The period that has elapsed since the New York session of the World Sugar Conference has witnessed rather violent fluctuations in the world sugar market. Cuban raw sugar (f.o.b. Cuba) at New York which four months ago stood at 3.41 cents per pound—the highest for two years—swiftly moved down, the quotation at the end of August being 0.03 cent below the International Sugar Agreement minimum of 3.25 cents. This downward trend was due to the decision of the Sugar Council to raise the export quotas of member-countries by 440,000 tons, making a global total of 4.44 million tons equal to the full basic limit. This upward revision was deliberately made with a view to arresting the upward trend in prices witnessed earlier. The Council also reallocated among other exporters the portions of some quotas—amounting to about 451,000 tons—not used by Russia, Czechoslovakia, Holland and Haiti. This additional weight of supplies was too much for the market and, consequently, sugar prices, as already said, fell swiftly. Now in order to prevent a further fall in prices, the Council took a corrective action early this month. Thus, on the 3rd inst., it announced a cut of 2 per cent. in the basic export tonnages of member-countries, as per details given in these columns last week. Since making this cut, world sugar prices have recovered slightly, the latest quotation for Cuban sugar at New York being 3.25 cents (as on the 9th inst.). But turnover has been poor.

It is against the aforesaid background that one has to view the prospects for the conclusion of a new International Sugar Agreement. The pressure on the "free" sugar market of supplies from producing countries which are not members of the existing Agreement, it is felt, makes the working of the Agreement as a price stabiliser "precarious, to say the least." Elucidating this view, the *Financial Times*, London, observes:

"The question now is the terms on which the non-member producers would join the pact and it appears that their price for doing so would be higher quotas than have so far been offered them. At the same time, a number of the present members, including Cuba, are asking for increases in their quotas and it has been suggested that Formosa will leave the pact, unless her quota is increased. The basic difficulty is how to make room for new members inside the Agreement and, at the same time, to meet the export demands of those producers who are already parties to it."

These are, indeed, quite pertinent observations which reveal how difficult is the task of the delegates now attending the World Sugar Conference in bringing about a compromise between the conflicting interests.

PALM "GUR" INDUSTRY

A programme for the development of the palm *gur* industry during the current financial year has been approved by the Government of India. The programme is to be executed by the All-India *Khadi* and Village Industries Board. It provides for technical guidance and training in the production of palm *gur* through the *Bharatiya Tad Gur Shilpa Bhavan* and the four Central pilot demonstration stations, organisation of palm *gur* producers' co-operatives and marketing of palm *gur* and palm products. The Union Ministry of Production has sanctioned to the All-India *Khadi* and Village Industries Board Rs. 19,02,300 as grant and Rs. 7,12,000 as loan for implementing the programme.

Under the programme, 30 training units, 10 propaganda units and 56 production units of three different sizes, special, big and small, will be continued. In addition, 10 propaganda units, 58 big production units and 56 small production units are to be established in different parts of the country. At each training unit, 40 persons will be given training for two months in the production of palm *gur*.

In order to develop the technical side of the industry and also to train palm *gur* workers, the *Bharatiya Tad Gur Shilpa Bhavan* (the Central Palm Gur Training School) at Dahanu, near Bombay, trained nine persons in the regular course, 97 in the specialised course and 38 in the investigation work during 1955-56.

A CONCESSION TO SUGAR MILLS

The Government of India has decided to allow up to 12th November 1956 a concession of As. 4 per maund on sugarcane crushed to all those sugar mills in Uttar Pradesh which commence crushing operations by 4th November. The cost of the concession will be shared equally by the Central and State Governments. In addition, a reduction of one anna per maund will be allowed in the minimum price of Re. 1-7 per maund for gate delivery and Re. 1-5 for delivery at rail centres on the sugarcane crushed during the period of the concession.

This decision has been taken, it is said, with a view to enabling the sugar mills to start early crushing. It, however, remains to be seen whether the concessions will offer sufficient inducement to mills to start crushing early. For the stocks lying unsold with the mills are still large; they aggregated as much as 678,000 tons at the end of September, as compared with 536,000 tons a year before. Moreover, the Government's move to see that crushing is started earlier than usual itself is not quite sound. It is common knowledge that the crushing of unripe cane means crushing of cane with less sucrose content and, consequently, there will be much loss in sugar recovery.

On Friday last week, the Union Food and Agriculture Ministry released for sale in the free market a further quantity of 160,000 tons of sugar out of the 1955-56 production. This quantity brings the total released so far to 1,463,000 tons.

Pray consider the case for

Cargo by air

"M'LUD and gentlemen of the Jury, the case for CARGO BY AIR rests on a few simple facts — facts which businessmen are quick to grasp and appreciate. To summarise, M'Lud —

Cargo by air saves time— obviously! But in addition to cutting down actual transit time, it often does away with the need for warehousing at ports of despatch or arrival. Cargo by air, in fact, gets your goods *where* you want them *when* you want them!

Cargo by air costs less— it cuts down handling and warehousing charges, gives you a quick return on capital outlay, costs less for transit insurance.

Cargo by air is MODERN— in this age of speed and competition, the other man has learnt the value of cargo by air. And it is high time, M'Lud and gentlemen of the Jury, that you do, too!"

The Judge, remarking that he could add nothing to this masterly expose, invited the Jury to consider the case. This they did without leaving the box, and all good men and true returned an overwhelming verdict for:

CARGO BY AIR EVERY TIME!

AIR-INDIA International

THE NEW PEOPLE'S CAPITALISM—I

KARL MARX COMPLETELY BELIED

By An American Correspondent

IF Karl Marx were alive today, he would have a lot of explaining to do. He would have to explain, for instance, why no group of people using his methods has ever been able to put into practice his basic slogan: "From each according to his ability, to each according to his needs." He might also be called upon to explain why it is that the nearest approach to carrying out his dictum has been accomplished in a country where the people have deliberately and emphatically followed methods completely opposite to his.

Marx developed his economic theories in the nineteenth century when the world-wide industrial revolution was at its height, and his views on how to solve the problems of an emerging industrial society had certain plausibility at the time. As he looked around in Germany, and in England, he saw that the life of the average factory worker was indeed an unhappy one. There was a huge gulf between the great mass of workers and the relatively small group whose capital possessions made possible the construction, operation and expansion of industry. More and more wealth and power was being accumulated by the few while the propertyless worker, poor and with no stakes in the community, saw little hope of relieving his poverty and misery.

It was Marx's belief that the "capitalists," as he called the group whose investment made industry possible, would make no effort to improve the working man's situation. He assumed that the only solution to the dilemma was for the many workers—the "proletariat"—to overthrow the few capitalists in a violent revolution, seize the factories, the farms, and the Government itself, and establish a "classless society." In Marx's ideal society, there would be common ownership of the "means of production" and the proletariat would rule.

He apparently did not foresee the possibility that free human beings, working through democratic means, could organise their lives and control their environment, so that economic forces could be harnessed for the common good. Instead of growing poorer, workers in the free enterprise countries have enjoyed continually rising standards of living. Instead of growing larger, the number of unskilled workers has decreased in size and opportunity has given rise to a new group of skilled craftsmen, engineers, accountants and others while new jobs and completely unforeseen opportunities have been created by machinery he thought would cause unemployment. Instead of the predicted bloody "class struggle," labour and management have worked closer and closer together on a basis of partnership and co-operation.

And in the very countries where "capitalism" is most highly developed, the Communist revolutionary movement is the weakest. Indeed, it would appear that the working man is overwhelmingly in favour of the capitalist system and wants to enjoy its benefits rather than overthrow it. In fact, many workers have themselves become capitalists through purchase of industrial shares.

This is decidedly true in the dynamic system of capitalism in the United States, a prime example of the refutation of the Marxian economic prophecy. In fairness to the old German thinker, however, it must be kept in mind that the capitalism opposed by him was the capitalism of his day and not the "People's Capitalism" which has developed in the United States.

Change in Nature of Capitalism

What has caused the great change in the nature of capitalism as practised in the United States? Why was Marx wrong when he predicted capitalism's end by class warfare, and great economic progress for the system which has been carried out in the Soviet Union in his name?

"The point is," says the Stanford University economist, Alexander Heron, "that no Marxian economy can give to each according to his needs, even if its rulers wanted to do so. Those rulers cannot give each according to his needs, because they cannot get from each according to his ability. All the compulsions and pressures of the all-powerful State have not resulted in production adequate to meet the needs of all. In contrast, the American economy has come infinitely closer to getting from each according to his ability. How has it been done? Natural resources alone do not create production; the U.S.S.R. has those. There is no physical, racial, geographic or climatic explanation. The only answer must be found within the system itself.

"The magnetic force which has drawn so much from each is the force of incentive operating in a field of freedom. Advanced technology, endless inventions, are results, not causes. No commissar ordered Morse to invent the telegraph, or Edison the electric light. No five-year plan demanded the invention of the automobile. The Wright brothers were not under the whip of compulsion to fly a plane at Kitty Hawk.

"The very freedom which Karl Marx denounced has been the first essential in getting from each according to his ability. The abundant production which has resulted has gone beyond the dreams of Marx himself in giving to each according to his needs. Production for use is really a symbol and tradition of the American economic system. Any system committed to such an objective must have a mechanism to learn what to produce and how much. Such a mechanism can be the master of an economy and the people who live within it, or can be the servant. Herein lies the final difference between the two roads to production."

Test of an Economic System

Surely the test of any economic system is how successful it is and whether it provides the population with desired goods and services. Measured by any standard, the system of competitive private enterprise which prevails in the United States meets this test.

The consensus is that the United States has accomplished the greatest share of its development since the turn of the century. In fact, the settlement and initial development of the United States had hardly been accomplished before the end of the nineteenth century.

The first wagon train did not reach California until 1849. The Golden Spike uniting the States by rail was not driven until 1869. By 1880, the population of the United States was less than a third of what it is today. The great American inventor Thomas Edison invented the electric light in 1879. In the 1870's and 1880's the land companies established by British, French and Dutch capital were still selling land in the richest agricultural area of the United States, the great middle-western and western plains, and up to 1890, some land there was still being homesteaded by settlers.

Nevertheless, the basis for the great industrial expansion of the first half of the twentieth century had been laid. Capital and labour had been transplanted from Europe and the rich resources of the United States needed only intelligent application of labour and capital, the development of managerial skill and technical knowledge to commence the mass production techniques and the eternal renewal of machines and plants so that technological progress would never remain at a standstill.

The tenets of freedom upon which the United States was founded were of imponderable importance, for from such a base came forth ingenuity, a zest for the challenging task, the venturesome spirit, a belief that competition is necessary and a healthy tonic.

A fundamental freedom for opportunity and growth, based on a system of incentives, has guided the development of the American system. It is implicit in the Declaration of Independence, the Constitution, the philosophy of Jefferson, Jackson, Lincoln and others.

The Big Change

The first 55 years of the twentieth century have been described by Frederick Lewis Allen as the Big Change. It was a big change not simply in material achievements and in the incredible expansion of productive capacity but also in the social and cultural sense.

The economics of the Big Change must be understood in human terms, or the whole point of this historical development is lost. If only to give some feel of the flavour, the power and the unpredictable nature of it, these points from Frederick Allen's work have been excerpted:

"Forbes Watson is authority for the statement that there were more sales of paintings in the 1940's than in all the previous history of the United States; that, in the year 1948, there were a hundred exhibitions of American art in American art museums; and that the total attendance at art exhibitions that year was over 50 million.

"Lyman Bryson reports that the lowest estimate he has been able to find of the number of people who paint in the United States today is 300,000. And that the Department of Commerce says that the sales of art supplies went up from four million dollars in 1939 to $40 million in 1949—a tremendous leap.

"We turn to music—and confront an astonishing spectacle. In 1900, there was only a handful of symphony orchestras in the country; by May 1951, there were 659 'symphonic groups'—including 32 professional, 343 community, 231 college, and a scattering of miscellaneous amateur groups. Fifteen hundred American cities and towns now support annual series of concerts. Summer music festivals attract audiences which would have been unimaginable even 30 years ago.

"Is not the truth of the situation, perhaps, something like this: Here is a great nation which is conducting an unprecedented experiment. It has made an incredible number of people, previously quite unsophisticated and alien to art or contemptuous of it, prosperous by any previous standard known to man. The multitudes offer a huge market for him who would sell them equipment or entertainment that they can understand and enjoy. To compare them with the people who in other lands have been lovers and students of literature and the arts is grossly unfair. They are not an elite but something else again. Let us say it in italics: *This is something new; there has never been anything like this before.*

"The job before those Americans who would like to see the United States a Greece rather than a Carthage is to try to develop, alongside the media of entertainment and equipment which satisfy these people's present needs, others which will satisfy more exacting tastes and will be on hand for them when they are ready for more rewarding fare. The problem is an economic one as well as an artistic one. Whether it can be solved is still anybody's guess. But in a day when, despite the discouragement of any limited *literati*, much of the best writing of the world is being done in the United States; when the impoverishment of foreign institutions of learning has made American universities no mere followers on the road of learning, but leaders, despite themselves, attracting students from many continents; and when, willy-nilly, a burden of responsibility for the cultural condition of the world rests heavily upon America, it should do us good to look at the army of music lovers that we have produced. For, if this is what auspicious economic conditions can bring in the area of one of the great arts, possibly the miracle may be effected elsewhere, too, and the all-American culture may prove to have been not the enemy of excellence, but its seed-bed."

Progress of the Working Man

In the meantime, let us not lose sight of the working man, a member of what Marx called the proletariat. The working man has come into his own in the capitalist United States. Today, there is more equality of income than in Soviet Russia, where, despite the Communist creed, the distance between the exorbitant pay and privileges of the few at the top and the wretchedness of the mass of the people is greater than it was during the reign of the Czars. There is less of a gap between the incomes of the rich and the incomes of the poor in the United States than there is in nations where a study campaign has been waged against the rich. The change in the United States has been brought about not by making the rich poorer, but by making the poor richer.

In addition to increased wages, U.S. workers have realised many other important gains. Among these are shorter hours, with the general achievement of an eight-hour day and a five-day week; paid vacations; paid holidays; a society of group insurance agreements; social security benefits, supplemented by private retirement pensions; and the availability of a large variety of useful products, notably in the fields of transportation, recreation and culture, and household tasks.

At the turn of the twentieth century, less than one-fifth of U.S. workers' families owned homes. Today, half of them do. In 1900, most workers lived in overcrowded cities, usually within walking distance of their jobs. Today, improved roads, automobiles, and other types of rapid transportation make it possible for them to live in residential and semi-rural districts. Rising incomes and increased leisure time have enabled Americans to improve their standard of living in other ways, as well. Better education and improvements in the technique of communications have given them an increased awareness and knowledge of the world beyond their communities.

In 1850, about 65 per cent. of the work done in the United States was performed by men and animals. Today, the horse has nearly disappeared from streets and farms. Animals now supply less than one per cent. of the work output of the country, and men another one per cent. Power-driven machines now provide over 98 per cent. Year after year, more and more power is used to operate U.S. industry. The cheaper and more efficient power becomes, the more it can be used, and the greater is each hour's production. Work output from inanimate energy in the United States in 1950 was about 185 times what it was a century ago.

Using machinery and production methods vastly superior to what was available a few decades ago, today's worker produces twice as much bituminous coal, and three times as much iron and cement every hour. He handles over two-and-one-half times as much railroad traffic, and produces nearly four times as much electricity. On the average, the U.S. worker produces five times as much as his forefather did in Marx's day.

WORLD BANK STRUCK BY LACK OF TRANSPORT FACILITIES

ENCOURAGEMENT TO COASTAL SHIPPING AND MOTOR VEHICLES URGED

IN the course of the letter which the World Bank President, Mr. Eugene R. Black, has written to the Union Finance Minister, Mr. T. T. Krishnamachari, to which we made a reference in our last week's issue, the former has stated that the World Bank is "struck by the extent to which lack of adequate transportation facilities threatens to constitute the bottleneck in the country's economic development." This is an observation with which even those who differ from the President for ideological or other reasons will readily concur. For the Government of India itself realises that transport is vital to the success of the country's economic programmes and that transport facilities should be augmented without delay. Again, this is also a sphere in which ideological differences have very little relevance, except, perhaps, where the question of nationalisation of road transport is concerned. And even here, there is a welcome trend of opinion in the Central Government, though not among the States, that encouragement to private road transport deserves at present a higher priority than formerly. It will thus be seen that, on whatever other issues there may be differences of opinion or emphasis between the Government and the World Bank, the sphere of transport is one in which they should be able to see eye to eye with each other.

In this context, it is certainly not too much to hope that the Government will be prepared to implement a transport programme that will be constructive as well as free from ideological bias. Briefly, the World Bank President's view is that "attention should be given first to the possibilities of improving operational efficiency of the railways and of encouraging road transport and coastal shipping." The Government, on its part, is already engaged in improving the operational efficiency of the railways. So far as coastal shipping is concerned, it is no doubt aware of the importance of acquiring additional tonnage by shipowners. But the world shipping situation is by no means so comfortable as to permit acquisitions of new tonnage to be made rapidly enough. It is also true that not all coastal ports are now in a position to cope with any sudden increase in the demand for port facilities. It seems, therefore, advisable to implement the suggestion made by the author of a series of articles on "Ambar-Jahaj," which appeared in this journal some time ago. For the chief advantage of the small steamers, for which the author made a convincing plea, is that their use will increase the carriage of goods along India's coastal line without any great reliance on extensive improvements in port facilities. This is an aspect of transport which deserves the Government's attention.

Road Transport

As regards road transport, it is well known that it accounts for a much smaller proportion of the total goods carried than in many western countries. An interesting analysis of the comparative importance of rail and road transport in different countries was given by Mr. E. A. Nadirshah, President of the Indian Roads and Transport Development Association, in the course of his speech, at the recent annual meeting of the Association, held in Bombay. In Italy, according to Mr. Nadirshah, motor transport carries more than twice the quantum of goods carried by rail; in Australia, it carries 8 per cent. more. In the U.S., the proportion of road to railway goods traffic, which was about one-sixth in 1939, rose to about one-third in 1953. In the U.K., motor transport lifts 46 per cent. of all surface freight, as against 54 per cent. by railways. In India, on the other hand, it has been computed that motor vehicles carry no more than 14 per cent. of the rail traffic. Mr. Nadirshah added: "One point is perfectly clear in regard to our transport requirements and that is, that road transport—and road transport alone—can solve the overall transport shortage which threatens to wreck our ambitious development plans."

The Association estimates that, by the end of the second Plan, the available transport facilities will fall short of the requirements by 36 million tons (as against the Planning Commission's estimate of 18 million tons), as against a gap of 9 million tons in 1955-56 (the Planning Commission's estimate being 5 million tons). In other words, both the estimates agree that the gap, at the end of the second Plan, between availability and requirements of transport will widen to more than three times the present level. This indicates the magnitude of the effort that will be needed to improve the transport position. Moreover, the Association has computed that, of the total deficit of 33 million tons in transport at the end of the second Plan, water transport, even if expanded to the maximum capacity possible, can relieve the railways to the extent of only 5 million tons. This, in its turn, serves to bring out more clearly the role that road transport can play in relieving the railways of their burden.

Motor Vehicles Act

The factors which have "throttled" road transport during the past 16 years were neatly summarised by Mr. Nadirshah when he said that they could be classified under four heads—restrictive regulations of Government, crippling taxation, lack of credit facilities and threat of nationalisation. Mr. Nadirshah said that most of the restrictive regulations spring from the Motor Vehicles Act of 1939, the twofold fear implicit in the Act being that road transport may take away from the railways any of the traffic which they are capable of handling and that such diversion may take place mostly in respect of high-rated commodities. Obviously, this fear, whatever may have been the grounds on which it rested in pre-war years, has no relevance to present-day conditions of acute shortage of transport facilities and the railways' inability to wipe it out. Viewing the problem in its historical perspective, Mr. Nadirshah made the following very pertinent observations:

"Until 1940, motor transport in India was free to expand without let or hindrance and the overall supply of transport in India was until then more or less adequate for all demands. Road transport services supplemented railways even on such long hauls as between Peshawar and Bombay, Delhi and Calcutta, Madras and Bombay, etc. In April 1940, the Indian Motor Vehicles Act which gave a monopoly of inter-State and long-distance transport to railways was brought into force and from that date begins the story of transport shortages. Within ten months of the Act coming into operation, the G.I.P. railway was unable to meet traffic demands and a railway official was asked to report on the situation. Mr. J. T. Day, who conducted the enquiry, reported that by 10th February, 1941, loading on the Bombay Division of the railway had fallen in arrears by 20 days, on the Jhansi Division by 25 days, on Bhusawal Division by 30 days and on the Jubbulpore Division by 40 days and that the shortage was very acute until the slack season set in. The officer in question attributed the shortage, in part, to the diversion of traffic from the road to the rail and admitted that road transport was in a position to afford substantial relief. Strangely enough, he made no recommendation for the withdrawal of the restrictions on motor transport but even went to the extent of suggesting that increased use of the road in any region should be contingent on the railways indicating to the Government that large quantities of goods are held up owing to the inability of railways to cater for it. Of course, the railways did not then, and have never since, requisitioned the assistance of road transport to supplement their services. On the other hand, although the transport bottleneck has been with us for these 16 years, they are still insisting that road transport should not operate on routes longer than 150 miles and that too, by taking 1½ miles of rail as equivalent to one of road on continuous gauges."

Mr. Nadirshah made a number of valuable suggestions for improving and extending road transport in India. In the first place, he urged that the targets of production of motor trucks in India should be so fixed that, after meeting the requirements of feeder and passenger traffic and the estimated normal renewals of old trucks in the country, the balance available should be adequate for the anticipated traffic in the country without prejudicing other modes of transport. Secondly, freights for road transport should be so fixed as to avoid unhealthy competition either among road operators or between roads and railways. Thirdly, the weight regulations governing the carriage of goods by road transport should be suitably amended. In this connection, he advocated the adoption of the axle load limit of 18,000 lbs. recommended by the Indian Roads Congress. Fourthly, he urged that the transport operator should be given loan facilities for purchase of vehicles in the same way as owners of industrial units are provided with funds for starting new undertakings or for the expansion of their existing undertakings.

Nationalisation

Finally, there are the twin problems of heavy taxation and threat of nationalisation. Mr. Nadirshah rightly stressed that one must not ignore the fact that "motor transport taxation in India is the highest among all countries of the world and that it amounts to roughly 500 per cent. of the tax in America." So far as nationalisation of goods transport is concerned, it is well known that the Government of India, though it has not opposed it on principle, has decided not to permit it before 1961. This decision has been welcomed in transport circles. Even so, it may be wondered whether the immunity for so short a period would provide the necessary incentive for road transport operators to sink money in acquiring new vehicles. The Government will certainly be well advised to extend, as Mr. Nadirshah himself suggested, the period of immunity to ten years, though, in our view, there is no need at all for nationalising road transport, be it passenger or goods traffic, at any time.

THE TRAVANCORE BANK
LIMITED
Head Office: **TRIVANDRUM**
Under the patronage of and largely supported by Travancore-Cochin Government
Branches at
BOMBAY, MADRAS AND OTHER IMPORTANT CENTRES IN SOUTH INDIA

Current Accounts	.. ..	Interest at ½ per cent. p. a. upto Rs. 1,00,000.
Savings Bank Deposits	..	Interest at 2 per cent. p. a. upto Rs. 5 000 and 2½ per cent. p. a. over Rs. 5,000.
Fixed Deposits	.. ..	Interest upto 3½ per cent. per annum.

Short-Term Deposits received on attractive terms
Save systematically and earn good profits through our
THRIFT DEPOSIT SCHEME
ADVANCES granted against Government and other approved securities
Transacts
FOREIGN EXCHANGE BUSINESS of all descriptions
For further details please apply to your nearest Branch or Head Office, TRIVANDRUM
D. R. VEDAMUTHU,
General Manager.

NEW RAIL-LINE

The 37-mile Ernakulam-Kottayam rail section, which has just been opened, is part of the Rs. 6-crore 96-mile Ernakulam-Quilon metre-gauge rail project connecting Ernakulam and Cochin in the north with Quilon and Trivandrum in the South. There are altogether 400 bridges to be constructed, of which 34 are major ones, besides 251 road crossings. The tract served by the line has vast natural resources and has an exportable surplus of coir, copra, pepper, rubber, tea, coffee and spices. It will thus pave the way for the rapid development of the west coast which forms the hinterland to the Cochin Port. As a through north-south rail link, lying on the west coast from Mangalore to Trivandrum, this has great economic significance, forming as it does an arterial railway for the transport of oil, foodstuffs and all other essential needs of the community. Passenger traffic also will be appreciably heavy as the area traversed is densely populated with an educated and travel-minded population.

OIL PIPELINE TO MEDITERRANEAN

A new dispute in the Middle East, when the slightly older Suez Canal controversy is still hanging fire in the Security Council, is the one between the Iraq Petroleum Company (I.P.C.) and the Lebanese Government. The I.P.C., which now owns a refinery and a pipeline in Lebanon, had planned to construct a new 24-inch pipeline from a point east of Homs in Syria to Tripoli on the Mediterranean coast as part of a plan to export an additional nine million tons of Iraqi crude oil annually. But, in view of what it regards as an unfavourable attitude of the Lebanese Government, the Company has reversed its original plan and decided to by-pass the Lebanon in the construction of its new pipeline to the Mediterranean coast by having the line in Syrian territory.

The Company had agreed to share with the Lebanese Government on a 50-50 basis the profits of its transit operations in the Lebanon. In terms of money, the Company had offered to pay the Government nearly £700,000 per annum on its present throughput of 7½ million tons of oil. When the new pipeline bringing an additional 9,000,000 tons of oil each year to Tripoli was completed, the total annual payments to the Government, according to the Company, would have amounted to about £1,500,000. If, subsequently, the former and now defunct Kirkuk-Haifa pipeline system were to be diverted to Sidon, the total annual payment to the Government on the basis of the Company's offer would be about £2 million.

The Company was anxious to know before proceeding with the construction of the pipeline what transit payments it would be called upon to make. Accordingly, it wanted to conclude a comprehensive agreement with the Lebanese Government. But the latter, it is stated, demanded certain higher payments which the Company felt it could not pay. Meanwhile, the Government has subjected the I.P.C. to new taxes. These new taxes, according to the Company, are a violation of the exemptions to which it was entitled under its 1931 Convention. The Government has also threatened the Company that it would take over its assets—a refinery with an annual capacity of 500,000 tons and pipeline with a total capacity of 7½ million tons a year—if its tax demands were not met. In accordance with the method prescribed in the Convention for the settlement of disputes, the Company has called for arbitration. It has also warned that, if the new measures contemplated by the Lebanese Government were imposed on it, there would be no alternative left for it except to suspend its operations in the Lebanon resulting in a mass discharge of its 2,500 employees.

In view of this controversy, the I.P.C. has decided, as stated at the outset, to by-pass the Lebanon in the construction of its new pipeline in the Mediterranean. Work has already started on a new 24-inch 9-million-tons-a-year capacity link from Homs to the port of Banias which will keep the line entirely within Syrian territory.

A news report from Syria, however, states that the Syrian Premier has expressed the view that the oil policies of the two countries are identical and that Syria would not adopt any measures harmful to the interests of any other Arab country. He is reported to have said that he would not agree to the transfer of pipelines from the Lebanon to Syria. It, therefore, remains to be seen as to how the whole issue will be resolved in the end.

ELECTRONIC EQUIPMENT

The I.B.M. World Trade Corporation, has announced, besides the electronic typewriter to which reference was made in our last week's issue, a few additional new products in the electronic field which will accelerate the trend toward plant and office automation.

They are the automatic production recording equipment, or A.P.R., the first machine system for automatically extracting vital data from assembly lines and processing it in a form suitable for quick management action, and the RAMAC and RAM 650, two electronic data processing machines, using I.B.M.'s "juke box" memory, a stack of magnetic discs to store millions of facts and figures less than a second from management's reach. The Random Access Memory (RAM) is just what the name implies, an almost instantaneous recall of any item, reflecting an up-to-the-minute status of business even while new transactions are being processed.

The automatic production recording or the APR fills a vital need. Thousands of hours are now being spent in plants and factories on data collection and recording. Much of this information is poorly or incorrectly recorded, and a substantial amount finds its way into accounting systems. Management has been aware that a great deal of these data are unreliable as well as expensive and difficult to collect, and thoroughly inadequate for the purpose of sound management decisions. With APR, production variables such as weight, count, length, and temperature, together with the related information that identifies the product and the process are automatically collected in great volume and recorded in printed and punched form. This information can be fed directly to data processing machines capable of preparing production, cost inventory, and other management reports. Management will have available a running picture of current production performance for on-the-spot supervision. The APR is made up of a system of components which may be combined in small, simple systems or in complex networks, depending on the application. These components include various types of input devices—clocks, keyboards, and a device that converts electrical or mechanical impulses from measuring instruments to digital form—storage devices, a programming unit, and output devices, an automatic typewriter and a tape perforator. These components have been developed to meet the needs of many and varied production problems and to be compatible with commercially available measuring instruments.

The RAM 650 and RAMAC both utilise the magnetic disc memory device announced by the IBM a year ago. Both machines are the first of a planned line of equipment designed for high-volume, in-line processing of business data. Transactions are processed continuously, as they occur, instead of being held until a group is accumulated, sorted and batch-processed. In a single step, all records affected by a transaction will be immediately adjusted to account for the change. The RAM 650 combines the IBM magnetic drum data processing machine (which is currently also being produced by the IBM World Trade Corporation in Canada, France and Germany and will soon go into production in Britain) with a series of disc memory units which are capable of storing a total of 24-million digits. The RAM can easily be added on to any 650 as an additional unit. The RAMAC is an entirely new machine which contains its own input and output devices and processing units as well as a built-in five million-digit disc memory. Both machines operate according to a programme of electronically stored instructions.

An advanced feature of the new continuous accounting machines is the method by which the memory may be interrogated. With the RAM 650, typewriter operators at remote inquiry stations may "ask" the machine for any of the data in the vast memory. Instants later the answer—perhaps a sales total or an inventory figure—appears on the typewriter. The same remote machines may be used to introduce information directly to the memory. The RAMAC may be interrogated in a similar manner directly from the machine's console.

AUTOMATIC TRAIN GRAPHS

Among traffic control devices developed by the Swedish L. M. Ericsson Company in recent years is a traingraph for the automatic graphic recording of train movements. Intended chiefly as a complement to centralised traffic control systems, it is reported to comprise a number of new features designed to simplify and facilitate operations for the control and safety of railway and underground traffic. The operator of a centralised traffic control system (C.T.C.) requires not only the visual picture of the current positions of trains but also continuous recordings of train movements. Recordings by and would be impractical, nor would they give the clear graphic picture that is needed. By means of the L. M. Ericsson Traingraph a clear stamped traffic diagram is obtained, giving a picture of the traffic situation for the hours immediately prior to and subsequent to the train-movement. Different colours can be used for different tracks or different direction of movement. Another novel feature is the large capacity in relation to size of apparatus, permitting the connection of a maximum of 112 or 224 train passage transmitting devices.

The new Swedish traingraph, which can be automatically operated on the data normally received in a C.T.C. office, consists of an aluminium frame in which are mounted rolls, magazines and feed mechanism for the chart, electromagnetic stamps and arrangements for feeding the colour ribbons and changing from one colour to another. Moreover, it includes an impluse generator and one or more relay sets. The dimensions of the traingraph, which can be installed in the operator's desk, are: length 660 mm., width 640 mm., height 182 mm., the width of the chart being 352 mm. If the chart is pre-printed with a graphic diagram of movements in conformity with the time-table the stampings will directly show whether trains are following the time-table and the extent of deviation from it. Written notes, which can be easily made on the chart, of train numbers will only be required in the event of abnormal delays. The putting-on of extra trains is facilitated, as also notes regarding train cancellations. The use of a traingraph is not confined to the recording of train movements in conjunction with C.T.C. It can also be used for recording the passage of trains through single or a number of consecutive stations, provided that there is any form of device that can give a remote indication of the passage of trains.

NEW PRODUCTS AND PROCESSES

Storage of Cashew Kernels

PROCESSES to increase the storage life of the roasted and salted cashew kernels by using *vanaspati* as the roasting medium have been evolved at the Central Food Technological Research Institute, Mysore. In one of the processes the kernels are first treated with *vanaspati* and then heated in a furnace for 20-25 minutes till they assume a slight brownish tinge. The roasted kernels may thereafter be salted, if required and packed in suitable cans. The storage life of such kernels when packed in ordinary atmosphere is about six months against a normal life of three months according to the processes at present employed in the industry. In the other process, the kernels are "deep fried" in *vanaspati* at a temperature of 160-180°C for 70-90 seconds, the excess oil being later recovered by centrifuging. The kernels are then dipped in molten *vanaspati* containing an anti-oxidant and a synergist for one minute and the excess oil centrifuged off again. The kernels after salting are packed in suitable cans. The storage life of kernels packed in this manner exceeds one year at ordinary temperatures.

Automatic Moulding System

Large quantities of ferrous and non-ferrous sand castings can be produced on a new automatic moulding system which recently came into operation at Platt Malleable Castings, of Walsall, Staffordshire. The equipment, which is named after the inventor, is known as the Hallsworth automatic moulding system and it has been developed in conjunction with the research and development department of Rubery Owen and Co. Heart of the plant is the automatic moulding machine which prepares the moulds in their boxes. The completed moulds are then automatically positioned on a rotary conveyor for pouring, which is done by a specially designed mechanism arranged to eliminate operator fatigue. The sand used in forming the mould moves through a continuous cycle. Having been made into a mould on the main machine and been in contact with the molten metal it is removed from the casting at the "shake-out" position and returned by an underground conveyor to a conditioning plant. The sand eventually returns to a hopper and measuring device before it is re-used in the moulding boxes. It is stated that the plant is capable of producing at least 240 completed moulds per hour when it is operated by a five-man team. Moulding boxes measuring 12 inches by 9 inches by 5 inches are used and it is estimated that an output of 1,000 lbs. per man per day is possible.

Tin Sealing Machine

Cylindrical containers, such as tins, glass jars and cardboard drums, can be sealed automatically with self-adhesive tape by a machine which is to be marketed by the Sellotape Division of Gordon and Gotch (8-10, Paul Street, London, E.C.2). Each container is placed individually by the operator on the machine's turntable. When the starting button is pressed a clamp descends to push the lid on tightly and to hold the container firmly; at the same time an arm swings forward and attaches one end of the tape to the tin. As the turntable rotates the tape is drawn on to the container and pressed on to ensure strong adhesion. When the turntable has turned through 360 degrees, plus about 5 degrees for the overlap, a cutter severs the tape and leaves a short length of tear strip protruding. The machine, known as the Pneutaper, is operated by compressed air and it is stated that any pomp with pressures in excess of 45 lbs. per square inch can be used.

Metallised Fabric

Imperial Chemical Industries is producing a new metallised fabric which can be used for decorative, but hard-wearing, trimming in cars, for shop fittings and display material and for fancy goods. The fabric is described as an aluminium-coated leather-cloth incorporating an abrasion-resistant plastic called Melinex which is claimed to protect the surface and prevent tarnishing. Two grades of the material are being offered. One is for sewn or "stick-down" applications and the other for high frequency welding. Marketed under the name Splendex the fabric is supplied in 50-yard rolls with a width of about 23 inches.

Easy Rust Removal

An official of the Australian Shipping Board has devised a means of removing rust economically from the ballast tanks on ships. This new process cuts removal costs 75 per cent. and takes only one or two days. Blocks of alloy metals, through which electricity passes, are suspended in the tanks. The alloy has a lower electro-chemical potential than the steel of the tanks and attracts the chemicals which cause the rust. The alloy metals can be used over and over again without corroding. In the first experiment the suspended plates were fed with a six-volt current for 21 hours; at the end of this period the tanks were perfectly clean.

Radiograph Amplifier

A radiograph amplifier which electronically increases the depth of the radiograph was developed by a firm, Phillips N.V. at Eindhoven (Holland) in its physical laboratory. A new form of this apparatus has now been designed for industrial use. It creates entirely new potentialities, as it enables materials to be examined by direct visual means, whereas hitherto examination was usually possible only by means of photographs. It enables welding seams, castings, rolled products and the like to be actually examined by X-rays, and mass-produced articles can be radiographed piecemeal. Whereas formerly a few random tests had to suffice, it is now possible to check the quality of the entire output.

Atomic Timepiece

A Malden, Massachusetts, U.S., company has unveiled an atomic beam clock that is exact to within three seconds per 100 years, according to the firm, and more precise than telescopic observations for navigation, communication and engineering systems. The clock, the company said, makes high precision time interval and frequency control practical for the first time without reliance on radio time signals. It is based on fundamental discoveries made some 15 years ago by Prof. I. I. Rabi of Columbia University, who won the 1944 Nobel Prize in Physics for these pioneer investigations into the inner cores, or nuclei, of atoms. The clock, known as the Atomichron, was developed under the guidance of Dr. Jerrold Zacharias, Professor of Physics at the Massachusetts Institute of Technology.

Cast Iron Alloy

A new alloy for use in the production of the flexible cast-iron known as spheroidal graphite cast-iron recently completed its full-scale foundry tests. The new "nickel-free" material is said to possess a number of advantages over other similar alloys. It consists of a mixture of silicon, calcium, magnesium and iron and has been developed by the Metallgesellschaft AG. and the Süddeutsche Kalkstickstoffwerke companies in Germany. It is expected that the new material will become available for commercial manufacture under licence in the near future.

Cheap Paper From Bamboo

One hundred tons of bamboo will now yield between 67 and 70 tons of cheap paper, as a result of further investigations conducted by the Forest Research Institute, Dehra Dun. The process, specified originally by the Institute, was expected to yield between 60 and 64 tons of paper from the same quantity of bamboo. Under the improved process, cooking time will be reduced considerably and the quantity of fibre to be converted into bleached fibre pulp also reduced. A mechanical bamboo project for further development of the process has been set up at Dehra Dun.

Semi-automatic Benders

W. Veenstra & Co. Sarphatikade 7, of Amsterdam, has for some time past manufactured an electric semi-automatic bender with a patented fully-automatic bending head on a free bending arm. It is thus possible to bend a workpiece in various bending planes in one operation. The automatic bending head clamps the material without the risk of slipping or damage, releases it after bending and automatically returns to its initial position for the next bend. A centrally controlled longitudinal spindle with automatic length stops ensures the correct length of the straight parts between the bends. The machine is very easy to operate, so that even unskilled personnel can work quickly and accurately with it. This bender is specially suitable for workpieces with bends in different planes, such as chairs, bedsteads, transport vehicles, etc. For the mass production of short workpieces, such as handlebars for bicycles and motor bicycles, exhaust pipes, etc., a dual-action bender can be supplied for simultaneous left- and right-hand bending.

DEVELOPMENT OF TRADE WITH INDONESIA

DIFFICULTIES IN THE WAY STATED

By Chinoobhai C. Javeri

THE influx of Indian culture into Indonesia is one of the most glorious and romantic episodes in the cordial relations between the two countries. In no less an important book than the Ramayana does one come across the name of Java. In the eighth century, there were rulers in Central Java professing the Siva faith. Hinduism was predominant then and its influence lasted upto the fifteenth century, till the advent of Islam which gradually replaced other religions of the Island. Yet, neither Indonesia has forgotten its ancient links with India nor time has obliterated traces of Indian culture.

The two countries—India and Indonesia—in their outlook and ideas are not so much apart as they are in terms of distance. There are many common economic, cultural and political ties between them. There are also many similarities between their standard of living and basic economy. The spirit is the standard which is acknowledged to be paramount in their relations. Many a problem such as the struggle for independence, etc., run parallel in the histories of the two countries.

The Republic of Indonesia consists of four major Islands of Java, Sumatra, Southern Borneo, Celebes and hundreds of smaller islands. The total area is 735,267 square miles and the population is estimated at about 70 million.

Since Independence, a new life is pulsating in the people stirred by a strong national consciousness. In trade, too, the spirit of nationalism has asserted itself against foreigners, who, in a large measure, controlled the country's trade in which the Chinese and the Dutch had a lion's share. By legislation and other measures, their domination has been removed and the trade has reverted to the hands of the people. Despite these changes, which have poised fresh problems and created new situations, the country's economic dependence on the West continues.

The main commodities which Indonesia produces and exports are sugar, palm oil, rubber, copra, tea, tobacco, pepper, sago, spices, beetlenut, hides, etc. The country has some mineral resources such as tin and oil which are also exported. Industrially, she is backward and underdeveloped. The national Government has embarked on an industrialisation programme and recently certain industries have been started. But for consumer and capital goods she still largely depends upon imports.

Nature of Economies

The economies of India and Indonesia are both complementary and competitive. The following table shows her overall exports to and imports from India:

(In lakhs of rupees)

	1953	1954	1955
Exports from India to Indonesia ...	621	1,357	670
Imports from Indonesia to India (including oil)	103	33	133

Basically, the position has remained unchanged. Indonesia is still having an adverse trade balance with India. She imports much more from India than she exports—a significant factor which withholds the expansion of trade between the two countries. Ironically, many of the products which Indonesia produces and can offer are those which India produces either sufficiently to meet the home demand or in excess. A cursory review will bear this out.

Take, for example, tea, black pepper, pulses produced by Indonesia. India is an exporter of all these items. The production of sugar in India is ample and sufficient to meet home demand. While coconut oil is produced on a large scale, the shortage is met by imports from Ceylon and Malaya. To protect indigenous plantations, import of rubber was banned though now allowed in a limited quantity to meet the growing demand of the expanding rubber industry. It is, however, not suggested that India is self-sufficient in most of the products which Indonesia produces and can offer for export.

Spices and coconut oil which India needs to meet the deficit are imported from Ceylon and Malaya because their prices are competitive on account of the advantages of the Commonwealth tariff preference enjoyed by them. These countries are not only our natural markets but also our best customers, at present, with whom we are keen on developing trade. It has been advocated in some quarters that Commonwealth tariff preference agreement should be cancelled, because it handicaps and interferes with the development of our trade with non-Commonwealth countries, many of which are our natural markets and very friendly with us, while no appreciable benefit accrues to our trade by the agreement. The contention is not correct. Had it not been beneficial, the agreement would not have been continued in the present circumstances. The opinion in knowledgeable quarters is just the opposite. It is averred that the trade has gained and is gaining by it and facts and figures bear this out. However, the matter may be reviewed and critically examined periodically in the context of the changing pattern of our expanding trade.

To some extent, the social, political and economic unrest, the intricate licensing procedure, the unsteady export and import policies, the changing economic climate in Indonesia, are factors which impede and handicap the development of trade between the two countries. The risk involved in trading under these unsettled conditions is of such a dimension that it restricts and retards the expansion of trade. It is however, hoped that Indonesia will soon make rapid strides in her economic progress and that her export and import policies will be rationalised and stabilised. Stable conditions will create a proper climate for facilitating and promoting trade between the two countries.

Long-term Credit

The barriers raised by the non-availability of foreign exchange and the imbalance in trade could be overcome by India agreeing to sell certain commodities to Indonesia on long-term credit. Payment of the loan could be guaranteed by the Central Bank of Indonesia. Such an arrangement might enable us to tide over temporarily the new phase in our trade.

Barter is another expedient for finding a market for one's goods. But this scheme does not fit in with our policy, though Indonesia has entered into barter agreements with Japan, Poland, China, Czechoslovakia. In the final analysis, however, barter basis does not pay. It is not in the larger interests of the country to export agricultural products and import machinery and engineering goods under barter scheme.

The loan, barter, bilateral trade agreements are only artificial devices which may promote trade temporarily but they do not offer an effective and long-term solution. Multilateral trade is a scientific and organised system of trading, but, unfortunately, it is neither practical at present nor does it find favour with countries due to peculiar existing economic conditions and political considerations.

Triangular trade, though complicated and difficult, is practicable and may be tried to ease the situation. Recently, India concluded a trade agreement with Burma for export of cotton textiles and acceptance of raw cotton from the U.S.A. for an equivalent amount as provided under P.L. 480. Indonesia is understood to have also entered into a similar arrangement with the U.S.A. and agreements for the import of cotton textiles by her under this arrangement have been concluded with four or five countries. India has been conspicuously omitted. This poses a pertinent question: Why is it that India, who is so friendly and has cordial political relations with Indonesia, was not approached by Indonesia to meet her cloth requirements?

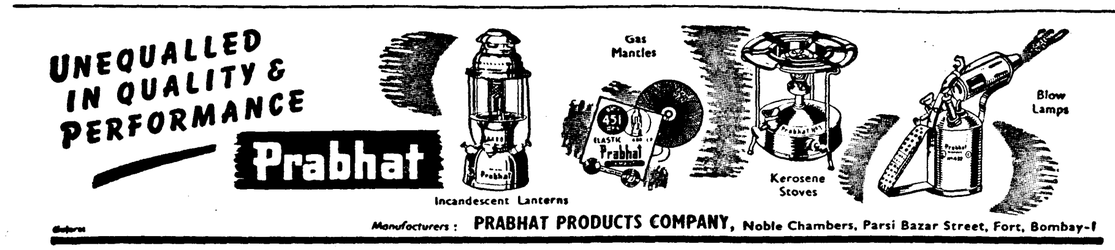
Whatever be the scope for implementing these suggestions, the important fact is the development of internal economy. Neither the natural resources nor the geographical location but only the attitude and character of the people inhabiting the country that can promote and ensure the country's progress and prosperity. Ultimately, it is the quantity and quality of human effort put into the work that speaks for a country's future.

In our trade and economic relations with the countries of Africa and Asia which are our neighbours and with whom we have friendly ties, a progressive enlightened policy of greater co-operation and reciprocity in buying and selling the goods should be pursued. In view of the growing industrialisation of our country, a new thinking in our trade policy with the neighbouring countries is necessary. We must actively assist them in developing their economy.

There are many Indians trading in these countries who have accumulated large funds which they cannot remit to India; nor do they know where to invest them. With them it is a problem to repatriate the funds. These funds could of course, be profitably invested in developing the economy and industry of the country concerned. But some measure of assurance by the Governments of the countries concerned about the safety of the capital is necessary. Repatriation of funds by merchants in some proportion to the amount they may invest in an industry in the country may be permitted by them. Remittance of profits derived from the industry may also be legally guaranteed. Some such facilities, if granted, will serve as an inducement to merchants to invest their funds in the industrial development of countries with which they are familiar. These countries being undeveloped, offer wide scope for starting lucrative industries. Such investments will not only earn for the Indian community the goodwill of the people but also go a long way towards promoting the trade and strengthening the political relations between India and these countries.

GYPSUM FOR SINDRI FACTORY

The entire requirements of the Sindri fertiliser factory, owned by the Central Government, in respect of gypsum, one of the main raw materials for ammonium sulphate, produced by the factory, are being met from the various mines in Rajasthan. The principal mines are at Jamsar in the Bikaner and Kawas in the Jodhpur Divisions. The factory was originally planned with the mines at Daudkhel in West Pakistan as its main source; after partition, the mines in Rajasthan have taken over that role. In 1951, when the mining in Kawas started, it was estimated that there will be about half a million tons of gypsum which would be suitable for the Sindri machinery. This estimate has been justified as that amount has already been mined. This source may probably yield another lakh of tons or so of gypsum before it runs out completely. It was planned to work the Kawas deposits first and the deposits at the nearby Uttarlai afterwards. In accordance with this plan, mining at Uttarlai has been taken up by the Sindri Fertilisers and Chemicals Ltd. The requirements of gypsum for the production of nitrogenous fertilisers in future will depend on the types and quantities of fertiisers to be manufactured.



THEY BUY WHAT THEY SEE IN TRAYOPHANE* PRINTED BAGS

Yes, customers prefer the product that's wrapped in Trayophane bags. Trayophane bags reduce waste, save time—because the contents are ready to be sold—wrapped, weighed and priced!

Economic! Hygienic! Convenient!

Why not get these colourful, eye-catching bags with your printed message, for an average cost of 6 pice?

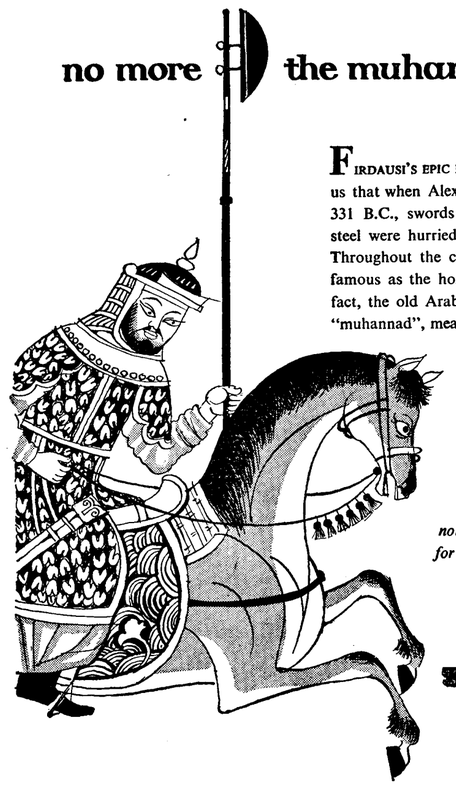
no more the muhannad



FIRDAUSI'S EPIC POEM, *Shah-Namah* tells us that when Alexander invaded Persia in 331 B.C., swords and other weapons of steel were hurriedly sent for from India. Throughout the civilized world India was famous as the home of quality steel. In fact, the old Arabic word for "sword" is "muhannad", meaning "from Hind."

Today, once again, steel is very much to the fore in the nation's thinking, but with a different intent. The country's steel-making capacity is being rapidly enlarged, not for purposes of war, but for peace and development.

SURVIVAL OF MANAGING AGENCY SYSTEM—II

COMPENSATION FOR TERMINATION OF OFFICE: RESTRICTION ON POWERS

By F. R. Ginwalla, B.A., LL.B.

THE payment of compensation to a managing agent for loss of office is strictly regulated by section 366. This section provides that the amount of compensation shall be limited to the remuneration which the managing agent would have earned if he had been in office for the unexpired residue of his term or for three years, whichever is earlier. This section further provides that the compensation should be calculated on the basis of the average remuneration actually earned by him during the period of three years immediately preceding the date on which his office was terminated, or where he held the office for a lesser period, during such period. The effect of the proviso to this section is that a managing agent is not entitled to any compensation if the assets of the company on winding-up are not sufficient to repay the share capital (including premium) contributed by the members of the company.

Section 365 enumerates the cases in which the payment of compensation to a managing agent for loss of office is prohibited. This section is to be read with the provisions of section 366 which we have already discussed. The prohibitions can be briefly stated as under:

(1) On the resignation of a managing agent in view of the reconstruction of the company or its amalgamation with any other body corporate and on his appointment as a managing agent or to any place of profit under the reconstructed company or the body corporate resulting from the amalgamation; (2) on the resignation, otherwise than on the reconstruction of the company or its amalgamation; (3) on the determination of managing agency agreement upon the issue of a notification that a particular class of business or industry shall have no managing agent from a specified date; (4) on the termination of the office of existing managing agents on the 15th August 1960; (5) on the managing agent giving up the managed companies in excess of 10 after 15th August 1960; (6) on the managing agent (if an individual) being adjudged an insolvent either by the Court or upon his own application; (7) on the dissolution of managing agency firm for any cause whatsoever, including the insolvency of a partner in the firm; (8) on the commencement of the winding-up proceedings where a managing agent is a body corporate irrespective of the fact that winding-up is by the order of the Court or subject to the supervision of the Court or voluntarily; (9) on the commencement of winding-up of managed company whether by or subject to the supervision of the Court or voluntarily; (10) on the vacation of office due to the conviction and sentence of not less than six months for an offence committed in India; (11) on the suspension of a managing agent when a receiver is appointed for his property by the Court or by or on behalf of his creditors. (The Court while appointing a receiver may allow a managing agent to continue in office for such period and subject to such conditions as may be specified in its order); (12) on the suspension of a managing agent by the board of directors under section 340; (13) on the removal on the ground of fraud or breach of trust or gross negligence and mismanagement; and (14) on the termination of his office as a managing agent when such termination is brought about by the instigation of the managing agent himself.

In this context, it may be noted as to when certain disqualifications take effect as mentioned in section 340 read with sections 334(a), 335(I), 336 and 337(II). The disqualification will take effect after 30 days from the date of order of: (1) adjudication of a managing agent (if an individual and not a firm or body corporate) as an insolvent, (2) appointment of a receiver by the Court of the property of the managing agent, (3) conviction of a managing agent for an offence committed in India and sentenced therefor for a period of not less than six months, and (4) the Court giving a finding that the allegations of fraud or breach of trust have been duly established. If an appeal or petition is preferred within 30 days from the date of the order made in the above cases the disqualification will not commence until the expiry of seven days from the date on which such appeal or petition is disposed of. If any further appeal or petition lies it should be made within seven days as aforesaid and the disqualification will not take effect unless such further appeal or petition is disposed of.

In the above cases, it is open to the board of directors of a managed company to suspend a managing agent immediately or at any time after the order is made by the trial Court or the Court of the first instance or it may wait till the result or disposal of appeal if any. In this context it may be noted that conviction does not operate as a disqualification if a convicted partner, where a managing agent is a firm or a director, where a managing agent is a body corporate, is expelled under section 341 within 30 days from the date of such conviction. Changes in constitution of managing agency firm or corporation must obtain approval of the Central Government within six months from the date of such a change as indicated in section 346. If this is not done the managing agency shall cease. The approval is to be given by the Government in consultation with the Advisory Commission. Conditions prohibiting reconstruction or amalgamation of a company except on continuance of an existing managing agent of the reconstructed company or of the body resulting from amalgamation is void under section 376 from the date of this Act coming into force.

Resignation

Unless a managing agency agreement otherwise provides, a managing agent may, by notice to the board of directors of the managed company, resign his office from such date as he may specify in his notice. But such resignation tendered under section 342(1) does not become effective till it is accepted by the managed company by a resolution passed in its general meeting after giving full consideration to managing agent's resignation together with the statement of affairs, balance-sheet, profit and loss account and auditors' report.

When a managing agency is terminated on account of the Central Government notifying that a specified class of business or industry shall not have a managing agent from a particular date or when a managing agent gives up the managed companies in excess of 10 so as to conform to the provisions of section 332 a charge is created under section 333 in favour of a managing agent on the assets of the managed company in respect of all moneys due to him from the managed company at the date of the termination of his office. This charge also protects a managing agent in respect of any liability properly incurred by him before the termination of his office. It may be noted that such a charge under this section is always subject to all existing charges, if any, on the assets of the managed company. Section 367 provides that, upon the termination or cessation of his office, a managing agent is entitled to enforce his claim, if any, against the managed company. This section does not affect the rights and liabilities in relation to the company, of the managing agent in any other capacity.

It is said that power corrupts and absolute power corrupts absolutely. This is the significance of section 368 which prevents the concentration of powers in the hands of a managing agent. A managing agent, whether appointed before or after the commencement of the Act, must function, subject to the superintendence, control and direction of the board of directors of the managed company and subject to the provisions of the memorandum and articles of the company. The powers are further restricted by the provisions contained in schedule VII of the Act. This schedule enjoins upon the managing agent the necessity to obtain the previous approval of the board of directors of the managed company for appointing any person in the managed company on a higher remuneration than the one fixed by it. These restrictions further extend to an appointment of any relation of a managing agent under the managed company without the sanction of its board of directors of the managed company. Sanction of the board of the managed company is also necessary for selling or purchasing capital assets beyond the limits prescribed by the board and for compounding or sanctioning the extension of time for the payment of any claim of the managed company against himself or his associate or for compounding any claim against the managed company of himself or his associate. In this context it is necessary to invite attention to the provisions of schedule VIII referred to in section 347. This schedule enjoins on every managing agent who is a firm or limited company to file with the managed company a declaration within one month from the date of the Act. This declaration is intended to inform the managed company as to who are interested in the managing agency and what charges occur in such interest. It is a continuing offence punishable with fine if the declaration specified in this schedule is not made.

Section 364 provides that any assignment of, or charge on, his remuneration, or any part thereof, effected by a managing agent shall be void as against the company. This section does not affect the rights *inter se* of the managing agent and any person other than the company. Section 369 prohibits a company from giving a loan to its managing agent or his associate. A company may, however, advance any amount to its managing agent for facilitating the company's business subject to the limits fixed by the company's directors and on no account exceeding Rs. 20,000 in the aggregate.

The restrictions contained in section 370 shall apply to a lending company which is under the same management as that of a borrowing company unless the making of such loan has been previously authorised by a special resolution of the lending company. These restrictions contained in section 370 do not apply to any loan advanced by a holding company to its subsidiary, or by the managing agent to any company under his management. Contravention of the foregoing provisions of sections 369 and 370 is an offence under section 371 punishable with fine upto Rs. 5,000 or with simple imprisonment extending to six months.

Restrictions on Investment

The limits to investments which may be made by a company in another company belonging to the same group are set out in section 372. The board of directors of the investing company may by a unanimous resolution at a board meeting invest upto 10 per cent. of the subscribed capital of the company in whose shares the investment is made, but the aggregate of such investments in other companies of the same group should not exceed 20 per cent. of the subscribed capital of the investing company. Investment beyond these limits can only be made by the approval of the company at its meeting and unless further approved by the Central Government.

The restrictions on investment noted in the foregoing paragraph do not apply to (1) any banking or insurance company, (2) a private company which is not a subsidiary of a public company, (3) a holding company in respect of investments made in its subsidiary, and (4) a managing agent in respect of investments made in a managed company. Section 373 provides that investment in shares of a company under the same management made before the commencement of the Act beyond the limits set out in section 372 requires the approval of the company and the Central Government within six months from the date of the Act or in the alternative the investment in excess of the prescribed limits should be disposed of within two years from the commencement of the Act. Any contravention of section 372 or 373 is an offence under section 374 punishable with fine upto Rs. 5,000.

Another important restriction under section 375 is that no managing agent can henceforth engage on his own account in any business which is of the same nature as, and directly competes with business carried on by the managed company, unless the managed company by its special resolution authorises its managing agent to do so. If a managing agent carries on any business in contravention of this section he is liable to account for the profits earned by him as if he received such benefits in trust for the managed company.

Section 377 restricts the right of a managing agent to appoint his director on the board of directors of the managed company. He may appoint one director when the strength of the board of directors is less than five, and not more than two when the total number of directors exceeds five. Any provision in the articles of an existing company or in agreement with the managing agent authorising him to appoint more directors than specified in this section shall be void after the expiry of one month from the date of the commencement of this Act. If at the date of the Act the number of directors appointed by the managing agent exceeds the number allowed under this section it is the duty of the managing agent to decide as to which of his nominees should continue in office. Such decision must be made within one month from the date of the Act coming into force. If no choice is made the nominees of the managing agent will be deemed to have vacated their offices.

Committee of Enquiry

Under the rules framed under section 324 it is necessary for the Central Government to appoint a committee to enquire into the desirability or otherwise of terminating managing agencies in respect of companies engaged in a specified class of business or industry. The procedure to be followed by the committee is laid down in rule 11 of the Companies (Central Government's) General Rules and Forms, 1956. The recommendation of the Committee will be considered by the Central Government in consultation with the Advisory Commission and, if after such consultation the Government is satisfied that steps should be taken to abolish the managing agency system in any particular industry or business, a notification to this effect under section 324 will be placed before Parliament for consideration. There can be no better safeguard than this. Thus, we have before our eyes an overall picture of the shape of things to come slowly but gradually in the managing agency system in India under the new Company Law which is primarily concerned with means and not ends.

Up go coal prices – but cement stays the same

The cheapest (and the best) cement is still supplied by the ACC group of Free Enterprise factories. Meanwhile coal and other prices go up.

And does anyone suffer by this refusal to increase cement prices? Certainly not. Cheap cement means low cost building of everything from homes and roads to dams and factories. Cheap cement means better living for millions.

How does it stay cheap? Simply by improving methods of manufacture—i.e. *by efficiency!* Only thus could the ACC have kept down its price of cement despite the following price-raising factors which have come about in recent years:—

- Higher wages
- Higher royalty charges
- Higher freight charges, & NOW
- Higher coal prices

By this very efficiency and refusal to add to inflationary trends, the ACC is contributing to a new era of history—an era of wealth and prosperity, undreamed of even twenty years ago.

EAST-WEST EUROPEAN TRADE

CONSIDERABLE EXPANSION WITNESSED

THE gradual but persistent thawing of the cold war that has been witnessed on the political front after the death of Stalin has created a favourable climate for the growth of better economic relations between the eastern and western parts of Europe. If these relations had remained strained for some time, it was only because of the existence of artificial barriers—stemming from political factors—between the two parts which are otherwise complementary to each other to a great extent. Consequently, when these barriers were partially removed, the natural economic forces, suppressed for a long time, began to grow active. The industrial expansion recorded in recent years in both parts of Europe, more especially in western Europe, gave great fillip to a fuller manifestation of this natural tendency. In the absence of a favourable political climate, not only would these forces have remained bottled up, but the problems of expanding markets and finding customers for their numerous products would have assumed greater proportions. The fast expanding industrial activities of these countries have thus led, on the one hand, to the reactivisation of the old relations, and, on the other, to greater diversification of trade.

This is the broad conclusion that can be drawn on an examination of the developments in east-west European trade in 1955, which are reviewed by the Economic Commission for Europe in an article in the latest issue of the *Economic Bulletin for Europe*. The article is titled "Recent Developments in Trade Between Eastern and Western European Countries." The features that have made for expanding trade relations are the more frequent contacts that have been taking place between the private industrialists and traders in western Europe and the trading organisation in eastern Europe through fairs and visits. The article also refers to "certain more basic developments" which influence the trade policies of the two parts in the long run. It states that a fundamental re-examination of the east-west trade policy is taking place. While in eastern Europe, foreign trade policy appears to be receiving more consistent attention than in the past in general economic planning and there is greater emphasis on the advantages of international division of labour, in western Europe, and in the U.S., Governments are showing more interest in promoting east-west trade and introducing a greater degree of flexibility in the licensing policy.

During 1955, the value of east European exports to west European countries increased by 30 per cent. above the 1954 level, while the deliveries of the latter to the former increased by 12 per cent. Larger quotas are also provided for in most trade agreements for 1956; and, in the first four or five months of 1956, the value of east European exports increased by 17 per cent., while those of west Europe improved by 14 per cent., over the corresponding period of 1955. The rates of increase in terms of volume were, however, smaller since the export prices had risen by about 5 per cent. in both the areas. An interesting feature of this expansion is that, although east-west European trade reached its highest post-war peak in 1955, west European exports still remained at only two-thirds of their pre-war volume and east European exports did not attain even one-half of that level.

Geographical Distribution

Certain striking changes were also witnessed in the geographical distribution of trade of western Europe, the Soviet Union and eastern Europe as a whole during the seven years 1948 to 1955. It may be noted here that the term "eastern Europe" includes the Soviet Union also. Whereas the main expansion during this period took place in trade within the respective regions, reflecting closer economic co-operation, the trade of the east European countries with eastern members of the Asian trading region, chiefly Egypt and Iran, increased both in absolute and relative terms. Moreover, whereas in the Soviet Union, the share of intra-regional trade was maintained in 1955, there occurred in the trade of the other east European countries a very marked shift to western countries and an absolute reduction not only in their intra-trade but also in their trade with the Soviet Union. Thus, in 1955, the expansion in eastern Europe's trade was almost entirely accounted for by an increase in trade with the western European countries and the overseas countries in the western trading region. In 1956, according to the information available, this shift is said to have become more pronounced. According to Bulgarian statistics, the western trading region accounted for 20 per cent. of the total turnover during the first quarter of 1956, as compared with 13 per cent. in the corresponding quarter of 1955. For Poland, again, the share of the western region in total trade has risen from 35 to 42 per cent. between the first four months of 1955 and 1956.

Trade with Russia

Some of the factors that led to the reduction in the east European countries' trade with Russia in 1955 were, among other things, the association of trade agreements between the former and the latter with the Five-year Plans of the former till 1955, failure of Russia to maintain its exports of foodgrains, and the difficulties of the east European countries to finance the imports from the Soviet Union. For example, whereas in the past, import surplus with Russia could be paid for by them by drawing upon Soviet credits, an export surplus is required now to pay those credits. And possibilities of attaining export surplus are limited because of their inability to supply quickly the machinery answering Soviet specifications. Shortage of raw materials was another reason for this development.

Proportion Larger in 1955

Another significant feature of the east-west European trade during 1955 was that not only did it increase between 1954 and 1955, but it also accounted for a larger proportion of the total trade turnover in both the areas. The share of trade with western Europe in the total trade turnover of eastern Europe increased from 14 to 16 per cent. between 1954 and 1955, but, in 1948, it had constituted 33 per cent. and in 1937 almost 60 per cent. In western Europe's trade, eastern Europe's trade accounted for only a little over 3 per cent. as against about 5 per cent. in 1948 and between 7 and 8 per cent. in 1937. What is, however, important is that, although this trade plays a relatively limited role for western Europe as a whole, there are five countries for which it accounts for from 10 to 25 per cent. They include Finland, Iceland, Turkey, Yugoslavia and Austria. Eastern Europe's trade with certain other important countries such as the U.K., France, West Germany and Austria has also improved slightly, but the full impact of the more liberal policies recently adopted by them is likely to be felt more and more in the coming months. The increase in British exports to the Soviet Union, which was mainly accounted for by heavy shipments of copper wire, was rendered possible by the relaxation of strategic controls. The increase in French exports in 1955, furthermore, was accounted for mainly by larger shipments of wheat to Poland and Hungary. During the year under review, West German trade with eastern Europe also increased substantially mainly on account of larger exports of rye, chemicals, iron and steel, non-ferrous metals and larger imports of coal, steel and flax. Although the official attitude was found to be cautious, the article points out that "industry is showing an increasing interest in recovering its former markets in eastern Europe, partly with a view to widening the range of trade outlets, and partly also because, despite the present export boom, some industries are experiencing difficulties in selling on western markets."

Austria's Trade Agreements

Among the other factors which contributed to the increase of east-west trade was the emergence of Austria as a sovereign country in May 1955, after the termination of the four-power occupation. This was soon followed by two trade agreements with the Soviet Union. According to the one entered into in August 1955, Austria agreed to supply capital equipment, petroleum, etc., for a period of ten years in return for grains, coal and other essential materials. As a result of these trade agreements, the machinery and equipment bound for eastern Europe from Austria are expected to form 50 per cent. of Austria's exports. No less a contribution was made to the expansion of trade by the resumption of trade in 1954 between Yugoslavia and east European countries. The trade that flowed between the former and the latter in 1955, though it fell short of the targets fixed in the trade agreements, revealed that eastern Europe emerged again as an important market for Yugoslavia. The possibilities of expansion in 1956 are found to be distinctly bright, because, first, of increased quotas agreed to in the new trade agreements, and, secondly, of granting of substantial credits to Yugoslavia by some of the east European countries, and, lastly, of the success attained by Yugoslavia in settling its financial questions outstanding in 1948, when trade relations were broken off. Turkey was another southern European country which switched over a large part of its trade in 1955 to eastern Europe, chiefly because of the marketing and payments difficulties encountered with west European countries.

Share of Manufacture Increases

In the sphere of commodity composition, east-west trade in 1955 disclosed certain significant changes. The most striking shift in eastern Europe's exports to western Europe was that, for the first time, manufactures made up a larger share of the total. They were also characterised by the emergence of new trade flows such as Polish coal exports to the U.K., or by the accentuation of the recent trends, such, for example, as increased exports of raw cotton and pig iron from the U.S.S.R. Of the grain exports from eastern Europe, those of wheat not only continued to decline in 1955, but an import surplus to the tune of 200,000 tons was witnessed. But the export of other grains slightly improved, as a result of heavier shipments of maize from Rumania. A recent development of major importance is the rise in eastern Europe's imports of wheat from overseas countries, particularly Canada. In 1956, while West Germany has agreed to deliver 300,000 tons of wheat, Poland has contracted to supply rye. Moderate improvement was again witnessed in respect of coal exports of eastern Europe, the notable feature being the emergence of Poland as the chief exporter of coal in Europe, with possibilities of further expansion in 1956. Petroleum exports of eastern Europe continued to rise, but they occupied a less important place in the supplies of west Europe, except in regard to Finland and Ireland.

Turning to west European exports, the E.C.E. article states that deliveries of butter and meat which were so important in 1953 and 1954 declined in 1955. The greatest expansion, however, was registered in the exports of raw materials for capital goods, notably steel, copper wire and timber. Contrary to expectations, exports of machinery equipment from western Europe to eastern Europe fell in volume, though expectations of improvement in future are held high. Exports of ships continued to increase in 1955 with possibilities of further increase in 1956. In March 1956, for instance, 88 ships with a total gross tonnage of 175,400 were under construction for the U.S.S.R. in western Europe as compared with 60 ships totalling 112,000 gross tons, a year earlier.

Discussing the prospects for the expansion of east-west European trade in the years 1956 and 1957, the article says that, while exports of foodgrains and timber from eastern Europe are unlikely to increase, those of coal (from Poland), coking coal and anthracite (from the U.S.S.R), brown coal (from Czechoslovakia) and petroleum (from Rumania) are likely to continue to increase, in spite of the retention of larger amounts for consumption by the producing countries. The article observes in this connection:

"Despite these rather divergent trends in the main export products from eastern Europe, the total level of east-west European trade seems likely to show a significant continuing increase. Larger quotas are, in the majority of cases, provided for in the trade agreements concluded for the current year, and a trend towards a diversification of trade is also clearly discernible in these agreements. In addition, there are some entirely new agreements widening marketing opportunities."

Further, one of the important developments taken note of by the E.C.E. in assessing the outlook for east-west trade, is the trade proposals made by the Soviet leaders to the British Government when they visited the U.K. last April. If the proposals, which involve imports by the U.S.S.R. from the U.K goods of the value of £800 million to £1,000 million in the five years 1956 to 1960, materialise, they would imply a fivefold or sixfold increase in the British exports to the Soviet Union, and more than a threefold increase in the deliveries of the U.S.S.R. to the U.K., as compared with 1955 levels of trade between the two countries. In considering the possibilities of such a large two-way expansion of trade, the E.C.E. article observes:

"It may be noted, on the one hand, that the levels envisaged would still not represent more than 5 or 6 per cent. of total British imports or exports in 1955 and, though perhaps equal to as much as one-sixth of the foreign trade of the Soviet Union, would still be small in relation to the total resources at its disposal. On the other hand, many of the goods figuring on the Soviet list of prospective orders in the United Kingdom, as well as many of the commodities which have hitherto made up the bulk of Soviet exports to the United Kingdom, are in short supply in relation to present home and export demands on either side."

Better International Payments Position

Finally, the article considers some of the important developments in the field of international payments and relations which make for much expansion of east-west trade in the near future. In the first place, the article takes note of the strengthening general balance-of-payments position in recent years in most of the west European countries, resulting in some enlargement in the facilities accorded to the east European countries for the transferability of their export earnings. Secondly, the increase witnessed in the east European trade surplus in the past year has opened up prospects for moving towards a greater degree of multilateralism. Thirdly, consideration is also being given by Governments to the possibility of developing more flexible payments arrangements in east-west trade. Fourthly, greater and more frequent contacts between private industrialists and traders in western Europe and those responsible for similar deals in the eastern part have been established through permanent trade representatives, fairs and tours. For instance, at the recent Leipzig Spring Fair, contracts worth about $880 million were reported to have been concluded by East Germany. Fifthly, east-west trade is also being facilitated by the trend witnessed in recent years towards greater decentralisation of the foreign trade organisations of east European countries. And, lastly, from the long-term point of view, the "fundamental re-examination" of the east-west trading policy that has been taking place on either side. While, on the eastern side, there has been evidence of greater emphasis on the advantages of international division of labour, on the western side, Governments are showing more interest in promoting east-west trade, and in introducing a greater degree of flexibility in licensing policy. Notwithstanding all these favourable signs, the article cautions that no spectacular rise, beyond the rate of increase attained during the past three years, seems probable in east-west European trade. The recent changes, according to the article, suggest the possibility of a more rapid expansion of trade of east European countries with overseas countries than with those of western Europe.

SWEDISH FOREST INDUSTRY

The Swedish pulp and wallboard industry is planning far-reaching extensions, according to a report published by the South Swedish Forest Industry Investigation Committee. By 1960, the volume of production of the pulp industry will, it is estimated, exceed that of 1954 by about 47 per cent. or by about 1,700,000 tons, if the present plans are carried through. In the same period, the capacity of the wallboard industry is expected to increase by about 300,000 tons, or 80 per cent. The Committee expects, however, that the realisation of the plans in the next four to five years will meet with certain difficulties, including raw material problems. It, therefore, considers it realistic to reckon upon its taking about ten years to carry through the present projects. On a somewhat longer view, the Committee judges the raw material situation to be favourable.

The annual quantities of timber available for lumbering in Central and South Sweden are estimated to increase up to the middle of the 1930's by an average of about 30 per cent. for large dimensions and by about 3 per cent. for smaller dimensions. At the same time, the possibilities of obtaining raw material from the North Swedish forests will remain at any rate unchanged. In addition, new techniques are making it increasingly possible to utilise small timber, hardwood and sawmill waste. The use of pinewood for the production of sulphite pulp is also stressed. As the supply of timber in North Sweden has been found to be considerably better than indicated by previous inventories, earlier discussed projects of "importing" South Swedish timber to the processing mills in the northern part of the country are regarded as no longer of urgent interest.

INDO-EAST GERMAN TRADE AGREEMENT

A trade agreement was concluded on 8th October between the representatives of the Government of India and the German Democratic Republic (East Germany) at New Delhi. The agreement came into force soon after the earlier agreement, entered into in 1954, expired on 15th October. The new agreement will remain in force for three years.

The important items included in the list of exports from India to East Germany are tobacco, manufactured and unmanufactured, mica, chrome ore, iron ore, ilmenite, kyanite ore, manganese ore, shellac, vegetable oils, cashewnuts, cashew shell oil, textiles (cotton, silk and art silk, woollen and jute), coir, coir manufactures, handicrafts and products of India's chemical and engineering industries.

The important items in the list of imports from East Germany are: various kinds of machinery, locomotives (electric, diesel and steam), plant and equipment for cement and sugar production, optical and scientific instruments and appliances, wireless communications equipment, newsprint and raw films. An important feature of the agreement is that the schedule of commodities attached to the arrangement will be subject to revision at the beginning of each calendar year. Moreover, it has also been agreed that all payments between the two countries will be settled in Indian rupees.

Other provisions incorporated in the arrangement include, *inter alia*, the creation of facilities by both the parties for the movement of goods between the two countries in accordance with their import-export and foreign exchange regulations in force in each country, and continuance of the trade representation of East Germany in India and provision of adequate facilities for its effective functioning, and extension of similar facilities by East Germany if and when needed by the Ministry of Commerce and Consumer Industries.

After the signing of the agreement, the representative of East Germany, Mr. Gerhard Weiss, pointed out, at a Press Conference, that the trade between the two countries had developed favourably during the short time that had elapsed since the conclusion of the earlier agreement. In 1955, for instance, exports from East Germany to India amounted to as much as Rs. 1.5 crores, while those from India were of the value of Rs. 0.65 crore. For the year 1956, contracts worth no less than Rs. 5 crores had already been entered into by the various organisations of his country with parties in India. He further expressed the hope that, by 1957, an increase of another 100 per cent. was possible. He had also given a broad hint to the effect that his Government would be willing to give credit facilities to India, similar to those accorded to Yugoslavia for putting up an aluminium factory.

Canada's foreign trade continued expanding in August but imports again outpaced exports, increasing the eight-months foreign trade deficit to a record $643.9m., or more than triple the $204.2m. a year ago. Exports in August increased to $426.7m. from $387.5m. last year, while imports rose to $475.3 m. from $429.8m. This boosted the eight-months' exports to $3,161m. from $2,807m. the year before. Imports in the eight months amounted to $3,805m. from $3,011m. Exports to the United Kingdom in August edged ahead to $69m. from $63m., while imports declined to $42m. from $45m. In the eight-month period exports to the U.K. amounted to $516m., against $513m., and imports to $327m., compared with $261m. Trade officials declared, in connection with the Bureau of Statistics figures, that there is no indication of any sharp reduction in trade later this year. It is almost certain the deficit will go higher as the Canadian demands for goods for expansion of production facilities and provision for higher living standards continue.

IMPLEMENTATION OF COMPANIES ACT

UNDESIRABLE PRACTICES SHOULD BE PROMPTLY CURBED

THE new Company Law, which emerged as a full-fledged piece of legislation early this year and was enforced from 1st April 1956, is doubtless the most voluminous legislation that the country undertook and passed after achieving independence. As the then Finance Minister, Mr. C. D. Deshmukh, explained at the conference of Registrars of Companies, the main object of the Companies Act is to secure the much needed economic integration between the private and public sectors. A proper functioning of the Act, as envisaged by its makers, naturally calls for much energy drive and initiative on the part of its administrators who have been vested with far greater powers than their confreres in other democratic countries.

The scope for Government regulation and control over the affairs of companies and their necessity for fulfilling the fundamental objectives of the Company Law were briefly explained by Mr. B. R. Bhagat, Deputy Minister for Finance, while addressing the Cuttack Chamber of Commerce last week. The Minister said that, while the Administration's basic principle of not interfering with the internal management of companies continued to be fully recognised, the veil of incorporation in respect of several important matters, had been lifted more effectively than before. He affirmed that the essential condition for the recognition of corporate personality enjoined a certain amount of publicity in the matter of companies, whether they belonged to the private or the public sector. It was on this basis that provisions had always existed in the Law, compelling public companies to file with the Registrar their balance-sheets and profit and loss accounts, lists of their shareholders together with their holdings, etc., and such other allied information. In the new Companies Act, some more disclosures had been made compulsory. Thus, all contracts by companies with their directors, contracts in which their directors were directly or indirectly interested, contracts with the managing agents, the remuneration to be paid to the directors and to the managing agents and, last but not least, the relations of the company with the associates of the managing agents, secretaries and treasurers, etc., had to be disclosed.

Inspection

The Minister added that, in addition to the veil of incorporation, there was something in the nature of a curtain formed by the companies' public file, that is, "the sum total of records, registers and documents" they were required to keep for inspection by directors or shareholders and those records and registers which they were required to file with the Registrar. "What goes on behind it," Mr. Bhagat remarked, "is normally concealed from the public gaze and only the director or the management will be in the know of things." Occasions do come, when this curtain also may have to be lifted. Thus, when there are allegations against a company, for instance, an inspector may be appointed by the Government to investigate the company's affairs. He is usually given very wide powers for enquiry which would enable him to go behind the company's register to ascertain its true owners. Mr. Bhagat justified these powers on the basis of past experience. Investigations of this type in the recent past, he revealed, had borne fruit, resulting in the prosecution and conviction of the defaulting persons. He, however, hastened to add that one should not interpret this remark of his to mean that generally all companies are not managing their business properly and honestly. What he evidently meant was that such instances as he cited were exceptions. "It would be a sad day," he said, "if it were necessary to say that of all public companies in the private sector. Fortunately, this is not so. By and large, the management of companies behave properly and, if the many provisions which have been added to the Company Law by the new Act have the effect of making every company comply with the standard of good conduct which the Legislature has in its wisdom prescribed, the object will have been fully achieved."

Government's Task

In order to ensure the fair name of the private sector, it is necessary that all companies should abide by the Company Law both in spirit and letter. Since all are not angels and there are black sheep in every community, it is equally necessary that the Law should be ably administered. If, despite the comprehensive nature of the new Law, there are departures from the minimum code of good conduct and rectitude and if they escape unnoticed and unpunished, it will be a grave reflection on those who administer the Law. It will not do if they merely blame the private sector. It is necessary to stress this point even at this early stage, so that the Government might strengthen its administrative machinery and maintain constant vigilance. Against the background of the acrimonious debate that took place at the time the new Law was on the anvil, any laxity on the part of the Government in enforcing the Law will be inexcusable. They owe it to the public, in general, and the honest company managements, in particular, to separate the sheep from the goat and weed out the undesirable elements from the sphere of joint-stock company management.

Commitments Fulfilled

Another reason that prompts us to stress this point is the following remark of Mr. Bhagat:

"No enterprise which has, for its formation and development, to depend on the willing co-operation not only of members and investors but of various interests, can function properly, unless its management are able to show that they have acted fairly and in the interests of the shareholders of the company. This is why the Company Law looks at the management as in effect trustees and expects a high standard of unselfish good behaviour from them. It is alro for the purpose of eventually creating an atmosphere of friendliness between the company management and members of the investing public that the Government has had at times to step in and use the power vested in it to order an investigation or inspection of one type or another and only if as a result of such investigation it is satisfied that any further action is called for, that it takes such action. No action is, however, taken lightly or without the fullest consideration of all explanations of parties in default and all aspects of a case. The pros and cons of every matter are carefully considered. The effect of any action that is taken on the state of the market, as well as on the mind of the investor, is carefully assessed. The circumstances of the case and of the fraud, if any, which has been brought out, are then most carefully examined. It is only when the circumstances fully justify further action that such action is taken, as, for example, when criminal liability is established against any party."

While we appreciate the liberal traditions which the Company Law Administration wish to pursue and its desire not to interfere in the affairs of a company unnecessarily, it should not be complacent in performing its policing functions. This need not handicap the working of honest companies. Just as an honest citizen has nothing to fear of the police, so also honest companies have nothing to worry about the Company Law. It would be folly on the part of the private sector to plead for a relaxation of these powers at this stage or for softness in the enforcement of the Law.

Bad Practices Alleged

It is now a little more than six months since the new Law came into force. Hundreds of companies have been amending their rules and regulations to bring them into conformity with the new code. Are these changes being made in accordance with the letter and spirit of the Law? Has the Government been closely following them? And, if so, what are its impressions? To these questions, Mr. Bhagat provided some valuable answers, as will be seen from the following extract from his speech:

"The information which has so far become available to Government does not enable it to make any categorical statement on the fulfilment of the objectives of the new Act. You have no doubt been reading in the newspapers advertisements inserted by a very large number of companies regarding the passing of some special resolutions in compliance with this section or that section of the Companies Act.

"The various regulatory sections of the Companies Act require that in certain cases the approval of three-fourths in majority of the shareholders of a company attending a meeting of the company should be obtained. This at once gives the management an opportunity to place before the members, the nature of the activities on which the company is engaged, the staff employed thereon and the remuneration paid for such services, the details of the contracts or agreements in which special sanction is required before managerial personnel who hold a post of trust are instituted.

"The object is that there should be as much disclosure as possible, so that no member of the company should have cause to complain, that he has been kept in the dark, that the management have acted in disregard of his interests and that he has not got full value for the money spent on such purposes. The ultimate decision of the majority freely expressed is always presumed to be right and in the best interests of the Company in accordance with the democratic concept which pervades the Company Law.

"A number of resolutions which have been passed by companies, with the aid of majority of holdings, have, however, disclosed some undesirable practices. By way of illustration, I may refer you to sections 356-358 of the new Act, which prohibit the payment of any commission or remuneration by a company to its managing agents or their associates for the sale of goods produced by the managed company, or for the purchase of goods on its behalf.

"While existing arrangements can continue upto the 28th February 1958, unless the contracts in their terms terminate earlier, some managing agents or their associates are reported to have entered into agreements ostensibly immediately before the commencement of the new Act, so as to continue to be paid remuneration, which it was the object of the Act, to abolish. In certain other instances, the managing agents have relinquished their offices as such and have converted themselves into managing directors or directors, so that they could, only with the consent of the board of directors and not of any wider forum, enter into buying and selling agreements with the company without circumventing the technical provisions of the law.

"Some of the companies are also reported to have circumvented the provisions of section 198, which prescribes over-all limits for managerial remuneration, expressed as certain percentages of the net profits of the company, adopted resolutions appointing certain relations or associates of their own in precisely identical posts designated differently, solely with the object of avoiding technical objections. No one can, by the mere process of changing names, be permitted to act in contravention of the provisions of the Companies Act.

