***These shares carry the right of a preferential dividend at the rate of 3 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

†Only 6 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 5 per cent. per annum and also to participate in further dividend of 3 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

‡This company carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

§These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. ‡ Less income-tax. (a) *Olive Mills* have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (b) Investments.
(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,80,000 shares are bonus shares. (k) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

EXCISE DUTIES AND TEXTILE POLICY

(*Concluded from page 553*)

final product is relatively small. Moreover, in the *mill* sector, the prices of cloth being lower, the value of the final product is less than in the *handloom* sector. This has its repercussions on the respective wage funds.

(ii) The wage fund in the mill sector is distributed among the *smaller number* of people, since the wage rate is higher.

If the wage rates in the two sectors are equated, the difference in their employment potential would, to a large extent, vanish. At present, wages in the mill sector are at least three times the wages of a fully employed craftsman on the handloom. The breaking up of a normal shift in a mill into three smaller shifts would increase the employment *potential of mill* production threefold at wage rates equal to those *earned in the handloom* sector. This simple arrangement, which is perfectly workable, exposes the *fallacy* of a vast and complex set-up of things which is designed artificially to promote the expansion of the *handloom* sector.

When the machinery and equipment used in the mill sector is produced within the country itself, as is largely the case

be somewhat arbitrary and would continually create frustration and disappointment. Finally, even if Indian insurers were allowed by the Government of India to transact business abroad and the foreign countries too accepted them, it is a moot point whether Indian insurers would be able to make a success of their foreign business. Deprived of the cushion provided by their large domestic business through nationalisation, they would find it difficult to sell life policies in countries where other insurers, with the backing of their domestic business, would offer a stiff competition to Indian insurers. Presumably, these considerations have weighed with the Government in reversing its original decision to permit Indian insurers of its choice to function as life insurers in foreign countries.

But it is doubtful whether the Corporation itself will succeed in retrieving the lost ground. The question of reciprocity applies as much to the Corporation as to any other insurer. If foreign insurers cannot do life business in India, it is difficult to see how the Corporation will be allowed to function in foreign countries. Already, Pakistan has "unregistered" Indian insurers. Mr. Patel revealed that the Corporation was making a fresh application for registration. It remains to be seen what action the Pakistan Government will take on this application. It is believed that the Corporation will also find it difficult to gain entry into Burma and Ceylon. Perhaps, it will be able to operate in countries which do not have insurance offices of their own. But even here, sooner or later, the question of reciprocity is bound to arise, as and when insurance offices are established in those countries. In other words, India may well have to give up all hopes of doing any life business in foreign countries. This is part of the price the country has to pay for the doubtful benefit of nationalisation of life insurance.

* * * *

There has been a spurt in the value of the Sone Valley Cement shares during the week under review from Rs. 8-12 to Rs. 9-1. This is presumably due to optimism about the outlook for the Company following the renovation and expansion plans which are to be undertaken by the Directors shortly, a brief account of which was given by the Chairman, Mr. Anandilall Poddar, at the recent annual general meeting of the Company. That the additional production resulting therefrom will surely be absorbed is evident from the fact that, despite the increased production of cement programmed under the second Five-year Plan, there will be a shortage.

The Company's production, it may be recalled, declined from 210,878 tons in 1953 to 195,000 tons in 1955. This was mainly due to the wear and tear of the plant and machinery. The Directors have taken up the programme of renovating and renewing the machinery in right earnest and are confident of restoring the former productive efficiency within a few months and of raising the output within a year above the annual production achieved in the Company's years of prosperity.

An account of the Company's scheme for expansion and development was given by Mr. Poddar in his speech. It is proposed to make additions to the plant at Japla, with a view to raising its daily capacity by 750 tons. It is also proposed to set up a suitable slag-cement plant near Durgapur in West Bengal, for utilising about 500 tons of slag from the Durgapur Steel Works and about 200 tons of clinkers or limestone from Japla. The slag-cement plant will be set up in co-operation with the Government.

All these plans will require large finances and the Directors have approached the Industrial Finance Corporation for suitable assistance. Further, a sum of over Rs. 8 lakhs per year will be available if the Government of India sanctions the rehabilitation allowance of Rs. 4 per ton on the Company's production, which was originally offered to the Company, but was declined by the previous management. After the changeover in the management on 1st August 1956—a development which has not been widely noticed in this part of the country—the Directors intimated to the Government of their willingness to accept this offer, subject to all the conditions attached to the offer. It will be recalled that the previous management, namely, Messrs. Martin Burn Ltd., was unwilling to accept the allowance on the ground that the strings tagged on to it adversely affected the prospects of shareholders receiving a reasonable return on their investment. Apparently, the present management which is by a Board of Directors and not through managing agents, does not subscribe to that view. It is probably not incorrect in feeling so, considering that the other cement companies which were prepared to accept Government control have not been worse off for it.

Incidentally, it will be recalled that the main condition attached by the Government in giving the rehabilitation allowance to the cement companies was that it should be credited to a separate fund and that no withdrawal from this fund could be made without the previous sanction of the Government. This condition was contrary to the recommendations of the Tariff Commission and was considered—very rightly too—to be an unwarranted interference with the freedom of the private sector. Nevertheless, the managements of all cement companies, except that of Sone Valley, meekly surrendered to the pressure from the Ministry of Commerce and Industry. This incident is not recalled in order to criticise the present management of the Sone Valley for reversing the stand taken by its predecessor, but only to show the utter lack of unity in the private sector even for the purpose of protecting the fundamental principles of free enterprise.

It may be mentioned in passing that the changeover in the management of the Company has been smooth. It has been effected, we are told, with the active co-operation of the previous management. The handsome tribute paid by Mr. Poddar to Messrs. Martin Burn Ltd. in his speech suggests that the whole arrangement must have been put through in a friendly spirit.

IS THE I.M.F. A FAILURE?

THE end of the first decade of the Brettonwoods Twins sees the world in a better economic situation than it was when they were born. There may be room for differences of opinion about the extent to which these two international financial organisations—the International Monetary Fund and the International Bank for Reconstruction and Development—have helped the world to attain an improved economic status. But there is no doubt that they have played a key role in the world economic progress. The Bank has rendered solid assistance to several countries, including a number of underdeveloped nations, by providing funds and know-how for expanding and establishing basic services and for raising the output of basic materials. The Fund's contribution may be less spectacular, but it is not less important for that reason. Until about 1952, the balance of payments problems of several countries were of such great magnitude that they were beyond the available resources of the Fund. They had, therefore, to be solved by other means. The free world has to be grateful to the U.S. for stepping in to close the gap and for rendering generous assistance without which the ravages of the war could not have been repaired in a remarkably short period. After the reconstruction of the war-shattered economies with American help, the nations of the free world have succeeded in minding their affairs without having to resort to the use of the Fund's resources on any significant scale. That is no reason to cast any aspersions on the utility of the Fund.

In fact, the restricted activity of the Fund as a lender is an index of the improvement in the balance of payments position of the world. The Fund is after all a lender in the last resort. Its balances represent a reserve for emergencies. If its resources are intact and not tied up through overextended commitments to member-countries, there is room for viewing the prospects for world trade with confidence. The fact that the I.M.F. has enough funds at its disposal to come to their help will enable member-countries to pursue a policy of fewer restrictions on trade and payments. Again, the consideration that the I.M.F. will come to their rescue in times of emergency only if they follow sound economic policies has a healthy influence on the Governments of member-countries and restrains their temptation to resort to unsound practices. The Fund offers a valuable forum for a discussion of economic policies and methods followed by its members, as well as for exchanging ideas on this subject. It has helped to avoid competitive adjustments in the external value of national currencies and thereby ensured stability in foreign exchange rates for such long periods as the world had not known before the second World War. It has been instrumental, to a considerable extent, to the revival of faith among Governments in the efficacy of monetary and fiscal measures, as opposed to physical controls and rationing, for restoring economic stability. Its contributions are thus of such a nature that they cannot be measured in terms of rupees, annas and pies, as is possible to assess those of the World Bank.

It is true that the I.M.F.'s goal of multilateral convertibility of currencies has not yet materialised. But the world as it has been since the war is different from the one envisaged by those who conceived and brought the Fund into existence. Nevertheless, the fact remains that the broad objectives of the Fund are being realised. More and more countries have now come to believe in them, as witness the increase in the number of its members. Only a few days ago, Argentina, a country which took to the system of the multiple exchange rates even before the war and which preferred to stay out of the Brettonwoods organisations, has now become a member of these bodies. In almost all parts of the free world, especially in the industrial countries of the West, there has been a growing faith in monetary discipline and a pronounced reluctance to adopt physical controls. It is noteworthy that, despite a severe pressure on the balance of payments position in 1955, the British Government has preferred to rely on monetary and fiscal measures to combat inflation and to reduce the deficit on trade account rather than re-impose restrictions on imports and place direct curbs on domestic consumption.

The experience of the Western countries during the last three or four years in gradually eliminating the discriminatory restrictions on imports has enabled them to appreciate the superior virtues of monetary and fiscal weapons. They now realise that, in the sphere of international trade, the move towards liberal multilateral trading arrangements carries with it the benefits to be gained by buying imports on a strictly competitive basis, unaffected by currency considerations, and that it tests the ability of the economies concerned to make the adjustments required if their positions as sellers in competitive markets are to be maintained and strengthened. They also realise that, in the domestic sphere, the "anonymous control" through high interest rates, supplemented by stiffening credit restrictions and heavier taxation, is a more desirable method of bringing inflationary pressures under control than direct restrictions by the State, because it will serve to achieve the object without penalising efficiency and honesty and placing a premium on inefficiency and reward for dishonesty. In a modern, egalitarian, society, where the voice of multitude counts, it will undoubtedly be extremely difficult to implement such a policy and to carry it to its logical conclusion, without the Government of the day becoming unpopular. It must, however, be said to the credit of the present Governments of Western countries that they are giving the flexible monetary and fiscal policies a fair trial with confidence born of conviction.

Enough evidence to support this conclusion is available in the latest annual report of the Fund. The report shows that, in most of the Western countries, interest rates have been pushed up to levels which are the highest to be seen in the past quarter of a century. It is noteworthy that both long-term and short-term interest rates are at their peak when the boom is at its height. This is proof enough, if proof were needed, to show that the classical weapon is being put to use. Its application has not been without some results. There has, for instance, been a check on further price increases. A large measure of stability attained in the commodity markets of the world during the past year is not a mere coincidence; it may be attributed at least partly to the stiffer monetary policies adopted by these countries. We in India know very well how the prices of many of our export commodities have been influenced by higher interest rates in Europe.

The Fund's report also shows that, though the surplus in the overall payments balance of the rest of the world with the U.S. was somewhat less in 1955 than it had been in 1954, progress in extending multilateral trade and payments was well maintained. Although there has been no addition to the list of Fund members which have established formal convertibility of their currencies, there has been a further relaxation of exchange restrictions, and extension of transferability of important currencies. Substantial progress has been possible even in countries which have been handicapped by

obstacles to free entry of their exports to the markets of some industrial countries. The U.S. Government, too, has been giving strong support to various elements of liberal trade policy. There has, of course, been an increase in the number of bilateral arrangements, especially as a result of the emergence of the communist countries in the scene of world trade. There have also been a few triangular deals consequent upon the efforts of the U.S. to dispose of its agricultural surpluses. But, by and large, these developments have neither retarded the growth of world trade nor affected the progress of free trade, apparently because of the large increase in production. It will thus be seen that, whereas there has been less talk of convertibility during the past twelve months, there has almost been a continuous progress in that direction through relaxation of exchange restrictions and more trade liberalisation.

Encouraging as this trend is, the future is not free from some disturbing features. Two of them at least are very serious and require the careful attention of the Western countries, if the faith in the efficacy of monetary and fiscal weapons built up during the past few years is not to be shattered. A paradox of the world economic situation in 1955-56 has been the emergence of inflationary pressures in the wake of an increase in industrial production and agricultural surpluses. The main reasons for these pressures are two; one is increased Governmental expenditure in a number of countries which is not amenable to monetary restrictions such as credit controls and higher bank rate; and the other is the continuing upward pressure of costs due to wage increases which have tended to go even beyond the limits set by the improvement in productivity. If the Governments fail to keep their expenditures within proper limits, even the modest degree of stability obtained in the past two years will be undone. The result will be no different, if they fail to prevent wage levels from getting out of control. In modern democracies, where labour is strong and well organised, there is a limit up to which monetary weapons can effectively prevent wage increases. They have to be supplemented by self-restraint by individuals, as well as by wise leadership of employers and employees alike. It remains to be seen whether these qualities will be forthcoming in an adequate measure at least in the big industrial countries of the West in order to avert a setback in their march towards multilateral trade and convertibility of currencies. Their new entanglement, following the dispute with Egypt over the Suez Canal, however, gives rise to a serious doubt whether they will be able to overcome the aforesaid two dangers in good time. But their failure to do so can be no reflection on the I.M.F. and its ideals.

ATOMIC ENERGY

EVER since President Eisenhower struck a constructive note on world atomic co-operation in December 1953, world's statesmen have been trying to hammer out the details of the agency which could facilitate such co-operation. The International Atomic Energy Conference, now in session, at New York, for considering the statute of the International Atomic Agency, is making a sincere effort at reaching an accord over the statute. It is hardly to be expected that the way towards the realisation of this objective would be smooth, what with the divergent political predilections of the world's great powers, not to mention the differences of opinion even among the less advanced nations. Nevertheless, it is gratifying to note that there is today a much better appreciation of the need for, as well as the urgency of, promoting the peaceful uses of atomic energy than there was at any time since scientists showed that atomic energy had as much a beneficent value as a baneful one.

It is now more than two-and-a-half years since President Eisenhower called for the establishment of an organisation devoted to peaceful uses of atomic energy "to serve the needs rather than the fears of mankind." His proposal called for nations having supplies of atomic material to contribute to an international pool. The pool is to be used to help other countries all over the world to develop atomic power plants. For a long time, it appeared that nothing could be done in this direction, so long as the U.S.S.R. was not prepared to offer its wholehearted co-operation. But the summit conference, held in Geneva in July 1955, cleared this bottleneck, for, at that Conference, Mr. Bulganin was reported to have agreed that the Soviet Union would be prepared to contribute atomic fuel, if an agency to handle it was created. This paved the way for the International Conference on the Peaceful Uses of Atomic Energy, which was held in Geneva in August 1955.

This Conference, which was rightly described by Dr. H. J. Bhabha, Chairman of the India's Atomic Energy Commission, in the course of a recent A.I.R. broadcast, as a "milestone in world history," brought forward for free and open discussion many subjects in the field of atomic energy which had till then been kept under strict secrecy. It re-established direct channels of communication between scientists working in the field—channels which had been interrupted since the beginning of the second World War. The Conference, as Mr. Dag Hammarskjoeld, the U.N.'s Secretary-General, described it, was "a memorable unfreezing" of atomic information. After this Conference, a group of twelve countries—Australia, Belgium, Brazil, Canada, Czechoslovakia, France, India, Portugal, South Africa, the U.S.S.R., the U.K. and the U.S.—was asked to participate in a working level meeting in Washington to prepare a draft statute for the agency. The draft statute was prepared in April last and it is this statute that is now being considered by the 57-nation Atomic Energy Conference at Washington. It is believed that an informal target date of 26th October has been agreed upon for completing the work on the statute.

The importance of reaching an agreement on the setting up of the Atomic Energy Agency was stressed by Mr. Dag Hammarskjoeld. He said: "It has become increasingly clear that, by acting together, we may be able to put atomic energy to peaceful uses in such a way as to help create economic and social conditions where many of the present reasons for tension and conflict would be eliminated." He revealed that the formulation of the draft statute had been characterised by a "spirit of friendly give and take" with an earnest desire for mutual understanding and agreement. The Agency, which the statute seeks to set up, is designed to promote and foster the use of atomic energy for power, medical research and other peaceful purposes. The draft statute itself provides that the Agency will come into being when 18 nations have ratified it. In the interim period between the conclusion of the Conference and the setting up of the Agency, a preparatory commission will be at work on certain preliminary problems connected with the establishment of the Agency. So far as the headquarters of the Agency is concerned, it is stated that the Government of Austria has offered a site in Vienna.

Some changes are likely to be made in the draft statute before it is finally approved. India has taken a leading part in suggesting improvements in the original draft. The suggested improvements include the stipulation that, in allocating the resources, the special needs of underdeveloped countries should be borne in mind, and the provision that facilities and plants already existing in a particular region would be utilised for the Agency's purpose. The Agency, it has been urged, should not make assistance to members subject to any political, military or other conditions incompatible with the statute. Yet another direction in which India is making its influence felt is in respect of larger representation for underdeveloped countries on the Governing Board of the Agency. The Asian-African seats on the Board are stated to have been increased to six, with the possibility of one more, out of twenty-three.

A hitch has developed over the magnitude of the safeguards which must be provided in the statute for the functioning of the Agency. The need for safeguards arises from the consideration that atomic energy, to quote the words of Mr. James J. Wadsworth, the U.S. representative at the Conference, is "uniquely dangerous as well as uniquely promising; the fuel for a reactor can be made into the explosive of a bomb—the radiation which cures can also kill." Precautions against misuse of the energy are, therefore, necessary in the interests of promoting the peaceful applications of the energy. Nevertheless, India holds that the safeguards, now proposed, go beyond the needs of security. As Mr. Bhabha pointed out, the "proposed safeguards requiring accountability for the source materials, uranium and thorium, when supplied by the Agency, in a world in which thousands of tons of these materials are sold from one country to another, avowedly for use in military programmes, are clearly unfair and arouse the fear in many that the result, if not the intention, will be to create a uranium cartel." He added: "Fissionable material will be the future fuel for electric power generation in the world, and to require such material to be turned over to the Agency by countries receiving aid is to give the Agency power to interfere in the economic life of such countries." Clearly, the Conference must not, in its understandable anxiety to prevent misuse of atomic energy, create conditions under which peaceful applications of the energy will be rendered well-nigh impossible. After all, safeguards must be conceived so as to protect a precious asset for better use and not in a manner that will deny it through disuse.

A GREAT SHIPPING ENTERPRISE

A METHOD of studying history, the value of which is not perhaps as widely realised as it should be, is to study the growth of great commercial enterprises. Some of these enterprises offer a good ground for historical research and reflection. One such is the British India Steam Navigation Co., Ltd. (B.I.), which celebrates its centenary this year. The story of the growth of this Company reads almost like a romance. In 1847, one Mr. William Mackinnon from Campbelltown (Scotland) came to India and soon met a fellow townsman, Mr. Robert Mackenzie. When the two Scotsmen met—one would perhaps add, "as was only to be expected" —they talked about the prospects for business in India. Out of that friendship was born the trading firm, the Mackinnon Mackenzie, a household name in many parts of this country. Realising that ships would aid their trading activities, the partners soon bought and chartered a few sailing vessels. It was a case of ships following trade. In 1853, Mr. Mackenzie lost his life in a shipwreck while on his way from Australia and thus died in "saddle," as the later history of the firm shows. Meanwhile, the East India Company had offered and the firm had accepted the business of carrying mail between India and Burma. The Calcutta and Burma Steam Navigation Co., Ltd., which was the forerunner of the now famous B.I., was formed in 1856 and it then could boast of no more than a couple of screw steamers.

During the last four decades of the last century, the Company's progress was rapid. This followed the undertaking, given in 1862, by the B.I. ships to carry mail service in the Persian Gulf—a really hazardous enterprise in those days of piracy in this region. The opening of the Suez Canal in 1869 opened out a new vista of opportunities. Again, the B.I.'s undertaking to carry mail service between Aden and Zanzibar, which commenced in 1872, enabled the Company's ships to participate in the growing trade with African ports. Mr. Mackinnon, before he died in 1893, had thus firmly laid the foundations of a large and prosperous shipping enterprise. But it was left to the genius of Mr. James Lyle Mackay (who afterwards became famous as Lord Inchcape) to consolidate and extend the great legacy left to his charge. Having started life as an assistant in the firm, he soon acquired by dint of hard work and his undoubted abilities an irresistible power in the direction of the Company's affairs. It was Lord Inchcape, by far the most powerful of the men who have appeared in world shipping history, who brought about, in 1914, the merger of the P. & O. and B. I. interests and presided over the combined enterprise as its Chairman. He lived through a difficult period in the Company's history, as indeed in the history of the world—the first World War—and brought the Company to a high watermark of shipping efficiency; he died in 1932. The present Chairman, Sir William Crawford Currie, like his great predecessor, Lord Inchcape, has had to steer the Company through the storm of the second World War.

From two tiny steamers to a fleet of 63 vessels with a total tonnage of 472,000 is the story of the century-old B.I. But behind this impressive development lies the patient effort and enterprise of generations of loyal workers. This is true of all great commercial enterprises in the world. Governments and political opinions may come and go. But the free enterprise of man goes on for ever, translating castles in air into enduring monuments on earth. Man must, of course, be free, both politically and economically, before he can perform this task.

SHARE MARKETS BRIGHT AGAIN

BANK RATE—STERLING—GOLD PRICE—FREE TRADE IN WEST EUROPE

THURSDAY, 5 P.M.

MARKET GOSSIP

CONTRARY to the conclusion in some quarters that the bullish phase in the share markets has come to an end for the present, the equities have registered further gains. Fluctuations in values are now less erratic; if anything, they point to a steadily rising trend. Even textile scrips have participated in this rise. Sentiment is slowly changing in favour of bulls, which shows that the effects of the recent shock given by the Government by steeply stepping up the excise duties on cloth have been practically overcome. The prospects of a fairly good number of new issues by the existing concerns as well as by companies that are proposed to be floated in the near future have had no adverse effects on the current equities. On the contrary, they have served to revive confidence in them. This may be due to three reasons. First, if *entrepreneurs* are prepared to take risks and start new industries or expand the existing ones, there is no reason why investors should feel disheartened. Secondly, if new concerns belonging to an existing industry, as, for instance, rayon or chemicals, can hope to make profits and pay a decent return to their shareholders, the existing units belonging to the same industry should be able to do even better. Thirdly, the Capital Issues Control seems to be more liberal nowadays in deciding the terms of new issues of the existing concerns than it was when sanctioning the request of the T.I.S.Co. and the I.I.S.Co. The scales of premium on such issues seem to have been lowered; in some cases, even though the company is already paying a dividend, no premium is insisted upon. In fact, the Controller has no objection to the existing companies attaching a certain amount of bonus element to their new issues, in order to make them fairly attractive to investors.

* * * *

Once again, there was a rumour this week that an increase in the Bank rate was imminent. But it died, again, as quickly as in the previous two weeks. Obviously, the bears have been trying to exploit the situation. The extension of credit control to cloth and yarn a fortnight ago has created a fear that the authorities might not hesitate to push up the interest rates, in order to arrest any further rise in price levels. The climate is thus suitable for setting afloat such rumours and making money at the expense of the credulous public. But, as was pointed out in these columns two weeks ago, the authorities are unlikely to be thinking on lines of stiffening interest rates. The central banking authority has just taken powers to introduce effective curbs on credit creation by the organised section of the money market. It would naturally like to use them and see whether the situation could not be improved, before raising the cost of money which would affect not only the trade and industry but also the Government itself, as its burden of interest charges also would rise. Moreover, in his reply to the debate on the Plan in Parliament, Mr. T. T. Krishnamachari, made some significant observations which are quite relevant to this subject. He observed as follows:

"Government do not think that the recent trends in prices, in money supply and in the balance of payments need in themselves cause undue or immediate anxiety. These trends, however, are indicative of the sort of stresses that might develop in the course of the implementation of the Plan. They must not be allowed to persist and should be prevented to the extent possible and corrected if they cannot be prevented. The question is not one of meeting a temporary adverse turn somehow; it is one of getting on to and maintaining in the face of increasing pressures generated by the Plan a new and more stable position of equilibrium.

"It is possible to equate demand and supply by slowing down investment. Such a policy would, however, be contrary to the expansionist approach of the Plan. Development is, in the last analysis, a process of generating new and cumulatively increasing demands and of finding ways and means, through a more effective deployment of resources, of increasing the supplies available for the system. Remedial action at this juncture should not be such as would inhibit the deeper and more abiding trends which the Plan is seeking to establish. A downward revision of the Plan has, therefore, to be ruled out.

"In the present situation, a general credit squeeze is not warranted. Selective control of bank credit, with a view to checking speculative investment has, however, to continue and will be strengthened as and when necessary so as not to affect adversely genuine investment in the private sector.

If the above statement is analysed to its logical conclusion, the only inference possible is that the Government does not find any necessity for increasing the Bank rate *at present*. If, in the opinion of the Finance Minister, a general credit squeeze is not warranted, and if he feels that selective credit controls will be sufficient, it means that an increase in the Bank rate is not warranted. Strictly speaking, the Bank rate comes within the category of measures taken to bring about a general credit squeeze and not under selective credit controls. It is regarded throughout the Western world as "anonymous control"; and, unlike selective credit controls, it affects credits for all purposes.

All this does not mean that at no time in future the Bank rate will be increased. If conditions change and there is a sharp all-round rise in prices due to excessive speculation and hoarding, the Government may put up the Bank rate. There is no indication yet of such a situation developing in the near future.

Of course, one should not jump to the conclusion that at present there is no case at all for a higher Bank rate. Indeed, a convincing case in favour of a rise can be made out. But it is a question of how those in the seats of power feel about it.

While it seems safe to think that the authorities are not in favour of enhancing the Bank rate at present, a stage has already been reached when the rates of interest on small savings should be revised in an upward direction. Since the fixation of these rates years ago, the cost of money has gone up considerably and the sources of investment which are alternative to the Government's issues for small savers have become much more attractive than they were before. It would not be surprising, therefore, if sooner or later the Government were to increase the return on these investments.

* * * *

It would appear that spreading doubts and rumour mongering are by no means the monopoly of Dalal Street. In fact, Throgmorton Street, London, seems to be more reckless than Dalal Street in this respect. While none in this country is inclined to believe that a devaluation of sterling is being contemplated, tongues in the city of London are said to be wagging, as will be seen from our "London Letter" published elsewhere in this issue. The growing pressure on sterling in the foreign exchange markets of Europe, the recent losses of gold, the consequences of the Suez, the continued wage-prices spiral, the Chancellor of the Exchequer's disinclination to raise the Bank rate any further—all these have been quoted in support of the doubt about Britain's ability to hold the value of the pound at the current parity of $2.80 per £. In anticipation of devaluation, the gold shares on the London Stock Exchange have been active and firm in an otherwise falling market. It is true that the Union of South Africa will be voicing at the I.M.F. meeting its customary annual demand for an increase in the dollar price of gold. But nobody believes that it will receive any attention. Accordingly, it is not so much the revival of this demand by South Africa as the rumour of devaluation of sterling which is said to have put new life among the speculators in gold shares.

The causes mentioned above in support of doubts about sterling are, however, no justification for devaluation. While it is true that Britain witnessed a setback in balance of payments last month and that British labour is pressing hard for more wages, disregarding the appeals from the Government, it must not be forgotten that Britain's payments position today is much better than it was early in the year. It is by no means in such a tight corner as to write down the external value of its currency. There is no doubt that a devaluation of the pound at this stage would be, as a noted British Economist, Sir Oscar Hobson, observes, a disaster to Britain.

* * * *

The demand for a higher dollar price for gold by South Africa is based on the grounds that the cost of mining has gone up and that when the price of almost every other commodity has advanced, there is no reason why gold alone should remain pegged at $35 per fine ounce, a level determined some 22 years ago. There may be some force in these arguments, especially the one based on the cost of production. The devaluation of 1949, of course, meant a 40 per cent. increase in the sterling price of gold received by the producers in South Africa, but this advantage has been practically lost through a steep rise in production costs. According to South Africa's new Finance Minister, Mr. J. F. Naude, unless the gold price goes up, 17 South African mines will have to close down. Notwithstanding these claims, the fact remains that, in 1955, gold production in South Africa went up, following expansion of mining in the Orange Free State, where the output doubled (in terms of value) from $38.3 million to $76.6 million. It is also expected that, if the supply of African labour were maintained, production in the whole of the Union would increase further.

Whatever may be the contention of South Africa, the dollar price of gold will ultimately depend upon the U.S. Government. And a decision by America on this subject is not an easy matter, for there is an elaborate process that has to be gone through. With the Presidential election due in less than 40 days, there is not the ghost of a chance of the U.S. heeding to South Africa's demand now.

* * * *

By far the most notable development in the history of post-war world is the movement towards economic collaboration. The Marshall Aid, the O.E.E.C. the World Bank, the I.M.F. and all the other specialised agencies of the United Nations bear, of course, ample testimony to this trend. But an equally significant trend is the economic co-operation between neighbouring countries. In Europe, the first great fruit of such co-operation was the European steel and coal community. The idea of possessing a common pool from which the depleted assets of the European railways can be made good is soon to be given a practical shape. The formation of a "Green Pool" under which the agricultural production of the West European countries are to be pooled together in order to ensure its profitable utilisation and a fair return to the farmer that will induce him to grow more has also been under discussion for some time now. But these developments do not exhaust the potentialities of economic co-operation. Indeed, there is a great movement towards setting up a free trade zone in Europe, from which all tariff barriers are to disappear gradually and over a period. Thus, economic nationalism of the pre-war variety is dying a slow death in Western Europe. But its eventual disappearance does not seem to be in great doubt. It is not possible to dismiss this as a new-fangled idea born of European idealism. The fact that the U.K.—a country which has always had its feet firmly planted on earth—has shown signs of its willingness to join the free trade zone must serve to show that it is not all a distant dream, but a possibility within the bounds of practicability.

What do the planners of this move visualise in the near future? They are working towards a common market of six leading countries—France, Germany, Italy and the Benelux trio. It is true that the French attitude towards the proposal is still a little uncertain. Its opposition, however, is now reported to be much less strong than what it was last year. But what is perhaps more to the point—the U.K., hitherto regarded as the most insular of the nations to any pull for an integration with Europe because of its connections with the far-flung Commonwealth, is reported to be more willing than in the past to participate in the free trade zone. Britain's change in attitude stems from the consideration that, if Germany gained access to the European free market while it stood aloof, it would mean a severe setback to Britain's trade with the Continent. A careful, though necessarily preliminary, study of the advantages and the disadvantages of joining this group has been made in the U.K. While the official study of the problem is, perhaps, something of a continuing process, it is noteworthy that the Federation of British Industries is now working on the proposals to bring Britain into W. European free trade zone.

Why does the U.K. favour this move? What happens, in the event of Britain joining the free trade zone, to Commonwealth trade, Imperial Preference and high tariffs? These are all obviously important questions, in which India too is interested. Apparently, these issues have been considered and it has been found that they are not insuperable obstacles to Britain's participation in European free trade zone. It is stated that Britain should favour this move, because, while the Commonwealth trade is somewhat static, the European trade is a steadily growing variety. Thus, whereas imports into the Commonwealth have ranged around $12,000 million per year, those into the region, covered by the six European countries, have expanded by $8,000 million to $19,000 million during the five years ended 1955. Britain would be denying itself a great deal if it were kept out of this growing market. On the other hand, its imports from the Commonwealth consist chiefly of primary products which do not compete with the industrial goods exported by European countries. So far as the Imperial preference is concerned, the London *Economist* calls it a "wasting asset, eaten into (1) by rising prices which lower the real value of absolute rates of duty that G.A.T.T. forbids governments to raise, (2) by the independent trading policies of the ever more numerous former dependencies, (3) by the difficulties of Australia with its balance of payments and (4) by Canada's gradual adoption of free trade policies." Thus, Britain is not, perhaps, unduly perturbed by the prospect of having to give up Imperial Preference.

Yet another consideration which makes Britain (a relatively high tariff country as compared with the rest of Europe, regard with favour the idea of joining the free trade zone is that no automatic, immediate lifting of tariffs is contemplated by the sponsors of the idea. What the proposal contemplates is a gradual abolition of tariffs over a period of, say, 15 years. At first, a 10 per cent. cut in tariffs will be effected, followed by a succession of five further 10 per cent. cuts at intervals of 18 months. The remaining 40 per cent. would be eliminated in a period between three and six years. In any case, suitable escape clauses, it is believed, would be built into any agreement that may be eventually reached, in order to provide for balance of payments crises. The F.B.I., it is stated, is working on an escape clause which would exclude a wide range of agricultural and horticultural produce from the operation of the common European market, plus a very limited selection of industrial goods.

The effect of all these new arrangements on India's trade deserves to be studied. It is, however, true that the effect would not be immediately felt. But it might conceivably affect Britain's exports to India. For, if it finds the European market more remunerative than the Indian, it might send more goods to Europe than to India. Again, if Britain decides to give up Imperial Preference, India may find it more difficult to sell certain goods to the U.K., notably its textiles. But, on the whole, the Commonwealth is not likely to be seriously affected through the creation of a free trade zone in Western Europe, even if Britain were to be a part to it.

ORIENT PAPER MILLS

The Directors have decided to raise further capital by the issue of 50,000 5½ per cent., tax-free cumulative redeemable preference shares of Rs. 100 each. The shares will be offered, in the first instance, to all the existing shareholders (including holders of preference shares) of the Company, in proportion to the nominal value of the shares held by them. With the aforesaid issue, the total preference capital of the Company will stand raised to Rs. 180 lakhs.

The proceeds of the issue is to meet the additional funds required for the implementation of the Company's modernisation and expansion programme. The necessary sanction of the Controller of Capital Issues has been obtained for the issue.

EQUITIES STAGE A RECOVERY

UNDERTONE FIRM

(From Our Own Correspondents)

BOMBAY, 27*th September*

EQUITIES on the Stock Exchange displayed a steady to firm tone during the week under review. Though there was no widening of the activity to a notable extent, sentiment was distinctly better than in the previous week, except for a moderate and short-lived setback on Tuesday this week. Operators' enthusiasm was chilled to some extent on that day by the Union Commerce and Industry Ministry's order prohibiting textile mills from stocking more than one month's average production and the wholesale dealers from holding more than three months stocks. The selling pressure which ensued on this account was short-lived, presumably due to the clarification made by the Government of the above order. News of fresh issues by some of the leading industrial concerns, prospects of more such rights issues, the lower *budla* rates in the last settlement and absence of any new unfavourable factors induced revival of speculative support and leading industrial scrips advanced sizably. The undertone at the close was firm.

In the steel section, Tata Ordinaries advanced from Rs. 195 to Rs. 198-12 on Monday this week. After a recession to Rs. 1,962-12 on Tuesday, the scrips rallied to close at Rs. 200-4. Indian Irons came up from Rs. 35-2 to Rs. 36-1½.

Textiles fared well on the whole and the gains in some of the counters were marked. Bombay Dyeings rallied from Rs. 634-6 to Rs. 646-4 before dipping to Rs. 633-12 on Tuesday. Subsequently, however, they appreciated to touch Rs. 648-12 at the close. Centurys were again well supported. After an initial rise from Rs. 552 to Rs. 561, the shares reacted for a while to Rs. 550, but again gained ground to Rs. 567-8 at the close. Kohinoors were comparatively sluggish moving within a smaller range. Advancing from Rs. 368-8 to Rs. 371, the shares slipped back to Rs. 363, before again recovering to Rs. 369 at the close. Central Indias gained on balance Re. 1 to Rs. 158 and Colabas Rs. 2-8 to Rs. 97-4, while Finlays were marked down by Rs. 2 to Rs. 352. Indu Ordinaries gathered just an anna to Rs. 12-9, while Khataus picked up Rs. 2-8 to Rs. 255. Mafatlals Rs. 5 to Rs. 420 and Models Rs. 10 to Rs. 192-8. New Greats were steady at Rs. 250-8, but New City fell by Rs. 8-2 to Rs. 173. Shree Niwas Cottons were steady at Rs. 225, while Simplex moved between Rs. 206 and Rs. 202-8 before closing at Rs. 205. Standards moved up by Rs. 8-12 to Rs. 493-12 and Svadeshis by Rs. 2 to Rs. 258-8. Tatas were a fraction better at Rs. 58, while Vishnus suffered a drop of Rs. 5 to Rs. 185. Azam Jahis appreciated by Rs. 4 to Rs. 94 and Osmanshahis by Rs. 3 to Rs. 91.

Bank shares were steady with the trend on the high side, though transactions were still on a small scale. Barodas advanced by Rs. 2 to Rs. 102. Centrals were As. 8 higher at Rs. 53, while their new shares were unchanged at Rs. 56. Bank of Indias gained Re. 1 to Rs. 172-8 and United Commercials Re. 1-8 to Rs. 57-8.

Business in insurance shares was far from lively, but the tone was steady. Small enquiries were noted in New Indias which rose by As. 12 to Rs. 45-12. Vulcans changed hands As. 4 higher at Rs. 16-4. British India Generals were As. 2 lower at Rs. 13-12.

In the electricity section, only the Tata Hydro Group shares were firm and made further gains, while the other counters were neglected. Ahmedabad Electrics shaded off from Rs. 96-4 to Rs. 95-15, while Bombay Suburbans and Surats just managed to hold their ground at Rs. 109-6 and Rs. 118-12, respectively. Tata Hydros recorded a rise of Rs. 4 to Rs. 131. Tata Powers jumped from Rs. 1,300 to Rs. 1,325 and their new shares from Rs. 1,248-12 to Rs. 1,270. Andhra Valleys gained Rs. 18-12 to Rs. 1,242-8, but the rise in their new shares was spectacular, the gain being Rs. 97-8 at Rs. 1,297-8.

Miscellaneous section shared the improvement in general sentiment. In the sugar group, Belapurs provided a firm feature with an advance from Rs. 247 to Rs. 254. Bhopals rose by As. 14 to Rs. 18 and Phaltans by Rs. 5-8 to Rs. 168-8. Walchandnagars moved up by Re. 1-14 to Rs. 273-2. Among cement shares, Associated Cements were steady gaining Re. 1 to Rs. 203-4. Digvijays jumped by Rs. 5 to Rs. 205-8 on the announcement of the proposal to issue new capital. Ashoka Cements were up by As. 6 at Rs. 12-10, while Dalmias were unchanged at Rs. 15-2 and Orissas changed hands As. 2½ lower at Rs. 13-7½. Among the engineering and mining shares, Alcocks were erratic, but closed on balance without any change at Rs. 345. Tata Locomotives were irregular moving between Rs. 176 and Rs. 171, but finished Re. 1-8 higher at Rs. 174-8. Premier Constructions disclosed no change at Rs. 217. Mahindra and Mahindras were steady at Rs. 16-3. Larsen and Toubros were done at Rs. 19 *ex*-right, as against Rs. 19-12 *cum*-right a week ago. Shivrajpurs were featureless at Rs. 88, while Indian Coppers gained As. 2½ to Rs. 7-9½. B.B. Petrols were steady at Rs. 3-13½.

Shipping shares were in the limelight, following the announcement by the Great Eastern Shipping Co. of a new issue at par to the existing shareholders. The Company's shares rallied by Re. 1-8 to Rs. 21-10. Scindias came up from Rs. 19-2½ to Rs. 19-9 before closing at Rs. 19-8. India Steamships were marked up by As. 3 to Rs. 10-8 on expectations that the final dividend for the year ended March 1956 would be As. 8 per share, making a total of Re. 1 for the year. Premier Automobiles reacted by Rs. 2-8 to Rs. 104, while Hindustans were a shade better at Rs. 10. Among the other miscellaneous scrips, Bombay Burmahs (old), after an initial rise from Rs. 745-10 to Rs. 754-6, slipped back to Rs. 743-12. Latterly, however, they gathered strength to Rs. 758-12. British India Generals were done As. 4 higher at Rs. 11-8. National Rayons gained Rs. 5-12 to Rs. 271-8. Tata Chemicals were a shade quiet at Rs. 20-2. Amar Dye-Chems put on As. 8 to Rs. 120-8. Tata Oils were taken up As. 12 higher at Rs. 56-8, while Wimcos were listless at Rs. 180-10.

Calcutta Stock Exchange

CALCUTTA, 26*th September*

Prices were steady on the Calcutta Stock Exchange during the week under review, but, although general interest was limited—this was a clear sign of the setting in of the usual pre-*Pooja* dullness—there were quite a few features. Trading was indeed cautious, but there were ready buyers at hardening rates for first class scrips that were on offer in view of the *Pooja* consideration. Encouragement can certainly be derived from the impetus which industrial development is receiving; but in market circles there was the fear that, as in the case of textile industry, if an industry was showing signs of making more profits, the Government might claim a good portion by imposing additional levies.

The strike in the 24 of the 26 collieries in the Raneegunj area is continuing, and if this is not settled soon the loss of production there, would certainly be felt by gas companies, public utility concerns and other industries dependent on power and fuel. The dock workers all over India are threatening to choose the last mighty constitutional weapon in their hands, and, if a strike results, much damage can be caused to the country's import and export trade, which will check the pace of the progress of the Plan.

A general *hartal* in this part of the country has become a usual feature of life, and one was staged yesterday to protest against the rise in prices of essential commodities. Stoppage of work, in which managements of factories and workshops cannot participate and have to keep open their establishments for all those willing to work, causes considerable wastage and tells upon the working results of the relative accounting period. When such *hartals* are so often repeated the seriousness can be imagined. With the elections so near, it cannot be that the *hartal*-fever has ended. All these uncertainties have naturally restricted investible funds, and in stock market circles concern over the success of capital issues of private companies, sanction for which was naturally held over by the Government in view of the State and Central loans, is entertained. The market was closed yesterday on account of the general *hartal*.

Very few transactions were recorded in the coal section, the demand of colliery workers for more benefits dampening enthusiasm. The loss of daily output of 10,000 tons in the collieries in the Raneegunj area as a result of the strike was also gravely noted. After opening at Rs. 15-8, Burrakurs encountered support at rates up to Rs. 16-1, shading off subsequently to Rs. 15-13. From the previous rate of Rs. 22 Hurriladihs were taken to Rs. 23-7 following the publication of a satisfactory working report for the half-year to December 1955 and the maintenance of the dividend at 12.5 per cent., as against 10 per cent. for the corresponding previous half-year. From Rs. 13-5 Raneegunjs declined to Rs. 13-3, while Bengals, in transactions of small lots, realised Rs. 507, as against Rs. 530.

The general dullness affected jutes also, inasmuch as business was restricted. All the same, in selective attention, a few features were recorded. Anglo-Indias were fully firm at Rs. 193, but Ganges declined to Rs. 67 from Rs. 72 a week ago, following the passing over of dividend for the half-year ended March last. New Centrals, at Rs. 17, put on As. 2, while Nationals recovered to Rs. 25-8 from Rs. 25-4.

Teas lacked enthusiasm earlier in the week, but following the strong trend in Monday's export auctions steadiness was in evidence. Bormahjans were fractionally better at Rs. 21-14, as were Hansquas at Rs. 24. Interest in Hasimaras pushed the rate to Rs. 32-2 from Rs. 31-12 and Hantaparas to Rs. 198 from Rs. 193-8. Patrakolas were bought at Rs. 202, as against Rs. 199 previously and Methonis at Rs. 22-7, as against Rs. 21-15. Dibrugarhs recovered to Rs. 24-8 from Rs. 24-1 and Betjans to Rs. 56-8 from Rs. 56-2. On interested buying, Brahmapootras rose to Rs. 9-3 from Rs. 8-9, and at Rs. 35 Gillapukris were steady.

Among cements, Sone Valleys were lifted to Rs. 9-2 from Rs. 8-13. In the mining group Indian Coppers continued to be fully steady at Rs. 7-1, while Metal Corporations sagged to Rs. 11-3 from Rs. 11-9. Shipping shares were spot-lighted with India Steamships touching a further high of Rs. 10-9, while in the oil group Indo-Burmah petroleums recovered to Rs. 10-12 from Rs. 40-9. Further interest was shown to Alkali and Chemicals in the chemical section, and the scrip was fractionally better at Rs. 23-8.

Paper shares were in the market's dull corner, with Titaghurs going down to Rs. 39-8 from Rs. 40-4. From Rs. 39-7 at one time Orients had improved from Rs. 39-7 to Rs. 39-15 but closed lower at Rs. 39-10. India Pulps lost to Rs. 25-3 from Rs. 25-8, but Shree Gopals remained unchanged at Rs. 18.

Hooghly Dockings were the star feature in the engineering section on interested buying. From Rs. 140 the rate forged ahead to touch a high of Rs. 151-8 and at each stage of the rise considerable strength was depicted. Burn & Cos. were a close second and from a previous rate of Rs. 358 the quotation hardened to Rs. 372. From Rs. 26-8 Richardson & Cruddas advanced to Rs. 27-10 before closing at Rs. 27-8. Texmacos were fractionally better at Rs. 23-11 and Jessops improved to Rs. 37-12 from Rs. 37-3. Indian Irons opened at Rs. 35-3 and recovered to Rs. 36-1 before closing at Rs. 35-14.

Better attention was shown to miscellaneous industrials. F. & C. Oslers improved further to Rs. 12-1 from Rs. 11-14 and Osler Electric Lamps to Rs. 5-5 from Rs. 5. Indian Wood Products were lifted to Rs. 44-12 from Rs. 40-8. National Carbons strengthened to Rs. 29-14 from Rs. 29-8 finishing at Rs. 29-10. Following continuance of the lock-out on labour troubles, National Rollings were quiet at Rs. 11-4, while Niccos were fractionally better at Rs. 26. B.I. Corporations rose further to Rs. 11-8 from Rs. 11-1, while Indian Cables receded to Rs. 35-12 from Rs. 36-9. Electric Constructions were unchanged at Rs. 13-8, but Dunlop Rubbers, at Rs. 30-2, added As. 9.

* * * *

Madras Stock Exchange

MADRAS, 25*th September*

The Madras Stock Exchange put on a dull appearance during the week under review. In the absence of any encouraging development, operators did not evince much interest in fresh business. Turnover was, therefore, restricted, with prices moving narrowly. Professional buying support was lent to a few select shares, the prices of which tended to move up. Among them, Bank of Mysores, United Breweries, Lakshmis (textiles) and T. Stanes turned out to be bright counters.

In the textile section, Metturs were subjected to heavy selling and climbed down by Rs. 10 to Rs. 47. Janardhanas dropped Rs. 4 to Rs. 116-8. Ranga Villas fell by Rs. 2-8 to Rs. 95, Pankajas by Rs. 2 to Rs. 90, Vijayakumars by Re. 1-8 to Rs. 145-8 and Vijayamohinis by Re. 1 to Rs. 93. Lakshmis, however, were well favoured, their quotation advancing by Rs. 5-8 to Rs. 258-8. Rajapalayams picked up Rs. 3 to Rs. 169. Bangalore Woollens had buyers Rs. 2-8 higher at Rs. 582-8. Rajalakshmis hardened by Rs. 2 to Rs. 187. Buckinghams gathered Re. 1-8 to Rs. 202. Cannanores and Premiers rose by a rupee each to Rs. 189 and Rs. 254-8, respectively.

Tea shares in the planting section were neglected for want of support, notwithstanding report of higher prices at the recent auctions in Cochin and Calcutta. Mlamallays were particularly depressed, the value receding by Rs. 3 to Rs. 60. Peermades shed Re. 1-6 to Rs. 34-2. Kalasas slipped by As. 10 to Rs. 16-2 *cum-div.* Haileyburias lost As. 4 to Rs. 27. Nonsuch Teas eased by an anna to Rs. 28-6. Coffee shares were quiet. Balmadies gave way from Rs. 4-4 to Rs. 4 Consolidateds decreased by an anna to Rs. 21-10. Amalgamateds were unchanged at Rs. 12-10, as also Coffee Lands at Rs. 27-4. Among rubber shares, Nilamburs found buyers As. 10 higher at Rs. 18-6 *cum-div.* Vaikundams put on As. 8 to Rs. 35-8. But Pullangodes were a shade easy at Rs. 4-7.

Sugar shares staged a retreat. Kirlampudis were the worst sufferer; the quotation slumped by Rs. 5 to Rs. 37. E.I.Ds. declined by As. 4 to Rs. 31-4. Deccans receded by As. 2 to Rs. 12. Travancores lost an anna to Rs. 14-4. United Breweries, however, met with good enquiries and moved up by Rs. 6 to Rs. 206.

COMPANY INTELLIGENCE

Shree Digvijay Cement

The Directors of Shree Digvijay Cement Co., Ltd. propose to raise fresh capital by the issue of both ordinary and preference shares. The proceeds of the issue, which is said to have received the sanction of the Controller of Capital Issues, will be utilised for financing the second extension plant and the expansion of other facilities required for that purpose. The second extension plant, which will go into operation shortly is designed to increase the rated capacity of the factory from 230,000 tons to 430,000 tons per annum.

According to the terms laid down by the Controller, the Company will offer 45,000 ordinary shares of Rs. 100 each at a premium of Rs. 17-8 per share for cash to the existing ordinary shareholders in the ratio of one new ordinary share for every two existing ordinary shares. With this issue, the issued ordinary capital of the Company will be raised from Rs. 90 lakhs to Rs. 135 lakhs.

Further, the Company has been permitted to issue 40,000 5 per cent., tax-free, redeemable cumulative preference shares of Rs. 100 each at par for cash. This will be offered, in the first instance, to the holders of the existing preference shares in the ratio of one new share for every existing share, thus doubling the preference capital from Rs. 40 lakhs to Rs. 80 lakhs.

* * * *

Great Eastern Shipping

The Controller of Capital Issues has approved the proposal of the Great Eastern Shipping Co., Ltd. to issue new ordinary share capital amounting to Rs. 60 lakhs, made up of 600,000 shares of Rs. 10 each. The new shares will be issued at par to the holders of the existing ordinary shareholders in the ratio of one such new share for every existing share. The Directors propose to call Rs. 5 per share on the new shares early in 1957 and the balance early in 1958.

NEWS IN BRIEF

TEA consumption in India is estimated to have increased to 206 million lbs. in 1955-56, as compared with 183 million lbs. in 1954-55.

The Government of India has decided to remove the export duty of Rs. 250 per ton leviable on linseed oil, with immediate effect.

The recently established State Trading Corporation has so far contracted business worth over Rs. 15 crores—Rs. 8 crores worth of exports and over Rs. 7 crores worth of imports.

As a result of the visit of Mr. K. D. Malaviya, Union Minister for Natural Resources and Scientific Research to Canada, the latter may help India in undertaking airborne surveys for mineral oil.

The Central Minimum Wages Advisory Board, at its recent meeting, has recommended the fixation of hours of work and rest intervals for agricultural labour, as in the case of industrial labour covered by the Minimum Wages Act, 1948.

The Government of India has decided to constitute a National Film Board and a Film Finance Corporation to help the development of the motion picture industry. The Film Finance Corporation will initially have a capital of Rs. 1 crore.

The Union Ministry of Food has perfected arrangements to supply the South Indian markets with 60,000 tons of rice in the next few days. A network of 3,000 fair price shops have been opened in South India during the last few days.

The Government of India has agreed to invest about Rs. 1 crore in Praga Tools Corporation and assume joint control over it. The State Government is a major shareholder in the Corporation which manufactures machine tools.

Soviet Russia has agreed to purchase shoes valued at Rs. 1 crore from India. The export will be channelled through the State Trading Corporation. This is the first time that a communist country is placing a substantial order for Indian consumer goods.

The Railway Board has set up a committee of three senior engineers to examine the amenities now available to Class III passengers inside compartments, and to make recommendations in regard to any improvements considered necessary.

The sanction of the Government of India has been obtained for the recently concluded agreement between the Wolf Electric Tools Ltd., London and Rallis India Ltd., Bombay, under which, the latter will assemble and progressively manufacture Wolf electric tools in India using, as far as possible, indigenous material.

The Industrial Finance Corporation of India has advanced loans to the extent of Rs. 15 crores for the development of various industries in the country in the year ended 30th June 1956. The total amount of loans given by the Corporation, up to this period, to 154 industrial units is Rs. 43.20 crores.

The Government of India has decided to constitute a National Savings Advisory Committee for co-ordinating the activities of State Committees and giving the benefit of its advice and active participation in the running of the movement. The Committee, which will have its headquarters in Delhi, will consist of 14 members, with Mr. S. K. Patil M.P. as Chairman.

The U.S. Department of Agriculture has authorised the sale of 44.5 million dollars worth of milled rice to India and Pakistan in their national currencies. The authorisations are made under previously announced agreements. The 26.4 million dollar authorisation for India covers about 4.4 million cwt. of milled rice and 18.1 million dollar one for Pakistan about 2.9 million cwt.

According to Mr. K. S. Sundararajan, Member of the Revenue Board, a total sum of Rs. 5 crores is expected to be collected as estate duty by the end of this year since October 1953, when the Estate Duty Act came into force. In the first year of its operation, the total collection was Rs. 80 lakhs, while last year it was about Rs. 1.60 crores and for the current year it is expected to be about Rs. 2.5 crores.

The State Trading Corporation has placed orders for 20,000 tons of cheap but standard quality cement from Spanish Morocco and Switzerland. Another 100,000 tons will be supplied by the Pakistan Industrial Development Corporation and 100,000 tons by Poland. Soviet Russia and Czechoslovakia have contracted to supply about 200,000 tons, half of which may actually be imported only in 1957.

Encouraged by the enthusiastic response received by the Forum of Free Enterprise, recently established at Bombay, its sponsors have decided to start a full-fledged organisation at Calcutta, where a working group has already been established. Requests to open centres have been received from various other centres also, particularly from Madras, Delhi, Bangalore. These requests are under consideration.

A programme to provide whole-time employment to 4,000 persons in the cottage soap industry, using non-edible oils, has been approved by the Government of India. The programme will also provide employment to a lakh of workers for two months. Financial assistance, amounting to Rs. 46.41 lakhs, has been sanctioned by the Union Ministry of Production to the All-India Khadi and Village Industries Board for implementing the programme in the current financial year.

The Government of India is examining a proposal to establish a fourth State-owned fertiliser plant in Bombay, based on the Burmah-Shell and Stanvac refinery gases. A proposal to this effect was contained in the report of the Fertiliser Production Committee, but was not pursued beyond the initial stages as it was decided to locate the three new plants to be set up at Nangal, Rourkela and Neiveli. In view of the increased demand for fertilisers that is likely to flow from an upward revision of agricultural targets, as also the need to save foreign exchange on the import of fertilisers, it is now felt that a further expansion of fertiliser production capacity, over and above what is provided for in the plan, may be warranted.

* * * *

From Abroad

Argentina became a member of the I.M.F. and the World Bank on the 20th inst.

The Syrian Government has given permission to the German firm *Concordia* to search for oil in various parts of the country. An American company, James Menthall, is also prospecting for oil in northern Syria.

Japan's sterling balances at the end of August showed a further fall as compared with the end-July figure when they stood around £57 million. Non-official sources place the balance, as on 31st August, at £46 million.

Loans aggregating $375 million to 39 countries were made by the U.S. Export-Import Bank during the year ended 30th June 1956. The loans were made to finance exports of American equipment, commodities and services.

A Conference of Federal and State Officials held recently at Washington has agreed that the U.S. oil production could be easily increased by 1.1 million barrels a day to meet a shortage in Western Europe if the Suez Canal is closed and supplies to Europe stop.

The Royal Netherlands Blast Furnaces and Steel Factories Ltd. is to erect a new steel factory according to the oxygen process successfully carried through in four factories in Austria, Canada and U.S. When the new plant is completed, the concern will have a capacity of 800,000 tons of Martin Steel and 300,000 tons of oxygen steel.

The World Bank announced on the 20th inst. approval of two loans, aggregating $31 million, for electric power expansion in Austria. The projects to be financed are part of a programme to meet the increasing demands of Austrian industry and to supply additional power for export to neighbouring countries.

The Governors of the central banks of Commonwealth countries are expected to meet in London, early next month, to discuss the recent experiences of monetary policy. Their meeting will supplement the regular exchange of informal visits and correspondence between the Bank of England and the other Commonwealth central banks.

Professors Kai Siegbahn and Per Ohlin of the Uppsala University, Sweden, have expressed the view that energy from sea water by fusion of hydrogen atoms at million degree temperatures may be the future solution of the world's power problems. The two scientists have been studying this problem independently of American and Soviet researchers.

According to an official announcement by the W. German Ministry of Economic Affairs, with effect from 15th October West German residents are permitted to buy from banks foreign currencies, for travel purposes in unlimited amounts. This applies also to dollars and other freely convertible currencies. Foreign visitors to Germany may also import currency freely and take it out of the country when leaving.

According to Government estimates, the U.S. capital goods boom is continuing at a record pace. The outlays for new plant and equipment are expected to have advanced to a new record yearly rate of $36,260 million in the current quarter. Present indications are that it will climb still higher to a $38,000 million rate in the final four months of the year. Spending in 1956 now is expected to aggregate $35,313 million. This is 23 per cent. more than the previous high rate of $28,701 million reached in 1955.

Sir John Teasdale, Chairman of the Australian Wheat Board has announced that the Board would be "seriously inconvenienced," unless the Suez Canal problem is settled within a month, because from now to November the Board has a heavy programme. It would be commiting, he said, breaches of contract if it sold wheat and then could not find ships to export it. British shipowners, he added, were reluctant to send ships into the Indian Ocean till the Suez dispute was settled.

The Premier of South Australia, Mr. T. Playford, recently announced that his Government would grant permission for a new uranium mine in the Crocker's Well region, about 70 miles north-west of Radium Hill. Investigations had revealed the existence of large deposits of uranium capable of open-cut mining; this could mean that Crocker's Well might replace Radium Hill as the biggest producer of uranium in the State. Meanwhile negotiations are proceeding for the sale overseas of large amounts of uranium extracted from the mines at Radium Hill.

PERSONAL

MR. R. D. Birla and Mr. G. D. Birla, both of whom had been to Europe, returned to India this week.

Dr. Punjabrao Deshmukh, Union Minister for Agriculture, left Bombay for Zurich *en route* to Moscow last Monday, to study collective co-operative farming in the U.S.S.R. for two weeks.

Mr. S. Ranganathan, I.C.S., formerly Joint-Secretary in the Ministry of Works, Housing and Supply, took charge this week as Secretary of the new Ministry of Commerce and Consumer Industries.

Mr. Michael L. Hoffman, European economic correspondent of the *New York Times*, has been appointed new director of the World Bank's Economic Development Institute, *vice* Professor A. K. Cairncross of Glasgow University.

Sardar K. M. Panikkar, formerly Indian Ambassador to China and Egypt, has been appointed Indian Ambassador to France in succession to Sardar H. S. Malik. He will assume charge of his assignment in December.

Mr. M. C. Dixit, one of the three survivors of the "Kashmir Princess" crash, has been appointed Director of Training and Licensing in the Civil Aviation Department, Government of India, New Delhi. He took charge of his new office this Monday.

Mr. P. G. Bhagat, lately Director-General, India Store Department, London, and subsequently, General Manager, Turner Hoare & Co., Ltd., Bombay, has been appointed Managing Director, the Hindustan Steel (Private) Ltd., Calcutta, *vice* Mr. S. N. Mozumdar, I.C.S., who has proceeded on leave preparatory to retirement.

Dr. Per Jacobsson, the noted Swedish economist, has been appointed Managing Director of the International Monetary Fund. He will take up his new duties in November and will also serve as Chairman of the Board and Executive Director, succeeding Mr. Ivar Rooth, also of Sweden, who retires on 3rd October 1956.

Mr. K. C. Reddy, Union Minister for Production, will leave for a three-week tour of the Soviet Union, West Germany and the United Kingdom on 10th October. He will undertake an intimate study of the production of coal and fertilisers, State management of industrial undertakings and employer-employee relations in those countries.

Mr. Binay Ranjan Sen, Indian Ambassador to Japan, was elected at the F.A.O. Conference in Rome, Director-General of the United Nations Food and Agricultural Organisation on the third ballot by 42 votes to 29 for the Dutch Agricultural Minister, Mr. S. L. Mansholt. Mr. Sen is the first Asian ever to be chosen as head of a United Nations specialised agency. He is F.A.O's fourth Director-General. Two of his predecessors were Americans and the first incumbent a Briton.

"COMMERCE" 1931

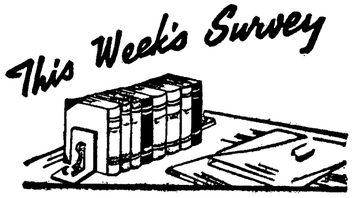
FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 26*th September*

Gold Standard

Britain is off the gold standard; that is, Britain has decided to suspend temporarily—say, for six months—the operation of sub-section two of section one of the Gold Standard Act of 1925 which fixes the price at which the Bank of England may sell gold. This drastic step has been necessitated by heavy withdrawals of gold from the Bank of England on foreign account. Since the middle of July last funds amounting to more than two hundred million sterling have been withdrawn from the London market. During the last few days withdrawals of foreign balances had so sharply accelerated that the Government felt bound to take the above-mentioned decision. But is the gold standard the ideal standard of value or exchange? Speaking at a meeting of the Farmers' Club at the Royal United Service Institution, Whitehall, some months ago, Sir Josiah Stamp attributed the fall in prices to the gold standard. "We are suffering very much at the present time because of a terrific fall in prices generally. We all agree," Sir Josiah went on, "that that terrific fall has had some extraordinary effects on industry. It has presented a very large increase of value to a certain class of people. The purchasing power has been shifted from one class to another. That has attacked the very mainspring of industry. We say that this is due to the gold standard. Supposing we had never known the gold standard, then some other standard would have been found. The standard of value might have been based on some natural products."

Representatives of U.S. bicycle, distilling and other manufacturing associations have protested against low import duties on foreign goods. The Kentucky Distillers' Association point out that there are inequities in the trade of American and Scotch whiskies because Scotch whisky enters the U.S. in unlimited quantities, subject to normal import duties, while American whisky is virtually banned altogether from the U.K. under the latter's restrictive trade practices. The Bicycle Manufacturers' Association complains that the domestic industry has been seriously injured by large volumes of bicycle imports.



LAC INDUSTRY

THE Silver Jubilee celebrations of the Indian Lac Cess Committee, held at Ranchi last week, provided an opportunity both for recording the achievements of the Committee and for emphasising the imperative need for setting the lac industry on a sound and secure footing. The conditions obtaining in the industry continue to be very distressing. The production of lac, especially of the best variety—that is, *kusmi* lac—has suffered a setback of late. The prices of lac are extremely unstable, thanks to speculation by traders, elasticity of demand for shellac, and its dependence on a very large number of industries which use lac and, therefore, on the general economic conditions in the countries where the lac-consuming industries are situated. It may be mentioned here that almost 92 per cent. of the lac produced is exported abroad. Indian lac is said to be facing a severe competition not merely from the low-priced Siamese lac but also from the synthetic materials for which billions of dollars are being spent on propaganda and technical services. Indeed, Indian lac, it is stated, now faces "a crisis of the greatest dimension; never before during its chequered career, spread over the past two centuries, has such a menace threatened to wipe out its very existence."

The none-too-happy position of the lac industry is certainly very unfortunate, considering that lac plays a significant role in the country's economy. Lac is a source of subsidiary income to a large number of cultivators in Bihar, Madhya Pradesh, Orissa, Vindhya Pradesh and Assam. In many areas, cultivation of lac is an important source of income to the backward tribes, particularly *adivasis*. What is more, lac is one of the major earners of foreign exchange in India, the average annual value of exports being nearly Rs. 10 to Rs. 11 crores. Again, lac is a valuable raw material which has innumerable uses, the chief among them being gramophone records, electrical goods, varnish, hats, sealing wax, adhesives, printing ink, metalware, oil cloth, resin cloth, rubber composition, linoleum, laminated paper, plastic goods, shoe and nail polish, bangles, and ammunitions. It is this multifarious role played by the lac industry which imparts urgency to framing a scheme for development and expansion. Any improvement in the industry from any point of view and at any stage, as Mr. R. R. Diwakar, Governor of Bihar, aptly stated when he inaugurated the Silver Jubilee celebrations, is bound to benefit the primary producers of the commodity. Otherwise, the country may, as Mr. M. S. Randhawa, I.C.S., President of the Indian Lac Cess Committee, warned in the course of his welcome speech, be deprived of not only export trade to the tune of about Rs. 11 crores per year but even the internal benefits from the use of lac.

The biggest problem facing the Indian lac industry is that of stabilisation of prices. The Government of India has, of course, banned futures trading in seedlac and shellac (except those on non-transferable specific delivery basis), with effect from 27th December 1954. But speculation in trade still exists. Dr. Punjabrao Deshmukh, Union Minister for Agriculture, was, therefore, right when he said, in the course of a broadcast talk the other day, that control over speculation should be rigidly exercised in future, the other measure suggested being regulation of prices by fixing minimum and maximum prices. Dr. Deshmukh also stressed that the problem of prices could be tackled by stepping up output which is "a pre-requisite to normal and sound trading in lac." Viewed thus, it is gratifying to note that the second Five-year Plan envisages an increase of 45 per cent. in the production of lac, from 1.1 million maunds to 1.55 million maunds. Higher production is proposed to be achieved through the establishment of 50 regional broodlac farms, imparting of technical knowledge of lac cultivation, intensified publicity campaign to popularise lac growing and planting of lac hosts in all suitable areas.

Simultaneously with the implementation of the scheme for augmenting production of lac, the internal market for the consumption of lac and lac products must be expanded. This aspect was very forcefully emphasised by Mr. Diwakar. He said: "At present, only 8 per cent. of the lac produced in India is consumed within the country, while 92 per cent. of it is exported abroad. A lot of the exported lac comes back to India after processing for which we pay through our nose ... export consists of valuable raw material which can be utilised in the country not only for processing but also for manufacturing a number of useful products which can be consumed within the country and also exported abroad."

There is considerable force in these observations. With the industrialisation of the country and improved standard of living, there seems no reason why internal consumption of seedlac and shellac should not move up. It must, however, be stressed that a high level of lac consumption can be sustained only if the quality and the price of lac and lac products compare favourably with the imported substitutes, especially the synthetics. The Government's decision to set up regional testing laboratories at important manufacturing centres for effecting improvement in the quality of goods produced by factories must, therefore, be widely welcomed. Equally welcome are the proposals relating to establishment of suitable godowns for storing seedlac and shellac and formulation of international standards of quality.

TRACTOR CULTIVATION

The results of an investigation conducted by the Board of Economic Enquiry, Punjab, into the economics of tractor cultivation make interesting reading. In many parts of this country, tractors are being increasingly used in cultivation. This is part of the increased interest which farmers have shown in better cultural practices. Nevertheless, it must be admitted that tractors have not made as big a headway as in certain other countries. The Punjab had 971 tractors in 1952, of which 867 were private-owned. It is believed that this number must have increased further by now. Among the reasons which have led to the increase in tractor cultivation in the Punjab, mention must be made of the impetus given to the use of tractors through the need for breaking large tract of culturable waste land and acute shortage of labour in the immediate post-partition period. The high level prices of agricultural commodities obtainable in the past few years is also said to have contributed much to the popularity of tractors in farms.

Discussing the economics of tractor cultivation and the prospects for a wider use of tractors, the report emphasises that the mechanisation of agriculture in India is still faced with the traditional difficulties arising out of inadequate supply of spare parts and repair service. It says: "The situation can be better imagined than described when a tractor goes out of order during the busy season and a part to be replaced is not available in the market or still worse, if the part is there but no technician is competent to do the job." It has rightly stressed that the first condition for a wider use of tractors is the availability of spare parts and technical guidance.

The report recognises that the tractors help reduce costs of agricultural production, besides improving the efficiency of farming operations. It, however, sounds a note of warning that an indiscriminate use of tractors may conceivably lead to the deterioration of soil due to exhaustion of the nutrient elements in the soil. Again, it advocates the institution of an extensive technical service designed to educate farmers in scientific agronomic practices. A defect in tractor cultivation is that it reduces the number of animals on farms and thereby the availability of farmyard manure. It says: "The supply of manure at a tractor-operated farm decreases substantially and this deficiency is badly felt by those who use tractors." But this problem is not entirely insoluble. For, as the report itself points out, the solution of the problem lies in the increased use of compost manure or oilseed cake as manure. In any case, as against the disadvantage that could come through the loss of farmyard manure must be set the advantage that the community derives through the fact that the employment of tractors leads to less land being devoted to fodder crops. This is because tractors reduce the need for keeping a large number of animals on the farm. Thus, only a relatively less acreage is necessary for cultivation of fodder crops. Larger areas, therefore, become available for cultivation of food and cash crops. As a result of tractor cultivation, there is, as the report says, an increase in the marketable surplus of farm produce.

Finally, the question of tractor cultivation is linked with the Government's land policy. So long as this policy is designed to bring about increased fragmentation of land rather than promote consolidation, there will be no incentive to employ mechanised cultivation. After all, the use of mechanised devices in agriculture implies the existence of large farm. It is only large and extensive farms owned by farsighted and intelligent farmers that can facilitate the use of modern methods in agriculture. The report rightly stresses that "the size of the farm and a consequent volume of work should be sufficient to justify the investment on farm machinery." Referring to collective or co-operative farming which may facilitate the increased use of tractors, the report says that the chief difficulty in undertaking such farming is that of convincing the peasants about the virtue of common ownership. The report concludes by stating that, although the tractors are likely to be more popular in the next few years, "the practicability of their completely replacing the bullock labour in the whole country borders on impossibility in the existing circumstances." In the context of the present trends in land reform legislation, in particular, this conclusion seems irrefutable.

MANAGEMENT TECHNIQUE

An interesting question in the General Economics paper set for the I.A.S. examination held recently was this: "It is not more hours or days of work that is required in India, but greater returns for the labour put in. How far would you accept this as an assessment of the employment problem in India?" Evidently, the framer of the question must have had at the back of his mind the normal reaction of labour to the phrase "increase in productivity," namely, the assumption that it would lead to a reduction in the numbers employed. That such an attitude is not only unfounded but absolutely wrong was impressively brought out by Mr. J. M. Shrinagesh, General Manager, Hindustan Aircraft (Private) Ltd., Bangalore, while inaugurating the Madras Institute of Management the other day. Increased productivity meant, Mr. Shrinagesh declared, an enlarged share to workmen of the fruits of increased productivity, including lower price of consumer goods. Elucidating this aspect, he observed:

> "If we were to persuade labour that increased productivity is one of the most essential requirements of the next Five-year Plan, not for the nation as a whole but for wage earners themselves, and if we could make it clear that any breath of inflation will result mainly in wage earners being partly deprived of the fruits of their labour, we would have gone a long way towards the attainment of the goal which we have set before us in our new Plan. ... We in India have to increase productivity very rapidly during the next five years, if we should ensure that there will be no inflation in the near future. Hence stable economy can be brought about by increasing productivity in respect of both capital and consumer goods."

The need for augmenting productivity cannot be stressed too strongly. It is common knowledge that production per man-hour in India is deplorably low as compared with most western countries and even with China. One of the means for securing higher productivity is improvement in management technique. Mr. Shrinagesh, therefore, did well to urge that, in the management field, it was not only in the teaching of management technique but also in the dissemination of the principles of management and in the training of executives that the main task lay. It lay also in the training of labour in an attitude and an approach conducive to increased productivity. The success of the Madras Institute of Management will be judged by the extent to which these objectives are fulfilled. The Institute, we are told, has been formed for the promotion and development of sound management in business and industry by encouraging the appreciation and application of good management philosophy and practice. It will spread knowledge of better management technique through exchange of information among members, and through discussions, demonstrations and plant visits. It will also organise lectures, impart training designed to improve managerial and supervisory skills, and conduct research in specific fields.

The approach of the Madras Institute of Management is sound and there is no doubt that it will be able to play a useful role. The very fact that an institute of this type has been set up indicates the awareness of the progress and development that the country is making in the business and industrial fields and the necessity to have a trained personnel for the management of industries.

FISH PRODUCTION

Although the main element in the world agricultural situation today is the emergence of surpluses, as a result of the failure of consumption to keep pace with production, it is undeniable that world food production will have to be greatly stepped up if the potential demand in many underdeveloped parts of the world were to become effective. In any case, so far as India is concerned, the need for increasing food production is particularly urgent, in view of the fact that the higher incomes that will be generated by the second Plan would be largely absorbed by primary requirements, namely, food and cloth. It may be difficult for India to reach the new targets for foodgrains. But it should be less difficult to augment food production by raising that valuable adjunct to grains and pulses, fish. After all, from an acre of water may be raised almost as much food as from an acre of land. And it costs less to raise fish than to raise crops. Further, there is no fear of exhaustion of fish resources as there is of soil fertility. The sea and other water resources are almost inexhaustible. During the period of the first Plan, the output of fish is believed to have risen by 10 per cent. to an annual rate of 1.1 million tons. Obviously, it should be possible to raise this level still further. Viewed in this context it will not be difficult to appreciate the importance of the All-India Fisheries Conference covened at Madras by the Union Ministry of Agriculture.

Addressing the Conference, Dr. P. S. Deshmukh, Union Minister for Agriculture, revealed that, as against India's need for about 4 million tons of fish on the basis of nutritional standards, the current production amounted only to 1.1 million tons, thereby leaving a wide gap. The Government hopes that a 50 per cent. increase in fish production over a period of about 10 years is a task within the bounds of practical accomplishment. It is gratifying to note that, in conformity with this plan, the Union Government has provided about Rs. 4 crores for the central schemes and Rs. 8 crores for the State schemes in the second Plan, as against only Rs. 1 crore and Rs. 4.13 crores, respectively, provided in the first Plan. Again, while in the first Five-year Plan emphasis was laid on schemes for overcoming food shortages, the objective of the second Plan is to increase the *per capita* consumption of food. Also, it is proposed to ensure that the fishing industry develops on modern and scientific lines. By these means, it is estimated that fish production would go up to 1.4 million tons at the end of the second Plan, as against 1.1 million tons at the end of the first Plan period. The problem is being tackled from various angles like fisheries research and extension, improving conditions of fishing and fishermen, fish-production from inland waters and the sea, fish marketing and utilisation of fish resources.

The whole situation certainly calls for a concerted and co-ordinated effort on the part of all the interests concerned. As it is, except for Madras State, which has done commendable pioneering work over a number of years, fisheries development has been taken up in most parts of the country only in recent years. One of the principal difficulties in implementing the plans is the lack of adequate trained personnel at all levels. Efforts are being made to overcome this handicap by taking help from abroad. Dr. Deshmukh stated that "fairly generous assistance" had been received from foreign countries like the U.S.A., Norway and F.A.O. in the development of fisheries and marketing of fish.

Simultaneously with the schemes for increasing the production of fish, the necessity for improving the lot of the fishermen who are leading a hand-to-mouth existence deserves consideration. The vast majority of them depend on middlemen for meeting their domestic needs and securing their production requisites. Very often they are in debt and have to pledge their catch in advance. Mr. Sri Prakasa, the Madras Governor, therefore, rightly stressed that the Conference should not overlook the human aspect of the problem and should devote its attention to those who caught fish, braving the seas and the weather.

The various methods for increasing fish production, which were considered at the Conference, included development of inland fisheries, extension of the area and time of operations both within and outside the coastal belt by installing engines to boats and introducing more suitable types of mechanised craft, marketing and storage facilities and development of research. For the development of inland fisheries, efforts have been made in almost all States to introduce fish farming on a large-scale. A large variety of fish suitable for cultivation in ponds and other impounded waters are available in the country. Special studies are being made on these species at the Central Inland Fisheries Research Station at which is also arranging to supply fish seed to the deficit States. The large reservoirs which are being constructed in connection with the river valley projects, as well as the numerous village ponds and tanks, offer good scope for development of fisheries. For instance, the Mettur reservoir in Madras, it is stated, can now produce about 5 tons of fish per day. Similar work has been initiated or is being planned for a number of other reservoirs. In their plans, the States have provided about Rs. 5 crores for the further development of inland fisheries alone.

In sea-fishing, mechanisation of existing craft in Bombay has resulted in a three- or four-fold increase in catch. India has received much assistance from the F.A.O. experts and the Norwegian Foundation in the matter of designing improved types of boats and fishing from powered boats. By using such equipment, some maritime States are reported to have achieved satisfactory results. Exploratory fishing with trawlers, conducted by the Central Government from Bombay and by West Bengal Government from Calcutta, has given much-needed information on the fishing grounds and fishing season. It is now proposed to establish more such stations on both east and west coasts.

The problem of marketing of fish is a rather complicated one. Co-operative marketing has not made much progress on account of the poor financial condition of co-operative societies. Efforts are being made to organise multi-purpose co-operative societies for improving the socio-economic conditions of fishermen and assisting them to undertake co-operative fish marketing. Attention is being given to the needs of the industry for transport and storage facilities. Under the Indo-Norwegian Project co-operation programme, a fishing community development project has been established in Travancore-Cochin and is functioning successfully in improving the economic, health and sanitary conditions of the fishermen community in the project area. The Government is setting up a number of fishery training centres in the country to provide the necessary technical personnel for implementing the various activities.

The Madras Governor suggested that the method of "closed sea" by which years ago fishing was allowed only during particular seasons should be reintroduced so as to protect various species of fish. Deep sea fishing stations are now functioning on the west coast in Cochin, and on the east coast at Visakhapatnam. Research in fish technology is being carried on by the State Governments of Bombay, Madras, Orissa, Travancore-Cochin and West Bengal. It is proposed to establish a central fisheries technological research institute during the second Plan to carry out investigations into not only the various aspects of the industry but also the utilisation of fish and other marine products and for establishing commodity standards and grades for marketing and inspection. In this connection, the Conference did well to recommend the establishment of a Central Board of Fisheries, with a standing committee to increase and co-ordinate fisheries research and developmental action in the country.

INDIAN GOVERNMENT AUDIT

WHY AND WHAT FOR?

By K. Ramamurthi, M.A. (Econ.)

CERTAIN remarks of the former Union Finance Minister over the question of audit of the Life Insurance Corporation by the Comptroller and Auditor-General of India and some of the recent criticisms of the function of audit by the American Expert on Public Administration, Dr. Paul H. Appleby, have necessitated a careful re-appraisal of the role and functions of audit. Nobody can cavil at the latter's valuable suggestions to reform the Indian administrative structure, and they are really worth deep study and speedy implemention. It is difficult to disagree with the learned Doctor when he says that "there is no lack of idealism or great vision in India or its Government but far too much of the dynamism and imagination characterising the setting up of objectives is smothered in procedures dominated by small thinking. It is as it should be, as we have with relentless selectivity winnowed out the grain and retained the chaff only of the administrative procedures of the British regime. In keeping with the spirit of the times, the whole frame work, therefore, requires thorough overhauling and reorientation. In order to suit the socialistic pattern of society which we envisage, the complicated and differentiating rules and regulations should be drastically revised and simplified. It is heartening to find that this process is already under way. Apart from all these reforms the choice and training of the right type of men to man the administrative machinery is also paramount. That the right type of men cannot always be had through the medium of competitive examinations only is also an accepted fact in advanced countries.

As the Planning Commission have succinctly put it in their Second Five-fear Plan, "If the administrative machinery, both at the Centre and the State, did its work with efficiency and integrity and with a sence of urgency and purpose, the success of the Second Plan would be fully assured. Thus, in a very real sense, the Second Five-year Plan resolves itself into a series of well-defined administrative tasks." It is in this context that Dr. Appleby's suggestions are most valuable and interesting. "The extraordinary evasion of individual responsibility" and the "tempo in which a calendar has more relevance than a clock" should, of course, give place to a sense of urgency and greater individual responsibility for decisions and actions at all levels of administration.

Controversial Ground

But it is only in his appraisal of the functions of the Comptroller and Auditor General of India that Dr. Appleby treads a rather unfamiliar and a somewhat controversial ground. Anyone familiar with the nature, significance and achievements of audit in the past and the present would think twice before subscribing to the banal view that the function of audit is a strictly negative one. It is, of course, a fact that the Government audit is a financial audit and not an administrative audit and that audit criticism is limited to financial criticism based on the accounts. It is, however, the duty of audit to bring to notice wastefulness in public administration and infructuous expenditure. Dr. Appleby's view that "it is a necessary but a highly pedestrian function with a narrow perspective and very limited usefulness" cannot be substantiated. One has only to glance through the pages of Audit Reports on Appropriation Accounts to have an idea of the innumerable cases of misappropriation of public funds and infructuous expenditure reported by audit as a result of its findings. The maintenance of a high standard of public financial morality and sound financial administration has been the constant endeavour of audit all along. Such a view as that of Dr. Appleby does not envisage the fundamental object of an audit department which is to secure value for the tax-payers' money by seeing that expenditure is not irregularly and wastefully incurred. Anyone interested in productivity, that is, the best possible utilisation of resources cannot fail to appreciate the role of audit and to accord to it the position of honour and prestige it deserves. It is not, therefore, surprising that Parliament has attached due importance to the role of the Comptroller and Auditor-General of India and accorded to him the status of an independent constitutional authority.

If the work of enforcing economy is to be done with efficiency, human nature being what it is, it cannot be left to those whose power and reputation depend upon spending; it must be given to somebody else to do whose whole work it will be and whose power and reputation will depend upon his efficiency in economising. Hence the need for a division of functions and thus, out of the three agencies of financial control, audit functions in a dual role both on behalf of the Executive (Finance Ministry/Department) and on behalf of the Legislature/Parliament.

In spite of the fact that it has been saddled all along with the executive responsibility of keeping accounts in Civil and Posts and Telegraphs Departments, much has been done by audit to focus attention on possible sources of leakage of public funds and to pinpoint irregular practices. The role of audit has been the positive one of suggesting and helping to take corrective action in the light of past experience and not merely a negative or pedestrian one of watching the mere application of rules and

PLANNING COMMISSION PREOCCUPIED WITH PRODUCTION

FOOD AND COTTAGE INDUSTRIES FRONTS RECEIVING GREAT ATTENTION

By A Special Correspondent

NEW DELHI, *25th September*

DELHI LETTER

WHILE by and large greater importance has been given to the development of heavy industries in India during the second Five-year Plan, practical experience appears to have convinced the Planning Commission and other experts that they could not afford to ignore the food front. This is particularly so, when repeatedly the Prime Minister and other Ministers in the Central Government have emphasised the urgency of increasing the output of foodgrains by about 35 per cent. to 40 per cent. more in the coming five years. The Prime Minister has also made it perfectly clear that, in his opinion, if all the people co-operated, our present troubles would not be so serious and we could produce a large surplus quantity of food and other agricultural produce so as to pay for what we import from abroad. He has also said that, instead of paying *for* food, we should pay *in* food for the machines and other materials that we have to get from abroad.

Both in theory and practice, to quote the Prime Minister again, there appears to be not the slightest difficulty in increasing our agricultural production by 40 per cent. in the next five years, not by mechanised methods but by adopting simple things, with such things as better seeds, better manure, better implements, simple and better ploughs and all that and by paying a little more attention to some of the modern knowledge.

Shift in Emphasis

It appears that ever since this statement by the Prime Minister, the Planning Commission has been trying to shift the emphasis from one aspect of the Plan to another. While the Ministers in charge of Heavy Industries, Production, and Iron and Steel have begun to give more importance to the manufacture of plant and machinery and to the other vital industrial raw materials, the Planning Commission has been attempting to re-orient the developmental schemes, particularly in regard to small-scale and other industries. This aspect is becoming almost daily evident to the onlooker going around the offices of the Planning Commission. Since productivity has become the keynote of the Government's policy, the Government is anxious to bring about greater production as quickly as possible, in order to offset the deleterious effects of inflation. It is from this angle that the Prime Minister decided, only last week, to create a separate ministry to be in charge of Community Development Projects and National Development Schemes and to place the Ministry under the care of Mr. S. K. Dey. Mr. Dey has already won sufficient reputation and praise as an organiser and it is expected that the mantle of organising agricultural production and bringing about quick results will fall on him. As a matter of fact, Mr. Dey has already taken to himself this serious and difficult task. In case he is able to bring about the desired results, it will be another achievement to his credit.

Stress on Co-operatives

The present thoughts of the Planning Commission are revolving on the axis of Community Development Projects and National Development Schemes. The Commission now believes that, in any case, these Community Projects, if given further stimulus and encouragement, would be capable of yielding encouraging results in the not distant future. The scope of the Community Projects is being developed in such a way as to include in the schemes the development of agricultural projects, irrigation plans, cottage and small-scale industries, etc. The Commission hopes to generate much more local enthusiasm among the people, with a view to achieving greater results, particularly in the development of small-scale industries, through the system of industrial co-operatives and expansion of irrigation schemes, through community labour and Governmental assistance and guidance. As a matter of fact, the Prime Minister has mentioned the urgent need for developing co-operatives, particularly agrarian co-operatives.

As days pass by, it appears that conviction is growing with the Government to the effect that small and medium irrigation schemes are capable of giving greater and quicker results than many of the grandiose multi-purpose projects. For instance, during the first Five-year Plan period, the additional area irrigated by major and medium irrigation works is put at 6.3 million acres, whereas the area irrigated from all sources in 1950-51 was 51.5 million acres. An addition of 10 million acres is estimated to be irrigated from minor irrigation works alone during the first Plan. Thus, it is felt that, whereas the major and medium irrigation projects during the first Plan were able to bring only 6.3 million acres under irrigation, the minor irrigation projects alone were able to achieve greater credit to the extent of bringing under irrigation nearly 10 million acres. In terms of expenditure also, the first Plan provided for seven irrigation projects costing more than Rs. 30 crores; six irrigation projects costing between Rs. 10 crores and Rs. 30 crores; four costing between Rs. 5 crores and Rs. 10 crores; and 50 costing between Rs. 1 crore to Rs. 5 crores each. All these were major and medium irrigation projects, while there were 200 minor irrigation projects, which together cost them a little less than Rs. 1 crore. Still what has been the result? The achievement of the minor irrigation projects has been telling. Therefore, the Planning Commission has gradually come round to the view that there is great need for a careful balance between the major and the minor irrigation schemes, which are both complementary in character and scope.

Now that the Government of India wants to increase agricultural production by 35 to 40 per cent., the Planning Commission has directed all the State Governments to give greater emphasis to the medium and minor irrigation schemes. With a smaller expenditure, the Government hopes to bring a larger area under irrigation. At the same time, it believes that these schemes can also generate greater local enthusiasm among the people, who will no doubt be asked to co-operate with Government officials for achieving greater and quicker results. In these respects, the Government feels that Community Projects and National Development schemes, if expanded to wider areas and given proper guidance and direction, will be able to show impressive results during the coming years.

The necessity for augmenting production has become an unavoidable feature with the Government and this is being reflected not only in the agricultural sector but in the industrial sector as well. In the Agricultural sector, for instance, besides increasing production of foodgrains, the Government is now compelled to have a greater output of raw cotton. Now that the Government's target of textile production is being stepped up by another 1,000 million yards, the necessity for increasing raw cotton production to about 65 lakh bales has become imperative. Since certain Government spokesmen have been trying to impress upon the public by saying that production of yarn by Ambar Charka will increase considerably, they have to make available larger stocks of staple cotton for several cottage industries projects also.

Cottage and Small Industries

With a view to giving a fillip to small-scale industries, the Government has decided to set up near Delhi a workshop for the manufacture of quality machine tools designed for use by small-scale industries. The West German Government has offered to assist the Government of India in this respect both by giving equipment and by supplying necessary technical personnel to operate the workshop. This decision, it is gathered, has been taken by the Government, because of the recent trends of marked shortages of certain consumer goods and the consequent perils of inflation. Plans are also under way for training 200 officers in service institutes to be built by Government. As many as 40 foreign experts will be recruited as part of the drive to secure an adequate number of technical personnel. These small-scale industries, it has been planned, would be distributed in different regions which provide special facilities for particular type of industries. As many as 30 extension service centres are expected to benefit by this arrangement. These extension service centres alone would cost the Government nearly Rs. 91 lakhs.

Although the Government has earmarked about Rs. 200 crores to be spent on cottage industries in the coming five years and the Prime Minister has stated that cottage industries should be located with increased amounts in case they showed greater absorbable capacity during the Plan period, the present indications are that there is not much possibility for the enlargement of this sector of the industry. As a matter of fact, doubts are being expressed in informed official circles as to whether this sector of industries will be able to absorb even the allotted modest figure of Rs. 200 crores. Nevertheless, the Government is anxious to give a fillip to the development of cottage industries in almost all the States.

It is a well-known fact that the Punjab has already earned great reputation through the development of cottage industries during the last few years. The causes for this might be many; but it must be mentioned here that the refugees have displayed a remarkable zeal and adaptation to set up well-sized cottage industries with small beginnings. It is this sort of zeal and enthusiasm which the Government wants to see spreading to other States. Already, the spokesmen of small-scale industries have been impressing upon the Directors of Cottage and Small-scale Industries of the States that they should show greater initiative and encourage the local people to take up to the development of these industries.

Of course... it's wrapped in

TRAYOPHANE

The new name for Trayons Transparent Film

★ TRAYOPHANE makes your products look *smart*, elegant!

★ Its perfect transparency means greater *visibility!*

★ TRAYOPHANE *protects* your product from dust, dirt and grease!

★ The vivid, brilliant colours of TRAYOPHANE make your sale *easy!*

★ And TRAYOPHANE is *cheap* too! A sheet 30" × 20" costs less than six pice! It's available in rolls and sheets.

ECONOMIC IMPLICATIONS OF USING THE CAPE ROUTE

ADVERSE EFFECT ON EASTERN NATIONS' DEVELOPMENT PLANS

By Patrick Seale

THE Suez Canal crisis is at its peak. Decisions taken in the next few days may vitally affect not only the future of the waterway, but also the rate of economic development of much of the Middle East and Asia. A vast change in the pattern of world trade and communications is being planned which would mean at least a slow death for Egypt's canal zone—now the country's most prosperous area—a sharp fall in revenue for the Middle Eastern oil-producing countries, and a severe dislocation of the industrial plans of India, Pakistan, and Ceylon.

The issues are clear-cut. President Nasser has not budged from his thesis that the management and control of the Suez Canal must be his alone. Faced with this display of cutdated nationalism, the traditional users of the canal are unwilling to trust their vital trade to Colonel Nasser's political good faith and managerial competence. They have, therefore, made plans which, at substantial short-term cost to themselves, will at least free them from Egyptian pressure.

President Nasser has fatally underestimated two factors. The first is the importance of establishing a basis of confidence if economic collaboration is to be successful. The second is the great ingenuity and flexibility of the Western industrial and trading machine in adapting itself to outside dangers.

In the last few weeks, evidence of this flexibility has been reported almost daily, and plans to by-pass the Suez Canal in favour of the route round the Cape of Good Hope have been gathering momentum. Committees in Europe and America have made detailed arrangements to divert Western Hemisphere oil to Europe should a drop in Middle Eastern supplies follow a boycott of the canal. Washington estimates that U.S. surplus oil capacity could easily meet these needs. Some 26 U.S. reserve-fleet tankers could be brought into transatlantic service.

Construction of supertankers—too large for the canal, in any case, and capable of rounding the Cape economically—has been given greater urgency. The latest reports suggest the U.S. Government would contemplate subsidising the building of giant tankers. Already some 300 such tankers are under construction in world shipyards. Britain is giving active attention to a £13,000,000 plan to build at Milford Haven, Wales, a terminal capable of accommodating such giants.

Meanwhile, atomic-power plans are to be speeded to relieve undue dependence upon oil. Arrangements for the provisioning, bunkering, and watering of ships diverted round the Cape are being finalised. Plans to provide more bunkering points in Durban harbour have been put into operation. Dakar, in French West Africa—claiming 30 berthing-places—has been reminding transit ships that it is one of the cheapest refuelling ports, because of low freight charges, for carrying oil from the refineries of Curacao, in the Caribbean. But what of the effect of these changes on Egypt's Middle Eastern and Asian friends? Excepting Egypt herself, it is for these countries that the Suez crisis carries most menace.

Cargoes to India

Almost half the southbound cargoes through the Suez in 1955 consisted of machinery and manufactured metals. India, Pakistan, Burma, and Ceylon received by that route 1,250,000 tons of machinery and metal manufactures. Almost 700,000 tons went to South-East Asia, and a slightly smaller amount to the Persian Gulf States. Other southbound cargoes included 2,500,000 tons of fertiliser—largely destined for Asian agricultural programmes.

India's second Five-year Plan, now in its early stages, is threatened with dislocation, if ships carrying vital industrial machinery for her are forced round the Cape. More than 65 per cent. of India's foreign trade passes through the canal, as opposed to only 18 per cent. of Britain's. The important point is that only a fraction of India's trade is carried in Indian ships. Foreign tonnage is mainly provided by British, Norwegian, Dutch, Japanese, and the U.S. shipping lines.

Reports from India estimate that about 90 per cent. of industrial equipment, steel plant, and other basic accessories for her second Five-year Plan is yet to be shipped. In the short term, the port of Bombay and the Indian economy are likely to suffer a severe damage through rise in freight rates, delay in the dispatch and delivery of foreign mail, and dislocation of passenger traffic due to vessels making transhipment at Colombo.

All these factors apply equally to the neighbouring countries. Passengers to the Far East will be hit by the 25 per cent. surcharge that the P. & O. line has just introduced as a result of the Cape diversion, while Colombo port itself will lose an estimated £10,000 of business for every large liner that by-passes it on its Cape route to Australia.

Strain on Egypt's Economy

But, of course, the port to suffer most will be Port Said. Once one of the busiest harbours in the world and the subject of ambitious development plans by the Egyptian Government, Port Said is now threatened with decline. Not only are local business men, shipping agents, and suppliers faced with bankruptcy, but the major effect of the U.S. support for the proposed canal users' association will be to deny Egypt the dollars now being paid to her "under protest" as canal dues. Without this source of hard currency—and denied the use of sterling—Egypt's slender reserves will be under great strain.

Apart from countries dependent for development and trade on Western equipment and shipping, the main victims of President Nasser's intransigence will be the Middle East oil producers. The Cape route could carry less than half as much oil as the canal has been carrying. The U.S. oil producers are eager to make up this difference. The net result would be a cut in Middle Eastern output. It is estimated that there would be a drop of nearly one-third in total Middle Eastern oil output and royalties, and of about half in those fields that depend most on the canal outlet.

Support to President Nasser is liable to prove very expensive to the Middle East, when it is realised that the total oil revenues of the Arab States last year exceeded $1,000 million, of which about $880,000,000 went in direct payments to Governments. But more important even than the short-term loss of income for the Arab Governments is the loss of confidence which President Nasser's policy has had on the investing public the world over. The victims of this policy are the underdeveloped countries—Egypt prominent among them—who must depend on foreign capital for their development for many years ahead.

Experts of the European Coal-Steel Community have declared that an interruption in the Suez Canal traffic need not cause an oil shortage in Western Europe. A study released by the Community's High Authority said that, if the Canal were closed, West Europe's oil needs could be met by (1) re-routing 20 million tons a year from West Asia round South Africa, (2) increasing imports from North America and Venezuela by 30 to 40 million tons a year and (3) using existing pipelines from West Asia to the Mediterranean. Already 40 million tons of oil by-pass the Suez Canal through pipelines every year. The experts said, however, that tankers now held in mothball reserve in the United States might have to be recommissioned to ensure additional shipments from the United States and Venezuela.

If pilot-scale operations, now under way, are successful, a culture pearl industry will soon be established in north-west Australia which will, it is expected, earn substantial amounts of dollars. The project is jointly sponsored by Australian, American and Japanese interests, and a culture farm has been established on the south-east coast of Augustus Island, about 200 miles north of the port of Broome, Western Australia. A Japanese firm, the Nippon Pearl Company Ltd. of Tokyo, will provide about half the capital, specialists, and a specially designed vessel to transport live oyster shell from Australian luggers to the culture farm. The bulk of the culture pearls will be exported to the United States.

THE SKELETON IN THE CUPBOARD

From Our Own Correspondent

LONDON, *22nd September*

LONDON LETTER

MR. Macmillan's visit to New York for the meeting of the World Bank and the International Monetary Fund has inevitably started up again whispers of devaluation. And the fact that the New York meeting is to be followed by one of the Commonwealth Finance Ministers in London will add savour to the talk! Fingers are being pointed at the August gold loss—admittedly largely the result of Suez—and the likely affect on this country's invisible payments of greatly increased shipping charges if much traffic has to be diverted round the Cape. Although the Chancellor declared in a speech to his Constituents this week that "after all we are not doing so badly with our present mixture of controls and freedom," this is not likely to still suspicions and may be rather taken as indicative of the Chancellor's blindness to the hidden crisis.

As over the Suez, so over the attitude to Labour, Government supporters are divided. There are the hard-headed men who say that the dismissals of men in the engineering and allied industries for the first time since the war, are going to give employers the whip hand again to talk back to the Trade Unions if there are any further demands for wage increases. But the Chancellor himself is not of this persuasion, as evidenced by the conciliatory tones he is at present using in a forlorn attempt to woo back his wandering Trade Union flock. He is calling out to them that, in spite of the hot temper of Brighton, really he and the Trade Unions all want the same things. What we wanted, he said, was surely "a free economy sensibly operated and subjected to the minimum amount of control." This is certainly what Mr. Macmillan has wanted but what does it mean? Mr. Macmillan thinks that it may mean some control over building (strange talk this from the man who boasted he would achieve 300,000 houses a year and did it by removing controls on building) and some more on imports. But his heart is not even in these two sops. He is not convinced that building controls will do any good and he is afraid that import controls may cause more unemployment than they prevent by robbing industry of essential materials.

He barely referred to his famous monetary controls—has he lost faith in them?—but he made it clear that his real belief lies in the restraint of wage claims. In a telling sentence he pointed out that, since 1945, production has increased only about 30 per cent. while money incomes had gone up by about 90 per cent. That was the explanation of the rise in prices and of inflation. But, in his view, wage earners had had the best out of this development, since, in the last five years alone, workers' money incomes had gone up by about 45 per cent. while prices had increased about 25 per cent. He calculated that wage earners had accordingly received a net gain in real wages of 15 per cent. in five years. The Chancellor argues that it is common ground with him and the Trade Unions that increased prosperity can only come about through increased production.

The Chancellor is not prepared to do more than let things take their course, maintaining his credit squeeze and may be, in due time, paying lip service to the ideas of some controls over inessential building and inessential imports. It has even been suggested that he will look again at the idea of a capital gains tax and may even make some further attack on business expenses. But what his opponents consider necessary are physical controls to force investment into the export industries and away from inessentials. All this is regarded as too drastic by Mr. Macmillan—if only the workers are sensible about wages everything will be all right. He has misread the lesson of Brighton, when the Trade Unions have, for the first time since the Conservative Government took office, turned their backs on co-operation with that Government. The Trade Unions want tough measures that attack speculative gains whether in the commodity markets or on the Stock Exchange. They want measures that hurt non-Trade Unionists as much as the Trade Unionists—then and then only will they accept wage restraint. It remains to be seen whether the results of the Chancellor's two forthcoming Conferences will force him to do something about his skeleton in the cupboard.—*All Rights Reserved.*

WORLD BANK COMPLETES TEN YEARS

RECORD NET INCOME IN 1955-56

THE year ended 30th June 1956, marks an important landmark in the history of the International Bank for Reconstruction and Development, familiarly known as the World Bank, in that it marks the completion of not only another year of successful operations but also the first decade of the Bank's very useful service. As if in commemoration of the occasion, the Bank earned a record net income of $29.2 million for the year, in which its activities were further extended. The number of countries and territories which received loan assistance from the Bank increased from 14 (in the previous year) to 20 and the number of loans from 20 to 26, although the amount of loans granted was slightly lower at $396 million, as against $410 million in 1954-55. Its membership advanced from 56 to 58, following the admission of Afghanistan and Korea to its fold. Consequently, the subscribed capital also rose from $9,028 million to $9,050.5 million.

In establishing its position in international finance and widening the scope of its activities, as the Directors point out in their report, the Bank has been greatly helped by the striking improvements which have taken place in the general economic environment. During the year under review, there were signs of a slight slackening in economic growth in the second six months; nevertheless, over the world as a whole, more people enjoyed more real wealth during the year than at any previous time in history.

As stated earlier, the Bank granted during the year ended 30th June last 26 loans to 20 countries and territories for an aggregate sum of $396 million, bringing the total loan commitments since the commencement of operations in 1946 to $2,720 million in 42 countries. The notable features of the Bank's lending operations during the year were: (1) there was increased activity in Asia, where the total amount lent was $166 million; (2) the size of individual projects assisted was larger than in the previous year; and (3)the Bank supported to a greater extent development programmes than single projects.

Six New Borrowers

Of the 20 countries and territories to which loans were granted during the year, six were new borrowers—Algeria, Burma, Guatemala, Haiti, Honduras and Lebanon. Seventy per cent. of the year's lending was for the development of electric power and transportation, and the remainder for industry and agriculture.

A total of $175 million was lent for electric power projects which will add more than a million kilowatts to generating capacity in eight countries. The largest of these was for the Kariba Gorge project in the Federation of Rhodesia and Nyasaland, where the Bank loan was $80 million, the largest yet made for a single project. The seven other power loans were in Algeria, Lebanon, Finland, Norway, Ecuador, Nicaragua and Uruguay.

Loans for transport improvements—roads, railroads and ports—amounted to $127 million, of which $52 million was lent for roads in Colombia, Guatemala, Haiti, Honduras, Panama and Peru. Loans granted for roads were mainly for the purpose of maintenance; for the Bank believes that "it can often contribute most effectively to economic growth in underdeveloped countries by first assisting in the establishment, equipment and training of efficient road maintenance services, rather than by financing new construction." Three loans aggregating $43 million were made for railway improvements in Thailand, Burma and South Africa, and three loans for a total sum of $32 million for improvement or reconstruction of the main ports of Pakistan, Burma and Nicaragua.

A total of $93 million was lent for industry in India, Japan and Pakistan. Included in this amount was a $75 million loan to the Tata Iron and Steel Co., Ltd. of India, the largest loan the Bank has ever made for industry and the largest to an Asian country. Several of Japan's key industries were assisted by the Bank with loans for their modernisation programmes, and, in Pakistan, the industrial loan was made to a pulp and paper mill which uses local bamboo as its raw material.

A part of the $27 million-loan for a multipurpose project in Lebanon was allocated for the construction of irrigation works which will permit the development of agriculture along the coast, and a $1.5 million loan was made in Nicaragua for the purchase of agricultural equipment and materials.

The Bank's net income for the year was the highest yet recorded; it amounted to $29.2 million, as compared with $24.7 million in the preceding year. The total reserves rose to $228 million as at the end of the year. Repayments of loan principal, including some payments made in advance, amounted to over $48 million during the year. These included both payments to the Bank and to investors who had purchased parts of loans from the Bank's portfolio. Disbursements on loans were $284 million, a slight rise over last year, bringing total disbursements to $1,964 million. About 40 per cent. of the year's expenditures were in Europe, 50 per cent. in the United States and the remainder in Canada and other countries.

Total additions to lendable funds amounted to $253 million; of this amount, $129 million was made available by member countries in new releases for lending from their subscriptions to the Bank's capital, an amount three times larger than was released last year. The Bank's annual report emphasises the need for further unrestricted releases of these subscriptions.

Another important source of loan funds was the sale of parts of the Bank's loans to banks and other investors. While this year's total of $72 million fell below last year's record figure of $99 million, because of tighter market conditions, there was a larger number of participations in loans at the time they were made. These participations contributed $14 million toward total sales and occurred in 18 of the 26 loans made during the year. The Report points out that investors outside the United States have become increasingly interested in the purchase of parts of Bank loans, which now aggregate $276 million; 57 per cent. has been purchased by investors outside the United States, as compared with 43 per cent. by United States investors.

The Bank interest charges are based upon the estimated cost of borrowing by the Bank at the time a loan is made. The general rise in money rates in the world's major capital markets, therefore, led to increases in the Bank's interest charges toward the end of the fiscal year, returning them to the level of late 1953. Interest on long-term loans rose to 5 per cent., an increase of ¼ per cent.; on shorter-term loans, the increases were between ¼ per cent. and ½ per cent. Corresponding changes were made in the prices at which the Bank sold loans from its portfolio.

The Report cites illustrative examples of progress made during the year by the Bank's borrowers in carrying forward projects and programmes financed by loans made in previous years. A 200-mile rail link was completed to provide a land-locked area of the Federation of Rhodesia and Nyasaland with a new outlet to the sea, thus expediting foreign trade. About half the Federation's copper exports already are being carried on the new rail connection. The French West Africa was receiving final deliveries of diesel locomotives which are replacing steam locomotives and reducing operating costs by about $4,500 per locomotive per month. The main construction works were completed during the year of a barrage and navigation lock on the Chao Phya, Thailand's major river artery. This project will eventually provide irrigation for about 2¼ million acres of land. The first natural gas pipe line in South Asia came into operation in West Pakistan. The gas is now being delivered from the Sui gas field to industrial consumers in the Karachi area, 350 miles to the south, and consumption is rising. This new source of energy is of particular importance to Pakistan, which had been dependent almost entirely on imported fuels. In Iraq, a barrage across the Tigris River was completed in time to prevent flood damage to Baghdad and the surrounding area during the season of high water in the spring of 1956. The Bank's loan for this project was repaid early in 1955, in advance of the due date. In Belgium, the Baudouin Lock, at the approaches to Antwerp, was completed. It can handle four 10,000-ton vessels at a time and has eliminated costly delays to shipping using the port. The construction of a network of good primary roads in Nicaragua is now nearing completion. The opening of a new road link has already reduced by three-quarters the cost of transporting coffee to the Matagalpa market from the surrounding hills. In Peru, new grain handling and storage equipment came into operation in the Port of Callao. This completed a modernisation programme which has made Callao one of the most efficient ports in Latin America.

Advisory Services

During the year, the Bank continued its advisory services to member countries, chiefly by means of advisory missions on particular aspects of development. The Bank also stationed resident representatives in several countries, and helped other member countries to obtain specialists for economic development work.

In its discussion of the technical assistance activities of the Bank, the Report states that the effectiveness of the Bank's general survey missions, now fourteen in all, is becoming more apparent. While total results cannot be assessed, a number of specific accomplishments can be attributed in whole or in part to the work of the missions, such as the highway programmes in Colombia and Honduras, railway rehabilitation in Jamaica, the passage of income-tax legislation in Nicaragua, changes in the education programme in Malaya, the reorganisation of development institutions in Nigeria, the preparation of a five-year investment programme in Guatemala and the reorganisation of public debt administration in Syria. According to the Report, one of the most important results of the general survey missions is the influence they have exerted in favour of a co-ordinated, long-term approach to development problems.

The Economic Development Institute, sponsored by the Bank with the financial support of the Ford and the Rockefeller Foundations, held its first six months' course during the year. The Institute aims at contributing to an improvement of the quality of economic management in Government by gathering together selected groups of officials from less developed countries for each course of Seminars. The first course was attended by 14 senior economic officials from as many member countries or territories in Latin America, Asia, Africa and Europe. The second course, with about 20 participants, will begin next month in Washington.

The International Bank for Reconstruction and Development has granted a loan of $3 million to the Central Bank of Costa Rica. The loan is for a term of seven years and bears interest at 4¾ per cent., including the statutory commission of 1 per cent. Amortisation of the loan will begin on 1st October 1958.

The loan is the first one to be granted by the Bank to Costa Rica and is guaranteed by the Government of that country. It will be utilised by the Central Bank of Costa Rica for granting loans for the development of agriculture and light industry. The Chemical Corn Exchange Bank of New York is participating in the loan without the World Bank's guarantee, to the extent of $366,000 representing the first maturity and half of the second maturity which fall due on 1st October 1958 and 1st April 1959, respectively.

WORLD PAYMENTS DEVELOPMENTS

I.M.F. REPORTS IMPROVEMENT

THE Annual Report of the International Monetary Fund for the year ended 30th April 1956, reports continued improvement in the international payments situation. Progress in extending multilateral trade has been maintained by further relaxation of restrictions, increased transferability of important currencies and lessening resort to discrimination to correct adverse balance of trade. These favourable developments have taken place in the context of increased industrial production and trade which have by now recovered from the dislocation caused by the Second War. For many agricultural products, the problem during the year under review was one of surpluses, not of shortages. This increased economic activity was accompanied by strong inflationary pressures in many countries, not all of which have been able to keep these pressures under check. The early post-war reluctance of Governments to take preventive or corrective internal measures has partly died down; there has been a gradual awareness of the utility of flexible monetary and fiscal policies.

Three important facts must be taken into account while assessing future developments in the field of international payments. First, the external expenditure of the U.S. Government, which has, in recent years, tended to become more stable, still remains the main prop to the improvement in the world balance of payments position. Since 1950, the U.S. Government expenditure abroad has provided nearly twenty-five per cent. of the dollars available to the world; in 1955 alone the U.S. Government spent $4.8 billion abroad. While one need not fear drastic changes in the U.S. aid programme in the near future, it would be dangerous to other countries to base their foreign trade policy decisions on the assumption of an uninterrupted flow of such aid.

Secondly, the export earnings of countries mainly exporting primary commodities have been subject to wide variations and these countries ran into balance of payments difficulties in 1955. They have to strike a balance between the need for building up external reserves and the need for accelerating economic development by utilising a larger proportion of such reserves.

Agricultural Surpluses

Thirdly, there is the problem of agricultural surpluses created, partly at least, by policies designed to give support to farm prices. The policy of the U.S., in particular, is of great consequence to other countries who may, on the one hand, be benefited by the sale or grant of these surpluses by the U.S. for development projects, and, on the other, may be hit by the loss of their own export markets or by fall in the prices. The general policy of the U.S. Government has, however, been to consider the interests of other countries before disposing of agricultural surplus.

World industrial production outside the Soviet area rose by 10 per cent. in 1955. This increase was the net result of different rates of increase in different countries. In the U.S.A., for instance production rose by 11 per cent., while the U.K. registered a rise of just 9 per cent. The change in relation to 1953 would, however, be more favourable to the U.K. Referring to this development the I.M.F. Report says:

"The expansion was made possible not only by an increase in employment, which set the stage for substantial wage increases, but also by an increase in productivity, which helped to moderate the effect of these increases on prices. In the United States, output was recovering from the level to which it had been reduced by the 1953-54 recession and the recovery was relatively unhampered by supply difficulties. In Western Europe, the expansion was a continuation of an already flourishing boom, and in several sectors tended to come up against limitations of productive capacity necessitating greater reliance on imports."

There was also considerable expansion both in the volume and the value of world trade. The volume of imports of industrial countries as a whole rose by over 12 per cent. The high degree of demand pressure and the lessening severity of import restrictions in the O.E.E.C. countries were responsible for a higher rise—14 per cent.—in their imports than in those of the U.S.A., where with a slower rise in demand and a larger part of it being met internally, the imports rose by just about 10 per cent. over the previous year.

Two important features distinguished the foreign trade of the industrial countries during 1955. First, this was a period of rising production and incomes; therefore imports of manufactures rose more sharply than imports of other commodities. Secondly, there was a tendency among the industrial countries to trade among themselves in semi-manufactures and foodstuffs, thereby reducing the share of the primary producing countries in world trade. Since 1953, the tendency of exports of industrial countries to rise more sharply than those of primary countries has been accentuated. Expansion of agricultural production in industrial countries is an important contributing factor towards this phenomenon. Other factors like substitution of synthetic for primary raw materials and the declining importance of food in total consumption have also contributed to this phenomenon.

Exports and imports of primary producing countries as a whole increased by 6-7 per cent., though this increase was unevenly distributed among different countries of the group. Commenting on the gains of trade, the I.M.F. Report states that, with the rise in world demand during the year, the export proceeds of the countries exporting tropical foodstuffs actually declined, while those of countries exporting other agricultural products increased only slightly. Oil producing countries and countries of diversified exports, exported roughly in proportion to world industrial production and world trade, while countries exporting rubber and non-ferrous metal increased exports at a rate greater than that of any but the most exceptional industrial countries.

Thanks to the "thaw" in the cold war, trade between the U.S.S.R. and its satellite countries, on the one hand, and the rest of the world, on the other, expanded considerably during the year under review, though much of such trade took place within the framework of bilateral arrangements. Exports of the Soviet area rose by 25 per cent. and imports by 10 per cent., which rate resembles the rate of growth of trade of industrial countries rather than of primary countries. Trade of the Soviet area with the primary producing countries did not register any significant change, the major part of the increased trade being with industrial Western Europe.

Reporting on the broad trends of exports of industrial countries, the I.M.F. Report says:

"There were large changes from 1954 to 1955 in the relative positions in world markets of the main countries exporting manufactured products, and in their competitiveness. There appears to have been a broad, though far from perfect, inverse correlation between changes in the shares of these countries in the total exports of important industrial countries, and changes in their relative export prices. In certain countries, demand factors or elements of competitive strength other than price appear to have exerted some influence."

Balance of Payments

An increase of $1.7 billion in gold and dollar reserves outside the U.S.A. and Soviet area, expanding payments surplus of Continental Europe, a decrease in reserves of the United Kingdom and a deteriorating balance of payments position of primary producing countries—these were the broad developments in the world payments situation during 1955. The rise in gold and dollar reserves was not so much due to the rest of the world's payments surplus with the United States as due to other factors such as more current production and private dishoarding of gold. In fact, there was a decline in the rest of the world's payments surplus with the United States during the year under review, thanks to the greater rise in output and income elsewhere than in the United States.

A widespread decline in the severity of dollar restrictions did not result in the expansion of U.S. exports, probably because of the growth of the fundamental competitive strength of other industrial countries *vis-a-vis* the United States. The I.M.F. points out:

"The answer to the question whether a 'dollar problem' may be said to have persisted in 1955 is, to a large extent, a matter of definition. The increase of $1.2 billion in 1955 in the gold and dollar holdings of other countries as a result of transactions with the United States falls short of the sums provided by the U.S. Government to the rest of the world by way of grants ($1.9 billion) and loans ($0.7 billion). Probably, however, only a small proportion of these sums is of the nature of balance of payments assistance and, while some of the remainder may also be temporary, an abrupt decline in the aggregate amount received by the rest of the world as a whole is probably not to be expected. Moreover, a reduction of some of the U.S. special payments to other countries might involve a more or less corresponding reduction of their imports. On the other hand, discriminatory restrictions maintained, though in greatly reduced intensity, on dollar imports probably still have a considerable effect upon U.S. transactions with the rest of the world, the magnitude of which cannot, however, be precisely estimated."

The balance of payments position of the O.E.E.C. countries and Japan showed substantial improvement; but the deterioration in that of United Kingdom exceeded this improvement, resulting in little change of the aggregate position of industrial countries. The mounting surplus of W. Germany in 1953 had threatened the payments position of other countries; in 1955, however, this threat receded, as W. Germany's surplus declined due to increased imports.

The U.K. imports rose more than its exports resulting in the depletion of reserves. In addition to the high demand pressure, flight from sterling due to a temporary loss of confidence contributed to the difficulties of the United Kingdom which were partly offset by a sharp decline in the net capital outflow. That could hardly relieve the pressure on the U.K. reserves as such movement took place mainly within the sterling area itself.

Actually the experience in 1955 showed that capital movements could not be relied upon to mitigate short-term disequilibria in international payments. Differences in interest rates created by the U.K.'s dear money policy did not induce a significant inflow of funds, the inflow being perhaps determined by consideration of exchange risk, besides that of profitability. Canada's relation with the U.S. was of the reverse order, because of the absence of exchange risks. Easy credit conditions prevailing in Canada tended to reduce capital imports from the U.S., where credit policy was firmer. In the second half of the year, Canada also tightened its credit policy, allowing an inflow of funds which prevented the exchange rate from declining further from the low level to which it had been brought earlier.

Corrective Measures

Corrective measures varied according to whether the countries were in deficit or surplus. The former category of countries increasingly used internal and external financial policies in preference to commercial or exchange restrictions. Countries like France and W. Germany, which had surplus accounts, liberalised their imports; besides W. Germany also allowed some degree of monetary expansion. The U.S.A. continued to spend abroad on Government account to offset surpluses on private account.

The primary producing countries were, however, not in a position to use disinflationary policies to offset payments deficit; and there was also disinclination to use import restrictions. Reliance was rather placed on changes in exchange structure or customs duties, only occasionally accompanied by changes in internal monetary policies. Where chronic inflation had led to highly over-valued currencies, resort was taken to devaluation as in Argentina or to flexible exchange rates as in Chile.

Prospects

Prospects for the balance of payments of non-dollar industrial countries depend in the main on two factors—on how far they will be able to keep inflationary pressures within their boundaries under check and how far the U.S. will continue on the tide of boom and, secondly, on the steadiness, if not on the increase, of U.S. Government expenditure abroad. On balance, the I.M.F. feels that, except the U.K., the industrial countries will be able to avoid any substantial deterioration in their payments position.

There will, however, be a slackening in the rate of growth of output and income in these countries which will adversely affect the prices of primary commodities. There is also little reason to expect any general support for primary product prices from an acceleration of inventory accumulation. But there is a likelihood of the supply of some foodstuffs and raw materials increasing.

It is in a situation of this kind that the Fund will continue to strive for a fully multilateral system. The convertibility of sterling is, of course, the key to such a system. The setback received by sterling during the year has made the prospects of convertibility remote. The Fund, therefore, urges its members to diminish the use of restrictive and discriminatory practices, and offers its resources to the membernations for moving towards convertibility or overcoming temporary payments difficulties.

Discussing at some length the balance of payments prospects the Report observes:

"The following considerations suggest that, in looking to the future, a broad distinction should be

(*Continued on page 647*)

UNIFORM STANDARD CONTRACT FOR CLOTH EXPORTS

ALL SALES OF PIECEGOODS BY MILLS TO SHIPPERS COVERED

WITH effect from 1st October next, all exports of cotton textiles manufactured by mills in India will conform to a new uniform standard contract, prepared by the Cotton Textiles Export Promotion Council. The Government of India's acceptance of this Contract was announced by the Textile Commissioner on the 11th inst. The Contract will be applicable to sales of piecegoods for export between mills and the exporters buying for export. Any agreement entered into in accordance with the terms of the Contract shall be binding on buyers and sellers, subject to such requirements as are agreed upon and such variations as become obligatory.

The successful formulation of the aforesaid Standard Contract for export may be said to terminate a long-drawn-out controversy over the issue between millowners and exporters. There have been serious differences of opinion with regard to the nature and content of a contract governing sales of textiles by mills to shippers. It will be recalled that, after considerable deliberation by the Millowners' Association, Bombay, a standard contract form was finally evolved in February 1951. The form, together with the set of special arbitration rules in regard to disputes, was subsequently revised as a result of certain suggestions received from the export trade. The revised form underwent further modifications. Despite these modifications, the form was not found acceptable to all the exporters, many of whom felt that complaints from buyers abroad could not be met and solved satisfactorily on the basis of that Contract. The All-India Exporters' Association, Bombay, prepared its own draft contract for export on the basis of the Millowners' Association's contract. This, however, was not accepted by the millowners.

In view of the lack of agreement over the standard contract for textile export thus, Mr. T. T. Krishnamachari, the then Union Minister for Commerce and Industry, had, on more than one occasion, declared that, if the parties were to fail to come to an agreement, the Government would itself take up the question of evolving a contract. The Cotton Textiles Export Promotion Council appointed a sub-committee to go into the question and prepare a standard contract form which would be acceptable to mills and exporters alike. The Contract which will be enforced with effect from 1st October next has been evolved by this sub-committee.

The Standard Contract stipulates that the quality of cloth should be in accordance with the signed basis sample which the seller is required to supply to the buyer; the minimum number of samples for each consignment is fixed at one full width half-yard sample for five bales of grey cloth; one full width half-yard sample for five bales of coarse, medium and fine bleached dyed printed and fancy goods; one half-yard sample for every two bales of superfine goods. The seller's export packing shall be according to the Textile Commissioner's existing notification. The responsibility for all risks arising from the seller using any labels, trade marks, trade numbers, etc., supplied or indicated or desired by the buyer rests entirely on the buyer. Unless otherwise stated, the price quoted in the Contract is exclusive of all taxes—sales, export, excise, etc.

Future Delivery

In the case of textiles sold for future delivery, the period of which extends to two months or more, the Standard Contract has laid down certain conditions. Thus, the seller shall supply the textiles in approximately equal lots per month and the buyer shall, before the end of each calendar month, take delivery, of, and pay for in cash against delivery, as many bales approximating to the quantity specified in the Contract as shall have been made ready during that month; there shall be one delivery in a month. Further, the textiles will be deliverable in equal monthly lots; the seller shall deliver at least 75 per cent. of the equal lot every month but shall be bound to supply, in the last month of the stipulated delivery period, all the bales under the Contract then remaining undelivered. The buyer shall give complete stamping and packing instructions, if any, at least one calendar month before the due date of the first delivery against this Contract.

The Contract provides that, in the event of default in payment and delivery by the buyer, the seller may refuse to make any further delivery. If, on the other hand, the seller fails to effect delivery against payment already made, the buyer may refuse to make further payment against this Contract. As and when textiles are ready for delivery in accordance with the provisions of the Contract, the seller is required to notify the buyer in writing the number and particulars of the bales ready for delivery and the buyers shall take delivery of the same within eight days from the receipt of the seller's notice. If, however, the delivery is not taken by the buyer, the goods will be appropriated towards the Contract. From the date of such appropriation, the goods shall be held by the seller for the account of the buyer and at his sole risk as regards loss, damage, deterioration or otherwise. The price of textiles *plus* all charges carry interest in favour of the seller at the rate of 6 per cent. per annum. The seller will be entitled, at his sole discretion and after giving not less than seven days' written notice to the buyer, to sell the textiles either by public auction and/or private sale. If the net sale proceeds are less than the amount due to the seller, the buyer should pay the difference at Bombay on demand. The seller must keep the textiles insured against all risks at the cost of the buyer from the date of appropriation. In respect of all textiles the delivery of which is not taken by the buyer within 14 days after the due date, the buyer will have to pay to the seller on demand As. 8 per bale per month for godown rent and As. 4 for insurance, calculated from the expiry of such period of 14 days to the date on which actual delivery is taken.

Extension of Period

The seller is not responsible for delays or non-shipment due to strikes, lock-outs, accidents, breakdown of machinery, lack of shipment space availability or any other factors interfering with the manufacture or shipment of textiles in Contract. Where the seller is unable to effect delivery of any textiles within the specified delivery period, the time for delivery shall be deemed to have been extended by a period reasonably required by the seller not exceeding 45 days and the mutual obligations of the seller and the buyer except for the time of delivery being so extended shall remain the same as before. The seller should, however, give notice of this fact to the buyer within a reasonable time of the occurrence of the event justifying the extension, and in any event before the original due date of delivery. Should a period longer than 45 days over the contracted delivery time become necessary to effect delivery on the part of the seller in pursuance of this clause, the seller shall intimate the buyer in writing of the time required by him the option of either accepting the whole or a part of the belated portion without any statement in price or by giving one week's notice in writing to the seller of his intention to do so, to cancel the contract in respect of the goods then remaining to be manufactured. Should it become impracticable for the seller in pursuance of this clause to manufacture the goods and deliver the same even with the buyer agreeing to accept late delivery, the seller will be entitled to claim cancellation of the undelivered portion and no claim for damages will lie against him for non-delivery. The seller seeking advantage of this clause shall, if required, furnish certificates in duplicate to be issued by the regional Millowners' Association certifying that the delay or non-fulfilment is caused by the aforesaid condition.

Under the Standard Contract, the buyer is not entitled to any claim for allowance or otherwise in regard to the condition of goods, when once the goods have left the mill premises or the seller's godowns, unless the buyer proves that the damage was done at the mill premises. The claim must be lodged within 45 days after the goods reach the port of destination or within five months from the date of delivery from the mill godown, whichever is earlier. The buyer is also not entitled to any claim for allowance on the ground that the goods delivered are not in accordance with the Contract, unless notice in writing of the intention to make claim is given to the seller within the aforesaid periods. Again, the buyer has no claim whatsoever against the seller in respect of goods being destroyed or so damaged by fire, water, etc., beyond the control of the seller, as to render them unmerchantable while stored at the mills or godowns of seller pending due date of delivery; the contract in respect of such goods shall be deemed to have been cancelled by mutual consent. But, if the price of such goods has been paid earlier, the buyer shall be entitled to a refund thereof.

Settlement of Disputes

The Standard Contract also provides for the settlement of disputes between mills and exporters. Accordingly, the disputes will be referred to arbitration in accordance with the rules—for the time being in force—as applicable to piecegoods for export and which will be framed by the Millowners' Association, Bombay, in consultation with the exporters' representatives. It is specifically stressed in this connection that nothing in the rules or arbitration or any implication thereof which runs counter to the terms and conditions of the Contract shall be applied thereto. As a result of any defect in the supply or a variation in the observance of the Contract terms, should the arbitrators award that the buyer shall pay for and take delivery of goods with the payment by the seller of any allowance or compensation and/or on the compliance by the seller of any other conditions, such award will be obligatory on the part of both the parties.

With the enforcement of the Standard Contract exclusively for exports of cotton textiles, one of the major handicaps that have all along been standing in the way of export trade will be removed. The contract form now in vogue which applies to all sales of cloth for both export and domestic consumption is not comprehensive and gives rise to many complications in the event of disputes with foreign buyers. The Standard Contract, coupled with the ITEX scheme for pre-shipment examination of cotton textiles, will go a long way towards eliminating the large number of complaints from overseas buyers. Much, of course, will depend on the willing co-operation extended by the millowners and exporters in the implementation of the Standard Contract.

SILK INDUSTRY IN RUSSIA

The silk industry of Leninabad (Russia) has launched an ambitious scheme for augmenting output of silk through modernisation. The total outlay for the next five years is fixed at as much as 125 million roubles (Rs. 14.9 crores), as against only 36 million roubles (Rs. 4.3 crores) in the last quinquennium. The scheme envisages creation of healthy and safe working conditions, mechanisation and automation of production, and adoption of new techniques. The implementation of the modernisation scheme in the last five years, it is claimed, has already resulted in a distinct improvement in productivity. To quote one report:

"Operating two old machines, a worker in the dyeing and finishing mill dyes 5,000 metres of textiles, whereas the new machine handles as much as 15,000 metres in one shift. Production of silk demands high speeds, especially in winding and reeling. Hitherto 8,000-9,000 spindle revolutions per minute were considered the peak of efficiency. A faster machine produced at Leningrad does 12,000 spindle-revolutions per minute. The spindle is pushed aside and stopped automatically when the thread breaks. The new machine has successfully passed its production test at the Leninabad mills. Automatic machines are replacing the old weaving looms. Their productivity is higher by 30 per cent. and the operator is able to take care of a doubled number of looms. Automats for the drying chambers have been built at the reeling mill. The reinforcing chambers have been made completely automatic at the winding mill. T.V. equipment mounted in the control offices makes it possible to keep the work of all the machines and looms under constant control. . . . Automation will raise the productivity of labour by 700 per cent."

Side by side with the modernisation of silk mills, special attention is being paid to impart advanced training to workers. In 1955, more than 2,000 men and women workers graduated from various vocational institutes. There is an evening textile school from which about 300 young specialists are expected to graduate in the coming five years.

The silk output in the Leningrad mills is now running at a rate of 60,000 metres (66,000 yards), as against 2,000 (2,200 yards) metres before the war. The total output comes to nearly 20,000 kilometres (about 22 million yards) which can produce about 7 million ladies' frocks.

TYPES OF WOOL

While not less than 200 breeds of sheep are known to exist in the world, for commercial purposes, their wool is broadly classified under four main groups, namely, (1) merino, (2) British, (3) crossbred and (4) carpet wools. Though each type is further divided under many sub-groups, this main classification will serve to indicate the general quality and utilisation.

Merino Types: The Merino, which represents the first quality of wool put in the market, is produced by the breed of sheep known by that name.

WORLD-WIDE TREND TOWARDS MORE AUTOMATIC LOOMS

EFFECT OF SUEZ CRISIS ON U.K.'S TEXTILE SITUATION DISCUSSED

From A Special Correspondent

MANCHESTER, 18*th September*

MANCHESTER LETTER

CONTRACTION in the size of the cotton industry is not confined solely to this country, although the latest loom statistics published by the International Cotton Federation show that the reduction in weaving machinery is most noticeable in the United Kingdom, where the number of looms in place has declined by 21,214 during the year to the end of January. Other European countries show a similar trend, French looms falling by 21,105, Belgian by 11,070, German by 9,930 and Italian by 7,905.

In contrast, the mills in Asia continue their expansionist projects. All the major increases took place in this area, with Japan in the forefront, showing a rise of 32,479 looms over the year. Turkey has installed 8,022 more machines and Pakistan 3,479, but a slight reduction of about 500 looms has occurred in India.

Future plans include the erection of nearly 30,000 more looms this year, of which over 17,000 are in Asia. In addition, a further 23,000 new looms are already scheduled for installation during the next two years—more than half of them in Asiatic countries.

World manufacturers of cotton textiles have slightly reduced their total available machinery by 19,127 looms but the switch to automatics continues. Ordinary looms in place fell by 51,242, but automatics increased by 30,907 and those with automatic attachments by 1,208.

European mills not only continue to work their machinery at the lowest level of activity but had more idle looms than any other area. The average weekly hours worked in Europe was 62.19 compared with 111.88 in Asia. Britain remained the "black-spot" with machinery operating only 36.87 hours a week and 76,242 idle looms. Others unfavourably situated were Italy, the machinery of which worked 39.65 hours and whose idle looms numbered 36,647 and French mills working 51.77 hours with 33,026 looms disengaged.

At the other end of the scale, Hong Kong maintained almost "round-the-clock" working at 146.66 hours. India operated 100.63 hours a week and reported 14,111 looms idle, while in Japan the machinery worked 88.42 hours with 67,195 looms stopped.

Suez—Economic Aspects

Traders in Lancashire in conjunction with business men in many other parts of the world have been watching with anxiety the progress of the dispute over the Suez Canal. Certain aspects of the developments, whatever the result of the immediate tension, must have long-term repercussions on the trade outlook, as they provide a basis for an entirely new shipping situation—not only to and from the East but throughout the world.

The most important single result arising from the changed situation in the Suez Canal area is that the confidence of its users in the future running of this waterway has been severely shaken. As a direct consequence consultations have already taken place among interested parties in order to divert sea traffic on the longer route round the Cape.

Transport

In such circumstances the cost of transport, and thereby of raw materials and finished goods, must obviously be raised. This, in itself, is a further blow to this country's already precarious national finances. From the local viewpoint, Lancashire textile exports would be additionally penalised in the struggle to maintain overseas trade in which we are already lagging.

But the increased cost of transit of goods must affect all countries concerned in shipping their products. In this case, it could well be that the price of imported cloth from India and Hong Kong would be raised to a level which would make it no longer economic as a purchase for home distribution.

The situation must also have an important bearing on the purchase of raw cotton supplies. Whereas, in recent years, considerable reliance has been placed on imports from the Sudan and some East African territories, the tendency would be to obtain alternative growths, involving less uncertain transport routes. To those who have worked so hard to stimulate the use of such types of cotton over the years this setback would be a grievous blow, but Lancashire spinners cannot afford to risk interference with the flow of their raw material at such a time.

Since the current crisis began nearly two months ago the trend of prices for Egyptian and Sudan cotton in the Liverpool market has been steadily upward. The table below indicates the rise that has taken place (in pence per lb.):

	Futures			Spot		
	American Oct./Nov.	Egyptian Nov./Dec.	Sudan Sept./Oct.	American 1 inch	Egyptian Karnak FGF	Sudan Sakel 6
July 26 ..	24.25	53.05	45.05	28.25	63.00	48.75
,, 27 ..	24.30	52.80	48.15	27.75	63.00	48.75
Aug. 3 ..	24.85	52.50	48.50	27.75	63.00	49.50
,, 10 ..	25.22	52.80	48.40	27.75	63.00	50.00
,, 17 ..	25.00	54.00	48.50	27.50	63.00	50.00
,, 24 ..	24.65	54.30	48.15	27.00	63.00	50.00
,, 31 ..	24.90	55.00	48.25	26.50	63.00	50.00
Sept. 7 ..	25.25	55.85	48.10	26.60	63.00	50.00
,, 14 ..	24.90	57.50	49.80	26.60	63.00	51.00

Already, there are signs that the danger of being caught with low stocks of cotton has been recognised and that steps are being taken to adjust the position. The visible supply of cotton held in Liverpool and Manchester, plus the quantity afloat, has risen sharply during the past few weeks.

At the beginning of August, visible supplies amounted to only 168,000 bales, but a build-up of stocks has been proceeding ever since, so that the total last week had reached 234,000 bales. Of this the major quantities were of American and Sudan cotton, including 20,000 bales of Sudanese qualities at sea for the United Kingdom. Stocks of the American staple included 62,000 bales in Liverpool and Manchester and 25,000 bales afloat. Only negligible quantities of Egyptian cotton are held in this country and fresh shipments have, of course, ceased for the time being.

The general attitude of trades throughout these weeks of mounting tension has been to cover necessary purchases without commiting themselves to any appreciable extent. Forward buying has rarely been for excessive quantities of yarn or cloth and a tendency to await events has been widespread. At the same time, the opinion is equally widely held that prices are unlikely to fall while so much uncertainty as to the future prevails. This being so, opportunities of securing goods on reasonable terms have not been missed but the full productive capacity of the industry, allowing for the severe wastage of workers, is by no means being utilised.

Factory Show-down Protest

As 500 workers from the Barton factory of Platt Bros.—the textile machinery firm—staged a protest march through Manchester streets last week the firm announced: "The factory will be closed down by the end of the year."

Men downed tools for half a day to take part in the march as a protest against the proposal to shut the factory, which employs 1,750 workers.

The marchers carried placards saying the shut-down would throw 2,000 out of work. They were led by local officials of the Amalgamated Engineering Union carrying the red and blue union banner.

At a mass meeting on a blitzed site on the city outskirts, they were told the march was the start of a campaign to keep the factory open and the union would back the campaign.

Mr. H. Scanlon, a Manchester official of the A.E.U. said the matter would be referred to the District Committee of the Confederation of Shipbuilding and Engineering Unions.

More School-leavers Join Cotton

Although there has been little break in the sequence of man-power losses by the cotton textile industry, the returns of summer school-leavers entering the spinning and weaving mills show an improvement on the corresponding period of last year.

In the period June-August, the industry recruited 1,029 school-leavers. They comprise 301 boys, equal to 4.7 per cent. of all school-leavers in the cotton area, and 728 girls, equal to 11.6 per cent. The percentages last year were 3.7 and 11.4—*All Rights Reserved.*

COTTON PRODUCTION IN THE U.S.

SMALLER CROP EXPECTED THIS SEASON

THE U.S. cotton occupies so important a place in the international trade in the fibre that any change in the statistical position of cotton in that country is sure to have profound repercussions on the world markets. Naturally enough, the second official forecast of the U.S.'s 1956-57 crop, released on 10th September, has evoked much interest in cotton circles the world over. And this season's crop estimate was awaited with more than usual interest because the trade was anxious to know the effect of the Soil Bank Programme on cotton cultivation in the U.S.

The estimate places the acreage under cotton in the current season at 15.6 million acres, as compared with 16.9 million acres in the previous season. This reduction in acreage may be attributed principally to the operation of the Soil Bank Programme. Though the Programme, designed to control production of farm crops by offering farmers cash inducement to hold some of the productive acreage in reserve, was initiated too late in the planting season to help producers, it had some effect in the desired direction. Thus, the acreage held over by cotton producers this season is 7.7 per cent., as compared with only 3.3 per cent. in the previous season.

The outturn of the crop in the current season, according to the estimate, is expected to aggregate 13.1 million bales. This is 437,000 bales less than the previous month's estimate and compares with 14.7 million bales in the 1955-56 season. It may be recalled here that the 1955-56 season was a very good one with the yield reaching an all-time record of 417 lbs. per acre. The higher yield was accounted for by the extremely favourable weather, reduced plantings on marginal land, more intensive cultivation, heavy use of fertiliser and light pest and insect infestation. During the current season also, the yield is expected to be good because the reduced acreage may lift more of the marginal land from cotton cultivation thus contributing to a higher average per acre yield. This month's crop forecast places the yield at 402 lbs. per acre, as compared with 394 lbs. a month ago. The crop is also reported to be progressing satisfactorily. According to the United States Department of Agriculture, cotton in New Mexico, Arizona, California and the irrigated areas of North-west Texas continued to make excellent progress in August, though in certain regions like Oklahoma, Carolina, Georgia and Alabama adverse weather conditions have affected the production prospects. On the whole, the condition of crop is reckoned to be 75 per cent. of normal as against 82 in the last season. Whether yield per acre in the current season will equal or exceed last season's figure remains to be seen; but present indications are that it is not likely to fall far short. The fall in production of about 1.6 million bales is, therefore, expected to result mainly from the reduction in acreage induced by the Soil Bank Programme.

Stocks Outside U.S. Low

If one takes into consideration the production prospects in the U.S., the stock position of cotton and the trends in world consumption, it will be seen that the future of cotton trade in the current season is not as gloomy as it was once made out to be. It is true that stocks of cotton in the hands of American shippers have mounted and that there has been increasing pressure to sell these stocks. Stocks have increased by more than 3 million bales in the past twelve months. At the same time, it must be recognised that the consumers outside the U.S. are by no means over-stocked since there was a continued reduction of inventories for which the uncertainty regarding American policy itself has contributed. European countries, and particularly the U.K. took substantially less cotton, users showing a general reluctance to buy more than their immediate needs. Hence stocks outside the U.S. have fallen by nearly 2 million bales to about 7.4 million. There are also signs that U.S. stocks may be reduced to more manageable proportions as a result of the competitive bid programme introduced by the Government. So far, more than 3.5 million bales of C.C.C. held cotton have been sold for export and the authorities hope that their aim of shipping 5 million bales in this way during the current season will be achieved. World consumption of cotton in the season just ended was at a record level of 28 million bales, mainly because large quantities were absorbed in U.S. and Asia. The trend is likely to be maintained or even improved because of the rapid economic progress that is being made in many of the underdeveloped countries.

A factor that is not as widely recognised as it should be is that though the U.S. export sales programme may have the effect of depressing the world markets it tends to lower prices for cotton and thereby increases the competitiveness of cotton in relation to man-made fibres. Recent developments, it is stated, have, after some years when conditions have been all against the natural fibre, brought the price level of cotton within the competitive range.

Leaders of the American cotton industry appear to favour a drastic revision of the existing policy. It is felt that there has been an excessive interference of politics in the making of decisions relating to agricultural policy. The need for freeing the industry from Government controls has been emphasised in several quarters. Some observers favour the establishment of a non-partisan Cotton Board consisting of representatives of the industry and the Department of Agriculture to decide the policy, to supervise the implementation of programmes for cotton and generally to run the trade in a business-like manner. But there is general agreement regarding the necessity for working down the present surplus stocks to manageable levels. It is also recognised that, from the point of view of the users of the material and in the long-term interest of the trade, the prices of cotton must come down. The interests concerned, it is felt, must gear themselves to a gradual decline in the price of cotton over the years and that this trend must be regarded, not as a calamity, but as a healthy development. At the same time there is a growing awareness that, having regard to the interest of other cotton producing countries, any sound solution to the long-term problems involved must be gradual rather than abrupt.

CO-OPERATIVE MARKETING OF COTTON

With the object of ensuring better returns to the producer of cotton and removing the hardships he is subjected to under present marketing conditions, the U.P. Government is actively exploring the possibilities of processing and marketing of cotton on a co-operative basis in some of the major cotton growing areas of the State. An officer of the Co-operative Department has already been deputed to conduct some preliminary investigations and to study the economic and other aspects of establishing a cotton ginning factory. It is proposed to start co-operative marketing societies in some selected districts such as Bulandshahr, Aligarh, Agra, and Mathura. The organisational pattern of a marketing society will be the same as envisaged in the All India Rural Credit Survey Report and adopted by the second Five-year Plan. There will be a marketing society at the headquarters of a *Mandi* with an area of operation roughly approximating to the area of the *Mandi*. Normally, it will cover about 200 villages.

In order to link up co-operative marketing with credit activities there will also be set up a number of large-sized credit societies, roughly covering an area of 25 to 30 villages, affiliated to the marketing society. The basis of lending to the farmers to meet the crop needs will be liberalised under this scheme. Loans to a member will approximate one-third of the expected income from the entire crop. The costs to be included for determining the income, on the basis of which loans are to be made, will be expenses for seeds, fertilisers, rent, irrigation labour, etc. The crop loans will thus correspond approximately to the cash outlay for cultivation. The Society will also arrange for the supply of seeds, fertilisers, etc., if the cultivators so desire. At the time of receiving crop loans the cultivators will have to execute a contract with the credit society to the effect that their produce will be marketed through the marketing society to which the credit society may be affiliated. The marketing society will arrange for the sale of the produce of the member-cultivator at the fairest possible price at the local *Mandi* or some other *Mandi* where rates may be favourable.

The marketing society will also give warehousing facilities for the producer. In this case the society will advance to the cultivator loans up to 75 per cent. of the prevailing market value of the produce minus the loan advanced by the large sized credit society. When the produce is finally disposed of, the Society will pay the balance less godown charges and other incidental expenses. The Government hopes that, by these measures, a fair price will be ensured to the farmers which will, in turn, stimulate greater production.

THE INCOMPARABLE MIDDLE EAST

ITS IMPORTANCE AS SOURCE OF OIL

[The sedimentary belt of the Middle East, where fewer than 1,500 wells have been drilled so far, is by no means yet exhaustively exporled. Surveying the future prospects of the area in a paper before the recent World Power Conference, Mr. P. T. Cox of B.P. foresaw that future search there will probably double present proved reserves—already nearly two-thirds those of the free world—giving an ultimate total of 200,000 million barrels. The geological features favouring vast accumulations of oil in the Middle East are unique and no other area is expected to rival it as the major future source of oil supply for the world.]

WHILE probably nearly half the oil in the U.S.A. is already used up, only seven per cent. of the larger volume of oil so far found in the Middle East has been produced and half the oil in the Middle East is, perhaps, still to be found. If Middle East proved reserves—nearly two-thirds of those of the free world—are added to past production, the region has so far provided more discovered oil than the whole of North America. But it is distinctive in other ways too. Its oil resources are on quite a different scale from those of other places: the yield per well, the size of the individual field, the richness of a zone. Geological circumstances so favourable to oil accumulation as are here found are unique, and future search elsewhere, although it will often be successful in its degree, will hardly find anything like this.

Dazzled by the richness of the resources discovered, one forgets how late, owing to its distance from industrial consuming centres, and how unintensively the vast areas of the Middle East have been explored. Including both exploration and development wells, a total of less than 1,500 wells have been drilled in search of oil in the Middle East, as compared with more than a thousand times as many in the U.S.A. Over 13,000 barrels of oil have been proved per foot drilled in the Middle East, as compared with between 20 and 30 barrels in the U.S.A., and between 600 and 700 barrels in Venezuela. Probably no other area has proved even as much as 1,000 barrels of oil per foot drilled in search of it.

Unique Combination

A unique combination of several geological factors has made the rewards of exploration so high. For, although the Middle East shares with many other oilfield regions the characteristic of being part of a major sedimentary trough which has been subsequently subjected to compressive mountain building deformation, in the Middle East the characteristic of sedimentation, the structure, and the timing of crustal movements have been peculiarly auspicious for oil. Marine sediments were deposited for an unusually long time without periods of extensive exposure to erosion or of deposition of continental-type sediments. The sedimentary layers comprise great thicknesses of marls, rich in organic remains, which make good oil source rocks; its limestone and sands form excellent reservoirs; and, most significantly, there is a recurrence of effective cap rocks. That so much of the oil generated has been retained is due to the region's very long tranquil geological history.

On the other hand it is due to the late Tertiary crustal disturbances—when the Zagros and Taurus mountain ranges were born—that the oil is so accessible. These movements formed large trap structures in which great accumulations of oil could take place. Also they exposed enough of the sedimentary blanket overlying the crystalline basement to allow oilfields to be found and developed largely by geological methods. Yet, even vaster oil accumulations than exist today probably existed in the Pliocene age, and have been lost by exposure of the reservoir to erosion. For this reason, the mountain belt of Iraq and Iran has been appropriately called "a gigantic oilfield graveyard."

Less exploration drilling per field discovered and per unit volume of oil proved than elsewhere is expected to continue to be a feature of the Middle East until all the major anticlinal structures in the region have been tested. After that stage has been reached, a sharp falling off in discovery rates, compared with those of other important oil producing regions, is anticipated. It is unlikely, however, that any other region will ever approach the Middle East in magnitude of total reserves.

The Oil Belt

The oilfield belt of the Middle East comprises a very big area. It is crescent or boomerang-shaped, is some 1,200 miles long, and is about 500 miles in width. Occupying some 600,000 square miles, it may be defined as the tract where there is a cover of sedimentary rocks which varies in thickness from rather less than 10,000 ft. to about 50,000 ft. Structurally, this belt consists of two fairly distinct parts: (a) a zone of rather pronounced folding which corresponds for part of its length with the foothills ranges of the Zagros mountains and embraces the fields of Iran and northern Iraq; (b) a foreland zone of gently warped structures in which the fields of southern Iraq, Kuwait and eastern Saudi Arabia lie. Throughout the length of the Persian Gulf, the boundary separating the foothills and foreland zone lies under the sea.

The oilfields already proved lie in the centre of the sedimentary crescent and lie partly in the foothills and partly in the foreland zones. Altogether 35 oilfields, some with two or more separate reservoirs, have been found in the Middle East, of which 21 are on production, and 3 are now being connected for production (Safaniya in Saudi Arabia, and Jambur and Bai Hassan, both in northern Iraq). In the remainder, either the crude is too heavy, or the oil accumulations are not worth development in the circumstances of the Middle East.