"There are certain provisions for entering into contracts with the associates of the managing agents, only by special sanction and after giving full details of material particulars of such contracts. A number of companies have passed or have purported to pass omnibus resolutions authorising such contracts without affording the members due opportunity to express themselves on the details of the proposals. Action of this type is neither justified, nor can it be supported on moral grounds. When the balance-sheet and the profit and loss account for the accounting period following the enforcement of the new Act come to be presented to the company auditors, they would, we expect, ask questions and go into all matters of this type. It would be their duty, and we expect that the duty will be truly and properly performed, to report to the shareholders all infringements of the provisions of the Act."

Firmness Needed

It will be seen from the foregoing quotation that the Government has reasons to feel that attempts are being made by some company managements to get round the Company Law and that undesirable practices are taking place. Surely, the Government has enough discretionary powers to prevent them. Under the new Law, not many changes could be effected by companies without the sanction of the authorities. While the auditors have a special responsibility and should exercise greater caution than before, the Government cannot avoid its responsibility. If it has no legal powers to prevent some of the undesirable practices which have come to light, it should use its moral powers on the erring company managements and make them fall in line with the spirit of the Act. Mr. Bhagat is perfectly right in claiming that, by and large, the Government has "fulfilled all the undertakings that were given (to company managements) at the time the Companies Act was being framed, in order to dispel fears and misgivings about it" and that it "may also take reasonable pride in the fact that both in this country and outside the sympathetic and responsive attitude of the administration has been well received." But, in its anxiety not to court the criticism that it is unduly restrictive in its attitude, the Company Law Administration should not permit any attempts or practices designed to circumvent the Law. The Act should be administered with both sympathy and firmness.

PROGRESS OF RALLIS INDIA LTD.

Preliminary ideas about the working of Rallis India Ltd. for the year ended 31st August 1956, while they are not quite satisfactory, are, nevertheless, encouraging. As against the very heavy losses suffered in recent years, the trading profits for the year are said to be sufficient to cover all expenses and to leave a surplus of about Rs. 20 lakhs, before charging depreciation. This change in the Company's fortune certainly gives some hope for the future.

In a circular to the shareholders dated 10th October 1956, the Directors observe that trading in all important articles, except gunnies, was profitable, although there were difficulties in some of the main markets and there was a reduction in turnover to about Rs. 25½ crores from Rs. 30 crores in the previous year. Establishment expenses of the complete organisation, which had steadily been reduced over the last four years, were further lowered by about Rs. 9 lakhs to a total of about Rs. 56 lakhs during 1955-56.

The most important lines of the Company's business are cotton, gunnies, oils and oilseeds. In cotton, there was a satisfactory volume of business both in Indian and foreign cotton, and the result was profitable. The position would have been better but for the difficult trading conditions caused by a smaller crop and the suspension of the futures market in December 1956. As readers are aware, the Contract was arbitrarily cut, resulting in large losses to many spot houses. In the case of gunnies, the turnover at about Rs. 9 crores was approximately Rs. 1½ crores less than the previous year. Explaining the position, the Directors' observe:

"It had not been possible for the Calcutta Branch to trade between February and April of 1955 (because of the then pending closure of the Branch) and this deprived us of forward sales which would have fallen into the year under review. Later, the unexpected removal of the export duty on manufactured jute goods and the uncertainty of the production policy of the industry, led to abnormal conditions in this market and made it very difficult for traders to form reliable market views. As shareholders will appreciate, it is necessary for a trading company such as yours to take market views, particularly in a highly competitive commodity like gunnies, and our views proved, on the whole, to be wrong. It was not possible to make good the loss and the department finished the year on the wrong side."

A substantial part of the Company's business in oil and oilseeds is usually in exports. An overall shortage of groundnuts during the year made it obligatory for the Government to restrict exports of groundnut oil. This reduced the turnover considerably and the consequence was that the Company's oil mills could not be worked to their full capacity. During the year 1955-56, the oil mills in the Bombay area worked to only about 65 per cent. of normal capacity, and those in the Madras area to about 50 per cent. of normal capacity. Despite these difficult circumstances, the seeds and oils departments, both in Bombay and Madras, finished the year with a profit.

The machinery departments showed an improvement at all the three branches. New business contracted during the year was profitable and good progress was made in the liquidation of slow-moving stocks brought forward from the previous year. Sales of these older stocks were effected to the extent of about Rs. 20 lakhs, yielding some profit on book value. The trade in other articles, the chief of which are piecegoods, bones, hides and skins, tanning materials and fertilisers, also yielded profits. Throughout the year, the Company continued its efforts to dispose of those capital assets which, as a result of reorganisation, are no longer required for its business. Assets worth approximately Rs. 42 lakhs have been sold at satisfactory prices. (This figure includes the sale of the Calcutta office and godown building for Rs. 35 lakhs, the formalities of which are about to be completed).

Efforts to expand the Company's business and to strengthen its established business continue to be made and developments in this direction during the past year included (1) the extension of the areas in which the Company prepares and sells fertilisers, (2) securing potentially important distributorships for machine tools and for tipped-tools, (3) increase of the Company's stake in a small spinning mill, which is likely to expand, and (4) the establishment of units for the manufacture of portable electric tools, fans and similar products. The Company is at present negotiating an agency for the sale of the output of a new sugar mill, besides investigating the possibilities of the export of mica. One of the old mills, now dealing mainly with groundnuts, is to be adapted to enable it to handle cottonseed as well.

The portable electric tool project is being undertaken in conjunction with the well-known British firm of Wolf Electric Tools Ltd., the products of which have earned a world reputation. It will start with assembly and go forward by stages to indigenous manufacture. Preliminary work has been done for the establishment of a factory in Bombay for this purpose. The factory is expected to reach the stage of production within a few weeks. The venture will be small at first, but is considered to have a bright future.

NILAMBUR RUBBER RAISES DIVIDEND

The working results of the Nilambur Rubber Company, Ltd. (Managing Agents: The Associated Planters (Private) Ltd., Madras), for the year ended 31st December 1955 show a gross profit of Rs. 95,577, as against Rs. 91,975 for 1954 and Rs. 97,801 for 1953. The net profit, after providing for depreciation at Rs. 9,207 (Rs. 9,341 for 1954 and Rs. 8,724 for 1953) taxation at Rs. 32,000 (Rs. 20,000 for 1954 and Rs. 7,500 for 1953) and Managing Agents' commission at Rs. 9,450 (Rs. 8,842 for 1954 and Rs. 8,908 for 1953) amounts to Rs. 44,920, as against Rs. 53,792 for 1954 and Rs. 72,669 for 1953. A sum of Rs. 5,000 has been set apart for debenture redemption fund and Rs. 1,500 for leasehold redemption fund. As against this, the previous two years' allocations were: Rs. 10,000 for debenture redemption fund, Rs. 10,000 for dividend equalisation fund and Rs. 1,500 for leasehold redemption fund in 1954 and Rs. 1,500 for reserve fund and Rs. 1,500 for leasehold redemption fund in 1953. The dividend on ordinary shares has been stepped up to 15 per cent. from 10 per cent., at which level it had remained unaltered for five continuous years since 1950. The dividend for 1955 takes up a sum of Rs. 30,000. The dividend on 6 per cent. tax-free, cumulative preference shares requires Rs. 12,000, leaving a balance of Rs. 5,110 to be carried forward, as compared with Rs. 8,690 brought in.

The Directors feel that the working results of the Company for the year under review have been satisfactory. Against an estimated crop of 177,000 lbs. for the year, the actual crop came to only 164,542 lbs. The actual crop in 1954 was 203,245 lbs. and in 1953 209,576 lbs. The crop for the year under review is the lowest to be recorded since 1950. This was due to labour strike and unfavourable climatic conditions. On account of this lower

(Continued on page 782)

Points From The Chair

Outlook for Rubber

"HIGH yield is one of several factors essential to efficiency in production. Of major importance is a full complement of skilled workers regularly at work and sound labour relations. A price decline with rising costs due to inordinate wage demands coupled with restrictive practices would be seriously detrimental to the well-being of plantation workers and to the economy of the Plantation Industry generally. Our own labour forces are content and fully co-operative. ... Market-wise it would be wrong to predict smooth going. International events may temporarily send prices to higher levels than those now ruling, but in our long-term interest it is not desirable that prices should fail to be competitive with synthetic. High prices would only lead the consumer to extend synthetic usage. In the U.S. the transfer of GR-S plants to private ownership has channelled the effort to achieve greater operational efficiency and increased capacity. We cannot afford to regard the powerful research activity in the U.S. with equanimity. New and more formidable opponents to natural than GR-S are on the way and there is little doubt that further useful polymers will be found. For the producer of natural rubber the best possible use of land will be vital and in that direction this Company has made, and, we believe, will continue to make, an important contribution."

R. C. JENKINS,
Prang Besar Rubber Estate, Ltd. (London).

Tram Fares

"There is still a feeling in Calcutta that increased fares will mean increased profits for the shareholders. One cannot repeat too often that the amount available for shareholders is fixed under the agreement with Government. Even if the surplus on running the undertaking were to increase tenfold the amount available for the shareholders would not increase by one rupee. Any increase in the surplus can only accrue for the benefit of the Government and the people of Calcutta. One of the great objects behind the agreement with Government was to ensure that never again would an increase in fares be questioned on the grounds that it would benefit the shareholders. Such an increase, when necessary, can only result in a surplus to be used in improving and modernising the undertaking and alleviating the travelling worries of the public."

D. E. WEBB,
Calcutta Tramways Co., Ltd.

Outlook for P.K. Tea

"In furtherance of the Board's plan of development, new clearings are being prepared for planting in Tea and, together with the 50 acres planted up last reason, we shall by the end of next year have extended our Tea area by new Clearings totalling 170 acres. Capital improvements amounting to just under Rs. 8 lakhs during the year have been largely used to the betterment of living conditions for our Staff and Labour, and the machinery in our Factories is being kept up to date to deal with the very large crops that have to be handid. Now to turn to the prospects for the current year, in the four months to end July, crop harvest is almost exactly in level with the estimate to date of 16,47,000 lbs. The prospects for the future depend entirely upon the weather, particularly the N. E. Monsoon showers, but with favourable weather I am confident that the estimated crop for the year of 41,20,000 lbs. is easily within the capacity of our Estates to produce."

W. W. KILGOUR,
The Peria Karamalai Tea and Produce Co., Ltd.

Oil Exploration

"Apart from Nahorkatiya-Hugrijan and Moran, where exploration work is being pushed as rapidly as possible, there are other areas in the Assam Valley which look promising. It is only by drilling in them that we can expect to ascertain whether oil is present or not. It is also to be remembered that in parts of the U.S.A., where geological conditions seem to be comparable to those in India, the number of prolific fields is limited and that a substantial proportion of the production is obtained from a large number of scattered small pools, involving extensive exploratory drilling to cover a very wide area. Our recent experience at Moran and parts of the Hugrijan area, where only one oil-bearing sand is present, compared to more than five oilsands in the Nahorkatiya area, show that we must be prepared to investigate a very large number of favourable structures to discover more oil. Until the discovery of oil at Nahorkatiya we had absolutely no clue as to whether oil could be expected in parts of Assam concealed under the thick blanket of alluvium. There are several large alluvial areas in the country, where we can now expect to find oil. These areas include part of West Bengal where S.V.O.C. are carrying out much geophysical work and the extensive Ganges Valley and the alluvial tracts of Rajasthan, Saurashtra, etc. There are also several exposed areas where the Oil and Natural Gas Commission have carried out very systematic geological and geophysical surveys and are due to undertake drilling operations. Whilst we sincerely hope that these efforts will meet with early success, let us not be impatient. Oil exploration needs considerable patience and an overdose of optimism besides much experience and great technical skill and, as I have said before, it is only the drill which can give the answer."

W. B. METRE,
Geological, Mining and Metallurgical Society of India.

COMPANY MEETINGS AND DIVIDENDS

GENERAL INVESTMENT AND TRUST CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Dividend: 3½ per cent. (for the half-year ended 28th February 1956). Transfer books remain closed from 11th to 25th October 1956, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Annual General Meeting, Calcutta, 25th October 1956. Dividend: 3½ per cent. (for the half-year ended 28th February 1956). Transfer books remain closed from 11th to 25th October 1956, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 26th October 1956. Dividend: Rs. 10 per share, payable on and after 29th October 1956. Transfer books remain closed from 8th to 26th October 1956, both days inclusive.

MACNEILL AND BARRY LTD. Annual General Meeting, Calcutta, 27th October 1956. Dividend: 11 per cent.

TALAYAR TEA CO., LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 29th October 1956. Dividend: Re. 1-4 per share (includes interim dividend of As. 10 per share). Transfer books remain closed from 22nd October to 4th November 1956, both days inclusive.

NAZIRA COAL CO., LTD. Annual General Meeting, Calcutta, 30th October 1956. Dividend: As. 8 per share. Transfer books remain closed from 18th to 30th October 1956, both days inclusive.

NEW CHUMTA TEA CO., LTD. Annual General Meeting, Calcutta, 31st October 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 18th to 31st October 1956, both days inclusive.

SHAHJAHANPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Shahjahanpur, 31st October 1956. Transfer books will remain closed from 24th to 31st October 1956, both days inclusive.

METHONI TEA CO., LTD. Annual General Meeting, Calcutta, 31st October 1956. Dividend: Re. 1-12 per share. Transfer books will remain closed from 24th to 31st October 1956, both days inclusive.

HINGIR RAMPUR COAL CO., LTD. Annual General Meeting, Bombay, 7th November 1956. Dividend: Rs. 2-4 per ordinary share, free of income-tax, payable on and after 8th November 1956. Transfer books will remain closed from 26th October to 7th November 1956, both days inclusive.

MARGARET'S HOPE TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Transfer books will remain closed from 25th October to 8th November 1956, both days inclusive.

RANICHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Transfer books will remain closed from 25th October to 8th November 1956, both days inclusive.

BHATKAWA TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Transfer books will remain closed from 25th October to 8th November 1956, both days inclusive.

BOMBAY CYCLE AND MOTOR AGENCY LTD. Annual General Meeting, Bombay, 8th November 1956. Transfer books will remain closed from 29th October to 8th November 1956, both days inclusive.

HULDIBARI TEA ASSOCIATION LTD. Annual General Meeting, Calcutta, 9th November 1956. Transfer books will remain closed from 27th October to 9th November 1956, both days inclusive.

COORLA SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 12th November 1956. Dividend: Rs. 12-8 per ordinary share (includes bonus of Rs. 5 per share.) Transfer books will remain closed from 1st to 15th November 1956, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Geeting, Calcutta, 30th November 1956. Dividend: Re. 1 per ordinary share, payable on or after 17th December 1956. Transfer books will remain closed from 20th to 30th November 1956, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Ad-interim dividend of Rs. 12-8 per ordinary share, free of tax. Transfer books will remain closed from 22nd October to 1st November 1956, both days inclusive.

VISHNU COTTON MILL LTD. Ad-interim dividend of Rs. 2-8 per ordinary share, free of tax. Transfer books will remain closed from 22nd October to 1st November 1956, both days inclusive.

ASHER TEXTILES LTD. Tax-free dividend of Rs. 15 per ordinary share for the year ended 30th June 1956. Transfer books remain closed from 16th to 29th October 1956, both days inclusive.

CHANDRAMALAI ESTATES LTD. Final dividend of 15 per cent. for the year ended 30th June 1956. Transfer books will remain closed from 23rd to 30th November 1956, both days inclusive.

COMPANY REGISTRATIONS

NAZIRA COAL MAINTAINS DIVIDEND

RESULTS OF MORE TEA COMPANIES

Nazira Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Tantia Brothers Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

After allowing for managing agents' commission and depreciation, there remains a profit of Rs. 92,517 (Rs. 1,06,701) to which is to be added balance of last year Rs. 11,096 (Rs. 25,598), making a total sum available of Rs. 1,03,613 (Rs. 1,38,508 including Rs. 6,209 being provision for taxation no longer required). The directors propose to dispose of this amount as follows:—

To reserve for taxation Rs. 35,000 (Rs. 40,000), to payment of dividend at 5 (5) per cent. free of income-tax Rs. 37,412 (Rs. 37,412) and to carry forward to next year Rs. 31,201 (Rs. 11,096 after transferring Rs. 50,000 to general reserve).

Output and despatches for the last three accounting years were as follows:—

Year ended	*Raisings* Tons cwt.	*Despatches* Tons cwt.
31st December 1955	17,871-7	17,798-5
31st December 1954	17,392-10	17,784-12
31st December 1953	16,339-0	15,828-0

Methoni Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea Crop.—A crop of 11,215 (9,553) maunds was manufactured and disposed of as follows:—For sale in Calcutta for export 10,207 (8,662) maunds and for sale in Calcutta for internal consumption 1,008 (891) maunds. The teas realised an average price of Rs. 2-5-5 per lb. as compared with Rs. 3-4-5 per lb. obtained for the previous season's crop of 9,553 maunds. The Company's export quota for season 1955 was 7,597 maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 611.96 acres.

Increase of Capital.—In November 1955, a sum of Rs. 2,00,000 being part of the reserve account of the Company was capitalised by the creation of 20,000 new shares as fully paid-up. These shares were allotted free to the existing shareholders of the Company in the proportion of one share for every four shares held by them on the 30th November 1955. The shares so distributed ranked in all respects *pari passu* with the existing shares and were to participate in any dividend declared after 30th November 1955.

The revenue account shows a profit of Rs. 6,23,104 (Rs. 11,82,056). After deducting from this staff commission and bonus Rs. 53,201 (Rs. 87,807), managing agents' commission on profits Rs. 9,363 (Rs. 23,518), reserve for taxation Rs. 2,00,000 (Rs. 4,00,000), bonus to labour, 1953-54 Rs. 1,51,467, and depreciation Rs. 75,645 (Rs. 72,567) there is a balance of Rs. 1,33,428 (Rs. 5,93,164). To this amount is added the dividend and interest on investments (net) Rs. 21,243 (Rs. 903), profit on sale of lorries Rs. 6,500 (*nil*), profit on sale of motor cycle Rs. 440 (*nil*), profit on sale of machinery Rs. 300 (Rs. 800), excess provision for Assam sales-tax—written back Rs. 724 (*nil*) and excess provision for taxation—written back Rs. 40,000 (*nil*) giving a net profit for the year of Rs. 2,02,635 (Rs. 5,96,227). After adding to this the adjusted credit balance of Rs. 26,515 (Rs. 39,297) brought forward from the previous year, there is a credit balance of Rs. 2,29,150 (Rs. 6,35,524) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Pay a dividend of 17½ (45) per cent. for season 1955 on 1,00,000 (80,000) ordinary shares, without any deduction for income-tax paid by the Company Rs. 1,75,000 (Rs. 3,60,000), and carry forward Rs. 54,150 (Rs. 45,524) after placing Rs. 1,50,000 to machinery reserve account, Rs. 50,000 to contingencies reserve account and Rs. 30,000 to hail insurance reserve).

In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

The estimated tea crop for season 1956 is placed at 10,500 maunds, at a total cost of Rs. 14,03,240 excluding capital expenditure amounting to Rs. 98,350.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	14,80,968
Reserves ...	9,37,500	Stock of tea	7,35,526

		Cash ...	9,272
Rs.	30,38,306	Rs.	30,38,306

Hattikhira Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

Tea crop.—A crop of 20,455 (21,999) maunds was manufactured and disposed of for sale in Calcutta for export 16,799 (13,039) maunds, and for sale in Calcutta for internal consumption 3,656 (8,960) maunds. The teas realised an average price of Re. 1-8-1 per lb. as compared with Rs. 2-3 a lb. obtained for the previous season's crop of 21,999 maunds. The Company's export quota for season 1955 was 14,858 (14,277) maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 2,153.65 acres.

The revenue account shows a profit of Rs. 3,89,793 (Rs. 16,03,032) and after deducting from this gratuities Rs. 7,000 (Rs. 5,000), staff commission and bonus Rs. 27,793 (Rs. 1,35,518), managing agents' commission on profits Rs. 4,987 (Rs. 31,885), reserve for taxation Rs. 85,000 (Rs. 5,00,000), depreciation Rs. 1,10,970 (Rs. 1,24,940) and bonus to labour, 1953-54 Rs. 1,09,266 there is a balance of Rs. 44,777 (Rs. 8,05,689). To this is added the interest on investments (net) Rs. 5,161 (Rs. 602), profit on sale of machinery Rs. 1,141 (Rs. 16,563), forfeited dividends Rs. 1,010 (*nil*) and excess provision for taxation written back Rs. 30,000 (*nil*) making a net profit for the year of Rs. 82,089 (Rs. 8,22,856). After adding to this the adjusted credit balance of Rs. 36,221 (Rs. 41,523) brought forward from the previous year, there is a credit balance of Rs. 1,18,310 (Rs. 9,64,379) after transferring Rs. 1,00,000 from taxation equalisation reserve, on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Pay a dividend of 7½ (40) per cent. for season 1955 without any deduction for income-tax payable by the Company Rs. 94,500 (Rs. 5,04,000) and carry forward Rs. 23,810 (Rs. 60,379 after providing Rs. 2,00,000 to reserve account, Rs. 1,00,000 to buildings and machinery reserve account, Rs. 50,000 to contingencies reserve and Rs. 50,000 to hail insurance reserve).

Bonus to Labour.—In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

The estimates for 1956 are based on a crop of 20,000 maunds at a cost of Rs. 22,72,359 which excludes capital expenditure estimated at Rs. 1,23,100.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Pathemara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea Crop.—A crop of 6,078 maunds was manufactured and disposed of as follows:—

For sale in Calcutta for export 4,803 maunds and for sale in Calcutta for internal consumption 1,275 maunds. The average price per lb. realised was Re. 1-7-11 as compared with Rs. 2-6 per lb. obtained for the previous season's crop of 4,612 maunds. The Company's export quota for season 1955 was 3,241 maunds.

A further 4.98 acres were put out during the year and the area under cultivation at 31st December 1955 was 500.04 acres.

Conversion of Preference Shares into Ordinary Shares.—Pursuant to an agreement dated 28th October 1955, made between the Company and Octavius Steel & Co., Ltd., the then holder of 7,500 6 per cent. cumulative preference shares of Rs. 10 each, the said preference shares were converted with effect from 1st January 1955, into an equivalent number of ordinary shares in the capital of the Company.

The revenue account shows a profit of Rs. 11,923. After adding to this the surplus received on winding-up of Happy Valley Medical Association Rs. 576, excess provision of liability in respect of previous year—written back Rs. 44,600 and provision for sales tax—written back Rs. 2,107 there is a total of Rs. 59,206. After deducting from this amount staff commission and bonus Rs. 2,147, managing agents' commission on profits Rs. 295, depreciation Rs. 11,975 and bonus to labour—1953-54 Rs. 33,116 there is a net profit for the year of Rs. 6,673. After adding to this the adjusted credit balance of Rs. 13,417 brought forward from the previous year, there is a credit balance of Rs. 20,090 on profit and loss account, which is carried forward.

In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

The estimated crop of tea for season 1956 is placed at 6,000 maunds, at a total cost of Rs. 7,71,000, excluding capital expenditure amounting to Rs. 1,35,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Eastern Cachar Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

Tea Crop.—A crop of 4,893 (4,849) maunds was manufactured and disposed of for sale in Calcutta for export 4,016 (4,249) maunds, and for sale in Calcutta for internal consumption 877 (645) maunds. The teas realised an average price of Re. 1-12-6 per lb. as compared with Rs. 2-6-6 per lb. obtained for the previous season's crop of 4,894 maunds. The Company's export quota for season 1955 was 4,231 (4,121) maunds.

No extensions were put out during the year and the area under cultivation remains unchanged at 649 acres.

The revenue account shows a loss of Rs. 23,530 (profit of Rs. 3,11,184) After adding to this:—Depreciation Rs. 10,070 (Rs. 8,830) and bonus to labour, 1953-54 Rs. 39,025 there is a total debit of Rs. 72,625. After deducting excess provision of liability in respect of previous year—written back Rs. 30,747 there is a net loss for the year of Rs. 41,878 (net profit of Rs. 2,42,202 after provisions and adjustments). After adding to this the adjusted debit balance of Rs 67,203 (Rs. 3,05,631) brought forward from the previous year, there is a debit balance of Rs. 1,09,081 (Rs. 63,429) on profit and loss account, which is carried forward.

In accordance with a tripartite agreement arrived at early this year, the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 has been charged in the accounts now presented.

Estimates for the current season have been framed for a crop of 5,500 maunds of tea to cost Rs. 7,83,685 which excludes Rs. 1,09,190 being expenditure of a capital nature.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	7,07,190
Reserves ...	11,000	Stock-in-trade	2,32,013

Rs.	12,32,132	Rs.	12,32,132

North-Western Cachar Tea Co., Ltd.

The directors of the above Company (Director: Mr. S. N. Tantia, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit from Kurkoorie tea estates amount to Rs. 1,76,365. (Rs. 4,55,338) and the profit from Bicrampore tea estates Rs. 1,65,280 (Rs. 4,99,329), making a total of Rs. 3,41,645 (Rs. 9,54,667). On transfer of this sum to profit and loss account and after making necessary adjustments there remains a credit balance of Rs. 4,86,654 (Rs. 7,42,129). After placing Rs. 1,60,000 (Rs. 1,20,000) to taxation reserve, there is a balance of Rs. 3,26,654 (Rs. 6,22,129) The directors recommend to deal with this as follows:—

Transfer to dividend equalisation reserve Rs. 1,00,000 (Rs. 3,00,000 to revenue reserve), pay a dividend at Rs. 15 (Rs. 20) per share, (free of income-tax) on 7,000 shares Rs. 1,05,000 (Rs. 1,40,000) and to carry forward Rs. 1,21,654 (Rs. 1,82,129).

Outturns and average selling prices compared with those of the previous year are as follows:—

	1955 Mds.	1954 Mds.	Average selling prices per lb. 1955 Rs. a. p.	1954 Rs. a. p.
Kurkoorie ...	4,714	4,451	1 11 6	3 0 0
Bicrampore ...	5,123	4,714	1 9 8	2 14 11

Estimate for 1956 provide for a crop of 10,000 mds. at an outlay of Rs. 10,00,000 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	8,25,000

Liabilities ...	3,63,794	Debts, deposits and advances ...	6,89,874
Profit and loss account ...	3,26,654	Cash ...	84,381
		Rs.	22,21,346

Teesta Valley Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Davenport & Co. Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

General.—Labour unrest during the year made the maintenance of discipline and of a good standard of work difficult, and the labour force resorted to a total strike in the latter part of June, with resultant loss of crop. Despite these conditions, a good standard of teas was achieved and, with finer plucking, a crop of 3,70,473 (4,40,947) pounds of tea was made. The total net average sale price was As. 41.97 (As. 48.73) and the total working cost per pound of tea produced was As. 33.35 (As. 26.56).

Working costs were enhanced by the short crop made and by the increase of As. 1½ in the daily wages of labourers agreed to by the industry from the 1st April and the further increase of As. 2 per day imposed by Government notification from the 1st July. These increases cost some As. 1.66 per pound of tea produced during the year and will cost some As. 2.54 per pound in a full year. In addition, early in 1956, the industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954, and it is expected will be required to make a proportionate payment for 1955; for this purpose the directors have provided Rs. 49,179 in the accounts under review, equal to As. 2.12 per pound of tea.

The gross profit for the year is Rs. 1,93,802 (Rs. 5,76,170), out of which the directors have provided Rs. 49,179 for bonus for labour, Rs. 38,755 (Rs. 1,77,861) for taxation, Rs. 13,534 (*nil*) for replacements and Rs. 35,225 (Rs. 41,601) for depreciation of assets. Allowing for these and the other adjustments, there is a net profit of Rs. 60,333 (Rs. 2,62,290) and a final balance on this account of Rs. 1,14,738 (Rs. 3,12,405), which the directors propose to deal with as follows:—

To pay a dividend of 15 (40) per cent. Rs. 48,000 (Rs. 1,28,000), to transfer to renewals and additions reserve Rs. 10,000 (*nil*) and to carry forward to 1956 Rs. 56,738 (Rs. 54,405 after placing Rs. 1,00,000 to general reserve and Rs. 30,000 to staff reserve).

Estimates for 1956 have been based on a crop of 5,000 maunds of tea at a total cost of Rs. 8,22,455, equal to As. 32.9 per pound, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound. In addition, capital expenditure is estimated at Rs. 43,000, covering a new land Rover and a number of *pucca* houses for labour.

Two major items of capital expenditure will have to be incurred as soon as circumstances permit within the next year or so; one is the renovation of the factory building and improvement of the accommodation; and the other is the withering provision of an adequate water-supply for the labour force, which has now become an acute problem.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	4,70,000
Reserves ...	8,21,779	Stock of tea	2,74,343
Provision for taxation ...	2,64,505	Stores ...	1,07,214
Liabilities ...	1,19,647	Debts and advances ...	1,38,589
Profit and loss account ...	1,14,737	Investments	4,07,206
		Cash ...	2,43,316
Rs.	16,40,668	Rs.	16,40,668

Gielle Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Davenport & Co., Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The estate suffered hail damage towards the end of April with loss of crop and of quality during the second flush. Labour unrest and indiscipline were apparent throughout the year and the labour force resorted to a total strike in the latter part of June. As a result of these conditions both crop and the standard of teas made suffered severely, the total crop being 2,35,761 (2,84,204) pounds of tea against an estimate of 2,68,000 pounds.

The total net average sale price was As. 33.80 (As. 49.13) and the total working cost per pound of tea produced was As. 35.48 (As. 28.64).

Working costs were enhanced by the short crop made and by the increase of As 1½ in the daily wages of labourers agreed to by the industry from the 1st April and the further increase of As. 2 per day imposed by Government Notification from the 1st July. These increases cost some As. 1.94 per pound of tea produced during the year and will cost some As. 2.85 per pound in a full year. In addition, early in 1956, the industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954, in respect of which we have provided Rs. 27,852 in the accounts under review, equal to As. 1.89 per pound of tea.

During the year a wing of the old factory was remodelled to accommodate godowns and garden office, a number of *pucca* labour houses were erected, a Myddleton Sorter was installed and a tractor supplied for the carriage of green leaf and for other essential transport.

There is a revenue loss for the year of Rs. 13,876 (gross profit of Rs. 3,48,539), to which has to be added reserve for staff expenses and depreciation and replacement of assets; and after allowing for the other adjustments shown and transferring Rs. 30,000 from renewals and additions reserve, there is a net loss for the year of Rs. 62,815 (net profit of Rs. 1,65,758) and a debit balance on this account of Rs. 25,965 (credit of Rs. 36,850 after paying preference dividends for 1952 to 1954; payto reserve) which is carried forward to 1956. Having regard to the heavy loss sustained on the season's working, the secretaries have offered to forgo the whole of their office allowance and commission on tea sales, and this has been accepted.

Estimates for 1956 have been based on a crop of 3,300 maunds of tea at a total revenue cost of Rs. 5,79,000 equal to As. 35.09 per pound, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound. In addition, some Rs. 28,500 will be spent on an outside staircase and withering racks for the factory, houses for labour and tractor trailer.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	5,06,900

		Investments	48,466
		Cash ...	29,705
		Profit and loss account ...	25,965
Rs.	9,01,341	Rs.	9,01,341

New Chumta Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

General.—Drought early in the season, with severe hail damage estimated at 52,820 pounds of made tea, together with poor distribution of rainfall, affected outturn, a crop of 4,63,382 (4,30,542) pounds of tea being made, compared with an estimate of 5,20,000 pounds. The total net average sale price was As. 26.42 (As. 49.68) and the total working cost per pound of tea produced was As. 22.93 (As. 24.31).

Early in the year the industry in West Bengal agreed in consultation with representatives of the workers to an increase from the 1st January 1955, of As. 3 in the daily wages of labourers in Terai and Duars estates, and corresponding increases were made in the wages of establishment and monthly paid workers. These increases cost some As. 1.66 per pound of tea produced during the year. In addition, early in 1956 the industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954 and it is expected will be required to make a proportionate payment for 1955; for this purpose the directors have provided Rs. 62,750 in the accounts under review, equal to As. 2.17 per pound of tea.

The gross profit for the year is Rs. 1,71,163 (Rs. 6,54,444), out of which the directors have provided Rs. 62,750 for bonus for labour, Rs. 33,383 (Rs. 1,71,163) for taxation and Rs. 46,961 (Rs. 66,886) for depreciation of assets. Allowing for these and the other adjustments, there is a net profit of Rs. 45,091 (Rs. 3,70,277), and a final balance on this account of Rs. 1,24,692 (Rs. 4,29,601), which the directors propose to deal with as follows:—

To pay a dividend of 15 (55) per cent. Rs. 45,000 (Rs. 1,50,000) and to carry forward to 1956 Rs. 79,692 (Rs. 79,601 after transferring Rs. 1,50,000 to general reserve and Rs. 35,000 to staff reserve).

Estimates for 1956 have been based on a crop of 6,500 maunds of tea at a total cost of Rs. 7,13,674, equal to As. 21.96 per pound, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound.

Accounts in brief are as under:—

Investment and Finance Co., Ltd.

The directors of the above Company (Chairman: Mr. D. P. Dunderdale, Calcutta) submit the audited accounts of the Company for the half-year ended 29th February 1956.

*The profit and loss account after providing for all charges shows a profit of Rs. 50,031 (Rs. 25,334) to which is added the balance brought forward from the previous half-year of Rs. 7,890 (Rs. 5,792) making a total of Rs. 57,921 (Rs. 31,126). From this amount is deducted: the amount transferred to revaluation of investments reserve of Rs. 20,000 (*nil*), leaving a balance available of Rs. 37,921 (Rs. 31,126). The directors propose to dispose of this amount as follows:—*

By payment of a dividend on the 1st cumulative preference shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 5,000 (Rs. 5,000), by payment of a dividend on the 2nd cumulative preference shares at the rate of 6 (6) per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 4,425 (Rs. 4,425), by payment of a dividend on the ordinary shares at the rate of 7½ (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 18,750 (Rs. 12,500) and by carrying forward Rs. 9,746 (Rs. 9,201).

Market.—There was a general lack of interest in the market during the period under review with a consequent reduction in transactions recorded and a general reduction in the market value of shares.

Secretaries.—In terms of Clause 3 of the Secretaries' Agreement and Article 134 of the Company's Articles of Association, Messrs. Bird & Co. (Private) Ltd. have voluntarily resigned the Secretaryship of the Company with effect from 31st August 1956. The resignation has been accepted by the directors and in accordance with the provisions of Section 342 of the Companies Act, 1956, the resignation will be placed before the shareholders when the audit of the accounts to 31st August 1956 is completed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Investments	11,81,755
Reserves ...	2,55,728	Debts and advances ...	4,248
Provision for taxation ...	34,111	Cash ...	96,294
Liabilities ...	82,712		
Profit and loss account ...	9,746		
Rs.	12,82,297	Rs.	12,82,297

General Investment and Trust Co., Ltd.

The directors of the above Company (Chairman: Mr. D. P. Dunderdale, Calcutta) submit the audited accounts of the Company for the half-year ended 29th February 1956.

The profit and loss account after providing for all charges shows a profit of Rs. 22,937 (Rs. 9,782) to which is added the balance brought forward from the previous half-year of Rs. 8,851 (Rs. 8,112) making a total of Rs. 31,788 (Rs. 17,894). This is reduced by the amount transferred to revaluation of investments reserve of Rs. 10,000 (*nil*) leaving a balance available of Rs. 21,788 (Rs. 17,894). The directors propose to dispose of this as follows:—

By payment of a dividend on the 1st cumulative preference shares at the rate of 5 (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 2,500 (Rs. 2,500), by payment of a dividend on the 2nd cumulative preference shares at the rate of 6 (6) per cent. per annum, less income-tax at 48 pies plus 5 per cent. surcharge on income-tax Rs. 2,213 (Rs. 2,213), by payment of a dividend on the ordinary shares at the rate of 7½ (5) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 8,438 (Rs. 5,625) and by carrying forward Rs. 8,637 (Rs. 7,556).

Market.—There was a general lack of interest in the market during the period under review with a consequent reduction in transactions recorded and a general reduction in the market value of shares.

Secretaries.—In terms of Clause 3 of the Secretaries' agreement and article 134 of the Company's Articles of Association, Messrs. Bird & Co. (Private) Ltd. have voluntarily resigned the secretaryship of the Company with effect from 31st August 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,25,000	Investments	4,88,194
Reserves ...	55,893	Debts and advances ...	3,017
Provision for taxation ...	941	Cash ...	38,568

Rs.	5,29,779	Rs.	5,29,779

Raghuvanshi Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Ravindra Maganlal & Co., Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st March 1956.

The profit and loss account for the year shows a profit of Rs. 7,66,638. After writing off a sum of Rs. 1,45,557 being the balance of previous year's loss carried forward from the last financial year and after providing a sum of Rs 63,992, being the dividend free of income-tax for the four years ending 31st March 1956 on the 4 per cent. cumulative redeemable preference shares, there remains a balance of Rs. 5,57,089 available for disposal. The directors feel that the result achieved is quite satisfactory. The directors propose to appropriate this amount as below:—

To dividend on ordinary shares at Rs. 3 per share free of income-tax Rs. 1,20,000, to depreciation on buildings Rs. 60,000, machinery Rs. 3,00,000, electric machinery Rs. 40,000, electric installation Rs. 10,000, furniture and fixtures Rs. 15,000 and to motor cars and lorries Rs. 10,000, leaving to be carried forward Rs. 2,089. It will be noticed from the accounts that the amount of Rs. 2,40,759 standing to the credit of "E.P.T. post-war refund account" and an amount of Rs. 1,09,241 out of the "reserve for taxation" have been transferred to the credit of the "Capital redemption reserve fund."

During the financial year under report the mills secured permission from the Central Government to manufacture rayon fabrics and have started manufacturing the same. The mills have negotiated a purchase of 148 looms and permission has been obtained from the Central Government to acquire, install and work them on the manufacture of rayon fabrics. It is expected that these looms will be installed and put into commission during the current financial year. Against this, the mills have sold 100 cotton looms.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	44,00,000	Block ...	46,68,087
Reserves ...	3,50,000	Stock-in-trade	35,15,786
Provision for taxation ...	12,400	Stores and spare gear	6,53,043
Staff gratuity fund ...	22,165	Stock of grain, etc. ...	6,927
Liabilities ...	40,02,533	Debts and advances ...	4,26,207
Profit and loss account ...	5,57,089	Investments	57,601
		Cash ...	16,536
Rs.	93,44,187	Rs.	93,44,187

N.B.—Figures within brackets relate to the corresponding period of the previous year.

MANCHESTER LETTER

(*Concluded from page 761*)

Mr. Roger Lee, Chairman of the Calico Printers' Association, has described in his latest annual report how his predecessors believed that capital investment in such projects, especially in the British Commonwealth, would be of value, not only to the Company itself in the future but in the national interest. "Many years ago, long before the war, it was apparent to the board of those days that some overseas countries, and particularly the Colonies and the Commonwealth, would demand textile industries of their own with consequent repercussions on the Lancashire textile industry," he declares.

Obstacles have been encountered, particularly in the post-war period, with difficulties in training labour, recruiting technical staff and carrying out building operations. Yet the combine is not dissatisfied with the progress made. Local operatives in Uganda are now being taught to spin yarn and weave cloth on modern machinery in the mill established at Jinja.

In South Africa, however, Mr. Lee refers to the very large labour turnover which provides a constant source of frustration and anxiety to the management. In such an area there is no lack of manpower but the time taken in training new recruits leads to serious reductions in departmental efficiency.

As an example of the gains sometimes arising from overseas projects, Mr. Lee points to the advantages obtained by the Australian mill owned by the combine as a result of the restrictions imposed on imports by the Australian Government. While other branches of the British combine are feeling the effects of this curtailment of trade with such an important outlet the firm on the spot is able to reap some benefits.

On the other hand, the action of the Indonesian Government in permitting very large imports of yarn and a certain amount of cloth from Far Eastern sources caused a serious depression in domestic prices and had an adverse effect on the group's mill in that country.

Commenting on the sharp fall in business in cotton goods with Africa, Mr. Lee mentions not only Japanese but East European competition. This, he says, is of a particularly deadly nature as it clearly pays no regard whatever to costs of production but is governed only by foreign exchange and political considerations. Goods from these areas are now being exported throughout the world and into Britain's home trade. Countermeasures by the Governments of importing countries should be introduced, he urges, containing anti-dumping restrictions which should be made truly effective.—*All Rights Reserved.*

COMPANY AFFAIRS

(*Concluded from page 779*)

crop, the cost of production for the year had also gone up. Thus, the cost per lb. at 88.36 cents in 1955 is the highest for the past 10 years and compares with 72.28 cents in 1954 and 67.66 cents in 1953. The financial results for 1955 would have been much worse than what they are but for a rise in the price of rubber. The net sale price per lb. in 1955 was 136.69 cents as against 125 97 cents in 1954 and 124.16 cents in 1953. The Directors feel that the crop during 1956 would be much better and the working results more satisfactory. The average selling price realised for 1955 was 136.39 cents.

The Company's balance-sheet as on 31st December 1955 shows the capital unchanged at Rs. 4 lakhs made up of Rs. 2 lakhs ordinary and Rs. 2 lakhs preference (6 per cent. tax-free cumulative). The debenture capital (also 6 per cent. tax-free) secured by a fixed charge on the Glencoorg Estate and a floating charge on the other assets of the Company amounts to Rs. 1,01,500 of which Rs. 1,500 represents the interest accrued thereon. The reserves and surplus aggregate Rs. 2.74 lakhs. The gross block of the value of Rs. 5.24 lakhs stands written down at Rs. 4.73 lakhs. The current assets aggregate Rs. 4.51 lakhs and cover the current liabilities and reserve for taxes amounting to Rs. 1.49 lakhs by a fair margin.

At present, the Company is producing only rubber on an area of 906.25 acres of fully mature trees. Besides this, it has 30 acres of replanted rubber and 250 acres of newly planted. It has 23 acres bearing immature coffee, 100 acres cashew (mature), and 31.14 acres in miscellaneous plantations. About 647 acres are in reserve, yielding a forest revenue of about Rs. 33,000 per annum on an average.

The Rs. 10 ordinary shares of the Company are being quoted at Rs. 17-4 and the yield on the basis of 15 per cent. dividend works out to 8.7 per cent. per annum.

Notice

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the Bombay Burmah Trading Corporation Ltd. will be held at the Registered Office of the Company at 9, Wallace Street, Fort, Bombay, on Monday the twelfth day of November 1956 at 11-30 o'clock (S.T.), when the subjoined resolutions (1) and (2) will be proposed as special resolutions and the subjoined resolution (3) will be proposed as an ordinary resolution.

(1) That the capital of the Company be increased to Rs. 3,00,00,000 by the creation of 1,14,000 shares of Rs. 125 each and that the Memorandum and Articles of Association be altered accordingly.

(2) That the following alterations be made in the Articles of Association, namely :—

(A) The following Article shall be inserted after Article XII :—

"XIIA. The existing issue Share Capital of the Company is and shall be deemed to be held by the following two classes of Members, namely :—

(*a*) Mr. William Wallace (deceased) or his Executors or Administrators holding 100 Founders Shares of Rs. 2,500 each issued to the said Mr. William Wallace (deceased) under the Agreement dated the 22nd July 1864 ; and

(*b*) The holders of the 1,24,000 Ordinary shares of Rs. 125 each of which 40,000 shares are fully paid and 84,000 shares have been paid up to the extent of Rs. 50 per share."

(B) The following Article shall be substituted for Article LVIII :—

"On a show of hands, every member present in person shall have one vote ; on a poll, every member present in person or by proxy shall have one vote in respect of every Rs. 25 of the paid-up equity capital held by him."

(C) Article LXV shall be deleted.

(3) That the Company hereby approves of the appointment and consents to the continuation of the following persons as Sole Selling Agents of the Company's products, in the respective areas mentioned against their names, for a period of five years commencing from 1st October 1956, with a proviso that the arrangement may be terminated by six months' notice by the Board or by the Sole Selling Agents.

Name of Agents	*Terms % Commission*	*Area or Place*
Aitken Spence & Co., Ltd.	Timber 3%	Ceylon
The Bombay Company (Private) Ltd.	Timber 3% Tea 5%	Calcutta, Jamnagar and South India
Boustead & Co., Ltd.	As detailed in letter dated 12-3-1954	Singapore and Malaya
Jardine Matheson & Co., Ltd.	Timber 4%	Hongkong
Jardine Matheson & Co. (Japan) Ltd.	Timber 4%	Japan
The Karachi Co., Ltd.	Timber 3%	Pakistan
Wallace Brothers & Co. (Holdings) Ltd. ..	Timber 3% Tea 2%	Europe

By Order of the Board,
R. E. FORRESTER,
Chairman.

BOMBAY, *15th October* 1956.

N.B.—Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him and such proxy need not be a member of the Company.

EXPLANATORY STATEMENT

As required by Section 173 of the Companies Act, 1956.

Resolution No. 1 : The Resolution provides for an increase of the authorised capital and makes possible the issue of further capital should that be deemed desirable at any future time.

Resolution No. 2 (A) : The proposed Article is introduced in order to define the two classes of members of the Company.

Resolutions Nos. 2 (B) and 2 (C) : The amendments to Articles LVIII and LXV are designed to bring the voting rights of the Company's shares into conformity with Sections 87 and 176 of the Companies Act, 1956.

Resolution No. 3 : Confirmation of the appointment of Sole Selling Agents for a period of five years is required under Section 294 of the Companies Act, 1956. All the agents mentioned have served the Company satisfactorily for many years in the past. The relative Agreements are open to inspection at the Company's offices at any time during working hours.

Note :—The Bombay Company (Private) Ltd. are partners of Messrs. Wallace & Co. and are therefore interested to the extent of the commission earned by them.

None of the Directors is interested.

MONEY STRINGENT

(*From Our Own Correspondent*)

BOMBAY, *17th October*

Conditions in the short-term money market have become more stringent than last week. The demand for funds from trade and industry alike has been increasing, while the supply of funds has shrunk further. The opening of the new 4 per cent. 1968 Bombay Municipal Loan (issue price: Rs. 99-8) amounting to Rs. 1½ crores on the 15th inst. has made the supply position worse. Total subscriptions to this loan amounted to Rs. 1.79 crores which practically denuded the market of the floating funds. Consequently, there was hardly any activity in the inter-bank section. Although the rate for call money is nominally quoted at 3½ per cent., some of the banks are said to have paid even 3¾ per cent. House money at call fetched 3⅞ to 3¾ per cent. One to three months deposits were quoted at 3½ to 3¾ per cent., while the rate for four months and above was 3¾ per cent.

A notable feature of the statement of affairs of the Reserve Bank of India for the week ended 12th October 1956 is the increase in the value of gold bullion and coin held by the Bank from Rs. 40.02 crores to Rs. 117.76 crores, an increase of Rs. 77.74 crores. This rise is not due to any addition to the physical quantity of specie with the Bank but is the result of revaluation, in accordance with a recent amendment to the Reserve Bank of India Act.

As the increase in the value of the Bank's gold holdings has not been followed by any corresponding increase in its note issue liability, there have been substantial variations in the other assets of the Issue Department. There has been a rise of only Rs. 7.66 crores in notes in circulation but this has been more than offset by an increase of nearly Rs. 8 crores in notes held in the Banking Department. The total notes issued, therefore, show a fractional fall of Rs. 34 lakhs which is balanced on the assets side by a corresponding reduction in the rupee coin. In these circumstances, the rise in gold holdings has been adjusted by a reduction of Rs. 59.94 crores in foreign securities and of Rs. 17.81 crores in rupee securities. The effect of these reductions is clearly reflected on the assets side of the Banking Department. Thus we notice an increase of Rs. 50.06 crores in balance held abroad, and of Rs. 27.58 crores in investments. The only other notable change on this side of the Banking Department is an increase of Rs. 2.50 crores in other loans and advances which is due to a net increase of Rs. 4.67 crores in loans given by the Bank to Scheduled banks against usance bills. It may be interesting to note here that fresh loans given against usance bills during the week under review aggregated as much as Rs. 14.33 crores.

On the liabilities side of the Banking Department of the Reserve Bank, the Central Government's deposits show a minor rise of Rs. 88 lakhs, but those of other Governments have shrunk by no less than Rs. 5.5 crores. Despite the increase in the Bank's advances to Schedule banks, the latter's cash balances show a drop of Rs. 1.79 crores, thereby reflecting the stringent conditions prevailing in the money market.

No striking variations are revealed in the Scheduled Banks' statement for the week ended 5th October 1956. As compared with that for the previous week, demand deposits are higher by a negligible sum of about Rs. 10 lakhs, but borrowings from banks of demand nature are actually down by Rs. 1.52 crores. Time deposits are also lower by Rs. 3.38 crores. Borrowings from the Reserve Bank as well as from the State Bank are higher by Rs. 2.47 crores and Rs. 39 lakhs, respectively. Among the assets, advance and bills purchased are up, the former by Rs. 2.64 crores and the latter by Rs. 1.70 crores. Investments are down by Rs. 1.32 crores and money-at-call by Rs. 98 lakhs. But total cash is better by Rs. 4.47 crores.

A distinctly quiet tone prevailed in the Gilt-edged market. There was a predominance of sellers in most of the loans of all State Governments, as a result of which there was a decline of As. 2 to As. 4 in all their medium and long-dated loans. There was, however, a fractional rise of one anna in some of their short-dated loans repayable two years hence. Among the Central Government loans, there was not much change. The Conversion Loan receded further by a couple of annas to close at Rs. 74-10. A decline of one anna was noted in 3 per cent. 1966-68 and 4 per cent. 1960-70. 2½ per cent. 1976, which had gone up by one anna last week, went up further, by As. 2, during this week to close at Rs. 83-2. There was no change in the other loans of the Union Government.

Among the State loans, Bombay issues were an exception, in that they showed no variations in their value. A fall of As. 4 was recorded by West Bengal 4 per cent. 1968. A similar fall was recorded by 4 per cent. 1963 and 1964 loans of Madras, 1963 of Travancore-Cochin, Madhya Pradesh and Madhya Bharat and 4 per cent. 1967 of Mysore. 4 per cent. 1968 Hyderabad and Mysore declined by As. 3. A drop of As. 2 was recorded by 4 per cent. 1967 Hyderabad, 1968 Madras, 1964 Uttar Pradesh, 1963 Bihar and 1967 and 1968 Madhya Pradesh.

In the foreign exchange section, there was keen demand for sterling owing to pressure of imports, but the rupee-sterling exchange rates remained unchanged. Bank's selling rate for spot TT on London was 1s. 5.31/32d. and their buying rate 1s. 6.1/32d. Among other currencies, bank's selling rate for U.S. dollars was a shade lower at Rs. 481½ per $100 and so also their buying rate at Rs. 476½, as against Rs. 481½ and Rs. 476¾, respectively, a week ago.

SILVER STEADY, GOLD EASY

(*From Our Own Correspondent*)

BOMBAY, *17th October*

The trend of the bullion market noted last week was reversed during the week under review. Thus, while silver staged an impressive recovery in prices, gold lost some ground. The undertone of the market today was fully steady.

The recovery in silver was aided by scattered support from spot houses and favourable reports from Calcutta. The rise in prices would have been more marked but for rumours of additional imports of Tibetan silver coins. The yellow metal encountered profit-taking at higher rates. There was also pressure of offerings induced by reports of unauthorised gold arrivals. The increase in backwardation charges from an anna and a half last week-end to As. 4-6 on Saturday, too, created hesitant feeling among bears.

Forward silver (20th October settlement) advanced from Rs. 172-4 to Rs. 172-12 on Friday, following Calcutta advices. Thereafter, it gradually declined to Rs. 172-3 yesterday, but recovered swiftly to Rs. 173-4 today. *Kartak* delivery (20th November settlement) improved from Rs. 172-13 to Rs. 173-5 and, after receding to Rs. 172-9, recovered to Rs. 173-12 before closing at Rs. 173-8.

Ready silver (.996 Mint) opened the week firm at Rs. 172-5, as against Rs. 172-4 last week-end. It improved to Rs. 173-1 on Friday and, after declining to Rs. 172-3 yesterday, jumped up to Rs. 173-6 today before closing at Rs. 173-4.

The average daily offtake of silver during the week was less, being three bars, as against 11 bars in the previous week. Offtake was also less at 23 bars, as against 27 bars.

Forward gold (19th October settlement), which stood at Rs. 103-10-6 on Wednesday last, scored a gain of As. 7-6 to Rs. 104-2 on Friday on buying support. It, however, moved down in the subsequent sessions to Rs. 102-14-6 before finishing higher at Rs. 103-8-6. *Kartak* delivery (19th November settlement) opened at Rs. 103-9-6 and, after rising to Rs. 103-13, eased to Rs. 102-14-6. But at the close yesterday, the settlement was quoted higher at Rs. 103-7-6.

Ready gold began the week half an anna higher at Rs. 103-14. It spurted to Rs. 104-6 on the 12th inst., but fell to Rs. 103-0-6 yesterday before closing at Rs. 103-7-6.

The average daily arrivals and offtake of gold during the week were both 3,200 tolas, that is, 200 tolas lower as compared with the previous week's averages.

There was no change in the quotation for ready silver at New York which stood at 91.0 cents. Ready silver at London improved from 79½d. to 79⅝d. Forward position was also better at 79½d., as against 79*d.* London spot gold spurted by 1½*d.* to 251s. 5½*d.*

The following comparative table shows the trend of market during the week under review :

	17-10-56	Highest	Lowest	10-10-56

MEDIUM TEAS STRONG

(*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*)

COCHIN, *12th October*

There were 475,000 lbs. on offer in Dust Sale 'T' which was held on Tuesday, the 9th inst. There was a strong demand for low medium and medium descriptions which were sold at dearer rates. Best liquoring teas were easier and sold at rates well below valuations. Black leaf Middle East teas were entirely neglected and withdrawals of this type were heavy.

London Market: Sale of 8th October 1956: Mediums were dearer, while others were unchanged. *Sale of 9th October* 1956: Dearer tendency, except stalky fibrous sorts.

Colombo Market: Sale of 8th October 1956: Dusts much dearer. Fannings little change. Broken mixeds dearer, particularly lower sorts. *Sale of 9th October* 1956: Low and medium sorts dearer. High grown B.O.P.s lower. Following quality fannings firm.

Calcutta Market: No sale this week.

Export Quota: The market has been very active and business has been done up to 36 pies per lb. at which rate there are buyers.

Dust sale 'U' will be held on the 23rd inst.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"451 *Sale No.* 28: 1.35 million lbs. offered. Good general demand, particularly for medium brokens which were As. 2 to As. 3 dearer. Best liquoring and good mediums lower. Following quality, Middle East types neglected. Whole leaf fully firm to dearer."

COTTON FUTURES DEPRESSED

(*From Our Own Correspondent*)

BOMBAY, *17th October*

The week under review was a short one for the cotton market, as it remained closed on the 12th inst. due to the death of a member and on 13th owing to *Dassera*. Both sections of the cotton market are closed today also on account of *Id-E-Milad*. During this brief trading period, the futures market depicted a depressed tone. Although the Government of India's announcement, on the 11th inst., of its decision to give a rebate of six pies per yard in excise duty on all cloth produced by textile mills in excess of its average monthly production during the eight months ended August 1956 was calculated to encourage greater mill production, it did not have any appreciable effect on cotton values. This was because, as usual, the decision had been anticipated and was, therefore, discounted well in advance. Another encouraging factor has been the rumour that the Government of India might release a quantity of 150,000 bales of cotton, including 50,000-70,000 bales of Bengal *Deshi* for export. In spite of these bullish factors the market failed to recover because it was still under the influence of the enhanced excise duty and the credit squeeze. The sentiment of operators was further dampened by the recent reports of clear and sunny weather in all cotton tracts. In the general absence of investment buying and mill support and the continuance of selling pressure, both contracts suffered further setback.

M. G. Jarilla (March 1957) opened the week at Rs. 665, about two points higher, and improved to Rs. 668¾ on bull support. Heavy unloading by up-country interests and hedge selling from Punjab pushed down the rates to Rs. 661¼ on Monday. Opening yesterday at Rs. 658, the contract staged a partial recovery and closed at Rs. 659. M. G. Vijay (April 1957) also followed more or less the same course. Opening the week at Rs. 775, one point higher than the previous closing, it improved to Rs. 786 on active bull support induced by reports of dull weather in North India. Due to heavy selling by certain upcountry interests the contract was pushed down to Rs. 772 on the 15th inst. Absence of mill support resulted in the contract receding further to Rs. 769 yesterday, before closing lower at Rs. 764-8.

The following is the trend of prices of the two contracts during the week:

(In rupees per candy of 784 lbs.)

	16-10-56	High	Low	10-10-56
Jarilla (March) ...	659	663¼	654½	663¼
Vijay (April) ...	764	786	760	774

The Central India Cotton Association, which had been permitted by the Forward Markets Commission to transact forward trading in Malwai cotton and cottonseed at Ujjain and Indore, held the *muhurat* trading on 14th October at Ujjain. The business in cotton was done at Rs. 655-4 per candy. The *muhurat* of the Indore ring has been fixed for 31st October.

The spot market at Sewri, in contrast to the futures section, put on a better appearance. There was moderate inquiry for all popular varieties, especially Berar Jarilla and Lakshmi-Jayadhar and a sizable volume of business is reported to have been transacted in these varieties. In the export section, due to the expectation of an export quota, some interest was evident in Bengal *Deshi*, Oomras, C.P.I. and C.P.II. Among foreign styles Pima and East African ready lots came in for business. The latest available rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Khamgaon 780; Hubli Jayadhar 850; Hubli Laxmi 900; Bengal old 675. *Delivery contracts*: Vijay 13/16" February-March Delivery 72 "on".

Steady conditions prevailed in the Karachi cotton market during the week under review. The early sessions of the market was characterised by keen buying demand and hence N.T.R.G. January delivery advanced to Rs. 78 and March delivery to Rs. 77-2 on the 11th inst. But later, on selling pressure induced by the high rates, values suffered a break. The closing rates were only slightly higher than the last week-end rates. N.T.R.G. January put on, over the week, As. 2 to Rs. 77-8 while March, having closed at Rs. 76-8 last week improved to Rs. 76-9. The spot section ruled easy. Overseas inquiries and local mill demand were slack. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 95-8; Punjab *Deshi* 80; 4 F Punjab Roller 79-8; S.G. 80-12; L.S.S. Punjab Roller 79-12; S G. 81-12; N.T.R.G. 81-12; S.G. 85-12; 289 F Punjab Roller 82-12; S.G. 83-12.

A markedly bullish trend was in evidence in the Alexandria cotton futures market throughout the week. This was mainly due to the fact that there was good demand from abroad especially for Ashmouni and hence its value advanced sharply. Overseas interest is attributed mainly to the reports that the Egyptian Cotton Commission has told exporters not to make future commitments for the export of 1956-57 Ashmouni Good, Fully Good and below grades without its authorisation. This, however, does not apply to business concluded before the issuance of the order. The move on the part of the Egyptian authorities, it is believed in some quarters, is made with a view to satisfying the needs of Egyptian mills for Ashmouni cotton. Prices of other varieties also ruled firm. Exports of Egyptian cotton from 1st September to 3rd October aggregated 14,358 bales (of 730 lbs) as compared with 30.777 bales in the corresponding period, a year ago. The latest available rates—in tallaris per lb.—from Alexandria cotton futures market are given below, the figures in brackets being last week's closing quotations:

Karnak: November 115 (108.80); January 114.85 (107.70); March 114.25 (107.00); Ashmouni:

October 83.35 (79.85); December 81.50 (78.65); February 82.10 (78.45).

Sizable gains were recorded by Liverpool cotton futures market during the week. Demand for both ready and shipment cotton continued to be firm. There were inquiries for a wide range of U.S. style cotton, both long and short staples. Some business was also concluded in Brazilian and East African styles. Sudan contract advanced because buyers were going in for that variety fearing that it may be difficult to get Egyptian styles in view of the Egyptian Cotton Commission's directive to traders not to make commitments for the export of Ashmouni new crop. Some small business is also reported to have been put through in Indian Oomra styles. The following are the latest available rates—in pence per lb.—from Liverpool:

American one inch staple Contract: October-November 25.45; December-January 25.30; March-April 25.25; May-June 25.18. *American Cotton Mixed Growth Contract*: October-November 26.00; December-January 25.55; March-April 25.35; May-June 25.23. *Egyptian Karnak Cotton Contract*: November-December, January-February, March-April 60.00. *Sudan Cotton Contract*: November-December 50.30; January-February 50.15.

Values in New York market maintained a steady trend throughout the week. Scattered hedge selling and liquidation met with trade and investment buying. The publication of the U.S. crop estimate (8th October) of 13,268,000 bales (of 500 lbs. each) for the current season, though slightly higher than last month's estimate, had very little effect on prices because the figure was close to general expectations. It is believed that the increased crop estimate is due to exceptionally good yields in central states and near record yields in the irrigated land in far west and northern Texas. Although drought and weevil's had caused considerable damage in Carolinas, Georgia and Alabama yields in those States were better than average. Exports for the current season till 4th October are placed at 722,114 bales, more than three times the comparative figure of 216,589 bales at the same time a year ago.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

	16-10-56	9-10-56	2-10-56
Spot	34.45	34.40	34.55
October	—	34.18	34.05
December	34.00	33.99	34.13
March	34.17	34.13	34.32
May	34.13	—	—

SUGAR RECEDES

(From Our Own Correspondent)

BOMBAY, 17th October

A distinctly easy tone was in evidence in the sugar market during the week under review. The release of 160,000 tons of sugar, announced by the Union Food Ministry on the 11th inst. went a long way towards relieving paucity of ex-mill offerings in the Bombay-Deccan area. Arrivals of indigenous sugar into the market this week were also quite large, being 14,500 bags, as against 3,300 bags in the previous week. These would have been still more but for the move of wayside station customers to transport sugar to their destinations, in order to meet the urgent festival demands.

Spot indigenous large grain sugar dropped a rupee to Rs. 92-Rs. 97 per bag. Medium grain was quiet at Rs. 88-Rs. 90, as also small grain at Rs. 87. British refined sugar was dull at Rs. 90-8 per 2 cwts.

The forward section ruled weak. *Asho* delivery contract for 'C' grade sugar fell from Rs. 89-2 to Rs. 88-8 before being quoted today at Rs. 88-12. The contract is scheduled to be squared up on Saturday next. Business in the new forward contract for 'C' grade sugar—*Magsar* delivery—commenced during the week at Rs. 89-8. The contract was subjected to selling and moved down to Rs. 88-12. Today, however, it was quoted higher at Rs. 89-2.

The ex-mill quotations for sugar are ruling steady on reports that large despatches of sugar against the recent release are expected to be actually available only after *Diwali*. If this expectation were to prove correct and assuming that the festival demand for sugar would be quite large, sugar prices might, it is felt, register an advance in the coming weeks.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 17th October

For the fourth week in succession, the yarn market ruled bearish. There was continued pressure of sales, especially by weak holders who were trying to dispose of their stocks on fears of a further fall in prices, in the wake of slackness in demand. Reports from consuming centres indicated accumulations of stocks. It was said that the expected improvement in pre-*Diwali* demand for rayon fabrics from West Bengal had not materialised, while enquiries from Delhi, Punjab and Northern markets had fallen off, due to heavy rains and floods. Nor were advices from other commodity markets quite encouraging. On top of these, financial stringency acted as a damper. Turnover in all kinds of yarns was, as a consequence, restricted, with values moving down further.

Rayon yarns were subjected to persistent hedging. Even the reported decision of the Central Government not to issue licences for import of art silk fabrics to tailoring establishments under the special avocation scheme for July-December 1956 failed to induce support. Snia rayon yarn (120 dull cones) for December delivery fell by Rs. 3 to Rs. 758. October position was pushed back to Rs. 743 from Rs. 745. Spot 150 Italy declined by an anna to Rs. 3-13. 150 Japan shed nine pies to Rs. 3-15-9. 120 Italy eased by half an anna to Rs. 3-12. 120 Japan was quiet at Rs. 3-11-6. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade receded by 21 pies to Rs. 3-8-3. 150 Bt. cones 1st grade, however, rose by six pies to Rs. 3-2-6.

There were fair offerings of staple fibre yarn which did not meet with sufficient enquiries and prices yielded further ground. 40 x 2 staple fibre yarn for October delivery dropped Rs. 6 to Rs. 610. December contract receded by Rs. 4 to Rs. 618. In the spot section, 40 x 2 Centurys lost half an anna to Rs. 3-5-6. Kohinoors were unchanged at Rs. 3-8. Citys, on the other hand, were done higher at Rs. 3-5-6, as against Rs. 3-5. Among foreign yarns (80 x 2), Paramounts and Fujis eased by six pies each to Rs. 5-13-6 and Rs. 5-14, respectively. S'Sellos were dull at Rs. 5-13. But K'Suns evoked special support and rose by As. 2 to Rs. 6-6.

The cotton yarn section continued to present a subdued appearance, as there was still no denial of the rumours of the Government fixing "fair" prices for yarn and of the State Trading Corporation taking over the distribution of mill yarn to handlooms. Besides, reports from South India were unfavourable; prices of yarn there were reported to have declined by As. 4 to As. 8 per bundle of 10 lbs. Sixty counts encountered heavy selling. Raghuvamshis moved down by As. 14 to Rs. 56-10. Finlays slipped by As. 8 to Rs. 60. Moderns declined by As. 4 to Rs. 61. Among 40s, Minaxis suffered a fall of As. 4 to Rs. 27-3. Moderns eased by As. 2 to Rs. 28-10. Deals in 30s were put through at reduced rates, Maduras losing As. 4 to Rs. 23-14 and Apollos As. 2 to Rs. 22-8. Among 20s, Hinds were unaltered at Rs. 19-4, while Moderns gathered As. 2 to Rs. 19-6. Among 10s, Elphinstones shed an anna to Rs. 14-8. Moderns were dull at Rs. 15. Eighty counts Mahindras and Moderns were both transacted at Rs. 71, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	17-10-1956	10-10-1956	3-10-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)–			
120 Dull Cone Snia October ..	743 0	745 0	760 0
120 Dull Cone Snia December	758 0	761 0	775 0
120 Japan (per lb.)	3 11½	3 11½	3 11½
150 Japan (per lb.)	3 15½	4 0¼	4 1
120 Italy (per lb.)	3 12	3 12½	3 13
150 Italy (per lb.)	3 13	3 14	3 14½
Staple fibre yarn (per case of 200 lbs.)–			
40 x 2 October	610 0	616 0	633 0
40 x 2 December	618 0	622 0	639 0
40 x 2 New Great (per lb.) ..	3 5½	3 5½	3 5½
40 x 2 Century (per lb.) ..	3 5½	3 6	3 6¼

80s Mahendra	71 0	71 0	71 12

CASTORS MOVE UP

(From Our Own Correspondent)

BOMBAY, 17th October

During the week under review, while castorseed in the local seeds market was cheerful, groundnut old crop remained markedly weak. Linseed reflected a sympathetic movement with groundnut. The market remained officially closed today due to *Id-E-Milad*.

Castors which started the week on a steady note spurted on the following two days to higher levels on active buying by shippers of castor oil for export to the U.S.A. Although the reports of the emergence of Brazil as a competitor, and the scattered profit-taking following the high rates, dampened the enthusiasm of the bull operators, the market later recovered much of the lost ground on reports of lack of prospects for Brazilian crop, and the good support from speculators and shippers. Groundnut spot, however, gradually slipped down due to lack of follow-through support and reports of dry weather from the up-country producing centres while futures remained comparatively steady. Towards the close, nevertheless, both groundnut and linseed moved in sympathy with castorseed. Shipments of castor oil from Bombay during the month of September are placed at 3,246 tons, and those for the first nine months of this year, at 26,608 tons. It is expected that exports during the three remaining months would be on the high side due to heavy outstanding commitments.

An event of much importance was the inauguration of forward trading in castorseed at Hyderabad on 15th October by Mr. R. Doraiswamy, member of the Forward Markets Commission. It may be recalled that when section 15 of the Forwards Markets Act was made applicable to the whole of India in May this year, Hyderabad was exempted to enable the Hyderabad Oils and Seeds Exchange to modify its articles and by-laws. The Act has now been applied to this exchange which acquires specific right to conduct a regulated forward market in transferable specific delivery and hedge contracts.

Groundnut February 1957 contract opened the week under review at Rs. 130-8 and rose to Rs. 131-12 on the third day on upcountry advices. Subsequently, however, it declined, and closed the week at Rs. 130-10. In the spot section, however, Bold F.A.Q. lost as much as Rs. 2 at Rs. 35, and Coramandels Rs. 3 at Rs. 34-8. Groundnut oil ex-mill shed As. 12 at Rs. 19, and railway receipt As. 11 at Rs. 18-8.

Castorseed which started the week under review at Rs. 124-8, gradually increased to as high a level as Rs. 128-7 on 16th and closed the same day at Rs. 127-12; thus gaining over the week Rs. 3-12. In the spot section, Bold Ready was quoted As. 4 higher at Rs. 29, Kanpur As. 6 higher at Rs. 29-2. Oil B.S.S. put on As. 5 at Rs. 17-15 and Oil Commercial As. 8 at Rs. 17.

Linseed May 1957 contract, after very narrow fluctuations, closed the week at Rs. 26-8, that is, at the same level as a week ago. In the spot section, however, Bold ready lost As. 10 at Rs. 31-10 and February-March As. 3 at Rs. 27-15. Linseed oil ready, again, was done As. 6 lower than a week ago.

Among the other seeds, *kardi* seed Bold ready and February-March fell by As. 4 each at Rs. 17-2, *niger* seed ready F.A.Q. and Madras lost As. 4 each at Rs. 27-4 and Rs. 27-8, respectively.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	17-10-1956	10-10-1956	3-10-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
February 1957	130 10	130 6	128 0

Ready	—	17 10	17 2

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 16th October

Markets reopened yesterday on a definitely firmer tone after remaining closed from Thursday last for the *Durga Pooja*. Earlier in the week, the increase in September-end stock of jute goods, announced on Wednesday last, had affected sentiment. The total of stocks were 124,700 tons, as against 123,500 tons at the end of August. The increase of 1,200 tons was due to hessian rising by 1,200 tons to 29,400 tons, while the increase in miscellaneous constructions by 400 tons to 7,100 tons was offset by the decline by 400 tons in sacking goods to 88,200 tons. The small increase in stock was no surprise, as it had been known that the month of September was a less satisfactory shipping period than August.

Stockists were not inclined to entertain any pessimistic view as to the future, at it was expected that foreign buyers would show more interest. Also, the order books of mills were fairly satisfactory. The increase in industrial activity within the country and the need for more packing material for the movement of a growing industrial output are as hopeful as the present inability of the Pakistani mills to cater to an expanding overseas market.

On Tuesday last, jute goods were steady. Hessian 40"×10 oz. was maintained at Rs. 41-13 and the rumour that mills' stock of hessian as at the end of September had recorded a decline was circulating. This proved to be baseless on the following day but the rate in fact advanced to Rs. 41-15 mainly in sympathy with the uptrend in sacking goods. Ready B. twills were fully steady at Rs. 113 on Tuesday last, as against Rs. 112 on the previous day, and on Wednesday rose to Rs. 113-8, following more interest shown by buyers on Government account. Forward position in B. twills were at a premium, January-March and November-December goods being higher by As. 8 and the one-month delivery goods by As. 6. On the other hand, January-March 40"×10 oz. hessian was at a discount at Rs. 41-8, as against Rs. 41-15 for the ready. October-December goods were at par, but the one-month goods were As. 3 higher at Rs. 42-2. Yesterday conditions were fully steady, and prices hardened further with the 40"×10 oz. hessian scoring to Rs. 42-3 f.a.s. and to Rs. 42-13 f.o.b. The eight oz. hessian was priced at Rs. 35-4 f.a.s. and Rs. 35-12 f.o.b. B. twills ready jumped up to Rs. 116-4.

The raw jute market was quiet. Mills, in an attempt to depress prices in the interests of economic production, kept out of the market. However, prices did not move down, and arrivals were rather restricted in view of the transport difficulty consequent on the recent heavy floods. All new arrivals were readily taken up. Indian northern bottoms were priced at Rs. 28-8 and local Daissee October-November bottoms at Rs. 29.

TEA EXPECTED TO OPEN FIRM

(From Our Own Correspondent)

CALCUTTA, 16th October

The tea trade anticipates that, after the holidays, auctions here would continue to be fairly satisfactory from the industry's point of view. One of the causes for such expectation is the possibility of an increase early in November in the export duty under the slab system, in view of the steady price trend in auctions in Mincing Lane. Foreign buyers would naturally be inclined to move out as much tea as possible before the apprehended increase in the export levy.

Reports from most tea-producing areas in North India state that the monsoon has ended, that the weather is dry, that an early cold weather is imminent, and that the immediate prospects are good. However, the outturn of leaf teas would be affected if rains did not recur before the onset of the cold weather. The September output was again good and at 94.3 million lbs. was higher by 1.9 million lbs., as compared with September 1955. The total output of North Indian tea up to and including September 1956 has come to 399.6 million lbs., raising the year's increase to 24.7 million lbs. These figures have increased the anxiety of the tea interests which are agreed on the necessity for a crop regulation scheme for the rest of the current plucking season aimed at improving quality. The regulation scheme is expected to be announced within a week or so.

Demand for higher quality teas would continue to be satisfactory. During the auctions held in London on Wednesday last, liquorings held their sway. And a *Reuter's* report from the United States quoting Mr. Ghoshal, Chairman of the Indian Tea Board, who is on a visit there, credits him with the encouraging revelation that the tea-drinking habit in America is on the increase, as evidenced from the increase in tea sales in the U.S.A. by 10.7 per cent. during the past five years.

News from Egypt during this week has also been quite pleasing, and the outlook for Indian quality tea abroad is brighter than ever before, but is only limited to the ability of the Indian gardens for production. Schemes for improving quality and raising production of quality teas are urgent. During the seven months to July last, Indian tea exports to Egypt were stated to have valued £(E)2.1 million which was close to Ceylonese tea exports to that country worth £(E)2.6 million in the same period. This shows that India is replacing Ceylon as the largest supplier of tea to Egypt. This is, of course, aided by India having a payments agreement with Egypt and Ceylon's difficulty to trade with Egypt following the blocking of sterling on Egyptian account by Great Britain. To arrive at the above conclusion, these figures should be compared with those of 1955 and 1954. In 1955 and 1954 Indian tea exported to Egypt were valued at £(E)3.1 million and £(E)1.5 million, respectively, as against Ceylonese tea worth £(E)5.7 and £(E)6.2 million, respectively. No wonder interest on Egyptian account in auctions continues to be remarkable.

The heavy accumulation of tea in the Assam gardens is expected to be eased shortly. For booking of tea to Calcutta via the Assam Link by the North Eastern Railway has again commenced. The strike by the crew of the joint steamer companies, which started from the 27th September and which forced tea gardens to send supplies to the Calcutta auctions by air, thereby increasing the cost of gardens by As. 3 per lb., has come to an end as from 14th October. This strike, it may be noted, was one of the contributory factors for the remarkable increase in tea prices during recent auctions. Another factor was the sizable purchases made for internal consumption as stockists had to replenish their holdings in view of the increased sales on account of the festival season.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 15th October

The kip market continued featureless and prices of lightweight cow hides were easier. U.K. importers were not showing interest at the prices offered at origin.

The tanned goat and sheep skins market was firm, due to good demand from the Continent and raw prices were firm in consequence.

The dressers in the U.K. are anxious to incorporate in the official c.i.f. contract a new clause stipulating that the E.I. tanned hides and calf should contain a certain minimum percentage of leather content with a view to preventing adulteration in tannages. The S.I.S.M. Association is not in favour of the new clause, as the existing terms of the No. 4 contract contain sufficient redress and the S.I. tanners will not be able to follow the technicalities of sale under leather content basis.

HIDES SUBDUED

(From Our Own Correspondent)

KANPUR, 14th October

During the week under review, the hides market ruled subdued, due to apprehensions of dislocation in railway traffic following floods in the Ganges. Fresh arrivals were lower as compared with the previous week. The Madras dealers were lukewarm. The main purchasers were the local tanners, headed by Messrs. Cooper Allens. Fresh goods from the local butcheries were ample.

The latest available quotations are: Wet salted cow 1st grade Rs. 250; 2nd grade Rs. 280 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 245 and 2nd grade Rs. 200 per 100 pieces; sheep skins Rs. 210 per 100 pieces.

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 16th October

Easier conditions continued to prevail in the metal market during the week under review. Stockists were disinclined to add to commitments, in view of holiday consideration and their desire to keep inventories as low as possible for the approaching New Year Day. Consumers were interested to buy day-to-day requirements only. However, stockists of finished products were accepting delivery of stores, orders for which had been placed earlier on manufacturers. This has been so due to an increase in requirements of products such as cables and jointings, copper and brass sheets, aluminium rods, brass and copper rods and tubes, etc., following the impetus industrial development is receiving and the Government's disinclination to grant import licences for products now made in India. It may be recalled in this connection that the Government of India removed (1) all alloys of copper including phosphor copper and cupro nickel and scrap of such alloys in all forms but excluding all manufactures and (2) paper insulated cables from the open general licence and brought these items under licensing.

Moderate demand was in evidence in copper. Electrolytic copper was priced at Rs. 212 as against Rs. 215 earlier in the week. Inquiries from the Government were on the increase. From Rs. 521 tin recovered to Rs. 526 and this was in consonance with the trend in Singapore market and in restricted demand, electrolytic zinc lost to Rs. 65-4 from Rs. 65-8 and Virgin lead to Rs. 79-8 from Rs. 81.

WOOL ARRIVALS LARGE

NEW DELHI, 7th October

The Government of India as announced its policy on the export of wool for the new half-year on the 1st inst. The announcement, however, has not affected the Delhi wool market, as the official notification is yet awaited from Bombay. Turnover in foreign trade is very low, because American buyers are not coming forward to buy at the present ruling prices. New supplies of wool are pouring into the market, in spite of a low buyer demand. Sellers are holding stocks till the notification reaces Delhi, thus keeping the prices firm.

The latest available quotations (per lb. f.o.r. Bombay) in the Delhi market are: Yellow (Delhi, Beawar and Punjab qualities) Rs. 2-11-6 to Rs. 2-12, greys (raw condition) Re. 1-4, light greys Re. 1-7 to Re. 1-8 and white (nominal stocks) Rs. 3-4 to Rs. 3-6.

Bradford, U.K.—28th September 1956.—The fairly substantial advance in Commonwealth wool prices which had marked the first month of the selling season appears to have reached its full extent in Australia in the past few days and, as is normally expected after such a movement, a slight reaction has been seen in the general level of prices. New business in tops is temporarily smaller than usual in volume, as consumers now await a more settled price basis before extending their purchases. The volume of business placed in recent weeks, however, has been heavier than usual for this time of the year, as both spinners and manufacturers have been covering their requirements for some distance ahead as precaution against any possible interference with the flow of wool shipments from Australia.

Sydney, Australia—24th September 1956.—Values for merinos and comebacks showed a hardening tendency as compared with closing rates at New Castle last week. The 16,120 bales offered from Bradford, Japan and the Continent were almost completely cleared under strong competition. On 25th September, values were generally unchanged under strong competition; of the offerings of 17,500 bales, 17,189 bales were sold.

Adelaide—25th September 1956.—Prices were 5 to 7½ per cent. higher than at the previous sale at this centre, being very firm on closing Melbourne rates last week. Bradford, the Continent and Japan were the main buyers and there was an almost complete clearance of the 18,500 bales offered. Faulty types also sold irregularly. At Albury, the selection contained a high proportion of crossbred wools.

AMERICAN LETTER

(Concluded from page 757)

The whole question, therefore, is of fractional rather than basic importance.

Business Good

The prospects for good business are still great. Most leaders in industry predict new highs in sales, jobs and profits for the final quarter of 1956. It may be another record year despite statements of caution made previously.

September employment totalled more than 66 million and unemployment dropped by 200,000 persons. Steel production has been running at better than full capacity. New construction exceeded a volume of $4,200 million in September for the third month in a row.

Third quarter bank statements have shown improved earnings and corporate profits, after taxes, are hitting new highs. They were 9 per cent. higher in the first half of the year than in 1955. Farm exports are running substantially ahead of last year and this may turn out to be one of the best 12 calendar months for U.S. agricultural shipments overseas.

Suez Crisis

The Suez Canal crisis has continual attention here. The main aspects are considered to be economic. In the opinion of top oil company officials, stoppage of canal traffic and necessary tanker shipments around the southern tip of Africa might double the present price of $2 a barrel. It may have serious repercussions for the economy of Great Britain and, to a certain extent, for the United States as well.

However, it is felt here in highly authoritative quarters that, in the longer run, the deficiency of Arabian oil could be easily made up by Western hemisphere production. The vast oil deposits of Canada have hardly been tapped, for example. Building of a few pipelines would, in time, remedy deficiencies and higher prices. Heretofore, overseas tanker shipments have been cheaper and the building of such pipelines was considered uneconomical. In a real emergency, however, such consideration would no longer be valid.

Moreover, it is merely a question of time. It is foreseen here that, within the next 20 to 50 years, perhaps, the predominant position of oil as a source of energy will have been supplanted by nuclear energy. Then, Arabian oil, the Suez Canal and related questions will no longer play such important roles as they do today.

One of the American television commentators showed a film the other day on a nationwide network, including an interview with President Nasser of Egypt and British and U.S. spokesmen. Mr. Nasser appeared very sincere in his desire not to interrupt Canal traffic and he left an excellent impression with most viewers.—*All Rights Reserved.*

COAL

(Concluded from page 763)

The results of the investigation, if implemented, will considerably enlarge the available coking coal reserves by enabling the use of weakly coking coals of the Raniganj coalfield, hitherto exported or used mainly for combustion or gas making. They will also open up the possibility of utilising the lower seams of Jharia coalfields, which have been considered beyond the scope of being used in carbonisation plants due to their high ash or poor washability characteristics, as well as high phosphorus content.

According to Dr. A. Lahiri, Director of the Fuel Research Institute, the work done by Carbonisation Section of the Institute is of the highest significance to national planning in general and to West Bengal, in particular, as it makes possible for the first time the location of carbonisation and iron and steel industries, as well as chemical industries based on by-products, in the Raniganj area, fairly or completely self-contained as far as coal supplies are concerned. He, however, adds that much work has yet to be done to confirm these results on pilot plants as well as on full-scale ovens, though to experienced technologists the indications are clear and hopeful. It behoves the planners to devote sufficient thought and care to utilise fully the results of the work done by the Institute.

Notices

THE TATA MILLS LIMITED

NOTICE

SHAREHOLDERS OF THE TATA MILLS Limited are hereby informed that certificates for new ordinary shares are now ready and they are requested to take delivery of the share certificates in exchange for the relative application money receipts and allotment letters duly signed.

For and on behalf of
THE TATA MILLS LIMITED,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
A. D. SHROFF,
Director.

BOMBAY, 16th October 1956.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books and Register of Members of the Company will be closed from 29th October 1956 to 5th November 1956 (both days inclusive) in connection with the further issue of Capital. Circulars regarding the issue of Right Shares have been issued direct to the shareholders.

By Order of the Board,
ASPINWALL & CO. (PRIVATE) LTD.,
Managing Agents.

COCHIN, 15th October 1956.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. † Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Re. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 in to shares of Rs. 10 each.

TRENDS IN SMALL SAVINGS
NEED FOR HIGHER INCENTIVE

By Prof. V. G. Ramakrishna

THE decision of the Government of India to constitute the National Savings Advisory Committee with a view to co-ordinating the activities of the State Committees and giving the benefit of its advice and active participation in the running of the movement is a move in the right direction. The Committee has been empowered to co-opt specialists in the different fields, such as eminent economists, bankers, sociologists, etc., as members as may be necessary. Ordinarily the Committee will consist of 14 members and have its headquarters in Delhi.