The two greatest fields yet found in terms of proved capacity are the 140-mile long Ghawar field in Saudi Arabia—probably the largest in the world—and the Burgan field in Kuwait. Next comes Kirkuk in Iraq. Other great fields are Masjid-i-Sulaiman (the first field in the Middle East, discovered in 1908), Haft Kel, Agha Jari and Gach Saran in Iran, Abqaiq in Saudi Arabia, Dukhan in Qatar, and Zubair and Rumaila in southern Iraq. In these eleven fields lie over 90 per cent. of the Middle East's present total of proved reserves which, excluding those of the non-commercial fields, are given by the author as at 1st January 1955, as over 92,000 million barrels or 12,600 million tons. Saudi Arabia is assessed at 35,000 million (compared with 30,000 million for the U.S.A.), followed by Kuwait at 28,000 million. Iraq 14,000 million, Iran 13,000 million and Qatar 1,500 million. It is a striking fact that the Middle East could meet the whole world's demand for oil for some years without drawing much more than 5 per cent. annually from its existing proved reserves.

The Future

But what of further discoveries in the future? Where and in what order of volume will more oil be found in the region? Oilfields so far discovered and developed are fairly divided between the foothills and foreland zones, but in terms of proved reserves the forelands fields in total hold more than twice as much oil as those of the foothills. All the fields so far discovered lie in a triangle which occupies less than a quarter of the oilfield belt of sedimentary rocks already mentioned and lies roughly in the middle of this belt within which it would be reasonable to search for further oilfields.

To the north-west of this triangle lies a much broader zone of foothills type of folding, in which is Syria, southernmost Turkey, western Iraq and Jordan. No commercial production has yet been found in this area (but a small field has recently been found in Israel to its south-west). Nine of this area's more promising and representative structures have been tested by drilling and there is no evidence to show why these were not productive since potential source rocks, reservoir rocks and cover rocks were all represented in the sedimentary sequence. While some oil may still be found in the area, in view of the negative results so far obtained it would be unduly optimistic to consider the ultimate reserves of this zone appreciable.

The area to the south-east of the triangle consisting of part of Persia and the Persian Gulf, the Rub' al-Khali of Saudi Arabia and the shaikhdoms of the Trucial Coast, has also not yet yielded commercial oil production, although oil shows have been found in some of the test wells drilled on five structure within it; two others are now being drilled. This area differs geologically in several important respects from the area within our triangle. But it cannot be regarded as adequately tested so far, and its prospects on the evidence available are rated highly. Its ultimate reserves must be regarded as significant, possibly of the order of one-fifth those of the central segment of the sedimentary belt.

It is, however, in the central segment (including part of the foreland adjacent to the triangle), extending over some 200,000 sq. miles, and within which lie the existing proved fields, that the most important future finds are to be looked for. Within the foothills zone alone there are more than 50 known but untested structures which may contain oil-bearing reservoirs, and it is also reasonable to expect that in the foreland region there are some tens of untested, and in many cases as yet undetected, anticlinal structures. It is unlikely that as much as half the oil-bearing structures of this segment have yet been tested.

In attempting to evaluate its ultimate reserves, one cannot rule out the possibility that the present proved reserves are substantially less than half the ultimate yield. Nevertheless, there are considerations which suggest that discovery in this segment may have reached the half-way mark and that its ultimate reserves might in fact fall short of 200,000 million barrels.

Thus far, this central segment has yielded already some 200,000 barrels of discovered oil per cubic mile of effective sediments. This yield is of the same order as that of California, the maximum for any sedimentary basin of the U.S.A. but probably less than that of the Apsheron Peninsula (Baku area) in Russia. Ultimately the area might prove richer but there is no reason yet to suppose that source rocks in the Middle East have been abnormally prolific of oil.

Average Yield

Supposing an average yield over all three segments of the sedimentary belt of some 100,000 barrels per cubic mile of effective sediments, it may fairly be said, in Mr. Cox's opinion, that ultimate reserves of the Middle East region as a whole are likely to be of the order of 200,000 million barrels. That this figure of ultimate reserves, based as it is on the stated geological considerations, is in fact a modest and conservative estimate of the area's ultimate reserves is suggested by the fact that it is of the same order as that put forward by the American geologist, Mr. Wallace E. Pratt, for *proved* reserves in the Middle East, i.e., known oil recoverable under today's economic conditions.

All such figures are necessarily speculative and, as Mr. Cox says, there is much to be said for avoiding figures and using only qualitative phrases when speaking of ultimate reserves. Whatever the figure that may be put to the Middle East's resources, it is head and shoulders above other existing producing regions, and the combination of geological circumstances found in the Middle East make it appear unlikely that any other area will ever achieve a comparable position.

Nevertheless, the Middle East has some disadvantages. The quality of the crude suffers from its high sulphur content, and the relatively low quality of straight-run gasoline produced from it told against Middle East oil in earlier years. This, however, has been largely offset by advances in refining techniques and by the growing demand for middle distillates. The remoteness from main consuming centres which for so long delayed the realisation and development of Middle East resources remains also a disadvantage, involving a long sea haul, and the use of long pipelines through transit countries. Climatic conditions also involve much abnormal expenditure. The natural difficulties for oilfield development and for building pipelines are, however, less than in regions of high rainfall and dense forests.

Another disadvantage affecting the Middle East is the cost of providing, in much greater degree than elsewhere, ancillary services to oil operations, e.g., trunk roads, water, health and welfare services, etc. Thirty years ago, this expense could be accepted as no serious economic handicap. But, with the rising wages in recent years, without a proportionate rise in output *per capita*, the situation has changed. Indeed, the principal problem for the future is costs. From the point of view of availability, the place of the Middle East as a supplier of oil is amply assured. But, in the face of rising labour costs, one of the principal problems in future will be to maintain the Middle East's competitive position to take advantage of the oil wealth nature has so lavishly bestowed on it.—*Petroleum Press Service.*

IMPROVING EFFICIENCY OF SUGAR PRODUCTION

MUCH NEEDS TO BE DONE ON FARMS

THERE is no other industry in India excepting the sugar industry the fortunes of which are so closely linked to the primary stage of the manufacturing activity, that is, production of raw material. Sugarcane accounts for as much as two-thirds of the aggregate cost of sugar manufacture. Indeed, sugar is, as it is aptly described, made in the field, not in the factory. It is this peculiar characteristic of the sugar industry which imparts urgency to the need for focussing utmost attention on sugarcane research and development. The urgency is all the greater in the present context when the industry stands on the threshold of a new era of expansion. The *successful* implementation of the programme for the development of sugar industry included in the second Five-year Plan will depend, to a great extent, on the progress achieved in the sphere of sugarcane cultivation. The word "successful" has been advisedly italicised, with a view to stressing the fact that the production target for sugar should not only be hit fully but be hit at an economic cost. In other words, the sugar industry must be in a position to make available adequate quantities of sugar at a price which suits the pockets of the common man. Such is possible only if the industry is assured of regular supplies of high sucrose-content cane at a reasonable price.

Viewed thus, it is, indeed, gratifying that, in its report submitted to the Government of India, the Indian sugar delegation to Australia and Indonesia has devoted a special chapter for the study of the possibilities of augmenting per-acre yield of sugar. The delegation attributes much of the success of sugar industry in Australia and Indonesia to the high efficiency attained on the farms. According to it, these countries have evolved varieties of sugarcane which give high tonnage, are resistant to disease and possess a high sugar-content. They are grown on farms in accordance with cultural practices and fertiliser schemes carefully selected to suit soil and climatic conditions prevailing in the different parts of the countries. Effective measures are taken to prevent losses occurring through pests and diseases. Thanks to all these measures, the conditions obtaining in the sugarcane economy of Australia and Indonesia are considerably encouraging *vis-a-vis* India, as the following figures clearly show:

	India	Australia	Indonesia
Average sugar-content of cane (per cent.)	12.3	15.1	13.4
Quantity of cane required for making one ton of sugar (tons)..	10.1	7.2	8.7
Yield of cane per acre (tons) ..	13.0	26.3	40.5
Yield of sugar per acre (tons) ..	1.6	3.9	5.5

The foregoing figures reveal that there remains much to be done in India to improve the efficiency of sugar production on the farms. The sugar delegation to Australia and Indonesia has put forward several notable proposals designed to bring about an improvement in the yield of sugar per acre. At the outset, it urges that the Coimbatore Sugarcane Breeding Institute must be directed to devote greater attention to evolving cane varieties possessing high sugar-content and which are resistant to diseases common in different tracts. The breeding of new varieties and their introduction, however, take a long time. It is, therefore, suggested that selected high sugar-yielding varieties from Australia, Java and other countries may be obtained for trial in the country; if found successful, they may be introduced in regions most suitable for their cultivation.

Testing of Varieties

The sugar delegation has drawn special attention to the need for introducing the system of testing new varieties on the farmers' fields. At present, a large number of varieties are evolved at the Coimbatore Institute. As soon as particular varieties are considered promising, they are handed over to the State Departments of Agriculture for trial at the local sugarcane research stations. When they are satisfied, the selected varieties are tried on small plots belonging to cultivators. In Australia and Java, promising canes are tried on farmers' fields within three or four years of their breeding. The test plots are properly laid out and it is obligatory on the part of the owner to submit results to the experimental stations. Commending this method, the delegation observes: "The method seems to be more practical, inasmuch as the new variety receives a larger and more satisfactory trial during the same period under varying conditions of soil and climate. The system will help in expediting establishment of new varieties in India."

Closely allied to this proposal are three other recommendations made by the delegation. First, the work of analysing the cane soils in different parts of the country should be intensified, with a view to classifying them and preparing suitable fertiliser schemes. Secondly, the extension services responsible for advising cane growers in the matter of adopting cultivation practices and implementing fertiliser schemes should be strengthened. The practice of holding field days for giving practical demonstrations of proper cultivation methods may be adopted. Thirdly, an all-India journal giving the latest information on methods of cane cultivation and describing in simple language the most recent developments which will be of interest to the sugarcane grower must be started.

Another important recommendation made by the sugar delegation relates to the setting up of cane pest and disease control boards on the Australian pattern in every sugarcane growing district which has one or more sugar factories. These may be opened under either the State Departments of Agriculture or the Cane Commissioners. Such boards, it is said, have contributed much towards the control of pests and diseases in Australia, thereby increasing appreciably the production of sugarcane and sugar per acre. In this connection, stress is laid on the State Departments of Agriculture or Cane Commissioners being authorised to specify varieties which can be grown in factory zones. It is claimed that the institution of such a system will, besides checking the damage caused by pests and diseases, greatly help in improving the quality of cane supplied to factories.

Planned Harvesting

The sugar delegation has further emphasised the introduction of a system of planned harvesting of sugarcane according to maturity in factory zones, as is the custom in Australia and Java. Under this system, the cane staff of the factories will survey the fields a few months before the crushing season and determine the possible time of maturity of cane in particular fields by examining the juices with the help of pocket refractometers. In accordance with the maturity charts furnished by the staff, the societies will distribute cane supply *Purjis* to the farmers.

The aforesaid series of measures are no doubt of great value. But the point is whether they can be implemented successfully, what with the sugarcane growing areas being widely scattered and fragmented. This is a serious handicap. The sugar delegation would have done well to indicate the definite lines on which this handicap can be removed. One of the possible ways of removing this drawback lies, as we pointed out on an earlier occasion, in the State Governments enabling the sugar mills to purchase on leasehold basis the agricultural land in their neighbourhood and lease them back to the *ryots* in that area on the distinct understanding that the latter will grow sugarcane on the lines suggested by the factories and under their supervision.

EXPANDING FUTURE FOR BAGASSE

Bagasse—the fibrous residue remaining after crushing juice from sugarcane stalks—may soon have as much commercial utility from the standpoint of tonnage as the sugar. Processes developed by the U.S. Department of Agriculture (U.S.D.A.) recently have produced both bleached and unbleached pulps suitable for corrugated boxboards, newsprint and fine papers. These processes can be applied economically to make paper from whole bagasse or, even better, from pith-free bagasse fibre.

Until very recent years, bagasse was a waste product that cluttered the areas around sugar mills, as only part of it could be used as fuel for the mill's boilers. Only in the last few years has its full potential value been realised. Experimental mills have shown that newsprint could be produced from it on a commercial basis. The new processes expand this use and add fine papers and paperboards to the growing list of products which can be made from its fibres.

The supply of bagasse is immense, when considered on a world-wide basis. More than a pound of bagasse accumulates for every pound of sugar produced. The world's population uses almost 50,000 million pounds of sugar, most of it in foods and confections. Thus more than 50,000 million pounds of bagasse are available for the growing variety of industrial applications.

Bagasse is made up of two kinds of tissue, principally. Hard, strong fibres form the outer covering of the cane and give it the strength to keep it upright in the field during the growing season. Inside are the pith cells that contain the sugar juices. The pith cells lack fibrous structure and strength. Their removal allows the most effective use of the outer fibre. Manufacture of paper from bagasse has long been possible, but it has been unable to compete with wood-pulp paper economically and technologically, because older ways of separating the pith from the outer fibre were impractical and much of the fibre was destroyed.

The U.S.D.A. researchers, therefore, developed the mechano-chemical process, a highly practical method which already has been fully tested on a commercial scale. It separates the pulp with inconsequential loss of the fibre and makes the pulp itself available for commercial uses. The process makes possible greater yields of high-quality bagasse pulps at comparatively low costs.

Extended semi-commercial scale studies made at the New York State College of Forestry at Syracuse, New York, were recently completed. These proved that both fine bleached papers and newsprint, as well as superior corrugated board for packing and boxes and liner for container boards, can be made from bagasse pulped and separated from pith by the mechano-chemical process. The same products, the studies proved, can also be made from blends of separate bagasse pulp and kraft wood pulp.

Nine hundred thousand tons of bagasse are produced annually in Louisiana and Florida, major cane-producing States. In those States, some of the bagasse is being processed into poultry litter. This business is more profitable than using the bagasse for sugar mill fuel and has been increasing in volume each year. The potential market for bagasse litter is indicated by the 13.3 million tons of all types of poultry litter used in the United States and the continued growth and increase in importance of poultry for egg production and meat in the nation.

Another sugar extraction by-product, blackstrap molasses—the syrupy residue of sugarcane juice left after extraction—is looming greater as a valuable factor in the production of sugarcane. Its importance as a livestock feed has been expanding and the potential market for its use in this manner is estimated at nearly 1,000 million gallons a year. In this connection, one of the most promising methods for using pith is in taking advantage of its capability for high absorption of blackstrap molasses, three times higher than for many common absorbents. The pith can be used as a dry-form molasses carrier in feeds. More than 70 per cent. of the blackstrap produced in the United States can be mixed with pith to produce a solid, easily transportable, high-energy feed ingredient that livestock relish.

If the sugar industry itself undertakes the recovery of these by-products, formerly largely wasted, a maximum profit can result. The mills could separate the pith and fibre, sell the fibre to paper mills, and combine the dried pith with blackstrap molasses to make a valuable ingredient for livestock feeds. The by-products could be a most important factor in offsetting sugar mill operating costs.

LICENCES FOR NEW SUGAR MILLS

The Union Government has laid down the broad principles governing the issue of licences for the setting up of new sugar mills and for substantial expansion of existing units. The principles are as follows:

New units: Co-operative factories will be allowed to be established in areas where sugarcane sufficient for a mill of 800-1,000 tons daily cane-crushing capacity is grown and the promoters have collected a substantial amount as share capital. The factories at sites where sugarcane cannot be utilised for any purpose other than sugar, such as the Terai areas of Uttar Pradesh, will be favourably considered. Applications from private and joint-stock concerns for new factories will be considered on merits as before. Also to be considered are schemes for sugar mills having special features and where large supplies of bagasse are sufficient to sustain a paper mill.

Expansion of units: The existing factories with a daily cane-crushing capacity of less than 1,000 tons will be allowed to expand up to 1,000 tons. The units in which the mill and boiling sections are not balanced at present will be permitted to have a balancing equipment, in order to achieve a daily crushing capacity of up to 2,000 tons.

SUGAR IN U.K.

State trading in sugar will terminate with effect from 1st January next. Thereafter, imports of sugar for home consumption will return to private trade. The purchase of raw sugar for re-export as such and for re-export as refined sugar is already in private hands. The Sugar Act, which received the Royal Assent in July 1956, is designed to reconcile free import of sugar for domestic use with price guarantees to Commonwealth sugar producers under the Commonwealth Sugar Agreement. The Sugar Act envisages the setting up of a Sugar Board—the Board will commence functioning from the beginning of 1957—which, while not itself handling sugar, will buy at negotiated prices from Commonwealth producers and then sell in the country of origin to traders at commercial prices. In the U.K., it will make such payments to the British Sugar Corporation as are needed to implement the price guarantees for home-grown sugar-beet. Import licensing arrangements for sugar will be made by the Board of Trade in due course. In order to enable the Sugar Board to balance its accounts in carrying out its functions as principals, a surcharge will be applied to all sugar from the appointed day.

COAL PRODUCTION IN SECOND PLAN

PUBLIC SECTOR'S PRELIMINARY STEPS

IT is now six months since the work under the second Five-year Plan was commenced and a sufficient period has, therefore, elapsed to review the preparatory measures taken by the Government to implement the schemes for development of coal industry. Mr. K. C. Reddy, Union Minister for Production, did well in taking the opportunity of outlining the progress made so far with the programmes of development in some of the important enterprises coming under his ministry, such as coal, lignite fertilisers and machine-tools, at a Press Conference held on the 15th inst. He expressed robust confidence in the ability of the public sector to fulfil the expansion and production targets set for it under the Plan.

So far as coal is concerned, the output target specified in the second Plan, as readers are already aware, is 60 million tons per annum, as against the present production of 38 million tons. Of the additional production, the public sector will raise 12 million tons and the private sector 10 million tons. The production in the public sector will mostly come from new mines to be established. The new collieries will produce about 10 million tons; the existing State collieries will raise an additional 500,000 tons and the Singareni Collieries (largely owned by the Hyderabad State Government) 1.5 million tons. The present production of metallurgical coal amounts to 13.5 million tons per annum, while the requirements of this variety of coal by the iron and steel projects are estimated at 16 million tons and the gap will be filled up during the second Plan period.

The existing State collieries and the new collieries to be established will be owned and managed by a Government-owned company, under the Ministry of Production. The Company, which has recently been registered, is known as the Hindustan Coal Corporation, with an authorised capital of Rs. 50 crores. Its headquarters will be at Ranchi. The Minister for Production is the Chairman of the Board of Directors, which includes officials and non-officials, including a director with special knowledge of labour problems. In addition to the formation of a company to own and run the State Collieries (old and new), the Ministry of Production has already set up a Coal Council to deal with all problems connected with coal, such as estimation of reserves, production, distribution, utilisation, recovery of by-products, etc. It will shortly constitute four committees to deal with different aspects.

The areas selected for mining of coal in the public sector are Korba and Jhilimili-Bisrampur in Madhya Pradesh and Kathara and Karanpura in Bihar. Prospecting operations have begun in Korba and Karanpura areas. The opening of a pilot quarry has been sanctioned and extraction of coal from this quarry is expected to begin by January 1957; the monthly output from this field will be 30,000 tons. Plans to work the Ghordewa Seam, which contains good quality coal, and from which 20,000 tons per month are to be raised have been prepared. The coal from this seam will be supplied mainly to the Bhilai Steel Plant. A railway line has already been constructed to link this field with the main highway and is now open for goods traffic. In the Korba venture, the Madhya Pradesh Government will be a partner along with the Union Government and will contribute one-third of the total capital expenditure. A consultative committee consisting of five representatives of the Central Government and three of the State Government has been set up to review the progress of this project.

Drilling has commenced in Kathara and extraction of coal is expected to begin in the current financial year. Drilling and prospecting in Karanpura are proceeding and production is likely to start next year. As regards Jhilimili-Bisrampur area, reliable results of earlier drilling show that this area promises to yield non-coking coal of very good quality. A scheme for extending railway facilities to this coalfield has been prepared by the Railway Board.

Most of the areas selected by the Government of India for starting new collieries are covered by mining leases or prospecting licences. In order to enable it to start operations in these areas, the Government will shortly introduce legislation to acquire these rights from private lessees. The Bill will lay down the principles of compensation for such acquisition. So far as the rights of State Governments in the minerals are concerned they will remain intact and the Central Government will work the mines as the State Governments' lessees.

The success of the Government's venture to produce the bulk of the additional coal necessary in the next five years depends to a large extent on the availability of the necessary technical personnel, preparation of project report and working plans by experts and the installation of up-to-date plant and machinery. According to Mr. K. C. Reddy, the Government has so far sanctioned the opening of four training centres at Kargali, Giridih, Talcher and Kurasia at a cost of Rs. 28 lakhs. Additional centres will be open in some other centres also. A team of Russian experts is expected to visit India in October to help the Government in planning the development of the Korba coalfield. The team will also study the project report and working plans already prepared by an Indian team of mining engineers and suggest the type of machinery to be used and working methods to be adopted. Another Russian team of machinery experts is expected to come to India to advise the Government on the establishment of plants for the manufacture of coal mining equipment. This team will work in collaboration with the main U.S.S.R. team already in India to study and advise the Government on the manufacture of heavy machinery. In addition to the coal mining equipment to be manufactured in India, machinery worth Rs. 30 crores will be imported for coal production. Orders have already been placed with a Japanese firm for the supply of a coal washing plant and its installation at Bokara-Kargali colliery at a cost of Rs. 1.64 crores. Proposals are being considered by the Ministry of Iron and Steel for setting up two additional washeries apart from the one proposed to be set up with the Durgapur steel plant.

Details about the Neiveli lignite project in South Arcot (which is being high priority), to which also Mr. Reddy referred in his Press Conference, were given in this column last week. The management and control of the project, the Minister said, would be entrusted to a Government-owned company to be incorporated under the Indian Companies Act 1956.

The Minister also made a brief reference to the private sector of the coal industry. He said that the production plans of this sector were being closely watched by the Coal Controller. On the basis of a study of these plans, the Coal Controller had prepared a transport plan for the additional coal to be moved from different colliery groups. This plan had been communicated to the Railway Board.

STRIKE IN RANIGANJ COALFIELDS

More than a week has elapsed since the strike in the collieries in the Raniganj area over a wage dispute commenced and the situation is said to have deteriorated during the last three or four days. Two workers unions, namely, the Colliery Mazdoor Sabha and the Colliery Mazdoor Congress, had given notice of strike in 26 collieries in Raniganj, with effect from the 17th inst. So far, however, only 23 collieries, involving about 50,000 workers, have been affected by the strike.

The main demands of the two unions are: (1) the wages of workers not benefited by the Award of the All-India Industrial Tribunal should be increased by 40 per cent. on the combined total of basic wages and dearness allowances, the basic wages including cash concession and the value of free rice supplied; (2) grading of all categories of workers; (3) service to be considered in placing a man in the scale of pay; and (4) stoppage of victimisation. The management of the Collieries concerned could not concede these demands.

The 26 collieries on which the strike notice had been served, it is stated, account for 14 per cent. India's entire coal production and over 50 per cent. of high-grade selected coals. Thus, the strike seriously affects production of high grade coal essential for industries. According to a spokesman of the industry, if the strike lingers for more than a week (as it has done now), the supply of coal to industries would be very much affected. The collieries affected are under the management of Messrs. Andrew Yule & Co., Ltd. and Messrs. Macneill & Barry & Co., Ltd.

COAL RESEARCH IN U.K.

Research scientists in coal in the U.K. are conducting experiments on a new method of conveying coal from pits by pumping the coal along with water through pipes. If the experiments succeed, the whole output of even the largest colliery in the U.K. can be pumped up the shaft through a small pipe. New pipe lines will have to be sunk from the surface to points near the face as it advanced and this process will simplify underground transport a great deal.

Work is also going ahead on a process which is capable of converting small coal of any volatile content, except anthracite, into briquettes that may be used for a wide variety of domestic and industrial purposes.

ROLE OF SOUTH INDIAN PLANTING INDUSTRY IN THE ECONOMY

ACHIEVEMENTS IN FIRST PLAN PERIOD

AMONG the industries which have contributed to the development of India's economy, mention deserves to be made—though it has seldom been made very effectively—of the contribution by the plantation industry. The magnitude of the investment sunk in this industry, the very large revenues it earns for the States and the Centre the number of persons for whom it provides employment and the amount of foreign exchange it earns for the country are all indicators of its contribution to the wealth of the nation. Despite the important place it has carved for itself in the national economy, the plantation industry was not included in the first Five-year Plan. In the second Plan it has been assigned an insignificant place. This does not minimise the industry's importance. The industry has made a notable progress during the first Plan period, sharing the aspirations of the nation and marches towards the goal of a prosperous and economically powerful India.

The United Planters' Association of Southern India, Coonoor, has, therefore, done well in bringing out a brochure, *The Plan and Planting*, outlining the progress made by the industry during the first Plan period. The study is, however, confined only to the three main plantation crops of South India, namely, tea, coffee and rubber, which are relatively better organised plantation crops. Nevertheless, the facts and figures set out in the brochure provide a sufficient idea of the magnitude of the industry's efforts and achievements during the Plan period. They also bear testimony to the "health" of the plantation system of agriculture.

The special feature of the plantation crops which distinguishes them from other agricultural crops is that they are not short-term crops and an investment in them does not give immediate return. Tea takes about eight years from the time of planting to the time a fair crop is yielded. Rubber takes ten years and coffee about six years. This is true whether increased production is attempted by new planting or by replanting. It is, therefore, difficult to Plan development of plantation crops on a five-year basis and measure its progress. The progress achieved during the first Five-year Plan period is thus the result of earlier efforts.

New planting and replanting of tea are under statutory control in conformity with an International Agreement, to which India is a party. The area under tea in South India was increased by only 3 per cent. during the years 1950-54. Rubber and coffee are under no such restriction and can be freely planted. The acreage under coffee rose by 16.4 per cent. during the five years 1950-51 to 1954-55 and that under rubber by less than 6.4 per cent.

The increase in production of tea during the past five years was 31 per cent. Coffee also recorded a rise of 31 per cent. and rubber 31.2 per cent. It must be noted here that the increases in production of the three crops have not come out of the areas newly planted during the period mentioned above. The increase in production and that in yield per acre were the cumulative effect of scientific management and progressive use of better strains of planting material in earlier years. Thanks to the special attention devoted to experiment and research for keeping the crops free from pests and diseases, development of healthy and high-yielding strains of plant material and improved cultural practices, the yield per acre of tea rose by 600 lbs. in 1950-51 to 770 lbs. in 1954-55 or by 28.3 per cent., coffee from 181 lbs. to 236 lbs. or by 30 per cent. and rubber from 258 lbs. to 277 lbs. or by 7.3 per cent.

The industry's functions as an earner of foreign exchange and a provider of employment are of the utmost importance. In order to export a crop and earn foreign exchange, the industry must produce the crop in excess of internal consumption. With a rising level of internal demand, the industry must keep up its pace of expansion so that it may be able to feed the export markets also. In this respect, tea, among the plantation crops, holds the top position. During 1955, shipments of tea from South India alone amounted to 78.24 million lbs. or 20.4 per cent. more than in 1951. The increase in foreign exchange earned was Rs. 21.8 crores or 70 per cent. over 1951. The rapid rise in internal consumption and the changes in production from year to year have reduced the quantity of coffee available for export. Nevertheless, exports of coffee rose from 3,700 tons in 1950-51 to 9,600 tons in 1954-56 and the earnings from exports from Rs. 1.35 crores to Rs. 7.3 crores. The achievement of rubber as an export crop is very modest, because rubber has long ceased to be an important export commodity of India. The output of this strategic commodity is not sufficient to feed the rapidly expanding manufacturing industries of the country, despite the rise of 31.2 per cent. in production during the past five years alone. However, some varieties of rubber are exported in order to relieve short-term accumulation of stocks.

The number of persons employed in the South Indian tea industry rose by about 36,000 or 18 per cent. and that in coffee plantations by 27,600. The employment in rubber estates increased by 7 per cent. from 1951 up to the middle of 1955. Since then there has been a sudden rise in employment following the launching of the replanting programme, but no estimate of it has so far been made.

Besides giving more attention to increasing the area under cultivation as well as the crop outturn, the planters have taken care to promote the welfare of its employees. The results achieved in this direction are commendable in the context of the successive rises in wages in the plantations and the equally sustained increases in taxation imposed on the industry. The wages of south Indian plantation labour have risen on an average by 34 per cent. during the last five years. This calculation excludes the increase in workers' earnings due to the guarantee of work assured throughout the year. Incidentally, it may be noted that nowhere else in the world an industry of an agricultural nature provides guarantee of work throughout the year. The introduction of annual holidays with wages and the payment of bonus are also not taken into account in the above calculation. Referring to the amenities provided to the plantation labour, the brochure says:

"The plantation industry has a unique record in the matter of providing a comprehensive range of amenities for its workers. In quality, number and range, these amenities have been generally and substantially improved during the period of the first national Plan. More and better hospitals, schools and houses have been provided. Fewer workers are falling ill and they are going to better and more numerous hospitals. More workers' children are going to schools and they are going to better schools. A large number of the younger children are being looked after in the more numerous and improved type of creches. Today the capital outlay required to house and provide the labour with the full range of standard amenities is approximately a fourth of the total capital required to develop a new estate."

The industry has thus made striking and many-sided progress during the first Plan period. The planters feel confident that this progress will be maintained during the next Plan period also. Much of the benefit of the additions to acreage during the first Five-year Plan will become increasingly evident during the next five years as the new acreage comes into bearing. Plans for further increased production of tea, coffee and rubber are being considered. Workers' welfare also continues to receive top priority.

CASH COMPENSATION TO ASSAM TEA LABOUR

The Supreme Court has dismissed the appeal filed by the Indian Tea Association, representing all tea gardens in Assam, and upheld the decision of the Labour Appellate Tribunal which held that the workers were entitled to receive cash compensation for the reduction in the quantity of articles of food supplied at concessional rates, in addition to the minimum wages fixed by the Government of Assam under the Minimum Wages Act.

Before February 1950 the workers in tea estates of Assam were being supplied rice at concessional rates at 5 seers per week per adult male worker. In November 1950, the Government reduced the quantity of rice so supplied to a worker to 3½ seers per week and thereupon the workers claimed cash compensation for this reduction. The dispute, which arose out of this claim, was referred to the Industrial Tribunal, Assam, and the Tribunal fixed the rate of cash compensation payable by the estates.

On 11th March 1952, the Government of Assam fixed the minimum wages of workmen employed in the tea gardens of Assam at certain rates. The minimum wages, which were to come into force with effect from 30th March 1952, consisted of basic wages and dearness allowance at the rates specified by the Government. The rates were, however, exclusive of concessions enjoyed by the workers in respect of supplies of foodstuffs and other essential commodities and amenities. The Government stipulated that these concessions and amenities should continue unaffected.

The minimum wages so fixed by the Government exceeded the total of the cash wages which the employers were paying to their workmen and the value of the concession at which rice was being supplied, as also the amount of compensation for the cut in rice ration. The employers, therefore, contended that the Government's minimum wage notification had the effect of absorbing their cash compensation in the cash minimum wage that had been determined and that they were under no obligation to pay, after the date of this notification, i.e., 11th March 1952, the compensation for the rice cut over and above the minimum wages fixed by the Government.

The workmen, on the other hand, claimed that they should continue to get the cash compensation that had hitherto been paid to them for the reduction in rice ration. The dispute which thus arose between the employers and their workmen was referred by the Government of Assam for adjudication by the Industrial Tribunal, Assam. The Tribunal by its award published on 6th August 1952 upheld the contention of the employers and held that when the minimum wages were fixed by the Government the employers were not under an obligation to pay compensation for the rice cut. The workmen preferred an appeal against this to the Labour Appellate Tribunal.

The Labour Appellate Tribunal by its award given on 2nd April 1954 held that the compensation for the rice cut had at the time of the notification issued on 11th March 1952 become an amenity and that the Government not only fixed the basic wages and dearness allowance but also preserved all the amenities which the workmen were enjoying and, therefore, they would be entitled to cash compensation for the rice cut as long as the cut remained in force in addition to the minimum wages.

Thereafter the Indian Tea Association came in appeal to the Supreme Court by way of special leave granted under Article 136 of the Constitution. In dismissing the appeal, Mr. Justice Bhagwati, who delivered the judgment of the court, after examining all the arguments advanced on behalf of the appellants, said that they were of the opinion that the conclusion reached by the Labour Appellate Tribunal in the award under appeal was correct.

WORLD RUBBER STATISTICS

World production of natural rubber in July this year, disclosed a sharp rise as compared with that for the previous month, while consumption declined, according to the latest figures issued by the International Rubber Study Group. Output in July aggregated 162,500 tons, as compared with 145,000 tons in June. Consumption amounted to 145,000 tons, as against 155,000 tons. The production in July brings the total output for the first seven months of this year to 1,015,000 tons, while consumption amounted to 1,097,500 tons. Stocks at the end of the period aggregated 817,500 tons, a decline of 67,500 tons since 1st January.

The January-July consumption figure included estimated imports into the U.S.S.R. of 75,925 long tons and into China of 42,450 long tons. In the month of July, imports into these two countries were estimated at 9,650 long tons and 6,900 long tons, respectively.

Reported exports of rubber from Indonesia during July 1956 amounted to 58,715 long tons, of which 15,836 long tons were reported as being of estate origin. On the basis of the normal monthly allowance of 2,500 long tons for non-reported exports, total Indonesian exports in July amounted to 61,215 long tons, giving a total of 346,860 long tons during the first seven months of 1956.

The United States imported 54.9 million lbs. of tea during the first half of this year, as compared with 56.6 million lbs. in the corresponding six months of 1955. Of this quantity, India accounted for 19.5 million lbs., as against 22.9 million lbs. a year ago, while the share of Ceylon rose from 17.8 million lbs. to 23.5 million lbs.

The imports of tea by the U.K. during the first seven months of the year increased to 315.4 million lbs. from 291.2 million lbs. in January-July 1955. India and Ceylon were the largest exporters to the U.K. during this period, the former accounting for 178.6 million lbs. (as against 155.2 million lbs.) and the latter for 79 million lbs. (73 million lbs.).

Rubber plantations now are being established in the Portuguese Congo, which forms part of the province of Angola. These will, in a few years time, be capable of supplying the entire natural rubber requirements of metropolitan Portugal.

Last year metropolitan Portugal imported 8,520 tons of natural rubber. Of this 5,577 tons came from Portuguese Guinea and the remaining 2,943 tons from British West Africa.

Reports from Luanda, the capital of Angola indicate that Mabor is to construct a tyre factory, with an annual capacity of 2,000 tons, on the outskirts of that city.

The production of tea in Pakistan rose to 8.2 million lbs. in August 1956, from 7.8 million lbs. in the corresponding month of last year. It is, however, slightly lower than that of 8.5 million lbs. produced in August 1954. The total production for the period April-August 1956, aggregated 28.7 million lbs., as against 25.6 million lbs. and 29.4 and 1954, respectively.

Brazil's exportable crop of coffee in 1955-56, according to one estimate, amounted to 25.3 million bags, excluding stocks held on Government account, of which about 17 million bags were exported. After meeting the requirements of domestic consumers, stocks amounting to 11.3 million bags were carried forward to the current year.

THE BANK OF MAHARASHTRA LTD.
Scheduled Bank
Head Office:—POONA-2.
Estd. 16th September 1935.
Bank completes 21 years of its career.

DURING THIS PERIOD

★ Working Funds reached Rs. 7 crores.
★ Paid-up Capital was raised to Rs. 16 lakhs.
★ Reserve Fund and other reserves went up to Rs. 3,75,000/-.
★ In and outside Maharashtra 31 Branches were opened.
★ A Grand Palatial building was erected for the Head Office in Poona.

We sincerely thank the shareholders, account holders, clients and numerous other well-wishers who have helped achieve this progress, and earnestly request them to continue this co-operation in future.

C. V. JOAG,
B. Com., F. I. B. (London)
Manager.

YOGIC ASANAS

To be healthy and to keep fit ask for our attractive Chart (Map) showing YOGIC ASANAS, which will be sent on receipt of M.O. for Rs. 1-14. These ASANAS can be easily performed at home.

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and in the evening from 6 to 7-30 p.m. at the above address. Lectures on every Sunday at 10 a.m.

STEEL IN THE SECOND PLAN

DETAILS OF THE PROGRAMME

NOTHING brings out more clearly the great importance which the Planning Commission attaches to steel production than the fact that the expansion programme for steel in the public and the private sectors at a cost of Rs. 462 crores accounts for as much as 43 per cent. of the total investment under large-scale industries in the second Five-year Plan. All this investment is designed to raise the current output of saleable steel of some 1.3 million tons to 4.3 million tons by 1960-61.

The first Plan included the expansion and modernisation scheme of the Tata Iron and Steel Co. (TISCo) for raising the production capacity to 931,000 tons of saleable steel and the expansion scheme of the Indian Iron and Steel Co. (IISCo) for raising the production of saleable steel and pig iron to 700,000 tons and 400,000 tons or alternatively to 620,000 tons and 500,000 tons respectively, by the end of 1957. The Plan also visualised the expansion of the Mysore Iron and Steel Works to a capacity of 100,000 tons of finished steel to be achieved before 1956. During the period of the first Plan, the major programmes completed by the TISCo comprise the new Simon carves battery of coke-ovens and the re-building of the 'D' blast furnace. The subsections for receiving power from the Damodar Valley Corporation were also completed. The IISCo has completed the major extensions visualised in 1950, namely, the Morgan mill, boiler plant and ash-handling equipment. The increase in production, at the Mysore Iron and Steel Works was mainly in respect of pig iron. The following table summarises the increase in production of saleable steel and pig iron over the period of the first Plan.

(In 000 tons)

	1951-52	1955-56
Saleable Steel:		
TISCO	799.0	797.8
IISCO	264.0	452.9
Mysore Iron and Steel Works	30.5	35.0
Total ..	1,093.5	1,285.7
Pig Iron:		
TISCO	1,129.0	1,156.0
IISCO	694.1	707.0
Mysore Iron and Steel Works	23.0	52.4
Total ..	1,846.1	1,915.4

Much preparatory work was done during the period of the first Plan towards the establishment of three steel plants in the public sector—the Rourkela (Orissa) plant with which is associated the German Combine of Krupps and Demag, the Bhilai (Madhya Pradesh) plant which the Russian participation is envisaged and the Durgapur (West Bengal) steel plant in which a consortium of leading British steel and allied interests is participating. These plants, as is well known, now form part of the steel programme in the second Five-year Plan. The Rourkela and the Bhilai steel plants are expected to go into production by the end of 1959 and the Durgapur plant by the end of 1960. The ingot capacity of each of these steel plants will be one million tons. The capacity for pig iron output will be 945,000 tons in Rourkela, 1,100,000 tons in Bhilai and 1,275,000 tons in Durgapur, while the capacity for finished steel will be 720,000 tons in Rourkela, 770,000 tons in Bhilai and 790,000 tons in Durgapur. The surplus of pig iron which will be available for sale is, of course, limited; it will be about 30,000 tons in Rourkela, 300,000 tons in Bhilai and 350,000 tons in Durgapur. The plans for the lay-out of the three steel plants have taken into account the possibility of further expansion in later years. Thus, the Bhilai steel plant provides for ultimate expansion up to 2.5 million tons of ingots per annum and the Rourkela and the Durgapur plants to about 1.25 million tons of ingots each. So far as the Mysore Iron and Steel Works are concerned, the capacity of the works is expected to reach 100,000 tons of finished steel.

Some of the special features of the three Government-owned steel plants are:

(1) The coke-ovens and blast furnaces are visualised in terms of units of not less than 1,000 tons daily capacity; (2) utilisation of washed coals and blends of coking and non-coking coals in the interest of conservation of metallurgical coals and establishment of a washery of 360 tons hourly capacity at Durgapur; (3) provision for sintering plants at Bhilai and Durgapur in case it is decided to establish them at a later date; (4) use of high top pressure techniques in blast furnace operations; (5) design of the blooming mill and soaking pits in the Durgapur steel plant to handle steel ingots of seven tons weight; (6) adoption of the Linz-Donawitz (LD) oxygen blowing process in the steel melting shop at Rourkela; (7) installation of a rolling mill of modern design at Rourkela for hot and cold rolling including a broad strip mill for strips up to 1.525 mm. in width, with an annual capacity for 720,000 tons of flat products; and (8) separation of hydrogen from the coke-oven gas for being used for ammonia synthesis in the fertiliser factory to be attached to the Rourkela steel plant.

The coke-ovens at all the steel plants are to be equipped for the recovery of crude benzol. Its further rectification into benzene, toluene, xylene, etc. is envisaged at Bhilai and Durgapur. As regards the by-product, ammonia, its fixation in the form of ammonium sulphate is provided at Bhilai and Durgapur and installation of contact sulphuric acid plants is included in the by-product recovery plant equipment. The developments envisaged at Bhilai also include the distillation of by-product coal-tar and the recovery of different organic compounds present in it. Details relating to by-product recovery are discussed under the coal carbonisation industry.

A rising level of steel output is envisaged in the two steel units in the private sector. The TISCo is expected to reach a total saleable steel output of 800,000 tons in 1956-57, 900,000 tons in 1957-58, 1,200,000 tons in 1958-59, 1,500,000 tons in 1959-61. During this period, the IISCo's output will be raised to 300,000 tons, 375,000 tons, 520,000 tons, 640,000 tons and 800,000 tons, respectively.

Pig iron supplies are, however, expected to be limited during 1956-57 and 1957-58, for, during these years, with the expansion of steel production by the TISCo and the IISCo, larger quantities will be consumed for steel melting. But in 1957, about 177,000 tons of pig iron will become available and in 1958, about 243,000 tons. The position is expected to improve thereafter, so that the availability of pig iron for sale, after all the programmes have been implemented, is expected to be some 660,000 tons—870,000 tons, made up of: TISCo 60,000—70,000 tons (off-grade), IISCo 100,000 tons; Rourkela 50,000 tons (off-grade); Bhilai 100,000—300,000 tons and Durgapur 350,000 tons.

The development of the steel industry involves, of course, the utilisation of a wide range of raw materials, such as iron ore, coal, manganese ore and limestone. The annual requirements of raw materials and electric power for the four plants in the public sector and the two plants in the private sector are given below:

(In million tons)

	Rourkela	Bhilai	Durgapur	Mysore Works	TISCO	IISCO
Coal	1.60	1.79	1.83	0.05	3.50	2.47
Iron ore	1.70	1.94	1.94	0.2	3.20	2.18
Manganese ore ..	0.11	0.03	0.06	..	0.06	0.04
Limestone ..	0.52	0.55	0.62	..	0.90	0.65
Dolomite	0.03	0.01	0.42	..	0.09	0.04
Electric power† ..	85	50	40	98	118	36

† In 000 k.w.

The estimated cost of the three plants in the public sector is about Rs. 353 crores, including the foreign exchange requirements of Rs. 228 crores. The total estimated cost of each plant, with the figures in brackets indicating the requirements of foreign exchange, is: Rourkela Rs. 128 crores (Rs. 89 crores), Bhilai Rs. 110 crores (Rs. 67.5 crores) and Durgapur Rs. 115 crores (Rs. 72 crores). More recently, the fear has been expressed that these estimates may have to be revised upwards, thanks to rise in prices. Be that as it may, the expansion scheme of the Mysore Iron and Steel Works is expected to cost Rs. 6 crores. In the private sector, the expansion scheme of the TISCo will cost Rs. 102.5 crores, of which the expenditure in the creation of new assets (as distinguished from expenditure on replacements and repayments of loans, etc.) is Rs. 85 crores, the corresponding figures for the IISCo being Rs. 49.2 crores and Rs. 42.5 crores, respectively.

GAS OUT OF COW-DUNG

The Indian Agricultural Research Institute has set up in villages around Delhi seven gas plants which manufacture gas out of cow-dung. This is the result of the research carried out at the Institute. This research work showed that, when moist dung is fermented in an enclosed vessel, a combustible gas, called methane, is obtained. One pound of dung yields as much as one cubic foot of this gas, so that a farmer having four to six animals could get about 100 cubic feet of gas from the dung voided in a day. This would suffice for cooking for an average family of four to six members. The process, however, involves no loss of the important manurial constituents of the dung which will still be available for being utilised as manure.

The gas plant consists of a metallic drum, about five feet in diameter and four feet in height, placed over a 15 feet deep well where cow-dung is collected for fermentation. The gas arising from this fermentation is collected in the drum which is kept in balance and under a regulated pressure by means of weights. The gas so collected is carried in a tube to a burner, on which cooking is done. The rate of gas production varies with atmospheric temperature and is higher in summer than in winter. On an average, however, it works out at about one cubic foot of gas for a pound of cow-dung added. One hundred pounds of cow-dung daily, mixed with an equal quantity of water, produce about 100 cubic feet of gas per day.

The operation of the plant is quite simple, and, beyond daily feeding of dung, no other attention is needed. The spent dung slurry automatically overflows from the tank and gets collected in shallow trenches built around it, ready for use in the fields. It is significant that this material does not attract flies and could be allowed to dry without causing any nuisance of smell and fly breeding. For such ideas intended for universal adoption the severest tests are necessary. It will, naturally, take some time before all the implications of this important new invention can be fully realised.

Initial capital outlay in the shape of pits, drums, pipes and gas burners is another major factor. Initial high costs—the present field models with a life span of 15 to 20 years cost about Rs. 250—may stand in the way of the acceptance of this excellent device. Research on methods to reduce the cost continues. Perhaps a larger model, co-operatively run, serving the need of an entire village could cut down the cost to make the idea sufficiently attractive to the village people. And larger models, the research scientists say, could be constructed on the same pattern as the pilot plants.

In the case of bigger installations, in addition to heating, the gas could be used for household lighting (in gas lamps) or for operating gas engines to run small-scale machinery or even motors to produce electricity.

JAPAN'S MERCHANT FLEET

In view of the fact that shipping interests all over the world are now making great efforts to construct new ships in order to make the most of the unusual prosperity prevailing in the freight markets, the Japan Shipowners' Association is reported to have arrived at the conclusion that about 8,870,000 tons gross would be the proper size of Japan's merchant fleet in the future. The highest peacetime tonnage of Japan's merchant fleet was 5,629,845 g.r.t. which was in June 1939. At present the strength of her merchant fleet is running around 4,000,000 tons and hitherto the objective had been to attain the pre-war tonnage of about 6,000,000 tons.

The shipping interests are also reported to be urging the construction of about 800,000 tons gross of new tonnage in the nine months from July 1957 to end of March 1958, including the ships to be built under the 13th shipbuilding programme. The yards in Japan are however stated to be in a position to construct only 600,000 tons for Japanese owners during the period. At the end of June last, Japan had 129 ships totalling 1,116,490 gross tons under construction in her yards, of which as much as 851,708 tons were for export.

HEAVY ELECTRICALS

The Heavy Electricals (Private) Ltd., owned entirely by the Government of India, has now been registered in Gwalior to take over the control of the Government's heavy electrical equipment project at Bhopal. The authorised capital of the Company is Rs. 30 crores. It may be recalled that Mr. K. C. Reddy, Minister for Production, stated, in the course of his recent Press conference, in New Delhi, that the factory would be designed to manufacture turbines, generators, transformers, static capacitators, circuit breakers, switch boards and control desks, small and medium-sized motors, traction motors, insulating materials, etc. The technical consultants for the project are the Associated Electrical Industries Ltd. A delegation of Indian engineers, which visited the U.K. in April-May this year, has submitted a report to the Government. The report has been accepted. But a detailed project report relating to the work in the factory is due by 30th November 1956. The recruitment of engineers, who will be given specialised training in the factories of the technical consultants in the U.K. is being taken in hand.

HINDUSTHAN AIRCRAFT

The expansion programme undertaken by the Hindusthan Aircraft Factory provides for the overhauling of aircraft and the manufacture of fighter aircraft, jet aero-engines and rail-coaches. In a Press interview, at Bangalore, Mr. Shrinagesh, Managing Director of the Factory, stated that the Factory would begin manufacturing gas-turbine aero-engines and Gnat fighter aircraft by the end of the second Five-year Plan. As regards over-haul of aircraft, he revealed that only specialised work would be undertaken at the Factory and that centres for overhaul would be established at Cochin and elsewhere. The Factory would build standard-type rail coaches but would keep the manufacturing unit flexible, in order to undertake the manufacture of electric and diesel trains as well.

The General Electric Co. of India Private Ltd., Calcutta, who are the agents of Permali Ltd., England, presented recently the film "Clear Road Ahead" to the officials of the Eastern Railway and South Eastern Railway. The film "Clear Road Ahead" has been produced by Permali Ltd. to depict the meticulous care taken during the manufacture of the Permali insulated rail joint which is used to insulate sections of the railway track, where track circuits are employed, and also to illustrate how widely this joint is used on railways in India, Great Britain, Australia, Canada, France, Norway and Sweden. The track circuit is a vital link in electrical signalling on railways and the film illustrates how well the Permali insulated rail joint stood upto the most arduous service and climatic conditions.

NEW PRODUCTS AND PROCESSES

Fruit Pulp Sheets and Slabs

THE pulp of fruits like mango and jack fruit is usually sundried or dehydrated by other artificial means in many parts of the country. The tough leathery product obtained by these indigenous methods, although brown in colour and inferior in quality is a favourite of children and youngsters alike. A process to obtain a fruit pulp of uniform and smooth texture, having bright colour and appearance and delectable taste and flavour has been worked out by the Central Food Technological Research Institute, Mysore. A soft fruit beverage which can also find a ready market, is obtained as a by-product. The process which is marketed by the National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1, involves the steeping of the edible portion of the fruit in sugar solution (containing citric acid, if necessary) and steaming for 15-30 minutes. After standing overnight with addition of sulphur dioxide, where necessary, the fruit is strained and passed through a pulping machine. The fine pulp obtained is spread on trays and dried in the sun or in a cabinet drier at 140-145° F. The thin dried sheets are cut into pieces of suitable size, pressed into slabs of desired thickness or made into rolls and packed suitably in airtight containers. The process of manufacture is quite simple and can be easily started as an integral part of a fruit preservation factory. Equipment required for this purpose can be conveniently fabricated in the country. Pilot plant trials with pulps of jack fruit, mango, etc., have been carried out successfully and operating details and economics of the process have been fully established.

Special Hearing Aids

An electro-acoustic articles factory, Audium Electro-acoustishe Industrie N.V., Singel 160, Amsterdam C. (Holland), has put on the market some new types of hearing aids, which to a large extent meet the requirements of good hearing quality, small size and low weight. They are handsomely designed and are supplied in a de luxe case. One type excels by its very high hearing qualities. It is fitted with a sixfold tone and limitation control, contains four transistors and weighs 71 grammes (2½ oz.). Another type of hearing aid is of an exceptionally small and light design (it weighs no more than 38 grammes=1.34 oz.); it contains three transistors and one transformer. This apparatus is specially intended for ladies, who can, for instance, wear it under their hair. In addition to these models, this factory also makes *hearing spectacles*, which have four very small transistors in the side-pieces. This hearing aid is thus absolutely inconspicuous.

Calcium Cyclamate

A chemical works, Chefaro N.V., Keileweg 8 (Post Box 6014), Rotterdam W. (Holland), which already produces the new synthetic sweetener, sodium cyclamate, has now also taken in hand the manufacture of calcium cyclamate. Although the cyclamates are higher in price than saccharin, there are numerous diabetics who prefer them to saccharin because of their purer taste, which is retained when they are cooked along with foodstuffs. For those who have to keep to a salt-less diet, calcium cyclamate is more suitable than sodium cyclamate.

Non-fading Gold-coloured Aluminium

Details have recently been released of a new method of producing non-fading gold-coloured aluminium in a variety of shades and tones. The colour is brought out, without the use of dyes or other colouring materials, by anodizing under readily controlled conditions. It may be varied from pale straw to deeper gold and gold-bronze tones, and the finish may be either bright or satin. The process, which has been developed and patented by the Kaiser Aluminium and Chemical Corporation, in California, imparts a sunfast gold colour of great permanence, well suited to a wide range of exterior architectural applications, motor car fittings, furniture and domestic appliances. The alloy will soon be commercially available in sheet form and development work now in progress is designed to adapt the gold coloured alloy to products in other forms, such as extrusions.

New Antibiotic

A new antibiotic drug, expected to be a major weapon in treating germ-caused diseases, has been developed by Chas, Pfizer and Company. The company reports that the drug, sigmamycin, has been found effective against a wider range of disease bacteria than any other drug. Sigmamycin is a combination of a new antibiotic, called both cleandomycin and metromycin, and the older antibiotic tetracycline. In clinical tests, the company reports, sigmamycin has been especially effective against germs which cause some types of pneumonia, blood poisoning and intestinal infections among other ailments.

Hypersonic Wind Tunnel

Ohio State University engineers are building a hypersonic wind tunnel that will be able to blow heated air at a speed of 3,700 miles per hour. The builders hope it will help them overcome one of the greatest barriers to space travel—heat. Heat generated by friction at hypersonic speeds (more than five times the speed of sound) is enough to make some present-day metals act like soft putty. The tunnel will enable engineers to stimulate conditions encountered at Hypersonic speeds.

ANNUAL MEETING OF THE SINGARENI COLLIERIES COMPANY LTD.

DR. G. S. MELKOTE ON THE TASK AHEAD

THE Thirty-fifth Ordinary General Meeting of the Singareni Collieries Company, Ltd. was held in Hyderabad-Deccan, on 21st September 1956. Addressing the shareholders on the occasion, Dr. G. S. Melkote, Minister for P.W.D. and Labour, Government of Hyderabad, and Chairman of the Company, referred to the programme for raising the output of the Company's collieries from 1.5 million tons to 3 million tons per year during the second Five-year Plan period. The period would, he said, be one of test for all serving the Company and forecast a period of "severe economics" ahead.

The following is the full text of Dr. Melkote's speech:

"GENTLEMEN,

"This is the Thirty-fifth Ordinary General Meeting of the shareholders of the Singareni Collieries Co., Ltd., and I have great pleasure in welcoming you particularly, because this is the last time that I shall be addressing you as Chairman. The annual report and accounts have been in your hands for some time and I take it that you have found time to peruse them critically. Last year, I claimed that we had achieved record results in the Company's history, but, as you must have already noticed, the results of this year are an appreciable improvement even over the results of the last year.

Plan for Future

"We have undertaken, as our contribution towards industrialisation programme under the second Five-year Plan, to raise the output of coal from our coalfields from 1.5 million tons to 3.0 million tons per year. This, in conjunction with production of lignite from Neivelli, will just suffice to meet the requirements of the South. This programme of self-sufficiency will also relieve the strain on rail transport system, as it will minimise long haulage of coal from the northern coalfields, except for coal of a special quality required for special industrial needs. The Government of India have agreed to help to finance it. The task, however, is not easy, considering that we will have to put in six to seven new mines and that it takes twelve months or so of boring operations to prospect the country and locate the site of a mine and three years more to develop it. We will be pouring in money for all that time without seeing any return therefrom. This will be a period of test for all of us when we will have to brace ourselves up with hard work with strict adherence to time-table and tighten our belts for severe economies to be achieved. I have, however, no doubt that, with a keen desire noticeable in every one to serve the country to the best of his ability and play one's part in the mighty venture on which the country has launched, the task will not be found insurmountable.

Labour Relations

"We have undertaken yet another responsibility. In giving its award, the All-India Industrial Tribunal (Colliery Disputes) observed: 'The Singareni Collieries Company, Ltd. with a progressive outlook that it has brought to bear upon their working are bound to continue their effort in the direction as thereby they would be doing service to themselves, the workmen and the industry at large.' We are indeed appreciative of the good word used for our Company as having a progressive outlook, but the truth is that the recent price increase sanctioned by the Government of India does not cover the increase in the cost of production due to increase in wages awarded by the Tribunal. We shall, however, endeavour to bridge the differences by scientific planning, use of machinery, improved working conditions, incentives to workers, designed to increase their productivity, without corresponding increase in physical effort. We are of the firm conviction that in the long run the higher earnings as a result of incentives to workers will lead to higher standard of living and in turn increase the urge for greater productivity. We shall go forth with this faith to achieve our object of reduction in costs. I feel I should, on behalf of the management and myself, offer our hearty congratulations to all sections of employees for the achievement of a substantial increase in wages and dearness allowance. This naturally has brought about a feeling of satisfaction and I am sure would be an incentive for increased production in days to come and with no strife whatsoever. Let me wish them all better and more prosperous days and days of contentment and happiness and improved amenities in every direction.

Selling Price

"The Company has always maintained that their task is to reconcile and balance judiciously the three separate interests, i.e., of workers, the investors and customers. I have explained above how the interests of investors and the workers have been served and there remains the interest of consumers. In my last year's speech I said that your Company had reduced prices of certain grades of coal giving consumers a recurring annual benefit of Rs. 2.67 lakhs. During the year the price of slack coal was reduced by Re. 1 a ton giving the consumers a further annual recurring benefit of Rs. 2.14 lakhs. This is something of which we can be proud, as you will no doubt recollect that in all other coalfields the price of coal was increased by As. 3 a ton with effect from 18th July 1955 to meet the additional cost of the liberalised Provident Fund Rules introduced by the Government. We have not only met this additional liability from our own resources but actually passed on a reduction in the price of slack coal.

Management and Staff

"Finally a word about the staff and management. On the 12th of August I was invited to inaugurate the work on *Gautam Khani* at Kothagudium and here indeed I saw a real manifestation of *esprit de corps*. What impressed me most was the realisation amongst all grades that their own welfare was directly linked with the welfare of the Company. There was keenness on the part of every one to co-operate with the management as they seemed confident that they will get a fair share of the cake in the end. I was not, therefore, surprised when I was told that the Secretary of the Union, while welcoming the recent award, has assured us that 'with the immediate implementation of the Tribunal Award the workers would make every effort to increase the output and maintain industrial peace for the benefit of one and all.'

"In these days, when it is the fashion for labour organisations to run down management simply because it is management, the existence of an understanding between the colliery union and the management I noticed is most heartening and I would like to congratulate both the management and the workers therefor. From the experience I have gained as Labour Minister, I am confident that a necessary prerequisite to mutual understanding between labour and management is better and higher morale in the organisation, better team work and better efficiency which will be all reflected in ultimate lower costs.

"As I have said, this is the last time I am addressing you as Chairman of your Company and I am glad to be able to record, there has been progressive improvement since 1952, except for the break in 1953 when we had a general strike in all our coalfields on the issue of demonetisation of *Halli* currency. I have no doubt that with the able management at the top, with the excellent team of officers, with understanding workers, and with your support the Company will grow from strength to strength."

BRITAIN'S NEW COKE PLANT

The National Coal Board's new £10 million coke plant at Wingerworth, near Chesterfield, U.K., will be opened on 30th October. Designed to produce 1,400 tons of coke a day, the new carbonisation and chemical plant will also provide 27 million cubic feet of gas monthly for domestic consumption: ammonium sulphate, naphthalene, benzole, sulphuric acid, pitch and tar. It is the most completely integrated installation in Britain and one of the biggest in Europe. The 2,000 tons of coal a day which will be carbonised will come from local mines, and will be suitable for conversion to smokeless fuel.

PARTICIPATION OF LABOUR IN MANAGEMENT

SOME NOTABLE SCHEMES ADOPTED IN WESTERN COUNTRIES

IN recent months, much discussion has taken place over the subject of participation of labour in the management of industrial enterprises. It is being increasingly realised that one of the effective ways of improving productivity and reducing industrial tension is to associate representatives of labour with management in the determination of certain policies as well as in their administration. This is not, however, an entirely new idea, for, in many western countries, it has been tried and found largely successful, particularly in the war and post-war years.

Recognising the importance of associating labour in management, the Planning Commission, in the report on the second Five-year Plan, observed that such a measure "would help in (a) promoting increased productivity for the general benefit of the enterprise, the employees and the community, (b) giving employees a better understanding of their role in the working of the industry and of the process of production and (c) satisfying the workers' urge for self-expression, thus leading to industrial peace, better relations and increasing co-operation." All this, the Commission said, could be achieved by providing for councils of management, consisting of representatives of management, technicians and workers. The Commission observed:

"It should be the responsibility of the management to supply to such a council of management a fair and correct statement of all relevant information which would enable the council to function effectively. A council of management should be entitled to discuss various matters pertaining to the establishment and to recommend steps for its better working. Matters which fall within the purview of collective bargaining should, however, be excluded from the scope of discussion in the council. To begin with, the proposal should be tried out in large establishments of organised industries. The pace of advance should be regulated and any extension of the scheme should be in the light of the experience gained."

Two weeks ago, we referred to the scheme for the association of labour in management, which has been adopted by the Indian Aluminium Co., Ltd. of Calcutta as part of the five-year agreement between the Company and the workers. Similarly, the principle of the association of workers in management, it may be recalled, was built into the agreement which the management of the Tata Iron and Steel Co., Ltd. concluded with its workers in January last. In pursuance of this principle, the Company concluded last month a supplemental agreement providing for the setting up of joint departmental councils, joint works council, joint town council and joint consultative council of management. All these councils will have equal number of representatives of workers and management. For each department of the works, there will be a joint department council to study the production problem and to advise on steps necessary at departmental level to promote and rationalise production. The joint works council will study operational results and current and long-term production problems of the works as a whole. The joint town council will deal with social welfare and other activities in the town. Finally, there is the joint consultative council of management. It will advise the management on all matters concerning the working of the industry in the fields of production and welfare. Although it may also deal with financial and economic matters, it will not concern itself with questions affecting the relations of the Company with its shareholders or managerial staff or taxes or other matters of a confidential nature. These agreements break a fresh and welcome ground in the sphere of industrial relations in India and their working will naturally be watched with interest.

Against this background, a brief review of the existing schemes in Yugoslavia, Germany and France, which appears in the July issue of the *Indian Labour Gazette*, makes interesting reading. In Yugoslavia, active participation of labour in the management and administration of public undertakings started from the year 1950 when the Federal Assembly passed the basic law on the management of State economic enterprises and higher economic associations by the workers' collectives. The basic law of 1950 envisages the administration of the undertakings through two elected bodies of workers, namely, the workers' council and the management committee. The workers of an undertaking first elect, from amongst themselves, a workers' council and the latter elects a managing committee. The council approves the plans, decides on the general policies and formulates the rules and regulations of the undertaking. It also decides on the manner of the distribution of profits. The management committee which is the executive body determines the manner in which the production plans should be carried out and is responsible for the day-to-day administration of the undertaking.

In Germany, labour participation in management is governed by two legislative enactments, the Co-determination Law, 1951 and the Works Constitution Act, 1952. The 1951 Act is applicable to all large undertakings normally employing more than a thousand persons. Their administration is to be carried out by two boards, namely, the board of supervision and the managing board. The former decides the policies and the latter executes them. The 1952 Act is applicable to all undertakings which are not covered by the previous Act. The Act provides, among other things, for the establishment of works councils and economic committees.

No adequate data about the success of the co-determination system, it is stated, are available. It would, however, appear that an on-the-spot investigation, conducted in 1953, into the working of the co-determination system in two steel companies, employing about 33,000 workers, revealed that the system can function satisfactorily at least in periods of good business activity. Many important conclusions emerged from this investigation. There was a general atmosphere of mutual trust and collaboration between workers and management, seldom found to the same degree in other industries. Decisions by the managing board were arrived at unanimously, instead of a majority vote, indicating a spirit of true partnership. The position of the labour director was not an incongruous one and he commanded a position of influence even though he was in a minority. There was evidence of psychological and economic gains to the workers. Among the economic gains were increased wages, better and more welfare benefits and greater job security as compared to undertakings where the system of co-determination did not prevail.

In France, labour participation in management is highly developed in the public sector than in the private sector. In the private sector there is no direct participation of labour in management. In the public sector, the right of workers to participate in the management in the nationalised industries has been clearly laid down in the various nationalisation laws. The method of labour participation in management differs from industry to industry. The representatives of workers are included in the industry at different levels, viz., industry, undertaking and unit.

In communist countries, too, great stress has been laid on association of workers with management. Thus, Mr. Halina Kowalska, of the International Labour Office, in the course of the article on "Productivity in Planned Economies of Eastern Europe," in the August, 1956 issue of the *International Labour Review* observes that, in the communist countries, the management of the enterprise, the party organisation and the trade union concerned, are all charged with encouraging and assisting workers' participation in planning, in general, and in the productivity programmes, in particular. The workers directly participate in the elaboration of plans at the level of enterprise, plant department, or workshop. Their main contribution, he says, "seems to be to indicate sources of waste of materials, to suggest preventive measures, to elaborate methods for organisational and technical improvement, and to establish schedules for the repair of equipment." They also participate in establishing the principles of systems of payment by results and in setting norms of work and piece and bonus rates. A direct and indirect influence by workers on these matters is also exercised by means of workers' suggestion schemes and the socialist work competition movement. Under the workers' suggestion scheme, the workers who offer constructive suggestions are generously rewarded. The socialist work competition movement or the socialist emulation movement aims at promoting a spirit of emulation among individuals, teams and groups of workers.

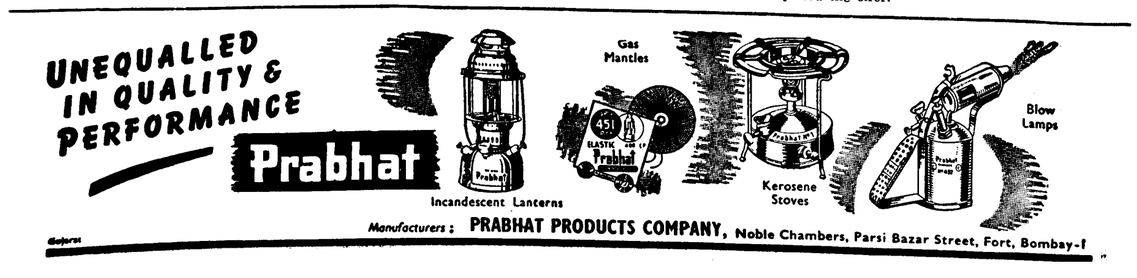
Wage Policy in Outline. By R. G. Gokhale. Published by The National Institute of Labour Management, Bombay, Price As. 12.

Within a brief compass of about 40 pages, Mr. R. G. Gokhale, who as the Labour Officer of the Millowners Association for several years has become a master of labour problems, has discussed clearly and comprehensively a host of issues relating to the formulation of a wage policy. In the context of the recent persistent demand by labour for an increase in wages, Mr. Gokhale's book has a certain topical significance. In any case, now that the country is committed to the second Five-year Plan, with its emphasis on large and heavy industries, there is need to keep the wage problems under continuous and expert scrutiny. Mr. Gokhale, with his intimate knowledge of, and experience in handling, labour problems, spotlights some of the major considerations which must be borne in mind in evolving a sound wage policy. He admits that the "formulation of a wage policy is an extremely difficult proposition and cannot be tackled in isolation." A wage policy, he rightly insists, must be related to employment, production plans and price policies adopted by the Government.

Mr. Gokhale makes a balanced approach to the problem. Thus, he emphasises that in fixing a schedule of wages, the human needs of the worker should be taken into account and recognition accorded to such factors as differences in skill, strain of work and training period involved. At the same time, a wage policy should be based on the capacity of the industry to pay, productivity of labour, level of national income and wages in other sectors, like agriculture, employment and price levels. Surely, in fixing wages, much harm may be done through ignoring any one or more of these vital considerations. We commend Mr. Gokhale's brief treatment of the subject to all students of labour problems.

The Bombay Port Trust General Workers Union, the Transport and Dock Workers Union, and the Bombay Port Trust Employees Union, which together claim a membership of 17,000 workers, gave notice to port authorities of their intention to go on general strike with effect from 14th October, 1956. Their demands, which were reviewed in these columns two weeks ago, include revision of pay scales, better leave and other facilities.

The Government has declared that the services of the assistant harbour masters as essential under the Essential Services (Maintenance) Order. This has been done to forestall the strike by these officers in Calcutta. When this issue was raised in the Lok Sabha, early this month—two adjournment motions on it were ruled out by the Speaker—the Union Minister for Transport, Mr. Lal Bahadur Shastri, said that the Government would accept the recommendations of the Tribunal to which the harbour masters' demands had been referred. He disclosed that he had himself offered them concessions which would give them an additional remuneration of Rs. 125-200 per month but they had rejected the offer.



TEXTILE MACHINERY CORPORATION LIMITED

SIXTEENTH ANNUAL GENERAL MEETING

MR. K. K. BIRLA SURVEYS COMPANY'S ACTIVITIES

ADDRESSING the shareholders of the Textile Machinery Corporation Ltd. at their Sixteenth Annual General Meeting held at Belgharia, 24-Paraganas, West Bengal, on 24th September 1956, Mr. K. K. Birla, Chairman, referred to the achievements of the Company in expanding the scope of its activities. Several agreements with reputed foreign concerns have been entered into, in order to secure technical know-how for producing new articles. The Company, Mr. Birla said, intended to make these new articles on a fairly substantial scale.

The following is the full text of Mr. Birla's speech:

"LADIES & GENTLEMEN,

"It gives me great pleasure to welcome you to this annual meeting of the Textile Machinery Corporation Ltd. The Directors' report and the audited accounts and balance-sheet for the year ended 31st December 1955, are already with you and, with your permission, I will take them as read.

"From the Directors' report you will see that our Company has been making steady progress; we have widened the scope of our activities. Several agreements have been entered into with reputed foreign concerns, by means of which we have secured technical know-how for producing certain new articles, namely, items of cotton spinning machinery, card clothing, jute spinning machinery, water tube boilers and sugar mill machinery, all of which we intend to make on a fairly substantial scale. These expansion schemes, as you may well imagine, will require additional financial outlay and for this purpose the authorised capital of our Company has been increased during the year from Rs. 1.5 crores to Rs. 4 crores and the paid-up capital from Rs. 1 crore to Rs. 1.9 crores.

"In our cotton textile machinery division we have raised our output of ring spinning frames and spares in order to cope with the present demand within the country. This higher demand arises out of the revised policy of the Government of India in regard to expansion of spindleage and loomage in cotton mills. Several mills have been permitted to expand and new mills are being set up. Installation of automatic looms has also been permitted. These are welcome signs of a change in the outlook of our national planners which the mills, as well as machinery makers, have been waiting for after a considerable period of stagnation. One hopes that the increase in activity this new policy has engendered will be sustained and that the Government will create the necessary conditions to make it stay. The time is now ripe for a review of the capacity existing in this country for the manufacture of looms and ring frames and the capacity now being created for back processes machinery. The indigenous manufacturing interests have shown commendable speed in the past in availing themselves of opportunities for increasing their ranges of production. They have the resources and they are prepared to expand further and we hope they will.

Cotton Ring Spinning Frames

"Our cotton ring spinning frame production, as I have mentioned earlier, is on a much higher scale than hitherto. We are applying the latest methods in production control calculated to ensure maximum utilisation of plant capacity and economies in consumption of material. There has been a substantial improvement in the quality of our frames. A statistical quality control unit has been started here whose work has in a very large measure helped to locate and eliminate flaws developing at the different stages of manufacture. We are glad also to note that standard specifications for component parts including those of our products are being evolved by the technical sub-committees constituted by the Indian Standards Institution.

"Our carding engine production, in which we are being assisted by our Japanese collaborators, Messrs. Howa Machinery Ltd., is progressing satisfactorily. The first batch of our carding engines, which we hope to put on the market within a few months, will have a small proportion of imported components. A year hence we expect to make complete carding engines in our own works.

"I have already referred to card clothing as a new line to be undertaken by us. A separate factory has to be set up for this purpose. Our Japanese collaborators in this project, Messrs. Kanai Juyo Kogyo Ltd., will soon be sending here a team of experts to help us in choosing a suitable factory site and also to install the plant. We shall have sufficient capacity installed to produce a fairly big portion of the indigenous demand for card clothing.

"In our jute mill machinery project we have made a start on spinning frames. We shall be making only a few frames this year with a portion of their components made by our collaborators, Messrs. Fairbairn Lawson Combe Barbour Ltd., Leeds. Side by side with this, we are planning for large-scale manufacture and for progressive increases in the proportion of components to be made here.

"Jute mills in the country have a big programme for rehabilitation of plant and we hope to be able to supply a fairly substantial portion of their requirements in this.

"Our boiler and heavy engineering division has also been working satisfactorily. We have been making industrial boilers till now of the Shell type only. We shall soon be making water tube boilers also. We have entered into an agreement with Combustion Engineering Inc. of New York for technical collaboration in this project. For the railways we are making locomotive boilers.

Wagon Production

"Our wagon production is now on a sound footing. In the current year we shall be changing over from metre gauge to broad gauge wagons. We have some capacity for passenger coaching underframes too; this line will be developed after we have secured an order for this item from the railways. There are certain other lines as well of railway equipment which we hope to develop by and by. The railways have done a very useful service to manufacturing interests by opening show rooms displaying the goods they import. We are grateful to them and to the Railway Equipment Committee for their very many helpful suggestions.

"In structural steel work, our boiler and heavy engineering division, encouraged by the results of its work in fabricating the sluice gates for the Rupar head works of the Bhakra Nangal Project—the longest barrage gates in India—has now undertaken fabrication of radial spillway gates for the Panchet Hill Project of the D.V.C. In this highly specialised work we are being aided, as in the past, by Messrs. Voest of Austria. Besides this, we are making structural parts for steel plants—bustle pipes, hot blast stove shells, Tyuere jackets, Detarrar casings, etc.

"Sugar mill machinery will be an additional line of manufacture in the boiler and heavy engineering division. In this we shall work in collaboration with Messrs. Stork-Werkspoor, Amsterdam, the world's foremost makers of sugar mill machinery. For this and our other expansion schemes we are constructing new shops and installing additional plant.

"Our steel foundry division was set up with a view to achieving self-sufficiency in steel castings and mild steel and special steel sections required for our own different lines of production. We are now making castings as well as ingots. We shall shortly be installing a rolling mill for rolling mild and special alloy steel sections. The possibilities of further expansion are being closely watched.

"One unsatisfactory feature about our current production and expansion plans is the shortages we now find of pig iron, steel and cement. On account of these shortages we have not been able to proceed with our work at a pace we would have liked to. We are, however, assured that these difficulties will soon be tided over since the Government, being seized of the situation, have taken steps to import these materials on their account.

"Pig iron imported on the Government account is proposed to be sold at a uniform subsidised rate on the same lines as imported steel. As regards indigenous steel, the advantage we had till now of cheap prices at the major ports will no longer be available to us. Indigenous steel is now being sold at a slightly higher, but uniform price, at all rail-head stations. As fairly big consumers of indigenous steel we shall hereafter be paying more for this commodity. Since, however, this price equalisation scheme was conceived in the interests of consumers all over the country we welcome it as such. Industrial units like ours situated at or near major ports will suffer a freight disadvantage in the matter of long distance haulage of their finished products. Since they have forgone the slight advantage they initially held in cheaper steel we feel it is but reasonable that they get some concession in the matter of railway-transportation costs of their goods for long distance haulage.

"The shortage of trained technical personnel is another problem which we, in common with all engineering concerns, have to contend with at present. We need to quickly make up an adequate quota of technical personnel to man our new divisions. We have recruited and are still recruiting graduate engineers who will undergo intensive training in our different manufacturing lines. Some of the foremen and assistant foremen at present working in engineering industries have not had the advantage of a basic engineering education. They could do better by equipping themselves with the necessary theoretical back-ground. In this connection we had some time back made a proposal to the Government of West Bengal for establishing an Institute of Engineering for training foremen. The Government have accepted this proposal and your Company has already donated a sum of Rs. 2½ lakhs towards this establishment and it will be making further donations with your approval according to necessity. This institution will impart basic theoretical and practical knowledge enough for men of the foreman category and it is hoped that our own employees along with those of other engineering concerns will derive some benefit out of it.

Industrial Policy

"In the revised Industrial Policy Resolution of the Government of India announced this year vast reservations have been made for development exclusively by the State of certain industries. I mention specially heavy castings and forgings of iron and steel, heavy plant and machinery for the manufacture of machine tools and mining and also the machine tool industry as amongst the categories thus reserved. I do not feel that the reasons that have impelled the Government to reserve iron and steel, mineral oils, shipbuilding, etc. will apply with equal force to the industries I have named. These are relatively smaller industries that private enterprise can quickly build up under the watchful eye of the State's development departments. For rapid development both in quantity and quality these industries would do better under conditions of free competitions. At any rate, the private sector should not be shut out of these altogether.

"But a few years back our engineering industries were languishing in hopes of matching their output to their installed capacities through increased offtake. We seem now to have got out of that rut and some of us have even had a taste of foreign markets. We now have an engineering export promotion council making surveys of export potential in overseas markets. Our country is likely to have a surplus of steel within a few years which can be utilised in making exportable goods and with our low priced steel we should be able to hold our own in the foreign markets for our wares.

"Ladies and Gentlemen, before I conclude I would like to express our thanks and appreciation to the officers, members of the staff and the workers for their unremitting efforts in sustaining the progress of your Company."

JAY ENGINEERING WORKS REPORT ALL-ROUND PROGRESS

PROCEEDINGS OF ANNUAL GENERAL MEETING

LALA SHRI RAM'S SUGGESTION FOR PROMOTING EXPORTS

THE Annual General Meeting of the shareholders of the Jay Engineering Works Ltd. was held at Calcutta on 14th September 1956. Addressing the shareholders on the occasion, Lala Shri Ram, Chairman of the Company, made a brief review of the all-round progress made by the Company during the past year. He also outlined the steps taken to expand the factory to produce electric fans and disclosed that the Industrial Finance Corporation of India had sanctioned another loan of Rs. 30 lakhs to finance the expansion plans. Lala Shri Ram appealed that a conference of railways, industry, trade and labour should be convened by the Government of India to consider how exports could be encouraged.

The following is the full text of Lala Shri Ram's speech:

"GENTLEMEN,

"With your permission, I will take the balance-sheet and profit and loss account and the Directors' report as read.

"We are meeting almost after a year, and I am glad to say that the past year has been of continued greater success and greater service, which is evident from the figures given below:—

Particulars	*Year ended 31st March*	
	1955	1956
	Rs.	Rs.
Sales	2,23,95,049	3,05,31,764
Profits	18,78,517	27,26,497
Payment to labour ...	54,27,552	63,52,919
Number of workers ...	2,639	2,934
Number of Usha embroidery and tailoring schools: ... and students ...	120 8,000	150 11,000

"The average of monthly production last year of sewing machines was 9,026 in number and the highest in one month was 12,012, as compared to the monthly average of 6,476 in the previous year and the highest of 9,241 in a particular month. The average production of electric fans last year was 6,939 in number, as compared to 4,478 in the previous year.

"During this year, the Directors decided to discontinue the manufacture of hurricane lanterns. The building and most of the machines have been utilised for other purposes.

"The Bhela enamel factory has been shifted to Chhindwara and has started working there.

"I told you last year that the definition of Section 23A of the Indian Income-tax Act was so modified, as to create serious difficulties, in paying back our loans, even to the Industrial Finance Corporation of India. We had applied for exemption. So far no decision has been arrived at.

"Last year, I said that we intended to produce a table fan and sell it for about Rs. 60. I am glad that these fans have been put on the market. We hope within the next few months to put a 36" ceiling fan on the market for about Rs. 100.

Expansion of Fan Factory

"I am glad to say that we have acquired about 75 *bighas* of land at a distance of about 3 miles from our present site, at a cost of roughly about Rs. 4 lakhs. We have already built the necessary roads, boundry wall and a bridge, and covered an area of about 1¾ lakhs sq. ft. The machinery is being shifted there, and it is hoped that by the end of December we will be making there about 6,000 fans per month, in addition to about 8,000 fans in the existing factory. The fan section will be completely shifted to the new site by next year, when we hope to be making about 25,000 fans a month.

"During the year, the Government of India has been good enough to give us licence for expansion of the fan factory capacity from 10,000 to 26,500 fans per month and of the sewing machine factory from 10,000 a month to 25,000 a month.

"For the expansion of these factories more finance was required, and the Industrial Finance Corporation of India has kindly sanctioned another loan of Rs. 30 lakhs.

"Orders has already been placed for machinery for the expansion of the fan factory, and the balancing of the existing sewing machine factory.

"The needle plant has been shipped from Europe and we hope that before the end of this financial year it will be in full swing.

"A four storeyed building has been put up for housing the tool room, design office, development and research department, training school, etc.

Selling Prices Unchanged

"Although due to increase in the price of various raw materials the cost of raw materials of sewing machines has gone up by over 20 per cent. and of fans by over 10 per cent., we are, however, selling these at the old prices and have not increased the rates.

"I have to point out that very great difficulty is being experienced since sometime on account of very poor and unstable quality of the pig iron and of hard coke.

"The Government of India recently announced its policy about uniformity in the prices of steel and pig iron of both Indian and imported. While this has helped the industries which are away from port towns and is welcome, so far as the exports are concerned, I would suggest that on the engineering goods exported, the prices of raw materials, whether pig iron or steel, should be charged on the basis of the indigenous prices. While the difference in cost to the pool will be negligible, it will be a great help towards export of these goods.

"While the Government of India has been good enough to accept the principle of a drawback of customs duty on goods exported, the procedure is so complicated and so difficult that it is almost impossible to get any refund. It entails a lot of work for the Government without doing any good to the industry. I, therefore, suggest that it should not be very difficult to devise on an *ad hoc* basis the amount of draw-back duty paid on such articles as are exported, whether they are fans, sewing machines or oil engines or any other items. This would very considerably reduce the complicated procedure, which is being followed now, and make it possible for the industry to get the draw-back duty amount.

Efforts to Increase Exports

"We, industrialists, owe a duty to our country in helping it to secure as much foreign exchange as can be possible. I feel that there is room for considerable increase in the export of general engineering goods. The markets should be explored for proper assessment and every effort made to increase the exports.

"Like various other countries, it would be a good thing if the Government of India called a conference of railways, industry, trade, labour. etc., to consider seriously as to how exports could be encouraged and helped. I do hope that the authorities will give the suggestion of mine due thought.

"I am conscious of the small contribution at present of the general engineering industry to our export trade, but I am sure that, in our national drive to conserve and augment our foreign exchange resources, we cannot afford to neglect even a small contribution and I am equally certain that there is very great scope for proper encouragement and for the export of engineering goods.

Earnings of Workers

"The earnings of our workers are steadily going up, and for the last year they received in the shape of *Puja* bonus and profit-sharing an amount equal to 5½ months wages, which is the highest in India.

"A few years back we started giving work to poor families and refugees outside the factory. It helped them in making a good living. In other places men skilled or unskilled find employment, and the number of such people has greatly increased and may be in the neighbourhood of about 1,500 working outside our factory premises.

"We are also going ahead with our policy for recruiting educated people. In the previous year we had 358 matriculates and now on 31st August 1956 we have 600. We think the scheme has been very successful.

"In the end, I have pleasure in conveying my thanks to and my appreciation of the work done by all my colleagues."

Proceedings

After the speech of the Chairman, the audited accounts of the Company for the year ended the 31st March 1956, were passed. A dividend of 10 per cent., free of income-tax, was declared in respect of the equity or ordinary shares of the Company.

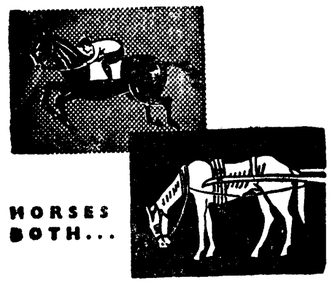
Thereafter the following resolutions were passed unanimously:—

1. *As ordinary resolutions*:
   (*a*) Mr. L. P. Singhania and Mr. M. G. Bhagat, who retired by rotation, were re-elected as Directors of the Company.
   (*b*) Messrs. H. P. Khandelwal & Co. Chartered Accountants, were re-appointed auditors of the Company for the year 1956-57 at a remuneration of Rs. 20,000.
   (*c*) Declaring that the age-limit prescribed in Section 280 of the Companies Act, 1956, shall not apply to Mr. D. N. Sen.
   (*d*) Approving and consenting to the renewal of the agreements and/or appointments of 146 sole selling agents in India and abroad, a list whereof was included in the notice to the shareholders;
   (*e*) Consenting to the Board of Directors contributing and/or subscribing amounts to any national, political, charitable, benevolent, public, general and other funds, not directly relating to the business of the Company or the welfare of its employees, the aggregate whereof in any financial year may exceed Rs. 25,000 or 5 per cent. of the average of the Company's net profits during the immediately preceding three financial years; whichever is greater; and
   (*f*) Providing that various books, registers and documents of the Company shall be kept open for inspection by shareholders and others during certain hours.
2. *As special resolutions*:
   (*a*) Electing and appointing Mr. M. G. Bhagat a Director of the Company and approving the appointment of Mr. D. N. Sen, Mr. K. L. Poddar and Mr. B. K. Rohatgi as Directors of the Company, and providing that the said gentlemen do continue as Directors until they retire.
   (*b*) Authorising the Managing Agents and the associates of the Managing Agents to retain commission and other remunerations, etc., in terms of section 359 of the Companies Act, 1956; and
   (*c*) Approving the contracts which are or may be entered into between the Company and India Electric Works Limited, for supply of goods by the latter under Section 360 of the Companies Act, 1956.

A 380,000-VOLT ELECTRIC NETWORK

Next year, France will have one of the first 380,000 volt lines in the world. 380,000 volts is the highest tension at which electricity has been transported up to the present. In order to economise, the Electricitè de France has decided to increase to 380,000 volts the tension of the line starting from Roseland, between Tignes-Malgovert and Plessis-Gassot near Paris which supplies Paris with more than a milliard kwh. per year. This line, which was built several years ago, is fitted with 1,000 pylons 50 metres high. At present, its tension is 225,000 volts but from the start it has been built to make adaptation to a higher tension possible. This transformation will enable the Electricitè de France to save 50,000 kwh., i.e. 250,000 million francs per year. The six cables of the two 225,000 lines will be brought nearer, two by two, until they are separated from one another by 40 cm. (whereas now the distance is 6 metres), in order to form a single 380,000 volt line.

Only the time required for installing four transformers, the most powerful ever built in France, and for staggering circuit interruptions (lasting about two months) at the most convenient times has postponed the opening of this line until next year. When the line was built several years ago, French enterprise set up a record for cable span between two pylons; the distance across the valley of the Basse-Tarentaise was 2,084 metres.



HORSES BOTH...

...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

TO HERALD AN INDUSTRY'S COMING OF AGE

NEARLY TWENTY YEARS AGO, the development of the aluminium industry in India was initiated with the help of Canadian technical and financial resources. Today this vital industry has entered a new phase of growth with Indian Aluminium Company's decision to install a new 10,000 ton smelter at Hirakud. This smelter will be India's largest and will more than double the country's production of aluminium.

As in the past, the Canadian associates of Indian Aluminium Company will contribute their know-how and experience in this new phase of growth. They will share, too, in the costs of the project, to finance a part of which the Company proposes to issue new capital.

GROSSING UP OF DIVIDENDS UNDER SECTION 16(2)

LEGISLATIVE INTENTION DISCUSSED

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

THE amendment of Section 16(2) of the Income Tax Act, which deals with grossing up of dividends, has led to a spate of controversy about the true intention of the Government. Does the Government by this amendment retrospectively desire to sabotage the previous position taken by the Income Tax Department or perpetuate it by a retrospective legislation? The wording of the amendment and the use of certain phraseology are likely to give edge to the controversy on either side, for the amendment at first sight seems capable of an interpretation that will suit either side.

We shall try to analyse this section in some detail in order to see which view is the true one and is in consonance with the underlying principle of the declaration of dividend and the tax paid by the company thereon. The controversial sub-section says:

"For the purposes of inclusion in the total income of an assessee any dividend shall be deemed to be income of the previous year in which it is paid, credited or distributed or deemed to have been paid, credited or distributed to him, and shall be increased to such amount as would, if income-tax (but not super-tax) at the rate applicable to the total income of the company without taking into account any rebate allowed or additional income-tax charged for the financial year in which the dividend is paid, credited or distributed or deemed to have been paid, credited or distributed, were deducted therefrom, be equal to the amount of the dividend:

Provided that when the sum out of which the dividend has been paid, credited or distributed or deemed to have been paid, credited or distributed includes (i) any profits and gains of the company not included in its total income, or (ii) any income of the company on which income-tax was not payable, or (iii) any amount attributable to any allowance made in computing the profits and gains of the company, the increase to be made under this section shall be calculated only upon such proportion of the dividend as the said sum after deduction of the inclusions enumerated above bears to the whole of that sum."

The substantative part of the Section provides that:

(a) for the inclusion of dividend in the total income, (b) dividend shall be deemed to be income of the previous year in which it is paid, credited or distributed and (c) shall be increased to such an amount as would if income-tax (but not super-tax) at the rate applicable to the total income of the company (without taking into account any rebate allowed or additional income-tax charged) for the financial year in which dividend is paid, credited or distributed were deducted therefrom, be equal to the amount of the dividend.

Total Income

There are two things to be noticed here. First, the Section does not deal with the "total income" of the company, but the "total income" of the shareholder. Secondly, it deals not with the fact, but with the fiction of making the dividend distributed as artificially deemed to be dividend of the previous year in which it is paid or distributed. The fiction of law as to the "previous year" was necessary for the following reasons:

(i) A dividend, when declared, is declared not necessarily out of the current year's profits only. The divisible profit is an amalgamation of the profits made during the year plus the carry forward of profit brought forward from the last year. (ii) These profits may further be replenished by drawing upon past reserves, such as dividend equalisation fund, etc.

Therefore, when such profits are distributed in a year, should the shareholder return the profits as the income of the year in which they were earned or the income of the year in which they were declared? Although shareholders are participants of the profits of the company as proprietors, their right to the aliquot part of profit does not arise until the company declares it as dividend. A debt is created against the company as from that date. To set right this possible doubt, namely, that the profit distributed is not the profit of one year only, the law will regard all such distribution as having been deemed to be income of the year in which the dividend is paid, distributed or credited.

Having created the fiction about the year in which dividend is to be returned as income of the shareholder, sub-section (2) goes on to provide for the process of grossing it up, i.e., increasing such dividend by an amount of income-tax (not super-tax) paid by the company. This process is imperative in terms of Section 49B. This section provides that any income-tax paid by the company, if the conditions of the Section are fulfilled, it shall be deemed to be paid by the company on behalf of the shareholders. Therefore, it becomes necessary to find what income-tax has been paid by the company on behalf of the shareholders in regard to the profits distributed as dividend. In the case of a company, all the profits of which have always been subjected to tax, no difficulty arises. But such an ideal position of simplicity is rarely found in practice for various reasons, among which mention may be made of the following:

(1) Profits of the company may not wholly be taxable; part of which may be agricultural and as such exempt from tax. Such profits may not enter the total income, if it were available for distribution as dividend. (2) The income of the company, though it may enter the total income, may have earned an exemption under certain specific provisions, e.g., profits of a company exempted under Section 15C. (3) The assessable income of the company may also suffer diminution by deduction of extra allowances in shape of depreciation, normal, extra or initial. If the company does not provide for all these allowances in its accounts at income-tax rate, there will be profit available for distribution measured by the difference between the actual income which is more and the assessable income which is less.

Anomalous Position

Under the substantive section, all profit distributed would have to be grossed up in order to give effect to Section 49B. But this would lead to an anomalous position. The section, therefore, logically provides modification of the effect of the substantive provision by adding a proviso in the following terms:

"Provided that when the sum out of which the dividend has been paid, credited or distributed or deemed to have been paid, credited or distributed includes (i) any profits and gains of the company not included in its total income, or (ii) any income of the company on which income-tax was not payable, or (iii) any amount attributable to any allowance made in computing the profits and gains of the company, the increase to be made under this section shall be calculated only upon such proportion of the dividend as the said sum after deduction of the inclusions enumerated above bears to the whole of that sum."

THE
BANKING ALMANAC

An INDISPENSABLE Book of Reference for Bankers, Manufacturers, Traders, Planters, Stock and Share Brokers and in fact for every concern dealing with Banks.

Contents: Complete particulars of Banks in India. **Complete list of Bank Branches in India** (Town-wise and Bank-wise). Complete particulars of the leading international banks of the whole world. And a mine full of other valuable information for businessmen.

Vol: 600 pages—Full Cloth Bound.

Rs. 10/- only (Postage & Packing **Rs. 1-4** extra).

INSURANCE & BANKING PUBLICATIONS

Post Box 676, NEW DELHI

We have already discussed the implication and the *raison d'etre* of this proviso. The proviso takes out from the dividend that portion of dividend which has been declared out of profits, the portion which:

(i) has not been included in the total income of the company, or (ii) on which the company has not paid income-tax, (a) by reason of profits though included in the total income have not borne any tax by reason of any specific exemption granted, e.g., exemption under Section 15C, or (b) by reason of allowances such as depreciation, development rebate, etc., in computing the profits of the company.

This portion of the dividend will not be eligible for grossing up.

The controversy that has arisen is centred round two points. In the main section, there is a reference to grossing up at the rate applicable to the company. This is interpreted—or was interpreted till the 1956 amendment thereof—as meaning the individual rate of each company instead of the rate applicable to the company as a class. The second point of controversy centres round the use of the word "total income" both in the substantive provision and in Clause (i) of the proviso.

Department's Argument

Let us consider this controversy. Does the rate relate to the individual rate of the company or the rate applicable to the company as a class? The Department argues that, prior to 1948, the article used in the Section was 'a' not 'the.' Therefore, in 1948, when this was altered, it must necessarily connote a change in the intention; a rate applicable to the class became the rate applicable to the company itself. To this the reply of the tax-payer is that it is not so. Under the Finance Act, 1948, a company had for the first time two rates—one, for the company, the profits of which did not exceed Rs. 25,000 and the other, for a company, the profits of which did exceed Rs. 25,000. The grossing up in the latter case was to be done at the full rate and grossing up in the former case was to be done at half the rate. But in either case, reference was to the company as a class—not as an individual company. That being so, the change of 'a' into 'the' cannot have the meaning that is attached by the Department to the individual rate of the company.

Further, the rates of company are flat rates —that is, rates that do not fluctuate with income. If this rate does not fluctuate—that is, increase with the income—it also equally does not reduce or decrease with the diminution of income. It attaches therefore to the company whatever may be the amount of profit. Such an amount may be infinite or zero, yet the rate will be the same. If this is true, then a flat rate applies to a positive income as well as negative income. The reason why one gets positive tax when one multiplies by positive figure or zero when one multiplies by zero is not the consequence of 'no rate,' but it is the consequence of the mathematical law, namely, a positive figure multiplied by a 'zero' must always result in a 'zero.' The Department argues that the flat rate can apply only to positive income, and not to negative income and, therefore, the negative result is obtained because there is no rate provided for *nil* income. This is absurd. There can be no such assumptions. If the rate applied to total income it must fluctuate with it. If it does not, then, it means that the rate is an uniform rate to be applied to profits of the company whatever they may be.

Another Hurdle

The next hurdle to be crossed is whether the use of the word "total income" in Clause (i) of the proviso can lead to the construction that it is the total income of the previous year. If it is the total income of the previous year, it can restrict the grossing up to such profits as are comprised in the total income of one year only. But this is not correct for more than one reason. Profits distributed are normally never restricted to one year. It always has an element of a carry forward from the last year—apart from the fact that, at times, the company may draw upon its dividend equalisation fund account to maintain a particular rate of dividend. It cannot be the intention to render nugatory the provision of Section 49B. If profits are distributed in the same year it will be susceptible to the process of grossing up. If the profits are taxed, but carried forward for future needs, it will not be so susceptible. This seems to be an anomalous position. It seems the most reasonable view to take is that profits on which benefit of Section 49B is conferred are the profits which have been once taxed and, when they are distributed the fiction of law should apply, namely, the company is deemed to have paid tax on behalf of the shareholder.

Next let us refer to definition of "total income" in the Act. Section 2(15) defines it as follows:

"Total income" means total amount of income, profits and gains referred to in sub-section (1) of section 4 computed in the manner laid down in this Act, and "total world income" includes all income, profits and gains wherever accruing or arising, except income to which under the provisions of sub-section (3) of section 4, this Act does not apply and except any capital gain which is not includible in the total income of an assessee."

In this, there is a reference to Section 4(1). Now, this Section reads:

"Subject to the provisions of this Act, the total income of any previous year of any person includes all income, profits and gains from whatever source derived."

Therefore, total income is the total of income of any such previous year. Clause (i) of the proviso, after substituting the above definition, would read thus:

"any profits and gains of the company not included in the total amount of income computed in the manner laid down in the Act for any previous year."

Total Income

Another aspect of this question may be examined in support of my thesis that the new Section 16(2) enables grossing up of dividends even if they are declared out of taxed profits of the previous years. Proviso Clause (i) excludes "any profits and gains of the Company not included in its total income" for the benefit of grossing up. Now, if we interpret the word "total income" or the income of the company during the previous year, it will mean that anything that has not been included in the total income shall be excluded. "Total income" is a concept of income during one year only. It takes no count of income of the prior years. And, therefore, income drawn upon for dividend out of previous taxed profits will also be excluded. This means that Clause (i) will be interpreted to exclude not only that which is not included in the total income, but also that which cannot, in the very nature of things, be included in the total income. Law should not be interpreted in a way that would impose a condition impossible of fulfilment. It would be punishing a company for something which cannot be done, namely, to include in the total income items which do not and cannot pertain to the income of the year. This suggests that the Clause (i), along with (ii) and (iii) in the proviso, refer not to the total income as the income of the previous year preceding the financial year, but any "previous year." Such an interpretation is in consonance with the definition of total income and also carries out the intention of the legislature, namely, not to deprive the shareholders of the benefit of Section 49B.

Thus, it becomes crystal clear that the Clause has no such restrictive meaning as is sought to be given by the proponent of the Departmental view. If Clause (i) is to mean total income of any previous year, not necessarily the year previous to the assessment year, the Clause (ii) and (iii) must mean income or allowances of any previous year.

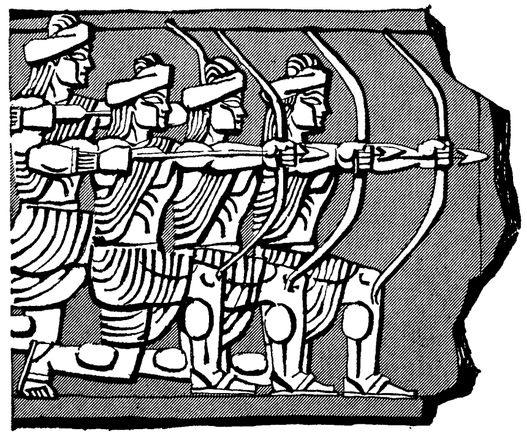
Previous Decisions

This section has been given a retrospective effect in these words. "This proviso shall be deemed always to have been substituted." The effect of this will be that all the decisions already given under the old Act will have to be interpreted for its validity in terms of this amended Section and not the Section under which they were actually decided. If the true construction of this Section, read with its proviso, is that the Government intends to give grossing right to dividend declared out of both current as well as past profits drawn upon for distribution, provided these profits have been subjected to tax in that year or previously, the amendment will bring relief to those to whom this right at present is refused. But if the construction is that the benefit should be granted only if the company has paid any tax during the current year it will have effectively scotched all such claims—though this may seem unfair on the principle embodied in Section 49B. We can only wait and see further development or litigation on this Section.

As one reads the ever-growing fiscal legislation, one cannot but cry with Alice in the Wonderland—as the years pass, the situation is becoming curiouser and curiouser—until we cannot see the wood for the trees. One may agree with Thomas Grey when he said that "where ignorance is bliss, it is folly to be wise." The spurt of new legislation does not bring knowledge but only makes confusion worse confounded.

Surprise at Thermopylae

When Xerxes, the mighty Persian emperor, invaded Greece in 480 B.C. he had with him a company of Indian archers. These Indian archers used a new weapon—a steel-tipped arrow which had been brought all the way from India. History records that the Greek army was surprised by the superior arms of Xerxes and was defeated in the battle of Thermopylae.



Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

PROBLEM OF ROLLING STOCK OF EUROPEAN RAILWAYS

JOINT EFFORT MADE AT SOLVING IT

[It is not only the Indian railways that are faced with the difficult problem of financing the replacement and expansion of their rolling stock. European railways, which suffered grievous damage during the war, are in the same plight. Among the methods by which the European railways are trying to overcome the problem mention must be made of the proposal for the formation of a joint corporation, the "Eurofima," by the leading national railways in Europe. An interesting account of the genesis of the idea of a joint corporation and of how it proposes to help the railways appears in the latest issue of Swiss Bank Corporation Bulletin *which is bound to be read with interest in this country.—*ED.]

NORMALLY, railway goods trucks have a life of about 35-40 years. About 42 per cent. of the freight rolling stock of the railways of Europe have reached that age. A count made by the International Union of Railways, at the beginning of 1954, showed that, of a total of 940,000 trucks, 140,000 or 15 per cent. were more than 45 years old. 390,000 or 42 per cent. were more than 36 years old. All of these urgently need replacement. In 1953, only 11,500 new trucks were overhauled, that is, about 1.2 per cent. of all the freight rolling stock. Everywhere in Europe, the state of the railway passenger cars is essentially the same as that of the trucks.

This deplorable condition of the railway rolling stock of Europe is primarily a consequence of the devastation wrought by war. Since the end of the war, the renewal of the railway rolling stock of Europe has been essentially a problem of finance. In many European countries, the railways are either state-owned or state-controlled. Because of the severe competition from motorised roadway transport, the railways in most European countries now earn no profits out of which new rolling stock might be paid for. That means that the investment capital needed to keep the railways efficiently equipped must, as a rule, come out of the state budget.

Until now, most of the capital that the state Governments have been able to place at the disposal of the railways in post-war years has been needed to repair tracks and rebuild bridges, stations and shunting yards, very little being left to renew rolling stock. On the other hand, the expansion of industrial production and the substantial increase of intra-European trade since 1950 mean that the railways have had to transport far more freight than formerly. Wear and tear on the railway rolling stock have therefore been abnormally heavy. From now onwards, the rate at which old rolling stock must be scrapped will be faster than ever.

What amount of capital would be needed to re-equip the railways of Europe with new freight rolling stock? In 1953, the railway administrations of ten western European countries agreed, as an emergency measure, to form a pool of railway freight stock for common use, so as to be able to economise with cars and thereby cope with all demands for transport. By the Europ-agreement, as it was called, these ten European countries pooled 160,000 trucks for use anywhere as required within the ten contracting countries. By this means, the return of empty trucks to the country of origin was virtually eliminated, so that the quantity of goods transported by each truck was much greater than previously. This arrangement worked excellently, but wore out the old trucks faster than ever. The problem of renewing the rolling stock remained unsolved.

Rolling Stock

As far back as 1951, the French state railways took the initiative in proposing co-operation among all the railway administrations of Europe in financing the purchase of new railway rolling stock jointly. The snag was that none of the countries concerned, except Switzerland, could provide investment capital. At a meeting of the representatives of the railway administrations concerned, held in Brussels in 1952, the plan of forming an "equipment trust," similar to those existing in the U.S.A., was discussed. This plan was submitted for examination to a "Study Group" created in Paris in October 1953, and included representatives of seven railway administrations and ten great European banks. The plan approved was that a joint stock company should be formed with ample resources to place orders with the truck-building industries for the construction of new rolling stock, that the member railways of the group would be able to buy on the hire-purchase system. Each country was to pay an annual rent for the use of the rolling stock supplied, plus a charge to cover depreciation. At the end of 20 years, the rolling stock would have been paid for and written off, passing into the ownership of the railway administration concerned. This was at that time but a proposal.

On 20th October 1955, however, 14 European countries agreed definitely to form a joint stock company along these lines, to be known as Eurofima—the European company for the financing the purchase of railway rolling stock. The avowed object of these agreements was, first of all, to renew the 160,000 freight trucks already in common use by the Europ-pool.

As each new truck costs about 25,000 Swiss francs, and the plan envisaged the replacement of old trucks at the rate of about 4,000 yearly, the cost would be no less than 100,000,000 Swiss francs each year. Even at that rate, a period of 40 years would elapse before the whole of the 160,000 trucks used by the Europ-pool would be replaced. But in 1954, the total number of trucks circulating in Europe was 940,000, quite half of which needed replacement forthwith. The scarcity of investment capital in Europe prevents the renewal of old trucks being made any quicker. It does not seem to be possible, for the time being in Europe, to mobilise more investment capital than this yearly for this purpose. But the amount of 100,000,000 Swiss francs would be enough at the start while experience was being gained.

Capital

Eurofima is to be registered in Switzerland with headquarters in Basle. The authorised capital of the company will be 50,000,000 Swiss francs. All shares are to be fully paid up. But the shares are of two kinds: "A" shares are to be paid for in cash, "B" shares paid for in the form of trucks for common use. The fourteen member countries contribute in accordance with the following schedule:

—	"A"	"B"	Total number of shares	Total nominal capital subscribed
				(In Swiss francs)
German Federal Railways ..	130	1,170	1,300	13,000,000
French National Railways ..	130	1,170	1,300	13,000,000
Italian State Railways ..	70	630	700	7,000,000
Belgian State Railways ..	60	490	550	5,500,000
Swiss Federal Railways ..	475	..	475	4,750,000
Netherlands Railway Co. ..	30	270	300	3,000,000
Swedish State Railways ..	100	..	100	1,000,000
Spanish State Railways ..	25	..	25	250,000
Luxembourg National Railways ..	100	..	100	1,000,000
Yugoslav Railways ..	100	..	100	1,000,000
Portuguese State Railways ..	20	..	20	200,000
Austrian Federal Railways ..	10	..	10	100,000
Danish State Railways ..	10	..	10	100,000
Norwegian State Railways ..	10	..	10	100,000
Total ..	1,270	8,730	5,000	50,000,000

Chiefly for geographical reasons, Great Britain, Greece and Turkey will not become shareholders in Eurofima for the time being. At the beginning, the cash assets of Eurofima will be 12,700,000 Swiss francs, while the assets in rolling stock will be equivalent to 37,300,000 Swiss francs in value. First of all, Eurofima will rent to Germany, France, Italy, Belgium and Holland the trucks that each of these countries have handed over to Eurofima in place of a cash payment. It will charge each of these countries a yearly rental for the use of these trucks, plus a charge for amortisation, so that, at the end of ten years, the trucks would have been paid for in full and their value written off, the trucks then becoming again the property of the respective countries, while the capital these trucks represented would have been converted into cash. Until fully paid for, these trucks will remain the property of Eurofima. If any country defaults in its payments, the rolling stock would revert to Eurofima without that country having any right to reimbursement of the cash payments already made.

The company will not aim at making high profits or accumulating cash reserves. Dividends are never to exceed 4 per cent. in any one year, payable to the individual railway administrations of the member countries. At the outset, the Company is to use its own cash capital, amounting to 12,700,000 Swiss francs, to place orders with the truck-building industries in the member countries, buying where the terms are most favourable. Later on, a programme will be drawn up periodically in advance, fixing the scope of the orders to be placed. One estimate envisages the amount to be invested yearly at 100 million Swiss francs. Almost the entire amount would at first have to be raised by the issue of long-term loans, most of them presumably in Switzerland. That raises the question of the nature of the security the company would be able to give. The basis for the arrangement is:

(1) Obligations to Eurofima would be a first charge on all revenues of the administrations of the individual member railways. (2) The Government of each member country would be responsible for the full amount of all obligations of its railway administration to Eurofima. (3) Should any member country default, all the other members would be responsible to Eurofima, each to the full amount of its share of the capital. (4) The life of Eurofima has by statute been fixed at fifty years.

Long-term Contracts

On such a basis, the credit of Eurofima as a joint stock company would be sound enough to permit its entering into important long-range contracts with the makers of railway rolling stock. All types could then be standardised and made in long series, hence at the lowest possible cost. For the time being, only freight trucks will be ordered, but ultimately Eurofima expects to order passenger cars also for the member countries. Any member country that wishes to do so will be free to place orders on its own account for the construction of railway rolling stock. Legally, Eurofima has no kind of monopoly. But few railway companies in Europe at present have any capital to invest. Nor could many raise capital by the issue of bonds. Virtually, therefore, Eurofima will have a very strong position in the market.

One important fact is that the Swiss Federal Railways do not intend to make any use of the credit obtainable from Eurofima as long as the cost of new rolling stock can be met out of their own budget. As this budget has shown a substantial surplus each year for several years in succession, the presumption is that the Swiss Federal Railways will make no demands whatever on the financial resources of Eurofima. Switzerland was chosen as the headquarters of Eurofima, firstly because of its central position in Europe, secondly because Switzerland was ready to make substantial fiscal concessions to Eurofima to avoid multiple taxation and thirdly because, if Eurofima is registered in Switzerland, the company would operate under Swiss law and Swiss courts be competent to deal with claims brought against the company. Complications might otherwise arise when, for example, funds raised by the issue of loans in one country were used to order rolling stock in a second country for delivery to a third country.

Looked at broadly, the operation of Eurofima by fourteen countries jointly would be a very definite advance towards the common goal of the economic integration of Europe.

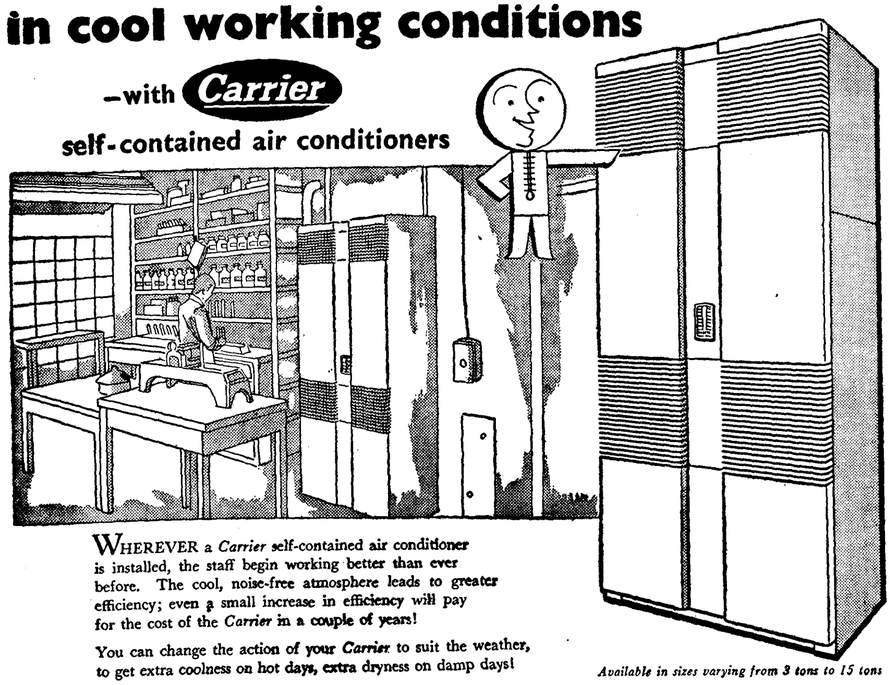
For offices and industrial establishments
Greater efficiency
in cool working conditions
—with Carrier
self-contained air conditioners



WHEREVER a *Carrier* self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the *Carrier* in a couple of years!

You can change the action of your *Carrier* to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Available in sizes varying from 3 tons to 15 tons

Works silently, cuts off noise
Your *Carrier* self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Circulates clean, filtered air
Your *Carrier* sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout — no dust, no unpleasant draughts!

Cools better at less cost
Specially-designed coils and filters make your *Carrier* more efficient, help it to cool better at lower cost.

Removes more moisture
Your self-contained *Carrier* not only lowers the temperature but removes moisture from the air — gallons of it! A new 'Humitrol' regulates the rate at which moisture is removed.

Remember — the Carrier self-contained air conditioner is remarkably compact, and takes up little floor place. The sale of these units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

Notices

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 15th day of October 1956, at 12-10 p.m., to consider, and if thought fit, to pass the following Resolutions, and Resolution No. 1 will be proposed as a Special Resolution:—

Resolution No. 1 (*As a Special Resolution*).

That the Articles of Association of the Company be altered in manner following:—

(1) Articles 53 and 54 shall be deleted and the following New Article 53 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled 'Annual General Meetings' and shall be specified as such in the Notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings."

(2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

(3) Articles 126, 127 and 128 shall be deleted and the following New Article 126 substituted therefor:

"At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

(4) Article 129 shall be deleted and the following New Article 129 substituted therefor:

"Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

(5) Article 130 shall be deleted and the following New Article 130 substituted therefor:

"The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act 1956."

Resolution No. 2 (*As an Ordinary Resolution*).

"That pursuant to and for the purposes of compliance with the provisions contained in Section 293(1)(*d*) of the Companies Act, 1956, this meeting hereby consents, such consent to be effective as on and from the 1st April 1956, to the Board of Directors of the Company borrowing monies for the purposes of the Company notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose."

ORIENT PAPER MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the ORIENT PAPER MILLS LIMITED, will be held on Monday, the 15th October 1956, at 3 p.m., at 8, Royal Exchange Place, Calcutta, to consider and, if thought fit, to pass, with or without modification, the following ordinary resolution:

"RESOLVED that 50,000 5½ per cent. (Tax Free) Cumulative Redeemable Preference Shares of Rs. 100 each be further issued and offered, in the first instance, to all the existing shareholders (including holders of Preference Shares) in the Company in proportion to the nominal value of the shares held by them, ignoring fractions, if any, on such other terms and conditions as may be attached to the said shares, by the Board of Directors of the Company in its discretion."

Explanatory Statement:—It is proposed to raise capital by issue of preference shares to meet the necessity of further funds in connection with the implementation of the modernisation and expansion programme of the Company, and to offer the said shares, in the first instance, to the shareholders (including holders of Preference Shares) as required under the Capital Sanction Order No. R.I.-CCI/54 dated 21st December 1954, granted by the Controller of Capital Issues, New Delhi. Accordingly, the resolution has been proposed to obtain the requisite sanction of the shareholders of the Company. The Capital Sanction Order, referred to above, can be inspected at the above address during business hours.

By Order of the Board,

STORES PURCHASE BY GOVERNMENT

SMALL-SCALE INDUSTRIES TO BE ENCOURAGED

IT will be recalled that, in February 1956, the Government of India acted promptly in accepting, by and large, the recommendations of the Stores Purchase Committee which submitted its report in March 1955, on the working of the Central Purchase Organisation. One of the important recommendations accepted by the Government was that a Purchase Advisory Council, consisting of the representatives of the Union and the State Governments and of various organisations of Commerce and Industry, should be set up, in order to make the Central Purchase Organisation more effective and responsive in its relations to the industrial and trading community. The first meeting of the Council, formed in accordance with the recommendations of the Stores Purchase Committee, was held in New Delhi only on the 18th inst. It is gratifying to note from the inaugural address of Sardar Swaran Singh, Union Minister for Works, Housing and Supply, and Chairman of the Conference, that, as a result of the steps that are being taken by the Government to implement the recommendations of the Committee, the efficiency of this Organisation (Central Purchase Organisation) has shown some signs of improvement. He, however, readily admitted that there was "considerable scope for further improvement," and gave the assurance that the Organisation would always be responsive to suggestions for improvement and that it would take action to eliminate the defects that might be found.

The Stores Purchase Committee which went into the scope and functions of the Central Purchase Organisation was completely convinced of the need for its continuance. It felt that it should be strengthened so that it could progressively and effectively undertake the purchase of specialised equipment hitherto purchased by the indentors, and serve the needs of departments of Government, including statutory authorities, river valley projects and State-owned industrial and other enterprises. In view of this increasing importance of this Organisation in the context of the development plans envisaged in the second Plan, no other body can impart to it greater strength and responsiveness than the Advisory Council, composed of, as it does, representatives of trade and industry besides the Governments. It will not be vain to expect, therefore, that, with the establishment of this Council, the objectives of the Government, expressed by the Hon'ble Minister in the course of his address, namely, to try and make the Central Purchase Organisation is really effective and efficient instrument for purchase of Government requirements, and, to ensure that the policy followed by the Organisation encouraged indigenous manufacture of stores purchased by the Government, will be realised, through the co-operative efforts of all concerned. And the Minister was only voicing a common feeling when he observed: "I have no doubt that such a co-operation will be readily forthcoming."

Encouraging Indigenous Production

In the course of his address, Sardar Swaran Singh expressed the hope that the co-operation of the industrial and trading community would help the Organisation, besides making it an efficient and effective instrument for undertaking all Government's purchases, in encouraging the indigenous production of Stores which the Government had been importing hitherto. He pointed out further that the Council could review from time to time the progress made by the Government in implementing its policy of substituting indigenous products for imported stores. While emphasising, in this connection, that the C.P.O. (Central Purchase Organisation) could play an important role in implementing a policy of purchasing at least a part of their requirements from the Small-scale Industries Corporation and the All-India Khadi and Village Industries Board, consistent with economy, quality and deliveries, he pointed out that the large-scale industries should appreciate that small-scale industries formed an integral part of the economy, and that they should also be allowed full scope for playing their part in raising the standards of living of the people in the rural areas. And for fulfilling their role, he went on to add, the small-scale industries must necessarily expect the fullest support from the large-scale industries. In all advanced countries, including the U.S.A. and Japan, he further stressed, small business was an essential part of the country's economy in supplying not only Government's requirements of stores which they were capable of manufacturing, but also in serving as an ancillary industry to the larger industries in respect of manufacture and supply of large variety of components required by the industry.

Analysing the causes for the delay from the time tenders are received till full payment is made, he listed two principal reasons. In the first place, very often suppliers failed to quote strictly in compliance with the terms of the invitation to tender. Secondly, again, it was failure on their part to adhere strictly to the conditions of the contract, particularly in the matter of delivery. These gave rise to persistent and prolonged delays in supplies, operational inefficiency, prevalence of idle labour in workshops and protracted correspondence and, consequently, delay in payment of bills. This had a cumulative affect on the execution of projects on hand.

The discussions in the Purchase Advisory Council, following the address of the Chairman, largely centred on those issues and difficulties the solution of which would ultimately lead to the fulfilment of the two fundamental objectives of the Government's Stores Purchase Policy. Thus, emphasis was rightly laid, among other things, on the need for tenders to conform strictly to the terms of invitation to tender, the desirability for large industries to utilise the services of small industries for manufacture of components in the interests of rational industrialisation, steps to encourage indigenous manufacture of stores that are still being imported, and understanding between the Government and the industry regarding the former's precise requirements and the latter's capacity to meet them.

Stricter Enforcement

Certain valuable suggestions emerged from the discussion. It was suggested that the Government should be stricter in enforcing contractual terms. It was also pointed out, quite rightly, that the list of contractors should be restricted only to those manufacturers who had the requisite capacity. Another notable suggestion was that suitable penalty, providing for automatic percentage rebate in price, should be levied if delivery dates were not adhered to unless such non-adherence was due to circumstances beyond the control of suppliers. The representatives of trade and industry also urged that the Government should, as far as possible, furnish complete specifications of the products it needs. Another pertinent suggestion made at the meeting was that the Government, in order to enable the industries to cope with its demands, should try to phase its purchases on the lines at present adopted by the Railway Ministry. The need for advance and detailed information about the requirements of the Government was also stressed. The tendency on the part of certain manufacturers to overestimate their capacity to supply the Government's requirements was roundly condemned.

But on an important subject namely, that of evolving a method through which the activities of the small-scale industries could be co-ordinated with those of large-scale industries, the Council did not put forward any concrete suggestions. The Council, nevertheless, recognised the desirability of tapping the capacity of the small-scale sector for making the components needed by the large-scale units. It was pointed out, in this connection, that circumstances had not been conducive to such an association so far. The time limit given by the Government for fulfilling the orders and the specifications laid down by it were not encouraging enough to the suppliers to go out of their way and get their requirements from small-scale producers. While the suppliers were on the look-out for ready availability of cheaper components, Government was also laying stress on timely deliveries. This difficulty can, however, be obviated, if, as was pointed out, judicious phasing of the purchases by the Government is arranged. In view of the importance given to the small-scale industries in the second Plan and the amount allotted for their development, it is all the more imperative that a workable arrangement should be evolved to bring the larger and smaller industries together in meeting the fast-increasing requirements of the Government. Moreover, the impact of a scientifically conceived, judiciously phased and efficiently operated programme of Stores Purchase on the employment situation at the present juncture cannot be underestimated. It is to be hoped that the numerous suggestions made at the Council's meeting the other day will be given utmost consideration and a practical and purposeful policy of Stores Purchase will be formulated, in order to make the achievement of the objectives easier and quicker.

TREND OF INDIA'S TRADE WITH JAPAN

FUTURE HOLDS POSSIBILITIES OF EXPANSION

COMMERCIAL relations between India and Japan date back to many centuries. But they were never more important than they are today. Indeed, if the developments in the post-war era are of any guidance, it is that Japan, as the only industrially advanced country in Asia, could play a vital role in the economic development of Asian countries, in general, and India, as a country with a relatively better-developed economy, in particular. Nevertheless, the volume of trade passing between India and Japan in recent years has not been great as it should be. This certainly calls for careful scrutiny.

The rapid industrialisation of India, and the consequent need for importing plant, machinery and other equipment give Japan a great scope for improving its trade with India. From this point of view, the Japanese unofficial trade delegation, headed by Mr. Takasugi, which is now in India, will be widely welcomed. Both India and Japan will do well to agree upon the best means of exploiting the possibilities of effecting a larger volume of trade to their mutual advantage. In this connection, the article on the recent trends in Indo-Japanese trade, entitled "Trade between Japan and India," which appears in the July issue of the *Monthly Circular* of the Mitsubishi Economic Research Institute, Tokyo, will be read with interest.

Shift in the Pattern

In the post-war era, there have been perceptible shifts in the pattern of India's foreign trade. This has been primarily due to the far-reaching changes in the structure of its economy. Having represented a typical colonial economy for many decades, India underwent considerable changes during the war and in the immediate post-war years. A slow but persistent emphasis on industrialisation had been in evidence. But the attainment of Independence in 1947 and the plans of economic development taken up more recently, have prepared the ground for further changes in the basic structure of the economy. Thus, while, on the one hand, India has ceased to be entirely an exporter of raw materials and primary products, and importer of finished and semi-finished goods, it has become, on the other, a net importer of foodgrains, besides becoming a large-scale importer of machinery and other equipment. It has also become an exporter of many light manufactured goods, including textiles. Yet another important shift is that a remarkable diversification of its customers has come about in recent years. This has led to the changes in the geographical distribution of India's trade. The U.K., for example, has lost the place of pride it enjoyed in India's foreign trade. At the same time, certain other countries, chiefly, the U.S., Western Germany, Australia, the U.S.S.R., Singapore and Egypt, have gained in importance in their trade with India.

Japan Suffers

In this process of what may be called "reshuffling," Japan too has suffered. Japan's trade with India in 1938, for instance, was of the order of 9.3 per cent. of India's total trade. Japan thus occupied a fourth place in order of importance, next only to the U.K., the U.S. and Burma. In 1948, however, the proportion of Japan's share in India's trade was less than 2 per cent. In the subsequent years, as a result of the relaxation of import restrictions in India, the level of trade improved gradually until, in 1955, the level stood around 4.3 per cent. In actual figures, while Indian exports to Japan were of the order of $68.8 million in 1938, they dwindled to $13.8 million in 1948 and gradually recovered to $56.6 million in 1953 and again receded to $34.7 million in 1954. In the year 1955, however, they stood at about $53 million. On the other hand, while the imports from Japan in 1938 amounted to $82.6 million, they declined to $19.2 million in 1948. They, however, improved to $75 million in 1949, but declined subsequently to $15.6 million in 1950. They were nevertheless of the value of only $34.6 million in 1954 and $62 million in 1955. But that is not all.

Viewed against the background of the expanding overall trade of India, a glimpse into which is provided by the table, (given below), the value of trade passing between the two countries is by no means very significant.

(In $ millions)

	India			
	Exports		Imports	
	Total	To Japan	Total	From Japan
1937	704.7	68.8	659.6	82.6
1938	616.7	53.9	566.5	56.1
1948	1,371.0	13.8	2,029.7	19.2
1949	1,265.7	10.6	1,925.4	74.8
1950	1,171.9	15.7	1,137.0	15.6
1951	1,645.8	38.5	1,792.7	47.3
1952	1,298.8	53.6	1,695.4	41.9
1953	1,116.2	56.6	1,200.7	26.1
1954	1,181.3	34.7	1,234.5	34.6
1955	1,243.0*	53.0*	1,347.0*	62.0*

* Approximate figures.

Composition of Trade

The other aspect of the shift in India's foreign trade is reflected, as already stated above, in the changes in the nature of goods participating in such trade. Thus, in 1938, 64 per cent. of India's exports consisted of foodstuffs, raw materials and 60 per cent. of the imports represented manufactured and semi-manufactured goods. Besides, only 30 per cent. of the exports were accounted for by the manufactured goods, including jute and cotton manufactures. In sharp contrast to this, in 1954, exports of foodstuffs, raw materials and non-manufactured goods accounted for only 48 per cent. and those of manufactured goods stood at 45 per cent. of the total. Moreover, imports of manufactured and semi-manufactured goods decreased from 60 per cent. to 50 per cent. between the two years, while those of foodstuffs, raw materials and the like increased from 35 per cent. to 45 per cent. during the same period. These changes serve to show that the process of India's industrialisation is gaining increasing momentum. Thus, 90 per cent. of the manufactured goods, exported in 1954, for instance, were light industry products, such as cotton yarn, cotton fabrics, jute fabrics and the like. Imports of capital goods, on the other hand, steadily increased, their percentage to the total imports having gone up from 30 per cent. in 1953 to 33 per cent. in 1955.

This aspect of the change in the economy had a profound impact on the trade between India and Japan. In 1935, for example, Japanese imports to India were dominated by textiles and yarns of cotton, rayon and silk, which accounted for 80 per cent. Other exports included metal manufactures such as galvanised sheets, wire rods, copper, potteries, glassware, textile machinery and other sundry machinery. Exports from India, moreover, comprised mostly of cotton and jute (86 per cent.), pig iron (4.2 per cent.), lead and other non-ferrous metals (1.9 per cent.) and iron and steel scrap (1.5 per cent.). In recent years, however, Japan's exports of capital goods have steadily increased, while those of consumer goods have declined, the percentage of capital goods to total exports in the three years, beginning from 1953 and in the first four months of 1956 being 50, 61, 78 and 82 respectively. A noteworthy feature of this trend is that, nearly 80 per cent. of Japan's total exports of rolling stock in 1955, and nearly 20 per cent. of iron and steel in January-April 1956 were for India.

A cursory examination of the trends in the last few years will bring out some very significant features. Japanese exports to India, which were of the order of $52 million in 1951 declined by 30 per cent. to $37 million in 1952 and further to $27 million in 1953, consequent on the application of import restrictions by India. What is, however, significant is that, while rayon filament yarn accounted for 40 per cent. of its exports in 1951, in 1952, its proportion declined to a quarter of the former level. On the other hand, in 1952, the exports of iron and steel and certain steel materials, such as billets, pipes, thick plates, increased by 4.8 times their level in 1951. In 1953, however, exports of machinery sharply declined as a result of the import restrictions applied by India, competition of Western European countries and deficient competitive power of Japan. Japan's exports, however, staged subsequently a remarkable improvement from $27 million in 1953 to $44 million in 1954 and as much as twice that value in 1955. The trend towards expansion in exports of machinery to India gained further momentum during 1955. Capital goods occupied, for example, 60 per cent. of the exports in 1954 (1.7 times as much as in 1953), non-ferrous metals (8.4 times) and machinery (2.1 times). At the same time, the exports of textiles remained increasingly inactive.

Indian Exports

As regards exports from India to Japan, the picture has been somewhat different. In 1952, they were as high as $72 million, that is, 40 per cent. higher than those in 1951, and increased slightly to $75 million in 1953 and, declined to $52 million in 1954. They nevertheless rose by 50 per cent. in 1955. The exports of salt, iron and steel scrap, iron ore, cotton and coal have markedly increased over the levels of the previous year. Although in 1954 there was a decline in the exports of iron ore and steel scrap, they once again staged a recovery in 1955.

The following two tables give the items which have figured prominently in Indo-Japanese trade in 1953, 1954, 1955 and January-April 1956:

(In $ 1,000)

—	Japan's imports from India			
	1953	1954	1955	1956 (Jan.–Apr.)
Oilseeds	48	103	2,995	83
Raw cotton	14,964	15,705	32,593	13,103
Salt	2,447	1,044	1,773	1,597

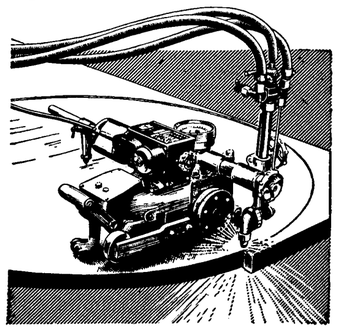
Machinery	3,978	8,177	28,872	11,508

What is the scope of future expansion of trade between the two countries? Clearly, the importance of India to Japan, as the article already referred to above has rightly stated, lies in the fact that India alone, among the countries of Asia, provides an expanding market for the capital goods of Japan. The increased need for capital equipment is unquestionable in the light of the programmes of industrialisation taken in hand in India. Further, the need for obtaining such equipment from as large a number of competent countries as possible has been increasingly felt, thanks to foreign exchange considerations and the increase in the emphasis laid on trade rather than loans and grants-in-aid. The scope for economic co-operation is thus very wide.

Much depends, however, on the creation of the necessary "climate" for the expansion of Indo-Japanese trade. It should be possible to enlarge the scope of technical co-operation between the two countries and joint-investment by Japan in India. At the same time, necessary steps should be taken in the form of expanding transportation facilities, such as shipping. The desirability of increasing economic co-operation between India and Japan, as the two leading countries in Asia, apart from China, for their mutual benefit and for the benefit of the rest of Asia cannot be overemphasised. It is to be hoped that the visit to India of the Japanese trade mission will be a prelude to such co-operation.

OXYGEN



MASTER OF METALS

There are oxygen cutting machines for every conceivable type of job ranging from small portable straight line and circle cutting machines to large automatic profile cutting machines for rapid precision cutting of shapes from steel plates and forgings.

OXYGEN Master of Metals

IOAX 39

THE INDIAN OXYGEN & ACETYLENE CO., PRIVATE LTD.

REGIONAL LABORATORIES IN INDIA

The establishment of Regional Research Laboratories, a Coal Survey Station at Hyderabad and an institute for design and fabrication of pilot plant, were some of the proposals approved by the Board and the Governing Body of the Council of Scientific and Industrial Research which met at New Delhi on 19th and 20th September under the Chairmanship of Mr. Nehru. The Governing Council felt that there was need for regional laboratories in the country for the study of scientific and technological problems in the regions. It was also decided that, for better co-ordination with national laboratories, these laboratories should function under the Council of Scientific and Industrial Research. The Central Laboratories in Hyderabad have already been taken over for development into a regional research laboratory.

The Governing Body approved of the establishment of a Regional Coal Survey Station at Hyderabad to conduct a comprehensive physical and chemical survey of the Godavari Valley Coal Fields under the supervision of the Central Fuel Research Institute. There are at present 5 regional coal survey stations functioning under the Fuel Research Institute, one each at Jharia, Raniganj, Ranchi, Bilaspur and Jorhat covering all the major coal fields in the north.

The Governing Council also decided that a well-equipped and well-manned laboratory should be set up for the design and fabrication of pilot plant in India. At present, there was a dearth of technical personnel in the country for this purpose and considerable difficulties were being experienced in the design and fabrication of pilot plant which were essential in the translation of laboratory researches to industrial practice. A planning committee would be set up to work out the details of the proposed institution. It was further decided that investigations into the utilisation of bitterns left after the manufacture of common salt at Sambhar Lake should be taken up. The bitterns, thrown away now as waste, contain valuable chemicals which could be used for a number of industries. A planning committee has been asked to submit concrete proposals for undertaking this research and setting up a research station. The Governing Body of the Council has also set up two other planning committees to prepare specific schemes for the establishment of a Public Health Engineering Research Institute and an Aeronautical Research and Development Centre for preparing a comprehensive programme of research in the engineering aspects of public health and aeronautics respectively. On the recommendation of its research advisory committees, the Council has approved over forty projects of research in various research institutions and universities in the country. These projects which will be placed under experts in respective institutions, cover the fields of plastics, chemistry, pharmaceuticals and drugs, physics, biology, roads and buildings, applied mechanics, electrical and aeronautical engineering.

Symposia on the following subjects were proposed to be held during the year:

(i) Cellulose research; (ii) curing and preservation of raw hides and skins; (iii) mineral beneficiation and extractive metallurgical techniques; and (iv) utilisation of Indian medicinal plants.

TRADE WITH *Japan* THROUGH

BANK OF TOKYO LTD.

(FORMER YOKOHAMA SPECIE BANK)

The only foreign exchange bank in Japan licensed under the Foreign Exchange Bank Law, offering complete banking service through its branches all over Japan and overseas, and well equipped to give full and accurate business information.

JARDINE HENDERSON JUTE GROUP DISAPPOINTS AGAIN

HOWRAH MAINTAINS DIVIDEND, BUT RELIANCE AND BALLY PASS OVER

THE financial results of the three jute companies under the management of Messrs. Jardine Henderson Ltd., Calcutta, namely, the Howrah Mills Company Ltd., the Reliance Jute Mills Company Ltd. and the Bally Jute Company Ltd., for the half-year ended 31st March 1956, are disappointing and show that the Companies have not yet turned the corner. The poor results were occasioned by the same trying and difficult trading conditions which existed during the preceding six months and which continued during the period under review. The quick stages in which the idle looms in the industry were put to use at the Government's behest proved a great disadvantage, instead of an advantage, as they led to a narrowing of the profit-margins. Between 9th January 1956 and 20th February 1956, 7½ per cent. out of the 12½ per cent. of the total complement of looms which had remained sealed, were put to work. This decision was taken because of the rapid fall in stocks of jute goods during the last half of 1955 and in expectation of a sharp rise in demand, mainly from Russia. This expectation failed to materialise and the increase in production soon converted the jute goods market in favour of buyers. At the same time, the increase in the demand for raw jute consequent upon the expansion in production, resulted in a sharp rise in the price of raw jute. The jute mills were thus in the unenviable position of having to pay higher prices for raw jute and of not being able to pass on the increase in the cost of their raw material to buyers of jute goods, because the latter were in a better bargaining position. In the face of mounting stocks, buyers snugly sat quiet and took their requirements on a hand-to-mouth basis at prices that suited them. The speculators took advantage of the situation to depress the prices of jute goods and push up the prices of raw jute, thereby aggravating the difficulties of jute mills. It was only after mid-July that the Government agreed to a reversal of the earlier steps and, between 16th July and 17th September, all the unsealed looms were sealed again, so that the position now is what it was up to 9th January 1956, namely, the mills are working at 48 hours a week with 12½ per cent. of its loom complement kept idle. But the experiment has cost the jute mills dearly. Not only the profits for the half-year ended March 1956 have been affected but also those for the subsequent half-year. One should not, therefore, be surprised if the vast majority of jute companies were to report poor financial results for the six months ended September 1956 as well.

A study of the table published at the foot of this page showing the working of the Companies during the past three half-years will give an idea of the deterioration in their results. Despite higher production, the sale proceeds of all the three companies are markedly lower. The accumulation of stocks is evident from the rise in the value of closing stocks. The fact that costs remained high is borne out by the disproportionate fall (as compared with that in sale proceeds) in the manufacturing expenses of Howrah and Bally and by the actual increase in those of Reliance. The effect of adverse results on the finances of the companies under reference is revealed by the depletion of the reserves and other provisions built up in the past in order to wipe out the losses suffered during the half-year under review.

The Howrah Mills which suffered a loss of Rs. 0.78 lakh in the previous half-year has made a slight recovery to Rs. 1.98 lakhs by way of gross profit. This is, however, far below the gross profit of Rs. 11.49 lakhs made in the corresponding six months of 1955. The net loss is lower at Rs. 1.21 lakhs, as against a net loss of Rs. 5.22 lakhs in the previous half-year, but compares very unfavourably with a net profit of Rs. 6.43 lakhs in the corresponding six months of 1955.

As compared with Howrah, the Reliance Jute has fared even worse. It has sustained a gross loss of Rs. 6.50 lakhs and a net loss of Rs. 6.59 lakhs without providing anything for depreciation, for which purpose a Rs. 75,000 and Rs. 1,00,000 had been set apart in the two preceding half-years. This is in distressing contrast to the comparatively smaller losses experienced in the previous half-year and the modest gains made in the period preceding to that. The Bally Jute has made a slight improvement with a gross profit of Rs. 1.25 lakhs, as against Rs. 0.14 lakh, and a net profit of Rs. 0.23 lakh, as against a net loss of Rs. 0.61 lakh made in the preceding half-year. But, as in the case of Howrah, these results pale into insignificance as compared with this Company's showing in the corresponding half-year of 1955, when it reported a gross profit of Rs. 3.84 lakhs and a net profit of Rs. 1.68 lakhs.

In spite of the unfavourable working conditions, the Directors of the Howrah have proposed to repeat the dividend at 5 per cent. per annum, to which level it was drastically cut six months ago from 12½ per cent. per annum paid for the previous four half-years in succession. Even this has been effected only by drawing from the reserves. A sum of Rs. 4 lakhs has been withdrawn from the reserves of which Rs. 3 lakhs are from machinery renewal reserve and Rs. 1 lakh from general reserve.

The net loss of Rs. 6.59 lakhs suffered by the Reliance Jute has not been covered. With the negative balance of Rs. 5.10 lakhs brought in from the previous half-year, a big total loss of Rs. 11.72 lakhs is being carried forward. Naturally, with such a large debit balance, both the preference and the ordinary dividends have had to be skipped over. This is the fifth half-year in succession for which the Company's ordinary shareholders have received no return on their investment.

The Directors of the Bally Jute have drawn a sum of Rs. 1 lakh from the general reserve and have utilised it for paying the preference dividend. The ordinary dividend, which had been restored only during the half-year ended 31st March 1955 after a break of three half-years, has had to be suspended again. In view of the unsatisfactory trading results for the half-year under review, the Managing Agents of the Company have waived Rs. 1.30 lakhs of their commission. The Directors have also waived absolutely their entire commission on the profits of the Company for the period.

The latest balance-sheet of the Howrah Mills shows that the reserves and surplus stand at Rs. 50.21 lakhs, as against a paid-up capital of Rs. 91.87 lakhs. There is a debenture liability arising out of the 5½ per cent. debentures 1965-70, amounting to Rs. 30.61 lakhs. The provision for taxation stands at Rs. 2.81 lakhs. The current liabilities aggregate Rs. 83.56 lakhs. The gross block of the value of Rs. 182.65 lakhs stands written down to Rs. 72.13 lakhs, besides which there is a capital expenditure in progress aggregating Rs. 53.26 lakhs. The current assets amount to Rs. 133.67 lakhs and provide a good coverage to the current liabilities and the provision for taxation mentioned above.

The modernisation of No. 1 Howrah Mill is going on rapidly. All the hessian machinery has now been erected and must be in full production now. All sacking units have been received and satisfactory progress is being made with the dismantling of the old machinery and erection of the new.

The reserves of the Reliance Jute aggregate only Rs. 5.82 lakhs, as against a paid-up capital of Rs. 69.50 lakhs. Even the small reserves just mentioned include such contingency reserves as pension scheme, Superannuation Fund, and labour Superannuation and Welfare Fund aggregating Rs. 3.69 lakhs. These are more a liability than reserves. The debenture liability amounts to Rs. 25.47 lakhs. The provision for taxation, at Rs. 0.37 lakh and the current liabilities, at Rs. 52.54 lakhs are adequately covered by current assets amounting to Rs. 77.32 lakhs. As already said, there is a debit balance of Rs. 11.72 lakhs being accumulated losses, besides a contingent liability of Rs. 70,000 representing arrears of preference dividend. The gross block of the value of Rs. 124.16 lakhs has been written down to Rs. 64.68 lakhs. The Company's application to the National Industrial Development Corporation for a loan of Rs. 25 lakhs for financing its modernisation scheme is still under consideration and the final decision is awaited.

Against a paid-up capital of Rs. 40 lakhs, the Bally Jute has reserves and surplus amounting to Rs. 25.11 lakhs. The gross block, at Rs. 96.92 lakhs, has been written down to Rs. 31.26 lakhs. The current assets amounting to Rs. 59.85 lakhs exceed the current liabilities and the provision for taxation, aggregating Rs. 26.65 lakhs by a fair margin.

PODAR MILLS LTD.

The decline of Rs. 1.74 lakhs to Rs. 12.09 lakhs in the gross profit of the Podar Mills Ltd. for the year ended 31st December 1955, to which a reference was made in our issue dated 4th August 1956, was due to debiting in the year's accounts a sum of Rs. 4.50 lakhs representing the bonus to labour for 1955 (in addition to that for 1954 and further bonus for 1952 and 1953) following the signing of the bonus agreement between the Company and the representative Labour Union. Explaining this to the shareholders at their recent annual general meeting, the Company's Chairman, Mr. Ramnath A. Podar, said that the usual practice of the Company in the past was to debit the amount of bonus in the following year when it was actually paid. When the bonus question was not decided in the following year, a provision of an approximate bonus amount for the previous year was made. As aforesaid, however, since the bonus liability for 1955 according to the agreement was ascertainable, it became incumbent that this provision should be made in the accounts for 1955 itself. It is clear from the Chairman's explanation that, if the Company had followed the usual practice, the profit for 1955 would have been higher. In fact, the Chairman revealed that the working profit for the year was about 20 per cent. higher than that for 1954.

Mr. Podar disclosed that a sum of Rs. 12 lakhs would be spent on rehabilitation during the current year. Besides, the Company was trying to start a third shift on a rationalised basis by converting 350 ordinary looms into automatic looms (adding to the present 200 automatic looms). He also disclosed that the Company was planning to add a further 10,000 new spindles to its present capacity.

INDIAN ALUMINIUM CO., LTD.

The Directors of Indian Aluminium Company Ltd. has decided upon a rights issue of new ordinary shares in the Company. It is proposed to issue 411,000 new ordinary shares of Rs. 10 each at a premium of Rs. 2-8, i.e., at Rs. 12-8 per share to the holders of existing ordinary shares.

In order to permit increased Indian participation in the new issue, the Canadian shareholder, Aluminium Limited, which holds approximately 87 per cent. of the existing ordinary shares, has renounced its right to subscribe for shares in excess of 50 per cent. of the new issue, and has agreed to limit its subscription to 205,500 shares only. The remaining 205,500 shares are being offered to the other ordinary shareholders in the proportion of one new share for one existing share held.

DUNLOP RUBBER

The Dunlop Rubber Co. (India) Ltd., announces important extensions to its manufacturing facilities in India. The existing factory at Sahaganj near Calcutta is being expanded to give increased output of truck and bus tyres, cycle tyres, cycle rims, general rubber goods and Dunlopillo. An entirely new plant is to be established in South India, probably near Madras, where sites are at present being surveyed. It is planned to manufacture truck, bus and cycle tyres there, principally for the needs of the South Indian market. The factory is expected to be in operation in about 2 years' time.

KALASA TEA PRUNES DIVIDEND

PROFIT LOWER

THE strength displayed by the shares (Rs. 9 fully paid-up) of the Kalasa Tea and Produce Company, Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode) in recent weeks with a rise in values from Rs. 16 to Rs. 16-12, despite the cut in dividend for the year ended 31st March 1956, from 15 per cent. to 10 per cent., shows that the shareholders are fully satisfied with the financial results of the Company for the year. There are two main reasons for their satisfaction. In the first instance, the results for the year under review are not strictly comparable with those for the previous year, because the earnings for 1954-55 did not represent the result of the year's trading alone, as will be explained presently. Secondly, with a heavy drop in tea prices during the past year, a fall in earnings and dividend was almost a certainty.

The gross profit of the Company for the year under review amounts to Rs. 1.25 lakhs, as against Rs. 5.09 lakhs for 1954-55. The profit for the previous year, it may be noted here, included a non-trading receipt of Rs. 3.23 lakhs being the claim settled by insurance company under loss of profit policy, on account of the destruction of the estates tea factory by fire in March 1954. Towards the close of that year, a new factory was built and only a small quantity of manufactured tea could be sold. Before the construction of the new factory, the tea crop was sold to other estates as green leaf, while the entire crop of the year under review has been sold as manufactured tea. Again, the profit for the year under review does not include the earnings from coffee (except for a small sum representing the excess realised on the previous two seasons' stock valuation), as the Company's coffee estate was sold with effect from 1st April 1955.

The net profit amounts to Rs. 70.266, as compared with Rs. 2.73 lakhs for 1954-55. No addition to the reserves has been made, except for a very small provision for bad and doubtful debts. The dividend has been cut from 15 per cent. to 10 per cent., thus restoring it to the level paid for 1953-54 and 1952-53.