The functions of the Committee will be (1) to co-ordinate and guide the activities of the Savings Advisory Committees in the States, (2) to assist and advise the Government of India generally and on measures necessary to intensify the national savings movement in the country and to devise ways and means of popularising the small savings scheme, and (3) to advise the Government on specific organisational and publicity matters relating to the national savings movements which may be brought to its attention. There is reason to think from past experience that such co-ordination is necessary. According to the small savings scheme in the first Five-year Plan, Rs. 385 crores had been planned to be raised by the Centre and the States through loans, small savings and unfun

MR. NEHRU'S ECONOMIC THINKING—I

WITH the General Elections in India only four months ahead, Mr. Nehru's remarks on free enterprise at a Press Conference in Calcutta on Sunday last acquire special importance, because hundreds of Congress men will base their exposition of the Government's economic policy on these remarks, if not parrot them, when they labour at the hustings. Mr. Nehru, of course, did not have the elections in his mind when he made his observations, for the *casus belli* was Mr. Eugene Black's letter to Mr. T. T. Krishnamachari, in which he had expressed his conviction that "India's interests lie in giving private enterprise every encouragement to make its maximum contribution to the development of economy, particularly in the industrial field," and that the potentialities of private enterprise in India "are commonly underestimated and its operations are subjected to unnecessary restrictions." But what the Prime Minister said will serve as talking points for his party men, apart from giving more weight to Mr. Krishnamachari's reply to Mr. Black. It is, therefore, necessary to examine his remarks at some length.

Mr. Nehru's observations are really provocative. They include a hit against international cartels. And the latter will do well to meet it effectively, if they do not wish the case of twentieth century capitalism, which is more socialistic than the so-called socialist republics, to go by default in the new free countries of Asia. It must indeed be flattering to the spokesmen of private enterprise to find that a social and political thinker like Mr. Nehru has found it necessary to take note of the arguments in favour of their philosophy and reply to them. His replies, however, are not very convincing and reflect a superficial study of the merits of modern capitalism in the free countries of the West on whose pattern of political system Indian democracy is modelled. In view of the enormous influence which he has over the people of this country and of the tendency among the vast majority of people to accept his statements without much reflection, Mr. Nehru has to be particularly careful in giving public expression to his thoughts. If he gives currency to half-truths, they will come to stick in the minds of people and do a lot of harm to the country as a whole. Further, if, in future, his ideas are not to share the fate which has overtaken those of Karl Marx now, he will do well to devote a little more of his time to a study of modern economic systems in the West, instead of being guided by the weekly economic digests submitted by his Secretariat and helpers in the Congress Party or by the praises showered on India by the foreigners who visit this country as its honoured guests.

One of the favourite theories of Mr. Nehru is that "the idea of equating democracy with private enterprise is not justified." Elaborating this thought, Mr. Nehru said at Calcutta that "unrestrained private enterprise and democracy were incompatible." If he is correctly quoted, we should say that he is beating the air. For none in this latter half of the twentieth century is asking for "unrestrained free enterprise," which means in simple economic jargon *laissez faire*. The need for a judicious regulation of free enterprise by the State is conceded by even the staunchest champions of free economy. What is questioned is the degree and the manner of control by the State. Similarly, no one insists, as Mr. Nehru seems to believe, that there should be only political democracy—by which is meant freedom for everybody to choose at stated intervals the Government he wants—and not economic democracy. But what is economic democracy? Mr. Nehru seems to imply that economic democracy means one in which economic power is not concentrated in a few private hands, lest the latter should control and limit the scope for political democracy. He, therefore, wants "the State to play an even greater part in industries and, more specially, to control the basic industries and those that are considered strategic." "Apart from misuse," he goes on to add, "private parties do not look at the entire picture of the State's development. They have only particular aspects in view. We have, therefore, evolved and are trying to pursue a policy of mixed economy. While the public sector comprises basic and strategic industries and some others, the private sector is encouraged to function in a fairly broad field, subject to the State's regulation."

This argument is very deceptive. In the first place, the free enterprise is painted in a much darker colour than it deserves. Secondly, it gives a very narrow definition of economic democracy. An ideal economic democracy is one in which there should be not only no excessive concentration of economic power but also enough freedom for individual enterprise and for following an avocation according to one's talents and aptitude in a manner not prejudicial to mankind. This freedom would be lost, if the State were to exercise too many controls and place too many restrictions on the citizens. And, thirdly, some of the economic policies of the Central and State Governments in India are themselves inimical to the growth of economic democracy. By taxing the people to the hilt, individual savings are minimised. Consequently, *entrepreneurs* are prevented from raising adequate capital, nor can they create their own capital. This, in turn, restricts the scope for new entrants into the field of industry and commerce. Besides, it forces the existing business concerns to depend on the State for supply of financial resources, thereby making them the vassals of the State, which, in actual practice, means vassals of the party in power. The new Company Law is another instance of Government's economic policy which has a similar effect. Some of its provisions reduce the chances of new blood flowing into the business world. At the same time, the pressure for economic development is so strong and insistent that the authorities are compelled to recognise the claims of already well-established *entrepreneurs* for expanding their industrial activities. The result is that concentration of economic power in the hands of the limited number of business men, who were lucky enough to be in the field already, is taking place at a much faster pace than the growth of new *entrepreneurs*. The migration of foreign capital, another offshoot of Government's economic policies, has only aggravated this unhealthy trend. Then, there is the moral aspect of these policies. The excessive rate of taxation and the enactment of statutes that cannot be easily enforced or that are full of loopholes encourage the people affected by them to look out for ways and means of evasion and escape. They also widen the scope for corruption.

The contention of Mr. Nehru that the "idea of equating democracy with private enterprise is not justified" is basically wrong. We challenge Mr. Nehru to prove it. While a certain

it became unavoidable, the programme of the present Government is for maximum ownership and/or domination by the State. This bid for absolute power is not a healthy thing even for the Congress Party. There are already signs of deterioration in the moral standards of its rank and file, as witness the frank assessment of its position by Rajaji a few days ago. That absolute power corrupts absolutely is not an empty slogan.

Mr. Nehru was candid enough to admit that, as a result of the Government's present policy, India is going towards State capitalism. "That is true to some extent." he conceded, and then added: "There is no other way. . . . There is no other way to develop our industry than through the State or we allow the private sector with the aid of the State to become dominant in our economy or we do not develop industry at all." He, of course, did say that the principle of the Co-operative Movement should be extended to industry, but his stress on the inevitability of the State having to own and establish industries on a large scale suggests that he realises that not much swift progress can be achieved through that system It is amazing that such a keen student of modern history as Mr. Nehru himself should have reconciled to the view that State capitalism is superior to even a regulated private enterprise. Apparently, he has forgotten that State capitalism in Germany, Italy and Japan led to dictatorship and ultimately to war. This is probably due to his ill-informed views about modern capitalism in the free economies elsewhere in the world. While he did well to highlight some of the dark features of capitalist monopolies, such as the one in oil, he was certainly not right in coming to the conclusion that the virtues of the capitalistic system have rapidly disappeared. Mr. Nehru must brush up his knowledge of modern economics, especially about monopolies, as we shall show in our next issue.

RAISING INCOMES

ONE of the most difficult of the economic tasks confronting the world today is that of raising the real incomes of underdeveloped countries. The disparity between the living standards in the industrially advanced countries and those in the backward regions is too wide and striking to go unnoticed. Although the specialised financial institutions of the United Nations are doing what they can to help raise incomes and living standards in many regions of the world, it must be admitted that the impact they have so far made on the economies of the underdeveloped countries is not so deep, nor so profound as the authorities themselves would like it to be The result is that, despite all the assistance that has been given by these institutions, there is no significant abridgement of the gap. In these circumstances, it is not surprising that the U.N. Secretary-General, Mr. Dag Hammarskjoeld. has, once again, thought it fit to stress, in the course of an introduction to his annual report to the General Assembly, that the "most serious" of the world's economic problems is the continued widening of the gap between the industrially advanced countries and the underindustrialised countries.

The fact is that, so long as the world is unhappily divided against itself into two groups, the developed and underdeveloped countries. there can be no lasting world peace either. It is true, as we pointed out last week in these columns, that such a division is, in one sense, artificial, because it tends to ignore the interdependence of the two parts. But the fact remains that so long as such interdependence does not lead—and it has not so far led—to the raising of the living standards in the underdeveloped countries, there will always be sufficient tinder for extremist political parties to play with. The rising incomes in industrially advanced countries is not a matter for unconcern for the backward regions, for such a rise will certainly lead to a higher demand for the commodities which primary-producing countries can export. But things do not always work that way. As the U.N. Secretary-General points out, even if supplies of primary products were to keep pace with the demand and the terms of trade were to remain unchanged, the growth of income earned in primary production would lag considerably behind the growth in income of industrial countries.

All this clearly shows that what is urgently needed is to increase the pace of economic progress in underdeveloped countries. But. so far from the pace being increased, there is sufficient evidence to show that, in many parts of the world, it has not only slowed down but has even been reversed. The Secretary-General warns that "even in percentage terms, the poor have become poorer." It is easy to see, as he points out, "how wrong and how dangerous it would be to permit such a trend to continue." This underlines the importance of stimulating the process of economic development. A major factor in facilitating this process is to achieve some stability in the prices of primary products which the countries export. Calling attention to this aspect of the problem, the Secretary-General says:

> "We have long ceased to accept unemployment as the price for keeping an industrial economy in balance. We have also accepted full employment as an international as well as a national obligation. Equally, we must come to realise that violent price fluctuations in the commodity markets are not productive of economic balance in the world but of economic chaos with all its political and social consequences in the undeveloped countries. And we must learn to accept commodity price stabilisation as an international obligation inseparable from the increasing economic interdependence of the world community."

There is no doubt that, if the prices of primary produce were stabilised, it would add a certain element of security to the economies of underdeveloped countries. For instance, the volume of world trade in agricultural products in 1955, according to the U.N. Food and Agricultural Organisation's Survey, was 5 per cent. more than in 1954 and thereby recovered its prewar level, but the value improved by only 1 per cent., as compared with 1954, thanks to the decline in prices. Violent fluctuations in prices lead to alternating bouts of plenty and famine in foreign exchange and, therefore, prevent the countries concerned from planning their economic progress. All these defects could be eliminated through the achievement of a certain level of stable prices. Nevertheless, it would be a mistake to overemphasise this aspect of the problem of development. By and large, the task of development is really one of capital investment, technical know-how and management. So long as these elements are absent, a mere achievement of stable prices, however welcome in itself, can make no real impact on the process of development. Further, if measures were found for bringing about stability in prices of primary produce while the industrially advanced countries showed no inclination to achieve similar stability in the prices of the goods they export, there could be no genuine progress in underdeveloped countries. Hence the importance of stable terms of trade between raw materials and manufactured goods.

In the recent past, the underdeveloped areas of the world, according to the F.A.O. Report, have, to a limited extent. profited from the boom in the industrialised countries. Most of them have been able to improve their balance of payments situation, to increase monetary reserve and to reduce quantitative and other restrictions on foreign trade. In the immediate future, it is quite likely that, in the industrialised countries, the Governments will continue to keep a strict watch over their economies, in order to prevent excessive expansion. The F.A.O. Report, therefore, suggests that the demand for agricultural products in the industrialised countries is "likely to stay high but not to increase appreciably." It says that for products which are already encountering marketing difficulties, no improvement seems likely in the year ahead. On the whole, it thinks that "although the demand for agricultural products is likely to remain at a high level, the pause in world economic development may thus make 1956-57 a somewhat less favourable year than 1955-56 for agriculture." If this forecast proves correct, it will certainly retard the progress of economic development in the underdeveloped countries, unless, of course, the prices of manufactured goods imported from industrialised countries register a substantial fall.

Whatever may be the outlook for the immediate future, the long-term problem, as we indicated above, is one of stimulating the inflow of capital into underdeveloped regions. Large doses of capital are needed. And what is particularly noteworthy, most of these investments have to be made in fields in which the direct return is low as well as slow; such fields include education, communications and heavy industries. It has been computed, for instance, that, in the next five years, the free world outside the U.S. would need some $90,000 million of new capital in order merely to maintain the recent growth in *per capita* output. This is more than what the U.N. specialised agencies can give to the capital-hungry regions. The Secretary-General says: "We have also to face the fact that the flow of international capital has failed in the past ten years even to regain its importance of only a generation ago. It is evident that we must seek to increase the supply of foreign investment capital, both public and private, available for economic development." This is at once an opportunity and a challenge to the free world. The future of freedom and all those values which the free world cherishes as dearer than any material possessions depend on how it meets this challenge.

KOLAR GOLD MINES

THE Mysore State Legislature having passed the Kolar Gold Mining Undertakings (Acquisition) Bill, the State Government has now acquired the legal right to take over the Companies as and from the "appointed day" to be chosen by the Government. We have ere now expressed the view that this act of nationalisation was strictly unnecessary. whether from the point of view of the future of gold mining in the State or that of the State's revenues. Assuming that the Government had a valid cause for grievance, it was certainly possible to refer the matter to arbitration or to enter into a fresh agreement with the Companies. Be that as it may, it is noteworthy that the question of compensation, a somewhat explosive issue in all nationalisation measures, has been settled satisfactorily; the Managing Director of the group of Companies is reported to have said that the Compensation (now finally settled at Rs. 164 lakhs) was "fair and reasonable."

In the case of the Kolar gold mining group, the question of compensation proved a particularly intractable one. For one thing, there is no precedent for nationalisation of gold mines in any part of the world, so that the State Government had necessarily to face the problem without the benefit of previous experience. Secondly, the authorities both at the Centre and in the State were understandably anxious not to create the impression that foreign investors are being unfairly treated in this country. This is a vital issue of far-reaching significance to the country's economic future. It is, however, regrettable—though it is not, perhaps, surprising—that ideas of compensation should have varied from time to time since the question of nationalisation was first mooted. This could have been avoided, if both the parties had not approached the question in an excessively bargaining spirit. The Government at first assessed the compensation at as low as Rs. 87.8 lakhs, although the State Home Minister, Mr. H. Siddaveerappa, now reveals that his own "personal" estimate of compensation was Rs. 150 lakhs. The Companies, on their part. pitched the demand at as high as Rs. 14 crores, then came down to Rs. 6 crores, and before the Kaul Committee (appointed by the Government of India to go into the issue) suggested Rs. 4 crores; the Kaul Committee's estimate was Rs. 119 lakhs. It was the Government of India which brought to bear on the question an impartial mind and settled it at Rs. 164 lakhs, excluding sterling assets held by the Companies amounting to some Rs. 50 lakhs. Some members of the State Legislature complained that the Union Government had compelled the State to pay the Companies more than what it was willing to pay. There is no substance in this allegaton. For the Minister has admitted that it was an agreed solution and, in any case, the Union Government, at one time, went so far as to suggest that, if the State Government could pay no more than Rs. 119 lakhs, the former would itself make up the deficit.

Little is yet known about the precise set-up which the State Government contemplates for the nationalised gold-mining industry. It is not clear whether the Government will utilise the services of the present management, Messrs. John Taylor & Co., Ltd. The Minister stated that no assurance had been given to the Company that its services would be retained. He added that there was a "sort of understanding" that, other things being equal, and if it was mutually agreed, the question of their continuance as Consultant Engineers might be considered. Since gold mining is a highly technical industry and the present management has had considerable experience in running it, the Government will be well advised to utilise its services in some form or other. This would also ensure the continuance of the traditions of sound management built up by the Company and the continued prosperity of the gold-mining industry.

CAMBRIDGE PROF. ON EXPENDITURE TAX

SCARCITY OF FUNDS—BOMBAY BURMAH

THURSDAY, 5 P.M.

MARKET GOSSIP

ALTHOUGH budget events have not yet begun to cast their shadows on the markets, there is no doubt that, in many quarters, apprehensions about the shape of the budget to come are being genuinely felt. With the size of the second Plan having been raised by Rs. 400 crores to Rs. 600 crores and with the yield from customs duties declining, there is no doubt that the Government must be actively examining the possibility of introducing such changes in the fiscal system as would facilitate a larger mopping up of people's incomes. Addressing the annual meeting of the staff of the income-tax circles of Bihar and Orissa, held at Patna last week-end, the Union Deputy Finance Minister, Mr. Baliram Bhagat, revealed that the Central Government was considering the recommendations of the Taxation Enquiry Commission and added that it was "just possible that there might be an entirely new structure of taxation." He urged the officers and ministerial staff to prepare themselves in advance in order to fit into the new scheme of things. It will be recalled that Mr. T. T. Krishnamachari also stated, soon after he became Finance Minister, that a certain re-vamping of the tax structure might be necessary. He has also been asserting that it would not be difficult for him to raise domestic resources.

It may be unnecessary to read anything more into Mr. Bhagat's or Mr. Krishnamachari's statements than that the Government is seized of the problem of recasting the fiscal structure. After all, it has been known that the Government is actively examining the Taxation Enquiry Commission's recommendations in the light of the subsequent suggestions of Dr. Kaldor. The last budget was the first instalment of fiscal reform based upon the Commission's report. Indeed, in some respects, the budget went even beyond the Commission's recommendations, for instance, in respect of taxation of bonus issues. Since then, much discussion has taken place on the subject of ceiling on incomes, to which the Commission made a purely academic reference. And it can now be taken that ceiling on incomes will not come up again on the Parliamentary floor, thanks to the Prime Minister's frank admission of the impracticability of enforcing it. Among other measures, the Commission did suggest capital levy and excess profits tax, though it regarded them as measures to be adopted in the last resort. The Commission also suggested travel tax, creation of fiscal monopolies, and increase in railway freights. Powers have now been taken in order to impose travel tax. Monopoly State trading in certain commodities, which the Government is now attempting, is perhaps only another variation of the fiscal monopoly device suggested by the Commission. The Railway Minister, on his part, has already revealed that the Government is thinking in terms of an increase in railway freights and fares.

Government spokesmen have ere now expressed the view that the Taxation Enquiry Commission's Report is not the last word on the subject of taxation. They must have obviously derived additional inspiration from Prof. Nicholas Kaldor's Report. Dr. Kaldor, as is now well known, has called for a "thorough and comprehensive reform." And, without mincing words, he has declared that "it is essential that the additional burden that will inevitably be imposed (either through taxation or through an inflationary rise in prices) on the broad masses of population should be complemented by an efficient system of progressive taxation on the small minority of the well-to-do who, in India, number only about one per cent. of the population." The proposals outlined in his Report aim at broadening the tax base through the introduction of an annual tax on wealth, the taxation of capital gains, a general gift tax, and a personal expenditure tax (the last in partial substitution of the present super-tax on income).

The five taxes—income-tax, capital gains tax, annual wealth tax, personal expenditure tax and the general gift tax—according to Prof. Kaldor, would all be assessed simultaneously on the basis of a single comprehensive reform. Briefly, he has suggested that the maximum rate of tax on income should not exceed 45 per cent. (as against the present 92 per cent.), the maximum rate of an annual wealth tax 1½ per cent. (on the excess of capital value over Rs. 15 lakhs), the maximum rate of the personal expenditure tax 300 per cent. (on a net personal expenditure per head of over Rs. 50,000 per annum) and the maximum rate of gift tax 80 per cent. (on gifts received by persons whose real estate, including the gift, exceeds Rs. 40 lakhs); all capital gains should be taxed at the same rate as income—that is, subject to the maximum rate of 45 per cent. He has estimated that the reforms of personal taxation he has suggested would yield Rs. 100 crores a year or more—though it may take some years before the full benefit is reaped—and that the other measures, including those designed to control evasion, he has suggested would yield Rs. 20 to Rs. 30 crores a year.

In the U.K., Prof. Kaldor is a distinguished exponent of the economic philosophy which is so dear to the hearts of the men who run the Government in this country. It is not, therefore, fanciful to believe that he will become the spiritual father of a new fiscal movement. It is not clear whether Mr. Bhagat was hinting at such a development, when he averred that "it was just possible that there might be an entirely new structure of taxation." But before the authorities finally decide to abide by Prof. Kaldor's leadership, they will perhaps do well to note that, in his own country, there are many eminent thinkers who do not see eye to eye with him. Even if this does not detract seriously from Prof. Kaldor's merit—no prophet is honoured in his own country—it will be worthwhile to note that some valid criticisms have been made of his "expenditure tax" system. Dr. A. R. Prest of the Cambridge University, writing in the October issue of *Lloyd's Bank Review*, examines the theoretical advantages claimed by the advocates of expenditure tax. He reaches the conclusion that, while the practical problems involved in implementing the reform are well-nigh formidable, the theoretical advantages of the proposals themselves are not as strong as they appear at first sight.

Before we present Dr. Prest's conclusions, it may be well to indicate briefly how expenditure tax works. Under the present scheme of taxation, if a man has an income of Rs. 10,000 a year and spends Rs. 8,000, he would be charged income-tax on Rs. 10,000; under an expenditure tax, he would pay on Rs. 8,000. Ignoring all canons of prudence, he spends, let us say, Rs. 12,000 a year, whether by borrowing or by drawing upon his savings; under income-tax, he would be assessed on Rs. 10,000, whereas, under an expenditure tax, he would be assessed on Rs. 12,000. The traditional argument for expenditure tax is that it encourages savings. Mr. Kaldor's contention is that it is also more equitable.

After an elaborate and convincing discussion, Dr. Prest reaches the conclusion that it is not certain that savings will be appreciably greater under an expenditure tax than under income-tax. Here are some of the other observations of Dr. Prest on the proposal;

"(1) There is the political problem of whether it is reasonable for the State to require such a degree of information as would be needed from the taxpayer about his activities. This is a matter for us to judge as political theorists rather than as economists; but the expenditure tax advocates should not be surprised if they found themselves in a small minority.

"(2) The transitional difficulties would be immense. Dr. Kaldor confesses that it might be necessary to withdraw all existing bank notes and make a new issue to prevent people building up cash hoards in anticipation of the introduction of the tax.

"(3) The practicability of the proposals for dealing with durable consumer goods (e.g., how is the list defined or changed?) is far from clear.

"(4) The identification of some forms of saving is an extremely treacherous operation. This is particularly true of saving by small business men whose bank accounts reflect both business transactions and personal expenditure. One cannot help feeling that the evaluation of saving is even more difficult than Mr. Kaldor admits it to be.

"(5) Difficulties would arise if an expenditure tax operated in this country but not in others, e.g., people might save heavily for a number of years and then emigrate in order to avoid taxation on their dis-saving.

"All these sorts of difficulties are reduced in magnitude, if not in kind, when the expenditure tax applies only to the surtax groups. Even so, one needs the boldness of faith to deny that they are still immense."

Summing up his arguments, Dr. Prest says:

"The theoretical advantages of an expenditure tax in promoting savings are not as strong as would appear at first sight, when allowance is made for 'equivalent taxation', and when the deterrents to saving offered by estate duties, the fear of inflation, and the possibility of discrimination against investment income are remembered. However, there are circumstances in which savings may be greater and these must be given full weight, along with the other advantages in promoting risk-bearing, etc. The equity argument is partly political. In so far as it is economic, it depends on the extent to which 'excess' consumption is being financed from capital gains and dis-saving. Mr. Kaldor's mental picture is that of a small group of people squandering their heriditary wealth on luxurious consumption. An alternative might be that of a large number of people drawn from all income groups supplementing their nominal money incomes to differing degrees by incomes in kind and expense allowances of multifarious shapes and sizes. Finally, the practical problems of expenditure taxation seem so formidable that one is bound to conclude that much less drastic modification of the existing fiscal system should be capable of accomplishing most of what an expenditure tax could really promise."

All this is only a very bare summary of Dr. Prest's very convincing arguments. But it should be sufficient to show that the path of expenditure tax is not strewn with roses, whether for the tax-gatherers or the assessees.

* * * *

Last week, we referred to the signs of dear money conditions in the U.S. and Canada, as reflected in the increase in treasury bill rates to 3.013 per cent. and 3.26 per cent., respectively. Since then, while reports from Washington suggest the continuance of tight conditions in the money market, Canada has already raised its Bank rate from 3½ per cent. to 3¾ per cent. The increase in the bank rate, it is stated, is a formal official adjustment to a situation in which the demand for new money continually presses against the official determination not to increase the money supply. Following the increase in the Bank rate, the Canadian chartered banks have raised the interest rate on prime loans from 5¼ per cent. to 5½ per cent. The increase in Canadian Bank rate, according to reports from Washington, will not affect the U.S. monetary policy; the Federal Reserve System's discount rate was raised to 3 per cent. from 2¾ per cent. only in August last.

Yet another country to announce an increase in Bank rate is the Netherlands, the Dutch Bank rate having been raised from 3¼ per cent. to 3¾ per cent. This is the third such increase announced by the Dutch Central Bank this year, the two previous revisions being 3 per cent. from 2½ per cent. in February and 3¼ per cent. from 3 per cent. in August. Many West European countries are faced with the problem of checking inflation as well as of preventing the depletion of foreign exchange reserves. Both France and the Netherlands have suffered a deterioration in both internal and external fields. Germany and Belgium, however, are worried over internal expansionary pressure, rather than balance of payments problem.

* * * *

In India, too, interest rates are firm. The Scheduled Banks' resources have been utilised to the fullest extent possible by way of loans, overdrafts and bills purchased and discounted. If there has been no substantial increase in interest rates, it is because the Reserve Bank and the State Bank, to some extent, have been lending money to the banks at fixed rates of interest. But the problem is what to do in the coming months, when the demand for financing agricultural crops and seasonal industrial production, for instance sugar, will gather momentum. The capacity of commercial banks to create more credit is greatly restricted. The Reserve Bank, of course, can lend more through the usance bills and it is suggested that the Bank must liberalise the conditions under which such advances are given. It has even been suggested that the rate of interest on such bills should be reduced and that, at the same time, selective credit controls could be introduced to ensure that banks lend money only for approved purposes. Another suggestion made is that the Government should expedite payment of all outstanding bills for goods and services supplied to it. This may go some way towards easing the position, but it cannot by itself provide any substantial relief.

There are two more ways in which the money supply can be increased. The Reserve Bank can be asked to buy both Central and State Government loans, which have sagged to a considerable extent in recent weeks. Through this open market operation, a fairly large amount can be pumped into the market. But this may run counter to the objective of not aggravating inflationary forces. The other way lies in expediting the development programmes of the public sector, so that more purchasing power will reach the hands of the public. This, however, is more difficult than the first, inasmuch as the State Governments are busy with the reorganisation of States; further, in the next two or three months, all ministers at the Centre and in the States will be preoccupied with the elections. Indeed, there is unlikely to be any appreciable momentum in the development expenditure in the first half of 1957.

It is stated that the Finance Minister will be visiting the City during the week-end and stay on till Monday evening. One of his engagements during this brief visit is a meeting with the bankers on Monday. While we are told that the main object of this meeting is to enable the Finance Minister to have personal acquaintance with the bankers, it is not unlikely that the state of the money market also will receive his attention. We are told that one of the questions to which he should address himself is whether it is not necessary to raise the cost of bank credit, with a view to discouraging borrowing for non-essential purposes. Mere selective credit controls may not be found adequate for this purpose, in view of the fact that the Indian money market is not a highly integrated one. Since the State Bank of India is under the control of the Government, it should not be difficult to increase the interest rates on bank credit without using the Bank rate weapon. Most of the banks prefer to raise their lending rates of interest, but are afraid to do so, due to fear of the State Bank pinching their business. Higher interest rates on advances will, of course, mean an increase in those on deposits, but it is felt that this will not be without some positive gain to the country. It is well known that higher interest rates stimulate savings and will ultimately bring more deposits to banks.

* * * *

Although the Central and State budgets are a long way off, investors must be prepared for a few shocks much earlier. The A.-I.C.C. meeting at Calcutta on 10th and 11th November is expected to give final shape to the Congress manifesto for the forthcoming General Elections. It remains to be seen whether, at this meeting, a new twist will be given to the Avadi Resolution on the economic and social objectives of the Congress Party. Since the main opposition to the party in power is from the left, it will not be surprising if it tries to steal the opposition's thunder by moving to the left still further, at least on paper. No wonder the share markets have, once again, begun to wilt, after tending to recover last week.

* * * *

The reactionary trend displayed by Bombay Burmah shares this week, despite rumours that the Company's working during the past year has been excellent, is due to the uncertainty that surrounds the final outcome of the negotiations between the management of the Company and the Bombay Shareholders' Association on the question of compensation to be paid to the holders of the Founder shares for surrendering their special rights. The uncertainty is due to the difference of opinion between the Association and the Company on the amount of compensation, as also on other issues connected therewith.

Under an agreement between the late Mr. William Wallace, the founder of the Bombay Burmah Trading Corporation, and the Corporation, entered into in the year 1864, the Founder shares are entitled to an extra or preferential dividend equal

EQUITIES RECEDE

SELLING PRESSURE IN TEXTILES

(From Our Own Correspondent)

BOMBAY, *25th October*

THE steady tone which prevailed in the share market during last week, with a moderate recovery in equity values, proved to be short-lived. For the week under review witnessed once again a retreat in equity values, under the lead of textile shares. Though the closing rates were well above the lowest levels, the net losses over the week more than wiped out the gains recorded in the previous week. The recession was due to lack of support coupled with liquidation, induced by fears about the outlook for cloth trade in the absence of any further relief in excise duty. The stringency in the short-term money market, recurrent rumours about the possibility of interest rates being raised, and the forthcoming offer of some attractive industrial issues restrained operators from lending support.

In the steel section, Tata Ordinaries slumped from Rs. 194-4 to Rs. 190, at which level some support was in evidence and the scrips recovered to Rs. 192-4. The gain was partly wiped out on profit-taking and the shares closed at Rs. 191-4. Indian Irons hardened early in the week from Rs. 34-6 to Rs. 34-11 before receding to Rs. 34-0½ on Tuesday this week. Subsequently, they moved between Rs. 34-2 and Rs. 34-8½ and finished at Rs. 34-5.

As already indicated, textiles provided the cynosure of attention of the bears. Bombay Dyeings were hammered down from Rs. 632-8 to Rs. 615-10, but they partly recovered to close at Rs. 621-4. Centurys were pushed down from Rs. 553-8 to Rs. 540, before being lifted up to Rs. 544 at the close. Kohinoors gave way from Rs. 352 to Rs. 343. Bradburys lost Rs. 3-12 to Rs. 201-4, Central Indias Rs. 5 to Rs. 145, Finlays Rs. 3 to Rs. 340 and Gokaks Rs. 2-4 to Rs. 238. Indu Ordinaries shed As. 2 to Rs. 11-15, Indore Malwas Rs. 2-8 to Rs. 155-4 and Khataus Rs. 5-10 to Rs. 245. A drop of Rs. 5 to Rs. 110 was noted in Mysore Spinnings. New Greats, however, held ground at Rs. 231. Shree Niwas Cottons were done Rs. 2-8 lower at Rs. 212-8 and Simplex changed hands Rs. 3 lower at Rs. 199. Standards moved down by Rs. 8-2 to Rs. 466-14, Svadeshis by Rs. 3-4 to Rs. 248-4 and Tata Mills by Re. 1-4 to Rs. 54-4.

Minor variations were noted in the electricity section. Ahmedabad Electrics were down over the week by As. 10 at Rs. 93-12, whereas Bombay Suburbans gathered As. 15 to Rs. 110-15. Surat Electrics shed As. 10 to Rs. 119-6. Tata Hydros were done at the close at Rs. 127-8 *ex-div.*, as against Rs. 130 *cum-div.* a week ago, Tata Powers at Rs. 1,265 *ex-div.*, as against Rs. 1,312-8 *cum-div.* and Andhra Valleys at Rs. 1,200 *ex-div.*, as against Rs. 1,238-12 *cum-div.*

In the miscellaneous section, sugar shares were featureless. Belapurs closed a rupee higher at Rs. 251-8, after being taken down to Rs. 248-8. Phaltans changed hands Rs. 2 lower at Rs. 159-12 and Walchandnagars Re. 1-4 down at Rs. 275. Bhopal Sugars were unchanged at Rs. 17-12. Narrow movements characterised transactions in cement shares. Associated Cements dipped from Rs. 194-4 to Rs. 192 before being restored to Rs. 194-4. Digvijays shed As. 12 over the week to Rs. 193-4. Orissas were dull at Rs. 13-2 and Dalmias at Rs. 14-15.

In the shipping and transport section, Scindias retreated from Rs. 18-13½ to Rs. 18-7 before regaining to Rs. 18-12. Great Easterns were dull at Rs. 22-1. Premier Automobiles, which were admitted to the forward list this week, recorded a rise of Rs. 5-4 to Rs. 108-8. Hindustan Motors were steady at Rs. 9-7.

Among the engineering and mining shares, Alcocks were brought down by Rs. 8-2 to Rs. 330. Tata Locomotives receded from Rs. 168 to Rs. 165-12. Larsen and Toubros were steady at Rs. 18-10. Shivrajpurs were well maintained at Rs. 86. Indian Coppers were done at Rs 4-4½ *ex-right*, as against Rs. 6-14 *cum-right* last week.

In the miscellaneous group, Bombay Burmahs (Old) gave way from Rs. 739-6 to Rs. 728-12 and their new shares dropped Rs. 4-6 to Rs. 270 National Rayons fell from Rs. 260 to Rs. 254-12. Killick Industries were, however, better by a rupee at Rs. 173. British India Corporations were steady at Rs. 11-3. Tata Chemicals shed As. 5 to Rs. 20, while Tata Oils were a fraction better at Rs. 52-12. Wimcos gathered Re. 1-14 to Rs. 176-14. Hind Cycles were a shade higher at Rs. 160-10.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *24th October*

After remaining closed from the 10th to 21st inst., on account of the *Pooja* holidays, the Calcutta Stock Exchange reopened on Monday last to record lethargic and uninteresting conditions. Lack of inquiries, disappointment over Government's reluctance to permit a higher dividend for the shareholders of the I.I.S.Co., Ltd., and dull reports from the commodity markets conspired to cool down the sentiment of buyers. The decline in the prices of jute goods, the labour problems caused to certain mills following the introduction of automatic looms, and the higher price-trend for raw jute made the jute section the quietest corner in the market.

Reports of growing Russian and Chinese competition in the textile markets in Singapore and Aden, where imports of cotton piecegoods from India are usually the largest from any single country, made even the appearance of textile scrips difficult. Exports of cotton piecegoods and cloth have been falling in recent months, and the recent addition to export duty is naturally putting down indigenous consumption, despite the improved standard of living. Miscellaneous industrials followed the general trend, while, in engineerings, tired bulls used the opportunity to indulge in profit-taking by liquidating holdings. In contrast, tea shares were in better form, following the emergence of strong demand in the Calcutta auctions held on Monday and the announcement of the 1956 crop regulation scheme which aims at reducing the crop by 25 million lbs.

The ending of the strike in the coalfields in the Raneegunj belt should have normally improved sentiment and invited more buying, but the general wave of dullness and depression was very strong and coals were caught in it. Burrakurs were quoted at Rs. 15-12 with Central Indias dropping to Rs. 7-4 from Rs. 7-7 but closing at Rs. 7-8.

In the engineering section, Indian Irons were marked lower at Rs. 33-13 after having opened at Rs. 34-2. From the previous closing rate of Rs. 39-1 Jessop & Cos. gave way to Rs. 37-12. Richardson and Cruddas were done to Rs. 26-15, as against the rate of Rs. 28-3 prevailing on the eve of the holidays. Texmacos were driven to quietness at Rs. 22-11. Hooghly Dockings met with business at Rs. 139 with Braithwaite & Cos. remaining firm at Rs. 29-6.

Tea shares were steady. Moheemas hardened by As. 4 to Rs. 24-10. Banarhats advanced by Rs. 3 to Rs. 336. Jutlibaris rose to Rs. 26-14 from Rs. 26-10. Dhelakats were fractionally higher at Rs. 23-9.

Many miscellaneous industrials reflected the general trend and lost ground. But there were exceptions too. Thus, while Aluminium Corporations were lower at Rs. 11-8, National Carbons were firm at Rs. 30 before finishing lower at Rs. 29-12. National Rollings came down further by a few annas to Rs. 10-11, as the lockout in a section of the mills was continuing with no prospect of an early resumption of work. F. & C. Oslers were quiet at Rs. 11-10. India Steamships moved down from Rs. 10-5 to Rs. 10-1.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *23rd October*

The Madras Stock Exchange put on a somewhat lively appearance during the week under review, in contrast to the depressed tone depicted in the past three weeks. There was a general recovery in equity values. The recovery was due mostly to large-scale covering by shorts. Some revival of buying was also in evidence, albeit in a few selected scrips. Real investment support was, however, still lacking.

In the planting section, coffee shares ruled firm. Rajendras were in the limelight, their quotation advancing by As. 8 to Rs. 12-8. Cochin Malabars gained an anna to Rs. 11-9. Kadurs were fully maintained at Rs. 3, as also Mysores at Rs. 3-3-6. Rubber shares elicited good attention of operators and registered an improvement in prices. Travancore Rubbers and Vaikundams rallied As. 4 each to Rs. 26 and Rs. 34-12, respectively. Rajagiris rose by a like amount to Rs. 25-12. Kailas picked up As. 2-6 to Rs. 6-5-6. Chandramalais increased by As. 2 to Rs. 5-9 *cum-div.* Be Bes were steady at Rs. 5-5 *cum-div.* The declaration of a higher dividend of 9 per cent. for the year ended 31st March 1956, as against 7½ per cent. for the previous year, announced by the Directors of the Be Be Rubber Estates Ltd. did not have any effect on the value of shares. Pullangodes were unchanged at Rs. 4-4-6 *cum-right*. The Pullangode Rubber and Produce Co., Ltd., has obtained permission from the Controller of Capital Issues for the issue of rights ordinary shares at par in the proportion of one share for every two shares held. Among tea shares, Devons strengthened by As. 4 to Rs. 26-4 *cum-right*. Coorg Teas and Kalasas gathered As. 2 each to Rs. 12-8 and Rs. 15-8, respectively. Mlamallays, however, were subjected to continue pressure of sale and climbed down by Rs. 5-4 to Rs. 49-12. Kalpettas failed to evoke support and dropped As. 6 to Rs. 32. Midlands receded by As. 4 to Rs. 19-14. Lucky Valleys shed a like sum to Rs. 13-14.

Among textiles, Metturs came in for enquiries and moved up by Rs. 4-8 to Rs. 452. Janardhanas and Ranga Vilas finished each Rs. 3 higher, the former at Rs. 102 and the latter at Rs. 87. Coimbatore Spinnings put on Rs. 2 to Rs. 90. Loyals gained As. 8 to Rs. 53. Radha Krishnas, on the other hand, were on offer Rs. 5 lower at Rs. 370. Bangalore Woollens receded by Rs. 2-8 to Rs. 563-12. Buckinghams eased by As. 8 to Rs. 196-8.

Among miscellaneous industrials, Textools evoked enlarged buying demand and spurted by Rs. 7 to Rs. 250 *cum-div.* Nundydroogs moved up by As. 12 to Rs. 11-8. Champion Reefs advanced by As. 9 to Rs. 8-1. Mysore Golds gathered an anna and a half to Rs. 2-7-6. Aluminium Industries rose by As. 6 to Rs. 20-6. Dalmia Cements strengthened by As. 4 to Rs. 15-6. Mysore Chemical Fertilisers gained As. 2 to Rs. 8-10.

CONSERVATIVES IN CONFERENCE

From Our Own Correspondent

LONDON, *22nd October*

THE true Conservatism of today is not the diehardism of the political cartoonists but the pragmatism that judges the broad tide of popular opinion, and is prepared to accept and consolidate the revolutionary ideas of yesterday. It is never in the vanguard when there is a flush of new hopes, new ideals, a surge towards a new way of living. But it takes over when the apostles of change have been thrown into confusion by unexpected difficulties; when uncertainty has replaced aspiration. Thus, it has a useful role to play in giving more progressive forces time to review their policy, adjust their values and draw fresh inspiration for another forward movement. On the other hand, Conservatism is no longer a self-contained philosophy of Government—a policy of conducting affairs firmly according to its own defined principles.

LONDON LETTER

All this has been reaffirmed at last week's annual Conference of the Conservative Party. The twentieth century Liberalism in economic affairs—the twentieth century Conservatism of the right wing Tories which has its own merits as opposed to the philosophy of public control in the fields of industry and commerce—is too strong for the party's leaders. They are only prepared to "dash for freedom" by knocking off direct physical controls, ignoring the fact that the fiscal chains they impose are just as cramping to enterprise. What is the good of a policy of individual and private enterprise when the *entrepreneur* is prevented from raising capital and taxed to the hilt on any profits he may earn to ensure that he cannot even create his own capital?

Capital formation in the United Kingdom today has become largely a matter of chance gains. Only very large enterprises can have large enough accumulations put to reserve after taxation to finance substantial development. That is why the rumble of discontent is heard on the wings of the Party: but it is noise without power. As the economic debate at the Conference showed, the Party is prepared to accept the Chancellor's policy of squeeze and consolidation which can do nothing but keep the way open for his opponents' return to power. Provided he can keep his head above the waters of international insolvency, Mr. Macmillan is content—but he can show no hope of raising himself bodily above them. It is, of course, interesting and instructive to note the motions debated at the Conference—that the Government should implement more forcibly its election pledges (towards complete economic freedom); should pursue a "realistic economic policy" and should make heavy reductions in taxation (big economies in Government spending and deflation to bring down the level of wages). But these were simply the rumbles on the right wing and the Government's spokesmen showed clearly that they could not be regarded.

Rent Control

Only on one score is the Government prepared to be brave—it says it will decontrol rents and allow new levels to be established. Some such policy is long overdue—the control levels no longer pay for the costs of upkeep of dwellings and landlords have even been known to abandon properties which were only liabilities. Thus, new slums are being currently created where repairs and rebuilding should be encouraged. Of course, the Opposition will make party capital out of any move to free rents and represent it as an imposition on wage earners. On the other hand, it remains to be seen whether the Government will follow the logic of its own arguments and introduce sufficient freedom really to encourage the proper repair to and improvements of property or whether by introducing half measures they will merely increase profit rentals without encouraging improvements and thus maximise opposition.

When one turns to such philosophy as could be distilled from the Chancellor of the Exchequer's speech, one is struck by the absence of any appreciation of the need to provide real incentives and rewards for achievement. Of course, such incentives and rewards are directed at the middle classes and those who aspire to enter them, and, in a country whose working classes have as their main aspiration to become middle classes, this would seem to be an elementary political mistake. It is no use Mr. Macmillan calling for more enterprise, increased production and so forth, unless he is prepared to allow substantial rewards to those who follow his call; and, after his speech, the jibe could still hold good that his party is either the friend of entrenched capital, on the one hand, and can only offer doles and state paternalism, on the other.

Certainly, the Conference has not improved Mr. Macmillan's chances of becoming the Prime Minister's potential successor; in fact, the Chancellor has a greater following for his right wing stand on Suez than he has for his handling of fiscal affairs. Mr. Butler's failures as Chancellor are, on the other hand, by way of being forgotten and he has a large following in his "centre" policy. At present, the two factions within the Party are evenly balanced, the adherents of one have no time at all for the other and Sir Anthony Eden, though loved by few, continues to reign supreme and be cheered by all.—*All Rights Reserved.*

NEWS IN BRIEF

NEARLY 160 co-operative societies of Ahmedabad's 125,000 textile workers have decided to form a federation of co-operative societies to supervise and guide all types of co-operative endeavour among the textile workers of the district.

According to a press note issued by the Joint Chief Controller of Exports, the export of linseed oil and cottonseed oil will continue to be licensed freely up to the end of December 1956 to all permissible destinations, excluding Portuguese Possessions in India.

Sir Raymond Streat, Chairman of the British Cotton Board, has announced that a delegation from Lancashire would visit India at the end of next month to discuss the question of British imports of Indian cotton textiles. The decision followed talks in London between a number of Lancashire cotton experts and Indian manufacturers.

During the period April to July 1956, India exported 642,200 pairs of leather shoes and boots, as compared with 586,019 pairs in the same period of last year. The total number of all kinds of boots and shoes exported, including those made from rubber, aggregated 1.5 million pairs, as against 1.1 million pairs in the corresponding period of last year. The exports went mostly to Aden, Bahrein Islands, Ceylon, and Saudi Arabia.

The Indian Council of Agricultural Research has decided to award prizes to those individuals or firms who are able to effect considerable improvements in the existing designs or evolve new ones in respect of 15 agricultural implements which are at present in use. The aim is to promote healthy rivalry among designers and research workers in evolving improved agricultural implements.

The Government of India has decided to extend the medical care provided under the Employees State Insurance Scheme to families of insured persons. The decision will be implemented as early as possible in the next financial year. About 30 lakhs of persons are likely to be benefited by this extension. The scheme now covers over 10 lakhs of employees in 39 centres in the country. It will ultimately cover over 90 lakhs, including families, when implemented all over India.

The Entomology and Animal Pests Committee of the Indian Council of Agricultural Research which concluded a two-day session in New Delhi recently has recommended a scheme to investigate the rate of decomposition of deposits of some common insecticides such as nicotine, D.D.T. and Gamahexane on their exposure to light and air at different temperatures. The investigation is expected to throw some light on the nature of residual effects of these insecticides.

The Hindustan Cable Factory at Rupnarayanpur in West Bengal, owned by the Government of India, is being expanded to enable the factory to take up the manufacture of co-axial telephone cables required for trunk lines. The factory, which went into production in September 1954, is the only unit manufacturing telephone cables in India. When in full production, the factory will manufacture 300 miles of co-axial trunk cables which will enable the Posts and Telegraphs Department to link the major cities of India by an underground telephone cable network.

The Government of India is understood to have approved of a number of industrial schemes for the manufacture of machinery and engineering goods. A new factory is being established in Bihar for the manufacture of under-frames for railway coaches and a firm in Madras is to be allowed to manufacture electric passenger, goods and service lifts. A Bombay firm is to be allowed to manufacture 9,000 tons of cast iron spun pipes per year. A Calcutta firm will be allowed to manufacture structurals with a capacity of 6,000 tons per year. Another engineering firm in Bombay will be permitted to produce steel forgings with a capacity of about 180 tons annually.

Mr. Yuji Kato, a member of the Japanese industrial machinery mission which recently visited India, has observed that the Government of India had proposed the conclusion of a long-term contract with Japanese steel mills. The Government, according to him, has expressed its readiness to export 1.5 million tons of iron ore to Japan in 1957, two million tons in 1958 and 2.5 million tons in 1959 and 3 million tons annually from 1960. He also said that officials of the Ministry of Commerce and Foreign Trade Corporation are expected to visit Japan to hold a series of talks for concluding the contract.

The establishment of a Rs. 5.5 crores plant for the manufacture of 30,000 tons of newsprint annually from bagasse is under the consideration of the National Industrial Development Corporation. A German firm, which was directed to submit a project report for the proposed factory, has recommended the location of the plant near a large sugar mill in South India. The report of an Italian firm on the subject is also awaited. The plant, it is expected, would consume about 50,000 tons of bagasse annually. It has been estimated that the newsprint produced in the factory would cost Rs. 600 per ton ex-factory, as compared with the Rs. 870 per ton at ports for the imported newsprint.

The delegation of the Silk and Rayon Textiles Export Promotion Council, which is on a tour of Afghanistan, Iran, Iraq, Kuwait and Bahrein, reached Afghanistan last week. The delegation held a number of meetings with the Afghan Chamber of Commerce, the Pushtony Tejarty Bank and the Central Co-operative Depot. Samples of Indian silks and rayons were also on display. These samples elicited much appreciation from local merchants. The delegation endeavoured to acquaint the Afghan importer with the benefit of trading with India, as well as the progress Indian industries had made. The delegation has now proceeded to Teheran.

Several important questions concerning promotion of trade in the Asian region will be discussed at the next meeting of the Trade Promotion Committee of the Economic Commission for Asia and the Far-East to be held in Tokyo from 29th October to 5th November, 1956. India will be represented at the Committee by Mr. Amolak Chand, Member of Parliament, Mr. B. K. Kochar, Deputy Secretary, Ministry of Commerce and Consumer Industries and Mr. D. Hejmadi, First Secretary (Commercial) in the Indian embassy in Tokyo. The Committee will discuss inter-regional trade consultations, development of inter-regional and intra-regional trade, facilities for trade with land-locked countries and arbitration and shipping difficulties. India has taken deep interest in these questions at the previous meetings of the Committee as well as the meetings of the Commission itself. The Committee will present a report to the main E.C.A.F.E. Committee on Industry and Trade. Mr. B. K. Kochar has also been asked to explore, while in Japan, in consultation with Japanese commercial and industrial interests the possibility of developing Indo-Japanese trade, based on export of ores, salt, and tobacco from India, and import of steel, cement and textile machinery from Japan.

From Abroad

Nearly 75 per cent. of Japan's shipyard workers went on an indefinite strike on the 17th inst. The workers' demand is for an increase in wages of 2,000 yen ($5) a month, while employers have offered only 500 yen.

According to Mr. Wijayesinghe, Parliamentary Secretary to the Finance Ministry of Ceylon, a scheme for the nationalisation of life insurance in the country will be submitted to the Cabinet for consideration shortly. There are about 60 insurance companies in Ceylon, most of which are foreign-owned.

The Council of the International Chamber of Commerce has passed resolutions expressing deep concern over the nationalisation of the Suez Canal Company. It feels that this development would greatly impede the growth of underdeveloped countries. In another resolution, the Council deplored commercial boycott based on racial or religious grounds.

As part of its drive against noise, the municipal authorities of Paris, where motor hooters have long been stilled, have prohibited the use of a whistle to call taxis from hotel steps. In future, the hotel attendant will not blow a whistle, but will hold a painted disc bearing the word "taxi" at the end of a stick, to attract the attention of passing taxi-drivers.

For the first time this year, 525 talented youngsters from all over the United States are attending college, with the help of the largest privately-financed scholarship programme in the history of American education. They are winners of $3,160,000 in college scholarships offered by the National Merit Scholarship Corporation after a nation-wide search for talent.

The proposed Swedish Atomic Insurance Pool was formed in Stockholm at a recent meeting of Sweden's leading insurance companies. The activities of the Pool will include insurance and re-insurance both in Sweden and abroad of plants for producing atomic energy in all its different stages. Mr. G. Kalderen, of the Skandia Insurance Company, was elected President of the Pool.

An Air Navigation Conference, dealing with such problems as airworthiness and operation of aircraft, is now being held at the headquarters of the International Civil Aviation Organisation at Montreal, Canada. The Conference, which is attended by technical experts, representing more than 20 nations and international organisations is the third to be held by the I.C.A.O. The Conference is expected to last four to five weeks.

The Committee for Economic Development of the U.S., a private non-political group, has advocated a continuing policy of gradual and selective tariff reductions. According to it, such a policy will not only broaden and increase world trade but is in the national interest of the United States. The Committee, headed by Mr. J. D. Zellerbach, has submitted its findings to Congress through a House Sub-committee on Customs, Tariffs and Reciprocal Trade Agreements.

According to Mr. Dag Hammarskjoeld, U.N. General Secretary, in 1956, 76 governments contributed $29.9 million to the U.N. technical assistance programme and 73 countries and territories received technical aid. For 1957, the United States has pledged a higher amount of $15.5 million. India will increase its contribution from $450,000 in 1956 to $500,000 in 1957. Argentina will also increase its contribution for 1957 by more than three times, to $360,000.

The Norwegian Government will ask Parliament for approval to increase the sale of tickets in the State Lottery from the present £3,500,000 maximum to a maximum of £5,000,000 a year. The lottery is held monthly, and, with the present maximum, tickets are sold out almost immediately. Of the lottery income, 64 per cent. is distributed in prizes, 5 per cent. is used to cover expenses, and the remainder goes into the State Exchequer. This year, the Exchequer will receive about £1,000,000 from the lottery.

Three American firms are pooling their resources to develop an atomic-powered locomotive. Two of the firms, the locomotive manufacturing Baldwin-Lima-Hamilton Corporation and the Denver and Rio Grande Western Railroad, have contracted with Walter Kidde Nuclear Laboratories for a technical study of the possible development of a radically different type of mobile nuclear reactor. This is claimed to be the first industry-sponsored and financed research project undertaken in this field. Another step forward in the atoms for peace programme is that the Kidde concern has been called in on the project to check conclusions and computations of the other two firms' engineers who started the study in 1955. A report by the Department of Physics of the University of Utah in 1954 has declared that an atomic locomotive would be technically feasible.

PERSONAL

DR. S. Bhagwantham, a well-known physicist and Vice-Chancellor of the Osmania University, has been appointed Director of the Indian Institute of Science at Bangalore.

Dr. N. V. Rajkumar has been appointed Commissioner for the Government of India in the British West Indies including British Guiana. He will have the rank of a Counsellor and will assume charge of his new post in December.

Mr. B. B. Ghosh, Joint Secretary in the Defence Ministry, took over as Secretary of the newly-created Food Ministry on Friday last. Mr. P. N. Thapar who had been Secretary of the combined Ministry of Food and Agriculture, assumed charge as Secretary of the Ministry of Agriculture.

Dr. D. Bannerjee, Chairman of the Indian Standards Institute, Rubber Division, returned to Bombay from Rome on last Friday. He visited Czechoslovakia and West Germany to obtain machinery for rubber manufacture and to explore the possibility of obtaining technical assistance from those countries.

Mr. B. R. Sen, Ambassador of India in Japan, who was recently elected Director-General of the Food and Agriculture Organisation, is scheduled to leave Japan on 30th October. After a short sojourn in India, he is expected to take up his new assignment towards the end of November. He is the first Asian to become the head of a permanent body of the United Nations.

Mr. Warren Lee Pierson, Chairman of the Board of Trans World Airlines, has been awarded the Commander's Cross of the Order of Merit of the Federal Republic of Germany in recognition of his services to civil aviation in Germany. Mr. Pierson, who has served as T.W.A. Board Chairman since 1947, has represented the United States in important matters of international finance and world trade over a period of twenty years.

Dr. Lewis Webster Jones, an outstanding economist and President of Rutgers University, will shortly visit South Asia to study the operation of the U.S. Mutual Security Programme. He is one among the six other prominent private citizens named by the Senate Foreign Relations Committee to obtain the most objective and non-partisan analysis of the Mutual Security Programme as it functions in different areas abroad. Author of several books and a contributor to the *Encyclopædia of Social Science*, Dr. Jones served as a member of the President's Commission on Higher Education from 1946 to 1948.

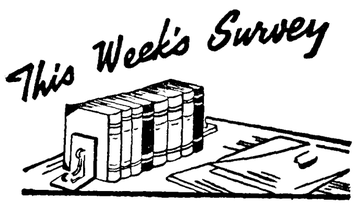
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *31st October*

Trade Revival

Encouraging signs have been evident in Great Britain of a speedy trade revival since the suspension of the Gold Standard, and confidence is steadily growing owing to the determination of the politicians to save the financial position of the country. As a result, Yorkshire textile firms have reaped orders totalling millions of pounds since the gold exchange was abandoned. Four cotton mills have reopened in Lancashire and others are expected to reopen in the near future. This noticeable improvement is not confined to any one section of the trade. Spinners and manufacturers alike are sharing in the benefit, while medium worsted and heavy woollens are also better placed than for a long time. The result is that in many places mills which have only been running a few days a week are now going "all out" and calling for more workers from the ranks of the unemployed. Numerous collieries in South Wales are reopening or extending their working time to cope with orders. Furniture and paper traders are busily booking orders, not only from England but also abroad. In each case thousands of workers are being drawn from the ranks of the unemployed, and manufacturers are rubbing their hands with the knowledge that they are now able to compete against foreign producers on better terms than they have known for many years.



TRANSPORT NEEDS

THE recent visit of the Union Minister for Railways, Mr. Lal Bahadur Shastri, to South India must have obviously convinced him of both the keen demand and the general enthusiasm of the people for transport. Indeed, transport is the one aspect of India's national economy which does not admit of any ideological controversy. Whichever agency is able to meet the transport needs of the country best—whether it is the private sector or the Government—must be given priority and all assistance. If, in the international sphere, the great powers can agree that the Suez Canal issue should be insulated from the politics of any country—one of the six principles accepted by the U.N.'s Security Council—there is no reason why a non-political, non-ideological approach should not be attempted in India towards transport. A gratifying feature of the recent trends in the Union Government's transport policy is that the authorities are willing to see the peculiar appropriateness of such an approach. They are alive to the need for an integrated development of all means of transport, especially the development of road transport and shipping. Further, they have shown some anxiety to promote private road transport —a belated and half-hearted recognition, it is true, but recognition nevertheless.

Mr. Shastri, who went to South India to open the first phase (37-mile-long Ernakuulam Kottayam section) of the Rs. 6 crores 96-mile-long Ernakulam-Quilon section, has by now realised how greatly the people value transport and, incidentally, how disappointed they feel when transport demands remain unfulfilled. He had constantly to remind the people that the railways were alive to the importance of forging new links such as Trichur-Kollengode, Tellicherry-Mysore, Tirunelveli-Cape Camorin, Ernakulam-Bodinayakanur and Ernakulam-Punalur lines. Some of these lines, he said, were being surveyed, in order to determine the traffic capacity in the sections. Obviously, these links, like those contemplated for other parts of the country, cannot be established overnight. But it is heartening to note that preliminary surveys are being conducted, with a view to determining the scope for immediate development.

The fundamental issue in the sphere of transport, as Mr. Eugene Black, the World Bank President, has emphasised, in his recent letter to the Union Finance Minister, is one of improving the operational efficiency of the railways and of encouraging road transport and shipping. The railway authorities have already taken steps to improve the operational efficiency of wagons. In this connection, Mr. Shastri quoted certain figures which make encouraging reading. He said that the wagon-miles per wagon-day in India were 43.3, as against 43.8 in the U.S., 42.8 in Canadian National, 41.6 in Canadian Pacific and 63.1 in Japan. The relatively high level of wagon performance in Japan, it is stated, is due to the fact that the railway system is more adequately electrified than in India and there is a round-the-clock system of work in Japan. Mr. Shastri revealed that the authorities were trying to adapt the Japanese railway practices to Indian conditions.

The overall transport picture, however, continues to have its dark spots, as indicated by transport shortages. This is primarily due to the demand for transport increasing beyond what can be met by improved railway efficiency alone. During the period of the First Five-year Plan, the goods traffic carried by the railways increased by 26 per cent. as compared with the 1950-51 level of 91.4 million tons. An additional traffic of about 75 million tons is expected to become available by the end of the Second Plan, of which the railways (according to present estimate) will be able to carry only 47 million tons. Clearly, there is a wide gap between the demand for railway transport and its ability to meet it. One way of bridging the gap is to make additional funds available to the railways which have now been allotted Rs. 1,125 crores in the Second Plan. so as to enable them to augment their equipment. But increased allotment is by no means easy to arrange in the present state of the country's finances, apart from the question whether the railways will be able to overcome the technical handicaps inseparable from a plan for augmenting railway services.

A better method would certainly be to supplement the efforts that are being made to increase railway capacity and improve railway efficiency by encouragement to road transport and shipping. Speaking at Madurai at a meeting of the Madurai-Ramnad Chamber of Commerce, Mr. Shastri pointed out that the Motor Vehicles Act was being amended, with a view to giving encouragement to private road transport. He also urged the merchants to patronise road and shipping services to an increasingly larger extent, even if it meant paying a little more by way of freight charges. The Bill to amend the Motor Vehicles Act, which is now in the Select Committee stage, certainly goes some way towards making private road transport a more attractive proposition to the existing and prospective operators. Even so, its provisions will have to be liberalised further, if private road transport has to come into its own. In any case, the State Government's policy towards road transport must undergo a radical change. If the ideological approach, namely, nationalisation of both passenger and freight services, cannot be completely abandoned, though we do not see why it should not be, at least the period of immunity from nationalisation for goods transport now generally taken to cover the period of the Second Plan, deserves to be extended, considering that the life of a motor vehicle is about seven to eight years. Further, a similar immunity should be given to road passenger transport also, wherever it is now being operated by the private sector.

Mr. Shastri revealed that, in order to augment the income of the railways for purposes of meeting the expenditure on expansion of services, the authorities would in the course of the next five or six months announce an increase in freight rates. It should be clear that such an increase would improve the competitive attractiveness of road transport. It would be a pity if motor vehicle operators were prevented from utilising this opportunity by the presence of other handicaps such as inadequate period of immunity from nationalisation and high taxation. Finally, the precise impact of the Government's decision in favour of an increase in freight rates will be known only when the quantum of increase is known. Meanwhile, even those observers who concede the need for such an upward revision in freight rates in the interest of railway development will not fail to notice how reluctant the Government is to apply a similar yardstick in judging the claims of electricity and other public utility undertakings in the private sector, let alone industrial enterprises, for a better remuneration for their services.

POWER SUPPLY IN BOMBAY

The Bombay State, despite its vastly growing industrial needs, has been experiencing power shortage so frequently that every available opportunity is being availed of by *entrepreneurs* in this field to impress upon the authorities the need for augmenting the generating capacity. Though the immediate prospects are promising —the efforts of the Tata hydro group of companies in meeting the power supply requirements are particularly noteworthy—the possibility of a power shortage being felt in 1959-60, unless something is done quickly to raise the generating capacity, was reiterated by Mr. J. R. D. Tata, Chairman of the Tata Hydro-electric Companies, at the annual general meeting of the Companies held this week.

As part of their contribution to meet the growing demand for power, the three companies raised during the past year the hydro-power generation to record levels, thanks to good monsoon, with the result that they were able to return in kind the energy purchased from the railways earlier. Their purchases of thermal energy from the Bombay Electricity Board's plant at Chola were also less than originally anticipated. As regards immediate prospects, Mr. Tata said, the first thermal set at Trombay will be put into commercial operation before the end of 1956. Every effort is being made to bring the second set also into operation by about April next. The construction of the new receiving station at Carnac Road is progressing satisfactorily and no effort is being spared in bringing into commission a part of the receiving station by December 1956. This will enable the southern part of the city to be better served by electricity.

The combined hydro and thermal resources of the Tatas, together with those of the Bombay Electricity Board and Railway plants at Chola, according to Mr. Tata, should be more than adequate to meet all the demands in the areas served by them during 1957-58. The demand, however, continues to rise with the establishment of new industries and with increased domestic consumption. Consequently, the generating capacity at Trombay will soon be fully utilised. The first phase of the Koyna project is expected to commence operation from October 1960. Even so, the supply is not expected to be sufficient to meet the demand. Mr. Tata assessed that a shortage of power would be felt again during 1959-60, unless something was done quickly to augment the generating capacity of the combined system.

During the last one year, Tatas themselves have been examining what further expansion they can undertake. Two projects have been investigated in this connection, one for hydro expansion at Bhira and the other for thermal expansion by the addition of a third set at Trombay. With the approval of the Bombay Electricity Board. they have finally decided to proceed with the Trombay expansion. The main advantage of this project over the Bhira project is that it will enable Tatas to produce almost double the quantity of energy that will be obtainable from the other scheme. The additional supply available from Trombay will thus more than adequately meet the anticipated shortage. Although the generating costs of thermal energy will be higher, this will be more than outweighed by this advantage of meeting the anticipated shortage.

The capital cost of this project is estimated at about Rs. 6 crores, a sum beyond the Companies' resources, unless they are able to get outside financial assistance. They have, therefore, requested the Government of India to sponsor an application which they propose to make to the World Bank for a loan and they are hopeful that the Government will agree to do so. On the assumption they will get the Government support and a loan from the World Bank, Tatas are, in order to save time, proceeding with engineering studies, selection of equipment and other preliminaries. If everything goes well and there is no undue delay, the third set at Trombay is expected to be brought into operation by the end of 1959, if not earlier. The exact amount for which loan is to be sought from the World Bank is not known, but, according to Mr. Tata, it will form a large proportion of the funds required for the project. The balance is to be sought from other sources to meet the rupee expenditure. There cannot be any difficulty in Tatas getting a loan from the World Bank, particularly because the Bank is interested in giving every encouragement to private enterprise, provided the support of the Government is forthcoming. It is to be hoped that the latter will readily endorse Tatas' application for the necessary funds from the Bank.

BONUS FOR MILL LABOUR

For the third year in succession, the dispute over the question of bonus to the 50,000 workers of the 44 cotton mills of Coimbatore, Salem and Palani (for the year 1955-56) has been settled through arbitration. The Arbitration Board, appointed by the Government of Madras with Mr. S. Ganapathai Pillai, District and Sessions Judge, Coimbatore, as Chairman and consisting of the representatives of mill managements and workers, announced its award on Saturday last week. The award was a majority one, the Chairman and the three representatives of labour constituting the majority; the three employer-members dissented totally.

An analysis of the contents of the award reveals that the award errs too much on the liberal side. In fact, it is so liberal that it is to be feared the interests of shareholders have been completely overlooked. The ceiling of six months' wages as bonus granted to about 23 000 workers of 21 mills, for instance, is excessive from Indian standards, past or present, and the increase in the quantum of bonus awarded to workers of other mills is also high. Thus, seven mills are required to pay bonus for five months covering 9.300 workers, four mills for four months, two mills for 3½ months, two mills for three months, three mills for 2½ months and two mills for two months. The two mills which have shown losses are, however, not required to pay any bonus.

Besides fixing the bonus at a high level, the award stipulates that, in determining the basic earnings for purposes of calculation of bonus, all allowances—excepting dearness allowance—such as night, production and maternity allowances, basic wages for the period of statutory leave with pay, and compensation on basic wages paid for involuntary unemployment, should be included. What is worse, the award is made applicable to all mill staff, including jobbers. and even the workers who have worked only for three months during 1955-56. And the workers are entitled to bonus whether they are now in service or not. Further, the mills have not been given sufficient time to make arrangements for the disbursal of bonus. The whole of the bonus amount—estimated at more than Rs. 60 lakhs—will have to be paid in one instalment on or before the 27th inst., except in the case of two mills where 50 per cent. of the total bonus is to be paid before the scheduled date and the balance within one month.

DEVELOPMENT OF THE SAHARA

Among the world's arid regions, the Sahara is certainly the largest, the French Sahara alone being wider than the U.S. Although scientists have not given up the grandiose dreams of "irrigating" the Sahara, the more immediate prospect of development is the one that is offered by the many mineral deposits that lie beneath this vast expanse of desert land. Since both its certain as well as potential resources are encouraging in the extreme, it will be of interest to mention some of the more important among them. They are:

(1) The newly-found oilfields at Edjele near the Libyan frontier and those of Tiguentourine. According to a statement by the French Secretary of State for Industry, these are expected to yield about 4 million tons of oil per year as from 1959. Some French experts even consider these deposits to be as important as those of Saudi Arabia. (2) The deposit of natural gas at In Salah, in the Djebel Berga. (3) Important coal deposits, mainly in the region of Colomb-Bechar, estimated to contain 4,000 million tons. (4) The iron ore deposit of Tindouf on the Moroccan frontier, estimated to contain 2,000 million tons of ore with a 50 per cent. content. It is sufficient to meet the supply needs of the whole of Western Europe for several years. (5) The deposits of tungsten which might turn out to be the biggest in the world and important uranium deposits.

The exploitation of the above resources in the Sahara, however, will not be without difficulties in view of the rival claims made for this subterranean wealth by other neighbouring States. Thus, even though the French plans for exploitation have already made sufficient headway, it is becoming increasingly apparent that, for any progress to be made, the co-operation of Morocco and Tunisia are absolutely imperative. The former complains that a considerable part of its territory has been taken away by France and claims its return. A similar claim is likely to emanate from Algeria in the event of its achieving complete independence on the plea that major tracts of such territory form its hinterland.

In spite of these difficulties, a Bill has been introduced in the French Parliament which seeks to create a "Common Organisation of the Territories of the Sahara." At the moment, such territories comprise Algeria, French Sudan, French Nigeria and the Chad territory. The new Administration is designed to plan and chalk out programmes for exploitation in the main fields of fuel and power, mining, water supply, industry and agriculture and to create such other conditions as may be found necessary for the successful execution of the project.

ANTIMONY INDUSTRY

The question of protection to the antimony industry, which was continued by Government in 1954 to last till the end of December 1956, following the recommendations of the last Tariff Commission in July 1954, is once again before the Tariff Commission. As a result of the recommendation of the Commission's subsequent suggestion, a Bill has been introduced in the Lok Sabha to provide for an *ad hoc* continuance of protection till the end of the year 1957. The Commission's public enquiry into the question of continuance of protection after 31st December 1957 commenced last week under the chairmanship of Mr. K. R. Damle, Chairman of the Commission.

In the course of his address, Mr. Damle touched briefly on the progress made by the industry during the past few years. It would appear that the antimony industry—in which there is only one producer, namely, the Star Metal Refinery—has not fully discharged the obligations placed upon it by the Tariff Commission. In the first place, the industry was called upon to fix its selling prices on the basis of current landed cost of imported antimony. Secondly, it was asked to maintain a reserve stock of at least 75 tons of antimony metal. The Chairman indicated that they will have to investigate whether and, if so, how far, the industry has fulfilled these obligations, and, if it had not, whether it was due to exceptional circumstances. Mr. Damle stated that. since June and July 1955, when the stocks of the metal with the Refinery were 85.43 and 74.13 tons, respectively, the producer had never been able to maintain the reserve stock of 75 tons recommended by the Commission.

But what is of paramount importance in considering the issue, as was pointed out by Mr. Damle, is that the only unit of antimony industry in India is entirely dependent, on the one hand, on imports for the supply of its chief raw material, namely, antimony ore. and, on the other hand, on the Government for the offtake of a major proportion of its production. Despite the fact that other raw materials required by the industry, such as soda ash, iron scrap, steam coal and fluorspar are available without much difficulty, the industry's dependence on imported ore, as the Chairman said, makes it vulnerable to fluctuations in prices abroad. In these circumstances, Mr. Damle was right in urging that careful consideration should be given to the claim of the industry for the continuance of protection.

The performance of the industry during the past few years, however, reveals that it is gaining in strength. While the production of antimony metal in 1953 was only 130.18 tons, it was as much as 539.07 tons in 1954. 504 tons in 1955, and about 430 tons in January-September 1956. Thus, though there was slight decline in 1955, the production since 1954 has been much higher than in 1953. The demand for 1955, 1956 and 1957 had been estimated at about 550 tons by the Commission during its last enquiry. The gap between domestic production and demand has been met by imports which in 1954 and 1955 amounted to 50 tons a year, and, in the first three months of 1956. to about 15 tons. But the demand is expected to go up to 700 to 1,200 tons in the next few years, thanks to increased offtake anticipated from such quarters as ordnance factories, railways and other Government departments, and storage battery manufacturers. In assessing the industry's claim for protection, it is certainly necessary to determine how far it can meet the growing demand for its product.

BRITISH INDUSTRIAL MISSION

Owing to Britain's long political association with India and its intimate knowledge of economic conditions here, the United Kingdom is in a better position than other countries to assess industrial development prospects in India and provide the necessary technical assistance for rapid industrialisation. But its share in fostering economic development in India in the post-independence period has not come up to expectations. This is due partly to paucity of surplus capital resources in Britain and partly

SEASON FOR VISITORS IS ON

THREE INDUSTRIAL MISSIONS TO EXAMINE INDIA'S NEEDS

By A Special Correspondent

NEW DELHI, 23*rd October*

DELHI LETTER

WITH the advent of the winter season, the capital is as usual crowded with a number of foreign visitors—technicians, dignitaries, trade and industrial missions, educationists and others, including tourists. The former British Prime Minister, Earl Attlee, will be arriving here this evening, accompanied by Countess Attlee. Earl Attlee is not new to New Delhi, as he had already been to this city about three years ago. Ever since his recent arrival in India, he has already visited Bombay, Calcutta. Madras and Lucknow and by this time he must have already formed his own opinion regarding the progress that India has been making since independence. Another distinguished visitor who is expected to visit this city shortly is the Emperor of Ethiopia, who has just arrived in India. Elaborate arrangements are being got ready for according him a fitting royal reception. India has, of late, been attracting a number of foreign students, particularly from Africa, who are already studying in many universities in the country, including that of Delhi. for various technical and other courses. Particular mention should be made of the Institute for African Studies, opened a couple of years ago in the Delhi University. The U.N.E.S.C.O. Conference is to open here on 5th November 1956, and, in this connection, every day brings a fresh crop of foreign visitors to Delhi.

British Team

Perhaps the more important among the visitors from our point of view will be the team of British engineering experts headed by Sir Eric Coates. This 11-man team is to arrive here tomorrow. Sir Eric Coates is not new to Delhi. He was an active administrator during the days of the British *Raj* in India and has still many old friends left in the capital. Having joined the I.C.S. in 1921, Sir Eric has served India for about 25 years. And. in his own country, he was Chairman of the Overseas Food Corporation and later a Deputy Chairman of the National Coal Board. He has set up a reputation as an able negotiator. And he has already been successful in arriving at an understanding with the Government of India regarding the setting up of the Durgapur Steel Plant. The British Mission is coming here at the invitation of the Government of India to advise the Government on matters relating to the expansion of India's heavy engineering capacity. The British team, which includes some of the topmost heavy engineering talent of Britain, is now evincing keen interest to contribute its share towards the economic development of India. The Mission will have its first discussion with the officials of the Ministry for Heavy Industry on Thursday. Later it will visit Calcutta and Jamshedpur and other important places, with a view to assessing the potentialities of expansion of heavy industries in the country.

Now that the Government of India has already decided to set up heavy foundry and forge projects for the manufacture of heavy castings and forgings. the visiting British team, it is believed, will be able to negotiate with Government officials at expert level on certain major projects. A decision is expected to be taken for the establishment of a number of heavy industries.

The Mission will also be visiting some important heavy industry centres in the country, in order to assess in what manner existing works could be expanded and dovetailed into the proposed establishment of new heavy engineering units in the country. The Mission's visit, which has been arranged under the auspices of the U.K. Government in association with the Federation of British Industries and the Colombo Plan, is expected to give the best available technical advice to the Government of India, so that India can produce its own requirements of capital goods and manufacturing plants as soon as possible.

Another technical mission which is coming is from Germany. This Mission is not generally concerned with heavy industries. Its efforts will be largely devoted to studying the technological institutions in the country and suggesting ways and means of improving existing provisions or starting new institutions of technology. This German Mission is being actuated by the lofty motive of arranging a number of technological schools at various levels in the country, in order to train and educate India's young men and make them able and self-reliant in undertaking responsible jobs of technicians and production managers in several industries.

Training

It will be remembered, in this connection, that a British machine tool expert, who submitted a detailed report to the Government of India some time ago on the development of machine tool industry in the country, had remarked that it would be profitable for the Government to adopt the German system of technical and technological education in training production managers, supervisory personnel, foremen, etc., through the aid of small pilot plants. He was of the definite opinion that a successful production manager or a foreman need not necessarily be a high degree holder and that about 90 to 95 per cent. of the personnel already employed or to be employed in industries in India could be most profitably trained through practical methods rather than through high technological institutions. Now that the Government has been planning to establish a number of heavy industries, steel projects, etc., it may be possible for it to benefit by the German system of training the youth of the country.

Yet another technical mission which is expected to arrive in India on or about the same time is from Japan. It is understood that this Japanese Mission is coming as a result of the understanding reached between the Government of India and the Government of Japan that Japan should send technical delegations of machine manufacturers to India every year. It is expected that, because of the highly advanced nature of the Japanese textile industry and the Japanese ship-building industry, the Government of India might utilise the visiting Japanese Mission for studying the ways and means of speedy expansion of the textile machinery and ship-building industries in the country.

Realisation has perhaps come to the Government of India at the eleventh hour that its cloth policy is not all well. This policy, which had been formulated in such a way as to appease the ideologies of a few ministers, has, however, not been beneficial to the larger interests of the country. Perhaps, the Government has come to realise its mistake only now. But then it is never too late. The restrictive policy that has been followed by the Government in regard to production of mill cloth has created a shortage psychology among the people, as a result of which prices have gone up to some extent. This trend, coupled with the high prices of foodgrains in several parts of the country and the acute shortage of housing accommodation in metropolitan cities—which goes on increasing rather than diminishing with the passage of years—is not considered to be conducive to the adoption of deficit financing on a large scale.

Mr. T. T. Krishnamachari, the Finance Minister, is a realist. As such, he is able to argue some of these points candidly with his cabinet colleagues. It is, therefore, likely that some adjustments will be made soon in the Government's cloth policy in favour of the mill industry which alone is now in a position to deliver the goods to the country. Indications are that private units for the manufacture of textile machinery will be asked to expand their production schedules soon.

Although the Government as a whole had to arrive at some compromise formula in trying to reconcile divergent ministerial viewpoints relating to cloth policy some time back, it now appears that, in the face of the serious cloth shortage in the country, a fresh approach would be made to reorient the textile policy. It was decided earlier that cloth production target should be computed at a *per capita* consumption of 18.5 yards; but now it appears that this lower target of production will have to be revised in an upward direction, in view of the estimated increase in consumption on the basis of about 20 yards *per capita* per annum. It is being pointed out in responsible ministerial circles here that the rising demand for cloth was the major contributory factor for the critical cloth shortage recently and the upward trend in prices of cloth. The Government of India is understood to have agreed to permit the installation of additional plants for the manufacture of textile machinery on the basis that mill capacity will have to meet an annual consumption at 20 yards *per capita*. This would mean that an estimated expenditure of Rs. 95 crores will have to be incurred for the manufacture of requisite machinery. However, there is no likelihood of any visible change in the Government's textile policy immediately, because of the reported anxiety of the Government that the policy, which was determined only in July last, should not be altered so soon, although, implicitly, the Government would be giving all possible encouragement to step up production of mill cloth.

Foreign Exchange

In the battle for foreign exchange, the Government's policy appears to be both positive as well as negative. On the positive side, the Government will be exploring all possible avenues for augmenting foreign exchange resources. During the next three weeks, the Import and Export Advisory Councils will be meeting in New Delhi in order to discuss the problem of earning additional foreign exchange through augmenting India's export earnings. On the negative side, the Government will try to conserve foreign exchange wherever practicable. It is from this point of view that the Government has been considering how to restrict imports. But the possibility of saving foreign exchange resources through import restriction is considered somewhat difficult, in view of their limited scope for such purposes. Generally speaking, most of the imports that are now coming from various foreign countries are considered very essential for the country's economic development and as such imports could not be curtailed much, without injury to the development of India. However, Finance Ministry officials seem to be determined to see that foreign exchange resources are utilised only for important and essential needs of the country and hence they are trying to plug all the loopholes in regard to expenditure of foreign exchange. In consonance with the import policy of the Government, namely, the necessity of allowing importation of the requisite quantity of capital goods, machinery. industrial raw materials such as iron and steel, non-ferrous metals, etc., the cut in imports will necessarily fall on consumer goods and other items without which the country can get on.

THE METRIC SYSTEM—I

FROM DIVERSITY TO UNITY

INDIA has decided to adopt the metric system of weights and measures. The Bill that is now under the consideration of Parliament seeks to establish the metric system uniformly all over the country, the existing weights and measures being replaced gradually. The seer and maund are units commonly used in India. Grocery for the home is bought by the maund, milk by the seer; while travelling luggage is weighed by the maund. But do all these terms mean the same to all of us? The seer stands for 24 tolas in Madras, 40 tolas in Madhya Pradesh, 80 tolas in Bombay, etc., the range extending from 8 to 112 tolas. There are often differences even between one district and another of the same State and within the district itself. Similarly, in Madras we find in use the *Marakkal* of 12 measures, 8 measures, 3-5/8 measures and 3 measures. For measuring land, we have the standards of *kani* and *veli* in the South, the *cotta* and *bigha* in the North, beside the *acre*—a comparatively new nomenclature. The *bigha*, itself is different in Bihar and Bengal. It has been estimated that there are more than 150 different varieties each of weights, lineal measures and capacity measures in India.

Thus, there is no system common to the country. Except in the State of Bombay, which enacted a standard legislation in 1939, there is no common system even within a State. If often happens, therefore, that every time a purchase is made, the buyer and the seller have to convert *candy* or maund to one's own known standard in order to decide on the merits of the bargain. This naturally is an irksome task; it is an impossible proposition for the farmer who goes to sell his produce in the market.

There is widespread loss to the agriculturists, as a result of the use of faulty weights and balances by the middlemen or purchasing agents. Such double-dealing is facilitated by the existing diversity in weights and measures, aided by the ignorance and illiteracy of the farmer.

The confusion caused by the lack of standards is not confined to rural areas. Even city-dwellers feel puzzled while dealing in uncommon transactions, such as purchase of gold and precious stones. There may be no cheating at all, but one never feels secure because of the unfamiliar jargon!

To end all this confusion, the metric system is to be introduced as the standard, because it is simple and it is universal. If either the "seer-maund" system or the "lb.-ton" system uniformly prevailed throughout the country, there would be less reason to look for a change. Since, however, there is no system, it is necessary to introduce one; Parliament has chosen the metric system.

The Metric System

What is this metric system? It is named after the "metre," a primary standard of length. The unit of weight is a "kilogram" and that of volume (capacity measure) is "litre." The structure of the system is based entirely on the number ten. This is merely an extension into the units of measurement the universal system of reckoning numbers. Just as we reckon units, tens and hundreds, the metric system deals in gram, decagram, hectogram, and kilogram, each a multiple of the lower.

The chief advantage of the system is its simplicity. The scale operates in multiples of ten, up and down. 1 metre=10 decimetres; 1 decimetre=10 centimetres; 1 centimetre=10 millimetres.

1 kilogram=10 hectograms; 1 hectogram=10 dekagrams; 1 dekagram=10 grams.

1 litre=10 decilitres; 1 decilitre=10 centilitres; 1 centilitre=10 millilitres (for correlation with known values it is enough to remember that a metre is roughly a yard; a kilogram is about a seer and a litre is a seer (liquid)).

Compare this ten-unit system with any of the present ones, Indian or British.

5 tolas=1 chatak; 16 chataks=1 seer; 40 seers=1 maund.

3 tolas=1 palam; 8 palams=1 seer; 5 seers =1 viss; 8 viss=1 maund.

16 oz.=1 lb.; 28 lbs.=1 qr.; 4 qrs.=1 cwt.; 20 cwts.=1 ton.

What is most striking is the variety of numbers—with no correlation—which one needs to remember, in any of these tables of conversion, namely, 5, 16, 40; 3, 8, 5, 8; and 16, 28, 4, 20. On the other hand, the metric system is the only one in which denominations are uniformly based on ten whether we deal in coins, liquid measure, length or weight. A metre is 10 decimetres, that is 100 centimetres, that is 1,000 millimetres.

Ten is the primary number; there are 10 fingers on the hand. Dealing in ten and its factors, 5 and 2, calls for no special skill. Moreover, the decimal structure of the system enables the expression of any quantity in units of lower denominations, avoiding fractions.

It is the simplicity of the metric system that makes it superior to other systems. This has been recognised by more than two-thirds of the world. Fifty-eight nations have adopted this system. Asian countries like China, Japan, Indonesia, and Persia have changed to this system within the last 30 years.

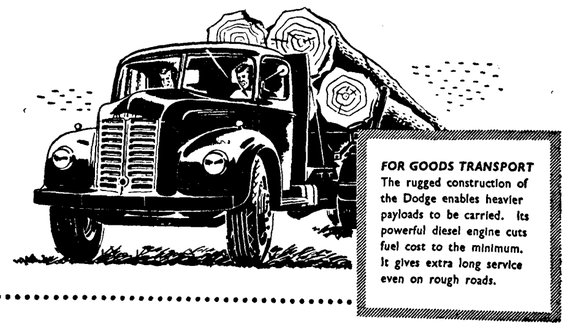
Dependable

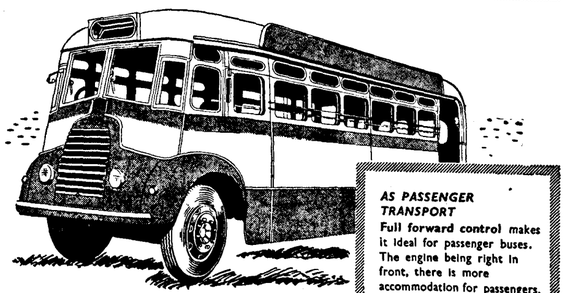
DODGE

DIESELS

TWO STURDY MODELS :– 165" wheelbase truck chassis, 5-ton load capacity, designed for goods transport. 190" wheelbase bus chassis, with full forward control, for passenger transport.