The following comparative table presents the salient features of the Company's working results for the past four years:

—	For the year ended 31st March			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of crop	5,03,844	3,25,837	5,42,286	4,33,325

	(10%)	(15%)	(10%)	(10%)
Carry forward	72,775	56,877	15,403	22,679
Crop of tea (in lbs.)	311,281*	974,856†	312,973*	289,373*
		13,145*		
Crop of coffee (in lbs.)	..	160	238	137
Cost of tea per lb. Rs.	1 6 9	..	1 4 4	1 5 3
Price realised per lb. of tea ,,	1 15 8	..	1 12 9	1 13 3

* Manufactured tea. † Green leaf.

The crop for 1955-56 is one of the largest in the history of the Company, having been exceeded only once by that for 1953-54 when a record crop of 312,973 lbs. was produced. A crop of 379,000 lbs. is expected to be harvested in 1956-57 at a cost of 145 cents per lb. The Company was allotted 207,425 lbs. export quota for the season 1955-56, which is 69.3 per cent. of the best crop basis. A similar percentage allotment is expected for the current season and a provisional allotment of 40 per cent., that is, 119,726 lbs., has been made so far.

The Company's financial position, as seen from its latest balance-sheet, is quite satisfactory. The paid-up capital of Rs. 5.40 lakhs is supplemented by reserves and surplus aggregating Rs. 7.23 lakhs. The Company issued during the year 7 per cent. (taxable) first mortgage debenture stocks of the value of Rs. 3 lakhs, which were fully subscribed. The gross block of the value of Rs. 11.88 lakhs (including development expenditure amounting to Rs. 2.97 lakhs and capital works in progress Rs. 13,901) stands written down to Rs. 10.77 lakhs. The current assets aggregate Rs. 7.70 lakhs, of which cash balances alone, accounting for Rs. 4.57 lakhs, more than adequately cover the current liabilities and provision for taxation amounting to Rs. 2.78 lakhs in the aggregate.

Points From The Chair

Co-operation in Second Plan

"THE importance of the co-operative system of organisation has been emphasised by the Planning Commission in the Second Plan. But one fails to find an integral place for it in the Community Development and National Extension Programmes and in the policies of State Governments regarding rehabilitation programmes and aids to rural economy such as Tagavi advances. The tendency is to entrust the Community Development and National Extension Programmes to Government officials of the Revenue Department. It is felt that so long as these programmes have to depend upon such external assistance, the urge to development will stop as soon as the external stimulus is withdrawn. It is, therefore, necessary to accept the co-operative structure as an integral part of the Community Development and the National Extension Programmes. In the preparation of detailed programmes for the second Five-year Plan, the State Governments, I submit, should place greater reliance on the village co-operatives for carrying out the Community Development and National Extension Programmes, instead of looking to a large number of *ad hoc*, non-statutory and non-elective bodies, which may have the effect of indirectly weakening the co-operative institutions."

R. G. SARAIYA,
Bombay State Co-operative Bank Ltd.

Freight Concession for Industries Near Ports

"Pig iron imported on Government account is proposed to be sold at a uniform subsidised rate on the same lines as imported steel. As regards indigenous steel the advantage we had till now of cheap prices at the major ports will no longer be available to us. Indigenous steel is now being sold at a slightly higher, but uniform, price at all rail-head stations. As fairly big consumers of indigenous steel we shall hereafter be paying more for this commodity. Since, however, this price equalisation scheme was conceived in the interests of consumers all over the country we welcome it as such Industrial units like ours situated at or near major ports will suffer a freight disadvantage in the matter of long distance haulage of their finished products. Since they have foregone the slight advantage they initially held in cheaper steel we feel it is but reasonable that they get some concession in the matter of railway-transaction costs of their goods for long distance haulage."

K. K. BIRLA,
Textile Machinery Corporation Ltd.

Copper Prices in 1955

"Cash copper on the London Metal Exchange rose from £295 a ton at the beginning of 1955 to £404 10s. on 15th December and finished the year at £400 a ton. Strikes at producing plants were, even more than in 1954, a big factor in forcing up the price. In 1955, they caused the loss of at least 130,000 tons of output: 40,000 tons in Northern Rhodesia in January and February, 75,000 tons in the U.S.A. in July and August and 15,000 tons in Chile in December. The great need of the copper industry now, and for some time past, is for higher output and it is to be hoped that strike losses will prove less burdensome this year. Stockpiling of copper was not a big market factor in 1955. The U.K. Government released 65,000 tons of copper during the year and probably this more than offset intake by the U.S. authorities. The American producers raised their price in stages during the year to 43 cents, which was generally adopted from 1st September. It is equivalent to £344 a ton, compared with the higher London prices quoted above."

WALTER GARDNER,
Amalgamated Metal Corporation.

Refund of Draw-back Customs Duty

"While the Government of India have been good enough to accept the principle of a draw-back of custom duty on goods exported, but the procedure is so complicated and so difficult that it is almost impossible to get any refund. It entails a lot of work for the Government without doing any good to the industry. I, therefore, suggest that it should not be very difficult to devise an *ad hoc* basis the amount of draw-back duty paid on such articles as are exported, whether they are fans, sewing machines or oil engines or any other items. This would very considerably reduce the complicated procedure, which is being followed now, and make it possible for the industry to get the draw-back-duty amount."

LALA SHRI RAM,
Jay Engineering Works Ltd.

Manufacture of Mine-lighting Equipment in India

"I am glad to report that our Indian Company, following the increasing mechanisation of the mines there, is receiving satisfactory orders for the supply of mine-lighting equipment. An increasing proportion of our mining equipment for this market is now being manufactured in our works at Madras, and I am glad to take this opportunity to pay a tribute to the high standard of Indian workmanship. As, in the near future, increasing local supplies of suitable materials become available, the major portion of our production of such equipment will be of Indian manufacture. To cope with increased requirements in the area, an extension is currently being made to the Madras premises."

JOHN OLDHAM,
Oldham & Son Ltd.

COMPANY MEETINGS AND DIVIDENDS

DHEMO MAIN COLLIERIES LTD. Annual General Meeting, Calcutta, 5th October 1956. Dividend: *Nil*. Transfer books remain closed from 28th September to 5th October 1956, both days inclusive.

EQUITABLE COAL CO., LTD. Annual General Meeting, Calcutta, 5th October 1956. Dividend: As. 12 per share. Transfer books remain closed from 28th September to 5th October 1956, both days inclusive.

HURRILADIH COAL CO., LTD. Annual General Meeting, Calcutta, 5th October 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 28th September to 5th October 1956, both days inclusive.

WEST JAMURIA COAL CO., LTD. Annual General Meeting, Calcutta, 5th October 1956. Dividend: *Nil*. Transfer books remain closed from 28th September to 5th October 1956, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 8th October 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 27th September to 8th October 1956, both days inclusive.

GANGES MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: *Nil*. Transfer books will remain closed from 30th September to 9th October 1956, both days inclusive.

GOUREPORE CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: Rs. 2-8 per share. Transfer books will remain closed from 30th September to 9th October 1956, both days inclusive.

NUDDEA MILLS CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: *Nil*. Transfer books will remain closed from 30th September to 9th October 1956, both days inclusive.

HATTIKHIRA TEA CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: As. 12 per share. Transfer books will remain closed from 1st to 9th October 1956, both days inclusive.

GANGES ROPE CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Transfer books remain closed from 30th September to 9th October 1956, both days inclusive.

MANGALORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: Interim-dividend 2½ per cent. for the year ended 31st March 1956 and an interim-dividend of 5 per cent. for six months ending 30th September 1956. Transfer books remain closed from 25th September to 4th October 1956, both days inclusive.

KALASA TEA AND PRODUCE CO., LTD. Annual General Meeting, Mangalore, 10th October 1956. Dividend: As. 14 2/5 per share. Transfer books remain closed from 29th September to 10th October 1956, both days inclusive.

MALANKARA RUBBER AND PRODUCE CO., LTD. Annual General Meeting, Kottayam, 11th October 1956. Dividend: Rs. 3-4 per share. Transfer books remain closed from 28th September to 11th October 1956, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 15th October 1956. Dividend: As. 8-2/5 per share (final). Transfer books will remain closed from 6th to 15th October 1956, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Interim-dividend of As. 12 per share. Transfer books will remain closed from 5th to 15th October 1956, both days inclusive.

MYSORE TOBACCO CO., LTD. Dividend of Re. 1-8 per share, for the year ended 31st March 1956. Transfer books will remain closed from 16th to 27th October 1956, both days inclusive.

VELLIMALAI RUBBER CO., LTD. Dividend of As. 12 per share, for the year ended 29th February 1956. Transfer books will remain closed from 10th to 15th October 1956, both days inclusive.

GENERAL PAPERS LTD. Dividend of As. 10 per share, for the year ended 31st March 1956. Transfer books will remain closed from 6th to 20th October 1956, both days inclusive.

KURCHERMALA PLANTATIONS LTD. Dividend of As. 10 per share, for the year ended 31st March 1956. Transfer books will remain closed from 12th to 26th October 1956, both days inclusive.

PANCHURA ESTATES LTD. Dividend of As. 4 4/5 per share, for the year ended 30th June 1956. Transfer books will remain closed from 13th to 22nd October 1956, both days inclusive.

MALABAR AGRICULTURAL CO., LTD. Dividend of Re. 1 per share, for the year ended 31st December 1955. Transfer books remain closed from 22nd to 29th September 1956, both days inclusive.

CHAMPDANY JUTE SUFFERS LOSS

MALANKARA RUBBER STEPS UP DIVIDEND

Champdany Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. James Finlay & Co. Ltd., Calcutta) submit the audited accounts of the Company for the six months ended 31st March 1956.

The accounts show a loss of Rs. 1,80,359 (profit Rs. 3,12,391) after charging Rs. 4,36,139 (Rs. 2,97,681) for depreciation and taking credit for Rs. 14,211 (*nil*) on account of the unutilised balance of the sales tax contingencies reserve. After bringing forward the credit balance of Rs. 1,30,505 (Rs. 22,542) *from* the previous half-year, the directors have transferred the balance of *rehabilitation* reserve Rs. 14,84,926 (*nil*) making a total of Rs. 16,15,431. From this sum, they have transferred to the general reserve Rs. 12,97,734 (*nil*) and have written off the loss for the half-year of Rs. 1,80,359 leaving an amount available for distribution Rs. 1,37,338 (Rs. 3,34,933). They recommend that a dividend at the rate of 4 (8) per cent. per annum should be paid, leaving a balance of Rs. 19,010, (Rs. 98,277) to be carried forward.

With the completion of the modernisation programme at the Mills last year, it has been considered that the balance of Rs. 14,84,926 under the rehabilitation reserve which had been built up in the past, need no longer be retained as such.

It is recorded that the managing agents have voluntarily forgone Rs. 1,00,000 from the remuneration accruing to them for the half-year under review.

In view of the provisions of the Companies Act, 1956, *relating to accounts* and annual general meetings, the accounts will be presented annually in future in respect of financial years ending on 31st March. The directors shall, however, review the results of working as soon as possible after 30th September each year and thereafter, declare such interim dividends as, in their opinion, may be justified in the circumstances.

During the later portion of the half-year under report the prices of raw jute and manufactured goods were each at levels which made simultaneous business at a profit very rarely possible. The results are, therefore, less satisfactory than was expected at the time the directors submitted their previous half-yearly report. The market prices for raw jute and those for manufactured *goods have* continued to remain at unremunerative levels and the working of the Company's Mills since the commencement of the new financial year has not in consequence been altogether profitable. Production has been maintained at a *high level and costs* have been kept as low as possible.

Buildings and machinery continue to be maintained in good *condition* and repair.

In accordance with the provisions of the Indian Jute Mills Association's Working Time Agreement, the Mills worked 48 hours per week during the period under report, while 2½ per cent. of the total loomage was unsealed and brought into production on 9th January 1956; a further 5 per cent. was unsealed on 20th February 1956, leaving a balance of 5 per cent. sealed. Subsequently, in an effort to bring production more into line with the quantity of raw material available and so reduce the disparity between raw jute prices and those obtainable for manufactured goods, 2½ per cent. of the total loomage was re-sealed and taken out of production on 16th July 1956. A further 5 per cent. of total loomage will be re-sealed on 17th September 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Block ...	1,11,38,967

Profit and loss account ...	19,010	Investments ..	2,08,844
		Cash	52,186
Rs.	2,35,63,169	Rs.	2,35,63,169

Malankara Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. John Sons' Estates and Agencies (Private) Ltd., Kottayam) submit the audited *accounts of the Company for the year ended* 31st March 1956.

Rubber—The crop harvested during the season was 6,86,083 lbs., at an estate cost of 51.72 cents per lb. compared to 5,79,744 lbs. at 58.82 cents per lb. during the previous season. The average price obtained for the season's rubber was 145 (129.02) *cents* per lb. including excise duty. The price of rubber was increased by Rs. 5-12 per 100 lbs. from 24th September 1955 and with effect from 1st August 1955 the excise duty on rubber was also increased by Rs. 5-12 per 100 lbs. The decrease in cost of production is mainly due to the high crop obtained during the season owing to favourable weather conditions and also due to the effect of the successful spraying and dusting of almost the whole area with copper sulphate solution and cuprosana dust respectively.

Cocoanut—The crop for the season was 6,84,078 (3,81,354) nuts. The crop obtained from the cocoanut area of Malankara estate was lower than that obtained for the previous season. But the crop for the season from the Jungle Ore Estate was almost the same as in the previous season. The average price obtained for this season was Rs. 15.33 per 100 nuts compared to Rs. 16.65 per 100 nuts obtained for the previous season's crop.

Pepper—The crop collected from pepper areas during the season was 12,811 (6,630) lbs. including rejections.

The net profit for the season was Rs. 3,46,670 (Rs. 2,23,703) after writing down depreciation on buildings, machinery etc, and lorry amounting to Rs. 26,979 (Rs. 24,019) and after providing Rs. 2,15,000 (Rs. 1,40,000) against income-tax and super-tax both agricultural and non-agricultural, for the assessment year 1956-57 and also Rs. 6,237 (Rs. 1,566) against short provision of income-tax for assessment year 1955-56.

The total capital expenditure during the season was Rs. 80,588 (Rs. 63,776) of which Rs. 72,001 (Rs. 58,284) was spent for buildings, machinery, *furniture, cocoanut shed etc.* and Rs. 8,587 (Rs. 5,492) for replanting rubber in 35 (16.75) acres during the season.

The directors recommend that a dividend of 32½ (22½) per cent. amounting to Rs. 2,92,500 (Rs. 2,02,500) be paid free of State and Central income-tax payable at source, to those shareholders whose names appear in the *register on* the date of the general meeting and to transfer the balance amount of Rs. 54,170 (Rs. 35,456) to general reserve account to cover part of the capital expenditure incurred.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	16,42,808
Reserves ...	7,63,785	Debts and advances ...	58,976

Liabilities ...	1,05,144	Cash and other balances ...	5,64,488
Profit and loss account ...	3,46,670		
Rs.	23,27,033	Rs.	23,27,033

Dalhousie Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

After providing Rs. 1,14,537 (Rs. 49,000) for depreciation the profit and loss account shows a loss of Rs. 2,22,841 (profit of Rs. 2,23,415) which is reduced by the amount brought forward from the previous half-year of Rs. 1,996 (Rs. 15,344) leaving a net loss of Rs. 2,20,845 (credit of Rs. 11,882 after transferring Rs. 50,000 to general reserve, Rs. 30,000 to jute stock reserve, paying a dividend of 7 per cent. per annum on preference shares absorbing Rs. 52,500 and ordinary dividend at Rs. 3 per share absorbing Rs. 94,377) and this amount the directors recommend should be carried forward.

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

Accounts in brief are as under:—

Standard Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

After providing Rs. 2,04,776 (Rs. 54,442) for depreciation, the profit and loss account shows a loss of Rs. 2,11,836 (profit of Rs. 70,879) to which is to be added the loss brought forward from previous half-year of Rs. 2,75,291 (credit of Rs. 1,112) leaving a net loss of Rs. 4,87,127 (Rs. 19,821) after paying preference dividend at 6 per cent. per annum, absorbing Rs. 27,000 and ordinary dividend at Re. 1 per share, absorbing Rs. 25,170, and this amount the directors recommend should be carried forward.

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

The electrification of steam auxiliaries at the mill was completed by *end* February 1956.

Hoograjuli (Assam) Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The application to the Controller of Capital Issues for permission to capitalise a sum of Rs. 3,00,000 out of the amount standing to the credit of the general reserve, referred to in our last report, was granted in September 1955, and the issued and subscribed capital of the Company has been increased by the *addition of 30,000* new shares of Rs. 10 each, issued as fully paid-up to shareholders at the rate of three new shares for every two shares held by them on 9th November 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the 1913 Companies Act; this has been *commented upon by* the auditors in their Report.

Early in the present year it was agreed with Government that a bonus should be paid to tea garden labour in respect of seasons 1953 and 1954, and the cost of *this bonus* has been included in the 1955 accounts.

The taxation provision in these accounts is made on the basis that the amount of the 1953 and 1954 labour bonus will be allowed as a charge in the tax assessment for the year.

After providing Rs. 47,851 (Rs. 42,491) for depreciation, Rs. 94,090 (Rs. 2,40,000) for the 1953 and 1954 labour bonus and making sundry adjustments, *the year's* results show a loss of Rs. 57,932 (credit of Rs. 1,46,748 after paying interim dividend of Rs. 3-8 per share absorbing Rs. 70,000). After *bringing in* the balance of Rs. 84,780 (Rs. 48,032) from last year, there remains a balance of Rs. 26,849 (Rs. 1,94,780) at the credit of profit and loss account. From this the directors recommend the payment of a dividend of As. 8 (final dividend of Rs. 5-8) per share, absorbing Rs. 25,000 (Rs. 1,10,000) leaving a balance of Rs. 1,849 (Rs. 84,780) to be carried forward.

A crop of 5,838 maunds was secured and sold at an average price of Re. 1-11-5 per lb. This compares with a crop of 5,834 maunds manufactured in 1954, which sold at an average price of Rs. 3-1-5 per lb. The tea market fell sharply during the course of the season, as regards poorer quality teas, and unfortunately the teas produced by the Company were below the normal standard. This was due to a fault in a drying machine that could not be rectified until the end of the season. The machine is now working efficiently.

Estimates for the current season have been framed for a crop of 6,250 maunds to cost Rs. 8,58,103. Crop to the 7th August 1956, amounted to 2,241 maunds compared with 1,851 maunds secured to the same date last year. It is expected that the estimated crop will be secured, provided normal weather conditions prevail.

Accounts in brief are as under:—

		Cash ...	1,85,120
Rs.	15,04,075	Rs.	15,04,075

Mothola Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts of the Company after providing for taxation and after writing off for depreciation Rs. 19,145 (Rs. 42,153) show a profit of Rs. 1,42,932 (Rs. 4,08,551) to which is added the balance brought *forward from* the last account of Rs. 53,033 (Rs. 16,982), giving a total of Rs. 1,95,964 (Rs. 4,25,533). Out of this there will be transferred to reserve account Rs. 50,000 (Rs. 2,75,000) leaving for disposal a sum of Rs. 1,45,964 (Rs. 1,50,533). On 21st December 1955 an interim dividend of 10 (15) per cent. was declared, amounting to Rs. 15,000 (Rs. 22,500). From the balance of Rs. 1,30,964 (Rs. 1,28,033), the directors recommend the payment of a final dividend of 40 (50) per cent. absorbing Rs. 60,000 (Rs. 75,000) leaving a balance to be carried forward of Rs. 70,964 (Rs. 53,033).

It is considered that the amount of Rs. 50,000 standing at the credit of labour welfare reserve in the balance sheet is no longer required. This amount is therefore transferred to the credit of reserve account.

Season 1955.—The International Tea Agreement expired during the year has not yet renewed. The Government of India, however, declared the export allotment for the year 1955-56 at 480 million pounds representing 69.3 per cent. on the crop basis of the tea estates in this country.

The production was exceptionally high and reached a record level whilst the demand from the overseas markets was extremely poor, resulting in the accumulation of huge stock. Until last August the tea offered for export *in the Calcutta auctions* received fair support at reasonable prices, but since then the prices started to fall. The internal market also coincided with the trend of the export market, and offerings although less than last year were disposed of at irregular prices. *It is to be* noted that during the year there was an impressive demand for selective best liquoring and tippy grades whilst buyers showed less interest towards poor standard teas.

The cost of production during the year was increased by As. 5.09 per lb. than last year mainly owing to increase in plucking rates, enhancement of pay scale of clerical staff, increase in rates of Assam Road Tax, implementation of bonus agreement in respect of garden clerical staff and labour and introduction of provident fund scheme.

Cultivation.—The area under tea plantation was reduced further by slightly above one acre on account of erosion; the plucking was extended to 370 (371) acres giving an average yield of 18.89 (18.29) mds. per acre. A further nursery was also put out and 3 (17) acres were replanted.

Crop.—The total outturn amounted to 6,996 *(6,638) mds. representing an increase of* 280 (177) mds. The average price realised was As. 36.24 per lb. as compared with As. 51.68 per lb. last year.

Season 1956.—The octroi levy announced by the West Bengal Government last year on tea entering into Calcutta together with certain welfare measures are expected to be implemented this year, which will add further to the current cost of production.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	3,67,463
Reserves ...	7,22,434	Stock of tea	5,38,104
Provision for taxation ...	3,44,430	Debts and advances ...	53,020
Liabilities ...	3,35,108	Other assets	85,043
Profit and loss account ...	1,80,964	Investments	2,01,967
		Cash ...	4,87,339
Rs.	17,32,936	Rs.	17,32,936

Poobong Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a loss of Rs. 51,963 (profit of Rs. 1,80,965). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 60,000 from revenue reserve account, there is a balance at *credit of that account* of Rs. 406 (Rs. 10,089 after paying a dividend of 15 per cent. absorbing Rs. 45,000 and transfer to buildings and machinery reserve Rs. 45,000), which it is proposed to carry forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

The result of the season's working is disappointing owing to the greatly increased cost of statutory concessions to labour, unfavourable growing conditions and hail damage, resulting in both a loss in crop and a deterioration in the quality of the garden produce, combined with adverse market conditions.

Crop weighed out at 2,060 maunds, as compared with 2,109 maunds in 1954 and the average selling price was Rs. 2-5-11 per lb. as against Rs. 3-6-5 per lb. in the previous year. The planted area remains at 500.43 acres.

Estimates for 1956 provide for a crop of 2,200 maunds at an outlay of Rs. 4,73,860, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	3,83,087

		Cash ...	52,133
Rs.	8,55,991	Rs.	8,55,991

Belgachi Tea Co., Ltd.

The directors of the above Company (Managing Agents: National Tea Corporation, Calcutta) submit the audited accounts *of the Company* for the year ended 31st December 1955.

Crop.—The season opened with early rains and fair prospects. Rainfall was well distributed almost throughout the whole season. In terms of

favourable conditions that prevailed during the year a total crop of 4,17,643 (3,23,610) pounds of tea was made, of which 1,38,759 pounds was sold in export market, 8,832 pounds was sold in the internal market and the rest was disposed of locally. The gross average export sale price was As. 28.00 (As. 39.44), the gross average internal sale price As. 22.72 (As. 29.64) and the total net average sale price As. 25.24 (As. 29.67). Total working *costs* per pound of tea produced was As. 16.09 (As. 18.11).

Dearness and other cash allowances, etc., to staff and labour cost some Rs. 76,097 as against Rs. 80,337 paid last year. Under the Delhi Agreement a sum of Rs. 15,905 was paid to labour as part bonus for the years 1953-54, and it is estimated to pay a further sum of Rs. 4,234 under the said agreement.

The *gross profit for the year* is Rs. 2,16,556 (Rs. 2,39,099) and after allowing for taxation and other appropriations and taking into account the *dividend from the subsidiary shown* there is a net profit of Rs. 2,49,487 (Rs. 1,48,951) and a final balance on this account of Rs. 2,87,352 (Rs. 1,72,865). The directors recommend to pay a *dividend of 100* (40) per cent. absorbing Rs. 2,50,000 (Rs. 1,00,000) *and carry forward* to 1956 Rs. 37,352 (Rs. 37,865).

The directors are of the opinion that it will be for the benefit of the Company, as also for the members, if the payment of dividend be made not in cash, but by giving to the members shares of the Bateli Tea Co., Ltd. It is for the members to decide whether the dividends should be paid in cash and/or in the said shares. It may be stated here that the Company is at present holding 46,687 shares of the Bateli Tea Co., Ltd. and the market value of the said shares is Rs. 25 per share. If the members, as recommended by the directors, approve of the payment of dividend at Rs. 10 per share, then a member holding five shares of the Company will be entitled to get two shares of the Bateli Tea Co., Ltd. as dividend. *It will, however, not be advisable* to split the shares of the Bateli Tea Co., Ltd., and the directors, therefore, recommend that in case any member holding shares in the Company which are less than five shares or any share which is not a multiple of five, *will be paid dividend in cash.* The directors further recommend that in case any member does not want to accept in payment of dividend shares of the Bateli Tea Co., Ltd., the dividend payable to him may be paid to him in cash.

Estimates for 1956 have been based on a crop of 5,000 maunds at a total working cost of Rs. 4,33,238.

Accounts in brief are as under:—

Nagaisuree Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) *submit the audited accounts* of the Company for the year ended 31st December 1955.

The *accounts* disclose a profit of Rs. 1,48,498 (Rs. 13,50,639). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,85,298 (Rs. 10,39,227), of which the directors have transferred Rs. 65,000 (Rs. 3,25,000) to revenue reserve. The directors recommend that a dividend of 7½ (40) per cent. be declared at the annual general meeting leaving Rs. 48,298 (Rs. 80,227) to be carried forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve representing the present written down value of these assets has been opened.

Crop weighed out at 12,237 maunds as compared with 14,619 maunds in 1954 and the average selling price was Re. 1-12-1 per lb. as against Rs. 2-12-5 per lb. in the previous year. Planted area remains at 1,124.90 acres.

Estimates for 1956 provide for a crop of 12,500 maunds at an outlay of Rs. 14,86,223, including inland freight and sale charges.

Accounts in brief are as under:—

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act 1956, they have been prepared in accordance with the 1913 Companies Act; and this fact has been commented upon by the auditors in their report.

After providing Rs. 4,905 (Rs. 16,025) for depreciation and crediting an excess liabilities provision of Rs. 2,000, the accounts for the half-year show a loss of Rs. 50,567. After adding the debit balance brought forward from the previous half-year, there is a total of Rs. 1,07,984 at the debit of profit and loss account which is being carried forward. Rs. 3,938 (Rs. 15,750) has been transferred from the general reserve and the directors recommend that the preference dividend for the half-year ended 31st December 1955, be paid *out of it.*

Raisings by the contractor during the half-year amounted to 5,053 tons, and despatches, *including those made on the contractor's account,* were 5,312 tons. Since the end of the period under review the particular area covered by this raising contract has been worked out.

The directors have been giving their detailed consideration to future plans for the working of further areas in the Bhuggutdih property, and applications in this connection are at present pending with the Coal Board. It is the Board's intention that the new workings *should be started* as soon as permission is received from the Coal Board, and that raisings should thereafter be maintained. The Coal Board have recently indicated that sandstowing should be undertaken generally in No. 10 seam, and this matter is also being considered by the Directors.

At an Extraordinary General Meeting of shareholders held on 19th April 1956, it was resolved to reduce the capital of the Company by repaying the preference share capital.

Hitherto half-yearly accounts have been issued, by this Company to its shareholders, but in the opinion of the Board of directors this is no longer practicable in view of the provisions of the Companies Act, 1956, *regarding annual general* meetings and the accounts to be presented at such meetings. Accordingly yearly accounts will be issued in future, *commencing with* those for the year ending 31st December 1956. This will not preclude the payment of half-yearly dividends, subject to the Company's results permitting, as the Company's Articles authorise the payment of interim dividends. It *is, therefore, the Board's* intention to consider the payment of interim dividends in the light of the Company's results up to 30th June each year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,37,500	Block ...	2,48,198
Reserves* ...	4,22,669	Stock of coal	1,452
Provision for taxation and cesses ...	3,009	*Debts and advances* ...	2,28,425
Liabilities ...	79,375	Investments	1,28,533
		Cash ...	*2,35,945*
Rs.	8,42,553	Rs.	8,42,553

*Reserves are shown after deducting Rs. 1,07,984, being the debit balance in the profit and loss account.

Straw Products Ltd.

The directors of the above Company (Managing Agents: Messrs. J. K. Agents Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

During the year after meeting all the expenses and charges and taking into account bonus to workers and staff, provision for depreciation, remuneration to directors, *and managing agents' commission* and remuneration, the Company has made a net profit of Rs. 4,03,078 which together with the balance brought forward from the last year's account of Rs. 42,925 makes a total of Rs. 4,46,003. The directors recommend the disposal of this amount as under:—

To provision for taxation Rs. 1,30,000 to pay dividend at Re. 1 (As. 8) per share on 1,50,000 (1,50,000) shares free of tax, equivalent to 10 (5) per cent. Rs. 1,50,000 (Rs. 75,000), transfer to general reserve Rs. 1,50,000 and balance to be carried forward to next year Rs. 16,003 (Rs. 42,925).

During the year under review, the production and sales of the Company's products have been satisfactory, and labour relations have been cordial.

Order for necessary pulping machinery as well as paper-cum-board machine had been placed from abroad during last year, which will increase production by another 15 tons per day and will include better quality of boardr and paper, such as duplex, triplex, corrugating and packing papers. The partial delivery of the *machines* has commenced. Total plant is expected to be received before the end of 1956, and after erection, it is expected to go into production by the first quarter of 1957, thus adding substantially to the earning capacity of the Company and increasing production to almost double the present quantity. The *Company has further plans for* expansion of the existing board machine to increase its capacity by nearly 50 per cent.

Gilby, Mono Shum Shere Jung Bahadur Rana, Major General Nara Shum Shere Jung Bahadur Rana, Mian Aziz Ahmed Khan Bhatti, Rani Jagdamba Kumari Debi, Padma Narsingha Rana, Mohamed Khalil Serage, Bahadur Shum Shere Jung, Maj. General Krishna Shum Shere Jung Bahadur Rana, H. H. Maharani Gamvir Kumari, Bibudhandra Prasad and Mr. Keshava Ram Bhandary.

THE BENGAL FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Tuesday the 23rd day of October 1956, at 12 noon, to consider, and if thought fit, to pass the following Resolution, which will be proposed as a Special Resolution, namely:—

That the Articles of Association of the Company be altered in manner following:—

(1) Articles 55, 56 and 57 shall be deleted and the following New Article 55 substituted therefor:

"In addition to any other meetings, general meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Board of Directors. Such general meetings shall be styled 'Annual General Meetings' and shall be specified as such in the notices convening these meetings. All other meetings of the Company shall be styled Extraordinary General Meetings."

(2) Article 63 shall be deleted and the following New Article 63 substituted therefor:

"The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet, and the Reports of the Board of Directors and of the Auditors, to appoint Directors in place of those retiring by rotation, to appoint Auditors and determine the manner in which they shall be remunerated, and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

(3) Articles 86 and 87 shall be deleted and the following New Article 86 substituted therefor:

"At every Annual General Meeting the Board of Directors shall lay before the Company a Profit and Loss Account made up to the 31st December in the preceding year and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company, but save as aforesaid, the Board of Directors shall not be bound to disclose greater details of the result or extent of the trading and transactions of the Company than they may deem expedient."

(4) Articles 88, 89 and 90 shall be deleted and the following New Articles 88 and 89 substituted therefor:

"88. Once at least in every year the Accounts of the Company shall be examined and the correctness of the Balance Sheet and Profit and Loss Account ascertained by one or more Auditor or Auditors."

"89. The Company at each Annual General Meeting shall appoint an Auditor or Auditors to hold office until the next Annual General Meeting and their appointment, remuneration, rights and duties shall be regulated by Sections 224 to 227 of the Companies Act, 1956."

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

CALCUTTA, 24*th September* 1956.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ended 30th September 1956.

The Preference Share Registers will be closed from the 5th to the 10th October 1956, both days inclusive. Payment will be made on or after the 1st November 1956, to those Preference Shareholders whose names are on the Company's Register on the 10th October 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 27*th September* 1956.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

BY ADVERTISEMENT IN NEWSPAPERS IN September 1955 and also in the Directors' Report for the year ended 31st December 1955, shareholders were informed that the date for conversion of fractional certificates of the 1949 and 1954 issues into whole Ordinary shares had been extended to the 30th September 1956.

The Directors have decided to further extend the date by which such fractional certificates of both the 1949 and 1954 issues should be presented for conversion into Ordinary shares to the 30th September 1957.

Holders of fractional certificates of the 1949 issue are particularly requested to note that no further extension of time will be allowed in respect of these certificates.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 25*th September* 1956.

Premier Mills (Cbe) Ltd.

The directors of the above Company (Managing Agents: Messrs. K. Narayanaswamy Naidu & Co., Coimbatore) submitted the audited accounts of the Company for the year ended 31st March 1956.

The working of the Company has been highly satisfactory. This has been possible by the judicious buying and selling policy adopted by the managing agents and also by the favourable yarn prices.

Orders have been placed for 12,000 spindles and delivery is expected in a couple of months. The buildings necessary to house the same are complete and the directors therefore hope that they will be able to work the full complement of 33,000 spindles by about the middle of the current year.

After meeting all working expenses and providing Rs. 4,92,363 towards depreciation, the year's working has resulted in a net profit of Rs. 5,76,256. Adding to this balance of profit carried forward from the previous year amounting to Rs. 10,291 and deducting therefrom the balance of income-tax payable amounting to Rs. 21,139, there is a sum of Rs. 5,65,408 to the credit of profit and loss account. The directors have recommended the following appropriations from the above sum.

To pay a tax-free dividend of 15 per cent. to the shareholders Rs. 1,87,500, to provide for taxes Rs. 2,75,000, to transfer to general reserve Rs. 1,00,000, and to carry forward to next year Rs. 2,908.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	12,50,000	Block ...	21,47,216
Reserves ...	3,50,000	Stock-in-trade	14,97,358
Provision for taxation ...	2,75,000	Stores ...	2,05,157
Liabilities ...	23,41,664	Debts, deposits and advances ...	3,48,859
Profit and loss account ...	2,908	Cash ...	20,982
Rs.	42,19,572	Rs.	42,19,572

GILT-EDGED DULL

(From Our Own Correspondent)

BOMBAY, 26*th September*

The short-term money market has continued to be stringent, with hardly any improvement in turnover. Though there was no increase in the demand for funds the available supplies were not sufficiently large to meet even the day-to-day requirements of banks. Consequently, there was no fall in interest rates.

Inter-bank call money was bid at the self-same rate of 3½ per cent. among all sections of banks. House money at call was also placed at 3½ per cent. and short-term deposits were offered 3¾ per cent. for one to three months and 3¼ to 3⅜ per cent for four to six months.

A further decline of Rs. 14.74 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 21st September 1956. This brings the total contraction for the past two weeks to Rs. 22.48 crores. Notes held in the Banking Department have risen by Rs. 6.52 crores during the week under review, so that there is a fall of Rs. 8.22 crores in the total notes issued. This decline is covered on the assets side by a decrease of Rs. 9.94 crores in rupee securities and an increase of Rs. 1.72 crores in rupee coin. In the Banking Department, deposits of the Central Government show a fall of Rs. 5.97 crores, while those of the other Governments are up by Rs. 4.41 crores. Deposits of banks are lower by Rs. 1.17 crores. A decline of Rs. 6.74 crores is noted in balances held abroad and of Rs. 2.23 crores in loans and advances to Governments. Other loans and advances have jumped up by Rs. 13.95 crores, of which outstanding advances to Scheduled banks against usance bills alone account for Rs. 9.75 crores. Fresh advances to banks against these bills during the week amount to Rs. 18.67 crores, probably the largest amount advanced in any one week so far, while repayments amounted to Rs. 8.92 crores. There has been a reduction of Rs. 9.82 crores in investments during the week.

The Scheduled banks' statement for the week ended 14th September 1956, shows a fall of Rs. 1.82 crores in demand deposits and a rise of Rs. 1.72 crores in time deposits. Inter-bank borrowings are up by Rs. 1.38 crores and borrowings from the Reserve Bank by Rs. 1.80 crores. In distinct contrast to the increase of Rs. 29.03 crores in advances noted in the previous week, there has been a drop of Rs. 4.21 crores in the week under review. Bills purchased and discounted have also declined by Rs. 2.46 crores. Investments are up by Rs. 4.76 crores. While cash balances do not disclose any marked variation, money at call and short notice show a rise of Rs. 1.85 crores.

The Gilt-edged market displayed dull conditions during the week under review, with the volume of business remaining at a low ebb. The undertone was, however, a shade steady following scattered enquiries from institutional investors.

3 per cent. 1959-61 was in request at Rs. 97-15, while 3 per cent. 1963-65, after declining by an anna to Rs. 94-7, remained at that level. 3 per cent. 1964 was nominally placed at Rs. 94-10, while 3 per cent. 1966-68 stood unchanged at Rs. 93-2. 3 per cent. 1970-75 attracted some sellers at Rs. 89-8, while 3 per cent. 1986 Conversion Loan attracted buyers an anna lower at Rs. 75-2. 3½ per cent. 1962 held its own at Rs. 97-15. 3¼ per cent. 1961 was on offer at Rs. 99-2 and 3¼ per cent. 1964 at Rs. 98-9. 3¼ per cent. 1965 was a shade better at Rs. 98-7. 3¼ per cent. 1967 was wanted at Rs. 98-7. 3¾ 1974 gained an anna to Rs. 98-8. Among State loans also, there was not much activity, but 4 per cent. 1968 Madras and U.P. loans had buyers As. 2 lower at Rs. 99-2.

In the foreign exchange section, the rupee held its own in terms of the U.S. dollar, the selling rate for ready dollars being unchanged at Rs. 481¼ per $100 and the buying rate at Rs. 477 per $100. In London, sterling ruled steady, the spot sterling gaining ground from $2.78.5/16-2.78.7/16 to $2.78⅞-2.78¾. Three months' forward closed unchanged at $2.76.9/16-2.76.11/16, while transferable sterling was marked up from 275.25-275.35 cents to 275.80-275.90 cents.

WOOL FIRM

DELHI, 21st September

During the past fortnight, the wool market has been eagerly awaiting the Government of India's announcement of its export policy for the new half-year beginning on 1st October. With the trade adopting a wait-and-see attitude, very little export business has been done. The turnover in foreign trade has, therefore, been very small.

The Liverpool auction of the September series ended on the 12th inst. Prices of best white and yellow remained unchanged. Medium and irregular greys advanced by 5 per cent. Of the 8,700 bales of Indian and Pakistani wool offered, only 1,667 bales were sold.

The Delhi raw wool market has remained firm, with daily arrivals averaging 200 to 250 maunds. The latest quotations (per lb., f.o.r. Bombay) are: Yellow (Delhi, Beawar and Punjab qualities) Rs. 2-11 to Rs. 2-12-6; Greys (raw condition) Re. 1-4; Light grey Re. 1-7 to Re. 1-8; White (nominal stock) Rs. 3-5.

Sydney, Australia (13-9-56): On the 10th inst., values were generally firm up to 5 per cent. higher than at the opening sale of the season, finer qualities being up to 5 per cent. dearer, broader qualities 5 to 7½ per cent., and comebacks and crossbreds 2½ to 5 per cent. dearer. There was an almost complete clearance of the 16,700 bales offered, under strong competition from Britain and the Continent and increased activity by Japan. As the week advanced, prices continued firm. Offerings at the Melbourne sale scheduled for the 17th to 20th inst. were increased from 50,000 bales to 60,000 bales. The Brisbane sale for 1st to 4th October will be held as scheduled, and an additional sale will be held from 15th to 18th October.

London (13-9-56): At the opening of the London wool sales yesterday, competition was keen and widespread, and prices of all descriptions advanced from closing rates at the July series. Prices of Australian greasy merinos, mostly topmaking styles, and of fleece and skirtings were 10 per cent. dearer. Greasy comebacks and fine crossbreds advanced by 10 per cent. and at times 15 per cent. New Zealand greasy crossbreds sold strongly. Slipes were generally 7½ per cent. dearer.

Exeter, U.K. (11-9-56): There was full clearance under keen competition, with values for fine topmaking descriptions 5 per cent. higher than at Bradford on 29th August.

Hawick, Scotland (6-9-56): Prices at the first Scottish wool sale of the season were rather in advance of those at last season's closing sale in June. A total of 2,423,600 lbs. of fleece wool was offered by the Committee of Scottish Wool Brokers, acting on behalf of the British Wool Marketing Board. Bidding was brisk, and all wools were sold with the exception of 11 lots of blackface.

Bradford, U.K. (14-9-56): Developments in the international situation this week have further increased the desire to see the current season's wool shipped as soon as possible and in the largest quantities possible, since the increased threat of delays in shipping emphasise the low level of stocks at the moment. There was in the first two weeks of the new season no strong buying movement on the part of the home trade, and most spinners covered their requirements before the season opened at the end of August. This week, however, topmakers have reported increased activity on the part of buyers, one or two of whom appear to have delayed placing orders, in view of higher prices, and are now being compelled to come into the market. The rising trend of prices, which shows no signs of slackening for the present, is inevitably accompanied by better business than would be the case, if prices showed a tendency to decline and all sections are booked well ahead.

Cape Town, South Africa (10-9-56): Values of fine quality wools moved in sellers' favour and the offerings of 4,700 bales were cleared under general competition.

BULLION LISTLESS

(From Our Own Correspondent)

BOMBAY, 26*th September*

Dull conditions prevailed in the bullion market during the week under review, with fluctuations confined to a narrow range. In silver, the trend was slightly downwards in the earlier half of the week. In the absence of any fresh incentives, operators were not inclined to enter into fresh commitments, although there was no selling pressure on that account. The demand in the ready section was also a bit slack. As the week drew to a close, however, there was a slight recovery on improved demand. This was particularly the case with the white metal.

Gold remained stagnant almost throughout the week, but the undertone was very steady. Just before the close, there was a slight marking up in price in sympathy with silver.

Silver for forward delivery (22nd September settlement) shaded off from Rs. 172-10 to Rs. 172-4 before the settlement ran out at Rs. 172-8. The next settlement (20th October) receded from Rs. 173-7 to Rs. 172-15 before hardening to Rs. 174-6 at the close.

Ready silver (.996 Mint) moved down from Rs. 172-10 to Rs. 172-3, but gained ground to Rs. 174 at the close. The floating stocks of silver are estimated at 2,400 bars. The daily average offtake was 20 bars.

Forward gold (21st September settlement) softened from Rs. 102-12 to Rs. 102-9 before the settlement ran out at Rs. 102-14. The next settlement (19th October) moved between Rs. 102-11 and Rs. 103-2 before finishing As. 9 higher at Rs. 103-6.

Ready gold advanced from Rs. 103 to Rs. 103-8. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas and the offtake was also of the same order.

In New York, silver was unchanged at 90⅜c., while London prices, after maintaining them at 78⅛d. till Monday this week, spurted yesterday to 79¼d. for both spot and forward. London gold dipped slightly from 251s. 7½d. to 251s. 6⅜d. early in the week, but recovered to 251s. 7d. later in the week.

The following comparative table shows the trend of market during the week under review:

	26-9-56	Highest	Lowest	19-9-56

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 26*th September*

Although earlier in the week a firm trend was depicted by the cotton futures market, in later sessions, easy conditions prevailed. The firmness was due to mill buying based on the expectation of favourable changes in textile policy. But other factors soon intervened to affect the market adversely. Reports of good weather, with prospect of a larger crop out-turn and the curb on credit initiated by the Reserve Bank acted bearishly on the market. On top of it came the announcement regarding restrictions imposed on the minimum stocks of cloth that mills should have, which also affected the earlier strength of the market. The earlier gains were wiped out, and over the week, there was no notable change in prices.

M. G. Jarilla (March 1957) contract opened the week at Rs. 693¼, two points higher than last week's closing rate and advanced to Rs. 697 on the following day due to extension of mill buying. On reports of good weather and credit curtailment initiated by the Reserve Bank, the contract came under selling pressure, with the result, that values slipped back to Rs. 687½ on the 24th inst. The Contract again improved to Rs. 691½ today and closed at the same rate. M. G. Vijay (April 1957) contract opened at Rs. 821, as against Rs. 818¾ last week. After having advanced to Rs. 824 on the 21st inst., it began its downward drift, touching a low of Rs. 815 yesterday. It again improved to Rs. 821 today but dropped to Rs. 813½ before closing at Rs. 821.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	26-9-56	*High*	*Low*	19-9-56
Jarilla (March) ...	691½	697	686½	691½
Vijay (April) ...	821	824½	813½	818½

There was brisk activity in the spot section earlier in the week, but towards the close, trading was restricted, following Government's announcement regarding limitation of stocks. During the opening sessions Ahmedabad mills purchased substantial quantities of Khandesh and Berar varieties. The prices of delivery contracts were steady. A leading Bombay textile group was credited with having purchased about three to four thousand bales of cotton stapling 25/32" at around Rs. 82 'on', on the 24th inst. In the export section Bengal *Deshi* was still greatly favoured, while the prices of Oomra *Deshi* and Kala were maintained. In the foreign section activity was moderate. B.P. 52 was quoted today at Rs. 1,720, as against Rs. 1,740 last week-end. A sizable quantity of American cotton stapling 1.5/32" was done at Rs. 1,450.

The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below, the figures in brackets being the last week-end rates:

Bengal *Deshi* 700 (705); Berar Jarilla 770 (780); Khandesh 780 (790); Vijay 955 (955); Oomra *Deshi* 750 (760); Moglai 730 (745). *Delivery Contracts*: Khandesh 197/3 December 120 (121), Berar 109 (111); Moglai 39 (40) 'on' Jarilla; 320F December 80 (71), 216F 102 (100); Vijay 13/16" February-March 69 'on' Vijay.

In contrast to the bearish trend noted last week, Karachi cotton market depicted a steady trend during the week under review. This steadiness was aided by the improved enquiries for N.T. and *Deshi* new crop. Modest gains were made by both the futures contracts. N.T.R.G. January delivery, which had closed at Rs. 74-15 last week improved to Rs. 75-6 yesterday. The March position also advanced fractionally to Rs. 73-15. The spot section ruled steady and values were on a par with last week's rates. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 96; Punjab *Deshi* 88; 4F Roller 77-13; S.G. 79-5; L.S.S. Punjab Roller 78-5; S.G. 80-5; N.T.R.G. 78-5; S.G. 78-13; 289F Punjab Roller 82-5; S.G. 86-5.

Conditions in the Alexandria cotton futures market were distinctly better. Earlier in the week, cotton futures displayed a firm trend attributed mainly to speculative buying in November and December pushing their rates to as high as 106.1 tallaris per lb. and 105.25 tallaris per lb., respectively, on the 22nd inst. Afterwards, the rates slipped back owing to selling pressure induced by the high prices. Nevertheless, yesterday's closing quotations were appreciably higher than the rates, last week. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below:

Karnak: November 102.90; January 102.20; March 101.40. *Ashmouni*: October 72.25; December 72.40; February 72.60.

Fair gains were recorded by the cotton market at Liverpool. Mill demand for ready and shipment cotton was confined mostly to American and Sudan cotton. All available descriptions of Sudan cotton have found a ready market owing to the freezing of Egyptian styles. Due to the relative cheapness of cotton purchased from the C.C.C. stocks most other American type growths are not attracting the attention of traders. Sizable purchases of East African and Belgian Congo cotton were also reported. Nigerian styles also evoked considerable attention, believed to be for prompt shipment. The following are the latest available rates—in pence per lb.—from Liverpool:

American Contract (1" *staple*): October-November 25.20; December-January 24.95; March-April 24.90; May-June 24.87. *American Cotton Mixed Growth Contract*: October-November 25.4; December-January 25.15; March-April 25; May-June 24.9. *Egyptian Karnak Cotton*: November-December 58.30; January-February 58.25; March-April 58.25. *Sudan Cotton Contract*: September-October 49.20; November-December 49.50; January-February 49.25.

Prices in the New York cotton futures market have fluctuated narrowly in quiet trading characterised by scattered hedging and liquidation which was offset by trade buying and short-covering. As a result, values ruled more or less steady. According to the estimates of the U.S. Department of Agriculture cotton exports are expected to more than double during the marketing year 1956-57. C.C.C. sales, against bids accepted on 18th September, aggregated 329,230 bales, at an average price of 26.22 cents, basis middling 1" at average location, the minimum price for middling 15/16" remaining unchanged at 25 cents. Sales by the Corporation now amount to 3,815,355 ba'es. Further bids for Government-owned cotton will be accepted on 2nd October.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	25-9-56	18-9-56	11-9-56
Spot	34.55	34.45	34.40
October	34.00	33.79	33.80
December	33.99	33.79	33.88
March	34.07	33.72	33.80

• • • •

Addressing a group of cotton traders the other day, at Bombay, Mr. Seton Ross, a well-known authority on cotton and Associate Publisher of the *Cotton Trade Journal*, Memphis (U.S.A.) has expressed the view that cotton prices in the United States must come down to adjust themselves to world demand and purchasing power. This, he pointed out, is necessary in order to bring about some form of equilibrium between the supply and demand, the absence of which has been the bane of cotton trade throughout its recent history. He drew attention to the fact that a lower price, while increasing the competitive capacity of cotton against artificial fibres, would also stimulate its consumption, thus strengthening the demand for cotton. Emphasising the need to evolve a realistic cotton policy on the part of the United States and to run the industry in a more business-like manner, he suggested the formation of a non-political cotton board to deal with the problems. This, according to him, will go a long way towards taking cotton out of political pressure. He also stressed the need for reorganising the Soil Bank Programme of the United States.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 26*th September*

During the week under review, the oilseeds market ruled slightly easy. At the commencement of the week, persistent reports of demand for castor oil from overseas markets had a tonic effect on the castorseed section. Besides, a tight hold on the maturing contract by a bull operator and brisk support of exporters on the spot section, gave further strength to the castorseed. Sympathetic movements were witnessed in the groundnut and linseed sections. Subsequently, the strong rumours that the Government was about to reduce export duties on linseed oil, boosted the linseed quotations. Very soon, however, realising pressure followed in linseed. In addition, reports of favourable weather in the groundnut and castorseed producing areas had an adverse affect on the new crop, while the current crop positions remained comparatively better. Today, however, the market improved slightly on scattered bear covering.

As a result of abolition of export duty on the linseed oil, which had made Indian oil unsaleable abroad, it was pointed out, export position would improve. Competition from Canada and Argentina is, however, regarded as a factor to be reckoned with. Following the abolition of duty, Britain reduced its quotation from £120 to £113 per ton. It is pointed out that, on the basis of current prices, export business is not remunerative. But the abolition, it is stated, was intended to make linseed oil appear competitive to the prospective Communist buyers.

In the groundnut futures section, the February contract rose from Rs. 133-8 at the beginning of the week to Rs. 135 on the second day. Later on, however, it reacted to a level of Rs. 129-12 on the 24th instant. Subsequently, it rose again moderately and finished up at Rs. 131-14. In the spot section, however, a different trend prevailed as a result of a concentration of the holdings. Bold F.A.Q. put on Re. 1-8 at Rs. 35-12. Coromandal and Khandesh quality also increased by As. 4 each at Rs. 34-12. Groundnut oil ex-mill and Railway Receipt, on the other hand, were lower by As. 5 and As. 3 at Rs. 18-9 and Rs. 18-7 respectively.

Castorseed September (futures) which opened the week at Rs. 148 on the 20th instant., climbed up steadily to Rs. 153 on the following day. However, it declined to Rs. 144 on the 25th instant. But today, it finished up at Rs. 146, losing over the week As. 12. May contract which opened the week at Rs. 127-8 touched Rs. 130 the next day, but receded to Rs. 123-4 on the 25th. There was a moderate recovery today to Rs. 124. It thus lost over the week Rs. 2-12. In the spot section, the same trend was evident. Madras and Kanpur quality lost As. 8 each at Rs. 28-4 and Rs. 27 respectively. Oil B.S.S. and Oil Commercial, too, were a shade lower at Rs. 16-14 and Rs. 15-14 respectively.

In the linseed section, May 1957 contract spurted to Rs. 27-12 on the 21st from Rs. 26-12, on the 20th. In the following days, however, it slowly declined and was quoted today at Rs. 26-8. It thus lost over the week As. 4. In the spot section, however, Bold Ready was As. 6 higher at Rs. 31. October-November, too, put on As. 6 at Rs. 31. Linseed oil Ready was done at Rs. 17-4, that is, As. 4 higher.

Among other seeds, *kardi* seed Bold Ready and October-November lost As. 12 each at Rs. 17-8. *Niger* seed Ready and Madras shed As. 12 and Re. 1 respectively at Rs. 27-4 and Rs. 27-8.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks.

	26-9-1956	19-9-1956	12-9-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	131 14	132 4	133 0

Ready	17 4	17 0	17 6

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 26*th September*

The yarn market ruled distinctly bearish during the week under review. The chief factor which adversely affected the sentiment of operators was the scarcity of floating funds, thanks to the policy of credit squeeze. There were also apprehensions of the Central Government taking stringent measures to check the upward trend in commodity prices. Nor were advices from consuming centres quite encouraging. Traders, therefore, were more eager to lighten their stocks, while buyers were very hesitant to extend their commitments, with the result that yarn prices climbed down. Staple fibre yarns were particularly depressed, thanks to reports of heavy accumulations of stocks in the important consuming centres all over the country, especially in the Punjab.

Staple fibre yarn (80 x 2) for December delivery was subjected to considerable selling pressure and the quotation toppled down by Rs. 26 to Rs. 642. October delivery slumped by Rs. 22 to Rs. 637. In the spot section, foreign yarns (80 x 2) suffered sizable losses. S'Sellos fell by As. 3 to Rs. 5-13. K'Suns dropped As. 2 to Rs. 6-6. Paramounts gave way from Rs. 6-0-6 to Rs. 5-15. Fujis lost an anna to Rs. 5-15-6. Among indigenous yarns (40 x 2), Citys receded by 15 pies to Rs. 3-5-6. Kohinoors declined by an anna to Rs. 3-7-6. New Greats and Centurys were quoted 9 pies lower each at Rs. 3-6-3 and Rs. 3-6-9, respectively.

There was a wave of selling in rayon yarns also. Snia rayon yarn (120 dull cones) for October contract was hammered down by Rs. 18 to Rs. 769. December position decreased by Rs. 16 to Rs. 783. Spot 120 Italy and 150 Italy retreated by As. 2 each, the former to Rs. 3-13 and the latter to Rs. 3-15. 120 Japan eased by nine pies to Rs. 3-12. 150 Japan was neglected at Rs. 4-1-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade slipped by 15 pies to Rs. 3-3-9. 120 Bt. cones 1st grade lost a similar amount to Rs. 3-11-6.

In the cotton yarn section, forty counts encountered selling and recorded losses. Minaxis receded by As. 5 to Rs. 28-3. Moderns declined by As. 4 to Rs. 29. Maduras eased by As. 2 to Rs. 29-6. Among 60s, Moderns dropped As. 8 to Rs. 62. Finlays fell by As. 4 to Rs. 61-12. Deals in twenty counts were put through at reduced rates, Hinds receding by As. 4 to Rs. 19-6 and Moderns by an anna to Rs. 19-5. Among 30s, Maduras eased by As. 4 to Rs. 24-8. Eighty counts were dull, Mahendras being quoted at Rs. 72 and Moderns at Rs. 71. Ten counts, however, were somewhat favoured. Podars rose by As. 3 to Rs. 14-13. Moderns and Elphinstones gained an anna each to Rs. 15-1 and Rs. 14-11, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	26-9-1956	19-9-1956	12-9-1956
Art Silk yarn **(per case of 200 lbs.)—**	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia October ..	769 0	787 0	788 0
120 Dull Cone Snia December	783 0	797 0	800 0
120 Japan (per lb.)	3 12	3 12½	3 12
150 Japan (per lb.)	4 1½	4 1½	4 1½
120 Italy (per lb.)	3 13	3 15	3 14
150 Italy (per lb.)	3 15	4 1	4 1
Staple fibre yarn **(per case of 200 lbs.)—**			
40×2 October	637 0	659 0	667 0
40×2 December	642 0	668 0	676 0
40×2 New Great (per lb.) ..	3 6½	3 7	3 7
40×2 Century (per lb.) ..	3 6½	3 7½	3 7½
40×2 City (per lb.)	3 6½	3 6½	3 7
Cotton yarn **(per bundle of 10 lbs.)—**			
10s Podar	14 13	14 10	14 11
20s Hind	19 6	19 10	19 10
30s Madura	24 8	24 12	24 14
40s Minaxi	28 3	28 8	28 10
60s Rashuvamahi	58 12	58 8	58 0
80s Mahendra	72 0	72 0	72 0

SUGAR DEPRESSED

(From Our Own Correspondent)

BOMBAY, 26*th September*

Depressed conditions prevailed in the sugar market during the week under review. Arrivals of indigenous sugar were considerable, being as much as 35,500 bags, as against 20,700 bags a week before. Such large arrivals in the face of scarcity of storage accommodation and stringency in the money market occasioned distress selling and a perceptible fall in prices. The drop of Re. 1-8 per bag in the *ex*-mill quotation in the Bombay-Deccan and of As. 12 in North India accentuated the downward trend in prices. The recession in sugar prices would have been more marked but for the delay in the issue of the normal monthly release of sugar for sale in free market which was due early in the week.

In the spot section, small grain indigenous sugar dropped a rupee to Rs. 87 per bag. Medium grain fell by a like amount to Rs. 88-Rs. 90. Large grain was neglected at Rs. 92-Rs. 97, as against Rs. 92-Rs. 98. In sympathy with indigenous sugar, British refined sugar slipped by As. 8 to Rs. 90-8 per 2 cwts.

Asho delivery contract for 'C' grade sugar ruled firm at Rs. 90-4 in the earlier sessions, thanks to bull support induced by delay in the monthly release of sugar and renewed rumours of an upward revision in excise duty. Thereafter, however, continued huge arrivals and distress selling in the spot section brought about selling at bulge. The contract was hovering around Rs. 89-14 today.

In contrast to the aforesaid trend, there was a rise of Re. 1-8 per bag in the price of sugar at Calcutta during the week. The rise followed keen buying enquiries, influenced by reports of substantial damage to sugar stocks with Bihar factories and dislocation of movement of sugar from Bihar to Calcutta.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

TEA PRICES DEARER

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, 20*th September*

There were some 1,400,000 lbs. on offer in Sale No. 26 which was held on Tuesday, 18th September. Quality was well maintained and showed some improvement amongst the low medium and medium teas. From the outset there was a very strong general demand for all types and, in particular, good liquoring teas. Low medium and medium brokens and fannings were irregularly As. 2 to As. 4 dearer, with buyers showing preference for bright coloury liquors. Best liquoring high-grown teas met with keen competition and prices advanced considerably. Rates As. 8 to As. 10 above valuations were not uncommon. Fannings grades in particular sold well. Whole leaf teas were very well supported, particularly high-grown Pekoes and Flowery Pekoes. There was a useful enquiry for Middle East types at rather lower rates. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 8 6
Low medium B.O.P. ...	1 14 0 to 1 15 0
Medium B.O.P.	2 1 0 to 2 3 0
Good B.O.P.	3 0 0 (nominal)
Well made black leaf O.P.	2 12 0

The average price realised for the sale was Rs. 2-4-11 per lb., as compared with Rs. 2-1 per lb. for the corresponding sale of 1955.

London Market: Sale of 17th September 1956.—Dearer market all descriptions.

Sale of 18th September 1956:—Lowest two pence. Best six pence dearer.

Colombo Market: Sale of 17th September 1956:—Good demand. Firm rates, except stalk. Good liquoring fannings dearer.

Sale of 18th September 1956:—Active but irregular. High and medium generally dearer, except light liquoring and inferior qualities. Middle East slightly lower.

Calcutta Market: Export:—56,386 packages. Good tea and poorest sorts in strong demand. Others started weaker, but strengthened as sale progressed.

Internal:—15,900 dust. Met strong general demand, improved as sale progressed. Middle East types fully firm. Best C.T.Cs. dearer. Poorer C.T.Cs. easier. Commons and mediums As. 1 to As. 2 dearer. Residue types very strong, several annas dearer.

Export Quota:—There has been a firmer tone and the market improved to 23 pies at which figure some business has been done.

Forthcoming Auctions:—Sale No. 27 will be held on Wednesday, 3rd October.

As we go to press, Messrs. Forbes, Ewart, and Figgis (Private) Ltd. wire:

"*Dust Sale S*:—500,000 lbs. Good demand, but prices irregular. Medium dusts fully firm, occasionally dearer. Best liquoring about steady. Commons irregularly and occasionally easier. Middle East strong and dearer."

LINSEED BETTER

(Messrs. A. Bradley and Co.)

CALCUTTA, 24*th September*

After a fairly quiet week linseed prices firmed up towards the close, following the Government of India's announcement of the removal of export duty on linseed oil. This decision is especially welcome owing to the lifeless condition which has prevailed in the oil market ever since the duty was imposed early in the year. Although it is hoped that exports will shortly commence, local prices are still somewhat higher than the current U.K. rate of £116 per ton.

The initial local reaction has displayed an advance of As. 8 per maund on seeds prices, and one rupee per maund on oil. With conditions as yet unsettled, little activity has been recorded at these levels. Seeds are still very scarce, and only small quantities are available from time to time. The latest available quotation for September-October is Rs. 24 per maund.

HIDES ARRIVALS MODERATE

(From Our Own Correspondent)

MADRAS, 24*th September*

Arrivals of tanned cow hides were moderate and clearances by shippers fair-sized. Prices were slightly easy. U.K. buying was small and importers were trying to buy F.A.Q. marks at lower prices which have been resisted so far. Holders of stocks are likely to accept lower levels in case sailings to U.K. are few and far between.

There was good call for superior tanned goat skins 11/12 lbs. run at 12*s.* to 12*s.* 6*d.* and fifths at 8*s.* 6*d.* to 9*s.* Light weights were not easily saleable Arrivals of adulterated qualities tanned goat and sheep skins were small and met with ready clearance.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 23*rd September*

During the week under review, the hides and skins market ruled steady. New arrivals were not as considerable as those in the previous week. Demand for high grade buff was keen. The Madras dealers were, however, lukewarm this week. Messrs. Cooper Allens were the main purchasers.

The latest available quotations are: Wet salted cow 1st grade Rs. 360 to Rs. 380, 2nd grade Rs. 260 to Rs. 280 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep skins Rs. 200 per 100 pieces.

TEXTILES

(Concluded from page 608)

The original home of merino is Spain, but, due to its excellent wool-yielding qualities, the breed is now found in all the principal wool-growing countries of the world. Owing to changes in climate, soil and management, each country has developed its own distinct type. The principal merino breeds of today are the Spanish, Rambouillet (or French), Saxony, Siberian, Australian, American, South American and Cape (or South African).

British Types: The British type of wool is coarser than merino, but is classed as medium in the wool trade. It is obtained from about 40 district breeds of sheep in Great Britain. Some of the breeds like Lincoln, Cotswold etc., produce very long staples measuring from 8 to 15 inches in length. Climatic conditions in the U.K. are not favourable for rearing Merino sheep.

Crossbred Types. The crossbred, as the name suggests, is the offspring obtained by the mating of a ram and an ewe of two different breeds. Different breeds of British sheep (mutton type) have been selected in different parts of the world for crossing with merino (wool type). The most important countries where it has been possible to develop and fix their type of sheep are South America, New Zealand, U.S.A. and Australia. Crossbred wool is finer (though not so fine as merino) with longer staple.

Carpet Types: Unimproved sheep found in Asia, Russia, North Africa and some parts of Southern Europe produce a fleece which is light, coarse, uneven and kempy. The wool from these sheep is known in the trade as carpet wool. Indian wool is classified in international markets as "East India Carpet Wool." Carpet wool, as found in India, although inferior to the types described in the previous paragraphs, should not, however, be considered as fit only for making carpets and low grade blankets.

FUTURE FOR WOOL

The future for wool is as great as it was at any time in the past, according to Mr. Ewen M. Waterman, Commonwealth Wool Adviser and Member of the Australian Wool Bureau. In support of this view, Mr. Waterman mentions increased world population, longer life expectancy and improved living standards, as the major factors which will influence the demand for wool in the coming years. World population has risen from 1,500 million at the beginning of the present century to 2,600 million; it is expected to touch 4,000 million at the end of the century. The wool growers, he says, should continue their efforts to augment supplies, in order to meet the growing demand of this increasing population. Referring, in particular, to the eastern market, Mr. Waterman observes:

"The eastern market will have a great influence on wool use in the future. There has already been a spectacular development in Japan's domestic consumption of wool. Before World War I, only 10 per cent. of Japanese people assumed western modes of dress, but the figure has now risen to 70 per cent. This is reflected in Australia's export trade. Shipments of wool to Japan in the July 1955-May 1956 period aggregated 169.9 million lbs., as compared with 111.8 million lbs. in the same period last year. The U.K. took 252 million lbs., as compared with 265 million lbs., in the same period. It will be a serious matter, if Australia fails to meet this expanding market, but I feel that, given a clear picture of what is required, the industry will not be found wanting."

A new process for softening cotton textiles and a variety of textiles produced from man-made fibres so as to give them a silky, smooth texture and a better drape has been developed by the American Cynamid Company, 30, Rockefeller Plaza, New York. The process, it is said, depends on the chemical treatment of the fibres with a special chemical compound called "Cyanatex SB-100" and improves the sewing properties of the treated fibres. The chemical is claimed to be extremely resistant to scorching and to yellowing, while, at the same time, being compatible with the starches, salts and other similar materials used in textile finishing.

INDIAN GOVERNMENT AUDIT

(Concluded from page 603)

orders. Both in the matter of acting as financial adviser to Government and in its helpful suggestions and constant assistance in the field of budgetary and financial control, the audit has been remarkably useful and its perspective has been wide.

The mammoth schemes launched under the Five-year Plans involving as they do enormous outlay of public money, along with the ever-widening public sector with its expanding commercial activities, demand a greater independence for audit than is the case now. The transfer of accounting functions to the Ministries under the general direction of Finance suggested now by Dr. Appleby has long ago been contemplated by our Government and the Comptroller and Auditor-General of India in their scheme of separation of audit and accounts which is already on the anvil. This very necessary reform needs only to be accelerated, in order to enable audit to enjoy greater independence. It is the financial engine that drives the State along; and it is public opinion and public criticism that keep the engine working smoothly and at full vigour.

Audit is keeping the Parliament informed of its findings in the form of Audit Reports. It is in investigating the sources of wastages and irregularities and, in educating the public opinion to get the best out of the administrative machinery, the role of audit is really very significant. Even though it is not the function of audit to range over the field of administration and to suggest how Government may better be conducted, the usefulness of audit to administration can never be gainsaid.

Dr. Appleby finds fault with Parliament for the "exaggerated importance" given to audit. In this connection, a peep into the British practice is revealing. Prof. Hilton Young beautifully summarises the activity of the House of Commons working with the Auditor General's brief:—"The House of Commons is not content with a merely formal reception of the Appropriation Accounts. It is not content to take it for granted that its directions as to the appropriation of public funds have been carried out; it imposes upon itself the tasks of careful and minute scrutiny of accounts, of enquiry into all irregularities and of admonition and in the case of final need, of punishment of peccant officials." It will not be correct to argue, as Dr. Appleby has done, that, by this process, the Parliament increases the timidity of public servants at all levels, making them unwilling to take responsibility for decisions. The remedy is not to condemn audit as useless or to suggest limitation of the role of audit but to improve the quality of the administration and to instil in the minds of the administrators the supreme virtue of integrity and honesty and a greater sense of urgency and purpose as the Planning Commission has already proposed. If this administrative reform becomes an accomplished reality (if at all!), then audit will naturally find itself in a limited role (without anybody's suggestion), as occasions for audit criticism will then become far too few.

(Concluded from next column)

(1) Increase in production of Thailand, (2) decline in import of lac from Thailand to India and the establishment of direct export trade in lac by Thailand with the U.S.A., (3) uncertain prices of lac, (4) lack of proper standards, (5) competition from synthetic products, and (6) small consumption in India.

In order to compete successfully with Thai lac and synthetic products, it is necessary to be able to supply lac of standard quantity at low and stable prices. And, in order to keep the prices low, it is necessary to expand production.

An Export Promotion Council for lac is being set up to devise ways and means for raising exports of lac. When these schemes start functioning, it is hoped that there will be an expansion in the market for lac, and the difficulties which the lac trade is experiencing in foreign markets will be minimised to a considerable extent.

According to a survey of developments during the first half of 1956, by the *Goteborgs Bank* the expansion in Sweden's industry continues at a somewhat slower pace than in the past few years. This is primarily due to the decline in the timber industry, while the output of consumer goods has shown a trend to stagnate. The expansion in the engineering industry, taken as a whole, is higher than the average. Building activities have remained on a practically undhanged level.

LAC IN EXPORT TRADE

ANALYSIS OF FIGURES FOR 1931-56

By Dr. S. R. Sen

ECONOMIC AND STATISTICAL ADVISER, MINISTRY OF FOOD AND AGRICULTURE

LAC is one of the few Indian commodities which are meant mostly for export. In fact, it is one of our principal export commodities. Almost 95 per cent. of the lac produced is exported to different countries, of which the more important are the U.S.A., the U.K., Germany, Hong Kong, Italy, France, Japan, China, Sweden, Brazil, the Argentine, and the U.S.S.R. It, therefore, contributes substantially to our foreign exchange earnings.

This commodity is exported mostly in the form of seedlac and shellac (including buttonlac). It is also exported as sticklac, kirilac and refuselac. The percentage share of the value of exports of lac to the total value of exports varied from 0.92 in 1938-39 to 3.75 in 1946-47. Its position in the export list also varied from 5th-6th in 1946-50 to 14th-15th in 1935-39. Usually, it occupies the 10th-11th position.

Exports of lac were higher in the years 1936-37, when 8,33,964 cwts. were exported. Other years in which exports exceeded 7,00,000 cwts. were 1933-34, 1939-40 and 1941-42. In point of value, the year 1951-52 was the best as lac worth Rs. 14,84,03,599, was exported. Other years in which the value received exceeded Rs. 100 million were 1946-47, 1950-51, and 1954-55.

The lowest exports were in the years 1943-44 and 1942-43 when 2,36,029 cwts. and 3,21,257 cwts. only were exported. The value received was very low in the year 1931-33, 1934-35, 1936-40 when it was below Rs. 20 million.

The variations in quantity in the 25 years have been much less than the variations in value. The total quantity exported in most years falls between 4,00,000 and 7,00,000 cwts. but the value fluctuates (leaving out the extreme years) from Rs. 20 million to Rs. 90 million. In point of total values, the period under review can be divided into two distinct periods, namely, 1931-46 and 1946-56.

The value in the first period has been below Rs. 50 million, whereas, in the latter period, it was above Rs. 65 million. But there is no such dividing line for total quantities.

Shellac and Buttonlac

The table below shows the percentage share of exports of shell and buttonlac in the last two quinquennia:

Five-yearly average exports of different kinds of lac in cwts. (Percentage to total in brackets)

Period	Shell and Button	Seedlac	Sticklac	Others	Total
1931-36 ..	3,80,816 (71)	1,18,434 (22)	7,254 (1.3)	30,815 (5.7)	5,37,319
1936-41 ..	4,41,945 (63.2)	2,25,407 (32.2)	2,107 (0.3)	30,021 (4.3)	6,99,381
1941-46 ..	3,13,835 (71.5)	1,14,055 (26.2)	108 (0.3)	10,243 (2.0)	4,39,142
1946-51 ..	3,57,012 (63.2)	1,64,410 (29.1)	1,155 (0.2)	42,294 (7.5)	5,65,480
1951-56 ..	3,48,875 (57.8)	1,95,453 (32.4)	3,674 (0.6)	55,320 (9.2)	6,03,122

Exports to different countries are set forth in the table below:

Five-yearly average exports of all kinds of lac to the U.S.A., the U.K. and other countries in cwts. and the percentage share of each to the total exports from India

Period	U.S.A.	U.K.	Other Countries	Total
1931-36	1,73,626 (32.3)	1,72,678 (35.6)	1,91,015 (100.0)	5,37,319 (100.0)
1936-41	3,76,370 (53.8)	1,20,213 (17.2)	2,02,798 (29.0)	6,99,381 (100.0)
1941-46	3,20,078 (72.9)	76,864 (17.5)	42,205 (9.6)	4,39,147 (100.0)
1946-51	2,77,276 (49.0)	1,39,543 (24.7)	1,48,661 (26.3)	5,65,480 (100.0)
1951-56	2,38,043 (39.5)	1,19,719 (19.8)	2,45,360 (40.7)	6,03,122 (100.0)

There have been some notable changes in the position of exports between pre-war and post-war years, e.g., the U.S.S.R., who was not taking any lac, has started taking substantial quantities and the volume of exports to Hong Kong, China, Indonesia and Australia appears to have considerably increased. Further, exports to Belgium and the Netherlands have considerably gone down in the post-war years. Germany has always been the chief buyer of Kiri, Molamma and other kinds of refused lac and its exports of shellac have considerably decreased.

Competition from Synthetic Resins

In recent years, Indian lac has been facing competition from Thai lac and synthetic resins. The Indian lac trade suffers in competition against these products because of the following reasons:

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. f.=Accounts *published half-yearly*. P.=Company has *Preference* shares. T.=Company has Debentures. n.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for *first* half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters '*A*' and '*B*' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the *months of June and December*, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of *land*, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and *stands for* the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year *they represent* the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2379 BOMBAY, 6th OCTOBER 1956 PRICE Rs. 1/8

AN UNWARRANTED AND HASTY STEP

IGNORING its more urgent tasks, the Mysore State Government has, on the eve of the reorganisation of the States, brought forward a Bill to nationalise the Kolar gold mines. Apparently, the uncertainties that surround the finances of the future Mysore State, the immensity of the tasks of administrative and financial integration which must follow the establishment of the new and enlarged State, and the need for conserving all available resources for purposes of development have not deterred the Government from giving effect to nationalisation of gold mines—a measure which has not been attempted anywhere in the world—a devotion and a priority which are worthy of a nobler cause. Nor has the Central Government, its own hands steeped in the Panna diamond mines, been able to exercise any restraint on the State Government's wholly unjustified move to nationalise the gold mines. The result is that the State Government is now engaged in getting the legislative consent for its decision to acquire the mining companies which have served the State for close upon three-quarters of a century.

There is, however, no gainsaying the fact that the Government's decision has the backing of the entire State legislature. But it is a different matter whether legislative or popular opinion could not have been changed through a more objective presentation of the gains and losses of nationalisation. As it is, the Government has never attempted to justify its decision to nationalise the mines, while the Opposition in the legislature, an assorted mixture of different political elements, has been only too eager to win cheap political popularity by showing the Government as being deplorably weak on the question of compensation. In this context, the Bill's passage through the legislature is a foregone conclusion. Thus, very soon, the gold mining industry in India, which accounts for some 212,000 ounces out of the total world (excluding U.S.S.R.) output of 27.15 million ounces, will become a State enterprise.

Briefly, the Bill, entitled Kolar Gold Mining Undertakings (Acquisition) Bill, 1956, seeks to vest in the State Government the ownership and control of the four Mysore gold mining companies which are operating in the Kolar gold field area. The total compensation payable to the companies is Rs. 164 lakhs; this excludes sterling assets of the companies to the tune of Rs. 50 lakhs. Compensation has been arrived at on the basis of average market value of the shares in the last 10 years. This amount is to be distributed among the four companies: the Mysore Gold Mining Co., Ltd. (Rs. 45.31 lakhs); Champion Reef Gold Mines of India Ltd. (Rs. 50.98 lakhs); Nandydroog Mines Ltd. (Rs. 60.37 lakhs) and Kolar Mines Power Station (Private) Ltd. (Rs. 7.33 lakhs). Of this compensation, 75 per cent. will be paid in cash on the vesting date and the balance within three months from the vesting date. It is not clear whether the issue of compensation is an agreed decision, for it is well known that the management once set the compensation at as high a level as Rs. 6 to Rs. 8 crores. Since compensation is not an issue that could be taken to the Court, the Government, it is to be hoped, has carried conviction to the management on the correctness of its valuation of assets and liabilities.

In the Bill, it is provided that, on such date as the Government may, by notification in the *Mysore Gazette*, specify (such date not being later than 30th November 1956), the undertakings of the companies concerned shall stand transferred to and vest in the State. The Government will honour all the commitments and agreements entered into by the companies. But, if it appears to the Government that any particular agreement was not reasonably necessary for the activities of the companies, it has the right to refer the matter to a court of law. This section will apply where any company has, after 18th June 1955 and before the vesting date, made any payment to a person without consideration or sold or disposed of any of its properties without consideration or for an inadequate consideration or paid excessive consideration in a transaction. The Bill also provides for referring any dispute in respect of a transaction to the arbitration of a single arbitrator to be appointed by agreement between the Government and the company.

The statement of objects and reasons appended to the Bill presents no convincing case for nationalisation. It merely records that the question of acquiring the Kolar gold mines has been under the consideration of the Government for some time now and quotes the resolution favouring nationalisation passed by the State legislature a year ago. The State's Finance Minister, Mr. H. Siddaveerappa, too, gave no valid reasons for this measure, beyond referring to the clear mandate for nationalisation received from the legislature. After narrating briefly the events, such as the 1949 agreement between the Companies and the Government, the discussions in the State legislature, the appointment of a Committee to investigate the working of the agreement, the decision to nationalise the mines, and the consultation between the State and the Centre over the question of compensation, the Minister averred that nationalisation was not the "be-all and end-all" of economic policy and that it was important that a nationalised undertaking should be worked well. And yet, it is difficult to avoid the impression that the State has consistently adopted the attitude that nationalisation was the be-all and end-all of its gold policy. Nationalisation of gold mines cannot be defended on the ground that the management was inefficient, or that it has adopted a policy that is detrimental to the interests of the country. These charges have not been made. It is true that there was a dispute over the working of the 1949 agreement between the Government and the management. But the agreement provided—and the management was ready to abide by the provision—for referring any dispute to arbitration. Even the Committee which investigated the working of the agreement did not advocate nationalisation. It is not as if nationalisation was an inevitable measure. Other ways were open to the Government to resolve the dispute.

If the contention is that the State was not willing to allow a vital national asset in the hands of foreign enterprise, it implies an attitude that is not conducive to the flow of foreign capital into the country. But, even here, it was not difficult for the Government to induce the management to associate progressively more and more Indian capital and technicians in the enterprise. Many well-established foreign concerns in this country such as the Imperial Tobacco and the National Carbon have adopted this course and, in the case of the Kolar gold mining companies, such a course would have been particularly easy, for they need fresh capital to exploit new sources of gold which have been discovered and Indian capital would have been forthcoming in ample measure. As it is, the Government has sought to nationalise the mines without examining the feasibility of any other alternative. The fact that a similar measure has not been adopted in any other part of the world should have induced a certain caution in the Government's enthusiasm for nationalising such a highly technical enterprise as gold mining.

Further, there is bound to be some confusion if and when new gold reserves are discovered in other parts of the country. For it is a moot point whether the Centre or the State in which the reserves are discovered should be allowed to exploit them. Why should diamond mines be owned by the Centre and the gold mines by a State Government? The Industrial Policy Resolution lists gold and diamond under Schedule A which specifies the industries in which all new units would be State-sponsored ones. It seems somewhat odd that the Centre should operate all new diamond mines, iron and manganese ore mines and coal mines, whereas the mining of gold, an international commodity of utmost importance to the banking and monetary world, should be undertaken by a State Government. In any case, Mysore's example in nationalising gold mining may well be a prelude to a movement by other State Governments to own and operate mines in their areas. Such a movement would make the confusion already caused by State trading in mineral ores worse confounded.

Above all, it is not known whether the State Government has made any attempt to retain the technical services of the present management. If gold mining were carried out efficiently, it could be a source of great wealth and employment opportunities. The known reserves are estimated to last for about 20 years in the case of Mysore Mines and Champion Reefs and for another 60 years in the case of Nandydroog Mines. Some promising new veins have also been struck in the region. In the context of the contemplated deficit financing, there is no danger of any fall in gold prices. Wisdom demands that the State Government should keep the technical services of the experienced management, in order to ensure that gold mining continues to be a profitable enterprise.

ON OTHER PAGES

MARK

this growing awareness of the need for and the value of economic co-operation between the haves and the have-nots, the position in this respect is not quite satisfactory and a lot more yet remains to be done. The have-nots complain that the haves are not doing all that they can to help them; similarly, the haves are sore that the have-nots have not done all that they should for attracting the flow of foreign capital. For the past several years, this has been the sum and substance of the speeches delivered at the annual general meetings of the World Bank on this subject. And the annual gathering of the Bank's Board of Governors held at Washington last week was no exception to it. Of the many that spoke on this occasion, Mr. B. Rama Rau, Governor of the Reserve Bank and India's representative on the Bank's Board, played the lead in singing the tune of the have-not nations, while Mr. Harold MacMillan, British Chancellor of the Exchequer, did it for the haves. And both of them made the mistake of looking at the problem only from their own respective angles. But a constructive contribution was made by Mr. Eugene R. Black, President of the World Bank, in his address to the gathering. In a forthright speech, Mr. Black brought out the defects in the attitudes of developed and underdeveloped countries and indicated the lines on which they should be remedied.

It must be said to the credit of Mr. Rama Rau that he effectively stated the case for greater attention by the World Bank to the needs of Asian countries. Speaking about India, in particular, he convincingly argued why a rapid development was imperative from the economic and political points of view. He said:

"We have established a democratic system based on adult suffrage. The masses, the majority of whom are ill-fed and ill-clothed, have become politically conscious. The 'pathetic contentment' of the masses, which a British statesman described many years ago as characteristic of rural India, has disappeared and there is evidently a new outlook on life and a demand for a higher standard of life. We have to demonstrate that, within the framework of a democratic structure, we can develop at a pace comparable to that in totalitarian countries."

The implication of the above quotation is that, if the Indian authorities fail to come up to the expectations of the public, democracy in India will be in danger. From this proceeds the argument that it is essential for the Western nations to come to the help of India.

Mr. Harold MacMillan did not deny the force of Mr. Rama Rau's argument, but he added a rider to it. He said:

"The plans and programmes for capital development in the underdeveloped countries can only be carried through with the aid of capital from abroad from the more developed countries. But it is obvious that this capital will not be made available, unless there is a foundation of international goodwill and trust and confidence that commercial and international agreements will be respected."

Evidently, Mr. MacMillan had in mind the nationalisation of the Suez Canal by Egypt. While it cannot be denied that it is necessary to create a congenial climate for attracting foreign capital, it will not be prudent for the developed countries to quote the Suez incident, or, for that matter, even the nationalisation of the Anglo-Iranian Oil Company by Iran, against the underdeveloped countries' plea for capital assistance. For both the cases have an unsavoury history behind them, for which the Western partners concerned are not free from blame. The nationalisation of these assets could have been avoided, if the latter countries had moved with the times and recognised the reasonable aspirations of the countries where the assets are situated. Both the cases are instances where considerations of power-politics and not economics were the main deciding factor. It would be most unfortunate for the world if the Western countries were to slow down their assistance to underdeveloped countries, simply because of these two instances of nationalisation. It is undoubtedly true that the countries in need of foreign capital should temper their national passions, but it is also equally true that the developed countries should not allow their political objectives to influence their attitude towards this question.

Both sides of the question of foreign capital for underdeveloped areas were fairly stated by Mr. Black. Pleading for objectivity on the part of the leaders of these areas in their development policy, he asked them to bear in mind that there were not enough foreign investors "clamouring at the gates of the less developed countries." This statement cannot be refuted. Almost in every part of the world, the rate of savings is lagging behind investment. With very few exceptions, the Western countries have scarcely enough savings today to finance their own investments. This is evident from the inflationary pressures that have developed in the Western world and the application of credit restraints. Consequently, unless the underdeveloped countries offer sufficient attraction, they will not be able to get enough foreign capital. They must recognise that the foreign investor is entitled to a fair return on his contribution and pay heed to the following advice of Mr. Black:

"The danger today is not that the foreign investor will ask too much of a developing country, but that the developing countries will do too little to attract him. Today, the foreign investor cannot go into a country, unless he is actually wanted by the people of the country. By indulging in the myth that the private investor is trying to force an entry to engage in some sort of evil exploitation, the less developed countries are cutting themselves off from one of the most productive sources of development assistance available to them. The capital and skills which the private investor brings with him may not be available from anyone else. Particularly, he brings with him the skills of industrial management—skills which have to be seen in action to be learned. If a country is bent on industrialising and having the benefits spread broadly among the people, it can do itself no better service than to seek out the private investor abroad who is willing to risk his capital on the chance of a fair return on a successful venture."

In tendering the aforesaid advice, the President of the World Bank was not oblivious of the fact that a lot of politics is involved in foreign investments. Nor did he forget that politics emanated from both the sides. This will be evident from the following quotation from his speech:

"When I speak of the importance of objectivity in development policy, I also mean disentangling that policy from conflicting short-term political aims. We all have to live with our politics. The problem is not to insulate development from politics but to distinguish what is good development politics from what is bad. And here my remarks apply equally to the industrialised countries and the less developed countries. For example, no leader in a developing country can afford not to set bold development goals; he must be responsive to his people. Yet no leader of a developing country can afford to set unrealistic goals and then disrupt the wole economy by trying to achieve them. This is the road to frustration. Similarly, in the industrialised countries, political leaders have a heavy responsibility to distinguish between short-term political advantage and the real long-term interest of their countries in the economic growth of the less developed areas of the world.

"Despite the existence of an unprecedented flow of development assistance out of the industrialised countries today, the real self-interest of these countries is all too often obscured by a welter of short-term political and economic aims. *All too often development assistance is seen merely as a means of buying diplomatic friends or military allies. As a result, all too often development assistance lacks continuity and provides an inadequate basis for the advance planning of development projects.*" (Italics ours.—ED.).

The last two sentences in the above quotation which we have set in italics clearly show that the World Bank President has spoken the truth and that courageously. They reveal that, for getting foreign capital, it is not enough if the underdeveloped countries alone set their house in order and change their attitude towards foreign investors; the industrialised countries also have to change their attitude. They should not try to exploit the less developed countries' hunger for capital to serve their short-term political objectives. In this context, one more paragraph from the speech of Mr. Black bears reproduction:

"I think the industrialised countries would do a useful service just by drawing a clear distinction between aid for economic purposes, and aid for military and other non-economic purposes. This would at least define the real area of their concern for growth in the underdeveloped world for its own sake. It is very much in the self-interest of the industrialised countries that they define this area of concern clearly. For, as I have said, a common concern with economic development for its own sake is certainly the best hope—possibly it is the only hope—of helping the great transformation going on in the less developed countries along lines compatible with the growth and security of people everywhere."

Our object in quoting such long passages from Mr. Black's speech is to show that, if only the U.S. and the U.K. had followed the criterion indicated by him in regard to their attitude towards economic development of Egypt, in particular, and the Middle East, in general, the present crisis in that part of the world might not have arisen.

It, of course, goes without saying that the less developed countries also should not try to make capital out of their plight in a world weary of war and divided by two conflicting ideologies. Those underdeveloped countries which have chosen democracy as their way of life should not overplay the argument that, unless the well developed democratic countries gave them generous assistance, they would be forced to embrace the totalitarian system. Nor should they try to play one power bloc against the other in the hope that they could get the best of both the worlds. To do so would tantamount to indulging in the dishonourable game of fishing in troubled waters. Such attempts never pay; on the contrary, they may cost the countries concerned dearly. Here, again, Egypt is a striking example. It is alleged that one reason why Britain and the U.S. suddenly withdrew their offer of economic assistance to Egypt was that President Nasser tried to play this game. If the Suez crisis has any lesson for the less developed countries, it is that they should scrupulously keep out of power-politics and also refrain from having high political ambitions, such as a desire to dominate over the neighbouring countries. This, of course, does not mean that they should remain silent spectators to any immoral acts that may be perpetrated by other powers.

Another very significant remark was made by Mr. Black when he said that "the old reasons for helping others help themselves to better their material lot need re-examination and re-articulation." It requires a certain amount of vision to appreciate the real meaning of this statement. The meaning will be clear when viewed in the context of his statement that "all too often development assistance is seen merely as a means of helping domestic manufacturers, producers and exporters find new business." It means that, if the richer countries of the world go on investing in the poorer countries only in the hope that thereby they would become richer still, they would be sadly disillusioned. Such an expectation would mean that the present disparity in incomes and standards between the developed and underdeveloped countries would last for ever. Surely, that cannot be, for there is a limit up to which certain countries can hope to be richer than others. Hopes are being held out by some leaders in the Western countries that the day when their workers will not have to work for more than three or four days in a week and yet be in a position to command a higher standard of living than they do at present is well within the practicability of the present generation. But, during this period, the underdeveloped countries cannot hope even to double their present miserable national incomes and that, too, after working six days in a week. If the old saying that prosperity is indivisible has not lost its force, can the world remain in peace for long with such disparities in incomes, living standards and leisure? The answer is obvious. The meaning of Mr. Black's remark is, therefore, clear. It is that the developed countries should help the less developed countries to move forward economically and socially, not in the hope that it will provide endless opportunities to amass vast wealth for themselves but in order to maintain even their present level of prosperity. And, accordingly, they should save more and invest a good part of their savings in the countries which are lagging behind, instead of expanding their domestic investments more and more. The present high rate of investments in Europe, America, Australia and Soviet Russia suggests that the industrialised countries are not yet alive to this aspect of economic development.

GOVERNMENT'S VERDICT ON I.I.S.CO.'S DIVIDEND NOT UNFAIR

MONEY MARKET—EXCHANGE BANKS—FREE TRADE

THURSDAY, 5 P.M.

MARKET GOSSIP

THE revival of bullish fervour in the share market witnessed in the previous two weeks has proved to be a short-lived affair. There has been a heavy all-round fall in equity values, following liquidation by disappointed bulls and fresh bear selling. A number of developments has conspired to bring about this fall. And these are listed here in the order of their importance. The rot began in the iron and steel section. There were some hopes that the Indian Iron and Steel Co., Ltd. might be able to pay a slightly higher dividend for 1955-56. Although these hopes were unwarranted, some operators would appear to have fallen victims to it. Consequently, when the Chairman of the Company announced to the public on Monday that the Company's application to the Government for permission to declare a higher dividend had been turned down by the authorities, they felt frustrated and decided to sell out their purchases. It may be noted, in this connection, that, of late, there has been a heavy overbought position in this scrip, as is evident from the continued heavy *budlis* which the bulls have had to pay in the recent fortnightly settlements. Another reason that must have induced the bulls to cut their losses and quit this counter is the prospect of having to pay still higher *budli* charges when the transfer books are closed, as they will be very soon, for declaring the dividend and raising the capital for which the Government has already given permission. Seeing the plight of the bulls, the bears must have been exploiting the situation as usual.

Close on the heels of the Government's decision on the dividend of Indian Irons, which had an adverse effect on the shares of the T.I.S.Co. also in sympathy, came the report that the ex-factory prices of cement produced by the new factories—such as the Digvijay Cement, Orissa Cement, India Cement, and Jaipur Udyog—had been substantially reduced. It is stated that the ex-factory prices have been reduced thus: Digvijay from Rs. 58 to Rs. 53-8, Jaipur Udyog from Rs. 57-8 to Rs. 53-8, Orissa from Rs. 57-8 to Rs. 54-8, India from Rs. 58 to Rs. 54-8 and U.P. State Unit from Rs. 61-8 to 54-8. In the case of Travancore and Mysore factories, however, an increase of Rs. 5-8 and Re. 1 is reported. Although no official notification announcing the cut seems to have been issued so far, the report appearing in a section of the daily Press has been taken by the market to be correct, especially as it has not been contradicted. As there appears to be no sound economic reason for so suddenly reducing the ex-factory prices of these new entrants, which have taken on hand large expansion programmes, this action of the Government has upset the confidence of investors. It has been interpreted as a move on the part of the authorities to favour its favourite child, the State Trading Corporation, which has been given the monopoly for distributing cement. The earlier belief that the S.T.C.'s invasion of the cement trade, all along held by the private sector, would be innocuous so far as the manufacturers are concerned has been belied. On the contrary, it has proved to be a case of the camel and the Arab, just as was anticipated in these columns. It is true that the ex-factory prices of the two old producers, namely, the A.C.C. and the Dalmia Cement, do not seem to have been cut, but who knows that they, too, will not be reduced later? It may be that the resources of the S.T.C. require to be enhanced, in order to subsidise the increasing volume of imported cement which cost far more than the domestic cement. But what certainty is there that this policy will not adversely affect the expansion of domestic production? Large sums of capital have to be invested for the purpose of increasing the domestic capacity. And, if monopolistic conditions are to be avoided in this basic industry, it is but right that the small factories should be given all encouragement to expand their capacity and become highly economic units. Again, was the Government's decision arbitrary or did it consult the Tariff Commission on this subject? In the interests of creating informed public opinion, the Government will do well to explain its action.

Meanwhile, the unexpected reduction in ex-factory cement prices has upset investors' confidence. Among the manufacturers and *entrepreneurs*, in general, it has given rise to a feeling of uncertainty about the Government's policy, while among the operators in the share market it has generated a fear that, in its anxiety to check inflationary influences, the Government might not hesitate to act boldly irrespective of the consequences to trade and industry.

This impression is confirmed by the manner in which, at the front, the Government has acted on the textile duties. It is common knowledge now that the excise duties on the cotton textiles were increased without a careful consideration of the pros and cons. When the Government realised the gravity of this would lead to an increase in the prices and the public were getting agitated over it, it rushed to announce fair prices for certain varieties of cloth and, in order to check profiteering in cloth. These prices were based on defective data and bore no relation to the cost incurred by the industry or the trade. This brought about a dislocation in the movement of cloth, because the majority in the trade refused to lift the goods from the mills, unless the latter agreed to bear the entire burden of excise duty. In fact, even now, the cloth trade is said to be virtually at a standstill. The trade and industry were hoping that they would get some relief from the Government after they had an opportunity to explain the position to the Finance Minister. They did get this chance last Sunday, when Mr. T. T. Krishnamachari paid a flying visit to this city. But nothing has come out of it, apparently because he has refused to budge even an inch. The trade and industry are sorely disappointed, for the anomalies arising from the Government's hasty and ill-considered action have been allowed to persist, to be corrected by the passage of time. In fine, they feel that the Government has been behaving like a sacred bull in a china shop.

Reports from the cloth market show that there has been a slight fall in the prices of cloth. The millowners are asserting that their profits for 1956 will be appreciably affected. The order on stocks that could be held by mills, if it were followed, would either back-fire on production or tell on their sale proceeds. In either case, their profits would be cut. All these considerations have begun to oppress the operators in cotton mill shares.

Among the other factors which have upset the share markets, mention may be made of the perceptible fall in the price of cotton, the downward trend in oilseeds and bullion, and the continued tightness of the money market.

* * * *

The circumstances in which the I.I.S.Co. approached the Government again for permission to increase the dividend and the grounds on which the Government refused it are set out in a circular letter by the Chairman—Mr. T. Leslie Martin—to the shareholders of the Company. The following are the main points from that circular:

(1) At the last annual general meeting of the Company, the shareholders had expressed a desire that the Board should request the Government again to permit the declaration of a higher dividend. The Board did so but got a negative reply.

(2) In May last, the Government refused the Company's request to raise fresh capital by the issue of ordinary shares at par to the existing shareholders. Instead, it insisted that these shares should be issued at a premium of Rs. 3-8 per share of Rs. 10 each.

(3) Since then, the Company had received numerous representations from its shareholders, expressing dissatisfaction over the restriction on the dividend and the fixation of a premium considered to be rather high by them.

(4) On 5th September 1956, the Company received a general representation from the shareholders on the aforesaid lines.

(5) The Company forwarded this representation to the Government for its sympathetic consideration and action. This was followed up by a visit to New Delhi by Mr. Biren Mookerjee, Governing Director of the Managing Agents and a director of the Company for personal consultations at the highest level. Mr. Mookerjee held discussions at the Ministerial level which extended over a period of six days.

(6) On 22nd September 1956, the Government wrote to the Company saying that "at this stage, it is unable to agree to any increase in the dividend rate."

(7) The reasons given by the Government for its decision are: (*a*) the Company has heavy debts; (*b*) it has a large expansion programme for which it requires more financial resources; (*c*) the Government has guaranteed the loan taken by the Company from the World Bank and has to guarantee another loan which it wants to take from the same source; and (*d*) the Government has given a large interest free loan. For these reasons, it will not be in the long-term interest of either the shareholders or the public to pay a higher dividend. The proper thing to do would be to conserve the resources. "Ultimately, the shareholders will have the full share of the increased profits. By continuing the rate of dividend at the present level for some time, the economic and financial position of the Company will be further strengthened and the Government is sure that, when shareholders fully appreciate this point, they will readily agree to give their fullest support to this policy."

(8) As regards the Company's contention that, while giving a loan to the Company, the Government did not make control over the dividend as a precedent to the grant of loan, the Government has observed that "it had been made clear to the Company, in the course of the loan negotiations, that the Government of India should be consulted in the matter of distribution of profits earned."

(9) The Government's reply has been given by Pandit Pant in his capacity as the Minister for Home Affairs and Heavy Industries.

(10) Pandit Pant has requested Mr. Biren Mookerjee to explain the Government's point of view to the shareholders.

It is now clear why the Company approached the Government again, even though it had been refused permission last year, and why the Government could not comply with the Company's request. In our view, the Government's explanation is quite convincing, and the shareholders are not right in pressing the management for a higher dividend, when the Company is still in the stage of growth and when its financial position is not yet stabilised. In view of its commitment to the World Bank and the grant of an interest-free loan from the public exchequer, the Government is entitled to have a say on the distribution of the Company's profits. Indeed, the case against the payment of higher dividend has been so strong all the time that it would be true to say that the majority of operators in the share market did not count upon any increase in the dividend. Incidentally, it is rather strange that hints about the possibility of a higher dividend began to appear in the share market only after the date of the Government's letter conveying its decision to the Company. On 20th September, the Company's shares were quoted in Bombay at Rs. 35-2. Next day, they rose to Rs. 35-10. On the 24th inst., they saw a peak of Rs. 36-0-6. Thereafter, they moved within a narrow range of As. 4. On the 26th inst., they suddenly dropped to Rs. 35-2-6 only to jump up again to Rs. 36 on the same day. They moved up further to Rs. 36-4-6 on the 28th inst., the recovery being due to revival of strong rumours of a higher dividend and, after gradually coming down to Rs. 35-12 on Monday the 1st inst., the scrip quickly retreated to close at Rs. 34-9 today. These movements warrant the inference that the market in this counter was lifted up first by somebody in the know of things by spreading misleading reports in order either to get out of previous commitments or to make a nice packet later by selling at the higher levels. There is, of course, nothing to be surprised about this, because it is public knowledge that there is no secret in New Delhi which cannot be had for a price.

* * * *

It now looks as though there is going to be no slack season for the short-term money market this year. In a few weeks, the marketing season will start; already the cotton crop has begun to move in the Punjab, albeit on a small scale. In view of the heavy sugarcane crop, the Government is anxious that the mills should begin crushing earlier than usual. There has been no slackening in the arrival of imports, while the Suez Canal crisis has given a special push to exports of certain commodities such as tea. The banks are thus busy, even though we are only in the first week of October. Normally, the busy season does not start before the middle of November. Supply of floating funds is next to nothing and the market is continually in the Bank. Conditions in the market are, therefore, stringent, with banks prepared to pay 3½ per cent. for call money, 3 per cent. for House money and the same rate for short-term deposits.

In recent years, between the months of July and November, there used to be at least some fall in short-term interest rates. So far this year, there has been no such fall, excepting that for a week or so in July, when the inter-bank call rate fell a little below 3 per cent. and even this happened only among the big banks. The main reason for this state of affairs has been the heavy borrowings by the Central and State Governments. These borrowings have drained off the money market not only all the surplus cash, but also a good part of the banks' capacity to create credit. The banks have had to take up a sizable block of these loans under pressure from and persuasion by the authorities. Besides, they have also had to finance at least half, if not more, of the subscriptions to State loans by others. In order to do so, they had to take large loans from the Reserve Bank, all of which have not yet been repaid. Of course, no bank will borrow from the Reserve Bank, unless it is absolutely necessary. It will do so only after using up all its available liquid resources.

If money is tight even in the first week of October, one can easily imagine that it will be dead tight when the forthcoming marketing season gathers momentum. People will do well to bear this point in mind, lest they should be told, once again, that the Exchange banks are the root of this problem. We thought that this myth had been exploded long ago, but we find that we are mistaken. Only a few days before, another banker, Mr. V. P. Varde, a leading co-operator, blamed the Exchange banks for the stringency in the money market. Referring to the keen competition for deposits among banks, he said there was a "mad race" among them for attracting deposits by offering fantastically high rates and had a dig at the Exchange banks by saying that "they have found it profitable to offer rates from 3½ per cent. to 4 per cent. for call and short deposits." Our enquiries go to show that Mr. Varde is not correct even about his facts, unless he means the rates quoted by joint-stock banks in the mofussil. But mofussil rates are no criterion; generally speaking, in these centres the Indian banks pay more than the Exchange banks, which, in any case, are mainly concentrated in Calcutta, Bombay and Madras.

Higher interest rates are a world-wide trend at present. The Indian economy is by no means so isolated from the world economy as to be free from the effects of this trend. True, we are living in a planned economy in India, but it is not a closed economy; nor is it a totalitarian one, where the State has absolute control over everything. All the same, the authorities have been successful in keeping down the interest rates well below those in many parts of the world or what they would be if the law of demand and supply had been allowed to have its say on the money market. The position of the money market would not have been more favourable to borrowers than what it is, if the Exchange banks had ceased to operate, for it is not these banks which import the higher money rates from the rest of the world to India; it is our foreign trade that does so. It is, therefore, unfair to lay the blame for the general increase in money rates at the door of the Exchange banks. On the contrary, it is well known that, because of the resources available to them abroad, they are able to utilise their entire borrowing in this country to finance Indian commerce and industry, instead of having to employ some of it for statutory deposits, investments, etc. This will also serve to dispel any notion that the Exchange banks use Indian funds outside this country.

EQUITIES RETREAT

HEAVY LIQUIDATION ALL ROUND

(From Our Own Correspondents)

BOMBAY, *4th October*

THE cheerful note witnessed on the Stock Exchange in the previous week proved to be a short-lived affair. For the equities succumbed to a shake out during the week under review, resulting in fair-sized losses over a wide range of counters, which more than wiped out the previous week's gains.

The change in sentiment was due to nervous liquidation, which was particularly more pronounced yesterday induced by rumours about the possibility of a rise in Bank rate. The other bearish factors which were responsible for the heavy marking down of values were: (1) the prospect of an increase in interest rate charged by the Industrial Finance Corporation on loans to industries; (2) the absence of any fruitful result from the Millowners' talk with the Finance Minister about *the excise duty on cloth*; (3) the Government of India's refusal to accede to the Indian Iron and Steel Company's request seeking permission for raising the dividend for the year ended 31st March 1956; and (4) the reported decision of the Government of India to reduce the ex-factory price of cement in respect of several factories. The undertone at the close was subdued.

In the steel section, Tata Ordinaries opened on a cheerful note and in a spell of brisk activity jumped from Rs. 200-4 to Rs. 201-12. Subsequently, however, a reactionary trend set in under heavy bull liquidation, bringing the price to a low of Rs. 195 today. The closing was a shade better at Rs. 196. After an early recovery from Rs. 36-1½ to Rs. 36-4½, Indian Irons retreated to Rs. 34-7½, the lowest since 30th April last, and closed at Rs. 34-9.

Textiles also suffered a sizable decline all round on bull liquidation. Bombay Dyeings reacted from Rs. 648-12 *cum-div.* to Rs. 628-2 *ex-div.* (div. Rs. 7-8) before gaining to Rs. 634-6. Centurys, which were well supported last week, met with heavy profit-taking and dropped from Rs. 567-8 to Rs. 552. The closing was better at Rs. 556. Kohinoors fell from Rs. 369 *cum-div.* to Rs. 353-8 *ex-div.* (div. Rs. 6), but finished higher at Rs. 356-4. Central Indias shed a rupee to Rs. 151, while Edward Textiles provided an exception with a sharp rise of Rs. 22-8 to Rs. 345 on interested buying. Finlays declined by Rs. 7 to Rs. 345 and Gokaks by Rs. 5-8 to Rs. 238. Indu Ordinaries changed hands As. 8 lower at Rs. 12-1. Indore Malwas were marked down by Re. 1-14 to Rs. 154-6, despite the increase in interim dividend *for the current year from Rs. 3* to Rs. 5 per share, Khataus receded by Rs. 5 to Rs. 250 and New Kaiser-I-Hinds by Rs. 5-10 to Rs. 127-8. New Greats were relatively steady at Rs. 250, while Sassoon Silks declined by Re. 1-4 to Rs. 12-4.

Activity in bank shares was restricted, but the undertone was steady. Barodas were maintained at Rs. 102, while Centrals were down by a rupee at Rs. 52. Centrals (New) showed no change at Rs. 56-8. Bank of Indias gathered a rupee to Rs. 173-8 and United Commercials changed hands As. 12 higher at Rs. 58-4.

In the electricity section, only selected issues, particularly among the Tata Hydro group, were in demand. Ahmedabad Electrics fell sharply from Rs. 95-15 to Rs. 94-11, while Bombay Suburbans gained As. 15 to Rs. 110-5 and Surats As. 5 to Rs. 119-1. Tata Hydros were well held at Rs. 131, while their New shares moved up from Rs. 121-8 to Rs. 125. Andhra Valleys were bid Rs. 12-8 higher at Rs. 1,255. Tata Powers, on the other hand, were marked down from Rs. 1,325 to Rs. 1,305.

Miscellaneous section was subdued in sympathy with the general weakness. In the sugar group, *Belapurs suffered a drop from* Rs. 254 to Rs. 248-8 before closing at Rs. 251-4. Bhopals were better on balance by As. 3 at Rs. 18-3, while Phaltans receded by Rs. 5 to Rs. 163-8. Shree Krishna Gyanodays, which were admitted on the Bombay list this week, were held at Rs 12-11. Walchandnagars shed Re. 1-14 to Rs. 271-4. Cement shares were on offer for reason stated above. Although Associated Cement's price was not affected by the cut, the shares were pushed down by Rs. 203-4 to Rs. 197-12, before they closed at Rs. 198-8. Digvijays suffered a drop of Rs. 10 to Rs. 195-8. Dalmia Cements were lower by As. 2 to Rs. 15 and Orissas by As. 1¼ to Rs 13-6. Ashoks were, however, better by As. 4 at Rs. 12-14. In the engineering and mining group, Alcocks gave way from Rs. 345 to Rs. 340 and Tata Locomotives from Rs. 174-8 to Rs. 166-8. Larsen and Toubros were steady at Rs. 19-1 and Mahindra and Mahindras at Rs. 16-2. Premier Constructions lost ground from Rs. 217 to Rs. 209. Shivrajpurs changed hands Rs. 2 lower at Rs. 86. Indian Coppers were done at Rs. 7-1 *ex-div.*, as against Rs. 7-9½ *cum-div.* (final div. As. 7½ per share). B. B. Petrols dropped from Rs. 3-13½ to Rs. 3-11¾.

Shipping shares, which were in the limelight last week, could not hold their own in the face of the general recession. Scindias, after an initial rise from Rs. 19-8 to Rs. 19-11, receded to Rs. 19-1. Great Easterns were lifted up from Rs. 21-10 to Rs. 23, following the increase in dividend from Re. 1 to Re. 1-8 for the year ended 30th June 1956, but receded to Rs. 21-14. India Steamships were held at Rs. 10-8. Premier Automobiles reacted from Rs. 104 to Rs. 101-8 and Hindustan Motors from Rs. 10 to Rs. 9-11. Among miscellaneous industrials, Bombay-Burmahs were on offer bringing the price down from Rs. 758-12 to Rs. 727-8 on reports that no decision had been taken on the capital reorganisation. The closing was a shade higher at Rs. 733-2. National Rayons fell from Rs. 174-8 to Rs. 166-8. B.I.Cs were lower by As. 7 at Rs. 11-1. Tata Chemicals shed As. 6 to Rs. 19-12, while Alembic Chemicals were done Re. 1-4 higher at Rs. 121-4. Tata Oils, after gaining ground from Rs. 56-8 to Rs. 58-4, moved down to Rs. 57. Wimcos were quiet at Rs. 178-12.

* * * *

Calcutta Stock Exchange

CALCUTTA, *3rd October*

The week under review on the Calcutta Stock Exchange witnessed fully steady conditions and such an unusual rally before the *Pooja* spell of holidays was aided by short-covering, good corporate news, and encouraging reports from Bombay. Working results of a few more engineering companies were announced during the week, and these naturally focussed the market's attention on the assured future of the engineering industry, for which Calcutta is the great centre of the country and which is, therefore, the backbone of industry in this part of the world and naturally of the Calcutta stock market. However, in contrast to this trend, speculative Indian Irons were hammered down on Monday when Mr. T. Leslie Martin, the Chairman of I.I.S.Co., announced the failure of his Company's efforts to persuade the Government of India to raise the dividend above the usual 10 per cent. in case working results permitted. New Delhi has reiterated its view that at present all resources should be mobilised for further expansion and repayment of loans to the Government and the World Bank. When these objectives are achieved, naturally the shareholder would be a beneficiary in the long-term.

Tea shares met with encouraging support during this week following the up-trend in tea auctions both in London and in Calcutta and the decision of the North-East Indian gardens to curtail production for a part of the rest of the plucking season as well as to destroy all residue teas considered unfit for sale in auctions. These steps would naturally bring about a better balance between demand and supply, as during recent months there had been a tremendous increase in production which naturally caused apprehensions in the market. There was a note of recovery in coals following the slight improvement in the strike situation in the Raneegunj coalfields, albeit the havoc caused by the recent floods in as many as 25 mines in the Raneegunj-Asansol area and the time and effort involved in restoring these mines to a working state. In jutes, selected counters forged ahead, while in miscellaneous industrials expansion plans set in in a fresh wave of investment buying. The prospects of a peaceful solution to the Suez Canal dispute and the suspension of the freight increase by the Far East Conference Lines also aided sentiment, but anxiety with regard to the unrest of the port workers was entertained. The market was closed yesterday on account of *Gandhi Jayanthi* and today on account of *Mahalaya*.

Engineering shares were the cynosure of all eyes in the market, and several counters added substantial improvements. For the year ended December last the dividend for Hooghly Dockings has been maintained at 12.5 per cent., despite a slight decrease in profits following diversion of funds for *expansional activities. In transactions*, the quotation reached a high of Rs. 148 from Rs. 142 finishing fully steady at Rs. 145. Indian Standard Wagons provided another favourite counter and the scrip recorded a further rise from Rs. 225 to Rs. 228. Investors derived considerable encouragement from the working results for the year ended March last for which a dividend of 30 per cent. (25 per cent.) has been announced. The Management of the Company are approaching the Government for permission to issue bonus shares in the proportion of one new ordinary share for each ordinary share issued.

Texmacos continued to meet with steady support at Rs. 23-8. The Corporation is not only making satisfactory progress in present lines of production such as metre gauge wagons, carding machines and boilers, but is embarking on a plan of production of fresh items such as cotton spinning machinery, card clothing, sugar and jute mills machinery, broad gauge wagons and water tube boilers. After touching Rs. 28-4 from Rs. 27-6, Richardson & Cruddas shaded off to Rs. 28, while Indian Galvanisings attracted special attention and were lifted from Rs. 21-8 to Rs. 23-10. Kumardhubis were dealt with at Rs. 9-14, as against Rs. 9-10 and Jessop & Cos., after hardening from Rs. 37-6 to Rs. 38-5, closed firm at Rs. 37-12. Indian Irons rose earlier from Rs. 36 to Rs. 36-5 on the possibility of an increased dividend for the year ended March last but sagged to Rs. 35-11 on Monday following the Chairman's announcement mentioned above. The announcement of the usual dividend of 10 per cent. in the next few days is anticipated.

In the miscellaneous industrial section, Dunlop Rubbers were in good form at Rs. 30, consequent on the announcement of the plan to increase output in the Calcutta Shahganj factory and to install a new plant near Madras to meet the demand of Dunlop products in South India. National Carbons touched Rs. 30-3 from Rs. 29-11, while National Rollings sagged further to Rs. 11-2 from Rs. 11-4 in the absence of any improvement in the labour situation to revoke the lock-out in a section of the mills. After last week's buoyancy, there was profit-taking in Indian Wood Products, which pulled the rate down to Rs. 47-8 from Rs. 48. Indian Aluminiums were fractionally better at Rs. 19-14 as were Osler Lamps at Rs. 5-6. Angelo Bros. were accorded more attention and the quotation was lifted up to Rs. 23-8 from Rs. 23-1. Indian Coppers continued to be fully firm and rose to a high of Rs. 7-3.

Sone Valleys, in the cement group, high-lighted attention and the rate improved to as high as Rs. 9-14 from Rs. 8-13. Asokhas also put on an improved appearance at Rs. 13, as against Rs. 12-11 earlier.

Further support was forthcoming to India Steamships, among shippings, and the rate soared from Rs. 10-6 to Rs. 10-15 by Friday before reclining to Rs. 10-10 on Monday. Port Shippings came to business at Rs. 17-10, as against Rs. 17-14 previously.

* * * *

Madras Stock Exchange

MADRAS, *1st October*

Barring bank shares and a few miscellaneous industrials which ruled firm on special buying support, the Madras Stock Exchange depicted distinctly easy conditions during the week under review. Tea shares encountered selling pressure induced by fears of reduced return on investment; the fears were based on the possibility of a fall in tea prices, following the recent restrictions on direct shipments for London auctions. Rubber shares lacked enquiries in the absence of any encouraging development. But coffee shares were somewhat firm. Activity in the textile section was restricted, with values drifting lower. For traders preferred to watch the trend of the piecegoods markets in the light of the order prohibiting textile mills from stocking more than one month's average production and the wholesalers from holding more than three months' stocks. Bank shares, however, recorded, as already stated, an improvement in values, thanks to buying by special quarters. Gold mining shares provided a bright spot; encouraged by increased compensation provided in the Mysore Government's Bill to nationalise gold mines, the shares staged an impressive rally.

Textile shares generally gave way. Metturs climbed down by Rs. 7-8 to Rs. 462-8. Coimbatore Pioneers dropped Rs. 5 to Rs. 525. Janardhanas fell by Rs. 3-8 to Rs. 113 and Ranga Vilas by Rs. 3 to Rs. 92. Loyals receded by Rs. 2 to Rs. 52-12. Rajadhunagars lost a rupee each to Rs. 186, Rs. 155 and Rs. 92 and Rs. 39, respectively. Kotharis declined by As. 14 to Rs. 18-6. Lakshmis and Venkatesas eased by As. 8 each to Rs. 258 and Rs. 180, respectively. Premiers, on the other hand, elicited good attention and rose by Rs. 5-8 to Rs. 260.

In the planting section, tea shares lost ground. Devasholas and Stanes Amalgamateds moved down by As. 4 each to Rs. 25-4 and Rs. 13-1 *cum-div.* (interim), respectively. Talayar Teas shed As. 3 to Rs. 13-1 *cum-div.* (final). Periakaramalais were lower by a similar sum at Rs. 9-14. Neelamalais decreased by As. 2 to Rs. 7-14. Among rubber shares, Cochin Malabars dropped As. 5 to Rs. 12. Malankaras and Vaikundams slipped by As. 4 each, the former to Rs. 36 *cum-div.* and the latter to Rs. 35-4. Vayitris were neglected at Rs. 2-10 *cum-div.*, as against Rs. 2-11. The directors of the Vayitri Plantations Ltd. have declared a dividend of 9 per cent. for the year ended 31st March 1956, same as last year. Among coffee shares, Rajendras hardened by As. 6 to Rs. 12. Kadur Coffees gathered As. 4 to Rs. 3. Amalgamateds were fully maintained at Rs. 12-10 and Coffee Lands at Rs. 27-4.

In the banking section, Bank of Mysores were well supported by some special quarters and the quotation advanced by Rs. 2-8 to Rs. 262-8. Indian Banks (Rs. 70 paids) improved by Rs. 2 to Rs. 154. Indian Overseas picked up Re. 1-8 to Rs. 153. Andhra Banks (Rs. 70 paids) were better by Re. 1-2 at Rs. 83-8.

Among miscellaneous industrials, Nundydroogs were keenly sought at Rs. 8-8 *ex-div.*, as against Rs. 6-12 *cum-div.* Champion Reefs rallied Re. 1-12 to Rs. 6-4. Mysore Golds (K.G.F.) put on As. 2-6 to Rs. 2-10. Rallis came in for enquiries and spurted by Rs. 2-4 to Rs. 44. Textools strengthened by Rs. 2 to Rs. 222. Singarenis gained As. 6 to Rs. 11-2. *India Steel Rollings*, however, receded by As. 3 to Rs. 14-14. F.A.C.Ts shed As. 2-3 to Rs. 7.

There was a jump of Rs. 9 to Rs. 215 in the quotation for United Breweries which were bid by professional interests. Other shares in the sugar section were unchanged at last week's levels.

TEXMACO

Reviewing the progress of the Textile Machinery Corporation Ltd., during the year 1955, our issue dated 15th September, *vide* page 526, stated that the Company's shares were being currently quoted at Rs. 23-8 *cum-div.* This is wrong. The rate of Rs. 23-8 does not include dividend of 10 per cent. For the year 1 Company paid only an interim dividend cent. which later became the dividend for year, as no further dividend was Assuming the market rate for the Rs. 23-8, the yield on the shares works per cent. per annum.

The Directors of Pan American World Airways Inc. have declared a dividend of 20 cents per share to stockholders of record at the close of business on 13th April 1956. This is the forty-sixth dividend paid by Pan American. A payment of 20 cents a share was made on 10th March 1956. Dividend payments have been made each year since 1941.

NEWS IN BRIEF

A PAPER mill will soon be set up either at Mettur or in Malabar at a cost of Rs. 3½ crores by a private agency. A German expert who recently studied the problem had recommended that the mill be located in Malabar where bamboo was available in plenty.

A Rs. 400-lakh scheme for taming the Makla river in Bihar has been formulated by the State Government. The scheme will help to irrigate 150,000 acres of land and save another 200,000 acres from floods. The Planning Commission's approval of the scheme is awaited.

The policy for export of raw wool has been reviewed by the Government of India in the light of the availability and the requirements of the indigenous industry and it has been decided to release a further quantity for export during the period October 1956 to 31st March 1957.

The Union Government has approved of a scheme for setting up a glass factory for the manufacture of scientific glass apparatus at the Guindy Industrial Estate, Madras. Estimated to cost Rs. 8 lakhs, the factory is expected to begin functioning from early next year. The factory will also produce glass tubes which are at present being obtained partly by imports and partly by indigenous production.

The Government of India has appointed an 11-member committee to advise on the location of the refinery for refining the crude oil produced in the Assam oil fields. Mr. S.S. Vasist, Adviser, Ministry of Railways, is the Chairman of the Committee which also includes two foreign representatives, one each from France and Rumania. The Committee has been asked to submit its report within two months.

An agreement for *ad hoc* transitional arrangements for the use of waters of the Indus system rivers till 31st March 1957 has been reached by India and Pakistan. The agreement provides for the continuance of arrangements for establishing *ad hoc* amounts for additional canal withdrawals by India from the three rivers Ravi, Beas and Sutlej on lines similar to those of the previous transitional agreements which ran from 1st April 1955 to 31st March 1956.

A number of industrial schemes for the manufacture of machinery and engineering goods has been approved by the Government of India. A Calcutta firm is to be allowed to set up a new undertaking in Howrah District; it proposes to make two cargo boats, four tugs and four barges per year, the capacity of vessels being 400 to 900 tons. A firm in Bombay is to be permitted to expand its capacity for the manufacture of cast iron spun pipes from 2,700 tons to 4,300 tons per year.

The Government of India has reviewed the policy for export of Madras-Mysore silk waste in the light of the availability and the requirements of the indigenous industry and has decided to allow the export of silk waste of Madras-Mysore origin by those holding stocks. Exports will be permitted by the Joint-Chief Controller of Imports and Exports, Madras, on production of stock returns showing stocks, as held on 5th September 1956 duly certified by the Director of Industries, Madras or the Director of Sericulture, Mysore.

A high level expert committee has been constituted by the Central Government to consider the reorganisation of the administrative services in the light of the need to accelerate State sponsored industrialisation. A senior member of the I.C.S., Mr. L. P. Singh, who was till recently Chief Secretary to the Government of Bihar, has been appointed officer on special duty in the Home Ministry to undertake the necessary enquiries. He will be assisted by a Consulting Committee, consisting of the secretaries of all the important ministries.

The control and management of State collieries, now being managed departmentally under the Ministry of Production, was transferred to the newly set-up National Coal Development Corporation on 1st October 1956. The Corporation, which is entirely Government-owned, was registered early this month at Ranchi as a private limited company, with an authorised capital of Rs. 50 crores. The Minister for Production, Mr. K. C. Reddy, is the Chairman of the Board of Directors of the Corporation and and Mr. R. S. Krishnaswamy, Coal Production and Development Commissioner, is its Managing Director.

A scheme for popularising the presentation of National Savings Certificate or National Plan Certificate as gifts on such happy occasions as marriage, birthdays, etc., has been drawn up by the Government of India. The scheme provides for the issue of gift coupons in attractive designs in denominations of Rs. 5 to Rs. 1,000. The recipient of the coupons will be entitled to get them exchanged into 12-year National Savings Certificates, or 10-year National Plan Certificates of their issue price, on application to any post office. In the event of the gift not materialising, the donor can convert the coupons into savings certificates or get refund, subject to certain conditions.

A Tele-communications Agreement was signed on 29th September between the Government of India and the Government of People's Republic of Poland. The Agreement provides for the exchange of wireless telegraphic messages and telephone calls, either State or private, between India and Poland and for the different rates to be charged for the different categories of telegrams and the apportionment of charges between the Tele-communication authorities of the two Governments. In so far as matters which are not specifically covered by the Agreement are concerned, the provisions of the International Telegraph and Telephone Regulations shall apply.

Representatives of the Government of India and the Associated Electrical Industries of Britain, who are technical consultants for the Government's heavy electrical equipment project, have agreed on the items to be manufactured during the first stage of production. The factory, which is being located near Bhopal, is expected to go into production by 1960 and will attain full capacity by 1967. A private limited company known as the Heavy Electricals (Private) Ltd., entirely owned by the Government of India, has been set up to control and manage the project. The schedule of manufacture includes A.C. and D.C. rotating machinery, rectifiers, transformers, switch-gears, traction and control gears, industrial control gears, D.C. motor starters, capacitors and water wheel turbines.

From Abroad

The Swiss insurance companies have decided to levy a supplementary war risk premium of 0.25 per cent. on Suez Shipping Policies.

Following a request by the Union of Bank Employees, the French Ministry of Labour has decided to close all French banks on Saturdays, this winter.

Mr. Walter Reuther, President of the United Auto Workers' Union, has announced that the organisation has planned a campaign for a four-day week in 1958.

The rural family enterprise continues to be dominant in West Germany; 80 per cent. of the agricultural enterprises and the territory under cultivation are owned by small and medium-scale peasants.

The I.M.F. has granted Egypt an emergency loan of $15 million, which will be used for the purchase of wheat from Canada. A Fund spokesman said that the loan is fully covered by Egypt's contribution in gold to the Fund.

The capital of the International Synthetic Rubber Company in Britain, sponsored in November last jointly by Dunlop, Goodyear, Firestone and Michelin, is being increased. The Company is to handle a £7-million scheme to produce general purpose synthetic rubbers in the U.K.

The West German Bundestag (Lower House of Parliament) has approved of a 99-year interest free loan of 240 million marks to Yugoslavia. This is the main item in a treaty of economic co-operation between the two countries, ratified by the Bundestag.

Most of the so-called "people's owned farms" in the German Soviet Zone are working unprofitably. This was revealed by the East Berlin Ministry for Agriculture and Forestry which stated that last year about 85 per cent. out of the 535 farms of this kind did not reach the profit-target.

The Japanese Cabinet decided on 25th September to ease restrictions on exports to China within the framework of the relaxed embargo policies of Western European nations. Mr. Mamoru Shigemitsu, the Foreign Minister, said that the Government would adopt a "special permission" system for exports to China.

Five major shipping companies trading with the East (the Orient Line, the P. and O., Royal Inter Ocean, Shaw Savill and the British India) have increased their freight charges by 10 per cent. from 1st November. This increase will also apply to ports in the Persian Gulf, Ceylon, Burma and Pakistan.

Egypt and Libya have signed a one-year trade and payments agreement which provides for most-favoured nation treatment between the two countries. The agreement stipulates a mutual 25 per cent. reduction in customs duties and lays down that transit trade will be subject only to "fair and reasonable" internal duties.

Exports of the British aircraft industry during the first eight months of this year reached a new record level of over £73 million, about £7 million more than the figure for the whole of last year. Exports of complete aircraft amounted in value to £51½ million, engines £18½ million, and electrical equipment, tyres and instruments £3 million.

Japanese Government officials have observed that Japan will press for increased exports to the sterling area following the marked decline in its sterling balances. Its case will be put at Anglo-Japanese trade and payments talks to be opened in London shortly. Japan's sterling balances have declined to about £45 million from about £95 million a year ago.

Russia has agreed to grant Poland a credit of 100 million gold roubles at two per cent. annual interest. The credit includes supplies of copper, rubber, and fats and will be repaid by supplying goods to the Soviet Union between 1957 and 1960. Poland has also been granted a four to five years extension of payments of loans and credits received earlier and which are due for payment.

The United States first nuclear-powered merchant ship will be a passenger-cargo vessel with a service speed of 21 knots. The Maritime Administration and the Atomic Energy Commission have reached agreement on the type of vessel to be built at a cost estimated at $40 million. According to Mr. Clarence G. Morse, the maritime chief, the ship would be completed and put in operation before the end of 1959. The ship will have a dead weight capacity of about 12,000 tons.

The Institute of London Underwriters has reduced by 2s. 6d. per £100 the insurance rate for war, strike, riot and civil commotion risks on cargoes going through the Suez Canal and also to, from or transhipping at Egyptian Ports. This reduction follows two increases by the Institute since the Suez Canal was nationalised. The new rate means that through-Suez rates are now 2s. 6d. per cent. above the schedule issued by the Institute in July. It replaces last week's announcement of increases of 5s. per cent. above the July charges.

At a meeting of the Coal Committee of the U.N. Economic Commission for Europe, held recently at Geneva, all the main coal producing countries of Europe have agreed to pool their plans to increase their coal output. In view of the rising demands for energy in general, delegates agreed that measures should be taken to increase coal production in Europe, provided that it could be done economically. It was felt necessary to draw up an inventory of the intentions of Governments concernings policy as regards future coal production and trade. Producing countries agreed to send to the E.C.E. Secretariat detailed statements of their plans.

PERSONAL

MR. J. R. D. Tata, Chairman of Air-India International Corporation, returned to Bombay from London on Friday last. He attended the annual meeting of the International Air Transport Association held in Edinburgh last week.

Mr. John Fuller, head of the Hotel Management Department of the Bettersea Polytechnic, London, arrived in Bombay from London on Tuesday. He has been invited by the Ministry of Transport to advise them on the setting up of a centre to train executive staff for hotel management. He will be in India for three weeks.

Mr. Miguel Cuaderno of the Philippines was named Chairman of the Board of Governors of the 60-nation World Bank and the International Monetary Fund. He succeeded Senor Antonio Carillo Flores of Mexico in the post. Mr. Cuaderno who is an outstanding advocate of a hard money policy in his country, has long championed the cause of the less developed countries.

Mr. O. V. Alagesan, Deputy Minister for Railways and Transport, left Bombay for London on Tuesday this week on a five-week tour of the Continent. Besides attending the General Conference of the International Union of Official Tourists' Organisations in Vienna from 19th to 26th October, he will study the working of ports and will visit road research installations in Paris, London and West Germany.

Dr. I. Drogin, Vice-President (Technical Sales) of the United Carbon Inc., Charleston, West Virginia, accompanied by Mrs. Drogin, has arrived in India on an extended tour which will take him to all parts of the country. Dr. Drogin is a world authority on carbon black and rubber technology and is the author of numerous works on these subjects which have been translated into many languages. During his tour he hopes to visit all important users of carbon black and to acquaint himself both with the industries as they now are and with their plans for development and expansion under the Government's second Five-year Plan.

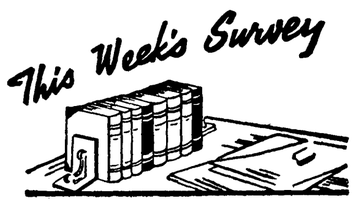
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *3rd October*

Rupee Gold and Rupee Sterling

The rupee-ratio is dead: Long live the rupee-ratio—that is the effect of the dramatic changes brought about by the promulgation of Ordinance No. 6 of 1931 and its immediate cancellation by Ordinance No. 7 of 1931. While the former effected a departure from the rupee-ratio at 1s. 6d. gold, the latter linked it to 1s. 6d. sterling. There was thus a conflict between the announcements of the Finance Member and of the Secretary of State for India; the interpretation of the former being that India would be allowed to fall away not only from gold, but also from sterling; while the latter definitely pegged the rupee to the sterling. The result was that while the Ordinance No. 6 temporarily relieved the Government of India from the obligation under the Currency Act of 1927 to sell gold or sterling, the Ordinance No. 7 provides for the sale of gold and sterling by the Government of India for the specific purpose of financing (1) normal trade requirements, excluding import of gold or silver coin or bullion; (2) contracts completed before 21st September 1931, and (3) reasonable personal or domestic purposes; but Government undertakes not to sell gold or sterling to liquidate over-sold exchange position of any bank in respect of any month subsequent to the month in which the demand for gold or sterling is made. Now, though the rupee-ratio is maintained intact in relation to the sterling, yet, as the latter has fallen in relation to foreign currencies to the extent of approximately 25 per cent., the rupee, in relation to the U.S.A. gold dollar, is no better than 1s. 1*d*. Thus, to all intents and purposes, the advocates of the sixteen pence ratio have obtained their wish so far as India's exchange is concerned with countries outside British India. There continues, however, still a sharp cleavage between the protagonists of sixteen-pence and those of eighteen-pence. This battle royal will never cease as economists, like doctors, will always differ in respect of both the diagnosis and the recipe.



BURMAH-SHELL'S GESTURE

THE Government of India has "gratefully accepted" the Burmah-Shell Refinery's "gesture of goodwill" in voluntarily surrendering the protection it had been given in the shape of a low excise duty. Under the agreement between the Government of India and the oil refinery companies, the Government had agreed to grant to the companies for a period of 10 years a "duty protection" of As. 2 per Imperial gallon. This protection is given by maintaining the duty on imported motor spirit at a level that is As. 2 higher than the excise duty levied on locally manufactured motor spirit. The object of this protection is to encourage oil refining in India. The Burmah-Shell Refinery Company, as a result of a recent appraisal of its financial position, has agreed voluntarily to give up this concession. The collection of excise duty at the enhanced rate began from 1st October 1956.

The Burmah-Shell's gesture will be widely welcomed in all quarters, particularly by the critics who have held that the oil refineries in this country are making excessive profits. It will be recalled that, in August last, the Speaker of the Lok Sabha allowed a half-hour discussion on the profits of refineries. Some members demanded even nationalisation of the refineries on the ground that their profits were high though it was never clear to others what connection there was between State-ownership and high profits. Replying to the discussion, Sardar Swaran Singh, the Union Minister for Works, Housing and Supply, pointed out that it was too soon to consider the question whether the concessions the Government had agreed to give to these companies were in any way excessive; after all, the companies had worked only for one year. The question could be reviewed, he said, after the companies had settled down to normal business. He added:

"If Government were to keep constant vigilance over the activities of these refineries, they could ensure that the oil companies do not derive undue advantage based on any technical or liberal reading of the agreements concerned. In fact, I am confident that, should a situation arise where the working of the refineries in practice produces more than a reasonable profit, the oil companies themselves could be persuaded—indeed, there is reason to believe that they might even voluntarily offer to do so—to adjust their retail prices or make such other changes as may be feasible, so that they derive no more than what may be a fair and reasonable return on their investment."

Sardar Swaran Singh's confidence in those who own the refineries has been fully justified by events. The Burmah-Shell's gesture, it is stated, will benefit the Government to the tune of Rs. 2.2 crores. Revealing this, Mr. K. C. Reddy, Union Minister for Production, in the course of a recent Press Conference, at New Delhi, expressed the hope that the other two refining companies, namely, the Stanvac and Caltex, would also make a similar gesture. It remains to be seen whether the financial position of these two companies will permit a similar gesture to be made. It has been computed that the gain to Central revenues through the surrender of protection by all the three companies would be of the order of Rs. 4.5 crores per year.

Be that as it may, the public is entitled to ask whether the benefit of the improved financial position of oil refineries, which permits a voluntary surrender of protection to be made, could not be passed on to consumers. In July last, when the question of "high" profits of oil refineries was raised in the Lok Sabha, Mr. Swaran Singh said that there was no intention to place any restrictions on the profits made by the oil refineries, but the question of price fixation for motor spirit required Government's approval. The obvious implication was that the Government would review the prices of motor spirit in the light of the profitability of its production. Indeed, Mr. Swaran Singh added that "as transport is very important, it is the Government's policy to ensure that supplies of oil are made available in all parts of the country at prices which are not excessive." The Government will do well to bear in mind the spirit of this assurance in determining its policy towards oil refineries.

NUCLEAR SHIPS

The Suez crisis is, indeed, a dark cloud. But it is not apparently without its silver lining. It has imparted a new sense of urgency in the application of nuclear research to shipbuilding industry. Many countries, which are now engaged in research on nuclear-powered ships, are believed to be giving top priority to their plans. These countries include the U.S., the U.K., France, Holland, Norway, Sweden, the U.S.S.R. and Japan. Five groups of companies in the U.K., and six such groups in the U.S. are stated to be working on designs for atomic engines for marine propulsion. A development that may conceivably speed up this movement towards atomic-power ships, is the three-power atomic pact, signed last week, by the U.S., the U.K. and Canada, under which the three countries have agreed on the mutual inter-change of rights in invention and discoveries in the atomic energy field.

It is, of course, too early to say when the efforts at making nuclear-powered ships and tankers will bear fruit. But, according to the scientific correspondent of the London *Financial Times*, the first such ships will be an American general purpose passenger steamer and a cargo ship and a Russian passenger and cargo-carrying ice-breaker. These ships, it is stated, are likely to make their maiden voyages in 1958, if not earlier. Norway and Sweden hope to complete their construction of atomic-powered ships by 1960-61. A Japanese firm is said to have submitted a Five-year Plan to the Japanese Government for the construction of a nuclear-powered tanker. In the U.K., several well-known engineering concerns, such as the Vickers Nuclear Engineering Company, Rolls-Royce and Foster-Wheeler, Richardsons Westgarth, are engaged in working out the industrial application of atomic energy. Nevertheless, the U.K. is on the whole said to be lagging behind other maritime countries in the development of nuclear ship propulsion, except in the case of the atom submarine project. Some new developments are, however, expected in the next 12 months.

No firm estimate about the cost or the operating expenses of nuclear powered ships is available at present. The cost of the atomic engines of a nuclear powered tanker is expected to be at least twice that of a conventional tanker. Two related problems are the weight of the ship and the cost of re-fuelling. Nuclear reactor furnaces must have bulky and heavy shielding. This will add considerably to the weight of the ships. But this problem is being tackled by research on special materials that will combine both light weight and efficient protection. In this connection, the use of a mixture of boron and aluminum or of special radiation resistant plastics is being tried. A welcome feature of nuclear-powered ships is the fact that they will not need frequent re-fuelling. These ships, once they are provided with the necessary fuel, will be able to do continuous voyage for 21 months to two years. At the same time, refuelling of nuclear reactor furnaces of the atomic engines could be an expensive process, involving special dock installations costing between £150,000 to £250,000 for remote control and radiation shielding equipment.

TERMINAL TAX

A notable measure now on Parliamentary anvil is the Terminal Tax on Railway Passengers Bill 1956. The Bill, which was introduced in the Lok Sabha on 13th September last by the Union Minister for Railways and Transport, empowers the Central Government to levy a terminal tax on passengers carried by railways to and from places of pilgrimage, *melas*, fairs, exhibitions, etc. The tax will be leviable in respect of every passenger ticket—single or return. It is subject to the maximum rates of Re. 1-8, Re. 1 and As. 8 in respect of every single ticket air-conditioned or first class, second class and third class, respectively, the rates for return ticket being double. There will be a free zone not exceeding a radius of forty miles, within which no tax will be imposed. Different rates of taxes, may, however, be fixed for long- and short-distance passengers.

There is nothing new or revolutionary in the levy of a terminal tax on passengers carried by railways. Whenever there has been any need for the levy of fresh terminal tax or for the enhancement of any of the existing terminal taxes (including pilgrim taxes), the practice has been to have recourse to the ordinance-making power of the President. In order to obviate the need for the issue of an ordinance on each such occasion for any fresh or increased levy, general legislation is desirable. This view has found favour with the different State Governments and various local bodies which, it is said, "have been pressing for such a general legislation for quite sometime past." The Taxation Enquiry Commission examined this question and supported the proposal for a levy of terminal tax at all places of pilgrimage on persons travelling by rail or road transport. The Commission also suggested imposition of a terminal tax at a low rate on long-distance passengers—the limit might be, say, 150 miles—in cities with a population of over 500,000. The Central Government has, however, decided to confine legislation for the levy of terminal tax to passengers carried by the railways only.

The proposed central levy of a terminal tax on passengers carried by railways to and from places of pilgrimage, fairs, *melas*, exhibitions, etc., need not evoke any opposition, inasmuch as the levy does not violate any accepted canons of taxation. When persons can incur a heavy expenditure for going all the way to and from places of pilgrimage, fairs, etc., there is no reason why they should mind paying a small amount as terminal tax. What is more, the persons visiting the aforesaid places enjoy various civic amenities provided by the Governments—Central and State—and the local bodies concerned. The latter especially are greatly in need of relief, since their finances are of an inelastic character and as such are too inadequate to meet the mounting expenditure on the provision of various civic amenities to visitors. Incidentally, it may be noted that the Bill does not contain any provision specifying how the proceeds of the proposed terminal tax will be distributed among the State Governments or the local bodies concerned.

While justifying the terminal tax, it must be emphasised that the incidence of such a tax should be very light. Considering that the rates

of pilgrim taxes now being levied are only a couple of annas per passenger, the maximum rates fixed in the Bill for third class single and return tickets, namely, As. 8 and Re. 1, respectively, are somewhat high. Since the terminal tax will be levied at nearly every important place in the country and since a person visits a number of places of pilgrimage, fairs, *melas* and exhibitions in one trip, Parliament will do well to lower the maximum rates to a more reasonable level.

MACHINE TOOLS

The management of the Hindustan Machine Tools Factory (H.M.T.) at Jalahalli (Bangalore) has now finalised the details of a diversified production programme. This was disclosed by Mr. M. K. Mathulla, the new Managing Director of the Factory, on the occasion of the visit to the Factory paid recently by the Union Production Minister, Mr. K. C. Reddy. The programme envisages manufacture of milling machines under a licensed agreement to be entered into shortly with certain German firms. Later on, the Factory will start producing radial drills and grinding machines. Meanwhile, the output of high-precision lathes has been stepped up; it will be at the rate of 20 per month before the end of the year, to be raised to 30 by the end of January 1957. Under the programme, the H.M.T. will be sending a number of skilled employees to foreign countries for training in the new types of machines proposed to be manufactured. Foreign firms have offered facilities for training the H.M.T. personnel. About 10 per cent. of the employees is already under training abroad and a batch of five or six will be sent shortly.

The move of the H.M.T.'s management to launch a diversified production programme, though belated, is to be welcomed. The high priority set for industrial machinery in the second Five-year Plan has brought to the fore the need for not merely accelerating the production of machine tools that are now being manufactured but also starting new lines of production. The progress on the machine tool project under the first Plan was, as the Planning Commission itself frankly admits, considerably behind schedule. The targets visualised in 1951 were scaled down in a subsequent review of the scheme, and the capacity of the H.M.T. was reduced from 1,600 lathes to 400 lathes per annum. The actual production fell considerably short of even the reduced target, the number of machine tools produced in 1955-56 being just 12!

In view of the none-too-satisfactory performance on the production front thus, one would surely watch with interest the activities of the H.M.T. in the coming five years. It is not, however, clear whether the production programme of the H.M.T. has been formulated with due regard to the lines of manufacture in which private machine tools producers are engaged. What is necessary is to ensure that both private and State-owned factories should together meet the country's demand for machine tools and that there is no avoidable duplication of effort and production. Be that as it may, so far as the H.M.T. is concerned, we are told that the original target of 400 lathes has been stepped up to 1,000 lathes, with an additional capital outlay of only Rs. 5 lakhs. The increased target is proposed to be hit through multiple-shift working of the Factory. The additional staff necessary, it is said, has been recruited recently, mainly from the surplus labour in the ordnance factories, who are under training in the training centre. The second shift has already been started in many departments. Under the scheme, the staff of the Factory is expected to be raised from 1,000 to 2,000.

Mr. Mathulla, in the course of a Press interview, claimed that, by the end of the second Plan (1960-61), the manufacture of precision lathes and other machines now contemplated would have gone up to such an extent that the foreign imports of such types would be unnecessary. According to him, the H.M.T. would be expanding the factory space and, very soon, a foundry at an estimated cost of Rs. 55 lakhs would be installed as an adjunct to the Factory. At present, all the castings, it is stated, are secured from different sources. The amount spent on the H.M.T. so far aggregates Rs. 5 crores. From next year, the Factory would, Mr. Mathulla declared, be on a self-supporting basis. If the past performance of the Factory is any criterion of its capacity, these claims appear to be unduly optimistic and there is justification for viewing them with scepticism. But, in view of the recent reorganisation of the past set up and the termination of the contract with the Swiss firm of technical consultants, who miserably failed to come up to expectations, it is possible that the Factory may fare better in future. Nevertheless, it remains to be seen whether all the expectations of Mr. Mathulla will be fulfilled.

COMMUNITY PROJECTS

There is no gainsaying the fact that the Community Projects have effected far-reaching changes in the rural areas of the country, which account for about 70 per cent. of India's population. The Community Project programme was first inaugurated on 2nd October 1952, so that it celebrates its fourth anniversary this week. The results achieved by the programme so far are, indeed, impressive. In terms of money, the people's contribution during these four years has been of the order of Rs. 26.13 crores, as against the Government's expenditure of Rs. 46.02 crores. In all, 557 Community Development Blocks and 603 National Extension Service Blocks, covering 1,57,347 villages with a population of 88.8 million have been in operation. One-fourth of the total villages of India and one out of every three villagers are said to be enjoying the benefits of the Programme. The number of villages enjoying the benefits of intensive development is stated to be on the increase as a result of the conversion of the N.E.S. into C.D. Blocks.

A characteristic feature of the programme is the emphasis laid on agriculture. Efforts have been made to educate the farmers in improved methods of agriculture. Till March this year, it is stated, 91,59,000 maunds of fertilisers, and 48,28,000 maunds of improved seeds were distributed. In the areas covered by the projects, more than 2 million acres of additional land was brought under irrigation. According to random surveys, the average yield of principal crop in the project areas is found to exceed that for the whole country by as much as 20 per cent. to 25 per cent. Besides, the new land reclaimed—to the extent of 11 lakh acres—has added 75 lakh maunds to the country's food production. Furthermore, the land under vegetable cultivation increased by 388,000 acres and that of fruit trees by 157,000 acres. In the sphere of animal husbandry, the authorities have opened 2,563 key village centres, besides supplying nearly 13,000 pedigree animals. People have shown great enthusiasm in the construction of roads. Till March this year, 38,000 miles of *kachcha* and 6,029 miles of *pucca* roads had been laid, and 22,000 miles of existing roads had been improved.

In the field of social welfare, again, the results are noteworthy. As many as 674 primary health centres, and 578 maternity and child welfare centres have come into existence. Moreover 107,000 wells have been either constructed or renovated under the scheme for provision of water supply. Again, 15,000 new basic schools have been opened in addition to the conversion of about 2,000 ordinary schools into the basic type. No less than 41,000 social education centres have been set up and about a million adults made literate. A noteworthy feature in the sphere of education is that the number of recreation centres and libraries has gone up to nearly 99,000. In the field of local self-Government, 11,540 *Panchayats*, and other statutory bodies, and 211,829 non-statutory bodies such as Village Councils, *Vikhash Mandals*, etc., have been set up. Again 33,000 new co-operative societies with 17 lakh new members have been started.

The training programme to provide the administration with the village level workers and extension workers has gone apace. Up to the middle of this year, no less than 14,446 village

Through its Branches in India, Pakistan, Malaya, Japan, Aden, East Africa and London and through correspondents in the principal countries of the world, the Bank is able to finance business of every description on favourable terms.
D. R. THOM,
General Manager.

PROGRESS OF INDUSTRIAL FINANCE CORPORATION ENCOURAGING

LENDING RATE OF INTEREST TO BE RAISED?

From A Special Correspondent

NEW DELHI, *2nd October*

DELHI LETTER

DELHI today celebrated the eighty-eighth birthday anniversary of Mahatma Gandhi in the customary manner. On the eve of 2nd October, both the President and the Prime Minister visited Rajghat, the Samadhi of Mahatma Gandhi and paid reverential homage to the Father of the Nation. Befitting the occasion emphasis was given to the constructive aspects of Gandhiji's ideals and aspirations. There is a feeling of quiet confidence both among the ranks and the Ministers of the Government of India that the country is well set towards rapid progress in the coming years. The inflationary edge appears to have been considerably blunted as a result of the favourable monsoon that the country has received during the last three months and more. The output of *kharif* crop is expected to be much higher than in the last year. What is more gratifying is the fact that the higher yield is expected to be shared by both the commercial and other food crops.

Further, the rain last week which was well spread out over the Punjab, Rajasthan, U.P., etc., is expected to be beneficial to the forthcoming *rabi* crop in these parts. As a result, the Government is a little more optimistic than before that the prices of agricultural commodities will remain at a more stable level in the coming months.

Industrial Finance

On the industrial front also the news is heartening. Production of almost all the industries, major as well as minor, has been showing a steady increase. The private sector has been playing a creditable part in helping the Government to increase the output of industries to an appreciable extent. The fact that this sector of the industry has been active is evident from the latest annual report of the Industrial Finance Corporation. According to the report "industry is seeking the assistance of the Industrial Finance Corporation in an ever-increasing measure and the amounts of loans sanctioned by the Corporation has also been increasing." It is pointed out, for instance, that the aggregate amount of loans sanctioned during the year ending June 1956, was Rs. 15,13,00,000 which is more than double that of the previous year. Also applications received for loans during the year numbered 86, as against 46 in the previous year. The loans asked for during 1956 amounted to Rs. 27,70,01,800, as against a total of Rs. 11,27,00,000 in the previous year.

It is also significant to note that a little more than 50 per cent. of the applications for financial loans came from the more or less well established industries like sugar and textiles. The remaining applications were from other major industries such as engineering, chemicals, cement and paper. Another significant feature of the applications for loans last year was that by far a greater portion of the loans was sought by co-operative sugar factories located in Bombay, Mysore, Assam and the Punjab. The loans sanctioned to sugar co-operatives amounted to no less than Rs. 5.5 crores. This, it is claimed by officials in charge of the Industrial Finance Corporation, is evidence of the implementation of the Government's policy of encouraging the establishment of co-operative enterprises.

Disbursement Slow

The eighth annual report of the Corporation also gives details of the total loans granted to industries. Since its inception, the Corporation has sanctioned loans aggregating nearly Rs. 43.2 crores. Of this sum, the amount so far disbursed comes near about Rs. 16.75 crores, the balance still awaiting to be disbursed actually. The main hitch in disbursement, as was explained to the Press by the Chairman of the I.F.C., was that, under the multiple audit before hand, loans could not be disbursed, unless the Corporation was fully satisfied that the guarantees offered by the loanees were quite sound and adequate.

As far as repayment of the principal advanced to industrial concerns during the last eight years was concerned, the Chairman of the Corporation, Mr. K. R. K. Menon, said that, according to schedule, the total amount due to the Corporation at the end of the current year was Rs. 2,24,76,000, of which a sum of Rs. 1,68,70,152 had been received. The amount in default was Rs. 48,65,848, constituting 21.6 per cent. of the amount due. Only six companies accounted for the bulk of the default and the assets of one of these companies have been sold and those of another leased out. The Chairman said that the Corporation was contemplating similar action in respect of one or two of the other defaulters also.

The total amount of interest charged and to be received on loans sanctioned since the inception of the Corporation eight years ago stood at a little over Rs. 2,80,00,000, of which nearly Rs. 2.63 crores had been realised. The amount in default was Rs. 17,72,312, constituting less than 6.4 per cent. of the total amount due. The main defaulter in this respect had been the Sodepore Glass Works. Another company had been granted extension of time to pay the arrears of interest amounting to a little over Rs. 25,000.

It was claimed by the Chairman that, on the whole, the working of the Corporation for the year ended June 1956 had resulted in a profit of Rs. 32.68 lakhs, an increase of Rs. 8 lakhs over that for the previous year. The net profit was Rs. 22.50 lakhs, after setting aside a sum of Rs. 10.18 lakhs for taxation. Almost the entire sum of net profits, he said, had to be transferred to the reserve fund for bad and doubtful debts, in view of the anticipated loss in the account of the Sodepore Glass Works. Therefore, he said, "we have had to call upon the Central Government this year also to pay us a subvention, in order to enable us to pay the entire guaranteed dividend amounting to Rs. 11,25,000."

Chairman's Optimism

Mr. Menon, however, hoped that, "with the further provision that we shall make from the current year's profit towards bad and doubtful debts, there will be no need to set apart any amount in the succeeding years on this account. And, as we shall make a substantial saving in our tax liability on our current year's income, depending on the size of the amount that we are obliged to write off in the account of the Sodepore Glass Works, we anticipate that we will have sufficient balance left out of our profits this year to meet the guaranteed dividend to our shareholders without having recourse to a subvention from the Government of India."

Mr. Menon was taking this optimistic view mainly on two major grounds, namely, the increasing measure of appreciation on the part of industrialists of the country and of the co-operative societies on the ability of the Corporation to meet their needs in the matter of long-term loans and, secondly, the marked increase in the volume of industrial investment that is likely to materialise during the second Five-year Plan period. He pointed out at the Press Conference, held immediately after the General Body meeting of the shareholders of the Corporation on Saturday last, that the amounts asked for by way of loans during 1955-56 alone came nearly to Rs. 27.70 crores, as compared with Rs. 11.27 crores in 1954-55 and Rs. 9 crores in 1953-54. The annual average for all the previous seven years put together was only about Rs. 8.62 crores. This, he claimed, was a fair indication of the increasing amount of confidence which the industrial public was placing on the Corporation today.

The Chairman also revealed that, with a view to reducing the time-lag between sanction and disbursement of loans and also the legal charges to the borrowers, the Corporation had appointed its own full-time Law Officers at two of its branches, as an experimental measure. They would examine the title to properties to be mortgaged to the Corporation and draft the loan documents. If the experiment proved successful, he said, similar Law Officers would soon be appointed at the remaining branches of the Corporation.

In addition to this, in order to bring about a closer liaison between the Corporation and the Controller of Capital Issues in regard to loans and capital issues sanctioned to industrial concerns, a suitable procedure for mutual exchange of information has also been evolved. Some amendments were also made to the Industrial Finance Corporation Act in September 1955. By virtue of these amendments, power is now vested in the Corporation not merely to sell the property mortgaged to it but also, in suitable cases, to lease it, so that, after reimbursing itself its dues from the lease money, the Corporation will be in a position to return the property intact to the loanee concern whose shareholders will thereby be enabled to realise their investments.

Rate of Interest

The Chairman of the Corporation pointed out in his Press Conference that the rate of interest which the Corporation had been charging was 6½ per cent. He also indicated that there was a probability of revising this interest rate in the upward direction in the coming months. Although there is a provision that some concession be shown to the loanee for prompt payment of interest—the rebate for such prompt payment of interest is ½ per cent.—yet any upward revision of the interest rate over the present 6½ per cent. is not likely to be really helpful towards the development of risk-bearing industries. It is generally known that important key industries which require large capital, technical know-how, efficient management, etc., take a number of years for stabilising themselves. It is, therefore, a truism to say that, on an average, it takes nearly ten years for important key industries to be in a position to declare any reasonable dividend to the shareholders. If, therefore, the Government through the Industrial Finance Corporation is anxious to charge interest at 6½ to 7 per cent. per annum, it is doubtful whether any really risk-bearing industry will be capable of utilising the Government loans for its development. Again, by increasing the rate of interest, the Corporation will be setting up another bad example as this action on the part of the Government is bound to induce private commercial banks also to charge a higher rate of interest from their loanees.

Another result of the Government's policy would be to drive away more efficient concerns to seek financial assistance from some other source, as, for instance, from the Industrial Credit and Investment Corporation. As a matter of fact, when this correspondent put a question to the Chairman as to whether there had been any cases where loans given by the I.F.C. and the I.C.I.C. had overlapped, the Chairman tried to explain it away by saying that the loans might have been complementary and not overlapping. This is sufficient indication that, in future, big and more efficient industrial concerns would be tempted to approach the I.C.I.C. for loans rather than the I.F.C., because of their comparatively easier terms and less rigorous conditions. It is also thought possible that even some of the important banks may be able to offer better terms to well reputed concerns by way of accommodating them in a more practical and co-operative manner. If these things do happen, the I.F.C. would hurt itself by raising the rate of interest on its loans. It is the general wish and hope of the industrialists here that such a step would be not only unwarranted but even unwise and the Government would not persuade itself to be drawn into taking any such wrong action.

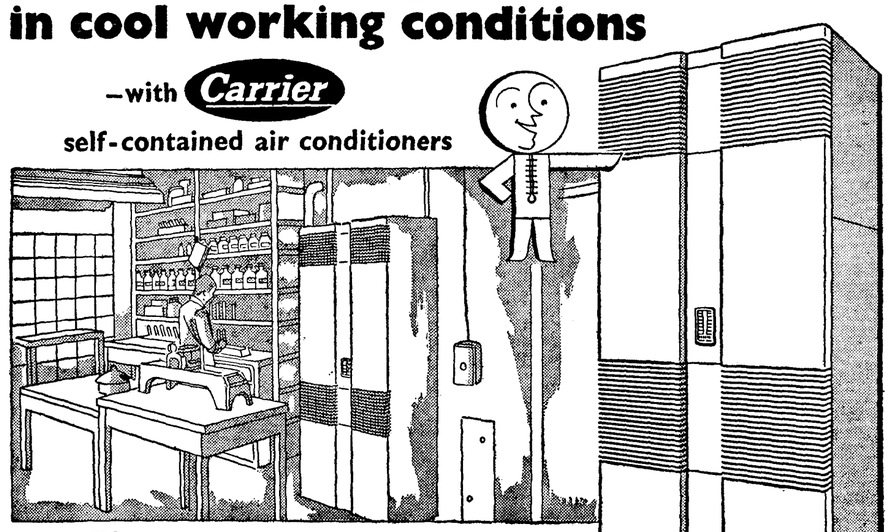
The Governments of India and West Germany have revised the annexure to the Indo-German Trade Agreement for the year 1956-57. The trade agreement which was signed on 31st March, is to remain in force for an indefinite period, but the annexure to it, containing quotas for Indian goods to be imported into Germany, is subject to revision every year. The Federal Republic of Germany admits imports of most commodities into Germany freely from India. For those commodities the imports of which are restricted, the Federal Republic of Germany has agreed to allot specific quotas for imports from India. Items for which such quotas were granted are cotton piecegoods, unbleached grey, coir mats and mattings, jute manufactures, miscellaneous items of textiles, leather tanned and finished and pineapple juice. The Federal Government has agreed to increase the quotas for imports of miscellaneous items of textiles and also to grant quotas for fresh items, such as twine, ropes, cordage and cable of jute and false jute, and canned fruits.

DHOLE & CO.
RINGWORM and ECZEMA OINTMENT
BARNAGORE · CALCUTTA

For offices and industrial establishments

Greater efficiency in cool working conditions

—with Carrier self-contained air conditioners



WHEREVER a *Carrier* self-contained air conditioner is installed, the staff begin working better than ever before. The cool, noise-free atmosphere leads to greater efficiency; even a small increase in efficiency will pay for the cost of the *Carrier* in a couple of years!

You can change the action of your *Carrier* to suit the weather, to get extra coolness on hot days, extra dryness on damp days!

Available in sizes varying from 3 tons to 15 tons

Works silently, cuts off noise
Your *Carrier* self-contained air conditioner works as quietly as a whisper. At the same time, since you shut windows and doors, it helps to cut off street noises, lets you work or relax in silence and comfort.

Circulates clean, filtered air
Your *Carrier* sucks in air in a steady stream, filters it, then spreads it gently and evenly. So you get an equally-cool temperature throughout — no dust, no unpleasant draughts!

Cools better at less cost
Specially-designed coils and filters make your *Carrier* more efficient, help it to cool better at lower cost.

Removes more moisture
Your self-contained *Carrier* not only lowers the temperature but removes moisture from the air — gallons of it! A new 'Humitrol' regulates the rate at which moisture is removed.

Remember — the Carrier self-contained air conditioner is remarkably compact, and takes up little floor place. The sale of these units in India is backed by Voltas' unique after-sale service and their engineers' unmatched experience in the line.

BOMBAY STATE CO-OPERATIVE BANK

DEPOSITS AND LOANS INCREASE

HAVING recognised the "failure" of co-operation during the last fifty years of its existence even in the limited sphere it is supposed to have functioned, and having been convinced that co-operative agency alone is the most appropriate instrument for bringing about smooth economic improvement in the countryside, the All-India Rural Credit Survey Committee recommended the reorganisation and reorientation of the co-operative movement on certain lines, in order to make it inherently strong and dynamic to fulfil the new and increasing responsibilities proposed to be cast upon it. The Planning Commission, and the Government of India, which have accepted the recommendations of the Survey Committee have, consequently, laid great emphasis on Co-operative Development for which an amount of no less than Rs. 47 crores has been earmarked in the Second Plan. What is, however, a welcome feature is the adaptability shown by the leading co-operators in India in accepting modifications in the ideology of co-operation, chiefly in respect of the voluntary principle and State partnership, in order to make the co-operative movement an ideal instrument for raising the standard of living of the masses through democratic methods. Viewed against the background of these rapid 'basic' changes that have been taking place in the whole co-operative sector, more especially in the Bombay State which has been a pioneer in that sphere, the activities of the Bombay State Co-operative Bank, the forty-fifth ordinary annual general meeting of which was held on 22nd September in Bombay under the chairmanship of Mr. R. G. Saraiya, one of the foremost co-operators of India, is of special significance. In the year ended 30th June 1956, the Bank continued to make steady progress in all the spheres of its activities, especially in those of deposits and loan operations, resulting in substantial improvement in net profits, despite the fact that a number of societies indebted to the bank were under liquidation and a number of bank's branches had been closed down under the reorganisation schemes.

Co-operation and Second Plan

Discussing the role of co-operation in the Second Plan in the course of the presidential address, Mr. R. G. Saraiya, who needs no introduction to our readers, rightly observed:

"The importance of the co-operative system of organisation has been emphasised by the Planning Commission in the Second Plan. But one fails to find an integral p'ace for it in the Community Development and National Extension Programmes, and in the policies of State Governments regarding rehabilitation programmes and aids to rural economy such as Tagavi advances. The tendency is to entrust the Community Development and National Extension Programmes to Government officials of the Revenue Department. It is felt that so long as these programmes have to depend upon such external assistance, the urge to development will stop as soon as the external stimulus is withdrawn. It is, therefore, necessary to accept the co-operative structure as an integral part of the Community Development and the National Extension Programmes. In the preparation of detailed programmes for the Second Five-year Plan the State Governments, I submit, should p'ace greater reliance on the village co-operatives for carrying out the Community Development and National Extension Programmes, instead of looking to a large number of *ad hoc*, non-statutory and non-elective bodies, which may have the effect of indirectly weakening the co-operative institutions. Primary co-operatives form the smallest but the basic unit of economic democracy. They can play a vital role and establish direct and effective contact between Government and the masses. They can help in mobilising national resources, promoting and undertaking production programmes and decentralising industrial development."

There is much force in what Mr. Saraiya has taken pains to emphasise so clearly. For the philosophical basis of Community Development is co-operation, and no other agency than the co-operative movement is more suited to fulfill the aims of Community Development. But, in the present circumstances when the movement is not sufficiently developed to shoulder responsibilities in these new lines, it is not at all advisable to entrust the movement with this responsible task. Nevertheless, it should be the aim of the Government to associate the co-operative movement with the Community Development and N.E.S. Programmes more and more, in order that the Government can withdraw completely from the picture without causing dislocation, leaving the task to the movement. Moreover, multiplicity of bodies for various purposes within the villages will lead to further factions and party politics and strike at the root of co-operative development. Again, it calls for large number of able literate persons in the villages, who are few and far between.

Reviewing the targets fixed for the Second Plan for short-, medium- and long-term credits and large-sized societies, Mr. Saraiya warned that the policy of creating large-sized credit societies should not be pursued mechanically, but should be adjusted in the light of prevailing local conditions. Where small-sized societies were working efficiently, he stressed, they should not be disturbed nor should help be denied to them.

State-participation

Alluding to the role of State-participation in the co-operative institutions, the Chairman of the Bank welcomed the establishment of the National Agricultural Credit (Long-term Operations) Fund for facilitating such co-operation. He, however, complained that there was a tendency on the part of many State Governments to regard themselves only as lenders and not as partners in the co-operative ventures. He averred that this tendency was against the spirit of the recommendations of the Survey Committee, as partnership by the State, accepted after a good deal of heart-searching by the co-operative movement, implies a partnership in losses as well as profits, responsibilities as well as rights. It is difficult to agree with Mr. Saraiya entirely on this point. Mr. Saraiya is right in so far as he means that the State's non-participation in the risks of the institutions, in addition to their participation in the share capital, would not give sufficient incentive for them to implement risky policies, and that, so far as the execution of such policies recommended by the State Governments are concerned —as in the case of financing the Weavers' and Industrial Co-operatives—the States should also share in the losses arising from such implementation. But it is possible to argue that the application of the principle, namely, State-participation in all the losses, irrespective of whether they arise from the adoption of the Government's policies or not, entails the danger of impairing the co-operative character of the institutions. For it is sound logic to say that, when the Government is called upon to bear the losses arising from the activities of those institutions in the share capital of which it has participated, the Government can also claim a greater share than otherwise in the management and functioning of those institutions. Where then do co-operatives stand? Will it not be a major step in the direction of State management of co-operatives?

The working of the Bombay State Co-operative Bank during the year under review reflected notable improvements in various directions. The share capital of the Bank has increased by Rs. 21,900 to Rs. 61.45 lakhs following the affiliation of new institutions, and additional shares allotted to co-operative banks. Of this share capital, the Bombay Government accounts for a sum of Rs. 26 lakhs. The Bank's total subscriptions to the central financing agencies have increased during the year by Rs. 4.75 lakhs to Rs. 17 lakhs. Its Sinking Fund for debentures, despite the allowances made for the redemption of 1946-56 series and for the transfer of an equivalent amount to the bad and doubtful debts reserve, stood at Rs. 3.09 lakhs as against Rs. 4.40 lakhs in the previous year. Another important feature was that an amount of Rs. 7.14 lakhs was written off the bad and doubtful debts reserve, as it was found that amounts due from a number of societies, which were in liquidation prior to 1946, and from some individuals, who were previously regarded as doubtful could not be recovered. Consequently, the bad and doubtful debts reserve at Rs. 11.25 lakhs reflected a moderate decline over the previous year when it was as much as Rs. 16 lakhs. The overall reserve position, at Rs. 56.63 lakhs, however, showed a decrease of Rs. 5.90 lakhs only over the year 1954-55.

Deposits Go Up

Deposits showed a notable improvement during the year under review. They increased by Rs. 206.59 lakhs, as against Rs. 181.27 lakhs in the previous year to Rs 1,285.97 lakhs, despite the closing of some of the branches. A part of the increased was attributable to the amounts deposited by the new co-operative sugar factories of their share amounts received from the Government. The deposits with approved banks, cash on hand, and gilt-edged securities were of the order of 63.6 per cent. of the deposit liability. The bank maintained adequate fluid resources throughout the year.

In the sphere of loan operations, again, a marked expansion was witnessed, though, during the year, ten branches had been closed and their outstandings transferred to the District Central Banks. The total outstanding loans and credits, excluding those with societies under liquidation, rose by Rs. 102.24 lakhs to Rs. 552.68 lakhs. Of this, agricultural loans accounted for Rs. 284.72 lakhs, while advances to non-agricultural societies were of the tune of Rs. 276.73 lakhs. Moreover, while the former increased by Rs. 12.04 lakhs, the latter rose by Rs. 102.60 lakhs during the year, the striking expansion in the latter case being due, mainly, to the advances given to two co-operative sugar factories. Further, a welcome improvement in the overdues position of the societies was witnessed as a result of better recoveries from the societies following more favourable prices for agricultural products during the year. The outstandings at the close of the year of medium-term loans were Rs. 58,000 higher at Rs. 4.70 lakhs. The Bank was continuing its efforts to obtain fund from the Government for meeting the increasing demands for these loans.

Yet another significant development in the sphere of non-agricultural finance was the scheme drawn up by the Government for financing Weavers' and Industrial Co-operatives. The scheme provided for making available to these societies finance at concessional rates of interest in the form of (i) contribution to share capital (ii) provision of working capital, and (iii) provision of marketing finance, through the Central Financing Agencies. The Government has also agreed to share in the losses arising from such financing. Under this scheme, the Bank received during the year an amount of Rs. 6.78 lakhs from the Government.

Sugar Factories

The year also saw a notable advance in the establishment of co-operative sugar factories. In all, fourteen sugar factories, six of which are expected to start production in January 1957, have been registered, while six others are expected to start production in the 1957-58 season. The role of the State Co-operative Bank in promoting these factories was very impressive. It has provided the working capital for the sugar processing factories in addition to crop finance required by the members. Besides, it has also been approached to arrange for letters of credit to enable the factories to import machinery. It has also provided interim financial accommodation for customs and other charges for releasing the machinery when the shipments arrived. The amounts so guaranteed aggregated Rs. 150.12 lakhs. Since all these activities have been undertaken in consultation with the Ministers' Committee for Co-operative Sugar Factories, Mr. Saraiya hoped that the bank would not be let down if any difficulties arose in connection with those activities. Indeed, he urged that the Government should increase its participation, in view of the increasing costs of installing the factories.

Following the acceptance by the Bank of the policy of encouraging district central financing agencies, a number of branches of the Bank had been closed and their business turned over to the new agencies formed, during the year under review. Of the 12 branches at the close of the year, 29 branches worked at a deficit. The Chairman pointed out that the Bank, however, was not willing to close down uneconomic branches, in view of the general policy of providing banking facilities in the rural areas. The question has, therefore, been referred to the Government for its consideration.

Other major developments during the year include an expansion of Rs. 99.45 lakhs to Rs. 605.45 lakhs in the portfolio of 'Investments in Government Securities.' Owing to improvement in their market value, the difference between the book value and the market value was only Rs. 4.03 lakhs. Financial accommodation from the Reserve Bank of India under section 17(4)(a) was of the order of Rs. 170 lakhs for financing seasonal agricultural operations and marketing of crops. Further, drawings from the Reserve Bank under sections 17(4)(a) and 17(4)(c) were Rs. 477.42 lakhs. During the year again, interest received increased by Rs. 6.15 lakhs while interest paid rose by Rs. 4.72 lakhs. Cost of management, however, declined by Rs. 0.4 lakhs to Rs. 19.7 lakhs, mainly due to closing of some of the branches.

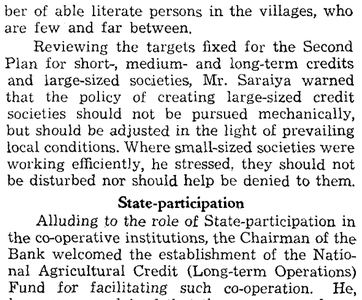
As a result of the favourable deposits, advances, and interest rates, the net profits of the Bank rose by Rs. 2.32 lakhs to Rs. 6,32,649. The sum available for distribution, including that brought forward, was Rs. 6,32,649. Consequently, a dividend of 5 per cent. could be comfortably declared, after carrying a sum of Rs. 67,832 to the statutory reserve fund, which was thus raised to Rs. 18.60 lakhs. It was also decided to utilise a sum of Rs. 50,000 to augment the agricultural finance reserve and a further sum of Rs. 35,000 to the staff gratuity reserve.

In his speech, Mr. Saraiya made an interesting observation on the role of marketing co-operatives also. He observed:

"We have been emphasising the urgency of creating efficient marketing organisations as a prerequisite for the planned development and progress of co-operative credit and agricultural production. In our experience rapid progress has been made in areas where efficient marketing arrangements are available. On the other hand, progress of recoveries is hampered in areas where such marketing organisations are lacking or are inefficient. An integrated scheme of economic development would be incomplete without efficient supply, marketing and processing co-operatives. Co-operative marketing can play an important role in the proper regulation of supply, prices and credit. A programme of price incentive, crop planning and rural development can be worked successfully only if a network of efficient marketing and warehousing organisations is established all over the country. It is necessary that certain standards of financial structure and managerial personnel, and certain patterns of co-operative marketing organisations at different levels, are laid down, and an apex institution to co-ordinate their marketing activities and to provide marketing intelligence and guidance is created without delay. Judged by the unsuccessful efforts in the past, it is obvious that the problems are complex and require a detailed scrutiny and a comprehensive solution. I, therefore, renew my request to the Government of Bombay to take urgent steps towards finding a solution to this problem."

Personnel

The success of the integrated scheme of rural credit recommended by the Survey Committee, depends in the ultimate analysis in no small measure on the availability of trained and efficient supervisory and managerial personnel. Inadequate steps in the direction of turning out trained supervisors can prove to be a serious set-back to the effective implementation of the scheme, and Mr. Saraiya was, therefore, right in emphasising this important aspect when he referred to the question of trained personnel. The co-operative training centres numbering eleven, already established in various parts of India, and the training college at Poona for managerial personnel, it is to be hoped, would be able to cope with the increasing demands for trained personnel. Co-operative field has not yet become an attractive one for very intelligent and efficient young men even if they do possess some measure of missionary zeal, which is so essential for the success of the Co-operative Movement. The chief reason for this state of affairs is that zeal alone is not the deciding factor. More and more of such people are drawn towards administrative jobs because of the better opportunities thrown open to them. In addition to the training facilities, if better prospects are also thrown open to the young men—which is very necessary because of the importance attached to the co-operative development—it should go a long way towards attracting the right type of young men to so important a sector as co-operation.



A good Sign for Exporters and Importers

Lloyds Bank offers a full overseas service through the vast network of over 1700 branches in the United Kingdom and Agents throughout the World.

Let LLOYDS BANK look after *your* interests

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

LB 885

LLOYDS BANK TO REORGANISE CAPITAL

The directors of the Lloyds Bank Ltd. sprang a surprise last week on the London Stock Exchange by announcing two important proposals. The one is to reorganise the existing capital structure of the Bank and the other is to increase in the final dividend for the current year. The reorganisation of capital, which is subject to the approval of the stock and shareholders of the Bank, has been decided upon, because the present share capital is not, in the Directors' opinion, in the most satisfactory form. At present, the Bank's capital is made up of two classes of shares, 'A' shares of £5 each, on which only £1-5 have been paid up, and 'B' stock of £1 each fully paid-up. The reorganisation is to be effected by cancelling the uncalled liability on the 'A' shares and by merging the 'B' stock with the 'A' shares in their converted form into one class of equity capital.

The authorised capital of the Bank is £74 million, made up of 14.5 million 'A' shares of £5 each and 1.5 million 'B' shares of £1 each. The paid-up capital is £19,403,495 made up of 14,372,956 'A' shares of £5 each, £1-5 paid-up per share, 1,437,296 'B' shares, converted into stock of £1 each and 4 'B' shares of £1 each fully paid-up. The 4 'B' shares of £1 each fully paid-up. The 4 'B' shares have been issued since the close of the last accounting year, in order to facilitate the proposed reorganisation. There is an uncalled liability amounting to £53,898,585 on the issued 'A' shares. This uncalled liability is only a reserve liability and can be called up only in the event of the winding-up of the Bank and that, too, only if necessary for meeting the liabilities of the Bank. The Directors consider that, under present conditions, such an eventuality can be disregarded. They are satisfied that the elimination of the reserve liability will, in no way, impair the Bank's credit and standing.

The reorganisation will, if approved by the shareholders (at their meeting convened for 19th October 1956), be carried out thus: (1) the uncalled liability of £3 15s. per share on the issued 'A' shares is to be cancelled, thus reducing each share to a nominal amount of £1-5 fully paid; (2) the 14,372,956 'A' shares of £1-5 will be first sub-divided and then consolidated into 17,966,195 shares of £1 each; (3) the face value of each 'B' stock, namely, £1 each, will be reduced to a nominal amount of 8s. 4d.; (4) the £598,875 of 'B' stock resulting from the above step will be converted into 598,875 'B' shares of £1 each; (5) all the rights, privileges and restrictions attached to the 'A' and 'B' shares are to be cancelled and the two classes of shares are to be amalgamated into one class of 18,565,070 shares of £1 each fully paid; (6) the unissued 'A' and 'B' shares will be cancelled, but the authorised capital will be restored to its present level of £74 million by the creation of the requisite number of further shares of £1 each. The sum of £838,425 accruing from the reduction in the face value of each 'B' stock from £1 to 8s. 4d. will be credited to the capital reserve.

The advantage of the scheme to the 'A' shareholders is that the market value of their holdings will go up. As it is, these shares are quoted at a price lower than they would otherwise command, on account of the existence of the reserve liability, although the chances of this liability being called up are almost nil. Secondly, many investors, particularly trusts, who are unwilling or are precluded from holding partly paid-up shares will invest their funds in the fully paid shares after the reorganisation. As regards 'B' stock, the dividend on them is now restricted to 5 per cent. while the 'A' shareholders have been receiving 12 per cent. per annum. The holders of 'B' stock do not enjoy priority in respect of dividends or return of capital. With the reorganisation of capital on the lines mentioned above, this discrimination between the two classes of shares will be eliminated.

The Directors propose to recommend a final dividend of 7 per cent. (actual) on the reorganised capital for the year ending 31st December 1956. An interim dividend of 6 per cent. (actual) on the existing 'A' shares and 2½ per cent. (actual) on the 'B' stock has already been paid for the year. If the capital reorganisation becomes effective, the return on the 'B' stock will increase from 5 per cent. to £5-8-4 per cent. Even if the scheme falls through, the Directors propose to recommend a final dividend of 7 per cent. (actual) on the existing 'A' shares for the current year, raising the total distribution for the year to 13 per cent. It may be noted here that a 13 per cent. dividend falls short of the 16-2/3 per cent. which the Lloyds shareholders received in 1929; their dividend was cut to 12 per cent. in 1932.

If the scheme is approved by the shareholders and sanctioned by the Court, the Directors propose to transfer from the contingency account to the general reserve a sum of £1,161,575, which together with the capital reserve of £838,425 created by the reduction in the face value of the 'B' stock, will bring the total of the Bank's published reserves to £17 million, as against an issued capital in the new form, of £18.6 million in fully paid shares of £1 each.

TREND OF MILL CLOTH OUTPUT UPWARD

EXPORTS, HOWEVER, RECEDE

THE series of measures recently taken by the Central Government to meet the rising trend of cloth prices have set both the millowners and the traders thinking as to what further things are in store for the industry. There was first the upward revision in excise duty on cloth, followed, in quick succession, by the fixation of the so-called "fair" prices for cloth, extension of credit control to loans given to cloth traders, and limitation on the volume of cloth stocks held by mills and wholesale dealers. Will these measures achieve the objective in view, namely, smooth and regular flow of cloth at a reasonable price from mills to consumers? The answer is an emphatic "no." The aforesaid measures constitute only a shock treatment and not an effective solution. For the supply of cloth available in the country is not large enough to meet the growing domestic demand and exports. Surely, the remedy for the current disquieting cotton textile situation lies in augmenting mill cloth production.

Be that as it may, it must be said to the credit of the mills that they have spared no efforts to maintain a high level of textile production, notwithstanding the restrictive textile policy of the Government. The aggregate quantity of cloth produced during the first eight months of 1956 was 3.498 million yards, which represents a rise of over 4.3 per cent. as compared with 3,353 million yards produced in the corresponding period of 1955. The substantial rise in mill cloth output follows an improvement in yarn production. During the eight months ended August 1956, as much as 1,076 million lbs. of yarn came off the spindles, as against 1,062 million lbs. a year before.

The trend of cloth and yarn output in the mills during January-August 1956, as compared with that in the same period of 1955, is indicated below:

(Cloth in million yards; yarn in million lbs.)

	Cloth		Yarn	
	1956	1955	1956	1955
January	414	430	130	132
February	428	399	133	124
March	416	422	131	133
April	425	419	131	131
May	446	407	135	129
June	447	415	137	132
July	478	446	145	144
August	445	416	134	137
Total ..	3,498	3,353	1,076	1,062

In distinct contrast to the encouraging performance on the production front, exports of cotton textiles from India have suffered a severe setback. The total shipments of mill-made piecegoods in the first eight months of 1956 are estimated at not more than 483.0 million yards, which compare unfavourably with 574.9 million yards exported in the same period of the previous year. On this basis, the aggregate exports for the whole of 1956 may be put at about 725 million yards, as against 836 million yards in 1955. This estimate falls considerably short—as much as 275 million yards—of the export target of 1,000 million yards.

The downward trend in cotton cloth exports has been in keeping with the world-wide recession in cotton textile trade, thanks to a number of factors. Mention, for instance, may be made of the readjustment of trade in the various markets, suspension of open general licence by several countries, increased world trade in rayon and other synthetic fibre materials, and the manufacture of cloth for domestic consumption by some of the cotton-growing countries which were large importers of Indian cotton textiles. The keen competition from Japan, China and Soviet Russia in some of India's traditional markets in Asia and Africa has also adversely affected cloth exports from India. In addition to these factors, mention must be made of increased demand for cloth in the country and higher prices ruling in the internal market. It is the last-mentioned two factors and the need for filling the gap in the country's foreign exchange budget that impart urgency to the necessity for giving all encouragement for the mill-sector of the cotton textile industry to expand its productive capacity by installing latest up-to-date plant and machinery.

The following table shows the different varieties of mill cloth exported from India during the January-August periods of 1955 and 1956:

(In million yards)

	Total	Coarse	Medium	Fine	Superfine
1955					
January	63.9	9.5	51.2	2.3	0.9
February	69.5	7.8	59.0	1.4	1.3
March	72.8	14.6	53.0	2.8	2.4
April	76.2	16.4	51.8	4.8	3.2
May	71.2	16.0	48.4	4.7	2.1
June	77.2	19.2	52.1	3.9	2.0
July	77.5	17.2	54.5	4.0	1.8
August	66.6	15.1	46.7	3.0	1.8
Total ..	574.9	115.8	416.7	26.9	15.5
1956					
January	51.9	12.7	37.8	0.6	0.8
February	68.7	15.4	50.0	2.1	1.2
March	60.7	14.3	43.5	1.5	1.4
April	59.5	15.1	41.6	1.0	1.8
May	70.4	19.4	47.4	1.8	1.8
June	63.8	16.2	43.7	2.0	1.9
July	58.0	14.1	39.7	2.5	1.7
August	50.0	14.1	33.3	1.6	1.0
Total ..	483.0	121.3	337.0	13.1	11.6

It will be seen from the above figures that the decline in mill cloth exports during the first eight months of 1956, as compared with those in the previous year was shared by all varieties, excepting coarse counts. The fall in the case of medium variety was particularly great, being of the order of 79.7 million yards. Shipments of fine and superfine counts were lower by 13.8 million yards and 3.9 million yards, respectively. Coarse varieties, however, registered a rise in exports, although the rise was negligible, being 5.8 million yards.

HANDBOOK ON INDIAN COTTON INDUSTRY

This is a valuable handbook published by the Cotton Textiles Export Promotion Council, Cecil Court, Apollo Bunder, Bombay, 1 (Price: Rs. 2-8). The *Handbook* contains, besides a brief but interesting review of the latest trends in the Indian cotton mill industry and trade, complete lists of composite mills, spinning mills, textile processors and the different varieties of cloth produced by mills. It also gives the names of manufacturers of hosiery, tapes-webbings, tents and thread. At the end of the publication are given statistics pertaining to production and exports in recent years. The *Handbook* will, there is no doubt, prove as a useful directory which will assist the overseas importers, as well as exporters in India, in knowing the manufacturers of the particular types of textiles required by them.

HANDLOOM INDUSTRY

The Reserve Bank of India has agreed to provide funds to the co-operative banking institutions, in order to enable the latter to extend credit facilities for working capital to the handloom industry. This was announced by the Union Ministry of Commerce and Consumer Industries last week. It will be recalled that working capital was hitherto provided as loans to weavers' co-operative societies out of the Handloom Cess Fund; upto the end of March 1956, an amount of more than Rs. 5.6 crores had been sanctioned. It was, however, realised that credit would have to come from the normal co-operative banking institutions, since, with the increased production of handloom cloth under the second Five-year Plan, the need for such working capital would also rise very considerably.

The Reserve Bank has agreed to make available credit at a reduced rate of 2 per cent., which, together with the usual margins for the apex and district co-operative banks, will work out to 5 per cent. for the ultimate borrower. But the weavers' co-operative societies are to be enabled to get loans at only 3 per cent. The difference between the two rates will be given as a subsidy by the Central Government from the Cess Fund. With a view to ensuring sufficient credit, the Government has also agreed to bear a 50 per cent. share of individual losses arising from non-recovery of any such loan, subject to the prescribed overall ceiling. The remaining 50 per cent. of such losses would be borne by the State Governments and the Co-operative Banks concerned. The Government has also agreed to share with the State Government the cost of the additional staff that would be required to ensure adequate supervision and audit of accounts of the co-operative societies, and of the lending operations of the co-operative banks.

It is intended that these arrangements should come into force from 1st April 1957. Loans will continue to be disbursed from the Cess Fund as hitherto until that date and, where arrangements cannot be completed within this time, loans will also continue to be given from the Cess Fund till the end of September 1957.

SILK IN MYSORE

The decision of the Government of Mysore to acquire six sericulture factories run and managed by the Mysore Silk Filatures Ltd. was announced by Mr. H. Siddaveerappa, the State's Home Minister, in the Legislative Council on 26th September last. The factory at Siddlaghatta is, however, left out, because the Government does not, it is said, want to be expropriatory in its dealings. The decision to nationalise the sericulture industry is based on the following considerations:

The industry has a vital bearing on the economic development and well-being of the people. Nearly 10 per cent. of the total population of the State depends on sericulture in some way or other for their existence. With the formation of the new enlarged State of Mysore, Kollegal, now forming part of Madras State, will be attached to Mysore and, with the existing sericultural areas in Mysore and Kollegal, the new State will have about 80 to 85 per cent. of the silk producing area in the whole of India. The Government has come to the conclusion that, unless and until this vital industry is taken over and renovated, it will be in great jeopardy of almost being annihilated. It is, therefore, determined to place the industry on a stable footing.

Justifying the Government's decision, Mr. Siddaveerappa, however, assured that the purpose did not end with the mere taking over; the Government had to do quite a lot. In this connection, he observed: "We are lagging behind in respect of technical know-how. We have to purchase modernised machinery. We have to spend not less than Rs. 20 to Rs. 25 lakhs almost immediately and the Government do not wish to stint any amount in this regard. I am glad to say that the Union Production Minister has promised to give us any help, in order to make this industry a successful one." Alluding to the Spun Silk Mills at Chennapatna (now managed by a private limited company), the Minister said that it was not working well; the factory had to be placed on a sound footing. He personally felt that, in the larger interests of the State, the concern should be entrusted to the Government.

An agreement envisaging an increase in wages for the mill workers of Coimbatore has been reached between the South Indian Millowners' Association and the workers' representatives. Under the agreement, the basic wage of an ordinary unskilled worker has been raised from Rs. 26 to Rs. 30-1 per month. Semi-skilled workers such as spinners will get Rs. 37-6, as against Rs. 27-10 previously, plus a maximum of Rs. 8-2 as production bonus. The agreement covers about 40,000 workers employed in the 41 textile mills of Coimbatore area, the increase in wages amounting to Rs. 50 lakhs per annum. It is valid for a period of five years, with option to the parties to revise it after the expiry of three years with notice as provided.

A new machine for twisting kapron thread has been erected in the Marx factory at Leningrad. The spindles are set horizontally, instead of in the conventional vertical way. The advantage claimed for the machine is the saving of space. One tier of spindles, it is said, occupies 2½ times less space than in conventional twisting units, thereby making it possible to double the number of spindles in the units of the same size. The spindle is stated to be capable of considerably higher speed of as much as 18,000-20,000 revolutions per minute, that is, double the speed of the functioning equipment. Besides, the weight of the machine has been reduced from 8 to 6 tons.

STRUCTURAL CHANGES IN COTTON MILL INDUSTRY

IMPORTS OF FINISHED GOODS MOVE UP

From Our Special Correspondent

MANCHESTER, 25*th September*

MANCHESTER LETTER

CONTRARY to some anticipations, the spate of mill deals, which was an important factor in the industry in Lancashire in 1955, has not continued on the same scale this year. Certain transactions have taken place and a number of firms have decided to withdraw from the trade altogether rather than continue the unequal struggle, but the movement has not been as pronounced as had been predicted. At the moment, seasonal influences may be holding up further developments of this kind but it would not be surprising if new mergers and financial arrangements were completed in the months that lie ahead.

Negotiations are known to have been proceeding in some cases and the possibility of terms being arranged is far from remote. Despite the slack state of trade the tendency among several of the bigger groups is to strengthen their position by the absorption of smaller units. Those which possess suitable mill buildings and machinery likely to fit in with the general organisation of the respective combines become an attractive proposition.

It is not surprising to learn that the adverse circumstances of recent years are causing much thought in the board rooms. Individual firms are having to review the future and their prospects with great care and, in a number of cases, an offer from a prospective buyer would be seriously considered.

Structurally the industry has lately tended to move in a vertical direction but in a different manner to the similar development which occurred soon after the war. Then it was noticeable that companies engaged in the later processing stages and in merchanting were anxious to secure productive capacity to ensure their supplies in a time of relative scarcity. Now the scene has altered in that the primary producers, chiefly in spinning, seem to believe that they can weather the storm more satisfactorily by launching into a wider sphere of activities.

Undiminished Flow

Although the outcry over foreign cloth imports has diminished there has been no corresponding reduction in the quantity of goods arriving in this country. Some slight adjustments have occurred in the style of textile fabrics being purchased abroad but the broad volume of imports has altered little compared with a year ago. To the end of August, total arrivals of cotton and rayon cloth amounted to 262,508,000 square yards, as against 265,390,000 yards in the same period of 1955.

Whereas some slackening has taken place in the imports of cotton grey cloth, from 207,226,000 yards to 185,955,000 yards, the amount of finished goods and ravon cloth has noticeably increased. Arrivals of finished cotton goods have risen from 19,934,000 yards to 24,259,000 yards and rayon fabric imported has gone up from 38,230,000 yards to 52,294,000 yards.

At the same time, exports of cotton and rayon goods from this country have been steadily declining so that the proportion of imports to exports has crept up from around 57 per cent. a year ago to 65 per cent. Total shipments to the end of August were 400,862,000 square yards, as against 462,206,000 yards a year ago.

Although the main source of cotton grey cloth supplies continues to be India with 94,404,000 yards, the quantity involved has dropped by 6,500,000 yards, but Hong Kong mills have sent an extra 1,000,000 yards at 36,526,000 square yards. Japan's shipments, however, have dwindled to less than half at 24,480,000 yards, as against 52,790,000 yards.

In the meantime, Lancashire exporters of cotton goods are still treading the downward path without signs of encouragement for the future. To the end of August, shipments earned £58,795,032, as against £66,715,457 a year ago and in all directions further ground was lost. Cloth exports during the period were 315,376,000 square yards, a fall of nearly 64,000,000 yards on last year. Yarn shipments, although still around the 1955 level at 23,655,609 lbs. were again unsatisfactory in August, the monthly total of 2,425,739 lbs. being the lowest since June, 1952, except when the dock strike intervened last year.

Protection Call

Mr. A. N. de Thier, former Chairman of Manchester's merchanting firm of Balstone, Cooke & Rayonese Ltd., told the annual meeting that with 190 mills shut down because of imports of cheap Asiatic cloth every textile board in Lancashire faced a hard task. Speaking from the floor of the meeting, he said: "Unless the Government takes some steps to protect Lancashire it is going to be a puzzle how to carry on."

Mr. E. G. Turner, the Chairman, appointed when Balstone, Cooke ran into difficulties, said active steps to reconstruct the capital were being taken and in the near future it was hoped to call an extraordinary meeting to make recommendations.

Leaders of Lancashire's 245,000 cotton workers have decided to press ahead with a claim for four weeks' paid holiday a year. "The claim will be presented to the employers when a suitable opportunity arises," said Mr. William Roberts. President, after a meeting of the Legislative Council of the United Textile Factory Workers' Association.

He said it was impossible to suggest when the claim would be put forward. It was a question of priorities. There were other matters which would have to be dealt with first.

A resolution calling on the legislative council to seek a month's holiday a year for cotton workers was passed at the annual conference of the United Textile Factory Workers' Association in May.

It could be a year or more before the issue is raised with the millowners. One resolution carried at the Association's 1955 conference has still to be acted upon.

Profit-sharing

The directors of Tootal Ltd., the Manchester textile group with mills at Bolton, are prepared to consider an amendment to the Company's profit-sharing scheme to give the employees a chance to obtain a bonus even in years when earnings are low. This was stated by the Chairman, Mr. Alan V. Symons, at the annual meeting in Manchester, when a shareholder pointed out that the most disappointing feature of the year's results was the fact that the operatives had received no bonus.

The profit-sharing scheme, which has been in operation for 37 years, is linked to the payment of an ordinary dividend to shareholders. Only on two previous occasions—during the 1920's—has a bonus been missed. At the moment so long as the directors recommend an ordinary dividend of more than 7½ per cent. a share-out of profits automatically follows. This year the dividend was reduced from 10 per cent. to 7½ per cent.

At the meeting it was suggested that the rate at which the bonus became payable should be lowered to 5 per cent. Mr. Symons said it would be a very complicated arrangement to alter the scheme, but that the Board would give the proposal very careful consideration.

Slight Labour Gain

Lancashire cotton spinning mills recorded their second biggest gain of full-time workers this year in the week ended 1st September. The Cotton Board announced in Manchester that the mills had recruited 87 more full-time spinning operatives than they lost. The only time this figure has been bettered was during a six-week run of manpower gains at the beginning of the year when the spinning section recorded a gain of 174 workers in the second week of January.

The figures show that although the gain in the week ended 1st September was partly offset by the loss of 40 part-time operatives, the spinning labour force has now increased to 97,080.

Of this number 88,200 were at work in the week under review when output of cotton, rayon and mixture yarn totalled 16,960,000 lbs. This was 60,000 lbs. more than in the corresponding week of 1955 and 4,920,000 lbs. more than in the previous week when holidays in four spinning areas curtailed production.—*All Rights Reserved.*

Indian textiles are reported to be losing ground in the New Zealand market due to keen competition from other countries. Last year cloth imports into New Zealand from India were valued at £505,104 as compared with £800,658 in 1954.

The drop in towel exports from India was one of the principal reasons for the general decline in textile exports to that country. Furnishing fabrics and household fabrics sold less last year than in 1954.

Besides Japan and Czechoslovakia, high quality furnishing fabrics from Belgium and Switzerland are making considerable headway in the New Zealand market. Hong Kong also figures in imports of textiles into that country.

SUPPLY POSITION OF EXTRA LONG-STAPLE COTTON

FUTURE PROSPECTS ANALYSED

IT is hardly surprising that figures relating to aggregate free world stocks of cotton tend to obscure the important fact that the supply position of long-staple cotton in the current season is none-too-happy. Surveying the position in regard to the supply of this variety, the International Cotton Advisory Committee, Washington, observes that, despite a continuing disequilibrium between free world production and consumption in recent years, the cotton surplus situation in respect of certain grades and staples is by no means as acute as a mere reference to aggregate statistics might suggest.

The chief producers of extra long-staple cotton, by which is meant cotton stapling 1⅛" or more, in the free world are Egypt, Sudan, Peru and the United States. Extra long-staple cotton is no doubt grown in several other countries like West Indies and Aden, but their aggregate production, though expanding, represents only a small fraction of the free world total. An analysis of the supply of this type of cotton in the last three seasons in these countries shows that, while total free world production of cotton has been on the increase, production of extra long-staple cotton has remained quite constant. At the same time, exports of these staples (and presumably domestic consumption, too, have exceeded current production and the deficiency has been made up by drawing on stocks built up as a result of an exceptionally large crop in Egypt in 1952-53. At the end of that season, stocks in Egypt alone amounted to nearly half a million bales. Stocks in the main exporting countries, namely, Egypt, Sudan, Peru and the United States, aggregated 700,000 bales. As against this, on 1st August 1956, aggregate stocks of extra long-staple cotton were only 395,000 bales.

In the last three seasons, Egypt's exports were running at a rate higher than the annual rate of production. This has resulted in considerable reduction in stocks and, as on 1st August 1956, it is estimated to have been as low as 100,000 bales. Stocks in Sudan have also fallen to the lowest level for several seasons. Stocks in these two African countries and Peru now amount to only 285,000 bales, as compared with 685,000 bales three years ago. In striking contrast to this, stocks of extra long-staple cotton in the Untied States, excluding those in the defence stock pile, have risen from 33,000 bales in 1953 to 110,000 bales at the end of July 1956. In the present conditions of supply of extra long-staple cotton, this constitutes a useful increment to the free world supply of these cottons.

The following table gives an idea of the supply and distribution of extra long-staple cotton for the period 1952-53 to 1955-56.

(In 1,000 bales)

	1952-53	1953-54	1954-55	1955-56*
Stocks, August 1:				
Egypt	274	485	225	195
Sudan	75	185	175	248
Peru	10	15	15	15
United States	10	33	103	138
Total ..	369	718	518	596
Production:				
Egypt	925	507	531	552
Sudan	335	348	335	392
Peru	55	46	79	77
United States	94	65	41	43
Total ..	1,409	963	986	1,064
Supply:				
Egypt	1,199	992	756	747
Sudan	410	530	510	640
Peru	65	61	94	92
United States	104	97	144	181
Total ..	1,778	1,680	1,504	1,660
Consumption plus exports:				
Egypt	707	762	560	635
Sudan	220	342	262	480
Peru	50	45	75	75
United States	11	6	9	65
Total ..	988	1,155	906	1,255
Stocks, (July 31):				
Egypt	485	225	195	110
Sudan	185	175	248	160
Peru	15	15	15	15
United States	33	103	138	110
Total ..	718	518	596	395

* Estimate.

Another noteworthy feature is the significant change in the pattern of production of extra long-staples. Although Egypt continues to be the single largest producer of this cotton, its relative importance has declined considerably in the post-war years. Before the war, Egypt alone accounted for about 70 per cent. of the total free world supply, but, in the last three seasons Egypt's share has fallen to a little more than half the total producion. This has been due, mainly, to official control of acreage; but reduced yields have also been a contributing factor.

Production trends elsewhere is towards higher output, especially in Sudan and Peru, where the respective Governments have been actively engaged in the promotion of cotton growing. Production in Sudan is approaching double the pre-war level, while in Peru, irrigation developments have made possible an annual Pima/Karnak crop of 70,000 bales. Production in the United States, as is well known, has been restricted in recent times, but, even so, it exceeds double the pre-war figure.

Prices

In contrast to the downward trend in American-type cottons, prices of Egyptian-types have tended to harden. This is particularly true of extra long-staples and reflects the more balanced relationship between supply and demand. The market has been characterised by marked fluctuations during the season, prices rising steeply in March to May and then receding towards the end of season. Extra long-staple prices are, however, very much higher than a year ago. The following table gives the price trend of a few types of long-staple cotton during the season just ended:

Liverpool Spot Quotations

(Pence per lb.)

Monthly average	Egyptian Karnak F.G.	Sudan Sakels G5S	Peruvian Pima No. 1
1955: August	50.25	42.31	41.55
November	48.08	42.84	..
1956: February	53.25	44.38	42.50
May	74.35	54.50	52.75
June	66.30	53.94	54.50

Prospects

As regards production prospects for the 1956-57 season, the Committee observes that they are primarily dependent on what happens in Egypt. Acreage devoted to the Karnak and Menoufi varieties during the present season is estimated to have declined by 9 per cent. as compared with the last season. On the other hand, the prospects are for a noticeable improvement in yield which is likely to offset to a greater or less extent the reduction in acreage. Beyond this season, the production outlook here will depend on whether or not control of cotton acreage is continued, and much the same is true in the United States.

In Sudan and Peru, production increases are more long-term in nature and opportunities for an increase in acreage are more limited. Over a period of years, a sizable expansion of cotton acreage is planned in the Sudan. There is plenty of suitable land and no shortage of labour, and acreage could be easily doubled. But there are some limiting factors, namely, the availability of irrigation water and the level of cotton prices. Therefore, unless there is a significant increase in Egypt and to a lesser extent in the United States, it is doubtful if there will be any accelerated upward trend in production of extra long-staples in the foreseeable future.

In view of the much lower carry over on 1st August 1956, the total supply of these cottons during the present season is likely to be under last season, although, from the export viewpoint, this may be mitigated to some extent by the re-entry of the Untied States into the export market.

From the demand side, the unpredictable factor is what purchases will be made by the Communist countries, for any marked change in their activity can have a noticeable effect on the extra long-staple cotton situation. It may be, however, that, if the world demand holds up to last season's level, then the supply situation could become problematic.

The generally favourable outlook for cotton textile production during the present season may not apply with equal force in respect of the consumption of extra long-staples for one obvious reason. The increase in free world cotton consumption in recent years has originated in cotton producing countries, which, apart from the United States, consume little, or no extra long-staples. Therefore, any increase in aggregate free world consumption of cotton may not result in a proportionate increase in that of extra long-staples. Furthermore, extra long-staples are, perhaps, more vulnerable to competition from the synthetics. This must be qualified however, to the extent that these cottons are employed in mixed yarns and fabrics. In the U.S., for example, extra long-staples are often blended with the newer synthetics.

MORE AREA UNDER COTTON

The First All-India Estimate of Cotton for 1956-57 puts the current year's area at 14,602,000 acres, as against the adjusted first estimate of 13,175,000 acres for 1955-56, according to the Directorate of Economics and Statistics, Ministry of Food and Agriculture. This shows an increase of 1,427,000 acres or 10.8 per cent. in area during the current year as compared to last year.

Details according to (i) Trade descriptions and (ii) staple-length, of current and previous year's estimates are given below:—

(i) By Trade Descriptions

Variety	Area (thousand acres) 1956-57 (First Estimate)	1955-56 (Adjusted First Estimate)	Increase (+) or decrease (—) of Column (2) over Column (3)
(1)	(2)	(3)	(4)
Bengals	865	745	(+) 120
Americans	2,473	1,953	(+) 520
Jarilla (including Virnar)	2,925	2,610	(+) 315
Verum	323	294	(+) 29
H. 420 (including Malini M5-A)	432	466	(—) 34
Oomras	2,089	2,326	(—) 237
Hyderabad Gaorani ..	1,140	1,044	(+) 96
Malvi	1,316	1,234	(+) 82
Broach-Vijay	1,046	1,013	(+) 33
Surti-Suyog	482	482	..
Dholleras	958	566	(+) 392
Southerns	499	388	(+) 111
Comillas	54	54	..
Total ..	14,602	13,175	(+) 1,427

(ii) Staple-Lengths

Staple	Area (thousand acres) 1956-57 (First Estimate)	1955-56 (Adjusted First Estimate)	Increase (+) or decrease (—) of Column (2) over Column (3)
(1)	(2)	(3)	(4)
Long-staple	4,520	3,954	(+) 566
Medium-staple	6,855	5,919	(+) 936
Short-staple	3,227	3,302	(—) 75
Total ..	14,602	13,175	(+) 1,427

The overall increase in area during the current year has been shared by almost all the cotton growing States and is marked in Saurashtra, Bombay, Madhya Bharat, Hyderabad, Punjab, Rajasthan and Madhya Pradesh. The increase in area has been attributed to favourable weather conditions at the sowing time and to developmental schemes undertaken under the Cotton Extension Schemes. The increase has, however, been offset to a small extent by decreases reported by Bhopal, Bihar, Andhra and Tripura.

Among the different varieties of cotton, the increase in area has occurred mostly in Americans, Dholleras, Jarilla (including Virnar), Bengals and Southerns. A considerable decrease in acreage has, however, been reported in Oomras. As regards staple lengths major increases have been shared by medium- and long-staple varieties.

The information given in this Estimate relates generally to the period upto the end of July 1956. Till then, the condition of the crop was reported to be, on the whole, satisfactory. In parts of Bombay, however, the crop was reported to have been adversely affected by heavy and continuous rains and attack of insects and pests.

This Estimate does not cover the entire area sown to cotton crop during 1956-57. Past experience has shown that the area at the first estimate stage forms roughly 65 per cent. of the area under the crop finally reported.

WORLD DEMAND AND SUPPLY OF MANGANESE

PROSPECTS FOR EXPANDING PRODUCTION ANALYSED

By Dr. R. M. Agarwal

IT has not been found possible to replace manganese by other metals capable of imparting the same properties to steel. The action of manganese is a complex one; it acts not only as a de-oxydising and de-sulphurising agent on steel, but combines with the latter to give it properties of resistance and ductility specially suitable for working it hot (particularly in the case of low carbon steels). The discovery of these properties has made it possible to reduce considerably the cost price of steel and to increase output by reducing the number of rejects in rolling and consequent waste of metal.

The technical conditions governing the use of manganese vary considerably not only from one country to another, but also in different undertakings of a given country.

The use of manganese can be considered under two headings:

(*a*) in the form of ore for making pig iron,

(*b*) in the form of ferro-manganese and/or spiegel for steel-making.

In modern steel mills, manganese is added near the end of steel making process in the form of an iron-manganese alloy, ferro-manganese, obtained by smelting high-grade ore in a blast or electric furnace. As a cleansing agent, it reduces the amount of oxygen remaining in steel and combines readily with sulphur to form manganese sulphide, which is less harmful. As an alloying element, it greatly increases the strength and toughness of steel without serious loss of ductility. Higher additions produce the well-known high manganese steel in which the manganese content is about 15 per cent. thus making the steel austenitic.

In cast iron, as in steel, manganese acts effectively as a deoxidizer and cleansing agent. When added in sufficient amount to cast iron, it tends to increase its strength, hardness, depth of chill, and resistance to wear.

Refined Ferro-manganese

Refined ferro-manganese, both low-carbon and medium-carbon grades, is advantageously used by many steel mills, especially those producing quality steels. The use of these refined manganese alloys gives greater control over the carbon content of the metal produced. It also results in great saving in time in producing low carbon steels. These alloys are commonly used in making structural and engineering steels, deep-drawing steels, stainless and tool steels. The utility of ferro-manganese in these applications is as a corrective in more quickly attaining the desired manganese and carbon content of the finished steel. If during the melting process, the rate of carbon decrease is slow, as is frequently the case in making low carbon steels, the use of refined ferro-manganese permits materials reduction of the time the melt is held in the furnace.

Under peacetime conditions, about 80 per cent. of manganese consumption is for this collective function. Special high manganese steel, which has extra high strength and resistance to shock and wear, accounts for the remainder, except for a little that goes into dry cells and chemicals.

The manganese supply problem centres around highgrade ore for the production of ferro-manganese. Use of ores containing less than 35 per cent. of manganese sharply increases the cost of making ferro-manganese. Use of ferro-manganese of grade below 70 per cent. in turn requires changes in steel making operation that increases the cost of producing finished steel. Measures to reduce consumption of high grade manganese ores by greater use of low-grade ores are generally uneconomic and are justified only when imports of high-grade ore are not freely available. Present costs and peacetime availabilities do not favour the use of low-grade ores.

It requires about 13 pounds of manganese to make a ton of crude steel. The average grade of manganese ore currently consumed is about 46 per cent. but almost 16 per cent. of the manganese content of the ore is lost in converting the ore to ferro-manganese, the alloy actually used in steel making process.

Expected Demand

If steel production in the United States approaches 150 million tons by 1975, as projected, the corresponding manganese requirement under current practices, will be about 2.5 million tons of ore of the grade now being used (46 per cent. average). If allowance is made for some increase in the production of high-manganese steels, 2.7 million tons may be required.

In 1950, free world steel producers outside the United States, with a steel output of 70 million ingot tons, consumed about 1.4 million tons of metallurgical-grade ore. Their manganese ore demand, expected to increase directly with steel production, will by 1975 be about 2.3 million tons as given below:

Free World Steel Production and Estimated Manganese Consumption in 1950 with Estimates for 1975

(Million short tons)

—	1950		1975	
	United States	Rest of the Free World	United States	Rest of the Free World
Steel production	100.00	70.00	150.00	140.00
Manganese ore requirement (including non-steel making uses)	1.80	1.40	2.70	2.30

The supply of manganese continues to cause some concern. Under the pressure of economic condition and owing to high price of manganese ore, special attention is being given to conservation of manganese by all principal users of this material, recovery of manganese slag, economy in use, search for substitute materials, use of low grade ores, and development of new mines. These measures have recently been given much consideration, because it is felt that increasing industrialisation in such countries as India and South Africa may force those countries to retain a larger part of their production for their own use.

The recovery of manganese from basic open-hearth slags could, if the process were developed commercially, be of revolutionary significance. If all the available raw materials were utilised, it would be possible to recover upto one half of present requirements of manganese. The cost of producing ferro-manganese by this process may be comparable with the present cost of producing it from imported ores.

Over 90 per cent. of the manganese ore consumed in the United States is imported; domestic supplies consist largely of very high grade materials derived from Montana copper-zinc-lead deposits supplemented by materials from sundry small mines and by-product operations.

Supply Position

The free world's supply of manganese now comes mainly from India and Africa. Indian output has gone largely to the United States, while North African output is absorbed by the European steel producing countries. The output from the Gold Coast and the Union of South Africa is divided between Europe and the United States. Somewhat over 10 per cent. of the United States' imports comes from Brazil and Cuba.

1950 World Production of Manganese Ore by Countries

Country	Thousand short tons	Per cent. of total
U.S.S.R.	1,500	32
Union of South Africa ..	717	15
Gold Coast (Exports) ..	645	14
India (Exports)	616	13
French Morocco	260	6
Brazil	150	3
Other countries	812	17
World Total ..	4,700	100

1950 World Production and Consumption of Manganese Ore by Regions

(Thousand short tons)

Region	Production	Apparent consumption
United States and Canada	111	1,882
Caribbean	101	14
South America	175	13
Western Europe	60	1,094
North Africa and Middle East ..	417	1
Central and South Africa ..	1,387	40
Free Asia (except Middle East)	784	210
Oceania	15	28
Soviet Sphere	1,650	1,650

Output from each of these sources has fluctuated considerably during the past 10 years. The Gold Coast has been the most stable producer, with present output just above the 1945-49 average and about 40 per cent. above the 1939-44 average. India's output rose sharply during the Second World War but declined 40 per cent. during the post-war period, until the political situation was stabilised. Recent expansion in French Morocco and the Union of South Africa has been vigorous, the 1950 output being two to three times the previous levels. During the war, Brazil and Cuba produced double their 1950 output.

The war-time market for each producer was governed by the needs of the Allies and the availability of shipping; in the post-war period, railroad capacity and potential Soviet competition have been the principal factors. In general, manganese production from the old producing countries—India, Gold Coast, and South Africa—has responded rather quickly to changes in demand. New production has also responded to the encouragement offered by an assured market.

Reserves

Of the major free world's producing countries, India's reserves clearly promise the longest life. Gold Coast reserves of high grade ore may be exhausted by 1975, if the present rate of production continues but other African and Brazilian reserves are large in relation to their present output.

Known Manganese Reserves of the Free World

(Million short tons of ore in place)

	High Grade (average 45% Mn.)	Low Grade (average 25% Mn.)
India	100	200
Africa:		
Union of South Africa	50	..
French Morocco	30	20
Belgian Congo	10	20
Gold Coast	10	20
Latin America:		
Brazil	50	..
Cuba	0.4	0.8
Other areas	16	27
Total ..	266	288

The outlook for increased production of manganese in response to rising demand is favourable. The expansion of manganese production is much less difficult and costly than other metals. Manganese ore usually occurs on or near the surface and is easily excavated by hand or power shovels. Furthermore, these ores do not require crushing and elaborate concen-

TECHNOLOGICAL RESEARCH IN SUGAR

WORK OF KANPUR INSTITUTE TO BE INTENSIFIED

REVIEWING the progress of technological research in Indian sugar industry, we observed in these columns sometime ago—*vide* page 260 of *Commerce* dated 12th February 1955—that, while the research and development work of the Institute of Sugar Technology, Kanpur, was satisfactory, there was still a vast field which needed further and more intensive research. We had then urged that, in view of the importance of sugar industry—the second largest industry in the country—as also of the need for continuous research in the industry, the research and development wing of the Institute should be strengthened. It is, indeed, gratifying that this plea has been fully endorsed by the Advisory Board appointed by the Government of India to advise the Kanpur Institute on the problems of research work to be undertaken at the Institute and to review the progress from time to time. At its first meeting held in Kanpur recently, the Board said: "While the useful work already done by the Institute is to be appreciated, the tempo of research work must be further augmented. Considering the increasing need of the sugar industry for technical advice, the advisory work has also to be greatly increased." Having this objective in mind, the Board put forward several recommendations of vital importance.

One of the recommendations relates to the expansion of staff. As the Kanpur Institute is suffering from lack of adequate personnel, additional staff should, it is suggested, be immediately appointed, particularly in sugar technology and sugar engineering sections, so that there can be separate staff for advisory work and quite separate staff for teaching and research. Closely allied to this recommendation is the notable proposal that a chief designer and other necessary engineering staff must soon be appointed to look after the work relating to designing machinery units and re-modelling them which has considerably increased, thanks to the expansion that is taking place in the sugar industry.

Other Valuable Suggestions

Four more valuable suggestions were made by the Advisory Board. First, the question of treating the sugar factory effluents economically should be examined by the Institute. Secondly, three research fellowships must be instituted, so that the students passing out of the Institute can be trained in the methods of research which will prove of great benefit during their future career in the sugar industry. Thirdly, the Institute should examine the question of making available from Indian resources suitable quality of standard wire mesh screens for grading purposes. Fourthly, in order to enlarge the scope of training, the existing two-year course should be extended to two-and-a-half years.

The Board is of the view that the problems of research work proposed to be tackled at the Institute are fairly appropriate to the needs of the industry. It has, however, emphasised that the Indian Sugar Mills Association should take steps to ascertain the problems from different factories and to communicate the same to the Institute. The Board has done well to ask the Institute to issue a quarterly bulletin to be widely circulated, in order to keep the sugar industry in touch with the activities of the Institute. It is needless to stress here that the results of research undertaken at the Institute should reach the manufacturer at the factory without delay.

Activities Should Be Correlated

In the course of his address, Mr. T. C. Puri, I.C.S., Joint Secretary to the Union Food and Agriculture Ministry, and Chairman of the Advisory Board, stated that the Kanpur Institute of Sugar Technology was meant to serve the sugar industry, which was the second largest industry of the country; it was, therefore, essential that its activities should be correlated with the needs of the industry, besides the problems of research work to be tackled. Mr. Puri drew the attention of the Board to the size and the type of the experimental factory to be attached to the Institute. According to him, it was in this factory that large-scale progress of sugar production were tried out and students were trained. The existing factory of 35 tons capacity was too small a unit for this purpose and a bigger unit had to be thought of. He, however, pointed out that, while a 1,000-ton factory was considered to be an economic unit, the capacity would be too large for experimental purposes and would engage too much attention of the staff of the Institute.

The members of the Advisory Board felt that an experimental factory with a daily crushing capacity of 200 tons to 300 tons should meet the end in view. They appointed a sub-committee to draw up the most up-to-date specifications for the factory. An estimated expenditure of Rs. 75,000 required for removing the deficiencies of the existing experimental factory was approved.

Functions of the Institute

Incidentally, a brief review may be made of the work now being done by the Kanpur Institute. The functions of the Institute are threefold: (1) Research in sugar technology; (2) training of students in sugar technology; and (3) advisory service to factories on their day-to-day technical problems. The Institute devotes attention to applied, as well as fundamental, research on manufacturing techniques and utilisation of by-products. The trials of the new method of cane juice clarification evolved at the Institute on commercial scale have revealed that sugar of superior quality can be produced.

Among the notable results of research conducted by the Institute, mention may be made of a new method of re-heating massecuites employing electrical resistance heating, a simple formula for calculating practical power requirements in milling, a process for re-conditioning stiffened press cloth, and a new system of purification and modification of cane juice clarification. The electrical process of cane juice clarification, evolved by Prof. D. N. Ghosh of the Patna University, is being given a pilot plant scale trial at the experimental sugar factory. A study of *gur* in storage has also been undertaken on a small-scale. The Institute has prepared a fuel economy scheme which, it is claimed, reduces or eliminates the extra fuel consumption in the sugar mills.

SUGAR PRODUCTION AND STOCKS

The aggregate production of sugar in India during the current season (up to 15th September 1956) was 1,857,000 tons, as against 1,487,000 tons in the corresponding period of 1954-55. The total quantity despatched in the same period amounted to 1,525,000 tons, a rise of 488,000 tons as compared with the 1,037,000 tons despatched a year before.

The closing stocks with the factory as on 15th September 1956, aggregated 746,000 tons, as against 596,000 tons on the same date last year.

STANDARD FOR SUGAR MOLASSES

The Sugar Industry Sectional Committee of the Indian Standards Institution has decided to formulate an Indian standard specification for molasses, the main bye-product of the sugar industry. The decision was taken at the meeting of the Committee held at New Delhi the other day.

At its meeting the Committee also finalised four draft standards for (i) methods of test for vacuum pan sugar, (ii) specifications for cube sugar, (iii) icing sugar and (iv) refined sugar. The drafts will now be circulated for eliciting comments.

India exported during the first six months of 1956 less cane and palmyra *jaggery* than in the corresponding period of 1955, but earned a larger foreign exchange on this account. The quantity of *jaggery* that was actually sent out amounted to 12,024 tons, as against 12,396 tons a year before. The aggregate value of exports was Rs. 50.18 lakhs, which compares favourably with Rs. 44.82 lakhs.

COAL PRODUCTION HIGHER

DESPATCHES ALSO MOVE UP

THE coal industry has been assigned an increase of 22 million tons in the production target to be attained in second Plan period. In 1955-56, the total production was 38 million tons, of which the private sector's share was about 34 million tons and the public sector's was over 4 million tons. Accordingly, by 1960-61 the total output should go up to 60 million tons. The trend of total production has no doubt been higher in recent years, the total output in 1955 being 38.2 million tons, as compared with 36.77 million tons in 1954 and 35.85 million tons in 1953. The output figures for the first seven months of the current year also show that the upward trend has so far been maintained in the current year. The bulk of the improvement has occurred in the private sector. The pace of increase is not, however, encouraging and, if this is all the pace that can be maintained during the coming years, it is doubtful whether even the private sector can reach the production-target. The industry cannot be blamed for such a slow progress, as at every stage, it is faced with fresh impediments, many of which are the outcome of the Government's defective policy.

The latest impediment is the strike of workers in the twenty-four collieries in Raniganj, which is about to enter its third week. Besides the fall in production which will result from the strike, many other industries, which depend on the metallurgical coal produced by these collieries, will also be affected.

The revert to the trend of production. The raisings during the seven months ended July 1956 amounted to 22.80 million tons, as compared with 22.14 million tons in the corresponding period of 1955. On the basis of the output for the first seven months, the total production for the whole year can be placed at 39 million tons. The actual output for the year will, however, be lower than this estimate as a result of the strike. If the strike continues for a month or more, then the total output for 1956 may even fall short of that attained in the previous year.

Despatches of coal during the current year were also higher than in 1955. The total despatches during January-July 1956 aggregated 19.94 million tons, as compared with 18.79 million tons in the corresponding period of 1955. On this basis, the total despatches for the year may work out to over 34 million tons, as against the actual quantity of 32.91 million tons despatched in 1955, 31.94 million tons in 1954 and 30.66 million tons in 1953.

The following are the monthly raisings and despatches during the first seven months of 1956, as compared with those in the corresponding period of 1955:

(In tons)

	Raisings		Despatches	
	1956	1955	1956	1955
January	3,196,089	3,152,967	2,788,689	2,671,573
February	3,346,389	3,248,578	2,690,633	2,502,267
March	3,360,456	3,304,154	2,835,244	2,764,112
April	3,223,355	3,233,135	2,864,950	2,693,664
May	3,314,435	3,175,335	2,871,114	2,743,546
June	3,196,937	3,074,872	2,877,245	2,658,339
July	3,167,406	2,956,326	3,010,020	2,755,971
Total ..	22,805,117	22,145,167	19,937,895	18,789,772

The raisings and despatches of coke (hard and soft) during the period under review were also higher. Raisings amounted to 926,135 tons, as against 904,966 tons in January-July 1955, and despatches 888,306 tons, as compared with 860,490 tons.

The improvement in raisings and despatches was to a large extent helped by the improvement in the supply of wagons. The daily average loadings in the Bengal-Bihar Coalfields during January-July 1956 were 3,361 wagons, as compared with 3,183 in the corresponding period of 1955.

The rising trend in production of coal has not, however, resulted in any increase in exports. On the contrary, there has been a fall. This decline is accounted for by the sharp fall in exports by land (solely to Pakistan). Thus, whereas the quantity of coal exported by sea during the half-year ended June 1956 amounted to 390,869 tons valued at Rs. 1.16 crores, as compared with 382,977 tons of the value of Rs. 1.14 crores in the first half of 1955, exports by land recorded a distinct fall from 521,525 tons in the first six months of 1955 to 432,838 tons in January-June 1956. In terms of value also, they were marked down from Rs. 1.47 crores to Rs. 1.17 crores.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

SPEECH OF MR. G. H. J. CLARKE AT THE ANNUAL GENERAL MEETING

THE Forty-fifth Annual General Meeting of the Imperial Tobacco Company of India Limited was held at Calcutta on 27th September 1956. Mr. G. H. J. Clarke, Chairman of the Company, who addressed the shareholders on the occasion, dwelt at length on the subject of taxation of tobacco and its products and indicated how damaging was the effect of the multiplicity of Central, State and local taxation at high rates on the industry as a whole and the economy of the country in general. He supported his predecessor's suggestion that the Governments concerned should consult the industry as to the best method of levying tax on tobacco and its products.

The following is the full text of Mr. Clarke's speech:

"LADIES AND GENTLEMEN:

"I have pleasure in welcoming you to this the Forty-Fifth Annual General Meeting of the Company.

"The meeting was originally convened for the 14th September 1956 and I wish to express the Board's regrets that the accidental omission of the hour of the meeting in the original Notice made deferment advisable in the interests of the shareholders. An explanatory statement has been sent to you.

"With your approval we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts which have been circulated, as read and the Assistant Secretary will now read the Auditors' Report.

"Since the last Annual General Meeting, Mr. E. H. Hare has resigned from the Board after serving your Company for over 30 years, latterly as the Chairman of the Board.

"Mr. W. E. Nicholson, who had served, mainly in the tobacco growing areas of Southern India, for over 33 years, resigned from the Board early this year.

"We wish them both much happiness in well-earned retirement.

"Following Mr. Hare's resignation, I was elected Chairman in December 1955.

"In April of this year, Mr. C. N. Kirkus, Mr. N. Shiva Rao and Mr. E. G. Willis were appointed to the Board.

"These three gentlemen bring to their new duties and increased responsibilities an extensive experience and expert knowledge of your Company's business in its various aspects and they will, I know, make a substantial contribution to the progress of your Company.

"The Accounts in your possession give a comprehensive picture of the financial results of the Company's trading during the year under review and I believe you will regard these results as most satisfactory.

"In the tobacco industry, as in many others, the volume of sales is a decisive factor in contributing to a company's financial prosperity and I am pleased to report that the increase in sales volume, to which Mr. Hare referred in his speech last year, was fully maintained throughout the whole of the year now under review.

"That increase has called for further investment in both fixed and current assets as reflected in the Balance Sheet, although in the case of fixed assets some element of the increased investment was occasioned by higher costs of new machinery.

"Having regard to the fact that the bulk of the Company's investments are short-dated, that item on the Balance Sheet read with the cash position indicates a satisfactory degree of liquidity.

"Consequent upon the introduction, under the Finance Act, 1956, of a tax on distributed profits, provision has had to be made in the Accounts now presented for the tax liability in respect of the profits distributed by way of dividend out of the profits for the year to 31st March 1955, as well as in respect of the two interim dividends for the year under review, all of which were distributed during the year to 31st March 1956. The additional tax burden arising from these distributions amounts to Rs. 13,26,500 and is included in the charge for Income and Super Tax in the Profit and Loss Account, a charge which in total approximates very closely to the amount left available for disposal by the Board out of the results of the year's trading.

"The appropriations made by the Board and their recommendation as to the final dividend are set forth in the Report of the Directors on page 4 of the Report and Accounts, and, at this stage, I need only say that these appropriations continue to reflect the application of the Board's financial policy, to which Mr. Hare referred in some detail in his speech last year. The final dividend of 4 per cent., if approved, will now be payable on 28th September 1956.

"There are already evident to us all signs of a mild inflationary tendency in the country's economy and, whilst we welcome the broad aims of the Second Five-Year Plan, with its promise of a better standard of living for all in this land, it behoves us to have clearly in mind the implications that the execution of the Plan carries in the way of possible inflationary pressure at some points in the economy. It will, therefore, continue to be the policy of your Board to ensure that the Company's Reserves are maintained at a level adequate to safeguard the real capital position.

"I have referred earlier in my speech to the increased volume of sales during the year under review and to the benefit derived therefrom by the Company.

"The revenues of the Central Government have also benefited directly through the medium of increased collections of Tobacco and Cigarette Excise Duties on that greater volume of sales.

"It has always been the contention of the tobacco industry and of your Company, in particular, that frequent increases in the rates of taxation of tobacco products were bound to have an adverse effect on consumer demand. That point of view has been supported in the past when sudden, too frequent increases in Tobacco and Cigarette Excise Duties have severely inhibited the natural growth of sales in following years, with consequent adverse effect on the overall yield from such taxation to the revenues of the Central Government.

"In the year under review, the benefit accruing to the Central Government from increased collections of the duties has arisen, as I have said, directly from the increased volume of sales and gives support to the further contention of the industry that a satisfactory measure of increase in tax collections will arise naturally from an expanding volume of sales.

"There can be no question of challenging the right of a Government to tax tobacco and its products, but I do wish to support, most strongly, the point made by Mr. Hare in his speech last year that, in fairness to the consumer and in order to avoid any permanent damage to a sound revenue-producing source, the Government should consult with the tobacco industry as to the best method of applying the incidence of this type of taxation. Failure to do so not only harms the tobacco industry, as well as those it employs and those it serves, but also defeats the intention of Government.

"During the year under review, the States have continued to levy Sales Taxes on tobacco products at varying, though high, rates and it is greatly to be regretted that tobacco and tobacco products, already subject to high duties imposed by the Centre, have not yet been totally exempted from sales and local taxation.

"A high proportion of your Company's sales is made in the form of a single cigarette for a single coin and there can be no question but that a multiplicity of State and local taxation rates, on top of the Central duties, seriously hampers the growth of our industry and greatly restricts the yield from taxation to the Central Government.

"An example of a type of State taxation damaging to the tobacco industry as a whole and to the economy of this country is to be found in the Andhra Act of 1955 amending the Madras General Sales Tax and the Madras Tobacco (Taxation of Sales and Registration) Acts as applied to the State of Andhra. The 1955 Act imposed a tax at the rate of 7½ pies in the rupee on first purchases of certain varieties of raw tobacco. Not only does this impose an additional and heavy burden on cigarette manufacturers in this country but, at a time when competition in overseas markets is unusually keen, it places Indian grown tobaccos at a price disadvantage in these markets and may, therefore, seriously affect this country's valuable export trade in that commodity. The Government of Andhra State promised to review the operation of this tax; and it was greatly hoped that the tax would be removed in the overall interest. Such hopes, however, have been considerably dimmed by the passing of a further Act imposing a tax on country varieties of tobacco, formerly excluded; but however logical it may be to extend the application of the tax to all varieties of tobacco, the tax remains damaging to the industry as a whole and to the economy of this country.

"I have intentionally laid considerable emphasis on this subject of taxation of tobacco products because, whilst of vital interest to your Company, the effects of its application and incidence are of equal interest to the Central Government.

"The first five months of the current trading year again record an increase in sales volume, but I would remind you of the following factors which are likely to affect our costs and so offset the financial benefits of that increased volume.

"The effects of rising raw material costs have yet to be fully reflected in our production costs; in particular, we had to pay higher prices for leaf tobacco in Southern India this year and grade out-turns are likely to be disappointing.

"Furthermore, the mounting costs of wages and of the provision of amenities for our workers have an inflationary effect on production costs and unless these increased wages and amenities are matched by increased production on the part of those receiving them, the Company's prosperity, and theirs, must suffer.

"Relations between the Management and the workers have been very good throughout the year. Nevertheless, your Company, no doubt in common with other manufacturers, has suffered an occasional loss in production through the ill-advised tactics adopted by small groups of workers often without the support of their recognised labour union.

"In an industry so highly mechanised as ours, we have always set great store by the maintenance of a high standard of working conditions, of good relations with labour and the provision of adequate amenities; all of which further the aims and objectives of the Second Five-Year Plan; but we are entitled to expect that *all* workers will reciprocate by giving of their best to increase production.

"I must say that there is increasing and encouraging evidence that both workers and their representatives are beginning to share our conviction that such differences as may arise from time to time between factory managements and workers are more readily capable of settlement by direct negotiation rather than by the adoption of tactics which not only adversely affect overall output but also the earnings of the individual worker.

"Whilst, therefore, I am hopeful that rising costs of production will not offset the benefits of expanding sales, I would be failing in my duty to you if I did not warn you of the significance of the upward trend in costs. Your Directors have felt justified, however, in the light of the results of the first five months' trading of the current year, in declaring an Interim Dividend of 2 per cent., free of income-tax.

"I now beg formally to move the adoption of the Report and Accounts for the year ended 31st March 1956, including the payment on the 28th September next of a Final Dividend of 4 per cent., free of income-tax, on the issued Ordinary Shares of the Company.

"I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the Accounts, it will be a convenient time to do so."

COFFEE DEVELOPMENT PLAN BEING IMPLEMENTED

REGIONAL OFFICES OPENED

THE Coffee Board has taken up in right earnest the task of implementing its fifteen-year development plan duly sanctioned by the Government of India, with the opening of five regional offices with effect from 1st October 1956. The plan, it will be recalled, envisages an increase of 9,600 tons in production by the end of the first Five-year period and 21,200 tons and 33,200 tons by the end of the second and third five-year periods, respectively. The additional production is sought to be achieved by a programme of intensive cultivation of the existing areas and fresh cultivation of additional acreage. Since the development plan extends over various districts of the existing States of Mysore, Madras and Travancore-Cochin, the need for regional offices at important centres has been found necessary.

The offices will function at the following centres with jurisdiction over the areas noted against each:

Headquarters	*Jurisdiction*
Chickmagalur	Chickmagalur, Hassan and Shimoga Districts.
Mercara	North and South Coorg.
Battagundu (Madurai District).	Madurai and Tinnevelley Districts and Travancore-Cochin State, excluding Nelliampathies.
Coimbatore	Districts of Coimbatore, Nilgiris and Salem and Nelliampathies in Travancore-Cochin State.
Kozhikode	Malabar District.

The aforesaid regional offices will be under a Development Officer whose headquarters will be at Bangalore in the Office of the Coffee Board.

The Board proposes to implement the development plan by giving monetary assistance to coffee growers. Such assistance will be of two kinds, namely, loans and accelerated pool payments. The loan aid will be given for intensive cultivation, as well as for opening out new areas to a limited extent. The loan for intensive cultivation will be given to planters in the 5 to 25 acre group at the rate of Rs. 500 per acre for *arabica* and at Rs. 375 per acre for *robusta* spread over a period of five years. For the 25 to 50 acre group (*arabica*), the loan will be granted at Rs. 750 per acre. The extension of acreage is subject to certain specified limitations based on the existing acreage. Loans for such extensions will be granted at Rs. 1,000 per acre for *arabica* and Rs. 750 per acre for *robusta* spread over five years.

Loan Aid to Existing Growers Only

The loan aid for extension of acreage by opening new areas is for the present limited to existing coffee growers only. In other words, those who want to take up cultivation of coffee by opening up new areas will not be entitled to receive loan aid from the Board. Loans will be granted only to registered coffee growers in the 5 to 25 acre group under *robusta* and 5 to 50 acre group under *arabica*. The group category will be decided according to the total planted area owned by the planter.

It will be noted from the foregoing that the present loan aid scheme is applicable only to planters having plots between 5 and 50 acres. Bigger growers will, however, receive larger advances against the value of their crop.

The terms and conditions of the loans are: (1) all loans will carry interest at the rate of 6¼ per cent. per annum, the interest being payable from the second year; (2) the principle is recoverable in five instalments beginning from the sixth year in the case of loans given for intensive cultivation and from the seventh year in the case of those for extension of existing areas; (3) loans will be granted only on the security by mortgage of the unencumbered estate and other immovable property acceptable to the Coffee Board, or where encumbered, if the person in whose favour the encumbrance exists agrees to substitute the Board's claim, in preference to his own, as the first charge; and (4) loans will be granted only if the Board's officers are satisfied that the estate can, by such aid, be profitably improved, or that the land is suited for the measures contemplated.

As regards the accelerated pool payment, planters in the 25 to 50 acre group will be eligible, provided they have not asked for the loan aid. Planters in the 50 to 100 acre group also will be eligible for this aid, as they are not entitled to receive loan aid as already indicated. The accelerated pool payments will be given to the extent of 85 per cent. of the value of coffee pooled in 1956-57 and these will be paid in instalments before the end of August 1957. Similar payments will be made for the next four seasons also. These advance payments will bear interest at the rate of 6¼ per cent., the same as that for the loan aid.

Rising Stocks

The Board has not been confining its activities only to the attainment of additional production targets. It has also at the same time been considering ways and means of promoting the internal consumption and finding export markets for absorbing the additional crop. In the meantime, reports from plantations indicate that growers are worried over the mounting level of stocks. The following figures of pool stocks at the beginning of each month and of the quantities disposed of (including those sold for export) are quoted in support of their contention:

(In tons)

1956	*Opening stock*	*Disposal*
January	7,559	2,185
February	13,388	1,796
March	20,308	2,234
April	26,473	2,566
May	27,079	2,978
June	25,985	3,329
July	22,088	2,691
August	19,547	3,553

The total quantity of coffee allowed for export so far amounts to 8,100 tons, almost all of which is said to have already been offered for sale. The balance of stocks, the planters say, is more than sufficient for meeting the requirements of domestic consumption for the next four months and the minimum required to be carried forward to the next season. The Board would do well to examine this problem, once again, and see that surplus stocks do not act as a deterrent to the progress of its development plan.

RUBBER STATISTICS

The production of rubber during the month of August 1956 amounted to 1,750 tons, as compared with 1,730 tons in the previous month and 1,756 tons in the corresponding month of 1955. This brings the total output for the first eight months of the current year to 13,111 tons, which compares with 12,255 tons in corresponding period of 1955. Consumption by manufacturers during the month under review, at 2,307 tons, shows a decline from 2,648 tons in July 1956, although it is slightly higher than that of 2,208 tons in August 1955. The total consumption for period January-August 1956 amounted to 19,154 tons, as compared with 18,226 tons in the corresponding period of the previous year. Thus, the increase in consumption has outpaced the rise in output, with the result that the gap between production and requirements has widened from 5,971 tons to 6,043 tons during the eight months. The stocks at the end of August have been marked down to 3,448 tons from 5,924 tons a year before.

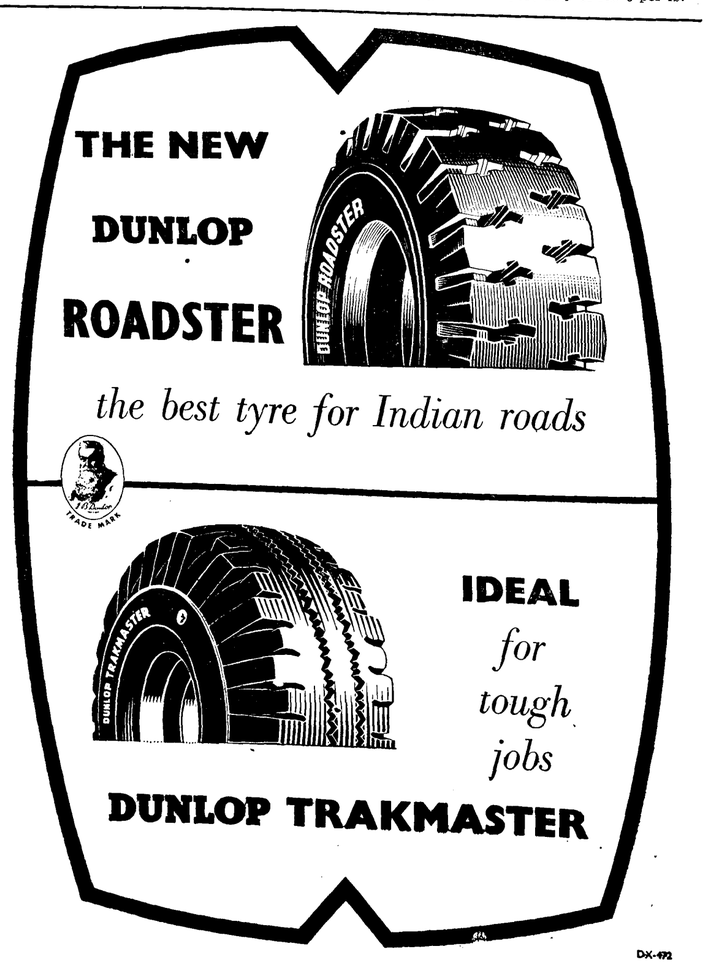
NORTH INDIAN TEA CROP TO BE RESTRICTED

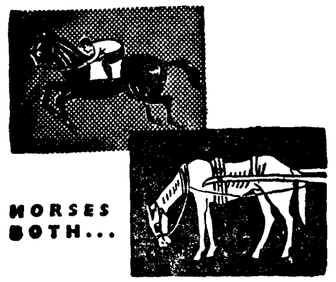
At a meeting of the Calcutta Tea Regulation Committee, which comprises the Tea Producing Associations of North East India, held in Calcutta on 27th September 1956, it was unanimously agreed that a substantial curtailment of the 1956 tea crop was necessary in order to regulate the crop against excessive supply. The dates from which members will be recommended to cease plucking will be advised shortly. It was also agreed that members should destroy all residual and waste teas of a quality unfit for sale in the auctions.

TEA EXPORT QUOTA

The Government of India has authorised the Tea Board to make a second interim release of export quota for the year 1956-57 to tea estates to the extent of 10 per cent. of their best crop basis, pending the final notification of the export allotment for the year. With this, the total release made so far for the year comes to 50 per cent. of the best crop basis.

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 3-3-9 per lb. for the month of October 1956, as against Rs. 2-11-5 per lb. in force from 1st September 1956. There is, however, no change in the existing rate of export duty of As. 6 per lb.





...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

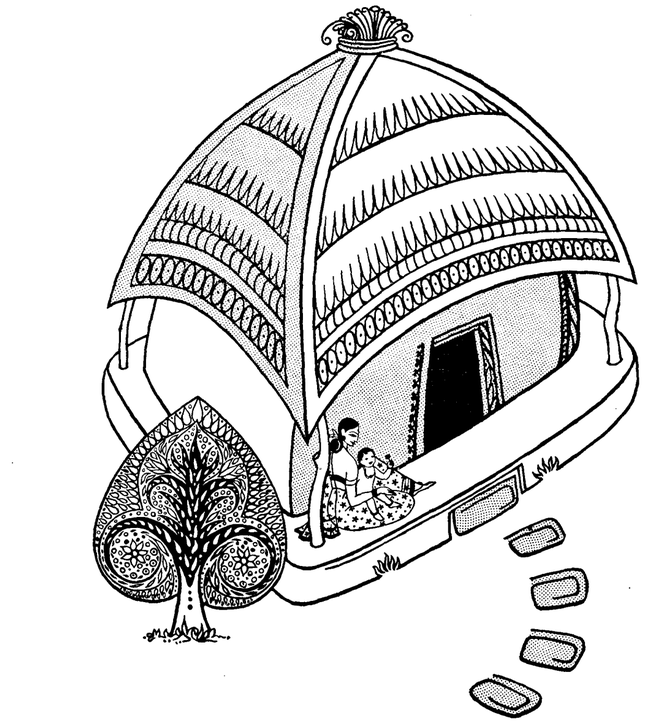
FIRE — MARINE — ACCIDENT



A roof over our heads—a place to rest, to shelter our families from the heat of the sun, from cold winds and driving rain—that is what we all need. Like food, a home is a basic necessity common to peoples of all countries.

A happy home, cherished by everyone, is founded on the common aims and efforts of all members of the family. In India today, a new outlook is born in the family—an outlook devoted to progress. Rapid industrialization is bringing about more employment, a higher standard of living, and more and better homes.

A constant supply of our petroleum products to fast developing industries is vital to this progress.

CAN ROAD TRANSPORT PROVIDE RELIEF TO RAILWAYS?

A CALL TO TRADERS AND ROAD TRANSPORT OPERATORS

By B. V. Vagh

VICE-PRESIDENT, INDIAN ROADS AND TRANSPORT DEVELOPMENT ASSN. LTD.

AN acknowledged development in the transportation of goods by road in other countries is the increasing employment of such multiple-unit vehicles as articulated vehicles, truck-trailer and tractor-trailer combinations. These, in effect, are miniature railways, which, within the radius of operation permissible on a road, carry, with the same motive power, larger loads, in one or more trailers than are possible on one chassis and are, therefore, more economical in transportation than trucks by themselves.

This development, which is bound to come to this country, has not yet attracted sufficient attention but the Motor Vehicles Act of 1940 provides for the employment of truck-trailer combinations and, in 1949, the Indian Roads Congress incorporated in its specification for "Dimensions and Weights of Road-Design Vehicles" optimum dimensions and loadings of such combinations for use on our roads. With the recent growth of the automobile industry in this country, the production of heavy-duty vehicles and an all round increase in the production of all commodities on account of our two five-year Plans, a time has come to call the attention of all concerned to this development, which, if planned for carefully, will play an important role in the implementation of our second Five-year Plan.

Unit Costs

The basic consideration in all services is the unit cost, which, in the case of transportation, is the cost per ton/mile of goods carried. Here, our present basis of comparison is the cost of transportation by railways. However, in this comparison two facts are generally overlooked. One is that railway freights are not based on the cost of carriage but on what a commodity can afford to pay and are, therefore, adjustible, if necessary. The other is that our present railway freights are not considered to be economic by many people, particularly independent observers like Mr. Galbraith and the World Bank Mission. The latter have observed that "it is clear that the provision made for depreciation in the past has been quite inadequate to meet replacement needs in full and we feel that the railways ought to be financing a much larger proportion of their current development programme out of their own resources." On the other hand, road costs are based on the cost of carriage and are fully economic in the sense that they cover all outgoings. Secondly, as a result of certain policies pursued by our Government in the past, road transport has been confined to feeder and zonal traffic only carrying small loads, operating over short distances and suffering from frequent stoppages. The general condition of our roads also was not very satisfactory in the past. Therefore, as a matter of sheer necessity, the present road transportation costs have been comparatively high.

Improved Conditions

However, conditions have changed and are changing rapidly. As against a minimum permissible laden vehicle weight of 14.500 lbs. which was in force in the country so far. the Council of the Indian Roads Congress has now agreed, at the instance of the writer, to a minimum laden weight of 18,000 lbs. which means a pay-load of 5 tons. Although this is insufficient for the wholesale use on all roads of a heavy-duty vehicle carrying 7½ tons of pay-load, that is, for a vehicle which is now produced in this country, still there are a number of roads on which it can ply and, therefore, for the time being it will be safe to base transportation costs on a laden weight of 18,000 lbs.

Then, a number of new bridges have been built, many have been strengthened and a large mileage of roads has been provided with improved surfaces. The geometric lay-out of many roads has also been improved permitting relatively greater speeds and necessitating fewer stoppages than before. Lastly, due to increased production all round during the first Plan, more freight is now available permitting a greater load factor. Thus, while a number of things still remains to be done in the sphere of roads and road transport, it is necessary to take account of what has been done and to profit by it in our transportation costs.

Feeder Traffic

Based on the conditions operating in the country in 1949, when petrol was rationed, the Motor Vehicles Taxation Enquiry Committee employed in their calculations of truck costs a load factor of two-thirds and a vehicle-mileage of 20,000 p.a. For the conditions of restricted laden weights then operating, the maximum pay-load of a normal truck was taken at less than 3½ tons. Lastly, Diesel-operation was not then much known, nor were heavy-duty vehicles available. Under this set of conditions, the rate per ton/mile then worked out to about 65 pies, which as compared with the then railway freights was naturally high. Under the altered conditions referred to above, the pay-load is 5 tons. and the load factor and annual mileage can be safely taken at three-fourths and 25,000, respectively. On this basis, the average cost per ton/mile now works out to about 53 pies for a petrol-driven vehicle and about 45 pies for a diesel-driven vehicle, although the initial cost of a truck is now over 50 per cent. more than that in 1949. Where a 7½ ton pay-load is permissible, the cost of a diesel-driven vehicle works out to about 37 pies per ton/mile. Therefore, against the old rate of about 65 pies, the current rate per ton/mile for feeder traffic works out to from 37 to 53 pies, depending on the size of a truck and fuel used. thus offering both an appreciable reduction and a wide choice.

Long-distance Traffic

But the development does not end there. The Deputy Minister for Transport has said in the Lok Sabha that competition between the railways and roadways is now a closed chapter in India and has referred to a ceiling in the level of State taxes, facilities for inter-State traffic and the need to adopt a liberal policy in respect of licensing for goods vehicles. All these facts, together with an improvement in the condition of our roads mentioned earlier, has opened the way to long-distance traffic by road. In this case for the same load factor and same conditions of loading the mileage per vehicle can be doubled. On this basis, the rates work out to from about 29 to 42 pies per ton/mile. Within this range. for a door-to-door service, a number of commodities at present carried by the railways can be handled by road transport, avoiding the present delays in obtaining railway wagons.

Truck-trailer Combinations

We have so far considered only trucks. All the trucks with a pay-load of from 5 to 7½ tons which are at present produced in this country are capable of carrying a trailer with in some cases nearly the same load as the truck itself. Trailers of this size are not yet being manufactured in this country but they are simple contraptions easy to produce. When the country can produce railway wagons at the rate of about 25,000 p.a. it goes without saying that it can very easily manufacture an equal number of trailers, if necessary. Based on the cost of railway wagons and the cost of trailers in other countries, their cost may work out to between one-fourth and one-third the cost of a truck and, in regard to operation, the experience in other countries is that the cost of operation of a truck-trailer combination may be about 40 per cent. higher than that of a truck. On a ton/mile basis, this works out to from about 22 to 33 pies assuming that a trailer carries only 80 per cent. of a truck's pay-load.

Summary

Thus. based on conditions operating at present, the ton/mile cost of road transport works out as follows:

Feeder Traffic—

Truck : 5 to 7½ tons pay-load : 37 to 53 pies per ton/mile.

Long-Distance Traffic—

Truck : 5 to 7½ tons pay-load : 29 to 42 pies per ton/mile.

Truck-Trailer 9 to 13½ tons pay-load : 22 to 33 pies per ton/mile.

It was mentioned recently on behalf of the Railway Board that, including incidentals, the cost per ton/mile by railway transport ranged from about As. 1-3/4th to As. 3-1/3rd, i.e., 21 to 40 pies in the case of certain essential commodities and raw materials. The reader can see for himself from the table given above that, on the basis of cost. many of these commodities can be handled by road transport also, if it is developed with a will to do so.

Trading Community

For no fault of theirs but due solely to Government policies in the past, our trading community and the general public have been wedded too much to the railway idea, so much so that today in our vocabulary the word "railways" has become synonimous with the word "transport." Due to this attitude, the country has reached a danger point in its transportation system and it is necessary to bring to its notice the following facts:

(i) Independent observers feel that the present railway rates are not economic.

(ii) With the need to develop the country rapidly and to reach quickly the goal of doubling our *per capita* income, it may be increasingly difficult for the country to spare for the railways nearly 25 per cent. of our total allotment on the Public Sector as in the second Plan.

(iii) A good deal of our investment on roads at present remains unutilised by not putting on them a number of vehicles commensurate with the carrying capacity of roads.

(iv) The automobile industry is expanding and is capable of further expansion and it is in the interests of the country to make full use of it.

(v) Leaving aside likely improvements and taking things as they are, road freights are comparable to railway freights, if truck-trailer combinations are used.

Hence, our trading community should take an interest in this line of development instead of relying solely on the railways.

Road Transport Operators

A word is also necessary to the transport operators. They have done a magnificent piece of work on the whole by developing road transport from a scratch. Inspite of nationalisation, private operators in the country handle practically all the goods traffic and about three-fourths of the passenger traffic. (These figures which were originally published by the writer in the *I.R.T.D.A. News Letter* of 16th October 1955 have now been confirmed by the Deputy Transport Minister in Lok Sabha on 11th August.). In terms of numbers, the ratio of nationalised to privately-owned buses and lorries is 1 to 10. This ratio will be still less by 1960-61. as a result of the slowing down of nationalisation. Therefore, the future lies in the hands of operators and it is up to them to study the development of truck-trailer combinations on the lines indicated above and show a way to the country.

At present, road transport operation is in the hands of people of limited means. Although, there is considerable scope for expanding this line, two factors have been preventing it, namely, Government restrictions on its use and the present level of prices of trucks. In a recent speech in Lok Sabha, the Deputy Minister for Transport has referred to a number of measures Government have on their hands to encourage the development of road transport. These measures are expected ultimately to remove these restrictions and pave the way for further expansion. But they will not solve the problem of vehicle costs. This Association has suggested to Government loans at a cheap rate of interest to operators and the Tariff Commission has been going into the question of prices of automobile vehicles. But the measure which will result in a substantial price reduction is in the hands of the operators themselves. It is to employ truck-trailer combinations or articulated vehicles instead of only trucks as at present. A combination of this type is estimated to cost about 30 per cent. more than a truck, which fact means that you get two vehicles at 1.3 times the cost of one, that is, 0.65 or, say, two-thirds of the cost per vehicle. Thus, the saving in initial cost per vehicle is about one-third, which is substantial.—*All Rights Reserved.*

INDIAN ENGINEERS IN THE U.S.S.R.

Indian engineers are undergoing professional training at the Giprokoks Institute, Kharkov, U.S.S.R., where a coking and chemical plant for the iron and steel works, now under construction in Bhilai was designed. During the four months training here they will study the principal elements of designing and the technological process to be applied at the new works in India. The Indian engineers will also study the organisational work at the Soviet coking and chemical plants.

NEW PRODUCTS AND PROCESSES

Rapid Weighing of Packed Goods

PACKAGED goods and rigid items can be weighed at rates up to 60 items per minute with a new portable electronic checkweigher made by The Solartron Electronic Group (Thames Ditton, Surrey). Weighing accuracy is said to be better than 0.2 per cent. and the equipment can be used in semi-automatic production lines or for high-speed percentage sample checkweighing in fully automatic, high-speed systems. The equipment is built into a console with a weighing head at the top. There are red, green and amber lights for routing the weighed products and there are also counters for checking the quantities of correct, under-weight and over-weight packages. Three sizes of weighing head with platforms made to suit the product being handled are available and nine standard models of the checkweigher are being made with maximum weighing capacities ranging from 0.12 ozs. to 70 ozs. Another development by Solartron is a checkweigher which can be incorporated into many types of production line and can weigh at rates up to 120 items per minute. This also has a claimed weighing accuracy of within 0.2 per cent. It can be used for either hand-controlled production lines or fully automatic arrangements and can be operated in conjunction with automatic equipment for rejecting over-weight and under-weight packages. Remote warning control devices may also be fitted.

Diamond Radiation Counters

A method for mounting diamonds in a miniature holder, which will enable the diamonds to be used as *pinpoint radiation counters*, has been successfully tried out in a series of experiments. The potential value of the process, which has been developed by Mr. F. Cotty of the Diamond Producers' Association, depends on the fact that radioactive radiation penetrates diamonds to approximately the same degree as human tissue, thus enabling a very accurate measure of the radiation dosage experienced under X-ray therapy treatment to be obtained. In the experiments conducted by Mr. Cotty the diamond to be used as the radiation source was drilled with a hole just large enough for a thin wire to be run through it and was fitted into the end of a thin hollow metal tube. In the finished counter the wire running through the diamond, which is insulated from the metal tube, acts as the anode while the metal tube acts as the earth potential. Steady counting rates of alpha and beta radiation sources were successfully obtained from diamond *radiation counters* prepared in this manner in the experiments, the counts being generated in the form of microvolt pulses of electricity. Although there are a number of technical difficulties in using diamonds as radioactive radiation counters, as for example the problem of obtaining diamonds of uniform behaviour, it is believed that these can be overcome.

Krupp's Steel Process

Methods of direct steel production from ore—that is, skipping the blast furnace stage—have come of age. Next year, the Krupp-Renn process will account for 180,000 tons of steel, that is about 0.8 per cent. of Germany's steel output. Three 120-yards long rotary kilns are being built at Salzgitter at a cost of 30 million marks, the first one to be ready by next month and the two others to follow shortly. The Krupp-Renn process (the name is derived from the teutonic word for "flow") consists briefly of reducing iron oxides in the rotary kiln to iron sponge at temperatures of 600 to 1,100 degrees centigrade. The iron sponge is then separated from the pasty slag by way of magnetic separators, and the small lumps of iron containing 92-97 per cent. Fe. are then fed into the steel furnace. No metallurgical coke is required. In Greece, for example, poorest lignite from the Ptolemais deposits is used as fuel for the nickel ore rotary kiln.

Semi-continuous Bronze Casting

Experiments which have resulted in the development of an improved method of semi-continuous bronze *casting* were discussed at a meeting of the Institute of Metals in Stuttgart. The work, which had led to the design and building of a relatively simple and inexpensive machine capable of producing higher quality bronze at a lower cost than traditional casting methods, was undertaken at the Tin Research Institute. The process depends on the use of a gas-heated reservoir mounted immediately above a graphite die through which the molten metal passes. The metal is then cooled with water and the cast bronze emerges from the bottom of the apparatus as either a rod, or a tube according to the type of die used. The speed at which casting may be carried out varies with the alloy used but speeds up to 12 and 15 inches of cast bronze per minute were attained during the experiments. One version of the system now in operation can produce bronze slabs of a standard suitable for rolling into springs for use in electrical switches and similar appliances.

Testing Mosquito Repellants

Research which has been carried out recently in Canada has demonstrated that the ability to absorb infra-red rays is an indication that a chemical compound is an effective mosquito repellant. The experiments which involved the testing of 6,241 chemicals as potential mosquito repellants was reported in a recent issue of the scientific journal *Nature*. The results of these experiments indicate, according to scientists of the British Columbia Research Council, that the basis of mosquito repellancy lies in the fact that a chemical absorbs infra-red near 21.7 millionths of a metre. The importance of these findings lies in the fact that they should enable large numbers of chemicals to be tested far more rapidly for possible mosquito repellant qualities than has hitherto been possible.

SUNDATTA COTTON-SEED UTILISATION LTD.

Registered Office : New Citizen Bank House, Palton Road, BOMBAY 1.

AUTHORISED CAPITAL	**Rs. 25,00,000**
Divided as follows :—	
20,000 Ordinary Shares of Rs. 50 each	Rs. 10,00,000
15,000 six per cent. tax-free cumulative redeemable Preference Shares of Rs. 50 each	Rs. 7,50,000
15,000 Unclassified Shares of Rs. 50 each	Rs. 7,50,000
	Rs. 25,00,000
PAID-UP CAPITAL : 15,000 Ordinary Shares of Rs. 50 each	**Rs. 7,50,000**
CAPITAL TO BE ISSUED : 15,000 six per cent. tax-free cumulative redeemable Preference Shares of Rs. 50 each	**Rs. 7,50,000**

Issue of Preference Shares

The Company at its Extraordinary General Meeting held on 29th September 1956 has resolved that 15,000 six per cent. tax-free cumulative redeemable Preference Shares of Rs. 50 each be issued at par. These shares are being offered by the Directors to the Members on the Company's Register as on 1st October 1956, in the ratio of one Preference Share for one Ordinary Share held. The time limit given to the Members for exercising the option to apply for the Preference Shares is up to 15th November 1956. The Letters of Offer are expected to be posted on or about 15th October 1956 under Certificate of Posting. The consent of the Central Government has been obtained for issuing the aforesaid Preference Shares as well as for effecting a substantial expansion of the existing industrial undertaking.

Outline of The Project

The Second Five-year Plan states that emphasis will be placed on stepping up the production and export of cottonseed oil and oils from solvent extraction process. The Company's plan to establish a 60-ton solvent extraction plant at Hubli in the new Mysore State, as an adjunct to its existing cottonseed crushing unit there, is in line with this declared objective of the Plan. The Company's proposed change of name from "SUNDATTA COTTON-SEED UTILISATION LTD." to "SUNDATTA FOODS & FIBRES LTD." is also consistent with the intended diversification of its activities.

The following are the main products which the Company will manufacture:

(i) Cotton linters for the cellulose, acetate rayon and paper industries;

(ii) Fully refined and deodorised cottonseed and groundnut oil for edible consumer use;

(iii) Crude and semi-refined cottonseed oil for sale to hydrogenation plants and for export;

(iv) De-oiled groundnut meal for manurial purposes and for export;

(v) Lecithinated cottonseed meal and cubes for export and internal consumption; and

(vi) Fatty acids for soap and lubricating grease manufacture.

The total additional outlay on Fixed Assets for the establishment of the solvent extraction plant is estimated at Rs. 10 lakhs, of which approximately Rs. 7½ lakhs will be on plant and machinery, and Rs. 2½ lakhs on land and buildings. The solvent extraction plant is expected to go into production between October 1957 and April 1958.

Finance for Solvent Extraction Plant

The proceeds of the Preference Issue of Rs. 7½ lakhs now being offered to the shareholders will be utilised to finance the solvent extraction plant. This plant is of the outdoor prefabricated type, and is expected to cost approximately Rs. 7½ lakhs, excluding the advance payment of 10 per cent. of the c.i.f. New York price which is being paid to the manufacturers by the Company from its present internal resources.

The solvent extraction plant is of the latest type recently developed in the U.S.A., and is specifically designed for the direct extraction of cottonseed kernels without the use of mechanical pre-presses. With its establishment, not only would the cottonseed crushing operations gradually become more efficient because of the higher oil recovery, but, during the slack season for cottonseed, that is, from October to March, the solvent extraction plant would be usefully and profitably employed in the de-oiling of groundnut oilcake. This oilcake is produced on a large scale during this period by the many groundnut oil mills situated within a radius of 200 miles of Hubli.

Funds for Land and Buildings

The cost of land and buildings is estimated at Rs. 2½ lakhs. The funds required for this purpose are to be provided from subscriptions to the unsubscribed balance of Rs. 2½ lakhs remaining as on 1st October 1956 in the Ordinary Share Capital of the Company. This balance of Ordinary Capital forms part of the issue of Rs. 5 lakhs made in 1953 which was only partially subscribed. No active effort has recently been made to collect this outstanding balance, which remains at the disposal of the Directors who are confident of its early private collection.

Past Performance

The Company's working during the eighteen months up to the end of June 1956 has been satisfactory. The Company, at its Fourth Annual General Meeting held on 29th September 1956, declared a maiden dividend of 6 per cent. on the Ordinary Shares for the year 1955. The audited Statements of Accounts for that year have been in the hands of shareholders for some time now, and the net profit (subject to depreciation) of a little over Rs. 2 lakhs may be considered somewhat below normal in view of the sizable quantity of 11,000 tons of cottonseed crushed and the sales turnover of over Rs. 40 lakhs. But this was due to the poor quality of cottonseed last year owing to crop damage.

During the first six months of this year, the Company's mills at Hubli crushed a little over 5,000 tons of cottonseed, which has resulted in a net profit (subject to Audit) of over Rs. 1½ lakhs. The interim audited Statements of Accounts for the period January/June 1956 are under preparation, and will be separately sent to the shareholders with the Letter of Offer relating to the Preference issue. It may be stated that the current rate of profit is likely to be maintained in the second half of this year, barring unforeseen factors.

Future Working

With the establishment of the solvent extraction plant and the addition of some cottonseed preparatory machinery, the capacity of the existing cottonseed crushing unit is expected to increase gradually from the present 10,000 tons to 15,000 tons per annum during the active season of the year, namely, April to September, while an additional 10,000 tons per annum of groundnut oilcake is expected to be de-oiled in the solvent extraction plant during the slack season for cottonseed, that is, from October to March. Such a rationalisation in productive capacity will not only increase the earning capacity of the mills but also ensure full employment for the Company's staff.

The present working capital resources, augmented by recent profits, are considered sufficient for the proposed alternate six-monthly working on cottonseeds and groundnut oilcake. It may be noted here that the order for the solvent extraction plant is being placed on the basis that 60 per cent. of the c.i.f. New York price of the plant is to be financed on a deferred payment basis through the Export-Import Bank of Washington to whom an application is being made by the Company. If this materialises, a sum of about Rs. 3 lakhs will be available as additional short-term working capital, and this will reduce, to some extent, the dependence on temporary bank borrowings against commodities.

By Order of the Board,
N. D. SIRUR,
Managing Director.

BOMBAY, *dated 4th October 1956.*

FUTURE OF MOTOR INSURANCE

PROBLEM OF TARIFFS

THERE is no doubt that, with the rise in living standards and incomes contemplated under the second Five-year Plan, the prospects of a wider use of automobiles and, as a consequence of such wider use, the prospects for motor insurance are bright. At the end of the first Plan (1955-56), the annual production and consumption of motor cars and trucks were estimated at 25,000 and 23,000 respectively. In the second Five-year Plan, the target of production, to be reached in 1960-61, has been set at more than twice the 1955-56 level, at 57,000 motor cars and trucks per annum. It is estimated that the annual rate of consumption in 1960-61 will equal the target of production fixed for that year. This optimistic estimate is based on the trend of offtake of cars and trucks since 1953. During 1953, 1954 and 1955, the offtake of cars was 5,000, 5,806 and 10,166 respectively, while that of trucks was 4,400, 8,007 and 12,899 respectively. The demand for motor cycles is also expected to move up from a mere 5,000 in 1955-56 to about 11,000 in 1960-61.

The overall outlook for the volume of motor insurance is thus bright indeed. But it cannot be a matter for gratification for the insurers unless the claims experience and the costs of repairs and services also become favourable. From this point of view, it is noteworthy that, under the second Five-year Plan, the road development programme is expected to absorb about Rs. 270 crores. So far as motor insurance is concerned, what is of particular importance is the maintenance and improvement of roads. The Plan also contemplates the maintenance of roads in a state of good repair. As against the advantages to be derived from the increase in the number of vehicles and the improvement in the state of roads, the motor insurers have to contend against the threat of nationalisation of road transport and of certain lines of motor insurance. Further, they have also to face the loss arising out of the rising cost of repairs and services. In this connection, they will certainly welcome the efforts at standardisation of motor vehicles, in so far as such standardisation will augment the supply of spare parts and thereby reduce the cost of components of vehicles.

Nevertheless, the general problem is one of evolving an economic schedule of tariffs. Referring to this problem, Mr. B. M. Birla, Chairman of the Ruby General Insurance Co., Ltd., at the recent annual meeting of the Company, said:

"In spite of the selective underwriting policy adopted by the Company, I am sorry to observe that this department continues to show a loss. This is also the case with most other insurance companies. It is high time the accident associations took up the question of an upward revision and rates because of more private car traffic on the roads and the high cost of repairs and the premium rates having again fallen below the economic level."

The problem to which Mr. Birla has referred is not peculiar to India alone. In this context, it is worth recording what the General Manager of a leading French insurance office, Mr. R. Schmit, had to say on this subject of motor tariffs. He averred, according to the *Review*, that the French car insurance market was on the verge of catastrophe, thanks to the rising cost of claims. He, therefore, suggested a "floor" tariff, with the upgrading of premiums for bad drivers instead of a ceiling tariff. He said:

"For some years now we have witnessed a mad race between premiums and claims, always to the advantage of the latter, the adverse balance being a permanent one and the deficit amounting to an ever-increasing number of milliards. Can this balance be corrected? We must face the facts and admit that, with the present state of things, the answer is 'No.' It is already clear that the recent reassessment is insufficient and that, in any case, its effects will be only of short duration. The technical risks increase daily (faster vehicles, effect of the two-wheeler on traffic circulation, roads ill-suited to heavy traffic, etc.). The Courts consider the insurance companies as an inexhaustible source of money and they award considerable, and often arbitrary, compensation without a clearly-defined foundation. It is no longer a question of law but demagogy that prevails."

Mr. Schmit's proposal was designed to penalise the bad driver by adapting the tariff to the statistics his driving reveals. He said:

"At the present time, the rates applied result in complete confusion. Two drivers in the same category purchase identical new cars and both take out policies with the same insurance company. They will pay the same premium. Client A proves to be an excellent driver whilst B is an irresponsible and careless driver who causes a series of accidents. The insurance company will not be able, as the tariff now stands, to demand an increased premium from B. Its only recourse will be to annul the policy, but B will go to another company and will pay a maximum premium which will not exceed the one he paid to the other company. We live in the times of the 'ceiling rate' which is quite good enough to meet normal risks, but results in increasing uniformity of treatment between the good and the bad customer. A large number of insured persons thus have to bear between them the cost of bad distribution of the rates. The gravity of this position is proportionate to the frequency with which accidents occur and therefore also to the arrangements for road safety. It has become the accepted thing that 'the insurance company will pay.'

"The fact that the bad driver is not penalised constitutes a real premium onus on the accident itself. I am convinced that a change in the tariff system would mean an important contribution to the efforts made to improve road safety. Let us replace the 'ceiling' tariff by the 'floor' tariff, i.e., a basic tariff. Let us give the insurance companies the right to apply premium proportionate to the results obtained. Let us say, for instance, that apart from the accident claim admitted within the four-year period or from any other technical consideration which has served as a basis for fixing the 'floor tariff,' additional claims would imply progressive increases. After a given abnormal run of accidents, the 'red' tariff rates would be applicable to the insured. In this case, his schedule would be sent to the police and his 'grey card' would be endorsed accordingly. The policy authorities would take this into account when the driver is arrested for infringement of the tariff regulations. For example, the normal amount of the fine would be increased by a coefficient 'x.' The right of redemption would be given. After a period free from accidents, the driver would revert to the normal category and his premium would be progressively reduced. A centralised organisation for 'risks' would be created between all the companies.

"I am convinced that this project will receive the approval of the immense majority of drivers. The public bodies concerned with road safety and accident prevention will be able to determine the advantages to be gained from this arrangement in furtherance of their efforts. The burden of the insurance would be shared more equitably between all the users. The number of accidents would most certainly be reduced."

It may be worth examining whether the proposal which Mr. Schmit advocated is capable of adoption in India. General insurers in this country have, of course, the right to exclude in the policies they issue the claims arising out of a car driven by a named driver, such specific exclusion being based upon the driver's previous record of accidents. But insurers seldom exercise this right, because the competition in the market is so keen that they are unable to exercise it. Will it not, however, be better to work out a system of penalty for bad driving than to possess a right of exclusion which cannot be exercised? This is only one aspect of the problem of motor insurance; for the general issue is still one of a revision of tariffs to economic levels.

INSURANCE EMPLOYEES

From many parts of the country have come reports of mass meetings and demonstrations by employees of the Life Insurance Corporation to protest against the pay-scales fixed for them by the Corporation. The three-day convention of the All-India Life Insurance Employees' Association, which concluded recently, at Nagpur, suggested that joint committees of the representatives of the employees and the Corporation should be immediately set up in order to associate the former in the management of the industry and to formulate its major policies. It demanded that the Government should take at least the Reserve Bank pay-scales and service conditions as the basis for formulating a schedule of "living wage" for the insurance employees. It appealed to the Corporation to implement the practice of yearly bonus and valuation bonuses to its staff. Other demands of the Association include housing and medical aid benefits, compensation on transfer, confirmation of temporary employees and reinstatement of retrenched personnel.

The Working Committee of the All-India Insurance Employees Association, which held a three-day session at Bombay, adopted a resolution rejecting the scales of pay offered by the Corporation on the ground that they were "retrograde." Failing a peaceful settlement of the dispute by the end of October, 1956, the Committee called upon its affiliated units to prepare for a token strike in the first week of November. The unsatisfactory features of the new pay-scales, according to the Committee are: (1) It negatives the rights and privileges secured by employees through collective struggle; (2) it enforces "starvation" wages on employees of an industry which has the capacity to pay a much higher wage; (3) it deprives 80 per cent. of the employees of the existing grades which are far better than the new pay-scales and (4) it deprives employees of bonus and effects cuts on their basic wage, gratuity, provident fund and other benefits.

The main contention of the employees of the Corporation is that the staff will now get much less than what some of the leading companies were paying in pre-nationalisation days. In the following table are compared the total monthly emoluments which an employee would get during each year of service in accordance with the scales prevalent in a leading office—this is given in brackets—and the total emoluments now offered by the Corporation.

1st year (Rs. 142) Rs. 142; 2nd year (Rs. 152) Rs. 148; 3rd year (Rs. 162) Rs. 154; 4th year (Rs. 172) Rs. 160; 5th year (Rs. 180) Rs. 171; 6th year (Rs. 189) Rs. 178; 7th year (Rs. 198) Rs. 185; 8th year (Rs. 206) Rs. 192; 9th year (Rs. 215) Rs. 199; 10th year (Rs. 224) Rs. 206; 11th year (Rs. 233) Rs. 213; 12th year (Rs. 241) Rs. 225; 13th year (Rs. 250) Rs. 232; 14th year (Rs. 259) Rs. 242; 15th year (Rs. 268) Rs. 252; 16th year (Rs. 277) Rs. 262; 17th year (Rs. 289) Rs. 272; 18th year (Rs. 301) Rs. 287; 19th year (Rs. 313) Rs. 297; 20th year (Rs. 325) Rs. 307; 21st year (Rs. 337) Rs. 317 and 22nd year (Rs. 349) Rs. 324.

It is amputed that over a period of 25 years, an employee of the Corporation would get Rs. 61,788. This compares with Rs. 86,076 which an employee of the Reserve Bank will receive or Rs. 76,140 which an employee of the New India or Rs. 67,560 of the Oriental, or Rs. 75,828 of the Hindustan would have got in accordance with the scales which prevailed before nationalisation of life insurance.

HEALTH INSURANCE

The Employees' State Insurance Scheme, which now covers about a million workers, was extended to the Travancore-Cochin State with effect from the middle of September. Inaugurating the Scheme, the Rajpramukh of Travancore-Cochin stated that it was not enough if a welfare State ensured payment of fair wages and provided satisfactory conditions for the workers. It had also to see that the worker was protected against incidence of disease and disablement.

In Travancore-Cochin, the Scheme will apply to 31,000 workers employed in 200 factories in Alleppey, Ernakulam, Alwaye and Trichur. The medical benefits under the Scheme will be administered through 14 insurance dispensaries. Insurance courts are to be set up in different centres to provide adjudication machinery in respect of disputes under the Act.

The Employees' State Insurance Corporation has announced that additional sickness cash benefits would be available retrospectively from 1st June 1956 to insured persons suffering from tuberculosis. The additional sickness cash benefit will be payable to an insured person, who has been in continuous employment for a period of two years or more in a factory to which the benefit provisions of the Employees' State Insurance Act apply. This benefit will be granted for a maximum period of 18 weeks after an insured person has exhausted the normal sickness benefit of 56 days, at the rate of 12 annas per day or half the rate of sickness benefit, whichever is higher, provided that the rate of extended benefit does not exceed the full rate of sickness benefit. The extended medical benefit for T.B. cases will be granted to those who have been in continuous employment for three years or more and will be available for two consecutive benefit periods (about a year), following the date on which the insured person otherwise ceases to be entitled to medical benefit.

READY REFERENCER ON THE INDIAN COMPANIES ACT, 1956
By JOHN & ROW, *Advocates*, MADRAS.

Price Rs. 25/-

The following is an extract from Mr. Tennetti Viswanatham's letter, which will speak to the merits of the book as well as the authors of the same.

"The Ready Referencer published by John and Row is indeed a very valuable book. It is a clear analysis of the provisions of the new Act. It brings together the changes in their logical sequences so that the Directors and Managing Agents can immediately lay their finger on the required provisions whenever they are in doubt as to what is to be done or what the Law on the subject is. Besides, the Referencer is of even greater value to the Lawyer, as one can expect it to be, coming as it does from John and Row, who have been distinguished specialists on Company Law. Likewise the Bench should find it invaluable."

THE MYSORE PAPER MILLS LIMITED

OUTLOOK FOR COMPANY HELD PROMISING

MR. T. SHAMANNA'S SPEECH AT THE ANNUAL GENERAL MEETING

THE optimistic view that, in the context of the heavy expenditure on educational and economic development programmes under the second Five-year Plan, the overall demand for paper that would be created in the coming years would be "distinctly favourable to the domestic paper industry" was expressed by Mr. T. Shamanna, Chairman of the Mysore Paper Mills Ltd., in the course of his speech, at the annual general meeting of the Company, held at Bangalore, on Thursday, 20th September 1956. As regards the future prospects for the Company, he said that as a result of the efforts made to increase production and reduce manufacturing costs the operations during the current year would yield "bright and promising results."

The following is the full text of Mr. Shamanna's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twenty-first ordinary general meeting of the shareholders of the Company and in presenting for your consideration, the report of the Directors and the audited balance-sheet for the year ended 31st March 1956. These have been circulated already and with your permission, I shall take them as read and proceed to review the salient features of the year's operations.

"I assumed charge of the office of the Chairman and Managing Director last March in succession to Mr. K. Narayanaswamy, Director of Industries and Commerce. Your Directors have placed on record their high appreciation of the valuable services rendered by him to the Company during the period he held the office of the Chairman and Managing Director and I am glad that his valuable assistance and advice are available to the Company as he continues to be a Government Director on your Board.

Raw Materials

"You were told at the last Meeting that the expansion of pulp plant for the production of pulp from indigenous raw materials was incomplete and that the equipment ordered for further developing the production of pulp and reducing its cost had been received and that erection work was progressing according to schedule. I am happy to be able to report that the pace of progress in the implementation of the expansion scheme was well maintained and additional equipment for stepping up pulp production has been installed and taken to service and this has largely contributed to the increase in paper production by about 25 per cent. As against machine production of 5,000 tons in 1954-55, the machine production in 1955-56 has been 6,500 tons. The increased production of pulp from indigenous raw materials has also resulted in reduction in the use of the expensive wood pulp.

"It has been our endeavour to successfully substitute the use of wood pulp by our pulp obtained from indigenous raw materials and limit the use of wood pulp primarily to impart to papers like bonds, ledgers and posters, the special physical characteristic required of them. I am indeed happy to say that we have achieved this to a very great extent in as much as corresponding to the progressive increase from year to year in the production of bamboo pulp, the consumption of wood pulp to feed one machine which in 1948-49 was 1,800 tons was reduced to 700 tons in 1955-56 even after the addition of the second paper machine.

Efficiency and Economy

"Further, it is stated in the Directors' report under review that auxiliary equipment which would secure greater efficiency and economy was under erection and the work was nearing completion. I am glad to say that this work has been completed a fortnight ago and the equipments such as the vacuum filters which help recovery of caustic soda, have been taken to service. The electrolyser and the soda recovery plant are working satisfactorily and have been contributing to the reduction in costs. It is hoped that with the installations and taking to service of the various machinery to step up production of pulp and reduce manufacturing costs, the operations of the current year would be bright and promising.

"I must here refer to the great difficulties in the matter of transport both for movement of raw materials to the mills and of finished paper from the mills to the consuming centres. This year also, arrangements had to be made frequently at Bangalore for transhipment of goods at Bangalore for want of through booking to Bhadravati from Madras and Mettur for movement of caustic soda and chlorine. In regard to coal, during the early part of the year, transport difficulties had threatened to impede the even flow of production, as the coal supplies had dwindled. Thanks to the helpful co-operation of the Railway authorities, the difficulties were tided over.

Demand for Paper

"There was further difficulty in that the demand for paper was not as strong as one could wish. In order to market the products, the selling prices of certain varieties of paper had to be reduced and other terms adjusted to suit the market conditions. The emergence of competitive conditions in the market compels us to resort to better advertisements, sales promotion, customer's service and display technique, to increase sales and I take this opportunity to assure you that the market trends are being carefully watched and our sales policy adjusted to suit the changing conditions.

"It has been a source of gratification to the Board of Directors, as it will no doubt be to you, that the financial results as disclosed by the balance-sheet and the profit and loss account are very satisfactory and register a further improvement and maintain the upward trend. During the year, we have provided Rs. 10,83,566 under depreciation and have paid by way of interest Rs. 2,94,429-8-0 as against Rs. 8,98,372 and and Rs. 2,90,153-4-0 respectively during the previous year. In spite of the abovementioned larger provision, the net profit for the year stands at Rs. 4,61,729-9-8, being Rs. 87,971-14-9 higher than in the previous year. This, I have no doubt you will agree, has justified the hope held out last year that with the increased output and consumption of larger quantities of indigenous pulp, better results would be forthcoming in the coming years.

"Your Directors have added Rs. 2 lakhs out of net profits to the Industrial Finance Corporation of India Loan Redemption Fund created last year. The Board have given very careful consideration to the question of declaration of dividend and though very prudent finance required maintenance of dividend at 7½ per cent. as in the two previous years, in response to the wishes of the shareholders expressed at the previous meetings, they have recommended declaration of a dividend of 6¼ per cent. plus bonus 3¾ per cent. absorbing Rs. 2,50,000 and have obtained approval of the Industrial Finance Corporation of India to recommend payment of a dividend of 10 per cent. I should also like to point out here that a sum of Rs. 50,000 has been provided in the accounts towards 'Gratuity' to meet part of our liability towards payment of retirement gratuity to our employees in accordance with the Industrial Award.

"In accordance with the provisions of the Employees Provident Fund Act, the funds of the provident fund have been separated from the Company's funds and have been transferred to the Provident Fund, which is managed by a Board of Trustees as required by law.

Industrial Relations

"Your Directors have accorded sanction to the payment of bonus of three months basic wages or salaries to the employees. A general good record of labour relationship has been maintained, though demands for additional amenities and benefits are being placed from time to time and due consideration is being given consistent with the resources of the Company.

"As you are well aware, the Indian Companies Act 1956 came into force from 1-4-1956 and certain Articles of our Articles of Association require to be amended to be in conformity with the law and a comprehensive resolution embodying all the changes will be placed before you for approval in due course.

Future Prospects

"Before I conclude, I wish to say a few words regarding the future development of our Mills. The Panel on Paper and Board, appointed by the Government of India, in 1945, to go into the question of post-war development of paper industry laid down that a 8,000 ton plant was the economic minimum and a unit falling below this minimum should be suitably expanded. Our scheme of expansion to step up production from 4,000 tons to 8,000 tons has been implemented and we hope to reach the target production during the current year. Several of the existing units are increasing their production capacity and new Mills are coming up. It is now considered that efficient operation under present-day conditions requires relatively large-scale production and opinion is expressed that for a unit to be efficient and economic the optimum figure should not be less than 16,000 tons. I do not propose to go into the question as to what constitutes an economic unit, but I think large-scale production in the long run would prove beneficial. In view of the heavy expenditure on educational and economic development programmes under the second Five-year Plan the overall demand for paper that would be created in the coming years would be distinctly favourable to domestic paper industry. Hence the desirability and necessity to increase the rated capacity from 8,000 tons to 16,000 tons should be considered and a comprehensive scheme with financial implications and prospect should be drawn up and it would be for you to extend your co-operation in finding the necessary funds, if and when the scheme is formulated.

"Your Directors warmly appreciate the loyal and willing co-operation received from all the employees of the Company.

"On behalf of the Board of Directors, I wish gratefully to acknowledge the continued assistance and encouragement received from the Government of Mysore and the Government of India and also to express our thanks to the Industrial Finance Corporation of India, for having acceded to our request to the declaration of 10 per cent. dividend.

"I also wish to express my grateful thanks to my colleagues on the Board for the uniform courtesy and co-operation that they have extended to me and their valuable advice.

"Gentlemen, with these observations, I now beg to move that:

"'The Directors' report, the audited balance-sheet and profit and loss account for the year ended 31st March 1956, be approved and adopted.'"

Note.—This is not a report of the proceedings at the above Annual Meeting, of which proceedings a separate report will be circularised.

How banking helps the MINING INDUSTRY

AN important part of India's mineral wealth is found in the South. From mines in South India come gold, magnesite, bauxite, iron, manganese and many other vital minerals.

The mining industry in South India employs about a lakh of people, and has an annual output worth Rs. 10 crores.

Banking has greatly helped the growth of the mining industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the mining industry.

We at Palai are proud that important firms in every field of business and industry in South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans and Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

NEW PUBLICATIONS

International Banking and Foreign Trade. Published for The Institute of Bankers by Europa Publications Ltd., 56, Bloomsbery Street, London, W.C. 1. Pages 226. Price: 20s.

THIS is a mixed bag of lectures revolving round the theme of foreign trade in the post-war period, written by academicians and practical bankers. They are important in that they give a summing up of post-war changes in foreign trade and economies of Western European countries. Being lectures delivered by practical bankers to practical bankers, they tend to be descriptive rather than analytical, and laudative or apologetic, rather than critical, about the happenings in their countries. They, therefore, fall short of the analysis of economic events given annually by the Chairmen of the British big five banks.

Mr. Dudley Stamp starts off the discussion with an account of the world's economic resources. His basic point is the F.A.O. theme about the increasing scarcity of food resources. What is more relevant, however, from the practical point of view is the maldistribution of supplies in relation to needs, an aspect that is also relevant to the foreign trade theme of the lectures. As should be obvious, this existence of surplus supplies in some areas and needs in others does not lead to trade under the existing price and trade mechanism. Other means, including sales for local currencies and downright gifts, become essential.

Two lectures, by Mr. Thompson-McCausland, deal with international trade institutions and international flow of capital. In both these respects, the post-war period differs radically from the pre-war period. Against the pre-war policy of cut-throat competition in foreign markets and closing of home markets, the post-war period has seen the Governments forced to follow a consistent trade policy. Export drives no longer create the mutual jealousies of the pre-war era, though as Sir Norman Kipping shows in a later lecture, the problem of export subsidies, of the German type of allowing an exporter to retain a part of his foreign sale proceeds or of the more brazen American type of sales for local currencies or at cheaper than home prices, or of the more universal type of guarantee of export risks and grant of long-term credit, has transferred the competition to other fields, about which controversy still exists. The flow of international capital is subject to two constraints—the balance of trade is not sufficiently favourable to allow for the necessary export of capital; and the flow that takes place is mostly on Government-to-Government level.

Messrs. Paul Bareau, Louis Camu, Herman Abs and Guido Carli deal with post-war economic developments in the U.K. (Exchange Control), Benelux, Western Germany, France, Italy and Switzerland (monetary policy). Developments in these countries varied according to the economic policies followed, though the same policy did not lead to identical results in different countries. The strick adherance to monetary discipline enabled Germany to expand output and trade, while Belgium failed to increase output to the same extent, and without suffering from inflation, remained a high cost economy, failing to expand trade. The U.K. and the Netherlands, which depended on physical controls, found it easier to expand output than to solve the balance of payments problem. France and Italy where both physical controls and monetary policy were not vigorously used, suffered from inflationary pressures and balance of payments difficulties, and in addition, failed to raise output substantially.

Mr. Bareau is satisfied with the U.K.'s progress towards convertibility of the pound sterling, and would favour a plunge into convertibility with a flexible pound—a "calculated risk" which is more likely not to pay off.

Mr. Copeman explains the role of insurance in promoting foreign trade. Sir Donald Anderson argues that shipping is being unfairly competed against by subsidised air transport. In the last two lectures, Mr. O. Kahn-Freund discusses the problem of conflict of laws and Lord Chorley, of the unification of commercial law.

The lectures vary considerably in quality, the best being those by Mr. Louis Camu, Mr. O. Kahn-Freund and Lord Chorley. Mr. Paul Bareau's plea for freeing sterling while making it convertible may not prove acceptable. Sterling is an international currency. If it were made convertible in order to widen its use it might create new problems, for flexible exchange rates might lead to reduction in international trade, both due to uncertainty of the exchange market and the imposition of higher tariffs or trade and exchange control which alone can make possible convertibility. The conflict between the attempts to make currencies convertible and to widen trade is real—at least under the present circumstances.

Would it be possible for the U.K. to achieve both these aims by a different kind of economic policy? The issues that would arise are discussed in the lectures on post-war France, Italy and Benelux. As the experience of these countries till 1955 and of the U.K. during 1955 and till now in 1956 shows, no single measure would have all the effects desired of it. If the Belgian experience was not enough, the recent economic history of the U.K. shows that monetary policy may be more effective in checking output than in checking inflationary pressures. At the same time, physical control measures, though they may achieve the immediate aim of correcting a balance of payment position, are not a long-term remedy and, as the experience of the Netherlands shows, would be effective only under very favourable circumstances. Mr. Louis Camu also gives a very interesting analysis of the problems of bringing about a customs union between two countries having different attitudes to economic policies.

Mr. O. Kahn-Freund details the attempt at applying uniform legal principles to international trade disputes to avoid conflicts of laws. These have been successful in the case of York-Antwerp Rules (general average loss on sea), Hague Rules (sea-carriers liability for goods received) and Warsaw Rules (transport of goods by air). There are other fields where the attempt to unify commercial law has not been as successful, as Lord Chorley shows. Evidently, the legal system has failed to keep pace with commercial and scientific advance, and a sensitive nationalism likes to identify sovereignty with the right to have its own legal system, even in commercial matters where uniformity in principles is more essential than their morality—which, in any case, has little relevance in commerce.

Most lectures deal with current problems of international trade, and, lacking an analytical basis, are likely to have an ephemeral value. They are, however, important as a summing up of the economic situation in the post-war Western Europe and as a snap-shot of the position in the second half of 1955. Their value to the immediate audience must have been much greater than to outsiders.

State Financing of Private Enterprise in Post-war India. By Dr. A. K. Datta Gupta. Published by Modern Book Agency, 10, College Square, Calcutta. Pages 188. Price: Rs. 9.

This book seeks to present, the writer says in the Preface, " a comprehensive, as far as possible detailed, and critical analysis of government financial help variously given to private enterprise after World War II in pursuance of a mixed-economy policy." The author includes, within the definition of private enterprise, agriculture, refugee rehabilitation, etc., and discusses all types of financial aid given by the State, whether in the form of loan, grant or subsidy.

Discussing industrial finance, Dr. Dutta Gupta says that gaps in such finance have not been measured and are not possible to be measured directly and indicates only in broad outline the breadth of capital and money markets. He then proceeds to point out the handicap of the Indian industries in the absence of issue houses without, however, proving it with the help of figures of undersubscribed new issues. The different sectors in the money market are not closely related and a multiplicity of interest rates prevails. There is inadequacy of banking resources, especially in the rural sector and this fact, together with low rate of savings, has been responsible for the scarcity of loanable funds.

The State has doubtless a great role to play in an economy like this and Dr. Datta Gupta has culled together the information regarding the various forms of State aid given in the post-war period. The Government has given direct and indirect financial assistance to shipping, aviation, housing, etc., and in certain cases, has set up statutory corporations for the purpose.

The author then proceeds to give an outline of the functions and working of the Industrial Finance Corporation, Industrial Credit and Investment Corporation of India Ltd., and National Industrial Development Corporation. He, however, treads on doubtful grounds when he criticises the I.F.C., for not having eliminated the financial difficulties of large-scale industry. The I.F.C. was not expected to do anything of that kind; it was designed to help the industries only when the latter were unable to raise capital from the normal sources. The I.F.C., however, has failed, as the author rightly points out, to utilise all its statutory powers and to pursue a policy of regional balancing of industries.

An appraisal of I.C.I.C.I. and N.I.D.C. could have been profitably made in the context of what the I.F.C. failed to do or could not do. Instead, the author gives a bare account of the two new Corporations, without any attempt at a critical examination of their powers and functions. One could have easily shown how the I.C.I.C.I., with the help of interest-free loan from the Government, can afford to underwrite new issues and participate in equity capital. It is difficult to see why more than two pages of information on some foreign corporations have been given, when there is no attempt to make any comparative study.

The book, originally written as a thesis for doctorate degree of Calcutta University, has tried to fulfil the limited function of bringing together the scattered information on the subject. Even here, it is too small to be comprehensive, and of course, it singularly lacks a vigorous analytical approach.

Population and Planned Parenthood in India. By Dr. S. Chandrasekhar. Published by G. Allen and Unwin, Ltd., Ruskin House, Museum Street, London. Pages 108. Price: 12s. 6d. net.

The problem of a continuously rising population has been engaging the attention of both laymen and experts, more particularly in underdeveloped countries where, by reason of their low standards of living, its adverse effects are likely to be felt most. The problem has assumed such an urgent character that it can be ignored only at the peril of the countries concerned. In the book under review, Dr. Chandrasekhar, who, as is well known, has done a great deal of valuable work in the field of population studies, has addressed himself to the task of analysing the Indian population problem in its various aspects, with particular reference to family planning.

An annual net addition of 4 or 5 million people to the existing population of about 370 million would not have constituted a serious problem for India, had the majority of the population been enjoying at least the minimum necessities of decent human existence. But the actual situation is far from that. Every addition to the existing population tends to push down further the low standard of living, unless it is offset by a marked increase in the production of food and other daily necessaries. The author is of the view that improvement in agricultural productivity and industrialisation, though they will be helpful, cannot by themselves solve the problem completely. He is also not optimistic about the possibility of migration of population, thanks to the presence of many political and cultural impediments. In the result, the only possible solution seems to be population control through planned parenthood. Nevertheless he is not unaware of the many difficulties to be surmounted —political, medical, psychological and administrative. He explores and answers, in successive chapters, the economic sociological, cultural, religious and administrative difficulties in the way of a wider adoption of contraception among the common people. The technical aspect of the question is also briefly dealt with.

As the Planning Commission observes, progress in the field of family planning depends, first, on creating a sufficiently strong motivation in favour of birth control, and, second, on providing acceptable, harmless, cheap and efficient methods. The diaphragm and jelly method, the best known so far, is costly and complicated as it involves individual medical examination and instruction requiring a competent doctor and too numerous clinics. Much of the success of a drive to popularise contraceptives depends, therefore, upon how far medical science will be able to devise a safe and simple method, such as an oral pill, which involves no genital manipulation. Research along this line is being done and the results are still awaited.

The book, despite its small size, is a useful addition to the literature on the subject. Statistical appendices and the index enhance the value of the book. A select bibliography, found at the end, will prove useful to those who intend to pursue the subject further. An introduction by Dr. Julian Huxley places the central issue of the book in the proper perspective. Dr. Huxley pays too a well-deserved tribute to the author when he says that the "book is an important contribution not only to Indian thinking but to world thinking on this central and overshadowing problem of our age."

MORE POWER TO OUR VILLAGES
The achievements in power and irrigation under the First Five Year Plan are actually the first phase of a long-term expansion. Within 15 years our total irrigated area will be doubled, production of electricity will increase from 2.3 million KW to 15 million KW !
During the Second Plan 21 million acres of fallow land will be irrigated, per capita consumption of electricity will rise from 25 units to 50. Over 80% of all villages of over 5,000 population will be electrified.
In these vast power and irrigation projects paper will play an important part. Wherever plans and estimates have to be made, paper will supply the means of record and communication.

INDIA'S FOREIGN TRADE DURING JANUARY-JUNE 1956

ADVERSE TRADE BALANCE INCREASES

THE figures relating to India's foreign trade during January-June 1956 are notable for more than one reason. In the first place, the picture of this trade during this period, which includes the last three months of the first Plan, and the first three months of the second Plan, reflects, by and large, the trend, pace and pattern of foreign trade that is most likely to follow in the five years ahead. Secondly, they also reflect as to where India stands in respect of its exports, and how much leeway has got to be made up if the problem of foreign exchange is not to be allowed to thwart the implementation of the Plan. So much for the significance of the trend of trade in the first half of the current year. As for the main features of the trend, both exports and imports were higher in value. But the increase in the latter was far greater than in the former, so that the adverse balance of trade became wider. To give the actual figures, imports rose from Rs. 323.55 crores in January-June 1955 to Rs. 393.75 crores in the first half of 1956, that is, a rise of Rs. 70.20 crores. Exports too advanced, but only by Rs. 4.16 crores, that is, from Rs. 283.34 crores to Rs. 287.50 crores. The deficit on trade account, therefore, widened from Rs. 40.21 crores to Rs. 106.25 crores. The following table gives a synoptic view of India's foreign trade (through land, sea and air) during January-June, 1956, as compared with that in the corresponding period of 1954 and 1955:

(Value *in crores of rupees*)

	January-June		
	1954	1955	1956
Imports	270.07	323.55	393.75
Exports	245.36	283.34	287.50
Deficit	—24.71	—40.21	—106.25

A welcome feature, however, was the improvement witnessed in the terms of trade. The general price index of exports increased from 84 (1952-1953=100) in May 1955 to 88 in May 1956, and, at the same time, the general price index of imports declined from 95 in May 1955 to 89 in May 1956, reflecting a significant betterment in the terms of trade (that is, the ratio of export price index to the import price index) from 88 in May 1955 to around 99 in May this year.