FOR GOODS TRANSPORT
The rugged construction of the Dodge enables heavier payloads to be carried. Its powerful diesel engine cuts fuel cost to the minimum. It gives extra long service even on rough roads.



AS PASSENGER TRANSPORT
Full forward control makes it ideal for passenger buses. The engine being right in front, there is more accommodation for passengers, ideal weight distribution and easier manoeuvrability.

MONEY SUPPLY GOES UP IN BURMA

STATE COMMERCIAL BANK'S SURVEY

DURING the year ended 30th June 1956, certain notable developments took place in the economy of Burma. The most important of them, as noted by the State Commercial Bank in its Annual Report and Statement of Accounts for the year 1955-56 was that the domestic money supply kept pace with the increasing tempo of economic activity. But there was no "compensatory" increase in the exchange reserves, though a substantial expansion in their level was witnessed as compared with the previous year. As a result of the expansion in consumption demand, consequent on the heavy investment and the restrictive policy adopted by the Government in regard to imports, there was a rise in the price level. At the same time, there was an increasing awareness by the Government of the need for curtailment of credit or absorption of the new money through increased imports, savings and taxation; and efforts in this direction increasingly took the form of limiting the development expenditures to projects already on hand. No notable changes were witnessed in interest rates during the year. There was, on the other hand, a considerable expansion in the supply of credit to the agricultural sector. Another noteworthy feature was the successful negotiation with the World Bank for two loans to finance the rehabilitation of Burma Railways and the Port of Rangoon. The economy as a whole was basically sound with a perceptible rise in economic activity and higher levels of production than in the previous year in the fields of agriculture and other natural resources. In consonance with these trends, a marked increase in the business of the State Commercial Bank was also witnessed.

Total money supply (including currency in circulation and demand deposits) during the period under review showed considerable expansion from K127.24 crores to K164.39 crores (one Kyat=one rupee). While the privately held money supply rose by K35 45 crores to K137.84 crores, Government money supply rose from K24.07 crores to K25.26 crores. The main factors responsible for this expansion were the continuing development expenditures by the State Boards and Corporations and the large reduction in net external payments brought about by import restrictions. It was also partly accounted for by an expansion in bank credit from K14.07 crores on 30th June 1955 to K18.65 crores on 30th June 1956. Following the expansion in money supply, a considerable expansion in the deposits of the banking system (excluding the Union Bank of Burma), and their investments in Government securities were also registered. Thus, while the former went up during the period under review from K62.33 crores to K71.99 crores the latter increased from K19.89 crores to K25.29 crores. An interesting feature, however, was that the banking system was still left with excess reserves to the tune of K11.04 crores, as against the required statutory minimum of K5.34 crores.

Increased Agricultural Finance

The year under review was notable for certain significant developments in the field of agricultural finance. The State Agricultural Bank opened one branch and 143 village banks during the year bringing their total to 16 and 285 respectively. Crop loans and cattle purchase loans had been disbursed through these institutions to the agriculturists and the amount outstanding on 30th June 1956 was no less than K40.59 lakhs. Moreover, loans granted by the Government itself for these purposes amounted to as much as K282.15 lakhs. In addition seasonal loans were also granted by the Agricultural and Rural Development Corporation for the cultivation of certain crops such as cotton, jute, tobacco, sugar, coffee and fruits. The outstanding amount of such loans at the end of June 1956 was K4.06 lakhs. Besides, there was also a marked increase in the funds made available to the Co-operative Societies. While the Union Bank of Burma, which commenced issuing loans to the Societies in July 1955, advanced K85.5 lakhs to 12 Co-operative Societies, the State Agricultural Bank's outstanding loans to them increased during the period under review from K45.81 lakhs to K94.51 lakhs. In addition, the loans sanctioned by the Government to the Societies during the period were to the tune of K216.87 lakhs. Further amounts. to the tune of K20.8 lakhs, were granted for improvement and extension of agricultural production by the Agricultural and Rural Development Corporation.

An indication of the Government's anxiety, and the steps taken in that regard, to limit its expenditure as far as possible to the projects already under execution in order to keep the price level under control is provided by the trends in the field of public finance. Although the Government budgeted for a total deficit of K19.13 crores (K2.19 crores on the revenue account and K16.94 crores on the capital account) for the fiscal year October 1955 to September 1956, figures available for the period October 1955 to March 1956 revealed a net surplus of K9.34 crores in the Government's transactions, following a surplus of K22.05 crores on the revenue account and a deficit of K12.71 crores on the capital account. The budget estimates of revenue for the financial year 1955-56 themselves were much lower than those for the previous financial year. Thus, total budget receipts were estimated at K86.46 crores, that is, 17 per cent. less than the revised estimates for 1954-55. This was chiefly due to the Government's decision to forgo the usual rehabilitation contribution from the State Agricultural Marketing Board with a view to enabling the Board to plough back its earnings into its business and to collect, instead, income-tax on the profits of the Board. The budget estimate of expenditure at K106.60 crores also was K18 crores lower than the revised estimates for 1954-55, the fall occurring in almost all heads of expenditure. A further indication of falling expenditure is given by the level of deposits held by the Government with the Union Bank of Burma, which increased from K6.16 crores at the end of June 1955 to K13.51 crores at the end of June 1956. Government's and its agencies borrowings also increased during the period under review by K4.39 crores to K102.29 crores.

Domestic Capital

In the field of domestic capital, the Government and the Union Bank of Burma continued to be the main sources of finance for both public and private enterprises during the year under review, although the corporations set up by the Government had commenced financing the sectors within their purview. The loan issued by the Government to the State Boards and local authorities aggregated K20 lakhs. There was also a significant increase in the value of debentures held by the Union Bank of Burma from K6.75 crores in 1954-55 to K20.55 crores in 1955-56. The Loans Board, set up in October 1955, of the Industrial Development Corporation issued loans to the private industrialists to the extent of K38.96 lakhs upto the end of June 1956. A plan for providing capital equipment for various industrial enterprises under a hire-purchase scheme was also finalised. Besides, the National Housing Board granted loans to the tune of K6.53 lakhs during the year under review.

An important development in the field of foreign loans was the financial agreement signed with the Government of India in October 1955. Under this agreement the Government of India agreed to make a general purpose loan, available for use in the sterling area, of Rs. 20 crores to the Government of Burma. As already mentioned two loan agreements were concluded with the World Bank in May 1956 which provided for granting by the Bank (i) a loan of U.S. $5,350,000 for the rehabilitation of the railways, and (ii) a loan of U.S. $14 million for the modernisation and expansion of the Port of Rangoon, at an interest rate of 4¾ per cent.

Deposits Increase

During the year under review, which is the second year of the operation of the State Commercial Bank, the Bank's progress in various fields was commendable. Despite the heavy pressure at the head office, the Bank had been able to open five new branches at Mandalay, Moulmein, Akyab, Taunggyi and Bassein. Besides, almost every department at the head office was reorganised to handle a greater volume of business and to supervise the work of the branches newly established. The following table, comparing the amounts under principal heads in the balance-sheet as on 30th June 1955 and 30th June 1956 reveals clearly the progress achieved by the Bank:

(In lakhs of Kyats)

Particulars	*30th June* 1955	*30th June* 1956
Deposits	2,137	1,835
Bills payable	17	124
Other liabilities	27	769
Cash (in hand and with banks and treasuries)	675	714
Advances and discounts	76	293
Investments	1,418	1,509
Other assets	141	455
Acceptances, endorsements and guarantees ...	732	1,084
Total assets/liabilities ..	3,042	4,056

It may be noted that the total number of current, savings and special deposit accounts held by the Bank increased during the year to 4,838 from 1,207 as on 30th June 1955. This spectacular increase was largely accounted for by the accounts of private customers, and, consequently, a substantial increase by 85 per cent. of private deposits was recorded. Government deposits, however, declined by 27 per cent. during the same period, obviously due to its expenditure on essential projects on hand. Consequently, the total deposits held by the Bank fell by K3.02 crores. An interesting feature, however, was that the total deposits at K18.35 crores as shown in the table above represented 28 per cent. of all the deposits of all commercial banks in Burma as on that date.

An important development deserving mention was the new scheme called the "Five-year Fixed Deposit Scheme" introduced by the Bank in April 1956, in order to provide additional investment opportunity to all kinds of customers. An interesting feature of the scheme is that it provides for a special facility for encashment of the Deposit Receipts after two years without loss of entire accrued interest. During the year, again, the investments of the Bank rose by K91 lakhs to K15.09 crores. It will also be seen from the increase in the Bank's balance-sheet total from K3,042 lakhs to K4,056 lakhs between 30th June 1955 and the same date in 1956 that the progress in the Bank's business was quite commendable.

During the year under review, the paid-up capital of the Bank also increased by K100 lakhs to K200 lakhs. The Report points out that this was in keeping with the need to strengthen the capital structure of the Bank relating to the size of its deposits. The entire capital of the Bank, it may be noted, is held by the Government.

Another notable advance in the business of the Bank was indicated by the amount of total credit made available by the Bank to its customers by way of advances in various forms. Thus, the advances in the form of loans, overdrafts, discounts and bills receivable increased from K198.72 lakhs on 31st June 1955 to K644.94 lakhs a year later. Consequently, the ratio of total advances to deposits rose from 9.3 per cent. to 35.1 per cent. during the same period.

I.M.F. GRANTS LOAN TO FRANCE

SERIOUS BALANCE OF PAYMENTS POSITION

ONE of the criticisms of the International Monetary Fund is that its activities during the past one decade have not been commensurate with the expectations held at the time it was established. It is alleged that it is a "bank without customers" and its vast resources are much more than what its activities warrant. As an instance of the Fund's "failure to live up to expectations," it is pointed out that, during the past financial year, the drawings on its resources amounted only to a little more than £13 million.

Close on the heels of these criticisms comes the news that the I.M.F. has granted France a stand-by credit of $262.5 million (£94 million). This sum will be available during the next twelve months. The critics of the Fund now note with gratification that the aforesaid credit arrangement with France marks a revival in the volume of business transacted by the Fund. Ordinarily a member's drawing rights is limited to 25 per cent. of its quota. France's quota amounts to $525 million and, accordingly, its ordinary drawing rights are no more than $131.25 million. The credit now granted by the I.M.F. represents 50 per cent. of France's quota (the maximum permissible under the stand-by credit arrangements, though instances of waiver of the normal limitation are not wanting) and double the amount that is available under ordinary drawing rights. Normally, the additional sum, over and above the ordinary drawing rights, that is, one-quarter of the quota, will be made available to a member only one year after the drawing of the first quarter. In the case of France, however, the I.M.F. has permitted it to draw the entire sum during the next one year, which provides another instance of the exceptions to this rule. Apparently, the Fund's authorities seem to have been stung by the type of criticisms referred to at the outset. But it is doubtful whether they have rightly acted in being so liberal to France, considering the fact that the borrower has been deeply involved in many types of infructuous expenditure. One of the reasons why France's balance of payments position is in a bad way is its political adventures in Africa.

Inflationary Pressure

The credit to France will be utilised, we are told, to maintain the country's foreign exchange reserves at a "satisfactory level" during the next one year. Since the beginning of the current year, the gold and foreign exchange reserves are stated to have dwindled considerably on account of persistent drawings on these reserves to maintain the strength of the franc. The country's balance of payments position also has deteriorated to a marked extent, owing to large imports to keep down the inflationary pressure. In 1955, France was able to strengthen its position sizably by achieving a substantial surplus in the balance of payments and adding to its official reserves. The overall payments surplus, which had stood at $502 million in 1954, rose to $915 million in the following year, and the gold and foreign exchange reserves (including the E.P.U. credit balances) were strengthened from $1,369 million to $2,120 million. The position has since changed so suddenly and rapidly that the country's balance of payments position has deteriorated considerably, with the result that it has sought a loan from the I.M.F. without resorting to other internal measures to correct the position. Commenting on France's balance of payments position in 1955 and early in 1956, the I.M.F. itself observes in its latest annual report as follows:

"The sharp expansion of exports in 1955 was the most important foreign trade development in France. Output increased considerably, and there were relatively few bottlenecks. Despite substantial wage increases, the existing degree of competitiveness was sustained by large increases in productivity. French exports of foodstuffs, steel, and coal increased sharply as European demand for these products was especially active. French imports, particularly of raw materials and machinery, also increased, but proportionately less than exports. In contrast to developments in trade with foreign countries, the trade of Metropolitan France with the outer franc area did not expand, mainly because of developments in Viet Nam and in North Africa.

In considering the significance of France's large payments surplus in 1955, it should be borne in mind that the French balance of payments in that year was still supported by receipts from U.S. Government expenditures totalling nearly $1 billion, an amount which is likely to be reduced in 1956. At the beginning of 1956, the French payments picture deteriorated as inflationary pressures re-emerged and crops suffered heavy frost damage. As a result, imports increased sharply, exportable supplies of foodstuffs and coal dwindled, and there was an adverse movement in the leads and lags in financing merchandise trade. Finally, France's trade balance is still dependent, to some extent, on the maintenance of import restrictions and the supply given to exports by rebates of certain taxes and social security charges."

The large imports allowed by France to keep down inflationary pressures within the country has thus resulted in a trade deficit. Besides, there are reasons to believe that France has suffered considerably during the current year in its invisible transactions also. For, during 1955, it obtained a sum of about $350 million from the U.S., by way of military aid on account of Indo-China, but this year there has been no such income on this account. Although American military spending continues to be a source of strength to France's reserves, economic aid from the U.S., which played an important part in building up the balance of payments position of France till last year, has dwindled almost to nothing. Another factor which has contributed to the deterioration in the position of France is the increase in the country's overseas expenditure, particularly the heavy military expenditure in Algeria.

Scope for Import Restriction

One of the important measures by which France can obtain substantial relief is the drastic restriction of imports. In fact, France has already taken some steps in this direction by holding up the liberalisation of imports and this has, to some extent, helped it to check further deterioration in the balance of payments. France is, however, unwilling to cut down its imports, as it may lead to a conflict with other members of the O.E.E.C., to oblige whom it liberalised its imports. Moreover, the restriction on imports will worsen the position by aggravating the inflationary pressure and reducing the purchasing power of the franc, at a time when it is essential to maintain the internal value of the currency. Now that the I.M.F. has granted a loan. France need not resort to such measures. It can, on the other hand, maintain its essential imports at a normal level.

The situation, though not a very happy one, is not without a ray of hope. For this is not the first time that France finds itself in such a position and the country has on more than one occasion since the war extricated itself out of similar predicaments. It is stated that the French authorities are resorting to other measures also to save its position. One of them is to borrow from the E.P.U. This has been rendered possible, because it has, until last July, settled entirely in cash its deficits with the E.P.U. The unused facilities which France can utilise amount to $62 million, of which $16 million has just been drawn to settle partly its September deficit.

WORLD BANK LOAN TO ITALY

The World Bank sanctioned two weeks ago a loan equivalent to $74,628,000 to Ifaly for agricultural and industrial development of Southern Italy. This brings the total amount lent by the Bank, for the purpose of raising the standard of living in the area comprising the Italian mainland south of Rome and the islands of Sicily and Sardinia, to $165 million. Of the earlier loans aggregating $90 million, $10 million each were made in 1951 and 1953 another of $70 million in 1955.

An interesting feature of the loan is that the Bank of America is participating in it, without the World Bank's guarantee, to the extent of $500,000 of the first maturity which falls due on 1st September 1959.

The present loan is granted to a Governmental agency called *Cassa per il Mezzogiorno* which was established in 1950 to administer a 12-year programme for the development of Southern Italy. Of this loan, $25.2 million has been allocated to electric power projects on the mainland and in Sicily, $25.5 million to irrigation and technical services in Sardinia, and $24 million to the industrial projects in the region. It may be noted that this is the first time that projects in Sardinia have been included in the Bank's lending in Italy. The progress made by the agency during the six years of its existence is varied as well as impressive. The *Cassa* had, for instance, signed 55,000 contracts and paid out the equivalent of $760 million on works completed or in progress. The agency has also completed 1,000 miles of canals, 750 miles of main and secondary canals. Besides, it has irrigated 114,000 acres, constructed 1,300 miles of roads, and has brought drinking water to 245 villages with 1,350,000 inhabitants. In addition, as many as 200,000 temporary jobs and 45,000 permanent jobs in agriculture and 100,000 permanent jobs in industry have been created through the projects of the agency.

The most ambitious of the irrigation projects is the one on the river Flumendosa. An equivalent of $25 million is expected to be spent on this project, which is expected to irrigate 123,500 acres in south-western Sardinia. The industrial projects numbering 10, on the other hand, will need $50 million. The industries include cement projects, glass factories, a vegetable cannery, a fertiliser factory and an automobile assembly plant. They will provide some 3,000 new jobs.

The projects in the power section, three in number, are expected to increase the installed capacity by 217,000 kilowatts or 14 per cent. and the annual generation of power by 17 per cent.

The loan is for a term of 20 years and bears interest of 5 per cent. including one per cent. commission charged by the Bank. Amortisation will begin on 1st September 1959. The loan is guaranteed by the Republic of Italy.

The U.S. Department of Commerce has reported that the U.S. Government net grants and long and short-term credits to other countries exceeded $5,000 million in the fiscal year 1956, a rise of 6 per cent. over the preceding fiscal year. The countries of the Near East and South Asia were among those receiving increased U.S. assistance. Disbursements fell off generally in Western Europe, except to Spain, largely because of the decline in payments to France and the United Kingdom in support of their military budgets. as their own capabilities increased. Increases in varying ratios were common elsewhere, with a few exceptions. Grants (aid requiring no repayment) continued to dominate foreign assistance programmes.

The American Telephone and Telegraph Company has released an up-to-the-minute estimate of the kind of investors who own shares in the $13,000 million Bell system. The Company says that 41 per cent. of its stockholders own 10 shares or less, and that 65,000 investors only hold one share each. No single individual owns as much as one-thirtieth of one per cent. of the Company's outstanding stock. Women own 45 per cent. of Company's common shares while 22 per cent. are owned by men, and 29 per cent. by joint accounts (usually husband and wife) and four per cent. by non-individuals including some 42,000 trustees, and 14,000 business and philanthropic organisations.

WORLD COTTON WEAVING CAPACITY

MORE AUTOMATIC LOOMS IN PLACE

A STRIKING feature of developments in the international cotton textile situation in recent years is the steady increase in the introduction of automatic machinery for weaving fabrics. The total number of automatic looms in existence in the world as at the end of January 1956 was 909,006, which compares favourably with 878,099 a year before and 826,713 two years before, according to the latest census of the International Federation of Cotton and Allied Textile Industries (Manchester). Similarly, the number of automatic attachments was higher at 80,182, as against 78,974 and 65,350. A large part of the increase in automatic looms and automatic attachments represents the replacements of the ordinary looms. This is evident from the fall in the number of these looms from 1,932,356 on 31st January 1955, to 1,881,114 on 31st January last. The fall has been so sharp that the total number of looms in place in the world early this year stood lower at 2,870,302, as compared with 2,889,429 a year before. Consequent on the steady increase in automatic looms (and looms with automatic attachments), on the one and, and the sharp drop in ordinary looms, on the other, the percentage share of the former in the total in January 1956 stood at 34.5, as against 33.1 in January 1956, 32.7 in July 1952 and 23.6 at the end of 1936.

The rise in the number of automatic looms during the year ended January 1956 was particularly noticeable in Pakistan, the number being higher by 13,062. There was also a rise, though moderate, in the number of automatic looms in several other countries, 4,700 in Brazil, 2,300 in Italy, 1,500 in the U.S.S.R., 1,300 in India, 1,000 in Czechoslovakia, 800 in Japan, and 400 each in the U.K. and France. The U.S. and Western Germany, however, accounted for a decline of 6,200 and 1,100 automatic looms, respectively.

Looms in Different Countries

The following table gives the estimates of the number of looms in place in the different countries as on 31st January 1956, as compared with the corresponding date of last year:

(In hundreds)

	Ordinary looms		Automatic looms		Automatic attachments	
	January		January		January	
	1955	1956	1955	1956	1955	1956
India	1,967	1,939	121	134	3	4
Japan	2,740	3,047	629	637	..	..
U.K.	2,896	2,674	392	396	50	55
U.S.A.	*	*	3,691	3,625†	..	..
U.S.S.R.	2,950	3,000	375	390	..	..
France	859	644	713	717	..	..
W. Germany ..	889	779	264	253	227	249
Italy†	442	410	543	566	339	269
Brazil	740	715	263	310	94	93
Czechoslovakia ..	810	820	20	30	..	..
Spain	793	702	112	113	..	..
Pakistan	164	59	27	157	..	..
China	700	750	100	100	..	..
Other countries ..	3,704	3,182	1,531	1,658	77	132
Total ..	19,324	18,811	8,781	9,090	790	802

* Not available.
† The figure does not include 108,326 looms in place in synthetic and silk fabrics mills. It, however, includes looms producing cotton fabrics in rayon mills but does not include woollen and worsted looms producing cotton fabrics.

The aggregate weaving capacity of the world cotton textile industry has been stepped up considerably. The total number of looms at the end of the current calendar year is estimated at 2,899,889, as against 2,870,302 in January last. Of the rise of 29,587 in the number of looms in course of erection and expected to run in 1956, 19,659 are new ones and 9,928 represent replacements. The share of automatic looms in this number is the largest, being 23,037, ordinary looms accounting for 6,232 and automatic attachments for 318. Although no returns have been received from China, it is reported that this country has recently increased the number of looms under the present Five-year Plan by approximately 8,000 and intends building a further 19 mills with a total of 45,000 looms.

Further Expansion

The year 1957-58 is expected to witness a further expansion, albeit at a slightly reduced scale, in the world cotton weaving capacity. In this period, about 23,059 looms are scheduled to be erected, as against 29 587 looms in 1956-57. Of the projected looms, 14,893 are new ones and 8,166 represent replacements. Here again the proportion of automatic looms predominates, the estimate being placed at 19,161. Ordinary looms account for 3.514 and looms with automatic attachments for 384.

A look at the following statement will give an idea of the looms projected for the period 1957-58, as also the looms which are in course of erection and expected to run in 1956:

	In course of erection and expected to run in 1956		To be erected during 1957-58	
	As increase	As replacement	As increase	As replacement
India	424	1,283	747	2,303
Pakistan	7,434	..	6,016	..
Turkey	3,150	..	944	..
Korea	958	3,300	..	..
Hong Kong	890	..	99	..
U.K.	762	2,021	359	590
Holland	527	1,214	164	713
Mexico	..	1,414	..	3,355
Brazil	2,647	119	2,491	179
Other countries ..	2,869	577	4,073	1,026
Total ..	19,659	9,928	14,893	8,166
Of which—				
Ordinary	4,300	1,932	1,656	1,858
Automatic	15,243	7,794	13,177	5,984
Automatic attachments ..	116	202	60	324

The foregoing table shows that the cotton textile industry in India, Korea, the U.K., Holland and Mexico is concerned more with rehabilitating its worn-out machinery, while that in Pakistan, Turkey, Hong Kong, Brazil, etc., is devoting great attention to the expansion of the size of the units by adding more looms.

Idle Looms More

The year 1955-56 witnessed less intensive utilisation of equipment in the cotton textile industry, as compared with the previous year. This is indicated by the increase in the world total of idle looms from 202,940 at the end of January 1955 to 245,223 on 31st January last. The number of idle looms was heavy in Europe, being as many as 152,890, the figures for the previous year being 149,600. The number of idle looms in Asia and South America was also large, being 42,358 and 36,900, as against 29,136 and 3,568 in the previous year. In India, the number of looms lying idle as on 31st January 1956 was 14,111, a fall of 220 looms as compared with the previous year. North America, however, experienced a more intensive utilisation of equipment, the number of idle looms declining from 18,743 to 12,650. Similarly, Africa accounted for a fall, from 1,893 looms to 335 looms.

The average number of hours worked per week by the looms during the year ended January 1956 varied from 36.87 in the U.K., where single shift is usual, to 146.66 in Hong Kong. The weekly average number of hours worked by the cotton mills in India is estimated at 100.63, which compares favourably with 91.54 a year before. This reflects the increase in the number of shifts worked by several mills.

ANDHRA GOVERNMENT REJECTS POWERLOOMS

The Government of Andhra has decided not to introduce powerlooms in the handloom sector in the State. This was disclosed by Mr. D. Sanjivayya, Minister for Co-operation and Commercial Taxes, at Kurnool the other day. The decision, Mr. Sanjivayya declared, had been taken after considered all shades of opinion and the views of prominent people and representatives of the industry. He hoped that the other States—Madras, Uttar Pradesh and Bombay—would follow suit and protect the interests of the age-long and well-established handloom industry. Justifying his Government's decision, the Minister said:

"All these years, it has been the established policy of the Government to protect the handloom industry in all possible ways. The Andhra Government, in particular, has been striving its best to see that the handloom industry progresses in the State. I have no doubt in my nind that this decision would be welcomed by all weavers and others interested in the progress of the country. I for one would feel that, unless our handloom industry is well protected and organised on co-operative lines, it would not be possible for us to solve the serious problem of unemployment. It will be a gratifying fact to note that as many as 5,000 ex-toddy tappers in West and East Godavari districts have been recently absorbed in the handloom industry without any investment either from the Government or by themselves which would not have been possible for any other industry. This itself is a clear example as to how the handloom industry is capable of providing employment opportunities to many people, provided it is protected against competition from both mills and powerlooms."

The Andhra Government's decision not to introduce powerlooms in the handloom sector is, indeed, regrettable. The very economic structure of the handloom industry is defective, and the industry being highly labour-intensive in character, not only is the rate of output low but the cost of production also is high. Consequently, the income derived by weavers is at a low ebb. This is the basic problem of the handloom industry. The effective solution to this problem, as has been said so often in these columns, lies only in mechanising production. Unless powerlooms are introduced in the handloom sector, the industry will not be economic and the persons depending on it will continue to be at the mercy of subsidy from the State even for living on a hand-to-mouth basis.

HANDLOOM INDUSTRY

The Central Government has announced more liberal financial assistance to handloom weavers for their working capital and for the purchase of improved equipment. Thus, the limit of loans for working capital for cotton looms in co-operative societies has been raised from Rs. 200 to Rs. 300 per loom. The previous distinction between looms already in the co-operative fold and those newly brought into co-operatives made for the purpose of determining the eligibility for loans has also been abolished. At the same time, the amount of loans which can be granted to central handloom co-operative societies from the Handloom Cess Fund has been doubled, that is, from five times to ten times the paid-up share capital of societies.

For the purchase of better equipment for their looms, each weaver will get an outright grant of Rs. 218; this sum represents the value of different items of equipment. Hitherto, it will be recalled, weavers were given grants only for specific items of equipment. The outright grant can be utilised for purchasing a new frame-loom, provided with the necessary accessories. Incidentally, it may be noted that the production of cloth on frame-looms is appreciably higher than that on the old type of looms.

Meanwhile, the Central Government has sanctioned a loan of Rs. 14.5 lakhs to the Government of Madras for setting up a workshop near Madras City for manufacturing handloom accessories and equipment required to meet the increased demand for better type of equipment. The proposed workshop, it is said, will turn out take-up motion attachments, hand-operated warping machines, flanged warp, bobbins, standard reed, pedal loom, country dobbies and accessories, varnished healds, wire healds for cotton weaving and jacquards.

The aforesaid measures are intended to enable the handloom sector to achieve the target of additional cloth production in the second Five-year Plan and make it possible for the weavers to improve their earnings. The handloom sector has been allotted an additional production of 1,000 million yards—700 million yards from mill yarn and the remaining 300 million yards from Ambar yarn. The output of handloom cloth is claimed to have gone up in the past five years by 800 million yards to 1,600 million yards.

CLOTH POLICY

As an incentive to increased production of cloth, the Government of India announced some time ago its decision to give a rebate of excise duty at the rate of six pies per yard on all cloth produced by a textile mill in excess of its average monthly production during the eight months January to August 1956. The rebate was to be allowed on cloth produced up to the end of December 1956. The Government has now decided to extend this concession in respect of all cloth produced upto the end of March 1957.

The Government of India has also cancelled the order issued by them on 24th September 1956 restricting stocks of cloth which can be held by any wholesale dealer to three months' average stocks. In case of West Bengal, the order had further stipulated that no dealer can hold more than one month's stocks of cloth manufactured by mills in West Bengal. This step was taken to check the rising trend in the prices of cloth. The Government consider that there is no necessity any longer to keep an all-India order of this nature in force. Powers have, however, been delegated to the State Governments to issue such restrictive orders as and when they consider necessary.

WOOL UTILISATION CENTRE

A wool utilisation centre would be set up at or near Coimbatore, if the scheme submitted by the Government of Madras were finally approved by the Central Government. The scheme is reported to have been viewed favourably by the Wool Committee of the Indian Council of Agricultural Research (I.C.A.R.) at its meeting held at New Delhi last week. The proposed centre will conduct experiments on the right usage of wool produced as a result of the adoption of various improved breeding policies and use of new implements. It will also disseminate information to persons engaged in the industry and impart training to individuals.

The establishment of the wool utilisation centre is very important for improving the condition of the wool industry. To the extent to which improved implements are used the time in the successive stages of production can be shortened and cost of manufacture reduced. Proper usage of wool will ensure production of attractive goods which will suit the modern taste for such goods. If the industry is thus made more efficient, the income of persons depending on it will register a rise.

"INDIAN SILK AND RAYON"

The Silk and Rayon Textiles Export Promotion Council has brought out an overseas quarterly entitled *Indian Silk and Rayon* (Editor: Mr. O. P. Dhawan). The publication is intended to acquaint the overseas buyer with the recent trends in India's silk and rayon textile economy. Special mention must be made of the inclusion of a list of some of the exporting firms dealing in the special varieties of silk and rayon fabrics. The utility of the publication is enhanced by the incorporation of figures relating to the quantity and value of silk and rayon fabrics exported from India in the past four years.

IMPORTS OF CLOTH CONTINUE TO CAUSE CONCERN

MANPOWER LOSSES EXCEED RECRUITMENT

From A Special Correspondent

MANCHESTER, 16th October

MANCHESTER LETTER

IT has become almost traditional for at least one important member of the Government—usually the President of the Board of Trade—to speak at the Cotton Board's annual conference at Harrogate. A year ago, the remarks of Mr. Peter Thorneycroft were awaited with more than usual interest in the hope that some action to curb the quantity of imported cloth might be announced. His speech at the outset of the conference settled the issue and decided the tone of subsequent discussions leading to a general agreement that some form of contraction and consolidation was inevitable.

In the twelve months which have elapsed the situation has not shown any important change. Foreign cloth is still arriving in large quantities although the volume has not increased to the extent which some traders feared. Until a few weeks ago, activity in cotton goods was spasmodic and very limited in scope. The revival which has followed cannot yet be spoken of in glowing terms as a seasonal improvement in demand can normally be anticipated at this time of the year, but it is at least reassuring.

Those who are travelling to Harrogate this week-end are under no illusions as to what Government aid can be expected. It would be a complete reversal of form if Mr. Thorneycroft were to announce any change of heart regarding imports.

In some quarters, however, there has been wishful thinking along such lines, stimulated perhaps by reports from Hong Kong after a statement made there by Lord Selkirk, Chancellor of the Duchy of Lancaster, who reiterated the British Government's view that Lancashire had a very strong case on the imported cloth question. Hong Kong manufacturers and merchants who feared this remark reflected a change of policy have since been reassured that no revision is contemplated in the arrangements covering the imports of Commonwealth cloth into Britain.

Redundancy and the probable future size of Lancashire's textile trade were the focal points of last year's Cotton Board conference but in the intervening months the possibility of any direct action to reorganise the mills on orderly lines has receded. Economic forces have been allowed full reign resulting in gradual curtailment of output, seemingly pointing the way ahead. The future structure of the industry is one of the topics to be discussed on this occasion and may well set the tempo for subsequent events.

Summer Yarn

Irregular production returns are inevitable during the holiday months of the year when output in the mill towns is halted for weeks at a time. It is, therefore, difficult to assess the situation until the usual autumn pressure for supplies begins to materialise. Considering the continual drift of labour from the mills, however, yarn output has kept up reasonably well and is now showing signs of exceeding the comparable totals of twelve months ago.

The table below shows the trend of production over the past four months, together with evidence of the wastage of manpower which has occurred:

Week ending	Yarn Production (In thousands of lbs.)		Recruitment	
	1956	1955	1956	1955

	17,210	17,250	— 7	—270

Aggregate production of all types of cotton and rayon yarn over the first nine months of 1956 was substantially lower than in the same period last year. To the end of September output aggregated 624,060,000 lb. against 654,900,000 lb. in 1955, when the decline was even more discouraging from the 1954 figure of 739,800,000 lb.

Continuance of the general trend away from purely cotton yarn production towards increased output of rayon and mixture yarns is the significant feature of the quarter's returns. Compared with a year ago cotton yarn output was over 11,000,000 lb. lower but production in the other sections was 5,000,000 lb. up on the third quarter of 1955.

The losses in the labour force have not been as substantial as those recorded a year ago, but the persistent excess of wastage over recruitment is a disturbing factor which is now having important repercussions in the industry. At the end of September, the number of spinners on the books of employers was about 3,500 lower than a year previously, being 96,630. Those at work totalled 88,140, compared with 91,230 at the same date in 1955.

Rainwear Wages

British raincoast employers have rejected a union demand for a wage increase for all workers in the industry, irrespective of their present earnings.

Announcing this, in Manchester, Mr. Geoffrey Woolfe, Secretary of the National Association of Clothing and Rainwear Manufacturers, said an extraordinary general meeting of the Association had decided unanimously not to enter into any agreement with the National Union of Tailors and Garment Workers on a claim for an extra 2½d. an hour, irrespective of present earnings.

After the Conciliation Committee for Britain's cotton industry had failed to reach an agreement in Manchester last week it was announced that Lord Terrington, the Chairman, would make an award in a dispute affecting payment rates to six-loom cotton weavers.

The issue went to conciliation after local deadlock on a claim by the Amalgamated Weavers' Association for the abrogation of the present basis of payment. Under the agreement the piece-rate of six-loom weavers is lower than that of four-loom weavers.

At a Press conference, held later, it was stated that some firms in the industry have been paying six-loom weavers at the higher rate while other firms have been keeping to the rates laid down in the agreement.

Earnings Contract

Few people connected with the textile industry of Lancashire will be surprised to learn that the results of cotton companies over the first nine months of this year, as collated by the *Financial Times*, show the most substantial reduction in profits of any group. Gross earnings have declined from £15 000,000 in the same period last year to £10,100,000.

This trend runs against the general movement of profits, which continued to show an upward curve, although the rate of increase has flattened during the third quarter of this year. In addition to cotton textiles, companies engaged in the clothing, entertainment, newspaper and printing, rayon, and household goods industries also announced lower profits during the first nine months of 1956.

An interesting aspect of recently published reports in Lancashire is the better showing made by some merchanting houses. The West African traders Paterson Zochonis & Co., increased net earnings from £45,000 to nearly £115,000 while internal re-organisation has resulted in Stavert Ziggmala transforming last year's loss of £4 158 into a gross profit of 9,201. Other distributing groups which have recovered from former setbacks include Hickson, Lloyd & King, whose net profit of £22,500 is £4 000 higher than a year ago, and I. J. & G. Cooper Ltd., whose earnings increased by nearly £7,000 to £25,500.

Mill deals remain out of favour for the moment although some firms have continued their policy of closing down rather than continuing to operate at an uneconomic level. The Todmorden mill owned by Lord Brothers (Cottons) Ltd., has been closed for this reason and its disposal is under consideration. The premises occupied by the spinning and weaving group of Francis Sumner at Glossop have now been taken over by a firm of footwear and rubber manufacturers based on Stalybridge.

Despite the adverse conditions largely encountered, however, the Calico Printers' Association, one of the larger vertical groups, was able to report increased trading profits, the figure to the end of June being £2,360 000, an improvement of nearly £320,000 on the previous year. The experience of Barber Textile Corporation, the spinning and weaving combine, has been better than many comparable concerns. Net earnings this year of £117,000 were only £18,000 below the 1955 level.—*All Rights Reserved.*

SUDAN COTTON EXPANSION SCHEMES

GREATER PRODUCTION ENVISAGED

SINCE it joined the family of free nations early this year, Sudan, a vast tropical country lying just south of Egypt, covering an area of nearly a million square miles, has been going ahead with plans for developing its farm potential, particularly cotton. Its effort takes on added interest to the cotton growers and traders of the world, as Sudan is already a major producer and exporter of long-staple cotton. Stretching through the centre of Sudan and bisected by the White and Blue Niles is a wide belt of rich productive soil accounting for the major portion of the cotton output of the country. By expanding production in this central belt the new Government of Sudan hopes to build a prosperous agricultural economy.

Cotton, which accounts for about 80 per cent. of the country's annual income, is an irrigated as well as rain-fed crop. In 1954-55, two-thirds of the crop was grown under irrigation. Irrigated cotton is the extra-long staple or Egyptian type and is produced mainly in the central belt, where the soil is rich but rainfall scarce. Rain-grown cotton is largely the American type and is cultivated on poorer soil in the south-western hills and plains. The central area, therefore, lends itself to cotton growing more readily than do the upland regions. But the expansion of cultivation of cotton in Sudan, as well as of other crops, depends largely on the extent to which irrigation facilities can be provided.

Sudan already has over 2 million acres under irrigation, half of which is in the Gezira, lying between the White and Blue Niles, south of Khartoum. The country is planning to irrigate 3.6 million acres more, or a total of 5.7 million. Soil resources are large and, therefore, the limiting factor is not land but water. It has been calculated that along the Nile at Aswan flows an average of 84 billion cubic metres of water annually. How to achieve a fair division of the total amount of available water is a problem confronting Egypt and Sudan. There are differences of opinion on whether the necessary storage can best be achieved by the High Dam at Aswan or by a series of smaller dams. Egypt favours the former and Sudan the latter.

Be that as it may, if some arrangement is agreed upon for division of water, Sudan will proceed to carry out its development plans. It is already engaged in the first phase of the Managil extension of the Gezira which will add 208,000 acres to this successful cotton-growing area. Completion of the Managil extension, which will raise the total newly irrigated area in the Gezira to 830,000 acres, depends on the construction of a dam at Roseires on the Blue Nile. Water from the Roseires reservoir will also be used for the Kenana scheme covering the vast tract of soil lying in the delta between the Blue and White Niles, just south of the Gezira. This is the last project scheduled and will take 15 years to complete. Altogether the dam at Roseires is expected to bring 1,870,000 acres under irrigation. It is estimated to cost some $21 million and its construction closely hinges upon the amount of external finance which Sudan will be able to obtain from the World Bank and other international agencies. There are also some other schemes such as the Atbara project, designed to irrigate 520,000 acres, and the Jonglei scheme covering an area of 520,000 acres. Apart from these, numerous pump schemes are spreading up and down the three Niles.

In 1954-55, Sudan produced 403,000 bales of cotton (480 lbs. net) from 685,000 acres. Of this, 65,000 bales were rain-grown and the remaining 338,000 bales were raised from 435,000 acres of irrrigated land. To what extent cotton production will expand when those projects under way and those that are contemplated, are completed? In this connection, an article in *Foreign Agriculture*, published by the U.S. Department of Agriculture, makes some interesting estimates. Assuming that Sudan does not increase its rain-grown acreage over the 1954-55 level, but increases its irrigated areas according to present plans, the country will, observes the article, increase cotton production by approximately 40 per cent. by 1960-61, 200 per cent. by 1965-66 and 300 per cent. by 1970-71. The following is the statistical estimate of the envisaged expansion.

Area

(In 1,000 acres)

	Irrigated	Rain-grown	Total
1954-55	435	250	685
1960-61	550	250	800
1965-66	870	250	1,120
1970-71	1,260	250	1,510

Production

(In 1,000 bales of 480 lbs. net)

	Irrigated	Rain-grown	Total
1954-55	338	65	403
1960-61	490	65	555
1965-66	776	65	841
1970-71	1,120	65	1,185

Source: *Foreign Agriculture*, July 1956, U.S. Department of Agriculture.

If Sudan's irrigation schemes are successfully completed, what kind of cotton will be produced on the expanded acreage? The choice of the type of cotton to be grown will depend, to a large extent, on the potential demand for it. The greater part of the increase in production is most likely to be confined to the extra-long staple variety known in Sudan as Sakel. It may be observed that, in 1955-56, Sakel accounted for five-sixths of the total crop; American type cotton constituted only one-sixth. As readers are aware, the original Domains Sakel compares with the Karnak of Egypt and the American-Egyptian Pima S-1 of the U.S. The Lambert Sakel is more like Giza 30 of Egypt and the long-staple uplands of the U.S.A.

It is pertinent, in this conection, to ask how far Sudan will succeed in finding a ready market for the increased production of cotton envisaged by the different schemes. It is common knowledge that Sudan at present exports almost its entire cotton crop. There is practically no mill industry and all the textiles required are imported. The bulk of exports have traditionally gone to the U.K. and India, but recently Sudan has been broadening its markets to include more countries like France, Germany, Italy and Czechoslovakia. It is quite unlikely, at least in the foreseeable future, that Sudan will be able to develop its mill industry sufficiently to absorb a sizable portion of its output of cotton. Nevertheless, it will have to find external markets for the increased production. Will the free world be able to absorb the additional output? The prospect for an easy off-take of the increased production appears, on present reckoning, to be gloomy, in view of the fact that the free world supply of cotton at present is far in excess of demand. But an encouraging factor, as we have pointed out in a previous issue, is that the supply of extra-long staple cotton at present is not as abundant as that of other types. Further, the schemes envisaged are long-term in nature, extending over a period of about 15 years, and it is possible that, during this period, world consumption of cotton will rise appreciably.

MEXICAN COTTON EXPORTS

Mexico's efforts in pushing up its cotton exports in competition with the U.S. are meeting with success, as is evident from its increasing share in Canadian cotton imports. During the nine-month period, August to April, of the 1955-56 season, Canada's cotton imports rose to 317,000 bales from 276,000 bales in the same period of the previous season. Imports from Mexico, according to the U.S. Department of Agriculture, accounted for 70 per cent. of the total as compared with only 3 per cent. in the previous season. At the same time, the U.S. share fell from 95 per cent. to 24 per cent.

Mexico is also trying to export more cotton to other countries. We have dealt with, at some length, in a previous issue, Mexico's plans for arranging barter deals involving cotton in exchange for capital and consumer goods from industrially advanced countries. Very recently, the Chief of the Mission of Japanese Industrialists for the Promotion and Sale of Rolling Stock which visited Mexico has suggested to *Ferrocarriles Nacionales de Mexico* the desirability of exchanging Japanese railway equipment, including locomotives, coaches, and freight cars for Mexican cotton up to a quarter of a million bales annually, worth about $362.5 million pesos. The offer, made on behalf of the Consortium of Japanese Rolling Stock Industry which includes 109 enterprises manufacturing locomotives, freight cars and coaches, covers barter operations and long-term sales at low rates of interest.

COTTON ACREAGE IN EAST AFRICA

While discussing the current (1956-57) season's cotton production prospects in Uganda in our last issue, we observed that till the end of June 1956 the acreage planted in areas east and west of the Nile together is 537,962 acres, as compared with 378,675 acres during the same period of the 1955-56 season. Statistical figures regarding the area under the crop in the current season in East Africa, which have now become available, show that the total acreage planted is 1,559,586 acres, as compared with 1,563,917 acres in the previous season. The area under B.P. 52 has fallen from 354,094 acres to 286,248 acres. Hence a fall in the output of this variety is expected. The following table gives details of the acreage planted in the current and last seasons:

(In acres)

	August 1956	August 1955
Eastern Province	880,495	845,356
Northern Province	344,425	302,071
B.P. 52	286,248	354,094
Bunyoro	24,525	31,004
Masaka	23,893	31,392
Total ..	1,559,586	1,563,917

An additional estimate, officially announced on the 16th inst. by the Government of Madras, places the area under cotton in the State in the season (1955-56) just ended at 978,500 acres, as against the finally recorded area of 1,003,900 acres in the previous season, representing a decrease of 2.5 per cent. in acreage. The total yield during the season is estimated to have aggregated 300,000 bales lint, as against 301,400 bales in the previous season.

COMMON MARKET FOR TEXTILES IN EUROPE

SOME ECONOMIC CONSEQUENCES OF THE PROPOSED MOVE

By R. Robson, M.A., Ph.D., Manchester

[In his despatch to the last issue of Commerce, *our Special Correspondent at Manchester had drawn attention to the views of Mr. R. Robson, Head of the Statistical Department of the Cotton Board, on the proposed customs union and the free trade zone in Europe. Mr. Robson's analysis of the implications of these moves to the cotton textile industry appeared in the form of an article in the September issue of the* International Review of Cotton and Allied Textile Industries, *the official organ of the International Federation of Cotton and Allied Textile Industries. We reproduce the article in full, with acknowledgment to the Review, in view of its interest to the Indian cotton textile industry and trade.*—Ed.]

THE plan of the Messina countries, that is, France, Germany, Italy, Benelux, to set up a common market in the form of a Customs Union has aroused fresh interest in the effect which such a development would have on particular industries and has also set for other European countries the problem of deciding the extent to which they will associate themselves with the common market. This latter issue involves interests much wider than those of any single industry and the views of any one industry, such as the textile industry, are unlikely to exercise a decisive influence on the issue. There is nevertheless an advantage in looking at the prospect of a common market from the point of view of the textile industry, with the object of trying to establish the interests which are involved and the consequences which would flow from such a development.

For purposes of analysis, we may consider the consequences of a common market under the two headings of changes within the market and changes in external relations, a distinction which is in any event important because some advocates of a common market tend to concentrate only on one of these aspects.

The first possibility within the common market is that it might tend to changes in the size or type of economic unit which would be a gain to the textile economy as a whole regardless of location. As far as the unit of production is concerned, there does not seem, *prima facie*, to be much scope for change in size, except, perhaps, in the case of a print works or of a rayon staple plant, where the most efficient sized unit might produce more than some of the smaller European countries could absorb. Otherwise, it seems clear that, in most countries, the position is similar to that in the United Kingdom, where there are several units involved in each type of production, e.g., drills, sheetings, etc., so that, apparently, the national market is large enough to allow for an efficient size of unit specialised to this extent. Such a conclusion, however, ignores the present trend towards a higher degree of specialisation, namely, that on fabrics for particular end-uses and the associated economies of standardisation and long runs. It is clear that the European market for a particular specification of cloth or design of print would be greater than that of any one country, and it is, therefore, arguable that, over some part of European production, the national market is not large enough to allow this standardisation to take place.

Factory and Firm

To pursue this further, it is necessary to distinguish between the factory and the firm. The size of the factory is determined mainly by technical considerations and the need to supervise labour. Increased standardisation and long runs are likely to result in a more rational deployment of labour, entailing, therefore, more detailed supervision and so leading, perhaps, even to a reduction in the size of the typical unit. In any event, it is doubtful whether the common market would do much more than give added impetus to the trend towards standardisation at the factory level, which is already taking place within the national market. It is otherwise with the firm. In this case, end-use specialisation would be very much encouraged by an expansion of the market. The reduction in variety of types produced and distributed in a much wider market should enable specialised firms of this kind to expand their turnover very considerably with little addition to overhead expense and so achieve considerable reductions in cost. Moreover, the increase in the size of firms would lead to a decrease in their number and so to a better utilisation of scarce managerial ability. Finally, one would expect, in due course, an increase in size and, therefore, a reduction in the number of distributors of textiles from the converting stage onwards.

In total, one would expect the economy of a reduction in variety to be achieved primarily in the common market by the development of a number of large firms specialised on fabrics for end-uses. There might be little change at factory level.

The second main consequence of a common market is that of a transfer of textile activities from one part of Europe to another. The usual analysis for this purpose is to distinguish between assembling and processing cost, the former relating to the costs involved in transporting raw materials, etc., to the point of manufacture and the latter to the cost of production at this point. The main element in processing costs is wages, and, to this extent, industry tends to move to the lower wage areas.

It is not easy to make a comparison of actual hourly earnings in the textile industries of Europe, and the position is still more complicated by the incidence of social charges. Where the social security system is similar, it is reasonable to include in wage costs the charges paid by the employer which amount to about 40 per cent. of hourly earnings in the case of France and Germany and 70 per cent. in the case of Italy. On this basis, hourly earnings plus charges paid by the employer are about 10 per cent. lower in Germany than in France and about 20 per cent. lower in Italy. For the United Kingdom, social charges paid by the employer amount to only 11 per cent., but, in view of the different structure of the social security system, this is not considered comparable and it seems best to estimate the U.K. level of wages plus charges at about the same as in France. The level in Scandinavia is estimated to be somewhat above that in the U.K. and, at the other extreme, the level in Austria somewhat below that in Italy.

Transport Factor

In the manufacture of a medium cloth, wages and salaries amount to about 4d. per yard and labour costs may, therefore, exert an "attractive" factor of about 1d. per yard from one location to another. This factor is about the same magnitude, as the cost of transporting cloth within Europe, for example, the cost of sending cloth from Manchester to Stockholm, is also about 1d. per yard. Where long railway hauls are involved, transport costs considerably exceed this. It is sufficient for our purpose, however, to say that the transport cost would, in many cases, be large enough to prevent a transfer of the industry to lower wage areas. If, moreover, we include in transport costs, the cost of installing textile machinery at points remote from textile machinery works, then the importance of transfer costs is increased. Because of transport and heavy packing charges, the cost of installation might be from 10 to 20 per cent. more at points remote from machinery centres than from points in their vicinity and the incidence of this on interest, repairs and depreciation charges, would once more cause a variation in costs of about 1d. per yard. In general, therefore, new investment in the textile industry is unlikely to be attracted to an overwhelming extent to low wage areas.

In the United States, where the classical transfer of the textile industry from the North to the South took place, the industry was much more fluid because of the standardisation of production and because of the centralisation of marketing in New York. Wage differentials and perhaps still more trade union practices were the main driving force, but the cotton industry in the South had, in addition, the advantage of local cotton, so that mills there were protected not only by transport charges on cloth but also on raw cotton. These advantages were quickly followed up by the locating of branches of the machinery manufacturers in the South.

Where labour costs are relatively unimportant, for example, in staple fibre production they do not exceed 2d. per lb., then transport costs become the important locating influence. They could amount to 1d. per lb. on pulp—both pulp works and staple fibre works are located so as to reduce this charge—and 1d. per lb. on machinery, while heavy charges are also incurred in transporting chemicals such as caustic soda. The industry is, therefore, much more likely to be attracted to these sources of supply than to low wage areas.

The effect of a common market on external relations depends on whether the market takes the form of a Customs Union as proposed in the case of the Messina group, in which there is free trade within the area and a common tariff against other countries or whether it takes the less comprehensive form of a free trade area for the products of European countries, leaving each member otherwise free to adopt its own tariff policy in respect of products from other countries. The latter method would permit a country such as the United Kingdom to continue to accord preferences to Commonwealth countries as against non-European countries, while allowing free entry to European products. Such a regime would probably be welcomed by the United Kingdom and by other countries wishing to preserve either existing commitments or a high degree of tariff autonomy. On the other hand, it would alone be of little advantage to the textile industries of Europe, since this tariff autonomy would probably result in the invasion of each national market by textiles from low wage (Asiatic) countries. In particular, while measures could easily be taken to identify European textiles, so that they alone circulated freely within the free trade area, there would be nothing to prevent each country from admitting Asiatic textiles into its own home market, a situation which might easily occur under the pressure of individual commercial policies.

Free Trade Area

The most likely outcome at present is that the Messina countries will form a Customs Union and that other O.E.E.C. countries will seek to form a free trade area which would include this group. In this event, the Customs Union members would be able to pursue a common policy in regard to Asiatic textiles and might be collectively strong enough to limit their importation. The non-Customs Union Members would individually be in a weaker position. A special agreement among them might be possible—it is true that at the moment even without the closer link of a free trade area there is such an agreement preventing processed Japanese cloth from circulating within Europe, and there is also a voluntary limitation of exports of textiles from Japan to Europe. This result was achieved, however, mainly by the countries now proposing to adopt the more effective mechanism of a Customs Union. Two reasons render it less likely that the remaining countries will act in concert. First of all, the main threat from low wage countries is in the textile sector and other European industries are much less concerned. Secondly, the position of the U.K., which might be the principal country outside the Customs Union, is a rather special one, because of Commonwealth issues. It is true that the British cotton industry now loses, under the Commonwealth preference system, almost as much through imports of duty-free textiles from India and Hong Kong into the home market as it gains from preference in the export markets, but the position is quite different for British industry in general and it will, therefore, be difficult to make any modification in the system. The cotton industries outside the proposed Customs Union are, therefore, probably facing a more difficult situation than those inside.

SUGARCANE PRICE IN BOMBAY STATE

MILLS AGREE TO PAY MORE

AS was briefly stated in these columns two weeks ago, the sugar factories in the Bombay Deccan are required to pay a higher minimum price for the sugarcane purchased by them during the ensuing (1956-57) crushing season. The revised price is Re. 1-10-5 per maund (or Rs. 45 per ton), which represents a rise of 8 pies (or Re. 1 per ton) over that fixed for the 1955-56 season. It is also higher by As. 3-5 per maund, as compared with the minimum price of Re. 1-7 fixed by the Government of India for cane delivered at the gates of factories.

The upward revision in the minimum price is the result of a mutual agreement reached between the Government of Bombay and the Deccan Sugar Factories' Association at a meeting held on 21st September 1956. All the factories have given an undertaking that they would pay the stipulated price for cane for the 1956-57 season. The Government, on its part, has assured that there would not be any further increase in price for this particular crushing season, if the decision were respected. The revised price does not, however, affect any contracts for higher price, if any, made by the factories with the sugarcane growers.

The basis of the cane price policy now announced by the Bombay Government is the same as that followed during 1955-56 and marks a departure from the sugarcane policy of the Government of India. This policy, it will be recalled, envisages the continuance of the minimum prices for cane fixed for the last season—that is, at Re. 1-7 per maund for gate deliveries and Re. 1-5 for deliveries at rail centres—in the coming season also. These prices are subject to the formula for linking the price of cane with the price of sugar evolved by the Government.

Peculiar Conditions

The Government of Bombay has, however, done well not to follow the system of linking the price of cane to that of sugar produced for the second season in succession. For such a system does not suit the conditions peculiar to the sugar factories in the Deccan. It is common knowledge that most of the factories in the region themselves grow the bulk of the sugarcane required for crushing on extensive farms owned by them. Only small quantities of cane are purchased from individual cultivators outside the farms to meet the requirements of extra crush. Any adoption of the formula for linking cane price to sugar will dissuade the factories from buying cane from cultivators, since they will not be knowing what additional price they may have to pay to cane growers in future. In view of this uncertainty, they will naturally prefer not to buy any outside cane and to rely on their own supplies. The individual cane growers will, therefore, be compelled to divert their cane crop to *gur* making on which they get a poor yield under normal conditions, and, consequently, a lower price which may even be below the minimum fixed by the Centre. Considering this disadvantage and with a view to inducing the cultivators to supply as much cane as possible to the factories, the Government of Bombay has, in consultation with the sugar millowners, fixed a higher minimum price of Re. 1-10-5 per maund for cane during 1955-56.

No Adverse Effect

The upward revision in sugarcane price in the Deccan will not adversely affect the sugar mills For the incidence that actually falls on the mills is not heavy. As already stated, the quantity of outside cane purchased by the factories is not much; it constitutes only a small proportion of the total quantity of cane crushed by them. Moreover, the quality of sugarcane supplied to the mills in the Bombay Deccan is superior to that of cane supplied to mills in any other part of the country. The average recovery per cent. of sugar in cane in this region comes to nearly 11.6, as against the all-India average of 9.9. The recovery advantage thus derived by the Deccan sugar mills comes to as much as 17 per cent. which is more than the 15 per cent. rise in cane prices which the mills are required to pay.

Agreement has also been reached between the Government of Bombay and the Deccan Sugar Factories' Association in regard to other aspects of buying sugarcane from outside growers. Accordingly, the factories shall not engage the services of any agent other than co-operative societies for securing the supply of cane grown within 12 miles of the factory site. They may, however, utilise the services of agents for purchasing cane grown beyond 12 miles. The factories should pay 25 per cent. of the price of sugarcane within 15 days of delivery, the balance of 75 per cent. being payable within one month preferably but in no case later than six weeks. It is left to the discretion of the factories to pay 10 per cent. of the price after the contract for the supply of cane by growers is fulfilled. The factories will endeavour to purchase as much cane as possible, consistent, of course, with their crushing capacities and the optimum season for which the units in different areas work. The factories have further agreed not to deduct any weight from the weight of sugarcane supplied by agriculturists beyond the limit laid down by the Government of India for deduction in weight on account of binding material.

Will Benefit Both

The aforesaid details of the agreement over the sugarcane price and purchases will reveal that both the cane growers and the sugar factories will be benefited. Thus, while the cane growers will receive a higher price for their product, the mills are assured of large supply of cane from private cultivators, which means that there will be a longer crushing season and, consequently, an increase in the production of sugar. During the 1955-56 season, when a similar agreement was in force, it will be recalled, the sugar factories in the Bombay Deccan crushed as much as 3·4 million tons of cane, as against 2.2 million tons in the previous season. The aggregate sugar output was higher at 207,800 tons which compares favourably with 173,500 tons. The output would have been higher but for some setback to the quality of cane, the average recovery per cent. of sugar being 11.51, as against 11.68. The average number of working days was 140, the figure for 1954-55 being 139. The number of mills which crushed for more than 150 days (but less than 170 days) during 1955-56 was eight, out of the 15 units that worked.

LICENCES FOR NEW SUGAR MILLS

The Licensing Committee of the Government of India has approved of schemes for the setting up of three new sugar mills and expansion of six existing units, involving a total additional daily cane-crushing capacity of 5,350-5,820 tons. Of the three new mills, two are co-operative ventures; one will be established at Ban Ankni in Purnea District, North-East Bihar, with a capacity of 800 tons, and the other at Morinda in the Ambala District, Punjab, with a capacity of 1,000-1 250 tons The third factory—a joint-stock concern—will be located in the Ganjam District of Orissa, the capacity being 1,000-1,220 tons.

Of the six existing factories which are allowed to expand, three are in Bihar State, the increase in the daily cane-crushing capacity being 1,500 tons to 1,800 tons, 850 tons to 1,000 tons and 850 tons to 1,200 tons. A sugar mill in the Bareilly District of Uttar Pradesh will expand its capacity from 1,280 tons to 2,180 tons and a unit in Andhra from 300 tons to 600 tons. In Madhya Bharat, one mill will augment its capacity by 550 tons to 1,250 tons.

The progress made in the implementation of housing schemes for the sugar factory labour in Uttar Pradesh was reviewed by the U.P. Sugar and Power Alcohol Industries Welfare and Development Advisory Committee at its meeting held in Mussoorie recently. The review revealed that, out of the original grant of Rs. 49,49,300, work on 1,160 quarters had been completed in 52 factories and construction of 50 quarters with the supplementary grant of Rs. 4,91,300 had been undertaken. The Committee considered the question of some sugar factories having refused to participate in the housing scheme and decided to persuade these units to avail themselves of the allotment for the benefit of their workers. It also examined the question of utilising the profits from molasses for compulsory labour welfare schemes and construction of quarters. No decision was, however, taken pending the report of a legislative special committee.

The total area under sugarcane during 1956-57 is estimated at 4,717,000 acres, as against 4,560,000 acres in the previous season, representing a rise of as much as 16 per cent. This figure is claimed to be the highest on record since 1948-49. The anticipated increase in acreage is attributed partly to high prices of *gur* at the sowing period and partly to better irrigation facilities. The improvement in acreage is expected to be shared by all the cane-growing States, with the exception of Madhya Pradesh and Hyderabad The improvement is particularly marked in Uttar Pradesh and Bihar.

CONSERVATION OF COAL

COAL BOARD'S EFFORTS DURING 1954-55

THE Coal Board has, during the last few years, taken several steps to conserve the resources of coking coal in India. It has, for instance, introduced control on the production of coking coal and has encouraged stowing by granting financial assistance to collieries. It has also taken steps to enforce stowing in several large mines. The washing of all coal is another means of conservation and is a live issue. The Board has embarked on several investigations on all these methods of conservation. If, however, the results achieved in respect of stowing and washing have not been spectacular, it is because several years of investigation, planning and installation work are required, according to the Board, before a large washing or stowing plant can be installed. The Board, however, hopes that the measures taken by it will result in considerable expansion in stowing and washing during the next few years.

The progress of the conservation measures taken during the year ended 31st March 1955 is outlined in the Annual Report of the Coal Board for the year just released. The delay in the publication of the Report is said to be due to the late receipt of the audit report of the Board's accounts; this was received only on 9th May 1956.

In pursuance of the policy of pegging the output of coking coal, decided upon in 1952, the overall ceiling of output for each grade of coal for the year 1954 was initially fixed at the level of actual output in each colliery during 1953. In a large number of cases, however, the ceilings were revised upwards on appeal from the collieries concerned, but the actual output of the different grades during 1954 fell short of the revised ceiling and, in respect of grade II coal, it did not come up even to the initial ceiling, as will be seen from the following table:

(In tons)

	Initial ceiling	Revised ceiling	Actual output
Selected A and B grades ..	7,103,000	7,353,000	7,210,000
Grade I	3,634,000	3,921,000	3,659,000
Grade II	2,926,000	3,103,000	2,745,000

The number of collieries brought under the pegging scheme in each grade was: selected A and B grades 74, Grade I 45 and Grade II 110. The field-wise distribution of coking coal collieries under pegging was as follows:

Name of field	Selected A and B grades	Grade I	Grade II
Jharia	64	40	99
Raniganj	8	1	1
Giridih	2	..	..
Bokaro	..	4	10
Total ..	74	45	110

Stowing being a matter of primary importance in any scheme of coal conservation, considerable attention was paid to this question by the Coal Board during the year under review. The Technical Advisory Committee (Mining) had recommended the early adoption of stowing in a number of collieries which had already commenced depillaring or about to commence it. It was expected that the Board would supply sand to the collieries for stowing purposes. In view of the heavy financial and administrative difficulties, the Board informed the collieries in 1954 that it would not undertake the responsibility of supplying sand and that excavations and transport of suitable stowing material should be the responsibility of the collieries themselves. The Board, however, undertook to provide financial assistance in the form of loan and stowing subsidy.

Although the Coal Board told the collieries that it would not undertake to supply sand for stowing, it was at the same time fully alive to the fact that the heavy financial burden involved in any large stowing project requiring the transport of sand over long distances was beyond the capacity of many a colliery. It, therefore, suggested that groups of collieries could undertake joint ventures in constructing ropeways to carry sand to the collieries, as this would reduce the financial burden on individual collieries and facilitate the expansion of stowing. The Coal Board made it clear that loans would be admissible for such joint ventures on the same terms as to any individual colliery. Discussions between certain collieries in the Central Jharia area were held on the aforesaid proposal, but no concrete scheme was evolved during the year under review.

Out of about 830 collieries working in India, 84 were sanctioned assistance towards voluntary

TRENDS IN WORLD PLANTATION PRODUCTS

"OUTLOOK FOR TEA NOT UNFAVOURABLE," SAYS F.A.O.

THE main feature of the world's agricultural economy during 1955-56 was the continuation of the rising trend in production of food and agricultural commodities—the increase over the previous year having been nearly 3 per cent.—in the face of a general decline in prices. It must, however, be noted that the increase in production was, as in the previous years, unevenly distributed. Nor was the trend of prices uniform for all commodities. So far as the three main plantation products—coffee, tea and rubber—are concerned, there was an increase in production of all the three. As regards the trend of prices, while there was a fall in those of coffee and tea, natural rubber recorded a rise.

In a survey of the various agricultural commodities during 1955-56 and the outlook for them, the F.A.O. observes in its latest publication, *The State of Food and Agriculture* 1956, that world production of coffee in the crop year 1955-56 is estimated at 44 million bags (2.64 million tons), which is about 7 per cent. higher than that in 1954-55 and 13 per cent. above the 1950-53 average. The production in 1955-56 would have been higher still but for a sharp decline in Colombian and Central American crops, due apparently to unfavourable weather conditions. Production in Africa and other coffee-growing countries continued to show a rise, the increase in Brazil being particularly marked. The Brazilian crop at 23.3 million bags (1.40 million tons) was a post-war record.

The low stocks in consuming countries and lower prices in producing areas stimulated demand throughout 1955 and in the first half of 1956. The imports by the U.S., which had considerably declined in 1954 on account of the sharp rise in prices, increased by 15 per cent. although they were still 7 per cent. less than those in 1953. The *per capita* consumption in the U.S. also recovered during 1955, but it nevertheless fell short by 16 per cent. of the average consumption of the immediate post-war years. Imports of France, West Germany and other European countries continued to rise. Notwithstanding the large increase in incomes, the *per capita* consumption of coffee in these European countries was below the 1934-38 average. However, provisional figures of world imports, at 34 million bags (2.2 million tons), during 1955 showed a rise of 12 per cent. over 1954.

Coffee Prices

Although coffee prices during 1955 ruled very much lower than in 1954, they were higher than anticipated, on account of the recovery in consumption and the unfavourable production in some countries. The decline in output of Colombian and other mild varieties of coffee led to a sharp rise in price, which strengthened the prices of the Brazilian varieties also. A notable feature of the price-trend during the past year was the widening of the disparity in the prices of the mild varieties, as compared with the standard Santos from the normal level of 3 to 5 U.S. cents to 15 U.S. cents, the gap being the widest witnessed during the last one decade. Since September 1955, the prices have remained stable on reports of severe frost damage to the 1956-57 Brazilian crop, as also on account of the strength of better quality coffees. The prices of African robustas, however, declined under the pressure of increased supplies. Recent developments, according to the F.A.O., indicate a continuation of remunerative prices at least for the rest of the current year.

Referring to the outlook for coffee, the F.A.O. observes:

"While forecasts of the 1956 Brazilian crop vary considerably, it is now recognised that world production in 1956-57 will be lower than in 1955-56. Futures for the most distant months consequently rose from 41 cents in September 1955 to 51 cents in March 1956. However, there is the danger that high prices will, as in 1954, adversely affect consumption and imports. Although no abrupt changes in consumption are to be anticipated, it is possible that the improvement which began last year may be temporarily halted, which would aggravate the effects of any sharp rise in supplies in the future."

The year 1955 witnessed a record production of tea, the increase in output in India and Ceylon having been more than anticipated. Production in Africa continued to rise, while in Pakistan and Ceylon the crops were slightly lower than those of the previous year. Despite the increased production, exports from the producing countries suffered a recession, due to "various administrative and other factors," resulting in accumulation of stocks. The supply and trade conditions, together with other factors, had their effect on prices. The Government of India's decision to restrict shipments of teas to London auctions, leading to a shortage of warehouse spacing and overburdening of auction facilities at Calcutta, and the decline in quality of Indian and Ceylonese teas, due to coarser plucking, were among the factors responsible for the fall in prices. In London, however, the scarcity of supplies resulted in a rise in prices during the autumn of 1955. In March 1956, however, the Government of India temporarily removed the restriction on shipments to London auctions. As a result, the F.A.O. expects that shipments might rise and a "closer balance of prices will be achieved between the various auction markets."

As regards the outlook for tea, the F.A.O. says that it is "not unfavourable, despite the abundance of supplies." According to this U.N. Organisation, the stocks in the U.K. are low, imports into practically all consuming markets can be expected to improve and, given "acceptable quality," prices are likely to remain firm.

Rubber

As in the case of most of the agricultural commodities, natural rubber also recorded a rise in world production to a record level of 1.94 million tons during 1955. The increase was only 6 per cent. over the output in 1954, despite the substantially higher price which it fetched. A feature of the expansion in production was the larger increases in the output of small holders than in that of big estates.

The price of natural rubber increased rapidly during 1955, touching the peak for the year in September. The average price for the year was 70 per cent. higher than that for 1954, the price of No. 1 R.S.S. having stood at 37.30 cents per lb., as against 21.99 cents in the previous year. The advance in natural rubber price was so sharp that at one time it stood at almost double that of synthetic rubber, the production of which expanded by 52 per cent. in 1955 from 0.73 million tons to 1.1 million tons, thus nearly touching the present capacity.

The upswing in the price of natural rubber was due to the increase in consumption from 1.79 million tons to 1.87 million tons, almost every rubber manufacturing country raising its consumption, the expansion in the U.S. being the largest (24 per cent.). The consumption would have gone up still further if the competitive price levels as compared with the synthetic rubber (noted in 1953 and 1954) had been maintained or the gap between the two had been narrower, but, as already pointed out, the natural rubber price (at 37.30 cents per lb.) was substantially higher than that of the synthetic (at 23 cents per lb. for U.S. G.R.S.). Moreover, the rise in consumption of synthetic rubber was much sharper, having gone up from 0.75 million tons to a record level of 1.07 million tons. A notable feature of the rise in consumption of synthetic rubber was the threefold increase in exports from the U.S. to other non-producing countries.

In the early months of 1956, some recession in demand for natural rubber became evident, following the cutbacks in automobile output in the U.S. and the U.K. Moreover, the increasing supply of lower-priced synthetic rubber and the prospect of new synthetic rubber plants in Europe and North America coming into production shortly had a depressing effect on the natural rubber, with the result that prices declined during the first half of 1956, though they continued to remain higher than those of equivalent synthetic rubbers.

NORTH INDIAN TEA CROP TO BE RESTRICTED

Suggestions have been in the air for some time that the effects of the excessive supply of tea in India and other world markets can be overcome by the early closure of the plucking season and the destruction of tea waste and residual teas. These proposals have now become almost a fait

(*Continued on page* 843)

OUTPUT OF JUTE GOODS DECLINE FURTHER

STOCKS, HOWEVER, RISE

THE month of September 1956 recorded another landmark in the history of the Indian jute industry; for it was during this month (on the 17th to be precise) that the jute mills implemented the decision of the Indian Jute Mills Association to re-seal 5 per cent. more of the looms, thus bringing the total idle capacity to 12½ per cent. of the looms. The sealing of the 5 per cent. of the looms represents a cut in production of 5,000 to 5,500 tons per month. This is in addition to the fall in output on account of sealing 2½ per cent. of the looms in the middle of July. One would naturally have expected a more substantial decline in output during the month than in the previous month and an equally substantial fall in stocks of jute goods. The statistics of production and stocks for the month of September, released by the I.J.M.A., however, disclose that, while production has fallen to a slightly great extent than in the previous month, stocks at the end of the month have increased.

The production of jute goods during the month under review amounted to 84,500 tons, as compared with 89,000 tons in the previous month and 94,100 tons in July 1956, thus maintaining the downward trend for the fourth month in succession—the output having dropped from 101,700 tons in May 1956. This brings the monthly production to the lowest level since October 1955, when it amounted to 78,800 tons.

The following table shows the output of jute goods during the month under review, as compared with that in the previous two months and that in the corresponding month of 1955:

Jute Goods Production

(In tons)

	September, 1956	August, 1956	July, 1956	September, 1955
Hessians	35,500	35,400	34,300	35,400
Sackings	43,800	48,200	52,900	47,200
Others	5,200	6,000	6,900	4,800
Total ..	84,500	89,600	94,100	87,400

It will be noted that the decline in production during the past month amounted to 5,100 tons, as against 4,500 tons in the previous months. This fall is solely accounted for by sackings and other manufactures, the production of which has dropped by 4,400 tons and 800 tons, respectively, while the output of hessians, which had gone up by 1,100 tons in the previous month, has further risen by 100 tons. This shows that the mills were concentrating their attention on cutting the production of sackings, the stocks of which are still high.

The total stocks of jute goods at the end of the month aggregated 124,700 tons, which shows a rise of 1,200 tons, in distinct contrast to the heavy fall of 14,400 tons noted at the close of the previous month, as will be seen from the following comparative table:

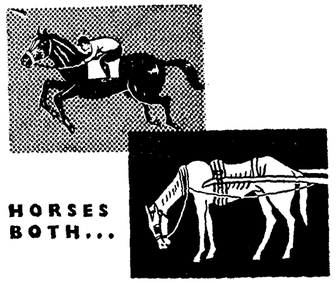
Jute Goods Stock

(In tons)

	As on 30-9-1956	As on 31-8-1956	As on 31-7-1956	As on 30-9-1955
Hessians	29,400	28,200	38,500	34,400
Sackings	88,200	88,600	93,200	32,500
Others	7,100	6,700	6,200	3,000
Total ..	124,700	123,500	137,900	69,700

Though the stocks at the end of September were substantially lower than those at the close of July last, they are still higher by as much as 55,000 tons than those at the end of the corresponding month of the previous year and large enough to constitute a source of anxiety for the mills. For, according to experienced brokers in jute goods, the position of the industry from the statistical point of view is still far from bright and the stocks of goods with mills at the beginning of 1957 are likely to be nearly twice as large as they were twelve months before. "These stocks, too," to quote Messrs. J. Thomas & Co., Ltd. "are not well balanced, by far the greater part consisting of sacking descriptions. The weight of them, unless some new and unforeseen factor arises, is likely to be severely felt during the slack period of January-March, and this consideration was reflected in the sharp discount at which January-March goods, particularly sacking goods, were frequently quoted during September."

As will be noted from the table above, the stocks of sackings have fallen by only 400 tons over the month, while those of hessians and other manufactures have gone up by 1,200 tons and 400 tons, respectively.



HORSES BOTH...

...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

RAMTIRTH BRAHMI OIL

FOR LONG, LUSTROUS HAIR

Use RAMTIRTH BRAHMI OIL. Ayurvedic Medicine (Regd.). It ensures growth of healthy hair, removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to every one in all seasons. Rs. 3-8 for big bottle and Rs. 2-0 for small. Send M.O. for Rs. 5-13 for big and Rs. 3-13 for small bottle including postage and packing. No V.P.P. sent.

SHRI RAMTIRTH YOGASHRAM
DADAR (C. RLY.) BOMBAY 14.

YOGIC ASANAS

To be healthy and to keep fit ask for our attractive Chart (Map) showing YOGIC ASANAS, which will be sent on receipt of M.O. for Rs. 1-14. These ASANAS can be easily performed at home.

YOGIC CLASSES are regularly conducted from 7-30 to 9-30 a.m. and in the evening from 6 to 7-30 p.m. at the above address. Lectures on every Sunday at 10 a.m.

HYDRO-POWER RESOURCES ESTIMATED AT 35 MILLION KW.

RESULTS OF PRELIMINARY SURVEY

IN the context of the increasing emphasis that is being placed on industrialisation and rural electrification in India's economic programme, there is no doubt that the demand for electric power will go up in future. It is certainly necessary to find out how much of this demand could be met by India's large water resources. The Government of India must, therefore, be congratulated on initiating a survey of water resources which are likely to yield electricity. The results of the preliminary survey, which was undertaken by the Central Water and Power Commission in 1953, indicate that India's "utilisable" hydro-power resources are about 35 million kw. at 60 per cent. load factor.

India's installed capacity for electricity, which was about 2.3 million kw., has already moved up to about 3.4 million kw. and is expected to go up to 6.9 million kw. by 1960-61. In urban areas, the demand for electricity will come from large-scale industries and other users of electricity, while, in the rural areas, there will be an increased consumption of electricity for purposes of rural electrification, running of small-scale industries and pumping water for irrigation. Experience in many countries has shown that electricity consumption increases steadily with the passage of time. Indeed, the forecasting of future trends in electricity consumption is a highly technical job, in which complicated statistical formulæ are employed. The U.N. report (prepared by the Secretariat of the Economic Commission for Europe) entitled *Methods Employed for the Determination of Electric Power Consumption Forecasts*, discusses several of the methods in use in the U.S. and European countries, including the U.S.S.R. Many methods are in use, the preference for a particular method being dependent upon several factors such as the extent to which the economy is planned, the period to which the forecast applies, the density of consumption, the degree of industrialisation and the pattern of energy resources. In Europe, the application of a mean rate of annual increase is the method most commonly employed. The best known constant rate conforms to the law of doubling-in-ten years—that is, 7.2 per cent. per year; this is particularly in vogue in France and W. Germany. Sweden tends to use a rate of 6.7 per cent., Italy 5.7 per cent., Belgium 5.5 per cent. and Switzerland 4 per cent. In India, the demand for power, it has been estimated, will increase at a rate of 20 per cent. per annum; this high estimate is obviously based on the consideration that a high rate of industrial expansion is envisaged in the second Five-year Plan.

Six Regions

The preliminary survey of hydro-electric resources, to which reference was made at the outset takes into account only the resources capable of development on technical and economic considerations in the context of prevailing cost, current construction techniques and the factors affecting development of river resources. For purposes of assessing these resources, the Commission has divided the country into six broad regions: (*a*) West-flowing rivers of the Western ghats, (*b*) east-flowing rivers of South India, (c) rivers of Central India, (d) the Ganga basin, (**e**) the Brahmaputra basin, and (*f*) the Indus basin. The present survey indicates that, at present, only about 2 per cent. of the estimated hydro-power resources of the country are being utilised.

The regional classification of the rivers brings out also some of the essential characteristics of the regions concerned. Thus, the problems involved in the development of the west-flowing rivers of the Western Ghats have a common feature in that almost all are "high-head" schemes, unaffected by conflicting requirements of irrigation and power. The problems of the east-flowing rivers of South India are different, in that the overriding requirements for irrigation have first priority and power development is generally of the "medium head" class. All possibilities of development in each region have been examined. The possible schemes are outlined in complete detail, indicating the location of dam sites with dimensions of dams and reservoir capacities, the type and details of the water conductor systems and location of power houses. Twenty-six such proposals, aggregating 3.7 million kw., 43 aggregating to 6.8 million kw. and 36 aggregating to 3.8 million kw.—all at 60 per cent. load factor—have been incorporated in the first three completed reports, entitled "West-flowing Rivers of the Western Ghats," "East-flowing Rivers of South India" and "Rivers of Central India." The fourth report on the Ganga basin indicates a total potential of 12.984 million kw., at 60 per cent. load factor, of which 7.47 million kw. lies entirely in Nepal. The survey is in progress for the remaining river basins.

Two Welcome Results

When the survey for the entire country is completed in 1958, the "real wealth" of hydro resources, and its distribution and characteristics will be established, within acceptable limits of accuracy. It is expected that, in the next stage, the hydro-electric survey will extend beyond the present limitation to "prelimintry studies," and cover a long-term systematic programme of field investigations.

Two welcome results of the preliminary survey deserve notice. In the first place, the survey reveals that there is a very favourable distribution of the water resources in the country, particularly in comparison with most of the other countries. This means that many schemes of hydro-electric power generation can be implemented in each region. Secondly, doubts had been expressed about the economics of hydro-power in comparison with thermal power. Experience in several centres, it is stated, has shown that hydro-electric power can be generated at rates which are highly competitive with thermal power. The current costs of hydro-power are about 0.2 to 0.3 of an anna per unit, as compared with 0.4 to 0.45 anna per unit (at 60 per cent. load factor) even in mine-head thermal stations. It is true that "seasonal" hydro power would need the "helping hand" of thermal generation for commercial supply on a continuous basis. But no assistance from thermal power, it is stated, is required for the "firm" component of hydro-power potential with which the current survey concerns itself.

WAGON EFFICIENCY

In a communication addressed to chambers of commerce and other representative business organisations in the country, the Railway Board has invited the co-operation of the business community in making a success of the railway campaign to "work the wagons harder." These organisations have been informed that the Railway Board has decided to reduce to five hours the existing "free time" allotted to the trade for loading and unloading of wagons, so that these may be back-loaded the very same day. The reduced "free time" will be enforced from 1st November 1956, when the new busy season starts.

As part of the campaign to "work the wagons harder," the Railway Board has already issued instructions that the railway's own coal wagons should, with immediate effect, be released in three hours instead of six and that wagons containing other railway material should be released within five hours instead of six, as previously. Steps are also in hand to reduce the detention of wagons in collieries and other sidings and port areas. The Railway Board's communication emphasises that in view of the likelihood of a shortfall in the availability of rail transportation during the second Plan period, it is of the highest importance that the maximum possible use should be made of the railway's existing resources in wagons, engines and line capacity, as more intensive use of existing resources would mean the "creation" of additional transportation capacity. The Board has urged the business community to extend its wholehearted support to this and to any other measures which Railway Administrations may be constrained to take, as these measures will not only be in the wider national interests, but also in the particular interests of the large number of individual business organisations which depend for their development on the maximum possible availability of rail transportation.

U.K.'S ATOMIC POWER STATION

FIRST OF ITS KIND IN THE WORLD

THE industrial atomic power station in Calder Hall, the U.K., which was formally opened last week by H. M. The Queen, is the first of its kind in the world. Although only one reactor furnace is in operation at present, the station is already producing 28 megawatts of electricity which will shortly be increased to between 40 and 50 megawatts. Next year, when the second reactor furnace will come into operation, the full capacity of 92 megawatts will be produced; between 72 and 76 megawatts of this electricity will be made available for public use. It is stated that, next year, Britain will have at least seven experimental and commercial power stations under construction costing £170 million to £200 million.

The amount of electricity generated by atomic energy will be further increased to 300 megawatts in 1958, when the second Calder Hall atomic power station and the two atomic power stations at Chapelcross, Dumfriesshire, come into production. By 1965, every new power station in the U.K. is expected to be an atomic power station. And, by 1975, the total output of atomic power stations would possibly be twice the output of all the power stations that serve Britain's needs today. This means that, at the end of the next 20-year period, Britain would be supplying electricity in an amount equivalent to that produced by 50 million and 100 million tons of coal.

No firm estimates about production costs of nuclear power can be made at present. For technological changes are constantly taking place in the sphere of nuclear power. But it is stated that the capital cost per kilowatt is likely to be about £120 and initial investment in uranium fuel may add about £30 per kilowatt. Since capital costs of coal or oil-fuelled stations are estimated at £55 per kilowatt, the competitive power of nuclear stations is stated to depend on availability of capital at reasonable rates. At the same time, experts believe that there is considerable scope for reducing the capital cost of the graphite-moderated gas-cooled type of station. Further, it has been computed that one ton of uranium can give as much heat as 10,000 tons of coal; one ton of uranium costs £10,000 and 10,000 tons of coal cost £40,000. Again, in the nuclear power stations, the plutonium by-product, which will be created, can produce heat equivalent to three million times its weight of coal and could be fed back into the reactor. Present estimates place the cost of nuclear power at 0.6*d.* a kilowatt on the assumption of 5 per cent. interest and 15 to 20-year life for capital charges. It is believed that, in course of time, the nuclear power stations will be fully competitive with the modern coal-fired stations.

In the U.K., the urgency nuclear power stations is greater than in the U.S. or the U.S.S.R. which produce cheap electricity from hydro-electric resources or readily available coal. Again, the U.K. has no reserves of oil for which it depends on the Middle East. Further, industrial concentration is sufficiently high in the U.K. to justify large expenditure on nuclear power stations which require a high load factor and have a high capital (though a low running) cost. These considerations have lent a new sense of urgency to the U.K.'s atomic power programme. To underdeveloped countries, nuclear power may not prove attractive, because of the low load factor in these regions. It must not, however, be forgotten that, whereas coal resources are not inexhaustible and coal raising is an increasingly costly process, the demand for energy will continue to rise in all countries, so that nuclear power will always be regarded as a welcome additional source of energy to hydro-electric or thermal power.

NEW PRODUCTS AND PROCESSES

Boron 10

PROBABLY the first commercial isotope separation column in the world, now being operated in Surrey by 20th Century Electronics, is producing Boron 10, an important material used in atomic energy development. Production of Boron 10, which is a rare non-radioactive material used in the manufacture of special counters for measuring the activity in nuclear reactor furnaces, followed close co-operation between the company's technical staff and scientists of the U.K. Atomic Energy Authority. Mr. Alan Edmonds is supervising the operation of the column, which is based on a U.K. Atomic Energy Authority design by Mr. R. McIlroy. Although production at present is barely sufficient to meet the need of Harwell, the company plans to construct several other columns of greater heights. The Boron 10 has an enrichment of over 99 per cent. The Russians showed an experimental column at the "Atoms For Peace" Exhibition at Geneva last year, but their product had an enrichment of only 87 per cent. The column, a narrow tube packed with five miles of stainless steel wire, cost about £2,000 per foot. Boron 10 is one of the most efficient media for measuring the quantity of neutron particles present inside a nuclear reactor furnace. Since the neutron particles are the "bullets" which keep the atomic "fire" burning in the nuclear reactor. Boron 10 is a vital material for use in equipment for controlling the output of nuclear reactors. Another use for Boron 10 is its application to medical therapy. A by-product of the Boron 10 producing process is Boron 11, of great value in nuclear research.

A Measuring Instrument

A gauging instrument for use by production engineers, which gives immediate information about the external dimensions of machined metal components, is one of the latest products of Southern Instruments (Frimley Road, Camberley, Surrey). Known as the Magna-Gage electronic comparator, the instrument is capable of measuring to an accuracy of .00001 inch. It consists of two parts: a probe which is brought into contact with the component under examination and an amplifying unit which records on a scaled dial any deviation from the correct dimension. Deviation causes the probe tip to be displaced and this in turn causes minute electrical changes which are transmitted to the amplifying unit. These changes are amplified and made to move a pointer on the dial which indicates the amount the component deviates from the correct dimension. It is claimed by the makers that in spite of the high sensitivity of the instrument, the readings are practically unaffected by temperature change. A change of 20 degrees F. is needed to cause an error of .00001 inch and it is also stated that the readings are little affected by changes in mains voltage or frequency.

Crop Dusting

A method of electrically charging insecticide and fungicide dust particles to make them adhere more thickly and firmly has been developed for the first time on a commercial scale by a British firm, and incorporated in a new dusting machine. The revolutionary development is quite simple. The dust passes through a very high electrostatic field so that each individual particle acquires a positive charge. When the particle approaches the surface of the plant being treated, an equal and opposite charge is induced behind the plant, thus drawing the particle to it. As the object being sprayed now has a negative charge, the positively-charged particle is held to the surface. Because like forces repel, the dust particles are evenly distributed over the surface. At the same time the dust is deposited in almost equal quantities on the lower surfaces of leaves, etc. It is estimated that the total deposits obtained by this new method of spraying are from four to ten times the amounts obtained by conventional means.

Versatile Chemical

From natural gas, air and ammonia, science has created one of the most versatile of modern chemicals—a crystal-clear liquid called acrylonitrile. Developed by the Union Carbide and Carbon Corporation in the United States, its uses are increasing at a rapid pace. Dynel, Union Carbide's remarkable textile fibre, is made from acrylonitrile. Fluffy and soft, but with great strength, this fibre is woven into everything from work clothes to evening dresses. It has become particularly popular in women's fur-like coats. Synthetic rubber made from acrylonitrile is used in shoe soles, gasoline hose, and many industrial products that must withstand hard use. When certain plastics are blended with acrylonitrile, they become shock-resistant and gain a toughness that helps them to last much longer.

Plastic-covered Meat

Meat coated with plastic by dipping is a new idea in consumer convenience being promoted in the United States. The meats are designed particularly for self-service stores, which predominate in U.S. grocery and meat sales. The plastic coverings come in two types, one of which allows the meat to be cooked by the housewife while still encased in the plastic, the other allowing the housewife to pull off the covering just before cooking. The first system makes use of a polyester film that encases the meat throughout the cooking process, eliminating dirty cooking pans. In the second system a colourless liquid coating of plastic is poured over the meat, rapidly hardening and conforming perfectly to the shape of the meat. It can be pulled off easily by the housewife before cooking.

Device to Study Ocean Bottom

For the first time in history scientists now have an instrument that can plunge into the ocean floor and bring up a large cylindrical core of undisturbed sediment deposited during thousands of years of geologic time. The device, called a large-diameter deep-sea corer, was designed by Dr. W. Maurice Ewing, Professor of Geology at Columbia University in New York City. Columbia scientists expect that it will aid them immeasurably in the study of the history of the earth and the origin of life in the deep sea. The new corer has an 11½-inch diameter, as compared with the 2¾-inch diameter of the earlier corer used by Columbia University oceanographers. The new instrument will reveal from 5,000 to 10,000 years of geologic time and will permit much greater precision in measuring the age of earth sediments lifted from the ocean bottom.

Colour Test for Tobacco

According to the United States Department of Agriculture, colour, instead of taste, may soon be the standard which experts use to judge tobacco. A colour comparison test, which permits scientists to judge the quality of tobacco while it is still growing, speeds up the process of breeding high-quality tobacco plants. The U.S. Department of Agriculture scientists who discovered the new method expect it to produce better tasting tobaccos. The tests will enable plant breeders to develop strains of tobacco that do not contain unwanted alkaloids. Until now, breeders have had to wait until tobacco has been aged, manufactured into cigars or cigarettes, and "taste tested," before undesirable alkaloids could be discovered.

Zirconium and Silicon Coatings

A series of new zirconium and silicon carbide refractory coatings designed for use in protecting materials from corrosion and abrasion has now reached an advanced stage of development. The coatings, which are based on zirconium oxide, zircon and silicon carbide, have been developed by the Norton Company. The silicon carbide coating is intended especially for application to graphite where that material is used for structural purposes as, for example, in the building of graphite moderated nuclear reactors, or in certain types of rocket motors. All three types of coating can, it is claimed, be bonded to form fully protective films over materials fabricated in complicated shapes by means of flame spraying techniques.

Electronic Eye

A new electronic eye has been developed that may enable astronomers to see further into space than ever before. The eye, in the form of a tiny tube, was unveiled recently at the opening of the Westinghouse Research Laboratories, at Pittsburgh. Scientists said the tube can make faint light and images thousands of times brighter. If attached to the giant telescope atop Mount Palomar in California, the tube will make the telescope three times as powerful. The Mount Palomar telescope already takes pictures of stars one to two thousand million light years away.

HOW INDUSTRIAL CONCILIATION WORKS IN CANADA

NO PLACE FOR COMPULSORY ARBITRATION

IN many countries which have a high proportion of industrial labour force in their population, the authorities are paying constant attention to evolving methods whereby stoppage of work on account of industrial disputes could be avoided. The main philosophy behind such intervention is that industrial stoppages have too adverse an effect on the community to be treated as a matter for consideration only by the two parties to the dispute—the employers and employees. Some measure of State intervention has come to be regarded as a necessary consequence of industrial development.

The kind and degree of State intervention in industrial disputes differ, of course, from country to country. Canada is one of those countries where compulsory conciliation has been adopted. There is compulsory conciliation in India also. But the chief difference between India and Canada is that, whereas in India, the State's intervention in industrial disputes goes beyond compulsory conciliation and extends into the realm of compulsory arbitration, in Canada, it just stops at compulsory conciliation. Indeed, it would appear that, in Canada, any attempt at introducing compulsory arbitration would be stoutly opposed in most quarters, both employers and employees, as being contrary to all Canadian conceptions. In other words, the right to declare a lockout and strike is not denied to employers and workers, respectively.

Conciliation

Only the Government insists that, when a dispute exists, it must be allowed the chance to bring the parties together, with a view to reaching an agreement. All that the Government insists upon is that the parties must first tread the path of peace before they declare war on each other. It is also not obligatory on the part of employers and workers to accept the recommendations of the conciliation officers. But it is incumbent upon them to submit to conciliation. Limited as this form of intervention is, especially when it is compared to Indian labour legislation, it is noteworthy that Canadian practice has some remarkable achievements to its credit. Thus, during the five-year period 1950-54, which was marked by prolonged strikes in several countries, work stoppages in Canada accounted for only 0.15 per cent. of the total estimated working time lost. An account of the working of the system in Canada, as presented by Mr. Alfred Stenger in the latest (September) issue of the *International Labour Review*, will be read with interest in this country.

Legislation

Canada, like India, has a federal constitution. The federal Government has jurisdiction over industries which operate inter-provincially and over transport and communications. The field of labour legislation is a provincial prerogative. The present statutory conciliation procedures are stipulated in the federal Industrial Relations and Disputes Investigations Act on which most provincial labour relations Acts are modelled. According to law the employer is obliged to "make every reasonable effort to conclude a collective agreement." But it does happen sometimes that the parties cannot come to an agreement. It is then that compulsory conciliation begins. It, however, covers only disputes arising out of collective bargaining negotiations for conflicts originating from disagreement concerning union recognition and other issues are dealt with by federal or provincial labour relations boards. Summarising the procedural details relating to conciliation in Canada, the author says:

"(1) Not later than 20 days after either party has given notice that it desires to commence collective bargaining, direct negotiations between employers and employees have to begin. Both parties are obliged to make every reasonable effort to conclude, revise or renew a collective agreement. During the period of negotiations the employer is not allowed to alter the conditions of employment or to lower wages without the consent of the employees or their representatives.

"(2) If direct negotiations fail, or collective bargaining does not begin within 20 days after notice has been given, either party may apply to the Minister of Labour for the appointment of a conciliation officer. The latter will in most cases be an official of the Department of Labour and will confer with the parties informally. No procedure is prescribed by the Act, and the conciliator has, in the words of the Act, the duty 'to bring about an agreement between parties to a dispute.'

"(3) If the conciliation officer does not succeed in his efforts the Minister of Labour may set up an *ad hoc* conciliation board. This board consists of three members, two of whom are appointed by the Minister upon nomination by the parties; these two members then nominate a chairman, the nomination being confirmed by the Minister. If they fail to agree on the choice of a chairman, a chairman is selected and appointed by the Minister. Members of the board are sworn in and are not allowed to have a financial interest in the outcome of the proceedings or to have acted as solicitor, legal adviser, counsel or paid agent of either party within the six months preceding the date of appointment.

"The Act empowers conciliation boards to require the production of documents, subpœna witnesses and take evidence on oath; in addition, section 34 of the Act gives the boards wide powers of entry and inspection. But the boards are reluctant to take evidence on oath and to employ court stenographers, and do so only in exceptional cases. If everything that is said is put on record a certain restraint is imposed on the parties and the chance of a meeting of minds, which may be possible if the parties can express themselves quite informally and off the record, is decreased. If the board fails in its attempt to bring about an understanding between the parties it issues recommendations as to how the dispute should be settled. As the word implies, neither party is obliged to accept these recommendations. However, the parties are not allowed to take action—either to go on strike or to declare a lockout—for seven days after the recommendation report is released by the Minister of Labour.

"(4) It does very often happen that, even after rejecting a board's recommendation, the parties use its report as a basis for the renewal of direct negotiations. In this connection, a very important consideration arises out of the principles embodied in the Act. The pressure of public opinion is brought to bear on the two parties to induce them to come to an agreement, for the recommendations of the conciliation board may be made public by the federal Minister of Labour and published verbatim in the *Labour Gazette*, the Department of Labour's official organ. During the sittings of the board both parties quite frequently agree not to release any statements to the public."

Although the parties sometimes reject the recommendations of the conciliation officers, they often take these recommendations as the basis for further negotiations. The law, however, provides a safety clause which empowers the Minister of Labour to take such action as he thinks fit in order to "maintain or secure industrial peace and to promote conditions favourable to settlement of disputes." There are instances where the Minister has made use of those powers. The chief advantage of the compulsory conciliation machinery, as the author points out, lies in the fact that the obligation to substantiate demand before a third party "exercises a great regulatory and modulating effect on collective bargaining and eliminates visionary demands." Further, in Canada, conciliation owes not a little of its success to the fact that political differences do not play any part in the sphere of industrial relations and such differences also lack the element of bitterness which is met with in other countries. Indeed, the author notes that class consciousness is nearly completely absent from the Canadian scene and "some sort of personal, friendly relationship between management and union representatives is maintained; they may address one another very often by their Christian names."

Delay in Settlement

Nevertheless, one great defect that has been noted in the sphere of Canadian industrial relations is protracted delay in the settlement of disputes. The author quotes Professor H. D. Woods, Director of Industrial Relations Centre of McGill University in Montreal, who, commenting upon the working of the Canadian Act, says that "the experience of those who have served on behalf of the parties, as chairmen of boards, and in the Government service shows that, in a great many cases, the procedure has produced long delays and frustration and has seriously weakened collective bargaining, as a private legislating process." To people, in this country at least, who are used to the delays of industrial courts, this will hardly cause any surprise. But this cannot obviously be a source of consolation to Canada. Referring to the adverse effect of delays in settlement of industrial disputes, the author says: "Pending negotiations are a permanent subject of conversation among employees to the detriment of the performance of work. There may also be a subconscious slowdown, because nobody can do his best if there is something on his mind." For these reasons, he rightly insists that industrial negotiations should be disposed of as quickly as possible. With this end in view, he makes the interesting suggestion that every new agreement between employers and employees should be made retroactive from date of expiry of the old contract; this would eliminate any motive to delay and protract negotiations. But one may wonder whether the adoption of this suggestion would not lead to the conclusion of hasty and ill-considered agreements which, in their turn, may breed additional industrial disputes.

DOCK WORKERS' PROPOSED STRIKE

Although a series of discussions has taken place between the representatives of the Government of India and those of dock workers, there is still no certainty that the strike that is scheduled to take place on 15th November will not come off. Notice of strike has already been served by the All-India Port and Dock Workers' Federation. A charter of demands, which includes revision of the scales of pay and allowance, has been drawn up by the workers. In Calcutta, the tension is apparently mounting, for the decasualisation scheme, in the form in which it has been made applicable to the dock workers in that city, is said to ignore several of the demands put forward by the labour leaders.

The Standing Committee of the Federation has urged the Union Government to send an early reply to the communication sent by it to enable the Federation to reconsider the strike decision. A statement issued by the General Secretary of the Federation, Mr. S. C. C. Anthoni Pillai, this week, said that the Government's reply, when received, would be placed for consideration before a special conference. Mr. Pillai stated that the discussions held between the representatives of the Federation and the Secretaries of the Union Transport and Labour Ministries last week did not prove helpful as the "replies to the several suggestions made by the Federation were most unsatisfactory." The Standing Committee of the Federation had now suggested that the revised schemes under the Dock Workers (Regulation of Employment) Act be kept in abeyance till a satisfactory solution was found and that the agenda for the conference of port and dock interests, which the Government was to call, should be widened so that all the issues raised by the Federation might be considered and settled.

There is no doubt that, in the unfortunate event of a strike by dock labour in India, there would be an all-round setback in the economic sphere. The Government, however, is aware of the widespread implications of a country-wide dock strike and is doing all it can to understand and mitigate the workers' grievances. Much will depend on the course of negotiations at the conference of the representatives of the Labour Ministry, the dockers, stevedores and port authorities, scheduled to be held in the first week of November. It is to be hoped that both sides will appreciate the grave repercussions which a strike at this juncture will have on Indian economy and strive to avert the costly and senseless blunder of a stoppage of work in the docks.

LABOUR DECISIONS

Although the Government has decided to abolish the Labour Appellate Tribunal, which was first set up in August 1950, there is no doubt that the Tribunal has made some very weighty pronouncements and given notable decisions which could serve as valuable precedents for guiding the work of industrial courts. From this point of view, the Indian Chamber of Commerce, Calcutta, has done well to collect the important decisions given by the Tribunal. The booklet, entitled *Precedents from Decisions of the Labour Appellate Tribunal of India*, published by the Chamber, classifies the decisions under various subject-headings. The booklet will prove to be a useful reference work for employers, lawyers and labour leaders.

During 1954-55, the Employees' Provident Funds Scheme covered 4,53,896 workers employed in 1,354 factories in six industries, according to the report on the working of the Scheme, which has just been published. The number of persons covered by the scheme was 86 per cent. of the total employment, namely, 5,26,071 persons in these industries. The largest number—458 factories with 1,81,863 members covered under the Fund was in the State of Bombay. Madras and West Bengal with 191 and 249 factories and 85,312 and 32,260 members respectively came next. Kutch is the smallest region with only two factories and 309 members. With only one factory covered in Bhopal the number of members of the Fund was 2,319.

The total amount of provident fund contributions due to be received from the factories covered by the scheme during the period was Rs. 6.15 crores. Interest at the rate of 3 per cent. was allowed on the provident fund accumulations of the subscribers to the Fund during the period. The Act which was passed in 1952 applied only to six industries during the period, namely, cement, cigarettes, engineering, iron and steel, paper and textiles. The contribution paid by a member of the Fund is one anna per rupee of his total basic wages, dearness allowance and value of food concessions; an equal amount is paid by the employer. The provident fund contributions are invested in Central Government securities. The Scheme has since been extended to 17 additional industries, including printing presses, heavy and fine chemicals, tea, sugar and glass. Nearly 20 lakh workers employed in 3,600 factories now benefit by the Act.

FLUX-FREE ! CORROSION-FREE !!

Welding light metals (aluminium, magnesium and their alloys) is speedy and sure with Argonarc Welding Equipment. Because no flux is used, there is no corrosion. The weld is stronger, production time is cut, and electrode wastage is reduced to a minimum.

Argonarc Welding is equally well applied to stainless steel and copper sheets. There is little or no distortion, because the source of heat—the tungsten arc—is small and concentrated.

IMPACT OF INDUSTRY AND ELECTRIC POWER ON AGRICULTURE

VERY BENEFICIAL FOR ITS PROGRESS

By D. Seshadri Sastri, B.A., B.L.

MODERN heavy industry and power generation have in this twentieth century played a great part in accelerating the pace of agricultural development in the Western countries of the world. It is equally true that advanced agricultural economy and, in some Western countries, especially in the United States of America, technological advance in agriculture have played an important part in accentuating the rate of industrial development.

With the establishment of heavy industrial units in a country, the manufacture of chemical fertilisers, farming machinery in general, water pumps, tractors, bulldozers, insecticides and large-scale water conservancy projects are made possible. Indian agriculture needs a huge quantity of these various means of production. If we make extensive, though judicious, use of fertilisers to increase the yields of lands already in production, we will need at least five million tons of nitrate fertilisers and at least 500,000 tons of phosphate and potassium fertilisers. This means a huge domestic market for heavy industry.

It was only in 1912 that a distinguished German scientist, Haber, evolved a process for the manufacture of synthetic ammonia by using the nitrogen in the air. Subsequently, Bosch, another German scientist, considerably improved upon the methods of the former and, thereafter, the Haber-Bosch method has since then formed the most important and useful method for the manufacture of synthetic ammonia. Thereafter, the production of nitrogenous fertilisers made very rapid strides and plants suitable for processing the various materials available were soon established in Germany, England, America and Japan.

The most scientific advance in the production of fertilisers in India came to be made with the establishment of a fertiliser factory at Sindri, the largest single fertiliser unit in the East. Since then, the use of ammonium sulphate fertiliser has come to be so popular that the fertiliser plant at Sindri is being expanded, and two new types of fertilisers, namely, urea and ammonium-sulphate-nitrate, which have a higher cencentration of nitrogen than ammonium sulphate, will soon be produced in Sindri. Government have also planned at present for the establishment of two more factories, very nearly of the same size as Sindri, one at Bhakra-Nangal and another possibly at Neively. Thus, the fertiliser industry in India can be expected to play an important role in increasing food output yields per acre.

Iron and Steel

Among heavy industries, the iron and steel industry plays a key role and its impact on agriculture is, indeed, very great. The expert survey of world resources of iron ore, recently published by the United Nations Organisation, indicates that India possesses iron ore resources of the order of 21,000 million tons, out of 84,580 million tons in the world as a whole. Most of these deposits in our country are stated to be of very high grade, with an iron content of over 62 per cent. With the possible exception of Brazil, our total reserves of high grade iron ore are roughly equal to the combined reserves of high grade ore held by the five major steel units of the world, namely, the U.S.A., U.S.S.R., West Germany, United Kingdom and Japan.

The significance of our rich deposits of high grade iron ore can well be appreciated if we remember the fact that iron ore deposits of developed countries in the West are fast smelting out and a few of them, notably the United Kingdom, have already been importing ore from long distances with a view to supplementing local supplies. Even the United States, the land of plenty, is looking ahead and is taking steps to slow down its depletion of the famous Lake Superior region ores by getting imports from Chile, Brazil and other regions.

Indian resources of high grade iron ore are thus an extraordinary gift of nature and brook no delay in their exploitation both from the point of view of national development as also of agricultural advancement. Provided the problem of coking coal, which commodity is not in abundance, is satisfactorily solved, we can fairly hope to develop our iron and steel industry and export large quantities of the finished product to the South East as also to the Far East. A judicious exploitation of this precious gift of nature is the problem facing India today and the creation of an independent Ministry for Iron and Steel has come not a day too soon. In the second Five-year Plan, "twelve million jobs in the next five years" are envisaged as the precursor to the ushering in of a Welfare State and there can be no justification, therefore, for delay in expanding the steel production, though the task is a difficult and complicated one. As the present state of our economy is lopsided, inasmuch as it leans too heavily on agriculture, which is forced to maintain 390 millions of our rural population on subsistence levels of income, our present social aim must be to rectify this imbalance by diversifying the base of our Indian economy and by equalising living standards upwards in an expanding economy. Out of a total working force of 23 million persons in Great Britain, only 1 million are engaged in agriculture, including fisheries. The gravity of the problem in India could be clearly seen when the corresponding figures for our country are taken, namely, 120 million active workers in agriculture from out of a total working force of 160 million. Far from this figure being reduced, large numbers are being added every year by nearly 1.5 to 2 millions and all of them must have opportunities for absorption in an expanded economy instead of being forced to add on to the unbearable load already weighing on subsistence agriculture. Economic advance clearly feeds on itself and industries with high productivity help savings and investment which in turn generate further avenues of employment.

Enemy of Caste System

Moreover, rapid technological progress and improved living standards always involve radical sociological changes and it is opined that this will surely be of help in lifting the curse of caste system dogging this unfortunate land of ours for hundred of years past. Rapid industrialisation will thus be the main task to be undertaken in the coming years and no metal has yet been found to play the master role being played by iron in helping the exploitation of natural resources and the elimination of grinding poverty and misery of the countryside.

Iron and steel form by far the most variegated of commodities in India available abundantly in nature for turning out the multitude of machines required alike for large-scale production of goods at low cost as well as for gradual technological advance in agricultural economy. Iron constitutes the cheapest metal made available to mankind; it is six times cheaper than aluminium which is the only other metal found in large abundance in nature, the respective percentages of iron and aluminium being 5 and 8 in the analysis of the earth's crust.

It is no doubt true that India has been lagging very much behind the Western countries in its steel productivity. In fact, it is the high rate of steel productivity that has enabled the Western nations not merely to push up their national income but also to distribute the same amongst its people through effective social security and full employment measures. Consumption of steel in the U.S., which was only 500 lbs. *per capita* in 1910, is now 1,500 lbs. and this verily forms the basis of its reputedly fabulous living standards envied throughout the world. Iron and steel thus hold the central position in the development of the power-driven machine and forms the basis of the technological key required for opening up locked wealth and for eliminating grinding mass poverty and unemployment afflicting the underdeveloped countries in Asia and Africa. There are no reasons why with the help of this gifted metal, the tremendous potential inherent in the vast internal market of our country should not be developed much on the same lines as the United States of America which, by the way, is the only country in the world not materially dependent on export markets for maintenance and growth of either its industries or its living standards. But it must be stated that, though India is not akin to the U.S. in all respects, it is in a far better position than any other country in Asia or Africa in respect of markets, raw material and other resources required for building up the necessary industrial potential. Our Planning Commission has realised and envisaged the potentialities and growing demands of the various regions in our vast Asian Continent and has, therefore, formulated its second Five-year Plan, with due emphasis on rapid expansion of our steel industry.

It is nothing but a lucky accident that a few nations in the West and Japan in the East had exploited scientific advance two hundred years earlier than the rest. But, surely, no one could bar the hard way always open to people with faith and perseverance; and unflinching determination to break with centuries of poverty would do the job in any event. Though India had never under-rated the risks of aggression and conflict, inherent in exploitation of export markets, her peaceful record of centuries of international trade in the hoary past is so consistent and spotless that there should be no hesitation in India rising to the pre-eminent position of a great exporting centre allotted to it by nature. By reason of its abundant iron ore and reasonably sufficient coal resources, India bids fair to become the natural centre of production and supply of manufacturing industry goods to South-East and South-West Asia. In spite of Japan's rapid progress in acquisition of technical skills, its very existence as a steel producer is now in great jeopardy after her exit from Manchuria at the end of the Second World War. Japan is cut off completely from coal supplies nearby and even her iron ore deposits are of notoriously poor grade. The People's Republic of China has not got plentiful supply of iron ore, though she possesses abundant coal reserves and as such, in the final analysis, China cannot become a possible competitor.

Domestic Market

Apart from the overseas market, we have a good domestic market. The 300 million peasants in our country constitute the mainstay of the market for India's steel industry. It is the peasants who consume the largest amount of manufactured goods while they are and alone can be the largest suppliers of raw materials for the industry. The present purchasing power of our domestic market is no doubt very low but its potential power is enormous. Once the national programme for our agricultural development and of our great river valley projects is realised, we shall have a domestic market with a fantastically great purchasing power. The workers in the factories and other industrial organisations must turn out more and better industrial goods which our farmers need and our farmers must grow more and better grain and industrial raw materials which industry and town-dwellers need. Workers in our towns and cities, and the farmers in the countryside should keep in constant touch, give each other encouragement and swap experience so as to promote the development of industry and agriculture. Indian industry must fabricate meteorological and hydrographical instruments to enable a network of hydrographical and meteorological stations and posts to be set up so as to improve the work of providing agriculture with reliable weather and meteorological forecasts. All rural areas should pay attention to such forecasts, so that they can ward off such calamities as flood, drought, gale and frost.

The Indian cotton textile industry is another major industry which has a great impact on agricultural economy. Out of the world total cotton cloth output of 26,852 million yards, India's output in 1955 was roughly about 25 per cent., namely, 6,714 million yards. Out of this output, a thousand million yards of cloth have been exported in 1955 and the value of our export cloth amounted to about 75 crores of rupees. The textile industry got us therefore 12 to 15 per cent. of our export earnings. The cotton mills alone are now employing as many as 758,000 persons and the textile mill industry is, therefore, occupying a very prominent position in the body economy of India and its propensity is to employ more workers and contribute more to the national income on which the *per capita* consumption of cloth depends. The living standards of a nation are usually assessed on the basis of its cloth consumption. *Per capita* consumption of cloth in India is now 15 yards and the target set in our second Five-year Plan by 1960-61 is 18.4 yards; the target of cloth output being 8,500 million yards. There is an increasing tendency in the country to consume more cloth, if it is available at reasonable prices when the peasant is getting more money to spend so as to give him at least a better standard of living at the subsistence level. The human habit is that, when a person gets more money to spend on consumption, he will be naturally tempted to have more cloth after he is satisfied substantially with his requirements of food.

Electric Power

Next to the textile industry, electric power is the greatest handmaid to agriculture and is another key to progress in various directions. The natural inclination and ambition of man is to work shorter hours and to have more of the comforts of living; but, for its attainment, more production in fewer hours is required. If this ambition is to be achieved, the country must use more electric power. Electricity has, therefore, a manifold purpose and achievement. For industry, electric power is the beacon light to progress, as it is the power to obtain more production with more efficiency. To the agriculturist, as well as to the horticulturist, electricity offers infinitely cheaper and more power for pumping water and for consequent higher output yields. To the rural areas, it brings better illumination and greater comfort. To the city dweller, electricity brings quicker transportation, better conservancy and other civic amenities. The availability of electric power, therefore, means better living and more material comfort both to the urban and rural areas.

The record of industrial countries shows that social progress is in direct ratio to the use of electric power. Apart from the needs of industry, a stage has certainly been reached when more determined efforts should be made to extend electric supply further into rural areas for agricultural and horticultural purposes. But how this is to be achieved is, indeed, a problem requiring serious attention. Hydro-electric power will increase with the completion of the multi-purpose river valley projects but its scope is certainly limited because the power so generated cannot generally be taken to a distance of more than 400 miles. Further, rural electrification has to contend with the poor purchasing power of the ryot and this necessitates some form of subsidy from the Government so long as the living standards of the peasants in the countryside do not show an appreciable rise. In the U.S.A., help or subsidy is being given through consumer co-operatives and some such suitable method should be devised in our country according to the conditions obtaining in the different States. But subsidy in some form or other is inescapable if the tempo of rural electrification is to quicken and really help agricultural productivity.

In spite of the large volume of hydel power which would be generated as a result of the various State river valley projects, the commercial supply undertakings would continue to play at least for two decades to come a vital role in the country's economy. The electric supply industry is the key to human advancement and is a great lever to speed up agricultural production. The Government of India should revise its policy and make the investment of essential development capital in the industry, once again, attractive to the public. Else, we will surely lose the kingdom "all for the want of a horseshoe nail."

The impact, therefore, of industry and electrical power on agricultural economy is very great, indeed, and let us hope and pray that, in the years to come, the peasants in the countryside and the workers and industrialists in the cities and towns would work shoulder to shoulder and thus pave the way for the material well-being of our teeming millions and for the rapid and everlasting prosperity of India.

THE NEW PEOPLE'S CAPITALISM—II

ITS ACHIEVEMENTS EXCEL THOSE OF ANY OTHER ECONOMIC SYSTEM

By An American Correspondent

WHAT effect has industry's mechanisation had on employment? As an industrial society develops, there is always a certain amount of unemployment, as people change from one job to another, though nothing as severe as what Karl Marx predicted. No completely satisfactory solution to this problem has been found, but, since the Great Depression of the early 1930's, the United States has sought to handle it through many devices such as unemployment insurance, free public employment projects, and other welfare programmes.

Since workers making physical goods—food, clothing, homes, etc.—are able to produce more in a much shorter time than in earlier periods, more people have become available to sell in stores, work in laundries, hotels, insurance companies, banks, schools, colleges and hospitals, or in Government agencies providing such services as public health, police and fire protection. One hallmark of a rising consumption is an increasing ratio of labour engaged in production of services rather than goods. In 1870, 25 per cent. of the experienced labour force in the United States was engaged in service industries and occupations. In 1950, it was 53 per cent.

Opportunities for employment have expanded as the result of discoveries and inventions, too. Recently, U.S. industry has been spending more than $5,000 million a year on research and development, and a great deal of this effort results in new jobs for workers. In addition, the Federal Government has supplied an amount nearly equal to two-fifths of what private industry has spent for this purpose. The opportunities for improvement and for increased efficiency have not been allowed to slip by, and both labour and management have played important parts in seizing these opportunities.

Labour has steadily improved its usefulness, and has realised an increasing share of the benefits of productivity. In addition, there has been a growing awareness on the part of management that company policies must be the product of consultation and understanding, if they are to be meaningful and acceptable to employees. With the steady growth of confidence between management and labour, the U.S. factory has become more of a genuinely human community. Strikes still occur, but they have changed in character. Unions no longer have to strike for recognition. Today, under the direction of strong, responsible unions strikes are usually orderly, without the bitterness evident in earlier years.

It is slightly over 100 years since Marx wrote the "Communist Manifesto." During that time, U.S. productivity per man-hour has climbed at an average rate of about two per cent. a year. Since 1900, it has nearly tripled. Today, the output of goods in the United States is about 30 times what it was a century ago, although the population in 1954 was only seven times what it was in 1850.

At the same time, working hours have been decreasing steadily. The standard work week is now 40 hours, as compared with 70 hours a century ago. If the U.S. economy were still producing at the 1850 rate, using 1850 methods, it would require a labour force of at least 300 million workers, each working 45 hours a week, to produce as much as it does today. The nation's civilian labour force today averages only 66 million people.

Psychological Aspects

There are psychological aspects of the employer-employee relationship that characterise modern private enterprise in the United States. U.S. employers have learned that human beings are the most important, most productive and scarcest economic resource. The job of management has come to be more of a task of leadership of people than the working of a property. It has come to be traditional for the working man to have an opportunity to rise to the head of his company, and this is proved by numerous cases in present-day industry and business.

Another development of importance has been the training that business has given the worker to enhance his chances of advancement in his own company and to be able to move on with his ability as his capital to other companies. More and more American companies pride themselves on their social welfare programmes, clubs, hospitalisation plans and other services which benefit their workers. The number of institutions established for the purpose of training young men and women for business advancement has grown with considerable support from business concerns, not to speak of the great fortunes settled by some large industries on scholarships and educational developments of national importance.

American business men are optimistic about the long-range future, they are planning much farther ahead than they did in the 1930's and 1940's. They are carrying out large and long-term capital investment programmes without regard to short-range ups and downs of the market. The goad of competition plus the rapid advances in industrial technology create a high obsolescence of plant and equipment, which forces them to maintain this high level of investment year after year.

Can the American business men claim a monopoly of brains or energy or skills? Do they have any closely guarded secrets of managerial or technological skills? Are they superior to other nations in science and technology? Obviously, the answer is "no." The real answer seems to be that American productivity is a matter of attitude—a basic belief broadly held by the people and particularly by business management that to do more with less human effort, is a desirable and necessary part of the economic process.

Competitive Spirit

In an even more basic sense, the American drive for productivity is an out-growth of the competitive spirit working in an atmosphere of political and economic freedom. Without vigorous competition, there could not be much incentive for increasing productivity. Clearly, tremendous new forces—social, economic and political—have been unleashed in our time by two world wars. In the United States, they have culminated in an intense, deep-rooted determination among the American people to achieve an easier, more secure, and better life. This resolve is whetted by the knowledge that greater security and higher living standards are within reach. The effort to achieve them has already overturned the old order of things.

The United States has experienced, without quite realising it, the evolution of a new kind of human institution—one which is both political and economic. The primitive and relatively unstable capitalism of the past has given way to a consumer-dominated, self-regulating system that broadly serves the interests of the great mass of people.

What the false prophets lacked was engineering foresight. They failed to see that the machine would change in nature, that it would in time take over the soul-numbing routines and enable the workers to become a caretaker and manager of enormous productive power. But the process has continued unabated within the freedom provided by the American economic system.

For the first time in history, technological progress, unleashed by the dynamic incentive system, gives people what they want.

What can be concluded from all these facts and figures and these quotations from eminent authorities? Does all this not prove that freedom itself is the great dynamic force that stimulates and propels the new capitalism as exemplified in the economic system of the United States? The system of free enterprise could exist only in a free society. It could not live in the Soviet Union or in any other place where the individual freedoms of thought, speech, and action are denied or abrogated.

Private enterprise, or the People's Capitalism, that has developed in the United States shows what free men can do working together with obligations and responsibilities to the whole society. This unique experience has clearly demonstrated that this system has served the population better and provided more people with a higher standard of living than any other economic system so far devised by human ingenuity.

(Concluded)

NEW PUBLICATIONS

Britain: An Official Handbook (1956 Edition). Published by Her Majesty's Stationery Office, London. Orders for the book can be placed with the British Information Services, Eastern House, Mansingh Road, New Delhi 2. Price: Rs. 5-10.

FOREIGNERS are people who ask questions. That, at any rate, is the way they appear increasingly in the modern world—questioners whose interest is welcomed and deserves a responsive effort to be armed with the answers. This is a new facet of relations, public and private, between different countries and between their citizens, as hosts and guests or as correspondents. There are more questions and more answers about most countries today than ever before. In Britain, this trend has led in recent years to the annual publication of *Britain: An Official Handbook*, which gives a picture of the nation and its life in which the narrative is readable, though fully armed with facts and figures, and the main lines emerge, though details can be quickly found on any individual point.

It will be realised, of course, that such a work has limitations as well as advantages; the reader must not expect to find in an official work either an evaluation of controversial aspects of the nation's life, or much reference to the kind of problems on the British scene which the visitor will find bulk large in the conversation of his hosts. Furthermore, of course, the habits and tone of daily life—all that comes under the heading of manners—are unsuitable for treatment in an official publication. On the other hand, there is one direct and understandable limitation that the compilers have imposed upon themselves and which could lead to misunderstanding unless pointed out. The information given relates almost exclusively to the islands of the United Kingdom and their domestic affairs. The elaborate network of relationships that link them to the countries of the Commonwealth, to their European neighbours, to the United States, and to every part of the globe can be no more than hinted at. Yet, these are part of the very stuff of life in Britain, of the daily experience of many Britons in business and in the professions, in education and research. The islands are not insular.

What strikes the reader of the *Handbook* most as far as its own subject-matter is concerned is the extreme complexity of the country's institutions. Wisely, the writers of the different sections have often begun by explaining how things came to be the way they are. In particular, there is the typical British interlocking of State and voluntary action. There seems to be no human need or activity that is not somewhere provided for by some department of the Government or by some voluntary association, or by both.

Wisely again, however, the compilers have understood that even the private and voluntary aspects of social arrangements in the United Kingdom rest on a firm foundation of law and government, and the long section on "Government and Administration," which immediately follows the opening account of the country's physical and demographic foundations, is one to which readers may most readily turn, whether their interest be in Parliament, Whitehall, or the Courts. An excellent balance has been maintained, and the corresponding section of the bibliography at the end of the volume is unusually sensible and up-to-date. The section on defence, while useful for purposes of reference, is rightly fairly brief, since more than any other perhaps it suffers from the exclusion from consideration of Britain's oversea responsibilities.

The sections which follow on Britain's economic life not only give a full picture of the range and nature of the country's activities and their geographical concentrations, but also suggest considerable emphasis on technical innovation, for instance, in the field of atomic energy.

While those whose concern is primarily with business will no doubt have frequent recourse to these chapters, there is another class of readers for whom the chapters headed "Social Welfare" and "Housing and Planning" will provide more of interest. Here, however, the treatment has in places, perhaps, concerned itself too much with the way these things look from above. In view of the many queries which the British traveller overseas is apt to receive about "socialised medicine," more might be done in future issues to show how the system works from the point of view of the ordinary family. The same is true, to a lesser extent, in the section on education. These are things that future editions might remedy.

The *Handbook* as a whole is handsomely produced and well illustrated with maps and photographs—*Max Beloff*.

Theory and Practice of Co-operation in India and Abroad. Vol. II. By Prof. K. R. Kulkarni. Published by Co-operators' Book Depot, 9, Bakehouse Lane, Bombay. Pages: 438. Price: Rs. 15.

The *Theory and Practice of Co-operation in India and Abroad*, Vol. II. deals with co-operation abroad. Volume I of the series dealt with the co-operative theory and practice in India and this has already been reviewed in these columns. The author has taken great pains to give in the present volume, in about 15 chapters, the development of co-operation in several important countries like Great Britain, Sweden, Soviet Russia, Canada and China. He has also included a chapter on co-operative education. Our own neighbouring countries have been omitted, presumably because they are unimportant from the historical point of view. Even so, Japan deserved to find a significant place in the book. Eager students would also miss an account of the entire movement in any of the countries included in the volume, since only particular developments are dealt with in detail. For example, in Britain, only the consumers' movement is emphasised and in the case of Ireland the creameries. In these days, when co-operative marketing is a subject of topical interest, one is disappointed with the chapter on co-operative marketing in Australia; the section "Commonwealth Bank of Australia" leaves one guessing why it has been introduced in that place. In the chapter which describes the consumers' movement in Britain, one would have expected a discussion of the competition with the chain of departmental stores. In general, the reader is left with the impression that the book does not contain any detailed critical analysis but a collection of various factual data.

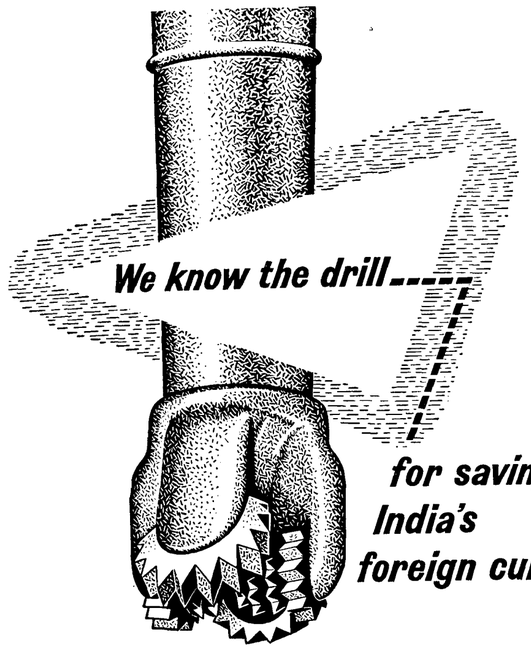
The book will, however, prove useful for students in colleges and training centres. There is definitely an absence of suitable text-books on this subject, despite the fact that the co-operative movement is given a high priority in the country and, sometimes, is even ranked as an important part of the public sector.

Introduction to Business. By Edwin H. Spengler and Jacob Klein. Published by MacGraw Hill Book Co., New York. Pages: 623. Price: $5.50.

Published first in 1935, this book has been carefully and thoroughly revised in its new fourth edition. It is an excellent text-book to acquaint the students (for whom it is primarily intended) with the manifold aspects, methods of organisation and problems of American enterprise. Illustrative material is also found in profusion and consists of graphs, charts and arresting photographs; the latter particularly provide a visual glimpse of the ramifications of industry in its various fields. At the end of each chapter, a set of text questions is also given for the benefit of the student-reader.

The book should, however, prove quite useful to people in all walks of industrial life. As may be expected, the treatment of the subject is in most general terms. The book, in fact, holds to the very end the interest of even a lay reader who will get an integrated, co-ordinated concept of business and a working familiarity with business terminology. In the revised edition, there is a new introductory chapter on business organisation which gives, in brief, the characteristics of the business economy, including such aspects of the economy as production, monetary transactions and free enterprise. The other two chapters in this part are devoted to a brief description of the various forms of business organisation, their advantages and disadvantages and an elaborate treatment of the corporate organisation.

Finding finance for industry is the subject matter of part two. The various classes of corporate securities, methods of marketing the securities and exchanges are all briefly but quite interestingly dealt with. The need for both long-term finance and short-term credit (operating funds) and the various ways of raising them are dealt with in two separate chapters.



Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

MAXIMISATION OF EXPORT EARNINGS

RESTRICTIONS ON OUTPUT HARMFUL

THE need for the maximisation of export earnings in view of the existence of the large gap to be covered in respect of the foreign exchange resources in the Second Plan, is so well known by now that it requires no special emphasis. The importance of export earnings is all the more heightened by the attitude adopted by the World Bank towards India's Plan, as has been brought out clearly by the letter of the Chairman of the Bank to the Finance Minister. Indeed, it is crystal clear that the only important way of lessening the country's dependence on the World Bank and other sources of foreign capital is to expand its exports both in quantity and variety. But it is feared that the question of export promotion has not been given the measure of attention it should have been given. It may be recalled that the World Bank Mission itself has stated in no ambiguous terms that it was not convinced, notwithstanding the assurances given by the authorities to the contrary, that sufficient attention was being given in the Plan to the promotion of exports. The Mission thinks that in the field of cotton textiles, great harm to exports could be avoided by removing the restrictions on the capacity of the mill industry. Quite apart from that, much more could, and should, be done to assist exports in other fields.

In this context, the views expressed by the Indian Chamber of Commerce, Calcutta, in a memorandum addressed to the Government, are timely and appropriate. The Chamber, while emphasising that the question of maximisation of the country's foreign exchange resources should be a major consideration in formulating Government's fiscal policy during the Second Plan period, has drawn the Government's pointed attention to certain difficulties in the way of augmenting exports in India's major export industries. In the case of the tea industry, the Chamber points out, it will be desirable to reduce the tax burdens on the industry in order to enable it to compete effectively in international markets. The Chamber has also focussed the Government's attention on the shortage of warehousing capacity in the Calcutta port, and on the need for providing regular shipping space for Indian teas, particularly to Australia and New Zealand. It may be pertinent to recall in this connection that the World Bank Mission also felt, on a close examination, that tea exports were being adversely affected by inadequate facilities for transport to Calcutta, by shortage of coal in tea estates, by constant pressure for higher wages, bonuses and improved social amenities and, on some of the more progressive estates, by the restriction on re-planting. "These are all maters," the Mission pointed out, "which can, in varying degrees, be influenced by the Government, and we feel that the Government has not always used its influence in the way best calculated to foster the competitive power of this vital export industry." The Indian Chamber has also underlined the importance of adequate and effective propaganda for developing export markets for Indian tea abroad.

Increasing Jute Production

Turning to the jute industry, the Chamber emphasises the need for increasing the production of better quality jute in the country to enable the industry to save on the cost of raw jute. Alluding to cotton textiles, the Chamber points out that the export trade in it can be expanded if the Government allows further expansion in the production of cloth by the mills. It suggests that uneconomic units in the textile industry which cannot finance the installation of automatic looms and which may not be sure of finding export markets should be permitted to install ordinary looms. The Chamber further suggests that penal excise duty at the rate of As. 2 per square yard on cloth diverted from export to home market should be reduced in the interests of the uneconomic units.

Among the other suggestions made by the Indian Chamber of Commerce, the one for granting refund of excise duty on groundnut oil for *vanaspati* exports has much to be said in its favour. The World Bank Mission, it may be noted, pointed out that the policy of imposing restrictions on the exports of commodities such as groundnut oil with the object of conserving supplies for domestic consumption was a misguided one, and that in the best interests of the economy, exporters should be allowed to ship whatever they could. It may be mentioned here that a noteworthy step taken by the Government in recent weeks is the abolition of the export duty on linseed oil. Again, the Chamber urges that efforts should be made to find markets for leather and leather goods to fully utilise the existing idle capacity.

The Chamber, in its memorandum, has drawn attention to the need for diversification of exports in the interests of healthy and balanced growth of India's foreign trade. It has stressed, in this connection, the important role which manufacturers of engineering and electrical goods, as also certain products of non-ferrous metals industry, can play. It is also possible, according to the Chamber, to expand the export markets for other new industries such as chemicals, pharmaceuticals, etc. In the considered view of the Chamber, export earnings can be augmented during the Second Plan period if intensive sales efforts are made by the trade, industry and the Government. Since countries of South-East Asia and the Middle East form the natural markets for industrial goods, it is necessary to concentrate the efforts on these countries. It favours frequent visits by representative trade delegations to overseas markets in order to study actual market conditions and to disseminate information regarding Indian products. Besides, the establishment of industrial showrooms in foreign countries for permanent exhibition of Indian goods and the strengthening of commercial staff of the Consulate Offices abroad are also stressed. The Chamber opines that mere collection of information by the Consulate Offices abroad will not be of much use if it is not promptly communicated to the business community. In order to facilitate the flow of such information the Chamber urges that periodical trade reports should be directly made available to the chambers of commerce in India by Government Trade Representations abroad.

Record of Exports: Not Impressive

The exports of India, it may be recalled, increased during the first six months of this year by only about Rs. 4 crores to Rs. 287.50 crores, while the imports went up by about Rs. 70 crores to Rs. 398.75 crores, thereby resulting in an adverse balance of Rs. 106 crores, as against Rs. 40 crores in January-June 1955. It is obvious from this trend of trade that all possible avenues have to be explored for stepping up the exports not only for offsetting the deficit in the balance of payments at the present rate of imports, but also to pay for the fast increasing imports in the years ahead. In this context, it is doubtful whether the latest reported decision of the Government to postpone for the present the contemplated expansion of 10 per cent. in the loomage of cotton mill industry is appropriate. On the other hand, the trade agreements concluded by India with several countries in recent weeks, especially with Burma, Japan, Indonesia, West and East Germany, Viet Nam, and more recently Chile, involving a variety of Indian goods, may give some, but not much, impetus to exports. The responsibility on the part of the Government for creating the necessary transport facilities cannot be overemphasised. For, to the extent the Government fails in this regard, exports will be affected. Again, the question of expansion of exports is closely interlinked with the cost structure which, in turn, is linked with the price levels. In other words, the first requisite for boosting exports is stability of prices and adequate supplies.

U.S. INDUSTRIAL OUTPUT

American industry poured out goods in September that equalled in quantity the all-time high level established in December 1955, and national income likewise continued its upward surge. The seasonally adjusted index of industrial activity for September prepared by the Federal Reserve Board showed an increase of 144 per cent. of the 1947-49 average. That equals the December 1955 rate and is a two per cent. gain over August.

At the same time, the Commerce Department announced that national income went up to a record yearly rate of $338,700 million in the second quarter, continuing the steady climb that started in the autumn of 1954. The Board noted that the outlook for October is for still more goods being turned out. It said steel mill activity, which in September was near rated capacity, was even higher in early October. Auto manufacture, due to completion of new model change-overs, is also expected to add to the October level.

Most of the rise in September, the Board said, was due to sharp increases in steel production and iron ore mining. In other areas, industrial machinery and other equipment construction expanded somewhat, while the output of household durable goods and building materials was maintained at high levels.

INDIA'S INDUSTRIAL OUTPUT

SUBSTANTIAL INCREASE RECORDED

DURING the first half of the calendar year 1956, the overall industrial production of India witnessed considerable progress. The average index number of monthly industrial production (1951=100) which stood at 127.3 at the end of 1955, rose to 136.8 during the period under review. This represents a rise of 9.3 per cent. over the corresponding period of 1955 and 7.5 per cent. over the preceding half-year. While significant increases were recorded in a number of industries, such as coal, cement, automobiles, bicycles and bicycle parts, in certain other important industries, cotton textiles, for example, there was a recession, as compared with the second half of 1955, though there was a slight improvement as compared with the same half-year of the previous year. Other industries to register a decline in production were hurricane lanterns, power and industrial alcohol, house-service meters and linoleum. Other highlights of the developments during the period under review were the commencement of the manufacture of new items in the field of automobiles and bicycles, and the granting of as many as 180 licences under the provisions of the Industries (Development and Regulation) Act, 91 of them for effecting substantial expansion of existing capacity and 21 for the manufacture of new items.

The production of finished steel during the period under review amounted to 643,000 tons, as compared with 637,000 tons during the corresponding period of 1955; it represented an increase of 19,000 tons over the second half of 1955. The production of cement steadily increased from 2.13 million tons in January-June 1955 to 2.27 million tons in the second half of 1955 and still further to 2.46 million tons during the period under review. The production in the month of June 1956 itself was 70,000 tons higher than that in the corresponding month a year before. The increase in production is attributable partly to additional capacity and partly to better utilisation of existing plants. A notable feature of this industry during the period was the issue of as many as 12 licences, three for establishing new factories with a total capacity of about 400,000 tons of cement and the remaining nine for substantial expansion of the existing ones.

A minor expansion in production took place in the sphere of coal, such having increased from 19.19 million tons in the first half of 1955 to 19.65 million tons in the six months under review. It was also 625,000 tons higher than in the second half of 1955.

In the field of cotton textiles, although production of cloth during the first half of the current year at 2,583 million yards reflected an increase of 76 million yards over the corresponding period of 1955, it fell short of the output in the previous half-year by as much as 18 million yards. This shortfall might be a seasonal variation. Nevertheless, from the increasing demand for cloth and the price trends it is evident that production of cloth has not kept pace with the increasing demand. That this symptom of scarcity should have arisen at a time when large expenditure is contemplated, and is being incurred, is serious enough and calls for immediate steps aimed at stepping up the industry's capacity. The production of jute textiles was distinctly higher at 576,000 tons during the period under review as compared with 508,000 tons in the corresponding period of 1955. In woollen textiles, the production of worsted fabrics was higher by 2.18 million yards at 7.4 million yards in the period under review, as compared with the same period of last year.

Another notable feature was the substantial increase recorded in the engineering industries. The production in the current half-year increased in the case of crown corks by 347,000 gross to 2.12 million gross, of oil pressure lamps by 9,800 to 43,200, of bolts, nuts and rivets and dog spikes by 2,881 tons to 13,552 tons, machine screws by 449,000 gross to 674,000 gross, of direct casting by 10,300 tons to 68,300 tons and of duplicators by 288 to 1,401. The production of razor blades also was higher, as compared with that in the previous half-year, but appreciably lower than in the corresponding period of 1955. Besides, the production of basic metals like aluminium, antimony, lead and sheets and circles of brass and copper also declined slightly, as compared with the first half of 1955.

Considerable increases were also witnessed during the period under review in the machinery manufacturing industries. The production of sewing machines, for example, rose by 17,174 to 63,659, that of power-driven pumps, by 642 to 5,655, and of grinding wheels by 464,000 lbs. to 1.10 million lbs. as compared with that in the first half of last year. The production of diesel engines, ring spinning frames and belting for machinery also increased considerably. The output of machine tools went up in value by Rs. 7.28 lakhs to Rs. 40.64 lakhs as compared with the corresponding period of 1955.

The production of automobiles increased substantially from 11,000 in January-June 1955 to 15,033 in January-June 1956. The production of complete bicycles also went up from 220,000 to 291,000. Increases in the manufacture of bicycle parts and automobile ancillaries were, however, more marked. A principal development in these industries was the manufacture of new items. The manufacture of Lambretta auto-rickshaws, shock absorbers, radiators and brake linings began for the first time in April-June 1956.

Among chemicals, the production of caustic soda, soda ash, liquid chlorine and bleaching powder increased substantially during January-June 1956. The production of ammonium sulphate and superphosphate was almost steady. The production of dyestuffs increased to 2.75 million lbs, as compared with 1.94 million lbs. in the corresponding period of 1955. Production of articles like soap, paints, plastic mouldings, rayon yarn and staple fibre also showed a substantial increase.

Most of the industries in the electrical group showed considerably increased output. This was particularly notable in the case of conduit pipes, electrical transformers and radio receivers. The production of conduit pipes increased from 2.44 million r.ft. to 4.60 million r.ft. The production of radio receivers was more than double the output of the corresponding period of last year, the comparative figures being 71,343 and 35,462, respectively. The production of electric lamps was up by 1.99 million lamps to 14.15 million lamps and that of electric fans by 15,000 to 156,700. An increase of 99 to a total of 474 was recorded by refrigerators.

INDO-CHILEAN TRADE PACT

A trade agreement was signed between India and Chile on 16th October. The agreement came into effect the same day and will be valid till 31st December 1959. It may be continued for a further period of three years by mutual agreement.

It may be noted that this is the first trade agreement with Chile. The agreement provides for maximum possible facilities being given by the two countries for the import and export of commodities of interest to either party. A noteworthy feature of the agreement is that the two Governments have also undertaken to enter into consultation with each other from time to time and to give consideration for suggestions that may be made for development and expansion of commerce and diversification and balancing of trade between the two countries.

Lists of commodities available for export from either country in the development of whose exports the two countries are particularly interested have also been exchanged. The list of items available for export from India includes such commodities as walnuts and cashew kernels, jams, chutneys and pickles, pepper, spices, unmanufactured tobacco, coffee, mica, shellac, vegetable oils (non-essential), coir manufactures such as coir yarn, coir mats, mattings and carpets, chemicals, drugs, medicines and medical herbs, hides and skins, tanned leather and leather manufactures, cotton piecegoods, jute yarn and fabrics, silk, art silk and woollen fabrics, cottage industry products such as handloom (cotton and silk) cloth, artistic silver, brass and bidri products, ivory articles, wood carvings and light engineering goods.

The list of items for export from Chile contains the following commodities: Pulses, barley, fresh and dried fruits, canned foodstuffs, wine, sulphur, iodine, lead, copper, pig iron, steel, hard and soft timbers.

In particular, at the request of the Chilean delegation, the Government of India has also agreed to facilitate imports of Chilean nitrate into India during the first three years of the agreement and the Government of Chile has agreed to do all it can to secure a substantial increase in the imports from India into Chile of tea, coffee, pepper, edible oils, shellac, jute manufactures, leather manufactures and exposed films.

It may be noted here that, on an average during the last ten years, exports to Chile from India amounted to one million pounds sterling and imports into India from Chile were as much as half of exports.

CERTIFICATION MARK FOR ALUMINIUM UTENSILS

The Indian Standards Institution has granted three licences for use of its Certification Mark on wrought aluminium utensils to three more firms in the country. The three firms are: (1) the Kandivli Metal Works, Bombay, (2) Messrs. Madura Metal Products Ltd., Madurai, and (3) Messrs. D. Ishwarlal & Co., Bombay. The mark will certify that aluminium utensils have been manufactured in conformity with the relevant Indian Standard, namely, IS:21-1953. The Standard Mark consists of the monogram of the Indian Standards Institution superscribed by the number designation of the Indian standard together with the grades of the material.

Aluminium utensils, manufactured from aluminium sheets, strips and circles, are being increasingly used in the country. India has also developed a good export market, specially in West Asian and East Asian countries. It may be noted, in this connection, that it has been brought to the notice of the Government by the Tariff Commission that utensils of doubtful quality are finding their way to the export markets and are thereby adversely affecting export trade. As a result of this, the Government of India has imposed a ban, to come into force from 1st November 1956, on the export of wrought aluminium utensils which do not bear the Standard Certification Mark of the Indian Standards Institution.

Several other manufacturers of aluminium utensils have approached the Institution for grant of licences and their applications are under consideration. The Institution intends to extend its Certification Marks Scheme to the entire production of aluminium utensils in the country.

These three licences raise the total number of licences so far issued to manufacturers of aluminium utensils to eight; the first three having been issued to Messrs. Jeewanlal (1929) Ltd., for their three factories at Madras, Bombay and Calcutta and the other two to Messrs. Lallubhai Amichand Private Ltd., Bombay, and Messrs. Metal Rolling Works Private Ltd., Bombay, respectively.

U.S. ORGANISING FIVE TRADE MISSIONS

A group of five trade missions is being organised in the U.S. to visit areas in South and West Asia and Latin America to seek means of increasing trade between those countries and the United States. It is expected that the first of these newly-organised trade missions will go to Burma, Malaya and India. The tentative date for their departure has been scheduled for 1st February 1957. They are expected to spend about six weeks in each of the three countries. This programme is related to the programme of trade missions that have been sent in the past in connection with U.S. participation at international trade fairs around the world. However, the trade missions planned for the future will also go to areas where international trade fairs are not scheduled.

A Commerce Department spokesman explained that the trade missions to friendly countries, in connection with U.S. participation in the fairs, have proved so successful that it has been decided to extend the programme and, in the future, to also despatch such missions to areas not having trade fairs. Plans call for missions to go to Burma, Malaya and India, as well as to the Union of South Africa, Iraq, Argentina and Peru. The spokesman said that, in connection with U.S. participation in international trade fairs since 1954, 37 trade missions composed of 80 U.S. private business men have gone to 26 countries, to discuss with local business men the problems involved in promoting exports and imports. These trade missions, in the typical case, are headed by a representative of the Commerce Departments and a number of private U.S. business men, selected with a view to their usefulness in the area to be visited. They spend several days in Washington before their departure, in an intensive orientation course at the Commerce Department, and they generally proceed to the country holding the fair about two weeks to a month in advance of the opening of the fair.

A Central duty of excise was imposed with effect from 1st March 1956 on soap produced without the aid of power and by executive notification exemption from this duty was allowed to the manufacturers in respect of the first 200 tons cleared by them in a financial year. It has been represented to the Government of India that, in its actual operation, this duty falls somewhat heavily on the manufacturers whose output is between 200 and 400 tons per year. Accordingly, the Government of India has decided to introduce another slab fixing a lower rate of duty for those manufacturers producing soap without the aid of power, whose production exceeds 200 tons but does not exceed 400 tons per annum. The reduced rates of duty in these cases are:

(i) In plain bars of not less than one pound in weight—Rs. 2-10 per cwt.

(ii) Other sorts—Rs. 3-1 per cwt.

This reduction does not apply to soap, other than household and laundry or toilet.

EARNINGS OF HASTINGS MILL HIGHER

DIVIDEND, HOWEVER, CURTAILED

THE financial results of the Hastings Mill Ltd., under the management of Messrs. Bangur Brothers, Ltd., Calcutta, for the year ended 31st March 1956, may be considered to be satisfactory, in view of the very difficult and trying conditions through which the jute industry has been passing for the past 12 months and more. This is especially so, when one takes into account the poor performance of some of the other units in the industry during the same period. The gross profit of the Company at Rs. 23.86 lakhs is better than that for 1954-55 and 1953-54 at Rs. 22.94 lakhs and Rs. 23.32 lakhs, respectively. It is, however, substantially lower than the 1952-53 profit of Rs. 37.80 lakhs.

The net profit, after providing for Managing Agents' remuneration at Rs. 3.43 lakhs (Rs. 3.09 lakhs for 1954-55 and Rs. 2.90 lakhs for 1953-54), depreciation at Rs. 5.50 lakhs (Rs. 9.43 lakhs for 1954-55 and Rs. 3.29 lakhs for 1953-54) and taxation at Rs. 2.30 lakhs (Rs. 4.00 lakhs for 1954-55 and Rs. 8.00 lakhs for 1953-54) stands at the comfortable level of Rs. 12.63 lakhs as against Rs. 22.94 lakhs and Rs. 23.42 lakhs, respectively, in the previous two years. Here again, the net profit for 1952-53 at Rs. 15.25 lakhs was higher than the profit for the year under review by Rs. 2.62 lakhs. It will be noted from the figures quoted here that the rise in net profit is very much higher than the expansion in gross profit. This is due to appreciably lower provisions for depreciation and taxation.

In spite of the comparatively better working results, the Directors have, probably as a precautionary measure, recommended a small dividend of only 5 per cent. on the ordinary shares, as against 11½ per cent. in the previous year and 10 per cent. in the three years preceding that. In fact, the year's dividend at 5 per cent. is the lowest paid since 1948-49, for which year the return was raised to 6 per cent. from 5 per cent. for 1947-48.

The following table brings out the salient features of the Company's working during the four years ended 31st March 1956:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	226.44	216.60	170.73	215.77
Other income	20.51	5.70	0.89	1.02
Manufacturing and other expenses	233.85	203.50	147.65	174.44
Gross profit	23.86	22.94	23.32	37.80
Managing Agents' remuneration	3.43	3.09	2.90	4.05
Provision for—				
Depreciation	5.50	9.43	3.29	5.50
Taxation	2.30	4.00	8.00	13.00
Net profit	12.63	9.42	9.13	15.25
To reserves	19.00	..	*3.50	*10.00
Dividends—				
6 per cent. preference	1.50	1.50	1.50	1.50
Ordinary	2.00	4.00	4.00	4.00
	(5%)	(11½%)	(10%)	(10%)
Carry forward	3.40	3.28	2.95	2.82

* Transfer to machinery replacement reserve.
† Deferred Renovation Reserve.

As will be seen from the table, a substantial allocation of Rs. 9 lakhs has been made from the profits for 1955-56 for deferred renovation reserve. This means that the Directors have chosen to conserve over 75 per cent. of the net profit.

The 6 per cent. preference dividend absorbs Rs. 1.50 lakhs and the ordinary dividend takes away Rs. 2.0 lakhs, leaving a balance of Rs. 3.40 lakhs to be carried forward, as against Rs. 3.28 lakhs brought in.

The year's sale proceeds at Rs. 226.44 lakhs is the highest to be experienced during the four years under discussion. So is the receipt on account of other income at Rs. 20.51 lakhs which include Rs. 7.02 lakhs from sales of raw materials, Rs. 1.93 lakhs dividend from the Company's subsidiary unit and Rs. 11.11 lakhs from loom hours for previous years. In the previous year, there was no such income as sale of raw material, and the receipt by way of sale of loom hours was only Rs. 1.93 lakhs. It is obvious from these figures that the improvement in profit noted above is due to fortuitous circumstances. It is not often that a jute mill can make profit by selling its raw material. As these circumstances are unlikely to repeat themselves, the Directors are perfectly justified in not passing on any part of the increase in profit to the shareholders and in ploughing back the bulk of the profit.

In accordance with the main and supplementary working time agreements of the I.J.M.A., the mill worked 48 hours per week throughout the period under review with sealing of looms varying from time to time. The sealing remained at 12½ per cent. of the total looms till 8th January 1956 and thereafter 2½ per cent. of the looms were allowed to be unsealed by the Association from 9th January 1956 and a further 5 per cent. were allowed to be opened from 20th February 1956. But, because of adverse market conditions, the Association decided to reseal 2½ per cent. of the looms with effect from 16th July 1956. With effect from 17th September 1956, 5 per cent. of the total looms have been resealed, with a view to checking further increase in the stock of jute goods.

During the year under review, working costs went up further, as a result of the third omnibus Labour Tribunal Award in November 1955 adversely affecting the competitive position of the industry. Raw jute prices continued at a level at which it was not possible to transact business in manufactured goods at a profit, although there was a steady demand for manufactured goods throughout the period. The Directors state that the mill is now fully equipped with sacking warp and weft spinning machinery. The order for hessian warp machinery has been placed. During the period under report, the Shree Ram Silk Manufacturing Company, one of the subsidiaries, improved the quality of its products. During the last few months of the financial year under review, the Fort William Jute Company, Ltd., became a subsidiary and its business is, except for silk manufacture, of the same nature as the business of the Company. The Company held as at 31st March 1956, 144.615 ordinary shares of Rs. 10 each fully paid up in the issued share capital of the Fort William consisting of 210,000 ordinary shares of Rs. 10 each fully paid-up and 10,000 preference shares of Rs. 100 each fully paid-up.

The balance-sheet of the Company as at 31st March 1956 shows the capital unchanged at Rs. 65 lakhs, divided into 25,000 six per cent. cumulative preference shares of Rs. 100 each and 40,000 ordinary shares of Rs. 100 each. It may be remembered that, in March 1951, the Company capitalised Rs. 20,00,000 by the issue of 20,000 ordinary shares of Rs. 100 each to the existing ordinary shareholders in the proportion of one new share for each ordinary share held. Its reserves and surplus aggregate Rs. 68.08 lakhs. The gross block of the value of Rs. 114.87 lakhs stands written down to Rs. 58.15 lakhs. The current assets amount to Rs. 138.27 lakhs and cover by a large margin current liabilities aggregating Rs. 63.33 lakhs, inclusive of provision for taxation at Rs. 4.58 lakhs.

HINGIR-RAMPUR COAL

An increase of 5,552 tons in the output of coal was the main factor responsible for the improvement in the financial results of the Hingir-Rampur Coal Company, Ltd. (Agents: The Killick Industries Ltd., Bombay), for the year ended 30th June 1956. The gross profit has thus gone up to Rs. 4.23 lakhs from Rs. 3.15 lakhs in the previous year. It is also substantially higher than the profit for 1953-54 and 1952-53 at Rs. 1.39 lakhs and Rs. 2.86 lakhs, respectively. The provision for depreciation has been raised from Rs. 2 lakhs to Rs. 2.52 lakhs. After setting aside Rs. 61,618, as against Rs. 10,815 in the previous year, for taxation, there is a net profit of Rs. 87,918 which is a little lower than Rs. 92,781 earned in the previous year. But it compares favourably with the loss of Rs. 398 suffered in 1953-54. No addition to the reserves has been made this year also, now for the fourth year in succession. The dividend on ordinary shares has been maintained at 4½ per cent. per annum (Rs. 2-4 per share of Rs. 50 each), free of income-tax. It may be remembered that no dividend was paid for 1953-54 while the distribution for 1952-53 was at the rate of 6 per cent. and that for 1951-52 at 8 per cent.

The output of coal during the year amounted to 202,784 tons as compared with 197,232 tons in the previous year. Despatches also were higher at 192,338 tons, as compared with 186,734 tons in the previous year. The Directors state that this increase, despite continued wagon shortage, may be considered satisfactory. The Central Government has sanctioned an increase of Rs. 4 per ton in the controlled price of the Company's coal with effect from 5th July 1956. Thus, the controlled prices for steam and slack coals are now Rs. 19-9 and Rs. 18-9 per ton, respectively.

The balance-sheet of the Company as at 30th June 1956 shows the capital unchanged at Rs. 20 lakhs divided into 24,000 ordinary shares of Rs. 50 each and 16,000, 4½ per cent. (tax-free) redeemable cumulative preference shares of Rs. 50 each. As against this, the reserves and surplus amount to only Rs. 1.23 lakhs. The gross block of the value of Rs. 41.35 lakhs has been written down to Rs. 18.75 lakhs which includes capital work-in-progress (at cost) amounting to Rs. 83,364. The current assets aggregate Rs. 15.10 lakhs and are enough to cover the current liabilities and provision for taxation at Rs. 12.62 lakhs.

BAGALKOT CEMENT PAYS MAIDEN DIVIDEND

CAPACITY TO BE TREBLED

THE two outstanding features of the working of the Bagalkot Cement Company, Ltd. (Managing Agents: Tendulkar Industries Private Ltd., Bombay), during the year ended 31st December 1955, are the successful efforts of the management to bring the factory into production in the face of many difficulties and obstacles and the earning of sufficient profit to pay a maiden dividend of 3 per cent., in addition to the fifth dividend guaranteed by the Government of Bombay for the year ended 18th June 1955.

The Company's plant was ready for trial operation in September 1955 and regular production of cement commenced early in November 1955. The plant has since been in continuous operation. The output of cement during the last two months of the year under review aggregated 9,343 tons, while despatches were 7,311 tons. Production would have been higher still but for the fact that the plant could not work to full capacity on a few occasions, due to reasons beyond the Company's control, such as failure in regular supplies of coal and gypsum on account of shortage of wagons and transport difficulties at Hotgi Junction. It is gratifying to note from the Directors' report that the Company's cement has been certified to be of high quality. The Government of India fixed an *ad hoc* price of Rs. 71 per ton f.o.r. destination for the Company's product, pending detailed investigation of actual costs of production. The Company's representation to the Government for an increase in the above price on the basis of actual costs of production is said to be under the latter's consideration.

After capitalising all erection and construction expenses incurred during the year up to the commencement of regular production—these amount to Rs. 3,73,461—as also previous year's losses aggregating Rs. 4.73,450, the Company earned a gross profit of Rs. 3,31,097. Of this amount, the Managing Agents' commission absorbed Rs. 24,809 and depreciation Rs. 75.000. A sum of Rs. 14,622 was set aside for rehabilitation and expansion fund. Out of the balance of Rs. 2,16,666, the dividend absorbed Rs. 2,16,000, leaving the balance to be carried forward. The year ended 18th June 1955 was the last one for which the Bombay Government's guarantee of dividend held good. In accordance with the terms of agreement, the Company has to refund the guaranteed dividend to the Government out of its future profits. The accumulated liability on this account is Rs. 5.82 lakhs.

The Company's working during the current year has not been quite smooth, particularly during the first six months, but conditions during the last few months have improved, as will be seen from the following observations of the Chairman, Mr. Tulsidas Kilachand, in his speech at the annual general meeting held last week:

"During the first six months of this year, the working of our cement factory was hampered by shortage of coal, shortage of wagons for movement of cement and labour unrest which resulted in two short strikes on the 14th of March and 31st of May of this year.

"The Company's efforts to meet the transport difficulties standing in its way have succeeded to a certain extent. The coal transhipment quota at Hotgi has now been raised. Increment in wagon quota for movement of cement is under consideration of the railway authorities and the Railway Board have further taken into hand, reinforcement of bridges between Hotgi and Gadag to enable the movement of heavier engines on this line.

"The labourers in our cement factory at Bagalkot resorted to strike on two occasions, namely, on the 14th of March and 31st of May and the latter occasion was marked by scenes of unruly conduct. Conditions have since improved and the labourers are appreciating welfare amenities which are being offered to them."

The following synopsis of the Company's latest balance-sheet will give an idea of its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital	70,72,670	Gross block	1,06,63,068
Reserves and surplus..	15,288	*Less*—Depreciation ..	75,000
Loans	29,33,456		
Liabilities	24,62,925	Net block	1,05,88,068
		Stock-in-trade ..	3,74,797
		Stores and spares ..	5,68,621
		Tools, etc.	22,825
		Investments	8,127
		Debts, deposits and advances	4,86,202
		Cash	1,28,202
		Preliminary expenses, etc.	3,07,479
	Rs. 1,24,84,339		Rs. 1,24,84,339

The Company spent during the year a further sum of Rs. 27.67 lakhs on additions to plant and machinery. The Directors have been considering for some time past the expansion of the factory. The Company has applied to the Government of India for licence to increase the plant capacity by an additional 200,000 tons per annum. The present manufacturing capacity is 100,000 tons per annum.

The Directors have decided to issue 250,000 ordinary shares of Rs. 10 each, being the balance not taken up by the public when the original issue of 1,000,000 shares was made. These shares are being offered to the existing shareholders at par in the proportion of one new share for every three held by them. The Government of India's sanction has been obtained for this issue.

HINDUSTHAN GENERAL

The report and accounts of the Hindusthan General Insurance Society, Ltd. (Managing Director: Mr. P. N. Talukdar, Calcutta), for the year ended 31st December 1955, disclose that the net premium income of the Society has increased by Rs. 1.74 lakhs. Thus, the net premium income advanced from Rs. 22.67 lakhs in 1954 to Rs. 24.41 lakhs during the year under review. The net premium income in the fire department declined slightly from Rs. 12.41 lakhs to Rs. 11.62 lakhs but in the accident department it increased from Rs. 4.79 lakhs to Rs. 6.47 lakhs and in the marine department from Rs. 5.47 lakhs to Rs. 6.32 lakhs. The return to shareholders has been maintained at 4 per cent.

Net claims, paid and outstanding, aggregated Rs. 11.06 lakhs, as against Rs. 9.20 lakhs in 1954, while expenses of management were a shade higher at Rs. 7.98 lakhs. Commission absorbed a slightly lower amount at Rs. 2.99 lakhs. The amount absorbed in 1954 on this account was Rs. 3.51 lakhs. A comparative study of the individual sections during the three years ended 1955 can be made from the table below:

(Rs. in lakhs)

	Year ended 31st December		
	1955	1954	1953
Fire Department			
Net premium income	11.62	12.41	12.06
Net claims	4.82	4.05	4.73
Commission and expenses ..	6.08	6.48	6.29
Profit	+1.03	+0.84	+1.31
Accident Department			
Net premium income	6.47	4.79	2.19
Net claims	2.36	1.53	0.86
Commission and expenses ..	2.67	2.10	1.31
Profit (+) or loss (—)	+0.77	0.12	+0.14
Marine Department			
Net premium income	6.32	5.47	4.40
Net claims	3.88	2.72	2.90
Commission and expenses ..	2.29	2.03	1.75
Profit (+) or loss (—)	—0.45	+0.14	—0.10

After meeting claims, commission and expenses, and providing for reserve for unexpired risks at 40 per cent. level in the fire, as well as in the miscellaneous, departments and at 70 per cent. level in the marine department, the working of the three departments disclosed a surplus of Rs. 1.36 lakhs, as against Rs. 1.11 lakhs in 1954. This surplus, together with Rs. 14,500 brought forward from the previous year and certain other items, made in all Rs. 1.07 lakhs. The reserve for bad debts absorbs Rs. 30,000 and the payment of a dividend of Rs. 2 per share, that is 4 per cent., Rs. 60,000, leaving a balance of Rs. 16,855 to be carried forward to current year's accounts.

The balance-sheet of the Society as at 31st December 1955 shows that its financial position is quite sound. Against a capital of Rs. 15 lakhs, its reserves and funds aggregate Rs. 14.63 lakhs, inclusive of fire fund Rs. 4.65 lakhs, miscellaneous fund Rs. 2.59 lakhs and marine fund Rs. 4.43 lakhs.

KEMP & COMPANY FARES BETTER

The working results of Messrs. Kemp & Co., Ltd. (General Manager: Mr. S. V. S. Iyer, Bombay), for the year ended 31st March 1956, show that the Company is making slow but steady improvement in its affairs. The gross profit, which had risen from Rs. 1.52 lakhs in 1953-54 to Rs. 1.67 lakhs in 1954-55, rose further to Rs. 2.43 lakhs during the year under review. The provision for depreciation has absorbed Rs. 49,172 (Rs. 51,795 for 1954-55 and Rs. 79,531 for 1953-54) and taxation Rs. 55,000 (Rs. 30,000 for 1954-55 and Rs. 50,000 for 1953-54). The amount paid to staff as bonus has progressively gone up. While only Rs. 16,000 was spent in 1953-54 and Rs. 18,000 in 1954-55 on this account, the year's payment is higher at Rs. 34,000. No allocation, however, has been made for any kind of reserves during the three years under discussion. Simultaneously with the increase in profits, the dividend to the shareholders has also been stepped up to 7½ per cent. from 6 per cent. for the previous two years. The dividend absorbs Rs. 90,000 leaving a balance of Rs. 14,719 to be carried forward, as against Rs. 6,698 brought in.

The improvement in profit reflects the expansion in sale proceeds. From Rs. 46.68 lakhs in 1953-54, sales rose to Rs. 47.81 lakhs in 1954-55 and improved further to Rs. 55.40 lakhs during the year under review. The rise in expenses has been proportionate to the larger turnover.

The balance-sheet of the Company shows the paid-up capital unchanged at Rs. 12 lakhs, divided into 6,000 shares of Rs. 200 each. As against this, the reserves and surplus aggregate Rs. 6.50 lakhs. The gross block of the value of Rs. 24.76 lakhs has been written down to Rs. 13.09 lakhs. The current assets aggregate Rs. 20.28 lakhs and cover the current liabilities and provision for taxation amounting to Rs. 14.86 lakhs by a comfortable margin.

UNILEVER UNDERTAKINGS IN INDIA AMALGAMATE

Lever Brothers (India) Private Limited. The Hindustan Vanaspati Manufacturing Company Private Limited, William Gossage and Sons (India) Private Limited and Joseph Crosfield and Sons (India) Private Limited are companies well known in India. These Companies belong to the Unilever Group and have for many years been supplying to the Indian consumer such well-known products as Sunlight, Lifebuoy and Lux toilet soaps, a whole range of toilet preparations, Dalda and Lotus brands of *vanaspati*, Blue Band Margarine and Pyramid and Wheel brand glycerine. These Companies have build up over the years an efficient manufacturing and marketing organisation, in the management of which Indian personnel play a great part. Their raw materials are primarily drawn from this country.

These Companies are now preparing to take the further step of inviting Indian participation in their capital. In order to achieve this purpose, Lever Brothers (India) Private Limited has absorbed the other three companies and it proposes shortly to convert itself into a public company under a new name. The High Court of Bombay has sanctioned the amalgamations and the Government of India has sanctioned the other legal steps to be taken before a part of the holdings of Unilever in the amalgamated company can be offered to the public.

COMPANY MEETINGS AND DIVIDENDS

DHUNSERI TEA CO., LTD. Annual General Meeting, Calcutta, 29th October 1956. Dividend: Re. 1 per share. Transfer books remain closed from 22nd to 29th October 1956, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 3rd November 1956. Dividend: Re. 1 per share. Transfer books remain closed from 25th October to 3rd November 1956, both days inclusive.

KUNCHUNPORE TEA CO., LTD. Annual General Meeting, Calcutta, 6th November 1956. Dividend: *Nil*. Transfer books will remain closed from 29th October to 6th November 1956, both days inclusive.

MARGARET'S HOPE TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Dividend: *Nil*. Transfer books remain closed from 25th October to 8th November 1956, both days inclusive.

RANICHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 25th October to 8th November 1956, both days inclusive.

BHATKAWA TEA CO., LTD. Annual General Meeting, Calcutta, 8th November 1956. Dividend: Rs. 2-8 per share. Transfer books remain closed from 25th October to 8th November 1956, both days inclusive.

HUKUMCHAND JUTE MILLS LTD. Annual General Meeting, Calcutta, 9th November 1956. Transfer books will remain closed from 1st to 9th November 1956, both days inclusive.

ZANDU PHARMACEUTICAL WORKS LTD. Annual General Meeting, Bombay, 16th November 1956. Transfer books will remain closed from 2nd to 15th November 1956, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Interim dividend of Rs. 5 per share, free of income-tax for the year ended 31st December 1956, payable on and after 12th November 1956.

NATIONAL CARBON CO. (INDIA) LTD. Interim dividend of As. 12 per share, payable on or after 10th December 1956. Transfer books remain closed from 27th October to 16th November 1956, both days inclusive.

OKAYTI TEA CO., LTD. Annual General Meeting, Calcutta, 14th November 1956. Dividend: *Nil*. Transfer books will remain closed from 5th to 14th November 1956, both days inclusive.

T. STANES & CO., LTD. Interim dividend of As. 14 per ordinary share, for the year ending 30th September 1956. Transfer books will remain closed from 1st to 15th November 1956, both days inclusive.

TEXTOOL CO., LTD. Dividend of Rs. 15 per ordinary share, for the year ended 30th April 1956. Transfer books will remain closed from 30th October to 12th November 1956, both days inclusive.

PENINSULAR PLANTATIONS LTD. Dividend of Rs. 3 per ordinary share, for the year ended 29th February 1956. Transfer books will remain closed from 5th to 15th November 1956, both days inclusive.

COMPANY REGISTRATIONS

NEW ERA FABRICS PRIVATE LTD. (Managing Director: Mr. Purshottam Kanji Badiani.) Business: Weaving of artificial silk, rayon, staple fibre, etc. Authorised capital: Rs. 50,00,000. Private company. Address: 16, Tulsi Pipe Road, Bombay 16.

UNIVERSAL ENTERPRISES PRIVATE LTD. (First Director: Maharaj Narpatsinghji.) Business: Tourists agents and contractors. Authorised capital: Rs. 5,00,000. Private company. Address: 3rd Floor, Western India House, Sir P.M. Road, Fort, Bombay.

PLANNED COMMERCE AND PRODUCTS PRIVATE LTD. (First Director: Mr. Girdharlal Shankarlal Dave.) Business: Dealers in hides, skins and leather. Authorised capital: Rs. 5,00,000. Private company. Address: 529, Kalbadevi Road, Bombay 2.

Points From The Chair

Electricity Amendment Bill

"YOU will have seen a reference in the Directors' report to the Electricity (Supply) Amendment Bill, which has been referred to a Select Committee of Parliament. To ensure that the provisions of the Bill will not be such as to impede the development of the industry, some of the clauses of the Bill will need modification, and we trust that the representations which have already been made and which we hope to reinforce before the Select Committee, will be accepted. Shareholders will recollect that the original Bill contained a provision prohibiting an electricity undertaking from declaring a dividend in excess of 3 per cent. per annum without the sanction of the State Government so long as any arrears of depreciation remained to be written off. Several representations were made to Government on this point and your Company has, both in writing and in meetings with the Ministries concerned, explained to Government the need for cancelling the provision. We believe that the point of view of the industry has been appreciated and that the clause will be suitably amended in the Select Committee stage so as to maintain the *status quo*."

J. R. D. TATA,
Andhra Valley Power Supply Co., Ltd.

Outlook for Malayalam Plantations

"As regards prospects for the current financial year, crops were originally estimated at 16,958,000 lbs. tea and 6,945,000 lbs. rubber, but the drought in the early part of the year has made doubtful realisation of the full tea crop. The shortage compared with last year was, at the end of September, more than 825,000 lbs. Largely as a result of the careful cultivation of past years, the tea has stood up extremely well to the exceptional drought and casualties have been remarkably low. The market for medium and low-grown teas, similar to those which form the bulk of this Company's output, has been appreciably lower in recent months than for corresponding months of last year, but has improved in the last few weeks. The output of dust tea to 31st December 1956, has been sold forward without export quota. No other forward sales have been made."

H. W. HORNER,
Malayalam Plantations Ltd.

Nationalisation of Suez Canal

"According to studies made by jurists whose services we have secured, Colonel Nasser's decision appears, in point of fact, to be incompatible with your Company's special status, and contrary to international public law. The Egyptian Government has tried to justify the 'nationalisation' of the Canal Company by arguing that it was purely and simply an Egyptian company, and thereby subject to the decisions of the Egyptian legislator. This assertion does not stand up to a thorough analysis of documents. The Company's Egyptian nationality, which is not mentioned, in the Acts of Concession, was only put down in the 1866 Convention for reasons of political expediency, and has produced only limited effects. In particular, the Company has never been registered in Egypt; the statutory seat of the Company fixed in Alexandria is purely fictitious. The Egyptian Government and the Egyptian Courts have had to admit on several occasions, in matters as fundamental as the application of the gold clause to our debentures or liability to the limited companies law and the exchange control law, that Egyptian public laws were not applicable *de plano* to the Company, and that a speiial regime had to be elaborated to allow for the Company's particular status."