Exports

The trend of exports, as revealed by the figures given below, for January-June 1956, as compared with those for the corresponding periods of 1954 and 1955 is far from encouraging:

(Value in crores of rupees)

	For January-June		
	1954	1955	1956
Jute manufactures	55.98	60.74	42.07
Tea	34.58	48.16	43.26
Cotton manufactures	36.86	30.85	25.82
Metallic ores	11.67	7.58	8.99
Hides and skins	12.04	8.99	2.87
Raw cotton	8.77	13.58	16.33
Spices (mainly pepper)	9.35	6.63	4.48
Vegetable oils	2.33	22.60	27.80
Fruits and vegetables	5.26	6.41	8.92
Tobacco	3.33	4.12	4.60
Raw wool	4.26	3.59	5.06

N.B.—The foregoing figures cover only the sea- and air-borne trade.

It will be seen from the table that the exports of jute manufactures which staged a recovery in the first half of 1955 to Rs. 60.74 crores over the corresponding half-year of 1954, sharply declined to Rs. 42.07 in the period under review. This spectacular decline may be attributed chiefly, to the competition from other jute manufacturing countries, such as Pakistan and Britain, and the increasing use of substitute packing materials in the U.S. That this downward trend should persist despite the abolition of all export duties on jute manufactures is serious enough, and calls for careful examination of the question of export promotion and increasing the competitive position of the industry *vis-a-vis* other countries, especially in view of its great importance as number one dollar-earner. Tea, too, witnessed a similar decline, from Rs. 48.16 crores in January-June 1955 to Rs. 43.26 crores in the corresponding period of 1956. Cotton manufactures were no exception. The value of their exports steadily declined from Rs. 36.86 crores in the first half of 1954 to Rs. 25.82 in the January-June period of 1956, despite the fact that the Government adopted a policy of free licensing of exports of all varieties of cotton piecegoods, and had removed export duties on coarse cloth. The value of the metallic ores exported, however, slightly improved from Rs. 7.59 crores to Rs. 8.99 crores between January-June 1955 and the period under review.

Among other commodities, raw cotton exports improved from Rs. 13.58 crores to Rs. 16.33 crores, a factor that made for the increase being the liberal quota given by the Government for export of good short-staple and short-medium varieties, besides unrestricted exports of yellow pickings, zoda cotton and sweepings. All these varieties found ready buyers. Exports of vegetable oils, experienced a spectacular expansion once again, their value having gone up from a mere Rs. 2.33 crores in January-June 1954 to Rs. 22.66 crores in the same period of 1955 and still further to Rs. 27.80 crores in the period under review. This was chiefly due to the liberalisation measures adopted by the Government in December 1955 and in January 1956, with a view to earning more foreign exchange. Prominent among such measures were free licensing for export of castor oil, cottonseed oil, linseed oil, allotment of additional quotas in respect of coconut oil, and undecorticated cottonseed oilcake, and, free licensing of nigerseed and kardiseed oils and cakes. A substantial expansion in the value of exports of fruits and vegetables and raw wool was also witnessed during the period under review, a contributory factor in the case of wool being the sanction by the Government of an export quota of 35 per cent. (on the basis of half of the best year's exports) for established shippers, and an unspecified quota for new comers. Tobacco exports also recorded a moderate improvement.

Imports

While exports have shown only a modest rise, imports have gone up sharply. The value of foodgrains imported which was only second to that of machinery, declined from Rs. 33.49 crores in the first half of 1955 to as low a level as Rs. 3.27 crores during the period under review. In contrast to this, the value of machinery imported increased between the same periods from Rs. 48.24 crores to Rs. 72.45 crores, an increase of as much as Rs. 24.21 crores. Moreover, the imports of iron and steel manufactures which occupied only a sixth place in the first half of 1955 at a value of Rs. 20.13 crores came to occupy a second place at Rs. 57.67 crores, during the period under review. Vehicles is another item the value of the imports of which rose from Rs. 21.35 crores to Rs. 32.65 crores. The explanation for the huge expansion in respect of these imports can be found in the import policy for January-June 1956, announced by the Government in December 1955. The policy laid great emphasis on sustaining the rising tempo of industrialisation, and as such liberalisation was effected in respect of imports of industrial plant and machinery, and industrial raw materials. Enhancement of quotas was also effected for import of a number of small tools to meet the requirements of small-scale industries. Moreover, in May this year, import duty on pig-iron was removed. Besides, the relaxation effected in regard to imports of raw cotton of staple length ¾" and above from Pakistan, and of staple length ¾" to 1.1/16" up to a ceiling of 40,000 bales from both dollar and non-dollar areas also had its impact on the imports of raw cotton, which increased in value from Rs. 30.15 crores to Rs. 34.31 crores between the first six months of 1955 and those of 1956.

The following table shows the trend of imports of certain important items during January-June 1956, as compared with those for the corresponding periods in 1955 and 1954:

(In crores of rupees)

	For January-June		
	1954	1955	1956
Foodgrains	8.70	33.49	3.27
Machinery of all kinds	40.75	48.24	72.45
Oils (mineral, animal, etc.) ..	52.16	32.83	30.08
Raw cotton	35.86	30.15	34.31
Iron and steel manufactures ..	11.02	20.13	57.67
Vehicles	15.14	21.35	32.65
Chemicals and drugs	11.94	13.86	21.49
Metal manufactures (other than iron and steel)	10.03	11.76	15.50
Cutlery, hardware, etc.	7.79	10.11	13.23
Paper and paper board and stationery	6.52	7.04	8.40
Dyestuffs	0.65	0.70	8.70
Sugar	2.45	8.96	1.05

N.B.—The foregoing figures cover only the sea- and air-borne trade.

Apart from the other things explained above, as can be seen from the above table, chemicals and drugs are another important item the imports of which increased significantly from Rs. 13.86 crores in the first half of 1955 to Rs. 21.49 crores during the period under review. Imports of metal manufactures (other than iron and steel) and those of cutlery and hardware also increased substantially. In the case of sugar, however, there was a marked decline in imports from Rs. 8.96 crores to Rs. 1.05 crores between January-June 1955 and the period under review.

Geographical Distribution

The distribution of India's foreign trade among the various countries also underwent considerable changes during January-June 1956, as compared with the pattern of distribution that prevailed in the corresponding period of 1955. The following table shows at a glance the changes that have taken place between the first halves of 1954, 1955 and 1956:

(In crores of rupees)

	January-June		
	1954	1955	1956
Exports from India to:			
U.K.	65.97	74.88	83.94
U.S.	36.17	46.33	42.07
Australia	10.29	13.96	10.89
Japan	8.13	9.62	16.37
Canada	6.78	8.46	7.38
Ceylon	8.31	8.49	9.41
Burma	9.79	7.15	5.17
Italy	2.75	3.40	5.98
West Germany	8.53	8.29	6.53
Netherlands	4.44	9.47	6.27
Imports into India from:			
U.K.	75.46	77.60	105.07
U.S.	37.12	43.38	45.51
Burma	7.08	29.01	2.66
West Germany	16.45	23.45	35.66
Australia	5.31	14.24	3.93
Kenya	8.45	12.53	11.77
Japan	5.85	11.30	20.10
Italy	10.34	8.54	11.64
Singapore	8.27	7.10	7.27
Bahrein Islands	11.07	6.38	2.58
Netherlands	6.12	5.73	6.68
Canada	1.50	2.58	4.17

A noteworthy feature is that the trade with the U.K. has increased substantially. While exports to the U.K. increased from Rs. 78.88 crores to Rs. 83.94 crores between the first two halves of 1955 and 1956, the imports from the U.K. increased more spectacularly from Rs. 77.60 crores to Rs. 105.87 crores. In contrast to this trend, the overall trade with the U.S.A. slightly declined, with the exports from India having dropped from Rs. 46.33 crores to Rs. 42.07 crores, and the imports to India having gone up by about 2 crores only. Yet another notable development is the steep fall in the imports from Burma between the first two halves of 1955 and 1956 from Rs. 29.61 crores to Rs. 2.66 crores. The explanation for this can be found in the very low level of imports of foodgrains during the period under review. In the case of Japan, however, both the exports to and imports from it increased very substantially. Thus, while the exports to Japan rose from Rs. 9.62 crores to Rs. 16.37 crores, imports from the same source shot up from Rs. 11.39 crores to Rs. 20.10 crores. The exports to Western Germany on the other hand, moderately declined, but imports from it expanded by about 50 per cent., that is, from Rs. 23.45 crores to Rs. 35.66 crores. In the case of Australia both imports from and exports to it suffered. It may be noted in passing that about 56 per cent. of India's foreign trade during the first half of 1956 was with the important free countries in America, Europe and Australia.

IMPORT POLICY

The Government of India, in connection with replacing the current O.G.L. numbers 39, 40 and 41, which expired on 30th September 1956, reviewed the import policy in respect of the items covered by those numbers. O.G.L. numbers 44 and 45, which have replaced them came into effect from 1st October 1956, and will be valid upto the end of June 1957. The import of the items included in the former O.G.L. number 41 will be governed by the current import policy, already announced, for the licensing period July-December 1956. It may be recalled that the period of validity of O.G.L. number 43, covering imports from Pakistan, has already been extended up to the end of October 1956.

The considerations that weighed with the Government in reviewing the policy were the requirements of the second Plan, the desirability of saving foreign exchange, and the extent of the needs of those goods which are not produced indigenously. Consequently, certain important articles have been transferred from the O.G.L. to the licensing list. They include raw hemp, certain types of electrical generators and generating sets, paper, insulated power cables, wax, wood and timber, electro-medical apparatus and certain types of surgical instruments.

In the case of soft currency area also, certain items have been transferred from the O.G.L. to the licensing list. They include ship chains, raw sisal fibre, etc, certain types of machines worked by manual or animal labour, certain chemicals, pulses, certain types of office machines, printing and lithographic materials and components, and dairy and farming appliances.

The items that have been added to the O.G.L. include oxygen breathing apparatus, supplied air respirators, and mechanical filter respirators required as protective equipment for factory workers.

TAXING AGRICULTURAL INCOME OF SUGAR COMPANIES

INTERPRETATION OF RULE 23 OF INCOME-TAX ACT

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

RULE 23 of the Income Tax Rules was a subject of a keen controversy and debate in a recent case. None of the text books throw much light on the subject. It will, therefore, be interesting to study the rule in all its implications in this article.

Rule 23 reads as below:

(1) In the case of income, which is partially agricultural income as defined in section 2 and partially income chargeable to income-tax under the head "Business," in determining that part which is chargeable to income-tax, the market value of any agricultural produce which has been raised by the assessee or received by him as rent in kind and which has been utilised as a raw material in such business or the sale receipts of which are included in the accounts of the business shall be deducted, and no further deduction shall be made in respect of any expenditure incurred by the assessee as a cultivator or receiver of rent in kind.

(2) For the purposes of sub-rule (1) "market value" shall be deemed to be:

(*a*) Where agricultural produce is originally sold in the market in its raw state, or after application to it of any process ordinarily employed by a cultivator or receiver of rent in kind to render it fit to be taken to market, the value calculated according to the average price at which it has been so sold during the year previous to that in which the assessment is made.

(*b*) Where agricultural produce is not ordinarily sold in the market in its raw state, the aggregate of—

(1) the expenses of cultivation;

(2) the land revenue or rent paid for the area in which it was grown; and

(3) such amount as the Income-tax Officer finds, having regard to all the circumstances in each case, to represent a reasonable rate of profit on the sale of the produce in question as agricultural produce.

Let me analyse the first clause of the rule. It applies in a case:

(1) where the income is partially agricultural and

(2) as such partially chargeable to income-tax under the head of business.

Therefore, where the income is chargeable under the head business and by reason of exemption under Section 4(3) (viii) any part of such income as is deemed agricultural is to be excluded from the charge, how is the quantum of such agricultural income to be determined? The rule goes on, therefore, to say:

(1) in determining that which is chargeable to tax the market value of any agricultural produce:

(i) which has been raised by the assessee or received by him as rent in kind and

(ii) which has been utilised as raw material in such business or sale receipts of which are included in the accounts of business

shall be deducted and

(2) no further deduction shall be made in respect of any expenditure incurred by the assessee as a cultivator or receiver of rent in kind.

Market Value

Thus, in order to determine the amount of agricultural income included in the income from business, the market value of the agricultural produce transferred by the agricultural section to the non-agricultural section has to be ascertained.

The rule contemplates determining of the market value of agricultural produce in each of the following two cases:

(1) where agricultural produce has been raised by the assessee i.e., where he himself is a cultivator of agricultural produce or

(2) where agricultural produce has been received by the assessee as rent in kind i.e., where, although he does not himself cultivate, the rent he realises is a share of agricultural produce.

In each such case, if the agricultural produce has been utilised as raw material in such business, profits of which are taxable under Section 10 or the sale receipts of such produce form part of the accounts of the business, the sum determined on the basis of the market value of the produce shall be deducted; thus eliminating the agricultural element in the business profits which is exempted from the charge, leaving non-agricultural profits alone to be taxed. Having thus determined the quantum of agricultural income embedded in the business income, the rule goes on to provide that, in computing business income, no further deduction shall be made in respect of any expenditure incurred by the assessee as a cultivator or receiver of rent in kind. Since only one account is maintained, all agricultural expenses are also charged in the accounts of business and, therefore, the rule provides that such of the expenditure incurred by the assessee which relates to agriculture part shall not be deducted. In other words, it shall be added back in determining profits under Section 10.

Rule 23 Clause (2) defines what is "market value" for purposes of computation under Clause (1). This sub-rule falls in two parts (*a*) and (*b*). Part (*a*) deals with a case:

(1) where agricultural produce is originally sold in the market in its raw state or

(2) where agricultural produce is sold after application to it of any process ordinarily employed by the cultivator or receiver of rent in kind to render it fit to be taken to the market.

Part (*b*), on the other hand, deals with a case:

(3) where agricultural produce is not ordinarily sold in the market in its raw state.

The question that arises is what distinction is intended to be conveyed in the three phases of agricultural produce mentioned?

The Determining Factor

To me it appears that the determining factor is that you have not to look to what the assessee himself does with the produce but what—the produce itself is.

Is it a produce which is originally sold in the market in its raw state? e.g., grass, fruit—these products can be sold in the market in its original raw state. No process is required ordinarily to render it fit to be taken to the market. That is one type of agricultural product.

Next, is it a produce which requires some processing, ordinarily employed by the cultivator, in order to render it fit for being taken to market, e.g., the cereal products? The corn sheafs have to be gathered, then harvested then threshed and cleaned, before it could be sold as agricultural products.

Next, is it a produce which is ordinarily not saleable at all as such in its raw state; as a produce of land it has no saleable quality. It has to be transformed into a product by a manufacturing process (a process not ordinarily employed by a cultivator) e.g., tea leaves. Tea leaves as originally plucked has no market value in its raw state as green leaves. It has to be dried and processed before they become a marketable product.

The rule prescribes the mode of computation for each class as follows:

"Where agricultural produce is originally saleable in its raw state,

Or

"Where the same is saleable after application to it of any process ordinarily employed by the cultivator to render it fit for market."

In such cases, the market value shall be calculated according to the average price at which the product has been so sold during the year previous to that in which the assessment is levied.

The first question is does the average price refer to average price at which the produce was sold by the assessee or the average market price ruling in the market during the year previous to that in which the assessment is made?

It seems to me that it refers to the average market price ruling in the market during the previous year for which the assessment is made irrespective of the fact whether the assessee himself has sold during the previous year such produce in the market or not.

Against the sale proceeds, if any, realised by the assessee of the agricultural produce reflected in the business accounts, a set off is allowed for agricultural cost on the basis of average market price ruling during the previous year.

Where, however, the agricultural product has no marketable value in its raw state unless processed and not the ordinary process applied by the cultivator, but the special process of manufacturer e.g., tea, jute or indigo, then the market value shall be determined by adding up the following three factors:

(1) the expense of cultivation

(2) the land revenue or rent paid for the area in which it was grown and

(3) such amount as the Income Tax Officer finds having regard to all the *circumstances* in each case, to represent a reasonable rate of profit on sale of the produce in question as agricultural produce.

Having analysed the rule 23 in all its ramification let me now come to the controversy. The controversy ranges round the following question:

Is a Sugar Company, which has a plantation of sugarcane of its own, governed by Clause (*a*) or Clause (*b*)?

The income-tax appellate authorities seem to veer round to the view that, in the case of a sugar manufacturing company having a plantation, Clause (*b*) of the rule alone applies, not Clause (*a*).

Let me examine the validity of their arguments.

In the first place, they emphasise the words of rule (*a*) and (*b*) particularly the opening words which say:

"Where the agricultural produce is originally sold in the market" in contra distinction to the opening word of clause (*b*) which say:

"Where agricultural produce is not ordinarily sold in the market in its raw state."

They conclude that, in a sugarcane factory, the "sugarcane" is not ordinarily sold in its raw state in the market, but sugarcane is utilised for turning its juice into sugar by a manufacturing process. If, however, sugarcane plantation had been owned by the cultivator, he would have fallen under Clause (*a*). But because it is owned by sugar company, it falls under Clause (*b*).

The Fallacy

The fallacy in the argument lies in associating the process with the particular assessee instead of associating with the product itself. Rule states and intends to take the agricultural product by itself and asks the question: is it a produce which by, itself, as it is grown on land, saleable without any process? If so it falls under Clause (*a*). Next question is, is it an agricultural product which is required to be processed by a cultivator in order to make it fit for the market? Then also the rule says its computation falls under Clause (*a*).

It may be that agricultural produce may require a process; but what is the type of process? A process usually applied by a cultivator is to render it fit for market; then, it is Clause (*a*) that is attracted; but, if on the other hand, the process is a manufacturing process which transforms the raw state into a finished product, then it clearly falls under Clause (*b*).

Now as I have previously explained sugarcane grown by the Sugar Company is not a product which cannot be sold by itself in the raw state, if the assessee so chooses. The fact that he does not is immaterial. If the product is a product which can be sold in its raw state, my own opinion is that Clause (*a*) of rule 23 is attracted and not Clause (*b*) as contended by the appellate authorities. This view is strengthened and fortified by the long practice hitherto adopted by the Government in assessing Sugar Company and, further, it is the method which is least likely to create any anomaly or inequity in assessments—anomaly inasmuch as, if the sugarcane is sold in its raw state, it will not attract tax. Must the agricultural profit of a sugar company be computed on the basis of anything less than the price which would be realised if sugarcane were to be sold in its raw state, merely because the Company chooses not to sell it in its raw state, but transform it into sugar. The inequity lies in reducing by this method agricultural profit and artificially increasing the non-agricultural profit to a level, which is more than the profit the Company would have made if, instead of growing its own sugarcane, it had purchased the whole lot from the market. True, non-agricultural profit must approximate to the profit of a sugarcane factory depending entirely on sugarcane from outside purchases. But, surely, a sugar company ought not to be penalised if it grows sugarcane on its own farm, instead of depending on its supply from the market.

The controversy has started and, unless the Central Board of Revenue intervenes with executive instruction or the Court interpretes the meaning of Clause (*a*) and Clause (*b*) of Rule 23, the agitation that has started will not be settled finally one way or other.

KHATAU MILLS' PROFITS HIGHER

DIVIDEND MAINTAINED

FROM a year of comparatively lower earnings, the Khatau Makanji Spinning and Weaving Co., Ltd. (Agents: Khatau Makanji & Co., (Private) Ltd., Bombay) has marched to one of substantially higher earnings. Thus, its gross profit of Rs. 50.54 lakhs for the year ended 30th June 1956 is a distinct improvement over the previous year's low of Rs. 34.34 lakhs while it is even a shade better than the one for 1953-54 amounting to Rs. 50.48 lakhs. It would thus seem that the Company has regained the ground it lost in the preceding year. The net profit also, after providing for agents' commission at Rs. 4.33 lakhs as against Rs. 3.43 lakhs, depreciation at Rs. 15.93 lakhs (Rs. 18.70 lakhs which includes a development rebate of Rs. 5.70 lakhs) and a higher provision for taxation at Rs. 13 lakhs (Rs. 5 lakhs), has markedly improved from Rs. 7.21 lakhs for 1954-55 and Rs. 15.62 lakhs for 1953-54 to Rs. 17.28 lakhs for the year under review.

In sharp contrast to the previous year when no addition to the reserves was made, the satisfactory working of the Company during the year under review has permitted an allocation of a substantial sum of Rs. 8.90 lakhs. Of this sum, general reserve gets Rs. 1 lakh and development reserve Rs. 7.90 lakhs. The dividend on ordinary shares has been maintained at 10 per cent. to which level it had been stepped up in the previous year from the rate of 8 per cent. for 1953-54. Besides this, an additional dividend on ordinary shares at Rs. 2 for the year ended 30th June 1956 has been declared which takes away Rs. 1.20 lakhs. The directors state that, if the decision of the Board of Referees under Section 23-A of the Indian Income-tax Act on the Company's application is unfavourable, the Company may have to pay an additional dividend to shareholders for the year ended 30th June 1954. The exact amount of such dividend is, however, not stated.

The following comparative table presents the salient features of the Company's working during the four years ended 30th June 1956:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale proceeds (gross)	426.54	416.99	385.35	379.53
Closing stocks of cloth, yarn and waste	73.51	69.97	59.44	51.50
Raw materials and stores consumed	221.44	222.11	205.82	225.98
Establishment and other expenses	158.91	171.40	137.62	128.06
Gross profit	50.54	34.34	50.48	25.73
Agents' commission	4.33	3.43	5.01	2.65
Depreciation	15.93	18.70*	17.10	18.15
Taxation	13.00	5.00	12.75	0.50
Net profit	17.28	7.21	15.62	4.43
To reserves	8.90	..	9.63	..
Dividends—				
4 per cent. preference ..	1.20	1.20	1.20	1.45
Ordinary	5.98	5.98	4.79	2.99
	11.20			
	(10%)	(10%)	(8%)†	(10%)
Carry forward	0.26	0.26	0.23	0.23

* Includes development rebate of Rs. 5.70 lakhs.
† On a capital of Rs. 59.85 lakhs doubled during the year by the capitalisation of Rs. 29,92,500 in March, 1954.
‡ Additional dividend on ordinary shares at Rs. 2 for the year ended 30th June, 1955.

It may be noted here that the chief contributory factor for the year's better results was the lower establishment and other expenses as compared with those for the previous year.

The directors justly claim that the Company's working during the year under review was satisfactory. In view of the heavy excise duty now in force and the high prices of Egyptian cotton, it is doubtful whether the Company's profits for the current year will be as satisfactory as those for 1955-56. In order to improve the working efficiency of the mill, orders have been placed for new machinery of the value of Rs. 37.79 lakhs. This is in addition to a sum of Rs. 38.65 lakhs already expended during 1955-56 on fixed assets, of which as much as Rs. 31.74 lakhs were on plant and machinery.

The balance-sheet of the Company as at June-end last reflects a healthy financial position. The paid-up capital is unchanged at Rs. 89.79 lakhs divided into 59,850 ordinary shares of Rs. 100 each, 29,925 4 per cent. (tax-free) cumulative preference shares of Rs. 100 each and a sum of Rs. 1,750 received from forfeited shares. The entire preference capital of Rs. 29.52 lakhs and Rs. 39.90 lakhs out of the ordinary capital represent bonus shares issued out of reserves. Despite such large capitalisation in the past, the reserves and surplus as at the close of the year stand at the impressive level of Rs. 55.34 lakhs. The provision for taxation stands at Rs. 8.09 lakhs. The secured loans from banks on the hypothecation of stock and stores guaranteed by Agents amount to Rs. 31.58 lakhs while other unsecured loans total Rs. 37.36 lakhs. Sundry creditors and other current liabilities stand at Rs. 90 lakhs. As already said, there has been an addition of Rs. 38.65 lakhs to the gross block during the year, bringing the total value of the block to Rs. 273.74 lakhs. The depreciation provided up to the end of the year of review amounts to Rs. 203.22 lakhs, so that the net block stands only at Rs. 70.51 lakhs. The current assets aggregate Rs. 241.69 lakhs, of which stock-in-trade represent Rs. 145.09 lakhs, stores, spares and loose tools Rs. 30.56 lakhs, debts, deposits and advances Rs. 47.59 lakhs, investments (at cost) Rs. 14.57 lakhs, and cash balances Rs. 3.87 lakhs. All these current assets exceed the current liabilities and the provision for taxation by as much as Rs. 74.66 lakhs. The investments mentioned here consist of holdings in Premier Automobiles and National Machinery Manufacturers.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 257-8 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 4 per cent. per annum, free of tax.

SUNDATTA COTTONSEED UTILISATION

The first Five-year Plan envisaged the development of cottonseed oil industry by the establishment of a few new plants capable of producing a minimum of 7,500 tons of oil and simultaneously 5 million lbs. of cotton linters. Accordingly, eight firms with a total annual capacity, in terms of cottonseed, of 83,200 tons were granted licences for crushing cottonseed only. These new units were in addition to a large number of mills which have been carrying on crushing of castorseed along with other seeds. As against the target of an additional 7,500 tons of cottonseed oil envisaged under the first Plan, the actual production in 1955-56 was about 9,000 tons, which compares with 5,000 tons at the beginning of the Plan period. In other words, the production in 1955-56 fell short of the target by 3,500 tons. Despite this shortfall the second Five-year Plan has raised the target of cottonseed oil production to 30,000 tons in 1960-61.

In view of the shortage of oils, it was considered necessary in the first Plan to encourage production of oil by solvent extraction of oilcakes and, accordingly, licences were granted for the installation of additional solvent extraction plants. The total annual capacity at the end of May 1956 was 391,500 tons in terms of oilcakes (equivalent to about 30,000 tons of oil). The current production of oil by these plants is, however, estimated at only 7,000 tons per annum. The second Five-year Plan has fixed a target of 64,000 tons of oil per annum through solvent extraction from oilcakes.

One of the units which were granted licences under the Industries (Development and Regulation) Act, 1951, for the production of cottonseed oil was the Sundatta Cottonseed Utilisation Ltd. with an annual capacity of 9,000 tons in terms of cottonseed. In view of the good prospects as indicated above, the Company proposes to increase its capacity of the existing cottonseed crushing plant to 15,000 tons of cottonseeds per annum during the active season of the year (April to September) and to set up a solvent extraction plant with a capacity of 10,000 tons groundnut oilcake per annum for producing oil during slack season for the availability of cottonseed. We are told that the groundnut oilcake will be readily available to the Company in large quantities in the neighbourhood of its own factory at Hubli. This plant is expected to go into production between October 1957 and April 1958.

The capital outlay for the establishment of the solvent extraction plant is Rs. 10 lakhs, of which Rs. 7.5 lakhs will be on the plant and machinery and the balance on land and buildings. The Directors of the Company propose to raise Rs. 7.5 lakhs by the issue of the unissued 15,000 6 per cent. tax-free cumulative redeemable preference shares of Rs. 50 each to the holders of the existing 15,000 ordinary shares at par. The present authorised capital is Rs. 25 lakhs, made up of 20,000 ordinary shares of Rs. 50 each, 15,000 6 per cent. tax-free cumulative redeemable preference shares of Rs. 50 each and 15,000 unclassified shares of Rs. 50 each. Of these shares, only 15,000 ordinary shares of Rs. 50 each have so far been issued and paid-up. The preference shares proposed to be issued will be offered to the holders of the existing 15,000 ordinary shares in the ratio of one preference share for one ordinary share. The balance of Rs. 2.5 lakhs required by the Company for land and building will later on be called up from the unsubscribed balance of the ordinary capital.

The Company's working during the year ended 31st December 1955 has been encouraging, in that it has resulted in a profit of Rs. 2.05 lakhs. After writing off the previous year's loss of Rs. 66,636, as well as the preliminary expenses and deferred revenue expenditure aggregating Rs. 17,263 and providing Rs. 75,000 for depreciation, the Directors have declared a maiden dividend of 6 per cent. for the year. During the year, the Company crushed 11,000 tons of cottonseeds. The profit of Rs. 2.05 lakhs earned in 1955 may be regarded by some as below normal, in view of the quantity of seeds crushed and the sales turnover of over Rs. 40 lakhs. This was, however, due to the poor quality of the cottonseed crushed which in turn was the result of damage to the crop. During the first six months of the current year, the Company's working is said to have been more satisfactory, the quantity of cottonseed crushed having exceeded 5,000 tons resulting in a net profit (subject to audit) of over Rs. 1.5 lakhs. This pace of progress is expected to be maintained in the current half-year also.

JAIPUR UDYOG RAISES DIVIDEND

The financial results of the Jaipur Udyog Ltd. (Chairman: Mr. S. P. Jain) for the year ended 31st March 1956 disclose steady progress. The Company has made a gross profit of Rs. 45.46 lakhs, as against Rs. 45.11 lakhs for 1954-55 and Rs. 30.01 lakhs for 1953-54. The net profit, after providing for depreciation at Rs. 20.22 lakhs (Rs. 20.39 lakhs for 1955 and Rs. 29.76 lakhs for 1954), amounts to Rs. 25.24 lakhs. This compares favourably with Rs. 24.72 lakhs for 1955 and a mere Rs. 25,346 for the year preceding to that. A sum of Rs. 4 lakhs has been transferred to general reserve. No such allocation had been made in the previous two years. The directors have proposed a higher dividend of Re. 1-4 per share, that is, 12½ per cent. on the ordinary shares, as against As. 12 per share, that is, 7½ per cent. in the previous year. The Company has also, from the profits for the year, made provision for the balance of arrears of dividend on 75,000 three per cent. cumulative preference shares amounting to Rs. 91,219. The year's distribution on ordinary shares at 12½ per cent. absorbs Rs. 18.75 lakhs, leaving a balance of Rs. 55,609, as against Rs. 1.23 lakhs in the previous year, to be carried forward.

The Company is engaged in the manufacture of cement. While no figures regarding actual production and stocks sold in terms of quantity are available, the sale proceeds give some idea about the Company's working. From Rs. 78 lakhs in 1954, sales rose to Rs. 155.19 lakhs in 1955 but slightly declined to Rs. 142.87 lakhs during the year under review. The year's working expenses include an amount of Rs. 2.96 lakhs distributed as bonus to the employees for the years 1953-54, 1954-55 and 1955-56. But for this, the Company would have shown even better results for 1955-56.

The directors state that the second cement plant with an annual production capacity of about 200,000 tons has been installed and that it would commence production soon. Most of the machinery for the third plant of similar capacity has been received and its erection work has started. This plant is expected to go into production by the middle of 1957. After this, the Company's production is expected to be over 600,000 tons of cement per annum. The directors are confident that a bright future is assured for the Company. An application for a loan of Rs. 1 crore has been made to the Industrial Finance Corporation of India for financing the Company's expansion programme. The loan arrangement is expected to be finalised soon.

The Company has an authorised capital of Rs. 5 crores. The balance sheet as at the end of March last shows the paid-up capital unchanged at Rs. 2.25 crores. A strange feature of this capital structure is the low-interest bearing preference shares of Rs. 100 each. There are 75,000 of them, entitled to a cumulative dividend of no more than 3 per cent. and that, too, taxable. The balance of capital consists of 1,500,000 ordinary shares of Rs. 10 each. Its reserves and surplus aggregate Rs. 4.81 lakhs. Loans secured from the Government of India under the subsidised industrial housing scheme by mortgage of the labour quarters (including land) constructed under the scheme amount to Rs. 2.17 lakhs. The current liabilities aggregate Rs. 95.47 lakhs. The gross block of the value of Rs. 336.89 lakhs has been written down to Rs. 266.89 lakhs. The additions, adjustments and transfers to the gross block during the year were of the order of Rs. 114.91 lakhs, while the total depreciation provided up to the end of the year of review was Rs. 70 lakhs. The current assets, which include a cash balance of Rs. 4.74 lakhs, amount to Rs. 61.47 lakhs.

In recent weeks, the ordinary shares of the Company have become a popular counter on the Bombay Stock Exchange. They are currently quoted at Rs. 13-8 per share, yielding 10.2 per cent. on the basis of the dividend for 1955-56.

MACHINERY CORPORATION FARES BETTER

The Machinery Manufacturers Corporation Ltd. (Managing Agents: Mahindra and Mahindra Ltd., Bombay) has reported better results for the year ended 31st March 1956. The profit for the year under review stands at Rs. 10.42 lakhs, as against Rs. 9.15 lakhs for 1954-55 and Rs. 1.25 lakhs for 1953-54. Similarly, sales which had improved from Rs. 26.11 lakhs in 1953-54 to Rs. 55.29 lakhs in 1954-55 have further risen to Rs. 65.03 lakhs during the year. The proceeds from outside contract jobs had fallen from Rs. 1.93 lakhs in 1954 to Rs. 82,800 in 1955 but have now risen again to Rs. 1.16 lakhs. As against Rs. 7.13 lakhs representing the depreciation provided for the year ended 31st March 1952 in the previous year, the year's allocation of Rs. 9.28 lakhs provides for depreciation in respect of the year 1952-53 and for the period from 1st April to 30th September 1953. The directors have recommended payment of arrears of dividends on special cumulative 4½ per cent. preference shares and cumulative 4 per cent. preference shares up to 31st March 1953. The balance of Rs. 68,562 has been carried forward to the balance-sheet in order to reduce the previous years' losses which now stand at Rs. 24.26 lakhs. The managing agents have again waived their claim to the commission on the net profits of the Corporation for the year under review.

The report states that the Corporation maintained a steady, all-round progress during the year under review. The total number of orders received during the year was for 704 cards, but of these, orders for 82 cards were cancelled. The Sonai Works manufactured a total of 550 cards during the year, as against 521 in the previous year. The number of cards despatched also increased from 512 in 1954-55 to 556 in 1955-56. Further orders for 251 cards have been received from April to end of July 1956.

The Company's foundry commenced working by the end of July 1956. Proposals for progressive expansion of the foundry to cover the full range of requirements are under active consideration. Two sets of cotton combing machinery manufactured by the Corporation's associates in the U.S.A. have been installed, and orders are in hand for further three sets.

The paid-up capital of the Company stands at Rs. 80.73 lakhs. There are no reserves. Loans secured from the Industrial Finance Corporation of India by the mortgage of the fixed assets of the Company amount to Rs. 44.55 lakhs while those secured from a commercial bank total Rs. 7.25 lakhs. Other current liabilities amount to Rs. 19.89 lakhs. The gross block of the value of Rs. 98.33 lakhs stands written down to Rs. 74.56 lakhs. Preliminary expenses and underwriting commission and brokerage amount to Rs. 12,398 and Rs. 89,109 respectively. The current assets amounting to Rs. 52.59 lakhs comprise general stores Rs. 2.19 lakhs, loose tools Rs. 5.65 lakhs, raw materials Rs. 6.56 lakhs, finished parts Rs. 6.41 lakhs, stock-in-trade Rs. 3.75 lakhs, work-in-progress Rs. 10.57 lakhs, goods-in-transit Rs. 1.91 lakhs, deferred revenue expenditure Rs. 38,355, debts, deposits and advances Rs. 13.95 lakhs, investments Rs. 21,400, and cash and other balances Rs. 99,940.

Points From The Chair

Prospects for Paper Industry

"THE panel on paper and board appointed by the Government of India in 1945 to go into the question of post-war development of paper industry laid down that a 8,000-ton plant was the *economic minimum and a unit* falling below this *minimum should be suitably expanded.* Our scheme of expansion to step up production from 4,000 tons to 8,000 tons has been implemented and we hope to reach the target production during the *current year.* Several of the existing units are *increasing their production capacity* and new mills are coming up. It is now considered that efficient operation under present day conditions requires relatively large-scale production and opinion is expressed that for a unit to be efficient and economic *the optimum figure should not* be less than 16,000 tons. I do not propose to go into the question as to what constitutes an economic unit, but I think large-scale production in the long run would prove beneficial. In view of the heavy expenditure *on educational and economic* development programmes *under the second* Five-year Plan, the overall demand for paper that would be created in the coming years would be distinctly favourable to domestic paper industry. Hence, the desirability and necessity to increase the rated capacity from *8,000 tons to 16,000 tons should* be considered and a comprehensive scheme with financial implications and prospect should be drawn up and it would be for you to extend your co-operation in finding the necessary funds, if and when the scheme is formulated."

T. SHAMANNA,
Mysore Paper Mills, Ltd.

Tobacco Taxation

"An example of a type of State taxation damaging to the tobacco industry as a whole and to the economy of this country is to be found in the Andhra Act of 1955 amending the Madras Central Sales Tax and the Madras Tobacco (Taxation of Sales and Registration) Acts as applied to the State of Andhra. The 1955 Act imposed a tax at the rate of 7¼ pies in the rupee on first purchases of certain varieties of raw tobacco. Not only does this impose an additional and heavy burden on cigarette manufacturers in this country but, at a time when competition in overseas markets is unusually keen, it places Indian grown tobaccos at a price disadvantage in these markets and may, therefore, seriously affect this country's valuable export trade in that commodity. The Government of Andhra State promised to review the operation of this tax; and it was greatly hoped that the tax would be removed in the overall interest. Such hopes, however, have been considerably dimmed by the passing of a further Act imposing a tax on country varieties of tobacco, formerly excluded; but however logical it may be to extend the application of the tax to all varieties of tobacco, the tax remains damaging to the industry as a whole and to the economy of this country."

G. H. J. CLARKE,
Imperial Tobacco Company of India Ltd.

Dairy Industry in the U.K.

"In spite of the efforts of the National Milk Publicity Councils—joint undertakings of producers and purchasers of milk to foster increased liquid consumption—the rate of milk production continues to outpace liquid consumption, and this has resulted in an increase in the manufacture of milk products to a record level. The present system of price guarantees by the Government is somewhat obscure and many of us would like enlightment on the operation of the plan of payment. It is apparently designed to place a ceiling on milk production in Great Britain, as the Government no longer guarantees the full price for milk produced in excess of the target figure. Manufacture in excess of this figure will therefore, presumably have some depressing effect on the overall return per gallon to the producer. With the great improvement in breeding and feeding of dairy cows, lactation yields have risen markedly in recent years. In consequence, producers have found that higher production, although it involves increased manufacture, by no means signifies a reduction in net farm incomes. How much further milk producers will pursue this policy is impossible to forecast, but the uncertainty in the present position makes it difficult for the industry to make satisfactory plans for the future."

LEONARD MAGGS,
United Dairies Limited.

Selling Price of Coal

"The Company has always maintained that their task is to reconcile and balance judiciously the three separate interests, i.e., of workers, the investors and customers. I have explained above how the interests of investors and the workers have been served and there remains the interest of consumers. In my last year's speech I said that your Company had reduced prices of certain grades of coal giving consumers a recurring annual benefit of Rs. 2.67 lakhs. During the year the price of slack coal was reduced by Re. 1 a ton giving the consumers a further annual recurring benefit of Rs. 2.14 lakhs. This is something of which we can be proud, as you will no doubt recollect that in all other coalfields the price of coal was increased by As. 3 a ton with effect from 18th July 1955 to meet the additional cost of the liberalised Provident Fund Rules introduced by the Government. We have not only met this additional liability from our own resources but actually passed on a reduction in the price of slack coal."

DR. G. S. MELKOTE,
Singareni Collieries Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

HINGIR-RAMPUR COAL CO., LTD. Final dividend of Rs. 2-4 per ordinary share, for the year ended 30th June 1956. Transfer books will remain closed from 26th October to 7th November 1956, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 8th October 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 27th September to 8th October 1956, both days inclusive.

GANGES MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend : Nil. Transfer books remain closed from 30th September to 9th October 1956, both days inclusive.

GOUREPORE CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: Rs. 2-8 per share. Transfer books remain closed from 30th September to 9th October 1956, both days inclusive.

NUDDEA MILLS CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: Nil. Transfer books remain closed from 30th September to 9th October 1956, both days inclusive.

HATTIKHIRA TEA CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Dividend: As. 12 per share. Transfer books remain closed from 1st to 9th October 1956, both days inclusive.

GANGES ROPE CO., LTD. Annual General Meeting, Calcutta, 9th October 1956. Transfer books remain closed from 30th September to 9th October 1956, both days inclusive.

KALASA TEA AND PRODUCE CO., LTD. Annual General Meeting, Mangalore, 10th October 1956. Dividend: As. 14 2/5 per share. Transfer books remain closed from 29th September to 10th October 1956, both days inclusive.

NILGIRI TEA ESTATES LTD. Annual General Meeting, Nilgiri, 15th October 1956. Dividend: As. 10 per ordinary share. Transfer books remain closed from 5th to 15th October 1956, both days inclusive.

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, 15th October 1956. Dividend: As. 3-2/5 per share (final). Transfer books remain closed from 6th to 15th October 1956, both days inclusive.

MACHINERY MANUFACTURERS CORPORATION LTD. Annual General Meeting, Bombay, 19th October 1956. Dividend: Nil. Transfer books remain closed from 1st to 19th October 1956, both days inclusive.

MYSORE GLASS AND ENAMEL WORKS LTD. Annual General Meeting, at the Company's glass works (Near Yesvantapur R.S.), 20th October 1956. Dividend: Nil. Transfer books will remain closed from 8th to 21st October 1956, both days inclusive.

INDIA CEMENTS LTD. Annual General Meeting, Madras, 22nd October 1956. Transfer books will remain closed from 7th to 22nd October 1956, both days inclusive.

PATHEMARA TEA CO., LTD. Annual General Meeting, Calcutta, 23rd October 1956. Transfer books will remain closed from 18th to 23rd October 1956, both days inclusive.

BEHARILAL RAMCHARAN COTTON MILLS LTD. Annual General Meeting, Bombay, 24th October 1956. Transfer books will remain closed from 10th to 25th October 1956, both days inclusive.

TELOIJAN TEA CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Transfer books will remain closed from 10th to 25th October 1956, both days inclusive.

BORMAH JAN TEA CO. (1936) LTD. Annual General Meeting, Calcutta, 25th October 1956. Transfer books will remain closed from 10th to 23th October 1956, both days inclusive.

BAGHMARI TEA CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Transfer books will remain closed from 10th to 25th October 1956, both days inclusive.

SUNGMA TEA CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Transfer books will remain closed from 10th to 25th October 1956, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Dividend: 3½ per cent. (for the half-year ended 28th February 1956). Transfer books will remain closed from 11th to 25th October 1956, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Dividend: 3½ per cent. (for the half-year ended 28th February 1956). Transfer books will remain closed from 11th to 25th October 1956, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 26th October 1956. Dividend: Rs. 10 per share, payable on and after 29th October 1956. Transfer books will remain closed from 8th to 26th October 1956, both days inclusive.

TALAYAR TEA CO., LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 29th October 1956. Dividend: Re. 1-4 per share (includes interim dividend of As. 10 per share). Transfer books will remain closed from 22nd October to 4th November 1956, both days inclusive.

COMPANY REGISTRATIONS

EXTRUSION PROCESS PRIVATE LTD. (Chairman: Mr. M. I. Patel.) Business: Manufacture of metal products. Authorised capital: Rs. 5,00,000. Private company. Address: "The Nest" H. F. Society, 4th Road, Jogeshwari, Bombay 42.

ADVANCE BUILDERS (INDIA) PRIVATE LTD. (First Director: Mr. S. K. Patel.) Business: Construction of all kinds. Authorised capital: Rs. 5,00,000. Private company. The registered office of the Company will be situated in the State of Bombay.

SALES AND EARNINGS OF TATA HYDRO GROUP IMPROVE

EQUITABLE COAL EARNS HANDSOME PROFIT

Andhra Valley Power Supply Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Tata Hydro-Electric Agencies Private Ltd., Bombay) present the annual report of the Company with the audited statement of accounts for the year ended 30th June 1956.

The profits, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 34,34,996 (Rs. 28,79,171). After adding amount brought forward from last year's accounts, Rs. 25,735 (Rs. 50.253), income-tax recovered from dividends on preference shares Rs. 90,662 (Rs. 90,662) and surplus provision for taxation in previous year Rs. 84,733 (*Nil*) the amount available for disposal is Rs. 36,36,126 (Rs. 30,20,086). The directors have made the following appropriations therefrom.

To ad-interim dividend on preference shares at 7 per cent. per annum for the half-year ended 31st December 1955 Rs. 1,72,690 (Rs. 1,72,690) and on ordinary shares, including new shares, at 3 (3) per cent. per annum for the year ending 30th June 1956 Rs. 9,08,310 (Rs. 8,40,810); to contingencies reserve Rs. 3,08,914 (Rs. 2,88,128), to arrears of depreciation Rs. 1,26,745 (Rs. 1,26,745), to write off of intangible assets Rs. 14,175 (Rs. 2,073), to deferred taxation reserve Rs. 2,00,000 (Rs. 2,00,000), to general reserve Rs. 5,00,000 (Rs. 2,00,000), to gratuities reserve Rs. 1,88,290 (*Nil*) and to dividend reserve Rs. 11,75,155 (Rs. 11,63,905) leaving Rs. 41,847 (Rs. 25,735) to be carried forward. The directors recommend the following final dividends for the year ended 30th June 1956 to be paid, if declared at the annual general meeting, from the dividend reserve:—

A dividend at 7 per cent. per annum on preference shares for the half-year ended 30th June 1956 Rs. 1,72,690 (Rs. 1,72,690) and a dividend at 4¼ (4¼) per cent. per annum on ordinary shares, including new shares (less interest payable out of capital at 4 (4) per cent. per annum on such new shares, as sanctioned by Government) Rs. 3,60,000 (Rs. 2,70,000). (Dividend on preference shares is subject to deduction of income-tax).

Sales of Electricity.—The year under review recorded for the three hydro Companies the highest hydro generation as well as total energy sales (inclusive of thermal energy purchased). Past good monsoons had helped towards conserving greater hydro resources, with the result that during the year over 1,300 million units of energy could be generated. 322 (155) million additional units of thermal energy were taken from the Electricity Board's plant at Chola.

The total energy sales for the three Companies were 1,395 million units, besides which it was possible to return to the Railways nearly 45 million units, replacing in kind almost all the energy supplied by them during 1953-54. The sales of energy and revenues for the year for this Company, as compared with the previous three years were as follows:—

Year	Units sold	Revenue
		(in rupees)
1955-56	408,083,532*	1,26,85,764
1954-55	365,107,108**	1,08,89,525
1953-54	327,471,661***	89,27,942
1952-53	300,671,385	71,57,938

*Includes 85,345,517 thermal units sold.
**Includes 40,923,133 thermal units sold.
***Includes 28,333,041 thermal units sold.

Total gross revenue was higher by Rs. 16,89,089 (Rs. 19,86,396) this year due to an increase of Rs. 17,96,239 (Rs. 19,61,583) in revenue from energy sales, partially offset by a decrease of Rs. 1,07,150 in revenue from other sources, mainly interest on Government Securities, Deposits, etc. Total expenses amounted to Rs. 81,11,046, that is Rs. 10,83,264 more than those for the previous year, which is accounted for principally by an increase of (*a*) Rs. 8,32,409 in the cost of thermal power purchased, (*b*) Rs. 90,257 in retiring gratuities, (*c*) Rs. 76,023 in salaries and wages, (*d*) Rs. 74,713 in depreciation, (*e*) Rs. 61,565 in managing agents' remuneration, (*f*) Rs. 57,187 in stores, oils etc. consumed and (*g*) Rs. 40,479 in licence commission. This has been partly offset by a decrease of Rs. 1,34,664 in repairs and maintenance. The provision for taxes has increased by Rs. 50,000. Accordingly, the net profit for the year reflects an increase of Rs. 5,55,825 to Rs. 34,34,996 or 19 3 per cent. over that of the previous year.

Works:—Trombay Thermal Station

Progress on the construction of the first 50/62.5 mw. unit was satisfactory. Unless unexpected or undue delays take place in the completion of the final stages, the first unit should go into commercial operation during November 1956, to be followed by the second unit in April 1957.

New Transformers.—Two 30,000 kva. transformers were commissioned into service at Parel receiving station, thus ensuring adequate 22 kv. supplies to B.E.S.T. sub-stations. A third 16,000 kva. transformer was brought into service at Trombay to cater for supplies to the Oil Refineries, Indian Rare Earths and the Atomic Energy Reactor Plant in that area.

Works Projected.—To keep pace with the rapid industrial development in the Bombay-Poona region and consequent higher load demands expected with the commissioning of the Trombay Thermal Station, various measures have been taken to build up the system transmission and distribution capacities etc.

In addition to laying of some new feeders to meet increased load demands, plans are being worked out for reorganising and reinforcing the entire underground distribution network so as to relieve overloading of old cables which have been in service for long periods.

Loan from World Bank.—The trust deed for securing mortgage bonds in various currencies equivalent to $16,200,000 was executed on 4th November 1955, and the various other formalities set out in the loan agreement and the loan regulations having been completed, the World Bank declared the loan effective on 7th December 1955. The World Bank has advanced to the three Hydro Companies, mostly in reimbursement of the foreign exchange expended on the Trombay Project, an amount in various currencies equivalent to $7,242,955 upto end of August 1956.

Revision of tariffs.—Having regard to the cost of purchase of thermal energy from the Bombay Electricity Board and the quantum of energy which had to be taken from that source, it became clear soon after the beginning of the year 1955-56 that the Companies tariffs would require revision. In doing so, it was thought that it would be possible to eliminate the then existing surcharges. When the principal consumers of the Companies were consulted, they expressed the view that, pending the enactment of the Electricity (Supply) Amendment Bill, it would be preferable to continue the present tariffs, varying the thermal surcharge as may be required from time to time to meet increased costs on account of the purchase of thermal energy. The Bombay Electricity Board which was then approached, approved of the thermal surcharge being raised from 15 per cent. to 24½ per cent. effective 1st January 1956.

General Power Supply Position.—The power pool started in 1951 to make use of auxiliary generating sets in textile mills and factories, continued to operate and met to the extent required additional demands of consumers. The units generated from this source during the year were 8,560,407.

The Government of Bombay, having invited applications for allotment of the capacity of the first unit from Trombay, have received demands exceeding 1,22,000 kw. excluding certain reservations proposed by Government for their own requirements and for essential consumers. The applications are under scrutiny of Government. Indications are that the load demand will continue steadily to increase until it absorbs all the additional power to be produced from the two sets of Trombay.

Accounts in brief are as under.—

Tata Hydro-Electric Power Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tata Hydro-Electric Agencies Private Ltd., Bombay) present the annual report of the Company with the audited statement of accounts for the year ended 30th June 1956.

The profits, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 27,95,640 (Rs. 25,00,587). After adding amount brought forward from last year's accounts, Rs. 21,171 (Rs. 35,234), income-tax recovered from dividends on preference shares Rs. 1,64,054 (Rs. 1,64,054) and surplus provision for taxation in previous year Rs. 1,24,968 (*nil*), the amount available for disposal is Rs. 31,05,833 (Rs. 26,99,875). The directors have made the following appropriations therefrom:—

To ad-interim dividend on preference shares at 7 per cent. per annum for the half-year ended 31st December 1955 Rs. 3,12,480 (Rs. 3,12,480) and on ordinary shares, including new shares, at 3 (3) per cent. per annum for the year ending 30th June 1956 Rs. 7,20,000 (Rs. 6,75,000); to contingencies reserve Rs. 2,36,141 (Rs. 2,21,107), to arrears of depreciation Rs. 37,259 (Rs. 37,259), to write off of intangible assets Rs. 62,955 (Rs. 62,878), to deferred taxation reserve Rs. 1,00,000 (Rs. 1,00,000), to general reserve Rs. 3,25,000 (Rs. 1,25,000), to gratuities reserve Rs. 1,35,686 (*nil*) and to dividend reserve Rs. 11,52,480 (Rs. 11,44,980) leaving Rs. 23,832 (Rs. 21,171) to be carried forward. The directors recommend the following final dividends for the year ended 30th June 1956, to be paid, if declared at the annual general meeting, from the dividend reserve:—

A dividend at 7 per cent. per annum on preference shares for the half-year ended 30th June 1956 Rs. 3,12,480 (Rs. 3,12,480) and a dividend at 4¼ (4) per cent. per annum on ordinary shares, including new shares (less interest payable out of capital at 4 (4) per cent. per annum on such new shares, as sanctioned by Government) Rs. 8,40,000 (Rs. 8,32,500). Add interest out of capital during construction on new ordinary shares at 4 (4) per cent. per annum Rs. 2,40,000 (Rs. 1,80,000). (Dividend on preference shares is subject to deduction of income-tax).

The sales of energy and revenues for the year for this Company, as compared with the previous (three) years were as follows:—

Year	Units sold	Revenue
		(In rupees)
1955-56	271,331,335*	84,34,884
1954-55	253,738,070**	75,68,863
1953-54	228,647,773***	62,33,853
1952-53	210,780,923	50,17,787

*Includes 56,897,011 thermal units sold.
**Includes 27,282,089 thermal units sold.
***Includes 18,888,694 thermal units sold.

Total gross revenue was higher by Rs. 8,56,844 this year due to an increase of Rs. 8,66,021 in revenue from energy sales, partially offset by a decrease of Rs. 9,177 in revenue from other sources.

Total expenses amounted to Rs. 54,40,214, that is, Rs. 7,86,791 more than those for the previous year, which is accounted for principally by an increase of (*a*) Rs. 5,54,937 in the cost of thermal power purchased, (*b*) Rs. 1,08,972 in interest on short-term loan, (*c*) Rs. 77,826 in retiring gratuities, (*d*) Rs. 59,828 in stores, oils, etc., consumed, (*e*) Rs. 44,385 in salaries and wages and (*f*) Rs. 38,852 in managing agents' remuneration. This has been partly offset by a decrease of Rs. 1,00,492 in repairs and maintenance. The provision for taxes has decreased by Rs. 2,25,000 on account of alteration in the basis of calculating excess dividend tax, under the Finance Act, 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,29,25,250	Block ...	3,24,35,965
Reserves ...	62,05,816	Capital works under erection ...	92,68,967
Provision for taxation ...	21,49,420	Stores, tools, etc.	20,94,123
Liabilities ...	1,36,14,783	Other assets	1,27,543
Profit and loss account ...	23,832	Debts, deposits and advances ...	45,49,810
		Miscellaneous expenditure	19,93,854
		Investments	41,40,217
		Cash ...	3,08,622
Rs.	5,49,19,101	Rs.	5,49,19,101

Tata Power Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tata Hydro-Electric Agencies Private Ltd., Bombay) present the annual report of the Company with the audited accounts for the year ended 30th June 1956.

The profits, after providing for taxes, managing agents' remuneration and depreciation amounted to Rs. 65,08,212 (Rs. 53,32,961). After adding amount brought forward from last year's accounts, Rs. 27,952 (Rs. 33,980), income-tax recovered from dividends on preference shares Rs. 1,71,222 (Rs. 1,71,222) and Rs. 2,73,080 (*nil*), the amount available for disposal is Rs. 69,80,466 (Rs. 55,38,163). The directors have made the following appropriations therefrom:—

To ad-interim dividend on preference shares at 7½ per cent. per annum for the half-year ended 31st December 1955 Rs. 3,26,138 (Rs. 3,26,137) and on ordinary shares, including new shares, at 3 per cent. per annum for the year ending 30th June 1956 Rs. 15,46,080 (Rs. 14,33,580), to contingencies reserve Rs. 3,00,000 (Rs. 5,37,305), to arrears of depreciation Rs. 9,516 (Rs. 9,522), to write off of intangible assets Rs. 62,272 (Rs. 27,160), to deferred taxation reserve Rs. 2,00,000 (Rs. 2,00,000), to general reserve Rs. 6,00,000 (Rs. 1,50,000), to reserve for special repairs Rs. 16,00,000 (Rs. 8,00,000), to gratuities reserve Rs. 2,57,670 (*nil*) and to dividend reserve Rs. 20,45,258 (Rs. 20,26,507) leaving Rs. 33,532 (Rs. 27,952) to be carried forward.

The directors recommend the following final dividends for the year ended 30th June 1956, to be paid, if declared at the annual general meeting, from the dividend reserve:—

A dividend at 7½ per cent. per annum on preference shares for the half-year ended 30th June 1956 Rs. 3,26,138 (Rs. 3,26,138) and a dividend at 4¼ (4¼) per cent. per annum on ordinary shares, including new shares (less interest payable out of capital at 4 (4) per cent. per annum on such new shares, as sanctioned by Government) Rs. 17,19,120 (Rs. 17,00,369). Add interest out of capital during construction on new ordinary shares at 4 (4) per cent. per annum Rs. 6,00,000 (Rs. 4,50,000). (Dividend on preference shares is subject to deduction of income-tax).

The sales of energy and revenues for the year for this Company, as compared with the previous three years were as follows:

Year	Units sold	Revenue
		(In rupees)
1955-56	715,472,339*	2,22,42,926
1954-55	643,845,182**	1,92,08,434
1953-54	581,119,441***	1,58,42,591
1952-53	536,452,309	1,27,70,451

*Includes 142,242,529 thermal units sold.
**Includes 68,205,222 thermal units sold.
***Includes 47,221,736 thermal units sold.

Total gross revenue at Rs. 2,26,28,148, was higher by Rs. 29,99,510 this year due to an increase of Rs. 30,34,492 in revenue from energy sales, partially offset by a decrease of Rs. 34,982 in revenue from other sources. Total expenses amounted to Rs. 1,39,09,936, that is, Rs. 20,14,259 more than those for the previous year, which is accounted for principally by an increase of (*a*) Rs. 13,87,342 in the cost of thermal power purchased, (*b*) Rs. 2,18,268 in managing agents' remuneration, (*c*) Rs. 1,25,554 in interest on short-term loan, (*d*) Rs. 1,24,354 in retiring gratuities, (*e*) Rs. 1,14,715 in depreciation, (*f*) Rs. 1,02,496 in stores, oils, etc., consumed, (*g*) Rs. 75,066 in salaries and wages, (*h*) Rs. 40,376 in miscellaneous charges and (*i*) Rs. 39,775 in interest on debentures. This has been partly offset by a decrease of Rs. 2,19,107 in repairs and maintenance. The provision for taxes has decreased by Rs. 1,90,000 on account of alteration in the basis of calculating excess dividend tax, under the Finance Act, 1956. Accordingly, the net profit for the year reflects an increase of Rs. 11,75,251 or 22.0 per cent. over that of the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,02,25,000	Block ...	8,62,52,579
Debentures ...	2,97,73,000	Capital works under erection ...	2,30,85,367

Provision for taxation ...	44,59,140	Other assets.	7,23,319
Liabilities ...	2,57,16,642	Debts, deposits and advances ...	1,13,13,070
Profit and loss account ...	33,532	Miscellaneous expenditure	30,58,972
		Investments	50,18,597
		Cash ...	19,09,110
Rs.	13,69,31,364	Rs.	13,69,31,364

Equitable Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submitted the accounts of the Company for the half-year ended 31st December 1955.

There was a profit before providing for depreciation, of Rs. 14,61,087 (Rs. 3,50,892). Deducting therefrom depreciation charged for the half-year of Rs. 6,00,000 (*nil*) and provision for cesses Rs. 70,000 (*nil*) there was a balance of Rs. 7,91,087 (Rs. 3,50,892). After adding the amount brought in from the previous account of Rs. 93,266 (Rs. 1,85,653), adjustments in respect of previous periods Rs. 31,530 (*nil*) and profit on sale of Hurriladih Power Station Rs. 64,836 (*nil*). There was an available balance for disposal of Rs. 9,80,719 (Rs. 5,36,545). The directors disposed of this amount as follows:—

By transfer to general development reserve Rs. 2,50,000 (*nil*), transfer to general reserve Rs. 4,00,000 (*nil*) payment of dividend on preference shares for the half-year at the rate of 6 per cent. per annum Rs. 12,000 (Rs. 12,000) payment of dividend on ordinary shares at the rate of 15 (15) per cent. per annum Rs. 2,22,282 (Rs. 2,22,282) payment of directors' commission on the above dividend Rs. 14,058 (Rs. 14,058) and leaving to be carried forward Rs. 82,379 (Rs. 14,058 after writing off Rs. 1,18,172 being debenture issue expenses).

Nett raisings during the half-year were 8,39,856 tons compared with 8,08,193 tons during the previous six months and 8,02,218 tons in the corresponding period of 1954. Despatches amounted to 8,72,996 tons against 8,35,129 tons and 8,51,251 tons during the preceding two half-years. Stocks totalled 65,918 tons compared with 83,344 tons at the end of the previous half-year and 1,05,387 tons as at 31st December 1954.

Collieries.—The Collieries have been maintained in good condition. Good relations between labour and management continued throughout the period.

During the period under review, the Company took possession of Charanpur Colliery and the properties of Apcar Collieries Ltd. (In Voluntary Liquidation). The Company's raisings were thereby increased over those for the previous half-year and an improvement in wagon supplies effected a reduction in the stocks of coal at the Collieries.

The award of the All India Industrial Tribunal (Colliery—Disputes) is effective from 26th May and has granted substantial increases in wages. Production costs have increased sharply but controlled selling prices, in West Bengal and Bihar, have been increased, from 5th July, by only Rs. 3 per ton. This state of affairs will have an adverse effect upon the Company's trading results.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,63,760	Block ...	1,15,25,712
Debentures ...	50,00,000	Stock of coal ...	8,78,966

Liabilities ...	1,56,50,987	Debts, deposits and advances ...	1,36,87,312
Profit and loss account	82,379	Investments	15,76,612
		Cash ...	8,41,052
Rs.	3,38,92,109	Rs.	3,38,92,109

Dhemo Main Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1955.

There was a profit before providing for depreciation, of Rs. 22,110 (loss of Rs. 2,17,919). After deducting this from depreciation charged for the half-year Rs. 90,086 (Rs. 81,827) there was a loss of Rs. 67,976 (Rs. 1,36,092). After deducting therefrom adjustment in respect of previous years Rs. 7,937 (*nil*) leaving a balance of Rs. 60,039 (Rs. 1,36,092) and adding thereto the balance at debit of profit and loss account brought forward from previous half-year of Rs. 2,43,279 (Rs. 1,91,155) there was a net accumulated loss amounting to Rs. 3,03,318 (Rs. 3,14,080). After transferring the balance on replacement reserve account, of Rs. 1,20,000 (*nil*) there is a balance at debit of profit and loss account to be carried forward, of Rs. 1,83,318 (Rs. 3,14,080).

Net raisings during the half-year were 1,15,751 tons compared with 1,22,177 tons during the previous six months and 1,12,847 tons in the corresponding period of 1954. Despatches amounted to 1,21,401 tons against 1,26,096 tons and 1,19,769 tons during the preceding two half-years. Stocks totalled 3,321 tons on 31st December 1955.

Colliery.—The condition of the Company's Colliery was maintained during the half-year. Good relations between labour and management continued throughout the period.

Underground conditions at the Colliery continued to be very difficult and raisings for the half-year were 6,400 tons lower than for the previous period. This reduction is reflected in the Company's results for the period under review.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	24,00,428
Liabilities ...	25,83,126	Stock of coal	48,252
		Stores and spare gear	1,53,246
		Debts, deposits and advances ...	13,47,573
		Cash ...	50,309
		Profit and loss account ...	1,83,318
Rs.	41,83,126	Rs.	41,83,126

Hurriladih Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1955.

There was a profit before providing for depreciation, of Rs. 2,94,924 (Rs. 2,54,792). Deducting therefrom depreciation charged for the half-year Rs. 28,127 (Rs. 31,061) and provision for taxation Rs. 1,35,000 (Rs 80,000) there was a balance of Rs. 1,31,797 (Rs. 1,43,731). After adding the amount brought in from the previous account of Rs. 65,461 (Rs. 62,148) and adjustment in respect of previous periods Rs. 3,727 (*nil*) there was available for disposal a sum of Rs. 2,00,985 (Rs. 1,95,879 after providing Rs 10,000 for doubtful debts). The directors disposed of this sum as follows:—

By payment of a dividend for the half-year at the rate of 25 (20) per cent. per annum. Rs. 1,00,000 (Rs. 80,000), payment of directors' commission on the above dividend Rs. 5,000 (Rs. 4,000) and transfer to general reserve Rs. 50,000 (Rs. 50,000) leaving to be carried forward Rs. 45,985 (Rs. 61,879).

Net raisings during the half-year were 1,12,985 tons compared with 1,22,153 tons during the previous six months and 1,29,489 tons in the corresponding period of 1954. Despatches amounted to 1,19,796 tons against 1,23,632 tons and 1,36,169 tons during the preceding two half-years. Stocks totalled 3,792 tons on 31st December 1955.

Colliery.—The good condition of the Company's Colliery has been fully maintained. Good relations between labour and management continued throughout the period. Working of 16 Seam at the Colliery is now expected to be completed before the end of 1956 and it is intended to proceed with the development of 15A Seam in replacement of 16 Seam.

The award of the All India Industrial Tribunal (Colliery—Disputes) is effective from 26th May and has granted substantial increases in wages. Production costs have increased sharply but controlled selling prices, in West Bengal and Bihar, have been increased, from 5th July, by only Rs. 3 per ton. This state of affairs will have an adverse effect upon the Company's trading results.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

		Cash ...	7,42,767
Rs.	27,82,649	Rs.	27,82,649

West Jamuria Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill and Barry Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1955.

The accounts showed a loss before providing for depreciation, of Rs. 1,49,773 (Rs. 2,18,962). Adding thereto the depreciation charged for the half-year of Rs. 1,14,717 (Rs. 65,379) and provision for bad and doubtful debts Rs. 9,379 (Rs. 22,302) leaving a debit balance of Rs. 2,73,869 (Rs. 1,75,885). After deducting therefrom the credit balance brought forward from previous account of Rs. 122 (Rs. 582) and adjustments in respect of previous years Rs. 1,097 (*nil*) there was a net Accumulated Loss amounting to Rs. 2,72,650 (Rs. 99,029 after taking into account Rs. 76,274 being provision for taxation no longer required. After transferring the balance on development reserve account, of (Rs. 1,26,000) Rs. 37,000 from general reserve and Rs. 63,000 from development reserve) there is a balance at debit of profit and loss account to be carried forward, of Rs. 1,46,650 (credit of Rs. 971).

Net raisings during the half-year were 1,17,912 tons compared with 1,11,035 tons during the previous six months and 1,11,137 tons in the corresponding period of 1954. Despatches amounted to 1,33,466 tons against 1,01,287 and 95,580 tons during the preceding two half-years. Stocks totalled 9,239 tons on 31st December 1955.

Collieries.—The Collieries have been maintained in good condition. Good relations between labour and management continued throughout the period.

In spite of improved despatches, West Jamuria Colliery continued to operate uneconomically during the period under review. Working results at Ackhalpur Colliery continue to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	32,65,173

Rs.	46,68,369	Rs.	46,68,369

Mysore Spun Silk Mills Ltd.

The directors of the above Company (Chairman: Mr. K. Shamsuddin Khan, Channapatna submitted the audited accounts of the Company for the year ended 31st March 1956.

The Mills worked to full capacity from the latter part of August 1955 only. It worked partially for the first four months of the year which resulted in a loss of about Rs. 30,000 (Rs. 4,54,581). By the end of the year, viz., 31st March 1956, the Company has, after wiping out the loss of the first 4 months, made a profit of about Rs. 42,000 without providing for depreciation. Considering the unfavourable market conditions for the finished products during the year, the result of the working is considered satisfactory and is also indicative of future progress.

Due to lack of adequate working capital during the year, the Mills undertook processing of raw materials for others delivering the finished products on payment of manufacturing charges. The said arrangement which proved beneficial to the Company, continued till the end of the year under report.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,61,780	Block ...	14,12,491

		Cash ...	21,836
		Profit and loss account ...	1,50,653
Rs.	28,96,489	Rs.	28,96,489

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notice

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2¾ per cent. per annum, less Indian Income-tax thereon, will be paid to the Registered holders as on the 22nd October 1956, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March 1957.

The Share Transfer Books of the Preference Shares will be closed from the 15th to the 22nd October 1956, both days inclusive.

By Order of the Board,

D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA 1, 1st *October* 1956.

Notices

THE NEW MONKHOOSHI TEA COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 30th October 1956, at 10-45 a.m. for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To re-appoint by a resolution which will be proposed as a special resolution a Director who retires by rotation.

   Special notice to propose the undernoted resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. H. Mackay Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act.

   To consider, and, if thought fit, to pass, with or without modification, the following resolution:—

   As a Special Resolution:

   "RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation."
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*:

   To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the Ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 23rd to 30th October 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA—1, 21*st September* 1956.

Note.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5.—By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. An authority is therefore required for your Directors to borrow for the purposes of the Company in excess of this statutory limit. The Resolution is intended to provide that authority and to restore the position which prevailed under Article 65 prior to 1st April 1956.

THE NEW ASSAM VALLEY TEA COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the Members of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday the 30th October 1956, at 10-30 a.m. for the following purposes:—

AGENDA

1. To receive and consider the Directors' and Auditors' Reports and the Profit and Loss Account for the year ended 31st December 1955, and the Balance Sheet as at that date.
2. To declare a Dividend.
3. To re-appoint by a resolution which will be proposed as a special resolution a Director who retires by rotation.

   Special notice to propose the undernoted resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company in which it is stated that Mr. H. Mackay Tallack is the Managing Director of the Managing Agents' Company and as such an associate of the Managing Agents within the meaning of the Act and a person who can only be appointed or re-appointed a Director of the Company by Special Resolution in conformity with Section 261 of the Act.

   To consider, and, if thought fit, to pass, with or without modification, the following resolution:—

   As a Special Resolution:

   "RESOLVED in conformity with Section 261 of the Companies Act, 1956, that Mr. H. Mackay Tallack be and is hereby re-appointed a Director of the Company liable to retirement by rotation."
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*:

   To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as an Ordinary Resolution:—

   "RESOLVED that the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for carrying on the business of the Company notwithstanding that the moneys to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the Ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

The Share Transfer Books of the Company will be closed from 23rd to 30th October 1956, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
A. H. FORSTER,
Secretary,
Managing Agents.

2, FAIRLIE PLACE,
CALCUTTA—1, 21*st September* 1956.

Note.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

Item No. 5.—By the provisions of Section 293(1)(d) of the Companies Act, 1956, the Directors without the consent of the company in general meeting cannot borrow monies in excess of the aggregate of the paid-up capital of the company and its free reserves. HASTINGS MILL LIMITED

NOTICE

THE ANNUAL ORDINARY GENERAL MEETING of the Company will be held at the Registered Office, at 14, Netaji Subhas Road, Calcutta, on Monday the 29th October 1956, at 3-30 p.m. for the following purposes:—

(1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March 1956.

(2) To declare Dividends.

(3) To elect Directors.

(4) To appoint Auditors for the current year.

(5) As special business, to consider and if thought fit, to pass with or without modifications, the following resolution which will be proposed as ordinary resolution.

"RESOLVED that consent of the Company be and is hereby given to the Board of Directors to contribute and/or subscribe from time to time to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the Company or the welfare of its employees, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year may exceed Rs. 25,000 or 5 per cent. of the Company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately proceeding, whichever is greater."

(6) To transact any other ordinary business of the Company.

The Share Transfer Books of the Company will remain closed from 16th October 1956, to 29th October 1956, both days inclusive.

By Order of the Board,
Per Pro BANGUR BROS. LTD.,
Sd/- B. D. BANGUR,
Managing Agents.

CALCUTTA, 24*th September* 1956.

N.B.—(i) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) Explanatory statement in regard to special business to be transacted at the meeting.

The Board of Directors have to give contributions from time to time to various institutions including charitable and other funds not directly related to the business of the Company or to the welfare of its employees and which is at times in excess of the limits as laid down in Section 293 (i) (e) of the Companies Act, 1956. A resolution has, therefore, been proposed to authorise the Directors to contribute to such funds in excess of the above limits.

THE STANDARD-VACUUM REFINING COMPANY OF INDIA LIMITED

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, 3*rd October*

There was an acute shortage of funds in the short-term money market during the week under review also. With demand for bank credit still keen, banks had to seek temporary accommodation from the Reserve Bank. Interests rates were, therefore, unchanged at the previous week's levels.

Activity in inter-bank business was very much restricted in the absence of any surplus funds with banks. Call money rate among all sections of banks was nominally quoted at 3½ per cent. House money at call was in demand at 3¼ per cent. Short-term deposits were taken at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

The Reserve Bank of India's statement for the week ended 28th September 1956 discloses a further contraction of Rs. 8.48 crores in notes in circulation, bringing the total fall for the past three weeks to Rs. 30.96 crores. Notes held in the Banking Department were up by Rs. 9.75 crores, so that the rise in total notes issued was of the order of Rs. 1.27 crores. This is covered on the assets side by a similar increase in rupee coin. Foreign securities have declined by Rs. 10 crores, while a similar increase is noted in rupee securities. In the Banking Department, a rise of Rs. 3.95 crores is noted in the deposits of the Central Government and a decline of Rs. 4.89 crores in the deposits of other Governments. There has been an increase of Rs. 1.93 crores in balances held abroad, but loans and advances to Governments show no change. Other loans and advances have dropped by Rs. 3.87 crores, and this decline is mainly accounted for by the fall of Rs. 4.28 crores in outstanding advances to Scheduled banks against usance bills. Fresh borrowings by banks against these bills during the week amounted to Rs. 6.48 crores. There has been a further fall of Rs. 10.02 crores in investments.

The Scheduled banks' statement for the week ended 21st September 1956 shows a fall of Rs. 5.72 crores in demand deposits of banks, while time deposits are higher by Rs. 33 lakhs. Inter-bank borrowings are lower by Rs. 1.38 crores, while borrowings from Reserve Bank have gone up by Rs. 13.61 crores. A decrease of Rs. 2.25 crores is noted in advances, while inland bills purchased and discounted account for an increase of Rs. 2.88 crores. Investments have gone up by Rs. 2.34 crores, while total cash balances have declined by Rs. 3.08 crores and money at call and short notice by Rs. 2.52 crores.

The Gilt-edged market showed no signs of any improvement either in price or in activity during the week under review. The undertone was, however, fairly steady with prices of most of the securities well held. 3 per cent. 1957 and 1958 were maintained at Rs. 99-12 and Rs. 99-9, respectively. 3 per cent. 1959-61 held its ground at Rs. 97-15, 3 per cent. 1963-65 at Rs. 94-7 and 3 per cent. 1964 at Rs. 94-10. 3 per cent. 1966-68 was placed at Rs. 93 after payment of interest on 1st October, as against Rs. 93-2 *cum*-voucher a week ago. 3 per cent. 1970-75 changed hands As. 2 lower at Rs. 89-6. 3 per cent. 1986 Conversion Loan shed an anna to Rs. 75-1. 3½ per cent. 1962 was unchanged at Rs. 97-15, 3½ per cent. 1961 at Rs. 99-2, 3¼ per cent. 1964 at Rs. 98-9 and 3¼ per cent. 1965 at Rs. 98-7. 3½ per cent. 1967 gathered an anna to Rs. 98-8, while 3½ per cent. 1974 was stagnant at Rs. 98-8. Among the State loans, Madras 4 per cent. 1968 hardened by As. 2 to Rs. 99-4 and U.P. 1968 by an anna to Rs. 99-3.

In the foreign exchange section, the rupee ruled steady in terms of the U.S. dollar during the week. This was in sympathy with the strength of sterling in New York. Banks' selling rate of ready dollars was unchanged at Rs. 481¼ per $100, while their buying rate, after moving up from Rs. 477 to Rs. 477¼, declined to Rs. 476¾ per $100. In New York, spot sterling softened in the earlier part of the week from $2.78⅜—2.78½ to $2.78-3/16—2.78-5/16, but soon rallied back to $2.78⅜—2.78½. Three months' forward moved up from $2.76-9/16—2.76-11/16 to $2.76-11/16—2.76-13/16 and transferable sterling from 275.80—275.90 cents to 276.60—276.70 cents.

GOOD DEMAND FOR TEA

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 27*th September*

Approximately 500,000 lbs. were on offer in Dust Sale 'S' which was held on Tuesday, 25th September. There was a good demand, but prices were rather irregular. Commonest kinds were slightly easier, but medium dusts with coloury liquors were fully firm and occasionally dearer. Best liquoring dusts sold well at about last rates. Middle East types met with some competition and prices advanced.

London Market: *Sale of 24th September* 1956:—Market excited and much dearer for all descriptions. Plain and mediums 6*d.* to 8*d.* dearer.

Sale of 25th September 1956:—Irregularly 2*d.* to 6*d.* dearer.

Colombo Market: *Sale of 24th September* 1956:—Dearer, except stalky sorts. Good liquoring dusts and fannings show very sharp rise.

Sale of 25th September 1956:—Strong demand dearer rates all grades. Dimbulas advanced strongly late in auction.

Calcutta Market: *Export*:—58,775 packages. Better general demand. Strongest features commonest and best, particularly fannings grades.

Internal:—Sale postponed.

Export Quota:—The market has been rather quiet and the quotation now stands at 23 pies sellers.

Forthcoming Auctions:—Dust Sale 'T' will be held on Tuesday, 9th October.

BULLION MOVES DOWN

(From Our Own Correspondent)

BOMBAY, 3*rd October*

Trading on the Bullion exchange was far from lively during the week under review. The slight improvement in sentiment noted towards the close of the previous week gathered further strength early in the week under review, but was not sustained during the rest of the week.

Silver opened on a bright note with a further hardening of values on reports of good offtake in the ready section and demand from the Calcutta market. Subsequently, however, the bullish fervour received a setback, as the demand slackened due to rumours of arrivals of Tibetan Coins and talks of reduction of import duty on silver. Today again, the market ruled steady, in the absence of any confirmation of these rumours and prices moved up slightly.

Gold was lethargic throughout the week, in the absence of any encouraging factors. The undertone was quiet on account of a contraction in demand.

Forward silver (20th October settlement) moved up from Rs. 174-6 to Rs. 175 early in the week, but soon staged a retreat to Rs. 173-7 on Monday, thus wiping out the previous week's gain. Today, however, there was again a revival to Rs. 174-2.

Ready silver (.996 Mint), after an initial marking up from Rs. 174 to Rs. 174-10, gave way to Rs. 173-3. The closing was, however, better at Rs. 173-14. The floating stocks of silver are reported to be 2,100 bars, while the daily offtake during the week was 20 bars on an average.

Gold for forward delivery (19th October settlement) looked up from Rs. 103-6 to Rs. 103-12, but gave way to Rs. 102-13 before closing today at Rs. 103.

Ready gold declined from Rs. 103-8 to Rs. 102-13, after touching a high of Rs. 103-14 early in the week. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was no more than 2,500 tolas on an average.

In New York, silver price was marked up from 90.75c. to 90.875c. London prices also hardened from 79¾*d.* to 79⅞*d.* for both spot and forward. London gold advanced from 251*s.* 7*d.* to 251*s.* 8¼*d.* before giving way to 251*s.* 5½*d.*

The following comparative table shows the trend of market during the week under review:

	3-10-56	Highest	Lowest	26-9-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	102 13	103 14	102 10	103 8

TANNED COW HIDES FIRM

(From Our Own Correspondent)

MADRAS, 1*st October*

There were more enquiries for tanned cow hides from the U.K. and arrivals into local market met with ready clearance. Lower selections, however, were difficult to sell and reduced prices, it was feared, had to be taken, if sales were to be forced. Light weights were comparatively weak, and the call for medium weight and heavies continued firm at last prices. Importers refused to increase their buying limits, despite shippers' offers at a penny over their last sales.

Demand for tanned cow calf and buff calf was poor, while buff hides were cleared steadily by exporters to the U.S.A.

In the tanned skins section, demand was a bit slow and lower selections were wanted at lower prices which the tanners were not anxious to take, in view of their well sold position.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 30*th September*

During the week under review, the conditions of the hides and skins market looked stabilised, despite certain railway dislocations owing to heavy rainfall in Bihar and Eastern U.P. There was heavy demand for upper grade buff and wet cow. It was reported that Messrs. Cooper Allens were in the market for high grade cow over some heavy orders for footwear received from abroad. The Madras dealers were in for lighter cow, goat and sheep. Fresh arrivals were ample.

The latest available quotations are: Wet salted cow 1st grade Rs. 360, 2nd grade Rs. 280 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep skins Rs. 200 per 100 pieces.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 27:—1,150,000 lbs. Very strong demand, particularly medium sorts and Middle East types which are As. 2 to As. 4 dearer. Others irregularly dearer, but best sometimes below valuation."

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, 3*rd October*

A distinctly bearish trend was witnessed in the cotton futures market in the week under review. It now appears as though the morale of the market has been undermined. The bearish trend was due, principally, to the Government's policy of restriction of mill stocks, the fear of an extension of the credit squeeze instituted by the monetary authorities and the prospect of a better crop in the current season. The limitation on stocks made mills cautious in their purchase of raw cotton and the credit squeeze led to the fear that banks would reduce advances against cotton crop. These considerations have induced heavy selling pressure with the result that cotton prices dipped sharply. The spot section which hitherto had remained firm also reacted sharply and the basis of popular varieties was down by five to ten points.

M. G. Jarilla (March 1957) opened the week at Rs. 691½, the same as the previous week's closing rate and fell back as profit-taking operations ensued. Continued bear hammering pushed the rates further down to Rs. 677, on Saturday. Thereafter, on heavy selling pressure, it began its downward march reaching as low as Rs. 669 today. However, rates improved slightly towards the end of session and closed at Rs. 671¾. M. G. Vijay (April 1957) opened one point lower at Rs. 820 and touched the low of Rs. 792 today, before closing the day's session at Rs. 794.

The following is the trend of prices for the two contracts during the week:

(In rupees per candy of 784 lbs.)

	3-10-56	High	Low	26-9-56
Jarilla (March) ...	671¾	691	669	691½
Vijay (April) ...	794	820	792	821

The weakness of the futures market was reflected in the spot section also which turned easy. Weak advices from Punjab, coupled with anxiety of farmers to sell their cotton in view of the difficulty of obtaining credit were responsible for this trend. Mills were reluctant to go in for cotton and dearth of enquiries pushed down prices.

In the export section there was only limited activity. There were inquiries for Bengals from Japan which maintained its price. China is reported to have been seeking Berar and C.P. *Deshi*. Some inquiries were also reported for Zoda. Delivery contracts too were easy.

In the foreign section interest was confined mainly to Pima. The market was thick with rumours that the Government might allow imports of 150,000 bales of American cotton out of the quantity of 500,000 bales provided for import under the recently concluded Indo-U.S. Trade Agreement. This quantity is expected to be imported through normal trade channels.

The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 700; Berar Jarilla 770; Khandesh 780; Vijay 955; Oomra *Deshi* 740; Moglai 725. *Delivery Contracts*: Khandesh 197/3 December 110; Berar 95; Moglai 30 'on' Jarilla; 320 F December 68; 216 F 90; Vijay 13/16" February-March 62 'on' Vijay.

A firm trend was in evidence in the Karachi cotton market, attributed principally to the continued interest shown by Italy and Japan in certain varieties of Pakistan cotton. Mills also evinced considerable interest in new crop N.T. and a fair amount of business is also reported to have been done in new crop deshi. N.T.R.G. January, which had closed at Rs. 75-6 last week, put on Re. 1-1 over the week, while March position advanced from Rs. 74-10 last week to Rs. 75-9. Prices of spot lots have also shown considerable improvement. Exports from Karachi during the 1955-56 season were 969,560 bales (42 bales to Indian ports), as compared with 929,783 bales during the previous season. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 96-8 (96); Punjab *Deshi* 82; 4 F Punjab Roller 78-12; S.G. 80; L.S.S. Punjab R.G. 79; S.G. 81; N.T.R.G. 81-4; S.G. 84-12; 289 F Punjab R.G. 83.

Buoyant conditions prevailed in the Alexandria cotton market in the week under review. The rally in prices was due to encouraging inquiries from abroad. The U.S., Germany, Italy and Switzerland were principal buyers. Regarding crop prospects, it is reported that in both Upper and Lower Egypt picking has become general. The expectation, based on arrivals at Minet-el-Basal, is that Ashmount is better in all respects than last year, Karnak the same, and Menoufi irregular in staple and Giza 30 not as good in style and staple as last year. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below, the figures in brackets being last week's closing quotations:

Karnak: November 107.25 (102.90); January 106.20 (102.20); March 105.4 (101.40). *Ashmouni*: October 79.15 (72.25); December 79.25 (72.40); February 79.70 (72.60).

Quiet conditions prevailed in the Liverpool cotton market during the period under review. Though there was fair demand for both ready and shipment cotton there no appreciable increase in prices was in evidence. By far the largest portion of the demand was attracted by U.S. styles. American shippers were still offering the lower grades and staples at very attractive rates. Trading in the Egyptian Karnak contracts continued to remain at a standstill due to the ban on Egyptian cotton imports. Business in Sudan cotton was also restricted owing to the continuing political uncertainty. The

following are the latest available rates—in pence per lb.—from Liverpool:

American one inch staple Contract: October-November 24.77; December-January 24.75; March-April 24.75; *Sudan Cotton Contract*: November December 50.15.

Prices in New York markets remained steady throughout the week and hedge pressure has not made itself felt, despite the increasing crop movement. However, on the 1st inst., a reactionary tendency was in evidence on scattered liquidation plus some New Orleans selling. It was met with trade buying and short covering. The weakness of Wall Street also adversely affected the market but trade houses offered the principal support which maintained values.

Meanwhile, it is expected that owing to the success of the surplus cotton export policy the Administration will continue these sales even after the target of five million bales for the season is reached. The prospects for further export sales are bright. An important section of the Trade and Industry, however, believes that the present procedure of liquidating surplus cotton is detrimental to the cotton marketing system. It is pointed out that while the programme had no significant effect on domestic prices, it has led to a sharp reduction in the volume of trading in the futures market.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	3-10-56	25-9-56	18-9-56
Spot	34.55	34.55	34.45
October	34.05	34.00	33.79
December	34.13	33.99	33.79
March	34.32	34.07	33.72

YARNS RECEDE FURTHER

(From Our Own Correspondent)

BOMBAY, *3rd October*

The last week's bearish tone of the yarn market gathered momentum this week. Selling pressure continued unabated and prices suffered a further setback. In particular, rayon yarns were adversely affected, thanks to reports of persistent downward trend in rayon fabrics prices and heavy accumulations of stocks with weaving mills. Staple fibre yarns were also depressed, on account of forced sales by several mills in the wake of slack demand from consuming centres. Cotton yarns, too, were neglected for want of buying support. The undertone of the market was weak.

Snia rayon yarn (120 dull cones) for October delivery dropped Rs. 9 to Rs. 760. December position fell by Rs. 8 to Rs. 775. 120 Japan and 150 Japan declined by half an anna each to Rs. 3-11-6 and Rs. 4-1, respectively. 150 Italy lost a like amount to Rs. 3-14-6. 120 Italy was dull at Rs. 3-3. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade slipped by nine pies to Rs. 3-3. 120 Bt. cones 1st grade receded by six pies to Rs. 3-11.

Staple fibre yarn (40×2) for October delivery moved down by Rs. 4 to Rs. 633. December contract retreated from Rs. 642 to Rs. 639. Among spot indigenous yarns, New Greats eased by six pies to Rs. 3-5-9. Centurys shed three pies to Rs. 3-6-6. Kohinoors were quiet at Rs. 3-7-6. Deals in foreign K'Suns (80×2) were put through an anna lower at Rs. 6-5. Paramounts and Fujis were both unchanged at Rs. 5-15.

In the cotton yarn section, sixty counts were subjected to selling. Finlays climbed down by As. 12 to Rs. 61. Raghuvamshis decreased by As. 6 to Rs. 58-6. Moderns lost As. 4 to Rs. 61-12. Among 40s, Maduras dropped As. 8 to Rs. 28-14. Minaxis receded by As. 4 to Rs. 27-15. There were transactions in 30s at reduced rates, Maduras declining by As. 8 to Rs. 24 and Apollos by As. 2 to Rs. 22-12. Among 10s, Moderns, Podars and Elphinstones shed an anna each to Rs. 15, Rs. 14-12 and Rs. 14-10, respectively. Among 80s, Mahendras lost As. 4 to Rs. 71-12. Moderns were unaltered at Rs. 71.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	3-10-1956	26-9-1956	19-9-1956
Art Silk yarn **(per case of 200 lbs.)—**	Rs. a.	Rs. a.	Rs. a.

OILSEEDS WEAK

(From Our Own Correspondent)

BOMBAY, *3rd October*

The oilseeds market ruled distinctly bearish during the week under review. After a steady start at the commencement of the week, the market was adversely affected by the reports of favourable weather condition in the producing areas. Weakness of the cotton market and lack of support helped the downtrend of prices. Bear-covering towards the close of the week, however, assisted some recovery in prices. At Madras also, the sentiment remained weak in the groundnut section, chiefly due to the prospects of early arrivals of new crop.

Groundnut February 1957 contract, which started the week at Rs. 132-2 came down gradually to Rs. 128 today, losing thereby as much as Rs. 3-14 over the week. In the spot section, Bold F.A.Q. shed Rs. 2-4 at Rs. 33-8, and Coramandal and Khandesh quality lost Re. 1-4 each at Rs. 33-8. Groundnut oil ex-mill, however, was fractionally higher at Rs. 18-10, while Railway Receipt came down to the last week's quotation at Rs. 18-7, after starting the week As. 3 higher.

In the castorseed section, the September contract was finally quoted at Rs. 142 or Rs. 4 lower than at the close of the previous week. Tenders to the tune of 11,400 candies were issued on 29th September, making a total of 37,000 candies. May 1957 contract, which began the week at Rs. 124, reached the lowest level of the week at Rs. 118 on the 1st October. Later, it improved slightly to Rs. 120-12. It has thus shed Rs. 3-10 over the week. In the spot section, Madras quality moved down from Rs. 28-4 to Rs. 27-14, and Kampur quality from Rs. 27 to Rs. 26-12. Oil B.S.S. lost As 4 at Rs. 16-10 though Commercial was unchanged at Rs. 15-14.

Linseed May 1957 opened the week at Rs. 26-8, but slowly slided down to Rs. 26-2 on the 1st inst. It, however, recovered to its former level at the close today. Bold Ready, however, moved slightly higher on demand from the crushers and put on As. 8 over the week at Rs. 31-8. Sutna Ready, too, put on As. 8 at Rs. 30, over the week. Linseed oil Ready, however, shed As. 2 at Rs. 17-2.

Among other seeds, *kardi* seed, Bold Ready and October-November declined by As. 6 each to Rs. 17-2. *Niger* seed Ready and Madras were each quoted As. 4 lower at Rs. 27 and Rs. 27-4 respectively.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	3-10-1956	26-9-1956	19-9-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	128 0	131 14	132 4

Ready	17 2	17 4	17 0

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, *3rd October*

A steady trend was in evidence in the sugar market during the week under review. The distress selling noted last week abated. In fact, there was some buying support for sugar, thanks to the delay in the issue of the normal monthly quota of sugar for sale in free market. Traders expected that the release might not be made till the beginning of next week. Reduced arrivals of indigenous sugar into the market also imparted some strength; arrivals during the week aggregated only 12,900 bags, as against 35,500 bags in the previous week and 20,700 bags two weeks before.

Spot-medium grain indigenous sugar improved by a rupee to Rs. 89-Rs. 90. Small grain was fully steady at Rs. 87 and large grain at Rs. 92-Rs. 97. British refined sugar was done at Rs. 90-8.

In the forward section, *Asho* delivery contract for 'C' grade sugar found buyers and rose by As. 8 to Rs. 89-12.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER DULL

(Messrs. Parekh and Co.)

BOMBAY, *3rd October*

Malabar black pepper has remained dull and depressed throughout the whole of last fortnight and the turnover has considerably fallen off on account of paucity of foreign enquiries. Except for a small business by way of short-covering, both bulls and bears lacked enthusiasm. Everybody awaited some new incentive. The fast-approaching new harvesting season was another weakening factor. Growers wanted to sell out their old holdings as much as they could before the arrival of the new crop, since they thought that if new crop was selling at lower price nobody was going to pay higher for the old crop except for an urgent need.

Heavier arrivals of pepper in New York during September against July and August shipments forced spot price to give in and it is now sel'ing at $0.30 without creating much interest among the grinders. The hope of some settlement in the threatening dock-strike at New York is, considered as one of the depressing factors for the spot market. When Sarawak spot in New York is selling on par with shipment for Lampong and/or Malabar, dealers there generally buy spot Sarawak for replacement against their sales of Lampong-Malabar. This naturally acts as a bar against fresh enquiries for shipment from India and Indonesia for some time and consequently tells upon the sellers in the producing countries who are accustomed to have foreign orders almost daily for supporting the market.

Alleppey, after touching Rs. 750, went down to Rs. 712½, while garbled at Cochin declined from Rs. 130 to Rs. 125. Arrivals of light berries are expected to begin soon. As a result, inland buying too has been depressed. Commission houses are looking for lower prices.

Despite good export during May to September, the Singapore market has failed to stabilise itself. The position in Indonesia is not clear for want of genuine information and hence uncertain. Therefore, the sentiment in pepper is at present bearish and unless some favourable development takes place the market is likely to go down.

In A.S.T.A. section, October shipment fluctuated between $0.29½ to $0.29 and November-December from $0.28½ to $0.28 without attracting much attention. In delivery section, prices are also moving narrowly with outside interest next to nothing.

Following are today's nominal quotations: Ready delivery Rs. 96 per Bengal maund; October Rs. 662½-667½ and November Rs. 655-60 per candy of 5½ cwts.

JUTE GOODS DROP

(From Our Own Correspondent)

CALCUTTA, *2nd October*

Prices of jute goods declined during the week, the reaction in sacking being more marked than in hessian. There was only limited support from foreign buyers and shippers, as it was evident that their immediate requirements had been fully met in the buoyancy that followed the recent decision of mills to curtail production. The upward trend had to be arrested, as there was an apprehension that prices might rise too high. In fact, prices of goods had advanced during recent weeks to such a level as to make production of mills only economic but not quite profitable. For raw jute also followed the trend of goods. During this week, despite the fall in the prices of jute goods and the restricted support to raw jute by mills, raw jute prices were maintained at previous levels. Prices of raw jute were steady in upcountry centres, and arrivals in Cossipore were absorbed almost immediately after clearance.

If mills are to work economically and prevent losses, there is no gainsaying the need for raw jute prices to go down further. However, for the present, the steady conditions across the border, the difficulty and the great delay in getting imports from Pakistan, and their effect on the local trend prevent prices for the domestic fibre from bearing a relation to the prices of jute goods. All those concerned with the jute industry have often stressed the imperative need for India to become self-sufficient in the matter of raw jute supplies, and this subject was naturally focussed at length by Mr. D. S. Kuthari when he addressed the Jute Brokers' Association in Calcutta on Saturday last.

The time has come for the Agriculture Departments of Assam, West Bengal and Uttar Pradesh to pay better attention to the growing of more jute. A great measure of success can be achieved even within the span of one season if more attention is paid to the distribution of improved seed, provision of better retting facilities, and wider publicity of literature in local languages relating to more scientific cultivation and to improvement of fibre yield.

During the week, a slight interest was shown in hessian by buyers on behalf of the Argentine. Usually, that country imports from India as much as 60,000 tons of jute goods a year, but, since stocks there are heavy, it was believed in Calcutta that Argentina's purchases during this year would be about 20,000 to 30,000 tons only. Australia was believed interested in woolpacks and for a time speculators were active. In the month of September, shipping was less impressive than in August, but it is expected that, in view of the lower output, stock figures, when published, would not unfavourably affect market sentiment. Between 1st and 25th September, sacking shipped was only 18,299 tons, as compared with 30,744 tons in the same period in August, and hessian shipped was 23,421 tons, as against 24,379 tons.

During last Tuesday, the market was closed on account of the hartal, and on Wednesday rates were fairly steady following interest shown by shippers as well as covering business. Ready B. twills were priced at Rs. 113-6 and hessian 40"×10 oz. at Rs. 43-7. However, follow-up business was not forthcoming, and speculators became disappointed. Therefore, B. twills sagged to Rs. 113-2 on Thursday and hessian 40"×10 oz. to Rs. 43-3. Lacking in support, the market trod a declining trend, and on Friday rates touched low levels. Mills were in no mood to enter the market for fear of prices going down further. In any case, during the recent upward trend, mills had sold considerably, and a good portion of their production has been booked for deliveries extending up to March next. Speculators were naturally inclined to lessen commitments and this, together with the lull in foreign buying, pushed down ready B. twills to Rs. 112-8 and hessian 40"×10 oz. to Rs. 43 on Friday. On Saturday, the rates were hardly changed. But yesterday, prices sagged further with B. twills and hessians standing at Rs. 111-4 and Rs. 42-12, respectively. The market is closed today (Mahatma Gandhi's birthday) and tomorrow (Mahalaya).

All forward positions also participated in the decline, and even the one-month delivery goods in both hessian and sacking lost the premium and were quoting at par with the ready goods. Jan-March B. twills gave way to Rs. 111-10 from Rs. 112-6, and Oct.-Dec. to Rs. 112-6 from Rs. 113-6. Both these positions in hessian 40"×10 oz. were priced at Rs. 41-10 and Rs. 42-7, as against Rs. 42 and Rs. 43 earlier.

Mills showed very little interest in raw jute. Sellers were not prepared to discount rates, in view of the steady trend in upcountry markets. However, with the easing of the flood situation, arrivals are bound to increase and it is expected that prices may move down. Indian northern bottoms were unchanged at Rs. 29 for most part of the week but declined yesterday to Rs. 28-8. So did Assam Upper bottoms; after being firm at Rs. 29, they eased to Rs. 28-8. Local daissees were, however, maintained firm at Rs. 29-8 throughout.

LINSEED REACTS

(Messrs. A. Bradley and Co.)

CALCUTTA, *1st October*

A further reaction following the removal of export duty on linseed oil has been observed, and prices are somewhat lower. Although seeds are very scarce, buyers are unable to pay high prices, owing to the poor offtake of oil. The oil section is dull. Following a decline in U.K. prices, a disparity of about £6 now prevails. The latest available quotation for Ready-October is Rs. 23-8 per maund.

TEA FIRM

(From Our Own Correspondent)

CALCUTTA, *2nd October*

Steady conditions prevailed during the internal auctions held last week, as demand for quality teas continued to be strong. Reports of keen competition during the tea sale in London on Wednesday last and the considerable strength of Doars tea there naturally boosted local sentiment. Reports of yesterday's sale in London have also been encouraging, and, although prices had eased at the beginning in view of a decline in quality, the good liquoring teas had advanced before the close of the auctions. It is clear that buyers on behalf of Great Britain are increasing their activity, for which one of the contributory causes is the withdrawal of the earlier decision by the Far Eastern Conference Lines to increase freight in order to compensate the shipping companies for the apprehended delay in the passage of the ships through the Canal following the refusal of European pilots to work for the nationalised Canal. Ships continue to pass through the Canal without any delay, and the Canal continues to be as free as before. British stockists naturally desire to get as much tea as possible through the Canal, when the going is good.

Trade circles have naturally welcomed the uptrend in export and internal tea auctions, but feel that the time has come for the Government to take some measures by which Indian tea would be able to stand the competition from other producing countries in foreign markets. Already, great attention to the tea industry is being paid in Japan, Iran, and China, where output is on the increase. The U.S.S.R. has a programme to produce more tea and, if reports are any guidance, the Argentine would, in the next few years, offer stiff competition inasmuch as it has planned to export as much as 30 million lbs. of tea by 1960.

One of the causes for the steady trend in export auctions during recent weeks has been the unusual entry of Russia to buy as much as 20 to 25 million lbs. of tea. But, as Russian production of tea would be stepped up to 390 million lbs. by the end of the sixth Five-year Plan Russia would by no means be a permanent customer of India. Pakistan is another producer country, which is planning to increase output to 75 million lbs. a year within the next ten years. Her present production is about 50 million lbs. a year.

One concrete way in which New Delhi can assist the industry is to abolish the export duty and advise the Assam and West Bengal Governments to do away with the movement and entry taxes. This industry is a major foreign exchange earner, and has been lately burdened with increased output costs. It is long since markets have turned to the advantage of buyers, and New Delhi has recognised this in the case of the jute and cotton textile industries. Now, the turn has come to tea. It should be stated here that, in the case of the jute industry, the Government abolished the export duties after scores of appeals from trade and industry to remove the duties and after these levies had priced out jute goods from world markets for a long time. Traders believe that the Government would have benefited from this sad experience and, therefore, hope for a timely response from New Delhi in the case of the tea industry.

In the meantime, the Government has announced that the export duty of As. 6 per pound remains unchanged, although, with the recent uptrend, the price of tea for the purpose of determining the export duty has been fixed at Rs. 3-3-9, as against Rs. 2-11-5 in force from 1st September 1956.

Note was taken of the Government of India's announcement making a second interim release of export quota for 1956-57 to tea estates to the extent of 10 per cent. of their crop, thus bringing the total releases so far to 50 per cent. Another announcement, which contributed to better conditions in the internal sales held on Wednesday last was the decision of the Calcutta Tea Regulation Committee, on which are represented tea producing associations of North-East India, to destroy all residual and waste teas of a quality unfit for sale at the auctions. The need to reduce the 1956 crop in order to arrive at a healthy balance between demand and supply was also agreed upon, and gardens in North-East India would soon be asked to cease plucking for the rest of the plucking season ending about 15th December. This decision follows the very large increase in North-Indian tea output during recent months, and the consequent decline in prices of certain grades of tea to below output costs.

During the sales for domestic consumption held last week, dusts offered totalled 16,372 chests. There was strong demand and prices of the better teas advanced. Clean black leaf teas were the strongest feature and added As. 2 to As. 3. Quality medium teas and the better commons realised prices higher by As. 1 to As. 2, while the other lots in this group gave way by one anna. Among C.T.C. Assams, the best lots were in good demand. The quotations were, best Assam C.T.C. Rs. 3-4 to Rs. 3-8, medium Assam C.T.C. Rs. 2-8, medium Dooars Rs. 2-1, and medium Assam grainy dust Rs. 2-2 to Rs. 2-3.

The number of packages of leaf grades on offer amounted to 887. Prices were fully firm following good demand.

FOODGRAINS QUIETLY EASY

(From Our Own Correspondent)

HAPUR, *1st October*

Quietly easy conditions prevailed in the foodgrains market during the week under review. Wheat and rice sales by the Government in different parts of the country, increased arrivals of the new *kharif* crop and the latest beneficial rains were responsible for the bearish trend. Reports of heavy damage to crops by the floods in east U.P. and Bihar, however, tended to check a further fall in prices.

Wheat average quality lost As. 6 to Rs. 14-12 per maund and farm quality was now transacted at Rs. 16-2 per maund. Local arrivals from the producing centres increased to an average of 200 maunds daily, as stockists were now reported to be anxious to liquidate their stocks, and offtake from fair price shops had also improved. Wheat stocks were now put at 80 *khaties* of 800 maunds each. With the arrival of the new paddy crop in small quantity in the rice producing areas in the North, prices of rice declined slightly to be quoted at: *Basmati* Rs. 23 to Rs. 30, *mainpuri* Rs. 19, *rangooni* Rs. 18-14 and coarse Rs. 15-8 per maund.

With increased arrivals of new maize crop—averaging 200 maunds daily—prices declined by As. 4 per maund to Rs. 11-8. Prices of other coarse grains also eased in sympathy. Arrivals of new *bajra* and *jowar* crop had not yet begun in the market and prices of old quality ruled quiet and unchanged. The week-end prices were: *Barley* Rs. 11-10, *bejhar* Rs. 11, *jowar* Rs. 13, *guwar* Rs. 9-12, *bajra* Rs. 12.

Pulses also disclosed a downward trend in line with the prices of other cereals and in sympathy with an appreciable fall in future prices. Peas *dara* was transacted at Rs. 11-5 and white quality at Rs. 12-6 per maund and stock position was 55 *khaties*. *Arhar* prices also eased to Rs. 12-4 per maund and stock went down to 91 *khaties*. Small demand for peas and *arhar* was only in the form of pulses from Madras side. Prices of other pulses also eased: *Urd* was quoted at Rs. 17 to Rs. 18-4, *moong* at Rs. 12-6 and *massor* at Rs. 14-8 per maund.

Pulses futures declined appreciably, due to continued bear pressure influenced by good rain reports. The latest quotations as on Monday were: Peas *mangsir* Rs. 10-12-9, peas white (gram) *mangsir* Rs. 11-4, *arhar mangsir* Rs. 11-11-6, *guwar maha* Rs. 9-8-6, *urd maha* Rs. 14-10-6, as against Rs. 11-6-3, Rs. 11-12, Rs. 12-8, Rs. 9-8 and Rs. 15-8, respectively, last week-end.

Fair to good rains have been received all over west U.P. towards the week-end. The rains are expected to enable timely sowings of the coming *rabi* crop. The standing *bajra* and *jowar* crop in some areas have been very much benefited.

SUGAR DRIFTS LOWER

(From Our Own Correspondent)

HAPUR, *1st October*

Sugar prices drifted lower on better supply position and poor offtake. The millowners were now reported to be anxious to part with their stocks, which were considerably heavy this year, they aggregated 746,000 tons as on 15th September, as against 596,000 tons at this time last year.

The latest rains have proved very beneficial to the standing cane crops and fair to good cane crop is expected in west U.P. Damage to the cane crop in east U.P. due to floods has been reported. Factories in west U.P. are expected to begin their season early and some of them may begin crushing by the middle of October.

The mill delivery prices of sugar as on Monday were Jaswant Rs. 28, Simbhauli Rs. 28-4, Mowana Rs. 27-12 to Rs. 28-8, Daurala Rs. 28-8 to Rs. 29-4, Amroha Rs. 27-10, Bijnore Rs. 27-10, Mansoorpur Rs. 27-14 to Rs. 29-4, Rampur Rs. 30-4, retail Rs. 30-4.

The *khandsari* sugar market continued to rule dull and depressed, in the absence of buying enquiry and good stock position. The latest prevailing prices are: *Khandsari* Rs. 23 to Rs. 26 per maund according to quality.

New *gur* arrivals, which averaged about 75 maunds during the major part of the week, declined towards the week-end due to rains. Old *gur* stock was put at about 17,500 maunds and outside demand was wanting, due to good stock position in the markets in the South, where new *gur* arrivals had also considerably increased. The latest prevailing prices are: New Rs. 12 to Rs. 13-8 per maund; old dry Rs. 11-8; wet *kotha* quality Rs. 9-12. *Gur fagun* futures declined during the week on bear pressure influenced by good rain reports, to be quoted at the worst level of the week at Rs. 9-14 today, as against the week's opening of Rs. 10-5-3.

WORLD DEMAND AND SUPPLY OF MANGANESE

(Concluded from page 663)

tration; a washing operation is usually sufficient to remove most of the waste material. The material is bulky and therefore transportation is a key factor.

One of the most pressing problems is the expansion of production in Brazil, where legal and political difficulties have been added to natural obstacles. Output over the past few years has been about one-third of production during the 1910's when the country supplied 20 per cent. of world's manganese. But large, newly discovered deposits at Urucum and Amapa are now being developed by steel companies of the United States with the assistance of loans and purchase guarantees made by the United States Government. Both deposits are very large and hold promise of yielding as much as 600,000 tons annually of high grade ore at a competitive cost. These projects are well started but need the cooperation of both the Brazilian and the United States Governments to be successfully developed.

African output has expanded so greatly within the last few years that it is difficult to judge whether further expansion is likely during the next decade. Given assurance of a steady market, good trade relations with the United States, and some improvements in rail transport and loading facilities, India can probably increase its output easily to about 30 per cent. above the 1950 level, provided it becomes its national policy to do so. If reserves were the sole consideration, Indian production could easily double.

Production Target for Manganese and Other Ores During the First and the Second Five-year Plans

	1950-51	1953-54	1955-56	1960-61
Coal (million tons) ..	32	36	37	60
Iron ore (million tons) ..	3	4	4	13
Mica (cwts.)	162	..	150	200
Manganese (million tons) ..	1	2	2	3.5

Manganese production is expected to rise by 75 per cent.

Out of a planned expenditure of Rs. 4,800 crores under the second Plan, no less than Rs. 75 crores will be spent on minerals and prospecting. This is expected to increase the national product by Rs. 150 crores or 58 per cent. during the second Plan period, as against Rs. 95 crores or 19 per cent. during the first Plan period.

Some 8 lakh persons are employed in mines at present. With output from mines increasing by some 50 per cent. in the second Plan, additional employment in mines during the next Plan period may be of order of 3 to 4 lakhs.

Outlook

Under present development plans, the free world's manganese output can probably increase from 3 million tons to 4 million tons of high-grade ore annually. Expansion to the full 5 million tons required by 1975 would demand major new mining projects. Available information on reserves and mining conditions indicates that such projects would not mean substantially higher costs. However, expansion programmes, involving considerable outlay, may require loans and long-term purchase contracts, particularly in view of the overhanging Soviet supplies.

Russia possesses over half of the known manganese ore reserves of the world and is producing twice the tonnage of any other country. It supplied more than a third of the United States manganese requirements upto 1938 and again in 1948, but by 1950 Soviet manganese exports to the free world virtually ceased. As steel companies cannot afford to gamble on manganese, free world manganese ore production has been expanding, but the possibility of the return of Soviet ore to world markets has slowed the process, though there is no specific indication that Soviet exports will be resumed within the foreseeable future.—*All Rights Reserved.*

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=*Company has* Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by *the same letters* 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the yea in which the respective companies close *their* accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. † Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(j) Made up of an interim dividend of Re. 1-12 per share on 1,30,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,30,000 shares are bonus shares. (s For seven months ended 31st March 1954.
† New Central Jute Mills—Dividend for 1955 is on shares of Re. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

AMERICAN LETTER

U.S. ELECTIONS AND ECONOMY

From Our Own Correspondent

NEW YORK, 27th September

TWO main issues are the centre of attention on the domestic American scene these days. A third one is the Suez Canal crisis. The first two problems are the Presidential election campaign which is getting under way in earnest and the increasing cost of money. Rising interest rates are also becoming an election issue besides being an academic discussion subject of economists and practical business men. The opening guns have been fired in the forthcoming race for the White House by President Dwight D. Eisenhower and the Democratic contender, Mr. Adlai E. Stevenson. Mr. Eisenhower's attention, rightly or wrongly, has been focussed so far on the well-being of farmers in the United States.

Farm prices have declined for a number of years. The trend was reversed recently, but the Democratic opposition has been trying to make capital

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2380 BOMBAY, 13th OCTOBER 1956 PRICE Rs. 1/8

WORLD BANK CHIEF'S SAGE COUNSEL

HE is not a true friend who is always pleasant. A banker, like a true friend, cannot always be pleasant to his client. And a client may ignore the banker's advice only at his peril. What makes a banker's advice so precious to his client is that it is based on enlightened self-interest and is calculated to advance the interests of both. A banker has, of course, no axe to grind in advising his client-friend, but he is not for that reason indifferent to his friend's welfare, because the latter's failure will cost him dearly. Further, a banker often knows more about the client's interests than the client himself. This is because a client, engrossed as he is in his own narrow affairs, will often be unable to look at them in their correct and broader perspective. Like the spectator who sees more of the game than the player, the banker is pre-eminently in a position to know what is wrong with his client's affairs and how best they could be set right. The World Bank's advice to India, expressed originally in a report submitted by a mission from the Bank and now reiterated by its President, Mr. Eugene Black, in a letter to the Union Finance Minister, Mr. T. T. Krishnamachari, bears all the imprint of a true banker's wise counsel to his valued client.

The World Bank Mission came, saw and was impressed with many things in India. But it also felt some misgivings. Although it did not say as much, it probably felt that some things were too good on paper to be translated into realities. Its reaction was that the second Plan was "somewhat too ambitious." It may be good political strategy that, in planning for 400 million people of a vast sub-continent, one should rather err on the side of ambition than achieve some small tidy results. It is, perhaps, best that a man's reach should exceed his grasp. But, then, no political party can afford to set unrealistic goals and disrupt the whole economy by trying to achieve them. To do so will be to invite disaster. So, even from the point of view of political exigencies, one cannot get away from realities. And the realities are shortage of capital resources, technical and administrative acumen and a host of other inhibiting factors. Mere ambition cannot overcome all obstacles or overcome them overnight. By and large, the Mission's advice was to set the pace of progress by the available motive power, to plan warily for the future so as to avoid the obvious pitfalls of inflation and frustration arising out of inadequate implementation of the Plan. The Bank's chief, Mr. Black, has reiterated this counsel—not a counsel of despair, nor a counsel of perfection, but a wise and practical counsel—in his letter to the Union Finance Minister. There are many little men in power in the world to whom any advice is distasteful. It is the measure of the man that Mr. Krishnamachari has acknowledged the fact that Mr. Black's advice has been given in "good faith."

It is easy enough for a critic, rather a cynic, to turn round and say that Mr. Black's advice contains nothing new nor anything unfamiliar to India's planners. But then, not all great things are new nor all new things valuable. Some valuable things do not suffer from reiteration. Mr. Black's observations belong to this category. His three main points are that enterprise must be encouraged, financial stability is too important a factor to be ignored and adequate transport facilities are vital to the success of India's second Plan. Mr. Black, in his address to the Board of Governors of the Bank last month, had said that there were several myths which he wanted to "clear way." The first myth was that "only governments can produce economic growth fast enough and of the right character." He conceded that there might be "no substitute for government in a great many instances when it comes to getting development off the ground." But he rightly insisted that it was a "dangerous myth to believe that economic development is a matter for government alone." He added: "The enthusiasm and potential contribution of every individual must be counted in a successful development programme. And that means leaving a wide area of freedom for individuals to follow their own development initiative and encouraging them to do so." The second myth, which was apt to becloud development policy, was that "inflation is a handy device for making development painless." He was glad to think that this myth was almost ready for burial for there was a "growing awareness of how inflation erodes savings, destroys the criterion for judging the soundness of investment, and plays havoc with a country's balance of payments."

Mr. Black's letter to the Union Finance Minister is a further elaboration of the views which the World Bank President expressed in his speech at the aforesaid annual meeting. He has thought it fit to emphasise, once again, his "conviction that India's interests lie in giving private enterprise, both Indian and foreign, every encouragement to make its maximum contribution to the development of economy, particularly in the industrial field." While he recognises that the Government itself must play an important role in India's economic development, he says that his "distinct" impression is that the potentialities of private enterprise are "commonly under-estimated in India and that its operations are subjected to unnecessary restrictions there." He points out that, "in a country which is short of capital and with limited resources of managerial and administrative talent, it is important that the respective roles of public and private enterprise should be fixed entirely on the basis which will ensure the most effective contribution of each to the economic development and not any theoretical concept of the role that each would play."

Clearly, what Mr. Black advocates is the pragmatic approach. Indeed, a few years ago, this was the Government's attitude to economic questions too. An impartial examination of the Government's achievements and failures in the recent past will reveal that, wherever the pragmatic approach has been given effect to, the Government has met with success and nearly all the failures can be traced to a departure from this approach. Thus, civil aviation and life insurance were nationalised in the face of definite and well-meant advice to keep them in the private sector. Civil aviation continues to run at a loss and the future of life insurance is by no means very bright. Similarly, in 1948, the Government decided to reserve, on ideological grounds, the field of further expansion in steel industry to itself and cold-douched the enthusiasm of the existing units in the private sector to add to their productive capacity. The result is that the country is now

tance of curbing inflation. Although the Government does not generally accept the thesis that the recent rise in prices is an inflationary symptom, it has been making strenuous efforts to fight it through imports of foodgrains and credit control. Nevertheless, it is to be feared that the Government is unable to get to the bottom of the mischief, which lies in the inability of agricultural and industrial production to keep pace with the rising demand. This inability is not entirely due to any inherent weakness in the domestic economy. For, to take an instance, the rise in cloth prices is due to an increase in demand which the organised cotton industry is deliberately prevented from meeting. Any other Government would welcome a rise in demand as a factor of considerable significance to the future of agriculture and industries. The Government of India, on its part, feels that it should curb the demand by artificial means rather than facilitate the increase in production that will absorb the rise in demand. Already, the Union Finance Minister has hinted at strategic controls, though he fully realises that controls are unwelcome to the public and also equally fully realises that controls, as all past experience shows, are never a permanent cure for inflation.

There is yet another evil which must flow from inflation. Any increase in inflationary forces will make it more difficult for this country to sell its goods abroad. Administrative controls may succeed in investing a national currency with a value which it does not possess. But, on the foreign exchange field, it is bound to be found out and its real worth exposed. This would be particularly unfortunate for this country now. For at no time in the past was the confidence of foreign investors in the value of the rupee more vital to the country's progress than now, thanks to the enormous amounts that would be needed to finance development. Even as things stand at present, the weakest spot in India's Plan is foreign exchange. From this point of view, Mr. Black has done well to emphasise that a "determined effort is called for to strengthen the competitive power of India's traditional export industries, particularly tea, jute and cotton textiles and to build up new exports, both manufactured and primary products." Further, he has drawn the Government's attention to the fact that, in some instances—for example, cotton textiles and vegetable oils—the official policies appear to have the effect of actively discouraging exports. Accordingly, he has urged the Government to reconsider these policies in view of the severe pressure on foreign exchange resources which is likely to persist throughout the coming period of intensive development in India.

It has, of late, become abundantly clear that transport might conceivably turn out to be the most serious of the obstacles to India's economic progress. Mr. Black's warning on the subject is as timely as it is forthright. He says: "We are struck by the extent to which lack of adequate transportation facilities threatens to constitute the bottleneck in the country's economic development." What is Mr. Black's remedy? Without necessarily suggesting an increase in the allocation under the Plan to railways, which he recognises to be substantial, Mr. Black recommends that, in view of the acute shortage of capital for development and very high import content of railway investment, attention should be given to the possibilities of improving operational efficiency of the railways and to encouraging road transport and coastal shipping; the latter between them should be capable of making considerably larger contribution than at present. It is to be hoped that the Government will accord the necessary priority to road transport and shipping, besides actively pursuing its own efforts at improving the operational efficiency of the railways. Whatever else may brook delay, transport cannot. And the sooner the Government succeeds in the task of broadening the bottlenecks the more effectively will it have paved the way for economic progress.

THE LANGUAGE ISSUE

MUCH has been said and written on the thorny issue of State language, but no satisfactory solution has yet been found. The doubt about the wisdom of having Hindi as the all-India State Language in another ten years, as provided in the Constitution, is growing, thanks mainly to the disturbances that followed the reorganisation of the States on linguistic lines and the fissiparous tendencies generated by it. Some of the top leaders of the country, including the Prime Minister Mr. Nehru, have begun to have second thoughts on this issue. A little over a month ago, in his address to the States' Education Ministers' conference, Mr. Nehru stressed the importance of English both as a medium of instruction for higher education, especially technical and scientific education, and as a means of international communication. It was agreed at this conference that English should be taught as a second compulsory subject even from the lower classes, so that students could gain adequate knowledge and command over it for receiving university education through that medium, and that effective steps should be taken forthwith to improve the standard of this language in schools and colleges. This appreciation of the value of English was born of the realisation that the decline in the standard of education as a whole in recent years was due to the neglect of English and that this deterioration in quality would have a deleterious effect on the pace of economic development. Mr. Nehru averred that it was patent that the manpower for industrial, scientific and agricultural progress could not be trained in any Indian language in the foreseeable future. "It is absolutely clear to me and it is not an arguable matter," he declared with a little vehemence, "that scientific and technological training has to be given in English. I am talking about now and not about 10 or 15 years hence. It does not, therefore, become a question of choice. It is an absolute necessity. You will not get through your Plan, if you do not do it."

While this stress on English has helped to clear the confusion that surrounded the future of its place in the scheme of education in India, it has not solved the equally important issue of all-India State Language. The general trend of thought among the leaders seems to be that, in view of the slow progress that is being made in the spreading of Hindi as an all-India language, it may be necessary to extend the period for English as the Union language by some years. But this, let it be noted, is only a trend of thought and not a certainty. There has been no decline whatever in the devotion of North Indian leaders to Hindi nor in their enthusiasm to make that language the lingua franca of India. In fact, in his address to the Education Ministers' Conference, Mr. Nehru did not say a word against Hindi. On the contrary, he maintained that "Hindi should be given every encouragement to grow and to be used for educational and administrative purposes, provided always that it grows on sound lines and not on superficial journalistic lines." He also added that he could not conceive of any foreign language being the State language of India.

There is, however, a large section of discerning public which feels that this attitude of top leaders is highly unrealistic, a view with which we concur. They are making the same mistake as they did on the issue of reorganisation of States on linguistic lines, namely, allowing sentiments, nursed on ill-digested thoughts, illogical reverence for the past, a bias against anything that is foreign and wrong notions of patriotism, to get the better of them. Although the parochial passions stirred by linguism have opened their eyes to the danger in forcing the language issue to the unity of India, they have not yet appreciated the need for evolving a rational solution. They seem to think that somehow the issue will solve itself and that time will point a way out. This is not a policy of convenience as some are inclined to believe, but one of drift, one that is not creditable to a nation which believes in planning and ordered, rapid growth. It is another instance of our national weakness, a tendency not to face squarely inconvenient issues. It is this weakness that encouraged the evil of linguism or provincialism. It will lead to a similar evil, if the issue of Union language is not satisfactorily tackled in good time. Delays, be it noted, always result in growth of vested interests.

Those who live in the North—these include almost all the top leaders of the Congress Party and the Ministers of the Central Government—are apt to minimise the danger, because the strongest opposition to Hindi being made the Union language comes from the South. But India is fortunate that one of its shrewdest politicians, Rajaji, happens to live in its southern part. Although it is now quite a few years since he retired from active politics and despite his advancing age, his love for India and humanity is so strong that he continues to take a lively interest in the difficult problems facing them. While it is true that not all the pronouncements of Rajaji have been sensible or realistic, it seems to us that what he said on the subject of Union language on Monday last constitutes a rational and the only practical solution. Addressing a students' gathering, Rajaji said that the language prevailing in a State should be the language of that State and that the language for inter-State communication as well as for communication between a State and the Centre should continue to be English and should not be replaced by Hindi. His thesis was that, in due course, both English and Hindi should be the Union languages. And he gave very good reasons in support of it.

Rajaji conceded that Hindi was the language of a vast majority of people in the country. Nevertheless, he did not want it to be the sole official language of India, for, in matters of administration, equal justice and expediency were very important matters. If Hindi were made the official language, he argued, it would not be fair to the large body of Tamil people—we would add to all non-Hindi people—living in a compact area who had studied English for 150 years. English to them was an asset and a possession and it would be an act of "grave injustice" if the people of Tamil Nad were ordered to manage their business in Hindi which they did not know. The logic of this argument cannot be denied by any impartial observer. Due to an accident of history, people all over the country have been accustomed to English as the State language. If it is a handicap to them for the reason that it is a foreign language, people in all parts of the country suffer from that handicap equally. If English is removed in favour of Hindi, the balance will be strongly tilted against a large section of the people. The latter will then nurse a grievance against the Hindi-speaking majority, a state of affairs which will not be conducive to the unity of India—a far more important consideration than devotion to any particular language of India. Further, as Rajaji rightly observed, if, in the Indian Union, any law or rule is enforced which brings great advantages to certain sections of people speaking a particular language and great disadvantages to millions of others who do not know that language, it will not be a just law; nor will the Union be a just democracy, for the concern of the Union should be fairness and equality for all, not merely for the majority.

There is, of course, nothing wrong in having more than one State language. Switzerland, the best democracy in the world, has three languages, namely, Italian, German and French. Similarly, Canada and Finland have two official languages. If these countries, the populations of which are very small as compared with India, can have more than one official language, there is no reason why India, with its vast population of about 370 million, speaking a score of languages, should not follow their example. There are at least over a dozen major languages in India and it will not be possible to have all of them as Union languages. Hence Rajaji's suggestion to have only two languages, Hindi and English, for this purpose, Hindi because it is the language of a majority of the people and English because it appeals to the vast minority of non-Hindi-speaking people, besides being already in vogue as a State language. All intelligent and educated men in India today know English and their ranks are fast increasing. Indeed, Rajaji's idea provides a very convenient way out of the language impasse into which India was driven by its leaders without much forethought when the Constitution was framed. Incidentally, it is, perhaps, not widely known that, even when the Constitution was on the anvil, there was considerable opposition to the ultimate abolition of English as the Union language and Hindi won its place by a majority of one vote. To retain English as Union language side by side with Hindi will thus be in accordance with the wishes of a vast number of the Constitution-makers. In any case, by giving equal place to English with Hindi, the Hindi-speaking regions do not lose anything; on the contrary, they will be in the happy position of being able to have the cake and eat it, because, besides the high status of Union language which their mother tongue will attain, they will also earn the goodwill and co-operation of the people in the South. A practical advantage of this solution will be that it will enable States like Madras, Kerala and Mysore to deal with the neighbouring States and with the Centre in English, while allowing Hindi-speaking people to do their business in their own language. Another great advantage will be that, as English is a world language, it will help India to maintain its international relations with ease and comfort, as also facilitate foreigners to take an intelligent interest in what is going on in this country. If India is not to become a closed book to the rest of the world and *vice versa*, if it is to hold a leading place among the comity of nations, if its international trade is to grow, if it wishes to have the active assistance of foreign capital for its economic development, in fine, if it is to attain the status of a modern industrial nation with progressive ideas, then it must not lower the present status of the English language, one of the few tangible advantages which it has gained as a result of 150 years of foreign rule.

NO CAUSE FOR INVESTORS GETTING JITTERY

T.T.K.'s Vain Threat To Cloth Trade—Two More "Blue Chips" Coming Soon

THURSDAY, 5 P.M.

MARKET GOSSIP

THE downward trend witnessed on the Stock Exchange last week gathered further momentum during this week. This was probably a case of a bear market feeding on itself. Any trend, once given impetus, lasts for a while. We all saw how and why confidence was rudely shaken last week. And, since then, there has been no change in the sentiment. When one is in a depressed mood, one is apt to view even bright developments in dark light or to exaggerate little things. In other words, when one is nervous, even minor events are sufficient to make one become unduly jittery. This is what happened during the week under report. Investors, therefore, should not be alarmed by the current trend of the market and liquidate their holdings indiscriminately at a loss. A typical instance of exaggeration was provided by the bearish interpretation given by the operators to the World Bank President's letter to Mr. T. T. Krishnamachari, India's Finance Minister. Such an interpretation, as we shall presently show, is unwarranted. On the contrary, it should be regarded as a bullish factor, for his advice to India, if followed, would occasion a more healthy economic development of the country and greater opportunities for the private sector.

Mr. Black has offered his criticisms of the Plan in a very friendly and constructive manner. He has advised the Government to give more encouragement to the private sector, and high priority to development of transport. He has asked the Government to devote greater attention to India's export industries such as textiles, oils, jute, tea and other plantations. He has told the Government to resort to deficit financing cautiously. All these suggestions are sound and there is no reason to believe that Mr. Nehru's Government will find any difficulty in heeding them. If it does, the results will be nothing but good for investors. But what if it turns a deaf ear to them? It will mean more inflation, more controls, more taxes, more profits, more of everything. From the long-range point of view, all these will mean a bad thing for investors, because a boom will one day burst. As one will not know when this will happen, one may suddenly suffer capital depreciation. But, from the short-range point of view, inflation will, sooner or later, bring a substantial appreciation in values, high taxes and strategic controls notwithstanding. So, in whichever way one may look at Mr. Black's letter to Mr. Krishnamachari, there is no cause for taking a pessimistic view of it.

* * * *

The frequent threats by Government spokesmen that they will extend the activities of the State Trading Corporation to this or that trade may make it difficult for one to believe that the Government will not restrict the scope for the private sector. The fact that Mr. Krishnamachari continues to swear by the handloom industry, despite the acknowledged urgent necessity for stepping up the supply of cloth as quickly as possible, may make one despair of Government's economic policy. But there are also indications that, gradually, the Government will realise the limitations of the public sector and allot more functions to the private sector.

In the first place, of late, Mr. Nehru has been telling his party men that it is not advisable to restrict factory production, in order to support cottage industries.

Secondly, the Government has already bitten much more that it can chew. It has simply not the administrative capacity to take on more commercial jobs.

Thirdly, even the Civilian clique, which, in its anxiety to grab more power and prestige, egged on the politicians to go ahead with their pet experiments in socialism, must have become tired and exhausted on account of overwork. With the exit of Mr. C. D. Deshmukh from the Central Government for good, this clique has lost a strong support for achieving its ambitions. The mess in which the country finds itself as a result of nationalisation of life insurance is mainly the work of Mr. Deshmukh, supported by this Civilian clique. In another two years, the Government and the ruling party will find out for themselves that the big things, which they have promised to do in the field of transport, industry and finance, cannot be achieved within the target date. Then, they are bound to give more work for the private sector.

Fourthly, the Government, which was at one time very strongly opposed to giving permission to Tatas for putting up two thermal power stations at Trombay and indulged in a prolonged controversy, which was finally settled in favour of Tatas only after the intervention of the World Bank, has now literally forced them to install a third thermal plant. It has been now officially announced by the Tata-Hydro Companies that the Bombay Electricity Board has sanctioned an expansion of the thermal generating station at Trombay by the installation of an additional 50/62.5 M.W. set. When this expansion is completed, the total generating capacity of the Trombay thermal power station will be raised from 100,000 to 150,000 kw. The cost of this expansion is estimated at about Rs. 6 crores and the Companies propose to proceed with the scheme as expeditiously as possible. As for the finance, we learn that the Government will do everything possible to help the Companies to raise the necessary resources.

Again, though Mr. Krishnamachari may swear by the handlooms and talk of expansion in production of cloth only through the decentralised sector, the law of demand and supply will compel him to relax. The Government can stick to its present cloth policy only if it pares down the development expenditure envisaged in the second Plan. It, however, does not propose to do so; if anything, it wants to raise the size of the Plan in terms of money from Rs. 4,800 crores to Rs. 5,200 crores. As there is going to be no reduction in the development expenditure, the demand for cloth and consumer goods is bound to go up to such an extent that the handlooms and powerlooms will be unable to cope with it. Public opinion, which is now indifferent towards the controversy handlooms *versus* cotton mills, will then become strongly critical of the Government's cotton textile policy.

If Mr. Krishnamachari and his colleagues are wise people, they should anticipate this development and take appropriate steps even now to avert an acute cloth famine two years hence. For, unlike food, an increase in cloth production cannot be brought about in one season. It will take at least two years to build the capacity for producing more cloth. That much time will be required for raising the additional quantity of cotton that will be necessary for increasing the cloth output. Further, unlike food, domestic supply of cloth cannot be supplemented by imports, as the country does not command sufficient foreign exchange resources to enjoy such a luxury. Moreover, large imports of cloth will be ridiculous and a negation of its policy of placing a ceiling on the domestic mill industry, in order to give protection to handlooms. Accordingly, it cannot be long before the Government changes its policy in favour of the mills. There are already reports in knowledgeable circles that a ten per cent. increase in the loomage of mills is being contemplated by the authorities.

* * * *

In his Press conference at Madras on Monday last, Mr. Krishnamachari he'd out a threat that, if the cloth traders did not behave properly, he would order the State Trading Corporation to take over their business. This threat is unwarranted, because he has already done enough to compel them to keep cloth moving. If there is a dislocation now, it is purely a temporary phase. After all, he has given the industry and the trade such a severe shock that it will take some time for them to recover from it and settle down to do business as usual. By announcing his notional fair prices, he has also put up the public against the trade and industry. It will tantamount to adding insult to injury, if he comes out with State trading in cloth on top of all the steps he has taken in the last one month.

Be that as it may, does Mr. Krishnamachari seriously believe that State trading in cloth will be successful? There are nearly 3,800 varieties of mill-made cloth and something like 4,200 million yards of such cloth will have to be distributed in a year. If the Governments were to undertake this job, they will have no time for doing anything else. It will be beyond their capacity and quite foolhardy of them to attempt it. State trading in cloth was tried on a small-scale in the past, resulting in heavy losses to State Governments. One has only to look at the civil expenditures of these Governments relating to the years 1946 to 1952 to realise how much money has gone down the drain on account of this business. Let not the people be misled into thinking that State trading will bring any net benefits to them. They may pay a few annas less for every yard of cloth, but they will be called upon to make good the Government's losses on such trading through higher taxes. So far as the party in power is concerned, it will become extremely unpopular, for State trading in cloth will open the flood-gates for corruption and nepotism. The whole thing sounds so unrealistic that we do not think Mr. Krishnamachari meant it seriously.

* * * *

The coming weeks will witness a spate of new capital issues from the private sector. Of these, two at least will be by foreign-owned and foreign-managed companies. These are Lever Brothers and Guest, Keen, Williams. Both the Companies have completed all the formalities and preparations for placing their issues on the market. They may announce their issues early next month and the lists are scheduled to open by about the middle of that month. It is just likely that the offer of Guest, Keen, Williams will precede that of Lever Brothers by a few days.

Both the Companies are now private limited companies. The scheme is to convert them into public limited companies by offering a part of their capital, all of which is now closely held by their foreign associate companies, to the Indian public. The object is to provide an opportunity to Indian investors to participate in the fortunes of these "India Limited" companies. It is well known that they have established themselves well in this country and have been making satisfactory profits. Their shares, when issued, will add to the number of "blue chips" quoted on the Indian Stock Exchanges.

About 5.9 lakh ordinary shares of Rs. 10 each, representing approximately 30 per cent. of its ordinary capital, will be offered by Guest, Keen, Williams Ltd. to Indian investors at a premium of Rs. 10 each. In other words, the issue price of this scrip will be Rs. 20 per share. Those who are in the know of the Company's affairs consider it as quite attractive both from the point of view of yield and prospects for capital appreciation. It is surmised that the yield will be very nearly 9 per cent. per annum, tax-free. The Company specialises in mechanical engineering, particularly in the manufacture of railway specialities. In its Bhandup Works at Bombay, which commenced manufacture in September 1953, the Company has the largest output of high class steel and brass wood screws in India.

The Lever Brothers' issue will consist of 5.5 lakh shares of Rs. 10 each, equal to 10 per cent. of the paid-up capital of the Company when it is converted into a public limited concern. The issue price, we learn, will be at Rs. 16-8 per share, that is, at a premium of Rs. 6-8. Knowledgeable circles say that the rate of premium is very low, considering that the Company is expected to pay a dividend which will give a yield of at least 10 per cent. per annum, tax-free. It may be noted that, since only 10 per cent. of the capital is offered to the public by the existing holders, the Company falls under section 23A of the Income-tax Act. We understand that the present holders wanted to offer the shares at a premium of Rs. 15 per share, but the Government forced it down to the figure mentioned above.

* * * *

The share market has reacted sharply to the World Bank President's letter to the Union Finance Minister. How far will Mr. Black's criticism of the Government's economic policies adversely affect the Bank's assistance to India's second Five-year Plan? This is not a mere academic question, for the successful implementation of the Plan depends largely on India's ability to cover the foreign exchange deficit, estimated at as much as Rs. 1,100 crores over the period of the second Plan; even this figure is said to be an underestimate. Allowing for withdrawals from the sterling balances to the tune of Rs. 200 crores, the net deficit is likely to be of the order of Rs. 900 crores, of which the foreign exchange requirements of the public sector alone account for Rs. 800 crores and those of the private sector Rs. 100 crores. Even if one takes into account the agreements with foreign countries which have been concluded for financing certain specific projects in the public sector, such as the three steel plants, it is computed that the public sector would need about Rs. 630 crores, in order to fulfil its obligations under the Plan. The Bank, as is well known, has been one of the major sources of foreign exchange to India. Thus, as on 30th June 1956, its loans to India aggregated $95 million, of which $48 million had been disbursed; besides this amount, the Bank has sanctioned a loan to the tune of $75 million for financing the T.I.S.Co's expansion programme.

It is in this context that one should assess the observations of Mr. Black, who, in his letter to the Finance Member, observes that the Bank believes that Indian economy has the capacity to develop basic strength which would "justify considerable increase in overseas borrowing during the next five years." But he adds:

"It is scarcely possible, however, for the Bank to commit itself to any specific figure for lending. We feel that we will have to consider the pace and scale of our further loan operations in India from time to time in the light of economic conditions and prospects, taking into consideration the economic policies which are pursued by your Government. On the one hand, we should have to take into account the extent and character of the impact on India's balance of payments of services of external debt contracted from sources other than the Bank. On the other hand, our disposition to lend would be favourably influenced by the amount of external financial assistance which India obtains without incurring the fixed foreign exchange obligations. I hope that we may contemplate development of close co-operative relationship between your Government and the Bank in which, from time to time, we shall mutually review the progress being made in execution of the second Five-year Plan and consider together further the role which the Bank may be able to play. For the present, I should like to assure you that the Bank is ready to embark forthwith on consideration and analysis of such further investment projects as your Government may desire to put forward."

It would be seen from the extract quoted above that the World Bank is not exactly averse to lending to India, though its loan operations will naturally be governed by the strength and resilience shown by the Indian economy from time to time. More specifically, the World Bank President has viewed favourably India's chances for obtaining aid for purposes of developing transport. Thus, he says that the problem of transport is one which has particularly engaged the attention of the Bank as well as the Government and of private interests throughout India. After emphasising the importance of raising the operational efficiency of the railways and of encouraging road transport and coastal shipping, Mr. Black says:

"I think that transportation could appropriately be regarded as top priority for any Bank financing that may be devoted to the second Five-year Plan. As preliminary detailed examination of projects in this field, I suggest that it would be useful if the general problem of transport in India could first be discussed between your Government and the Bank in the light of the study of the Indian railways which, I understand, has recently been carried out at your invitation by a team of American railway consultants."

It may be mentioned here that transport figures quite prominently in the Bank's loan operations. Thus, out of the Bank's total loans of $2,667 million, as on 30th June 1956, the loans given for transport purposes accounted for $656 million. The specific items of transport for which the Bank has lent financial assistances are: Railroads $348 million (of which $117 million to Africa and $80 million to Asia); shipping $12 million (entirely in Europe); ports and inland waterways $78 million (of which $34 million to Asia and $37 million to Europe); roads $168 million (of which $114 million to countries in W.

EQUITIES RETREAT FURTHER

NERVOUS SELLING IN TEXTILES

(From Our Own Correspondents)

BOMBAY, 11*th October*

FOR the second week in succession, the Stock Exchange ruled very much subdued. The frank criticisms on the Government of India's economic policies, made by the World Bank President in a letter addressed to the Union Finance Minister, adversely affected the sentiment of operators. The criticisms were interpreted to mean that the chances of India getting large World Bank loan had become slender. This feeling gave rise to all sorts of conjectures. Some thought that the Government might reduce the scale of deficit financing, while some others felt that the monetary and fiscal policies might be tightened. There were, of course, fears of increased tax burdens which gathered momentum with the recent pronouncements of the Finance Minister. In addition to these general bearish factors, the Government's decision to lower the *ex*-factory price of cement in the case of several companies, thick rumours of the State Trading Corporation taking over distribution of mill yarn to handlooms, and the Finance Minister's statement that the Government might enter the cloth trade if prices did not decline also imparted weakness to the market. Disquieting reports from piecegoods markets and bearish advices from Calcutta, too, acted as a damper. There was, therefore, persistent nervous liquidation by bulls, which, coupled with fresh speculative selling, brought about a further sharp reaction in equity values. The undertone of the market was weak.

In the steel section, Tata Steels were firm on the opening day at Rs. 196-8, as against Rs. 196 last week-end. Induced by continuous selling, they came down to Rs. 193 on Tuesday. After recovering to Rs. 195-8 yesterday, they relapsed again today to Rs. 193-4 before finishing at Rs. 193-12. Over the week, there was a loss of Rs. 2-4. Indian Irons began the week As. 4 higher at Rs. 34-13, but, for want of support, declined in the subsequent sessions to Rs. 34-4. After rising by As. 5, the shares retreated to Rs. 34-3 at the close today. The net loss over the week was As. 6.

Textiles suffered a severe setback, thanks to enlarged offerings in the wake of slackness in enquiries. Madhusudans moved down by Rs. 13-12 to Rs. 117-8. Bombay Dyeings dropped a like amount to Rs. 620-10. Laxmis fell by Rs. 12-8 to Rs. 710. B.R. Cottons slumped by Rs. 9-12 to Rs. 50-4. Bradburys declined by Rs. 8 to Rs 209-6, Centurys by Rs. 8 to Rs. 548, Dawns by Rs. 7-8 to Rs. 160 and Kohinoors by Rs. 7-4 to Rs. 349. Podars shed Rs. 5-4 to Rs. 167-8. Svadeshis lost Rs. 4-8 to Rs. 246-8, Shreenivas Rs. 3-12 to Rs. 215 and Finlays Rs. 3-8 to Rs. 341-8. Mafatlals, Mysores and Phœnix suffered a fall at Rs. 2 each to Rs. 417-8, Rs. 115 and Rs. 148-12, respectively. Central Indias eased by Rs. 2 to Rs. 149. Elphinstones were lower by Re. 1-8 at Rs. 61-8. A similar loss was suffered by Tata Mills which were done at Rs. 55. Models and New Kaisers decreased by Re. 1-4 each to Rs. 248-12, Rs. 190-10 and Rs. 126-4, respectively. Standards, however, were well supported and advanced by Rs. 2-8 to Rs. 475. Gokaks were also better by Rs. 2 at Rs. 240 and Indores by Re. 1-4 at Rs. 155-10.

Bank shares were dull and featureless. Barodas receded by As. 12 to Rs. 101-4. Punjab National's and United Commercials slipped by As. 8 each, the former to Rs. 56-8 and the latter to Rs. 57-12. Central Banks decreased by As. 4 to Rs. 51-12. Indias lost a like amount to Rs. 173-4. Unions were unchanged at Rs. 7-3.

Barring Bombay Suburbans and Ahmedabad Electrics which recorded a rise of Rs. 15 and As. 15 to Rs. 1,240 and Rs. 95-10, respectively, on special buying support, electricity shares failed to evoke the attention of operators and lost ground. Andhra Valleys came down by Rs. 15 to Rs. 1,240. Tata Powers fell by Rs. 5 to Rs. 1,310. Tata Hydros eased by As. 8 to Rs. 130-8. Surats declined by As. 3 to Rs. 118-12. Amalgamateds were a shade easy at Rs. 11-1.

Engineering and mining shares recorded a decline in values for want of support. Alcocks were sold at Rs. 335, as against Rs. 340. Premier Constructions retreated by Rs. 2-8 to Rs. 206-8. Larsen and Toubros receded by As. 5 to Rs. 18-12. Indian Coppers eased by an anna and a half to Rs. 6-15-6. B.B. Petrols lost nine pies to Rs. 3-11. Shivrajpurs were unaltered at Rs. 86. Tata Locomotives, however, strengthened by Rs. 2 to Rs. 168-8 on expectation of an early Government decision regarding prices of locomotives.

In the sugar group, Phaltans dropped Re. 1-8 to Rs. 162. Bhopals declined by As. 9 to Rs. 19-10. Belapurs gave way from Rs. 251-4 to Rs. 251. Cauverys were quiet at Rs. 50. Walchandnagars, on the other hand, had buyers Re. 1-14 higher at Rs. 273-2.

Cement shares suffered a further fall in price. Associated Cements climbed down by Rs. 4-4 to Rs. 194-4, notwithstanding the fact that the cut in *ex*-factory prices of cement does not apply to this Company. Digvijays fell by Rs. 3-8 to Rs. 192. Orissas lost 18 pies to Rs. 13-4-6.

Activity in the transport section was restricted. Scindias came in for selling and lost As. 4-6 to Rs. 18-12-6, while Great Easterns improved by As. 4 to Rs. 22-2. Premier Automobiles elicited good attention of some operators and picked up Re. 1-12 to Rs. 103-4. But Hindustan Motors eased by 18 pies to Rs. 9-9-6.

Among miscellaneous industrials, Bombay-Burmahs were adversely affected on renewed fears of delay in the implementation of the scheme of capital reorganisation. Old shares drifted lower from Rs. 733-2 to Rs. 718-2 and new shares from Rs. 276-4 to Rs. 266-14. National Rayons were subjected to heavy selling and dropped Rs. 8-12 to Rs. 254-4. Tata Oils declined by Rs. 2 to Rs. 55 and Killicks by Re. 1-8 to Rs. 175. Wimcos and Polsons eased by Re. 1-4 each to Rs. 177-8 and Rs. 176-4, respectively. India Investment Trusts lost a rupee to Rs. 75. Tata Chemicals decreased by As. 7 to Rs. 20-3. B.I.Cs, however, were in special request and rose by As. 3 to Rs. 11-4.

* * * *

Madras Stock Exchange

MADRAS, 9*th October*

The Madras Stock Exchange displayed a distinctly bearish trend during the week under review too. Traders would appear to be somewhat pessimistic about the returns from investment in industries. The pessimism is based on some of the recent pronouncements of the Union Finance Minister. The supply of funds seeking investment is rather limited, credit control measures are being tightened, and there are fears of upward revision in taxes. All these factors have chilled the enthusiasm of operators for fresh commitments. In fact, the general tendency seems to be to liquidate the existing holdings and, consequently, equity values continue to march downwards.