M. FRANCOIS CHARLES-ROUX,
Suez Canal Company

Increasing Use of Fertilisers

"It is very heartening to observe that the trend in favour of increasing use of commercial fertilisers has come to stay and this will doubtless mean further improvement in agricultural production in the coming years. Though the present *per capita* rate of utilisation of nitrogenous fertilisers (nitrogen proper) continues to be quite low, being only 1/35 the rate in the U.S.A., 1/26 of West Germany, 1/16 of the U.K. and 1/15 of Japan, the spread of this practice amongst the conservative agriculturist classes of India has been very rapid, tonnages actually consumed having registered an increase of 800 per cent. in the period 1938-55 in India compared with only 25 per cent. in West Germany, 80 per cent. in Japan, 416 per cent. in the United Kingdom and 500 per cent. in the U.S.A. during the said period. This is indeed a very auspicious development for controlling inflationary forces inherent in vast developmental expenditures based on deficit finance. Since food and cloth will continue to absorb a lion's share of incomes earned by the masses for a long time to come in our underdeveloped economy, a stable price level of agricultural commodities based on adequate indigenous production of foodgrains, oilseeds and cotton will undoubtedly prove invaluable in effectively countering and mitigating the evils of such inflationary forces during the transition period of transformation of India into a modern economy."

K. NARAYANASWAMY,
Mysore Chemicals and Fertilisers Ltd.

COORLA SPINNING PAYS MORE

PROFIT OF HANSQUA TEA RECEDES

Coorla Spinning and Weaving Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Cowasjee Jehangir and Co., Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st March 1956.

There is a profit of Rs. 6,22,161 (Rs. 4,85,597 before providing for depreciation and gratuity) after transferring to provision for depreciation of machinery, etc. Rs. 8,50,000 (Rs. 4,25,000), to provision for depreciation of buildings, etc. Rs. 50,000 (Rs. 25,000) and to provision for gratuity Rs. 82,000 (Rs. 36,000). Adding to this balance the amount of Rs. 20,755 (Rs. 21,158) carried forward at the end of the last year, there becomes available a total of Rs. 6,42,916 (Rs. 20,755). From this amount the directors have transferred rupees three lakhs (*nil*) to general reserve, and, out of the balance of Rs. 3,42,916, recommend payment of a dividend at the rate of Rs. 7-8 (Rs. 7-8 after transferring Rs. 1,95,000 from dividend equalisation reserve) per share and a bonus at the rate of Rs. 5 (*nil*) per share for the year under report, together absorbing Rs. 3,25,000 (Rs. 1,95,000) and leaving Rs. 17,916 (Rs. 20,755) to be carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,00,000	Block ...	90,15,997
Reserves ...	13,03,380	Stock-in-trade	25,59,109
Provision for taxation ...	3,23,178	Stores, spare parts, vehicles, etc. ...	5,19,974
Provision for depreciation gratuity ...	57,80,041 2,00,208	Debts, deposits and advances ...	9,09,817
Liabilities ...	25,68,394	Investments	73,800
Profit and loss account ...	3,42,916	Cash ...	39,420
Rs.	1,31,18,117	Rs.	1,31,18,117

Hansqua Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a profit of Rs. 1,00,013 (Rs. 4,63,678). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,12,282 (Rs. 3,13,694), of which the directors have transferred Rs. 40,000 (Rs. 1,75,000 to buildings and machinery reserve) to revenue reserve account. The directors recommend that a dividend of 10 (25) per cent. be declared at the annual general meeting, leaving Rs. 22,282 (Rs. 13,694) to be carried forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December, 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Crop weighed out at 5,195 maunds which compares with 5,318 maunds in the previous year. The average selling price was Re. 1-13-7 per lb. as against Rs. 2-15-2 per lb. in 1954. Planted area has been resurveyed at 523.70 acres.

Estimates for 1956 provide for a crop of 6,000 (7,000) maunds at an outlay of Rs. 7,13,560 (Rs. 7,45,740), including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	8,69,205
Reserves ...	9,98,794	Stock-in-trade	5,10,850
Provision for taxation ...	2,10,093	Stores and supplies	81,394
Liabilities ...	1,96,050	Quota rights	
Profit and loss account ...	22,282	receivable	40,733
		Debts, deposits and advances ...	1,87,228
		Investments	2,22,009
		Cash ...	15,800
Rs.	19,27,219	Rs.	19,27,219

Dhunseri Tea Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

After charging manager's and staff's commission, there is a profit on the year's working of Rs. 85,072 (Rs. 6,58,197) to which should be added the credit balance on profit and loss account brought forward from the previous year of Rs. 8,779 (Rs. 8,732 and also Rs. 10,169 being provision for taxation no longer required) making a total of Rs. 93,851 (Rs 6,77,098). From this amount has been deducted the following provision for taxation Rs. 12,000 (Rs. 2,45,000) and depreciation Rs. 24,468 (Rs. 47,710) leaving a balance of Rs. 57,383 (Rs. 2,51,649 after transfers to reserves, etc.). Payment of dividend on preference shares for the half-years to 31st March and 30th September 1955, without any deduction for income-tax paid by the Company absorbs Rs 8,385 (Rs. 8,385). From the available balance of Rs. 48 998 (Rs. 2,43,264) the directors recommend payment of dividend of 10 (50 per cent. including interim dividend of 10 per cent.) per cent. on ordinary shares for the year ending 31st December, 1955, without any deduction for the income-tax paid by the Company absorbing Rs. 46,897 (Rs. 2,34,485) leaving a balance to be carried forward of Rs. 2,101 (Rs. 8,779).

The Company during the season has been financed by the arrangements made with the National Bank of India Ltd., Calcutta, which provided the overdraft facility against the hypothecation over the crop and other moveable property of the Company.

Capital expenditure incurred during the year comprises of Rs. 36,440 for the erection of new staff quarters, labourers' houses, segregation ward and medicine godown, Rs. 12,603 for one tractor, and Rs. 8,309 for M.S. forma and plucking machines.

Weather and Crop.—The weather, though not very well off during the year, was generally seasonable. The final crop during the season came to 7,325 maunds as compared with 6,956 maunds in 1954 and 7,038 maunds average over the 1950-54 period.

Prices.—Due to world-wide recession in tea prices during 1955-56, the prices realised on the season's crop declined substantially and came down to As. 28.25 per lb. as compared with As. 42.31 in 1954 and As. 31.87 in 1953. The crop was disposed of as follows: for export auctions 407,516 lbs. at As. 30.31 and for internal auctions 171,358 lbs. at As. 23.34 per lb.

An extension of 1.86 acres was put out during the year, thus making total planted area 645.8 acres as at 31st December 1955, against 643.94 acres as at 31st December 1954.

Estimates for 1956.—The estimates recently revised provide for a crop of 7,300 maunds at a local cost of production of Re. 1-9-1.65 per lb. to which, certain expenditures like payment of bonus to the labour for the years 1953 and 1954 Calcutta costs and West Bengal Entry Tax at one anna per lb., fall to be added, will enhance the cost of production considerably. The total tea manufactured upto 14th September 1956 comes to 4,659 maunds against 4,586 maunds in 1955. 88,982 lbs. of the 1956 season tea have been sold till the end of August 1956, at an average price of As. 39.58 per lb., and prospects for remainder of the season seem to be good.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,98,280	Block ...	3,64,047

Nilgiri Tea Estates, Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. George & Co., Ltd., Kottayam, Travancore-Cochin) submitted the audited accounts of the Company for the year ended 31st March 1956.

Estimates and Acreage.—As mentioned in the previous report of the directors, the Stagbrook Estate was taken possession on 12th May 1955. The total area under tea, including new clearings is 1,423.10 acres. The Mailoor Estate cover 336.34 acres under tea, Kokayar Estates 265.75 acres and Stagbrook 821.01 acres. The Mailoor Estates also cover 164.96 acres under coffee. Mailoor, Kokayar and Stagbrook Estates are reported to be in good condition.

Crop and Prices.—The tea crop secured during the year was 7,80,234 (4,04,527) lbs. at 127.27 cents or Re. 1-4-4 (Re. 1-2-8) per pound. The crop estimated for 1956-57 is 9,75,000 lbs. at 128.90 cents or Re. 1-4-7 per pound. The tea was sold at an average price of Re. 1-12-9 (Rs. 2-13-9) per lb. The coffee crop for the year ended was 1,007½ (723½) bushels at Rs. 67-14-5 (Rs. 97-11-6) per bushel. The coffee crop estimated for the year 1956-57 is 1,200 bushels at Rs. 57-14-8 per bushel.

The net profit after providing for interest on debentures, depreciation and taxes, etc., amounted to Rs. 1,33,526 (Rs. 86,983). To this has to be added the balance from last year of Rs. 7,798 (Rs. 12,196), making a total of Rs. 1,41,324 (Rs. 99,179). The preference dividend for 1955-56 paid in May 1956 absorbed Rs. 18,219 (Rs. 18,206) leaving a balance of Rs. 1,23,105 (Rs. 80,973). From this amount the directors recommend payment of dividend of 6½ (15) per cent. on the ordinary shares for 1955-56 (the dividend on new shares from 20th May 1955) Rs. 80,560 (Rs. 84,375) and transfer to debenture redemption fund Rs. 40,000 (Rs. 11,200 to general reserve), leaving a balance of Rs. 2,544 (Rs. 7,798) to be carried forward.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

		Cash ...	1,20,526
Rs.	39,10,349	Rs.	39,10,349

Kunchunpore Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a loss of Rs. 1,375 (profit of Rs. 3,23,356). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 4,618 (Rs. 19,031 after transferring Rs. 1,45,000 to revenue reserve, Rs. 1,00,000 to buildings and machinery reserve and after paying a dividend of 27½ per cent.) which the directors propose to carry forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Crop was 4,356 maunds as compared with 4,256 maunds in 1954. The average selling price was Re. 1-11-6 per lb. against Rs. 2-12-8 per lb. in the previous year. Planted area is now 603.53 acres.

Estimates for 1956 provide for a crop of 4,200 maunds at an outlay of Rs. 5,99,570, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,60,000	Block ...	3,12,914

Profit and loss account ...	4,618	Investments	43,789
		Cash ...	46,653
Rs.	8,18,720	Rs.	8,18,720

Anderson Wright, Ltd.

The directors of the above Company (Chairman: Mr. G. J. K. Hook, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The amount at the credit of profit and loss account carried forward from last year is Rs. 24,401 (Rs. 76,079), to which has to be added the amount which the directors have transferred from investment depreciation reserve Rs. 2,50,000 (*nil*), making a total of Rs. 2,74,401 (Rs. 76,079). From this sum there is to be deducted: loss on the profit and loss account for the year ended 31st December 1955 Rs. 89,042 (profit of Rs. 4,94,322) and provision for taxation Rs. 77,075 (Rs. 1,06,000) leaving a balance of Rs. 1,08,284 (Rs. 4,64,401) which the directors recommend should be dealt with as follows:—

In payment of a dividend for the year ended 31st December 1955 on preference shares at the rate of 4½ per cent. per annum without any deduction in respect of income-tax paid by the Company Rs. 90,000 (Rs. 90,000) and to be carried forward Rs. 18,284 (Rs. 24,401 after transferring Rs. 1,00,000 to debenture redemption reserve, Rs 1,00,000 to investment depreciation reserve and 7½ per cent. ordinary dividend absorbing Rs. 1,50,000).

During the year under review the managing agency of the Central Kurkend Coal Co., Ltd., held by the firm Anderson Wright & Co., was relinquished and the investments held in that Company were disposed of. The total loss arising to the firm and the Company as a result of this transaction was Rs. 4,17,460.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	44,302

Chittaranjan Cotton Mills, Ltd.

The directors of the above Company (Managing Agents: The Keshavlal Industrial Syndicate Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

There has been further improvement this year in the expansion of the mills. There has been an addition of Rs. 1,46,000 in the machinery account besides Rs. 62,000 in buildings. Further, advances to the extent of about Rs. 3 lakhs have been made this year for buildings under construction.

Due to the investments in machinery, the production materially increased and the sale of the products has been Rs. 92,59,000 as against Rs. 87,72,000 in the year 1954.

The net profit of the Company during the year under review after deducting depreciations and other expenses come to Rs. 14,86,032 (Rs. 15,70,733). After adding the balance carried forward from 1954 of Rs. 1,16,339 (Rs. 92,700), there is a total of Rs. 16,02,371 (Rs. 16,63,433). Out of this the directors have transferred to reserve fund for taxes and other liabilities Rs 9,00,000 (Rs 10,00,000), paid a tax-free dividend at 12½ (12½) per cent. Rs. 2,57,600 Rs. 2,50,000), transferred to reserve fund Rs. 1,50,000 (Rs. 1,35,000), transferred to dividend equalisation fund Rs. 1,00,000 (Rs. 1,50,000) and to welfare fund Rs. 11,721 (Rs. 5,707). This leaves a balance of Rs 1,83,050 (Rs. 1,22,726) to be carried over to next year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,60,548	Block ...	56,76,578

Rs.	1,11,56,670	Rs.	1,11,56,670

Clive Buildings (Calcutta) Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

During recent years there has been a tendency for companies to move their offices from the business area to Chowringhee. Plans have been announced for a number of large office blocks along Chowringhee but the nationalisation of life insurance appears to have brought these to a standstill, since most of them were promoted or financed by life insurance companies. At present good coffee accommodation is not easily obtained in Calcutta and there is a long waiting-list for any vacancies occurring in Clive Buildings. During the year several offices changed hands but good tenants were found without difficulty.

The gross receipts amounted to Rs. 5,50,193 as compared with Rs. 5,18,487 last year. The gross profit for the year amounted to Rs. 3,23,109 (Rs. 3,04,549) and, after meeting the usual charges for debenture interest, depreciation, sinking fund, etc., there remains a net balance of Rs. 1,93,711 (Rs. 1,73,761), out of which there has been provided Rs 94,813 (Rs. 99,773), on account of income-tax and super-tax, leaving a balance of Rs. 98,868 (Rs. 73,988). To this amount must be added Rs. 1,84,610 (Rs. 1,81,122) brought forward from last year, making a total of Rs. 2,83,478 (Rs. 2,55,110). The directors recommend that the balance at credit of the profit and loss account should be dealt with as follows:—

By payment of a dividend on 10,000 ordinary shares of Rs. 150 each at Rs. 6 per share (without any deduction in respect of income-tax payable by the Company) Rs. 60,000 (Rs. 55,000), by payment of a dividend on 1,000 management shares of Rs. 15 each at Rs 6 per share (without any deduction in respect of income-tax payable by the Company Rs. 6,000 (Rs. 5,500), transfer to repairs fund Rs. 20,000 (Rs. 10,000) and carry forward Rs. 1,97,478 (Rs. 1,84,610).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,15,000	Block ...	41,43,293
Debentures	19,95,000	Other assets	2,992
Reserves ...	9,87,957	Debts, and advances ...	30,502
Provision for taxation ...	66,348	Investments	4,16,232
Liabilities ...	1,96,056	Cash ...	3,64,820
Profit and loss account ...	1,97,478		
Rs.	49,57,839	Rs.	49,57,839

Mangalore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1956.

Acquisition of the Company's Undertaking.—In the last report to the shareholders it was intimated that the Government of Madras had notified the Company that the undertaking at Mangalore would vest in Government on 31st December 1955. In December 1955, the Government of Madras notified the Company of the advancement of the date of vesting to 15th December 1956. Thereafter in June 1956, a further notice was issued to the Company notifying that the date of vesting would be 15th October 1956, and the necessary measures are now being taken to transfer the undertaking on that date.

The basis of compensation payable to the Company by the Government will be as already advised to the shareholders, namely Basis "A" as defined by Section 5 of the Madras Electricity Undertakings (Acquisition) Act, 1954, and as soon as the amount of compensation payable by the Government is finalised and received, the necessary steps will be taken for winding-up the Company.

The revenue account shows a profit on the year's working of Rs. 2,13,683 (Rs. 1,02,810). After deducting from this debenture interest Rs. 6,875 (Rs. 6,875), debenture trustees' fees Rs. 300 (Rs. 300), bonus to employees Rs 23,319 (Rs. 14,422), arrears of depreciation Rs. 5,018 (Rs. 5,021), gratuity to retired employees Rs. 1,831 (Rs. 396), provision for taxation Rs 77,000 (Rs 14,700) and appropriations—Under the Electricity (Supply) Act, 1948 Rs. 29,439 (Rs. 4,434) there is a net profit for the year of Rs. 69,901 (Rs. 56,663). After adding to this Rs. 38,542 (Rs. 32,289), the credit balance brought forward from last year, Rs. 4,205 (Rs. 5,590 on account of forfeited dividends), on account of profit on sale of investments and forfeiture of dividends, there is a credit balance of Rs. 1,12,648 (Rs. 94,542) on profit and loss account. This has been disposed of as follows:

To ad-interim dividend of 7½ (*nil*) per cent. (free of tax) for the year ended 31st March 1956—paid on 9th December 1955 Rs. 42,000 (*nil*), second ad-interim dividend of 2½ (first and final 10) per cent. (free of tax) for the year ended 31st March 1956—declared on 14th September 1956 Rs. 14,000 (Rs. 56,000) and to carry forward Rs. 56,648 (Rs. 38,542). The first item only has been given effect to in the accounts now submitted. No recommendation for the declaration of any further dividend is being made to the shareholders.

Plant.—The 250 kw. sulzer set No. 1 broke down on 3rd January 1956 after 30 years' service, due to fatigue. Parts to recommission the set are on order. The 500 kw. main set No. 6 sustained an accident on 2nd April 1956 and was out of commission until 22nd May 1956 during which period supply to consumers was rationed. Replacement parts were imported by air and the set recommissioned within seven weeks.

A continuous supply of energy was maintained throughout the year, and an increase of approximately 7 per cent. in the number of units sold was recorded as compared with the previous year. The total number of consumers connected as at the end of 1956 was 4,916 as compared with 4,645 in 1955. The units of electricity sold during 1955-56 amounted 3,650,086 as compared with 3,422,270 in 1954-55.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,60,000	Block ...	11,17,115

Shahjahanpur Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1955.

The revenue account shows a profit on the year's working of Rs. 75,053 (Rs. 73,093). After adding to this the profit on sale of investments Rs. 1,250 (*nil*) and amount written back out of provisions for deferred taxation in respect of the years 1948-50 Rs. 7,600, there is a total of Rs. 83,903 (Rs. 73,093). From this is deducted the arrears of depreciation Rs. 5,416 (Rs. 5,415), gratuity to retired employees Rs. 1,294 (Rs. 1,313), expenditure during construction written off Rs. 741 (Rs. 741), provision for taxation 1956-57 Rs. 26,000 (Rs. 15,951), reserve for deferred taxation Rs. 6,400 (Rs. 8,700) and appropriation under the Electricity (Supply) Act 1948 Rs. 3,778 (Rs. 3,721), leaving a credit balance of Rs. 40,274 (Rs. 37,252). After adding to this Rs. 14,393 (Rs. 5,882) being the adjusted credit balance brought forward from last year, Rs. 30,063 (*nil*), being the total of adjustments on account of fuel cost, provision for taxation no longer required and other sundry items, and deducting therefrom Rs. 27,617 (*nil*) being adjustment on account of value of old stock of stores written off there is a credit balance of Rs. 57,113 (Rs. 59,894 after adjustment) which the directors recommend should be disposed of as follows:—

To pay a dividend of 5 (5) per cent. for the year ended 30th September 1955, without any deduction for income-tax paid by the Company Rs. 45,500 (Rs. 45,500) and to carry forward a balance of Rs. 11,613 (Rs. 14,394).

A continuous supply of energy was maintained throughout the year, and a small increase in the number of units sold was again recorded, as compared with the previous year.

Arrangements by the State Government for providing a bulk supply from the Sarda Canal Hydel System are being finalised and it is expected that as soon as the terms of the Agreement are settled, the supply would be made available.

Considerable labour trouble was experienced during March 1956, when a strike notice, containing a large number of unreasonable demands, was served on the Company. These demands were rejected in the interest of discipline and efficient operation of the Undertaking. A majority of the workmen, instigated by the Labour Union, went on strike on 14th March 1956 and although a few loyal workmen gave considerable assistance to the Company, supply was interrupted until 20th March 1956 when the strike was called off on the basis of a settlement reached with the Union.

The number of consumers connected to the Company's system at 30th September 1955, was 2,056 as against 2,009 at the end of September 1954. The number of units of electricity sold during the year was 23,54,926 (22.24.801).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Profit and loss account ...	11,613	Investments	2,17,788
		Cash ...	1,52,908
Rs.	15,25,631	Rs.	15,25,631

Karanpura Collieries, Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 29th February 1956.

Raisings and despatches.—Raisings were 1,50,031 tons and despatches 1,48,818 tons, compared with 1,31,579 tons and 1,33,566 tons respectively in the previous year. Steady progress is being maintained at the Company's colliery.

Transport.—The overall wagon supply position was satisfactory but irregular placements have at times caused congestion at depots thereby rendering the coal stocks liable to heating.

Labour.—Good relations were maintained with labour throughout the year. At the end of the Company's year, the Labour Tribunal was still in session. The Tribunal has since published its award which will materially enhance costs. The full effect of this however is yet to be assessed.

Belatedly Government announced a flat increase in coal selling price of Rs. 3 per ton for all Bengal and Bihar collieries. The directors hope that this increase is an interim measure only and that Government will cause an examination of costs to be made at the end of six months as suggested by the industry.

The reason for this suggestion is that costs of every component item have increased in the last few years and, indirectly in power costs and in other ways often overlooked, this award will increase the costs whereas controlled selling prices of coal have in fact decreased in the last nine years.

After providing Rs. 1,40,417 (Rs. 1,03,537), for depreciation, Rs. 32,016 (Rs. 43,500) for taxation, Rs. 47,200 (*nil*) for tax contingency reserve, Rs. 2,900 (Rs. 8,700) for development rebate reserve and including the sum of Rs. 2,661 (Rs. 3,145) brought forward from the previous year, the profit and loss account shows an available balance of Rs. 1,47,527 (Rs. 1,74,347), which the directors propose to dispose of as follows:—

In paying a dividend on the 5½ per cent. cumulative (taxable) preference shares for the year ended 29th February 1956, Rs. 40,562 (Rs. 81,124), in paying a dividend on the ordinary shares at the rate of 5 (2½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 1,00,000 (Rs. 50,000) and in carrying forward Rs. 6,965 (Rs. 2,661 after paying preference dividend arrears for the period 1st March 1952 to 28th February 1954).

Accounts in brief are as under:—

Notices

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual General Meeting of the Shareholders of the ORIENT PAPER MILLS LIMITED will be held at its registered office at Brajrajnagar in the district of Sambalpur (Orissa) on Tuesday the 20th November 1956, at 3 p.m., for the following purposes:

(a) To receive and consider the Report of the Directors and to adopt the audited accounts of the Company for the half-year ended 31st March 1956.

(b) To declare Dividends on Preference and Ordinary shares.

(c) To elect Directors in place of Shri P. R. Sarker who retires by rotation and in place of Shri R. K. Somany who retires by rotation as well as under Section 261 of the Companies Act, 1956.

Shri R. K. Somany is an Associate of the Managing Agents and has been on the Board of Directors since almost the inception of the Company. It is considered desirable to avail of his valuable advice by retaining him as a Director of the Company. The Company has received the requisite special notice from a shareholder and accordingly the special notice is hereby given to the shareholders for passing the following special resolution for re-appointment of Shri R. K. Somany, as a Director of the company.

"RESOLVED that Shri R. K. Somany, an Associate of the Managing Agents, be and is hereby re-elected as a Director of the Company."

(d) To appoint Auditors for the current year and fix their remuneration.

As Special Business:

(e) To consider and, if thought fit, to pass, with or without modification, the following ordinary resolution:

"RESOLVED that inspection of registers, books and all other documents, required to be maintained and kept open for inspection by the Company, be allowed to the persons entitled thereto, on receipt of 24 hours' prior notice from them, at the registered office of the Company during 11 a.m. to 1 p.m. on each working day, in accordance with and subject to the provisions of the Companies Act, 1956."

(f) To transact any other business, which may be brought forward at the meeting, with the permission of the Chairman.

The Share Transfer Books will remain closed from the 5th to 20th November 1956, both days inclusive.

EXPLANATORY STATEMENT

Item (e).—The resolution has been proposed to fix the time for and mode of inspection of various registers, books and documents of the Company, keeping in view the administrative convenience.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA, 16*th October* 1956.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The dividends. when declared, will be payable to registered shareholders as on the 20th November 1956, on or after the 30th November 1956.

ENQUIRY NOTICE

INDIAN RAILWAYS REQUIRE A LARGE number of bridge girder spans, both broad-gauge (5'-6") and metre-gauge, varying from 30 ft. to 200 ft. spans. Indian and foreign fabricating firms of repute interested in supplying these girders are requested to contact the undersigned for further information. This is not a Tender Notice but only an Enquiry.

M. N. BERY,
Joint Director, Works,
Ministry of Railways (Railway Board)
'N' Block, Raisina Road, New Delhi.

HUKUMCHAND JUTE MILLS LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE next Annual General Meeting of the Shareholders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Friday the 9th November 1956, at 4-30 p.m., for the following purposes:—

1. To receive and pass the Directors' Report and the Audited Accounts for the year ended 31st March 1956.
2. To declare Dividends.
3. To elect Directors in place of those retiring.
4. To appoint Auditors.
5. To pass the following resolution as a Special Resolution:—

"RESOLVED that Sri D. P. Goenka, a Partner of the Managing Agents, be and is hereby re-elected a Director of the Company."

6. To transact any other business that may be brought before the Meeting.

Dividends, if declared, will be paid to the Registered Shareholders only.

The Share Transfer Register of the Company will be closed from 1st November 1956 to 9th November 1956, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents.

CALCUTTA, 9*th October* 1956.

THE SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED
TIRUCHIRAPALLI

NOTICE

THE DIRECTORS HAVE SANCTIONED THE payment of an *ad-interim* tax-free dividend for the year 1956-57 of 3¾ per cent. on Ordinary shares and also usual dividends of 2¾ per cent. on Preference shares.

The warrants will be made out in the names and addresses of shareholders standing registered in our books as on 23rd November 1956, or their mandatees and posted on and after 17th December 1956. The shareholders are requested to notify immediately any change of address to the Company.

The register of Members and share transfer books of the Company will be closed from 23rd November 1956 to 5th December 1956 (both days inclusive).

N.B.—Holders of blank transfers are advised to have the shares registered in their names in time before closure of books.

By Order,
SESHASAYEE BROTHERS
PRIVATE LTD.,
Managing Agents and Chief Engineers.

TIRUCHIRAPALLI, 18*th October* 1956.

THE BENGAL FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend on the shares of the above Company of 11¼ per cent., free of Income-tax, for the year ending 31st December 1956, was declared by the Board of Directors on 22nd October 1956, payable on or after 9th November 1956, to those Members whose names are registered in the Register of Members of the Company on the 9th November 1956. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

The Register of Members of the Company will be closed from 5th November 1956 to 9th November 1956, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 22*nd October* 1956.

THE ASSOCIATED CEMENT COMPANIES LIMITED

NOTICE

THE SHARE TRANSFER BOOKS OF THE Company will be closed from Friday the 9th November to Friday the 30th November 1956 (both days inclusive).

By Order of the Board,
For THE ASSOCIATED CEMENT COS., LTD.,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
M. DANDEKER,
Managing Director.

BOMBAY, 5*th October* 1956.

COAL

(*Concluded from page* 812)

stowing during the year 1954-55, but only 59 collieries actually carried out stowing, as against 55 in the previous year. The total quantity of stowing material consumed amounted to 5,123,628 tons, as compared with 4,963,530 tons in 1953-54. The output of coal by these collieries during the year under review aggregated 3,241,407 tons, as against 3,028,069 tons in the previous year. The total amount of assistance paid was Rs. 45.54 lakhs, which falls very much short of that (Rs. 61.61 lakhs) paid in 1953-54. This shortfall in the amount of assistance is explained by the fact that most of the collieries were not given assistance for full three-quarters of the year, due, in some cases, to changes in the areas of stowing sanctioned by the Board which required further application, examination and sanction. There was also delay in the submission of supplementary applications involving changes of area and some delay in the scrutiny of claims for assistance.

As regards washing, the final report of the Coal Washeries Committee was submitted in June 1954. The Committee recommended that washing of all coals, coking and non-coking, should be done in central washeries established by a central marketing organisation which would also be responsible for the sale and distribution of the coal. The Coal Board did not consider the setting up of a central marketing organisation for undertaking the purchase and sale of all coal produced in India as being urgent, but recommended, for the acceptance of the Government of India, the following proposals:

(1) All coking coals should be washed, (2) collieries producing coking coal should be encouraged to install washing plants and the Board should assist them with loans, washing subsidy, etc., and (3) after a prescribed date, the Board should step in to undertake the washing of the coal for which no washing arrangement is made by the producing collieries.

No final decision was taken by the Government during the year on the Board's proposals. Subsequently, however, it took the following decisions:

(1) General, all metallurgical coal down to grade II should be washed; (2) private collieries may be given the choice to set up washeries to meet the requirements of washed coal of all existing and projected steel plants. If the required quantities do not become available from washeries set up by private collieries, the Government will itself set up washeries to meet the full requirements; and (3) the average cost of washing should be made good to the collieries through either revision of prices or a negotiated price for washed coal or by means of a suitable subsidy as may be determined at the appropriate stage.

The other measures taken by the Board during the year under review in furtherance of coal conservation include the appointment of two committees, one for the standardisation of the methods of investigation into coking coal reserves and for re-estimation of the reserves of coking coal in the country and the other for examining the loss of coal in barriers between collieries and in working their seams and for suggesting ways and means by which these losses could be avoided. The work of the first committee was kept in abeyance pending a final decision on the issue of the expansion of the committee. The second committee also did not function during the year under review.

GILT-EDGED WEAK

(From Our Own Correspondent)

BOMBAY, 24*th October*

The short-term money market remained featureless for yet another week, with very little activity in the inter-bank call money section. There was, however, no change in the conditions, which, if anything, were a little more difficult for borrowers, due to paucity of funds. With quite a few attractive industrial issues in the offing, lenders were probably reluctant to release their funds to the market. Consequently, interest rates remained firm. Inter-bank call money was nominally quoted at 3½ per cent. House money at call fetched 3½ to 3¾ per cent. and short-term deposits were offered 3½ per cent. for all periods from one to six months.

A decline of Rs. 8.69 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 19th October 1956. This is in contrast to the successive rise aggregating Rs. 29 crores during the previous two weeks. Notes held in the Banking Department show an increase of Rs. 9.37 crores, with the result that the expansion in total notes issued is of the order of Rs. 68 lakhs only. This is covered by a similar rise in rupee coin on the assets side. There has been a further decline of Rs. 4.97 crores in foreign securities, but this is offset by a corresponding increase in rupee securities. The value of the Bank's holdings of gold coin, which was raised from Rs. 40.02 crores to Rs. 117.76 crores in the preceding week, is unchanged at the latter level. In the Banking Department, the deposits of the Central Government have fallen by Rs. 2.53 crores, while those of other Governments and banks are up by Rs. 1.12 crores and Rs. 1.75 crores, respectively. On the assets side, a decline of Rs. 4.17 crores is noted in balances held abroad and of Rs. 6.12 crores in loans and advances other than to Governments. Of the latter, advances to Scheduled banks against usance bills account for a net drop of Rs. 1.58 crores. The scarcity of funds in the short-term money market, resulting in banks resorting to heavy borrowings from the Reserve Bank, is reflected in further fresh advances against these bills to the tune of Rs. 10.75 crores during the week under review. But, as there has been a net decline as just mentioned, it is obvious that repayment of maturing bills must have been of the order of Rs. 12.33 crores.

The Scheduled Banks' statement for the week ended 12th October 1956 reveals a decline of Rs. 5.34 crores in demand deposits and of Rs. 31 lakhs in time deposits. Borrowings from banks have gone up by Rs. 1.61 crores and those from the Reserve Bank by Rs. 2.29 crores. Borrowings from the State Bank, on the other hand, stand reduced by Rs. 1.40 crores. On the assets side, advances are lower by Rs. 1.07 crores and inland bills purchased and discounted by Rs. 68 lakhs, while foreign bills purchased and discounted have risen by Rs. 1.58 crores. Investments stand reduced by Rs. 1.18 crores and cash balances by Rs. 3.75 crores. Money at call and short notice is better by Rs. 1.86 crores.

The Gilt-edged market presented depressed conditions during the week under review. There was a heavy marking down of values of the medium and long-dated issues on selling pressure. Despite the attractively low levels touched by some of the medium-dated issues, investors were reluctant to buy them. Nor was any official support forthcoming. The undertone at the close was weak.

3 per cent. 1986 Conversion Loan continued to sag, the net fall over the week being As. 6 to stand at Rs. 74-4. 3 per cent. 1963-65 dropped an anna to Rs. 84-5 and 3 per cent. 1964 As. 2 to Rs. 94-8. 3 per cent. 1966-68 declined by As. 5 to Rs. 92-8 and 3 per cent. 1970-75 by as much as As. 6 to Rs. 89. 3½ per cent. 1961 was, however, better by an anna at Rs. 99-3, as also 3½ per cent. 1965 at Rs. 98-8, while 3½ per cent. 1964 shed an anna to Rs. 98-8. 3½ per cent. 1967 and 3½ per cent. 1974 were unchanged at Rs. 98-8.

The State loans fared no better and most of the 4 per cent. issues were on offer. Bombay 4 per cent. 1970 shed an anna to Rs. 99-14. Among the Madras loans, 4 per cent. 1967 fell by As. 3 to Rs. 99 and 1968 by As. 4 to 98-14. A drop of As. 4 was noted in U.P. 4 per cent. 1963 and 1964 to Rs. 99-10. Of the other U.P. loans, 4 per cent. 1967 declined by an anna to Rs. 99-2 and 1968 by As. 3 to Rs. 98-15. M.P. 1968 and Orissa 1968 each moved down by As. 2 to Rs. 99. . A similar recession was recorded by Mysore 4 per cent. 1967 at Rs 99-2. Mysore 1968 dipped by As. 3 to Rs. 99.

In the foreign exchange section, the rupee maintained its strength against the U.S. dollars, banks' selling rate for ready dollars being unchanged at Rs. 481¼ per $100 and their buying rate at Rs. 476¾ per $100.

LINSEED QUIET

(Messrs. A. Bradley and Co.)

CALCUTTA, 22*nd October*

Somewhat quieter conditions prevailed in the linseed market this week, owing to lack of buying support in linseed oil. Despite poor arrivals, buyers were less keen, except at lower prices. Activity was on a very limited scale during the week. The oil section was weak, and local prices were out of line with indications from overseas. Local demand was very poor. The latest available quotations for Ready-October is Rs. 23-12 per maund.

(*Concluded from next column*)

Forthcoming Auctions:—Sale No. 29 will be held on Tuesday, 30th October and Dust Sale 'U' on 23rd October.

As we go to Press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale 'U'*.—500,000 lbs. Fair general demand, but prices irregularly one anna to As. 2 lower for everything."

SILVER REACTS

(From Our Own Correspondent)

BOMBAY, 24*th October*

Trading in the bullion market during the week under review was marked by a recession in silver prices, in distinct contrast to the upward trend noted in the previous week, and a relatively steady tone in gold. The drop in forward silver (November settlement) over the week was Rs. 2-3, which more than wiped out the recovery staged in the previous week. This deterioration in the strength was attributed to absence of support and heavy selling pressure induced by reports of large arrivals of Tibetan coins in the country. The paucity of buyers is reflected in the widening of the discount rate from As. 4 to As. 6 at which the ready metal was placed below the forward, despite the fact that the present floating stocks in the city are of the order of only 1,600 bars. Another factor wich affected the sentiment in silver was the rumour regarding the uncertainty of forward trading in bullion.

Gold was featureless, with fluctuations confined to a narow range. The undertone was, however, steady, due to good offtake consistent with the level of arrivals.

Forward silver (October settlement) moved between Rs. 173-6 and Rs. 172-11, before the settlement ran out at Rs. 173-1. The November settlement, after an early advance from Rs. 173-8 to Rs. 173-13, retreated to a low of Rs. 170-12 yesterday. Today, however, it regained some strength and closed at Rs. 171-5.

Ready silver (.996 Mint) moved up from Rs. 173-4 to Rs. 173-9, before receding to Rs. 170-15 at the close. The floating stocks of silver are estimated at 1,600 bars. The daily average offtake was of the order of 20 bars.

Gold for forward delivery (October settlement) fluctuated between Rs. 103-3 and Rs. 103-10 before the settlement ran out at Rs. 103-7. The November settlement rose from Rs. 103-7 to Rs. 103-11, but sagged slightly to Rs. 103, in sympathy with silver. Towards the close it regained to Rs. 103-7.

Ready gold closed at Rs. 103-9, after having gone up earlier from Rs. 103-8 to Rs. 103-15. The floating stocks of gold are placed at 20,000 tolas. The daily average arrivals and offtake were of the order of 3,000 tolas.

In New York, the silver price was raised from 91c. to 91⅛c. In London also, spot silver advanced from 79⅝d. to the post-war peak of 80½d. Forward silver was marked up from 79¾d. to 79¾d. London gold moved up from 251s. 5½d. to 251s. 5¾d. before lowering to 251s. 5¼d.

The following comparative table shows the trend of market during the week under review:

	24-10-56	Highest	Lowest	17-10-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	103 9	103 15	103 2	103 9½
Forward*	103 7	103 11	103 1	103 7½
Sovereign	67 8	—	—	66 10
SILVER				
Ready (.996 fine Mint) ..	170 15	173 9	170 6	173 4

TEA PRICES HARDEN

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 19*th October*

There were some 1,350,000 lbs. on offer in sale No. 28 held on Tuesday, 16th October. Due to the possibility of an increase in export duty next month to As. 10 per lb. the market was expected to be strong. The quality of offerings was well maintained and in a few cases showed improvement. The sale opened to a good general demand and strengthened towards the close. Emphasis lay on low medium and medium brokens which attracted keen competition and sold at rates As. 2 to As. 3 higher. Best liquoring and good medium teas generally sold at lower rates and buyers followed quality closely. There was rather more enquiry for whole leaf teas and these sold at fully firm to dearer rates. Black leaf Middle East types met with very little competition and consequently these types sold below valuations. The following are the quotations:

	1956 Rs. a. p.
Plain B.P.	1 11 0
Low medium B.O.P. ..	2 2 0
Medium B.O.P.	2 6 0
Good B.O.P.	2 12 0 to 3 0 0
Well made black leaf O.P.	2 10 0

The average price realised in sale No. 28 was Rs. 2-8-2 per lb., as compared with Rs. 2-0-11 per lb. for the corresponding sale of the previous year.

London Market: *Sale of 15th October* 1956.—Market firm.

Sale of 16th October 1956.—Best strong. Others irregularly weak.

Colombo Market: *Sale of 15th October* 1956.—Active demand. Broken mixeds and fannings 10 to 15 cents dearer. Dusts 20 to 50 cents up.

Sale of 16th October 1956.—Mediums below best 10 cents dearer. Best mediums and high growns 20 to 30 cents lower. U.V.A. quality declined. Persian Gulf sorts lower.

Calcutta Market:—No sale this week due to holidays.

Export Quota:—Due to the shipping activity, business has been done in export quota at 36 pies, although we understand that in Calcutta business has been done up to 38 pies. There are sellers at 36 pies in Cochin today

(*Continued in previous column*)

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, 24*th October*

The bearish trend noted in the cotton futures market in the last few weeks continued unabated during the week under review also. Now it seems clear that, unless some fresh development takes place, it will be difficult to restore confidence among traders and arrest the downward drift of cotton rates. Although the expectation of an export quota announcement had a favourable effect on the market last week, the hope has yet to materialise. Sentiment of operators was further disturbed by the anticipation of a bumper crop this season and the reported accumulation of unsold stocks of cloth with certain mills. Therefore, even the extension of the rebate period and better spot advices failed to give any fillip to the market. The heavy selling pressure, coupled with the absence of buying support, even at low levels, served to bring down prices.

M. G. Jarilla (March 1957) opened the week lower at Rs. 654, as compared with the previous closing of Rs. 659 and dipped further on reports of good weather. The absence of an export quota announcement acted as a damper and rates slipped firther, reaching a low of Rs. 639 on the 22nd inst. A slight improvement was thereafter evident due to stray mill buying and the contract improved to Rs. 653 today before closing lower at Rs. 650½. The net loss over the week is Rs. 8-8. M. G. Vijay (April 1957) opening the week at Rs. 654, ten points lower than the previous closing, improved, on bull support, to Rs. 766 the next day, before commencing its downward march which took it to as low as Rs. 741 on the 22nd inst. The mild rally that followed pushed up the contract to Rs. 756 today, before it closed at Rs. 752. The net loss over the week is Rs. 11-8.

The following is the trend of price of the two contracts for the week:

(In rupees per candy of 784 lbs.)

	24-10-56	*High*	*Low*	16-10-56
	Rs.	Rs.	Rs.	Rs.
Jarilla (March) ...	650½	657	639	659
Vijay (April) ...	752½	766	741	764

In the spot section, there were good mill inquiries for most varieties of cotton, especially Vijay, presumably due to lower prices and yet prices failed to improve. Berar and Khandesh also evoked considerable interest. But due to the accumulation of stocks mills were reluctant to make large commitments. In the export section, Oomras, Wagad and C.P. I received attention but the fear that the export quota may not materialise soon prevented the emergence of perceptible improvement in prices. In the foreign cotton section, mill interest was evident in American styles, Pima and Sudan cotton. The latest available rates—in rupees per candy of 784 lbs.—from the spot market at Sewri are given below:

Bengal *Deshi* 650; Berar *Jarilla* 730; Khandesh 740; Vijay 930; Oomra *Deshi* 710; Moglai 705. *Delivery contracts*: Khandesh 197/3 December 95; Berar 85; Moglai 30. 'on' Jarilla; 320F December 77; 216F 97; and Vijay 13/16" 87 'on' Vijay.

Mr. C. E. Spencer, Chairman of the Uganda Lint Marketing Board, who was on a visit to Bombay, expressed the hope that the Government of India's virtual embargo on the import of East African cotton would be a temporary measure. Mr. Spencer said that there was great demand for East African cotton in India in spite of recent imports of American cotton. He is understood to have impressed upon Government officials the advisability of not disturbing the trade pattern.

A firm trend was in evidence in the Karachi cotton market during the week under review. This was due to the keen interest evinced in Pakistan cotton from abroad. Local spinner demand was also good. N.T.R.G. January which had closed at Rs. 77-8 last week put on Re. 1 to Rs. 78-8 while the March position improved from Rs. 76-9 to Rs. 77-6. The spot section was also active.

The first estimate of the area under cotton for the current (1956-57) year shows an increase of 8.3 per cent. over last year's first estimate. The area under the crop is estimated at 3.386 million acres (American and *Deshi* varieties 2.623 million and 713,000 acres, respectively) as against 3.08 million acres reported in the first estimate of the previous season. The acreage reported in the final estimate of the previous year was 3.537 million acres.

The following are the latest available quotations from the Karachi market—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 95; Punjab *Deshi* 80; 4F Punjab Roller 80-4; S.G. 81-8; L.S.S. Punjab Roller 80-8; S.G. 82-8; N.T.R.G. 82-8; S.G. 86-8; 289F Punjab Roller 83-8; S.G. 84-8.

Easy conditions prevailed in the Alexandria cotton futures market during the period under review and there was a decline in prices. The fall in prices was probably a corrective reaction to the sharp upswing in values that occurred during the past two weeks. Still there was sustained trade interest and speculative activity which maintained the strength of the market. The latest available rates—in tallaris per lb.—from Alexandria cotton futures market are given below, the figures in brackets being last week's closing quotations:

Karnak: November 114.25 (115); January 111.15 (114.85); March 110.10 (114.25); *Ashmouni*: October 81..20 (83 35); December 80.00 (31.50); February 79.85 (82.10).

Values recorded a slight fall in the Liverpool market during the week. But American mixed growth contract and Sudan cotton crept up due to improved demand. There was, in general, good demand by mills for both ready and shipment cotton as a result of which a fairly large turnover was effected. Spinners, who were hitherto practising a strict hand-to-mouth policy, have shown a

greater inclination to build up stocks instead of confining purchase to meet immediate needs. This has been attributed to the general belief, now held, that a reduction in C.C.C. floor selling price for export is unlikely and that heavy entries of cotton into loans will maintain domestic prices in the U.S. at higher levels. The Soil Bank is also expected to draw much larger acreage next season which would result in a smaller crop. In the absence of Egyptian cotton, the fine spinning section was attracted to Sudan, Peruvian and long-staple East African varieties. U.S. cotton, covering grades of strict low middling to good middling, was much sought after, especially to meet local demands. Rumours regarding the grant of an export quota by the Government of India were welcomed in those sections which usually prefer Indian cotton to certain American styles. The following are the latest available rates—in pence per lb.—from Liverpool:

American one inch Staple Contract: October-November 25.45; December-January 25.25; March-April 25.05; *May-June* 24.90; *American Cotton Mixed Growth Contract*: October-November 25.85; December-January 25.65; March-April 25.40; May-June 25.25; *Egyptian Karnak Cotton*: November-December, January-February, March-April 60; *Sudan*: November-December 51.15; January-February 51.45.

Values in the New York cotton futures market ruled easy during the week. The easiness was mainly due to the large volume of hedge selling brought out by reports of increasing movement of new crop.

It is reported that due to the present high prices of Egyptian Karnak and because of an energetic sales campaign by growers, U.S. spinners have switched over to American long-staple cotton in a large way. Tests conducted by the U.S. department of Agriculture have shown that the U.S. long-staple varieties Pima 32 and Pima S. 1 match Egyptian Karnak in quality. Due to the high price support, almost the entire production of long staples were formerly in Government hands and U.S. spinners were importing lower-priced long-staple cotton from abroad for their needs. The C.C.C. stocks of American Egyptians were about 130,000 bales some months ago but presently they are only around 25,000 bales. Some of this cotton might consist of *Pima 32 and SXP from earlier varieties*; but current production is all Pima S. 1. The crop this season is estimated around 45,000 bales and together with the present C.C.C. stocks there will be a quantity of about 70,000 bales for further purchase this season. Due to the increased demand it is expected that there will be a substantial increase in the acreage allotment for long-staple cotton for the next crop. Growers of such cotton generally expect potential annual demand to expand in the foreseeable future to 300,000 to 500,000 bales. Messrs. Patel Cotton Company observes in this connection: "These developments are of interest also to spinners in India who consume about 230,000 bales (500 lbs.) of similar long-staple cotton annually. If Pima S. 1 continues to be priced attractively as against Egyptian Karnak and production is increased to ensure regular supply, India might become an important importer of that cotton."

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

(In cents per lb.)

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, *24th October*

The sugar market presented a steady tone during the week under review, in contrast to the distinctly easy conditions witnessed last week. The steadiness was aided chiefly by a rise of As. 8 per maund in the ex-mill quotations for Bombay-Deccan sugar. There were, besides, active enquiry for sugar from the southern side and sustained spot demand in view of the forthcoming festival days, while arrivals of indigenous sugar into the market were lower, being 11,000 bags, as against 14,500 bags in the previous week. Consequently, prices of sugar tended to move up.

Large grain indigenous sugar advanced by Rs. 2 to Rs. 92-Rs. 99 per bag. Medium grain rose by a rupee to Rs. 88-Rs. 91. Small grain was firm at Rs. 87. British refined sugar was fully steady at Rs. 89-8 per bag of 2 cwts.

In the forward section, *magsar* delivery contract for "C" grade sugar improved by As. 5 to Rs. 89-5. *Asho* delivery contract was squared up at Rs. 88-12 (ex-godown including sales tax), same as last week. Delivery orders aggregating 7,200 bags have been issued in this settlement.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

YARNS WEAK

(From Our Own Correspondent)

BOMBAY, *24th October*

The bearish trend of the yarn market noted in the past four weeks gathered further considerable momentum during the week under review. In fact, conditions akin to panic prevailed in the market. The chief factor which sapped the morale of operators was the credit squeeze. The pressure from banks was so much that the stockists, especially the weak-holders, were nervously liquidating their stocks. The offerings were too heavy to find demand and yarn prices, as a consequence, continued their downward march. The fall in prices would have been more precipitous, but for the opening of rayon yarn sales for the current quarter at high prices by the National Rayon Corporation and the Century Mills. The undertone of the market was distinctly weak.

In particular, the rayon yarn section ruled very much depressed, thanks to nervous bull liquidation and bear pressure. Snia rayon yarn (120 dull cones) for October delivery were hammered down by Rs. 28 to Rs. 715. December position dropped Rs. 23 to Rs. 735. Spot 150 Italy fell by As. 2 to Rs. 3-11. 150 Japan receded by three pies to Rs. 3-15-6. 120 Japan was neglected at Rs. 3-11-9, as also 120 Italy at Rs. 3-12. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade retreated from Rs. 3-8-3 to Rs. 3-7-6. 150 Bt. cones 1st grade was dull at Rs. 3-2-9.

In sympathy with rayon yarns and owing to very slack enquiries from consuming centres, staple fibre yarns suffered a sharp setback. 40×2 staple fibre yarn for October delivery was subjected to continued pressure of sales and slumped by Rs. 15 to Rs. 595. December contract went down by Rs. 17 to Rs. 601. In the spot section, 40×2 New Greats decreased by three pies to Rs. 3-5-6. Kohinoors and Centurys were unaltered at Rs. 3-8 and Rs. 3-5-6, respectively. Citys, however, gained three pies to Rs. 3-5-9. Among foreign yarns (80×2), Paramounts, K'Suns and Fujis eased by half an anna each to Rs. 5-13, Rs. 6-6-6 and Rs. 5-14-6, respectively.

The cotton yarn section put on a subdued appearance this week too, thanks to slackness in demand and lack of encouraging advices from the cotton market. Among 80s, Mahindras receded by a rupee to Rs. 70. Moderns fell by As. 8 to Rs. 70-8. Deals in sixty counts Raghuvamshi's were put through As. 2 lower at Rs. 56-8. Moderns were unchanged at Rs. 61. Among 20s, Moderns declined by As. 2 to Rs. 19-4. Hinds were dull at Rs. 19-4. Transactions done in 10 counts were limited, Moderns being quoted at Rs. 15, Podars at Rs. 14-15 and Elphinstones at Rs. 14-8. Thirty counts were, however, firm on special buying support. Maduras advanced by As. 2 to Rs. 24. Apollos were fully maintained at Rs. 22-8. Forty counts yarns were also well supported. Minaxis advanced by As. 9 to Rs. 27-12. Moderns hardened by As. 6 to Rs. 29. Gokaks were done at Rs. 27-10 and Maduras at Rs. 23-12.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	24-10-1956	17-10-1956	10-10-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)—

CASTOR MOVES UP FURTHER

(From Our Own Correspondent)

BOMBAY, *24th October*

During the week under review the castorseed and groundnut sections of the local oilseeds market reflected two different trends. While the former moved further up, the latter weakened further. Linseed maintained a sympathetic movement with groundnut.

Spot groundnut prices suffered a sizable setback once again this week, as a result of the arrivals of the new crop groundnut at the terminal markets, and the generally favourable weather conditions prevailing in the producing areas, which further strengthened the belief that the new arrivals would continue. On the other hand, encouraging reports of foreign demand for castor oil kept the sentiment cheerful. Towards the end of the week brisk buying by influential shipper-*cum*-speculative interest gave further momentum to the upward trend in castors. The market closed firm.

In the groundnut section, February 1957 contract opened the week under review at Rs. 129-12. It, however, declined to Rs. 126-10 on 22nd inst. It, however, recovered modestly to Rs. 128-14 at the close today. It this lost over the week Re. 1-10. In the spot section, while Bold F.A.Q. lost no less than Rs. 2 at Rs. 33, Khandesh Quality ready shed Rs. 2-4 at Rs. 32-12. Groundnut oil ex-mill was done at Rs. 18-12, that is, As. 4 lower than a week ago.

Castorseed May 1957 contract having commenced the week cheerfully at Rs. 128-10, improved today to Rs. 131-4, gaining thereby as much as Rs. 3-8 over the week. Bold ready again put on As. 8 at Rs. 29-8, and ready Kanpur As. 4 at Rs. 28. Oil B.S.S. was quoted at Rs. 18-2 at the close today.

The linseed section remained dull during the week. At Rs. 26 at the close today, it reflected a loss of As. 8 over the week. Bold ready again was lower by As. 6 at Rs. 31-4 and February-March by As. 7 at Rs. 27-8.

Among other seeds, *kardi* seed Bold ready improved by As. 10 to Rs. 17-12. *Niger* seed ready and Madras, however, lost As. 12 and As. 8 respectively at Rs. 26-8 and Rs. 27.

The Ahmedabad Seeds Merchants' Association has commenced forward trading in cottonseed (May contract) with effect from 16th inst. The Association was recognised by the Forward Markets Commission for carrying on forward trading in castorseed and cottonseed for Gujerat and Saurashtra regions. The Commission has permitted the Association to fix 25 candies (784 lbs.) as a unit for trading in cottonseed.

Forward trading in cotton and cottonseed will begin at Indore and Ujjain from 31st October.

The export of linseed oil and cottonseed oil will continue to be licensed freely up to the end of December 1956, to all permissible destinations excluding Portuguese possessions in India. A Press note issued on 20th inst. by the Joint Chief Controller of Exports adds that in the case of cottonseed oil, licences will be issued on shipping bills supported by valid firm sale contracts as hitherto, within an overall ceiling, up to the end of December 1956, or till the ceiling is reached, whichever is earlier.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	24-10-1956	17-10-1956	10-10-1956
	Rs. a.	Rs. a.	Rs. a.

PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, *24th October*

Except for a temporary rise in the earlier part of the week in sympathy with Singapore where one or two Chinese firms are reported trying to manipulate the market, Malabar black pepper continued to weaken under pressure of selling by Alleppey growers who sold a few parcels at a new low level of Rs. 625. Singapore rose from Str. $73 to Str. $78 to react to Str. $75. New York is reported depressed under rather heavy unsold consignments of Lampong. Spot Lampong, in New York, was sold at a new low of $0.25. Some of the Indian consignors are reported to have sold afloat parcels of Malabar at $0.26 to $0.25½. There are some small enquiries for special Sarawak black in London at 19d., following the steadiness at Singapore. European markets are, however, slow to follow as the dealers there expect lower prices in view of larger Muntok crop. At the time of writing, Alleppey is reported to have improved from Rs. 625 to Rs. 650 while garbled at Cochin from Rs. 110 to Rs. 114 owing to covering by profit-taking.

Estimates of pepper production and the balance in the hands of growers in the producing countries are usually guesswork, the only reliable figures available being for export. The present estimate of unsold balance of Malabar black varies from 4,000 to 6,000 tons.

Among the different Malabar commodities, such as copra, turmeric, ginger, cardamom, pepper alone can be stored well for some years. It is, therefore, quite possible that some of the growers may hold on till the prospects of new crop are fully visualised. However, when market is weak growers become nervous and desire to sell even with sizable concession. But, without foreign orders in hand, exporters are not willing to buy.

The undertone of the market is weak and the market is likely to go down, unless some new developments take place. The practice of sending unsold consignments by Singapore, Lampong and Malabar interests is having a demoralising effect as dealers in the U.S. and Europe would not like to place enough orders for c. & f., when spot and afloat are available at their own doors. Unsold consignments are, therefore, acting as a boomerang. Pepper is likely to continue to be a tame affair until somebody is bold enough to manipulate and push up the prices because generally grinders and dealers in foreign countries do not buy aggressively in a quiet market.

In the A.S.T.A. section, October was done at $0.26 while November-December was quoted at $0.25½ *without attracting* notable response. In the delivery section, the market is weak with undertone uncertain. There is some resistance from the bulls to whom the present prices appear low. Today's nominal quotations are: Ready delivery Rs 85 per Bengal maund; December Rs. 602½/607½ and February Rs. 607½/612½ per candy of 5¼ cwts.

TEAS WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, *23rd October*

After the suspension of the auctions for a couple of weeks, in view of the *Pooja* holidays, export sales were resumed yesterday. Conditions were, as anticipated in our earlier report, fully steady with quality teas receiving the keenest attention of bidders. A contributory cause for the uptrend in the prices of quality teas was the finalisation of the 1956 crop regulation scheme by the Calcutta Tea Regulation Committee which represents the tea-producing interests in North-East India.

The Committee's decision to recommend to estates to destroy waste and residual teas of a quality unfit for sale in Calcutta auctions has been hailed here. For this step would ensure the maintenance of the quality of the superior teas, as the question of adulteration is ruled out. The prices of quality teas would naturally be maintained at a fairly satisfactory rate, and an agreeable balance between the availability of quality teas and ordinary types would result. Plucking would be discontinued by 30th November or earlier, but not before 20th November. This would lead to a short-fall in production by 15 million lbs. and, adding to this the estimated quantity which would be involved in the proposed destruction, the total loss of output would be of the order of 25 million lbs. In other words, this would mean that the total of tea production for 1956 would be the same as that in 1953, that is, 530 million lbs. For production so far has been 25 million lbs. ahead of last year.

Since the quantity of tea available this year would be the same as that of last year, despite the slight decline in the production in South Indian gardens, it is expected that there would be enough tea available for both export and internal consumption. Since supply would equalise demand, prices would be maintained at levels, fair to consumers and producers alike. It should be said here that the future of the industry demands sympathetic consideration in New Delhi to the need for abolishing the export levy. In a similar way, the Assam and West Bengal Governments should review the movement and entry taxes on tea.

The Committee's direction to estates situated in the Dooars and the Assam Valley is to cease plucking as from 20th November. If the estates in the Terai, Tripura, Cachar and the Darjeeling district have obtained production approximately equal to an average for the three years to 1955 by 20th November, they should also stop plucking by that date. Such of the gardens as have not reached the average crop *should discontinue plucking* immediately they reach this figure before or at the latest by 30th November.

The above steps would lead to the commencement of pruning one month earlier than usual and to the production of increased quantities of the first and second flush of teas in the next season. Since quality teas are produced in the cold weather, more plucking time during that part of the year would give the much-needed increase in output of the higher teas, reducing the output of ordinary types to the extent of an increase in the production of the former. The early end to plucking would also give more time to replanting.

During yesterday's export sale, offerings aggregated 61,700 packages. The market opened with a fair general demand which dwindled down by the time the sale was closed. Fannings were in good demand, with keen attention being shown to the clean and black teas. Prices of low mediums and commons improved by an anna to As. 2, with the high quality registering the maximum increase of As. 2. Medium teas possessing bright liquors also received the keen attention of buyers. C.T.C. types, on the other hand, were a weak feature, the price declined by As. 2 to As. 4. Darjeelings met with higher demand, but tippy teas met with a declining market, the more expensive lots giving way by As. 8. Whole leaf grades were fully steady, and the lots possessing style were bid at As. 4-As. 8 higher than the previous rates. More attention was also shown to well-made stylish B.P.S.s, as also to non-wither Dooars. The quotations were: Best C.T.C. Assam B.P. Rs. 3-2 to Rs. 3-3; clean black pekoe Rs. 2-3 to Rs. 2-4; medium Assam B.P. Rs. 2-2; plain B.P. Re. 1-12 to Re. 1-13.

Export quota right was offered at As. 2-8 per lb. with buyers offerings one pie less. Business was *subsequently done* at the lower figure.

JUTE GOODS EASY

(From Our Own Correspondent)

CALCUTTA, *23rd October*

Prices of jute goods eased slightly during the week under review. Overseas buyers showed less interest. Prices of raw jute, however, improved fractionally, thanks to reduced arrivals. Production of jute goods during the month of September was lower at 84,500 tons, as against 89,600 tons in the previous month. While hessian output increased by 100 tons to 35,500 tons, that of sacking was lower by 4,400 tons at 43,800 tons and of miscellaneous constructions by 800 tons at 5,200 tons. Production during the current month is bound to record a further decline, on account of the several holidays and also on account of the lock-out by certain mills in and around Shamnagar and Kankinara, where many units of the jute industry are concentrated. New automatic machineries require less labour; thus, some hands have become surplus. While the managements desire a reduction in strength and thereby a fall in the cost of production in an attempt to put production on an economic basis, labour leaders have been naturally opposed to any retrenchment. The lock-out has followed disagreement on this point between the managements and labour. This situation would naturally have an effect on the trend of the market and the prospect of a perceptible fall in production has already made speculators active.

Without going into the merits and demerits of the lock-out, it should be said that, from the point of view of the future of the industry, the prospect of buyers paying higher prices for goods is unfortunate. For, with higher goods prices, raw jute prices are bound to go up further. The latter trend is already there, brought about not by the cause now detailed but by the setback caused to transport facilities, both through roads and the swollen rivers, following the heavy flooding. Then, there is the danger of jute goods being priced out of world markets, which situation would naturally make paper and cloth bags, other substitutes and bulk handling once again more popular. It is to be hoped that some understanding between the mills locked-out and labour will be arrived at soon and production resumed.

Indian resistance to higher prices for Pakistani jute and the consequent fall in imports into India *from East Bengal* have been naturally causing concern to the jute interests in that part of Pakistan. This *situation has led to all-out efforts in India to in*crease production of jute, in regard to both quality and quantity, in order to be self-sufficient in feeding the mills. While efforts in this direction have not brought the desired result in the span of nearly a decade, it is believed that the Government circles fully recognise the need for the distribution of improved seeds on a wider area. The fall in Indian purchases in Pakistan has also led to another happy development, in that those concerned in raw jute sales there are thinking on the ways and means by which raw jute prices in Pakistan can again be made attractive to the Indian buyer. With this end in view, the representatives belonging to several bodies of balers and sellers in East Pakistan have urged the Government in Karachi to rescind the 1¼ years' old order which prohibit exports to India of jute in *kutcha* bales. The need for packing jute in *pucca* bales increased the cost, since most of the exporters possessed only *kutcha* bale presses and had to hire *pucca* bale presses. However, the trade does not hope for a favourable outcome from the above representation to Karachi, since *pucca* bale press-owners, whose opinions have to be taken into account in Karachi for political considerations, have naturally frowned at these attempts which would deprive them of the profits they are making now.

The feature of the week under review in the jute goods market was the great amount of interest shown in October green heavy Cees by buyers on behalf of Red China, which has placed an order for a fair quantity. The price of this construction registered a marked increase, but this had no effect on other constructions in sacking, due to lack of attractive export inquiries. Ready B. twills were quoted at Rs. 116 on Tuesday last, but, by Thursday, they went down to Rs. 115-4. The hessian section, however, depicted a steady trend. This was due to the prospect of overseas business maturing after the holidays. Ready 40" 10 oz. hessian was fully steady at Rs. 42-3 on Tuesday last and, after improving to Rs. 42-4 on the following day, sagged to Rs. 42-2 on Thursday. Forward goods in B. twills continued to be quoted at a premium, but forward hessians were at a discount. Yesterday, rates declined, as there was no support. Ready B. twills were priced at Rs. 114-14 and 40" 10 oz. hessian at Rs. 41-14.

As stated, raw jute was steadier during the week under review, although mills restricted their purchases. Since jute goods were falling, mills had expected that this trend would be reflected in raw jute. But, this was not so, in view of the fall in imports, consequent on the hazards which the heavy floods have caused to riverine transport. From Rs. 29, Upper Assam bottoms hardened to Rs. 29-8, and Indian northern bottoms at Rs. 29-8 recorded a similar increase. Oct.-Nov. local *daisee* bottoms rose from Rs. 29-8 to Rs. 30. The strong Pakistani markets neutralised the mills' attempts to push down prices for the indigenous jute by remaining out of the market.

COARSE GRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, *22nd October*

Steady conditions prevailed in the foodgrains market during the week. Anxiety over rising prices has been aggravated by the reported heavy damage to the *Sawani* crops, due to incessant heavy rains and consequent floods last week in parts of U.P., Punjab, P.E.P.S.U, Himachal Pradesh and Delhi. It looks as though the entire food policy will have to be revised in the light of fresh developments. The Government, however, is expediting imports and the wheat position in the country is expected to ease in November, when arrivals of the order of 170,000 tons are due at Indian ports. The Government's latest intention appears to be to keep controls on inter-zonal movement of grains to the minimum. No further restrictions are envisaged in the immediate future.

While wheat prices at Hapur continued to be steady at Rs. 15 per maund for average quality and at Rs. 16-4 for farm quality, prices of coarse grains recorded notable gains during the week. Rise in wheat prices was checked by the sales of fair price-shops, the number of which has been doubled to a dozen and average sale is around 300 maunds daily. Local wheat stock ran down by two *khaties* during the week to 77 *khaties*. Bright sunny weather will now enable timely sowings of wheat crop, while sowings of coarse grains and gram have been delayed. Rice prices recorded modest fall during the week due to increased arrivals of new crop in the producing markets. The latest prices are: *Basmati* Rs. 23 to Rs. 28; *rangooni* Rs. 18-8; *manipuri* Rs. 18-8; coarse quality Rs. 15-8.

Despite heavy stocks at 124 *khaties*, prices of gram appreciated by As. 4 per maund during the week. Barley and *bejhar* prices also advanced fractionally. Maize was much on request for seasonal demand and prices hardened due to small arrivals from eastern districts. *Jowar, guwar* and *bajra* prices appreciated, due to reports of loss to crops by the latest rains. The weekend prices were: Gram local Rs. 11-14, Punjab produce Rs. 12-8, barley Rs. 12; *bejhar* Rs. 11-4, maize Rs. 11-10, *jowar* Rs. 13, *bajra* Rs. 12 per maund.

Pulses also recorded a hardening tendency in line with the bullish trend of cereals, although stock was fairly good and outside support slack. Peas *dara* green was quoted at Rs. 12-3 and white quality at Rs. 13 per maund, as against Rs. 11-12 and Rs. 12-8 per maund, respectively, last weekend. Stock position ran down slightly during the week to 48 *khaties*. *Arhar* recorded a rise of As. 4 to Rs. 12-4 per maund, and stock position was still heavy, being 87 *khaties*. Prices of other pulses also improved during the week on reports of extensive losses to standing crops. The prevailing prices as on Monday were: *Urd* Rs. 16-8 to Rs. 18-8; *moong* Rs. 13. *masoor* Rs. 15 per maund.

After early gains on bull support influenced by better prices in the ready section, pulses futures declined towards the weekend and were quoted slightly below the opening level on bear pressure from east U.P. The latest quotations as on Monday were: *Peas mangsir* Rs. 11-9-3, *jeth* Rs. 9-9; peas white (gram) *mangsir* Rs. 11-12-4½; *jeth* Rs. 9-15-9; *arhar mangsir* Rs. 11-15-3; *jeth* Rs. 10-5; *urd maha* Rs. 15-5-3.

SUGAR SUPPLY POSITION EASY

(From Our Own Correspondent)

HAPUR, *22nd October*

The sugar market rules quiet. Supply position is reported to be easy and outside buying enquiry slack. Some mills in west U.P. have begun crushing for the new season, attracted by the offer of the Government's concession of As. 4 per maund on cane crushed by 12th November. Waterlogging in areas due to last week's heavy rains, however, has created a problem for the transport of cane to the factories. Mill delivery prices have drifted lower, as old stocks with factories are still very heavy.

The latest mill delivery prices of sugar are: Jaswant Rs. 27-14; Simbhauli Rs. 28-3; Mowana Rs. 28-4; Daurala Rs. 28-12; Amroha Rs. 27-10; Bijnore Rs. 27-10; Mansoorpur Rs. 28-6; Rampur Rs. 30-4; retail Rs. 30 per maund. New production of *khandsari* will still take about two months to start. But, due to good stock position of old quality and poor buying enquiry, prices have recorded a depressed trend and are today quoted at Rs. 22 to Rs. 26 per maund according to quality.

Arrivals of new *gur* which were stopped due to rains have begun in small quantity at an average of 50 maunds daily and are quoted at Rs. 14 to Rs. 15 per maund. Outside buying enquiry for old quality is fairly good and prices have improved to Rs. 13 per maund for dry quality and to Rs. 11 for *kotha* quality. Old stock has gone down to about 10,000 maunds.

Gur futures have declined appreciably on continued bear pressure. The latest quotation for *fagun* delivery was at the worst level of the week at Rs. 9-10-6, as against the week's opening of Rs. 10-1-4½ and the highest touched during mid-session at Rs. 10-4-10½.

TANNED GOAT FIRM

(From Our Own Correspondent)

MADRAS, *23rd October*

Trading in kips with the U.K. was poor, as importers evinced buying interest at very low prices. This did not affect the Madras market, as arrivals met with ready clearance, though the prices of light weights decreased by half an anna per lb. Arrivals of tanned calf skins were small. There was some clearance of lower grades in cow hides for local sale.

The tanned goat market was firm for 11/12 lbs. and easy for lighter weights. Tanned sheep prices were firm, due to good demand from Japan, the Continent and the U.K.

In the London public sales, prices of better class goat skins advanced by 6d. per lb., while poorer classes and lower selections declined by 6d. per lb. on August levels.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

‡—Managed by the board of directors. † Less income-tax. (e) Olive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (e For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have)been amalgamated with New Central Jute Co., with effect from 1st December 1954.

MARKET REPORTS—Continued.

METALS BEARISH

(From Our Own Correspondent)

CALCUTTA, 24*th October*

Under the impact of advices of depressed conditions from overseas markets, the metal market depicted an easy trend. Prices of all base metals, excepting tin, moved down. The finalisation of the Indo-Chilean trade agreement was welcomed in trade and industrial circles, as prospects of more imports of copper, steel and nitrate from Chile are better. To keep with

REORGANISATION OF STATES

INDIA has reached this week a new stage in its political journey. The political map has been re-drawn for the third time in the last ten years. At first, there was Partition which was followed by the merger and integration of Indian States with the rest of the Union. These two stages were not without their share of troubles and tribulations. But, by and large, they affected only isolated regions. The third stage, namely, the reorganisation of the States mainly on a linguistic basis, has shaken the entire country to its roots. Many sensitive spirits were profoundly anxious lest the feelings of linguistic separatism should endanger the unity of the country. In any case, no one can deny that this stage has been the most difficult one in the country's political march. For this reason, if not for any other, all patriotic Indians will wish that this will be the final re-drawing of the Indian map, and that, in future, all time and energy will be spent on the more enduring task of ensuring constructive unity through purposive co-operation. This, of course, presupposes a certain measure of what Mr. Nehru, with his intuitive grasp of the country's problem, has termed "emotional integration." The present generation of politicians, educationists and public men owe it to posterity to foster the spirit of such integration.

Although linguistic chauvinism of the type that marred India's national life in recent months is an entirely new development, there is no doubt that the demand for linguistic reorganisation of the country has at least a history of three decades. In its Nagpur session, held in 1920, the Indian National Congress accepted it as one of its political objectives. The Congress continued to adhere to it till 1948. The early advocates of the linguistic idea, who saw in it nothing more than a certain degree of administrative convenience and cultural co-operation, would themselves have been shocked to witness the more recent manifestations of the linguistic movement. The Dar Commission, which was appointed by the Constituent Assembly in 1948, expressed the view that, in forming provinces, the emphasis should be primarily on administrative convenience and the principle of homogeneity of language should only subserve that end. The J.V.P. Committee, the report of which was adopted by the Congress in April 1949, was the first to utter a note of warning against the linguistic principle. It averred that language was not only a binding force but also a separating one and insisted that the primary consideration should be the security, unity and economic prosperity of India and all separatist and disruptive tendencies should be rigorously discouraged. Nevertheless, linguistic movement continued to grow. And the Government conceded—unwisely as later events seem to show—the demand for Andhra in 1952. This gave a further fillip to the linguistic movement and the States Reorganisation Commission (S.R.C.) was constituted in December 1953. Perhaps, no commission appointed by the Government had a more arduous task to perform. It interviewed no less than 9,000 persons and considered no less than 152,000 memoranda from individuals, parties, and associations, before it submitted its report on 30th September 1955.

Barring the creation of the bilingual Bombay State, the States Reorganisation Bill which received Presidential assent on 31st August 1956, closely follows the S.R.C. recommendations. Apart from Jammu and Kashmir State, which is a Part-B State, there are 13 States and five Union territories, i.e., Delhi, Himachal Pradesh, Manipur, Tripura and the Laccadive, Minicoy and Andaman islands. The following are the new States of the Indian Union with their respective areas (in square miles), as well as population (in millions) given in brackets:

Andhra 105.963 (31.26); Assam 89.040 (9.7); Bihar 67,300 (38.8); Bombay 190.919 (48.0); Kerala 15,035 (13.5); Madhya Pradesh 171,201 (26.0); Madras 50.110 (30.0); Mysore 74,326 (19.0); Orissa 60.140 (14.6); Punjab 47,456 (16.0); Rajasthan 132,078 (15.9); Uttar Pradesh 113,410 (63.2); W. Bengal 33,805 (26.3)—Jammu and Kashmir 92,780 (4.4).

It will be seen from the figures given above that Uttar Pradesh is the largest from the point of view of population (63.2 million) and Bombay is the largest in point of area (190,919 square miles). The other States too differ in size and population. The Bombay State has received 19.7 per cent. of the cultivated area and 11.2 per cent. of the foodgrains production. Madhya Pradesh's share being 11.8 per cent. and 11.3 per cent., respectively. Uttar Pradesh accounts for 13.7 per cent. of the cultivated area and 21.1 per cent. of the foodgrains production. If Uttar Pradesh is likely to exercise a great influence on Indian administration by virtue of its large population, the Bombay State can do so by reason of its financial resources. The bilingual State is expected to have the largest revenue budget of any State in India. The outlay on its Five-year Plan, which was already the highest for any State in the country, will further go up through reorganisation of its boundaries. Its outlay originally was Rs. 266 crores. The loss of a few districts to the Mysore State will reduce it to Rs. 230 crores. But the addition of other regions, namely, Saurashtra, Kutch, Vidarbha and the Marathawada districts of the former Hyderabad State will swell the outlay on the Five-year Plan to Rs. 315 crores. Clearly, the State's Five-year Plan will be the largest of its kind and its implementation will require a great deal of imagination and judgment, both because of the magnitude of the outlay and the diversity of the regional problems in the State.

From the larger national point of view, the more important of the tasks confronting the Government lie in the sphere of integration. The process of linguistic division having been completed, it should now be the endeavour of all thinking men to forge the bonds of unity rather than harp upon sectional interests. This is particularly important, because the linguistic movement has released, as well as whipped up, all the latent disruptionist forces in the country. The S.R.C. itself clearly visualised that this danger was inherent in linguistic separatism. It warned against any tendency to lose sight of the wood of Indian nationalism in the quest for the trees of separate linguistic States. It said:

"It is the Union of India that the basis of our nationality. It is in that Union that our hopes for the future are centred. The States are but the limbs of the Union, and while we recognise that the limbs must be healthy and strong and any element of weakness in them should be eradicated, it is the strength and the stability of the Union and its capacity to develop and evolve that should be the governing consideration of all changes in the country. Regionalism has a legitimate place in a country as large as India, but, unless its limitations are recognised, and the supremacy of the Union not merely in the political but also in in the economic thinking of the country is fully accepted, it will be a source of weakness to us as a nation. If this is generally realised, we have no doubt that the issues arising out of the reorganisation of the States will not be allowed to assume the proportions of major political controversies."

The future of the country's progress will depend on the extent to which these sentiments find an expression in official and non-official attitudes and policies. What are the means by which regional loyalties could be allowed free play without endangering national loyalty? What measures are necessary in order to ensure that the regions do not waste their energy on inter-regional disputes but contribute to national well-being and progress? The States Reorganisation Act has provided for safeguards for linguistic minorities; this is a good safety-valve for minor discontentment within each State. A major device is that of the zonal councils. The Act provides for the creation of five zones and a council for each of the zones. It is to be hoped that these zonal councils will meet often enough to exchange thoughts and ideas and will, in course of time, establish conventions by which a certain measure of administrative uniformity is achieved in the zones.

No steps have been taken for bringing about administrative integration through the creation of additional cadres of all-India services; this was one of the vital recommendations of the S.R.C. The S.R.C. also recommended that 50 per cent. of the new entrants in any cadre of an existing all-India service should be from outside the State concerned. This has not been implemented, much less accepted even in principle. Actually, a disturbing symptom is that, in all the new States, the administrative officers have all been drawn mostly, if not solely, from among the linguistic regions concerned. It is well known that the new States have all virtually decided in favour of carrying on their administration in their respective languages. To a certain extent, this is both desirable and unavoidable. But it is to be hoped that, at least in the higher levels of executive administration and judiciary, the States will realise the wisdom of carrying on their work in a single all-India language. What should that language be? In the immediate and foreseeable future, there is no doubt that the language should be English till such time as Hindi could be developed as a satisfactory substitute. Indeed, it is being increasingly realised that any hasty replacement of English by the Indian languages or by Hindi will create a wide range of transitional difficulties of bewildering complexity.

MR. NEHRU'S ECONOMIC THINKING—II

IN his Press Conference at Calcutta a fortnight ago, Mr. Nehru made certain remarks on private enterprise which implied loss of faith on his part in the virtues of capitalism. He observed:

"The chief alleged virtue of the capitalist system is competition between hundreds and hundreds of thousands of producers and that, by competing, they improve their conditions and keep a balance in the economy. That, to some extent, had been true of the early days of capitalism. But that is not true today in regard to many basic commodities, where huge industries and combines function. So, the basic feature of capitalism has disappeared from the modern capitalistic system. For instance, there is no competition in oil. The price of oil is now fixed at Gulf of Mexico prices even for the oil produced in India. Just imagine! The oil produced in Assam is as costly as that produced in England. This is fantastic. Then, there are huge combines in chemical . . . soap and other industries. They do not permit any competition and lay down terms and conditions and prices at which their products are to be sold. The competitive character which is the fundamental basis of the capitalistic system has rapidly disappeared."

Briefly commenting on the above quotation, we stated in these columns last week that the Prime Minister was not properly informed of the trends in modern capitalism. In this article, we shall try to substantiate our contention.

At the outset, it must be said that there is nothing new in the kind of criticisms that were levelled against capitalism by Mr. Nehru. Nor is there going to be anything new in what we propose to say, for anyone who reads a good book on the growth of this system—there are several books on this subject—will see long chapters presenting both sides of the picture. But a dispassionate observer will not fail to notice that the criticisms against monopolies and oligopolies frequently trotted out by their critics are one-sided and exaggerated. The U.S. is one of the capitalist countries where large business combines answering the description of monopolies and oligopolies exist. Four years ago, Dr. J. K. Galbraith, a distinguished U.S. economist, who was recently in India at the invitation of the Government to examine the Government's plan for development of railway transport, published a thought-provoking book entitled *American Capitalism*, a perusal of which will show to what extent and why our Prime Minister is wrong in saying that the virtues of the capitalist system have ceased to exist. In this book, the author examines how the management of several important industries in the U.S. has come to rest in the hands of a few giant corporations and proves convincingly that, instead of holding mankind to ransom by suppressing inventions and technological progress, they have been able to bring immense benefits to it, thanks to the large resources they are able to command and invest in research. While there is not much competition among them in the ordinary sense in which it is understood, namely, competition in prices, there is a progressive trend among the giant corporations to compete among themselves in research, in producing new products, or in improving their quality. This competition enables them to serve consumers better than mere price competition.

It is necessary, in the first place, to understand why, in a capitalist society, there is, after a particular period of growth, a tendency for giant corporations to come into existence in certain industries. There are, of course, certain sections of any economy which constitute an exception to this trend. Agriculture, textiles, coal-mining, shoe-manufacturing, and wholesale and retail trades are notable examples of those walks of life where, generally speaking, the number of producers does not shrink with the growth of industrialisation. But there are certain other industries, especially engineering, chemicals and rubber manufacture, in which, after some growth, only the most efficient units survive; the less efficient ones either merge with the former or gradually cease to exist. The process by which an industry moves from the hands of many to those of a few should not be misunderstood. To regard this tendency as something that leads to an unhealthy concentration of economic power is to miss the point. The following extract from Dr. Galbraith's book will show that the causes of this trend are deeply organic:

"Except in industries where the maximum advantages of size are realised at a relatively small volume of production—agriculture, some types of trade, and some few fields of mining and manufacture—entry into an industry is easy only when it is very new. Then the recruitment of capital by all is based on hope and promise and it is impossible to distinguish the promise of an embryo Ford from that of an embryo Preston Tucker. No aspirant has the advantage of organisation and experience; none has achieved the status of a comparatively sure thing. Since all are beginners, all are small, and the capital requirements for any one are modest. With the growth of the industry the firms already in operation also grow. In doing so, they realise whatever technical economies there may be in larger-scale production and the successful ones also acquire, either directly from earnings or from their reputation for making them, the wherewithal in new capital for future growth. These firms also acquire—a point somewhat neglected by economists—the economies of experience. The development of an industrial enterprise is a fairly intricate task in organisation and administration. It can only be accomplished easily when it is accomplished slowly—when there is opportunity to search for talent, to try new men out a few at a time, and when there is leisure to re-assign, promote to innocuousness, or detach with regrets, the inevitable mistakes. Only a little of this can be afforded at any given time."

There is, however, no need to get alarmed over such a trend, because any attempts on the part of the few giant corporations to blackmail society through collusion and understanding can be easily checked by the State. It should be quite possible for a vigilant government to police competition and keep it free from unhealthy understandings. Experience of the U.S. and the U.K. clearly shows that control of big business is not likely to be very difficult, for large firms are sensitive to the charge that their practices are suspect or lacking in public spirit. In fact, there is a pronounced tendency among them to maintain and follow scrupulously accepted standards of propriety, honesty, and integrity, in order to raise themselves in the eyes of the public. In India, too, though there are hardly any giant corporations of the size that one sees in the U.K. and the U.S., the experience with such of those big industrial concerns as there are—the T.I.S.Co. and the A.C.C., for instance—is no different.

THIS ISSUE

[As we have to go to press two days earlier than usual on account of Deepavali *and Hindu New Year, it has become necessary to omit many of our customary features and publish a small issue this week. —*ED.]

A major compensation for the disappearance of price competition in those industries which are in the hands of a few corporations is technological advance. Stressing this point, Dr. Galbraith says: "A benign Providence, who, so far, has loved us (Americans) for our worries, has made the modern industry of a few large firms an almost perfect instrument for inducing technical change. It is admirably equipped for financing technical development. Its organisation provides strong incentives for undertaking development and for putting it into use. The competition of the competitive model, by contrast, almost completely precludes technical development." In order to enable one to appreciate the force of this argument, it may be added that technical development has ceased long since to be the preserve of the scientist and the engineer. To quote Dr. Galbraith again:

"Most of the cheap and simple inventions have, to put it bluntly, been made. Not only is development now sophisticated and costly but it must be on a sufficient scale so that successes and failures will in some measure average out. Few can afford it, if they must expect all projects to pay off. This was not the case in the late eighteenth and the nineteenth century. Then, in the beginning stages of the applications of science and technology to industry and agriculture, there was scope for the uncomplicated ingenuities of a Hargreaves or a Franklin. The competition of the competitive model (the ideal of ancient economists) encouraged such ingenuity and assured the spreading of its fruits. As elsewhere, the competitive model had great appropriateness to the industrial society which it was designed to interpret. Its designers were not abstruse theorists or dolts. It is the society they interpreted that has changed. Because development is costly, it follows that it can be carried on only by a firm that has the resources associated with considerable size. Moreover, unless a firm has a substantial share of the market, it has no strong incentive to undertake a large expenditure on development."

It is because of these considerations that Dr. Galbraith asserts "that there must be some element of monopoly in an industry, if it is to be progressive."

One of the popular criticisms against domination of an industry by a few firms is that they will sit not only on production but on progress as well, by suppressing inventions and patents. At one time, this view was not incorrect. But, at present, it is not wholly true even as a generalisation, because the Governments of almost all Western countries have effective powers to prevent such collusion. Moreover, in such models" and compared their progress in the field which set great store by progress, "technical progress," as Dr. Galbraith points out, "is an important source of business prestige. An American business concern simply cannot afford the reputation of being unprogressive." In order to illustrate the advantages conferred by big business combines on free economies, the distinguished American economist has given a few instances of industries which are "competitive models" and compares their progress in the field of technological advance with that of industries falling under the group of monopolies and oligopolies. An impressive example is provided by a comparison of the oil industry with the bituminous coal industry. As Mr. Nehru made a particular reference to the oil industry, it will be in the fitness of things to quote this example as described by Dr. Galbraith:

"The oil industry is an unquestioned oligopoly; in any market area, there are a few large firms and the characteristic fringe of independents. Over the years, it has been under repeated attack for violation of the anti-trust laws; it has rarely been free of suspicion of holding prices above the level that would be associated with more vigorous price competition. Profits have generally been excellent. Yet, few would be inclined to trade the oil industry for the bituminous coal industry which, abstracting from the stabilisation operations of John L. Lewis, approaches the competitive model.

"The oil industry is clearly progressive—almost as progressive, perhaps, as the uncommonly attractive brochures of its member companies unreluctantly concede. As the result of its enterprise in petroleum exploration and recovery, in developing new products, and in engineering new methods of transporting both petroleum and products, the consumer of gasoline and fuel oil has been a far more fortunate man than the consumer of coal. The continuing shift of customers from the admirably competitive coal industry to the dubiously competitive oil industry emphasises the point.

"It seems reasonable to suppose that, if the same technical talent that has been devoted to the search for oil, or to its utilisation, had been brought to bear on coal-mining in the last half-century, the coal industry would be very different from what it is today. New techniques of recovery might long since have been developed. Men would no longer toil like moles in mining operations that under the most favourable conditions are hazardous and highly inefficient . . . an unpleasant, uninspiring and none too healthy occupation."

It will be seen from the foregoing quotations from Dr. Galbraith's book that monopoly and its counterpart oligopoly are not such great evils as is made out by the critics of modern capitalism. Several public enquiries have been held in the U.S., especially after the Second World War, by the Government of that country and by the courts competent to go into their cases. And the very fact that, after all these enquiries, they have been allowed to exist is proof enough that there is something good about them and that the American society, which is free and democratic, stands to lose more than it can gain by ordering a dissolution of the industrial giants. In our next issue, we shall indicate the experience of Britain—another democratic country—in this field and also examine Mr. Nehru's pithy remarks on the price policy of oil companies.

BULLS IN SHARES STILL HESITANT

U.S. FUNDS TO BANKS' RESCUE?—GUEST, KEEN'S NEW ISSUE—MORE ON FREE TRADE ZONE

TUESDAY, 5 P.M.

ON the eve of the festival of lights and the Hindu New Year's Day, the share market is hesitant. Although equities have recovered a little from the lowest levels to which they had receded earlier and the list shows a large sprinkling of gains over the week, there are no signs of buying fervour returning on any perceptible scale. The impression among the leading brokers is that the market is well liquidated and that values have gone down to levels which are fairly attractive, from the long-range point of view. But bulls are reluctant to venture again. Accordingly, the *Moorat* trading on Friday, 2nd November 1956, is likely to be colourless, unless between now and then some new developments emerge. There are several reasons why bulls are not enthusiastic. First, they are afraid that there may be some fireworks against private enterprise and investors at the forthcoming session of the All-India Congress Committee. In attempting to give a more precise definition of the Congress Party's goal of socialism in the election manifesto which is expected to be finalised at this meeting, the scales, it is feared, may be weighted against the private sector, property-owners and landlords. Mr. Nehru's strictures on those State Governments which are reluctant to fall in line with the ideas of the Planning Commission on land reform and agricultural co-operatives and his caustic remarks about capitalism a fortnight ago at Calcutta may be regarded as sufficient grounds for these fears. It will not be surprising if Mr. Eugene Black is criticised further by some Congressmen for writing the letter he did to Mr. T. T. Krishnamachari. The capital that is being made by some of the left-wingers in Britain out of this development is said to be encouraging them to rail at him. In refreshing contrast to their British confreres, the Indian socialists and other leftists have chosen to remain silent on Mr. Black's observations. Surprising, is it not!

MARKET GOSSIP

Secondly, in some parts of the country, there is evidence of growing appeasement of labour at the expense of investors. The abolition of the Appellate Tribunal seems to have encouraged some of the adjudicators to throw all caution to the winds and give liberal increases in the emoluments of workers. The Plantation Labour Award in Madras is a typical instance. Another is the Award relating to payment of bonus to workers employed in cotton mills at Coimbatore, Salem and Palani, to which a reference was made in our last issue. On a rough estimate, it appears that cotton mill workers alone will get about Rs. 9 crores by way of bonus this year, of which Rs. 2.5 crores were paid this week to the workers in Bombay City itself. The Madras share market estimates the burden of the Plantation Award on the estates at not less than Rs. 12 crores, with a recurring charge of Rs. 2.5 crores per annum. Then, there are the pressing demands for more wages from Port Trust workers and employees of the Insurance Corporation, not to mention the general demand of the I.N.T.U.C. for an increase of 25 per cent. in the wages of all workers. With the General Elections not far off, it remains to be seen whether the Government will sternly say "no" to these claims. The decision to extend the facilities of the Employees' State Insurance Scheme to all members of industrial workers' families, even though the workers in rural areas and agriculturists are being neglected, and the serious proposals that are being put forward to associate the workers with the management of companies in the name of "industrial democracy" are pointers to the direction in which the wind is likely to blow on the labour front in the coming weeks.

Thirdly, though no concrete decisions were taken at the bankers' meeting with the Finance Minister on Monday as regards the measures to be adopted to prevent any further stringency in the short-term money market, there is an impression that the authorities will not be averse to a stiffening of rates of interest charged by banks on loans and advances. In any case, accommodation for speculation in shares will become extremely difficult.

Fourthly, it is felt that, after some of the first class new issues now pending are absorbed, the large lot of the new shares of the Indian Iron and Steel Company, Ltd., may prove a heavy drag on the market. The marked slump in the value of A.C.C. Rights from Rs. 62 in mid-September to Rs. 47 this week has raised doubts whether the new capital of Indian Irons will be taken up by investors without difficulty.

While these are the four principal reasons for the hesitancy of bulls, encouraging reports from Washington about the prospects of the World Bank giving a big loan to India and the assertion of the Prime Minister in Delhi early this week that there are no serious differences of opinion between the Bank and the Government of India must have deterred the bears from increasing their activity in the market. Also, the statement by both Mr. Kasturbhai Lalbhai and Mr. Dharamsey Khatau to the effect that the present dislocation in cloth trade is only temporary and that within a few months the offtake of cloth will, once again, become buoyant must have put them on their guard.

Stringent conditions continue in the money market, though there has not been any rise in interest rates. Banks cannot afford to pay more for deposits, so long as they do not step up their rates of interest on loans and advances. Although there is no statutory control on these latter rates, none of the banks is prepared to take the initiative due to fear of loss of business to another. Further, an influential section of banks feels that a mere increase in interest rates on deposits will not lead to any appreciable increase in the flow of fresh money into the banking system. It is, therefore, opposed to any rise in interest rates. No indication is available about the official mind on this subject. There seems to be an impression in these quarters that there is room for pruning down the advances of Scheduled banks, as a part of the advances is said to be for purposes which are not the normal business of commercial banks to finance.

This criticism is apparently based on the belief that banks are financing, on a fairly substantial scale, fixed capital expenditure of industries, which can very well be left to be taken care of by the special institutions that exist for this purpose, as, for instance, the Industrial Finance Corporations and the Industrial Credit and Investment Corporation. It is argued that, so long as commercial banks readily give funds for capital expenditure, there will be little inclination among industrialists to go to the long-term institutional lenders whose money costs more. It is accordingly suggested that the Reserve Bank should exercise its powers for applying selective credit controls. There appears to be considerable force in this contention. While adequate data are not available to indicate the volume of funds thus locked up by commercial banks, the fact remains that the I.C.I.C. is not being actively made use of by the industrialists and that the turnover of Industrial Finance Corporations could be much larger than they are.

Bankers were highly appreciative of the informal meeting they had with the Finance Minister on Monday this week, when there was a discussion of banking and monetary trends and of the measures necessary to meet the credit requirements in the coming busy season. They were very pleased that Mr. T. T. Krishnamachari took the trouble of coming here all the way from New Delhi, in order to get a firsthand idea of the position of the market and to hear in person what they had to say on this subject. They felt that such personal contacts between the Treasury and the banks would be very useful to both and hoped that there would be more meetings of this nature in future.

The talks on Monday were mainly of an exploratory nature. They related to the rising trend of bank advances, the relationship between deposit rates and advance rates, the impact of the large import surpluses during recent months on the domestic money supply, delays in the payment of supply bills by the Government and the small increase in bank deposits as compared with the rise in note circulation. Most of the talking, we learn, was done by the bankers. The Finance Minister listened patiently and said very little. It is not yet known in what way the banking system will be assisted by the Reserve Bank during the coming busy season. But it is obvious that the easiest way would be to liberalise the conditions under which usance bills are discounted and to widen the scope of this scheme. Mr. Krishnamachari is, however, a man of ideas and it will not be surprising if he decides to utilise the stringency in the money market to get some extra income for the Government. It is possible that he may make available to the banking system a portion of the counterpart funds of U.S. aid to India, provided the commercial banks are prepared to co-operate with the Government. While it is too early to give any details of this move, a sum of Rs. 25 crores to Rs. 30 crores may be placed at the disposal of the short-term money market through a syndicate of banks.

* * * *

As regards other markets, the Gilt-edged is quietly steady but thin. The downward trend in Central Government loans has halted, though the selling pressure in some of the 4 per cent. State loans, particularly of Bombay, Madras and Uttar Pradesh, persists. There has been a slight improvement in bullion due to good demand in the spot section. A net rise of Re. 1 in silver and Re. 1-7 in gold is noted since Wednesday last. The bulls, however, are afraid of increasing their commitments, as the future of forward trading, now under the active consideration of the Forward Markets Commission, is extremely uncertain. Among commodities, both oilseeds and cotton are firm, with some appreciation in their prices. Foodgrains also are ruling strong. Reports from North India suggest that the recent heavy rains and the consequent floods have inflicted considerable damage to standing *kharif* food crops and adversely affected the prospects for *rabi* crop also. Water-logging has delayed sowing and the extra moisture in the soil is not conducive to securing good crops.

* * * *

The European "free market" proposal to which we made a reference in these columns (*vide Commerce* dated 6th October) is getting wider and wider measure of support in the U.K., though French non-official opinion has very nearly crystallised itself in a form that is antagonistic to it. To take the French criticism first, The President of the Employers' Federation, Mr. Villiers, says that the provisions of the scheme would neither permit the necessary mutual adjustment of the economies of the countries, nor the avoidance of economic and social troubles which would bring about hostile reactions to the common market. Economic integration, according to a survey conducted by this Federation, would be doomed to failure if it were not preceded by the adoption of a special decree of unification in the monetary field and in the field of economic policy. Two other points made out in the survey are: (1) A certain degree of protectionism *vis-a-vis* the outside world is necessary, at least at the beginning of the common market; and (2) the overseas territories of the participants also should participate in the common market.

So far as the U.K. is concerned, no definite commitment has been made by the Government in respect of the European "common market" proposal. It is believed that a White Paper on the subject will soon be published, to be followed by a debate in Parliament. A reference to the subject, made by Mr. A. R. W. Low, Minister of State, Board of Trade, will be read with some interest in this country, in view of the fact that it contained remarks about imports of Indian cloth into the U.K. Speaking at the final session of the Cotton Board Conference, held at Harrowgate, Mr. Low said that, so far as the cotton industry was concerned, the two points which seemed to worry traders about the common market plan were the inter-relationship between the proposal and the problem of Hongkong and Indian imports and the threat of unfair trade practices in the free trade area in Europe. He added: "I do not think these proposals alter in any way the position of Commonwealth imports. The system the Government is considering allows the principle of Imperial Preference to continue. You should also remember that you now enjoy preference on exports within the Commonwealth several times the value of the imports (Hongkong and Indian) concerned." On the future of trading practices within the free market area, Mr. Low said he would expect that, before any pact was drawn up, undertakings would have to be given that the countries concerned would not resort to the use of subsidies and dumping. Despite this assurance, opinion in U.K. textile circles, it is believed, is not in favour of the common market idea.

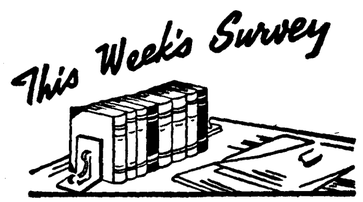
Naturally, the opinion of trade and industry on a subject of this kind cannot be unanimous, for each section will tend to look at it from the way it is affected by the proposals. From this point of view, it is noteworthy that several sections in the U.K. are inclined to think that the whole idea deserves to be pursued. The *Journal* of the Birmingham Chamber of Commerce writes: "On balance, the argument in favour of Britain's participation in the free trade area, and as far as may be, in the common market, appear to outweigh those against it." Sir Graham Hayman, President of the Federation of British Industries, averred, in the course of a speech at Liverpool, that the prosperity of the U.K. was closely linked with the economic stability of Europe and that the proposal for free market demanded their "earnest consideration." He described the proposal as "daring and far-reaching" and said that "to a large extent, its effects are immeasurable."

The six European countries concerned in the proposal represented about one-eighth of the U.K.'s total export trade, worth today about £400 million. Other Western European countries, Sir Graham pointed out, might associate themselves with the plan and thus involve about a quarter of present U.K. exports. "If we refuse to associate ourselves with this plan," said Sir Graham, "we run the risk of a serious degree of exclusion from a great and growing market on our doorstep, which in time might also develop into an increasingly potent competitor in Commonwealth and other markets. At the same time, our links with the Commonwealth countries which are of great importance to many of our industries, and represent in total one-half of our exports, cannot be sacrificed." They might need to be reviewed from time to time, for Imperial Preference was turning out a handicap rather than an advantage to cotton textiles and certain other industries. But there were solid reasons why Commonwealth links must be safeguarded. The Government appeared to accept this view, and supported the assumption that Imperial Preference need not be radically disturbed. The proposal, he declared, must be considered in the light of the radical changes in world conditions and trade, and not prejudged by reference to the position in the 1920's, when the U.K. was practically the only free-trade country in an increasingly protective world. To-day, the position, he said, was reversed and Western Europe, in particular, was moving away from protection towards greater freedom of trade.

* * * *

Investors in equities, who have been keenly awaiting the issue of ordinary shares of Guest, Keen, Williams Ltd., will be glad to know that the list for this issue opens on the 7th inst. As will be seen from the detailed prospectus published elsewhere in this issue, the Company offers 589,400 ordinary shares of Rs. 10 each at Rs. 20 per share, that is, at a premium of Rs. 10 per share. Although the offer is being made at a time when the money market is experiencing acute stringency, there is every reason to believe that the shares will be avidly taken up by the public. For, in the first instance, it is a small-priced issue and the minimum number of shares for which applications are invited is 50, so that it is within the capacity of small investors. Secondly, the yield even on the basis of the dividend of 17.5 per cent. paid for 1955 is very attractive at 8.75 per cent. per annum, free of income-tax; the dividend for the current year is expected to be 18 per cent., if not more. Thirdly, the outlook for the Company is quite good, as will be shown presently. Fourthly, the shares are approved investments within Section 27A of the Insurance Act. Fifthly, after the shares now being offered are allotted, the Company is likely to come within the purview of Section 23A of the Indian Income-tax Act.

(Continued on page 871)



U.S. ECONOMIC EXPANSION

THE U.S. economy has been passing through a record level of prosperity, and, according to authoritative sources, the pace of increase in prosperity witnessed in the first half of 1956 will continue for the rest of the current financial year and well into the next year. Addressing recently a week-end assembly at Oberlin College, Mr. Arthur Burns, Chairman of President Eisenhower's Council of Economic Advisers, pointed out that, "in another ten years, our nation's total output of goods and services, which is currently proceeding at an annual rate of about $414,000 million, may approach the $600,000 million mark." The factors which have brought about a "wide diffusion of economic prosperity and well-being in recent times," to quote him further, were:

"First, jobs have been generally plentiful during the past decade. . . . Total civilian employment, which rose from 55,250,000 to 61,250,000 between 1946 to 1952, is averaging 65 million this year. Second, a progressive shift has taken place from low-paid and unskilled occupations to better-paid and more interesting work. Ordinary labourers, who constituted 17 per cent. of the work force in 1940 and 12 per cent. in 1950, number less than 10 per cent. now. On the other hand, the professional and managerial group currently accounts for 19 per cent. of the work force, in contrast to 14 per cent. in 1940. Third, small and independent business continues to be an important gateway of economic opportunity, despite the spread of giant corporations. Over four million independent concerns are presently engaged in various types of business and their number is growing. . . . Fourth, our progressively rising national income is being shared widely. In 1955, 54 per cent. of American families had a money income of $4,000 or higher, in contrast to 42 per cent. with equivalent real income in 1947 and 48 per cent. in 1952. . . . Fifth, the average price level has been nearly stable in consumer markets since the early months of 1952. In consequence, the savings recently accumulated by people through bank accounts, life insurance policies, pension funds, and savings bonds have remained virtually intact for meeting life's contingencies and opportunities. . ."

These are impressive gains. More recent trends indicate that a little over 66 million have been gainfully employed, and the figure of the unemployed at 2 million was the lowest for the past three years. Aggregate sales of manufacturers, wholesalers and retailers were $1.500 million more in August this year than a year ago, and are still continuing to rise. Moreover, personal income in August 1956 was at an annual rate of $328,200 million which represented an increase of $19,500 million more than that of August 1955. Factory workers' average hourly wages in September, on the other hand, reached a new record rate of $2, and average weekly wages were $81. Again, little sales resistance is noticeable to the increasing prices for finished goods and business men are confidently increasing their borrowings. All this is happening, despite interest rates remaining at their highest since 1952.

This seemingly satisfactory picture, however, does not truly reflect those features of the U.S. economy which have given cause for some concern. Some expert observers have taken pains to warn the nation of the dangers of too fast an expansion of the economy. Recently, for instance, the Vice-Chairman of the Board of Governors of the Federal Reserve System, Dr. C. Canby Balderston, declared that, though the long-term prospects for the country's economy were superb, they would be lost if immediate problems were not successfully grappled with. These immediate problems are the direct outcome of excess demand over supply and the resultant increases in prices, cost structure, and speculation. He pointed out that, in the current "tight money" market, the purchasing power of the dollar was at stake, and emphasised the need for pursuing credit policies "designed to prevent excessive credit expansion."

A similar warning came from Mr. Cola G. Parker, President of the National Association of Manufacturers. He said that the economy was running ahead too fast and it needed to slow down for a "digesting period," which might be expected to occur by about the middle of the spring of 1957. He further warned that the greatest single threat to the nation's economic health was that wage increases were running ahead of productivity.

Mr. David Rockfeller, Executive-Vice-President of the Chase Manhattan Bank of New York, similarly expressed anxiety over the rapid expansion of business spending. According to the Commerce Department, business expenditures in 1956, on a seasonally adjusted annual rate, reached a total of slightly over $35,000 million or 23 per cent. higher than the outlays for 1955. Mr. Rockfeller was of the view that the expansion programmes undertaken by a number of industries would raise their capacity at a rate faster than their sales could be expected to grow in the near future. Further expansion, he felt, would lead to a "bunching of growth that could lead to very difficult adjustments in the economy as a whole."

The malady of the U.S. economy is thus over-rapid expansion of prosperity which, if taken too far, has the potentialities of leading to a slump. There is thus a great deal to be said in favour of checking further undue expansion of credit and production leading to higher and higher prices. It is to be hoped that the warnings uttered by leading men in the country will have a salutary effect and greater caution will be applied in undertaking programmes of expansion.

ECONOMIC RESEARCH

In India, the need for undertaking research in applied economic problems on an objective and independent basis has never been felt more keenly than now. There is considerable controversy over the merits and demerits of the private and public sectors in the country's economy. Again, there is a growing tedency to introducing ideological considerations in the realm of economic affairs. It is this tendency which imparts urgency for enlightening the general public of the dangers of an economy based on such considerations. Viewed thus, the establishment of the National Council of Applied Economic Research at New Delhi, with the primary object of undertaking, aiding and promoting research in economic and industrial problems "on an entirely objective and independent basis," has, indeed, come not a day too soon. The Council has as its Director-General, Dr. P. S. Lokanathan, one of the distinguished economists of India and the first Executive Secretary of the Economic Commission for Asia and the Far East, a U.N. organisation. The scope and work of the Council were lucidly explained by Dr. Lokanathan at a Press Conference in Bombay on Wednesday last week.

The Council enjoys, according to Dr. Lokanathan, the benefit of co-operation of the Government of India, as well as of the business community. On the Governing Body of the Council are leaders in the economic life of the community, including Ministers, high-ranking officials and outstanding business men, all of whom serve in their personal, rather than representative, capacity. Its President is an ex-Finance Minister of India, Dr. John Matthai, himself a distinguished economist. The Ford Foundation has made a liberal grant—about $500,000—towards the initial expenses of the Council. The research work conducted by the Council will be either at its own initiative or at the instance of Governments—Central or State—business concerns, associations or individuals who may seek the assistance of the Council for analysing and finding solutions to specific problems in the planning and management of industrial and other undertakings.

A striking feature of the Council is that it will largely be self-financing in respect of most of its operations. For it is the intention of the Council normally to charge a fee to cover the costs of the research projects undertaken by it on behalf of Government or private industry or any other agency. What is more, the Council hopes to contribute to the training of research workers and, for this purpose, proposes, at the appropriate time, to organise a training programme and to award research studentships and fellowships. It also hopes to be of service to institutes and organisations outside India having similar objectives; it is empowered to exchange information and co-operate with them in the study of problems which may be of mutual interest or concern to them. The Council will be in close touch with the University Departments of Economics and Sociology, as well as with the research institutions functioning in India in related fields, so as to take full advantage of the work already done or in the process of being done. It will also be in contact with the Government agencies, business community, and co-operative and other agencies.

At the Press Conference in Bombay, Dr. Lokanathan declared that the problems referred to the Council would receive an independent and objective analysis and judgment. Reassuring is his statement that the conclusions arrived at would be "completely free from any type of external influence or bias." Incidentally, it may be noted that the Council has already drawn up a programme of research for 1956-57. The projects which will be taken up immediately include problems of small-scale industries; pattern of sources and requirements of energy; marketing and marketing techniques at home and abroad for products of new industries (including small industries); study of taxation laws in India and in the capital exporting countries affecting foreign investments in India. The Council proposes to secure the services of several foreign experts for working on the projects.

The object for which the Council has been formed is, indeed, laudable. Surely, the work of the Council will be watched with considerable interest by all those who are interested in the rapid economic development of India. With his rich academic background, backed by wide and varied experience, more especially as the Executive Secretary of one of the most important limbs of the United Nations, Dr. Lokanathan will, there is no doubt, guide the Council most competently and efficiently. The fact that he is the chief of the Council is itself a guarantee that the organisation will acquit itself very creditably in fulfilling its objectives. It is to be hoped that Government agencies and business houses will lend their active support and encouragement to the Council.

STRUCTURAL AND METALS DIVISION

The development programme for Indian industries, envisaged in the Second Plan, includes not only a wide range of consumer goods industries but also basic industries like steel and non-ferrous metals. If the many-sided programme for industrialisation were implemented, it would certainly mean an increased use of ferrous and non-ferrous metals. From this point of view, much interest attaches to the decision of the Indian Standards Institution to set up a Structural and Metals Division. Inaugurating the Council of this Division at Calcutta last week, the Union Minister for Heavy Industries, Mr. Manubhai Shah, revealed that the Government would soon establish a Development Council for Non-ferrous Metals.

At the outset, Mr. Shah referred to the work done by the Indian Standards Institution in connection with the steel economy programme. He stated that the basic code for the design of steel structures and standard specifications and codes of practice on various other subjects were now under print. Higher efficiency standards for beams, channels, angles and other structural sections were well on the "road to finalisation." The considerable amount of work undertaken through the steel economy programme, he said, had highlighted the possibilities of the standardisation of metals and metal products and of

"co-ordinating the metallurgical aspect with the use aspect." He said that such co-ordination was particularly essential in regard to structural application of metals. He was, therefore, gratified to find in the new Division that "co-ordination between the two aspects would be possible, which will add to the metallurgical aspect of the manufacture of structurals and their economic use."

After thus indicating the scope of the work of the new Division, Mr. Shah stressed the need for setting up a suitable machinery for dealing with the important problems of rationalisation and standardisation of alloy steels and special steels. Although some work had been done in respect of structural steels, alloy steels and special steels, on which practically all heavy industries were dependent, had not received the same attention. He emphasised that, in order to assist the domestic production of alloy steels and special steels, it was essential that a "rationalised series of such steels is established through a study of the present uses and requirements in the country and a concentrated effort made for the simplification and reduction in the number of varieties, sizes and shapes."

In the course of his speech, Mr. Shah did well to refer to two interrelated topics—the importance of branch offices of the Indian Standards Institution and public co-operation. A branch office of the Institution has been established at Bombay and Mr. Shah availed himself of the opportunity of addressing the Structural and Metal Division Council to open a branch office of the I.S.I. at Calcutta. It would appear that the branch office at Bombay has been doing commendable work and that the demands on its services are increasing with the passage of time. The advisory committee in Bombay, it is stated, is actively co-operating with the Branch Office in making people standards-minded. Appropriately enough, the authorities have decided to start another branch office at Calcutta which the Minister rightly described as the "home and heart of engineering industries of our country." The branch office, as he himself indicated and hoped, should provide a "helpful liaison between the standards-making body in Delhi and the standards-using organisations in Calcutta and elsewhere." It is to be hoped that in Calcutta, too, the advisory committee which has been set up will evince keen interest in the work of the I.S.I.

Indeed, such co-operation is particularly essential in this country in the interests of accelerated growth of standards-consciousness. In this sphere, India differs from other industrially advanced countries, in that, whereas in other countries, standards were developed in response to a felt need and after the industries concerned had achieved a certain measure of progress, India is attempting to set standards even before it has reached a high level of industrial progress. This difference between Indian and Western attempts at standardisation may possibly impose a certain strain on this country's industries. But it is just as well that the importance of standards is realised even at the initial stages of industrialisation, for that will avoid the difficulties of subsequent adjustment to standards. In any case, India has the benefit of Western experience to draw upon in the matter of setting up standards for industries. Only, care must be taken, as Mr. Shah himself pointed out, to ensure that standards are formulated after taking into account Indian conditions and requirements, and the position relating to raw materials and workmanship.

BRITISH MISSION'S TASK

The British Heavy Engineering Mission led by Sir Eric Coates, after having had some preliminary discussions with the Ministries and officials concerned on the scope and nature of its work, has begun its tour of selected industrial centres in the country. In its intensive study of India's existing capacity and future needs in the engineering industry, the Mission, which is a fact-finding and reporting body, is expected to have talks with representative industrial organisations in the private sector also. Since the field of enquiry is wide, the Mission would concentrate on assessing India's needs in such lines as industrial plant and machinery, machine tools and structurals.

The scope of the Mission's work does not include proposals for starting specific projects or location of industrial enterprises, but, in so far as the location of heavy industries is important both from the strategic and economic point of view, its survey will take into consideration locational factors also. Sir Eric is reported to

EQUITIES RULE STEADY

ALL-ROUND RECOVERY IN PRICES

(From Our Own Correspondent)

BOMBAY, 30*th October*

THE Stock Exchange ruled steady during the week under review. After an initial marking down, in continuation of the previous week's recession, equities staged a sizable recovery during the rest of the week. The abatement of selling pressure, bear covering and small replacement buying pushed up prices. The absence of any adverse factors, expectations of some satisfactory solution being found to relieve the monetary stringency, as a result of bankers' talk with the Finance Minister on Monday this week, and the political developments in the Middle East were the main bullish factors. Nevertheless, confidence was not fully restored and buyers were reluctant to enter into large commitments.

In the steel section, Tata Ordinaries gave way early in the week from Rs. 191-4 to Rs. 189-8, but gathered strength to Rs. 192-4 at the close. Indian Irons finished at Rs. 34-5½, after having been taken down to Rs. 34-0½ from Rs. 34-5.

Barring a few counters, the textile section as a whole participated in the rise, though the gains over the week were not very marked. Bombay Dyeings dropped from Rs. 621-4 to Rs. 613-12, before advancing to Rs. 626-4. Centurys fell from Rs. 544 to Rs. 537, but recovered to Rs. 549-8. *Kohinoors gained over the week* Rs. 3 at Rs. 346, though the lowest touched was Rs. 338-8. Central Indias provided one of the exceptions with a decline of Rs. 9-8 to Rs. 135-8. Finlays were unchanged at Rs. 340. Gokaks were marked up by a rupee to Rs. 239. Indu Ordinaries gathered As. 6 to Rs. 12-5. The interim dividend on the shares has been maintained at As. 10 per share for the year ended 31st December 1956. Indore Malwas were up by Re. 1-14 at Rs. 158-2. Khataus changed hands at Rs. 237-8 *ex-div.* (div. Rs. 10 per share), as against Rs. 245 *cum-div.* a week ago. Shree Niwas picked up Re. 1-14 to Rs. 214-6 and Simplex Rs. 2-8 to Rs. 201-8. Standards moved up by Rs. 10-10 to Rs. 477-8, Svadeshis by Rs. 7-4 to Rs. 252-8 and Tata Mills by Re. 1-4 to Rs. 55-8.

Bank shares ruled quiet with a slight marking down in values. Business also was restricted. Centrals dropped a rupee to Rs. 53-4, while their new shares were steady at Rs. 57-4. Bank of Indias were done Re. 1-4 lower at Rs. 143. Barodas were unchanged at Rs. 102, while United Commercials shed As. 12 to Rs. 56-4. Punjab Nationals were a shade dull at Rs. 56-8 and Unions at Rs. 7-3.

The miscellaneous section moved in consonance with the general pattern. In the sugar group, Belapurs were taken down from Rs. 251-8 to Rs. 249, before they advanced to Rs. 252-8. Phaltans improved by Re. 1-4 to Rs. 161. Walchandnagars hardened by Rs. 5 to Rs. 280. Among cement shares, Associated Cements advanced to Rs. 196, after an early reaction from Rs. 194-4 to Rs. 192-8. Digvijays were steady at Rs. 193-12. Orissa Cements were maintained at Rs. 13-2, while Ashoks shed As. 6 to Rs. 12-2. In the engineering and mining section, Alcocks moved within a narrow range and gained Re. 1-4 to Rs. 331-4. Tata Locomotives were bid up to Rs. 170-12 before finishing at Rs. 169-8, as against Rs. 165-12 last week. Premier Constructions advanced by Rs. 2-12 to Rs. 207-12, while Larsen and Toubros were well held at Rs. 18-10 and Mahindra and Mahindras at Rs. 15-14.

Among shipping and transport shares, Scindias were favoured and the shares gained As. 7 to Rs. 19-3. Great Easterns were also bid As. 5 higher at Rs. 22-6. Hindustan Motors were held at Rs. 9-7 and Premier Automobiles at Rs. 108-8. In the miscellaneous group, Bombay Burmahs retreated from Rs. 728-12 to Rs. 714-6, following the publication of the award of the Special Industrial Tribunal for Plantations giving higher wages for workers with retrospective effect from March 1952. Today, however, there was a partial recovery to Rs. 722-8. British India Corporations were quiet at Rs. 11-1. National Rayons rallied from Rs. 254-12 to Rs. 261-8. Tata Chemicals gained only As. 4 to Rs. 20-4, despite the declaration of a maiden dividend of As. 12 per share for the year ended 30th June 1956. Tata Oils were dull at Rs. 52-8, while Wimcos were steady with a rise of Re. 1-4 to Rs. 178-2.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 29*th October*

The Madras Stock Exchange, which put on a somewhat lively appearance last week after nearly a month's depressed tone, has once again staged a relapse. In fact, conditions akin to panic are prevailing at present. The morale of the market has been greatly shaken by the publication of the Plantation Labour Award. The Award provides for a steep upward revision in the wages of plantation labour, with retrospective effect from 1952. The implementation of the Award is estimated to result in payment of more than Rs. 12 crores by way of extra wages and an annual recurring expenditure of Rs. 2,5 crores. In view of the heavy incidence of the Award thus, operators are greatly apprehensive about the future of plantation companies. The general opinion is that the Award would impose considerable strain on the finances of the companies and that returns on investments would be very much reduced.

These fears let loose a wave of persistent selling and there was a landslide in prices of planting shares. In sympathy and on reports of heavy accumulations of unsold stocks of yarn and cloth with mills, the textile section also depicted a weak tone. Sugar and other miscellaneous industrials, too, encountered selling and drifted lower. The undertone of the market was distinctly bearish.

The shares of practically all the plantation companies suffered a sharp recession in values. Among rubber shares, Travancores and Vaikundams fell by As. 12 each to Rs. 25-4 and Rs. 34, respectively, Rajagiris dropped As. 8 to Rs. 8. Pullangodes climbed down by As. 7-6 to Rs. 3-13. Nelliampattys receded by As. 4-6 to Rs. 3-5 and Thirumbadis by As. 2 to Rs. 2-3-6. Among teas, Devasholas slipped by As. 12 to Rs. 24-6. Blue Mountains and Talayars lost As. 8 each, the former to Rs. 6-1 and the latter to Rs. 12-8 *cum-div.* Neelamalais eased by As. 6 to Rs. 7, Chembras by As. 5 to Rs. 4-2, Ouchterlonys by As. 4 to Rs. 4-14 and Nilgiris by As. 3 to Rs. 11-8. Among coffees, *Cochin Malabars were subjected to nervous liquidation* and slumped by Re. 1-14 to Rs. 9-11.

In the textile section, Meitturs fell by Rs. 9-8 to Rs. 442-8. Rajalakshmis dropped Rs. 9 to Rs. 168. Coimbatore Pioneers went down by Rs. 5 to Rs. 315. Janardhanas suffered a loss of Rs. 3-8 to Rs. 98-8. Buckinghams shed Rs. 3 to Rs. 193-8. Ranga Vilas lost a similar amount to Rs. 84. *Coimbatore Spinnings decreased by Re. 1-8 to* Rs. 88-8. Kotharis and Loyals were done each As. 8 lower at Rs. 17-8 and Rs. 52-8, respectively.

Among miscellaneous industrials, Raliis declined by a rupee to Rs. 46. Travancore Rayons eased by As. 8 to Rs. 14-14. F.A.C.Ts. receded by As. 6 to Rs. 6-7. India Steel Rollings and Spencers retreated by As. 4 each to Rs. 14-6 and Rs. 16-10, respectively.

In the sugar section, E.I.Ds. slipped by Re. 1-4 to Rs. 29-4. Indias gave way from Rs. 16-14 to Rs. 16-8. Travancores lost As. 4 to Rs. 13-12. Mysores were dull at Rs. 46.

Notices

THE AHMEDABAD ADVANCE MILLS, LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting the payment of the following dividends to the shareholders for the year ended 30th June 1956:—

Rs. 5-0-0 per Share on Preference Shares, free of income-tax.

Rs. 12-0-0 per Share on 33,000 Ordinary Shares, without deduction of income-tax.

Rs. 3-0-0 per Share on 7,000 Ordinary Shares, without deduction of income-tax.

For and on behalf of,
THE AHMEDABAD ADVANCE MILLS, LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 26*th October* 1956.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY LIMITED

NOTICE

MESSRS. KILBURN & CO. PRIVATE LTD., Managing Agents, have received advice from the Head Office of the India General Navigation and Railway Company, Limited, informing them that the Directors have decided to recommend a Dividend, on account of the year ended 31st December 1955, of six per cent. on Preference Stock and five per cent. on Ordinary Stock, both less standard rate of Income-tax at eight shillings six pence in the pound. The Dividends will be payable in sterling on the 30th November 1956 to Stockholders on the Company's Registers on the 9th November 1956.

INDIA GENERAL NAVIGATION AND RAILWAY COMPANY LIMITED

NOTICE

THE COMPANY'S CALCUTTA STOCK Transfer Registers will be closed from Friday the 9th November 1956 to Thursday the 22nd November 1956, both days inclusive.

By Order of the Board,
KILBURN & CO. PRIVATE LTD.,
Managing Agents.

SHIPPING RUN BY PRIVATE ENTERPRISE

IS THERE NO DISCRIMINATION AGAINST IT BY GOVERNMENT?

By M. A. Master

THE Government of India have given a categorical assurance in their recent Statement on Industrial Policy that, "when there exist in the same industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them." Let us examine how far the performance is in consonance with profession.

In his speech inaugurating the annual meeting of the Indian National Steamship Owners' Association at Bombay on 21st June 1955, Mr. Lal Bahadur Shastri, Minister for Transport, very rightly expressed his great disappointment at the premier shipping company withdrawing from the India-U.S.A. trade and from certain other overseas passenger-*cum*-cargo services. He exhorted private shipping not "to discontinue certain services on the ground of their being unremunerative." He reminded it of its "special responsibility to the public" as public carriers. He made it clear to Indian shipowners that "it would not be correct on their part to pick and choose the routes to which they could operate profitably without regard to the public convenience, particularly in view of the assistance they are receiving from the public revenues."

Even the worst critic of private enterprise cannot deny the fact that the premier shipping company built up the Indo-American trade and the India-U.K. passenger service at considerable sacrifices. In doing so, it showed both vision and courage. After running the passenger service with continuous losses for over five years, it requested the Government to give it such financial help as would make good the losses incurred by the running of this passenger line, which had, as admitted on all hands, increased the prestige of India. It may be added that the request made by that Company was in accordance with the shipping policy of the Government. The Government had, in endorsing the recommendations of the Reconstruction Policy Sub-Committee on Shipping, announced in 1947, that they would give such financial help and assistance to Indian shipping as was given by such important maritime countries as the United Kingdom and the United States of America. It was, however, very unfortunate that this request for financial help to maintain the passenger line was turned down.

It is also difficult to understand the reference of the Transport Minister to the obligation of private shipping to continue to run that line "in view of the assistance they are receiving from the public revenues." It may be said here without any fear of contradiction, that the Government have not been giving any financial assistance or subsidy to Indian shipping. As a matter of fact, Mr. Alagesan, Deputy Minister for Transport, had definitely stated in the Lok Sabha, in September 1955, that "the Indian shipping industry is not at present receiving any direct subsidy from Government." It is, therefore, neither fair nor just to call upon private shipping to run a service at a continuous loss without any subsidy from the Government, particularly in view of the fact that private enterprise is responsible to the investors who give them the capital for building up industries.

Now, let us look at the good luck of State undertakings. In his speech in Bombay on 2nd September 1956, the Transport Minister remarked that "one of the complaints which have been voiced from time to time is about the lack of passenger services based on India." He gave an assurance to the country that "the Government have, therefore, decided to start or expand a few such passenger services *even if the financial results of such operations do not prove remunerative.*" (The italics are mine). "These include the Madras-Rangoon service, the Calcutta-Madras-Andaman service, the Indian-Persian Gulf service, and the India-Red Sea passenger and pilgrim traffic." These services will, as stated by the Deputy Minister for Transport in the Lok Sabha, be run by the Western Shipping Corporation (Private) Limited, a corporation cent per cent owned by the Government. The losses incurred by the Corporation will be made good by the taxpayers. If the State runs a passenger line, it is assured that the losses made by it will be made good from the general revenues. If, however, passenger lines are run by private enterprise—such as those between India and the U.K., and India and Rangoon—no such help is to be given to those lines, despite the national shipping policy of the country to give such help but, on the contrary, those lines will be branded as lacking in patriotism, if they do not continue to maintain their activities even at the cost of incurring continuous losses. Can any impartial person say that this is not a policy of discrimination against private enterprise?

It is well known that, since the announcement of the policy of mixed economy and up to the end of the period of the First Plan, about 500,000 tons g.r.t. of shipping has been acquired, 457,000 g.r.t. of shipping is acquired by private enterprise and only a little over 42,000 g.r.t. of shipping is built up by mixed economy. Despite this very excellent performance by private shipping, threats are often held out by Government spokesmen that "if the shipping companies do not come up to our expectations, the Government would naturally like to fill the gap."

Justifying the expansion of shipping by the State with cent per cent ownership, the Minister for Transport remarked last September that "the private sector has ample scope to expand and develop within this high target, but what happens if there is no satisfactory response from Indian companies?" During the last two years, private shipping companies have placed orders for the construction of 23 new large ships with foreign shipbuilding yards, to be employed in the overseas trades, at a cost exceeding Rs. 30 crores. On the one hand, the difficulties with which private shipping is faced remain unsolved. On the other hand, instead of appreciation of private enterprise for the manner in which it has expanded tonnage, threats are held out that the State will build up new units. One wonders whether this could be construed as a healthy spirit of co-operation and a proper discharge of the responsibilities of the State.

Moreover, it should not be forgotten that State undertakings, receive special encouragement which is denied to private enterprise. It was stated by Mr. Alagesan, Deputy Minister for Transport, in the Lok Sabha, only a few weeks ago, that the Government would undertake to bear the losses of the newly set up corporation for the first five years as it did in the case of the Eastern Shipping Corporation. It is not difficult to expand both the scope and area of shipping activities, as desired by the Transport Minister, when one is assured that the losses that may be incurred in doing so will be made good from the general revenues of the country. Special encouragement and facilities which are given for this purpose to State undertakings are, however, denied to private shipping. And yet, we are told that it is the policy of the State "to give fair and non-discriminatory treatment" to both privately and publicly owned units. No sensible person will, however, deny that this is a policy of discrimination against private enterprise.

In view of the difficulties of capital formation experienced by the private sector, the Government of India have been advancing loans to shipping companies for the acquisition of second-hand or the construction of new ships. They are grateful to the Government for this facility. The position, however, may be radically altered during the Second Plan period. It is laid down in the recent Statement on Industrial Policy that "in suitable cases, the State may also grant financial assistance to the private sector. Such assistance, especially when the amount involved is substantial, *will preferably be in the form of participation in equity capital,* though it may also be in part in the form of debenture capital." (The italics are mine). Mr. Nanda, a member of the Planning Commission, in his speech at Amritsar, indicated clearly the object of this radical change. He remarked that, "in the past, the Government had given considerable loans to the private sector. It was proposed in future to convert this assistance, when sought, into equity participation. Such a policy would extend the role of the public sector." If the object of turning the loans into equity capital is to increase the inroads of the public sector into the fields of private enterprise, not only is it a policy of definite discrimination against private enterprise, but it is also an indirect attempt at nationalising such private shipping as has been built up in this country against huge odds and with heavy sacrifices. Neither is this a policy of non-discrimination as professed by the State, nor is it playing fair cricket, as claimed by the Government, in meting out equal treatment both to the organisation of private enterprise and undertakings of the State.

SHIPPING UNDER CONSTRUCTION

As against a total of 1,501 vessels aggregating 7,449,310 g.r.t. under construction in the shipyards of the world, India had, under construction in its own yards, five motor vessels of between 4,000 and 6,000 g.r.t. aggregating 25,954 g.r.t. and nine steamships of between 100 and 1,000 g.r.t. aggregating 2,091 g.r.t., as at the beginning of this month, according to the latest shipbuilding returns of Lloyd's Register of Shipping. The world tonnage under construction shows an increase of 226,306 tons compared with the position at the end of June last and of 836,669 tons compared with the beginning of the year. The French shipbuilding yards had 465,462 g.r.t. of shipping under construction, showing the highest increase of 79,097 g.r.t. The Japanese shipyards had under construction 1,192,745 g.r.t. and showed the second highest increase of 76,255 g.r.t. Since the beginning of the year, when Japan took a clear lead over Germany with the highest figure for tonnage under construction, barring the U.K., it has been steadily expanding its output and in the amount of tonnage launched it has even taken the lead from the U.K. with 498,475 tons of shipping launched during the quarter June-September, as against U.K.'s 283,992 tons during the same period.

The following figures give the tonnage under construction in the leading shipbuilding countries of the world as on 1st October 1956, with the fluctuations as compared with the position as on 1st July 1956 in brackets:

(In tons)

United Kingdom 2,077,976 (+49,844); Japan 1,192,745 (+76,255); Germany 823,263 (+16,584); Italy 670,416 (+18,526); Netherlands 610,067 (+26,507); France 465,462 (+79,097); Sweden 398,827 (+29,628); Norway 249,924 (—3,875); U.S.A. 201,865 (+4,396); Spain 161,896 (—2,114); Denmark 116,109 (—14,609); Finland 115,234 (+11,030); Belgium 112,823 (—58,723) and Yugoslavia 99,386 (—1,881).

Out of the tonnage now under construction, the countries "importing" the largest amounts of new tonnage are Liberia (781,266 tons), Panama (555,645 tons), and Norway (506,834 tons). The countries making the largest additions to their existing fleets are the United Kingdom (1,756,417 tons), Liberia (781,266 tons), Norway (754,013 tons), Panama (555,645 tons), the Netherlands (491,487 tons), Italy (479,548 tons), the United States of America (347,205 tons), Japan (315,675 tons), France (263,175 tons), and Germany (253,912 tons).

Oil tankers under construction in the world amount to 219 ships of 2,993,201 tons gross (108 steamships of 2,190,203 tons and 111 motorships of 802,998 tons), which is 169,181 tons more than the previous quarter, and represents 40.2 per cent. of the total tonnage under construction in the world.

REVITALISING SERICULTURE INDUSTRY

ADMINISTRATIVE MACHINERY MUST BE GEARED

A DETAILED reference to the programme for development of silk industry under the Second Five-year Plan was made in these columns only two weeks ago. As will be seen therefrom, the programme is very comprehensive in approach, inasmuch as it covers all the different sectors of the industry, including raw silk production, spinning and weaving, and marketing. It is this comprehensiveness that invests the Central Silk Board with a new, heavy responsibility. But the question whether the Board will discharge the responsibility satisfactorily will, in turn, depend on the attitude of the State Governments. It is necessary specially to stress this point, because the past few years' experience has been none too encouraging. Out of the Rs. 59.37 lakhs sanctioned by the Board as grants-in-aid during the seven years ended 1955-56, the States have spent only Rs. 17.24 lakhs, representing just 29 per cent. of the total.

The non-implementation of the schemes thus is certainly a sad commentary on the efficiency of the State Governments. They have not cared to devise ways and means of overcoming some of the administrative difficulties facing them. Mr. V. Nanjappa, Textile Commissioner and Chairman of the Board, was, therefore, perfectly justified in stating, in the course of his address at the tenth general body meeting of the Board held in the City last week, that, unless the State Governments speeded up the machinery for proper utilisation of the grants-in-aid sanctioned, it would be very difficult for the Board to ask for increased allotment for the sericulture industry in the years to come. Reassuring is Mr. Nanjappa's statement that the Board would extend all possible assistance to the representatives of the State Governments on the Board to take steps for ensuring expeditious utilisation of funds for the purpose for which they have been sanctioned. Indeed, the only way to achieve the objective of developing the silk industry on a sound and secure footing lies, as he rightly declared, in setting right the machinery in the States for the speedy execution of the important schemes designed to improve the various branches of the silk industry.

Most Appropriate

A disquieting feature of the Indian silk industry is that the progress achieved in the primary stage—that is, sericulture—has failed to keep pace with that of the secondary stage—that is, manufacture of silk fabrics. It is most appropriate, therefore, that stress is lately being laid on revitalising the sericulture industry. Most of the 78 schemes sanctioned by the Government of India relate to this field. They include establishment of a sericulture research station and modern cold storage plant at Srinagar; two modern type of rearing houses at Shillong and Senchoa (Assam); hill nursery for rearing univoltine race in W. Bengal; multivoltine disease-free silk-worm egg station in Malda, Murshidabad and Darjeeling districts; Chawki collective rearing centre at Kamagerai (Madras); four demonstration sericultural farms in Uttar Pradesh; foreign race seed station in univoltine area; expansion of foreign race seed station at Kalimpong (W. Bengal).

While the aforesaid schemes relating to sericulture research are of great importance, it is imperative that the results of research undertaken at the various stations should be made available to the sericulturists without delay and in as easily understandable a manner as possible, because the bulk of the sericulturists, it is common knowledge, consists of illiterate and ignorant peasants. Viewed thus, the decision of the Central Silk Board to have in its secretariat a special department for publicity must, indeed, be widely welcomed. The proposed department will, it is said, issue hand-outs, bulletins, posters, etc., with a view to giving publicity not only to the activities of the Board but also for popularising the use of silk and for the development of sericulture industry. Moreover, it will provide information about the developments in sericulture taking place in foreign countries for the benefit of the agriculturists practising silk-worm rearing and others interested in the development of the industry.

While the need for revitalising the sericulture side of the silk industry is of utmost importance, it is imperative that the filature industry should be reorganised. It is only then that the quality of silk required by the weaving sector can be improved, thereby dispensing with the imports of raw silk in the near future. Surely, the three notable decisions taken at a meeting of the filature interests convened by the Silk Board at Bangalore early last month, to which Mr. Nanjappa alluded, deserve to be commended. First, a sub-committee has been set up to go into the question of the working of the filature establishments individually and to formulate a scheme with recommendations for assistance to be extended to them. Secondly, it is considered necessary to subject the production of filature raw silk to compulsory testing by the silk conditioning and testing houses at Bangalore and Calcutta. Thirdly, it is proposed to fix the floor and ceiling prices for filature and *charka* raw silk in the States, with a view to benefiting the primary producers, that is, silk-worm rearers and silk reelers.

Price Stability

The last-mentioned aspect, namely, fixation of floor and ceiling prices for raw silk, is of special significance, considering that violent fluctuations in prices in the past have had a seriously adverse effect on the development of sericulture industry. These fluctuations must be attributed partly to variations in the world prices of silk and largely to speculation. Such instability, it is needless to add, seriously militates against the success of any efforts at improving the quality of cocoons and raw silk. One of the measures taken by the Silk Board to ensure stability in raw silk prices relates to the licensing of raw silk imports only through the agency of the Board; no licences for imports are given either to the trade or to the actual users. This policy, Mr. Nanjappa claimed, had not only restricted the quantity of imports but also contributed materially towards stabilisation of prices of both indigenous and imported raw silk in India. Indeed, he said: "On the whole, the Board has been able to stabilise the prices of raw silk in India, which has been very helpful to the silk-worm rearers in getting a fair rate for cocoons." The price of indigenous filature raw silk at present is estimated to range between Rs. 30 and Rs. 33-8 per lb., which, to quote Mr. Nanjappa, "is quite reasonable according to the cost of production worked out by the Tariff Commission."

INCREASE IN COTTON YIELD

An extra yield of 116 lbs. of 216F cotton per acre was obtained at the Cotton Breeding Station, Hansi, by spraying the crop with plant hormones costing Rs. 4 only per acre. The phenomenon of shedding of a large number of buds, flowers and bolls, apparently sound ones, under normal conditions of cultivation is not uncommon in cotton. A substantial increase in yield could be effected, if this obvious loss by shedding could be minimised. The assistance of plant hormones has been invoked for the purpose and it showed a certain measure of success in achieving the object. The trials with naphthalene acetic acid and nephtoxy acetic acid have been found to inhibit fruit drop in many varieties of apples and tomatoes. A preliminary experiment was conducted under a research scheme financed by the Indian Central Cotton Committee at Hansi, to determine the effect of these hormones on the shedding of bolls and consequent enhancement in its yield.

The results of the experiment indicate that the hormone which contains apha-naphthalene acetic acid as an active ingredient was found to be quite effective when sprayed on the plants of 216F cotton in July-August in concentration of 10 parts in million parts of water. Higher concentrations of hormone and double spraying showed depressing effects on yield. A significant increase in the number of bolls per plant and yield of kapas was visible in the last picking, which indicated that the treatment had a beneficial effect on newly initiated buds and even on buds borne later. The treatment is likely to be more effective, if given in the season. On the average of two years' results, the treatment gave 116 lbs. of kapas more per acre than the untreated crop.

SUPPLY POSITION OF EGYPTIAN COTTON

Despite the fact that the current (1956-57) season's cotton crop estimate of 1,011,370 bales (of 730 lbs.) in Egypt is only slightly lower than the previous season's figure of 1,001,796 bales, the total supply is estimated to be much lower, as compared with the season just ended. This is attributable to the low carry-over stock at the beginning of the season which is placed at 127,735 bales, as against 280,931 bales on 1st September 1955. The decline in production of Ashmouni from 437,585 bales in the previous season to 360,411 bales (estimated) in the current season has been particularly striking. At the same time, the output of Menoufi is estimated at 105,479 bales in the current season, as against only 40,878 bales in the previous season.

The fall in carry-over stock has occurred mainly in Karnak, Giza 30 and Ashmouni. Stocks of these types, as on 1st September last, are placed at 36,922 bales, 29,401 bales and 31,144 bales, as against 90,800 bales, 79,286 bales and 82,990 bales, respectively, at the beginning of the previous season. The following table illustrates the supply position for the current and the previous seasons:

(Quantity in bales of 730 lbs.)

Variety	1956-57 Season: Carry over as on 1-9-1956	Crop	Total supply
Karnak	36,922	319,589	356,511
Menoufi	7,918	105,479	113,397
Giza 30	29,401	188,630	218,031
Dendera	561	12,329	12,890
Ashmouni	31,144	360,411	391,555
Others and scarto ..	21,789	24,932	46,721
Total ..	127,735	1,011,370	1,139,105

Variety	1955-56 Season: Carry over as on 1-9-1955	Crop	Total supply
Karnak	90,809	315,501	406,310
Menoufi	11,248	40,878	52,126
Giza 30	79,286	178,326	257,612
Ashmouni	82,990	437,585	520,575
Others	16,598	39,506	56,104
Total ..	280,931	1,001,796	1,292,727

Notice

THE INDO-BURMA PETROLEUM CO., LTD.

THE BOARD OF DIRECTORS HAVE DECLARED an Interim Dividend of Re. 1 (One) per share (Income-tax Free) for the year ending 31st December 1956 payable on 21st November 1956 to those Shareholders whose names appear on the Company's Register of Members on the 13th November 1956.

The Company's Ordinary Share Register will be closed from 13th November to 20th November 1956 (both days inclusive).

By Order of the Board,
STEEL BROTHERS & COMPANY, LIMITED.,
Managing Agents.

READY REFERENCER ON THE INDIAN COMPANIES ACT, 1956

BY JOHN & ROW, *ADVOCATES*, MADRAS.

Price Rs. 25/-

The following is an extract from Mr. Tennetti Viswanatham's letter, which will speak to the merits of the book as well as the authors of the same.

"The Ready Referencer published by John and Row is indeed a very valuable book. It is a clear analysis of the provisions of the new Act. It brings together the changes in their logical sequences so that the Directors and Managing Agents can immediately lay their finger on the required provisions whenever they are in doubt as to what is to be done or what the Law on the subject is. Besides, the Referencer is of even greater value to the Lawyer, as one can expect it to be, coming as it does from John and Row, who have been distinguished specialists on Company Law. Likewise the Bench should find it invaluable."

RENEWED DEMAND FOR RESTRICTING IMPORTS OF CLOTH INTO U.K.

PLANS FOR TRADE PROMOTION

From A Special Correspondent

MANCHESTER, 23rd October

MANCHESTER LETTER

TALKS between Lancashire and Indian textile leaders on imports of foreign cotton cloth into Britain are to begin in India next month. This important announcement was made at the opening of the Cotton Board's annual conference at Harrogate this week-end by Sir Raymond Streat, Chairman of the Board.

In a speech to the 700 representatives of management and labour he disclosed that preliminary discussions had taken place last month in London with Indian trade leaders who had been visiting this country on their own affairs. The negotiations followed an approach to the Indian Prime Minister, Mr. Nehru, by Sir Anthony Eden, Britain's Premier.

Sir Cuthbert Clegg, former Chairman of the Cotton Manufacturers' Association, is to lead the British team, which will include representatives of every section of the industry.

Sir Raymond referred to the recent anxiety, widely expressed in America, at imports of low-priced Japanese cloth. The United States Government, he pointed out, had secured an agreement imposing a ceiling on imports of Japanese cotton goods into America. "I have a feeling that what can be done in one case can be done in another," he told the conference.

European Common Market

Throughout the week-end talks, originally scheduled to be based on the theme "Cotton's New Look," the project for a European common market involving the gradual reduction of tariffs between Western European countries was foremost among the topics under consideration. Although it was not officially on the agenda questioners persistently raised the matter during debates after the individual contributions.

In the final session of the conference on Sunday, Mr. A. R. W. Low, Minister of State, Board of Trade, intervened in an effort to allay fears which had been freely expressed that Lancashire would be forced to fight a trade war on two fronts if Britain joins the proposed scheme.

After propounding the ideas and basis of the plan, he made it clear that the British Government had as yet made no decision on whether or not to join the proposed pact. "We are consulting industry at home," he said, "but we have taken no final decision. We have submitted the proposal for consideration as something that has some solid advantages."

Several of the delegates at the conference, Mr. Low said, had told him that they would welcome the opportunity of competing for trade in a market of 250,000,000 people. "You have to meet competition outside Europe," he continued, "and you might as well take advantage of the European markets."

So far as the cotton industry was concerned, the two points which seemed to worry traders about the common market plan were the interrelationship between the proposals and the problem of Hong Kong and Indian imports and the threat of unfair trade practices in the free trade area in Europe.

"I do not think these proposals alter in any way the position of Commonwealth imports," Mr. Low declared. "The system the Government is considering allows the principle of Imperial Preference to continue. You should also remember that you now enjoy preference on exports within the Commonwealth several times the value of the imports concerned."

On the future of trading practices within any European free trade area which might be joined by Britain, Mr. Low said he would expect that before any plan was finally drawn up undertakings would have to be given that the countries concerned would not resort to the use of subsidies and dumping.

Earlier in the conference, Mr. Lewis Wright, Secretary of the Amalgamated Weavers' Association, had warned delegates of the dangerous position in which the cotton industry might find itself whatever the final decision on the common market plan. "Within the framework of a European common market we should either have to compete or go down," he said. "We should be in the unenviable position of fighting a war on two fronts. If Imperial Preference continues Lancashire would probably find itself fighting hard against the European textile industries and also find itself attacked from the rear by Hong Kong and India."

Advice to Waverers

A comprehensive survey of existing conditions and prospects for the industry was given by Mr. Fred Wood, President of the Master Spinners' Federation. His advice to the faint-hearted among millowners was to take their opportunity and leave the industry if they were not ready to carry out extensive modernisation schemes.

"Those who are not prepared to go forward would be well advised to consider whether the time is not now ripe for them to retire from the trade altogether," he declared. "They may be able to hang on in a state of suspended animation for a little longer but such reserves as they have accumulated will tend to be dissipated further with every day that passes."

Rejecting the idea of an organised redundancy scheme to streamline the spinning industry, Mr. Wood said: "I do not like the hint of compulsion involved and I believe it should not be necessary if all managements keep in view the need for a taut, well co-ordinated industry."

More shift work was the key to future prosperity. Mr. Wood maintained. Labour shortages since the war had hampered the expansion of shifts, but as new and expensive machinery was increasingly installed double day-shift working at least should be the pattern. Although night-shift working might not become general it would be wrong to exclude it from consideration in cases where it could be shown to contribute to cost reduction.

Trade Promotion

Plans for the continuation of the promotional campaign on behalf of the Lancashire cotton industry were outlined to the Cotton Board's annual conference by Mr. Hugh Lloyd-James, Director of Osborne-Peacock Co., Ltd. The scheme was launched last month with the slogan "Buy Britain's Cottons."

Looking ahead to 1957, Mr. Lloyd-James told the audience of mill directors, executives and trade union officials: "Then we shall not only use the newspapers but also magazines, the cinema and commercial television. This should provide an impact of considerable measure, taking full advantage of presentation in colour."

During 1957, the advertising theme would remain the same but the various advertisements would feature different sections of the industry. "We shall have ads for shirts, ads for curtains, ads for sheets, ads for bedcovers, ads for towels, ads for dresses and so on," he continued, "each designed to cover a specific angle and each carefully graded by merchandise and media to appropriate consumer groups."

Timing of the advertising would be in line with seasonal promotion plans of the retail trade, Mr. Lloyd-James said. The ambition of the sponsors was to have a continuous series of reporting displays throughout the year at all levels of trading. In this way it was hoped that the industry's campaign would have the active assistance of merchants in their contact with the wholesale and retail trades. Every sales aid to be issued would be carefully designed to be complementary to a manufacturer's own display pieces.

Six-loom Pay Dispute

An award settling the dispute between employers and trade unions in the Lancashire cotton textile industry over the rates of payment for weavers operating six looms was announced this week. Lord Terrington, Chairman of the Cotton Weaving Conciliation Committee, notified both sides that the present system of payment for six-loom weaving under the uniform list would be abolished from the beginning of 1959.

The Weavers' Amalgamation had protested at the varying rates of pay which were in use in different mills. Six-loom weavers paid on the so-called ordinary list received wages up to 11 per cent. higher than those paid under special six-loom rates introduced over 20 years ago. Some mills paid on the higher rates and others on the lower list.

The issue went to conciliation after negotiations on the union's demand for the ending of the six-loom agreement resulted in deadlock. In his award Lord Terrington urged the need for all parties in the dispute to extend redeployment in the industry in the interests of increased production—*All Rights Reserved.*

A RATIONAL SUGAR POLICY WANTED

STRESS ON MAXIMISATION OF OUTPUT WITH MINIMUM CAPITAL OUTLAY

THE President of the Deccan Sugar Technologists' Association (India), Mr. K. J. Somaiya, addressed the thirteenth annual convention of the Association, held at Shakarnagar (Hyderabad) last week, more as a sugar and sugarcane technologist than as a mere sugar millowner. Thus, in his speech, Mr. Somaiya referred practically to all the technical problems confronting both the sectors of the sugar industry, namely, sugar manufacture and cane growing. He must have felt the need for doing so, because, though sugar production activity is a very complicated one, requiring a high level of technical skill and managerial talent, the official policies governing this industry are based largely on ideological considerations. How else can one justify the Governmental patronage to co-operation in sugar-making, irrational sugarcane price policy, tenancy legislation and control over molasses, not to speak of the heavy burden of taxation?

To take, for instance, the co-operative development in sugar industry. An analysis of the financial structure of the co-operative sugar mills will reveal that the share of cane growers constitutes only a small proportion of the total amount invested and that it is the State which contributes the major portion of the finance. In reality, therefore. these factories are as good as State-owned factories. In short, the formation of the so-called sugar co-operatives marks the entry of the State into the sphere of sugar manufacture. Considering the highly technical nature of the sugar industry, it is, indeed. very much doubtful whether the co-operative sugar factories even with all the backing of the State will deliver sugar to the consumer at an economic price. This consideration, in fact, should be the yardstick for judging the success of any venture in any field of economic activity. But to Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, the only yardstick seems to be the extent to which the cane growers will benefit. Thus, inaugurating the sugar technologists' convention, Mr. Jain said:

"The establishment of a large number of co-operative sugar factories, as now planned, would go a long way towards raising the standard of living of the cane growers. . . . The Government has taken courage to launch this programme largely on account of the singular success achieved by the first experiment in this direction made at Pravaranagar. It shows the way of ameliorating the conditions of the Indian peasants through the establishment of processing industries based on crops grown by them on co-operative basis. . . . All the co-operative units when completed, would produce nearly a quarter of the country's production of sugar and benefit the growers to the extent of at least Rs. 3 crores annually as profits from their own factories."

Highly Doubtful

The anxiety of Mr. Jain to improve the lot of cane growers is no doubt understandable. But he must not stress his anxiety so much as completely to overlook the no less important consideration, namely, the price that the consumer has to pay for sugar produced by the co-operative factories. When, in spite of more than two decades' experience in sugar-making, the joint-stock companies have not been in a position, thanks to circumstances beyond their control, to supply sugar at a reasonable price, it is highly doubtful whether the co-operative units will succeed. Further, the improvement in the lot of cane growers can be brought about without starting co-operative units. We would like to draw the attention of Mr. Jain to the enormous benefits which the cane growers attached to the Walchandnagar Sugar Factory—a joint-stock enterprise—are already enjoying. They get facilities such as free education, modern housing, medical aid, provision of cheap food and other necessities of life and opportunities for healthy recreation. Anyone who visits the Walchandnagar Colony will feel fully convinced of the capacity of a joint-stock enterprise not only to look after the comforts and welfare of cane growers but also to ensure production of quality sugar at an economic price.

Apart from the lack of justification for introducing the principle of co-operation to a large-scale modern industry, it is regrettable that co-operative sugar factories are being fostered at the expense of the existing interests. Characterising this tendency as a "pitfall of over-enthusiasm," Mr. Somaiya observed: "I have failed to understand how national or any interest is served by promoting units in places where already somebody has ploughed his capital and funds and has difficulty in finding enough raw materials even for modest expansion and, in some cases, even for existence. It is actually creating a problem—where there was none—and then trying to solve it. This year's working figures will prove the gravity of the situation. . . ."

There is no exaggeration whatever in these observations of Mr. Somaiya. As we have ourselves pointed out on more than one occasion, the Government of India should not allow establishment of factories in areas where there are already units capable of absorbing the raw material grown in that area. A proper and rational dispersal is imperative for the healthy development of the sugar industry, or, for, that matter, any industry. Mr. Somaiya did well to suggest fixation of a minimum distance between two units. He went even to the extent of saying that "it is still not too late to merge the present licences in the same locality and bring into existence giant co-operative factories."

Australian Example

In this connection, Mr. Somaiya urged revision in the very concept of an economic unit. According to him, the daily cane-crushing capacity of an economic unit should be 2,500 tons, instead of 1,000 tons. The trend of development in the Australian sugar industry, it will be recalled, has been towards liquidation of smaller units and merger into giant units, as will be seen from the figures cited below:

	1888	1950	1954
No. of factories ...	166	32	34
Average annual production capacity (in tons) per factory ...	350	27,750	36,000
Aggregate production (in tons) of sugar	59,000	888,000	1,285,000

The average annual production capacity of sugar per factory in Australia thus comes to as much as 36,000 tons, which compares very unfavourably with the all-India average of just 12,000 tons. Liquidation of smaller units and merger into giant units are also said to be common features in the other sugar-producing countries of the world such as Hawaii, British West Indies and Louisiana. Commending this example for being emulated in India, Mr. Somaiya remarked: "We should look to the signs of the times and should not try to put the hand of the clock behind. Therefore, the ends of production and efficiency would have been best achieved by encouraging the existing factories to expand, where such expansion is possible." Elucidating this aspect further, he made the following observations:

"While we are expanding our production (of sugar), we have to pause before we do the ambitious planning, so as to profit by the experience gained by other countries which have already gone before us on the road. I would, therefore, like to say a few words on the principles of planning. Our main approach should be to produce, under given conditions, maximum sugar with the minimum of capital investment. Further, it should be achieved at maximum efficiency, lowest manufacturing cost and minimum losses."

Any impartial observer of the trends in sugar economy in India and the world over will not find it difficult to appreciate the force of the aforesaid remarks. It must be stressed that, unless the existing sugar mills are assured of adequate supplies of quality cane at an economic price, the Government should not allow any new factories to be established in the same area. An effective solution to the problem of cane supplies to factories lies in the State Governments enabling the sugar mills to purchase on leasehold basis the agricultural lands in their neighbourhood and lease them back to the ryots in that area on the distinct understanding that the latter will grow sugarcane on the lines suggested by the factories and under their supervision. Mr. Somaiya did well to draw pointed attention to this aspect. Pleading for the recognition of the merit of maintaining large-scale mechanised estates for growing sugarcane, he said:

"All the factories in the Deccan own large plantations and grow a major part of their requirements. If the Deccan industry enjoys the first place, it is primarily due to its agricultural record. The results obtained on their farms are amongst the highest in the world. The yields of cane per acre for the whole estate, namely, 50-55 tons, are becoming normal features. The average yields of *Adsali* cane are much higher, around 60 tons per acre. The recoveries obtained are the highest in the country—around 11 per cent. to 12.8 per cent! The sugar per acre for *Adsali* cane comes to as high as 6.8 to 8.5 tons. On the Prize Plots this year, the yield was 13.6 tons of sugar per acre. This can be sadly contrasted with the all-India average of 14.7 tons of sugarcane per acre. Comparison with world figures also makes encouraging reading. Hawaiian averages, which are amongst the best, are 62.05 tons of cane per acre with 10.46 per cent. recoveries, giving 6.489 tons sugar per acre. These figures are for 24-month crops, whereas Deccan figures are for 16-18 months crop."

The foregoing extract clearly brings out the importance of large mechanised farms for growing sugarcane. One of the primary problems of the sugar industry in the Deccan is the scattered area, ranging from one-acre plots to 50-acre plots. The very area, if consolidated, or if proper conditions were created to do the same, would give, as Mr. Somaiya rightly said, even more encouraging results. The present Tenancy Legislation, while it permits the sugar mills to retain the existing holdings, does not allow purchase of lands, with the result that, ultimately, the sugarcane farms would gradually disintegrate as and when the leases terminate. Mr. Somaiya minced no words when he declared that a bolder policy was necessary and that the sugar factories should be permitted to purchase new lands and consolidate their holdings. The State Government should come forward and help the factories to remove the pockets in their holdings. If necessary, the landowners within the pockets might be settled in other areas owned by the factories, so as to create large compact blocks which are a primary necessity for efficient mechanised cultivation.

Taxes Must be Lowered

To revert to Mr. Ajit Prasad Jain's speech. It is gratifying that Mr. Jain specifically urged the need for making available to consumers adequate quantities of sugar at a reasonable price. He said: "It has been my anxiety to secure an all-round development of the sugar industry and to see that sugar is available to the people in adequate quantities at a reasonable price. For more than one reason, the cost of production of sugar still continues to be high as compared with the cost in other important sugar-producing countries of the world. This is due not only to the low yields of cane and comparatively low sugar-content but also, to some extent, to the low efficiency of cane at the factory stage." Few would disagree with this statement. Nevertheless, there is no denying the fact that the high price of sugar is due not so much to the reasons adduced by Mr. Jain as to the heavy incidence of taxation—Central and State. On every pound of

NEW PUBLICATIONS

Price Controls in India Since 1947. By Dr. R. C. Agrawal, 28, Ferozshah Road, New Delhi. Foreword by T. T. Krishnamachari. Pages: 200. Price: Rs. 7-8.

IN most of the free countries of the world, statutory price control had its origin as an instrument of war-time economic policy but it is not purely a war phenomenon. It has been continued even after the war in most countries, because the post-war economic situation justified or even necessitated its continuance. Price control is resorted to when, owing to an excess of aggregate demand over supply, the equilibrium price determined by the free play of the forces of supply and demand is not conducive to the welfare of consumers. More specifically, price control is called for, in abnormal situations, when one or more of the following factors are present: (1) tense international situation which is likely to lead to outbreak of war, (2) large-scale failure of crop or fall in production of other essential goods, and (3) the need for stabilising the income of particular groups as a matter of social policy. In so far as deficit financing is thought of in most underdeveloped countries as a principal means of financing development projects, price control in some form or other is likely to be introduced, or continued where they are already in operation. When an attempt is made to step up the rate of investment beyond the rate of existing saving, it is almost bound to lead to an inflationary rise in prices in the short run, as investment takes time to fructify and raise real incomes. In view of the large volume of deficit financing envisaged in India's second Plan, the study of price control assumes a special significance at present.

The book under review is a study of the mechanics of price control, and an assessment of its relative merits and defects *vis-a-vis* other indirect forms of control like monetary and fiscal policies. It also attempts to dispel the distrust in the price mechanism as an instrument for allocating resources in an efficient manner and points to the administrative and other difficulties of successfully working any form of price control administration.

After discussing the objectives and techniques of price control, the author briefly surveys the evolution and the working of price controls in India. The performance of price control in India has not been encouraging. He points out that the failure of the decontrol experiment in 1947 was due not only to the fact that the time was not propitious for removing controls. but also because a strict vigilance on the monetary and fiscal fronts was not maintained; the experiment led to a sharp rise in prices, necessitating reimposition of controls in 1948. The impact of price control on the producer, consumer and the distributor is discussed in successive chapters. Another chapter deals with the framing of price control policies and their administration. The author rightly warns the administrators and policy-makers that price control is a delicate instrument which needs to be used with the utmost caution both as regards the framing of policy and its execution. Interference with the functioning of the market mechanism, except under abnormal situations, when there is large-scale economic maladjustment between supply and demand, leads to distortion of the structure of production which will adversely affect investment. He points out that modification of tax policies, large-scale borrowing, changes in the rate of interest and credit policies, etc., can exercise a more equitable influence without creating a structural imbalance in the economy which is almost inevitable in a system of direct controls. But situations may arise, as in the case of heavy deficit financing or war, when fiscal and monetary policies alone cannot achieve the desired objective. He does not deny the usefulness of price controls in such situations as a restraint on inflationary rise in prices. Even then, as he takes care to emphasise, price controls serve merely to cure the symptoms of inflation and provide no permanent remedy for the ills flowing from it. The obvious lesson from the analysis is that the authorities in this country will do well not to carry deficit financing to a point at which inflationary pressures emerge necessitating the imposition of controls.

The difficulties in the way of formulating and administering price controls are, indeed, formidable. In the case of agriculture, output is less responsive to price adjustment as compared with industries and it is all the more true under a system of subsistence farming such as the one that prevails in India. The difficulty is further enhanced by the existence of a highly cellular marketing pattern with varying and fluctuating scarcity relationship and price tendencies in different areas. In the case of finished or manufactured goods, any system, designed to control their prices, which does not control the prices of the cost components, is inequitable and will ultimately lead to a fall in production. All this serves to underline the difficulties involved in the bureaucratic regulation of prices. The author discusses the several administrative problems which price control may give rise to and emphasises that the shortage of personnel of the proper calibre in administering the controlled price is a very real limitation in India. The author's treatment of these and related issues is objective and unbiassed and Mr. Krishnamachari's praise, in his preface to the book, that the "future planner, the administrator and the student of economics will find ample material to develop from the basis provided by this thesis" is well deserved.

The Culture and Marketing of Tea. Second Edition. By C. R. Harler. Published by Oxford University Press. Price 25s. net (In U. K. only).

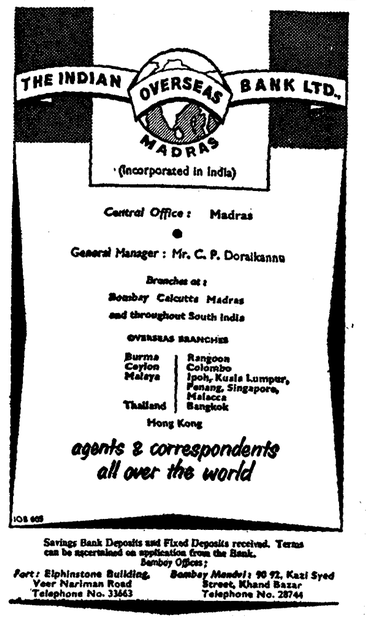
China, to which many movements and arts of civilisation owe their origin, is believed to be the original home of tea; indeed, China is said to have given the word "tea" to the world. The tea bush was cultivated and the leaf prepared in that country for many centuries. Until the end of the nineteenth century, China almost held the monopoly in world tea trade. In 1886, the country's exports touched a peak of 300 million lbs., when India produced only 90 million lbs. Ceylon had just started producing tea. Since then, the change in the style of manufacture of the beverage in the tea countries controlled by Europeans brought out a product different from Chinese tea. The tea consumers gradually began to favour this new "tea," with the result that the Chinese tea was almost ousted in course of time. By 1930, its exports fell to 100 million lbs. and to 25 million lbs. by 1952, most of which was green tea. The loss of market for Chinese tea was due to lack of modern knowledge, outdated methods and the lack of capital in the hands of tea farmers. At present, tea production in China is only a village industry.

The development of tea culture and manufacture by scientific research has not only been responsible for the widening of the world market for tea but made the tea consumer prefer only quality teas. Scientific research has opened up the way for the selection and propagation of high-yielding bushes giving quality tea, while the study of the bio-chemistry of the tea leaf has modified the approach to all processes of manufacture. These changes in the growing, preparation and the marketing of tea were outlined by Mr. Harler in the first edition of the above book, published in 1933. Since then, however, many fundamental changes in every aspect of the tea industry have taken place, so that the author has completely re-written in the present edition what was contained in the first one.

The latest edition is divided into three parts. The first part is devoted to a description of the tea plant, the climate and production of tea, tea soils, the culture and preparation of tea, the chemistry and the pharmacology of tea. The author treats these topics with a wealth of scientific details in a language that can be readily understood even by a layman.

Part II of the book gives a graphic description of the tea areas of the world, beginning with the classic tea countries of China and Japan. The rise of tea plantation industry in Assam and the evolution of modern practice in India are presented in some detail. The author also discusses the potentialities for growing tea in Africa, the U.S.S.R. and Australia.

In Part III, the author gives an account of the development of tea trade, with a description of the early trading days of the East India Company in China and the functions of the agency houses which opened up tea lands in India, Ceylon, Java and Africa. The author draws some general conclusions with regard to the culture and marketing of tea. These conclusions, set out in the last chapter of the book, are of considerable interest and importance. According to the author, the Assam Valley is the country *par excellence* for tea planting and the same holds good to a somewhat less extent for other tea districts of North-east India. Enormous crops of quality tea can be produced with the minimum effort in Assam Valley and there are large areas of land suitable for extensions. The field methods now advocated in Assam and followed in the best Assam tea estates, Mr. Harler says, are fundamentally sound and should be tried in other tea countries, though modifications may well be needed. He favours some international scheme of control both of export and planting so that the supply of, and the demand for, the commodity can be equated and the disturbing effects of slumps and booms reduced or avoided. He adds that it remains to be seen whether the pressure of population on the land in Asian tea countries will allow a crop ilke tea to be grown extensively for export. The countries in Eastern Africa have an opportunity to become one of the new sources of tea supply. The U.S.S.R. also, Mr. Harler says, will probably develop its tea areas. By selecting a type of bush to suit the difficult climate in Georgia and by adopting mechanical plucking, many new areas incapable of producing tea economically can, according to him, be enabled to do so.



"Planting and Commerce" Annual Number 1956 and Special Numbers. Acting Editor: Mr. Joseph Stanley.

The latest annual number of *Planting and Commerce* is the third in its series and preserves all the usual features which characterised the earlier numbers. The detailed survey of the plantation industry in 1955 which forms the main feature of the number gives a comprehensive picture of the various plantation crops. The survey also discusses the outlook for each plantation crop. There are several special articles, of which mention must be made of "Plantation Labour," which discusses some aspects of plantation labour policy, "Kerala—Its Assets and Liabilities," "Prospects for Natural Rubber," "Coir and the Board," and "Rubber Replanting by Subsidy and New Planting by Loan."

In the course of the editorial on the second Five-year Plan, the Editor says that a socialistic pattern of society may succeed, but not a Plan based on primitive productive methods. In another editorial on "The Year for Plantation Crops," he observes that 1956 will not be a record-maker for plantation crops, but it will be a fairly good year.

The *U.P.A.S.I. Supplement*, issued in connection with the 63rd annual conference of the United Plantation Association of South India, also contains some very instructive articles, besides the story of the U.P.A.S.I. which has rendered meritorious service to the plantation industry in South India for over six decades.

The special number devoted to cashew and pepper, two of the "unique products of the tropics," produced in Malabar, contains a mine of information on these two plantation crops.

The consent of the Government of India has been obtained to this issue by an order, a complete copy of which is available for public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of this Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration, such copy having attached to it :—

(i) the written consent of the Auditors mentioned herein to the issue of this Prospectus with their report included therein in the form and context in which it is so included;

(ii) a statement in writing signed by the Auditors as to the adjustments made by them in arriving at the profits and statement of assets and liabilities included in their report and giving their reasons therefor ; and

(iii) copies of contracts Nos. 1 to 12 mentioned herein under the heading "Contracts" or memoranda giving full particulars thereof.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Ordinary Shares of the Company.

The Subscription List will open at the commencement of Banking hours on the 7th day of November, 1956, and will close on the 14th day of November, 1956, or earlier or later at the discretion of the Directors.

GUEST, KEEN, WILLIAMS, LIMITED

(INCORPORATED ON THE 17TH DAY OF FEBRUARY, 1931, UNDER THE INDIAN COMPANIES ACT, 1913 AS HENRY WILLIAMS INDIA (1931) LIMITED, WHICH NAME WAS CHANGED TO GUEST, KEEN, WILLIAMS, LIMITED ON THE 19TH DAY OF DECEMBER 1934).

SHARE CAPITAL

AUTHORISED .. .. **Rs. 3,00,00,000/-**
Divided into 30,00,000 Shares of Rs. 10/- each

ISSUED, SUBSCRIBED AND PAID-UP .. .. **Rs. 1,41,06,000/-**
Divided into 14,10,600 Ordinary Shares of Rs. 10/- each fully paid

LOAN CAPITAL

The Company has no debentures or other loan capital outstanding but has Bank overdrafts secured by hypothecation of stock-in-trade.

ISSUE OF

5,89,400 Ordinary Shares of Rs. 10/- each fully paid at Rs. 20/- per share.

PAYABLE IN FULL ON APPLICATION.

Applications for Shares by members of the public must be for a minimum of 50 Shares or for multiples of 50 Shares.

The Company is advised that the Ordinary Shares now being issued are "Approved Investments" within Section 27A of the Insurance Act, 1938.

An interim dividend of 8 per cent. free of tax was declared on the 20th September, 1956, to shareholders at that date in respect of the Company's 52 weeks' financial period ending the 29th December, 1956. The Shares now being issued will rank for any further dividend that may be declared in respect of the said period and any subsequent financial periods and in all other respects *pari passu* with the Ordinary Shares of the Company already issued.

As the existing shareholders do not intend to apply for an allotment all the Shares now being issued will be available for allotment to the public save that 50,000 Shares of this issue are being reserved initially (without any obligation on the Company) for those employees who have a minimum of twelve months' service with the Company. Applications for Shares from such employees for a minimum of 10 Shares or for multiples of 10 Shares will be considered.

DIRECTORS :

REGINALD CATLOW, ESQ., "Kinburn," 11, Ramsdale Road, Bramhall, Cheshire, England. Industrialist, (*Chairman*).

HENRY MORTON LEECH WILLIAMS, ESQ., M.B.E., B.A., 24/4, Alipore Road, Calcutta-27. Engineer & Company Executive, (*Managing Director*).

JOHN FADE HEATLY, ESQ., 11/1, Burdwan Road, Calcutta-27. Company Executive.

KAILASH CHANDRA MAHINDRA, ESQ., "Mont Blanc," Dadyseth Hill, Bombay-26. Industrialist.

KRISHNA CHANDRA MAITRA, ESQ., "Rushilla," Carmichael Road, Cumballa Hill, Bombay-26. Industrialist.

WILLIAM MORRICE, ESQ., 4, Kings Court, Theatre Road, Calcutta-16. Company Executive, (*Secretary*).

SIR ARCOT RAMASWAMI MUDALIAR, K.C.S.I., D.C.L. (*Oxon*), 9, Lower Rawdon Street, Calcutta-16. Industrialist.

MADRAS: PATERSON & CO., 22, Errabalu Chetty Street, P.O. Box 48, Madras-1.