During the week under review, textiles were subjected to heavy selling on rumours of the Government fixing "fair" prices for yarn (as in the case of cloth) and the State Trading Corporation taking over the distribution of mill yarn to handlooms. Further, the Finance Minister's statement regarding the future of cloth prices induced holders of textile shares to sell them. Coffee shares also came in for selling, on bearish advices from the recent coffee auctions. Tea shares lacked enquiries, thanks to reports of overall production being in excess of world consumption and uneconomic prices fetched by common tea. Rubber shares were neglected, in the absence of any fresh incentives. Sugar shares suffered losses, following persistent weakness in sugar markets.

Textiles, as already stated, were subjected to heavy selling. Coimbatore Spinnings slumped by Rs. 9 to Rs. 90 *ex-div.* Bangalore Woollens dropped Rs. 8-8 to Rs. 575 and Ranga Vilas Rs 8 to Rs. 84. Metturs climbed down by Rs. 7-8 to Rs. 455. Buckinghams fell by Rs. 5-4 to Rs. 197-8, Janardhanas by Rs. 5 to Rs. 108 and Rajalakshmis by Rs. 4 to Rs. 182. Venkatesas decreased by Rs 2 to Rs. 178. Cannanores and Vijayamohinis lost a rupee each to Rs. 188 and Rs. 91, respectively. Ashers were unchanged at Rs. 232 *cum-div.* The Directors of the Asher Textiles Ltd. have declared a tax-free dividend of 15 per cent. for the year ended 30th June 1956, as against 12½ per cent. for the previous year.

Among coffee shares in the planting section, Cochin Malabars moved down by As 11 to Rs. 11-5. Consolidated Coffees shed As. 7 to Rs. 26-11. Shevaroys receded by As. 3-6 to Rs. 2-9-6. Anaparis and Kumergodes were done each As. 2 lower, the former at Rs. 4-13 and the latter at Rs. 7-4. Among tea shares, Coffee Lands retreated from Rs. 27-4 to Rs 26-11. Midlands fell by As. 8 to Rs. 20-6, Kil Kotagiris by As. 7 to Rs. 8-7 and Periakaramalais by As. 6-6 to Rs. 9-7-6. Peermades declined by As. 4 to Rs. 33-12. Twyfords lost a like amount to Rs. 20-12. United Nilgiris eased by As. 3 to Rs. 24-4 *cum-div.* (final). Devasholas, Kalasus and Perksides decreased by As. 2 each to Rs. 25-2, Rs. 16-2 *cum-div.* and Rs. 19-12, respectively. Among rubber shares, Mlamallays dropped a rupee to Rs. 59. Rajagiris slipped by As. 10 to Rs. 25-10. Vaikundams gave way from Rs. 34-12. Neelamalais changed hands lower at Rs. 7-9, as against Rs. 7-14, and Thirumbadis at Rs. 2-4-6, as against Rs. 3-7-6.

Deals in sugar shares were put through at reduced rates. Deccans fell by As. 6 to Rs. 11-10 E.I.Ds. receded by As 4 to Rs. 31. Jeypores lost As. 2 to Rs. 13-14. Indias eased by an anna to Rs. 16-14. United Breweries, however, elicited special buying support and rose by As. 2 to Rs. 217.

In the miscellaneous section, India Cements went down by Re. 1-8 to Rs 32-12 *cum-div.* (final). Mysore Papers were on offer As. 14 lower at Rs. 17-8. Travancore Rayons fell by As. 7 to Rs. 15-7. Aluminium Industries receded by As. 6 to Rs. 20 *ex-div.* F.A.C.Ts and Mettur Chemicals declined by As. 3 each to Rs. 6-13 and Rs. 10-4, respectively. Textools, on the other hand, encountered excellent buying enquiries and forged ahead from Rs. 222 to Rs. 235. Nundydroogs rallied Re. 1-14 to Rs. 10-6 *ex-div.* Champion Reefs spurted by Re. 1-2 to Rs. 7-6. Rallis advanced by As. 8 to Rs. 44-8. Singarenis gained a like sum to Rs. 11-10. Travancore Cements were better by As. 4-6 at Rs. 10-12-6

* * * *

Calcutta Stock Exchange

CALCUTTA, 9*th October*

Dull conditions prevailed on the Stock Exchange during the week under review. Interest in fresh business was lacking, in view of the *Puja* holidays which will commence from tomorrow. Volume of transactions put through was very small, with fluctuations in values confined to a narrow range, the general tendency being downward.

Jute and coal shares drifted lower, owing to slack enquiries. Among the former, Howrahs slipped by As. 9 to Rs. 23-3. Nationals and New Centrals suffered a loss of As. 6 each to Rs. 24-15 and Rs. 15-15, respectively. Among coals, Western Bengals declined by As. 3 to Rs. 6-4. Burrakurs eased by As. 2 to Rs. 15-13. Central Indias were quiet at Rs. 7-7. In the engineering section, Indian Irons fell by As. 6 to Rs. 34-7. National Irons receded by As. 4 to Rs. 8-5. Jessop & Cos., however, evoked very good attention, the quotation advancing by Re. 1-13 to Rs 39-1. Richardson and Cruddas gathered As. 11 to Rs. 28-3. Tea shares received some support. Patrokolas were in the limelight and jumped up by Rs. 19 to Rs. 231. Dhelakhats hardened by As. 4 to Rs. 23-14. Brooke Bonds were better by As. 2 at Rs. 22-8. Among miscellaneous shares, Jardine Hendersons moved down by Rs. 2-8 to Rs. 89. Indian Aluminiums shed a rupee to Rs. 18-8. National Tobaccos lost As. 4 to Rs. 75-4. Rohtas were quiet at Rs. 22-4 and Martin Burns at Rs. 24-12.

RESTRICTION OF CREDIT TO CLOTH TRADE

In a communication to the Reserve Bank of India, the Bihar Chamber of Commerce has urged the Bank to reconsider its directive to Scheduled banks to restrict credit facilities to cloth dealers, and to restore the margin of accommodation to the previous level. The Chamber has pointed out that reduction of the margin of accommodation by 10 per cent. as decided upon by the Bank will adversely affect the smooth movement of cloth from the mills to the market at a time when cloth is greatly needed. It is further of the view that the measure may produce a rise in the prices of cloth, instead of fall. It has argued that, if the aim of the Government is to curb hoarding, this can as well be achieved by the recent order of the Government prohibiting wholesale dealers from holding more than three months' stock in their possession at a time.

The last annual general meeting of the State Bank of Pakistan was held at Lahore and not at Karachi as was stated in column 1, page 554 of our issue dated 22nd September.

CAUVERY BRAND CHEMICALS

CAUSTIC SODA Solid, flakes & lye
LIQUID CHLORINE
STABLE BLEACHING POWDER
SLAKED LIME
HYDROCHLORIC ACID
FERRIC CHLORIDE
BURNT LIME
CALCIUM CHLORIDE

BECAUSE "CAUVERY" brand chemicals are produced under careful control, each shipment will be of the same high quality and constant uniformity. And because of our rigid inspection methods and care of containers, "CAUVERY" brand chemicals will reach you in the same good condition that it leaves our plant.

NEWS IN BRIEF

UNDER the Women's Savings Campaign Scheme, launched three years ago, a sum of Rs. 4.82 crores has been collected so far. The scope of the campaign is proposed to be expanded considerably.

The first Inter-State Regional Seminar, organised by the Ministry of Community Development, was held at Junagadh in Saurashtra from 8th to 11th inst. The Seminar took stock of the economic, psychological and social impact of the Community Development Programmes.

The Travancore-Cochin Government has sanctioned the establishment of a co-operative central land mortgage bank for the New Kerala State. The bank will replace the existing Travancore Credit Bank, which will be liquidated. Its assets and liabilities will be transferred to the new bank.

The Assam Oil Company has announced that tests now being made at the Moran test well No. 1 have shown signs of oil but it is too early yet to say what the importance of these are. This well, drilled to a depth of 13,739 feet, more than 2½ miles, is the deepest well in the sub-continent and one of the deepest wells in Asia.

The Railway Board has decided to set up a fuel economy training centre at Dhanbad, in Bihar. The decision has been taken in pursuance of one of the recommendations of the Railway Fuel Economy Enquiry Committee which had suggested that a central training institute should be set up to give short courses of intensive training to locomotive and fuel inspectors in maintenance and operation of locomotives.

The Government of India has taken preliminary steps to carry out the inland water transport schemes included in the second Five-year Plan under which some 5,000 miles of river routes are proposed to be made navigable for modern power craft. Mr. K. S. Krishnan, an officer of the Calcutta Port, will be in charge of planning and designing structures and equipments needed to assist navigation.

An engineering and traffic appreciation survey is to be carried out by the Western Railway for a broad-gauge railway line of about 158 miles from Jhund to Malia and extending up to Jamnagar, in Saurashtra. Saurashtra is at present served by a network of metre-gauge railways and the object of the survey is to investigate the prospects of providing a direct link with the broad-gauge system in the rest of the country.

A new workshop for the manufacture of railway signalling and interlocking equipment is to be set up at Sabarmati, near Ahmedabad, at a cost of over Rs. 2.5 crores. The Western Railway at present has two signalling workshops at Ajmer and Mahalaxmi and a telecommunication workshop at Bombay. These are mainly engaged in repair and overhaul work. The new workshop will be equipped with both broad and metre-gauge slidings.

The Netherlands Minister for Food and Agriculture has handed over to the Government of India a plant for preparing bottled milk. It is a present to India by the Netherlands Dairy Machinery Manufacturers' Association. With this plant, it will be possible to prepare pasteurised, sterilised and recombined milk. The gift includes the accompanying laboratory also. The plant is meant for the Dairy Produce Research Institute at Karnal, where it will be used mainly for purposes of instruction.

Under an agreement between Messrs. Kokoku Rayon Pulp Company of Japan and Sahu Jain Ltd. of India, a team of Japanese experts recently visited Dalmianagar to explore the possibilities of starting a rayon grade pulp factory. The team will also make an extensive tour of the Himalayan forests, with a view to finding out coniferous wood necessary for the production of rayon pulp. The team is also visiting Dehra Dun to observe the results of research on wood.

The services of an eminent American dairy engineer have been sought to assist the West Bengal Government to prepare plans for a new dairy factory in Calcutta with a manufacturing capacity of 500,000 lbs. of milk per day. Construction of this second milk factory which is to be finished within the target year of 1959 is one of the important projects under the Rs. 6½-crore Greater Calcutta Milk Scheme. The Scheme, which will be completed with the financial assistance and collaboration of the F.A.O., envisages the augmentation of milk production for consumption tenfold.

The Eastern Shipping Corporation has decided to fall in line with the decision of the India-Australia Shipping Conferences to increase by 10 per cent. freight rates on cargo between India and Australia from 1st November. Mr. R. R. Saxena, Managing Director of the Corporation, observed that the Corporation, which is a member of the India-Australia Shipping Conference, had initially expressed disapproval of the surcharge proposal. However, it did not consider it advisable to fall out from the majority decision of the Conference. The Conference, he observed, has excluded cotton textiles from the operation of the surcharge.

In order to provide technical assistance to small-scale industries, the Ministry of Commerce and Consumer Industries will set up a number of extension centres in several industrial towns of the country. The extension centres, which will work under the guidance of the regional service institutes for small industries, will render advice on the introduction of improved machines and techniques, reduction in the cost of production and organisation of industries. The centres will also be equipped with workshops and common service facilities or testing laboratories. The Government has sanctioned Rs. 9.1 crores for the purchase of equipment and machinery. A number of machine tools are being acquired free from the U.S. under the Technical Co-operation Mission.

As a result of discussions held in New Delhi letters have been exchanged between the Government of India and the Japanese Government, extending, till 31st March 1957, the most-favoured-nation treatment accorded to each other in the Indo-Japanese Peace Treaty of 1952. It had provided that, pending the conclusion of agreements to place their trading and other commercial relations on a stable and friendly basis, the two countries would accord, on a reciprocal basis, for a period of four years, certain privileges to their nationals in trade, shipping, navigation, air traffic, etc. For various reasons it has not been possible so far to conclude the agreement envisaged in the Treaty and hence the latter's provisions are being extended.

* * * *

From Abroad

The Cairo Radio has reported that Saudi Arabia would grant Egypt a new credit of about $15 million.

A proposal to increase Pakistan's tea production from 54 million lbs. to 75 million lbs. a year has been adopted by the Pakistan Tea Board.

Details of a plan for an iron and steel plant to be set up in Pakistan are being prepared by Krupps of Essen. The cost of the plant is put at more than Rs. 60 crores (£45 million).

Japanese industrial interests have offered to buy Ceylon's entire annual output of ilmenite. According to present plans, 100,000 tons of ilmenite-bearing sands could be refined annually in Pulmodai in the Eastern Province of Ceylon.

France and West Germany announced recently that they have reached an agreement for the return of the Saar to the latter. A satisfactory solution of the problem of currency exchange in the Saar from French francs to West German marks has also been arrived at.

Output of Australian factories rose by 4 per cent. in the financial year 1955-56, as compared with the previous year. Three-quarters of the rise is attributable to the metal working industries, especially to motor vehicles and industrial machinery.

Soviet Russia has signed an agreement to supply 200,000 tons of wheat to Egypt which will cost Egypt 5,750,000 pounds (Egyptian). Egypt has already contracted to buy 200,000 tons of Russian wheat some time ago which means that it is due to receive 400,000 tons during the 1956-57 season. Egypt will pay in its own currency which will be used by Russia to purchase cotton and other cereals in Egypt.

China is to give Nepal economic assistance of the order of Rs. 6 crores over the next three years under an agreement signed in Peking on 7th October. This will raise the total foreign aid Nepal is to receive in the next three years to Rs. 26 crores. India has already offered aid to the tune of Rs. 10 crores and the U.S. is to give an equal amount. Nepal's Five-year Plan is estimated to cost Rs. 33 crores.

The International Co-operation Administration announced on the 4th inst. that the United States would sell up to 40,000 tons of wheat to Afghanistan to help relieve a food shortage resulting from recent floods and drought. The Afghan currency received from the sale of the grain will be deposited in a special account in Afghanistan. The Government of Afghanistan will market the wheat through internal commercial channels.

A free trade zone will shortly be established in Port Said. Officials of the Egyptian Commerce and Industry Ministries have already prepared details for its establishment. The Plan involves the setting up of industries, assembly plants and import-export facilities similar to those in the Tangier Free Zone. It is hoped that the establishment of the zone will not only benefit Egypt but also help business promotion in the entire Middle East.

A plan has been elaborated in France, and will soon be put into operation, by which motorists travelling on the main roads of France will be warned of telegrams waiting for them. Service stations will display a notice that there is a telegram waiting for the owner of a car, whose number will be indicated. The contents of the telegram will be made known to all the service stations of the particular road travelled, which in turn will make them known to the owner of the car.

The Department of Commerce estimates that U.S. employment in mid-September aggregated 66,071,000, a new high for the month, but down slightly from the all-time high registered this summer. The Department attributes the decline to students leaving jobs to return to school and to seasonal employment. The figure is 1.3 million above that for last September. Unemployment, at 1,998,000 for the period, is one of the lowest recorded in the past three years.

The Ceylon Government has approved of a proposal to establish an acetic acid factory in Ceylon at a cost of Rs. 4.1 crores to produce 500 tons of acetic acid a year. The factory is also to produce 140 tons of methyl acetone, 350 tons of charcoal and 150 tons of phenol. It is proposed to establish two more factories, one for desiccated coconut and the other for white copra, each capable of handling 100,000 coconuts a day. These factories will provide the coconut shell necessary for the production of acetic acid.

Representatives of three Baghdad Pact nations —Iran, Iraq and Pakistan—will meet this month to finalise plans to launch a joint shipping enterprise, with a capital of £6 million. Under the draft proposals to be discussed by them, each of the three countries is to contribute an equal share to the capital. To begin with, three steamships are to be bought. Another proposal for forming an air transport company on similar lines is now being discussed by Iran, Pakistan and Turkey. An order has already been placed by Iran under this proposal for three Viscount aircrafts.

The Maritime Transport Committee of the seven-nation Organisation for European Economic Co-operation has noted with concern two new cases of flag discrimination in trade agreements between India and Poland and between Russia and Indonesia. The Committee, described as the only international governmental body in the maritime field, held that the agreements contained a discriminatory shipping arrangement that all cargoes moving between the countries concerned under contracts between their Governments should be reserved to ships of these countries. It also expressed its firm determination to take all possible steps to prevent the further spread of discriminatory practices which militate against the freedom of shipping services.

PERSONAL

MR. D. N. Khurody, Milk Commissioner of Bombay, returned to Bombay from Paris last Tuesday after a tour of the U.S.S.R. and the Continent.

Mr. R. W. C. Swartz, Australian Minister for Trade, arrived in Bombay from Sydney on the return inaugural flight of Air-India International on Tuesday.

Syed Rahamatalla Adulla, Ambassador-designate of the Sudan in India, arrived in Bombay from Cairo last Wednesday and immediately left for New Delhi.

Mr. Mohan Singh Mehta, India's Ambassador to Switzerland and Austria, arrived in Bombay from Geneva on Sunday last and left for Udaipur the same evening.

Dr. B. C. Roy, Chief Minister of West Bengal, returned to Calcutta on Saturday, 6th October, after a month's visit to Japan. He had gone there to study the working of cottage industries.

Mr. Sankar Nath Maitra, formerly Chief Commissioner, Andaman and Nicobar Islands, has been appointed Deputy High Commissioner for India in Pakistan, Dacca, in succession to Mr. N. K. Raychaudhuri. He will assume charge of the post in the first week of November.

Mr. B. N. Kaul, India's Ambassador-designate to Belgium, Mr. H. Valvanne, Minister for Finland in India, Dr. H. Karebs, Vice-Consul for West Germany in Calcutta, Prof. I. Jalante, Cultural Attache at the Italian Embassy in Delhi, and Mr. J. A. Alemany, Spanish Trade Commissioner in Pakistan, left Bombay aboard the Italian luxury liner s.s. *Victoria* on Tuesday.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 10*th October*

The Depreciated Rupee

There are many points with which we are at one with the Bengal National Chamber of Commerce in its statement with regard to its recent action in supporting immediate linking of the rupee to the sterling. Although the Bengal National Chamber's opinion is sharply in contrast with a very large measure of Indian public opinion, particularly with the considered opinion of the non-official members of the Legislative Assembly, the Committee of the Chamber point out that, whatever may be the latest development in economic thought and theories, "the Committee remain no less strong an advocate of a gold standard for India as anybody else in this particular controversy." The chief concern which determined the Bengal National Chamber's temporary support to the maintenance of the rupee on a stable sterling ratio was the anxiety to take all the temporary advantage of a depreciated currency in India's export trade with all gold standard countries as it is well known that 76 per cent. of India's export trade is with countries other than the United Kingdom as is evident from the trade returns for 1930-31 and that the overwhelming share in this export trade is contributed by India's agricultural produce. The Bengal National Chamber took the view that, by linking the rupee to sterling pending a definite development of the value of pound sterling, the rupee would be maintained as a depreciated currency in terms of gold and as such secure a general rise in the prices of all such agricultural and other commodities which enter into India's foreign trade with gold standard countries. This anticipation which follows strictly according to economic theories has turned out to be true.

MEASURES TO INCREASE FOREIGN EXCHANGE RESOURCES

GOVERNMENT'S EFFORTS AT BUILDING HEAVY INDUSTRY

From A Special Correspondent

NEW DELHI, *9th October*

DELHI LETTER

THE Union Finance Minister, Mr. T. T. Krishnamachari, has been giving expression to his difficulties and to the almost insatiable demand for money from the various State Governments for the implementation of their development schemes. Perhaps, the crux of the problem of financing the plan has been the foreign exchange problem. Officials at high levels are now considering various ways and means of tackling this question. Enquiries made in the Transport Ministry reveal that the Government is showing greater earnestness in acquiring additional shipping tonnage from whichever source available, albeit at higher prices. It appears that the Government is now veering round to the view that if its attempts prove successful in acquiring a sufficient tonnage immediately, the additional tonnage so acquired would be able to earn a handsome money by way of freight. In other words, this will enable the Government to conserve an appreciable amount of foreign exchange resources which would otherwise have to be paid to various overseas shipping companies for importing substantial quantities of foodgrains, iron and steel, machinery and industrial raw materials.

Imports of Food

Already, the Food Minister has hinted that the Government would be importing about 5.5 million tons of wheat and over 3 million tons of rice during the second Plan period. If this quantity of foodgrains has to be imported from foreign countries, necessarily foreign shipping companies will have to carry the goods to the Indian ports and the Government will have to pay substantial sums of money to those foreign companies by way of freight. It may be mentioned here that a high official of the Transport Ministry has already been touring some foreign countries, especially the United Kingdom and other continental countries of Europe with a view to assessing the possibilities of acquiring additional tonnage during the next few months. Preliminary reports from him received by the Government are understood to indicate that the prospect of such acquisition are somewhat bright.

Since it takes considerable time to build new ships, it is quite possible that the Government will be inclined to buy second-hand ships from whatever source they are available. The additional price which the Government will have to pay in the acquisition of new ships, it is contended, would be largely off-set by the help which these ships will render the Government by way of enabling it to conserve exchange resources. The present idea of the Government is that the additional tonnage of three lakh tons set for the second Plan should be acquired within the next one or two years. It would appear that when the Japanese trade mission was here recently talks were held with the Mission regarding the help that Japan might be able to give India, particularly in regard to the acquisition of new ships. The Government is also expected to provide more encouragement to the private shipping companies in India to expand their fleet. All these indicate that the Government has been making a new approach in the matter of acquiring additional tonnage.

Foreign Exchange

The Finance and the Commerce Ministries are reported to be holding high level talks with a view to investigating possibilities of augmenting the foreign exchange resources of the country. Although there has been a serious depletion of the sterling balances during the last five months, the Government is not very much unnerved by this tendency. Already, the Finance Minister, during his tour in the South, hinted that this sharp decline in the sterling balances was not alarming and that it was attributable to the increase in our imports of machinery and iron and steel from the Western European Countries. India has been experiencing considerable imbalance in its trade with Germany, France and other continental countries.

During the pre-war period India used to send substantial quantities of industrial raw materials and certain other commodities, too, to those countries in order to pay for the imports of industrial goods from them. India's export commodities included short-staple cotton, raw jute, coffee and vegetable oilseeds. But, during the post-war period, India has been unable to send any quantity of raw jute to those countries while its exports of short-staple cotton have also become negligible, largely due to restricted internal production, increase in the consumption of Indian textile mills and the emphasis laid by the Government on the export of coarse cloth and yarn in preference to short-staple cotton. Similarly, exports of coffee have also become negligible. Internal consumption of this beverage has increased, thanks to the increase in population, the propaganda carried on for coffee by the India Coffee Board, a semi-official organisation, and the gradually increasing contacts between the North and the South. Similar, too, has been the case with the exports of groundnuts which occupied the lion's share in India's trade with France and Germany during the pre-war period.

Exports

The Government of India has now been thinking about the measures designed to increase its exports to these countries in order to earn more foreign exchange to pay for the imports of machinery and other goods.. Obviously, raw jute export is out of the question. The position in regard to exports of short-staple cotton, too, is not encouraging. The increase in the consumption of indigenous cotton mills which is now running at the annual rate of about 4.5 million bales has been largely militating against any increased exports, unless of course, the country is able to step up production of short-staple cotton to a substantial extent. The earnings from coffee, even if India were to export another thousand tons more, may not be appreciable. Hence, the only item which can bring increased earnings is vegetable oilseeds, particularly groundnuts.

Although India has not been exporting large quantities of groundnuts, it can export groundnut oil if the country is able to augment its production of this oil. There is almost an insatiable demand for vegetable oils of this kind both in France and Germany as also in a number of other continental countries. It is, therefore, possible that, from the next year onwards, the Government might be able to earmark at least a handsome quantity of groundnut oil for export to these countries in order to earn sufficient foreign exchange. No doubt, such action might hit the domestic consumers to some extent. The Government is now considering how best it can achieve its objective without causing any serious dislocation of the internal price structure.

Price Level

Clearly, if the Government succeeds in its policy of importing large quantities of foodgrains from abroad and thereby keeping down the prices of these staple foodgrains, then the major portion of the struggle will be over. Because the nerve of the price structure in this country has all along been the staple foodgrains. Once the prices of the foodgrains are stabilised, that is to say, are controlled at a fairly steady level without undue fluctuations, then increased exports of other commodities like groundnut oil would not seriously affect the price level. Perhaps, the Government is engaged in evolving an integrated policy in these matters. If it does not have any such plan already, it is high time it began to think along those lines.

At the same time, the Government has also to consider the question of implementing its industrial programmes. Since the essence of the implementation of the Plan is the time factor involved, the Government is showing greater earnestness in bringing about the industrialisation of the country as quickly as possible. An evidence of this is discernible from the recent note given by the Heavy Industries Minister, Mr. M. M. Shah, to the trainees of the A.I.C.C. camp, at Alipur, near the capital. Mr. Shah stated in that note that the State will move fast enough in the public sector, wherever necessary, in order to fill up the gaps in production so as to create a balanced and dynamic equilibrium in the national economy. He stated that if venture capital for any reason of history or tradition had not come forward in a particular field of production, whatever the reasons might be, the State would have to move fast to fill up that gap. He averred that, in the modern technological world, any missing links left unfilled were bound to upset and imbalance the national economy.

Industrial Policy

Mr. Shah also said that the Government's industrial policy was a wholesome one integrating all the healthy approaches with a view to achieving speedier industrial development of the country. He assured the private sector that there need be no unnecessary apprehensions about the State's role in the public sector. The policy statement of the Government has given ample scope for the development of the private sector. But, if the private sector was unable to play its part for some reason or other, then the State has to do it in the interest of an integrated and well-knit national economy. The Minister for Heavy Industries added that, during the second Plan, the Government would have laid the foundations both for heavy machine building and heavy engineering industries in the country. As a matter of fact, active steps are being taken by the Government to speed up the establishment of plants, structural shops and fabrication shops for the production of cement manufacturing machinery and machinery for several other industries. Mr. Shah, on his part, was confident that, with the full co-operation of the private sector, India would be in a position to manufacture most of its machinery requirements for the textile industry in the next five years, which averages about Rs. 15 crores a year. Actually, however, by the end of the second Plan, he has estimated, that India will be in a position to manufacture about 60 per cent. of its machinery requirements or over Rs. 100 crores worth of machinery every year. India is also planning for achieving self-sufficiency in chemicals and fertilizers. About 75 per cent. of the national requirements of drugs, dyes and intermediates aggregating Rs. 75 crores per annum are expected to be produced by the end of the second Plan.

The Government has already taken three major and positive steps for laying the foundations of heavy industry in the country. In the first place, the roles of the British and Russian technical experts in the field of rapid industrialisation of India have been defined and their respective assignments clearly made. Secondly, contracts have been given to three foreign firms to prepare project reports for the establishment of inter-linked foundry-forge shops at a cost of about Rs. 8 crores. They are expected to submit these reports by the end of December, this year. Thirdly, a British expert, Mr. John Blakiston, has been appointed as technical adviser on forgings and foundries to the National Industrial Development Corporation. His appointment is in the first instance for five years.

Technical Mission

The British technical mission, headed by Sir Eric Coates, is expected to arrive in New Delhi by the end of this month. It will study the scope of heavy engineering industry in relation to the existing capacity, its potentialities of expansion and the need to set up new units in the public sector. Similarly, the Russian experts who are already in India, are confining themselves to a survey of the needs and possibilities of setting up heavy machine building industry in India, principally for the new iron and steel works, heavy chemicals and coal-mining. The Russian team will also indicate the amount of credits and technical aid that the U.S.S.R. will be able to extend to India. Both the British and Russian teams are stated to be planning for the next ten years.

Messrs. Klockners of West Germany and another reputed concern from Czechoslovakia will prepare separate project reports on the proposed forge-foundry shops on the basis of a memorandum prepared by Mr. Blakiston. Mr. Blakiston has suggested that the forge-foundry works be located in the Dhanbad-Bokaro-Ranchi area. According to him, the steel foundry should have a capacity of 150,000 tons of steel castings; 25,000 tons of grey steel and 5,000 tons of finished forgings with a maximum weight of 15 tons each. The National Industrial Development Corporation, it is believed, will be able to launch these projects within the next six months or so.

EUROPE AND THE COMMONWEALTH

IMPLICATIONS OF TARIFF MOVES

From Our Own Correspondent

LONDON, *1st October*

LONDON LETTER

MR. Macmillan's Washington discussions with his Commonwealth colleagues have given rise to rumours which have put the Treasury in Whitehall to the embarrassing task of admitting that they did not know what the Chancellor was up to. Admittedly, Mr. Macmillan is an enthusiast for linking up the United Kingdom with the six countries of the Messina Conference (France, Italy, Belgium, Luxemburg, Holland and West Germany). Admittedly, he is also aware that the other O.E.E.C. countries, in particular the Scandinavian group, Switzerland and Austria, have more or less decided not to be left out, and Mr. Macmillan is all the more determined to be in. But it is hard to credit that he should be so unaware of the importance of the European Customs Union to the Commonwealth, as either to commit Great Britain formally or to assume that the Commonwealth countries would also want to be in, without first consulting them.

But Mr. Macmillan's nature being what it is, and talking as he thought behind locked doors, he has spoken with enthusiasm of these plans as something which both Britain and the Commonwealth should seriously and urgently discuss.

The confusion has arisen from the fact that his conversations have leaked out with the interpretation that Mr. Macmillan has been making *formal* proposals. In Whitehall, such matters are supposed to be only in a very exploratory stage, while in Washington it is sincerely hoped they will remain so; for America is well aware that a Customs Union embracing the O.E.E.C. countries and the Commonwealth countries for all manufactured goods, would be a powerful step to creating an industrial bloc stronger even than the United States.

How does Mr. Macmillan himself hope that the necessary integration might be achieved? He is following the lead given by France in proposing a ten-year period in which tariffs on manufactures would be progressively reduced leading to their final abolition at the end of the ten years. The Messina countries have talked about agricultural produce but the "Green Pool" conversations of last year showed how difficult it is to bring freedom of trade into such a sphere. However, the Customs Union plan does envisage some reduction even for these products, but the Commonwealth Ministers have been assured that this matter is of secondary importance.

Canada has taken part in these discussions and notes them with special interest. She is very conscious that it might be easier to group together countries in the non-dollar world than to bring in dollar countries, yet the exclusion of Canada from European-Commonwealth grouping would much isolate her. It is not enough to say, as Mr. Macmillan is reported to have said, that the Commonwealth European grouping would have no dollar problems. They would only have no dollar problems if the weaker countries—and for this purpose the sterling group must be taken as weaker—were able to hold their own convertability-wise with their colleagues. Mr. Macmillan is sincere in believing that the grouping he favours would strengthen Britain and the Commonwealth as well as all the other Members by permitting industrial economies and expansion. But, until the overseas balance of payments of all the countries in the group can be equally active, the weaker countries will employ quotas instead of tariffs, and the practicable liberation of trade will not be greatly advanced.—*All Rights Reserved.*

An atomic power station to supply electricity to North and South Carolina and Virginia will be built by four major utility companies serving the area. The Duke Power Company of the U.S., along with three others, will construct the plant. Top officials of the companies have prepared a charter for the nuclear station. The four companies have subscribed a total of $100,000 to begin work on the new project. They will start by forming a non-profit scientific corporation that will handle the plant, and later incorporate a second company to construct the station. The companies plan to form a new organisation called the Carolinas-Virginia Nuclear Power Associates, Incorporated, to handle all affairs regarding the atomic station.

COST AND AVAILABILITY OF MONEY

"HIGHER INTEREST RATES AN ECONOMIC NECESSITY AND NOT A POLITICAL ISSUE"

IN view of the importance that is given in the Second Five-year Plan of India to deficit financing, the following extract from the October issue of the *Monthly Bank Letter* of the First National City Bank of New York is of topical interest. It shows why interest rates are bound to go up ultimately and what happens when they fail to do so due to State intervention. It shows also as to who are the real beneficiaries of higher interest rates.

Shortage of borrowed money and rising interest rates have become objects of widespread public discussion. There are some people, to be sure, who express doubts that the Federal Reserve's restrictive credit policy is strong enough to arrest the enveloping wage-price spiral. But more is heard of the practical difficulties of raising funds. Bankers freely confess to their inability to cover all loan demands. Home-builders, faced by financing problems, have curtailed their planned operations. Industrial leaders are giving their new projects another look, moved by the need to measure the cost and availability of funds against the merits of specific capital undertakings. Government has its problems too, of designing securities to sell in a market supersaturated with credit demands.

Some fear that the credit brakes are taking hold too hard and may precipitate a general business contraction. This is always a risk in dealing with a boom. But, while soft spots are apparent in some areas of business, there are still more evidences of forward momentum in the economy than of contraction. The rising drift of prices gives evidence that the Federal Reserve authorities, in raising discount rates in April and again in August, had a correct evaluation of the risks of inflation.

It is clear from the record that shortage of money is a product, not of any absolute shortage, but of expanded demand. Corporations are raising more money by bond offerings than they did in 1955—or than in any other year. Banks are lending more money to business than ever before—and are increasing their loans to business faster than ever before. What the Federal Reserve is trying to do is skim the froth off the boom and hold credit expansion within limits consistent with a stable economy. There is no question of desiring to precipitate a contraction of available loan funds. The Federal Reserve has no authority to deny people their right to spend their own money as they please. They do have the right and responsibility to discourage borrowings that rest in the final analysis on extensions of credit by the Federal Reserve Banks.

Demands for borrowed dollars come from every side—even from abroad to the extent that borrowers can find access to our comparatively cheap market. The lion's share of the nation's current savings continues to be claimed by the building boom, although the flow of borrowed money into this area has slackened slightly as a result of increased business requirements for credit. While most people who want to buy or build houses find funds available, speculative building has been hard hit. Rates on coventional mortgage loans have tended to move up from a range of 4½-5 per cent. to 5-5½ per cent. At the same time, reflecting the pressures on them for funds, banks and savings and loan associations are competitively raising the rates they offer the individual saver.

The increase in total mortgage indebtedness during the first half of 1956 amounted to $7.8 billion as compared with a record rise of $16.2 billion during all of 1955.

Problems of Mortgage Market

Within the mortgage market, investor interest has gravitated more towards conventional mortgages and away from VA and FHA mortgages on which rates are fixed by law or regulation at 4¼ per cent. Some builders urge raising these rates one-half or even 1 per cent. to restore their competitive position in the rate structure. The Government acted on 20th September to broaden the market for 4¼ per cent. mortgages by scheduling increased mortgage purchases at higher prices for "Fannie Mae" (the Federal National Mortgage Association), raising the limit on saving and loan association borrowings from the Federal Home Loan Banks, and lowering from 7 to 5 per cent. down payments of the FHA on homes appraised at $9,000 or less. While these steps were linked as measures to stimulate the supply of funds for home mortgages, the lowering of down payments works the other way around, increasing the demand for mortgage money and reducing the equity cover for the investor.

It is time that someone took a good look at the Federal Government's programmes to encourage home-building on a cheap money shoe-string. It was one thing to stimulate borrowing to build twenty years ago when millions of people were unemployed and savings funds were stagnating in inactivity. It is another thing to carry these programmes on full steam when labour is scarce and savings inadequate to the demands.

An editorial in the August issue of *House and Home* magazine courageously faced these issues:

"Let's admit we've been living in a fool's paradise where we could sell terms and financing instead of houses—a fool's paradise where we could always compensate higher costs with slower payoffs. . . .

"What difference did it make if your price went up from $10,000 to $12,000 if extending the mortgage from 15 to 20 years made the monthly payment lower on the higher price? And if costs went up again, why not hide them even deeper by borrowing still more money and making the mortgage run for 25 years? Or 30 years? Or perhaps 40 years? . . .

"Until we get our costs in hand, we are hardly ready for more money. Right now, the first result of more money would be more inflation in land prices, more inflation in material costs, more inflation in labour costs—and more houses priced out of the market."

House and Home stated the problem simply:

1. Everybody wants to borrow a lot of money. In fact:

2. Everybody wants to borrow a lot more than anybody has to lend.

3. There is only one common pool of money from which to borrow.

4. Our industry [home-building] wants to borrow more money from this pool than anybody else, and

5. Our industry does not want to pay as much net interest as the other borrowers pay. That makes us low man on the totem pole.

Forecasting rising needs for credit to finance home-building, local government needs and industrial expansion in the years ahead, the editorial warns that we cannot develop the needed increase in savings unless we do something:

The Government must cut income-taxes hard and leave more money for savings. It must reverse the tax policies born of the depression, when the New Deal set out to discourage savings and force consumption.

Borrowers must pay more interest, to make it worthwhile for lenders to save.

Prices must be kept level. People won't put money aside to spend tomorrow if they know they will get less for their money unless they spend it now.

New ways to save must be developed.

The editorial cites as "nonsense" the idea that home buyers—who may be paying off $700 a year on a new $2,500 car—cannot pay off more than $200 a year under a 30-year mortgage to buy a new $10,000 house:

The 30-year mortgage makes our money problem worse instead of better, for three reasons:

1. It keeps home buyers from building up enough equity in their homes to trade them in for the down payment on a better house,

2. It makes us pay bigger discounts to get mortgage money, for lenders don't like to tie their money up for 30 years for the same yield as for 20 years.

3. It slows down the flow of amortisation money back into the mortgage pool.

Pointing out that the biggest single source of money for new mortgages is the pay-off of old mortgages, *House and Home* urges a shortening of mortgage terms—increasing as it were "involuntary savings"—as the best way to generate more money for building.

Congestion of Business Loan Demands

The dynamically expanding area of credit demand this year has been business borrowing to finance increased working capital requirements and, more particularly, sharply enlarged spending for modernisation of plant and equipment. This is all good for the country but the sum total has to stand the test of available funds. What the credit structure has been doing this year is shifting some of the flow of savings from mortgage investments into corporate bonds, meanwhile moving to rectify the overall imbalance between savings and investment at a higher interest rate level.

It was apparent earlier in the year—from the expressed intentions of business to enlarge plant and equipment outlays—that the corporate bond market had a test coming. Many firms, anticipating mistakenly that the political influences of an election year would bring cheap money, postponed bond issues and sought financing through their banks. As the Federal Reserve raised discount rate, confirming intentions to restrain undue credit expansion, and banks raised loan rates, borrowers felt the pressure to go to the long-term market.

Beneficiaries of Higher Rates

The dim view the stock market takes of effective credit restraint should be a tip-off that people rich enough to afford risky stock investments are not the prime beneficiaries of rising money rates. Lending institutions gain direct benefits but these are financial intermediaries, channels for the investment of the people's savings. Since these institutions keep most of their funds continuously at work, the benefits of higher interest rates come more or less slowly, as loans and investments turn over. Since a restrictive credit policy depresses bond prices, selling bonds to gain advantage of higher interest rates involves losses that may take years to make up. Beyond these considerations, and higher operating costs that must be carried, the bulk of the residual benefits return to the public at large, through services rendered, lower costs of insurance and pension benefits, and higher rates offered to attract savings accounts.

The greatest body of beneficiaries of higher interest rates are the small savers, lacking the means to command large borrowing power, lacking

(*Continued on page 747*)

FOREIGN BUSINESS OF INDIAN BANKS

CONSIDERABLE GROUND LOST IN PAKISTAN

THE foreign business of Indian banks during 1955 showed no marked headway; if anything, it experienced a slight setback. Although they participated in the general world-wide upward swing in banking activity, they experienced unfavourable conditions in Pakistan where about 50 per cent. of their foreign business is concentrated. The decline in Pakistan business was so sharp that the improvement noted elsewhere was not sufficient to neutralise it. The number of banks operating abroad remained unchanged, but the number of offices rose by two, thanks to the opening of an office at Hongkong by the Indian Overseas Bank and another in British East Africa by the Bank of India. At the end of the year, in all 24 scheduled banks and 6 non-scheduled banks were operating in 10 foreign countries through 108 offices, of which 99 belonged to the former and 9 to the latter. The shrinkage in the Pakistan business of Indian banks is not surprising for four reasons. First, anything Indian has become anathema to Pakistanis; so successful has been the campaign of hatred against India started and sustained by the leaders of Pakistan. Secondly, and this is a sequel to the first, Pakistan does not provide adequate facilities for Indian banks to operate there, with the result that it is not easy for them to develop their business with confidence. Thirdly, there is a rapid growth of indigenous banks. And, fourthly, there has been a steady fall in the other Indian business activities in Pakistan. In view of all these, it would not be surprising if there were to be a further decline in the Indian banks' activities in Pakistan. If their external turnover is not to shrink further, Indian banks must venture in other parts of the world where the political climate is not adverse and with which India's trade is growing.

A comprehensive analysis supported by relevant data of the foreign business of Indian banks is provided in the September issue of the *Reserve Bank of India Bulletin*. According to it, the overall position of the foreign offices of Indian banks revealed that their total liabilities fell by Rs. 66 lakhs during the year under review to Rs. 86.2 crores, as against a fall of not more than Rs. 36 lakhs in 1954. This decline, however, does not disclose the steep fall that occurred in demand deposits by as much as Rs. 5.1 crores, from Rs. 53.4 crores to Rs. 48.4 crores, because of the increase witnessed in other liabilities. Thus while borrowings from banks, almost all of which took place in Pakistan, increased by Rs. 1.2 crores, the draft on the resources of the head offices and branches in India went up by no less than Rs. 2 crores.

Advances Slightly Improve

On the assets side, notwithstanding a fall of Rs. 70 lakhs—as against Rs. 55 lakhs in 1954—to Rs. 16 crores in liquid assets, the ratio of liquid assets to deposits improved from 24.0 per cent. to 24.8 per cent., obviously owing to a relatively sharper decline in deposits. Advances, however, went up from Rs. 35.8 crores to Rs. 37 crores. An analysis of this most remunerative of all portfolios of a commercial bank reveals that, while bills purchased and discounted increased by Rs. 4.4 crores to Rs. 14.59 crores, loans and advances fell by Rs. 3.2 crores to Rs. 22.37 crores. The end result of the fall in deposits and rise in credits was that the ratio of loans and discounts to deposits moved up from 51.4 per cent. to 57.3 per cent. between 1954 and 1955. Thus, in the face of a decline in deposits and loans, the bill business of the foreign offices of the Indian banks, which rose from Rs. 6.1 crores in July 1951 to Rs. 14.6 crores in December 1955, constituted "the principal redeeming feature" of the Indian banks' business abroad. Unlike advances, investments in Government securities dropped over the year by Rs. 3 crores to Rs. 19.6 crores, mainly as a result of the liquidation of holdings of Pakistan securities. Nevertheless, the investments in Pakistan Government securities alone (Rs. 8.60 crores) accounted for nearly one half of the total, the balance being distributed among the obligations of the Governments of Burma (Rs. 4.67 crores), Ceylon (Rs. 3.61 crores) and the U.K. (Rs. 1.99 crores). Consequently, the ratio of investments to deposits came down to 33.2 per cent. in 1955 from 34.9 per cent. in 1954. It is evident that the drop in investments of Government obligations is the result of a fall in deposits in the face of an increase in advances.

The Indian banks' business in Pakistan during the year under review, as already said, suffered a sharp contraction over the previous year, though the persistent reduction in the number of banks and offices, which stood at 27 and 66 respectively at the close of 1955, was checked. Total liabilities fell by no less than Rs. 10.6 crores during the year to Rs. 33.6 crores, as against 2 decline of Rs. 2.9 crores and Rs. 3.3 crores respectively in 1955 and 1953. Of this reduction, deposits alone accounted for as much as Rs. 10.3 crores, the ratio of demand deposits to time deposits in the reduction being 4 : 1. Moreover, branch adjustments, too, fell over the year by Rs. 1.4 crores to Rs. 4.0 crores, while borrowings from banks were higher by a crore of rupees. The substantial shrinkage in Indian banks' deposits in Pakistan is in distressing contrast to the generally rising trend of deposits in that country. With their resources thus depleted, there was a fall in their assets also. Liquid assets went down by Rs. 2.7 crores to Rs. 4.4 crores. Consequently, their ratio to deposits moved down from 19 per cent. in 1954 to 16.2 per cent. in 1955. The outstandings of loans and discounts also climbed down from Rs. 21.0 crores to Rs. 17.2 crores, but, reflecting the slightly higher volume of Indo-Pakistan trade in 1955, the bill holdings were a shade higher at Rs. 2.2 crores. Owing to the relatively sharper fall in deposits, the ratio of loans and discounts to deposits rose from 56.3 per cent. in December 1954 to 63.8 per cent. in December 1955. Another notable feature, already referred to, was the drop in investments in Government securities from Rs. 11.7 crores to Rs. 8.6 crores.

Deposits Increase in Burma

In Burma, the Indian banks' business showed a slight improvement, as against a mild decline in 1954. Their total liabilities rose from Rs. 11.1 crores to Rs. 13.4 crores. This was mainly due to an increase in deposits from Rs. 10.7 crores to Rs. 12.8 crores. This increase was in tune with the trend obtaining in Burma. It is interesting to note that Indian banks held about one-fifth of the total bank deposits in Burma. They, however, could not utilise the increase in deposits to push up their loans and advances. On the contrary, this portfolio shrank by nearly half, from Rs. 2.7 crores to Rs. 1.5 crores, and the ratio of advances to deposits fell even more sharply, from 24.9 per cent. to 11.7 per cent. Consequently, the banks had to raise their investments in Government securities and cash balances. Liquid assets rose by Rs. 1.0 crore to Rs. 3.3 crores, and their ratio to deposits from 21.6 per cent. to 25.7 per cent. Investments increased by a crore of rupees to Rs. 5.8 crores, while branch adjustments were up at Rs. 2.5 crores by Rs. 1.3 crores, probably reflecting transfer of funds to head offices in India.

A slight improvement was witnessed in the business of the four offices of the four Scheduled banks functioning in the U.K. at the close of 1955. The deposits at Rs. 6.2 crores, which were a little over one-half of the total liabilities, reflected an improvement of Rs. 41 lakhs over the year. Branch adjustments, again, amounted to Rs. 2.6 crores. This means that these offices took money from India to London where interest rates were very much higher. Liquid assets, wholly held in the form of balances with other banks and money at call and short notice, increased by Rs. 50 lakhs to Rs. 3.8 crores, and accounted for one-third of the total assets. As a result, their ratio to deposits increased from 55.7 per cent. to 60.3 per cent. Following a slight improvement in the bill holdings, and a similar fall in the loans, their combined ratio to deposits improved from 46.3 per cent. at the end of 1954 to 50.2 per cent. at the close of 1955. The actual bill holdings were Rs. 2.6 crores and loans no more than Rs. 56 lakhs. Gilt-edged securities remained unchanged at Rs. 2 crores and their ratio to deposits declined.

In Ceylon also a moderate improvement was evidenced in the working of the offices which were three in number. Of the increase in their total liability to the tune of Rs. 0.8 crore to Rs. 8.8 crores during the period under review, deposits accounted for Rs. 0.2 crore, which, however, compared favourably with the total increase witnessed in deposits for the whole banking field. Thus, the deposits with the Indian banks at Rs. 8.0 crores, accounted for one-tenth of Ceylon's total bank deposits at the end of 1955. Credits extended by them in Ceylon were very low, a mere Rs. 1.2 crores, equal to about 15 per cent. of the deposits. Consequently, the major portion of the funds was held in the form of Government loans (Rs. 3.6 crores) and cash (Rs. 2.4 crores).

In Malaya, the number of Indian banks and their offices remained unchanged during the year at 4 and 12 respectively. Their total liabilities recorded a slight improvement from Rs. 7.7 crores to Rs. 9.0 crores, to which increase deposits at Rs. 6.4 crores contributed Rs. 1.1 crores. Unlike in Burma, Britain and Ceylon, the major portion of deposits of Indian banks in Malaya is utilised to finance the trade and industry in that country. Thus, as against deposits aggregating Rs. 6.4 crores at the end of 1955, credits extended by these banks were as large as Rs. 6.2 crores, so that the ratio of advances to deposits was as high as 97 per cent.. The bulk of the advances was in the form of bills, their exact amount being Rs. 4.5 crores. It is interesting to find that this amount constituted about a third of the total bills held by the foreign offices of Indian banks.

A significant development of the Indian banks' business in British East Africa during the year under review was the opening of a new office in Dar-es-Salaam by the Bank of India. Thus, at the close of 1955, the Bank of India and the Bank of Baroda had three and five offices respectively. A notable feature was that their liabilities more than doubled over the year to Rs. 5.8 crores. Deposits at Rs. 2.1 crores represented an increase of Rs. 1.1 crores over the year. Branch adjustments showed two-fold rise to Rs. 3.1 crores, and probably reflected the inflow of funds from head offices for expanding their business in this country. This is reflected in outstandings of loans and discounts which sharply went up from Rs. 1.6 crores to Rs. 4.8 crores and their ratio to deposits moved up from 168.8 per cent. to 228.6 per cent., the highest maintained by Indian banks abroad. The bulk of the increase in advances, Rs. 2 crores to be precise, was under loans, while bills accounted for a rise of Rs. 1 crore. Though liquid assets improved slightly, their ratio to deposits fell from 39.6 per cent. to 23.8 per cent.

Progress Elesewhere

The other four countries in which Indian banks had offices at the end of 1955 were: Aden, Hongkong, Japan and Thailand. As a result of the opening of a branch by the Indian Overseas Bank in Hongkong, the number of offices increased to six during the year. While their combined liabilities expanded during the year by a crore of rupees to Rs. 4.5 crores, their loans and discounts at Rs. 2.9 crores formed 144 per cent. of their deposits, as against 100 per cent. at the end of 1954. These exclude bills purchased and discounted aggregating Rs. 2.5 crores, an increase of Rs. 1 crore over the year. Liquid assets at Rs. 73 lakhs constituted 36.5 per cent. of the deposits.

An interesting part of the article is the attempt made to assess the magnitude of transfer of funds into and out of India through the foreign branches of Indian Banks from the figures of branch adjustments over the period 1951 to 1955, inclusive. Further, these transfers of funds are also compared with those effected through the exchange banks. For this purpose, increases in the figures of branch adjustments in the liabilities side are regarded as a movement of funds from the head offices in India to branches abroad and those on the assets side as transfers of funds into India by these branches. The *Bulletin* has taken note of certain limitations in regard to the accuracy of those figures. But, since the period under review, namely, 1951-55, is fairly long, it is probable that some of the transit items would have offset one another. The figures given below relating to branch adjustments reveal that, over the period 1951-55, there has been a reduction in the obligations of foreign branches to their head offices in India, despite the enlargement in the area of operation of Indian banks in foreign countries:

(Rs. lakhs)

	End of				
	1951	1952	1953	1954	1955
Liabilities	16,18	13,10	12,08	11,02	12,97
Assets	2,11	1,50	2,83	2,82	4,26
Net ..	14,07	11,60	9,25	8,20	8,71

It will be seen from the table that the excess of liabilities over assets on account of branch adjustments of the foreign offices declined from Rs. 14.1 crores at the end of 1951 to

(Concluded on page 747)

WORKING OF INDUSTRIAL FINANCE CORPORATION

IMPRESSIVE INCREASE IN NUMBER AND AMOUNT OF LOANS SANCTIONED

JUDGING from the impressive increase in the loans sanctioned and the wide range of industrial borrowers served, it must be clear that the eight-year-old Industrial Finance Corporation has already carved out for itself a place of great importance in India's industrial economy. Whatever its distracting critics may have to say—not that such criticism is wholly unjustified—of a few isolated transactions, the Corporation has, by and large, justified the confidence and the trust reposed in it by its original sponsors and Parliament. The Corporation's performance is creditable enough to generate the hope that, in the next few years, when it might be conceivably called upon to shoulder heavier burdens, it will not, unlike some of its borrowers who have failed it in the past, fail its potential borrowers.

Founded primarily with the object of providing capital for new and expanding industrial enterprises, the Corporation has, year after year, exceeded its own record in the grant of loans. During the year ended 30th June 1956, it received 86 loan applications, aggregating Rs. 27.70 crores, as against 46 applications for total credit of Rs. 11.27 crores in the previous year. During the year under review, it sanctioned Rs. 15.13 crores covered by 44 applications, as against Rs. 7.34 crores and 27 applications in 1954-55. The Chairman of the Corporation, Mr. K. R. K. Menon, in the course of his speech at its recent annual meeting, quoted statistics which bring out more clearly the precise significance of the 1955-56 figures. He pointed out that the aggregate value of the loan applications received in 1955-56, namely, Rs. 27.7 crores, and the amount sanctioned during the year, namely, Rs. 15.13 crores, compared very favourably with the average of the previous seven-year period, namely, Rs. 8.62 crores and Rs. 4 crores, respectively. The total amount of loans sanctioned by the Corporation upto 30th June 1956 was Rs. 43.21 crores. The amount actually disbursed was Rs. 16.73 crores, while loans declined or not made available (owing to abandonment or postponement of the scheme by the applicant or other reasons) was Rs. 6.23 crores, leaving the Corporation's outstanding net commitments at Rs. 20.25 crores.

Borrowers

Borrowers belong to many groups of industries, the most important of them being the food, textiles and paper industries. The industries (classified in accordance with International Standard Industrial Classification) which have availed themselves of the facilities provided by the Corporation and the amount of loans sanctioned to them upto 30th June 1956 are given below:

Loans Sanctioned

Food manufacturing industries (except beverage industries) Rs. 11.69 crores; textiles—spinning, weaving and finishing of textiles Rs. 6.60 crores; artificial fibres Rs. 1.10 crores; paper and paper products Rs. 4.21 crores; rubber products Rs. 15.50 lakhs; basic industrial chemicals, including fertiliser Rs. 5.36 crores; vegetable and animal oil and fats Rs. 6.50 lakhs; miscellaneous chemical products Rs. 41.25 lakhs; glass and glass products Rs. 1.10 crores; pottery, china and earthenware Rs. 39.50 lakhs; cement Rs. 3.40 crores; non-ferrous metals industry Rs. 1.17 crores; metal products except machinery and transport equipment Rs. 1.68 crores; machinery except electrical machinery Rs. 1.08 crores; electrical machinery, apparatus, appliances and supplies Rs. 1.56 crores; rail-road equipment Rs. 50.00 lakhs; motor vehicles and ancillaries Rs. 1.37 crores; bicycles Rs. 50.50 lakhs; miscellaneous manufacturing industries Rs. 42.80 lakhs; and electric light and power Rs. 42.75 lakhs.—Total Rs. 43.21 crores.

Of the 86 applications received during the year for loans aggregating Rs. 27.70 crores, just over half in number as well as in amount represented applications from two industries alone, namely, sugar and textiles. The rest of the applications covered other major industries such as engineering, chemicals, cement and paper. A significant feature of the applications from the sugar industry was that by far the greater portion of it was from co-operative sugar factories located in Bombay, Mysore, Assam and the Punjab. The total loans sanctioned to sugar co-operatives during the year aggregated Rs. 5.50 crores and three applications for a total amount of Rs. 1.30 crores were pending the issue of sanction at the end of the year. In pursuance of the policy of the Government to encourage the establishment of co-operative enterprise, the Central and State Governments have agreed to guarantee all the loans that were sanctioned by the Corporation during the year to sugar co-operatives on a 50-50 basis. Although the Corporation may not stand to lose through its loan operations in relation to sugar co-operatives, thanks to the State Governments' guarantee for the loans, it may be wondered whether the application of co-operation to a large-scale industry such as the sugar industry is correct in principle or will be successful in practice.

Delays Cut Down

While the rate of interest charged by the Corporation continues to be 6½ per cent. per year (with a rebate of ½ per cent. for prompt payment of interest and instalments of principal), the Corporation has been devising means, whereby the inevitable delays in the grant of loans are cut to a minimum. In this connection, the Chairman, in his speech, acknowledged the assistance rendered by various chambers of commerce and industry in the matter of simplifying the procedure governing the Corporation's relations with its clients. The Corporation has also instituted a legal branch, in order to "quicken the pace of work at various stages in connection with the examination of title deeds and the execution and registration of mortgage documents." Further, the branch managers have now greater delegated authority to deal with clients on the spot. Yet another measure which the Corporation has adopted in order to increase its usefulness to its clients is the liberalisation of the conditions under which interim loans are granted, particularly in cases where "pending the finalisation of the legal formalities concerned with the execution and registration of the formal mortgage deeds, machinery, etc., ordered by our clients has to be paid for or documents relating to which have to be retired."

The Corporation is, however, careful enough to avoid what may be called superfluous or non-genuine borrowing. Thus, in accordance with the Government's directive, the authorities, in dealing with loan applications, take into consideration the "capital structure and outside investments of the company concerned with a view to ensuring that the industrial concern is not borrowing from the I.F.C. while it is simultaneously investing large amounts in other industrial and other concerns."

Amount Due

The total amount of interest charged and to be received on the loans sanctioned since the inception of the Corporation was Rs. 2.80 crores, out of which a sum of Rs. 2.62 crores was actually received. The amount in default is only Rs. 17.72 lakhs, constituting less than 6.4 per cent. of the amount due. Three companies including the Sodepore Glass Works Ltd., accounted for the larger portion of the defaults. One company has been granted extension of time to pay the arrears of interest amounting to Rs. 25,000. According to the schedules of repayment of principal, the total amount due to the Corporation was Rs. 2.25 crores out of which a sum of Rs. 1.68 crores was received. The amount in default is Rs. 48.65 lakhs, constituting 21.6 per cent. of the amount due. Only six companies including the Sodepore Glass Works Ltd., had accounted for the bulk of the defaults. Of these, the assets of one of the companies have been sold and those of another have been leased out. Similar appropriate steps are being taken in respect of the others. Extension of time was granted to four companies to repay the instalments aggregating Rs. 7.40 lakhs. Extra repayments to the extent of Rs. 1.47 crores were received which included the repayment of the loans in full made by six companies.

The Corporation, it may be recalled, decided last year to sell the entire assets of the Sodepore Glass Works Ltd. to a reputed firm of glass manufacturers of Tokyo who had agreed to set up an Indian company to run the factory. The Indian company has since been registered under the name of the Indo-Asahi Glass Company, Ltd. Considerable progress has also been made in the action taken towards the completion of the sale transaction, and it is expected that this factory will be able to go into production before long under the management of the new Indian Company.

The working of the Corporation, during the year under review, resulted in a profit of Rs. 32.68 lakhs, as against Rs. 24.69 lakhs in the previous year. Provision for taxation absorbs Rs. 10.18 lakhs. The whole of the balance, namely, Rs. 22.5 lakhs, has been transferred to the reserve for bad and doubtful debts, in view of the anticipated loss in the account of the Sodepore Glass Works Ltd. The Central Government will thus have to pay a subvention of Rs. 11.25 lakhs, in order to enable the Corporation to pay the guaranteed dividend of 2½ per cent. In this connection, the Chairman has struck the optimistic note that, in future, there will be no need to depend upon the Government's subvention to meet the guaranteed dividend to shareholders.

Balance-sheet

To turn to the Corporation's balance-sheet. Its total assets of Rs. 15.18 crores consist of cash Rs. 15.25 lakhs, loans and advances Rs. 14.24 crores (inclusive of Rs. 70.36 lakhs being advances to the Sodepore Glass Works Ltd. and Rs. 40.31 lakhs for expenses incurred after the management of the concern was taken over by the Corporation) and other assets Rs. 78.37 lakhs. On the liabilities side, the Corporation has, besides a share capital of Rs. 5 crores, reserves aggregating Rs. 61.68 lakhs, borrowings from the Reserve Bank Rs. 82 lakhs, bonds and debentures Rs. 7.81 crores, provision for taxation Rs. 9.53 lakhs and other liabilities amounting to Rs. 73.93 lakhs.

What is the Corporation's future? The Corporation, when it was started, was the major Government-sponsored institution for meeting the credit needs of industrial borrowers. Since then, many institutions have sprung up. Besides the Industrial Credit and Industrial Corporation and the National Industrial Development Corporation, there are the State Finance Corporations, not to mention the international lenders like the World Bank and the International Finance Corporation. There is, therefore, a wide network of massive lenders for industrial purposes. As against this favourable development must be set down the growing number and increasing needs of industrial borrowers. The implementation of the second Five-year Plan and the emphasis that is laid by it on industrial development will call for greater productive effort than was witnessed in the last five-year period. The I.F.C. will, therefore, have larger and wider opportunities of service to its clientele. In this connection, the Chairman has raised a very pertinent issue. He feels that, if the Corporation continued to expand its activities as in the past, its own monetary resources would soon be "tapering off," thereby "accelerating the advent of the day when we shall, perhaps, be forced to borrow under conditions which might leave us little or no margin of profit after meeting our tax obligations and our working expenses." This is an issue of fundamental significance to the future of the Corporation—and may be to the entire banking world. It is the duty of those who steer the financial ship of the State to see that it is not compelled to strike anchor through want of primary motive power, namely, adequate financial resources.

U.K.'s GOLD AND DOLLAR RESERVES

The sterling area's gold and dollar reserves during the month of September rose by $52 million to $2,328 million. In August, it may be recalled, the reserves went down by no less than $129 million.

The chief contributory factor for the improvement witnessed in September was the sale by Britain of the Trinidad Oil Company to U.S. interests as a result of which it received $177 million. Moreover during the month, $3 million was received from the U.S. as defence aid.

A payment of $34 million was made in gold or dollars to the European Payments Union during September in part settlement of Britain's deficit in August. Other payments included $3 million to the creditors of the E.P.U. in bilateral settlements, and $8 million as quarterly instalment on Canadian interest-free loan. Britain had a deficit of $12 million with the European Payments Union in September, which was $4 million less than that in August and $12 million lower than in July.

In the first seven months of this year, the reserves had risen by $285 million but in the subsequent two months they fell. Indeed, but for the Trinidad oil deal $254 million of this amount would have been lost in the past two months. As it is, the reserves are standing $208 million higher than at the beginning of 1956.

Taking the third quarter of this year as a whole, it is seen that the loss amounted to $57 million (or $234 million if the Trinidad deal is not taken into account), as compared with a fall of $335 million in the exceptionally third quarter of 1955.

HIGHER WAGE PACKET FOR RAJASTHAN COTTON MILL WORKERS

ENQUIRY COMMITTEE'S RECOMMENDATION

THE Committee appointed by the Government of Rajasthan (Chairman: Mr. S. R. Deshpande, a former Labour Bureau Director, Government of India) to enquire into the conditions of labour employed in the cotton mills in Rajasthan has done its job pretty well. The summarised Press version of the Committee's report reveals that the Committee has been not only comprehensive but also realistic in its approach. A perusal of the report will give a clear insight into the financial position, technical equipment, and wage structure of the cotton mill industry in the State. While making recommendations about the wages of mill labour, the Committee has tried to do what it considered to be "ordinary justice to the workers," without causing "any damage to the larger interests of the industry."

The Deshpande Committee characterises the wages now being paid to mill labour as being "extremely low." Although it is conscious of certain financial difficulties confronting the mills, it feels that they do not at all justify such low wages. The Committee has accordingly recommended an increase in the pay packet to the workers—a minimum monthly wage (inclusive of dearness allowance) of Rs. 65 for the least skilled operative and of Rs. 92 for a member of the clerical establishment. It has also recommended the adoption of two standardisation schemes, one with a basic minimum wage of Rs. 30 plus a dearness allowance of Rs. 35 and the other with a basic minimum wage of Rs. 26 plus an allowance of Rs. 39. While the higher basic wage is the same as is current in Bombay, Kanpur and Indore—the lower wage corresponds to that in most other textile centres—the rates of dearness allowance are lower than those paid in Bombay (Rs. 71-5 in June) and Indore (Rs. 46-2 in June).

Incidence of Higher Wages

If the aforesaid recommendations were accepted, as many as 6,867 persons (including 522 women) engaged in the six major cotton mills of Rajasthan would be the recipients of enhanced incomes. On a rough estimate, it is calculated that increased wages will involve more than 10-15 per cent. of the present total wage bill of the industry. In view of such heavy incidence, the Committee has done well to suggest a phased programme of increments to attain the recommended monthly wages.

Lest it should be accused of taking a partisan view of things, the Committee points out that it has tried to give the highest relief to the lowest paid workers. According to it, the operatives in the Rajasthan cotton mills have suffered for years the injustice of having had to receive a much lower wage than was their due. Even so, judged from the representations made by the employers, the Committee may be criticised for having gone "too fast and too far" and it is equally possible that the labourers may accuse it of having gone "too slow."

Justifying the upward revision in wages for the Rajasthan mill labour, the Deshpande Committee observes that, if the various units are run with reasonable efficiency, care and integrity, and succeed in maintaining cordial relations with labour, the cotton mill industry in Rajasthan can prosper as well as that in the rest of the country. In its opinion, as the mills in Rajasthan are engaged mostly in the manufacture of coarse and medium count yarn and cloth, the common man will be their best prop and support. The second Five-year Plan envisages an increase in the *per capita* consumption of cloth from 14 yards to over 18 yards. The next few years will be the period coinciding with the implementation of the second Plan and the objective of the planners is to bring about an improvement in the standard of living of the common man.

Not Very Satisfactory

The findings of the Committee reveal that all the six major units of cotton mill industry in Rajasthan appear to be making "trading" profits, although, from the point of view of equipment and management, this state of affairs is not very satisfactory. The combined operative strength of the industry is 93,320 spindles and 1,689 looms. The average annual rate of output is 12.6 million lbs. of cotton yarn and 22.0 million lbs. of cloth. Out of the six units, four are public limited companies. The oldest factory was set up in 1921. Except for one unit, which seems to have followed a conservative financial policy by ploughing back the profits in the concern and building up reserves, the others present a picture of considerable financial debility. One of the units would appear to be even struggling for its very existence for want of working capital and two others have gone in for borrowings.

The generally none-too-happy financial position of the Rajasthan cotton mills is attributed to the fact that, with the merger of the States with Rajasthan, most of the concessions which the mills had formerly been granted by the princes of the old States have disappeared. Further, the mills are paying for their power and fuel much more than their counterparts in Bombay and Ahmedabad. As against these handicaps, two Rajasthan mills enjoy two distinct advantages. First, raw cotton is purchased at their very door and at considerably cheaper rates. Secondly, the percentage of wage bill to the total cost of production is only 12 to 18, as against 25 in Bombay and Ahmedabad.

Utilisation of Equipment

A striking feature of the cotton mill industry in Rajasthan is the maximum utilisation of the machinery and equipment, which has been rendered possible by "excellent" demand position. Thus, all the units excepting one are working three shifts. Even the remaining unit, it is said, can start the third shift shortly, if it is able to come to an understanding with its workers. Generally, the cotton mills of Rajasthan are stated to have fairly modern machinery and equipment, excellent technical direction and good working conditions. One of them is highly rationalised, and is capable of extracting from its workers a good amount of work. The third of the important units, which is a composite unit, has apparently failed to conserve its resources and its relations with its employees appear to be far from satisfactory. The fourth large unit which is only a spinning plant, though equipped with modern Japanese machinery, has been complaining of bad trading results. The fifth unit is a mere "waste" plant working with old and unserviceable machinery and is the worst paymaster. The sixth unit is also working with very old and reconditioned machinery.

Rationalisation

The Deshpande Committee has devoted special attention to the question of rationalisation. It notes that rationalisation (that is, introduction of efficient systems of work) has made little progress in Rajasthan, except in one unit. In two units, the managements are anxious to introduce rationalised methods of work, in order to reduce complements which they consider excessive. It is now generally accepted that the implementation of schemes of rationalisation cannot be achieved without cent per cent cooperation from labour. The Committee has, therefore, urged that any unit which has prepared a scheme should introduce it only on the basis of a mutually agreed formula. In this connection, the Committee has done well to call upon the workers' representatives to view the question of rationalisation with an open mind and to help smoothen introduction of schemes of rationalisation. It, of course, emphasises that rationalisation must not result in throwing anyone out of employment.

EXPORT OF WOOL

The Government of India has announced the policy regulating export of raw wool during the period October 1956 to March 1957. Accordingly, those who had exported raw wool in their own name and at their own risk and account during any one of the 11 half-years (January-June and July-December) in the calendar years 1951 to 1956 will be given allotments equivalent to 45 per cent. of their best half-year's exports, subject to a minimum individual allotment of 32,000 lbs. (100 bales). The established newcomers who have effected some export against their allotments during October 1955 to March 1956 and April-September 1956 period will be given a uniform allotment of 32,000 lbs. each. The other newcomers who fulfil the qualifications prescribed below would be granted a uniform allotment of 8,000 lbs. each:

(1) Internal dealers who had made outright sales of wool for export purposes or local consumption of the value of not less than Rs. 50,000 during any one of the calendar years 1951 to 1956 (end June);

(2) shippers who had exported raw wool from the territories now constituting Pakistan during any one of the calendar years 1945 to 1947 and/or from India during any one of the calendar years 1948, 1949 and 1950, directly in their own name, risk and account, or through commission agents but on the shippers' risk and account; and

(3) all other shippers, who are already registered at ports on the basis of their exports through exporting houses or commission agents.

In future, quotas will be given only to such exporters who effect shipments in their own name and at their own risk and account.

TEXTILE INDUSTRY IN BURMA

Burma seems to be making earnest efforts to expand the cotton textile industry. It is reported, for instance, that the Industrial Development Corporation of Burma has almost completed negotiations with three Japanese firms for establishing as joint ventures three cotton textile mills, each with 40,000 spindles and 200 powerlooms. The capital outlay on each of the three units is estimated at Rs. 2 crores. Of the proposed mills, one will be erected at Rangoon as a joint venture with the Ishikawa Company of Japan on the basis of 60 per cent. Burmese and 40 per cent. Japanese investment. The two other Japanese firms jointly negotiating for setting up factories at Myingyan and Rangoon are the Dai-Nippon Company and the Japan Cotton Trading Company.

Meanwhile, plans are said to be under way for expanding the size of the present Government-owned spinning and weaving factory at Thamaing by 20,000 spindles to 40,000 spindles and by 200 looms to 600 looms. This factory was built by American engineers in 1950 at a cost of about Rs. 2.9 crores. The additional machinery and equipment costing Rs. 1.5 crore will be purchased from China. Seven Chinese engineers are reported to have already arrived in Burma to supervise the expansion operations.

REPORT OF MILLOWNERS' ASSOCIATION, BOMBAY

Like its predecessors, the latest report of the Millowners' Association, Bombay—that for 1955—contains a comprehensive and lucid review of the developments on the Indian cotton textile front during 1955. As usual, the Report reproduces the representations submitted by the Association to the authorities with regard to the handicaps facing the mill sector and the solutions for the same. It also gives, in the form of tables, a wealth of statistical information pertaining to cotton textile economy, including production of yarn and cloth, exports and imports, consumption of cotton, and trend of cotton and piecegoods markets. Given, too, are statistics relating to the spinning capacity of India, Japan, China, the U.K., Germany and the U.S., and world's cotton crops. In addition to all these, the Report includes a mill statement for 1955 and a detailed statement of the position of cotton spinning and weaving in Indian mills during 1954-55 as compared with that in the previous years.

The Government of India has raised the limit of the quantity of cloth that can be held in stock by mills from one month's stock of the mills' average production to six weeks. The enhanced limit includes cloth sold but not yet delivered by the mills. Cloth packed for export is, however, excluded altogether. The Government's decision is a sequel to the representation made by the mills to the effect that, in addition to unsold stocks of cloth, many mill's have also to carry quantities of cloth which have already been contracted for purchase but where the purchaser has not yet taken delivery.

The U.S. Government has announced imposition of higher tariffs on imports of woven wool fabrics in excess of the permitted quarterly quota of 3.5 million lbs. for the current quarter. The permitted quota bears a tariff rate of 37.5 cents per lb. plus 25 per cent. *ad valorem*. The wool fabrics imported after this quota is exceeded are now made subject to 37.5 cents per lb. plus 45 per cent. *ad valorem*.

The Government of India has reviewed the policy for export of Madras-Mysore silk waste in the light of the availability and the requirements of the indigenous industry and has decided to allow the export of silk waste of Madras-Mysore origin by those holding stocks.

COTTON MILL INDUSTRY STARTS PUBLICITY CAMPAIGN

WORLD TEXTILE TRADE

From Our Special Correspondent

MANCHESTER, *2nd October*

THE opening shots in a campaign sponsored by the Lancashire cotton industry to interest the public at home in the virtues and value of cotton goods have now been fired. The Cotton Board, advertising consultants and representatives of all branches have collaborated in a publicity scheme which is now being displayed in advertisements in national and local newspapers. The drive has a twofold objective of offsetting the threat of foreign competition and endeavouring to revitalise the selling power of the fibre.

MANCHESTER LETTER

The slogan "Buy Britain's Cottons" had already been coined; now a new sentence has been added to each advertisement. After describing the virtues of cotton in its many different guises, the message ends: "And the best of it is that the best of it comes from Britain."

Advertisement

Posters showing various versions of the advertising campaign are now going up in mill canteens and on notice boards. The operatives who spin and weave the goods will be able to see how their efforts are being brought before the public. All the assets possessed by the fibre are driven home, from cotton's durability to its cleanliness, from its industrial uses to its modern transformation into a fashion fabric, from its cheapness to its launderability.

The sponsors of this idea of a national drive to boost sales have great hopes for the project. They do not pretend that it will solve all their troubles, but the success of similar schemes in other countries, notably the United States, gives ground for the belief that the money which is being spent will not be wasted.

One drawback alone mars the effectiveness of the approach to the public so far. The labelling of cotton goods, by which imports from Hong Kong and other Commonwealth sources can legitimately be marked "British," remains a stumbling block. Shoppers might well guess by the usual wide disparity in price that some of these goods, with their misleading tags, are manufactured many thousands of miles from Britain, but the anomaly persists and may perplex the few.

Imports And Exports

A discouraging survey of recent conditions in the United Kingdom cotton industry, showing a picture of shrinking exports and growing foreign imports, is given in a quarterly statistical review issued in Manchester by the Cotton Board. These influences, accompanied by a continued running-down of stocks, have kept output of cotton yarn and cloth at depression levels, the Board stated. In July and August, the daily rate of yarn output in Lancashire mills, allowing for holidays, took a sharp downward turn and last month it was lower than at any previous period of the present recession.

Imports of cotton piecegoods showed a marked increase in the first half of this year. Those from India and Hong Kong were mainly for home consumption but supplies were received in larger quantities from other sources for re-export, including Japan, China, France and Bulgaria.

Home Market

In addition, the Board disclosed for the first time the extent to which made-up cotton goods are now entering Britain's home market. Imported shirts are arriving at a rate of 10,000,000 a year and towels are coming in at about 11,000,000 annually. The Cotton Board estimates that imports of made-up cotton articles so far this year have been at an annual rate equivalent to about 50,000,000 square yards of cloth. Imports of unfinished cotton and rayon fabrics exceeded 200,000,000 yards in the half-year.

World trade in cotton goods declined sharply in the second quarter of 1956 chiefly owing to a drop in Japanese exports from a post-war record level of 363,000,000 square yards in the first quarter to 260,000,000 yards. On the other hand, cloth from man-made fibres sold in larger quantities on world markets and Japanese shipments increased from 237,000,000 square yards to a new record level of 288,000,000 square yards in the second quarter of the year.

The world textile export scene has changed but little, as the table below shows, the general tendency being towards increased shipments of goods made from synthetics at the expense of cotton fabrics. Comparable figures are given for the first half of this year and 1955:

(In million yards)

	1956			1955		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K. ..	287.0	64.0	301.0	281.9	69.0	350.9
U.S. ..	267.6	72.1*	339.7*	299.3	119.4	418.7
Japan ..	622.6	525.3	1,147.9	498.0	409.4	907.4
India ..	309.3†	0.6*	309.9†	385.7	1.1	386.8
Holland ..	128.4	23.0	151.4	119.3	20.6	139.9
France ..	78.3‡	22.6‡	96.5‡	218.2	65.3	283.5
Germany ..	112.5	105.2	217.7	115.1	107.5	222.6
Italy ..	42.7	50.7	93.4‡	37.6	60.0	97.6
Belgium ..	55.5‡	15.9‡	71.4‡	99.8	22.7	122.5
Hong Kong ..	62.8	31.5	94.3	88.1	9.8	92.9

* 3 months for rayon only. † 5 months. ‡ 8 months.

In addition to the above direct shipments made by Hong Kong mills, a further 127,000,000 yards of cotton cloth have already been shipped abroad this year as re-exports. Most of these supplies went to Indonesia and Siam.

Egyptian Cotton

International developments have disrupted the free flow of Egyptian cotton to certain consuming areas at present but traders with an eye to the future are still keeping in touch with the supply position and the statistical outlook. The season which has just ended brought several unusual influences to bear on the Egyptian crop and the exports of 895,109 bales were 20 per cent. higher than in the previous season.

Another important factor was the substantial rise in consumption of cotton by local spinners in Egypt. The quantity of 254,246 bales absorbed established a new all-time record. As a result the carryover of 154,407 bales was one of the lowest for many years and compared with 284,995 bales in the previous season.

Leading consumers of Egyptian cotton during the 1955-56 season were (in bales, with comparisons for the previous season):

Czechoslovakia 158,930 (37,439); India 102,454 (87,698); France 93,160 (91,329); Japan 70,329 (47,796); Italy 62,567 (46,887); China and Formosa 57,511 (75,055); Switzerland 39,693 (32,304); Russia 34,195 (44,696); Poland 33,181 (21,085); United States 32,241 (45,480); Rumania 30,650 (10,645); United Kingdom 29,154 (39,655); Western Germany 28,119 (57,993) and Hungary 22,009 (26,253).

Current estimates of the new crop indicate a yield of around 1,165,000 bales, an increase of nearly 150,000 bales on last season. This offsets the reduction in the carryover and makes a probable supply of some 1,320,000 bales available for distribution.

The uncertain outlook affecting Egypt's political and economic situation makes it hazardous to assess the immediate prospects for supplies of the fibre. Spinners in Egypt absorbed nearly 20 per cent. of available supplies last season and may well increase their requirements. The significant feature of exports was the fact that nearly 30 per cent. of Egyptian cotton was sent to China and East European countries. An extension of this trade in current circumstances seems more than likely.

Recent Price Trends

The important effect on Lancashire cotton cloth prices of the substantial reductions in yarn quotations which took place at the beginning of August can now be gauged from a comparison with previous Board of Trade figures in this connection. The index number, based on 100 points at the end of June 1949, dropped sharply in August to 118.6 compared with 122.0 in July.

This means that the level of cotton cloth prices is now lower than at any time during the last three years. More significant still is the fact that the relationship between the cost of cotton and rayon fabrics is now narrower than for a long time past. The latest index number for rayon material, calculated on the same basis, is 113.7.

Following the attempt to reduce American yarn prices to a more realistic level, reports were about that the cost of Lancashire goods was well within the competitive range of some important rivals, including Hong Kong and Japan. In many quarters, however, it is felt that Lancashire's opponents abroad have a much larger margin on which to operate and can well afford to shade their prices when opportunities of doing business arise.—*All Rights Reserved.*

MEXICO'S EFFORTS TO OUTBID U.S. IN COTTON TRADE

BARTER DEALS PLANNED TO PUSH UP EXPORTS

WE have referred, in a previous issue, to Mexico's reaction to the U.S. cotton export policy and its objection to any form of two-price system for American cotton. Such a scheme, Mexico has held, would disrupt world markets. Subsequent reports, it is noteworthy, indicate that Mexico is planning to take effective measures to counter the adverse effects on its economy of the U.S. policy. A new cotton policy is gradually taking shape to cope with the situation created by the U.S. Farm Legislation. This Act has, in so far as cotton is concerned, three well-defined objectives. They are: (1) to dispose of the accumulated surplus at the rate of five million bales a year, (2) to recover that portion of the international cotton market formerly supplied by the U.S. for permanent trade purposes, and (3) to improve the quality and reduce the cost of production, so as to make the realisation of these objectives possible.

The first impression created by the law among a majority of Mexican producers and traders was that the policy was intended only to dispose of surpluses without any future plans of participation in cotton trade. It was also believed that U.S. cotton would not compete with Mexico's product, because of the latter's superior quality. But it now appears that Mexico has realised that the U.S. cotton export policy is a direct threat to its cotton trade and industry. The Commodity Credit Corporation has fixed the minimum price at 25 cents per lb. for basis Middling 15/16", average location. This will, it is felt, directly affect Mexico, because the latter is primarily a producer of medium-staple cotton. Further, even the 25-cent level is not a floor price, for the C.C.C. has been directed to accept even lower prices, should it be found necessary to meet the competition of cheaper priced comparable foreign growths. It is this provision that has caused the greatest flutter in cotton circles, not only in Mexico, but throughout the world.

Export Tax

Mexico has now sharply reacted to the U.S. move. A broad outline of the policy to be adopted is given in the latest monthly publication of the *Banco Nacional de Comercio Exterior*, a leading bank of Mexico. Mexican cotton, it is claimed, has before it a growing field in the international trade, because of its lower cost and excellent quality. These qualities are proposed to be improved further. Production, the report says, will be concentrated in the optimum areas and cotton technology will be improved to increase output, so as to make up in quantity what may be lost in price. As a preliminary step for helping domestic producers, the Mexican Government intends, according to the report, to readjust the export tax on cotton which at present is 22 per cent. *ad valorem*. This duty is not charged on bills but on the physical quantity exported of any type of fibre or fixed accounting factor established by the Treasury Department and subject to periodic revision. At present, the tax stands at 5.24 cents on the dollar per lb. If no adjustments are made, it is felt, the producers would be forced to absorb the entire reduction in market prices, inasmuch as the Treasury's share would remain stable in relation to the quantities exported. The authorities will make such adjustment in their cotton policy as will protect the producer's income level. The *ad valorem* tax will be reduced from time to time to levels that will permit sale of Mexican cotton at minimum remunerative prices, but at prices not lower than those set by the C.C.C. for the sale of U.S. cotton. Though such a step will eliminate marginal producers, it will avoid a price war which, Mexico is convinced, will not square with the long-term interest of the cotton trade.

Nor are these, it is claimed, the only way open to Mexico to protect the interest of its producers. Being an underdeveloped country, its domestic market for capital and consumption goods is ever-expanding. In the present international circumstances, this is a valuable asset to bank on, for they are precisely the ones gaining importance in international trade in their role of principal vehicles for the trade expansion of developed countries. Mexico has been receiving innumerable suggestions and even concrete proposals for bilateral agreements which assure Mexican cotton lucrative markets and a diversified foreign trade. A recent step in the direction of barter deals is the announcement by the Department of Economy that import permits for automobile parts to be assembled in Mexico will be granted, subject to the condition that such operations be undertaken as part of compensated trade arrangements which stipulate the export of Mexican cotton from the 1955-56 harvest in amounts equal in value to the automobile imported. This policy came into effect on 1st October. A similar agreement has already been in force for some time now, in respect of permits to import wine, liquor, chemicals, fibres, sheet steel, machinery, textiles, etc. A significant feature of the new measure is that the two operations need not be simultaneous. The importer may arrange for his share of cotton to be exported by anyone else in his name. No specific destination is required for the cotton; it may be sold to any country, not necessarily the one supplying the imports. All that is required to get the licence to import automobile, or any other article, is that the commitment to export cotton within a given period be made.

Some Hopes

Mexico is not unaware of the fact that these measures will increase the competitive struggle among the ranks of cotton shippers. But it believes that they will make its cotton more attractive to buyers abroad, and also eliminate intermediaries through whom many importing countries are buying its cotton. Further, it maintains that some clients of the U.S. will be reluctant to purchase American cotton, because their sale of textiles to the U.S. will be steadily reduced by the protectionist policy the U.S. will have to adopt. The assumption that the U.S. will follow a strong protectionist policy for cotton textiles is based on the ground that American textile manufacturers buy their cotton at inflated prices and will not be able to compete with piecegoods imported from Japan, for example, made out of C.C.C. sold cotton at much lower prices. In other words, the U.S. dumping policy will have the effect of raising U.S. textile duties and reducing the dollar income of its cotton customers, thus making their bilateral trade with Mexico more attractive. But it must be added that nowhere is the belief held in Mexico that the enormous impact of U.S. cotton sales on world prices and demand can be offset by any or all the measures which Mexico can adopt. Nevertheless, it is confident that, if international market conditions are aggravated to the point of scraping the demand for cotton from sources other than the C.C.C., Mexico will be able to balance the value of its imports under the barter system by exports of cotton.

Again, cotton producers in Mexico are planning to adopt defensive measures by creating a National Cotton Commission, with a contribution of 5 pesos per bale or ton of cottonseed, up to 12 million pesos annually to finance it. The Commission will plan cotton production, start experimental fields to improve quality and raise yield per unit of cultivated area, undertake control of pests and plant diseases and organise a domestic and international service on market conditions. Mexico's producers also intend to create a National Cotton Bank with a capital of 40 million pesos provided out of private funds to finance the purchase of machinery and equipment and guarantee harvest. The Bank will also regulate domestic cotton trade as well as exports.

The measures that are being adopted by a major exporter of cotton are not without significance to cotton people in other parts of the world. While the world market for cotton has yet to adjust itself to the flow of American cotton, Mexico's plans to outbid the U.S. will result in a further slump in prices. The latest indications are that Mexico has already captured a sizable share of the market in some leading importing countries. In a recent issue of the *Foreign Commerce Weekly*, the U.S. Department of Commerce stated that Mexico has been able to open new markets for its cotton through sales to nations of little importance in its foreign trade. Thus, Mexico has already taken over America's place as the leading cotton supplier to Germany. While the U.S. exports to Germany fell from 381,928 bales in 1954-55 to 109,442 bales in 1955-56, Mexico's share increased to 402,979 bales in 1955-56, thereby making the latter the principal supplier of cotton to Germany. Japan, Denmark and the United Kingdom have also evinced interest in buying Mexican cotton in exchange for machinery and other products.

IMPORTS OF COTTON INTO INDIA

Figures relating to imports of foreign cotton in the season ended 31st August 1956 show that 598,030 bales (of 400 lbs.) of foreign cotton were imported into India during the period as compared with 529,579 bales in the previous season. However, the quantity licensed for importation was 893,428 bales, as compared with 649,280 bales in the 1954-55 season. Of the total raw cotton imported, 583,247 bales were from the sterling area and 14,783 bales were from the dollar area, the corresponding figures for the previous season being 453,668 bales and 75,911 bales, respectively. Variety-wise, East African cotton accounted for nearly 50 per cent. of India's total imports of sterling area cotton, Egyptian cotton being second in importance and Sudan cotton rating as third. The following table gives detailed import figures for the season just ended:

(In bales of 400 lbs.)

	1955-56		1954-55	
	Quantity licensed	Actual arrivals	Quantity licensed	Actual arrivals
Sterling Area Cotton—				
Egyptian	224,580	219,273	179,016	123,964
East African	320,209	223,037	236,623	257,609
Sudan	126,349	132,798	122,013	66,713
Others	31,410	8,139	13,753	5,382
Total ..	702,548	583,247	601,405	453,668
Dollar Area Cotton—				
U.S.A.:				
Under Aid .. 14,567				
Free .. 176,313				
	190,880	14,783	47,875*	75,911*
Grand Total ..	893,428	598,030	649,280	529,579

* Includes Mexican cotton.
Arrivals include quantity licensed in the previous season.

Mill consumption of raw cotton in the first eleven months of the season ended 31st July 1956 was of the order of 4,549,851 bales comprising 3,995,792 bales of indigenous cotton and 554,059 bales of foreign cotton. In the corresponding period of the previous season total consumption aggregated 4,364,462 bales, of which 3,775,977 bales were Indian cotton and 588,485 bales foreign cotton. It is noteworthy that the consumption figure of 384,660 bales of Indian cotton in July is a new high since January last and compares favourably with 376,100 bales in the corresponding month of the previous season.

IMPROVING QUALITY OF SUGAR

NEED FOR CORRECT STANDARDS

THE view that the standard for the grading of sugar evolved by the Sugar Industry Sectional Committee of the Indian Standards Institution should be made final with necessary modifications was expressed by Mr. T. Prasad, Chairman of the Committee, at the Committee's meeting held in New Delhi last week. The Committee, it will be recalled, was first set up in 1953 with Dr. T. S. Venkataraman, former Sugarcane Expert to the Government of India, as the Chairman, to draft standard specifications for sugar. After taking into account the various difficulties and limitations in the manufacture of sugar, the Committee felt that the standard should be related, as far as possible, to the prevailing manufacturing and trade practices in the country. It came to the conclusion that, for grading sugar, the number of possible combinations in the existing set of material standard sealed samples should be reduced and the system of grading amended. Accordingly, it was decided to abolish grades AA, F and G in the grain size and grade 26 in the colour series and to group together the remaining five grain sizes and three colour grades, so as to produce the following 15 combinations:

Grain	*Colour*		
Size	29	23	27
A	A-29	A-28	A-27
B	B-29	B-28	B-27
C	C-29	C-28	C-27
D	D-29	D-28	D-27
E	E-29	E-28	E-27

The aforesaid set-standard has been the basis for grading sugar in the last two years. The set-standard is claimed to have found support with the sugar factories. The Development Council for the Sugar Industry has already considered the views expressed by the users and has made recommendations on the subject. Several foreign delegates to the ninth Congress of the International Society of Sugarcane Technologists held in New Delhi early this year expressed their appreciation of the standards for grading of sugar formulated by the Indian Standards Institution.

Special Significance

The need for adopting quality standards assumes special significance in regard to such an essential consumer article as sugar. The organisation chiefly responsible for stipulating sugar standards and advising the factories to conform to these specifications is the Bureau of Sugar Standards. More than two decades have elapsed since the Bureau was established; it was set up in 1935 by the Indian Council of Agricultural Research. It must be said to the credit of this Bureau that it has achieved remarkable success in bringing about an improvement in the quality of sugar produced by the sugar factories. The major portion of the sugar output at present, for instance, is accounted for by the highest colour grades, namely, I.S.S. 29 and 28, the actual share of both being nearly 90 per cent., as against 12 per cent. in 1945-46. Again, there has been an appreciable decline in the production of lower colour grades of sugar (I.S.S. 27 and 26) from 84.1 per cent. to just 10 per cent. There has been improvement in the quality of sugar production as regards the grain size too. The predominant grain size is now D (the bolder grain) which is superior to grain size E. The grain sizes A, B and C have registered a distinct rise in output. Taking both colour and grain size into consideration, D-28 is the predominant quality of sugar now produced, while D-24 was so some years ago. Indeed, it is claimed that the quality of sugar produced in India compares very favourably with that produced in any other country.

While the progress made in the direction of improving the quality of sugar thus is notable, there is no gainsaying the fact that much still remains to be done. The methods of test by evaluating vacuum pan sugar vary not merely from region to region but also from factory to factory. Such variation is not in the larger interest of the sugar industry. It is important that the same methods of analysis should, as Mr. Prasad emphasised, be adopted throughout the country. It is equally important that the methods must be easy to adopt and accurate and should not, as far as possible, involve very costly apparatus. Alluding to the draft standards for refined sugar, cube sugar and icing sugar, Mr. Prasad said that the standards would be useful for the development of the industries producing these articles. He asked the Committee to consider what other important sugar products should be standardised. He felt that molasses might be one such product.

At the end of the meeting, the Committee finalised four draft standards for methods of test for vacuum pan sugar and specifications for cube sugar, icing sugar and refined sugar. The drafts will be circulated for eliciting comments. The Committee also decided to formulate an Indian standard specification for molasses.

Incidentally, Mr. Prasad made a brief view of the developments in the Indian sugar industry. According to him, the production of white sugar has gone up from 1,297,000 tons in 1952-53 to 1,856,000 tons in the current season (1955-56). The latter figure is higher than the revised target of 1,800,000 million tons fixed in the first Five-year Plan. The consumption of sugar has also recorded a rise, the estimate for 1955-56 being 1,950,000 tons, as against 1,637,000 tons four years before. Steps have been taken to augment output further. Licences have already been issued under the Industries (Development and Regulation) Act for the establishment of 53 new sugar factories and for a substantial expansion in 51 existing units. The full utilisation of all these licences will mean the creation of an additional capacity of about 950,000 tons. An outstanding feature of the new development programme is the setting up of sugar mills on co-operative basis. Licences for 31 co-operative units have already been granted. Twelve of these are expected to commence crushing operations during the coming (1956-57) season.

WORLD SUGAR

The International Sugar Council has effected a 2 per cent. cut in the basic export tonnages of the member-countries of the world Sugar Agreement. This decision was taken at the end of its secret meeting held in Geneva on the 3rd inst. The cut in export quotas has been enforced under Article 21 of the Agreement which empowers the Council to reduce quotas, if the world price of sugar falls below the minimum of 3.25 cents per lb. Cuban raw sugar (f.o.b. Cuba) at New York which stood at 3.25 cents till the 10th inst. receded to 3.24 cents on the following day and further to 3.22 cents on 17th September, since when the rate has remained unchanged. The decline in sugar prices was due to the reallocation of the portions of the quotas which certain members of the Agreement were unable to fulfil. Cuba and some other exporting countries were allowed to increase their exports and, consequently, the supply position of sugar eased, leading to a fall in prices.

It is with a view to raising the world price of sugar that the International Sugar Council has, as stated at the outset, cut the basic export tonnages. The revised export quotas (in metric tons) of the countries subject to the reductions are: Cuba 2,605.021; China (Taiwan) 681,338; Dominican Republic 681.021; Belgium 56,779; the Philippines 28,390; France 22,712.

SUGARCANE PRICES

The Government of India has fixed Re. 1-7 per maund as the minimum price for gate deliveries and Re. 1-5 per maund for deliveries at rail-centres for sugarcane to be purchased by vacuum pan sugar factories during the 1956-57 season. These prices are the same as those fixed for the 1955-56 season, and are subject to the formula for linking the price of sugarcane with the price of sugar evolved by them.

The Bombay Government, however, has decided, in accordance with the policy adopted by it for fixation of the price of sugarcane for the 1955-56 season, to follow the same policy for the 1956-57 season. It has, therefore, discussed this question with the Deccan Sugar Factories' Association on 21st September 1956. The minimum price now mutually agreed upon between the Government and the factory owners is Rs. 45 per ton of sugarcane, to be delivered at the factory side. This, it must be noted, is the minimum price which every factory has agreed to pay and does not affect any contracts for higher price, if any, made by the factories with sugarcane growers.

Of the two co-operative sugar factories proposed to be set up in Bihar under the second Five-year Plan, one is expected to commence production from the 1957-58 season. This factory will be located at Bankankhi in Purnea district. The Government of Bihar has already appointed a special officer to take necessary steps for establishing the factory. The cane growers will contribute Rs. 10 lakhs towards the share capital and the State Industrial Finance Corporation will advance a loan for the capital.

(*Concluded from next column*)

loaders, 0.59 ton for all workers underground and in open workings and 0.38 ton for all persons employed including surface workers. The percentage of absenteeism was of the order of 13.33.

Nine coke plants at collieries and elsewhere produced 379,000 tons of hard, soft and other kinds of coke during the month and despatched 228,071 tons.

NEIVELI LIGNITE PROJECT

PROGRESS SATISFACTORY

THE discovery of lignite deposits at Neiveli in South Arcot has been widely welcomed as a happy augury for the rapid industrialisation of the country, more especially the Southern part of the peninsula. No wonder, therefore, that it has been given a high priority in the second Five-year Plan. The preliminary investigations having proved successful, the Government has lost no time in going ahead with further plans for developing the mines and exploiting the deposits.

Accordingly, orders for the supply of major specialised equipment for lignite mining, such as bucket-wheel excavators, slewer spreaders, belt conveyors, track shifter tractors, etc., of a total value of Rs. 4 crores were placed at the end of September 1956. Orders for conventional earth-moving equipment aggregating Rs. 1.57 crores were placed earlier in August. Many other items of equipment needed for the development of the mine are being assessed and tenders for such equipment are likely to be invited before the end of the year. The first bucket-wheel excavator is expected to become available towards the latter half of 1958.

Plans will be finalised before the end of the year for open-cut mining operations designed to winning the lignite above a series of artesian aquifers. Estimates are also being drawn for the construction of quarters for the personnel engaged in the mining operations. The scheme for the construction of the giant 200 M.W. thermal power station at Neiveli is making commendable progress and a rough draft of the proposals is expected to be ready before the end of this year. Side by side with this, the planning of the fertiliser unit is also making progress. The chemical engineer connected with this aspect of the project is now abroad on a visit to the United States and Germany to study developments in technical processes. The planning of the briquetting carbonising plant, however, will be taken up only after some preliminary experiments have been conducted in that direction with the aid of a pilot plant.

A skeleton survey of the entire area has been completed. A town-planning expert has been appointed to prepare a general lay-out plan of the whole area comprising the project and to locate suitable sites for production units, workshops, stores, etc., and the proposed township and training institutions. Similarly, an architect has been appointed for drawing up plans and designs of the various buildings that would be needed for staff quarters and offices. There is no difficulty about availability of electric power, since the Madras Government has promised to supply power to the extent of 12,000 kw. till energy from the proposed thermal station at Neiveli becomes available. Preparations are already afoot for the construction of a 110 kv. line from Villupuram to Neiveli for this purpose. Recently, at a conference consisting of the Chief Executive Officer of the project, some officers of the Central Water and Power Commission, the Chief Engineer (Electricity), Madras and other officers, held at Neiveli, matters relating to the distribution of power thus made available by the Madras Government were discussed.

The entire land required for the purpose will be acquired under a phased programme. To prevent inflation in the value of lignite-bearing lands, the Madras Government had, as early as in 1953, enacted legislation pegging the value of lands in 69 villages in some taluks of the South Arcot district to the value obtaining on 28th April 1947. On a representation made by the inhabitants of the lignite area, the Government of India has recently exempted 43 villages from the scope of the Act for some time. Permission has also been granted for the immediate acquisition of the necessary lands in 15 villages in the pegged area and seven villages outside the scope of the Act for the construction of the production-units, workshops, staff quarters, railway sidings and training institutions.

OUTPUT OF COAL IN INDIA

The output of coal in India increased to 3,307,647 tons in August 1956 from 3,164,647 tons in July 1956. Despatches of coal amounted to 3,172,927 tons in August 1956, as against 3,017,398 tons in the preceding month. The stocks at pitheads amounted to 3,018,439 tons at the close of the month, as against 3,372,035 tons at the beginning of the month.

During the month under review, 838 collieries were reported to be working, with an average daily employment of 336,633 workers. Output per manshift was estimated at 1.12 tons for miners and

WHY DOES INDIA NEED SYNTHETIC RUBBER INDUSTRY?

PUBLIC SECTOR'S SHORT-SIGHTEDNESS

IT is often claimed nowadays by some that the private sector has no foresight and cannot correctly visualise the future demand for commodities and manufactures. This is one of the grounds on which the need for State interference and State initiative is sought to be justified. The implication here is that the State is more efficient in these matters than the private sector. But that is not quite true and those who make that claim have the benefit of hindsight. Several instances can be given to show that, even when the private sector prompted the Government to look ahead, it failed to do so and let things drift. A typical instance is provided by the private sector's plan for rubber industry submitted some seven years ago. If only the Government of India had the vision to accept that plan then, there would be no shortage of raw rubber in the country today and it would not be necessary to spend large sums of foreign exchange for importing this commodity from abroad. Nor would it be necessary to think in terms of a costly project for producing synthetic rubber, when India is richly endowed by Nature to grow rubber. Let it not be forgotten, in this connection, that rubber is a basic raw material of vital importance to India's economic development. Without it, there can be no modern civilisation.

How short-sighted the public sector has been in regard to this important matter will be evident from the following quotation taken from the speech of Mr. W. W. Kilgour, Chairman of the Cochin Malabar Estates Ltd., in his speech at the last annual general meeting of the Company, held at Kozikhode, over a month ago:

"Discussion of the proposal to establish a synthetic rubber plant in India still continues. The reason given is that rubber consumption is increasing much more rapidly than production, but this underlines the short-sightedness which rejected the first subsidised Planting Scheme in 1949. The need for such a scheme is now realised, and replanting will be subsidised for the first time in India in 1957. But, if the first scheme had been implemented in 1949 when it was proposed, it would by now have begun to bear fruit and to meet the difference between production and demand."

Implications

As mentioned in an earlier issue of this journal, the Government proposes to have a synthetic rubber plant at Bareilly in Uttar Pradesh. The estimated cost of this plant is Rs. 12.5 crores. But this may be an underestimate, as is the case with most of the industrial projects of the public sector. Some reports place the figure of capital expenditure on this project at as high as Rs. 20 crores. The plant is expected to employ about 8,000 workers, but no information is available about its capacity and production. But, on the assumption that a sum of Rs. 12 crores will be sufficient for this purpose, some idea can be given of the larger benefits that would accrue to the country if the same capital were invested in rubber plantation. In his aforesaid speech, Mr. Kilgour spelled out these advantages as follows:

This sum would be enough to:

(1) Plant 80,000 acres of high yielding rubber,

(2) produce over 20,000 tons of natural rubber a year, and

(3) provide employment, directly or indirectly, for at least 2 lakhs of workers, and this in the part of India with the gravest unemployment problem.

"These figures would be more than doubled, if this amount of money were to be spent in the form of subsidies to planters or loans as is the pattern at present. The present rubber replanting subsidy scheme will cost some Rs. 2 crores, and the proposed new planting loan scheme would require a maximum outlay at any one time of about Rs. 5 crores, all of which would be recoverable."

Proceeding, Mr. Kilgour brought out the implications of this investment clearly by saying:

"In the context of the unemployment problem in India, it seems strange, therefore, to spend Rs. 12 crores, at least half of which will have to be in valuable foreign exchange, on employing 8,000 workers, when the same amount spent entirely at home would employ 25 times as many people. And this proposal is made at the same time as immense subsidies to keep alive certain varieties of cottage industry which clearly have no hope of being able to compete in a modern economy. On the other hand, our industry is well able to meet all competitions."

From the foregoing account, readers will see for themselves how the public sector, which claims to know everything, is subjecting the country to a needless waste of capital, a scarce commodity. It slept over a scheme prepared by the private sector for well-nigh six years. For this fault on its part, precious public savings of the order of Rs. 12 to Rs. 15 crores, if not Rs. 20 crores, are to be invested in a low labour-intensive scheme.

Some may be inclined to feel that we are exaggerating the point. They may argue that the synthetic rubber project will provide a valuable outlet for the molasses of the U.P. sugar industry, a part of which now goes waste. But there are other uses for this product. The potentialities for utilising it in full for producing power alcohol have not been exhausted. This country is dependent upon the outside world for the major part of its requirements of liquid fuel. Given proper encouragement to power alcohol industry, molasses can be utilised to close a part of this gap. They can also be used, along with bagasse, as a high-energy livestock feed. This is an outlet for molasses which has hardly been tried in India. India has the largest cattle population in the world, but the vast majority of them is underfed. Molasses can be a very valuable means of solving the problem of undernourishment of Indian cattle. Experiments in the U.S. have revealed that molasses can be converted without any difficulty into a solid, easily transportable form of cattle feed, so that it should be possible to use this commodity, which is available only in certain regions of the country, in all parts of India. It is, therefore, unnecessary to start a synthetic rubber industry, in order to solve the problem of surplus molasses.

Nature's Bounty Not Fully Utilised

One can understand Europe and America spending vast sums of capital on synthetic rubber industry. These countries cannot produce natural rubber, because they do not enjoy the climatic conditions necessary for it. Their political hold over the countries producing natural rubber in Asia is weakening and, in times of emergency, they are afraid of their supply being easily cut off. It is common knowledge that, without rubber, they cannot live, nor defend themselves when attacked. In fine, rubber is a strategic commodity. They are, therefore, keen on attaining self-reliance, if not self-sufficiency, in raw rubber. This they have been able to achieve through the synthetic, for which the raw materials are within their easy reach. But India is in a different position. It has all the facilities for producing natural rubber—land, climate, labour and know-how. All these could have been fully utilised and almost the entire requirements of the country could have been secured by now, if only the public sector had been alert and listened to the advice given by the planters.

BELGIUM MAY HAVE FEWER JUTE MILLS

Lack of confidence in the future may lead to some reduction in the size of the Belgian jute industry. At the present prices for jute goods, the working of too many individual units is found uneconomic, and the industry in Belgium is reported to be preparing to follow the French example of concentrating production in the largest and most efficient concerns, so that the prices of jute manufactures may be maintained at the most reasonable level by making optimum use of modern machinery and efficient management techniques.

EXPANSION OF EGYPTIAN JUTE INDUSTRY

The existing jute mill at Shubra-el-Kheima, Cairo, is reported to have been taken over by a new company of the name of Societe Generale des Produits de Jute, reports *Jute Bulletin* of the Indian Central Jute Committee. New equipment is being installed in the mill to raise its production from 2,500 tons to 8,000 tons a year. Another jute mill, reportedly under construction, is expected to produce over 17,000 tons of goods and create jobs for 3,000 workers in about three years' time.

FRENCH PRODUCTION FALLS

French jute industry's production recorded a further decline during May to 8,150 tons of yarns and 6,200 tons of fabrics from 8,790 tons (revised) and 6,468 tons (revised), respectively, for the month of April. May production brought the total for the first five months of the year to 44,792 tons of yarns, as compared with 43,059 tons for the corresponding period of last year. The cloth output during January-May 1956 aggregated 33,372 tons, a considerable decline from the previous year's 34,186 tons.

UTILISATION OF JUTE IN SURGERY

IT CAN REPLACE COTTON DRESSINGS

THE shortage and high cost of many common consumer goods during the war and post-war years have led to the discovery of many cheaper substitutes. The use of wearable fabrics made out of vegetable tissues in place of cotton textiles is an instance in point. The rise in the cost of Indian jute goods, due to higher raw jute prices and various other causes, has, likewise, been responsible for the introduction of substitute packing materials in foreign markets. Though these substitutes have not yet wholly replaced jute bags and fabrics, the competition from them has had a markedly adverse effect on the Indian jute industry. Such a situation has to a large extent been due to the fact that jute goods have remained only as a packing material and no other major use for jute has been found.

Thanks, however, to the recent research by scientists, jute need no longer remain so. It has even replaced cotton in many uses where the latter holds the field. This is evident from the talk of Lt.-Col. K. K. Chatterjee at the Asiatic Society, Calcutta, held last week. According to Dr. Chatterjee, a proper substitute for absorbent cotton used for surgical purposes can now be made from jute. Surgical dressing made out of jute and supplemented by other vegetable tissues can considerably reduce the necessity of using gauze dressings. The economic aspect of the surgical use of jute has shown that the material can be produced at 50 per cent. or even less, of the cost of absorbent cotton wool and that it can reduce the cost of gauze material also. There is thus a twofold advantage in the surgical use of jute, namely, jute dressing is economic for patients and also releases large quantities of cotton for textiles. It has also been found, Lt.-Col. Chatterjee said, that the dressings made of jute and vegetable tissues do not give rise to "jute dermatitis," an ailment said to be common among workers of jute mills. The vegetable tissues, it is claimed, conserve body heat better than absorbent cotton. The discovery of jute dressing as a substitute for gauze, he added, should encourage industrialists to install plants for the production of the material.

Lt.-Col. Chatterjee explained the "principle of disintegration" which led to the formation of jute and vegetable tissues. He said that the preliminary step in the process was the separation of fibres from fibral bundles by peeling off the surface elements. The fibres should afterwards be treated both from the surface and from the central part. The surface could, he said, be treated better by chemical agents than by bacterial. The treatment by chemicals had an advantage over the latter, in that the chemicals gained quick access to the substance of the jute fibre, which consisted of long tendrils with tapering ends and a central canal. The jute, Dr. Chatterjee suggested, should be cut into small pieces which would facilitate the access of the chemicals through the openings of the central canal and the body of the fibre.

Chemical Treatment

The standard chemical treatment was alkaline treatment and chlorination by bleaching powder, chlorine water or chlorine gas. The process further included boiling, agitating, cylinder-washing, carding, sifting and pressing. The success of the process lay in the selection of a particular variety of vegetable tissues and judicious application of the chemicals. The strength of the chemicals and the duration of immersion would depend on the character of the particular vegetable issue which was being processed.

Lt.-Col. Chatterjee's elucidation of the process of making surgical dressings out of jute and vegetable tissues makes interesting reading and one wishes that some industrialist comes forward to take steps to manufacture them. The difficulty, however, is the adequacy of supplies of raw jute, so that they can be manufactured at a cheaper rate in order to induce their wider use than cotton dressings. India is still dependent to a large extent on Pakistan for supply of raw jute. Unless the country attains self-sufficiency in jute at an economic cost, the diversion of jute to the manufacture of surgical dressings may lead to an increase in the price of other jute goods. But there is no doubt that this invention will be of great use to Pakistan which has a large surplus of jute for which outlets have to be found through exports.

ADVANTAGES IN EXPORTING FERRO-MANGANESE

STEADIER MARKET THAN CRUDE ORE

By Dr. R. M. Agarwal

INDIA exports about one million tons of manganese ore per year of which the U.S.A. alone take about 600,000 tons. The ore has had an increasing market lately on account of stockpiling. Further, because of their high phosphorus content, Indian ores are normally blended in the U.S.A. with other manganese ores. The second Five-year Plan, it may be mentioned here, has fixed an export target of 1.5 million tons of manganese ore, as against 0.94 million tons during the first Five-year Plan.

Reserves

India has large reserves of manganese ore, the primary raw material for manufacturing ferro-manganese. These are at present exploited mainly for export which fetches a very much smaller return (about Rs. 200 per ton of manganese ore, as against Rs. 700 per ton of ferro-manganese). Keeping in view the several advantages that would accrue from development of natural resources including much larger export earnings, the first Five-year Plan recommended that the export of finished or at least semi-finished products should be encouraged in the case of manganese ore.

The following table gives the exports of manganese ore during the period 1950-51 to 1955-56:

	Quantity Tons	*Value* Rs.
1950-51	8,20,780	8,01,25,406
1951-52	11,24,956	15,69,33,834
1952-53	14,39,678	21,78,22,976
1953-54	15,67,949	24,73,16,573
1954-55	9,44,877	12,43,67,566
1955-56	9,20,847	10,72,33,707

In the U.S.A. about one million tons of ferro-manganese ore is consumed annually and is manufactured from ores obtained mainly from India, Brazil and South Africa; but the demand from these sources may slightly fall on account of discovery of manganese ore in French Equatorial Africa. It is difficult to believe that this new source of supply will supplement Indian supply and it may be assumed that for a long time to come America will have to look to India for a large part of its ferro-manganese requirements. If, therefore, India can produce ferro-manganese at a price which can find a market in the U.S. or the U.K., the finished goods should have an equal chance with the raw ore to attract these markets. In order to meet the demands of foreign markets, ferro-manganese containing about 78 to 82 per cent. manganese can be produced in electric furnace by using ore containing a minimum of 48 per cent. manganese and a maximum of 7 per cent. iron.

The requirements of ferro-manganese for the iron and steel industry by 1960-61 have been estimated at 60,000 tons for an output of 6 million tons of ingot steel. There is some scope for developing an export trade also in ferro-manganese, for though most of the steel-producing countries manufacture their requirements of ferro-manganese by importing raw ore, the U.S.A. which is the largest consumer, produces only 75 to 80 per cent. of its ferro-manganese requirements. The balance which is of the order of 125,000 to 200,000 tons per annum is met out of imports from countries like Norway, Canada, and France. The large-scale expansion of steel production envisaged in several countries over the coming years will increase the consumption of ferro-manganese. From an overall view, it is considered that, provided the quality and price are satisfactory and a vigorous export promotion policy is pursued, about 100,000 tons of domestic output could be absorbed by export requirements by 1960-61. This would contribute to export earnings about Rs. 8 crores at current prices.

On the basis of the present position, the following pattern of development of capacity and production is visualised between 1956-57 and 1960-61:

	Annual capacity Tons	*Actual production* Tons
1956-57	10,000	5,000
1957-58	25,000	25,000
1958-59	55,000	50,000
1959-60	105,000	70,000
1960-61	171,800	160,000

To achieve the production target of 160,000 tons the industry will require 320,000 tons in terms of high grade manganese ore, 128,000 tons in terms of coke, 96,000 tons of limestone and 560 million kw.h. of electrical energy. It is visualised that in implementing the schemes approved by the Government an investment of Rs. 9 crores would be incurred during the second Plan.

Internal Demand

No specific target was indicated for ferro-manganese production in the first Five-year Plan. Internal demands being limited, there is no continuous production of ferro-manganese. The Tata Iron and Steel Company, Ltd., is practically the only producer, though the Indian Iron and Steel Company, Ltd., has also been producing very small quantities of spiegel. The present annual consumption of ferro-manganese by the steel industry is estimated to be of the order of 23,000 tons. Domestic production being intermittent, small quantities are imported to supplement domestic production as is indicated below:

Year	*Production* Tons	*Imports* Tons
1951-52	21,469	2,538
1952-53	34,900	1,293
1953-54	1,221	3,447
1954-55	43,513	3,567
1955-56	*Nil*	184

The production of standard grade ferro-manganese from indigenous raw materials has to face certain problems as the raw materials differ widely from those of other producing countries in that manganese-iron ratio of most of the Indian manganese ores is low as compared with major manganese-ore producing countries. It is held that production of standard grade ferro-manganese would only be feasible when the manganese-iron ratio in the blast furnace charge is 6 : 1 or more. Further, one has to take into account the higher phosphorus content of India coke. The use of the electric furnace for the manufacture of ferro-manganese might reduce the disadvantage of the high phosphorus content in coke but the other handicap will still remain to be overcome.

Manufacture

For manufacturing ferro-manganese in the blast furnace usually about 2½ tons of coke are required per ton of ferro-manganese produced. But the consumption of coke is reduced to about one ton if the ore is smelted in electric furnace as the coke is then required only for the reduction of the ore to the metallic state and not for producing heat which is supplied by electric energy. As less coke is used, the introduction of phosphorus from coke will be much less. It is therefore now within the range of practical possibility to manufacture low phosphorus ferro-manganese in India and even to sell the material at a competitive price in foreign markets, if electric power could be obtained cheaply.

It may be argued that since the prices of manganese ore have gone up it may be profitable to sell manganese ore rather than manufacture ferro-manganese and then sell it. The present price of manganese ore may be attractive, but it should not be forgotten that the strength and property of trade is judged not so much from temporary booms as from recessions. It may not be out of place here to recall the experience in 1954 when prices suddenly dropped and most of the mines had to close down. The market for ferro-manganese is not so unstable as in manganese ore. Moreover, it requires three times more space to transport a ton of manganese ore as compared with ferro-manganese. Indian shipping is anything but developed and the discrimination of foreign lines against Indian products is not unknown. Freight rates have also risen by about 25 per cent. Ferro-manganese is thus a space-saving device and ensures quicker and cheaper transport. It may, however, take some time before the country is in a position to export ferro-manganese. Till such time, exports of manganese ore should be allowed.

MOVE TO SET UP INTERNATIONAL ATOMIC AGENCY

WASHINGTON CONFERENCE DEBATES ROLE OF SAFEGUARDS

A NOT altogether unexpected hitch has developed in the Washington Conference on Atomic Energy over the safeguards to be provided against the improper diversion of nuclear power to military uses. The Conference is now engaged in settling the details in regard to the establishment of the International Atomic Agency which will help develop applications of nuclear power to peaceful uses in the world. The need for safeguards arises from the fact that atomic power, as is well known, can be used both for peaceful and military purposes; it is necessary to foster peaceful uses and to prevent uses of atomic power for destructive purposes. But the question which is being hotly debated is the nature and the extent of safeguards to be provided in the statute governing the International Atomic Agency.

At the 82-nation conference on Atomic energy, which is now being held at Washington, there is general agreement that the atom can provide extensive benefits to industry, electric power production, agriculture, medical science, health and transport. Some participants have expressed the belief that the new atomic age will usher in a "second industrial revolution." They have urged that such a revolution should be brought about in a manner that would avoid the errors and shortcomings that accompanied the first industrial revolution. Many States have also disclosed to the Conference the wide extent to which they have already progressed in developing atomic energy. Their reports revealed several new discoveries of nuclear source materials, of technical training centres set up and other facilities installed.

Atomic Capacity

Generally speaking, it is now agreed that the establishment of an international agency for the application of atomic energy to peaceful purposes will go a long way towards dispelling doubts and fears about the future of nuclear power. Such an agency, it is also felt, will stimulate the discovery of new fundamental data on which all progress depend and also provide an opportunity for nations which have little or no atomic capacity at present to acquire atomic facilities best suited to their needs. It is also realised that such an agency will enable nations to obtain electrical energy that will lighten their burdens and increase their productivity.

Nevertheless, several nations have expressed the fear that the draft statute (the subject of consideration at the Conference) for the International Atomic Agency contains safeguards which are likely to interfere with the development and use of atomic energy in underdeveloped countries. Dr. Homi J. Bhabha, India's delegate to the Conference, complained that the statute gave the International Agency "maximum powers of interference" in those areas least capable of producing nuclear weapons but those provisions would not affect the better-equipped nations which could carry out weapons programmes without the assistance of the Agency. Dr. Bhabha conceded that the measures designed to insure that the aid rendered by the Agency would not be diverted to military purposes were sincerely intended to protect world security. But India believes, he said, that "the sale of source material should not have elaborate safeguards attached to it," and that the undertaking that "the material is only to be used for the peaceful uses of atomic energy should be sufficient." With this end in view, India has, as already mentioned in an earlier article in this journal, suggested some amendments to the draft statute.

Purpose of Amendments

Dr. Bhabha explained the purpose of the amendments at a Press Conference in Washington. One such amendment would authorise the agency at the request of individual countries to inspect their plants for chemical separation of uranium 235 and plutonium usable in atomic bombs as well as power reactors. Dr. Bhabha said that the peaceful and military uses of atomic energy were "two sides of the same coin" and difficult to separate. He pointed out that, of all nuclear reactors, only the so-called homogenous type turned out bomb-grade by-products, whereas the by-products of other types had to be run through a separation plant before they became bomb-grade. He, therefore, felt that the "crucial point" to control was the separation plant which was the "nerve centre" of the whole process. Another amendment proposed by India was intended to eliminate the Agency's right to requisition bomb-grade "special fissionable materials" produced in reactors built with the Agency's help. The amendment would give the Agency the right only to be informed of the disposition of such by-product material and to require accountability for it "to the extent necessary to insure that it is used only for peaceful purposes." Yet another amendment was designed to deprive the inspectors from the Agency of the right to check up on natural uranium received from the Agency. Finally, Dr. Bhabha denied that India's amendments would leave the statute without sufficient safeguards against military uses.

It will be seen that the whole object of India's amendments is to ensure that, while safeguards against improper use of atomic power continue to form part of the statute, they are not made so rigid as to restrict the scope of the underdeveloped countries for developing and using nuclear energy. The attitude of Western powers, especially the three leading atomic powers, namely, the U.S., the U.K. and the U.S.S.R., is somewhat different. Both the U.S. and the U.K. feel that safeguards, somewhat more rigid than what India advocates, should form part of the statute. So far as the U.S.S.R. is concerned, it has announced that it will give direct bilateral assistance to any country which wants its help in atomic development. It is not clear whether Russia has made this generous offer of assistance in order only to wean underdeveloped countries away from the International Atomic Agency.

Big Powers

It is, however, noteworthy that Russia has not so far given atomic assistance to any country outside the communist bloc; nor has it made available any fissionable material to international agency as Britain and the U.S. have done. Presumably, all the great atomic powers are, in various degrees, afraid that, in the absence of rigid safeguards, other countries might soon join their ranks as producers of atom bombs and other atomic weapons, thereby causing further complications in the balance of power of the world. A notable development, in this connection, is that Russia has agreed in a general way to a U.S. proposal for "standardising safeguards" against the secret diversion of atomic material to military purposes by small nations which get atomic aid from the big Powers. This shows how keen all these powers are to merge their political differences when it comes to a question of safeguards against the so-called misuse of atomic energy by the smaller countries, while they are very zealous of their freedom for such a purpose.

ELECTRONIC TYPEWRITER

For the first time in history, electronics has been introduced to the typewriter. The result is that this oldest office machine has learned to "read" while it writes. The "reading" typewriter was unveiled recently by the Electric Typewriter Division of International Business Machines Corporation in New York, when it announced the new I.B.M. Electric Typewriter with electronic tabulation. In Europe, the I.B.M. Electric Typewriter is manufactured in Sweden, Britain, France, Germany, Switzerland, Holland, Belgium and Italy, which all take part in the highly successful typewriter-part-interchange programme, a plan under which each country manufactures a certain part of the electric typewriter and then interchanges it with parts manufactured in the seven others.

The new typewriter feature specialises in the "reading" of prepared business forms which contain blank fill-in areas for the entry of date, order number, address, terms, and similar data. Modern business firms use scores, even thousands, of different varieties of such forms every day. And each time a typist rolls a different form into her typewriter she has to go through the process of manually resetting the tabulating stops. The electronic "reading" feature of the new I.B.M. typewriter eliminates these time-consuming tabulating adjustments.

In this new device, vertical lines printed on the business form with electrically conductive ink, make the form sensitive to electrical impulses. These conductive lines, in effect, programme the typewriter. When the tab key on the keyboard is depressed, a tiny sensing unit close to the paper "reads" the form and automatically brings the typewriter carriage to the correct typing point. The electronic tabulation typewriter may be used for any normal typing application. Instruction for only a few minutes is necessary to operate the machine. The "reading" unit is made operative by depressing the "electronic tab" lever on the front of the machine. The electronic unit is mounted beneath the keyboard and is confined to a small metal container within the case, approximately three by six inches in size.

OIL RESERVES

The "proved and probable" reserves in the Nahorkatiya area, according to Mr. W. B. Metre, Senior Geologist of the Assam Oil Company, Ltd., are sufficient to plan a production target of two and a half million tons of oil per year together with about 45 million cubic feet of gas per day, equivalent to about 0.6 million tons of fuel oil per annum, a large part of which could be utilised for industrialisation of Assam. This was indicated by Mr. Metre in his presidential address at the annual meeting of the Geological, Mining and Metallurgical Society of India held recently at Calcutta. Mr. Metre continued: "The declining Digboi production is likely to average 0.3 million tons per year during the next few years. On present evidence, therefore, we can expect to meet 56 per cent. of the present estimated crude requirements in the country. This will be a very great improvement on the present production of about 8 per cent. of the total consumption." These estimates do not include the proved but unestimated pools of part of the Hugrijan area near Naoholia, where oil has been found and the Moran area which is expected to be oil bearing.

Referring to the other areas in the Assam valley, Mr. Metre thought that several of them may be promising, but pointed out that it is only by drilling in them that we can expect to ascertain whether oil is present or not. Similar considerations apply to the several large alluvial areas in the country, specially part of West Bengal, the extensive Ganges valley and the alluvial tracts of Rajasthan, Saurashtra, etc., and also the exposed areas where the Oil and Natural Gas Commission have carried out very systematic geological and geophysical surveys and are due to undertake drilling operations. Though Mr. Metre sincerely hoped that these efforts to find more oil in the country would meet with early success, he warned his audience not to be impatient and pointed out that oil exploration needs considerable patience and an overdose of optimism besides much experience and great technical skill.

THUNGABHADRA HIGH LEVEL CANAL

With the inauguration of work on the Thungabhadra high level canal scheme on 2nd October last, by Mr. C. M. Trivedi, Governor of Andhra, an important step has been taken towards the goal of agricultural prosperity of the States of Andhra and Mysore. The canal which is estimated to cost Rs. 20 crores is expected to irrigate about four lakh acres and augment production of foodgrains by two lakh tons. Although the benefits that would accrue from the construction of the canal had been recognised quite early, the actual commencement of work was delayed by the inability of the State Governments concerned to arrive at an agreed formula for the allocation of water resources. However, the spirit of accommodation and the desire for mutual settlement which prevailed at the recent inter-State meeting held at Bangalore in June 1956 enabled the representatives to arrive at an agreement.

The idea of the Thungabhadra reservoir was first mooted by Sir Alfred Cotton, but the first concrete suggestion of a reservoir at Mallapuram came from Col. Smart, then Chief Engineer of Madras, in the early nineties of the last century. The Irrigation Commission realised the value of such a scheme and it was the most important scheme recommended by it for alleviating the recurring famines in the ceded districts. An agreement for sharing the waters was reached between Madras and Hyderabad States only in 1940-42 and it was decided to investigate the high level canal along with the now ready low level canal. With the inauguration of the work, the excavation of the high level canal has now started and it is designed to carry 4,000 cusecs and irrigate about 4 lakh acres, one lakh acres in Mysore and 3 lakh acres in Andhra.

NEW PRODUCTS AND PROCESSES

Combining Aluminium Tube and Sheet

A PROCESS for combining an aluminium tube and a sheet so as to provide a large surface area for heat transfer, in which the tube which carries the liquid from which the heat is to be removed is formed as an integral part of an aluminium panel while rolling, has been developed by the Metals Division of Imperial Chemical Industries. One advantage of the process is the fact that it eliminates the need for localised welding, or brazing and thus ensures that the heat transfer conditions are consistently good. At the same time the finish and appearance of the finished product are also improved. Any arrangement which can be drawn on paper can, it is claimed, be produced in the final aluminium sheet by means of the process and, it is claimed, multiple paths and tube junctions are no more difficult to produce than straight tubes. The roll-welded sheet is made from two separate sheets of "Kynal" P.10 aluminium each of which is thicker than the final sheet. In the first stage of the process the pattern of the required tubeways, drawn so that they are compressed in one direction to allow for subsequent elongation, is silk-screened on one sheet of the aluminium, using a special "stop-weld" ink. A second sheet is then placed against the printed one so that the printed surface is sandwiched between the two sheets, which are then cold rolled together. The very high contact pressure produced during this operation welds the two sheets together at all points where they are in contact, except those where the "stop-weld" is present. The sheets are then annealed to ensure that recrystallisation of the metal structure occurs and that a full-strength weld is achieved. During the annealing process the "stop-weld" ink vaporises and escapes from the unwelded portions between the sheets where the passageway reaches the sheet edge. The passageways to carry the heat transfer liquid are then formed by an inflation process carried out at very high pressures, the sheet being placed between the flat platens of a hydraulic press during the operation. This ensures that tubes of accurate and uniform height are produced and that the walls are work hardened.

A New Method for Protecting Metals

A series of glass dispersions which can be used to protect metals such as steel and titanium during hot working have been developed by Acheson Colloids, London. Research work on the dispersions, which consist of glass in a fine form dispersed in chemical and resin solvents such as silicones, mineral oils and ethyl and isopropyl alcohols, was originally undertaken with a view to finding a method for protecting titanium alloys from oxidation and hydrogen embrittlement. One of these dispersions, called dag 1205B, which consists of semi-colloidal glass in isopropanol, is said to give protection to a number of titanium alloys while they are being worked when it is applied to the metal by dip, brush, or spray after the metal has been thoroughly degreased in vapour degreasing equipment. In this particular case the glass itself may not always be sufficient as a lubricant, owing to its freezing and its tendency to stick in the dies and, as a result a dry graphite coating should also be applied to the disc. In most cases, however, the glass in the dispersions acts as a satisfactory lubricant. The coatings should either be allowed to dry thoroughly in air after application, or alternatively they should be baked. A wide variety of resins can be used in the preparation of these glass dispersions, and they can be made with various sizes of glass particles. The coatings are now becoming available commercially and have been successfully used in the manufacture of Nimonic and titanium turbine compressor blades.

Atomic Inks

Drawing inks containing radioactive isotopes are among the latest peaceful products of atomic energy. These atomic inks, which may revolutionise the art of lithography, transmit radiations which are strong enough to expose photographic print paper placed over drawings made with the inks. When this is done, the resulting print is a perfect image of the original drawing, and has an accuracy of detail that is almost impossible to obtain in conventional lithographic work. Furthermore, thousands of copies can be made from the original drawings with no loss of detail. The atomic inks have been developed and tested by Dr. Harry Wheeler, of Louisiana State University in the United States. He believes that the inks will do for art reproduction processes what high-fidelity has done for music reproduction, namely, broaden the range of textures and shades in reproduction of art works.

Safety Lights

A device to assist motorists driving behind large road transport vehicles was recently shown in Melbourne to officers of the Victorian Country Roads Board and the Transport Regulations Board. A driver wishing to overtake a large vehicle gives a warning blast on his horn; this is picked up by a microphone installed at the rear of the preceding vehicle. A buzzer sounds, and a red light flashes in the driving cabin of the vehicle in front. The driver notes whether it is safe for the overtaking car to pass; if it is unsafe, he pushes a handle towards a red light. A sign mounted at the rear of the transport then flashes in red: "Don't pass." When the road is clear, the transport driver moves the handle towards an amber lamp, and the rear sign flashes "Pass now" in amber.

Trouble Warning for Aircraft

A safety device for aircraft which functions through the connection of wires to all likely trouble spots in the engine and fuselage was demonstrated recently in Perth, Western Australia. When a failure occurs, an electric current discolours a plastic-covered heater cartridge and a warning light flashes in the pilot's cabin. There are several heater cartridges connected in a circle. If a second breakdown occurs, another cartridge is discoloured, but not as deeply as the first. The inventor of the apparatus is Mr. R. H. Orgill, an electrical engineer of Perth. Although the cost of installing it on existing aircraft would be high, a considerable reduction in expenses would be effected by installation during manufacture.

Welding Machine

An electric welding machine which ensures airtightness in wheels for tubeless tyres has been installed at the plant of Rubery Owen and Kemsley Ltd., Finsbury, South Australia. Designed and made in Australia, the machine welds, instead of rivets, the centre to the rim of a car wheel. Four welds, in place of the usual 12 rivets, are sufficient to enable a wheel to pass the normal fatigue-lift test. But the company plans to put welds on each wheel. The machine is fitted with electronic devices to control the welding and its rate of operation. It can handle 300 wheels an hour. The company also proposes to use the machine for the wheels of tyres with tubes.

Typewriter That Takes Dictation

The business man of the future may dictate his letters directly to a phonetic typewriter or speech writer that will type out his words in conventional business letters. A model of such a voice-operated typewriter was described at a recent meeting of the Acoustical Society of America held at Cambridge, Massachusetts. The model, which has already been constructed by the Radio Corporation of America, has a limited vocabulary of common English words. It types from dictation with 80 per cent. accuracy which, as an R.C.A. official said, is "probably as good as the average secretary."

Safety Tyre

The Goodyear Tyre and Rubber Company in the United States has perfected a new type of nylon cord tyre which, it says, can be driven about 250 miles after a puncture or blowout bad enough to slash the outer casing. The tyre has two casings —inner and outer—each with an independent air supply. If the outer casing is punctured, the inner casing will keep the tyre inflated. Goodyear hopes that its "captive-air" tyre will replace the tubeless tyres now used, which turn punctures into slow leaks and allow a safe but quick stop.

Transistors to Replace Radio Valves

The radio show held recently, in London, was the first in the series of 23 to date at which transistors have replaced valves in some portable and car radios, record reproducers, and radiograms. There is little doubt that an enormous expansion in the use of transistors is imminent in the radio and television industry, as well as their increasing application to industrial equipment such as computers, telephone exchanges, and machinery control systems. Intensive research has marked the period since invention of the transistor was first announced in 1948. For certain purposes it already has numerous advantages over the glass-enclosed valve which has held the field for so long. But some of the complicated functions, for instance, performed by valves in a television receiver cannot yet be undertaken satisfactorily by transistors.

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

DR. N. N. LAW'S PLEA FOR RETAINING SYSTEM OF PRINCIPAL AGENTS

SPEAKING at the Annual General Meeting of the Hindusthan General Insurance Society Ltd., held at Calcutta, on Saturday the 29th September 1956, Dr. N. N. Law, M.A., Ph.D., Chairman, reviewed the trend of the progress made by the Society in the year 1955. After detailing for the shareholders the salient features of the progress, Dr. Law went on to make a few observations on some of the important issues affecting trading in general insurance.

"One of the disturbing factors," said Dr. N. N. Law, "affecting the outlook of the general insurance business is the undercurrent of a feeling of uncertainty created by the nationalisation of life insurance, which remains to be effectively removed."

Proceeding, Dr. Law said: "From the many statements on the floors of Parliament and elsewhere it is clear that general insurance is attracting the attention of those who have an implicit faith in the superior excellence of nationalisation, although it has yet to be demonstrated in the field of life insurance itself. General insurance is thus put in an awkward position in which it finds it difficult to look ahead with full confidence, so essential for the healthy expansion and progress of the business. Nevertheless, it is felt that should general insurers in the country adopt the correct moral and progressive attitude towards the business, the trade may look forward to the Government to act according to their avowed policy and to leave this business entirely to private enterprise.

"As I say this, I cannot help referring, with a feeling of regret, to the recent directive of the Ministry of Finance that all the available business of the life companies so long enjoyed by the general insurers in the country should be channelled to a few companies of which the Government has assumed control, following nationalisation of life assurance, which, in effect, has limited the scope to the insurers in the private sector. The future of the Indian Insurance Companies' Association Pool, which for some years in the past have been a source of strength to Indian insurers in the country, is reported to be uncertain, as it is, apparently, the intention of the Government of India to transfer the business to the few controlled companies. Evidently, such a measure could not but come as a severe undeserved shock to private insurers in general business.

Principal Agents

"In my address, last year, I referred to the issue of principal agency, which, according to the terms of the Insurance Act as amended in 1950, is scheduled to go out of existence from the 1st of September 1957. As I then pointed out, principal agents in general insurance have always played a constructive role. With a very small margin of remuneration they have endeavoured to service the clients and have also stimulated the flow of general insurance to companies. By virtue of their standing, principal agents have a sobering effect in trading of general insurance which cannot be expected of ordinary agents, and since the expenses for maintenance of principal agents are nominal in character, I do not quite see what useful purpose will be served by their abolition altogether.

"It is felt that the insurance bodies should immediately take up the matter and urge upon the authorities the necessity of allowing continuance of principal agents. In India, broker firms like those in the U.K. do not exist, and principal agents in some ways serve to fill up the gap, offering a definite service and benefit to general insurance companies. As I have pointed out, the Government has already imposed serious hurdles and brakes upon general insurers after nationalisation of life insurance. In fairness to the general insurers, I cannot too strongly urge that whatever facilities are still available within the attenuated scope should not be denied to them and the statutory inhibition against principal agents beyond September, 1957 should be withdrawn by an early amendment of the Act. This points to a period of continuous struggle and special efforts ahead for which your company is called upon to muster all its strength.

Reinsurance Corporation

"A welcome feature of general insurance in the current year, however, is the inauguration of a reinsurance corporation, following an evaluation by the Government of India of 'gains and drains,' meaning inflow and outflow of foreign exchange. The survey had shown that there is considerable import of insurance into India to which a reinsurance corporation established within the country could be a corrective. With the support which is assured to the corporation from the general insurers in the country, there can be no doubt that the corporation will prove itself to be an eminently successful institution in the attainment of its objectives, its underwriting business yielding a fair return to the shareholders.

Managing Director

"Gentlemen, before I conclude, I am very pleased to inform you that with necessary Government sanction Mr. P. N. Talukdar, M.A. (Cantab), Special Director, has been appointed as Managing Director of the Society. I have no doubt that with his initiative, business acumen and organising abilities already shown by him from the very inception of the Society, Mr. Talukdar will, in his new role as Managing Director, be a great strength to the Society in the attainment of still greater success in future. With the various problems and difficulties which now beset general insurance, your Directors felt that it was in the interest of the Society to avail of the services of Mr. Talukdar as Managing Director of the company at this stage and it is a matter of satisfaction that the Government of India has also been pleased to give their consent to this appointment."

HIGHER PRODUCTIVITY IN INDIA

I.L.O. TEAM'S IMPRESSIVE EFFORT

A GREAT deal of attention has deservedly been devoted in all industrialised countries to the problem of productivity in manufacturing establishments. In post-war years, there has been a tremendous upsurge in the demand for industrial goods. This is not confined only to the industrially advanced countries. The demand from underdeveloped countries, too, has been increasing. Again, any rise in living standards in the underdeveloped countries will further stimulate a large increase in the demand for goods and services which, in turn, will call for a greater productive effort than is now being put forth. Clearly, it is of the utmost importance that productivity in industry as well as agriculture should be improved rapidly enough to meet the growing world-wide demand for farm commodities and industrial goods.

To many underdeveloped countries, which are now slowly industrialising their economy, the movement for increased productivity ought to have a special appeal; for they have to make up the leeway of decades of economic neglect before they can even catch up with the present levels of production in the industrially advanced countries. Unfortunately, productivity is a concept which has certain unpleasant associations for labour, for many persons still believe that an increase in productivity means only the use of labour-saving equipment or prescription of larger work-loads for workers. Presumably, this misconception arises from the fact that productivity is often expressed as "so much quantity of goods turned out per worker." Although this definition is often a convenient index for measuring productivity, it must be clearly understood that it serves to oversimplify the problem of productivity in industries. After all, a low level of productivity need not necessarily be a reflection on the efficiency of labour, for productivity is determined as much by capital investment, physical equipment, choice of raw materials and management as by labour. The techniques for improvement of productivity depend on the improved utilisation of not only manpower resources but also equipment resources and raw materials.

In India, the I.L.O. productivity team which visited this country in December 1952 showed how productivity could be improved without any adverse effect on employment. We reviewed in one of our recent issues (*vide Commerce* dated 1st September 1956) the work of the team which split itself into two groups, one working in the textile mills in Bombay and Ahmedabad and the other in certain units of engineering industry in Calcutta. Some more light on the work of the team has been thrown by Mr. V. K. R. Menon, Director, International Labour Office, India Branch, New Delhi, in the course of an article in the Independence Number of the *Indian Labour Gazette*. The following table gives a few typical examples of increases in productivity obtained by the team in the engineering industries:

Job	No. of men employed in new method	Procedure	Increase in productivity (Per cent.)
Assembly of fan parts.	6	Layout study to achieve flow production.	17
Metal chipping ..	30	Quality study	*

As regards the team's work in textile mills, it was found that significant increases in productivity were achieved through reorganisation of work, quality control and other means. The increases in productivity in respect of different textile processes were:

Stentering: 12.5 per cent.; calendering: Mill A 36 per cent.; Mill B 33 per cent.; winding: Mill B 20.7 per cent.; Mill C 14 per cent.; carding 10 to 17 per cent. (according to counts); drawing: Mill A 20 per cent.; Mill B 13 per cent.; Mill C 6 per cent.

Further, the team stressed that the adoption of the productivity techniques which it advocated could result in substantial reduction in production costs. Thus, it indicated that the cost of production of straining screws could be reduced from Rs. 3.85 per screw to Rs. 1.91 per screw, of amplifier fuses from Rs. 233 per thousand to Rs. 48 per thousand and of clamp per PGT from Rs. 297 per hundred to Rs. 137 per hundred. Again, in a transport workshop in Poona, this team showed that, as a result of improved layout, material handling and certain other methods, the floor area in the machine shop could be reduced from 33,600 sq. feet to 23,600 sq. feet and output raised from two to four bus bodies per day. This meant a saving of Rs. 200,000 which would have been required to provide more working space. Again, by effecting a change-over from bolt and nut construction to riveted assembling in the manufacture of car body components, the savings in material costs were of the order of Rs. 12,800 per 100 sets. Finally, it stated that considerable savings could be effected through the reorganisation and simplification of the stores system. Thus, a simplified store system, it said, could enable the management to reduce stocks of parts by about 30 per cent. which, in its turn, would mean a saving of Rs. 1 crore in the funds required for financing stocks.

Commenting on the work of the I.L.O. productivity team, Mr. Menon says that it would appear to have proved the following results:

"(1) Work study techniques can be applied in India with marked success in raising output; (2) work study techniques, properly applied, can improve industrial relations, although this result is dependent on a human and sympathetic approach by work study men and supervisors; training in work study must therefore emphasise the need for such an approach; (3) substantial increases in productivity can be achieved without capital investment; (4) improvement of working conditions is a highly important factor in raising productivity and can often, by itself, lead to large increases; (5) work study can benefit workers by improving working conditions, reducing physical effort and leading to increased output and higher wages."

It is to be hoped that both managements and labour leaders will become more alive than hitherto to the importance of raising productivity in industrial establishments. A rapid increase in the present rate of economic development could be achieved through campaigns to raise productivity. It is particularly necessary to do so, because in a country like India, where capital resources are in short supply, all efforts should be directed towards deriving maximum benefit for available equipment and resources.

UNEMPLOYMENT INSURANCE IN W. GERMANY

In future, every West German working man or woman will be automatically insured against unemployment, irrespective of the salary or wage earned. The Bill, which deals with the complete reform of unemployment insurance in West Germany, is the most voluminous ever to be submitted in this legislative period. The reform includes higher unemployment payments and lower contributions to the unemployment fund. In this connection, it may be noted that unemployment insurance was first established in Germany in 1927. Considerable changes in the employment structure have taken place since then. The world depression in 1929 made unemployment in Germany go up to a disastrous level. After many ups and downs, the curve has now reached practically full employment. In the years before and during the war, very strict regulations were enforced on the choice and place of employment. On the other hand, a shorter working time was introduced along with mechanisation and automation. All these new developments led to a host of new regulations which certainly did not help to clarify the situation. Things got terribly complicated after the war when the Americans, British and French started to deal with unemployment problems in their own way. Before the advent of the Federal Republic in 1949, all 11 West German Länder adopted the laws of the Allies. Unemployment regulations in West Germany varied considerably as a result.

Although a labour exchange and unemployment insurance bureau has been in existence since the spring of 1952, questions on unemployment and public assistance payments had to be treated according to the regulations in force in the land concerned. When drafting the proposed unemployment Bill, the Bundestag saw a chance to eliminate not only dozens of laws and regulations but also to introduce a complete reform of unemployment insurance. While insurance used to be compulsory for workers with a gross income of less than 500 marks, this limit has now been raised to 750 marks. Persons earning more than 750 marks a month need not be insured. Persons with a gross income of just under 750 marks pay the highest contributions but also receive the highest pay in case of unemployment. Persons eligible for unemployment assistance have been divided into two classes. There will be no change in this case. Unemployment insurance payments are fully covered by the contributions of the insured persons. The unemployed person is legally entitled to payments from the insurance fund, no matter whether he can prove his need or not. Until now an insured person had to work for five years to be entitled to the longest period of unemployment pay of 52 weeks. The time of uninterrupted work necessary for 52-week payments will be reduced to three years.

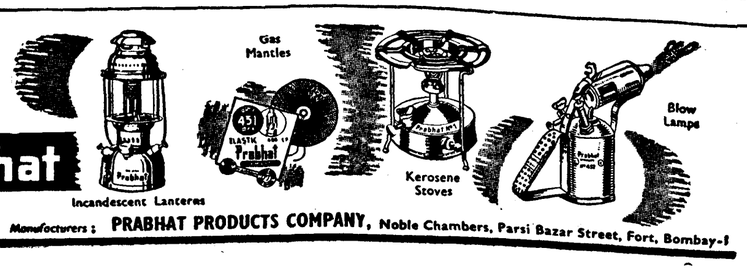
After the insured person has received unemployment pay for the maximum period of 52 weeks, he is turned over to public assistance. Public assistance is only given in case of need. The sums given by public assistance are, of course, smaller than insurance payments. The new Bill proposes to increase insurance as well as public assistance payments, especially for persons having families to support, and to push up the wage limit from 119 DM. to presently 175 DM. per week. Thus, an unemployed father of two children earning 175 DM. per week will be entitled to 63 per cent. of his former net income, while the same man would get 84 per cent. of his former net income if he made only 60 DM. per week. Contributions to the unemployment fund will be lowered from 3 to 2 per cent. of gross income. This reduction does not apply to persons employed in the building trade, as this section of the economy shows the highest unemployment figures in winter, a fact which is due to the nature of the trade.

The additional yearly sums to be paid out are estimated to be 40 million DM. per 100,000 unemployed. As the overall number of unemployed persons in the year 1956 is expected to be 490,000 the additional burden on the insurance will be almost 200 million DM. On the other hand, as contributions have gone down considerably, the insurance will have to face a deficit of roughly 300 million DM. at the end of the year. This deficit, however, could be carried for many years to come. As unemployment in West Germany has diminished considerably, the insurance fund has accumulated nearly 3 billion DM. in the course of the last few years; interest alone is more than 90 million DM. per annum. The additional burden on public assistance is expected to be 12 million DM. per year per 100,000 unemployed entitled to payments from the Assistance Board. No more money will have to be paid for the current year as the number of unemployed has gone down so much that the sums reserved for public assistance in the budget will not be completely used.

MINIMUM WAGES

The fixation of hours of work and rest intervals for agricultural labour covered by the Minimum Wages Act, 1948, was recommended by the Central Minimum Wages Board which met at New Delhi last month. The Board, it may be recalled, was set up in 1950 under Section 8 of the Act. It advises the Union and State Governments in matters relating to fixation and revision of minimum wages and co-ordinates the work of Advisory Boards in the States.

The Board, at its last meeting, suggested that registers of employment of agricultural labour should be maintained only by persons with holdings of 10 acres of land. It recommended that the Central Government should add to the schedule under the Act the employment in mines and quarries, casual employment and employment in coal handling in railways (both departmental and contract) and employment in ports and docks (other than that already covered). It agreed that there was need for amending the Minimum Wages Act, so as to invalidate agreements or contract, whereby employees could relinquish or reduce their rights and privileges or concessions accruing to them under the Act.



RAMTIRTH BRAHMI HAIR OIL

Hair and brain tonic

Ensures growth of healthy hair. Removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to everyone in all seasons. Rs. 3/8 for big bottle and Rs. 2/- for small bottle.

TASKS AHEAD OF INTERNATIONAL FINANCE CORPORATION

MR. ROBERT L. GARNER STRESSES ROLE OF COMPETITIVE PRIVATE ENTERPRISE

[*The newly started International Finance Corporation, in the two months of its existence, has already received numerous applications and enquiries. This shows how genuine has been the need for the kind of services which the Corporation is expected to render. We have reasons to feel that, in this country, the knowledge about the Corporation and its functions is still not as widespread as it should be. Consequently, we publish on this page a detailed extract from the address of Mr. Robert L. Garner, President of the Corporation, at the inaugural meeting of the Board of Governors, held at Washington, last month, and we have no doubt that it will be read with interest. Mr. Garner's address is notable not only for the light it throws on the Corporation's functions but for the clear exposition of some of the basic economic problems of underdeveloped countries, in general, and of the role of competitive private enterprise, in particular.*—ED.]

LAST year, in Istanbul, I outlined the plans for an International Finance Corporation. This year, I can report the reality—the I.F.C. exists. Next year, I trust that I may be able to record some actual accomplishments. Today, we are in being with 32 members and are advised that a number of other countries expect to join in the coming months. Our presently paid-in capital of over $77 million has been temporarily invested to give an income more than sufficient to cover our expenses.

In the two months of the I.F.C.'s existence we have received numerous applications and enquiries, but naturally we have not yet made any investments, nor have we even reached in any case the stage of serious negotiation. Inevitably the numerous applications and enquiries include many which are unsuitable. Some have been entirely outside the I.F.C.'s field, such as export financing or investment in public utilities or Government enterprises or social schemes. Some are of a type which the I.F.C. may be prepared to consider at a later stage. Others are related to predominantly industrial enterprises, the field in which the I.F.C. proposes to concentrate its investments in its early years; and while in this category many are unsuitable or too small, a reasonable number deserve serious consideration.

Interest Shown

We have been gratified and encouraged by the interest which responsible industrial firms and financial investors have shown in the functions of the I.F.C. Among the companies which have had discussions with us, either in general terms or with a view to some specific proposition, are some of the best and most experienced firms in the world, which are contemplating new industrial ventures overseas in the less developed areas and desire financial partners when their plans have matured. We have had, too, some promising enquiries which have come to us directly from companies in the less developed countries. The business already before us convinces me that the high hopes which the Bank has long had for the Corporation will not be disappointed.

Certainly, I give full measure to the importance in human affairs of the role of Governments and of their necessary functions in economic development. Many things only public authorities can do. Nevertheless, I believe deeply that the most dynamic force in producing a better life for people, and a more worthy life, comes from the initiative of the individual—the opportunity to create, to produce, to achieve for himself and his family—each to the best of his individual talents. And this is the essence of the system of competitive private enterprise—twentieth century model—as it has been developed by the most enlightened and successful business concerns. It holds the promise of rewards according to what the individual accomplishes. It is based on the concept that it will benefit most its owners and managers if it best satisfies its customers; if it promotes the legitimate interests of its employees; if in all regards it acts as a good citizen of the community.

Profit Motive

It is moved by the desire to earn a profit—a most respectable and important motive, so long as profit comes from providing useful and desirable goods and services. It is my belief that the best services and the best profits result from a competitive system wherein skill and efficiency get their just reward.

As I have said, it is my conviction that private enterprise can play an indispensable role in economic development. And let me define "economic development," as meaning the more effective utilisation of physical and human resources to the end that more people get more of the good things of life. I do not include in this definition any mere physical expansion which ignores the legitimate freedom, rights and desires of the people concerned. Economic development, in the sense in which I speak, is not measured solely in kilowatts or steel production, but in terms of human values.

Too often we hear that lack of capital is the principal obstacle to economic development. The experience which I and my associates in the Bank have had with this problem over the past years disproves this. We have found that the human factor—whether in Government or in private enterprise—is a more important ingredient than is money. In private industry, in particular, the intelligence, vigour and vision of management are often worth more than the most modern of buildings and machines. The very pace of current technological development of communication and transport, of marketing and advertising, calls for management both broader and deeper in its operations than ever before. Although there is widespread recognition in the less developed countries of the need for specific skills in industry—for the engineer the chemist, the mechanic—what is less recognised is the even greater need for executive experience, for the men who can make sound policies, guide the enterprise as a whole and direct the specialists. There must be the "know what" as well as the "know how."

Management

And so in the International Finance Corporation our first question will be whether the private partners with whom we are asked to associate can supply or obtain management of character and competence. Just as we shall put primary emphasis on the character and experience of those with whom we associate, we shall strive to establish that we likewise are "good partners." This can result only if we exhibit the business viewpoint, exercise sound judgments and, while aiming at a reasonable profit from our investments, refrain from making excessive demands as against the contributions and risks of our partners. We shall try to be neither naive nor greedy.

There will be voices raised, I am sure, to urge that, since the Corporation has obtained its capital from Governments, it should make its investments on easy terms which will impose the least possible financial burden on the enterprises it finances. Those who so argue misconceive our objective. Our primary interest is not simply to help along some selected private projects by making $80 or $90 million available to them. Our purpose is much wider. It is to demonstrate that private investment in the less developed areas, prudently made and properly managed, can be both profitable and useful—and by that demonstration to encourage an affirmative attitude on the part of private investors throughout the world. But to succeed in that objective, we must earn returns commensurate with the risks we undertake.

Fair Return

There are other reasons, too, for this approach. The very fact that we assume risks implies that some of the ventures in which we participate may fare badly. Only by contracting in each case for appropriate profits in the event that the enterprise is successful can we assure a fair overall return, despite possible losses on the less fortunate ventures. And finally, and perhaps most important of all, it is fundamental to the I.F.C. concept that we should constantly seek to revolve our capital by selling securities from our portfolio to private investors. To do this requires that we make investments, not on "easy" terms, but on terms approximating as closely as possible those which the market place finds attractive.

It is with these considerations in mind that we have been formulating our proposed investment pattern. Our charter provides that we make our investments in the form of obligations, but as investors we shall regard ourselves as providing forms of venture capital. Thus, while our investments will usually provide for some minimum fixed interest, we will expect some additional return depending upon profits—if any—and some rights to share in ownership which we can sell to private investors. These rights may be expressed as rights of conversion of all or part of the obligation into capital stock, or rights to purchase stock at a stipulated price; in either case, the I.F.C., although it cannot itself exercise the rights, will seek to sell them to private purchasers and thus to realise appropriate gains. I am aware that investments carrying such rights of participation in profits and of conversion into equity may be novel to some of our associates and unfamiliar in some of the countries in which we expect to operate. But these techniques are used in financing in the industrialised countries and I believe they will prove appropriate for our purpose.

Investments

Our thinking has been crystallising on a number of other points, too, about which I would like to say a few words. First, as to the location of our investments. For the present, we intend to concentrate entirely on those areas where industry is less advanced—where both imported funds and experience can make a significant contribution. The more highly industrialised countries will, we hope, provide many of the partners with whom we will join, although certainly in some cases we expect to invest in local companies with no foreign participation. In this connection, I have been glad to find that, with few exceptions, the majority of companies in the industrialised countries seem to recognise the desirability of seeking local partners when they venture abroad. The exceptions mainly arise from the belief that local investors may press for most of the earnings to be paid out in dividends rather than being retained to build up the business. In general, however, the desirability of seeking local partners seems to be recognised. I think this is a sensible approach and, while we do not propose that the I.F.C. should insist on it as a condition of making an investment, I believe we should regard the participation of local investors as an important favourable factor.

Second, as to the kinds of investments we expect to make. Our decision to concentrate on industrial enterprises for the first few years of the Corporation's life is based on the belief that, in general, the field of industry is the one in which we can most effectively promote development. After a time we may find it practical to branch out into the fields of finance, commerce and agriculture.

We require a reasonable minimum both for the size of the enterprise and for the amount of our own investment in it, for a number of practical reasons. For one thing, there is a limit to the number of propositions it is feasible for our staff to investigate all over the world. For another, an enterprise must be of a certain size before it can easily compete for competent management. And finally, the I.F.C. would find it difficult to follow the progress of its investments, and to interest private investors in their purchase, if it scattered its funds among a myriad of small propositions. On the other hand, we must have a reasonable upper limit to the size of our investment in any single enterprise. To concentrate our resources on financing a few large projects would not, I am sure, be the best way to carry out our mandate of stimulating private investment on a broad front.

Size of Capital

I am aware of some question as to whether the size of our initial capital is large enough to do the job. However, our capital will not march alone, but always in company with larger amounts from private sources, so that the enterprises in which we participate will represent much more than our own funds. For some time in the future we expect to be more concerned with using our available capital effectively than with lack of resources.

Like a new ship, the Corporation is beginning its trial run. It will take some time to test our policies to have our staff gain the experience of working together, to build up reserves against unforeseen contingencies and to establish the confidence of business men and investors in our judgment and in our desirability as a partner. I trust that our members and all other well-wishers will have reasonable patience while we chart our course in the initial period. I am confident that a prudent beginning will promote our long-term progress.

It appears to me that the launching of the Corporation has been timely. The world is in one of its periods of vigorous economic growth.

INDUSTRIAL FINANCE CORPORATION OF INDIA

SPEECH OF CHAIRMAN, MR. K.R.K. MENON, AT ANNUAL MEETING

PROGRESS MADE IN 1955-56 IMPRESSIVE—OUTLOOK CONSIDERED PROMISING

AN optimistic view of the outlook for the Industrial Finance Corporation of India was taken by its Chairman, Mr. K. R. K. Menon, when he addressed the Eighth Annual General Meeting of the shareholders of the Corporation held at New Delhi on Saturday, 29th September 1956. He explained at some length the various steps taken by the management to improve the utility of the Corporation to the private sector.

The following is the full text of Mr. Menon's address:

"GENTLEMEN,

"I have pleasure in placing before you the accounts of the Corporation and the report of the Board of Directors for the year ended the 30th June 1956. Printed copies of the accounts and the report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read. I would, however, make some observations on a few points.

Dividend

"The working of the Corporation for the year ended the 30th June 1956 has resulted in a profit of Rs. 32.68 lakhs which shows an increase of Rs. 8 lakhs over that of the previous year, After setting aside a sum of Rs. 10.18 lakhs as provision for taxation, we are left with a net profit of Rs. 22.50 lakhs. The whole of this amount, however, has had to be transferred to the reserve for bad and doubtful debts, in view of the anticipated loss in the account of the Sodepore Glass Works Ltd., to which I made a reference in my speech last year. We have, therefore, had to call upon the Central Government this year also to pay us a subvention to enable us to pay the entire guaranteed dividend amounting to Rs. 11,25,000. We hope that, with the further provision that we shall make from the current year's profit towards bad and doubtful debts, there will be no need to set apart any amount in the succeeding years on this account. As we shall make a substantial saving in our tax liability on our current year's income, depending on the size of the amount that we are obliged to write off in the account of the Sodepore Glass Works Ltd., we anticipate that we will have sufficient balance left out of our profits this year to meet the guaranteed dividend to our shareholders without having recourse to a subvention from Government. You will observe that I take quite an optimistic view of the future. I do so, relying particularly on two major factors, namely, *first*, the increasing measure of appreciation on the part of the industrialists of the country, and also of co-operative societies engaged in industrial enterprises, of the ability of the Corporation to meet their needs in the matter of long-term loans, and, *second*, the marked increase in the volume of industrial investment that is likely to materialise during the period covered by the second Five-year Plan.

Record Loans

"Evidence of the first named factor will be found in the figures relating to our activities furnished to you in the annual report which is in your hands. It will be noticed that the amount of loans applied for in the year which has closed reached the record figure of Rs. 27 crores 70 lakhs, as compared with Rs. 11 crores 27 lakhs for 1954-55 and Rs. 9 crores for 1953-54. The average for all the previous seven years put together is Rs. 8 crores 62 lakhs. I venture to think that this is a fair indication of the increasing amount of confidence that the industrial public is now placing in our institution. To deal effectively with this enormous increase in the demands made on us, and at such short notice, has been no easy task, and the measure of the modest success we have achieved in this direction is indicated by the fact that the total amount of loans sanctioned by us during the year under review was Rs. 15 crores 13 lakhs, as against Rs. 7 crores 34 lakhs in 1954-55 and Rs. 5 crores 27 lakhs in 1953-54. The yearly average for all the previous seven years put together was only a little over Rs. 4 crores. I see no reason why this very satisfactory record for 1955-56 should not be maintained in the succeeding years if our administrative machinery is geared adequately to cope with the increasing load, and our relations with the industrial and commercial sector of the public continue to be as close and cordial as they have been during the past year.

"In connection with this last named factor of public relations, it is my very pleasant duty to take this opportunity to acknowledge the assistance that we have received during the year under review from the various Chambers of Commerce and Industry, whose representatives were good enough to meet me and my colleagues on the Board of Directors on several occasions for free and frank discussion of various problems of mutual interest. These discussions greatly facilitated our work during the year, and have helped, in particular, to focus our attention on ways and means of simplifying our procedure to the advantage of our clients as well as ourselves. I feel sure that the steps we have already taken in pursuance of these discussions would bear fruit in the near future in the shape of better business for us and more cordial relations with our clients.

Conditions Liberalised

"I will refer to just one or two of the more important measures that we have adopted in connection with the drive that we embarked upon in the year under review for quickening the pace of work and effecting other general improvements. A measure of great significance, was the institution of a separate legal branch of our own, manned by full-time officers under the control of the Corporation, in our head office as well as in two of our branch offices. This measure, which has been introduced as an experiment for the present, will be extended to all our branch offices after we satisfy ourselves that there are no snags in it. It is designed to quicken the pace of work at various stages in connection with the examination of title deeds and the execution and registration of mortgage documents. This will also cut down, to a very considerable extent, the legal charges now incurred by us and passed on to borrowers. Many of our clients have expressed great satisfaction at this long overdue reform in our administrative set-up. We have also succeeded in considerably simplifying, and standardising to as great an extent as possible, the terms and conditions incorporated in our mortgage deeds. The previous practice of our sending for our clients' representatives all the way to the head office in Delhi to discuss and finalise the terms and conditions of loans was given up, and branch managers were delegated authority to deal with our clients on the spot on our behalf. We have also liberalised to an appreciable extent the conditions under which interim loans are granted, particularly in cases where, pending the finalisation of the legal formalities concerned with the execution and registration of the formal mortgage deeds, machinery, etc., ordered by our clients has to be paid for or documents relating to which have to be retired.

Four Auditors

"Before I leave the administrative and organisational aspects of our work, I should like to mention one or two salient facts in regard to the audit that has been done of our accounts. We have now *four* different auditors carrying out audit throughout the year, and I shall refer briefly to each of them. Firstly, there is our own internal audit, the machinery for which has, in the course of the year, been put on a satisfactory working basis. This has been found to be of very great value to us. Secondly, there is the audit done by a firm of chartered accountants who are elected by the shareholders. Thirdly, another firm of chartered accountants appointed by the Central Government in consultation with the Comptroller and Auditor General also conducts an audit. No serious irregularity has been brought to notice by either of these firms of chartered accountants. Certain relatively minor matters to which our attention was drawn by them have been looked into and set right. Fourthly, there is the audit carried out by the Director of Commercial Audit under the auspices of the Comptroller and Auditor General. In the course of the year under review, the Director of Commercial Audit conducted his audit in two instalments, the first one extending from the last week of September 1955 to the first week of February 1956, covering our official year ending 30th June 1955, and the second extending from the first week of June 1956 to the first week of August 1956, covering the first half of the year 1955-56. In the audit of the accounts for the first period, a large number of formal objections were raised by the audit party and, after we had commented upon them, only a few of these objections are now understood to be in the process of finalisation. We are hopeful that a few more of these items also will be withdrawn or modified as a result of further discussions. The audit of the second period is still in the process of completion.

"There is no doubt that, in the existing setup, we have a multiplicity of audit, somewhat in excess of real requirements. One might also be tempted to take the view that, if the bulk of the items of original audit objections was withdrawn, there must have been created quite an appreciable quantity of work at all levels most of which would have been eventually proved to be infructuous. These and other related matters have engaged our close attention and we have brought these to the notice of Government.

Industrial Investment

"I now turn to the second important factor, which I would describe as the external factor—as distinct from the internal factors about which I have been speaking to you till now—which, in my opinion, should give us ground for hope of an even greater volume of business for the Corporation in the future. This factor is centred round the spurt in industrial investment in the private sector that it is anticipated will materialise during the second Five-year Plan period.

"The Planning Commission, in their report on the second Five-year Plan have given detailed figures of some of the overall targets of industrial investment in both the public and the private sectors which, they state, will show that the second Plan period will be one of 'intensive and many-sided industrial effort.' During the first Five-year Plan period, there was a shortfall of investment in the private sector in certain industries, though, in the aggregate, the investment target of Rs. 230 crores for expansion programmes was bettered in actual performance to Rs. 340 crores. The lag in private investments occurred, according to the Planning Commission, in industries which required heavy capital investment and offered a relatively small profit margin. It is this kind of industry which might not be able to attract adequate equity capital from the investing public that would claim our special attention during the coming years, with due reference, of course, to the industrial priorities drawn up by the Planning Commission in their report. The general scheme of priorities in the private sector as envisaged by them places iron and steel first, then heavy and medium engineering industries, including structural fabrication, automobiles, railway rolling stock, castings and forgings, industrial machinery, bicycles, sewing machines, motors and transformers etc., followed by fertilisers, chemicals, cement, refractories, jute and cotton textiles, sugar, paper and a wide range of consumer-goods industries. The programme of overall development envisaged in the private sector during the second Plan period is estimated to involve an outlay of Rs. 720 crores, comprising Rs. 570 crores of new investments and Rs. 150 crores on replacements and modernisation. Of this total estimate of Rs. 720 crores, a provision has been made by the Planning Commission for Rs. 55 crores for the activities of the National Industrial Development Corporation and Rs. 15 crores for us, leaving a balance of Rs. 650 crores to be raised from other sources. While our figure of Rs. 15 crores is near enough to the average of our disbursements during the past seven years, our achievement during the past one year leads me to think that we should be able not only to reach this target quite easily but to improve on it to an appreciable extent in the next five years. We, therefore, propose to address Government on the subject of the feasibility of increasing this figure.

"In spite, however, of the fact that these figures relating to the industrial development in the private sector during the second Five-year Plan that I have given you do augur well for an institution like ours which may well be described as a hand-maiden of the private sector, I think it is just as well that I invite your attention also to one or two factors which we shall have to take into account in assessing our ability to rise to our full stature in the coming years. Firstly, we must take note of the fact that we have other institutions like the Industrial Credit and Investment Corporation of India and the National Industrial Development Corporation whose fields of activity converge on ours, and indeed, overlap with ours to some extent. Secondly, it is important to bear in mind the fact that both these institutions have a greater measure of freedom in the matter of financial operations than we have, and they enjoy certain special facilities which we do not share. Thirdly, though the Central Government have so far implemented the policy of utilising the Corporation as the main channel for processing their own industrial loans, and we may hope with confidence that this policy will continue to be followed, we cannot be sure that the State Governments have been, or will be, equally helpful to us in this matter. I mention this, as we have been given to understand that certain State Governments have sanctioned loans directly to certain industrial concerns, and, according to a statement contained in the annual report of one of the State Financial Corporations, the State Government concerned have been 'offering loans at rates of interest which are only about half of those charged by us and on the basis of security which are also very much easier than those observed by the Corporation.' You will agree this is a matter of vital importance to both ourselves and the State Financial Corporations.

Resources

"The fourth, and, in a sense, the most important factor which is likely to come in the way of expanding our activities to the fullest extent otherwise possible, is the fact that, if we succeed in inviting business at the present rate and dealing with applications for loans at the pace that we have achieved last year, our own monetary resources will soon be tapering off, thereby accelerating the advent of the day when we shall, perhaps, be forced to borrow under conditions which might leave us little or no margin of profit after meeting our tax obligations and our working expenses. This matter is engaging our serious attention already, and we hope that we should be able to find a satisfactory solution in collaboration with the Central Government who have been apprised of the matter. It will take some time before a final decision is taken; I mention it now merely to reinforce my point that, if the outlook is on the whole bright and we could be quite optimistic regarding the future, it behoves us also to take note of other factors which we shall have to take into account.

"In my speech last year I said that we had been obliged to take over possession of the assets of certain concerns who had defaulted in their obligations to us. The position in this regard is explained in our annual report. You will have observed that there has been considerable progress in this matter. I am glad to inform you that one of these factories, which we sold, and another which we leased, have both now gone into production. It is gratifying that these concerns which had virtually closed down business for considerable periods have been set on their feet again and brought into full production, thanks to the intervention of this Corporation. We are taking appropriate steps with the same objective in regard to the other concerns also, and we hope it will be possible to achieve our objective consistent with the safety of the funds invested by the Corporation.

Sodepore Glass Works

"You will no doubt also recollect that the Board of Directors had decided to sell the factory of the Sodepore Glass Works Ltd., another of our defaulting concerns, to the Asahi Glass Company Ltd. of Tokyo and that the vendee concern were to form an Indian company to take over the assets and work the plant. This Indian company has now been formed, and necessary action in regard to the execution of the sale and mortgage deeds is well under way. Steps have also been taken by the company to make necessary arrangements for bringing the factory into production as early as possible. We expect that this factory will start working before long.

"Another noteworthy feature of our activities in the year under review was that we sanctioned loans to co-operative societies of a total amount of Rs. 5 crores 50 lakhs. I should like to mention, in this connection, that apart from the impetus that this has given to the Co-operative Movement as such, the fact, that, as a condition precedent to our loans, the members of these societies, drawn mostly from the lower income groups, have been made to subscribe towards the industrial schemes financed by us, a total sum by way of share capital of the order of Rs. 2 crores 20 lakhs, has contributed appreciably towards helping Government's efforts at promoting savings and drawing them off for investment purposes.

"A large majority of the concerns to whom we have lent money did quite well during the year under review, and, in the case of a number of concerns, we saw no reason to withhold the permission asked for to declare dividend in excess of the normal maximum of 6 per cent. This very satisfactory position in regard to production and profits is reflected in the figures relating to progress of repayments furnished in the annual report.

Sugar Industry

"You will have noticed from the industry-wise figures given in the annual report that our loans to the sugar industry aggregated Rs. 11 crores 58 lakhs at the end of the year under review. We have been advised by the Central Government that 'we should continue to finance sugar co-operative factories on the scale that we have been doing hitherto, and that as regards loans to sugar factories other than co-operative sugar factories our policy in regard to their financing should not be unduly restrictive in view of the recent enhancement by the Government of the target of production for the industry.

"We dealt with the large majority of loan applications in consultation with our Advisory Committees of which we have had four working in the course of the year, namely, those for the Textile, Engineering, Chemical and Sugar industries. These Advisory Committees are now in the process of being reconstituted so as to include a larger number of technical experts in each, and also so as to provide for a wider territorial representation.

"The figures given in Appendix E to the annual report showing the State-wise distribution of the loans sanctioned by us in the year under review as well as in the previous years will show that, as compared with the position as it obtained on 30th June 1955, there has been a marked increase at the close of our financial year in June 1956, in the loans sanctioned to concerns located in certain States. Excluding those States which, relatively speaking, may be described as industrially advanced, the figures relating to the progress in some of the other States are, I think, worth inviting your special attention to. These are—

(i) Andhra—Increase from Rs. 4 lakhs up to the end of 1955 to Rs. 1 crore 29 lakhs at the end of 1956;

(ii) Assam—From *nil* up to end of 1955 to Rs. 45 lakhs at the end of 1956;

(iii) Punjab—From Rs. 1 crore 10 lakhs up to end of 1955 to Rs. 2 crores at the end of 1956;

(iv) Travancore-Cochin—From Rs. 1 crore 12 lakhs up to end of 1955 to Rs. 3 crores 18 lakhs at the end of 1956; and

(v) Uttar Pradesh—From Rs. 1 crore 30 lakhs up to end of 1955 to Rs. 2 crores 95 lakhs at the end of 1956.

Efforts are being made to effect substantial increases of this kind also in other States similarly situated.

Delays Cut Down

"The ministerial and officer staff of the Corporation was augmented to some extent to make good deficiencies which had existed since long. On the procedural side, certain measures were adopted which have resulted in the cutting down of delays in the day-to-day work of the Corporation to an appreciable extent. This matter continues to engage the personal attention of myself and my General Manager, and we are hopeful of effecting further improvements as soon as the additional staff to be newly recruited are in position.

"Before resuming my seat, I should like to convey my sincere thanks to my colleagues on the Board of Directors and on the various Advisory Committees for their co-operation and guidance in all our deliberations. I should also like to convey on behalf of the Board and on my own behalf our thanks to the General Manager and the entire staff of the Corporation, both here and in the branches, for their very loyal and devoted work throughout the year, in spite of the exceptionally severe strain that had been placed on them as a result of the marked expansion of the activities of the Corporation in the year under review."

ECONOMIC INTEGRATION OF EUROPE

WAY TOWARDS A FREE WORLD MARKET

By Fritz Berg
PRESIDENT, FEDERAL ASSOCIATION OF GERMAN INDUSTRY

IT cannot be denied that there exists an inherent relation between the foreign policy and foreign economy of a nation. The future development of international trade will largely depend on a relaxation of the political situation in the world. It is my firm conviction that, if we could understand each other internationally, we should be able to face future possibilities with much optimism. Let us think only of the immense demand for capital investment and the increase of the overall national income.

The present economic situation in the world demonstrates the case of a number of more or less completely isolated groups. A consolidation of these groups into a free world market is the main economic problem in our present world, although I do not deny that such a task will be a very difficult one. We must not forget that, in the late twenties, the then existing unity in the world market was completely destroyed by an ever-spreading depression. The gold standard was replaced by national systems of currencies which aimed at a more or less general control of foreign exchange. The different national measures taken to support this turn of the market finally resulted in a new system of economic autonomy which favoured the national products, even though the national price level by far exceeded world market prices.

Government action taken in the way of customs regulations, import restrictions, as well as foreign currency restrictions were a means to protect the home economy from the influence of the world depression, and to consolidate the capital situation by national measures. As a result of this defensive attitude, a new system of conjuncture developed which, with the assistance of an autonomous currency policy, finally lead to an expanding policy of employment. The nation herself offered generous credits and thus created the illusion of increased purchasing power and full employment, while the gap between her's and the world economy grew larger and larger. In a system such as this, a foreign policy was only important, when it served to achieve full employment. The results of this disintegration in the economic world were sales crises, discriminating trade practices, and, finally, a substantial reduction of the international exchange of goods.

The new economic situation which we (Germany) faced after World War II can be described as follows: To begin with, world economy tended to be divided into several political groups of interest much more than in earlier years, this may be attributed to the development of world politics. These remarks particularly apply to the strongly isolated Eastern nations with their nationalised economy. It would be practically impossible to include this part of the world in a free economy, unless their Governments were prepared to give up their principles of State monopoly on the national economy. Although it is our sincere wish to consolidate trade between East and West, we must realise, when entering into economic relations with the East, that we have to deal with political realities, We should not forget that Russia and her satellite States regard foreign trade as a means of strengthening their political influence.

Way Back to Free World Economy

It cannot be denied that the Western powers, too, show a certain tendency to form economic groups, although this is carried out under completely different aspects than is the case in the East. Western formations of economic groups are not governed by a spirit of hostility to world trade. The principle underlying Western economic growths are of a financial nature. We are now referring to the dollar and sterling areas or to the European Payment Union. After the war, new economic structures have developed alongside which are oriented towards more regional or functional communities. Let us name the Coal and Steel Community and the O.E.E.C. for example. They all have a common goal, namely, to produce larger markets of partly inland character and to prepare such markets for a future incorporation into a free world economy.

By producing these different points of gravity, it is intended to achieve a unity of the world market, which, however, would exclude the Eastern nations for the time being. The integration of Europe which has made very little progress on the political level up to now has been considerably promoted from an economic point of view. European integration, the chief concern of the entire German industry, has by no means lost contact with the larger world markets. There is no tendency to form an autonomous European community. On the contrary, by increasing the industrial capacity of a very important section, European integration will well serve world economy. The best use we can make of the results from the work of the O.E.E.C. is to remember the advantages of international team work and the comparative costs system. We note that international economic relations have no doubt improved considerably during the last few years, and that the liberalisation of trade is increasingly extending to the overseas countries. They seem to realise more and more that an export trade governed by Government regulations does not represent a panacea for the solution of economic problems.

The important thing to do now is to spread the idea that a policy of splendid isolation from the world markets will invariably lead to economic instability, to a breakdown of the price structure and, last but not least, to signs of inflation. Only an economy which is oriented towards free world trade will, in the long run, be capable of raising living standards and creating a basis for political stability.

THEY BUY WHAT THEY SEE IN *TRAYOPHANE PRINTED BAGS

Yes, customers prefer the product that's wrapped in Trayophane bags. Trayophane bags reduce waste, save time — because the contents are ready to be sold — wrapped, weighed and priced!

Economic! Hygienic! Convenient!

Why not get these colourful, eye-catching bags with your printed message, for an average cost of 6 pice?

U.K. RESTRICTIVE TRADE PRACTICES ACT

ITS SIGNIFICANCE

By John Kingsley

WHEN the Restrictive Trade Practices Act became law in the United Kingdom, a blow was struck for industrial flexibility at home and for greater competitiveness abroad. The Bill had been the subject of public controversy since July last year, when the Government gave an undertaking to bring forward legislation against trade restrictions. From the opening debate in the House of Commons in February, the period of parliamentary gestation was only just over five months. The Act became law by 2nd August 1956. As lawmaking goes, this was not a long period.

Indeed, the proceedings were carried through with great speed, for it must be remembered that legislation of this kind depends for its success to a large extent on careful drafting, and that attention had to be paid to the restrictionist attitude which was bound to prevail among the many interests which could be expected to oppose the Bill.

The impetus of this progress through Parliament has been maintained. Within a few days of its receiving the Royal assent, the first order under the new Act was made, the Registrar due to be appointed under the Act named, and the Registrar's office established.

The appointment of the Registrar is a sign that the Act is not only on the statute book but is immediately coming into operation. The Registrar's is a key position. The first requirement of the Act is that public registration be made of restrictive trade practices.

Other main provisions include the establishment of a Restrictive Practices Court (which has powers of a High Court) to decide whether these practices are in the public interest. The Act lays down criteria for the court to apply in judging whether the practices are or are not in the public interest. The onus of proof is upon those who wish to justify the practice.

Another feature is that collective enforcement of resale price maintenance has become unlawful, but not resale price maintenance carried out by single companies. The Monopolies Commission is retained, although smaller in size, to deal with those arrangements not subject to the new judicial procedures, e.g., monopolies and export agreements.

The first order under the Act laid before the House of Commons, which would bring the first catch into the Registrar's net, is exceedingly wide in scope. If it receives the approval of Parliament, it will come into effect on 30th November. It covers cases of restriction on prices and collective discrimination.

By its very breadth, this first order is likely to give some inkling of the amount of work which the new machinery is likely to have to deal with in the legalistic battles over definitions. If the Government's draftsmen have done their work well, there should be a large catch for the Registrar to get to work on.

Emerging Pattern

Assuming that this is the case, something of a pattern begins to emerge. Companies which have the kinds of agreements specified by the order will have three months in which to register them. This will take until the spring of 1957, which, in turn, means that the court appointed under the Act should be at work interpreting the new legislation and setting up its precedents by the middle of the year.

Agreements which cover both United Kingdom imports and exports are within the scope of the judicial procedure of the new court. Pure export agreements are, however, dealt with under the old procedure—in the Monopolies Commission. But the details of such agreements have now to be supplied to the Board of Trade.

The policy behind the new Act is thus seen to be to a move towards reducing restriction and increasing flexibility in the home market. Behind all the arguments about the meaning of words which are likely to develop in the next year or two as individual cases are argued out lies the Government's decision to bring about a greater competitive spirit in the structure of British business.

British industry is being called upon to flex its muscles in the home market, so that it can more efficiently compete abroad. This Act may yet prove to be the most significant single legislative gesture for British competition in the world market since the repeal of the Corn Laws 110 years ago.

Saved . . .
5 gallons of lubricating oil every day
— Rs 7950 in a year!

THERE'S a metals plant in a large industrial city saving Rs 7950 every year — just because they asked us at Standard-Vacuum for free advice about their lubricating problems!

One of our engineers visited the plant and noticed that a good deal of oil was being wasted — because of the manner in which important machinery was lubricated. Thanks to his recommendations, the factory now uses 1500 gallons of lubricants *less* each year, and the machinery is working more efficiently than ever before.

SURVIVAL OF MANAGING AGENCY SYSTEM—I

PROVISIONS OF THE NEW CODE ANALYSED

By F. R. Ginwalla, B.A., LL.B.

THE cynics who are tempted to say that, by 15th August 1960, the managing agents in India will find themselves placed in a straitjacket seem to be very vaguely understanding the historical background of the new Companies Act and its social and economic implications so fully dilated upon, both in and out of Parliament since its introduction in the form of a Bill. The debates in Parliament indicate that the House was conscious of the fact that the managing agencies have nursed hundreds of companies which, in the fullness of time, have flowered into giant industrial and business concerns. There can be no doubt that the managing agencies since the later half of the nineteenth century have been the "bone and sinews" of the industry in this great country. It would be, indeed, disastrous both for the nation and the country if the system of managing agency failed to play its role in the planned economic development of India. The new Act only gives a new outlook to the Indian managing agency system, full of so many complexities and wide variations in contracts, constitutions and control of managed companies. The Act prescribes some recognised standards of behaviour, with a view to weaving an integrated pattern of relationship as between promoters, investors, the management and the labour. These recognised standards of behaviour are prescribed by Parliament which derives its power absolutely and finally from the mass of Indian humanity. In order that the dream of a socialistic pattern of society may come true, there must be industrial development in the country and this vitally depends upon the national character.

A poet has said: "The bad and good alike in honour share." The common people quarrel over inequality in property. The rich quarrel over inequality in honour. It is on account of such economic and social forces that the new Company Law was ushered in in this country.

Let us examine the various provisions of the Act with a view to meeting the primary need of those who wish to know more about the shape of things to come in the managing agency system.

Appointment and Reappointment of Managing Agents

The provisions of sections 324 to 326 indicate the test of eligibility for the appointment and reappointment of managing agents. Section 324, which has a far-reaching effect, empowers the Central Government to notify that companies engaged in specified classes of industry or business shall not have managing agents from a specified date. Section 325 provides that no company acting as the managing agent of any other company shall, after the commencement of this Act, appoint a managing agent for itself, whether it transacts any other kind of business in addition or not. Section 325 further provides that no company having a managing agent shall, after the commencement of the Act, be appointed as a managing agent of any other company. An appointment in contravention of this section is void. A further effect of this section is that, if a company having a managing agent is itself acting as a managing agent of another company, the term of office of the first mentioned company as a managing agent shall expire at the latest by 15th August 1956.

If a managing agent survives the foregoing two tests by escaping from the prohibitions specified in sections 324 and 325, he becomes eligible for appointment or reappointment subject to the provisions of section 326. Under this section appointment or reappointment of a managing agent can be made by the company in its general meeting, subject to the approval of the Central Government. It is open to the Central Government to withhold its approval, unless it is satisfied that it is in the public interest to allow the company to have a managing agent, that the terms of managing agency agreement proposed are fair and reasonable, that in its opinion the managing agent proposed is a fit and proper person, and that he has fulfilled the conditions which the Central Government requiries him to fulfil. The extensive powers and the wide discretion allowed by sections 324 and 326 cannot be exercised arbitrarily. It is obligatory upon the Central Government to consult the Company Law Advisory Commission and seek its advice before issuing any notification under section 324 as observed above, or before disposing of any application under section 326 pertaining to the appointment or reappointment of a managing agent.

Term of Office

The term of office which a managing agent may hold is regulated by section 328. After the commencement of the Act, no company shall appoint a managing agent (if it had no managing agent at any time since its commencement) for a term exceeding 15 years at a time. The term of office in the case of reappointment shall not exceed 10 years at a time. A managing agent can be reappointed for a fresh term, when the existing term of the managing agency has two or more years to run. The reappointment of a managing agent may be made by the company even much earlier provided the Central Government in consultation with the Advisory Commission approves of such earlier reappointment on the ground that it is in the interest of the company.

The reappointment of a managing agent under section 328 (1) does not include the reappointment of any person on fresh, additional or changed conditions for any period not extending beyond his existing term, but otherwise includes:

(1) the renewal, or the extension of the term, of a previous appointment, or

(2) the appointment of any person or persons having an interest in the previous managing agency.

Any appointment or reappointment of a managing agent made in contravention of section 328 shall be void in law.

With regard to the term of office of all existing managing agents at the date of the commencement of the Act, it is provided by section 330 that their term of office shall expire on 15th August 1960, if it has not expired earlier by virtue of the terms of current managing agency agreements. This deadline does not apply to those managing agents who are reappointed under the provisions of the Act.

Section 331 states that all provisions of this Act other than those relating to the term for which the office can be held shall apply to every managing agent holding office at the commencement of the Act, with effect from such commencement.

Variation of the Managing Agency Agreement

The term of the managing agency agreement may be varied only in the manner prescribed by section 329. Any variation in the terms of agreement may be made by a resolution of the company passed at its general meeting. Before passing such a resolution, it is obligatory on the company to obtain the sanction of the Central Government. Before according its sanction for passing such a resolution by the Company, the Central Government is required under section 411 to refer the matter to the Advisory Commission for its advice.

These four sections, namely, 328, 329, 330 and 331 which have been just discussed apply to a public company, a private company which is a subsidiary of a pubic company, and a private company which is not a subsidiary of a public company, unless the Central Government, by general or special order, specifically exempts such a private company.

Restriction on Number of Managing Agencies

Section 332 marks a deadline and provides that, after 15th August 1960, no person shall at the same time hold office as managing agent in more than 10 companies. In calculating the number of managed companies, private companies which are neither subsidiaries nor holding companies of public companies, unlimited companies, and associations which do not carry on business for profit or which prohibit the payment of dividends, are to be excluded.

Another important aspect of this section is that the following are deemed to hold office as managing agent of the company:

(a) Where the managing agency is a firm, every member of that firm; and

(b) where the managing agent is a company, every person who is a director, the secretaries and treasurers or a manager, of the latter company and every member thereof, who is entitled to exercise not less than 20 per cent. of the total voting power therein.

Any person who acts as a managing agent of more than 10 companies after the marked deadline, namely, 15th August 1960, shall be liable for a continuing offence punishable with fine extending to Rs. 1,000 in respect of each of these companies in excess of 10, for each day on which he so acts.

Remuneration of Managing Agents

The restrictions on managerial remuneration are contained in sections 348 to 354. The principle involved in these provisions of law is to ensure the investing public that the system of managing agency is shorn of its abuses and adapted to meet the requirements of a growing economy like ours. It is also significant to note that section 355 illustrates the wisdom on the part of Parliament in encouraging private companies by exempting them from the restrictions on managerial remuneration.

Let us enumerate the advantages to a private company on account of its exemption under section 355 from the operation of sections 348 to 354. These advantages are sufficiently attractive to convert public companies into private companies. Briefly speaking, a private company may remunerate its managing agent in any form and not necessarily on the percentage of net profits. It may determine the net profits in any manner it chooses. It is free to give additional remuneration to its managing agent without any sanction of the Central Government. It may remunerate its managing agent at any time, and not after the account having been placed before the company in its general meeting. It may also pay office allowance to its managing agent in addition to the remuneration.

Now let us consider the circumstances under which Parliament thought wise to impose restrictions on managerial remuneration in respect of public companies and private companies which are subsidiaries of public companies. It is appropriate here to digress a little. British business men are credited with making the first attempt to formalise the written bond between a managing agent and his managed companies. Since the later half of the nineteenth century, various types of such relationships have been documented and followed as precedents. The twists and turns of the Indian Company Law which date back to 1850 gave a managing agent some refuge and this accounted for so many complexities and wide variations in agreements relating to managing agencies. It is necessary here to give some instances. In some cases, commission paid to a managing agent was charged on net profit. In some cases, the payment of commission was based on turnover of sales. In certain cases, the percentage payable on net profits was kept low but in office allowance on a monthly basis was paid at a considerably higher rate in addition to reimbursement of all expenses incurred on behalf of a managed company. The commission for service rendered to the company was yet another source of income. Parliament was, therefore, forced to make suitable provisions in the new Act. To what extent these provisions will, in practice, be effective is, of course, anybody's guess. They are not to be looked upon as irksome fetters on private enterprise, but are to be implemented with the spirit of helpfulness.

Minimum Remuneration

The position under the new law is that, by reason of section 348, a public company and a private company which is a subsidiary of a public company cannot pay to its managing agent by way of remuneration for any year, whether as managing agent or in any other capacity, any amount in excess of 10 per cent. of the net profits of the company for that year. The net profits are to be determined in accordance with the provisions of sections 349 and 350. A special provision is made under section 351 for determining the net profits, where there is a profit-sharing arrangement between two or more companies having a common managing agent. The minimum remuneration in the event of a year of no profits or inadequate profits is fixed under section 198(4) at Rs. 50,000. Section 353 prohibits the payment of remuneration to a managing agent for any financial year or part thereof until the accounts of the company for that financial year are audited and laid before the company in its general meeting. Under the proviso to this section, the minimum remuneration of Rs. 50,000 may be paid to a managing agent in suitable instalments as may be specified either in the articles or in a resolution passed by the company at its general meeting. It is also open to a managed company to make such a provision in the managing agency agreement itself. If the Central Government is satisfied that a monthly payment of minimum remuneration not exceeding Rs. 50,000 per annum is insufficient for the efficient conduct of the company's business, it has power under the proviso to section 198(4) to sanction an increase subject to such conditions as may be specified in the order.

The payment of additional remuneration to a managing agent beyond the limits specified in sections 198 and 348 may be sanctioned. under section 352 by a special resolution of the company and approved by the Central Government in consultation with the Advisory Commission as being in the public interest. The overall limit of managerial remuneration is fixed at 11 per cent. of the net profits as indicated in section 198 read with section 352. In the context of this discussion, it is necessary to invite reference to the Press Note issued on 28th April 1956 by the Union Ministry of Finance, New Delhi. The substance of the Press Note is that companies cannot vary the terms of payment of remuneration to their managing agents so as to conform to the provisions of the new Act by passing a resolution in the annual general meetings. The Press Note adds that this is not permissible under section 353. The proviso to section 353 only enables a managing agent to be paid the minimum remuneration in suitable instalments as may be specified in the resolution of the company at its general meetings. The Press Note further adds that the correct procedure is prescribed by section 329 for varying the terms of the managing agency agreement by passing a resolution in general meeting of the company after obtaining the previous sanction of the Central Government.

Office Allowance

Section 354 prohibits the payment of office allowance to a managing agent but he may be reimbursed in respect of expenses incurred by him on behalf of the managed company. Such expenses are to be sanctioned by the Board or by the company in its general meeting. Section 354 adds that nothing contained in sections 349 to 358 shall be deemed to prohibit a managing agent from being so reimbursed.

Commission on Sales etc.

The provisions of sections 356 to 358 are in the nature of safeguards against the malpractices associated with the managing agency system, under which a managing agent would augment his remuneration by appointing himself as a buying or selling agent for the managed company. A managing agent is, however, permitted to act as a selling and buying agent for the managed company in respect of transactions outside India to the extent and subject to the conditions specified in these sections.

Section 359 prohibits a managing agent from charging extra remuneration to companies under his management for services rendered otherwise than as a managing agent. The effect of this section is that a contract between a managing agent and a company under his management in respect of sale, purchase or supply of any property or for rendering any services should be approved by the company by a special resolution.

Section 360 permits contracts between a managing agent or associate and the managed company for the sale or purchase of goods or the supply of services to the extent specified in that section. Such a contract as contemplated in section 360 must be approved by the company by a special resolution.

Section 363 prohibits a managing agent of a company or his associate from receiving any sum from the company, whether directly or indirectly, by way of remuneration, rebate, commission, expenses or otherwise. The effect of this section is that any benefit derived by a managing agent or his associate from a public company or a private company which is a subsidiary of a public company, in contravention of sections 356 to 361 or from a private company which is not a subsidiary of a public company in contravention of sections 356 to 361 shall be deemed to have received such benefit in trust for the managed company.

Section 361 expressly provides that all existing contracts with managing agents or their associates with respect to their appointment as selling agents, buying agents or for the purchase of goods or the supply of services, etc., to managed companies as referred to in sections 356 to 360 shall terminate on 1st March 1958, unless they expire earlier.

REVITALISING SMALL INDUSTRIES

PROGRESS MADE CONSIDERABLE

A GREAT deal of public discussion had taken place in the country before a definite place was found for the village and small industries in the second Plan. Any more discussion of the merits and demerits of this group of industries at this stage will only be of academic value. One important conclusion, however, emerged from the prolonged discussions which, since the die is cast, should bring about the proper "climate" for the fulfilment of the role allotted to this group of industries. The conclusion is that, however incongruous it may sound to talk of village and small industries in this age of atomic energy and automation, they have a vital and integral place in the economy of the country, at any rate for some time to come, because of the special circumstances obtaining in the country—namely, low level of *per capita* income and capital formation, fast expanding population, oppressive pressure on land, and inadequate transportation facilities. A time may come, however, when, through a series of plans and higher and higher rate of capital formation and manufacture of various types of heavy equipment indigenously, sufficient degree of structural changes in the economy will have been effected, which will gradually eliminate the existence of uneconomic small units. The fact that such a time is not quite within our sight—at any rate it is not likely to arise in the present generation—is the *raison d'etre* for paying special attention to the small and village industries. They can help solve, to some extent, the enormous problem of finding employment to unskilled, illiterate and widely scattered masses of people all over the country. Viewed in this context, there cannot be much dispute over the view, expressed by the Planning Commission, that "village and small industries in their different aspects are an integral and continuing element both in the economic structure and in the scheme of national planning. The primary object of developing small industries in the rural areas is to extend work opportunities, raise incomes and standard of living and to bring about a more balanced and integrated economy."

Realistic View Wanted

Although the objective thus stated is laudable and cannot be seriously disputed, one wonders whether the groups of industries under reference are capable of fulfilling the heavy responsibilities cast upon them for the period of the second Plan, in their present unorganised state. In view of the limitations so circumscribing their activities, it is imperative to take a realistic view in estimating the capacity of the small industries for formulating what are termed as "common production programmes." It may be noted that the common production programmes broadly fall into two categories. namely, those intended to provide a degree of preference or assurance of market for small units by restricting the scope for the corresponding large-scale industries, and those intended to provide positive assistance through supply of raw materials, technical guidance, financial assistance and so on. If the measures taken under this programme encourage those types of small-scale production which enjoy certain advantages over the corresponding large-scale industry or do not conflict with the concerned large-scale industry, there could be no objection to them. But the wisdom of adopting any step becomes questionable when it is intended to restrict the production of the large units and demarcate or reserve a part of the sphere of production to the small industries when the latter are hardly ready to fill the gap. Moreover, it should not be forgotten that there is always a time lag after various steps in the spheres of organisation, finance and marketing are taken and before the full results are obtained. The time lag is likely to be longer in this sector, because of the fact that the units themselves are scattered widely and involve great organisational and other delays. The importance thus of a rational and realistic application of the common production programme cannot be overemphasised, in view of the fast-increasing public and private expenditure and the consequent rise in the effective demand of the people.

What is of urgent importance, therefore, are (1) the removal of the limitations under which the small industries function, organisationally, technically and otherwise, (2) the need for ensuring that the decentralised sector acquires sufficient vitality before they are called upon to play a bigger role, and (3) observance of great caution in the formulation and application of the common production programmes. Against this background it will be appropriate to review what has been done in the sphere of small industries (not village industries), during the last few years as a first step in the direction of strengthening them in order that they may play the vital role carved out for them.

Industries falling in the group of small industries are of varied type, but their common features at present are their urban or semi-urban location, and use of machines, power and modern techniques. Thus, an important feature is that they are run by small *entrepreneurs* of self-supporting workers, and sometimes by co-operatives. Certain units in this field, as in the case of those manufacturing bicycle parts or sewing machine parts, may be ancillary to large industries. The working definition adopted by the Small-scale Industries Board includes within the scope of the term small-scale industries all units or establishments having a capital investment of less than Rs. 5 lakhs and less than 50 persons when using power. The principal requirements of this industry, as the second Plan points out, fall into four categories. First, the imparting of training and technical advice regarding the adoption of improved tools, machines and new techniques, secondly, supply of raw materials and power at reasonable rates, third, availability of adequate finance on fair terms, and lastly, facilities for importing or purchasing of machines and assistance in the marketing of products.

Allotment Stepped Up

While during the first Plan period, an amount of Rs. 5.2 crores had been spent on the development of small industries, the amount has been stepped up to as much as Rs. 55 crores in the second Plan. Substantial progress has been noted, moreover, since the Government of India accepted the recommendations of the International Planning Team of the Ford Foundation on small-scale industries. Thus, in addition to the four technical institutes for technical assistance to small-scale industries set up early in 1955, small institutes have been opened at a number of centres, namely, Ludhiana, Rajkot, Patna, Trivandrum and Hyderabad. It is also proposed to establish a full-fledged institute in each State during the second Plan period. Moreover, these units, supplemented by branch units and extension service centres, will act as service agencies in order to assist the small-scale industries in improving their production and management and in securing adequate raw materials, finances and markets. They will also promote patterns of development through common production programmes for the small and the larger units.

A noteworthy feature in disseminating technical information is that of taking round the countryside, mobile vans fully equipped with units of general machinery to demonstrate to the small *entrepreneurs* the value of latest equipment. While eight such vans are already in use, it is proposed to increase their number to 45. These apart, the technical and economic service agencies of the Central Government have witnessed considerable expansion, and the number of teams to investigate the conditions of some of the industries have been increased by 11 to 28 including the 12 in the Community Project areas. While investigation on the conditions of nine industries has been completed, arrangements are being made to investigate 29 other items.

National Small Industries Corporation

The National Small Industries Corporation, established in February 1955, combines in itself the functions of a marketing service corporation and small industries corporation, the establishment of which was recommended by the Ford Foundation Team. Besides thus providing the necessary incentives and help for the small industrial units to improve their techniques of production and management, the Corporation has also taken up the functions of supplying equipment on hire-purchase basis, marketing of quality goods produced by the small industries and putting up of industrial estates. The Government purchase division of the Corporation, it is claimed, has already made some headway in bringing about a change in the outlook of the purchasing agencies, by helping small industries secure direct contracts from them. Moreover, this division of the Corporation has also succeeded in obtaining the agreement in principle of nine of the large-scale units in the country for the establishment of small-scale ancillary units around their factories to meet their requirements of components. The impetus thus gained for their development is expected to increase several-fold, after the formal acceptance by the Government of the recommendations of Mr. Kennard Wendall in regard to the reorientation of the Government's purchase policy, in so far as it affects small industries, and also because of the emphasis already given by the Stores Purchase Advisory Council to the development of small industries.

The function of supplying up-to-date equipment, the lack of which is regarded as one of the chief maladies of the small industries, is dealt with by the hire-purchase division of the Corporation. It is expected that, by the end of this financial year, applications for machinery worth over a crore of rupees will have been approved.

Lack of proper markets, and inadequate information about the existing markets have been the traditional obstacles to the progress of the small industries. The activities of the marketing section of the National Small Industries Corporation will be noted in this context with satisfaction. The division is concerned with, in the first place, encouraging production of quality marked standardised goods by the small-scale industries, secondly, giving information to the producers about the reactions of the consumers to the former's products, and lastly, establishing wholesaling depots in different parts of the country to push the sales of the products of the small industries. A noteworthy feature of this division is that it arranges for the products of these industries being taken round the rural areas in mobile vans, not only for promoting their sales but also for gauging the reaction of the consumers and to impress on them the ability of the small industries to meet their increasing demands. Wholesaling depots, on the other hand, encourage the small units in specific industries to manufacture quality goods of given standards and facilitate their being disposed of in different parts of the country. For example, a depot at Agra for footwear is said to be functioning successfully for the last six months. Similar depots at Aligarh (for locks) and Khurja (for potteries), have made a successful start, while those at Calcutta (for knitware) and Bombay (for varnish) and Madras (for stainless steel and matches) are being established.

Industrial Estates

One more division of the National Small Industries Corporation is in charge of setting up one crore rupees worth of industrial estate in Okhla near Delhi. Substantial progress is noted in the construction of buildings for factories. Thus, while 13 buildings have been completed to house factories, work on 22 more is going to be started shortly. A similar estate is also going to be established by the division at Allahabad.

With the establishment of the Finance Corporations in 13 States, a major hurdle in the way of expansion of small industries, namely, finance, is well on the way of its removal. The second conference of the representatives of the State Financial Corporations held under the auspices of the Reserve Bank of India in November 1955 discussed the question of co-ordination between the State Financial Corporations and other agencies in providing financial assistance to small-scale industries. Moreover, with a view to liberalising financial assistance to small-scale industries, the Union Government indicated to the States in June 1955 its willingness to place funds at the disposal of the State Governments so as to enable them to liberalise their rates for the grant of loans upto certain limits to small-smale industries, under the State-Aid-to-Industries Rules or through the medium of co-operative banks and other agencies. According to this arrangement, the ratio of Central Government contribution to that of the States would be 2 : 1. Moreover, losses also would be borne by the two Governments in the same proportion in the case of loans to private parties and in the proportion of 3 : 1 in the case of industrial co-operatives. Another important feature of this arrangement is that loans would be advanced to the borrowers upto 75 per cent. of the value of the security offered. Yet another notable step in this connection is the initiative taken by the State Bank of India in devising a scheme for co-ordinating the activities of the co-operative credit organisations, commercial banks and State Financial Corporations. "Pilot" schemes have already been launched by the Bank in three centres.

The process of revitalising and expanding the small industries is thus well on its way. It should not be forgotten, however, that too much reliance on figures and statistics is apt to mislead both the authorities and the people. The attitude of looking below the surface of statistics is very essential at a time like this. It is to be earnestly hoped that a strong edifice of small industries will be built on the foundations already being laid. But in that attempt let not the already existing large-scale industries be reduced to stagnant pools in our economy, as is now sought to be done by the authorities in the case of the cotton textile and match industries, to mention only two instances.

MINISTRIES OF COMMERCE AND CONSUMER INDUSTRIES AND HEAVY INDUSTRIES

It may be recalled that, following the division of the Ministry of Commerce and Industry into the Ministry of Heavy Industries and the Ministry of Commerce and Consumer Industries, a brief Press note was issued early in September indicating subjects that would be dealt with by each Ministry. Fuller details of the particular industries that would fall within the purview of each are now made available. The Ministry of Commerce and Consumer Industries would deal with plantation industries; textiles (that is, cotton, jute, silk, art silk, coir, etc., but excluding synthetic fibres and yarns); food, drink and tobacco industries; domestic ware and household requisites, including electricals (other than refrigerators and air-conditioning equipment), hardware, and crockery, glass and sanitary ware; cosmetics and toilet requisites; stationery and office equipment; sports goods; leather, rubber, plastic and celluloid goods; drawing, mathematical scientific and surgical instruments other than precision instruments. Timber plywood and hardboard; paints and varnishes; agricultural implements and tools; bicycles and sewing machines; musical instruments; and drums and containers. This Ministry would also be concerned with all small-scale industries.

The Ministry of Heavy Industries will be concerned with the following industries except those which are carried on as small-scale industries:

Cement and iron and steel industries; automotive industries including aircraft, locomotives, motor vehicles of all types, road rollers, tractors, etc., and their accessories including tyres and tubes; electrical engineering industries, that is, motors, transformers, generators, switchgears, cables and wires, insulators, etc.; engineering industries including ball bearings, machine tools and other tools, castings, forgings and structurals, bolts, nuts and screws, drums and containers; chemical industries including power alcohol, drugs and pharmaceuticals, dyestuffs and coal tar, products, fertilisers, etc.; pulp, paper, board and newsprint; films, for cinema, X-ray and photography and photographic chemicals, apparatus and accessories; refractories, crucibles, electrodes, etc.; arms and ammunition; and all other industries not shown under the Ministry of Commerce and Consumer Industries.

The Ministry of Heavy Industries will also deal with all applications under the Industries (Development and Regulation) Act, 1951.

NEW I.C.I. PLASTICS LABORATORIES

Users of plastics throughout the world will benefit from new technical service laboratories built by the Plastics Division of Imperial Chemical Industries Ltd. at Welwyn Garden City, near London, which were opened on 28th September. These laboratories—probably the finest and best equipped of their type in the world—have been designed to facilitate the development of newer and better raw materials for the plastics industry, and to enable I.C.I. to provide the industry with the most efficient technical service. The Plastics Division of I.C.I., it may be noted, is one of the world's biggest producers of plastics materials, and probably has a more extensive range than any other similar manufacturer. It spends a high proportion of the £1,000,000 devoted every year by I.C.I. to technical service and the related activities of application development.

The new laboratories have a working area of 56,000 sq. ft. and the staff will total 250. Since the laboratories have to cater for a wide variety of practical operations, from purely scientific to technological and semi-technical, the buildings house not only conventional chemical and physical laboratories, but also equipment typical of that used in commercial production. There are, moreover, seven fabricating laboratories, each of which contains a large range of up-to-date semi-scale or full-scale equipment covering all the standard processing and manipulative operations with which the plastics industry is normally concerned. For example, the moulding shop has 12 compression presses ranging from 10 to 250 tons, including a 100-ton side ram press. The fabricating laboratories are at present arranged to deal with the following subjects: (1) moulding, including compression and injection, (2) general thermoplastic compounding including mixing, spreading and calendering, (3) extrusion, (4) rubber-like polymer technology, (5) monofilaments and films, (6) general fabrication of rigid plastics, and (7) fluorine polymer technology.

MARKETING OF CATTLE IN INDIA

India possesses approximately 156 million cattle and 44 million buffaloes. These amount to more than one-fifth and a half respectively of the total number of cattle and buffaloes in the world. The value of cattle to the economy of India is estimated at Rs. 3,000 crores annually.

A report on Marketing of Cattle released by the Directorate of Marketing and Inspection, Union Ministry of Food and Agriculture, reveals that in spite of India's position being comparatively superior to other countries in cattle wealth, she neither has the greatest density of cattle population in the world nor a high ratio of cattle to human population. The report offers a detailed study of the various uses to which cattle is put in India and the different problems relating to their development. It further observes that in the past India had built up a fairly good export trade in cattle, but because of its present decline the problem needs attention.

Among the various recommendations included in the report are urgent attention to proper enumeration, introduction of a market intelligence service, co-operative cattle breeding societies and regulation of markets.

PATENTS CONVENTION

A convention concerning the priority of patents of invention has been concluded between Canada and India. The High Commissioner for India, His Excellency Dr. M. A. Rauf, signed on behalf of the Government of India and the Secretary of State for External Affairs, Mr. L. B. Pearson, signed on behalf of the Canadian Government.

The convention provides generally that Canada and India will extend reciprocally the provisions of each country's legislation with regard to the protection of patents to citizens of the other contracting party and to bodies incorporated or registered under its appropriate legislation. Thus the benefits of the Canadian Patent Act shall be enjoyed by Indian citizens and incorporated bodies and likewise the benefits of the Indian Patents and Designs Act by Canadian citizens and incorporated bodies.

The convention shall come into force three months after signature, at which time the appropriate notifications concerning these arrangements shall have been published respectively in the *Canada Gazette* and the *Gazette of India*.

ORDNANCE AND RIVER VALLEY PERSONNEL

Apropos the recent unrest in the ranks of the workers in the Government's ordnance factories and in the Damodar Valley Project, following the retrenchment of surplus workers, it is officially stated that about 4,230 surplus personnel from ordnance factories were registered for alternative employment upto 1st October 1956. The surplus personnel are being registered under the special scheme introduced by the Government of India for providing alternative employment speedily to such personnel from ordnance factories and the D.V.C. Hirakud and Bhakra-Nangal projects. Out of 1,856 surplus D.V.C. personnel, 874 have been given alternative employment, 457 do not need any employment assistance and the rest are likely to be absorbed soon.

A delegation of research workers of the chemical and pharmaceutical industry from India, headed by Prof. Kane, visited Kharakov in the U.S.S.R. The Indian guests acquainted themselves with the work of the Kharkov Chemical Pharmaceutical Research Institute and the Ukrainian Experimental Endrocrinology Research Institute. Members of the delegation also went to the drug factories. On 2nd October, the delegation left for Moscow by air.

how much does a pair of eyes cost ?

Eyes belonging to able administrators ... trained technicians ... skilled craftsmen ... how much are they worth to *you* and your business ? Difficult to calculate in terms of money. Yet if you consider the effect of good lighting on efficiency and output, you will see why you must ensure that everything is done to prevent eye-strain and fatigue. Merely adequate lighting is not enough. Your office or factory must have *good* lighting. Free from glare, free from harsh shadows, and planned in such a way that every pair of eyes have the light they need to do their job ... without eye-fatigue to hamper their efficiency.

INDIAN STANDARD WAGON FARES WELL

DIVIDEND RAISED—BONUS SHARES TO BE ISSUED

IF the high level at which a company's scrip is quoted on the Stock Exchange is any indication of its progress and the confidence the investors have in its ability to pay more and more handsome dividends, there can be no better example than that provided by the Indian Standard Wagon Company Ltd. (Managing Agents: Messrs. Martin Burn, Ltd., Calcutta). The realisation by the investing public of the growing importance of a heavy engineering industry like this in the rapid industrialisation of the country under the Five-year Plans is reflected in no small measure in the firmness of engineering shares on the Calcutta Stock Exchange. That the ordinary shares of the Standard Wagon which were quoted at Rs. 94 at the opening of the year 1955, touched a high of Rs. 150 in August of that year, and have spurted further to the impressive level of Rs. 225 on 5th October 1956, is ample proof of the high popularity these shares are having on that Exchange. Indeed, the working results of the Company for the year ended 31st March 1956 more than justify this increasing measure of popularity. The year under reference has proved to be yet another successful one. The Company's works remained fully booked throughout the year and the substantial increase in turnover has resulted in an appreciable improvement in trading results. The trading profit has advanced by Rs. 8 lakhs to Rs. 53.71 lakhs, thus making a rapid stride over the previous year's profit which had itself constituted a high level in the Company's history. The steadily rising profit of the Company from year to year—incidentally, this is the sixth year in succession to record such increase—has made it one of the most prominent among the engineering companies.

Alongside the expansion in trading profit, the net profit also has registered a rise from Rs. 23.76 lakhs for 1954-55 to Rs. 28.37 lakhs. This has been arrived at after providing for depreciation, taxation, managing agents' commission and provision for (1) taxation contingency, (2) labour profit-sharing bonus, and (3) labour retiring gratuity fund. All these provisions have taken up a larger sum than in the previous year. Quite justifiably, the distribution on ordinary shares has been stepped up from 25 per cent. to 30 per cent. The year's dividend includes a bonus of 5 per cent. It may be recalled that the distribution has been progressively raised in recent years, from 15 per cent. for 1951-52 to 19 per cent. for the years 1952-53 and 1953-54 and to 25 per cent. for 1954-55. The distribution for 1953-54 was actually double that paid for the preceding year since it was on a higher capital of Rs. 19.49 lakhs doubled in November 1953 by the capitalisation of Rs. 9.75 lakhs from the reserve fund. The year's distribution at 30 per cent. marks yet another step in the Company's policy of stepping up dividends commensurate with the rise in profits, only, of course, after paying due regard to the question of building up sufficient reserves.

The following table enables an easy comparative study of the Company's working and progress during the four years ended 31st March 1956:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	449.37	331.53	273.63	247.93

* Approximate only.
† Plant replacement reserve, Rs. 7.75 lakhs and general reserve, Rs. 1.00 lakh.
‡ On a capital of Rs. 19.49 lakhs doubled by the capitalisation of Rs. 9.75 lakhs in November, 1953.

The rise in sale proceeds and the higher value of stock and work-in-progress during the year under review indicate that the Company's works were fully employed. Out of the net profit, the Directors have provided a sum of Rs. 1 lakh to general reserve and Rs. 7.75 lakhs to plant replacement reserve. The Directors state that the programme for replacement and general rehabilitation and modernisation of the plant continues to make good progress and the total cost of the programme is now estimated at Rs. 32.5 lakhs. They further state that, even though the provision on this account of Rs. 7.75 lakhs in the year's accounts brings the total of the reserve up to immediate requirements, allocations from future profits will continue for some years to come for further development. Two new reserves have been created during the year under review, namely, the labour housing reserve with an initial allocation of Rs. 5 lakhs and the development rebate reserve with an allocation of Rs. 1,61,915. The latter represents the special taxation rebate granted for the year in respect of capital expenditure on plant and machinery and the Directors have decided that "this amount should not be taken into profit but should be set aside for any special development project. The total amount set aside for general and other reserves from the profits for the year under review aggregates Rs. 15.37 lakhs, that is, Rs. 2.37 lakhs more than those provided a year ago and Rs. 5.50 lakhs two years ago. It will thus be noted that not only the return to shareholders has been progressively stepped up but also the amount that is ploughed back into the business.

In order to bring the issued capital more into line with the actual capital employed, the Directors have decided to recommend the issue of bonus shares in the proportion of one new ordinary share for each ordinary share already issued. Accordingly, an application is being made to the Controller of Capital Issues for permission to capitalise reserves to the extent of Rs. 19,49,250. This will enable the Directors to issue one bonus share for each one of the existing ordinary shares.

The Company's reserves and surplus as at the end of the year stand strengthened at Rs. 47.34 lakhs, at which level they exceed the paid-up capital of Rs. 39.85 lakhs by Rs. 7.49 lakhs. But a point that should be noted here is that of the paid-up capital, ordinary shares amount to only Rs. 19,49,250. After the proposed capitalisation, the paid-up ordinary capital will be doubled to Rs. 38,98,500, while the reserves and surplus will be reduced to Rs. 27,84,737. On the assets side, the gross block of the value of Rs. 84.57 lakhs has been written down to Rs. 30.47 lakhs. The current assets aggregate Rs. 392.89 lakhs, including work-in-progress of the value of Rs. 287.82 lakhs, and exceed the current liabilities and provision for taxation, amounting to Rs. 336.17 lakhs, by Rs. 56.72 lakhs.

The Rs. 25 paid-up ordinary shares of the Company are being currently placed at Rs. 225. On the basis of a distribution of 30 per cent., the yield on the shares at their current market value works out to 3.3 per cent. per annum. This low return, no doubt, reflects the proposed bonus issue, which, as already mentioned, will double the paid-up capital. If the dividend on the increased capital also were to be maintained at 30 per cent., the yield would work out to 6.6 per cent. That, however, is unlikely for at least a few years to come, though the present level of profit is comfortable enough to permit payment of such a distribution. At best, the Directors may be able to pay 25 per cent. on the increased capital for the current year. If this assumption turns out to be correct, those who buy the Company's share at the ruling market price (Rs. 225) will get a return of 5.5 per cent. free of tax.

TALAYAR TEA CUTS DIVIDEND

The financial results of the Talayar Tea Company Ltd. (Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam) for the year ended 31st March 1956 do not compare favourably with its performance for the years 1954-55 and 1953-54. Thus, the Company has made a gross profit of only Rs. 5.05 lakhs, as against Rs. 7.83 lakhs for 1954-55 and Rs. 6.99 lakhs for 1953-54. The net profit, after providing for depreciation at Rs. 20,339 (Rs. 31,423 for 1954-55 and Rs. 39,403 for 1953-54), taxation at Rs. 1.70 lakhs (Rs. 2.50 lakhs for 1954-55 and Rs. 2.75 lakhs for 1953-54) and Managing Agents' commission at Rs. 48,455 (Rs. 47,454 for 1954-55 and Rs. 35,190 for 1953-54) amounts to Rs. 2.66 lakhs, as against Rs. 4.55 lakhs for 1954-55 and Rs. 3.50 lakhs for 1953-54. A sum of Rs. 50,000 has been set apart to development reserve. As against this, the previous two years' allocations were: Rs. 1.50 lakhs for development reserves and Rs. 50,000 for dividend equalisation reserves in 1954-55, and Rs. 1.50 lakhs for development reserve in 1953-54. The dividend on ordinary shares has been reduced from 16¼ per cent. for 1954-55 to 12½ per cent., of which 6¼ per cent. was paid by way of an interim. The reduced rate is the same as that for 1953-54 and takes up a sum of Rs. 1,56,250. The dividend on 6 per cent. preference shares requires Rs. 45,000, leaving a balance of Rs. 25,453 to be carried forward, as compared with Rs. 10,601 brought in.

The decline in the Company's profit was due to lower prices for tea and higher cost of production. The position might have been worse but for a substantial increase in the outturn of coffee. The following table shows the Company's experience in regard to production of tea and coffee during the past five years:

	1951-52	1952-53	1953-54	1954-55	1955-56
Tea					
Acreage	1,295	1,295	995	995	995
Total crop .. (lbs.)	11,68,469	9,01,176	8,64,117	8,17,621	8,07,104
Yield per acre (lbs.)	900	696	654	822	811
Cost of production .. (cents)	116.00	138.89	144.42	146.92	148.13
Average sale price .. (cents)	180.00	183.16	225.72	254.48	204.72
Coffee					
Acreage	703	703	703	703	703
Total crop .. (cwts.)	1,500	871	1,359	362	1,125
Yield per acre (cwts.)	2.1	0.53	1.93	0.52	1.60
Cost of production per ton .. Rs.	2,878	11,125	2,860	11,865	3,379
Average sale price Rs.	4,203	3,567	4,292	3,687	..

The Company's balance-sheet as on 31st March 1956 shows the capital unchanged at Rs. 20 lakhs made up of Rs. 12.50 lakhs ordinary and Rs. 7.50 lakhs preference. The reserves and surplus aggregating Rs. 13.50 lakhs exceed the ordinary capital by Rs. 1 lakh. Gross block of the value of Rs. 29.39 lakhs has been written down to Rs. 27.04 lakhs. The current assets, including stock-in-trade of the value of Rs. 6.32 lakhs, aggregate Rs. 13.14 lakhs and cover the current liabilities and the provision for taxation amounting in all to Rs. 6.67 lakhs by a very comfortable margin. Cash balances alone are shown at Rs. 3.03 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 13-1 *cum-div.* On an *ex-div.* basis, and taking the total dividend for the whole year at 12½ per cent., the yield works out to 10 per cent. per annum.

COMPANY LAW ADMINISTRATION

A Press Note from the Finance Ministry, Government of India, says that, consequent on the reduction in the number of States on their reorganisation, the offices of the Registrars of Companies at Patiala, Nagpur, Rajkot and Vijayawada will be abolished as from 1st November next.

The responsibilities of the offices at Patiala, Rajkot and Vijayawada will be taken over by the Registrars at Jullundur, Bombay and Hyderabad, respectively. The responsibilities of the Registrar at Nagpur in respect of the companies, which have their registered offices within the territories of the reorganised State of Madhya Pradesh will be transferred to the Registrar at Gwalior. His responsibilities for the remaining companies will be passed on to the Registrar at Bombay.

The Press Note also lists other centres of registration affected by the reorganisation of States and specifies changes in jurisdiction.

The Regional Director, Company Law Administration, Western Zone, Bombay, will be in charge of the offices of the Registrars at Bombay and Bangalore (that is, the reorganised States of Bombay and Mysore).

The Regional Director, Southern Zone, Madras, is to be in charge of the offices of the Registrars at Madras, Trivandrum and Hyderabad (that is, the reorganised States of Madras, Kerala and Andhra).

The Regional Director, Eastern Zone, Calcutta, is to be in charge of the offices of the Registrars at Calcutta, Shillong and Cuttack (that is, the States of West Bengal, Assam and Orissa and the territories of Manipur and Tripura).

The Regional Director, Central Zone, Kanpur, (whose headquarters is temporarily at New Delhi) is to be in charge of the offices of the Registrars at Lucknow, Patna and Gwalior (that is, the States of Uttar Pradesh, Bihar and the reorganised State of Madhya Pradesh).

The Regional Director, Northern Zone, Delhi, is to be in charge of the offices of the Registrars at Jullundur, Jaipur and Delhi (that is, the reorganised States of Punjab, Rajasthan and the territory of Delhi).

(Concluded from next column)

will be spread broadly among the people. If national passions can be tempered enough to give these methods a chance to work, the result in terms of world peace and prosperity is likely to be very impressive."

Points From The Chair

Instability of Copper Prices

"THE price instability of copper, our main raw material, is a constant source of anxiety. In spite of the valiant efforts made by certain large producers to stabilise this market, we have seen fluctuations of more than £100 per ton over a period of a few weeks. It is disappointing to a user, such as ourselves, that the Metal Exchange prices show a greater reaction to rumours arising from political sources than to the time-honoured law of supply and demand. The effects of this violently fluctuating market are understood, if not appreciated, at home, but in the export field they are not understood and are heartily disliked. Unfortunately, the last twelve months have seen an upward climb in the price of aluminium, which is now less attractive as a substitute for copper on a price basis. It nevertheless enjoys a wider vogue where the weight of the cable is a consideration; a healthy sign in what will one day be a big business for our country."

JAMES S. CLARK,
Sterling Cable Co., Ltd., London.

Techniques and Civilisation

"Like every new technique capable of wide use, automation has, unfortunately, become a subject of controversy. Automation is the normal and natural result of technical development. It should be obvious that Britain cannot afford to fall behind in the application of automation techniques. If we are to stand up to competition from other nations, we cannot fight with antiquated weapons. Automation is essential to maintain a reasonable living standard. Its obvious advantages must not make us, however, insensitive to the human problems which are always connected with such developments; these will have to be resolved in joint consultation. With the relative inelasticity in the growth of manpower in the United Kingdom, and with the added burden of having to support an increasingly ageing population, the accelerated application of automation in Britain has come just in time. The output of our industries could not be significantly increased if we relied on the availability of more pairs of hands to man more machines. Under these conditions, to discourage automation would be suicidal. In 1948 the labour force in manufacturing industry totalled 8,137,000, with the index of industrial production at 100 and the average weekly hours worked were 44.9. In 1955, with a labour force of 9,337,000 in manufacturing, working 46.4 hours a week, the industrial production index rose to 142, of which 22.5 per cent. is attributable to productivity. This means that if the state of efficiency in industry had remained static since 1948, without further introduction of labour-saving machines, we would have to employ not 9,337,000 people as we do today, but 11,171,000 to produce the nation's current output as indicated by the production index. In fact, by enhanced efficiency the country has added the labours of some 1,834,000 productive people and enjoys the benefits of this increased output. The Industrial Revolution is not something we have once experienced and left behind but we are constantly living through it."

SIR HARRY RAILING,
General Electric Co., Ltd. (London).

An Exacting Challenge

"In the past 15 years, more than half a billion people in Asia and Africa have gained their national independence. But the fact of national independence has not yet brought the human betterment which the people of the less developed countries so urgently need and desire. That challenge still lies ahead. And I doubt whether any group of leaders in history has faced any more difficult or exacting challenge. Economic development is a fickle process. It creates new problems even as it solves old ones; it satisfies immediate demands only to create new and larger demands. And, most important, it destroys old attitudes towards life and work, even as it creates materials for a better life. In the less developed areas of the world today, the old stabilities are still crumbling as the minds of more and more millions are opened to new hopes and ambitions. The process of development has brought, with its benefits, turmoil and discontent which could thwart further development if not threaten the very foundations of world order.

"Yet we also know that economic development is *necessary* for the kind of world in which people everywhere live and grow in peace. We know that the problems economic development creates—the turmoil and discontent, the new hopes and ambitions—can only be made manageable with more economic development. The process must go on. It must go on steadily in the less developed countries until some new stability is achieved which is compatible with the security and welfare of people everywhere.

"Let us make no mistake, economic development in these countries today is not just a process; it is also an idea—a rallying cry for more and more millions who are aroused against their traditional poverty. Here is great potential for good. If the human energy in the less developed countries can be effectively harnessed to constructive economic development, these areas can well enjoy an unprecedented rate of growth.

"What is needed to make good the promise of these countries is a recognition that there are impartial, dispassionate methods of planning, organising, and carrying out development policy—methods which provide substantial insurance that concrete results will be achieved and that benefits

RESULTS OF HOOGHLY DOCKING GOOD

SETBACK IN RESULTS OF MCLEOD GROUP TEA COMPANIES

Hooghly Docking & Engineering Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The value of work billed during the year amounted to Rs. 68,57,049 against Rs. 48,87,244 in the previous year, an increase of about Rs. 19.7 lakhs. This was mainly due to the increasing volume of new construction work undertaken by the Company as reported last year.

The gross profit for the year was Rs. 4,83,373 and net profit, Rs. 1,12,120. The corresponding figures for 1954 were Rs. 3,97,568 and Rs. 1,76,646, respectively. The fall in net profit was due, on the one hand, to the small margin on which construction work has to be undertaken, and on the other, to the increasing amount of interest that has to be paid on borrowed money to finance these constructions. The value of work in progress increased during the year from Rs. 99 lakhs to Rs. 115 lakhs putting an additional strain on the working capital of the Company.

After charging all expenses including depreciation and writing off Rs. 3,545 (Rs. 4,500) as bad debts the profits for the year amounted to Rs. 1,72,120 (Rs. 1,81,646) to which has been added the balance brought forward from previous year of Rs. 46,167 (Rs. 50,771) making a total of Rs. 2,18,287 (Rs. 2,32,417). Out of this sum there has been provided for taxation Rs. 60,000 (Rs 5,000) leaving a balance available for disposal of Rs. 1,58,287 (Rs. 2,27,417). The directors recommend this balance to be disposed of as follows:—

In payment of a dividend of 12½ (12½) free of tax absorbing Rs. 1,56,250 (Rs. 1,56,250) and carrying forward the balance of Rs. 2,037 (Rs. 46,167 after transferring Rs. 25,000 to dividend equalisation fund).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	19,34,801
Reserves ...	22,00,000	Capital work-in-progress	1,29,969
Provision for taxation ...	45,206	Materials, stores and spare parts	7,15,205
Provision for sales tax ...	1,27,275	Goods in transit ...	8,038
Liabilities ...	1,25,62,222	Work-in-progress ...	1,15,80,779
Profit and loss account ...	2,037	Debts, deposits and advances ...	17,72,215
		Cash ...	45,733
Rs.	1,61,86,740	Rs.	1,61,86,740

Baghmari Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 3,37,510 (Rs. 12,41,322) to which must be added profit on sale of machinery and motor vehicle Rs. 5,799 (Rs. 2,555) and balance of profit brought forward from 1954 Rs. 93,058 (debit of Rs. 75,110) making a total of Rs. 4,36,367) (Rs. 11,77,896). From this amount must be deducted provision for taxation Rs. 1,10,009 (Rs 3,72,000), adjustment Rs. 1,35,314 (*nil*), amount written off stores for obsolescence, etc. Rs. 5,133 (Rs. 2,788), loss on buildings demolished Rs. 4,761 (*nil*) and depreciation on fixed assets Rs. 90,099 (Rs. 117,550) leaving a balance of Rs. 91,051 (Rs. 6,85,558) which, the directors recommend, should be distributed as follows:—

In payment of a dividend at the rate of 10 (35) per cent. for the year ended 31st December 1955, on 55,000 shares of Rs. 10 each, absorbing Rs. 55,000 (Rs. 1,92,500), leaving to be carried forward Rs. 36,051 (Rs. 93,058 after transferring Rs. 3,00,000 to general reserve and Rs. 1,00,000 to buildings and machinery reserve).

Crop.—The saleable crop weighed out at 9,155 (8,579) maunds against an estimate of 9,700 (9,000) maunds, and was disposed of at an average price of As. 33.90 (As. 49.94) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 9,500 maunds at a total revenue expenditure of Rs. 11,92,631.

The fall in the average price of tea from As. 54.41 per lb. for season 1954 to As. 39.29 per lb. in season 1955 has adversely affected the results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,50,000	Block ...	10,48,038
Reserves ...	11,21,541	Stock of tea	5,76,395
Provision for taxation ...	4,82,000	Stores ...	1,96,897
Liabilities ...	4,42,138	Other assets	9,561
Profit and loss account ...	36,051	Debts, deposits and advances ...	94,177
		Investments	1,099
		Interest accrued on investments and deposits	3,318
		Cash ...	7,02,245
Rs.	26,31,730	Rs.	26,31,730

Bormah Jan Tea Co. (1936) Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 4,20,650 (Rs. 10,04,249) to which must be added the balance of profit brought forward from 1954 of Rs. 1,44,105 (Rs. 6,184 including Rs. 224 being adjustments) making a total of Rs. 5,64,755 (Rs. 10,10,433). From this amount must be deducted provision for taxation Rs. 1,88,000 (Rs. 3,71,414) adjustment account Rs. 1,04,727 (*nil*) and depreciation on fixed assets Rs. 25,573 (Rs. 24,657) leaving a balance of Rs. 2,46,455 (Rs. 6,12,605). The directors have set aside to buildings and machinery reserve Rs. 75,000 (*nil*) leaving an available balance of Rs. 1,71,455 (Rs. 5,37,605 after paying ordinary interim dividend of 10 per cent. absorbing Rs. 75,000). This amount the directors recommend, should be distributed as follows:—

In payment of a dividend at the rate of 6 (6) per cent. for the year ended 31st December 1955, on 1,000 cumulative preference shares of Rs. 100 each, absorbing Rs 6,000 (Rs. 6,000), and in payment of a dividend at the rate of 20 (25) per cent. final for the year ended 31st December 1955, on 75,000 ordinary shares of Rs. 10 each, absorbing Rs. 1,50,000 (Rs. 1,87,500) leaving to be carried forward Rs. 15,455 (Rs. 1,44,105 after placing Rs. 2,00,000 to general reserve).

Crop.—The saleable crop weighed out at 7,703 (7,632) maunds against an estimate of 7,850 (7,400) maunds, and was disposed of at an average price of As. 35.69 (As. 50.23) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 8,300 maunds at a total revenue expenditure of Rs. 9,84,795.

The fall in the average price of tea from As. 50.23 per lb. in season 1954 to As. 35.69 per lb. for season 1955 has adversely affected the results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,50,000	Block ...	6,50,337
Reserves ...	7,27,550	Stock of tea ...	4,58,854

Sungma Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 96,338 (Rs. 4,65,554) to which must be added profit on sale of motor vehicle Rs. 1,600 (*nil*) and balance of profit brought forward from 1954 Rs. 24,081 (loss of Rs. 2,79,294), Rs. 1,22,019 (Rs. 1,86,260). From this amount must be deducted adjustments Rs. 64,617 (Rs. 39,574) and depreciation on fixed assets Rs. 91,204 (Rs. 72,373) leaving a balance at debit of profit and loss account to be carried forward to 1956 Rs. 33,802 (credit of Rs. 24,081 after paying a dividend of 7½ per cent. absorbing Rs. 46,875 and also writing off Rs. 3,357 on stores, etc.).

Crop.—The saleable crop from Sungma and Turzum Estates weighed out at 4,685 (4,497) maunds against an estimate of 4,875 maunds, and was disposed of at an average price of As. 39.29 (As. 54.41) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 4,800 maunds at a total revenue expenditure of Rs. 8,06,654.

The fall in the average price of tea from As. 54.41 per lb. for season 1954 to As. 39.29 per lb. in season 1955 has adversely affected the results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,25,000	Block ...	12,36,873

Teloijan Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 4,67,028 (Rs. 13,75,575) to which must be added the balance of profit brought forward from 1954 of Rs. 81,743 (Rs. 18,243 including Rs. 3,807 being adjustments) making a total of Rs. 5,48,771 (Rs. 13,93,818). From this amount must be deducted provision for taxation Rs. 1,99,137 (Rs. 5,28,000) adjustment account Rs. 99,425 (*nil*) loss on building demolished Rs. 117 (*nil*) and depreciation on fixed assets Rs. 38,043 (Rs. 35,075) leaving a balance of Rs. 2,12,049 (Rs. 8,30,743). This amount the directors recommend, should be distributed as follows:—

In payment of a dividend at the rate of 25 (50) per cent. for the year ended 31st December 1955, on 59,800 ordinary shares of Rs. 10 each, absorbing Rs. 1,49,500 (Rs. 2,99,000) leaving to be carried forward Rs. 62,549 (Rs. 81,743 after transferring Rs. 3,50,000 to general reserve and Rs. 1,00,000 to buildings and machinery reserve).

Crop.—The saleable crop weighed out at 10,032 (10,467) maunds, against an estimate of 10,000 (9,300) maunds, and was disposed of at an average price of As. 33.55 (As. 49.83) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 10,000 maunds at a total revenue expenditure of Rs. 12,05,408.

The fall in the average price of tea from As. 49.83 per lb. in season 1954 to As. 33.55 per lb. for season 1955 has adversely affected the results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Profit and loss account ...	62,549	Cash ...	9,87,230
Rs.	30,33,305	Rs.	30,33,305

Barnagore Jute Factory Co., Ltd.

The directors of the above Company (Secretaries: Messrs. McLeod Russel and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1956.

The loss for the year amounts to £76,620 (profit of £58,693 before providing depreciation, etc.) to which has to be added depreciation of fixed assets £44,824 (£22,242), provision against loss on realisation of jute stocks £50,000 (*nil*) and purchase of annuity for retired secretary £7,500 (*nil*) making a total of £178,944 (credit of £22,258 after depreciation). After deducting profits on sale of investments:—Freehold property £38,640 (*nil*) and shares in subsidiary company £67,500 (*nil*) there is a debit balance of £72,804 (credit of £22,258). From this amount has to be deducted the balance brought forward from 31st March 1955 £64,858 (credit of £71,772) leaving a debit balance of £7,945 (credit of £94,030). The directors propose to meet the payment of the preference dividend for the year as follows:—

Interim of 2½ per cent. paid 22nd December 1955 (net) £2,875 (£2,750) and a final of 2½ per cent. payable on 12th October 1956 to shareholders on the register on 28th September 1956 (net) £2,875 (£2,875) absorbing £5,750 (credit of £29,172 which includes a dividend of 15 per cent. on ordinary shares absorbing £19,766).

Including the proposed preference dividend of 5 per cent. which will absorb £5,750, the total debit balance will amount to £13,695. In order to pay the preference dividend and wipe off the debit balance, the directors have utilised £13,695 from revenue reserves. Thus the reserves are lesser to that extent in the balance sheet. Last year after paying dividend of 5 per cent. on preference shares and 15 per cent. on ordinary shares the directors carried forward a credit balance of £64,858. It will be noted that apart from a trading loss of £92,400 it has been necessary to make a provision of £50,000 for loss on realisation of jute stocks.

In compliance with the working time agreement of the Indian Jute Mills Association, the Mills worked 48 hours per week throughout the period under review. For the first 9 months, work continued with 12½ per cent. of the total looms sealed. From 9th January this year production was increased by unsealing 2½ per cent. of the total loom complement, and from 20th February a further 5 per cent. of the total looms were unsealed. Unfortunately offtake did not justify these production increases and as from 17th September next the total looms unsealed are to be re-sealed restoring the position to 12½ per cent. of the total looms sealed.

Trading conditions during the year under review remained extremely difficult. Not the least of the problems encountered was the extreme shortage of suitable raw material during the months of July, August and September last year caused by heavy flooding, at first in Assam where serious breaches of the Assam link railway occurred in many places, and later in East Pakistan. During this period the free movement of our purchased supplies was impeded and consequently the Mills' jute stocks fell to dangerously low levels, preventing economic use being made of whatever raw material was left available. Such replacement of supplies as could be effected from the very limited local sources were generally of inferior quality. As a result, the productive efficiency of the Mills was seriously affected.

At no time during the period covered by these accounts was it possible simultaneously to buy jute and sell manufactured goods at prices which did not show a substantial loss on the transaction. The chief obstacle to profitable trading by the Calcutta Mills in general continues to be the extremely high price of their raw material, and it must be emphasised that the cost of jute represents approximately two-thirds of the Mills' entire working costs. The competition from Jute Mills in Pakistan is becoming increasingly intense and under recent conditions these Mills have generally enjoyed the benefit of lower jute prices to the extent of between Rs. 170 and Rs. 220 per ton.

Indian Mills are still dependent on Pakistan for the supply of approximately 25 per cent. of their raw jute requirements. The devaluation of the Pakistani rupee, on 31st July 1955, did not result in any reduction in price in terms of Indian rupees of Pakistan jute because of the decision of the Government of Pakistan to maintain their minimum export prices at the same level as previously. In addition, they have further increased the export duty on raw jute, excluding cuttings, by Re. 1 per maund. Fortunately, the competitive position of the Indian Mills was to some extent restored by the removal of all export duties by the Government of India with effect from 1st August 1955.

The average price of raw jute during the year under review was fully Rs. 150 per ton above that ruling in 1953, while a comparison between the 1955 and 1953 average prices for hessians shows no significant difference in the levels ruling in the two years. The fact that there has been no increase in average selling prices, commensurate with the rise in the price of raw jute, explains the inability to trade at a profit during the last 12 to 18 months.

While the very high cost of raw jute remains the major problem of the Indian Mills, unavoidable increases in manufacturing costs, including labour wages, have also contributed to their difficulties. An Industrial Tribunal set up by the West Bengal Government under the Industrial Disputes Act to adjudicate on matters concering the basic wages and dearness allowance of all workmen in the Jute Textile Industry in West Bengal issued its Award, effective from 6th November 1955, under the terms of which the emoluments of the majority of the Company's employees were increased by Rs. 3-12-9 per month. In terms of cost of production this last increase represents an additional burden of approximately Rs. 14 per ton.

These difficulties of the current trading position further emphasise the need for every possible reduction in manufacturing expenses. In the last report of the directors reference was made to the orders which had been placed for new machinery to replace a large part of the drawing and spinning frames on the hessian side of East Mill, with a view to pressing ahead with the modernisation programme. The directors advise that shipment of this new machinery has now been completed and payment has been made in full, mainly after the closing of the accounts now submitted. With the installation of this new machinery the modernisation of East Mill will have been largely completed up to the spinning, and a materiai reduction in manufacturing costs is confidently expected.

Reference was also made in the last report of the directors to the sale of the Company's holding of shares in the Kassipur Co., Ltd., and also of the Rajabagan property on which the Kassipur Co., Ltd.'s factory buildings are situated. Payment of the proceeds amounting to £174,313 has since been received and this will go some way to the financing of modernisation. This sale resulted in a capital gain of £106,140 which sum has been taken to the credit of the profit and loss account.

Runglee Rungliot Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclosed a profit of Rs. 31,940 (Rs. 2,40,532). On transfer of this sum to profit and loss account and after sundry adjustments, including a transfer of Rs. 30,000 from revenue reserve account, there is a balance at credit of that account amounting to Rs. 51,918 (Rs. 2,23,275). The directors paid a dividend of 20 (50) per cent. and carried forward Rs. 23,918 (Rs. 28,275).

The crop made was 2,098 maunds compared with 2,259 maunds in 1954. The average selling price was Rs. 2-9-4 per lb. as against Rs. 3-10-0 per lb. in the previous year. Planted area remains at 341 acres.

Estimates for 1956 provide for a crop of 2,200 maunds at an outlay of Rs. 4,71,060 including inland freight and sale charges.

Tezpore Tea Co., Ltd.,

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The Company's profit for the year after the inclusion of Rs. 59,985 (Rs. 39,741) brought forward from 1954, is Rs. 7,15,664 (Rs. 21,96,494). And after crediting provision for taxation no longer required Rs. 54,485 (*nil*), stores depreciation no longer required Rs. 67,271 (*nil*), transfer from general reserve Rs. 1,50,430 (*nil*) and estimated taxation recoverable on provision for labour bonus Rs. 2,08,000 (*nil*) making a total of Rs. 11,95,850 (Rs. 21,96,494). After making provision for taxation Rs. 3,90,000 (Rs. 8,77,435), superannuation fund contribution Rs. 8,758 (*nil*), labour bonus in respect of previous years Rs. 3,02,942 and labour bonus for 1955 Rs. 1,25,000 there remains Rs. 3,69,150 (Rs. 8,69,580 after writing of investments Rs. 15,000; placing Rs. 4,00,000 to general reserves and Rs. 34,479 to contingency reserve. Out of this the directors recommend payment of a dividend of 8 per cent. on the cumulative preference shares, without any deduction for income-tax paid by the Company Rs. 16,440 (Rs. 16,440) and a dividend of 15 (50) per cent. on the ordinary shares, without any deduction for income-tax paid by the Company Rs. 2,97,432 (Rs. 7,93,155) leaving to be carried forward Rs. 55,278 (Rs. 59,985).

Labour Bonus.—Provisions for labour bonus for the year 1955 and also for the years 1953 and 1954 have been made in the profit and loss account. The necessity to provide for the labour bonus for more years than one and the incidence of tax on the profits for the year together would have resulted in a net loss to be carried to the balance sheet of over Rs. 1 lakh, and it would not have been possible to meet, even the payment of the preference dividend. However, credits to the profit and loss account in respect of taxation provision and stores depreciation no longer required, the estimated tax relief on the provisions for labour bonus and a transfer from general reserves have mitigated the impact of the labour bonus provision and have enabled the directors to recommend the payment of the preference dividend as well as a dividend of 15 per cent. on the ordinary shares. The directors consider, this a satisfactory achievement.

The tea crop was 32,034 (29,539) maunds and the average sale price realised for season 1955 was Re. 1-13-3 per lb. compared with the 1954 average of Rs. 2-6-8 per lb.

The estimates for season 1956 provide for the production of a crop of 28,000 maunds at a total cost on revenue account of Rs. 37,48,053. The West Bengal Government, as from 16th April 1956, have imposed entry tax at anna one per lb. on all teas other than those for shipment to U.K. which has not been included in the above estimates.

Accounts in brief were as under:—

Sijua (Jherriah) Electric Supply Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The profit and loss account, including the credit balance of Rs. 41,391 (Rs. 44,269) brought forward from the previous year, and a sum of Rs. 15,641 (*nil*) written back from the provision for sales tax, no longer required and after allowing for sundry charges, depreciation, taxation, etc., placing Rs. 29,606 (Rs. 27,478) to reserve for contingencies, Rs. 17,785 to tariffs and dividend control reserve, Rs. 17,785 to provision for rebate to consumers, Rs. 60,000 (Rs. 80,000) to debenture redemption reserve and Rs. 60,000 (Rs. 4,000) to development rebate reserve, showed a credit balance of Rs. 1,45,430 (Rs. 1,67,391) which the directors disposed of as follows:—

In paying a dividend on the ordinary shares at the rate of 7½ (7½) per cent. per annum without any deduction for income tax paid by the Company Rs. 1,26,000 (Rs. 1,26,000) and in carrying forward Rs. 19,430 (Rs. 41,391).

The units of electricity sold in 1955 was 85,273,296 units as compared with 90,803,594 units sold in 1954.

The Damodar Valley Corporation supplied 15.87 million units in 1955 as compared to 22.83 million units in 1954.

Following the announcement of the Coal Award, the Union have asked for a revision of the wage structure. Negotiations continue.

Kinnison Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

After crediting Rs. 8,05,000 being requisitioning claim realised from Government of India and after providing Rs. 2,40,000 (Rs. 3,50,000) for taxation, Rs. 67,000 (Rs. 72,000) for reserve for taxation contingencies, Rs. 1,20,000 (Rs. 18,000) for development rebate reserve and Rs. 3,39,631 (Rs. 2,54,137) for depreciation, the profit and loss account showed a profit of Rs. 3,82,373 (Rs. 5,36,353) to which was added the amount brought forward from previous half-year Rs. 52,710 (Rs. 29,674) and transfer from provision for taxation Rs. 97,000 (*nil*) and which was reduced by transfer to general reserve Rs. 1,50,000 (Rs. 1,00,000), leaving an available balance of Rs. 3,82,083 (Rs. 4,21,027 after transferring Rs. 45,000 to jute stock reserve). The directors disposed of this amount as follows:—

In paying a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 52,500 (Rs. 52,500), in paying a dividend on the ordinary shares of Rs. 6 (Rs. 7) per share, without any deduction for income-tax paid by the Company Rs. 2,87,946 (Rs. 3,35,937) and in carrying forward Rs. 41,637 (Rs. 32,590).

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mills were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

Accounts in brief were as under:—

Lansdowne Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

After providing Rs. 77,785 (Rs. 92,588) for depreciation, the profit and loss account showed a loss of Rs. 2,68,426 (profit of Rs. 3,51,537) which was reduced by the amount brought forward from previous half-year Rs. 10,707 (Rs. 4,428) and transfer from provision for taxation Rs. 45,000 (*nil*) leaving a net loss of Rs. 2,12,719 (credit of Rs. 11,135 after paying preference dividend at the rate of 7 per cent. absorbing Rs. 52,500 and ordinary dividend at Rs. 5 per share, absorbing Rs. 1,22,330). This amount has been carried forward.

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

Following on the partial modernisation of the mill spinners were called upon to look after 200 spindles of a modern high speed frame. As a protest against this spinners indulged in an illegal strike and as a result the mill remained closed from 15th February. After protracted negotiations spinners agreed to operate 200 spindles and work was resumed on 12th March. The total loom hours lost amounted to 145,638.

In regard to the scheme for partial modernisation of the mill, all machinery has arrived and erection has been completed. Only a part of the modernisation programme was completed by March 1956, so that the full benefit of the scheme is not reflected in the accounts for this period.

Notices

THE COORLA SPINNING AND WEAVING COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Eighty-fourth Ordinary General Meeting of the Company will be held at its Registered Office at Readymoney Mansion, Vir Nariman Road, Fort, Bombay, on Monday the 12th day of November 1956 at 4 p.m. (S.T.), to transact the following business:—

1. To consider and adopt the Audited Profit and Loss Account and Balance Sheet and the Reports of the Directors and Auditors for the year ended 31st March 1956.
2. To declare a Dividend and a bonus.
3. To elect a Director in place of Lady Hirabai Cowasjee Jehangir who retires by rotation but being eligible offers herself for re-election, and for that purpose to consider, and if thought fit, to pass the following Resolution as a Special Resolution of which special notice has been given to the Company and is hereby given pursuant to Section 261 of the Companies Act, 1956, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Lady Hirabai Cowasjee Jehangir is a member and Director of the Managing Agents' Company, and is liable to retirement by rotation, viz:—

   "RESOLVED that Lady Hirabai Cowasjee Jehangir be and she is hereby re-elected a Director of the Company."

4. To elect a Director in place of Mr. Hirjee C. Jehangir who retires by rotation but being eligible offers himself for re-election, and for that purpose to consider, and, if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice has been given to the Company and is hereby given pursuant to Section 261 of the Companies Act, 1956, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Mr. Hirji C. Jehangir is a member and Director of the Managing Agents' Company and is liable to retirement by rotation, viz:—

   "RESOLVED that Mr. Hirji C. Jehangir be and he is hereby re-elected a Director of the Company."

5. To appoint and/or approve of the appointment of Mr. C. P. Wadia under Sections 261 and 281 of the Companies Act, 1956, and for that purpose to consider, and, if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice has been given to the Company and is hereby given, inasmuch as the Managing Agents of the Company are authorised by the Managing Agency Agreement between them and the Company to appoint a Director on the Board of the Company and Mr. C. P. Wadia is a relative of the Directors of Cowasjee Jehangir & Co. Private Limited, the Managing Agents of the Company, and hence an associate of the Managing Agents, and is liable to retirement by rotation, and as he has completed the age of 76 years, viz:—

   "RESOLVED that the Company hereby appoints and/or approves of the appointment of Mr. C. P. Wadia as a Director of the Company and it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

6. To appoint Auditors for the current year and to fix their remuneration.

An explanatory statement in respect of the above items of business is herewith annexed.

PLEASE NOTE THAT A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THAT THE PROXY NEED NOT BE A MEMBER.

By Order of the Board of Directors,
COWASJEE JEHANGIR & CO. PRIVATE LTD.,
Managing Agents.
COWASJEE JEHANGIR,
Chairman.

Dated 1st October 1956.

Transfer Books of the Company will remain closed from 1st day of November 1956 to the 15th day of November 1956. If the dividend and bonus as recommended by the Directors are passed at the meeting, payments thereof will be made to those Shareholders whose names are on the Company's Register on the 31st day of October 1956 and the payments will be made on and after the 19th day of November 1956.

Annexure to the Notice:

EXPLANATORY STATEMENT

To:
THE SHAREHOLDERS OF
THE COORLA SPINNING & WEAVING COMPANY, LIMITED.
Dear Sirs,

The Special Resolutions set out in Items Nos. 3, 4 and 5 in the accompanying Notice are required under Sections 261 and 281 of the Companies Act, 1956, as the case may be and the reasons for passing the same are specified in the Notice. The Directors mentioned in the Resolutions have been on the Board for quite some time past, and it is desirable to continue their appointment as Directors of the Company.

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventh Ordinary General Meeting of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Saturday, 27th October 1956, at 11.00 a.m.

BUSINESS

1. To receive the Directors' Report and Auditors' Report and to adopt the Statement of Accounts for the year ended 31st March 1956.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. To transact any other competent business.

By Order of the Board,
A. H. FORSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, *29th September*, 1956.

Note.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have declared the payment, on 1st November 1956, of the Dividend on the 5 per cent. Cumulative Preference Shares of the Company for the half-year ending 31st October 1956, without any deduction in respect of Income-tax payable by the Company.

The Preference Share Transfer Register will be closed from 29th October to 31st October 1956, both days inclusive.

Dividends will be paid only to Registered Shareholders or their Mandatees.

By Order of the Board,
G. M. ROBBINS.
Secretary.

63, NETAJI SUBHAS ROAD,
CALCUTTA-1,
4th October 1956.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN THAT A LOCAL Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Bombay Local Head Office of the Bank will be held at the Bombay Local Head Office, Apollo Street, Bombay, on Wednesday the 14th day of November 1956, at 4 p.m. (Standard Time) for the purpose of electing a person to be a Director of the Central Board to fill the vacancy, in terms of Section 25(2)(a) of the State Bank of India Act 1955, caused by the resignation of Shri Vithal N. Chandavarkar.

H. V. R. IENGAR,
Chairman.

BOMBAY, *3rd October* 1956.

TASKS AHEAD OF INTERNATIONAL FINANCE CORPORATION

(Concluded from page 720)

The less developed areas are abandoning their *status quo* and perceiving the possibility of a better life for their peoples. Thus there is the opportunity of greater production and trade extending over greater areas of the world than ever before. At the same time, the industrialised countries of Western Europe, their facilities rebuilt and improved after the destruction of war, are again pressing vigorously into overseas markets and investments. Business men and investors in the United States are developing new interests in venturing outside its borders. Science and modern machines open new roads to unparalleled production. And so the scene is set for a growth which, given reasonable peace, should surpass anything history has seen. And, in this expansion, I see private initiative, experience and capital playing an essential role.

Certain Obstacles

However, it is only realistic to take note of certain obstacles which could greatly hinder or even prevent fulfilment of this promise. Investment in enterprise, particularly far from home, and the building up of industry and commerce, involve not merely trades of the day but long-term plans and judgments of the course of events over the years. They take place freely only when there is confidence—confidence in reasonable political and economic stability, confidence that the rules will not be changed arbitrarily, and that engagements made will be fulfilled. Confidence in the standards of business conduct, in the treatment by public authorities of private investment, whether local or foreign, in the respect for validity of contracts—these things will largely determine the pace and volume of private investment in the developing countries. And confidence is a plant slow to grow, but easy to kill.

Arbitrary Action

In the face of arbitrary actions by private parties, such as refusal to fulfil a contract, redress can be sought under the law. But against similar action by Governments, under claim of sovereign rights and powers, there is no such protection. Thus the conduct of public authorities is predominant in building up or destroying the confidence of those who control capital. Unfortunately, each example of arbitrary action in the world of international business, wherever located, affects not only the parties directly involved, but spreads its influence to far distant areas. Thus, no country needing the aid of international capital in its development can be indifferent to actions or attitudes regarding the treatment of such capital anywhere in the world.

Our member-Governments have assigned the International Finance Corporation the objective of stimulating a greater flow of private capital into productive enterprise in the less developed areas. Capital is available; enterprise is not lacking. If capital and enterprise are given a positive welcome by our member-Governments—and by all other Governments who believe in this objective—I am confident we can carry out our assignment.

ADVANTAGES IN EXPORTING FERRO-MANGANESE

(Concluded from page 715)

In terms of the new Industrial Policy Resolution of the Government of India, announced on 1st May 1956, manganese as well as ferro-alloys have been brought under Schedule "A" where new enterprises would be started by the Government. Ferro-manganese is an industry closely linked with iron and steel in which all new units are reserved to the public sector so that the State enterprises become major consumers. Further, the power required in ferro-manganese production would be generated in the coming years almost entirely in the public sector. From this point of view it is but natural that the Government would consider intervention in this industry, if any of the approved schemes do not materialise and a gap *vis-a-vis* the target of capacity needs to be filled up. The extent of Government interest in this field may, however, be limited by the consumption in State enterprises.—*All Rights Reserved.*

(Concluded)

NOTE CIRCULATION UP

(From Our Own Correspondent)

BOMBAY, *10th October*

There has been no change in the state of the short-term money market described in these columns last week. Demand for funds from trade and industry has been good throughout the week under review. And, in the absence of surplus funds, the banks have once again had to fall back upon the Reserve Bank and the State Bank of India for replenishing their capacity to create credits. With the Reserve Bank ready to provide the banking system funds at its usual rates, there has been no increase in interest rates. Accordingly, these rates have ceased to reflect the extent of stringency in the market. But it remains to be seen how long this position will continue.

Conditions in the inter-bank section were dull, not because there were no borrowers but because there were no lenders. The day-to-day money was quoted at 3½ per cent. amongst all banks, but this rate was more or less nominal, as not much business was reported. House money at call fetched 3¾ per cent., which is the same as in the previous week. One to three months' deposits were offered 3½ per cent., while the rate for four months and above was 3⅝ per cent.

A marked rise of Rs. 21.34 crores is disclosed in notes in circulation by the statement of the Reserve Bank of India for the week ended 5th October 1956, as compared with that for the previous week. This increase is not surprising, for the statement covers the first week of the month when there are always large payments to be made by both public and private sectors. It may, however, be noted that this increase of Rs. 21.34 crores is very much higher than the expansion of Rs. 15.67 crores witnessed in the first week of September 1956 and of only Rs. 7.49 crores recorded in the two weeks ended 10th August last.

As the increase in note circulation during the week under review has been more than offset by a reduction of Rs. 21.67 crores in notes held in the Banking Department, the total notes issued disclose a fractional fall of Rs. 33 lakhs only. Accordingly, no important changes have been recorded on the assets side of the Issue Department of the Bank, excepting a fall in the rupee coin corresponding to that seen in the total note issue.

In the Banking Department of the Reserve Bank, a precipitous fall of Rs. 16.83 crores is seen in the deposits of the Central Government. There has also been a substantial fall of Rs. 8.83 crores in the deposits of other Governments. Deposits of banks, too, are down but by only Rs. 2.27 crores. It is these recessions in deposits, reflecting as they do the payments made during the week, which are responsible for the increase in note circulation mentioned above. On the assets side of the Banking Department, balances held abroad are down by Rs. 4.62 crores. There has been a small increase of Rs. 90 lakhs in loans and advances to Governments, but other loans and advances show a perceptible net rise of Rs. 2.97 crores. This latter increase is mainly the result of expansion of Rs. 1.3 crores in loans to Scheduled banks against usance bills. Investments, however, show a fall of Rs. 5.03 crores; this follows a drop of about Rs. 20 crores witnessed in the preceding two weeks.

The Scheduled banks' statement for the last week of September, namely, the one ended 28th September, shows a rise of Rs. 5.02 crores in demand deposits in contrast to a fall of Rs. 5.72 crores in the previous week. Time deposits, however, have fallen by Rs. 3.45 crores. Borrowings from banks of demand nature have risen by Rs. 58.79 lakhs, whilst those of time nature have come down by Rs. 10 lakhs. A part of the increase in deposits has evidently been utilised to reduce the borrowings from the Reserve Bank against usance bills, for this item shows a drop of Rs. 4.28 crores. Advances in India have risen by Rs. 94.21 lakhs. Bills purchased, both inland and foreign, have also risen, the former by Rs. 96.43 lakhs and the latter by Rs. 1.04 crores. The total cash balances are lower by Rs. 1.04 crores but investments are up by Rs. 2.13 crores.

Barring a perceptible decline in the 3 per cent. 1986 Conversion Loan from Rs. 75-1 to a record low of Rs. 74-12, the gilt-edged market was uneventful during the week. The recession in the value of the Conversion Loan was due to the renewed fear of an increase in the Bank rate in the near future. Among the dated loans of the Union Government, there were few changes in their rates. In the low-interest bearing group, the 2½ per cent. long-dated 1976 was up by an anna to Rs. 83, while, in the 3 per cent. group, 1963-65 lost an anna to close at Rs. 94-6. There was no variation in the 3½ per cent. and other higher interest-bearing loans, but, in the new 3½ per cent. 1962 loan, there was a fall of one anna to Rs. 97-14. No changes were recorded in the rates for State loans, except that 4 per cent. 1968 Andhra had sellers at Rs. 98-14, as against Rs. 99 a week ago. The tone of the market was on the whole quiet and the turnover greatly restricted.

HIDES EASY

(From Our Own Correspondent)

KANPUR, *7th October*

During the week under review, the hides and kins market ruled easy. At the commencement of he week, persistent reports of demand for buffalo ides from overseas had a tonic effect. In addition, eports of favourable arrival also created a good mpression.

The closing quotations are: wet salted cow 1st rade Rs. 365 to Rs. 385; 2nd grade Rs. 260 to s. 280 and 3rd grade Rs. 140 per score; wet salted uffalo hides 1st grade 2 lbs. and 2nd grade 2 lbs. ozs. per rupee; goat skins: 1st grade Rs. 250 and nd grade Rs. 200 per 100 pieces; sheep skins s. 210 per 100 pieces.

SILVER WEAK, GOLD STEADY

(From Our Own Correspondent)

BOMBAY, *10th October*

A sharp break in silver prices characterised the trading on the Bullion Exchange during the week under review. There was heavy bull liquidation induced by rumours of withdrawal of export ban on silver coins from Tibet to India. In fact, it was reported that nearly 15 million coins had actually arrived in India from Lhasa. Further, advices from Calcutta forecasting a reduction in the import duty on silver led to professional offerings. At the same time, the offtake was not very encouraging. Consequently, prices drifted lower. The yellow metal, however, ruled fully steady, thanks to better enquiries in the face of smaller arrivals. The expectation of a further rise in the pre-*Diwali* demand and firmness of commodity markets also imparted some strength to this metal.

Forward silver (20th October settlement) opened the week at Rs. 174-8, as against Rs. 174-2 at the end of our last week. It moved down to Rs. 172 on the 8th inst. Lower prices, however, evoked some support and the settlement recovered to Rs. 172-11 before closing lower at Rs. 172-14 today. Business in *kartak* delivery (20th November settlement) commenced at Rs. 174-3 on Saturday. The contract steadily receded to touch a low of Rs. 172-12 today before winding up at Rs. 172-13.

Ready silver (.996 Mint) began As. 3 higher at Rs. 174-1. Thereafter, it declined to Rs. 171-13 on Monday. After recovering to Rs. 172-8 yesterday, it finished quiet at Rs. 172-4.

The floating stocks of silver are estimated at about 1,900 bars, as against 2,100 bars a week before. The average daily offtake during the week was 27 bars, while arrivals averaged 11 bars.

Forward gold (19th October settlement) met with buying support and gradually advanced from Rs. 103 to a high of Rs. 103-12 today. At the close, however, it was a shade lower at Rs. 103-10-6. *Kartak* delivery (19th November settlement)—business in this delivery commenced at Rs. 103-7 on the 6th inst.—improved by As. 5 to Rs. 103-11 yesterday. After declining to Rs. 103-7-6 today, it finished higher at Rs. 103-9.

Ready gold stood firm at Rs. 102-13 on the opening day. It put on Re. 1-1 to Rs. 103-14 before closing at Rs. 103-13-6 today.

The floating stocks of gold are estimated at 25,000 tolas, same as last week. The average daily offtake was higher at 3,400 tolas, as against 2,500 tolas in the previous week, while arrivals were less at 3,400 tolas, as against 3,500 tolas.

Ready silver at New York moved up from 90.78 cents to 91.00 cents. The price at London also improved from 79½*d.* to 79¾*d.*, while forward silver receded from 79⅝*d.* to 79*d.* London spot gold was slightly easy at 251s. 4¼*d.*, as against 251s. 5½*d.*

The following comparative table shows the trend of market during the week under review:

	10-10-56	Highest	Lowest	3-10-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, *8th October*

Sugar prices were dull and depressed during the week, with mill delivery prices drifting lower, due to slack outside buying enquiry. Unsold stocks with factories are still to the tune of 700,000 tons and the production for the coming year is expected to touch a new high of 2.0 million. The area under sugarcane at 4,717,000 acres is 6.16 per cent. over last year; in west U.P., the acreage of cane is put at 22 per cent. higher over last year. The Union Government is anxious to enable the sugar factories to start early crushing this season, and is reported to be considering some scheme in this connection. It is expected that the season will start by the end of the month as against the normal crushing period in the middle of November. The latest mill delivery prices (per maund) of sugar at Hapur are: Jaswant Rs. 28; Simbhauli Rs. 28-4; Mowana Rs. 27-12 to Rs. 28-8; Daurala Rs. 28-8 to Rs. 29-4; Amroha Rs. 27-10; Bijnore Rs. 27-10; Mansoorpur Rs. 27-8 to Rs. 29-4; Rampur Rs. 30-4; retail Rs. 30.

The *khandsari* market continued to rule dull and depressed, with poor buying enquiry in the face of good stocks. Prices were around Rs. 22 to Rs. 26 per maund.

New *gur* arrivals were almost *nil* during the week, due to rains. Old stock was still put at 16,000 maunds and prices of this quality improved during the week on better buying enquiry from east U.P. and Bengal and the week's offtake aggregated 8 wagons. The latest heavy rains have proved beneficial to standing cane crop. Old dry *gur* was quoted at Rs. 11, wet at Rs. 10-10, new nominal at Rs. 12 to Rs. 13-8 per maund.

Gur future *fagun* delivery prices moved narrowly during the week in purely speculative bouts of buying and selling. Opening at Rs. 9-14 last Monday, the delivery touched the highest and lowest at Rs. 9-15-4½ and Rs. 9-11-10½; it was today quoted near the opening level of Rs. 9-14-3.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *10th October*

The bearish trend noted last week in the cotton futures market continued during the week under review and cotton rates slipped further down. The break in values would have been more marked but for the emergence of some bullish factors which lent support to the market. These were, (1) reports of damage to the quality of crop, following heavy rains in certain leading cotton tracts like the Punjab and Khandesh district, (2) expectation of an export quota announcement, (3) anticipation of the abolition or at least a reduction of the export duty on cotton. These expectations did not materialise. On the contrary, there were reports that the outlook for the new crop is bright. All this weakened the sentiment of operators. To-day's closing quotations are considerably lower than those quoted last week.

M.G. Jarilla (March 1957) opened the week higher at Rs. 673 and moved up to Rs. 677 on short covering touched off by reports of renewed monsoon in Gujerat and Berar and favourable up-country advices. A virtual landslide followed later, due to selling pressure induced by expectation of American cotton imports and the fear of a further credit squeeze by the Reserve Bank. Absence of mill buying and support from investors aggravated the downward trend. Consequently prices came down to as low as Rs. 664 on the 6th inst. But the contract displayed steadier trend the next day following reports that the tail-end of the monsoon was doing considerable damage to the quality of the crop and it moved up to Rs. 673-8. It again fell to Rs. 662 today efore closing a shade higher at Rs. 663½. Fluctuations were more marked in the case of M.G. Vijay (April 1957). Opening the week at Rs. 796, two points higher, the contract moved up to Rs. 978 on good bull support. Afterwards it started its downward drift, touching a low of Rs. 776 on the 6th inst. On the 8th inst. it again improved, owing to report of damage to the crop, to Rs. 788. Today, after opening at Rs. 781 it dropped to Rs. 772 before winding up the session at Rs. 774.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	10-10-56	High	Low	3-10-56
Jarilla (March) ...	663½	677	662	671¾
Vijay (April) ...	774	798	772	794

Futures business in cotton will commence at Indore and Ujjain soon after the *Dusserah* under the auspices of the Central India Cotton Association —a newly formed trade body. Preliminary arrangements have almost been completed and a formal blessing from the Forward Markets Commission is awaited. Business facilities provided at Indore and Ujjain are expected to attract traders from Akola, Ahmedabad, Nagpur and Delhi. Mills in U.P. and Punjab might also take advantage of the hedging facilities. As business at Indore will cover only locally grown varieties, it is felt that Bombay's importance as an all-India centre will continue.

In sympathy with the futures section the spot market at Sewri also ruled easy. However, some brisk activity was induced by the apprehension that due to the recent rains the quality of the crop would deteriorate. Up-country buyers, especially mills of Ahmedabad were eager to purchase quality cotton. The basis of delivery contracts was steady.

In the export section Oomra, C.P.I., Jarilla and *Deshi* varieties attracted attention. There were also inquiries for Bengals, Dholleras, Kala and Wagad. In the foreign section interest was noted for Americans, Sudan and other African cotton.

The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below, the figures in brackets being last week's closing rates.

Bengal *Deshi*: 680 (700); Berar Jarilla 750 (770); Khandesh 765 (780); Vijay 945 (955); Oomra *Deshi* 730 (740); Moglai 710 (725). *Delivery Contracts*: Khandesh 197/3 December 110 (110); Berar 96 (95); Moglai 30 (30) 'on' Jarilla. 320 F December 76 (69); 216 F 100 (90); Vijay 13/16" 68 (62) 'on' Vijay.

The firm trend noted last week in Karachi futures market gathered momentum during the week under review. The helpful factors were absence of selling pressure and encouraging advices from up-country centres. Earlier in the week, prices of old crop ruled easy due to weak advices from New York but it later improved on buying support. N.T.R.G. January which had closed at Rs. 76-7 last week improved to Rs. 77-6 and March position put on, over the week, As. 15 to Rs. 76-8.

New crop business abroad, since last mid-May, has been of the order of one lakh bales, as compared with 118,000 bales a year ago. Of these, Japan alonge bought 70,000 bales, Hong Kong 4,500 bales and France 20,000 bales. Other continental countries and the United Kingdom showed little interest in Pakistan cotton. The following are the latest available spot quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 96-8, Punjab *Deshi* 79; 4 F. Punjab Roller 79-8; S.G. 80-14; L.S.S. Punjab Roller 79-14; S.G. 81-14; N.T.R.G. 82-2; S.G. 85-8; 289 F Punjab Roller 82-14; S.G. 84-14.

Cotton values in the Alexandria futures market ruled more or less steady during the week. The buoyancy which characterised trading in the previous week was replaced by a more cautious attitude. Though both Karnak and Ashmouni contracts opened the week lower than the last week's closing rates, values advanced later on bull support with the result that the week's closing rates are slightly higher than the previous week-end rates. The latest available rates—in tallaris per lb.—from the Alexandria cotton futures market are given below, the figures in brackets being last week's closing quotations:

Karnak: November 108.80 (107.25); January 107.70 (106.20); March 107.00 (105.4). *Ashmouni*: October 79.85 (79.15); December 78.65 (79.25); February 78.45 (79.70).

Modest gains were recorded by Liverpool cotton futures market during the week under review. Turnover in both ready and shipment cotton continued to expand. A considerable amount of hedge selling was absorbed by several large spot houses. Cheap United States cotton of all grades and staples have out-priced many other varieties of cotton in the Liverpool market. However. Brazilian, Sao Paulo and Mexican cotton continued to compete effectively with U.S. cotton; but their supplies are limited. Other growths, such as Indian, Pakistan, Syrian, Turkish, Nigerian, etc., are finding it difficult to maintain their position *vis-a-vis* U.S. styles. Trading in Egyptian contract remained idle and only a small end-of-season interest was evinced in Sudan cotton. The following are the latest available rates—in pence per lb.—from Liverpool:

American one inch Staple Contract: October-November 25.10; December-January 24.85; March-April 24.85; May-June 24.80; July-August 24.73. *American cotton Mixed Growth Contract*: October-November 25.25; December-January 24.95; March-April 24.88; May-June 24.81; July-August 24.74. *Egyptian Karnak Cotton*: November-December 60.00; January-February 60.00; March-April 60.00. *Sudan Cotton*: November-December 50.15; January-February 50.00.

Values in the New York market ruled generally easy throughout the week. The limited buying support that came up was influenced by larger export sales. The near position remained steady while forward months, on balance, were easy. The U.S. Department of Agriculture estimated, on 8th inst., this season's cotton crop at 13,268,000 bales of 500 pounds gross weight. This is 153,000 bales more than last month's forecast of 13,115,000 bales. It compares with the Department's goal—under planting and marketing controls—of a crop of ten million bales, with last year's crop of 14,721,000 bales and with the ten-year (1945-1954) average of 13,098,000 bales. This year's production will be supplemented by a reserve and surplus supply of 14,539,000 bales accumulated from past big crops. The production of American-Egyptian type cotton was indicated at 47,200 bales, as compared with 42,900 bales last year. Regarding crop prospects, it is reported that cotton suffered some damage and pickings were delayed on account of wind and rain in central and south Alabama, northern Florida, Georgia, Carolina and Virginia. Cotton growth is stimulated in Middle and Western portions of the main belt by sunny weather with cool days. In northern and western sections of the Texas harvesting, it is reported, is nearing completion.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	9-10-56	2-10-56	25-9-56
Spot	34.40	34.55	34.55
October	34.18	34.05	34.00
December	33.99	34.13	33.99
March	34.13	34.32	34.07

YARNS MOVE DOWN

(From Our Own Correspondent)

BOMBAY, 10*th October*

The bearish trend of the yarn market noted in the past fortnight gathered considerable momentum during the week under review. In fact, the market ruled depressed and values staged a further steep fall. Rayon yarns were subjected to selling, following offers at old prices by the local agents of the Continental manufacturers, but buyers were extremely hesitant to make purchases. There were reports of heavy stocks with importers, as well as with dealers and consumers. These reports induced nervous liquidation in forward deliveries which led to a sharp break in prices. In sympathy with rayon yarn and following disquieting advices of large accumulations of stocks from consuming centres, staple fibre yarns were also adversely affected. Cotton yarns were easy, thanks to rumours of the Government fixing "fair" prices for yarn and of the State Trading Corporation taking over the distribution of mill yarn to handlooms.

October delivery Snia rayon yarn (120 dull cones) was hammered down by Rs. 16 to Rs. 745. December position dropped Rs. 14 to Rs. 761. In the spot section, 150 Japan declined by half an anna to Rs. 4-0-6. 120 Italy and 150 Italy lost a like amount to Rs. 3-12-6 and Rs. 3-14, respectively. 120 Japan was neglected at Rs. 3-11-6. Among indigenous yarns, 150 Bt. cones 1st grade fell by an anna to Rs. 3-2. 120 Bt. cones 1st grade suffered a similar loss and were done at Rs. 3-10.

Values of staple fibre (40×2) forward deliveries drifted lower. October contract slumped by Rs. 17 to Rs. 616. December contract retreated from Rs. 639 to Rs. 622. Spot (40×2) Citys shed nine pies to Rs. 3-5. Centurys eased by half an anna to Rs. 3-6. New Greats lost three pies to Rs. 3-5-6. Among foreign yarns (80×2), Paramounts and K'Suns declined by an anna each, the former to Rs. 5-14 and the latter to Rs. 6-4. Fujis decreased by six pies to Rs. 5-14-6. S'Sellos were quiet at Rs. 5-13.

There was selling pressure in sixty count cotton yarns. Raghuvamshis were the worst sufferer, their quotation moving down by As. 14 to Rs. 57-8. Moderns and Finlays dropped As. 8 each to Rs. 61-4 and Rs. 60-8, respectively. Forty counts also encountered selling. Minaxis slipped by As. 8 to Rs. 27-7, Maduras by As. 6 to Rs. 28-8, and Moderns by As. 4 to Rs. 28-12. Among 80s, Mahendras receded by As 12 to Rs. 71. Moderns were dull at Rs. 71. Deals in 30 counts Apollos were put through As. 2 lower at Rs. 22-10, while Maduras were somewhat favoured with a rise of As. 2 to Rs. 24-2 in price. Among 20s, Hinds lost As. 2 to Rs. 19-4. Moderns were quiet at Rs. 19-4. Among 10s, Elphinstones declined by an anna to Rs. 14-9. Moderns were unchanged at Rs. 15, as also Podars at Rs. 14-12.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	10-10-1956	3-10-1956	26-9-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia October ..	745 0	760 0	769 0
120 Dull Cone Snia December ..	761 0	776 0	783 0
120 Japan (per lb.)	3 11½	3 11½	3 12
150 Japan (per lb.)	4 0½	4 1	4 1½
120 Italy (per lb.)	3 12½	3 13	3 13
150 Italy (per lb.)	3 14	3 14½	3 15
Staple fibre yarn (per case of 200 lbs.)—			
40 × 2 October	616 0	633 0	637 0
40 × 2 December	622 0	639 0	642 0
40 × 2 New Great (per lb.) ..	3 5½	3 5½	3 6½
40 × 2 Century (per lb.) ..	3 6	3 6½	3 6½
40 × 2 City (per lb.)	3 5	3 5½	3 5½
Cotton yarn (per bundle of 10 lbs.)—			
10s Podar	14 12	14 12	14 13

80s Mahendra	71 0	71 12	72 0

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, 10*th October*

The oilseeds market reflected a bullish trend during the week under review. During the first three sessions of the week, while the castorseed and linseed sections forged ahead on export demand, groundnut improved markedly on demand by crushers. Although linseed slightly reacted on profit-taking at higher levels and lack of support in the following sessions, groundnut and castorseed received further momentum following reports of unfavourable weather conditions in the producing areas. Moreover, groundnut spot was in great demand from crushers in view of the impending *Diwali* festival, and castorseed was in demand from speculative quarters on expectation of additional overseas demand. The market closed today with a steady undertone.

Groundnut February contract opened the week under review at Rs. 129-4 and steadily gained strength for the aforesaid reasons and reached the highest level of the week on 9th at Rs. 132-12. On profit-taking, however, it receded to Rs. 130-6 at close today, gaining over the week as much as Rs. 2-6. In the spot section, Bold F.A.Q. spurted from Rs. 35-4 at the beginning to Rs. 37 at the close today. Coromandel ready, too, put on no less than Rs. 4 over the week at Rs. 37-8. Khandesh quality, again, rose by Rs. 4-4 to Rs. 37-12 during the week. Groundnut oil *ex*-mill improved by Re. 1-2 at Rs. 19-12, and railway receipt by As. 14 to Rs. 19-3.

Castorseed May 1957 rose from an opening quotation of Rs. 120-14 to a high of Rs. 126-2 today and finished the week at Rs. 124. It thus gained over the week Rs. 3-10. In the spot section, while Bold ready hardened by Re. 1-6 to Rs. 28-12, Madras rose by As. 14 to Rs. 28-12. Oil B.S.S., on the other hand, climbed up by Re. 1 to Rs. 17-10 and Oil Commercial by As. 10 to Rs. 16-8.

In the futures section of linseed, May 1957 contract spurted to Rs. 27-1 from Rs. 26-8 during the first three sessions of the week. Today, however, it finished at Rs. 26-8. In the spot section, Bold ready increased by As. 12 over the week to Rs. 32-4 and October-November by As. 6 to Rs. 31-14. Linseed oil ready was quoted today at Rs. 17-10, that is As. 8 higher than a week ago.

Among other seeds, *kardi* seed, Bold ready and February-March put on As. 4 each at Rs. 17-6 while *niger* seed ready F.A.Q. and Madras quality rose by As. 4 each to Rs. 27-11 and Rs. 27-8 respectively over the week.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	10-10-1956	3-10-1956	26-9-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	130 6	128 0	131 14
Khandesh Quality Ready (per cwt.)	37 12	33 8	34 12
Dec.-Jan.	26 6	—	26 4
Linseed—			
May 1957	26 8	26 8	26 8

Commercial (per quarter) ..	16 8	15 14	15 14
Linseed oil—			
Ready	17 10	17 2	17 4

SUGAR IRREGULAR

(From Our Own Correspondent)

BOMBAY, 10*th October*

Conditions in the sugar market disclosed a distinctly mixed trend during the week under review. Thus, while the spot section ruled steady, the forward section was easy. The steadiness of spot sugar was due to a fall in the arrivals of indigenous sugar which were only 3,300 bags, as against 12,900 bags and 35,500 bags a week and a fortnight before, respectively. It was also due, to some extent, to the delay in the issue of normal monthly release. Forward sugar came in for selling, on rumours of a release of 160,000 tons for sale in the free market today.

Ready large grain indigenous sugar improved by a rupee to Rs. 92-Rs. 98 per bag. Small grain was fully maintained at Rs. 87. Medium grain hovered round Rs. 88-Rs. 90. British refined sugar was unchanged at Rs. 90-8 per 2 cwts.

Asho delivery contract for 'C' grade sugar receded from Rs. 89-12 to Rs. 88-14; it was quoted today at Rs. 89-2. The contract is due to be squared up on the 20th inst.

The delay in the monthly release of sugar, it is said, is a sequel to the representation made by the northern mills to the Union Food Ministry. Such a delay, the mills are reported to have told the Ministry, would not only help them dispose of the large stocks of sugar released earlier but unsold and also stabilise the prices which are falling.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 10*th October*

Malabar black pepper, during the week, continued to rule weak, with prices tending downwards owing to poorer foreign enquiries coupled with the anxiety on the part of the growers to sell in view of the fast-approaching new season. The prospects for the new crop, as far as Cochin Travancore area is concerned, are reported to have improved owing to favourable weather during the last two months and the new crop is expected to arrive by the first week of November.

Both New York and Singapore established new low levels, the former selling spot at as low as $0.28 and the latter at Str. $78 without attracting business.

Alleppey was willing seller at Rs. 700 but no worthwhile quantity was lifted as most of the exporters were already over-bought and were reported trying to liquidate their own holdings before the movement of the new crop. Garbled at Cochin are offered at Rs. 1224. Some small business with Eastern Europe is reported done but the quantity is not enough to support the market. Poorer inland consumption during the last month also made holders rather nervous.

During this year when pepper prices moved between Rs. 800 and Rs. 700 the entire old pattern of trading seemed to have changed. Formerly, when pepper prices were very high, the exporters were buying from growers and selling to overseas buyers without maintaining any sizable stock. But the present prices, having been taken near the bottom, every exporter has tried to build up stock. In a weak market, when foreign countries are buying hand to mouth, such holding by second hands created unhealthy competition with the first hands.

With the proximity of the new season, there are enquiries about the estimate of new crop, the balance of exportable surplus and the estimate of home consumption. We give hereunder our own figures (estimates) collected from various sources: (1) Our tentative estimate for the new crop Malabar black is between 20,000 and 21,000 tons. (2) Our estimate of exportable surplus as on the 1st October is about 4,000 tons (exports from November to September came to 11,825 tons). (3) Our estimate of home consumption is in the vicinity of 9,000 tons.

In A.S.T.A. section, turnover is very poor and whatever little is done, is by way of profit-taking or short-covering. There are sellers for October shipment at $0.28½ and November-December at $0.27⅞. In delivery section, bulls tried to maintain the market but they were unsuccessful. This is because, October delivery is quoted higher than that of December. No investor would come forward to hold or store the goods when the next delivery is selling at discount.

Following are today's nominal quotations: Ready delivery Rs. 93 per Bengal maund; October Rs. 652½-657½ and December Rs. 635-640 per candy of 5½ cwts.

TEA STRONG

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 5*th October*

Approximately 11½ lakhs pounds were on offer in Sale No. 27 which was held on Wednesday, the 3rd inst. Quality of teas were improved on previous auction and there were some useful teas on offer from all districts. A very strong general demand characterised the auction. Medium sorts, in particular, were competed for freely and prices advanced As. 2 to As. 4. High grown teas were irregularly dearer, although some teas in this category sold below valuations. Black leaf Middle East types had strong support and generally sold at a premium. Whole leaf grades were rather easier on last week's rates.

The quotations were: Plain B.P. Re. 1-9-6; low medium B.O.P. Rs. 2; medium B.O.P. Rs. 2-4 to Rs. 2-6; good B.O.P. Rs. 3; and well made black leaf O.P. Rs. 2-10.

London Market: *Sale of 1st October* 1956:—Very irregular and generally easier. Mediums strongest feature. C.T.Cs. show biggest drop.

Sale of 2nd October 1956:—Dearer tendency everything, except light liquoring.

Colombo Market: *Sale of 1st October* 1956:—Active demand at dearer rates. Plainer sorts up 10 to 15 cents. Better liquoring teas 30 to 50 cents.

Sale of 2nd October 1956:—Strong demand generally. Dearer rates, except best B.O.Ps. which were sold below last week's closing rates.

Calcutta Market: *Export*:—Excepting thin liquoring Assam brokens, very strong. Rousing support for all grades.

Internal:—Sale is being held only today.

Export Quota:—There has been an announcement by the Government of a further 10 per cent. release of export quota on the "best crop basis", aggregating 50 per cent. for the current year so far. As the market circles were expecting a release of 15 per cent. the price of quota rose from 23 pies to 30 pies, at which rate business was done. At the time of writing, there are buyers at this figure.

Sale No. 28 will be held on Tuesday, the 16th inst. and dust sale T on the 9th inst.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*373 Dust Sale T.*—475,000 lbs. offered. Strong demand for low and medium descriptions which were dearer. Best liquoring rather easier. Middle East types entirely neglected."

RAW JUTE ARRIVALS LOWER

(From Our Own Correspondent)

CALCUTTA, 9*th October*

Following restricted interest shown by foreign buyers, jute goods were quiet during the week under review, but prices were maintained earlier in the week and advanced fractionally as the week progressed. It was expected that foreign buyers would need to buy fair quantities in the coming weeks and for this reason sellers were not inclined to discount quotations. After the recent heavy purchases, it was evident, buyers were having a respite. In view of the forthcoming holidays, speculators were also disinclined to add to their holdings. However, since a good portion of mills' production has already been booked for forward deliveries extending up to March next, bazar stockists were not prepared to entertain a nervous feeling despite the week's dull report on lack of business. Due to this factor, forward deliveries have again begun to be quoted at a premium. The markets were closed on Tuesday and Wednesday last, and the re-opening on Thursday last was high-lighted by the announcement by Mr. D. P. Goenka, Chairman of the Indian Jute Mills' Association, to the effect that it was very likely that futures trading in jute goods, suspended in Calcutta in 1950, would re-commence on the *Diwali* Day. Government action for suspension had followed violent changes in prices of jute goods as a result of activity in futures trading.

The Forward Markets Commission had examined the need to have a futures market, and had subsequently recommended to the Government the desirability for such a market which should be run on the lines of the East India Cotton Association. It is expected that the futures market would now be run on ideal lines, as it would help maintain prices at a reasonable level in periods of dullness. The vacuum created by the absence of futures trading has been felt by mills, and jute goods are one of the commodities the prices of which, in bouts of lethargy, go down so low as to force mills to withdraw from the market. The Government will, however, watch carefully the activity in the futures market, and if operators play their part well the future of the market is assured.

The recent floods in West Bengal and the abnormal rise in the level of the Ganges have affected raw jute movements from upcountry centres. Naturally, arrivals in the Cossipore market have been lower during the week. This circumstance has aided the price-trend in raw jute despite the lack of interest by mills. Prices were more or less unchanged, but owing to the need to have cash to celebrate the *Pooja* cultivators in the mofussil areas were said to have made more offers. All arrivals met with ready buyers who had to fulfil commitments for early delivery jute. Indian northern bottoms had sagged down to Rs. 28-8 from Rs. 29 on Thursday last but by the week-end picked up to Rs. 29. Local daissee bottoms for October-November delivery were unchanged at Rs. 29, although for a time the quotation was higher at Rs. 29-8. From Rs. 28-8, Assam bottoms hardened to Rs. 29. Business took place at Rs. 28-12 a maund for Northern Dhubri bottoms, basis ready bills of lading. Cuttings changed hands at Rs. 124 per bale.

A Government tender for 18,000 bales highlighted attention in the sacking section of the jute goods market. On Thursday last, ready B. twills were quoted at Rs. 112-8, as against Rs. 111-12 on the previous working day which was Monday. Business was lacking, but for the aforesaid reason the price had fractionally improved to Rs. 112-14 which was the closing rate for the week-end. However, yesterday a very weak trend was in evidence and ready B. twills sagged to Rs. 112. Forward quotations were again at a premium during this week; on Thursday at Rs. 112-12 the Jan.-March goods were at a premium of As. 4 which widened to As. 8 as the week progressed. On the other hand, goods for delivery within one month were earlier at a premium of As. 10, which was lessened to As. 6. The report of rise in U.S. stocks of burlap, despite an increase in consumption, affected sentiment in the hessian section; the ready 40" 10 oz. sagged to Rs. 42-4 by the week-end from Rs. 42-9 on Thursday last. In sympathy with the general trend, there was a further recession to Rs. 42-13 yesterday. October goods were throughout the week quoted at a premium, and October-December goods were at par with the ready goods. On the other hand, a premium, and January-March goods were priced at Rs. 42 and the ready rate at Rs. 42-9; both rates subsequently declined to Rs. 41-4 and Rs. 41-13 respectively.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 9*th October*

There was strong demand for tea, both for export and internal consumption, during last week's auctions which could not be covered in last week's report, following postponement of the auctions in view of the earlier holidays during the week. This was not surprising in view of the increased demand for the good quality teas for export; the U.K. continues to be a great buyer. Indian exports of tea may well reach a higher total this year than last year. For the eight months ended August 1956, India exported to Britain 200 million lbs. of tea, than 28 million lbs. more than in the corresponding period in 1955. In the month of August alone exports to the U.K. were 22 million lbs. which was 4½ million lbs. more than in August 1955. Auctions held in London, Colombo and in Chittagong during last week had all the common trend of higher demand for the superior teas. Naturally, these factors were reflected in the auctions held in Calcutta yesterday as well as last week.

North Indian tea output has been increasing and the abundance of poor quality teas has been a source of great anxiety for the gardens. This has led the north-east Indian estates to decide on restriction of output by ceasing plucking from a date to be fixed later on. The south Indian output up to the end of July at 73 million lbs., however, registered a slight decline, exports were higher by 5 million lbs. at 46½ million lbs. Shipments to Great Britain alone accounted for an increase of 2½ million lbs. A feature of considerable importance was Australia taking as much as 29.6 million lbs. during the seven months to July or an increase of 2.8 million lbs. Exports of Indian tea to the United States and Egypt have also recorded striking increases. These trends point to the need of Indian gardens to produce more quality teas.

However, the week under review was not devoid of disturbing news. Tea gardens in Assam have reported heavy accumulation of tea owing to their inability to get shipping space for sending tea to Calcutta warehouses following the strike by crews of joint steamer companies. Some gardens have resorted to despatching tea by air, and this has naturally increased planter's cost for tea. Some accumulation has also been reported at rail-heads. The floods caused as a result of heavy rains in upper Assam and the abnormal rise in river levels have worsened the transport situation.

During the export auctions, held on Thursday, last, offerings amounted to 47,400 packages. Prices of whole leaf grades and black fannings gained by As. 4, and those of low mediums and commons by As. 2. Keen competition was offered to quality teas of normal manufacture, raising their rates by As. 2 to As. 6. Medium C.T.Cs. were easy by As. 3 to As. 4, but there was good demand for the very best C.T.Cs. Tippy teas rose above valuations and among Darjeelings the flavoury lots were in better demand. The quotations were: best C.T.C. Assam B.P. Rs. 3-6, medium Assam B.P. Rs. 2-2 to Rs. 2-3, clean black pekoe Rs. 2 and plain B.P. Re. 1-12 to Re. 1-12-6.

Last week's internal sale was held on Friday, when dusts offered aggregated 17,024 packages. Demand was strong, and buyers' attention was again focussed on clean black leaf teas suitable for export. Commons and mediums advanced, while the poorer C.T.Cs. fell fractionally and the better liquoring C.T.Cs. by As. 3 to As. 4. The quotations were: Best Assams C.T.C. Rs. 3 to Rs. 3-2, medium Assam C.T.C. Rs. 2-6 to Rs. 2-8, medium Assam grainy dust Rs. 2-4, and medium Dooars Rs. 2-1 to Rs. 2-2.

Leaf grades aggregating 1,238 chests were catalogued. These met with good demand, leading to rise in prices.

COARSE GRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 8*th October*

A mixed trend prevailed in the foodgrains market during the week. While wheat prices ruled steady, those of coarse grains tended lower. The latest beneficial rains will increase coarse grain sowing acreage, although sowings will be delayed and some loss has been reported to standing *kharif* crops. The Union Food Minister, Mr. A. P. Jain, has reiterated the Government's intention to check the rising trend of foodgrain prices, but the possibility of introducing physical controls, procurement or rationing has been ruled out. If, however, any need were to arise, certain restrictions on movement of foodgrains might be imposed.

Wheat average quality, after early fall in midsession to Rs. 14-12 per maund, following the withdrawal of sales tax on foodgrains by the State Government, recorded modest gains to Rs. 14-14 per maund in the week-end, due to a decline in the local arrivals, which averaged 100 maunds daily due to rains. Farm quality continued to be steady, due to good consumers demand in the face of poor arrivals; it was done at Rs. 16-4 per maund. Outside buying enquiry for wheat was dormant and stock was unchanged at 80 *khaties*.

Rice prices eased slightly on advices from the producing areas where new crop arrivals were increasing and were quoted at: *Basmati* Rs. 23 to Rs. 28; *manipuri* Rs. 18-6; *rangooni* Rs. 18-8; coarse quality Rs. 15-6.

Gram prices eased appreciably by As. 8 per maund to Rs. 11-4 for local and to Rs. 11-14 for Punjab produce, due to heavy stocks at 126 *khaties* and good sowing prospects due to rains. *Barley* and *bejhar* prices also lost As. 4 and As. 8 per maund, respectively, to Rs. 11-6 and Rs. 10-8 per maund, due to poor consumers demand. Prices of other gains were also quoted lower at: Maize Rs. 11-4, *jowar* Rs. 12-12, *guwar* Rs. 9-10, and *bajra* Rs. 11-10 per maund.

Pulses also recorded a downward trend and peas was transacted As. 4 lower at Rs. 11-8 for *dara* quality and at Rs. 12-6 for white quality, with stock position unchanged at 55 *khaties*, due to poor outside buying enquiry. *Arhar* was on request from the South and the week's offtake aggregated 3 *khaties*, with remaining stock at 88 *khaties*, but prices declined on good prospects for the new crop. Other pulses also eased in sympathy and were quoted at: *Urd* Rs. 15 to Rs. 18, *moong* Rs. 12-4, *masoor* Rs. 14-4.

Pulses futures, after early fall on bear pressure, advanced towards the week-end on Punjab support and on Monday were quoted at:—Peas *mangsir* Rs. 10-15-10½, peas white Rs. 11-5-9; *arhar mangsir* Rs. 11-7-3, *guwar maha* Rs. 9-7; *urd maha* Rs. 14-10.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 9*th October*

Perceptibly easier conditions prevailed in the metal market during the week under review. This was attributed to the change in the international political situation, following bright prospects of a peaceful solution of the Suez Canal dispute. Advices from overseas markets also showed a recession in prices.

Locally, electrolytic copper declined from Rs. 222 to Rs. 215. Demand was on the lower side with, as usual, more attention being shown to scrap. Utensils scrap was priced at Rs. 198 per cwt. From Rs. 528, tin sagged to Rs. 522. This trend was in full accord with that depicted in the Singapore market, and as such the local quotation was equal to the replacement cost. Electrolytic zinc opened at Rs. 67. As the week progressed, the general behaviour of the market affected sentiment and the rate sagged to Rs. 65-8. Virgin lead at Rs. 80-8 was easier by As. 8.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 8*th October*

After a quiet opening, the linseed market ruled firm, following a Government tender for linseed oil, and prices displayed a steady rise. Buyers were in evidence, with a view to exporting linseed oil, while sellers were very reserved. Arrivals were very poor. Somewhat better conditions prevailed in the oil section, and there was a small demand from local shippers and crushers. Activity was small. The latest available quotation for ready October is Rs. 24 per maund.

TRADING IN KIPS POOR

(From Our Own Correspondent)

MADRAS, 8*th October*

Trading in kips was poor, due to lack of buying interest of U.K. importers. Prices declined slightly. There were some enquiries for buff calf but at low prices. Shippers expected that good orders in kips would be forthcoming during the Leather Fair week in the U.K. (1st to 5th October), but were greatly disappointed.

There was a moderate volume of shipment business in tanned goat skins at unchanged to 3*d*. lower levels. Tanned sheep skins prime tannages were in good demand.

The next London Tanned Skins Auctions will take place on the 15th inst., when 950,000 tanned goat and 300,000 sheep skins will be available for sale. Lower selections are expected to record lower prices.

Notice

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE

IN THE BOARD'S CIRCULAR LETTER TO the Shareholders of INDIAN IRON & STEEL CO., LTD., dated 1st October 1956, notification has been given that the Government of India are unable to agree to any increase in the rate of dividend on the Ordinary Share Capital of the Company. At a meeting of the Board of Directors held today, the Directors have accordingly recommended payment of a dividend of One Rupee per share free of Indian Income-tax being at the same rate as the preceding year. This dividend awaits the sanction of the Shareholders at the Annual General Meeting to be held on the 30th November 1956.

The Ordinary Share Register of the Company will be closed from the 20th November 1956 to the 30th November 1956, both dates inclusive, and the dividend, if sanctioned, will be paid on or after the 17th December 1956, to those shareholders whose names appear on the Register of Members on the 30th November 1956.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,

ABBREVIATIONS:
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable.
(J) Income-tax free. * Loans held entirely by the Trustees. *** Rupee Counterparts
†Bombay State Transport. †† Rate of interest reduced from 6 to 3 per cent. with effect from 1st June, 1944.
‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1955. ‡—Interest free to first 15 years. §—Interest free for first 7 years.
§§—These shares carry the rights of a preferential dividend at the rate of 4 per cent. (of which only 3 per cent. is cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.
†Only 7 per cent out of the 10 per cent. dividend is cumulative
‡‡In addition to the fixed cumulative dividend of 3 per cent these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.
†††These shares can be redeemed at Rs. 105 at any time by special resolution
‖These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.
¶These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

INDIA'S REPLY TO WORLD BANK

IT is unfortunate that the realistic and well-meant observations of the World Bank President, Mr. Eugene R. Black, on India's second Plan should have evoked a certain amount of adverse criticism in this country. Some seem to regard his advice as amounting to undue interference with the philosophy underlining the Government of India's economic and social policies. This inference is absolutely unwarranted. As mentioned in these columns last week, Mr. Black's advice is to be treated as that of a banker to his client. A bank has a right to enquire into the economic soundness of a person—his method of business and his ways of living—who wants to borrow from it. If he is not prepared to subject himself to such a scrutiny, he has no business to seek a loan from the bank. The relationship between the World Bank and India is no different. The World Bank is entitled to say what it feels about India's economic policies and plans. It has also a right to withhold loans to India, or to any country for that matter, if it has reasons to feel that this country's economy is not being managed on proper lines.

The World Bank is not a relief organisation or a charitable body. It is a business organisation, which, with the initial capital subscribed by its members, seeks to mobilise the savings of people in all parts of the free world for international investment. It has to be financially sound, if it is to gain the confidence of investors. It has also a philosophy, which every one who wants to do business with it must understand. Its philosophy is to encourage free trade through free enterprise. It is one of the three economic institutions brought into existence shortly after the war to give practical shape to the objectives of the Atlantic Charter. When India became a member of the World Bank, it subscribed to the principles and philosophy of the Bank. It is in furtherance of its philosophy that the Bank has brought into existence another financial institution, known as the International Finance Corporation. The latter will utilise its resources solely for financing projects sponsored and managed by private enterprise. If a country decides to follow a particular method of economic progress which tends to conflict with the philosophy of the World Bank, it must be honest enough to recognise that it cannot hope to get much assistance from that source.

Although the World Bank stands for free trade through free enterprise, it is not opposed to mixed economy. On the contrary, it has recognised that a government, especially of an underdeveloped country, has to play an important part in the economic development of its people. It has freely given large loans to State-owned and State-managed public utility undertakings engaged in providing such basic services as transport, power and irrigation, without which there can be no economic development. But it does not view with favour a mixed economy in which the State dominates over the economic activities of its citizens through too many restrictions and by itself owning and operating a large part of the industries, trade and finance. The mixed economy of the type which India has now chosen to follow, namely, the one in which the State will have the dominant share, stands too far to the left of the mixed economy of the World Bank's conception. If this point is recognised, it will not be difficult to appreciate the reason why the World Bank is rather reluctant to grant India a consolidated general loan, as it has done in the past to some of the European countries and Australia and only a few days ago to Italy, or to commit itself to any specific figure of loan for the second Plan period. It is no use blaming the World Bank for its refusal to do so. And it will be ill-becoming on our part to attribute bad motives to this institution. India can, however, expect from the World Bank assistance for its specific projects, provided they are sound and their execution is patterned on the lines of the Bank's policies. It is well known, for instance, that the Bank is opposed to giving finance to some of the industrial projects which are State-owned, but which are not beyond the capacity of free enterprise to run them. The World Bank President, it may be noted here, has expressed his readiness to consider specific investment projects which the Government of India desires to put forward.

It is gratifying to find that Mr. T. T. Krishnamachari, India's Finance Minister, is not one of the critics of the type referred to at the outset. In his reply to Mr. Black, he has welcomed the comments of the World Bank in a commendable spirit of humility. He has not questioned the Bank's goodwill to India, of which, he says, "we have absolute assurance." His remark that "we are neither omniscient nor infallible; nor are we so rigidly wedded to any course of action as not to alter it, if it becomes apparent to us that we are mistaken" shows that the Government is still keeping an open mind. But the difficulty with the Government of India is that it takes too long to realise its mistakes, with the result that the country's progress happens to be slower than it need be. Many instances can be given to prove this statement. Suffice it to give two, one old and another still fresh.

The development of steel industry is an old instance. If India is lagging behind the rest of the world in the matter of steel production, it is due to the defective industrial policy of the Government of India. As was mentioned in these columns last week, soon after the Congress Party came to power, it decided to reserve expansion of steel industry to the public sector and kept the Sword of Damocles hanging over the existing units by saying that their future ownership would be decided 10 years later. None can seriously deny that this policy was based on the ideological consideration that all basic industries should be owned and controlled by the State. We all know the result of this policy. The Government could not do what it wished and the private sector in the steel industry did not have much heart to expand its activities. It took seven long years for the Government to realise its mistake and eight years for admitting it in public. The cost of this mistake is incalculable. It is reflected not only in the present shortage of steel which is holding up the economic progress of the country and is resulting in a heavy drain on our foreign exchange, as the gap is sought to be closed with imported steel, but also in the increased capital that has to be expended on the steel plant. If the wisdom that dawned on the Government a year and a half ago had come in 1948, the country would have saved at least Rs. 100 crores, if not more, in terms of capital alone. Since such los

financial stability" and that it will "depend wholly on the pace tt which development proceeds." This remark is evidently in reply to the World Bank's comment that the second Plan is somewhat over-ambitious. But we do not know how "social stability" can be preserved, if economic stability is disturbed as a result of trying to implement a plan for which the country does not command adequate resources. Six months ago, Mr. Krishnamachari himself said the very same thing, which Mr. Black has done in his letter to him. Speaking in Parliament on 16th April 1956, Mr. Krishnamachari approvingly quoted from Arthur Lewis's book, *The Theory of Economic Growth*, in which the author maintains that "societies are not necessarily wise to choose to speed up their rate of growth above their current level." He then said: "If I have any say in planning (which he has now as a member of the Planning Commission), I would not commit this country to a type of planning which, while it might seem to meet our immediate aspirations, would, in actual fact, be impossible of achievement." Almost at about the same time, Mr. C. D. Deshmukh, the then Finance Minister, confessed in public the existence of serious defects in the Plan and admitted that the investments contemplated in the Plan were beyond the capacity of the country and that it might be necessary to extend the period of five years. In the light of these comments, as also the well-reasoned and well-known arguments of Mr. K. C. Neogy, another author of the Plan, it is difficult to see how anyone in this country can take exception to the remarks of Mr. Black or feel convinced of Mr. Krishnamachari's reply.

The Finance Minister avers that private enterprise in India is being given enough scope for development, that the Government's approach to this question is not very different from what Mr. Black states it should be and that "the Industrial Policy Resolution was not intended to be an ideologically dogmatic document and has not been interpreted as such." This is a half truth. The spokesmen of private enterprise also do not agree with the Minister, as witness the remarks of Mr. Tata at the last annual meeting of the T.I.S.Co., as well as the speeches delivered by scores of business men during the past 12 months. If the Government's policy is that "the respective roles of public and private enterprise should be fixed entirely on a basis which will ensure the most effective contribution of each to economic development," why is it that it has reserved to the State exclusive responsibility for new undertakings in a large number of industries, including oil, coal and other minerals, where free enterprise has proved its ability? Why did it nationalise life insurance? Why has it permitted nationalisation of gold mining by the Mysore Government which involves payment of compensation in foreign exchange? Why has it brought under State trading even those branches of internal and external trade, where free enterprise has served the country ably?

WORLD AGRICULTURE

AN economic analyst, who is intent upon studying some particular segment of world economy, is apt to get his picture out of focus, if he cannot study his subject against the world background. This is particularly true of the study of world agriculture. Although it might be useful and convenient to isolate agricultural trends for purposes of study, it cannot be too strongly emphasised that agriculture is as much a part of world economy as any other. What happens in the industrialised West has its repercussions on the agricultural East. A high level of automobile activity in the U.S. or the U.K., for instance, is a matter of utmost significance to the rubber tapper in Malaya. Similarly, a famine or a series of crop failures in the agricultural countries may conceivably mean a loss of valuable markets for industrial countries. It is, therefore, gratifying to note that the U.N. Food and Agriculture Organisation (F.A.O.) has, year after year, presented its study of world agriculture against a wider economic background, relating its own excellent documented analysis of world agricultural trends to the trends in industrial countries. Its latest report, the *State of Food and Agriculture* 1956, makes yet another contribution to the study of the inter-connections between agriculture and industry, besides presenting a comprehensive account of the world food and agricultural situation.

World agricultural production has continued to maintain its upward trend which has been its most notable feature in post-war years. In 1955-56, the index of agricultural production (Base: pre-war average=100) was 126, as against 122 in 1954-55 and 110, being the average for the years 1948-49 to 1952-53. It is also noteworthy that the increase in production continues to be about 1 per cent. ahead of the annual increase in world population. The index of *per capita* food production in 1955-56 (Base: pre-war average=100) was 104, as compared with 102 in 1954-55 and 96, the average for 1948-49 to 1952-53. But this is an overall picture which obscures the fact that a substantial proportion of increased agricultural production is concentrated in the sparsely populated parts of the world, namely, North and Latin America and Africa. Thus, whereas the index of food production for the world as a whole was 126 in 1955-56, it was 158 for North America, 142 for Latin America and 140 for Africa. The *per capita* food production was 104 for the world as a whole; it was as high as 121 for North America but only 92 for the Far East and 106 for the Near East. The following table gives the estimated world (excluding U.S.S.R., Eastern Europe and China) production of major commodities:

World Agricultural Production
(In million metric tons)

	1934-38 Average	1948-52 Average	1954-55	1955-56 (P)

(P)—Preliminary.

The trends in world trade in agricultural commodities, as is well known, determine the state of prosperity in many of the underdeveloped countries. It is, therefore, satisfactory to note that the volume of world trade in agricultural products increased sharply in 1955 and was some 5 per cent. greater than in the preceding year, when the pre-war level had been reached. The increased volume of trade in 1955 was, however, largely offset by a decline in price; as a result of this, the value of agricultural products increased by only about 1 per cent. Further, it must be noted that the increase in the volume of world agricultural trade failed to keep pace with the increase in world trade as a whole. Thus, while the volume of world trade in agricultural commodities is now only about 5 per cent. above pre-war levels and 10 per cent. less than in the late nineteen twenties, the volume of world trade as a whole is some 70 per cent. larger than in pre-war years and 50 per cent. greater than in 1929.

In assessing the importance of world agricultural trade, one must bear in mind that international trade continues to be an exchange of manufactured goods for primary products, despite all the movements in agricultural countries towards national self-sufficiency in manufactured goods and, in industrialised countries, towards increased agricultural production and evolution of substitutes for agricultural commodities. Thus, the Secretariat of the G.A.T.T. has computed that, in both 1952 and 1953, non-industrialised countries exported about 60 per cent. by value of world shipments of agricultural products and, in their turn, imported some 50 per cent. of world shipments of manufactured goods. These transactions, which consisted largely of the direct exchange of agricultural products for manufactures, accounted for nearly 50 per cent. of the total value of world trade. It is true that some industrialised countries also export agricultural commodities; such exports account for about 40 per cent. of the world shipments of agricultural products. But these countries generally exchange their agricultural commodities for industrial goods, so that the character of international trade still remains one of exchange of industrial goods for agricultural products.

Against this background, it is worthwhile examining the relative trends in agricultural trade and industrial production. From 1913 to 1927-30, the volume of world manufactured production increased by 40 per cent. and the volume of world trade in agricultural commodities also increased by 40 per cent., though the increase in real value of the latter was only 17 per cent., thanks to the fall in prices. From 1927-30 to 1954-55, the growth of world manufactured production was much faster, rising by 130 per cent. But, by 1954-55, the real value of world trade in agricultural products had only just regained the pre-war level. Again, it is noteworthy that, whereas the volume of agricultural trade has barely regained the depressed level of the nineteen-thirties, the volume of trade in manufactured goods has roughly doubled since the pre-war period. The expansion of trade in manufactured goods, as the F.A.O. Report points out, has far out-distanced the growth of trade in agricultural products generally. This is due to the increased production of agricultural commodities in some industrialised countries, the search for synthetic substitutes for certain commodities of agricultural origin and increased consumption of agricultural commodities in the producing countries themselves. The effect of the last-mentioned factor will become evident, when it is remembered that, over the period 1951-55, only 38 per cent. of world output of cotton entered world trade, only 39 per cent. of sugar and 6 per cent. of rice, as against 57 per cent., 51 per cent. and 15 per cent. respectively, in pre-war years.

In 1955-56, additions to stocks, according to the F.A.O. Report, seem likely to have been more modest than in the previous year, in spite of the rise of some 3 per cent. in world agricultural production and of 5 per cent. in North American output. Thus, although the world wheat crop was about 4 million tons greater than in 1954-55, it is expected that the addition to stocks this year will be only about 2 million tons, raising the total carryover of the four main exporters (U.S., Canada, Argentina and Australia) from 45.8 million tons to about 48 million tons. In coarse grains, the pressure appears to be particularly large, because more than half of the increase in world production over 1954-55 (about 6.5 million tons) seems likely to be added to stocks. Cotton is another commodity in which stocks are high at about 5 million tons. It is in the U.S. that the pressure of stocks has been felt most heavily. The U.S. Commodity Credit Corporation held stocks worth $8,633 million on 30th April 1956, as compared with $7,261 million a year before.

Commenting upon the surplus disposal policies adopted by the U.S., the Report observes that they have been "conducted with a fair degree of restraint and consideration of third parties but they have so far failed to effect any reduction of stocks of the major surplus commodities." It predicts that "more vigorous U.S. disposal measures are likely in the near future," though even such measures are "unlikely to bring about the full absorption of the present large stocks of some commodities." It rightly holds that much will depend on the success of the new U.S. measures to reduce stocks by means of a curtailment of production. In other countries, however, the Report avers, a continued expansion of agricultural production is still the chief need and remains the primary aim of national policies. Referring to India, it points out that the success of the first Five-year Plan in raising agricultural production has enabled more emphasis to be placed on basic industries in the second Plan. Although this conclusion is generally correct, it must be noted that, in India, too, the authorities have been compelled to emphasise—or more appropriately, re-emphasise—the need for raising agricultural production.

While the Report feels that supplies of agricultural commodities will again be larger in 1956-57 and that there is little likelihood of any significant reduction in surplus stocks in the immediate future, it affirms that the "basic dilemma of most governments is how to reconcile their dual responsibilities to maintain the economic position of farmers and, at the same time, to provide consumers with adequate food supplies at low prices." Indeed, for nearly all countries, both those which, like the U.S., are faced with the problem of surplus stocks and others, like India, which are confronted with the need for increasing agricultural production, the problem is really one of maintaining a level of prices, adequate to the farmer and within the capacity of the consumer to pay. It will require considerable administrative acumen to ensure that prices of agricultural commodities are held at levels that will give the farmer the income he needs and also enable the consumer to buy his requirements. In this country, the problem has so far been tackled only through mere exhortations to increased production; no constructive price-support scheme has been implemented. It remains to be seen whether, apart from any welcome assistance that good weather can give, these official exhortations alone will enable the country to reach the higher targets for agricultural production

EQUITIES LOOK UP BUT GILTS SAG

WORLD FATS AND OILS—CLOTH POLICY—GERMAN MARK—MONEY RATES IN U.S.—BIGGER TANKERS

THURSDAY, 5 P.M.

THE downward trend in equities has come to a halt. There has been an all-round fractional rise in values over the week. The selling pressure has stopped, though there is not yet much buying fervour. Operators from Madras, who were consistently depressing the market during the previous two weeks by selling some of the popular counters, have ceased doing so. For some time, local operators were puzzled, if not alarmed, at the behaviour of their confreres at Madras. For usually, the Madras operators are a quiet lot; rarely do they indulge in such sizable bearish activity, as they did during the past few days. The local speculators, therefore, thought that they must be acting on some sure information. The recent visit of the Finance Minister to his State and some of the unpalatable observations which he made at Madras and Coimbatore induced the Bombay operators to attach more credence to that belief than they would have otherwise done. "It is possible," they argued among themselves, "that T.T.K.'s friends in Madras might have been able to get an inkling of his next step or as to how his mind is working about the immediate future of the fiscal and monetary policies of the Government." They would not believe that such a thing was impossible. So, they followed the Madras lead for some days. Madras brokers, too, were telling their confreres in Bombay that an increase in the Bank rate could not be completely ruled out. But nothing bearish has emerged since then. If anything, the Government has made some bullish gestures, as, for instance, the rebate of excise duty on increased production of cloth and the withdrawal of restrictions on the quantum of cloth which the traders can keep. These are only gestures and do not mean any tangible benefit worth mentioning to the cotton mill industry. Nevertheless, they seem to have helped the market to recover its poise.

MARKET GOSSIP

* * * *

In contrast to the steadiness of the share market is the distinctly quiet trend of the Gilt-edged market, where the recently issued State loans have staged a perceptible retreat. During the past one week, many of these loans have shed As. 2 to As. 4. The loss is much more as compared with their issue price, as will be seen from the following figures:

4 *per cent.* 1968	*Issue price* Rs. a.	*Latest market price* Rs. a.
Andhra	99 8	98 13
Bihar	99 4	99 0
Bombay*	100 0	99 15
Hyderabad	99 8	99 4
Madhya Bharat ...	99 4	99 4
Madhya Pradesh ...	99 4	99 2
Madras	99 12	99 2
Mysore	99 8	99 3
Orissa	99 4	99 2
Punjab	99 4	99 4
Rajasthan	99 8	99 8
Saurashtra	99 8	99 9
Travancore-Cochin ...	99 4	99 4
Uttar Pradesh	99 8	99 2
West Bengal	100 0	99 12

* 1970.

It will be seen that the loans worst affected are those of Andhra, Madras, Uttar Pradesh and Mysore. If some of the loans are unchanged, it is because they are not easily saleable and generally inactive. An increase of one anna in the Saurashtra loan is negligible, as the State is being integrated with Bombay from 1st November. If anything, it should be standing at least on par with the Bombay if not at a premium, a premium because it is two years shorter in duration than the Bombay loan. The Hyderabad loan has gone down by As. 4; on the contrary, it, too, should go to a premium, because the Centre has assumed responsibility for all the outstanding public loans of the Hyderabad Government, due to the disintegration of the State; consequently, it is as good as a Central Government loan.

The market, however, is in no mood to appreciate these finer points in the investment merits of the various State loans. The extremely stringent conditions in the short-term money market are making themselves felt on the Gilt-edgeds. The heavy fall in the Madras, Andhra and other South Indian State loans reflects the extent to which the respective State Governments brought pressure on the public to invest in their loans. A large number of investors who yielded to this pressure subscribed to their State Government loans with the assistance of bank finance. Many banks were asked by the State Governments to give these people advances on small margins, the new loan being retained as the security. Either the banks must be calling back these loans now, in order to meet the trade demand for credit, or those who bought the State loans must have decided to cut their loss in capital by directing their bankers to sell out their holdings. There had been a slight fall in prices even a few days after the list was closed a month ago. On top of this came the fear of an increase in the Bank rate. Naturally, those who had invested in State loans with the help of borrowed money must have become nervous and preferred to liquidate their commitments.

In the past year, too, there was a similar rush to sell State loans, but conditions in the money market were different then. There was not such acute stringency as there is now. Further, the capital market has now become saturated with 4 per cent. and other long-medium-dated loans, in contrast to the keen enquiry for them this time last year. In the past few days, the Life Insurance Corporation supported the new State loans to some extent, but is now reluctant to do so, perhaps because of the continued fall in prices. The Reserve Bank as a rule does not support the State loans and has not done so as yet. If it sticks to this policy, those banks which extended liberal support to State loans for several considerations will be put to hardship and may try to replenish their cash balances by selling the Central Government loans which, in turn, will tell on the Gilt-edged market even more perceptibly.

The position of banks is quite tight. Their ratio of advances to deposits is over 70.39 per cent., as compared with 58.07 per cent. a year ago, while their cash balances constitute only about 8 per cent. of their deposits, as against 9.84 per cent. this time last year. Every week, they have been borrowing from the Reserve Bank against usance bills and other securities. As on 5th October 1956, such borrowings amounted to as much as Rs. 65.71 crores, as against only Rs. 8.06 crores a year before. The accumulation of cloth stocks with mills, growing demand for credit from other industries, continuous imports and the borrowing by the Municipality this week are the main causes for the current stringency of money. The state of the market is likely to become even more uncomfortable in the coming weeks.

* * * *

It is regrettable to find that the Government's cotton textile policy is becoming more and more unrealistic. Its decision to give a rebate of six pies per yard of cloth on production in excess of a specified quantity (the average monthly production during the first eight months of 1956) belongs to the category of those measures which place a premium on inefficiency and dishonesty. This rebate is intended to encourage multiple-shift working by mills. The Finance Minister himself has admitted on several occasions that the scope for securing any sizable increase in production by such means is very limited, because as many mills as possible have already been working to their capacity. If all the mills are not working three shifts, it is because they are suffering from some impediments such as old machinery, lack of balance in the preparatory

PEPPER MARKET

This week's report on pepper market appears on page 795.

or processing departments, and difficulty in finding and housing labour. Even if some mills have a little scope for working one shift more, they may not be enthusiastic in utilising it because of the difficulties involved in retrenching surplus labour later when the need for it arises. So the only way in which a mill can show increased production is by reducing the quality of cloth. By linking the rebate to the increase secured in output, the Government is actually inducing the mills to follow this despicable method. And, since there is no regulation of the quality of cloth produced by mills, there is nothing to prevent them from using less yarn in every yard of cloth, in order to show a higher yardage. By doing so, they will pay less tax on their cloth than a mill which does not reduce the number of picks and takes special care to produce high quality cloth with long durability. This step of the Government is thus absurd.

* * * *

It looks as though the world has an insatiable hunger for fats and oils. The F.A.O. Report records that a record world output of over 24 million tons of fats and oils in 1955 and the prospect for larger supplies in the current year have not prevented prices from moving up. Even in the U.S., where the production of fats and oils in 1955-56 was a record one, the overseas demand for these products has been particularly encouraging, thanks to the high level of economic activity in one of its chief markets, Western Europe. Reviewing the current trends, the Report observes that total 1956 supplies of the major liquid edible oils (cottonseed, groundnut, soybean and olive) which comprised about three-quarters of the estimated 9.5 million tons of this group of oils available for use in 1955, are unlikely to decline. Increases in 1955-56 groundnut and soybean crops have probably offset the reduction in olive oil supplies. Record groundnut supplies for crushing are available from current West African harvests, the U.S. supplies of soybeans are ample, and a new record crop is expected in 1956-57, while the volume of exports of both groundnuts and soybeans from China is being maintained at an unusually high rate for post-war years. World output of cottonseed oil will depend on the size of the 1956-57 cotton crop in the U.S., but is unlikely to be significantly reduced from the 1.5 million tons peak reached for the last two years, despite lower U.S. cotton support prices and area allotments. In Argentina, the 1955-56 edible oilseed crops, particularly sunflower seed, are much larger than in 1954-55, when this country became a net importer of edible oils. Linseed oil supplies during 1956 are also likely to rise moderately, due largely to Canadian crop expansion, while larger plantings in 1956-57 are forecast, and a recovery in Argentina's crop area is probable. World copra output in 1955 was at high level's, chiefly owing to increased output in the Philippines, and based on early 1956 shipments, this year's crop in that country will be even larger. Palm oil and palm kernel purchases in Nigeria, the world's leading producer, declined moderately in 1955, but rose again towards the end of the year and during the first four months of 1956.

The main factor which brought the quantity of oils and fats exported in 1955 to 6.7 million tons (oil equivalent), according to the F.A.O. Report, was stronger import demand in Europe and Japan. It recalls how in 1955 and early 1956, the last of the U.S. Government-held stocks of cottonseed oil, linseed and linseed oil were sold out. The U.S. assistance to international trade through the financial provisions of foreign aid programmes, rather than through the direct sale of Government stocks, has now become more important. These provisions permit payment for quantities bought in the open market in the currency of the importing country. During the period September 1955 to May 1956, the U.S., it is stated, concluded agreements with 15 countries for the supply of 350,000 tons of edible oils. The Report avers that the rate of shipments under these agreements has accelerated in 1956 and that transactions of this kind will continue to be a "significant" element in international trade and price situation throughout the current calendar year.

* * * *

The prospects for Indo-German trade will be affected somewhat adversely, if West Germany implements the reported advice of the O.E.E.C. experts for revaluation of the foreign exchange parity of the deutschemark. This suggestion has been made with a view to correcting the continued high German balance of payments surplus. Whether it is taken as a compliment or a punishment for the excellent health of the German economy, there is no doubt that, in the countries importing German goods, particularly capital goods, it will be widely deplored, since it will mean higher prices for such goods. On the other hand, two of the other suggestions made by the O.E.E.C. experts will be welcomed by other countries which have built up export connections with Germany; they are fresh liberalisation of imports by the removal of quotas which still represent a serious obstacle to imports, especially of agricultural produce, and a reduction in customs duties. The O.E.E.C.'s other suggestions to Germany are an acceleration of foreign debt payment and a lowering of interest rates. It has also recommended that Germany should encourage investments abroad. Perhaps W. German industrialists will do well to consider this suggestion favourably, for the country has not yet directly participated in the economic development of overseas countries on a scale that is commensurate with its status as a creditor nation.

German reactions to the aforesaid recommendations of the O.E.E.C. are not quite favourable. "Germany cannot be held responsible for the mistakes of others"—this is said to be the view in official circles. While it is not denied that Germany should follow a good creditor policy, there is no tendency to accept all the suggestions of the O.E.E.C. It is, however, reported that Dr. Erhard, Minister of Economics, would be willing to accept most of the measures advocated. But it is not clear whether he would agree to revaluation of the currency also.

A point that needs to be borne in mind, in this connection, is that the par value of the deutschemark was fixed at a very low level in order to enable West Germany to export its goods. Since then, thanks to the hard work of its people, the marvellous organising abilities of its industrialists and the wise fiscal and monetary policies followed by the Government, the German economy has attained remarkable strength. It is true that the United States gave plenty of financial assistance but the Germans were realistic enough to put the American funds to the maximum use. For several years after the war, they worked without looking at the clock and with whatever tools they could get. Having thus gained wealth and strength for their country, there is no reason why the product of German labour should any longer be sold cheap and why the external value of its currency should not be higher. It is only but right that, when the economy of a country improves to an extent beyond expectations, the external value of its currency should go up, just as a currency is devalued when the economic position of its country suffers a reversal. Surely, adjustments in the foreign exchange values of currencies, rare as they should be, do not always mean only devaluation. At some time or other, one country or another may find itself in the fortunate position of being able to revalue its currency, by which is generally meant an upward revision in its value. It remains to be seen whether Germany, a country which lost everything except its skill in the last war, is destined for such an honour.

* * * *

Much interest, though not significance, attaches to the recent piercing of the traditionally regarded 3 per cent. limit in the U.S. Treasury bill rate which jumped to a new post-war peak of 3.013 per cent. in the first week of this month, as compared with 2.899 per cent. in the previous week. But this new level, which has not been touched at any time during the last 23 years, is attributed to the Treasury's announcement of 91-day bills to help meet autumn cash needs. This special offering, like the regular weekly offering, is for the amount of $1,600 million. It is believed that the Treasury bill rate will go down, once the special offer has been digested. Nor is the bill offer expected to influence rates for business borrowing. It is stated that the slight hardening of the rate reflects temporary money market conditions rather than a deliberate fresh move to make money dearer still. Nevertheless, it is noteworthy that some hardening of interest rates has taken place in the short-term business loans. Thus, in September, the rate for such loans from the New York City banks was 4.14 per cent., the highest since August 1932. The September level is ¼ per cent over the level touched in June this year and is said to reflect the increase in the prime rate from 3½ per cent. to 4 per cent. which took place in August last.

A broad indication of the general financial policy to be pursued by the central banking authorities in the U.S. was given by Mr. C. Canby Balderston, Vice-Chairman of the Federal Reserve

SHARES RULE STEADY

NOTABLE RECOVERY IN TEXTILES

From Our Own Correspondent

BOMBAY, 18*th October*

THE Stock Exchange which remained distinctly subdued in the previous two weeks picked up some strength during the week under review. There was revival of buying confidence in several counters. The sentiment of operators was influenced favourably by the Central Government's decision to withdraw the restriction on the maximum quantity of cloth—three months' average stock—that a wholesale dealer can hold and to extend the period of excise duty rebate on cloth produced in excess of the average monthly production during January-August 1956 by a further three months with effect from January 1956. These concessions induced good buying support for textile shares, the prices of which staged a notable recovery. In sympathy with this trend and following speculative support, steel and other industrials also recorded an improvement in values. The undertone of the market was steady.

Tata Steels elicited professional buying demand and advanced by Re. 1-8 to Rs. 195-4 on Monday. At higher levels, profit-taking set in and the shares receded to Rs. 193 yesterday. The recession was, however, short-lived, as today they were bought at higher rates; the quotation improved to Rs. 194-8 before finishing at Rs. 194-4. The net gain over the week was As. 8. Indian Irons opened the week As. 3 higher at Rs. 34-6. After fluctuating between Rs. 34-10 and Rs. 34-3-6 on alternate bouts of buying and selling, they wound up the week at Rs. 34-6.

Among textiles, Bombay Dyeings were in the limelight, their quotation jumping up by Rs. 11-14 to Rs. 632-8. Centurys rallied Rs. 5-8 to Rs. 553-8. Indores advanced by Rs. 3-2 to Rs. 158-12. Kohinoors spurted by Rs. 3 to Rs. 352. Svadeshis recorded a gain of Rs. 2 to Rs. 248-8. Khataus rose by Re. 1-14 to Rs. 250-10. Finlays picked up Re. 1-8 to Rs. 343. Central Indias and New Greats improved by a rupee each to Rs. 150 and Rs. 251, respectively. Tatas were better by As. 8 at Rs. 53-8. Gokaks gathered As. 4 to Rs. 240-4. Laxmis were firm at Rs. 710, as also Morarjis at Rs. 260, Shreenivas at Rs. 215 and Simplex at Rs. 202. Standards were unchanged at Rs. 475. The Standard Mills Ltd. has decided to establish a cement manufacturing plant at Bhavnagar. Vishnus, however, came in for selling and dropped Rs. 8-12 to Rs. 176-4, reflecting the operators' disappointment over the declaration of an interim dividend of only Rs. 2-8 for the year ending December 1956. Bradburys also encountered selling and receded by Rs. 4-6 to Rs. 205. Mafatlals were somewhat neglected at Rs. 415, as against Rs. 417-8, and Podars at Rs. 165, as against Rs. 167-8. Sasoon Spinnings lost Re. 1-8 to Rs. 45-8.

Some buying support was visible in the banking section and prices tended to rise. Bank of Indias moved up Re. 1-8 to Rs. 174-12. Barodas strengthened by As. 12 to Rs. 102. Punjab Nationals hardened by As. 8 to Rs. 57. Central Banks gained As. 4 to Rs. 52. United Commercials were fully maintained at Rs. 57-12. Union Banks, on the other hand, were a shade easy at Rs. 7-2.

Among electricity shares, Tata Powers were sought Rs. 2-8 higher at Rs. 1,312-8. Surats put on Re. 1-4 to Rs. 120. Ahmedabad Electrics, Andhras and Bombay Suburbans, on the other hand, failed to elicit support and receded by Re. 1-4 each to Rs. 94-6, Rs. 1,238-12 and Rs. 110, respectively. Tata Hydros lost As. 8 to Rs. 130.

In the engineering and mining group, Alcocks made sizable headway on revival of buying enthusiasm and rallied Rs. 3-12 to Rs. 338-2. Premier Constructions had buyers Rs. 2-8 higher at Rs. 209. Shivrajpurs were fully maintained at the last week's level of Rs. 86. B.B. Petrols were firm at Rs. 3-11. Indian Coppers, however, eased by 18 pies to Rs. 6-14. Tata Locomotives receded by As. 8 to Rs. 168 for want of support. Larsen and Toubros lost As. 2 to Rs. 18-10.

Among sugar shares, Walchandnagars evoked good buying orders and hardened by Rs. 3-2 to Rs. 276-4. But Belapurs were a shade easy at Rs. 250-8. Phaltans shed As. 4 to Rs. 161-12.

Among cement shares, Digvijays found purchasers Rs. 2 higher at Rs. 194. Associated Cements were fully steady at Rs. 194-4. Orissas, however, eased by half an anna to Rs. 13-4. Ashokas were done As. 3 lower at Rs. 12-11.

In the transport section, Scindias gained an anna to Rs. 18-13-6. Great Easterns were unchanged at Rs. 22-2. Premier Automobiles were done at Rs. 103-4, same as last week. Hindusthan Motors lost 18 pies to Rs. 9-8.

A smart rally of Rs. 21-4 to Rs. 739-6 in Bombay-Burmah Olds and of Rs. 7-8 to Rs. 274-6 in new shares was feature of trading in the miscellaneous section. The chief inspiring factor was provided by hopes of favourable legal opinion over the question of capital reorganisation. Prospects of higher dividend also acted as a fillip. The improvement in prices would have been more marked but for the reaction at the close, following rumours of some delay in finalising the scheme; there were vague talks regarding the possible move for bringing injunction against the proposed meeting on 12th November next. Kemp & Cos. attracted very good attention of some operators and advanced by Rs. 7-8 to Rs. 200. National Rayons were favoured well, with a rise of Rs. 5-12 to Rs. 260. Wimcos picked up Rs. 2-8 to Rs. 175. Tata Chemicals gathered As. 2 to Rs. 20-5. British India Corporations were fully steady at Rs. 11-4, Hind Cycles at Rs. 160 and Indian Investment Trusts at Rs. 75. Tata Oils, however, were subjected to selling induced by reports that the Government of India had refused permission for a bonus issue; the shares moved down by Rs. 2-8 to Rs. 52-8.

* * * *

Madras Stock Exchange

(*From Our Own Correspondent*)

MADRAS, 16*th October*

There was a further sharp fall in equity values during the week under review. Offerings of scrips were quite large, while enquiries from buyers were poor, thanks to lack of fresh incentives. In particular, textile shares were subjected to nervous liquidation, notwithstanding the half-an-anna excise rebate granted to mills by the Government to encourage higher production. For the operators were apprehensive of the possibility of some sort of official control over prices and distribution of yarn and cloth. The planting section remained subdued, with sellers predominating in rubber, tea and coffee shares. Sugar company shares were also neglected. Activity in the miscellaneous section was greatly restricted and prices tended to look down. The undertone of the market was distinctly bearish.

Among textile shares, Dhanalakshmis were hammered down by Rs. 10 to Rs. 425. Janardhanas dropped Rs. 9 to Rs. 99. Bangalore Woollens fell by Rs. 8-12 to Rs. 566-4, Metturs by Rs. 7-8 to Rs. 447-8 and Cannanores by Rs. 5-8 to Rs. 182-8. Coimbatore Pioneers and Rajalakshmis receded by Rs. 5 each to Rs. 320 and Rs. 177, respectively. Lakshmi 'A's declined by Rs. 3 to Rs. 127. Venkatesas shed a like amount to Rs. 175. Anglo-Frenchs lost Rs. 2-8 to Rs. 112-8. Coimbatore Spinnings and Rajapalayams were done each Rs. 2 lower, the former at Rs. 320 and the latter at Rs. 165. Lakshmi fully paids were pushed back to Rs. 256-8 from Rs. 258. Adonis, Buckinghams and Coimbatore Cottons decreased by As. 8 each to Rs. 11-10, Rs. 197 and Rs. 392-8, respectively.

In the planting section, rubber shares encountered heavy selling and drifted lower. Mlamallays slumped by Rs. 4 to Rs. 55. Kalpettas moved down by As. 6 to Rs. 32-6. Neelamalais suffered a loss of As. 4-6 to Rs. 7-4-6. Travancore Rubbers and Vaikundams declined by As. 4 each to Rs. 25-12 and Rs. 34-8, respectively. Nelliampathys lost As. 3 to Rs. 3-9 and Rajagiris As. 2 to Rs. 25-8. Tea shares lacked support and lost ground. Peermades dropped a rupee to Rs. 32-12. Haileyburias eased by a like amount to Rs. 26. Coffee Lands receded by As. 8 to Rs. 26-2. Twyfords fell by As. 8 to Rs. 20-4. Parksides and Coorg Teas shed As. 6 each to Rs. 19-6 and Rs. 12-6, respectively. Kailas declined by As. 5 to Rs. 6-3 *ex-div.* and Midlands As. 4 to Rs. 20-2. Among coffee shares, Consolidated Coffees slipped by As. 7 to Rs. 20-11. Rajendras were dull at As. 12 and Sheveroys at Rs. 2-10-6. Cochin Malabars, however, elicited special support and advanced by As. 3 to Rs. 11-8.

Sugar shares gave way under pressure of selling. East India Distilleries dropped As. 12 to Rs. 30-4. Travancores receded by As. 6 to Rs. 13-12. Mysores and Kirlampudis shed As. 4 each to Rs. 46-8 and Rs. 36-12, respectively. Deccans were unchanged at Rs. 11-10, as also Indias at Rs. 16-14, Jeypores at Rs. 13-14 and Cauverys at Rs. 50. United Breweries were quiet at Rs. 217.

In the miscellaneous section, Mysore Papers were sold As. 8 lower at Rs. 17. India Cements, Mysore Tobaccos and Travancore Chemicals slipped by As. 4 each to Rs. 32-8 *cum-div.* (final), Rs. 15 *cum-div.* and Rs. 16-8, respectively. Mysore Chemical Fertilisers declined by As. 3 to Rs. 8-8. Spencers lost As. 2 to Rs. 17. Rallis, on the other hand, met with enlarged buying enquiries and spurted by Rs. 4-8 to Rs. 49. Travancore Cements were favoured As. 7-6 higher at Rs. 11-4. Nundydroogs hardened by As. 6 to Rs. 10-12 *ex-div.* Champion Reefs gained As. 2 to Rs. 7-8.

The Calcutta Stock Exchange remained closed during the week under review, on account of the *Puja* holidays. It will reopen on Monday the 22nd inst.

MARKET GOSSIP

(*Concluded from previous page*)

Board of Governors, last week. He said that the Federal Reserve System intended to supply sufficient funds for essential credit needs. At the same time, he warned against "excessive credit expansion." Some loan applications, he said, must necessarily be refused or deferred by commercial banks, even though they may be technically creditworthy.

An upward trend in Treasury bill rates has been noted in Canada too. The yield on $123 million of 91-day Canadian Treasury bills has, at 3.26 per cent., moved above the Bank of Canada discount rate of 3½ per cent. on loans to Chartered Banks. This has led to the speculation whether there would be an increase in the Canadian Bank rate. It is, however, recognised that the high Treasury bill rate reflects limited bidding by banks and investment houses. It would appear that, in the second week of this month alone, the Chartered Banks have borrowed $32 million from the Bank of Canada. This shows the need for cash felt by the banks in that country.

* * * *

The Suez Canal crisis has been indirectly responsible for certain new trends in the shipping world. Men's thoughts are turning to the construction of faster and bigger ships. It is true that, even without the Canal crisis, shipowners would be interested in building such ships. This is because world trade is growing at a rapid pace, so that the day might soon come when the Canal might find it difficult to afford transit facilities for all available trade; this in turn would necessitate the construction of bigger ships to carry the trade round the longer Cape route. The Suez Canal crisis has, however, lent a new urgency to this trend. Since oil is one of the important commodities which now pass through the Suez Canal, the oil companies are naturally interested in building large tankers, known as supertankers. Among the oil companies which have already embarked upon a programme of building supertankers, mention must be made of the British Petroleum Company. The Chairman of the British Petroleum, Mr. B. R. Jackson, announced recently that his Company intends to include 60,000-ton ships in its next building programme with John Brown & Co.

Last year, British Petroleum announced a big tanker building programme, consisting of 23 ships (worth about £52 million)—17 to be built in the U.K. and six in Italy. Of these ships, no less than six were of 42,000 tons and no tanker was less than 32,000 tons. All these orders are expected to be completed by 1959-60. The next programme is expected to be announced in the next two years. Meanwhile, it is interesting to note that the British Petroleum Company has chartered a 12,000-ton Russian tanker to carry crude petroleum from the Persian Gulf to U.K.-Continent. This is probably the first time that the Soviet Union has entered the charter market and is another pointer to the strong possibility of that country offering competition to the free countries in world trade.

Interest in building bigger oil tankers is not confined to the U.K. alone. In the U.S., plans are under way for undertaking an immediate study of the possibilities of building a fleet of large tankers to serve as an alternative in the transport of oil in the free world, particularly from the Middle East. President Eisenhower has directed the Office of Defence Mobilisation (O.D.M.) to convene a meeting of the official representatives and the National Petroleum Council "to consider plans that will be helpful in assuring the efficiency and adequacy of the distribution of petroleum supplies in the foreseeable future in the free world." In a press interview, Mr. Arthur S. Fleming, Director of the O.D.M., declined to say what might happen to the programme if the current Suez situation improved. He, however, indicated that the construction of tankers might go forward on a "modified" scale. He stressed that the President's letter to his Office did not constitute an order for tankers. He, however, thought that a considerable number of tankers—as many as 50—might be built; they would be tankers of 50,000 tons or more and could be built in nine months to one year. He added that the tankers could be purchased by either American oil companies, or foreign oil companies or foreign countries.

NEWS IN BRIEF

A TEAM of three American textile experts will visit India shortly to advise the handloom industry on export promotion of its products. The team has been sponsored by the Ford Foundation; it is visiting this country on an invitation by the Government of India.

The Government of India has decided that the National Industrial Development Corporation should set up central capacity to manufacture primary intermediates required for the production of dyestuffs as part of the development programme of the dyestuffs industry.

Plans for opening a direct cargo service by the Western Shipping Corporation from India to Poland, under the Indo-Polish Shipping Agreement signed in May last, are expected to be finalised soon by the shipping delegation, headed by Dr. Nagendra Singh, Director-General of Shipping, which is now touring Europe.

The Annual Convention of the Deccan Sugar Technologists' Association (India) will be held at Shakkarnagar in Hyderabad-Deccan on the 25th, 26th and 27th inst., Mr. K. J. Somaiya, President of the Association, presiding. The Convention will be addressed by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture.

In view of the proposed reorganisation of States and the transfer of the public debt of Hyderabad State to the Union, it has been decided to transfer the management of the Hyderabad loans, which are at present being managed by the Hyderabad State Bank, to the Reserve Bank of India with effect from 1st November next.

The National Co-operative Development and Warehousing Board will be inaugurated on 7th November at New Delhi by the Prime Minister. The Board, which has as its Chairman Mr. A. P. Jain, Union Minister for Food and Agriculture, will, among other things, plan and promote programmes for the production, processing, marketing, storage and warehousing of agricultural produce. It may also advance loans or grant subsidies to State Governments for financing co-operative societies.

Loans to the extent of Rs. 7 crores are expected to be made available to the Andhra State by the Union Government during the current year by the completion of development projects. The loans will enable the execution of spill-over schemes like the Thungabhadra and Machkund hydro-electric projects and the Krishna Barrage Project. Another Rs. 1½ crores will also be made available for medium irrigation schemes and Rs. 1 crore as advance to meet the gap in the State's budget on revenue account.

The Planning Commission is expected to consider the proposal for the sanction of Rs. 50 lakhs in the second Plan period for carrying out pilot projects of progressive participation of workers in management. The Indian National Trade Union Congress recently submitted a memorandum demanding that the Government should take steps to facilitate worker's participation in management in both the private and public sectors. The Congress also suggested that the Government should initiate pre-employment and post-employment training schemes for workers in the technique of both production and management.

The Government of India has set up a high-power committee on Plan projects aimed at developing a system of internal efficiency audit. The Committee will organise investigations and initiate studies in the use of finance and other resources on different projects under the second Plan. This is to ensure that organisation, procedure and programming methods in every field are so designed that the money spent yields the best possible results. The Union Home Minister, Mr. G. B. Pant, is the Chairman of the Committee which includes, among others, Ministers for Planning and the Finance and Deputy Chairman of the Planning Commission.

The Government of Travancore-Cochin has decided to hand over the cashew industry to workers' co-operatives in the event of any large-scale failure or neglect on the part of employers. The State Government has also announced the acceptance, by the Government of India, of its suggestion to cancel import licences to cashew employers if they fail to produce evidence of having placed orders for raw nuts within the next one month. The licences will then be issued in favour of the co-operatives or the State Government as is found convenient. The decisions were taken after consultations with the Centre when the series of discussions at State level failed to evolve an agreed formula for stabilising this vital foreign exchange earning industry. The Government would prepare a scheme of co-operatives and set up the nucleus of an organisation, including the appointment of a cashew officer, for taking charge of the business. Most of the State's 125 cashew factories, together employing 75,000 workers, have remained closed since August for want of raw nuts.

From Abroad

The *John Sergeant*, a World War II Liberty ship, has been converted to become the world's first ship powered by gas turbines. The ship is *en route* England and Germany on its first voyage after conversion from steam propulsion.

According to the U.N.E.S.C.O., more than a thousand distinct languages are in use today in various parts of the world. The total does not include thousands of dialects and variations, of which there are a thousand in Africa alone.

The Chairman of the Australian Wheat Board, Sir John Teasdale, has forecast that this season's marketable wheat crop may be less than two-thirds of last season's crop. Estimates indicate a total of about 115 million bushels, as compared with 180.7 million bushels last year.

Seven leading Australian manufacturers of medical equipment have combined to form an organisation, called the Australian Medical Export Company, to develop exports of Australian medical equipment, especially to South East Asia. The Company will provide, among other things, X-ray machines and sterilisers.

The Ford Foundation has announced a five-year programme to support and stimulate publication of scholarly books in the humanities and the social sciences. For this purpose, the Foundation trustees have appropriated $1,725,000. Approximately 30 colleges or non-profit organisations are expected to become eligible for the Foundation grants.

The U.S. Department of Agriculture has announced that Pakistan will be authorised to buy in its own currency 1,564,473 lbs. of U.S. tobacco valued at $1,522,000. It has also announced that Pakistan is being given more time to complete purchases, previously approved, of $286,573 worth of tobacco and $840,000 worth of cotton.

A contract for columbium and vanadium tubes for the Dounreay experimental atomic power station, Caithness, has been placed with the Tube Investments Company Accles and Pollock by the U.K. Atomic Energy Authority. The order is believed to be the first full-scale order for columbium for use in a nuclear power reactor.

After a thorough investigation, the Swedish Standards Committee has suggested certain standards for sizes and qualities of ordinary paper bags. The intention is to reduce production costs and to rationalise the trade in this kind of articles. The production of paper bags in Sweden alone aggregates about 15,000 tons valued at about Kr. 17,000,000 (£1,200,000) per year.

The South African Minister for Economic Affairs has directed the Board of Trade and Industries to investigate the economics of the distribution of petrol, paraffin and other oil products by oil companies, with special reference to costs and profit margins, benefit allowed to the distributive trades, and the bearing of the benefits on the Government's policy of maintaining a fixed profit margin of 3*d.* per gallon.

The Association for Applied Solar Energy of the U.S., which sponsored a world-wide symposium on the subject recently, has announced plans to build a large solar furnace in Phœnix. The Association's President, Jan Oostermeyer, has said that the organisation hopes to render a real service to American industry by making similar facilities available in Arizona where 300 days of intense sunshine can be utilised each year.

The organised labour movement in Philadelphia has announced a "scholarship plan" to help young people win university scholarships. The sponsor of the plan is the Philadelphia Central Labour Union, representing, 220 local unions. Recently, it sponsored an essay contest on the topic "Labour Unions and American Democracy" and the winners of the contest are to receive college scholarships amounting to $2,450.

The U.S. Departments of Labour and Commerce have reported that the wages of American factory workers were more than $2 an hour during September, setting a new all-time high. At the same time, unemployment dropped below two million, with more than 66 million persons holding jobs. The average weekly pay of factory workers during September was $81, surpassing the previous record of $80 weekly. The average weekly pay cheque in September was $3.29 bigger than a year ago and $1.40 higher than in August.

The *Montreal Gazette* has reported that Canada's trade is threatened by the U.S. policy of disrupting some of Canada's foreign markets by using extraordinary non-commercial methods and by the U.K.'s contemplated plan of free trade with West European countries which may shut out exports from Canada. This means, it observed, that the policies of two huge nations are both likely to create new difficulties for Canadian trade at the very time when Canadian trade problems are already serious.

Pakistan proposes to establish an agricultural bank as an agency to increase agricultural production. The bank will give credit facilities to agriculturists' co-operative societies and other bodies for the purposes of developing agriculture and warehousing, storage and marketing of agricultural products. It will also undertake research on agricultural credit and marketing of products. The original share capital of the bank will be Rs. 20 crores. The Central Government will hold not less than 51 per cent. of the shares.

Calder Hall, the only atomic power station in commercial operation in the world, was opened by Queen Elizabeth on the 17th inst., is entirely lubricated by Shell. As a result of experimental work carried out at their Thornton Research Centre, Shell is able to provide a lubricant to satisfy the special conditions involved in the working of the Parsons gas circulating plant which is necessary for harnessing atomic power. The new lubricants are resistant to radiation and have many other unusual and complex characteristics.

PERSONAL

EARL Attlee, a former Prime Minister of the U.K., arrived in Bombay from London on the 11th October on a three-week visit to India.

Mr. K. C. Reddy, Indian Minister for Production, arrived in Prague on the 11th October from Moscow.

Mr. N. T. Gulrajani, the Indian delegate to the U.N. International Sugar Conference, has been elected Vice-Chairman of the Conference.

Mr. B. Rama Rau, Governor of the Reserve Bank of India and leader of the Indian Delegation to the World Bank meeting, returned to Bombay from London on Sunday.

Mrs. Vijayalakshmi Pandit, India's High Commissioner in London, arrived in Bombay from London on Wednesday, 10th October. She is on a five-week holiday.

Mr. M. C. Chagla, Chief Justice, Bombay High Court, has been appointed to act as Governor of Bombay in place of Dr. Harekrushna Mahtab, until a permanent successor is appointed to fill the vacancy.

Mr. S. G. Barve, I.C.S., took over as Motor Transport Controller and Vice-Chairman, Bombay State Road Transport Corporation, on Monday, from Mr. R. J. Rebello, who is proceeding to Bangalore to take up his assignment in the State of Mysore.

Mr. B. D. Garware has been elected President, Mr. B. M. Thakkar and Mr. B. P. Himmatsingka, Vice-Presidents and Mr. M. B. Gidwani and Mr. B. L. Pachisia, Honorary Secretaries of the All-India Plastics Manufacturers' Association.

Mr. B. D. Garware, President of the Maharashtrian Chamber of Commerce, Bombay, left for an East Asian tour on Monday by the s.s. *Asia*. He will be attending the E.C.A.F.E. meeting on trade as representative of the Indian National Committee of the International Chamber of Commerce, to be held in Tokyo from 29th October to 5th November. He will also visit Hong Kong and Singapore and meet chambers of commerce and such other organisations.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

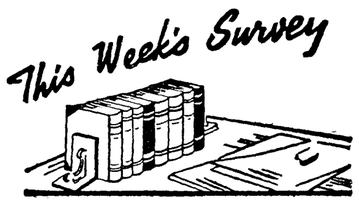
CALCUTTA, 17*th October*

Silver Situation

In June last, the Associated Chambers of Commerce of India and Ceylon had before them a suggestion by one of the constituent chambers to the effect that the Government of India should be urged to take action to protect the peoples and trade of India as far as possible against the adverse effects of the fall in silver. With this in view, it was proposed *inter alia* that the Government of India should press on the Home Government the vital necessity of calling other Governments into conference with regard to the silver position. Subsequent to the reference which it made to the constituent chambers in the matter, the Associated Chambers addressed the Government of India enquiring whether an indication could be given as to the prospects of an International Conference being convened to consider the situation and to deal not only with the question of silver sales but also with other factors affecting the international situation. The Government of India replied explaining that the matter had been receiving their constant attention but that they were of the opinion that, until the producers of silver—especially the American producers—showed signs of willingness to consider some restriction of production, there was little likelihood of a conference proving effective. Anyway, they passed on the representation of the Associated Chambers to the Secretary of State for India; and there the matter rests at present.

Mr. R. P. Morison, Chairman of the British Iron and Steel Federation, has indicated that British steel demand may go up by one-third during the next six years. He said that, in the post-war years, the industry had spent about £1 million a week on development and increased steel production by nearly 1 million tons a year. But the rise in demand had exceeded all forecasts. The industry, according to him, was now planning for six years ahead and, in 1962, some 28 million tons of steel might be required, four tons of steel for every three tons produced today.

The Director of the Norwegian Ministry of Trade has expressed the wish that Norway would like to see Britain a member of the European free-trade area. Without Britain, he says, the economic preponderance of Germany will be too great. With Britain a member, the smaller countries of Europe will have fewer misgivings. According to him, a common market can offer Norwegian export industries bigger opportunities. A larger market without tariff barriers will enable production to be increased and rationalised. More specialisation will be possible. Norway can also expect to receive more foreign capital for developing the country's resources.



SUEZ CANAL DISPUTE

THE U.N. Security Council has accorded its partial approval to the Anglo-French resolution on the Suez Canal dispute. It has accepted the first part of the resolution, embodying the six principles which should govern any settlement of the dispute. But Russia vetoed the latter part of the resolution, calling for endorsement of the proposals for international control of the Suez Canal. The Foreign Ministers of Britain, France and the U.S. criticised the Soviet Union for using the veto. The Soviet Foreign Minister, however, averred that some progress had been made at the Council and that it had done an "important and positive job."

The six principles to which the Council has given its assent are: (1) There should be free and open transit through the Canal without discrimination—overt or covert—this covers both political and technical aspects. (2) The sovereignty of Egypt is respected. (3) The operation of the Canal should be insulated from the politics of any country. (4) The manner of fixing tolls and charges should be decided by agreement between Egypt and the users. (5) A fair proportion of the dues should be allotted to development. (6) In case of dispute, unresolved affairs between the Suez Canal Company and the Egyptian Government should be settled by arbitration with suitable terms of reference and suitable provisions for the payment of sums found to be due.

Explaining the reasons which prompted Russia to veto the second part of the resolution, as mentioned earlier, Mr. Shepilov, the Soviet Foreign Minister, said that the creation of some international organ for the administration of the Canal would, in effect, cancel the legitimate act of the Egyptian Government in nationalising the Suez Canal; it would thus be incompatible with Egypt's sovereignty.

Some Western critics would, of course, assail the Russian decision stating that it amounts to treating the resolution like a curate's egg—good in parts. Nevertheless, there is no gainsaying the fact that the final formula embodies a certain measure of compromise by both sides. The Western powers have accepted Egypt's right to operate the Canal. Egypt, in its turn, has agreed that the Canal's operation should be insulated from the politics of any country. It has also agreed to settle by arbitration any dispute that may arise out of the operation of the Canal. All this indicates a considerable measure of advance by Egypt from its original stand. But it does not mean that the dispute has ended. Protracted negotiations will now have to start over the means by which the general principles, approved by the Security Council, can be best implemented. An early agreement could be reached if the Western powers do not import extraneous considerations into the dispute and refrain from using it as a means for re-establishing their political supremacy over the Middle East and North Africa. Indeed, the dispute would have been amicably settled by now if the Suez Canal had been treated as an economic asset instead of a political prize.

COAL STRIKE CALLED OFF

The deplorable situation which followed the declaration of strike by the colliery workers of Raniganj on 17th September 1956 has ended, thanks to the intervention of Dr. B. C. Roy, Chief Minister of West Bengal. After having held out for nearly a month, the 38,000 workers of 26 collieries in Raniganj resumed work on the 14th inst. This was in response to the call-off strike notice given by Mr. Deven Sen, President of the Colliery *Mazdoor* Congress, and other leaders, following Dr. Roy's assurance that he would do his best to see that the points raised by the Union would get the fullest consideration at the hands of the managements of colliery companies.

The colliery strike at Raniganj was not only illegal but also unjustified. It was illegal, because the strike had been called during the pendency of the Award of the All-India Industrial Tribunal (Colliery Disputes). It was unjustified, because the proper means of pressing any inadequacy in the Award lay in an appeal. What was worse, the workers were reported to have resorted to measures such as refusal to allow even safety men to work at various times throughout the strike period, particularly when there was serious flooding of pits.

Be that as it may, it is gratifying to note that wiser counsels have prevailed on the colliery labour at least now. It is noteworthy that the colliery owners have already accepted the improved wages and conditions of service considered reasonable by the Tribunal and, in fairness to labour, have even gone beyond the Award where anomalies existed. Several labour unions which have not accepted the Award as reasonable have appealed and these are currently being heard by the Labour Appellate Tribunal of India. As regards the workers' demands which lie outside the scope of the Award, namely, (a) resumption of free and concessional ration supply and (b) free housing, the unions will be well advised to defer them till the Appellate Tribunal gives its award.

G. A. T. T.

The Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.) commenced their eleventh session at Geneva on Thursday last week. The session is being held at a time which coincides with an outstanding development in the sphere of world trade. The development relates to the Macmillan Plan for associating Britain and the Commonwealth with the projected European free trade area. The Plan has aroused considerable interest, especially among the countries which are outside Europe; of the 35 nations which have signed the G.A.T.T., 20 are non-European countries. It is these countries which are deeply worried over the possible effect of the establishment of the free trade area on their trade with Europe. The chief question they are all asking is: If a large free trade zone is created in Europe, what will happen to the G.A.T.T. rule which says that advantages given to one member of the G.A.T.T. must be given to all?

The answer to the poser will, perhaps, be provided by the current session of the G.A.T.T. Incidentally, the session is expected to last till about the end of next month. The session, it is said, will set the stage for negotiations, at a later date, with the European free trade area now being studied in Paris by the O.E.E.C. and in Brussels by the European Coal and Steel Community. The Contracting Parties will endeavour to establish working relations between members of the G.A.T.T. and the countries concerned in the proposals for a free trade area. Disclosing this in the course of his opening remarks, Mr. Dana Wilgress, Chairman of the G.A.T.T., observed: "The effects of the proposals would extend to all countries which have a stake in international trade. A free trade area, or even a customs union, is clearly of close concern to the G.A.T.T. Contracting Parties as a whole."

The Geneva session of the G.A.T.T. is also expected to set the stage for general consultations on the problem of quantitative restrictions still maintained by the Governments of several countries, in order to protect their balance of payments. It is stated that as many as 20 countries, including Britain, continue to follow a policy of restricting certain foreign imports by means of quotas. The G.A.T.T. rules allow this only when a country is in financial difficulties. The dollar nations no doubt appreciate the need for such restrictions in certain countries, but they consider the quotas imposed by countries like Germany and the Netherlands unjustified. The U.S. is reported to be suggesting that the G.A.T.T. and the International Monetary Fund should carry out a country-by-country probe. And the indications are that the suggestion "will almost certainly be approved."

There are two other important items on the agenda of the Geneva session. First, Japan will report to the Contracting Parties on the refusal of 14 members to apply the most-favoured-nation treatment to it. Secondly, Switzerland has applied for some sort of associate membership "which would allow it to enter into tariff negotiations with the Contracting Parties pending a decision—this will not be sought at this session—on the agricultural waiver which the Swiss consider a prerequisite to their full-fledged adherence."

As regards the Organisation for Trade Co-operation, no progress can be expected at the Geneva session. For, since the U.S. Government has not pushed through the draft Bill (passed by the Ways and Means Committee of the House of Representatives) in a plenary session of the House, the Bill has now expired. The whole matter will, therefore, have to be taken up from scratch by the new Administration before the new Congress next year. Naturally, the U.S. delegation to the G.A.T.T. session will not assume any commitment on the subject.

In the course of his address, Mr. Dana Wilgress did well to focus attention on the slackness in trade between the industrial and non-industrial areas of the world, notwithstanding a rise of 60 per cent. in the total volume of world trade since 1948. He characterised as "alarming" the failure of most of the underdeveloped countries to enjoy a comparable share of increasing world prosperity. Surely, this failure is, as Mr. Wilgress pertinently declared, a direct challenge to the terms of the G.A.T.T. Charter which lays down that "members should conduct their trade so as to promote the progressive development of *all* the Contracting Parties."

A DIRECTOR'S REMUNERATION

A case involving the interpretation of the complicated provisions in the Companies Act relating to the remuneration of a director was decided by the Chief Justice of the Bombay High Court, Mr. M. C. Chagla, and Mr. Justice Desai. In the course of their judgment, which gave a judicial interpretation of such sections of the Act as Section 198, Section 309 and Section 348, their Lordships felt constrained to observe: "It seems to us unfortunate that a law (the new Companies Act, 1956) which is intended to help in the development of companies in our country and also to put down abuses which were noticed in the working of companies and especially in the institution of managing agency which is peculiar to our country should not have been couched in clear and more precise language."

The plaintiff in the case is a shareholder of Messrs. Jyoti Ltd., Baroda, while the defendants were: (1) Adnem Services, who are the managing agents of Jyoti Ltd., (2) Mr. Manubhai B. Amin, a director of Jyoti Ltd. and partner of Adnem Services, and (3) Messrs. Jyoti Ltd. Mr. Amin had been appointed technical adviser to Jyoti Ltd. on a salary of Rs. 3,000 per month. The chief question that came up for decision was whether Mr. Amin could validly receive a salary of Rs. 3,000 per month as a technical adviser to the Company when he was already receiving remuneration as a director of the Company and also as a partner in the managing agency firm. For deciding this question, their Lordships had to interpret Sections 309, 198 and 348 of the Companies Act. Briefly, Section 309(2) states that a director may receive remuneration either by way of a monthly payment or by way of a fee for each meeting attended or partly by the one way and partly by the other, while Section 309(3) states that a director may also receive a specified percentage of the net profits of the company, provided that such percentage does not exceed five for any one such director or, where there is more than one such director, ten for all of them put together. Their Lordships held that, under Section 309, a director might receive remuneration as a director and he could also get remuneration in a capacity other than that of director. Therefore, the defendant in the present case was permitted to receive the salary of Rs. 3,000 per month in his capacity as a technical adviser.

Their Lordships next referred to Section 198 which states that the remuneration payable by a public company, or a private company which is a subsidiary of a public company, to its directors, its managing agents or secretaries and treasurers shall not exceed 11 per cent. of the net profits of the company. The question was whether the amount of Rs. 3,000 paid to the defendant as a technical adviser and not as a director was included in the limit of 11 per cent. prescribed by the Act. In their Lordships' opinion, what was sought to be controlled by the Act was the cost of management and, therefore, what had to be considered was managerial remuneration and not remuneration paid for any other purpose. Accordingly, their Lordships held that the amount paid to the defendant in his capacity as a technical adviser should not be included in the 11 per cent. limit laid down in the Act.

Proceeding, their Lordships examined the relevance of Section 348 to the present case. This section provides that a company shall not pay to its managing agent "by way of remuneration, whether in respect of his services as managing agent or in any other capacity, any sum in excess of ten per cent. of the net profits of the company." Holding that this section applied to the present case, their Lordships stated that the defendant, who received remuneration as a partner in the managing agency firm and also Rs. 3,000 per month, could not receive in any capacity a sum exceeding ten per cent. of the net profits. In other words, the defendant was permitted to receive Rs. 3,000 per month as a technical adviser. It was held that this amount would not fall within the mischief of Section 309 and also it might not be taken into consideration for purposes of Section 198. But the amount (Rs. 3,000), was held, must be taken into consideration when it came to a question of limiting the remuneration of the managing agents (under Section 348) to ten per cent. of net profits.

DEPRECIATION BASIS

The question of allowing industries adequate depreciation on the basis of replacement cost, as against historical cost basis, is one that continues to be discussed. There is general agreement in principle that the rate of depreciation should be appropriate enough to give adequate incentive to the industry to undertake replacement and expansion programmes. Nevertheless, it has been difficult to persuade the taxation authorities to agree to the computation of depreciation on a replacement basis. But it cannot be denied that it is a more equitable basis than the present one, for replacement costs all over the world are considerably higher than the original cost of machinery, so that depreciation for plant and equipment provided on a historical basis is insufficient to finance their replacement. In these circumstances, the profits, struck after providing for depreciation on historical basis, do not give a true picture of a company's financial position.

In the U.K., one of the formest champions of the case for a revision of the historical cost basis of depreciation is Sir John Braithwaite, the Chairman of the Stock Exchange. He referred to this problem again recently while proposing the toast to "the Bankers and Merchants of the City of London and the health of the Governor of the Bank of England." Emphasising the reasonableness of the demand and urgency of the acceptance of the principle and its implementation, he recalled that, although the Royal Commission had accepted the truth of the proposition, it had "sheered away from making the recommendations that logically should have followed from it." He emphasised that the "figures—the statistics—of company profits should be realistic and true, and not artificial and false as they are at present."

Referring to the taxation aspect of the issue, he pointed out that so long as depreciation allowances were permitted for taxation purposes only on the historical cost basis, company profits would remain artificially inflated, and would appear greater than they really were. There is unquestionably considerable force in this argument. Again, it must be noted, in this connection, that much of the present-day labour demand for a share in reserves in a company's account books stems from an inadequate appreciation of the importance of these funds for purposes of replacement. Sir John recognised that the Government must have its revenue, though he hoped that it might be possible for it to lighten the burden on companies so as to enable them to finance their expansion plans. But Sir John pointed out that it mattered little to the Government when the amount of money it received from the industries by way of taxes on profits did not change, whether it got the same through a higher rate on smaller but truly computed profits or through a lower rate on artificially expanded profits. The gain, Sir John rightly argued, from substitution of the true method of computing profits for the false would be very great indeed.

In Britain, the principle of allowing a deduction for depreciation of assets before arriving at taxable profits goes back to the Customs and Inland Revenue Act of 1878; the deduction allowed is the actual cost of the asset. But, since then, much water has flowed under the bridge to call for a change. The most important of forces that have changed the picture, as Sir John said, has been inflation. Sir John recalled that Lord Waverley, when he was Chancellor of the Exchequer in 1945, recommended to the House of Commons a general proposition to the effect that the taxable profits of industry should be real profits in the sense that those profits should be struck only after making all the proper deductions and allowances—including adequate provision for the amortisation of money expended on assets which are used up in the process of profit-making.

Sir John, however, was not oblivious of the difficulties in implementing the reform. But he felt that the difficulties of computation would be ably circumvented by the companies and their advisers in a manner satisfactory to the revenue requirements of the Government and the progress of the companies, provided the authorities first agreed to the principle of the reform. Obviously, the matter is one of utmost importance not only to a country like Britain where industry is sufficiently advanced, but also to India which is on the threshold of great industrial progress. Not only commonsense and reason but also exigencies of the situation, such as the need for ensuring continued growth of the industry, warrant a reappraisal of the basis of depreciation.

POONA MILK SCHEME

The supply of cheap and pure milk in adequate quantities to the urban population has always been a major problem in this country. All State Governments are trying to augment production and supply of milk to the various towns situated within their territories. But Bombay may justly claim to have provided an excellent model in this field; its Aarey Milk Colony is undoubtedly one of the best of its kind in the world. Somewhat less known than the Aarey Colony (though it deserves to be equally well known) is the Poona Milk Scheme which handles about 6,000 lbs. every day. The Scheme is being expanded at a capital cost of Rs. 13.8 lakhs to handle about 25,000 lbs. of milk per day.

Laying the corner-stone of the Central Dairy of the Scheme on the 14th October, Mr. B. S. Hiray, Minister for Revenue and Agriculture, Bombay State, observed that, unlike the Aarey Milk Colony, the Poona Milk Scheme associated the rural areas with the supply of milk to the City. In Poona, the production of milk is decentralised, while the marketing centralised. Obviously, the chief advantage of such a scheme is that the cost of capital outlay is less than in a scheme of the Aarey type. The cost of production of milk also tends to be low and the villagers are themselves encouraged to take to dairying. Further, centralised marketing improves the lot of the farmers. Indeed, it would appear that the farmers in the neighbourhood of Poona City are very enthusiastic about the scheme. Along with the collection of milk, the staff of the dairy development section of the Department of Agriculture has introduced a number of measures in the villages to improve the lot of the cultivators-cum-producers of milk. One such measure is a scheme to encourage voluntary savings. The Government has made available to the producers veterinary and artificial insemination services by establishing a veterinary dispensary in the milk production area. It has also provided loans for the purchase of pumps and engines for cultivation of green fodder. It would be interesting to watch the effect of these measures on the average annual production of milk per animal. Mr. Hiray pointed out how such production for cow and buffalo was very low in India at about 413 lbs. and 1,100 lbs., respectively, as compared with 4,800 lbs. in Australia and 7,600 lbs. in the U.K.

The Minister stated that a Government Milk Scheme on these lines was being run at Hubli-Dharwar for quite a few years. Another scheme (at Karjat) on the Poona model for the benefit of the people of Thana was under consideration. He also revealed that, in the second Five-year Plan, the Government of Bombay would start schemes on the Poona pattern at Baroda, Nasik, Sholapur and Kolhapur and form a network of such schemes at other places, including smaller towns. In order to give a fillip to the co-operative milk unions, Government has decided to establish eight co-operative milk unions during the second Plan period. Each of these unions will be served by at least five societies and every union is expected to handle at least 4,000 pounds of milk per day. Clearly, if such schemes were implemented on a country-wide scale, it would lead to lower prices for milk and better intake and thereby help raise nutritional standards of Indian diet. There is great scope for such improvement, considering that the *per capita* daily consumption of milk in India, as Mr. Hiray himself pointed out, is deplorably low at 5.5 ozs., as against 15 ozs. required for balanced nutrition, 18 ozs. in the U.K. and 22 ozs. in the U.S.

FINANCING HIGHER EDUCATION

Although education forms the base from which advancement in all directions emanate and is the *sine qua non* of progress in other fields, the thorny problem that confronts every nation is the question of financing this huge project. The provision of educational facilities calls for large investments. It is true that they will pay handsome "dividends" in due course. But, then, education is a long-dated investment. It is not surprising that no country has been able to solve the problem of educational finance completely. A State has to incur large expenditure on all sorts of diverse schemes of development and more often than not, its allocation for spreading education falls far short of the required amount. In these circumstances, the private sector can make a useful contribution to this type of industry, by supplementing the gap left by the State with its own resources. So far as this country is concerned, there has been no lack of educational charity. Recently, we made a reference (*vide Commerce* dated 4th August 1956) to a novel experiment, which combines business efficiency and philanthropy, that has been initiated by the authorities of the Canara Bank. Under this scheme, the Bank intends to finance the higher education of deserving candidates by providing funds from its own resources to the extent of five times the amount placed by a donor at the disposal of the Fund. The loan is repayable by the recipient scholar in instalments not later than one year after the completion of the course of his studies with a nominal 4 per cent. simple interest.

In this context, the report of a similar scheme sponsored in the State of Massachusetts, (U.S.), to help finance the college education of deserving students is bound to evoke interest in this country. It is stated that this project, believed to be the first of its kind in the U.S., would make it financially possible for thousands of students to attend college next year which otherwise they would not have been able to afford. Under the plan, loan money will be available to Massachusetts boys and girls to help them pay for their own education. The sponsors are engaged in establishing an organisation to be known as the Massachusetts Higher Education Assistance Corporation. The Corporation's board of directors includes Massachusetts Governor, Christian Herter and presidents of many of the State's banks, colleges and industries. They will raise a central Guarantee Fund from contributions and by sale of stocks, besides urging every bank in the State to co-operate in giving student scholarship loans at minimum interest rates. Any boy or girl who lives in Massachusetts and has successfully completed his freshman year at an approved college, technical school or any other institution of higher education will be eligible for loan help.

When a student has satisfactorily finished his first year, he will be able to borrow money from a bank for his further education—probably up to $1,000 a year for three more years. While in school, he will not have to make any payments on the loan. Repayments will start about six months after graduation. Plans are under way to make the programme applicable to further graduate study also. The programme may begin operating early next year. There is no estimate now of how many students will apply for loans, although much evidence of interest is reported. Mr. Elmer O. Cappers, President of the Corporation, says that the project "means that everybody shall be given a chance to a higher education."

It is to be earnestly hoped that the example set by the Canara Bank in our own country and that by the Massachusetts Corporation will be emulated by India's leading banks and industrialists, so that higher education, particularly technological education, would be within easy reach of a student of small means but reasonable ability.

DISCOVERY OF OIL WILL LEAD TO SAVING OF FOREIGN EXCHANGE

CANADA READY TO LEND A HELPING HAND

From A Special Correspondent

NEW DELHI, 16*th October*

DELHI LETTER

IN the battle for conservation of foreign exchange which has taken a new turn, consequent on the letter from the Chairman of the World Bank to the Indian Finance Minister, it will be a source of comfort for the Government and its officials to learn that the prospects for near self-sufficiency in mineral oils appear to be bright. The latest news from Assam is, indeed, really encouraging. In a recent speech, Mr. W. B. Metre, Senior Geologist of the Assam Oil Company, gave certain interesting information about the probable and proved oil resources in Assam. According to him, the resources in the Nahorkatiya area alone in Assam are sufficient to plan a production target of 2.5 million tons of oil per year, together with about 45 million cubic feet of gas per day, equivalent to about 0.6 million tons of fuel oil per annum, a large part of which could be utilised for industrialisation of Assam. Mr. Metre observed that the declining Digboi production was likely to average at 0.3 million tons per year during the next few years, but, on present estimates of other resources, one could expect to meet as much as 56 per cent. of the present crude consumption in the country estimated at 5 million tons. This will, indeed, be a substantial improvement on the present production which stands at only about 8 per cent. of the total consumption. He added that, even after allowing for increased consumption, one could count on meeting about 50 per cent. of India's requirements from the Nahorkatiya and Digboi fields.

What is more interesting is the fact that Mr. Metre is hopeful of the promise held out by other areas in the Assam Valley. In other words, the possibilities of producing more oil in Assam seem to be very encouraging. Now that we have already received the news that, in the Moran area, there have already been some successful locations of oil wells, the attention of the Government is all diverted to exploring this field more thoroughly and comprehensively.

Encouraging Picture

It will be worth mentioning here that the present rate of consumption of oil in India is in the neighbourhood of 4.3 million tons. And it is estimated that, by the end of the second Five-year Plan, that is, by 1960-61, consumption will go up to about 7 million tons as a result of increased industrialisation of the country. In case Assam itself is able to supply about 4 million tons of oil per annum, which is not an overestimate taking into consideration the recent encouraging prospects, India's dependence on imports of oil from foreign countries will be considerably reduced. Enquiries made in responsible Government departments indicate that the Government of India will be giving a very high order of priority for accelerating the work of producing oil from the wells and also for refining it, since this will surely enable the Government to conserve its foreign exchange resources substantially to the extent that it is able to produce oil internally as quickly as possible. As matters stand at present, the Government is not likely to lessen the efforts that are being taken to explore and dig oil in other parts of India also as, for instance, in the Jwalamukhi area in the Punjab and elsewhere.

Mr. Metre is also not presenting any discouraging picture in regard to the location of oil in other areas in the country. On the other hand, he is of the view that several large alluvial areas in the country, especially parts of West Bengal, the extensive Gangetic valley and the alluvial tracts of Rajasthan, Surashtra, etc., are also known to be capable of yielding oil. The existence of oil in these exposed areas is suspected by the Oil and Natural Gas Commission which has carried out very systematic and extensive geological and geophysical surveys in these areas; drilling operations in some of those tracts are already in progress.

Another interesting feature of Mr. Metre's speech is his robust optimism about the success that is likely to be achieved by the Government in its efforts to find more oil in the country. In this connection he observed that "our present aim is to attain or to approach self-sufficiency in petrolum for the entire country and to effect a large saving of foreign exchange. Until we find oil to meet the country's requirements and unless much more drilling is done—and we hope to do this in the next two or three years—we cannot say whether oil is present in other areas. But I can assure you that, if the oil is there, we shall find it."

It will also be remembered that, recently, the Government of India appointed a Commission for determining the location of the site for setting up an oil refinery in the country, particularly between West Bengal and Assam. Although it may take some time for this Commission to make its final recommendations, the Government should be very careful to see that the country's interests as a whole are fully safeguarded. In other words, whatever may be the decision of the Commission, the progress of the contemplated oil refinery project should not be delayed or retarded on account of any inter-State rivalry that might arise between the Governments of West Bengal and Assam in claiming the location of the refinery within their respective confines. The project is vital, as it involves the question of very valuable foreign exchange, and therefore the sooner it is accomplished the better for the country as a whole.

Canada to Help

Mr. Keshav Dev Malaviya, Minister for Natural Resources and Scientific Research, should also be congratulated for his continuous efforts at exploring oil in the country along with other minerals. He has just returned from Canada, where he had been on a tour with a view to investigating possibilities of seeking Canadian technical help for oil exploration in India. Mr. Malaviya's firsthand impressions are very promising and hopeful. It appears that Canada, which has attained a high degree of proficiency in the art of discovering mineral oil, has expressed its keen desire to help India in speeding up oil exploration and drilling. In fact, it is understood to have agreed to help India in conducting aerial surveys for exploring oil resources, by using its highly developed technique for this survey. This readiness on the part of Canada reflects its goodwill towards India. Only the formalities remain to be completed for inviting a Canadian technical team to India for such survey. According to Mr. Malaviya, the "U.S. Government also is very sympathetic to India's oil exploration programme."

If things go according to schedule, as there is every reason to believe so, the Rs. 30-crore scheme for exploration of mineral oil during the second Five-year Plan period, prepared by the Ministry of Natural Resources and Scientific Research, will be not only fully implemented but substantially exceeded. Because this field offers a rich and substantial source of foreign exchange conservation, it should be given a high priority in India's development plans. India is at present importing mineral oil at the rate of about Rs. 75 crores per year. With the estimated increase in India's oil consumption to about 7 million tons a year in the next few years, if India could produce the requisite oil internally, then it would be in a position to save at least foreign exchange worth about Rs. 120 crores, if not more, per annum. And this is a substantial amount.

Other Avenues

Apart from oil, the Government of India is also very keen on exploring fresh avenues of saving foreign exchange resources. The Government is now determined to effect as much savings as possible in foreign exchange. And, for this purpose, the Government is concentrating on the production of such goods that would be in a position to effect this saving. Mention has already been made in these columns on an earlier occasion that the Government of India is very anxious to increase the pace of progress regarding machine-building industry in the country and that its efforts are particularly directed to see as to how this could be accelerated. The recent efforts at setting up forge-foundry projects should be taken in that light.

In another direction, too, the Government is concentrating on enlarging its sphere of production. For instance, in the case of dyestuffs, efforts are now being made to set up this industry, particularly by manufacturing intermediates within the country. The National Industrial Development Corporation has already prepared a project costing about Rs. 18 crores and the plan is being put through as quickly as possible. A number of details yet remain to be settled, particularly in regard to whether there should be only one plant for the manufacture of primary intermediates or whether production of these should be distributed between two units. In a similar manner, the question whether both the units should be central ones or only one has to be central, still remains to be settled. It appears that the ministry concerned is keen on coming to a final decision very soon, so that work on the project would not suffer any delay.

Dyestuffs

A contributory factor for this sense of urgency is the fact that India, which imports dyestuffs from abroad, is keen to save foreign exchange as much as possible. Imports of dyestuffs into the country have been steadily on the increase, standing at present at a value of Rs. 15 crores a year. This figure is bound to go up substantially with the rapid development of industries, particularly of the manufacture of paints and varnishes, not to mention cotton textiles. It is estimated that consumption of dyestuffs will go up to 10,000 tons valued at Rs. 30 crores.

The Government has already decided that, although India cannot completely cut off imports, still such imports should be confined only to the absolutely necessary ones and that too to the irreducibly minimum quantities. The bulk of the requirements should be produced indigenously. The pace at which the Government has been approaching this question shows that the authorities are fully seized of the problem and that they want to achieve the desired objective almost on a war footing. A number of industrial units have already been given licences in the last few years for the manufacture of dyestuff. But most of their schemes are dependent on imported penultimates and only in quite a few cases they are known to have started manufacturing, in small quantities, dyes from complex intermediates.

It is the firm opinion of the Government that many of the important, complex and latest intermediates can be developed easily and with great advantage to the country by factories which undertake their final processing into finished dyes or other products. At the same time, it is thought desirable also to produce some of the most important primary intermediates on a centralised basis, because capacity for these intermediates is related not to the production programme of a single unit, but intended to meet the demands of a number of industries throughout the country. It has therefore been decided that the National Industrial Development Corporation, which is a private limited company owned entirely by the Government of India, should set up central capacity to produce the primary intermediates.

The Government has already obtained a detailed technical report covering the whole field from an Italian firm. It has also received reports from German technical experts and the I.C.I. of the United Kingdom. In addition to all these, a group of Indian technologists, too, has worked out the basis and requirements and potentialities of producing the primary intermediaries indigenously, and submitted its report to the Government. The Government is now busy studying and examining all these reports. Although it is natural that their approaches differ in many ways, there is a large area of basic agreement between them on fundamental issues, the most important of these being the point that there is ample scope and urgent need for developing the dyestuff industry in India on sound lines. The Government attaches greatest importance to the early development of this vital industry in the country and is of the view that its development should not depend on imported intermediates but, as far as possible, on intermediates manufactured in India. It feels, that the demand for the intermediates should be assessed not merely on the basis of production plans for the dyestuff industry but also on the basis of development in other allied fields like drugs, plastics and explosives.

LONDON LETTERS

LEFT-WHEEL TOGETHER

From Our Own Correspondent

LONDON, 5*th October*

"THE Labour Party" wrote the Editor of *The Times* on Wednesday of this week "has picked up the scent of office." It was the day following the party's annual conference at Blackpool, when Mr. Aneurin Bevan was elected Treasurer by a substantial majority. A year ago, when Mr. Gaitskell won office as leader of the party, he was leader of a divided party, a party in which the right dominated an uneasy left, a party which could not see its way clear to rouse any enthusiasm among its own followers, let alone the electorate. Then, three months ago, Mr. Gaitskell announced that "equality" was to be the signpost which the party was to follow in the years ahead, and your correspondent, commenting on this and on the general lack of a sense of purpose in the Labour Party, suggested that the real issue before the Labour Party was not that of equality, or any other slogan, but whether it was to be dynamic or stodgy—whether it was to have any appeal which might make it the leader of the nation, or whether its only hope of office was to rely on the mistakes of its opponents.

Now this year's conference, though it has found no new slogans, oddly enough no policy more new than that which has been slowly formed over the past few months, has, however, achieved dynamism and it has achieved this through cohesion, through a fusion of left and right, a fusion which, comparable to that in an atomic reaction, has released a flood of energy in the movement which has made it possible to say that the party "has picked up the scent of office"! This is inevitably an event of economic as well as political significance for the nation.

Since Mr. Gaitskell became Leader of the Opposition, he and his right-wing supporters have, in the name of economic realism, been moving away from the old slogans of the Socialist movement, such as nationalisation and a transfer of economic power from capitalists to the body public. Mr. Gaitskell has tried to tell the nation that a system of financial and physical controls is the key to greater prosperity and that the doctrine of equality in education, in incomes and taxation, is the way in which everyone will share in the greater prosperity. Broadly, the policy of the leadership has been like that of the old Liberal Party, reform rather than revolution.

But Mr. Gaitskell was leader on the authority of the Trade Unions, and he knew that the terms of his leadership meant that, when the industrial battles had to be fought, he would have to fight them on terms which the ordinary wage earner understood. And always on the left, in apparent reconciliation to his leadership, was the figure of Mr. Bevan. The real change that has taken place in recent months has been the swing of the Trade Union movement more and more leftwards, as personified in the leadership of the largest union of all, the Transport and General Workers. Yet that union, though becoming more militant, did not support Mr. Bevan in his bid for the Treasuryship of the party, the post next in importance to that of the Leader. So Mr. Bevan's victory in this election has been one against formidable odds, not excluding his own past mistaken tactics. The weight of the Trade Union movement was thrown against him but he is the darling of the Constituency Parties, the rank and file members of the movement organised outside the unions. The overwhelming support of the constituencies, plus the support of many of the unions, has thus established the leader of the left next in position to that of the right! When Mr. Attlee, as he then was, stepped down from the leadership of the Labour Party, your correspondent asked whether Mr. Gaitskell and Mr. Bevan were big enough to sit down together to lead the party. The answer then was negative, the two men fought each other. The answer this year has been given by the party itself which has established the two men in effect as joint leaders, and has declared unmistakably its decision that left and right must work together! The fact that the block votes of the big unions were not cast for Mr. Bevan is much less important than the fact that the temper of these unions has moved leftwards. Mr. Gaitskell is now the leader of a party which has wheeled away to the left, and he has noted the enthusiasm with which this movement has been marked. The whole Labour movement now feels it knows where it is going, that it has a general policy which it can enthusiastically put to the electorate who will in time be asked to vote for a united party, with a message to interest the working mass of the electorate. Now a substantial economic policy remains to be forged.—*All Rights Reserved.*

PLATEAU OR TIGHTROPE?

From Our Own Correspondent

LONDON, 12*th October*

SO Mr. Macmillan, the Chancellor of the Exchequer, is still on his plateau—as he told the assembled bankers and Commonwealth Finance Ministers at the annual Mansion House Dinner on Tuesday. He has been pleased to find that the surplus on the balance of payments for the first half of 1956 is £144 million, instead of the £100 million he forecast. Indeed, if the pace could have been kept up till the end of the year, the surplus would reach the £300 million mark which successive Chancellors appear to have adopted as their target. But, alas! Inevitably the trade figures for the third quarter do not make such good showing: the *average* gap between imports (f.o.b.) and exports (c.i.f.) having widened from £51 million per month in the first six months to £57 million per month for July/September. But this sort of movement is an annual phenomenon—so too much attention need not be given to the fact that the balance has worsened steadily in each month from July. More hopeful is the fact that, even though the average for this last quarter is £57 million, that for the corresponding quarter a year ago was £74 million.

What then of the gold loss in the third quarter?—The loss of £20 million which partly offset the £95 million accrued between January and June and which would have been much greater had the Trinidad Oilfields sale not been made? There is only one answer—Suez and the flight of short-term funds and bear pressure against sterling. Mr. Macmillan, high priest of a tough policy over Suez, did not refer to this.

And where has this year's improvement come from? Exports, said the Chancellor "are expanding at the annual rate of about six per cent. in volume and about 10 per cent. in value" and in cash they brought in some £160 million more the first half of 1956 than in the first half of 1955. Imports remain obstinately high in spite of the credit squeeze and Mr. Macmillan says we must not relax—the squeeze is necessary to keep them where they are. The Governor of the Bank of England speaking for most of his colleagues, does not take this view. He does not like Mr. Macmillan's complete reliance on keeping money tight—starving business of credit, while Government expenditure plunges ahead. The Chancellor, on the other hand, maintains that economies are continuously being made and that, so far, the fiscal year has shown payments kept within the bounds of budget estimates. Again, he conveniently forgets the mounting bill for his Suez policy.

On inflation, Mr. Macmillan commented that prices and, indeed, wages were running much more evenly this year and the steady rise had slowed down. Public confidence appeared to have increased as National Savings at nearly £30 million for the first half-year were the highest for any similar period since 1948. So he talks of a plateau having been reached. But the banker's revolt is growing—against his methods, not his objectives, for they too believe the economy is overstrained—and there is nothing of the broad assurance of a plateau about the situation in which the Chancellor finds himself and which he has in part had to discuss with his Commonwealth colleagues. He is more like a man on a tightrope—balancing to avoid the abyss below him and straining to reach the security of his destination. A false move and he sways precariously—will his methods carry him through?

Of his talks with the Finance Ministers, he said: "The pace of economic development is quickening. So we must expect some drawing down of the great accumulated (sterling) reserves. They will be used to finance the ambitious plans of Commonwealth social and industrial progress . . . all this puts a heavy burden and responsibility upon the old country to increase its external surplus. It also requires mutual consultation and mutual adjustment of policies, so that the overall balance of the sterling area, trade is put on a sound footing . . . of course the (gold) reserves are too low." And, in that last sentence, he revealed his whole problem and the delicacy of his (and this country's) tightrope act. And, then, suddenly he linked hands with his political opponents when he said: "The shifting of our resources from production for the home market to production for export is essential and must continue." But the Chancellor was at dinner and not in Parliament so nobody asked him how he proposed to do it. —*All Rights Reserved.*

AMERICAN LETTER

ELECTION CAMPAIGN WELL UNDER WAY

From Our Own Correspondent

NEW YORK, 11*th October*

THREE major issues are the centre of American domestic attention. They are the Presidential election campaign, rising interest rates and the Suez Canal crisis.

The fight for votes is getting under way at the present time. President Eisenhower and his opponent Adlai Stevenson are taking their sides of the question into the countryside in approved American fashion and the arguments become rougher as the time of the election approaches.

The Democrats represented by Mr. Stevenson really have very few issues. The war in Korea has been stopped. Employment, income and production is at top levels. The main criticism is that the Republicans favour big, instead of small business, that the Democratic party is the party of the "people" and the Republicans are plutocrats.

President Eisenhower so far has paid a lot of attention to the farmers. Farm prices have declined for a number of years. The trend was reversed recently. However, the Democratic opposition has been trying to make capital out of the allegation that the farmer, relatively speaking, has been worse off than he was two or three decades ago. This is not quite supportable, but figures and statistics can always be twisted.

At this writing, President Eisenhower still holds an edge over Mr. Stevenson. His popularity is undiminished. His health is restored and he is determined to stand on the record of his Administration, based on peace and prosperity.

A balanced internal budget of the Washington Government is another important subject, most observers believe. It has been achieved and the prospects are that this year's budget surplus will be even larger than it was in the last fiscal year ended 30th June. Curtailment of expenditures and wise monetary management otherwise have had a lot to do with this showing.

Harder Money Policy

The wisdom of the harder money policy of the Administration or the lack of wisdom is still being debated hotly. It is a campaign issue. The Republicans insist it is the policy to follow. The Democrats want easier money and would not mind if the flood-gates of inflation were opened again.

During the Eisenhower Administration, inflationary influences have been more or less confined to the economic impact of higher wages and somewhat higher prices. Higher interest rates have been beneficial to corporation and bank earnings. They have not seriously impeded the new issue markets which play an important part in the expansionary economy of the United States. With rising yields, bond prices naturally have been declining and equity prices likewise have taken a more cautionary attitude.

If Mr. Stevenson should be elected, tight money policies are likely to be abandoned. Bond prices would go up again and the upward spiral would also make itself felt in other directions. What is too high or too low, has yet to be determined. The so-called man-in-the-street here has yet to become inflation-conscious. He thinks in terms of the dollars he earns rather than about purchasing power. Somewhat typical of that is the attitude of the average buyer of an automobile and most Americans are.

The question is seldom raised what the overall cost of the car is. Most purchasers inquire merely how much their monthly payments would be and for how long. This has a meaning to them in terms of their income which has taken the place of capital. In the American conception of ever greater production, capital so far as individuals are concerned in most instances means an increasing equity in a house, insurance policies and savings.

The controversy as to whether interest rates are too high or too low is somewhat relative. As compared with other countries, the United States still has one of the lowest rates in the world owing to the rapid accumulation of savings. Supply and demand in the money markets has mostly been in near balance, except for the usual fluctuations which occur normally.

(*Continued on page 785*)

U.K.'S BATTLE AGAINST INFLATION

COMING MONTHS CRUCIAL—LIMITATIONS OF MONETARY WEAPONS

DURING the first half of the current financial year, Britain's economy showed signs of increasing financial stability internally and improved balance of payments position externally. Monetary policy has been found to be increasingly effective since April 1955, and the battle against inflation has produced substantial results, though it has not yet been completely won. While the upward trend in retail prices has been brought under control, there has been a growing realisation that, unless wages and salaries, which form so large a part of the costs, are also effectively kept under control, real price stability will not have been attained. The rising trend of imports has been checked and exports stimulated, resulting in a substantial improvement in the balance of payments position. There is, however, a growing need to step up the savings at home and exports abroad, in order to free real resources for investment. This is particularly important, in view of the tempo of development in the sterling area and the possibilities of withdrawal of the accumulated resources to a certain extent to finance the ambitious plans of social and industrial development in some of the countries belonging to this area.

In the recent past, instead of drawing down their balances in London, most of the sterling area countries contributed to an increase in such balances through surpluses on their external trade. The coming months are, therefore, rightly termed by financial commentators in London as "crucial." The fields of industrial costs and public finance are, again, regarded as the determining ground. Accordingly, increasing emphasis is laid on the need for the banking system to hold fast to the present policies and help stabilise the situation, though it is recognised that the scope for application of monetary weapons is limited and that their efficacy should not be over-rated in the present conditions.

Monetary Policy

The occasion for taking stock of Britain's economic position arose, as usual, at the annual banquet given by the Lord Mayor of London to the bankers and merchants of the city. At this function, Mr. Harold Macmillan, Chancellor of the Exchequer, and Mr. C. F. Cobbold, Governor of the Bank of England, gave a half-yearly review of the economic and financial conditions of Britain. In their references to monetary policy, both the speakers recognised the limitations of this policy in the present conditions. Indeed, the Chancellor admitted that all the problems could not be solved by monetary instruments alone. He observed: "There is, in practice if not in theory, a limit beyond which the rate of money could not be driven. Nor is it as efficacious today over as wide a field as in the past."

The Governor of the Bank of England devoted his talk mainly to monetary policy and brought out its positive effects. Answering the critics of this policy, he remarked: "Controversy has centred both on the technical machinery and on the general effects. To take first our mechanics, doubts have been expressed whether our technical arrangements are up-to-date. There is no advantage in sticking to old arrangements merely for the sake of tradition. But equally we see no advantage in changing arrangements which work well, unless we are sure that change would be for the better." The object of Britain's monetary policy is to curtail spending and encourage saving by making money both dear and scarce. Money was made costly by pushing up the interest rates; it was made scarce by constriction of bank credit rapidly and substantially, restrictions on hire-purchase and control of capital issues.

As a result of these measures, and the co-operation extended by the banking system, the position improved considerably as reflected by bank advances. These bank advances, according to Mr. Cobbold, remained remarkably stable. To quote him:

"The spotlight has been on the movement of bank advances. In the five years since we began to operate a more flexible monetary policy, inflation has not in this country been fed by any run-away increase in total advances. Over the period, and against a background of rising prices and strong demand for money, the level has remained remarkably steady. In fact, the total of clearing bank advances is now slightly lower than it was just five years ago—a very different experience from that in, for example, the United States or Germany.

"Twice—once at the beginning of this period and again in the spring of 1955—signs emerged of an undesirable increase. Both times, by a combination of technical measures and of co-operation between the authorities and the banking system, the movement was held and reversed."

Deposits And Government Borrowings

But Mr. Cobbold pointed out that the level of advances was not the only important index. The level of deposits, too, was important. This level was influenced by the form and extent of Government borrowings. The danger was great when such borrowings consisted mainly of floating debt. The objective of monetary authorities was, therefore, to keep the floating debt down to the minimum manageable size. But it had not been always possible to match the total requirements of Government and the public bodies by the sale of long-term securities. Occasions arose when floating debt had at times become excessive; bank deposits rose too high; and technical pressures became more difficult to maintain. This situation arose early this year when the authorities had to choose between two broad alternative courses. Either they had to press on with measures to reduce the creation of new short-term debt and to fund existing short-term debt—by economies, a savings drive and a general funding programme. Or they had to accept that this could not be achieved and to introduce new techniques—for example, an enforced and movable liquidity ratio.

Endorsing the decision taken by the Government to choose the former course, Mr. Cobbold observed:

"The great merit of the existing technical arrangement is that it rings two different warning bells. When Government borrowing is in hand but bank advances are increasing too fast, the liquidity ratio rings a bell of warning to the banks, as in the first part of 1955.

"When bank advances are in hand but Government short-term borrowing is mounting dangerously, it rings a bell of warning to Government, as it did most properly in the latter part of last year. A mandatory increase in the liquidity ratio, by forcing the banking system to hold more Treasury bills, would work in absolute contradiction with a policy of funding and reducing bank lending to the Government."

Turning to the general contribution of the present monetary policy to the fight against inflation, the Governor felt that an appraisal was difficult and must be a matter of opinion. He, however, ventured to state that, after a slow start, it had been increasingly effective since about April 1955. He felt that, in the summer and autumn of last year, its effects were mainly negative, in the sense that, without a credit squeeze and an increase in interest rates, consumption and investment demand would have soared, and prices would have risen higher, resulting in much more serious balance of payments difficulties. After the turn of the year, more positive effects were being witnessed slowly but steadily. He further remarked in this connection: "The economy is still overstrained but rather less than some months ago—the tempo has not increased and seems to be diminishing a little. The battle against inflation has been effectively joined, but it is certainly not yet won. The coming months are crucial. The determining events lie in the fields of industrial costs and public finance, but the banking system can help by holding fast to present policies. There is no room for any letting up."

As to the future, he pointed out that no commitment had been given to anybody about the future course of Bank rate; as usual, it would be reviewed from time to time and changes made as circumstances warranted. "But we shall obviously feel more comfortable," he added, "when circumstances justify a somewhat lower pattern of short-term interest rates."

Role of Credit Squeeze

Discussing further the role of the credit squeeze, Mr. Cobbold emphasised that it was a necessary brake which should be applied when consumption and investment were running too fast. He warned, however, that it should not be envisaged as a long-term measure of offsetting "other inflationary forces." Elucidating this point, he said:

"You cannot drive the economic machine with one foot on the accelerator of public expenditure and the other on the brake of credit restriction. As soon as the speed of the machine is under control, the brake should be taken off and kept for emergency use. An indefinite period of severe credit restriction, whether by persuasion, by present technical methods or by newly-devised techniques, would starve the economy and, by inhibiting free competition among the banks, would prejudice both their efficiency and their services to public."

Proceeding, Mr. Cobbold reminded his audience that the conditions since the years before 1930 had greatly changed. The compass of monetary policy had been greatly affected "by the growth of Government's share of total economy, by high taxation, by exchange controls, and, not least, by political and social developments of the past 25 years." Outlining the functions of monetary authority in these changed circumstances, Mr. Cobbold observed:

"In particular, we must seek to carry public opinion with us in understanding and approval of what we are trying to do. The jargon and technique of monetary control are complicated and obscure. The objective is simple. Our task is, as the Chairman of the Federal Reserve Board has put it, to lean against the wind. When more is being spent on consumption and investment than the country can afford, our duty is to try, by making money more difficult and more expensive to borrow and by making interest rates on savings more attractive, to encourage people to spend less and save more."

High Interest Rates

He clarified the purpose of high interest rates by saying that the use of high interest rates and credit restrictions was being directed not to cause unemployment or reduction in the standard of living, but wholly towards avoiding the disastrous conditions to the common man which alternating boom and slump produced.

Among other notable developments in the field of British finance, the success of the National Savings Campaign was remarkable. According to Mr. Macmillan, the receipts from National Savings, excluding Defence Bond redemptions, amounted to over £29 million, the best result for the half-year since 1948. Apparently, the income-tax exemption for the first £15 of interest on Post Office and Trustee Savings Bank deposits had given great encouragement to savings. In addition, the savings arsenal was stocked with what was called a "new and less orthodox missile"—the Premium Savings Bond. This is expected to give considerable fillip to the savings drive. Evidently, as a reply to the critics of this instrument of borrowing by the State, the Chancellor said: "Please be kind to the Premium Bonds. If it really be a temptation, pray yield to it."

Alluding to the developments in the sphere of balance of payments, the Chancellor said that, while imports were checked and their value stood slightly less than in the second half of 1955, though slightly more than in the corresponding half of 1955, exports were as much as £160 million more than in the last half of 1955 and nearly £170 million larger than in the first half of 1955. That meant, according to Mr. Macmillan, expansion of exports at the annual rate of about 6 per cent. in terms of volume and about 10 per cent. in term of value. Moreover, improvement was also witnessed in the balance of invisible transactions and the terms of trade had been favourable to the U.K. As a result, the surplus in the first half of the current year was estimated to be as much as £144 million, as against only £100 million expected in July. He, however, warned the nation against relaxation, and stressed that there was need to increase the exports in order to be able to finance overseas capital commitments, that is, both to pay past debts and to maintain the U.K.'s contribution to the development of the Commonwealth. In this connection, he observed:

"The halt in the growth of imports is due partly to reduction in some stocks and partly to a slackening in the rate of increase of production. As production increases, so will the demand for imports. More exports will, therefore, be necessary to pay for them. Nor must we forget the need to finance our overseas capital commitments, both to repay past debts and to maintain our contribution to the development of the Commonwealth and our place in the oil industry.

"All this can only be done, if our savings at home and our exports abroad continue to grow and to free real resources for investment. For, although many worthy people seem quite unconscious of so obvious a fact, it is still true that you cannot invest a deficit."

Sterling Area

Turning to the sterling area, the Chancellor pointed out that the pace of development in the area required some drawing down of the accumulating reserves to finance the ambitious plans of social and industrial progress. This meant, he averred, greater burden on the U.K. and called for mutual consultation and adjustment of policies among the sterling area countries, so that the overall balance of the sterling area could be put on a sound footing with the rest of the world. Viewed in this light, the reserves, although they increased during the last six months by £95 million, were too low. But the position was not too bad, he felt, so long as the sterling area maintained balance with the non-sterling world.

Indicating the progress made by Britain in fighting inflation in more specific terms, Mr. Macmillan pointed out that the boom had been checked. Personal consumption was running very little above last year's level, and there was evidence of people saving more. Moreover, the business community had grown more cautious in planning expansions. Again, total demand had not risen much over last year's level, and home production and imports had remained stable. Since the spring, there had been a welcome stability in the price level; retail prices in August were, in fact, a little lower than in April last. He did not expect them to go much higher in the coming months.

All this does not mean that Britain has achieved economic equilibrium. Far from it. The most important problem still facing it is one of "shifting its resources from production for the home market to production for export." The Chancellor, therefore, emphasised the need for making the exports competitive in price as well as quality. But he did not say how this need could be fulfilled.

Both in Britain and outside, there is a growing impression that the Suez dispute has already inflicted a severe strain on the U.K.'s economy. Mr. Macmillan's comment on this question was: "So far, neither military expenditure which we have incurred nor the degree of disturbance to shipping have had a significant effect on our economy. Nevertheless, on the outcome of this affair, our life and that of all Western Europe may well depend." The consensus of opinion is that the Chancellor has understated the economic effects of the Suez dispute, as will be seen from the despatch of our London Correspondent appearing on an earlier page.

U.K.'S FOREIGN INVESTMENTS

Although Britain has all the qualifications to make it a successful exporter of capital—specialised institutions, financial connections, and long experience—it continues to have a dwindling share in international investments both within and outside the sterling area. For instance, British capital exports, which in 1913 were the equivalent of about £800 million at today's prices, have averaged, in the last three years, about £60 million a year, whereas, over the whole of the post-war period, it has been substantially negative. The reason is not far to seek. Though the U.K. enjoys several advantages which can make it a capital-exporting nation, it lacks the crucial thing, that is, investible surplus resources.

This may seem surprising to some, in the light of the fact that Britain's real national income today is probably more than 25 per cent. above the pre-war level and as much as 70 per cent. higher than in 1913. But its inability to supply, out of its own resources, more than a fraction of the capital needs of at least even those countries which are accustomed to look to it for finance, is attributable to its excessive pre-occupation with the maintenance of full or near full employment at home and its striving after the attainment of the goal of the Beveridgian welfare state, namely, providing for its citizens social security from the cradle to the grave. This, coupled with its large expenditure on armaments, makes it difficult for Britain to secure a balance of payments surplus which it must have in order to maintain its position as a great financial power.

Whatever the reasons, the fact remains that the downward trend in Britain's overseas investment is gathering fresh momentum. This is the conclusion that emerges from a study of the figures supplied by the Balance of Payments White Paper published on 10th October. In the first half of 1956, according to provisional estimates made by the White Paper, the outflow of capital by way of commercial long-term investment in the rest of the sterling area was £25 million, as compared with £100 million in the whole of 1955, £175 million in 1954 and £150 million in 1953. Net long-term investment by the U.K. in the rest of the world, including the sterling area, was £50 million for the first half of 1956, as compared with £125 million in 1955 as a whole, £200 million in 1954 and £175 million in 1953. This fall in the rate of overseas investment may appear intriguing in the context of an improvement in the balance of payments during the period. But this is partly the result of the credit squeeze in the U.K. which makes it difficult and expensive for loans to be raised in London.

WORLD BANK LOAN TO THAILAND

The World Bank has given a loan of $3.4 million to the Port Authority of Thailand to finance the purchase of three dredges, and auxiliary equipment, to be operated in the channel leading to the Port of Bangkok and in the harbour.

The First National City Bank of New York is participating in the loan, without the World Bank's guarantee, to the extent of $184,000 representing the first two maturities falling due August 1958 and February 1959.

This is the second loan made by the Bank for the development of the Port of Bangkok. A part of a $4.4 million loan made to the Government in 1950 was used to deepen and widen a channel through a sandbar at the mouth of the Chao Phya River. The channel was completed in January 1954, and now ocean-going vessels of up to 10,000 deadweight tons are able to reach the port. The savings in handling costs and lighterage fees are substantial—an important factor in the Thai economy since Bangkok handles the bulk of Thailand's foreign trade.

It is essential that the Port Authority have adequate dredging equipment to maintain sufficient depth of water in the bar channel and in the harbour. Orders for the equipment financed by the Bank were placed on the basis of international bidding; one of the dredges is already in operation and the others will be delivered in late 1957.

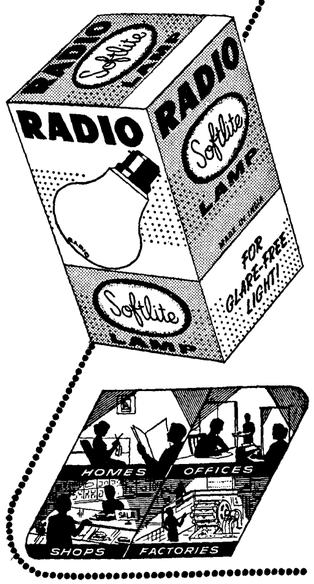
The Government established the Port Authority of Thailand as an autonomous agency in 1951 and in the past five years the Authority has considerably improved port operations. The Port Authority will itself carry out dredging in the harbour, and has engaged foreign contractors to carry out the dredging in the bar channel for the next two years. The contractors will train Thai personnel in dredging operations so that the work may be taken over by the Thais as soon as practicable.

The Bank's loan which was sanctioned on 12th October 1956, is for a term of 15 years and bears interest at 4½ per cent. including the 1 per cent. commission charged by the Bank. The loan is guaranteed by the Kingdom of Thailand.

The Bank has now made five loans totalling $40.8 million in Thailand. In addition to $7.8 million for the Port of Bangkok, $15 million was lent for rehabilitation of the railroads and $18 million for the irrigation of the Central Plain.

WHEREVER YOU NEED...

GLARE-FREE LIGHT!



Wherever you need glare-free light—and that's everywhere—depend on Radio Softlite Lamps to give it to you! Freedom from eye-strain, better vision and greater efficiency are contributing factors which make RADIO 'SOFTLITE' LAMPS the outstanding choice for every lighting need.

SILK UNDER SECOND FIVE-YEAR PLAN

COMPREHENSIVE PROGRAMME OF DEVELOPMENT

A COMPREHENSIVE programme of development for the silk industry is expected to be launched during the second Five-year Plan. The programme covers all the different sectors of the industry, including raw silk production, spinning and weaving, and marketing. It envisages improvement of mulberry, better silk-worm seed supply and organisation, development of silk reeling, utilisation of by-products, development of non-mulberry silk industry, co-operative marketing and testing, sericultural research and education, and stabilisation of prices. Special priority has been accorded to the need for improving quality, reducing cost and augmenting production of raw silk. The implementation of the programme is estimated to involve a capital outlay of Rs. 5.0 crores, excluding Rs. 1·5 crores provided for the silk weaving sector. The total outlay on silk and sericulture thus comes to Rs. 6.5 crores, which represents an increase of as much as Rs. 5.2 crores as compared with the amount actually spent under the first Plan. The bulk outlay of Rs. 5 crores on sericulture—amounting to Rs. 4.8 crores—is accounted for by States, the share of the Centre being Rs. 20 lakhs, which will be spent mainly on schemes confined to general co-ordination and all-India research centres.

It will be seen from the foregoing brief account that stress is laid more on the primary stage of the silk economy—that is, sericulture—than on the secondary stage—that is, manufacture of silk fabrics. This is only as it should be, considering that sericulture has, as the Planning Commission says, a high employment potential and provides supplementary occupation to a large number of rural families. The sericulture industry is estimated to support nearly five million persons in its different sectors. At the end of the second Plan period, it is hoped that the industry will absorb about 60,000 persons more. Schemes for the improvement and development of mulberry, as well as non-mulberry, silk were in operation during the first Plan period, but, in all directions, a larger effort is envisaged in the second Plan.

Mulberry Silk

As regards mulberry silk, an important item in the development programme relates to the reduction in costs of cultivation of mulberry leaf through substitution of existing mulberry with higher-yielding grafts in both rainfed and irrigated areas, evolving of new varieties of mulberry of higher yield, and improvement in cultivation methods, manuring, etc. These and other measures for bringing about improvement in mulberry and cocoons will be supplemented by steps to modernise silk reeling, encourage substitution of improved basins for country *charkhas* and converting the improved basins for filatures into multi-end basins, and introducing central cooking system and drawing chambers. Utilisation of by-products in the spun silk industry is necessary for the service of the reeling industry and steps are proposed to be taken to rehabilitate and extend the spun silk industry. As an experimental measure, co-operative societies for raising young worms of the first and second stages collectively are to be established. Also included are proposals relating to (1) co-operative marketing and testing of cocoons; (2) grading of cocoons; (3) introduction of a system of payment of cocoon prices on actual yield; (4) further development of work in the conditioning of houses at Calcutta and Bangalore and at the Berhampur station; (5) establishment of two training institutes for training personnel for sericulture departments in the States.

As regards non-mulberry silk, the development programme provides for plantations, as well as improvement of basic seed cocoon production for eri-muga and tassar. The organisation of seed supply, improvement of spinning and reeling, marketing, and training and research will be undertaken more or less on lines similar to those for the mulberry silk industry.

Schemes Already Sanctioned

The Union Production Ministry has already sanctioned the implementation of three schemes for the silk industry in West Bengal, Bihar and Assam. The West Bengal scheme envisages the setting up of a modern silk reeling factory at Malda for producing high-grade raw silk. A central loan of Rs. 10 lakhs has been granted to the State Government for starting a pilot filature plant. Of this sum, Rs. 6 lakhs will be utilised for the construction of factory buildings and purchase of Japanese type machinery, scientific appliances, etc., and the balance for working capital. The proposed factory is expected to provide employment directly to about 300 persons and indirectly to many in the twisting and weaving sectors. The establishment of a modern silk reeling factory, it is claimed, will help Indian silk compete successfully with any foreign silk and thereby stimulate its consumption by the indigenous weaving industry. Since *charkha* reeling of silk has its limitations, modernisation of the reeling industry by filature system is the only way to improve the quality of raw silk and reduce the cost of production.

The West Bengal scheme also contains two other proposals: First, for the establishment of a multi voltine disease-free egg station at Malda, an additional grant has been provided. For the supply of disease-free layings, some more grainages are to be established and a grant of Rs. 75,300 has been sanctioned for the purpose. Secondly, in order to increase the supply of mulberry grafts and thereby the production of seed cocoons, the existing seven nurseries in the State are to be reorganised. The scheme envisages reclamation of fallow lands in the nurseries, provision of irrigation facilities, preparation of grafts, etc., for which a grant of Rs. 60,500 has been given. Financial aid has also been sanctioned for establishing three new mulberry gardens in the State and reorganising the Sericultural Training Institute at Berhampur.

Silk in Assam

The Union Ministry of Production has sanctioned financial assistance to Assam for its scheme to continue the mobile demonstration party in the State, which gives demonstration of improved methods of silk reeling and spinning. It has also sanctioned grants for the supply of improved rearing and spinning appliances to mulberry growers and seed-cocoon rearers and for the establishment of two mulberry graft nurseries in the existing farms at Mangaldai and Jowai in the Khasi and Jaintia Hills and for providing subsidy to eri-seed rearers. A batch of sericulture officers in the State is to be deputed every year to undergo higher training in the different branches of the silk industry in Mysore, Madras, Kashmir and Bihar for a period of six months. The State gets a grant amounting to half the total expenditure for implementing the scheme.

The Bihar scheme envisages establishment of two more main stations and ten sub-stations for the development of the tassar silk industry. Bihar, it may be noted here, produces the largest quantity of tassar silk in the country. The rearing of tassar worm is mainly carried on by the members of the scheduled tribes in the districts of Chota Nagpur and Santhal Pargana. There are already three main tassar stations in the districts of Singhbhum, Manbhum and Santhal Parganas. The two new main stations are to be set up in the districts of Hazaribagh and Ranchi, so as to give special encouragement for the development of the industry. The ten sub-stations will be established in the interior of the tassar-producing districts of Bihar in order to supplement the work of main stations which cannot serve all the rearers in the interior. These stations will distribute disease-free layings to the rearers and train them in rational and scientific methods of rearing, reeling and spinning. As the people engaged in tassar worm-rearing are backward, they need to be taught reeling and spinning. This will enable them to earn about 200 per cent. more than what they now get by selling away their cocoons. Hence a scheme to open five production-*cum*-training centres in the interior of the State has been approved and a grant of Rs. 35,125 has been sanctioned. The State also gets financial aid for the construction of a building in the mulberry farm at Roshna in Purnea district for rearing, grainage and reeling.

JAPANESE TEXTILES

The Japanese Textile Goods Export Council has agreed to impose further restrictions on exports of cotton textiles to the U.S. It is proposed, for instance, to set overall ceilings on shipments of cotton fabrics and on the cloth-content of made-up goods. In addition, quotas will be fixed for specific lines of wearing apparel; so far, only blouse exports have been restricted to 1.5 million dozens for the year ending 31st March 1957.

The above decision has been prompted by the need for avoiding any imposition of quotas on Japanese imports by the U.S. Government. The American textile industry has bitterly complained against lack of diversification in Japan's sales of cotton goods, rather than the overall volume exported. Vehement objections have been voiced over the sudden flood of certain items like blouses, men's shirts and women's shorts from Japan.

To revert to the quotas. As yet, no details have been worked out on the quotas. The Japanese cotton textile industry is attempting, through exploratory talks with the Japanese and American Government officials, to determine how much it can safely export without running the risk that renewed opposition from the U.S. competitors may result in the erection of import barriers. No formal agreement on the matter will be concluded between either the Government or the industries. The restrictions imposed by Japan will be voluntary and are to be enforced throughout Japan by associations of textile manufacturers. The Japanese textile manufacturers are reported to have sought the assurance that the Eisenhower Administration will attempt to dissuade the Congress from enacting import restriction and also take steps to eliminate discrimination in Southern States against Japanese textiles.

BONUS FOR COTTON MILL LABOUR

On the 28th of this month, the cotton mills of Bombay City will be disbursing a total sum of about Rs. 2·5 crores as bonus to their workers—numbering 225,000—for the year 1955. The basis for disbursements is the one laid down under the five-year bonus agreement reached between the millowners and their workers early this year. The quantum of bonus payable has been worked out jointly by the Millowners' Association, Bombay, and the *Rashtriya Mill, Mazdoor Sangh;* it varies from 25.0 per cent. to 4.0 per cent. of the workers' basic wages. Twenty-one mill companies will pay a bonus equivalent to 25 per cent. of the basic wages; 17 companies will pay 4.8 per cent., and the quantum payable by the remaining 12 companies ranges from 10.9 per cent. to 20.6 per cent.

Between the 19th and 30th inst., the 64 member-mills of the Ahmedabad Millowners' Association are also expected to pay as bonus approximately Rs. 1.20 crores to 125,000 workers for 1955. The actual quantum of bonus will be determined in accordance with the five-year bonus pact (1953-57). Under this pact, every worker is assured of a minimum bonus of 15 days' basic wages, regardless of his mill showing a profit or loss, subject, however, to a ceiling of three months' wages. The "floor" and "ceiling" stipulations are correlated over a five-year period by a system of set-off and set-on, whereby the mills which incur loss in any year may draw on their previous year's reserves of set-offs for bonus payment.

A NEW CHARKA

What is claimed to compete with the four-spindle Ambar Charka in daily output as well as in case of operation is the new two-spindle machine invented by one Mr. Sathe of Poona. The new Charka—Ram Charka, as it is called—is said to be capable of turning out one hank of yarn per hour; the yarn compares favourably with Ambar yarn in uniformity and tensile strength.

Several advantages are claimed for the Ram Charka. These are: Elimination of the necessity of processing cotton into slivers before it is finally converted into yarn, as is required with the Ambar Charka and power spindles (this takes away a lot of labour and tedium in work); and adjustment on the machine enabling carding of cotton in half an hour for eight hours' spinning; and lower maintenance costs. The price of the Charka is estimated at Rs. 150. In addition, the Charka which consists of wood and iron parts can be made entirely by village artisans. Its overall weight is 25 lbs. which, it is said, can be reduced by a few possible improvements.

While the rotations for spinning are secured by pedal operation, cotton is fed into the machine by both hands of the operator. A special shuttle adjusts the tension of the yarn.

As an incentive to increased production of cloth, the Government of India has decided to give a rebate of excise duty at the rate of 6 pies per yard on all cloth produced by a textile mill in excess of its average monthly production during the eight months ended August 1956. As there may, however, be certain mills which have worked only partially during these eight months, the basis would be taken as either the mill's average production during this period or a normal two-shift production, whichever is higher. The rebate would be calculated each month and would be allowed on cloth produced upto the end of December 1956.

The Government of India has decided to grant a special rebate of six pies in a rupee on all genuine retail sales of handloom cloth made by weavers' co-operative societies, Government emporia and consumers' co-operative societies during the period 20th October to 2nd November. The rebate will be in addition to the existing rates of rebate on sales of handloom cloth. It will not, however, apply to the West Bengal State which has availed of this concession during the *Puja* session.

The International Silk Association has formulated a trade mark for use only on real silk products. The use of the mark will be authorised by the national committees of the 21 countries which are members of the Association.

TEXTILE INDUSTRY'S REACTION TO CUSTOMS UNION PROPOSAL

WORKERS' EARNINGS SURVEYED

From Our Special Correspondent

MANCHESTER, *9th October*

IS Britain's cotton industry threatened by yet another "pincers movement" which may offer her rivals further chances to compete? Such would seem to be the choice of evils facing the trade as a result of the plan now being discussed to set up a European free trading zone.

MANCHESTER LETTER

Already the scheme, involving a customs union for member-countries, has the support of France, Germany, Italy and the Benelux group. Industrialists in Britain are being sounded as to their views on the project and the Government is clearly contemplating joining the venture. Nor has any great opposition been voiced within the Commonwealth, although Empire trade would be affected by the move.

For Lancashire the alternatives offer little solace. If for political and prestige reasons this country adopts the scheme it will expect to play a leading role in the European free trade area. Tariff rates between the member-States would be gradually reduced over a period of up to 15 years ahead. Such a liberalisation of imports and exports might well involve a freer flow of foreign textiles into Britain's home market without any corresponding improvement in shipments to the Continent.

To Enter Or Not

On the other hand, staying outside the free trade area also presents dangers. This aspect of the future economic scene has been covered in a timely contribution to the latest bulletin of the International Cotton Federation by Mr. R. Robson, head of the Statistical Department of the Cotton Board. Those countries which have not yet decided whether to join the customs union may find themselves on the wrong side of the fence.

The members of the scheme, Mr. Robson says, would be able to pursue a common policy in fighting the battle against Asiatic textiles and might be collectively strong enough to limit cloth importation from the East. In contrast, nations outside the union would individually be in a weaker position.

The situation of the United Kingdom in such matters is complicated by Commonwealth issues and the reluctance of the Government so far to take any action to curb the flow of Empire-made products into this country. To quote Mr. Robson: "It is true that the British cotton industry now loses, under the Commonwealth preference system, almost as much through imports of duty-free textiles from India and Hong Kong into the home market as it gains from preferences in the export markets. But," he adds, "the position is quite different for British industry in general and it will, therefore, be difficult to make any modification in the system."

To sum up, Mr. Robson thinks the cotton industries which remain outside the proposed customs union would probably face a more difficult situation than those inside. Whatever the eventual outcome, fiercer competition for Lancashire is already on the horizon.

Workers' Wages

It is not difficult to see why inflation is so vital a factor in the national economy when the half-yearly figures of average earnings of British workers are published. Prices and wages have for so long been engaged in an upward spiral that any change in the situation would indeed be remarkable.

At the end of April, the advance gained by the 7,000,000 workers covered by the Ministry of Labour survey showed a larger rise than in any other six-monthly period. Average weekly earnings over the manufacturing industries concerned then stood at £9 17*s.* 9*d.* compared with £9 7*s.* 2*d.* in October last year.

To compare current wages with those of 1938 is to enter a different world, when earnings averaged no more than £2 13*s.* 3*d.* a week. The rise since then now stands at 271 per cent., the biggest advance being in payment for girls under 18, who then received 18*s.* 6*d.* and now get little short of £4 a week. The average earnings of all workers in the past nine years have been practically doubled.

As the survey covers the final week in April the figures relating to the cotton and allied industries are already outdated because the wage advance of 5 per cent. granted to the operatives by the Industrial Disputes Tribunal came into force at the beginning of May. All the same, average earnings had already increased in the previous six months to new high levels, as the following table shows:—

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)	All workers
	s. d.	*s. d.*	*s. d.*	*s. d.*	*s. d.*

Textile Finishing—					
April, 1955 ..	198 1	92 7	103 8	75 5	165 6
October, 1955 ..	208 4	101 2	109 6	79 5	174 3
April, 1956 ..	209 8	102 5	110 10	80 10	175 10

The next returns will inevitably show an even higher level of payment in the trades concerned. In view of the present difficulties in some districts in securing adequate labour to meet the recent revival in demand, the earning power presented by work in the mill should not be overlooked. As has frequently been stressed in the past, the wages available for women and juveniles in the textile trades compare very favourably with those in other occupations. The problem facing managers trying to recruit new labour is to persuade the doubtful starters that more regular employment can be offered than has been the case in the past.

Practically no change took place in the number of hours worked by cotton operatives in the final week of April compared with the average six months previously. On this occasion, the average was 43.6 hours per week whereas in October last the figure was 43.7 hours.

Juvenile Entrants

The rather more active conditions in the trade have turned the spotlight once more on the need for an adequate labour force in the event of the improvement being maintained for any length of time. Already reports are to hand of individual firms being hampered in their attempts to speed up production by a shortage of trained workpeople.

Yet the attitude of prospective entrants into the trade can be well appreciated. Within the confines of the mill towns anxiety over the future of cotton as employment is now almost inbred. Those who confidently approached the post-war era in anticipation of a never-ending demand from the markets of the world had a rude shock in 1952 and the recruitment experts have never since had as much heart for their job.

It is, however, encouraging to note that some slight progress was made in gaining young labour for spinning mills and weaving sheds during the recent summer holidays. The 1955 figures were comparable only with the severe setback inevitably experienced in 1952, but this year not only the percentage but the number of school-leavers joining the industry increased.

The share of the mills in attracting labour during the summer vacation over the past decade has naturally varied according to the state of trade. Soon after the war the numbers taken on each year ranged between 1,250 up to 1,500 until in the peak year of 1951 nearly 2,000 school-leavers were enrolled, a proportion of over 15 per cent. throughout the area.

The subsequent slump and its effect on the labour position is past history, but there was a remarkable recovery in 1953-54 when each summer saw some 1,500 youngsters again ready to make cotton their career. The further contraction in the industry has, of course, had its bearing on recent recruitment figures, but even so the juvenile entrants this year again exceeded 1,000 despite all the adverse publicity lately given to the trade.

Spreading Wings

Lancashire traders can hardly have expected to witness the shipment of large quantities of textile machinery from this country year in and year out without realising that the recipients would eventually use them to establish textile industries of their own and that as each became self-sufficient they would enter the export battle. As a result the directors of some Lancashire firms planned ahead in anticipation of the day which has now generally arrived.

COTTON PRODUCTION IN UGANDA

LARGER OUTPUT EXPECTED THIS SEASON

ALTHOUGH the efforts which are being made to reduce India's dependence on foreign countries for its requirements of long-staple cotton are showing encouraging results, it cannot be said that we are as yet in a position to dispense with imports of cotton. In the season ended 31st August 1956, India imported 598,030 bales (of 400 lbs. each) of cotton, of which sterling area cotton was of the order of 583,247 bales and dollar area cotton 14,783 bales. A country-wise break-down of the import figure shows that East African varieties alone accounted for about 50 per cent. of India's total imports of sterling area cotton. Among the sterling area varieties of cotton, the Uganda crop is certainly one of the most important. From this point of view a description of the crop prospects in Uganda for the current season, given in the latest monthly review of the International Cotton Advisory Committee, Washington, will be read with interest.

Uganda, as is well known, is a principal producer of long-staple cotton, the two main varieties grown being S-47 (staple length 1.1/16"-1.3/16") and B.P. 52 (staple length 1⅛"-1¼"). S. 47 or strains evolved from it account for 70 per cent. of the total production and B.P. 52 or its variants represent 30 per cent. of the total. But, quite unlike other producing countries of that continent, especially Egypt and Sudan, the yield per acre in Uganda is very low. Hence, though the total acreage under cotton is considerable, the actual outturn of the crop is comparatively small. Thus, in 1955-56, the area under the crop is estimated to have been 1,599,000 acres, as against 1,885,000 acres in Egypt, but the output is estimated at 300,000 bales (of 478 lbs.) in Uganda, as compared with 1,541,000 bales in Egypt.

The volume of production of cotton in Uganda is determined, principally, by the price obtained for the crop in the immediately preceding season and, to a lesser extent, by the Government's guaranteed minimum prices for the current season. This is not to deny that world demand and market trends have no relation to the volume of production; but the influence of the latter is less, as compared with other cotton-exporting countries. This is attributable to the system of marketing of the crop prevalent in Uganda, under which the Lint Marketing Board purchases the entire crop at a seasonal price which is supported by a Cotton Price Assistance Fund, which presently aggregates £20 million. The guaranteed minimum prices are published annually in April, just before the commencement of the planting period which usually extends from June to August, though there are slight regional variations. Therefore, when an immediate cash inducement in the shape of an enhanced price cannot be offered, propaganda remains the main stimulant to induce growers to increase their production.

Recent experiments in cotton plantings have proved that earlier planting is vital to the health of the plant. A loss of up to one-third of the crop, it has been estimated, can occur if planting is delayed by one month. Usually, cotton planting commences in April in those areas of Uganda north and east of the river Nile. But planting during this month is only 2 per cent. of the total acreage, the heaviest plantings being in the month of July when, approximately, 40 per cent. of the crop is planted. In the areas west of the Nile, planting commences a month later and ceases in September in all areas. At the beginning of the current season (1956-57), a vigorous propaganda campaign was undertaken by the Department of Agriculture to encourage early planting. Although there has been in general a good response to the campaign, actual planting has been hindered by the vagaries of weather which have proved particularly disastrous. In the cotton tract, west of the river Nile, inclement weather has resulted in less intensive land preparation than what might have been the case. Nevertheless, the acreage planted by the end of May was double that of the same period in 1955. In the region east of the river Nile, the response to propaganda was excellent and the acreage planted was more than double that planted during the corresponding period last year. In June, cultivators were anxious to plant cotton and much more early crop would have been planted if the weather had been more favourable. Cotton planted in April and May withstood the dry weather, but some of the early June plantings failed and had to be replanted.

Since it has been felt that farmers cannot be induced to resort to early plantings on any significant scale until its advantages are convincingly brought home to them, the Agricultural Department announced, by way of providing an extra stimulus, that the cotton buying season would open in mid-December. This is, in most cotton zones, earlier than usual and such a step is designed to enable the cultivators to market the early harvestings and have cash for Christmas.

Apart from early plantings, development of the type of cotton cultivated, in respect of both yield and quality of lint, is the only practice followed presently for improving the crop. The task of increasing the number of improved varieties was begun principally with B.P.Q., a pedigree cotton derived from B.P. 52, for the area west of the Nile. The Empire Cotton Growing Corporation's Cotton Research Station at Namulonge has developed a technique which enables fibre quality tests to be undertaken at the breeding stage. Formerly, certain cotton fibre characteristics could be assessed only by means of spinning tests, which meant that they were not determined until the end of the breeding programme. A new variety has been developed with the use of this technique and mill tests have shown that its yarn appearance is equal to that of Ashmouni and that it has at least as good a high standard count as the B.P. 52. Its effective length is 1¼" and it is estimated that the increase of yield per acre will be 25 to 30 per cent. of the existing level. It is hoped that, subject to the successful completion of the multiplication scheme which will take four years, this new long-staple variety would successfully compete with Ashmouni in world markets. A new derivative of the S. 47 variety is also being introduced in the areas east of the Nile, the special virtue of which, it is claimed, is its freedom from nep.

As latest data about the actual area planted in the current season is not so far available, it is difficult at present to make estimates of the crop. But, it may be observed that, in the present state of agricultural development in Uganda, where the peasant cultivators work under conditions of subsistence economy, production prospects for the years immediately ahead are governed to some extent by the stability in world prices, or the ability of Government artificially to support a price acceptable to the farmer. Nevertheless, so long as the present system of marketing remains, large fluctuations in the crop size are not likely.

Be that as it may, the information available so far shows that, in areas east of the Nile, plantings are considerably above average, whereas in the west, to the end of June, they are lower. In actual figures, till the end of June, 47,352 acres were planted in the area west of the Nile, as against 60,891 acres in the same period last season, whereas east of the Nile acreage planted aggregated 490,610, as compared with 317,784 during the corresponding period of the last season. Judging from these figures it is unlikely that the crop will exceed 350,000 bales (of 478 lbs.) which is higher than the 1955-56 crop.

SOVIET COTTON TECHNOLOGY

That improved agronomical practices can do much to improve output of cotton has been, once again, proved in the U.S.S.R. As a result of the widespread adoption of improved methods of cultivation, the 1955-56 crop in Soviet Russia is reported to have been a good one, practically every cotton-growing region raising a fine crop. Both sowing and cultivation have been done by machinery, resulting in considerable reduction of work by hand. An improved method that has been widely adopted was square-hill sowing with two or three plants in each square, making it possible to cultivate cotton fields by machinery lengthwise and crosswise.

At first, this method did not yield favourable results, because the squares of 70×70 centimetres were too big and there were too few plants on each square and hence the output was less. Neither did sowing more plants in the square give the desired results. Therefore, the Tajikistan cotton growths suggested cutting down the rows between the squares to 60, 50 and even 45 centimetres, which gives the best density for the growing plants—about 80,000 to 120,000 plants per hectare (about 2½ acres), depending on the soil and the particular type of cotton. Experiments conducted at the Tajik experiment station of the U.S.S.R. Cotton Research Institute and other experiment stations proved this method to be very efficient. With lengthwise and crosswise cultivation, the cotton yield moved up by approximately 0.3 to 0.5 ton per hectare and the expenditure of labour on arduous operations like thinning out and hoeing was practically halved.

In the 1954-55 season, as a result of the adoption of square-hill planting of cotton and lengthwise and crosswise cultivation, many collective farms increased their yield considerably. For instance, by employing lengthwise and crosswise cultivation on the greater part of their plantations, collective farms in Voroshilov and Jalal-Kuduk districts, Uzbekistan, picked almost a ton of cotton more per hectare than in 1954. Whereas the Polar Star Collective Farm in Tashkent harvested 3.1 tons of cotton per hectare from the fields where cultivation was lengthwise only, it picked nearly 3.5 tons from fields cultivated lengthwise and crosswise. In Regar district, fields with a layout of 45×45 centimetres yielded 4.5 tons per hectare, and straight-row fields yielded only four tons. The new method yielded, in the Leninism Collective Farm, almost 0.4 tons of cotton per hectare more and cut labour by 50 to 66 per cent. Encouraged by these results, many more collective and State farms adopted the new method in 1955-56 and the season's biggest crops were picked in regions where the square-hill system was applied on large areas.

Cotton picking machines are being improved every year and Soviet designers have recently modified the SKHM—48M single-row cotton picker. Among the other improved machines are a double-row horizontal spindle harvesting machine, and a new boll-harvesting machine for picking unmatured cotton.

Another notable feature is the opening of many drying and cleaning departments at State cotton procurement stations, permitting the collective farms to deliver the cotton without first drying it in the field. Thus, machinery has been put to work on another labour consuming task in cotton production.

U.S. SURPLUS COTTON SALES

Under the provisions of Title I of the American Agricultural Trade Development and Assistance Act (U.S. Public Law 480), over one million bales of American cotton have so far been sold, according to sales contracts registered with the Commodity Credit Corporation. The purchase authorisation, it may be recalled, was issued in early January 1955 and since then up to 14th September 1956 total sales aggregated 1,003,000 bales (500 lbs. each).

India is one of the principal beneficiaries of the programme. The agreement with India, signed on 29th August 1956, is by far the largest yet made, providing, as it does, for the sale of 500,000 bales of American cotton valued at $70 million. The agreement stipulates that deliveries are to be made over a three-year period, as against the usual delivery time of one year.

Among other countries which have benefited by the operation of Public Law 480 in respect of cotton disposals, mention may be made of Pakistan, the Netherlands, the Republic of China (Formosa), Burma and Indonesia. The authorisations issued in favour of Burma and Indonesia were for the purchase of 125,000 bales and 89,000 bales of cotton, respectively. It was also provided that both these quantities should be processed in other countries. An authorisation is also reported to have been made in favour of Formosa for the purchase of about 35,600 bales of cotton. Recently, on 21st September, another purchase authorisation was issued for $11.5 million or 79,500 bales of cotton, under which United States cotton purchased by Indonesia is to be exchanged with Japan for cotton textiles. Yet another three-way arrangement was made with Pakistan. The Pakistan-U.K. authorisation involves cotton valued at $6.5 million.

In conformity with the provisions of Public Law 480, the U.S. has made agreements for the sale of cotton with seventeen other countries, amounting to a total value of $342.6 million. As much as one half of the amount covered by existing agreements had been sold for export. By 14th September 1956, sales of cotton had been completed on eight purchase authorisations covering about 538,000 bales, worth $95.1 million. Sales under other authorisations issued have aggregated 46 per cent. of the authorised quantities.

IMPORT AND EXPORT OF COTTON IN SEPTEMBER 1956

Figures relating to shipments of Indian cotton to foreign countries in the first month of the current (1956-57) season show that, of the total 11,924 bales (including yellow pickings and sweepings) shipped, the largest quantity, that is, 7,121 bales, went to Japan. China and the United Kingdom took 2,700 bales and 1,004 bales, respectively. The following table gives the quantity shipped during the month along with that in the corresponding period last season:

(In bales of 400 lbs.)

	1st to 29th September	
	1956	1955
Japan	7,121	33,749
China	2,700	34,451
U. K.	1,004	6,777
Hong Kong	200	10,892
Continent	112	21,655
U. S. A.	47	856
Others	166	1,395
	11,350	109,775
Yellow Pickings and Sweepings ..	574	

Imports of foreign cotton into India during September 1956 aggregated 23,411 bales, comprising 1,118 bales Egyptian, 15,118 bales East African, 4,019 bales Sudan, 6,913 bales U.S. and 1,243 bales Peruvian and other varieties of cotton. The quantity licensed for importation during the month was 20,472 bales. Actual arrivals include some quantity licensed in the previous season also.

RANIGANJ COAL FOR SMELTING PLANT

RESULTS OF RESEARCH

RECENT investigations by the staff of the Carbonisation Section of the Fuel Research Institute, under the direction of Mr. N. N. Das Gupta, the Officer-in-charge, have resulted in some profitable discoveries which, if translated into practice, would be found to be of much use to the iron and steel industry. These investigations have revealed that excellent metallurgical coal, suitable for the iron and steel industry, can be prepared from Raniganj coals, exclusively or in blends with small quantities of low volatile Jharia or Giridih coals.

Weakly caking Raniganj Measure coals—from the Dishergarh seam—in 20 to 25 per cent. blends with Jharia lower seams and weakly caking Raniganj Measure coals in 15 to 20 per cent. blended with low temperature carbonisation char are suitable for metallurgical uses. Other results of the investigation show that excellent gas coke can be prepared by blending Raniganj Measure coals with coke dust or low temperature char; cokes suitable for ferro-manganese manufacture by the blast furnace technique can be prepared from Raniganj coals—Laikdih seam—and blends of Laikdih—with or without Dishergarh—and Giridih, or any low phosphorous coals of the Jharia field; and weakly caking Dishergarh seam can be used exclusively for manufacture of metallurgical coke in blends with low temperature char of suitable quantity or with small quantities of low volatile Jharia coals.

What led to the aforesaid investigations was the fact that in the western part of the Raniganj coalfields occur a number of coal seams, with substantial reserves in depth, semi-caking to medium-caking in quality, with fairly low ash compared to other Indian coals, with reasonable moisture content, and with sulphur and phosphorus contents suitable for iron and steel making.

Of the various seams like the Laikdih, Ramnagar, Chanch, Dishergarh, Sanctoria etc., the Laikdih group coal has been used in blends in small proportions for manufacturing metallurgical coke in the existing iron and steel industries, but these coals are not generally considered suitable for this purpose. This is evident from the fact that an iron and steel company in the heart of the Raniganj coalfields draws its major supplies only from the well-known coking coal seams of Jharia coalfield. The Laikdih seam has also been found to contain low phosphorus, low enough for the production of coke suitable for the manufacture of ferro-manganese by the blast furnace technique. Thus, if this coal could be blended with some suitable coal for production of coke of good physical characteristics, it could be used in the manufacture of ferro-manganese by the blast furnace technique. The investigation has thus served to disprove the negative view so far expressed by experts on the use of this coal.

General Metallurgical Use

The next objective of the research referred to at the outset was the production of coke for general metallurgical use—that is, for blast-furnace operation and foundries in normal type of coke-ovens—by suitable preparation of coal, adjustment of carbonising conditions and judicious blending with low volatile coals, semi-cokes or chars, or high temperature coke dust. In view of the limited reserves of coking coal in the country and the consequent necessity for conserving the good coking coals of the Jharia and Bokaro fields and the possibility of substantially improving the economics of the iron and steel industry, the work done was considered to be of the highest importance. There was also the possibility of the increased recovery of tar and by-products from these high volatile coals. Some of the other considerations taken into account were the increased output of gas for transmission and distribution, the possibility of manufacturing gas-coke suitable for synthesis gas manufacture through water-gas or semi-water-gas processes, the great scientific and technological interest in upgrading of weakly caking coals in order to replace the highly caking coals, the utilisation of coke fines from high temperature or low temperature carbonisation plants which constitute a drag on the market and adversely influence economics of such plants, and the utilisation of such new techniques like fluidized carbonisation for production of tar and by-products for the chemical industry and by disposal of char for blending in coke-oven plants.

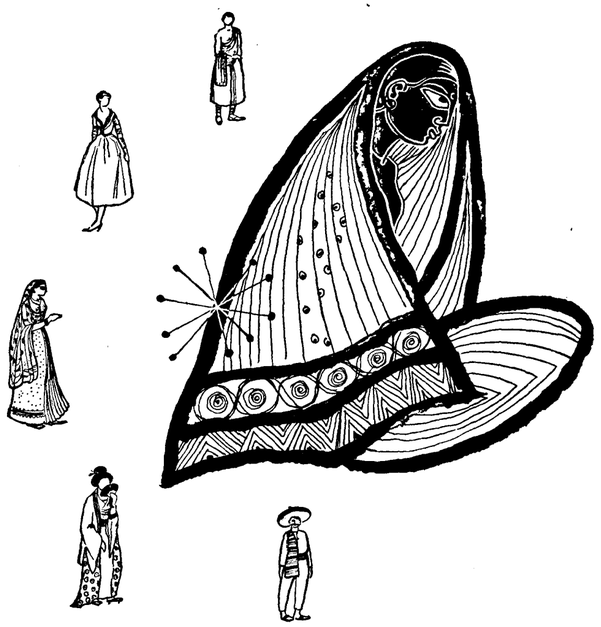
We don't all wear the same type of clothes; but,
here or thousands of miles away, clothes are a basic necessity.
A simple piece of cloth is everywhere the symbol
of one of man's fundamental needs.
For the fulfilment of this need we must depend
on the joint effort of many; in India industries and
development projects all form a part of this joint effort,
speeding the nation's progress.
A constant supply of our petroleum products
to such enterprises is fundamental
to this progress.



STANVAC — *the name that stands for progress.*

STANDARD-VACUUM OIL COMPANY (Incorporated in the U.S.A., with Limited Liability.)

PSSVOC-9/8/56

V/O "STANKOIMPORT"
32/34, Smolenskaia-Sennaia, Moscow, U.S.S.R.

EXPORTS
A WIDE RANGE OF
METAL CUTTING TOOLS:

DRILLS — SHAPER CUTTERS
TAPS — TOOLS
DIES — GEAR CUTTERS
CHASERS — SHAVING CUTTERS
CORE DRILLS — BROACHES
REAMERS — FILES
CUTTERS — NEEDLE FILES
RASPS

The metal cutting tools we furnish are manufactured of the best grades of steel and undergo suitable heat treatment. This provides for extra long tool life and permits work at higher surface speeds and at larger feeds.

WORLD SUGAR CONFERENCE AT GENEVA

MOVE TO CONCLUDE A NEW PACT

THE *Palais des Nations* at Geneva is the venue of the second session of the United Nations Sugar Conference which commenced on the 4th inst. and is expected to last until about the end of this month. The first session of the Conference, it will be recalled, was held at the United Nations Headquarters (New York) from 21st May to 20th June 1956. At this Conference, the operation of the International Sugar Agreement of 1953 was reviewed in the light of experience gained. This Agreement came into force at the beginning of 1954 and provides for a review, in the third year, of its operation of the entire working, especially in regard to quotas and prices. The current session is attended by the delegates from all the member-States of the U.N., the Interim Commission of the International Trade Organisation, the Food and Agriculture Organisation, and the World Sugar Council. Mr. N. T. Gulrajani, Indian delegate, has been elected Vice-Chairman of the Conference.

Like its predecessor, the current session is being held in secret. No details regarding the deliberations of the Conference and the decisions taken thereat will, therefore, be available until the Conference comes to a conclusion and a *communique* is issued. From the brief Press release issued by the European Office of the U.N. (Geneva), it is, however, gathered that the Conference is giving "final consideration" to the problems, in the light of the examination, by the Governments of the countries invited to the Conference, of the reports and suggestions emanating from the first session. Negotiations on sugar prices and quotas are also being continued. The main object of the Conference is, of course, said to be to enlarge the membership of the International Sugar Agreement by bringing in a number of countries—notably Peru, Indonesia and Brazil—which are non-signatories and which are insisting on high quotas as a condition for their participation.

The First Session

The Geneva session of the World Sugar Conference is being held under more favourable conditions than those at the time of the first talks for the conclusion of a new international pact for sugar. The New York session, as readers are aware, ended in a virtual deadlock, though the joint *communique* subscribed to by the 48 nations attending the session claimed that "substantial progress" had been made. At this session, Cuba, which exports as much as 50 per cent. of the sugar under the existing Agreement, rejected all attempts for persuading it to accept a cut in quota. In addition, there was the disagreement among the exporting groups. The sugar-producing countries of Asia—Indonesia, Formosa, and the Philippines—and the Dominican Republic pressed for an upward revision in individual quotas for the free markets in the world. These were the main factors which impeded agreement needed for a new world sugar pact. The only positive results of the session were: Adoption of the reports of the various committees containing suggested amendments to the text of the existing Sugar Agreement, as well as new proposals having as their objectives the promotion of increased consumption of sugar, including consumption for other than human nutrition; appointment of five committees—Executive, Steering, Economic and Administrative, Statistical and Technical, and Credentials; and a study of the different systems for the operation of the Agreement.

Fluctuations in Sugar Prices