History and Business

The Company was incorporated in Bengal on the 17th February 1931 as a Private Limited Company under the name HENRY WILLIAMS INDIA (1931) LTD. and was formed, *inter alia*, with the object of acquiring and carrying on the business of HENRY WILLIAMS (INDIA), LIMITED, an earlier Company incorporated in Bengal in the year 1922, which founded the Company's manufacturing Works at Calcutta. The other main objects of the Company will be found set out below in this Prospectus. The change to the Company's present name was made on the 19th December, 1934 consequent upon the purchase of a large interest by GUEST, KEEN & NETTLEFOLDS, LTD., of Birmingham, England.

On the 4th December, 1948 GUEST, KEEN & NETTLEFOLDS, LTD., purchased from the other shareholders their interests in the Company, thus becoming the sole owners. On the 29th January, 1953, the Company formed a wholly owned Subsidiary, NETTLEFOLDS OF INDIA PRIVATE LTD., incorporated under the Indian Companies Act, 1913 for the purpose of connecting the name "NETTLEFOLDS" with the Company's project for manufacturing wood screws and kindred fastenings in India. This Subsidiary as well as the Company has the right to use wood screw and kindred trade marks and labels, including the name "Nettlefolds," which is famous throughout the world for these products, under user agreements with the proprietors. The Company has also entered into a user agreement with George Goodman Ltd., of Birmingham, England in respect of the latter's trade mark and labels relating to safety-pins and kindred products manufactured by the Company in India. The Company has also entered into an Agreement with Exors. of James Mills Limited of Stockport, England, whereby the Company is permitted to manufacture in India under Licence certain products including railway permanent way fittings under Trade Marks and Patents belonging to Exors. of James Mills Limited, in consideration of which the Company pays a royalty based on the selling price of the products subject to a minimum payment of £500-0-0*d.* per annum. The said Agreements contain provisions whereby the user of the Trade Marks undertakes that the goods to be manufactured shall be up to specification and that the Owner of the Trade Marks shall have a right of access to the place where the goods are manufactured for the purpose of inspecting all stages of manufacture.

The Company and its predecessors have always laid emphasis on the specialised lines of engineering and in particular those pertaining to Railways. The fulfilment of orders received from the Railways has always constituted a large part of the Company's activities. The Company is one of the pioneers in India of rolling special sections used in the manufacture of springs for which business it continues to execute a very substantial part of the country's needs. In addition the range of manufactures includes Baling buckles for the Jute Industry, and, of more recent years, grinding media for the Cement Industry and a growing variety of Forgings for the Automobile Industry. Railway Points and Crossings, Permanent Way Fittings, Signal Fittings and Rolling Stock components are all made at the Calcutta Works, which is in the advantageous position of having its own Rolling Mills and Furnace Plant for making special and alloy steels. For nearly 30 years the Company has been the largest single producer in India of Steel Railway Sleepers, and its Bolt and Nut Department is by far the largest Bolt and Nut unit in India.

The Bhandup Works which commenced manufacturing in September, 1953 ir now the largest producer in the country of high-class Steel and Brass Wood Screws. As additional lines this Works started manufacturing Safety Pins in the latter half of 1954, Cotter Pins in the first half of 1955, Hypodermic Needles in January 1956, Tinmen's Rivets in June, 1956 and Metal-thread Screws in July, 1956. These products of the Bhandup Works are marketed and distributed throughout India by Nettlefolds of India Private Ltd.

The Company specialises in Mechanical Engineering and also has a valuable Agency section importing and selling a wide range of mechanical and electrical products of the following well-known overseas manufacturers:—

Associated Locomotive Equipment Ltd., London, England	Locomotive Poppet Valve Gear.
William Beardmore & Co., Ltd., Glasgow, Scotland	Wheels and Axles, Locomotive Crank Axles, Heavy Steel Castings, Forged Steel Rolls, Miscellaneous Forgings, etc.
Beyer Peacock & Co., Ltd., London, England	Railway Locomotives.
British Rollmakers Corporation Ltd., Crewe, England	Rolls and Rollers for Rolling Mills and for the Paper, Rubber and other Industries.
Bruce Peebles & Co., Ltd., Edinburgh, Scotland	Electric Motors, Generators, Transformers, Rectifiers, Convertors, etc.
Cowans Sheldon & Co., Ltd., Carlisle, England	Loco Breakdown Cranes, Overhead Cranes, Dock Cranes, Turntables, etc.
Crompton Parkinson, Ltd., London, England	Stud Welding Equipment.
Drabble & Sanderson Ltd., Sheffield, England	Woodworking Equipment, Tools, etc.
Drewry Car Co., Ltd., London, England	Diesel Locomotives and Rail Cars.
Exors. of James Mills, Ltd., Stockport, England	Bright Drawn Bars and Wire, Ledloy Steel Bars, Bright Steel Taper Pins, Cotters, Machine Keys, Grooved Pins and Studs, Shakeproof Lock Washers, etc.
Guest, Keen & Nettlefolds (Midlands) Ltd., Birmingham and Darlaston, England.	N. P. K. Self-Tapping Screws, Special Bolts, Nuts, Machine Screws and a wide range of other fastenings.
Guest, Keen & Nettlefolds (South Wales) Ltd., Cardiff, Wales	Hot and Cold Rolled Steel Strip, Steel Rod and Wire.
Hauck Manufacturing Co., Brooklyn, U.S.A.	Oil Burners, Flame Guns and Torches.
Henry Williams Ltd., Darlington, England	Railway Track and Signalling Equipment.
Manganese Bronze and Brass Co., Ltd., Ipswich, England	Bronze, Brass, White Metal, and "Oilite" Self-Lubricating Bronze Bearings.
Mills Scaffold Co., Ltd., London, England	Tubular Scaffolding and fittings, Prefabricated Tubular Steel Structurals, Racking, Grandstands, etc.
Murex Limited, Rainham, England	"Thermit" Welding of Rails.
Murex Welding Processes Ltd., Herts, England	Electrodes, Welding Plant and Accessories.
M. & C. Switchgear, Ltd., Glasgow, Scotland	Switchgear up to 3.3 K.V. Automatic A.C. Control Gear, etc.
P. & M. Co. (England) Ltd., London, England	Rail Anchors, Rail Lubricators, Switch Point Protectors, Rail Benders, Hydraulic Track Jacks.
Shaw Son & Greenhalgh, Ltd., Huddersfield, England	Boiler Fittings, High Pressure Valves, etc.
Somerset Wire Co., Ltd., Somerset, England	High Tensile Steel Wire.
Thomas White & Co., Ltd., Paisley, Scotland	Woodworking Machinery.
Turton Bros. & Matthews Ltd., Sheffield, England	High Speed Steel, Tool Steel, Twist Drills, Spiral and Volute Springs and Metal Working Tools.
"Twisteel" Reinforcement Ltd., Smethwick, England	Reinforcing Fabric and Bars for Concrete.
Tyer & Co., Ltd., Dalston, London, England	Railway Electrical and Mechanical Signalling Instruments, etc.
United Wire Works (Birmingham) Ltd., England	Non-ferrous Rod and Wire.
Uskside Engineering Co., Ltd., Newport (Mon.), Wales	Mining Machinery, Bollard and Sinking Capstans, Ram Pumps, Haulage Gear, Winders, Flexible Couplings, etc.

Land, Premises and Plant

The Company has its main office at Calcutta, offices at Bombay, Madras, New Delhi and at London, England, and manufacturing works at Bhandup near Bombay and at Calcutta.

The Calcutta Works is situated at Shalimar, Howrah, West Bengal, on two sites owned by the Company each of which is within its own ring fence, the older site containing an area of approximately 33 acres and a site recently acquired for future development containing an area of approximately 11 acres. The two sites are joined by railway sidings and are readily accessible to Andul Road. Erected on this land is a modern, well-equipped, manufacturing works with a covered floor area totalling approximately 6,21,000 sq. ft. The Works is well served by internal railway sidings, adequate to handle incoming raw materials and outgoing finished goods. Ample water is available from deep tube-wells and surface tanks. The Plant and Machinery is well maintained in efficient condition and at the 31st December, 1955, the written down book value of the fixed assets pertaining to the Calcutta Works was Rs. 1,03,93,006.

The Bhandup Works, approximately 18 miles from Bombay on the main Agra Road, is served by its own siding from the Central Railway. The property on which the Works are situated comprises a residential area of approximately 15 acres on the West side of the Agra Road, and an industrial area of approximately 53 acres on the East side of the Agra Road, which latter accommodates the Works proper. Approximately 13 acres of the industrial area are rented on a 50 years lease to Sankey Electrical Stampings Private Ltd. The industrial area has its own electric generating station; water is taken both from the mains supply and from wells on the Estate. This works has a covered floor area of approximately 70,000 sq. ft. and all the Plant and Machinery has only recently been installed and is well maintained in efficient condition; at the 31st December, 1955, the written down book value of the fixed assets pertaining to the Bhandup Estate was Rs. 45,59,276.

The Company's Head Office at Calcutta is held on lease, and a written undertaking has been received for an extension of this lease until the 30th June, 1979. The offices at Bombay, Madras, New Delhi and at London, England, are all held under tenancy agreements on reasonable terms.

Management and Staff

Of the Directors, the Chairman, Mr. R. Catlow, has for most of his working life been connected with GUEST, KEEN & NETTLEFOLDS, LTD., England, and has, since August, 1952, been a member of the Board of that Company. There are four full-time Working Directors, all of whom have been in the employment of the Company for many years either as executives or Directors and have considerable practical experi-

ence as engineers and commercial men, as well as holding technical qualifications. There are three non-executive Directors in India, who have recently joined the Board, whose experience and guidance will form a valuable contribution to the efficient running of the Company.

The Managing Director and the three other full-time Directors are responsible for the day to day running of the business, and they are ably assisted by experienced officials, many of whom have spent most of their working lives with the Company.

The total number of employees of the Company including the management, staff and operatives employed at Calcutta and Bhandup Works is approximately 5,850. The Company has been operating and will continue to operate recruitment and training schemes for its employees both in India and overseas, which it anticipates will continue to provide and train executives and operatives for its requirements. The efficiency and continuity of management at all levels are maintained by the Company's long-standing practice of promotion wherever possible from within the organisation. Labour relations have, on the whole, been very satisfactory and there is reason to hope that they will continue to be so. Opportunities are assured by the Company's technical and commercial training policy for the promotion of Indian Nationals in the management of the affairs of the business, and additional requirements of technicians are supplemented by imported staff with specialised qualifications.

Development

At the Calcutta Works the extensions and modernisation, begun in 1954, of the Bolt and Nut Cold Forging Department are now substantially completed, and the modernisation of the Bolt and Nut Hot Forging Department has already commenced. The modernisation and extension of the Forging Plant and machining capacity for the Railway Permanent Way and Rolling Stock fittings requirements are now being embarked upon. In addition, plans are being made for a greatly increased output of the special steel sleepers required for railway points and crossings. To keep pace with the modernisation of the fabricating departments, and to ensure a satisfactory supply of bars, rods and special sections to these departments, modernisation and expansion of the Rolling Mills at the Company's Calcutta Works are now in progress. In addition to meeting the needs of the Calcutta and Bhandup Works this development provides not only for the growing requirements of spring steel bars and special sections for the Company's outside customers, but also for further potential capacity to take up additional supplies of steel semis as and when they become available under the Government programme for the development of the Steel Industry. Another development linked with the Rolling Mill expansion is the installation of a second Electric Steel Melting Furnace to provide special and alloy steels, which will increase the existing capacity from 6,000 tons to 12,000 tons per annum. It is expected that the new Electric Steel Melting Furnace will begin operating during the year 1957. It is also expected that the initial stages of the Rolling Mill expansion scheme will come into production at the end of the year 1958 and that its subsequent stages will be implemented by the end of the year 1959. It will be seen therefore that the cost of this expansion programme will be spread over some four years.

The Rolling Mill and the Steel Furnace expansion schemes have been approved by the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/4/75/55 dated the 3rd December, 1955, for the manufacture of bars and rods has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it. A Licence (No. L/4/72/55 dated the 12th November, 1955, for the manufacture of special steels including spring steel and alloy steel) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Company is also developing at its Calcutta Works the manufacture of Tungsten-Carbide for Drawing Dies and Rock Drill Bits, for which latter there is a growing demand for use in the construction of the Country's River Valley Projects and quarrying generally.

A further development is the manufacture of steel Road Wheels for pneumatic tyre equipment, plans for which have been drawn up. It is proposed, in the first instance to manufacture only wheels for Animal Drawn Vehicles but later on for Motor Cars.

In their letter Ref. No. 11 (85) IA (LA)/55 dated 5th June, 1956, the Government of India informed the Company that the manufacture of Animal Drawn Vehicle Wheels is not governed by the Industries Act and that the Company is not required to obtain a Licence for this purpose. The manufacture of Motor Car Wheels has received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/11/36/56 dated 19th June, 1956, for effecting a substantial expansion to this industrial undertaking for the manufacture of Motor Car Wheels) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

To augment existing service facilities for the production departments a new Tool Room and Machine Repair Department are being built and equipped with the latest precision machinery.

At the Company's Bhandup Works a considerable expansion in the productive capacity of wood screws is almost completed and the resultant increase in production is already being experienced; at the same time this Works is now manufacturing Metal-thread Screws and Tinmen's Rivets, Cotter Pins and Hypodermic Needles as new lines. These developments have all received the approval of the Government of India under the Industries (Development and Regulation) Act, 1951, and the Registration and Licensing of Industrial Undertakings Rules, 1952, as follows:—

A Licence (No. L/4/70/55 dated the 29th October, 1955, for effecting a substantial expansion to the existing undertaking for the manufacture of wood screws) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A Licence (No. L/4/48/55 dated the 29th April, 1955, for the manufacture at Bhandup, Bombay, of metal-thread screws of smaller sizes and small rivets including tinmen's) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The following schemes not being classed as "Scheduled Industries" under the said Act have received the approval of the Government of India as follows:—

Approval for the scheme to manufacture Safety-pins was given by the Ministry of Commerce and Industry letter ref: No. E. I. 47(2)/53 dated the 6th March, 1953, and approval for doubling the capacity was given by the Ministry of Commerce and Industry letter ref: No. E. I. 47(2)/53-G. I. dated the 25th August, 1955.

Approval for the manufacture of Wire goods.—Screw Hooks, Eyes, Cotter Pins and Gate Hooks was given in the Ministry of Commerce and Industry letter ref: No. Eng. Ind. 34/(32)/53 dated the 14th September, 1953, and approval for substantial expansion of production was given in the Ministry of Commerce and Industry letter ref: No. G. Ind. 37(5)/55 dated the 23rd April, 1956.

Approval for the manufacture of Hypodermic and Serum Needles was given by the Ministry of Commerce and Industry letter ref: No. Eng. Ind. 45(3)/54 dated the 27th April, 1954.

It is expected that the expenditure on these aforementioned projects together with normal replacement of fixed assets during the next four years will be between four and five crores of rupees, a part of which will be provided out of the proceeds of this Issue, and the Directors expect to be able to finance the balance of this expenditure out of future earnings and resources which may become available from time to time.

Objects of Issue

The objects of this new Issue are to enable the Company to expand its production, to enlarge the scope and range of its activities, to provide additional working capital and to afford an opportunity for the participation of Indian Capital.

The Company was converted into a Public Company on the 22nd October, 1956.

FINANCIAL INFORMATION

Auditors' Report

The following is a copy of the Report of the Company's Auditors, Messrs. Price Waterhouse Peat & Co., Chartered Accountants,

The Directors,
MESSRS. GUEST, KEEN, WILLIAMS, LTD., 41, CHOWRINGHEE ROAD, CALCUTTA-16.

B-4, CLIVE BUILDINGS,
CALCUTTA-1.
22nd October 1956.

DEAR SIRS,

We have examined the books and accounts of GUEST, KEEN, WILLIAMS, LTD., as kept in Calcutta in which are incorporated the certified returns from the Calcutta Works, Bhandup Works (which started production in 1953) and Bombay and Madras Branches for the five years ended 31st December, 1955 and the books and accounts of NETTLEFOLDS OF INDIA PRIVATE LTD., a wholly owned subsidiary company of GUEST, KEEN, WILLIAMS, LTD., as kept in Bombay for the period from 29th January, 1953 to 31st December, 1955 and report that the profits or losses of the Companies are as set forth. These profits or losses have been arrived at after charging all expenses of working, management and consultant's fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

No dividend has been declared by Nettlefolds of India Private Ltd., since the date of its incorporation on 29th January, 1953.

Yours faithfully,
PRICE WATERHOUSE PEAT & CO.

Profits and Prospects

The period covered by the Auditors' Report includes the five years to the 31st December, 1955. The profits for the 52 weeks ended the 29th December, 1951, were exceptional for that time and marked the end of the post-war boom. The profits for the 53 weeks ended the 3rd January, 1953, reflected a definite change to a buyers' market and falling off in customers' requirements which continued for the greater part of the 52 weeks ended the 2nd January. 1954, and was caused mainly by the holding off by Government of its normal purchases of railway requirements. This was general in the Engineering Industry at that time but particularly affected the Company's Steel Railway Sleeper Department which had to close down due to the absence of any orders whatsoever. The profits for the 52 weeks ended the 1st January, 1955, reflected a return to better trading conditions and were assisted by the earnings of the new Wood Screw Department at Bhandup Works and the first Steel Furnace at the Calcutta Works. The period ended the 31st December, 1955, showed further improvement in earnings, mainly assisted by the Company's progressive plant development and modernisation coupled with a continued rising demand from customers. The trading so far this year shows continued improvement and this together with the state of the Order Book leads the Directors to believe that (in the absence of circumstances beyond their control) with the additional finance now to be made available to the Company, and with the Company's various development schemes gradually coming to fruition, profits of current and future financial periods will show an increase consistent with the growth of the Company.

STATUTORY AND GENERAL INFORMATION

Minimum Subscription

(a) The minimum amount which in the opinion of the Directors is required to be provided in respect of each of the matters mentioned in clause 5, part 1 of Schedule II of the Companies Act, 1956, is Rs. 95,00,000, made up as follows:—

	Rs.
(i) Cash purchase price of property purchased or to be purchased	71,75,000
(ii) Expenses of this Issue ...	3,25,000
(iii) Re-payment of monies borrowed in respect of the foregoing matters	Nil
(iv) Additional Working Capital (being the balance)	20,00,000

(b) The amounts to be provided over the next four years in respect of the matters aforesaid otherwise than out of the proceeds of this Issue are estimated to be Rs. 3,78,25,000 and will be provided out of such facilities as may be available to the Company from time to time.

Underwriting

The Shares now intended to be issued have not been underwritten but the Company will pay brokerage as indicated below.

Contracts

The following contracts, not being contracts in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:—

(1) Dated the 5th October, 1955, between the Company and P. & M. Company (England) Ltd., whereby the former Company is given the sole right to manufacture in India under Licence and distribute certain products including Rail Anchors under Trade Marks and Patents belonging to the latter.

(2) Dated the 28th September, 1956, between the Company and Jardine Henderson. Limited, appointing the latter Registrars and Share Transfer Agents to the Company for a period of five years.

(3) Dated the 1st January, 1956, between the Company and Henry Morton Leech Williams appointing the latter Managing Director of the Company for a period of five years at a salary of Rs. 6,000 per month and such other benefits, privileges and amenities granted to Senior Staff by the Board of Directors. In addition Mr. H. M. L. Williams is paid a commission of 1 per cent. of the net profits of the Company.

(4) Dated the 16th November. 1955, between Guest, Keen & Nettlefolds, Ltd., of the first part, Guest, Keen & Nettlefolds (Midlands) Ltd., of the second part and the Company of the third part, for registration of the latter Company as registered user under the Trade Marks Act, 1940 of certain Trade Marks relating to wood screws and kindred products.

(5) Dated the 9th March, 1956, between Guest, Keen & Nettlefolds (Midlands) Ltd., and the Company's wholly owned subsidiary, Nettlefolds of India Private Ltd., for registration of the latter Company as registered user under the Trade Marks Act, 1940 of certain Trade Marks relating to wood screws and kindred products.

(6) Dated the 20th September, 1956. between the Company and Sankey Electrical Stampings Private Ltd., whereby the former Company leased to the latter certain pieces or parcels of land situate at Bhandup near Bombay together with several structures, buildings, and erections standing thereon and other rights and liberties appertaining thereto for a period of fifty years commencing from 1st January, 1956, at a monthly rental of Rs. 1,641-7-0.

(7) Dated the 13th April. 1955, between the Governor of West Bengal of the first part, the Administrator, Howrah Municipality, of the second part and the Company of the third part, whereby the Governor agreed to sell (the Administrator confirming) and the Company agreed to purchase certain pieces or parcels of land containing an area of approximately 33 Bighas, 5 Cottahs and 8 Chittacks for expanding the Company's Calcutta Works, for the sum of Rs. 5,32.400. The purchase price has since been paid by the Company and the property conveyed to it by a Conveyance dated the 24th August, 1955.

(8) On 9th July, 1956, an order on the Brightside Foundry & Engineering Co., Ltd., Sheffield, England. for the supply of Rolling Mill Equipment the cost of which is estimated to be £876,240 (Rs. 1,16,83,200).

(9) On 25th January, 1956, an order on G. W. B. Furnaces Ltd., Dudley, Worcs., England, for the supply of one Tagliaferri Electric Furnace the cost of which is estimated to be £30,492 (Rs. 4,06,560).

(10) Various orders numbered 10/1 to 10/7 dated 10th October, 1956, on various suppliers for the supply of Wheel-making Equipment. The cost of these orders is estimated to be £40,533 (Rs. 5,40,440).

(11) Various orders numbered 11/1 to 11/6 dated between 30th May, 1955 and 7th July, 1956, on Guest, Keen & Nettlefolds (Midlands) Ltd., for the supply of Plant & Machinery the cost of which is estimated to be Rs. 18,38,374.

(12) Various orders numbered 12/1 to 12/17 dated between 21st February, 1955 and 3rd September, 1956, on various contractors and suppliers for the supply and erection of Buildings, Plant and Machinery and Equipment, the total cost of which is estimated to be Rs. 35,65,510.

Redeemable Preference Shares

The Company has not within the two years preceding the date hereof issued and it does not at present intend to issue any Redeemable Preference Shares.

Other Previous Issues

No Shares or Debentures have been issued or agreed to be issued within the two years preceding the date hereof either for cash or as fully or partly paid up otherwise than in cash.

Commission

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any Shares in or Debentures of the Company or as discount in respect of Shares issued.

Payment to Promoter

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

Option to Subscribe

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any Shares in or Debentures of the Company.

Purchase of Property

Save as respects property purchased or acquired or to be purchased or acquired under Contracts being Item Nos. 7 to 12 referred to above under the heading "Contracts", any property which the Company has purchased or acquired or proposes to purchase or acquire which is to be paid for out of the proceeds of the present issue or the purchase or acquisition of which has not been completed at the date of the issue of this Prospectus, is property—

(a) the contract for the purchase or acquisition whereof has been entered into in the ordinary course of the business of the Company, the contract not being made in contemplation of this issue or this issue in consequence of the contract; or

(b) as respects which the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under Contract Nos. 7 to 12 aforesaid has vested or will vest absolutely in the Company and there have been no other transactions relating to such property within the two years preceding the date of this Prospectus.

Miscellaneous

The fixed assets of the Company were revalued in the year 1946 and as a result of such revaluation the value of the said assets was increased from Rs. 30,47,417 to Rs. 1,26 01,826 the difference of Rs. 95,54,409 being credited to Capital Reserve Account. On 29th August, 1947, the Company issued 11,75,500 fully paid Bonus Shares of Rs. 10 each by capitalising the sum of Rs. 1.17,55,000 standing to the credit of Capital Reserve Account which was made up of the aforementioned amount of appreciation in the value of fixed assets together with a further sum of Rs. 22,00,591 transferred from General Reserve Account during the year 1947.

Directors

The Articles of Association of the Company provide that:—

The number of Directors shall not be less than three nor (unless otherwise determined by the Company in General Meeting) more than nine. The Consultant (see reference below) has the right to appoint up to one-third of the total number of Directors and to nominate the Chairman. A Director does not require any share qualification. Each of the Directors of the Company shall (unless otherwise determined by the Company in General Meeting) be paid out of the funds of the Company as remuneration for his services as a Director the sum of Rs. 200 in respect of each Meeting of the Directors which he attends. If any Director being willing shall be called upon to perform extra services or to make any special exertions in going or residing away from his usual place of business or residence for any of the purposes of the Company, or in giving special attention to the business of the Company as a member of a Committee of Directors, the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his share in the remuneration from time to time provided for the Directors. The Articles provide that the business of the Company shall be managed by the Directors who may exercise all such powers of the Company as are not by law or by the Articles required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations which may be made by the Company in General Meeting not being inconsistent with the Articles or the provisions of any law.

Interest of Directors

Mr. H. M. L. Williams is the Managing Director of the Company and receives remuneration for his services as such.

Mr. J. F. Heatly, Mr. W. E. Murphy and Mr. W. Morrice are salaried employees of the Company and in addition together share a commission totalling 1¼ per cent. of the net profits of the Company.

Mr. R. Catlow, Mr. H. M. L. Williams and Mr. J. F. Heatly are shareholders (each holding less than one-tenth of 1 per cent. of the issued capital) of GUEST, KEEN & NETTLEFOLDS, LTD., the principal shareholders of this Company. Mr. H. M. L. Williams and Mr. J. F. Heatly are also Directors of NETTLEFOLDS OF INDIA PRIVATE LTD., the wholly owned Subsidiary referred to above. Save as above no Director has any financial or other interest in any of the property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it.

Indemnity

The Articles provide that every Director, Manager or Officer of the Company or any person employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgment is given in his favour, or in which he is acquitted or in connection with any application in which relief is granted to him by the Court.

Management

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Consultant

Guest, Keen & Nettlefolds, Ltd., a Company incorporated in England was appointed the Technical Consultant of the Company by virtue of an Agreement dated the 17th September, 1948, effective from the 1st January, 1948, and terminating on the 31st December, 1967. In accordance with the terms of the said Agreement, *inter alia*, the Consultant undertook to furnish the Company with technical assistance in regard to manufacture and details of plant processes and methods for the production of engineering products (other than wood screws and their kindred products which are the subject of separate user Agreements with the Company and with the Company's wholly owned subsidiary). Furthermore, the Consultant undertook to lend to the Company technical instructors and advisers and to advise the Company of any patent invention development process or manufacturing improvement and the results of any research carried out by the Consultant relevant to the manufactures of the Company from time to time. In addition the Consultant agreed to afford overseas technical training for the Company's employees. The overseas training has extended from training Indian Officers at the highest level at an Administrative Staff College in England to courses for Works Junior Supervisory Staff on specialised machines at the various works of Guest, Keen and Nettlefolds, Ltd., in the United Kingdom. All these facilities will still be fully available to the Company and the Company relies on them for its continued technical development. For the services to be rendered pursuant to the said Agreement which have undoubtedly been of great benefit in the past and and which the Directors consider essential for the future prosperity and expeditious development of the Company, the Consultant receives a remuneration of twelve and a half per cent. of the profits of the Company with an assured minimum of £30,000 per annum and a fixed royalty of £2,000 per annum. The Consultant in accordance with its rights under the Agreement is entitled to appoint and has appointed two Directors. The Directors so appointed are ex-officio Directors and are not subject to retirement by rotation. By an Agreement dated the 30th May, 1950 between the same parties as are parties to the said Agreement dated the 17th September, 1948, the Company has agreed to accept performance of the obligations contained in the last mentioned Agreement by G. K. N. Group Services Ltd., a wholly owned subsidiary of Guest, Keen & Nettlefolds, Ltd.

Borrowing Powers

The Articles provide that the Directors may from time to time raise or borrow any sum or sums of money for the purposes of the Company and may secure the repayment of any sum or sums of money so borrowed in such manner and upon such terms and conditions in all respects as they think fit. The Directors' borrowing powers are now limited by Section 293 (1) (d) of the Companies Act, 1956.

Voting Powers

The Articles provide that, subject to any special rights or restrictions affecting any particular class of shares, on a show of hands every member present in person or by proxy shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him. There are no special rights or restrictions attaching to the present Ordinary Share Capital of the Company.

Restrictions on the right to transfer and vote

The Articles provide that the Directors may decline to register any transfer of shares upon which the Company has a lien, and in the case of shares not fully paid up may refuse to register a transfer to a transferee of whom they do not approve. No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

Auditors' Consent

Messrs. Price Waterhouse Peat & Co., have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report, set out above, in the form and context in which it is included.

Main Objects

The Main Objects of the Company, as set out in sub-clauses (a), (b) and (c) of Clause 3 of its Memorandum of Association are as follows:—

(a) To acquire and take over as a going concern the undertaking and certain assets of Henry Williams (India), Limited, and with a view thereto to enter into and carry into effect, with or without modifications or alterations as may be agreed upon, whether before or after the execution thereof, an agreement already prepared and expressed to be made between Henry Williams (India), Limited, and the Liquidators thereof of the one part and the Company of the other part, a draft whereof has been subscribed with a view to identification by A. H. Bishop, a Director of the Company.

(b) To carry on the business of iron-founders, mechanical and railway engineers, and manufacturers of railway appliances, agricultural implements and other machinery, toolmakers, brass-founders, metal-workers, boiler-makers, mill-wrights, colliery owners, ship owners and ship-builders, machinists, iron and steel converters, smiths, wood-workers, builders, painters, metallurgists, electrical engineers, water supply engineers, gas-makers, farmers, printers, carriers, and merchants, and to buy, sell, manufacture, repair, convert, alter, let on hire, and deal in machinery, implements, rolling-stock, and hardware of all kinds, and to carry on any other business (manufacturing or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above, or otherwise calculated, directly or indirectly, to enhance the value of any of the Company's property and rights for the time being.

(c) To carry on any business relating to the winning and working of coal and other minerals, the production and working of metals, and the production, manufacture, and preparation of any other materials which may be usefully or conveniently combined with the engineering or manufacturing business of the Company, or any contracts undertaken by the Company, and either for the purpose only of such contracts or as an independent business.

Documents

Copies of the Memorandum and Articles of Association of the Company, the Consent Order of the Controller of Capital Issues, the Licences issued by the Central Government referred to above, the Contracts referred to above as being material contracts and/or copies thereof, the above-mentioned Auditors' Report and copies of the balance sheets and profit and loss accounts upon which the Report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the subscription list closes whichever is earlier.

Copies of the material contracts specified above or memoranda giving full particulars thereof and the consent of Messrs. Price Waterhouse Peat & Co., were attached to the copy of this Prospectus delivered to the Registrar of Companies, West Bengal, for registration.

Application and Allotment

Applications for shares which must be for 50 shares, or multiples of 50 shares (10 shares in the case of applications from employees) must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to the Brokers or a Branch of the National Bank of India Ltd., in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of Bank charges must be drawn either upon a branch of the National Bank of India Ltd., in India, to which the application form and cheque or draft are being sent, or upon a Bank situated in a town in which there is a branch of the National Bank of India Ltd. If drawn upon a Bank elsewhere the appropriate bank charges must be included in the remittance otherwise the application will be refused.

Cheques or Drafts should be made payable to the "National Bank of India Ltd., Account Guest, Keen, Williams, Ltd., New Issue," and should, for the applicants' protection be crossed "A/c Payee only." A separate cheque or draft must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full the whole or any balance of the application money received will be refunded to the applicant, in which event Bank's commission, if any, will be payable by the applicant.

Share Certificates will be available for issue in exchange for Letters of Allotment on and after 15th March, 1957, and each applicant who is allotted more than 100 shares will receive Share Certificates in lots of 100 shares, and such smaller denominations as may be required to complete the total number of shares allotted except when the applicants request Share Certificates in larger denominations.

Brokerage

Brokerage at the rate of 4 annas per Ordinary Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker.

Copies of this Prospectus and forms of application may be obtained from the Brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

NEED FOR MORE ENERGETIC FLOOD CONTROL MEASURES

CATTLE INSURANCE SHOULD RECEIVE TOP PRIORITY

THIS year, as in the last and in 1954, India has suffered heavily from floods. Although firm estimates of the total loss cannot be framed at present, it is known that large floods have occurred in Assam, Bihar, U.P., West Bengal, Punjab, Rajasthan, Travancore-Cochin, Bombay, Himachal Pradesh and Madras. A peculiar feature of this year's floods is that they have occurred even in areas which normally enjoy relative immunity from extensive flood damage. Again, in previous years, it was the tributaries of the Ganga which caused considerable damage, whereas, this year, the main river itself has been responsible for destruction of crops and property along its banks. Yet another feature of the floods this year is that they started occurring much earlier than in previous years.

Unofficial estimates place the loss in Uttar Pradesh alone at more than Rs. 12 crores, whereas the loss in Bihar is estimated at Rs. 6 crores. Paddy and sugarcane are among the crops which have suffered from flood damage. If these figures are any indication, it looks as though the losses this year, when they are finally assessed, may be more than what the country suffered in 1955. Last year, the total direct damage, including relief expenditure, was estimated at Rs. 107 crores. Surely, all this represents a colossal waste of national resources, not to speak of the human suffering involved in flood damage.

Realising the immensity of the loss caused by floods, the Government constituted, in 1954, the Central Flood Control Board. Four river commissions were also constituted, one each for the Ganga, the Brahmaputra, the north-west rivers and the central Indian rivers. A tentative programme of works was prepared and a total provision of about Rs. 16.5 crores was made; actual expenditure during the period of the First Plan has been estimated at Rs. 8 crores.

No Isolated Measure

Control of floods is not, of course, just one isolated measure. It means essentially several measures—all designed to control floods when they occur. Such a systematic programme will include construction of embankments, storage reservoirs and detention basins, diversion of water from one river to another, increasing the slope in the river, dredging and channelling river reaches, building of local protection works such as revetments and spurs, afforestation and contour building. A provision of Rs. 60 crores is made in the Second Plan for flood control measures. The Ministry of Irrigation and Power has drawn up a programme of flood control, estimated to cost Rs. 175 crores and to be spread over 10-12 years. The programme, it is stated, will be implemented in three stages:

Immediate: This will cover investigation, and preparation of plans and estimates. Revetments, spurs and embankments may be constructed in selected localities.

Short-term: During this phase, embankment and channel improvement will be undertaken. This type of protection will apply to a major portion of the areas subject to floods.

Long-term: This phase will cover construction of storage reservoirs on rivers and tributaries which will in general be taken up along with irrigation and power projects for multi-purpose development of the basin.

A brief review of the progress of the work in the above programme was recently given by the Union Minister for Irrigation and Power, in the Lok Sabha. The "immediate" stage of the programme, it is stated, has been completed. As regards investigations, the work compressed within the last two years, according to Mr. Nanda, might have ordinarily taken three to four times this period. Aerial photography has been completed in respect of 43,000 square miles in addition to 16,000 square miles of tertiary levelling, as against the target of 43,400 and 18,100 square miles respectively. Big strides have been made in the matter of hydrological observations. There were practically no silt observations prior to 1941 in many of the major river systems. Rain-gauge stations were few. There were only about 800 discharge stations in the country's entire river system. Since 1954, the authorities have been able to set up as many as 32 silt observation stations on the Brahmaputra and its tributaries. 59 rain-gauge stations and 281 additional gauge discharge stations. The investigation organisations at the Centre and in the States were geared up so that as many as 69 major schemes have been investigated and submitted for sanction by the various States.

So far as construction is concerned, important local town protection works have been completed, the level of 1,400 village sites has been raised and more than a thousand miles of embankments have been prepared. This represents a quantum of work not done in the past in the course of many years. Implementation of these emergent schemes has meant protection to an area of 4,800 square miles in Uttar Pradesh, Bihar, West Bengal and Assam with a population of approximately 50 lakhs. Advance has been made in research and experiment also. Extensive hydraulic model tests have been employed in connection with the flood problem. Work models on a scale far larger than ever attempted in the country have been set up for Dibrugarh, Kosi and other works. In the matter of designs for projects on some of the difficult rivers, the work of the engineers has been eminently successful. Dibrugarh, Kosi and other similar works, it is claimed, bear testimony to this.

Delhi's Ordeal

Delhi too has had to face the threat of floods this year. Much commendable work has been done by the Army in fighting the floods. The Central Water and Power Commission is stated to be considering flood control measures for the protection of Delhi and its suburbs. The experience gained in this year's unprecedented floods in the Yamuna has brought out the fact that it is necessary to make some provision for proper training works upstream in order to ensure an even flow of flood water through all the spans of the bridge. During the peak period of this year's flood, it was observed that the passage of the bulk of the flood water was concentrated only through three or four spans of the bridge out of a total of 12 as the direction of the current was oblique. The flood protection scheme partially executed last year below the Delhi Power House was successful in preventing erosion on the right bank of the Yamuna and saving the railway line to the power house. The scheme, according to the plans prepared by the Central Water and Power Commission, involves the construction of 14 spurs, perpendicular to the bank with revetment on the upstream face for about a mile. The three spurs completed so far, it is stated, were effective in diverting the current of the river from the bank.

All this is certainly encouraging. But does it really amount to a great deal? The Government once promised that it would place flood control on a war footing. The question is whether it is being conducted on such a footing. Government spokesmen are apt to quote the American experience in extenuation of their relatively less vigorous programme of action. It has been pointed out, for instance, that even a country like the U.S., which has invested $5,000 million on flood control measures, has not been free from ravages through floods and that, last year alone, this country suffered damage of $600 million and loss of 279 human lives. But what is ignored in this calculation is that the damage might have been more extensive if the American authorities had not carried out these protective measures. Again, the U.S. farmer has other means, such as a more extensive social security system and a price-support programme, whereby he is able to maintain himself in reasonable comfort even in years when his crops and animals are damaged. The Indian farmer does not enjoy such privileges. The need for protection against the ravages of nature is much more urgent for the Indian farmer than for the American. It has also been contended that floods bring rich sediment and enable the farmers to reap bumper harvests in subsequent years. But such incidental advantages, apart from the fact that they are confined only to a few regions, do not make up for the total loss caused by floods.

The immensity of the loss suffered by the country from floods will be evident from the fact that the damage caused by these in the last six years has been estimated at Rs. 237 crores, besides Rs. 45 crores spent on providing relief to flood-affected victims. Instead of spending large sums on *ad hoc* relief programmes, which are becoming an annual feature anyway, the Government will be well advised to implement the flood-control programmes even more vigorously than it has done so far, and also consider without delay the question of initiating crop and cattle insurance in rural areas. Such insurance schemes deserve to be taken up in right earnest, because they will impart a certain element of security to rural economy which is now exposed to the perils of droughts and floods.

WAGON EFFICIENCY

Spectacular increases ranging upto nearly 40 per cent. in the movement of goods wagons through the traditional railway bottlenecks in the country have occurred, according to a comparison of figures for June-September 1956 and the corresponding period last year. These increases have occurred following a number of steps taken by the various railway administrations to step up operational efficiency. The total outstanding registrations for wagons on the entire broad-gauge railway system of the country were approximately equivalent to only one day's normal loading operations.

An increase of 39.5 per cent. has occurred in the number of wagons moved from the Central to the Southern Railway via Bezwada. Similarly, an increase of 28.5 per cent. has occurred in the traffic moving from the Central to the Southern Railway via Raichur. Traffic moving from the South Eastern to the Southern Railway via Waltair has shown an improvement of 11.2 per cent. Percentage improvement over some of the other "difficult" sections is: Bezwada-Madras section 21.6; and Godhra-Ratlam 19.6. Traffic moving from the Eastern to the Northern Railway via Moghalsarai showed an improvement of 13 per cent. between June and August 1956 compared to the performance during the corresponding months last year. There was a setback during September due to breaches and stoppage of rail movement for about ten days.

The following table shows the daily average number of loaded wagons moved through some of the junctions and over routes with limited capacity, during June to September 1956 and the corresponding period last year:

Route or junction	*Daily average wagons (June-September)* 1955	1956	*Percentage improvement*
1. South-Eastern and Southern Railways (via Waltair) ...	213	238	11.2
2. Central and Southern Railways (via Bezwada) ...	182	254	39.5
3. Central and Southern Railways (via Raichur) ...	154	198	28.5
4. Bezwada-Madras Section ...	328	399	21.6
5. Godhra-Ratlam ...	495	592	19.6
*6. Eastern-Northern Railways (via Moghalsarai)	1,746	1,862	13.0

* Figures exclude September when there were breaches and stoppage of rail movement for about ten days.

The Institute for the Utilization of Gas of the Ukrainian Academy of Sciences (U.S.S.R) has developed a system of complete automation for gas heating boilers. If the torch is extinguished, the pressure of the gas drops to emergency level, the water in the boiler is overheated, there is insufficient air or the automatic regulator is out of order the gas is automatically turned off from the burners. If there is anything out of order at the control post outside the boiler-room, light and sound signals are turned on. With the automatic controls the boiler-room requires no fireman.

BURMA RECORDS HIGHER TEMPO OF ECONOMIC ACTIVITY

BALANCE OF PAYMENTS POSITION BETTER

THE economy of Burma registered a notable improvement during the year ended 30th June 1956. The level of favourable balance of trade registered in the preceding year was very nearly maintained at K17.55 crores, and there was a substantial improvement in the balance of payments position, the adverse balance at the end of 1955 being only K11.82 crores, as against K42.20 crores in 1954. A considerable rise in agricultural and mineral production and a marked expansion in the field of industries were noted. Another notable feature was the conclusion of trade and payments agreements with a number of countries. However, although import restrictions were liberalised to a great extent and a large number of import licences were issued, prices of imported consumer goods continued to be at a high level. And since Burma still depends to a very large extent on foreign countries for the supply of essentials of modern life, the higher import prices pushed up the wholesale and retail prices. Consequently, the cost of living was markedly higher than during the previous year. There is a growing realisation on the part of the authorities that, since the country can hardly afford increased imports without an improvement in exchange reserves, drastic remedies in the form of enforced savings and increased taxation might be inevitable if production cannot be stepped up sufficiently to restore a proper balance in the national economy.

During the year ended 30th June 1956, a trade surplus of K17.55 crores was registered, as against K19.22 crores in the previous year, mainly at a sacrifice of imports which declined from K97.63 crores in 1954-55 to K84.76 crores in 1955-56. The value of exports also fell by K14.56 crores. One significant trend in the import trade, contrary to the earlier one, was the increase in the proportion of consumer goods—to the tune of 66 per cent.—relative to capital goods. The U.K. again continued to be the chief supplier of Burma's needs, the proportion of imports from it rising from 23 to 28 per cent., while India and Japan ranked second and third respectively, accounting for 17 per cent. each of Burma's imports.

Exports Increase

In the field of exports, those of rice went up by 0.11 million tons to 1.68 million tons. The proceeds, however, declined from K83.53 crores to K76.47 crores. Earnings from exports of oilcakes, metals and ores, however, increased by 8 per cent., 88 per cent. and 9 per cent. respectively. Though the volume of rubber exports was at a lower level than in the previous year, they fetched 9 per cent. more in earnings. Among the countries that bought from Burma, India ceased to be the major customer, having been displaced by Japan which accounted for 11 per cent. of Burma's exports. Japan was followed by the U.K. and China.

Rice Trade Agreements with a number of countries continued to remain in force during the period under review. The most important of these were China, Indonesia and Japan. The total quantity of rice involved was about 550,000 tons. A very heartening feature in this field was the conclusion of negotiations with India for supplying it with 2 million tons of rice over a period of five years. New Trade and Payments Agreements were also entered into with a number of countries, including the U.S.S.R., Poland, Israel, Rumania, Sweden, Yugoslavia, and Bulgaria. These agreements provided for, generally, the export by Burma of agricultural products, metals, ores, timber, rubber and other goods in exchange for, mainly, machinery and other capital equipment, and consumer goods such as textiles, hospital, equipment, leather and metal goods. An agreement concluded by Burma which deserves special mention was the Agricultural Commodities Agreement with the U.S., under the United States Public Law 480, in February 1956, providing for the purchase of $20.8 million (Kyats 9.8 crores) worth of raw cotton, dairy products, tobacco and fruits, payable in Burmese currency. An important feature of the Agreement is that it enables Burma to increase the import of consumer goods without using up its foreign exchange. Of the total sum involved $17.5 million represent provision for the purchase of raw cotton to be processed in third countries. Following the conclusion of this agreement, tripartite agreements were concluded between the Governments of Burma, the U.S. and third countries which would export textiles and yarn to Burma in exchange for U.S. cotton. Such agreements were signed with the U.K., West Germany and Japan. After the close of the year, India too signed an agreement with Burma on these lines.

Another welcome development during the year under review was increase in the exchange reserves. Following the reduction in the adverse balance of payments from K42.20 crores in 1954 to K11.82 crores in 1955, the drain on exchange reserves, which had fallen from K93.84 crores at the end of June 1954 to K54.41 crores at the end of June 1955, was effectively checked. At the end of June 1956, the reserves stood slightly higher at K54.84 crores. This improvement is also attributed, to a certain extent, to the measures taken by the authorities to prevent speculative imports of goods under O.G.Ls. and to combat black-marketing in foreign exchange.

Transport

The field of transport and communications was another in which the country made a notable advance. Much progress was witnessed in the programme of rehabilitation and modernisation of the railways. Dago bridge, a major link on the main line between Bassein and Henzada, was repaired and restored to traffic, facilitating the movement of agricultural products from the hinterland to the port of Bassein. A number of new coaches purchased from West Germany and Japan were also added to the railways. While freight traffic during the year increased by 1.1 per cent. to 368,487,000 ton miles, passenger traffic rose by 11.6 per cent. to 22,844,000. Inland water transport was also strengthened. As a result, passenger traffic increased by 17.2 per cent. and freight by 35.6 per cent. But, in the case of seaborne shipping, the total tonnage dealt with in the chief ports registered a decline. In the port of Rangoon, for instance, freight figures declined by 5.2 per cent. for exports and 1.5 per cent. for imports, though the number of ships of various types calling at the port went up by 49. During the year, coastal services for passengers and freight were extended upto Chittagong and Calcutta. A continuous expansion in ocean shipping is expected after the addition to the existing fleet of the ships ordered from the U.K. and Yugoslavia. A steady increase was witnessed in the international and air traffic at the Rangoon airport. One important even of special interest was the opening of the Burma-China air link in April 1956.

THE BANK OF INDIA LIMITED.

Through its Branches in India, Pakistan, Malaya, Japan, Aden, East Africa and London and through correspondents in the principal countries of the world, the Bank is able to finance business of every description on favourable terms.

D. R. THOM,
General Manager.

Production Rises

A development worthy of special mention was the advance registered in agricultural production. To take some examples, paddy production rose by 1.1 per cent. to 5.8 million tons, that of groundnut was up by 32.6 per cent. to 204,300 tons, and of sesamum by 21.5 per cent. to 17,500 tons. Cotton production, however, decreased by 24 per cent. to 17,500 tons. Slight increases were also recorded in a number of other items such as maize, beans, pulses, and tobacco. There was also a slight increase in the total sown acreage.

In contrast to this trend, forest produce, other than teak and *pyinma* which had increased by 16.8 per cent. and 25 per cent. respectively, declined by 42.6 per cent., as compared with the previous year. Timber exports, however, increased by 20 per cent. from 36,000 tons in 1954-55 to 43,200 tons during the year under review. The year also saw the establishment of the Rubber Export and Development Corporation and, consequently, export of rubber became the monopoly of this Corporation.

In the field of mineral production, crude petroleum increased by 23.5 per cent. to 44.7 million gallons, as compared with the previous year. Other mineral oils also registered an average increase of as much as 11.5 per cent. The Burma Oil Company (1954) Ltd. continued to expand its activities. Moreover, the Government's Joint Venture with the Burma Corporation (1951) Ltd. undertook most of the mineral extraction, especially of zinc, within the country. Explorations for the extraction of zinc and lead ore at Loungkheng and Pangpet areas were completed. Further the output of lead ore at 23,000 tons during the nine months ended March 1956 was 27.8 per cent. higher than that in the corresponding period of 1954-55. Tin production, however, recorded a decline of 20 per cent. during the first nine months ended March 1956. A refreshing development in this connection was the joint venture agreement concluded by the Government with the Anglo-Burma Tin Company, Ltd., for promoting tin extraction within the country.

Marked expansion was noted in the field of industries. The Namti Sugar Factory, opened in May 1956, went into full production and when the new plant at Pyinmana is completed, Burma will be self-sufficient in respect of sugar. Cement production in the first ten months of the year under review recorded an increase of 3.4 per cent. to 41,800 tons. The output of cotton yarn, however, declined slightly. Among other industries, a significant advance in the tea industry was registered with the opening of a tea blending and packing plant at Mandalay. Further, the construction of a brick and tile factory, a jute bag and twine mill, and a steel rolling mill was in progress. A silk reeling and spinning factory was completed, while another was under construction.

In the realm of prices, certain export prices, chiefly those of lead and zinc, remained firm due to better external demand. The prices of cotton and white beans, however, reflected some weakness. The wholesale prices of domestic produce, on the other hand, showed a rising trend with the exception of dried chillies and tobacco leaf. The prices of groundnut oil and grain registered notable increases by 27 per cent. and 73 per cent. respectively. The wholesale price index of all commodities (Base 1938-40=100) at a monthly average of 462.8 during the year under review, represented 18.4 per cent. increase as compared with the previous year.

The continuing prevalence of high prices in the case of imported consumer goods, despite the liberalisation of imports as from December 1955, resulted in the Government setting up an Anti-Inflationary Measures Committee. The measures taken included declaring a group of 33 items as essential commodities for the purpose of taking action, if necessary, to control their procurement, distribution and price. Measures were also taken to speed up imports of essential consumer goods, and to ensure their distribution at fair prices. As a result of the high level of prices (wholesale and retail) prevailing in the country, the consumers price index jumped up from 309 in June 1955 to 407 in June 1956. The fact that the index of cloth prices rose from 419 to 673 during the year points to acute scarcity of cloth and the urgent need for augmenting supplies.

PRIVATE ENTERPRISE IN INDIA
HAS IT FAILED?

By A. D. Shroff

[Assuming that the future role of private enterprise in this country will be determined not by purely ideological considerations but by the record of its achievements, it is of the utmost importance that an impartial assessment of these, as well as its shortcomings, must first be attempted. Such an assessment was made by Mr. A. D. Shroff, the well-known industrialist, in the course of an interesting lecture at a recent meeting of the Commerce Graduates' Association, Bombay. Mr. Shroff, who chose for his theme—"Has Private Enterprise Failed?"—showed with the help of a wealth of statistics and convincing arguments that private enterprise had not only not failed but had been eminently successful in contributing to the economic progress of the country. Indeed, if it had not been more successful, the fault lay not with it but with the restrictive official policies. In the context of the controversy on this subject, we have no doubt that the full text of Mr. Shroff's speech, which we publish on this page, will be read with interest.—ED.]

FOR some time past, private enterprise in the country has been continuously under fire. It has been suggested that private enterprise is incapable of undertaking large-scale and rapid economic development of the country. It is also suggested that private enterprise only results in the concentration of economic power in the hands of a few people. It is further said that—and it was said only a few days ago by no less a person than the Prime Minister of India in Calcutta—that private enterprise and democracy are incompatible. But the main provocation for the choice of the subject is a speech made by Mr. T. T. Krishnamachari, who was then the Union Minister for Commerce and Industry, at Madurai on 4th August. In the course of his speech, he observed that "private enterprise has failed me." and that private enterprise was not showing either initiative or enterprise.

Before I proceed to examine the validity of the various contentions which have led some people to the conclusion that private enterprise has failed in this country, I think, I should mention that of all Ministers of Industries, since India attained independence, Mr. T. T. Krishnamachari must be acknowledged as an outstanding success. Some of us may differ from him on some of the views he holds and propagates. But I think there is not the slightest doubt that in the discharge of his very high responsibilities as the Minister for Industries, he has shown remarkable drive, energy and understanding of business problems, and above all, a capacity for taking quick decisions. It is, therefore, all the more incomprehensible for me that a man of such fine understanding of business and industrial problems and a man who has first-hand opportunities of witnessing from day to day what was being done in the industrial sphere in the last few years, should have preferred to make this charge against private enterprise in this country. To quote a Shakespearian phrase, to me it has come as "the unkindest cut of all."

Historical Review

It is very necessary that I should give a brief historical review of private industry in this country, particularly before India attained independence. If one looks back to the history of private enterprise for 60 or 70 years before India attained independence, one must take into consideration the circumstances and the environment under which private industry had to struggle. For one thing, we were under a regime, which was quite indifferent and apathetic, if not in some cases definitely antagonistic, to any industrial development in the country. If, for instance, one studies the tariff policy of those days, the transport policy, or the fixation of railway freight—all these will reveal the conditions under which private enterprise had to struggle. Even in later years, when the Government came to adopt—and that too very grudgingly—a policy of discriminating protection, that policy was too halting and unsuited to bring about any rapid development of industries in the country. In spite of all these limitations and disabilities private enterprise was subject to in those days, it was surely through the enterprise and endeavour of private enterprise that India was put on the industrial map of the world and attained the eighth place among the industrial nations in the world. To quote one or two instances; the cotton textile industry—(remember only about 40 years ago we used to import every year Rs. 60 crores worth of piecegoods from abroad)—has now developed substantially in the last few years when we have become a very important exporter of cotton piecegoods to about 40 to 45 different markets in the world. The very fact that Indian piecegoods should effectively compete with shrewd and established exporters from Lancashire and Japan bears ample testimony to the efficiency with which textile industry has been built up in this country.

I would also like to refer to the days when the late Mr. J. N. Tata first thought of starting steel industry. I do not know if many are aware that a leading British businessman of Calcutta ridiculed the idea as a dream, and he even offered to consume every pound of steel made in India! Fortunately for him, he is not alive today; otherwise he would have suffered not a little from indigestion. But the fact of the matter is that a great pioneering effort succeeded in giving India the largest single individual steel-making unit in the British commonwealth of nations, and I believe India will be proud also of the fact that it is today one of the most economic and cheapest producers of steel in the world.

Take, for instance, also the development of hydro-electric power—entirely undertaken by private enterprise—a tremendous venture in those days, a venture not only in the sense of generating power but even of making Bombay millowners believe that power could be generated and supplied to Bombay mills. We know today what it stands for in the economic life of Bombay.

These two or three instances might show what private enterprise, functioning under the limitations and disabilities to which it was subject in those days, could achieve. I may also mention shipping. Shipping in India against the powerfully entrenched foreign shipping companies almost looked like a dream. It was due to the pioneering effort of the late Mr. Narottam Morarji and Mr. Walchand Hirachand that Indian shipping has come to stay and offers today very fine promise of supplying a much-needed complementary transport service to sustain our economy.

Rs. 10,000-Crore Plan

Even before we attained independence in 1944, seven business men of India got together and put before the people a plan for the economic development of the country. The plan was sufficiently ambitious; it involved an estimated expenditure of Rs. 10,000 crores over a period of 15 years and out of that, it envisaged spending something like Rs. 4,400 crores on development of industries. This shows that private enterprise in India, even before independence, was fully conscious of the needs of the country and also had faith in itself that it could undertake development on a very large and extensive scale. After 1947, the Government started taking more active interest in the economic development of the country. Private enterprise also did not fail to assist in the process of development. The curve of industrial production during the last five years has been continuously rising. Taking 1946 as the base year, i.e., 100, industrial production went up to 117.2 in 1951, 128.9 in 1952, 135.3 in 1953, 146.6 in 1954, and, in 1955, it stood at 161.5.

Let me make it clear that the overwhelming proportion of the increased production was contributed by private enterprise because the few State enterprises which came into operation were mainly confined to the Sindri fertiliser factory, the Chittaranjan locomotives, and the Indian telephone factory at Bangalore, etc. If one takes the aggregate value of production, the contribution by the public sector represents a comparatively negligible percentage of the total. The following is the break-up of the general index of industries in respect of some of the old and of the new industries, taking 1946 as the base year representing 100:

	1951	1955
Old Industries:		
Cotton textiles	101	127
Jute textiles	60	94
Steel	116	132
Cement	207	286
Paper and paper boards ...	124	174
Matches	140	147
Sugar	121	173
New Industries:		
Machine tools	52	82
Diesel engines	1,532	2,124
Bicycles	266	1,143
Sewing machines	726	1,658
Electric motors	311	549
Soda ash	396	644
Caustic soda	508	1,181
Superphosphates	1,356	1,598

This remarkable increase in industrial production during the past five years in which both old industries and new industries have equally participated and to which the State enterprise has contributed comparatively very little, I think, ought to give a lie direct to the very charge that private enterprise has failed to do its duty in this country. The index figures do not convey the whole story. Important new industries were started, for instance, rayon. It was started and is prospering well and perhaps in the course of the next three to five years, India will be self-sufficient in regard to requirements of rayon yarn. Take again the steel tubes industry. Though this project was mooted even before the last war, owing to the exigencies of the war it could not be brought into operation. It has since been started and is one of the important industries in the country. Similarly, reference may be made to automobiles and trucks.

These are facts which, of course, cannot particularly be unknown to the Ministry of Commerce and Industry. They are there to tell their own story. But I would not like to quote anything which comes from private enterprise itself. Here is a statement made by the Planning Commission in a publication which is entitled *Progress of Industrial Development 1956-1961*:

"New investment on industries in the public sector during the First Plan was expected to amount to about Rs. 94 crores. The actual outlay, according to the latest estimates, has only been about Rs. 57 crores. Investment by the private sector on new projects and expansion programmes was expected to be about Rs. 233 crores and the latest estimates indicate that the actual investment has been of this order."

The Industrial Finance Corporation of India—one of the few financial institutions which have come into existence after India attained independence—has just published its eighth annual report, in which it is stated that the total amount of loans sanctioned has risen from Rs. 9.5 crores in 1951 to Rs. 43.26 crores in 1956, and the number of applications for loans received have doubled from 43 to 86 during the course of the last two years. Further, if one turns to the office of the Registrar of Joint Stock Companies, one will find that the number of joint stock companies registered and in actual operation have risen from 22,675 in 1947-48 to 29,779 in 1954-55.

Licences

An important new piece of legislation after independence is the Industries (Development and Regulation) Act of 1951. Under this Act, one cannot put up a factory without obtaining a licence. According to the latest figures available, for three years upto 1955, out of 1,440 applications made to Government for licences, 1,142 were granted. Of these, there were 363 licences for new schemes, 657 for expansion schemes and 122 for organisational changes without additional capacity. I have referred to these few facts in order to confirm that private enterprise is not only alive, but is kicking all right.

Private enterprise would have shown perhaps a much better and a more impressive record of achievement, if it had not to work under a certain set of circumstances of which all are so painfully aware for the last few years. I was on a committee, which was asked by the Reserve Bank to consider the circumstances under which private enterprise was functioning and to explore ways and means of helping private enterprise particularly in the financial sphere. We had a very good opportunity of studying the situation in different parts of the country, and the unanimity of opinion which was represented to the Committee was that the Government's economic policy in the last few years has created an atmosphere of uncertainty in which naturally incentives are likely to be at a low ebb and that capital has been rendered very shy.

Let us turn to the first Industrial Policy Statement of April 1948. The threat of nationalisation which was uttered therein in respect of basic industries has served as a serious disincentive to further industrial effort in the country. Nationalisation of airlines dealt a very serious blow to confidence and, as a matter of fact, it has created an atmosphere of crisis of confidence which still continues. I am very surprised that the charge of lack of incentive or enterprise should be laid at the door of private enterprise when it is too well known that it was only through private enterprise that a first class international air service was built up within a comparatively short period. Nationalisation of airlines gave a rude shock to confidence amongst the investing public and since then, we have found it increasingly difficult in attracting the average investor to subscribe to any fresh industrial enterprise.

We don't know...

We don't know whether worries turn Black Hair into Grey Hair or not, but we do know that whatever may be the cause of Greying of Hair, Loma surely turns them back to Dark Hair.

Nationalisation of the Imperial Bank and, recently, nationalisation of life insurance have dealt further blows to private enterprise and have made capital more and more shy. I have been trying to look up the new industrial issues during the last 8-9 months, and I have not come across, perhaps with the exception of one or two, any public issues for new industrial enterprise which has been supported by the investing public. The Industrial Policy Statement of this year has certainly created further apprehensions not only in the minds of business men but of the investing public in general. The tragedy of the situation is this—that with a few exceptions, Indian business men and Indian public in general have not shown any due appreciation of the implications of this policy. Even a man like Sir John Strachey, who visited India some months ago, in his report has pointed out, although he is a man who has a definite Leftist bias, he was really surprised that when the Industrial Policy Statement was issued some Indian business men definitely welcomed it, while, most of them in general showed apathy or indifference about it.

Let us take the second criticism, viz., that "private enterprise results in concentration of economic power." In this connection, an article, which recently appeared in the *Tata Quarterly* of April-July deals in detail with some structural aspects of industry in India. The article examines in a very objective manner the problem whether, in view of the fact that particularly in the last few years when demand has been outstripping the supply position generally in the country there has not been a trend towards the establishment of a sort of monopoly by Indian industrialists. If one studies that article, I am sure, one will agree with the writer of the article that applying any test, which is usually applied to the scrutiny of the establishment of a monopoly in any branch of economic activity, one will come to the conclusion that no such thing has happened in India.

Is There Monopoly ?

The establishment of a monopoly, for one thing, suggests that those who are interested in the manufacture of particular products or commodities get together and manipulate the prices of these products or arrange production in such a manner that prices can be whipped up to the detriment of the community in general. An examination of the working of a number of leading industrial units in India and relating the price trends to the growing demand for the products, will lead to the objective conclusion that there is no basis of even an attempt to establish monopoly in any of these industries in India. But when critics talk of concentration of economic power, they do not so much mean the establishment of monopoly. But what they really mean is that there are only a few industrial firms who are interested in a large number of industries, and therefore, exercise control over them. In the first place, I need hardly point out that this betrays a lack of understanding of the basis of joint stock enterprise. The basis of joint stock enterprise is this—however big, influential and wealthy a firm may be, the magnitude of modern industrial operations is of such a character that no single firm can get together all the monetary resources to make any such enterprise possible. For instance, in one of our leading companies, the Tata Iron and Steel Company, there are about as many as 42,000 shareholders. It is true that the creditworthiness of some of the firms in India, their past record of achievement, enabled them to mobilise the savings of hundreds and thousands of small investors which alone make industrial enterprise in the modern sense possible.

Legislation was recently undertaken in the shape of amendment to the Indian Companies' Act which goes far enough to break any such concentration, if it exists in the country. But conceding for a moment, the argument about the concentration of economic power in the hands of a few people, it should not be forgotten that in an underdeveloped country, like India, one cannot expect hundreds and thousands of people who could be promoters of industries. If one studies the economic history of a country, like Japan, for instance or even of Germany, it is the pooling of resources and the working together of two or three big firms which made possible the industrial progress achieved in these countries.

Licensing Scheme

There is another important reason which might explain why industrial development in the last few years could not be quicker than what it has been. We who work in the private sector are believers in planned development. Planned development does assume some sort of regulation. But such regulation should not become restrictive as it has been in India. Take, for instance, the Industries Development and Control Act and the licensing scheme which it has put up. Even if one thinks of starting an industry on one's own, unless one satisfies certain norms which have been established by the Planning Commission, one is not likely to get permission to go into that industry. There are also certain administrative procedures and my committee was particularly shown definite instances of administrative procedures where so much of red-tape was involved that a number of industrial proposals which were put up in Madras and Bangalore had to be abandoned since the promoters got simply tired of travelling from Bangalore and Madras to Delhi and back. It is not out of place to point out to the Government that, in the interest of the industrial development of the country, some of these administrative procedures will have to be considerably simplified.

Another subject of topical interest is the publication of a letter addressed by Mr. Eugene Black, President of the World Bank, to our Finance Minister, Mr. Krishnamachari. The genesis of the letter is this: that a few months ago the World Bank sent out a mission—the World Bank has the practice of sending out missions to different countries getting loans from the Bank in order to make periodical surveys of economic conditions in those countries. The mission came to India a few months ago and after surveying the situation and after having very intimate talks with Government officials, Planning Commission and Ministers they submitted their report to the World Bank. In that report, within the short space of about 18 paragraphs the mission has highlighted the main elements of our economic situation. In one paragraph, the mission writes thus:

"The importance of private enterprise in the continuing economic development of the country is another factor which we would like to stress. We appreciate that the Second Five-year Plan offers an opportunity for the 'co-existence' and simultaneous expansion of both the public and private sector and we have noted with gratification that the Prime Minister and other responsible Ministers have emphasised the need for private enterprise. Nevertheless, we believe that the importance of private business has not yet been sufficiently recognised and publicised. The record bears out the fact that private enterprise has performed creditably during the last five years with respect to both investment and production. In the organised sector of manufacturing and mining, private business has contributed 90 per cent. of the increase in net output during this period. Owing to the capital-intensive nature of much of the contemplated public investment in industry and mining during the second Plan, Government plants and mines are expected to contribute only 29 per cent. of the anticipated increase in net output of mining and manufacturing as compared with a 54 per cent. share in the total planned investment. On the other hand, private business in this sector is expected to account for 71 per cent. of the rise in net output. Considering the probability that the village and small-scale industries may fall considerably short of the targets set for them by the Plan, the importance of the organised private sector becomes even more evident. It is, therefore, vital that the private sector be given adequate incentives and resources to enable it to make its requisite contribution."

On the basis of this report, Mr. Eugene Black addressed a letter to our Finance Minister, Mr. Krishnamachari. In the course of that letter, Mr. Black said:

"In making my own comments, I should like first to emphasise once again my conviction that India's interests lie in giving private enterprise, both Indian and foreign, every encouragement to make its maximum contribution to the development of economy, particularly in the industrial field. While I recognise that the Government itself must play an important role in India's economic development, I have the distinct impression that potentialities of private enterprise are commonly underestimated in India and that its operations are subjected to unnecessary restrictions there."

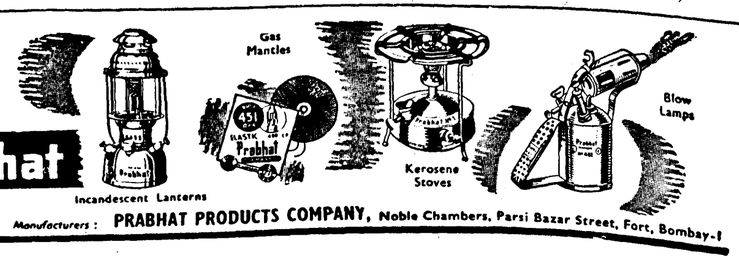
Tribute to Mr. Black

This letter has created a little flutter in certain dovecotes. I do not know on how many occasions we have been told by the highest in the country that distinguished foreigners who are visiting India have been terribly impressed with the progress that this country is making. This is perhaps the first occasion when a friendly critic has dealt with a few things in a very outspoken fashion. I can personally vouch for one thing, that Mr. Eugene Black is a real and sincere friend of India. I have reasons to say that he earnestly desires that India should develop economically at a rapid pace. But Mr. Eugene Black also is a man who, by his extensive knowledge of conditions in different parts of the world, is convinced that there are certain well-proved and well-tried methods of economic development which have resulted in substantial progress in many countries of the world and there is no reason that one could see of a hasty departure from these proved and well-tried methods. It is after a very close study of conditions in India, as reported to him by the mission, and also because of the great personal interest he takes in watching the progress that India is making, that he has expressed his views and tendered some advice which one could expect will be taken in the same spirit in which it was offered. I must say that the reply given by the Finance Minister is a very courteous, dignified and understanding reply. On the other hand, the criticism that we hear from other quarters appears to be rather unwarranted. It appears to be based again on the same thing to which Mr. Black refers—doctrinaire and ideological approach to the problems. There are certain people highly placed in this country who simply refuse to come down to earth and face problems in a realistic manner. I think. I would take this opportunity of paying my personal tribute to Mr. Black for the service he has rendered to India, particularly, at this critical juncture, when we want a little more realism in the formulation and implementation of our economic policy. I am not referring to other parts of Mr. Black's letter or to other suggestions which have been made by the World Bank mission.

I am glad that the views held by some of us are being fully confirmed by the conclusions given by the World Bank mission in its report in respect of a matter like the textile policy. The textile problem, in my judgment, is a very simple problem provided it is approached in a realistic way. Money worth crores is being pumped into circulation. How many people, who had no employment before, or who had no adequate employment, have started earning! In a poor and underdeveloped country, like India, the two essential things to be provided are food and clothing. The demand for food and cloth is on the increase. And if our economy is to be sustained on a largely independent basis, it will be the first and primary responsibility of the Government to see that the demand does not outstrip supply. It is a very simple problem and instead of tackling the problem in a realistic way, ideological and doctrinaire approach is brought to bear on the solution of the problem, with the result that there is nothing else but tinkering with the problem. Merely putting additional excise duties or advertising what are considered as fair prices will not result in producing additional cloth which is being needed every day by the country.

There is, however, one very interesting statement made by Mr. Krishnamachari in his reply

(*Continued on page 871*)



HUKUMCHAND JUTE REPEATS DIVIDEND

LOWER TEA PRICES AFFECT HULDIBARI

Hukumchand Jute Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Ramdutt Ramkissendass, Calcutta) submit the audited accounts of the Company for the year ended 31st March 1956.

After providing Rs. 2,35,622 (Rs. 4,40,054) for depreciation, Rs. 8,00,000 (Rs. 9,00,000) for taxation and Rs. 2,00,000 (Rs. 3,17,182 for general reserve) for investment reserve the revenue account shows a profit of Rs. 16,79,173 (Rs. 16,35,051) to which is to be added the credit balance of Rs. 1,19,762 (Rs. 1,64,711) brought forward from last year, leaving a balance of Rs. 17,98,935 (Rs. 17,99,762) out of which an interim dividend of Rs. 1,40,000 (Rs. 1,40,000) on preference shares at Rs. 3-8 (Rs. 3-8) per share free of income-tax was declared on the 1st March 1956 leaving a balance of Rs. 16,58,935 (Rs. 16,59,762) which the directors recommend should be dealt with as follows:—

To pay a final dividend on preference shares at Rs. 3-8 (Rs. 3-8) per share (making a total payment of 7 per cent. per annum) for the year ended 31st March 1956 absorbing Rs. 1,40,000 (Rs. 1,40,000) and a dividend on equity shares at Rs. 2 (Rs. 2) per share for the year ended 31st March 1956 absorbing Rs. 14,00,000 (Rs. 14,00,000) leaving a net balance of Rs. 1,18,935 (Rs. 1,19,762) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked on the basis of 48 hours throughout the period under review with sealing of looms varying from time to time, 12½ per cent. of the total looms were sealed up to 7th January 1956; 2½ per cent. of the total looms were unsealed as from 9th January 1956 and further 5 per cent. were unsealed from the 20th February 1956.

Trading conditions continued to be difficult during the year due to wide fluctuation in the goods markets.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	92,50,000	Block ...	1,30,00,000
Reserves ...	27,85,153	Stock ...	84,94,105
Debentures	23,00,000	Stores, spare parts, etc.	3,89,615
Provision for taxation ...	22,78,530	Debts, deposits and advances ...	45,56,711
Liabilities ...	1,14,50,995	Investments	13,51,700
Profit and loss account ...	1,18,935	Cash ...	5,91,482
	Rs. 2,83,83,613		Rs. 2,83,83,613

Huldibari Tea Association, Ltd.

The directors of the above Company (Managing Agents: Messrs. Davenport & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Weather conditions were generally favourable and a crop of 17,67,246 (63,71,277) pounds of tea was made and disposed of on the Calcutta auctions. The total net average sale price was As. 26.95 (As. 42.42) and the total working cost per pound of tea produced was As. 21.83 (As. 20.73).

Early in the year the industry in West Bengal agreed in consultation with representatives of the workers to an increase from the 1st January 1955, of As. 3 in the daily wages of labourers on Terai and Duars estates, and corresponding increases were made in the wages of establishment and monthly paid workers. These increases cost some As. 1.26 per pound of tea produced during the year. In addition, early in 1956 the industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954 for which purpose the directors have provided Rs. 2,38,500 in the accounts, equal to As. 2.16 per pound of tea; and it is expected that the Company will be required to make a proportionate payment for 1955.

The gross profit for the year is Rs. 5,27,135 (Rs. 20,60,450) to which the directors added Rs. 1,25,000 from general reserve; and they have provided Rs. 2,38,500 for bonus to labour, Rs. 1,82,144 (Rs. 6,43,032) for taxation and Rs. 1,53,488 (Rs. 88,590) for replacement and depreciation of assets. Allowing for these and the other adjustments shown, there is a net profit of Rs. 95,312 (Rs. 12,80,861) and a final balance on this account of Rs. 2,02,494 (Rs. 13,77,181), which the directors propose to deal with as follows:—

To pay a dividend of 12½ (80) per cent. absorbing Rs. 1,03,125 (Rs. 6,60,000); and carry forward to 1956 Rs. 99,369 (Rs. 1,07,181 after transferring Rs. 1,50,000 to renewals and additions reserve and Rs. 4,60,000 to general reserve.

Estimates for 1956 have been based on a crop of 21,500 maunds of tea at a total cost of Rs. 23,73,466, equal to As. 22.08 per pound, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,25,000	Block ...	10,98,000
Reserves ...	17,14,718	Stock of 1955 crop ...	9,47,540
Provision for taxation ...	6,32,032	Stores and supplies ...	3,80,293
Liabilities ...	6,17,362	Debts and advances ...	2,66,420
Profit and loss account ...	2,02,494	Investments	3,66,127
		Cash ...	9,33,226
	Rs. 29,91,606		Rs. 29,91,606

Okayti Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a loss of Rs. 29,195 (profit of Rs. 1,95,358). On transfer of this sum to profit and loss account and after sundry adjustments including a transfer of Rs. 45,000 from revenue reserve account, there is a balance at credit of that account of Rs. 560 (Rs. 11,518 after transferring Rs. 40,000 to revenue reserve, Rs. 45,000 to buildings and machinery reserve and Rs. 10,000 to hail reserve, also dividend of 37½ per cent. on ordinary shares and preference dividends) which it is proposd to carry forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve representing the present written down value of these assets has been opened.

The result of the season's working is disappointing owing to the greatly increased cost of statutory concessions to labour, unfavourable growing conditions, a six-day strike in June and adverse market conditions.

Crop weighed out at 2,202 maunds as compared with 2,250 maunds estimated and 2,264 maunds in 1954. The average selling price was Rs. 2-6-4 per lb. as against Rs. 3-7-3 per lb. in the previous year. Planted area remains at 505 acres.

Estimates for 1956 provide for a crop of 2,250 maunds at an outlay of Rs. 4,87,760, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	2,23,710
Reserves ...	97,647	Stock-in-trade	1,68,841
Provision for taxation ...	55,348	Stores and supplies ...	30,993
Liabilities ...	1,52,403	Tea seed sales receivable	300
Profit and loss account ...	560	Loans and advances ...	27,002
		Cash ...	5,112
	Rs. 4,55,958		Rs. 4,55,958

Margaret's Hope Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 43,680 to which must be added the profit on sale of assets Rs. 2,271 and balance of profit brought forward from 1954 Rs. 23,070, making a total of Rs. 69,021. From this amount must be deducted provision for taxation Rs. 5,607, adjustment Rs. 11,458, bonus to labour and staff, 1953 and 1954 Rs. 45,481 and depreciation on fixed assets Rs. 25,670, leaving a balance at debit of profit and loss account to be carried forward to 1956 Rs. 19,195.

Crop.—The saleable crop weighed out at 4,419 (4,238) maunds against an estimate of 4,760 maunds, and was disposed of at an average price of As. 36.58 (As. 57.92) per lb.

The estimate for season 1956 provides for a saleable crop of 4,600 maunds at a total revenue expenditure of Rs. 8,20,044.

Results.—The fall in the average price of tea from As. 57.92 per lb. for season 1954 to As. 36.58 per lb. in season 1955 has adversely affected the results.

Bhatkawa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation of Rs. 6,80,116 to which must be added adjustment amount of Rs. 11,536, profit on sale of motor lorries Rs. 2,669 and balance of profit brought forward from 1954 Rs. 1,13,262 making a total of Rs. 8,07,583. From this amount must be deducted provision for taxation Rs. 2,26,839, bonus to garden labour and staff, 1953-54 Rs. 1,76,430, stores claim written off Rs. 1,068, irrecoverable advance written off Rs. 5,203 and depreciation on fixed assets Rs. 1,33,617, leaving a balance of Rs. 2,64,426. This amount the directors recommend, should be distributed as follows:—

In payment of a dividend at the rate of 25 per cent. for the year ended 31st December 1955, on 90,000 ordinary shares of Rs. 10 each, absorbing Rs. 2,25,000 leaving to be carried forward Rs. 39,426.

The saleable crop weighed out at 17,728 (17,698) maunds against an estimate of 18,000 maunds, and was disposed of at an average price of As. 29.66 (As. 41.84) per lb.

The estimate for season 1956 provides for a saleable crop of 17,000 maunds at a total revenue expenditure of Rs. 18,79,929.

Results.—The fall in the average price of tea from As. 41.84 per lb. for season 1954 to As. 29.66 per lb. in season 1955 has adversely affected the earnings and the profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	9,80,500
Reserves ...	16,53,306	Stock of tea	14,42,744
Provision for taxation ...	6,20,715	Stores ...	3,38,911
Liabilities ...	11,80,194	Other assets	11,121
Profit and loss account ...	39,426	Debts, deposits and advances ...	4,14,152
		Investments	6,800
		Cash ...	11,99,413
	Rs. 43,93,641		Rs. 43,93,641

N.B.—Figures within brackets relate to the corresponding period of the previous year.

SUGAR

(*Concluded from page 856*)

sugar costing As. 8 that one buys, one pays as much as As. 2 as taxes, representing 25 per cent. of the price. If, therefore, Mr. Jain is really serious in lowering the price of sugar, he must concede the demand for a downward revision in taxation, or encourage the adoption of measures which will lead to production of more sugar per acre.

Be that as it may, in the course of his address, the Union Food and Agriculture Minister expressed the confidence that the target of sugar production fixed at 2.25 million tons in the Second Five-year Plan "would be achieved much before the target date." He estimated sugar production during 1956-57 at 1.93 million tons. The Minister reviewed the progress made in the implementation of the expansion programme for the sugar industry. His account reveals that action has been taken to increase the installed capacity of industry from 1.5 million tons in 1953 to 2.5 million tons in 1960-61. Of the additional capacity, 250,000 tons will go into production during 1956-57. The Government has so far granted licences for the expansion of 57 existing units and establishment of 55 new factories, including 34 co-operative units and 3 units to be installed by shifting idle plants available in the country. All these cover a total production capacity of 960,000 tons of sugar, nearly 60 per cent. of which is in the South, the number of new units to be established in this region being 39. Of the 34 co-operative units, 14 will be set up in Bombay, 5 in Andhra, 4 in the Punjab, 3 each in Uttar Pradesh and Madras, 2 in Mysore and 1 each in Assam, Orissa and Bihar. Eighteen more co-operatives are projected during the Second Plan period. Out of the co-operative sugar units liecnsed one—at Kopergaon—went into production in 1955-56. This unit has applied for expansion of its capacity from 800 tons to 1,200 tons and has proposed to set up a subsidiary factory with a capacity of 700 tons. Eleven more co-operative mills are expected to start crushing in 1956-57 and a similar number during 1957-58.

Notices

THE AHMEDABAD ADVANCE MILLS, LIMITED

NOTICE

THE FIFTY-FOURTH ANNUAL GENERAL MEETING of the Shareholders of THE AHMEDABAD ADVANCE MILLS, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Tuesday the 27th November 1956, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1956, and the audited Balance Sheet as at 30th June 1956.
2. To declare Dividends.
3. To appoint a Director in place of Mr. K. M. D. Thackersey who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Mr. Jaykrishna Harivallabhdas, who retires in terms of Article 113 of the Articles of Association of the Company and is eligible for re-appointment.
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Sections 190, 261, 280 and 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Sections 261, 280 and 281 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Mr. T. V. Baddeley, C.B.E., a Director of the Company who is also a director, officer, member, and associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint Ex-officio and Special Directors to the Board) and who has attained the age of 67 years be and is hereby made and/or approved as required by the provisions of the said Sections 261 and 281 and it is hereby specifically declared that the age limit for directors prescribed by Section 280 of the said Act shall not apply to him."

   The reasons which make this resolution necessary are more fully set out in para 2 of the Explanatory Statements referred to in Note (*a*) below which para 2 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.

7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that the Company pursuant to Section 314 of the Companies Act, 1956, consents to Mr. R. J. Tata and Mr. S. H. Tata who are respectively the uncle and the brother and therefore relatives of Mr. N. H. Tata, whose appointment as a Director is proposed to be made at this meeting, holding and continuing to hold offices or places of profit under the Company as employees."

8. To appoint a Director in place of Mr. N. H. Tata who resigned from the Board to enable the provisions of Section 314 of the Companies Act, 1956, to be complied with, and to consider and, if thought fit, to pass the following resolution as a Special Resolution of which a special notice, as required by Sections 190 and 261 of the said Act, has been received by the Company.

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. N. H. Tata, who is a director, officer, member and Limited, the Managing Agents of the associate of Tata Industries Private Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint Ex-officio and Special Directors to the Board) and two of whose relatives are in the employ of the Company, be and is hereby appointed a Director of the Company."

   The reasons which make the above resolution necessary are more fully set out in paragraph 4 of the Explanatory Statements referred to in Note (*a*) below, which paragraph 4 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.

9. To consider and, if thought fit, to pass the following resolution required by Section 359 of the Companies Act, 1956:—

   "The Company, being satisfied that the insurance premia or other charges made by The New India Assurance Company, Limited, for insurance in respect of the Company's properties, assets and goods and all other insurances are at rates which are not less favourable to the Company than the market rates and are otherwise reasonable, hereby authorises Tata Sons Private Limited, associates of Tata Industries Private Limited, the Managing Agents of the Company, to retain all commission or other remuneration already earned or to be earned by them at any time hereafter as one of the principal agents of The New India Assurance Company Limited in regard to all contracts of insurance or insurance policies which have been or which may at any time hereafter be entered into by the said New India Assurance Company Limited with the Company."

10. To consider and, if thought fit, to pass the following resolution required by Section 293 of the Companies Act, 1956:—

    "RESOLVED that pursuant to subsection (1) (d) of Section 293 and all other enabling provisions (if any) of the Companies Act, 1956, and the Articles of Association of the Company, the Company hereby consents to the Board of Directors of the Company borrowing moneys for the purposes of the Company from time to time even though the moneys so borrowed together with the moneys already borrowed by the Company and remaining outstanding or the amount for the time being and from time to time remaining undischarged of the moneys so borrowed together with the moneys already borrowed may be in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose Provided that such excess shall not be more than Rupees one crore at any time and Provided further that in computing the amount of borrowings whether already made or to be made the amounts of temporary loans obtained from the Company's bankers in the ordinary course of business shall be excluded.

    RESOLVED further that the Company hereby ratifies and confirms all borrowings by the Board of Directors after 1st April 1956, which, together with the amounts previously borrowed by the Company, are in excess of the aggregate of the paid-up capital and free reserves of the Company."

11. To consider and, if thought fit, to pass the following resolution:—

    "RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the registered office of the Company, between the hours of 10-30 a.m. and 1 p.m. (S.T.) on all working days, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of members or holders of debentures of the Company, if any, as aforesaid between the times abovementioned during the period prescribed by sub-section 5 (a) of Section 307."

12. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 26*th October* 1956.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 6 to 11 set out above are annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will be closed from Monday, the 5th November 1956 to Friday, the 30th November 1956, both days inclusive.

(*d*) If dividends on shares, as recommended by the Directors, are passed at the meeting, the payments will be made on and after Wednesday, the 28th November 1956, to those shareholders whose names are on the Register of the Company on the 27th November 1956.

Annexure to the Notice dated the 26th October, 1956, convening the Annual General Meeting on the 27th November, 1956

EXPLANATORY STATEMENTS AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

The following Explanatory Statements, as required by Section 173 of the Companies Act, 1956, set out all material facts relating to the special business mentioned in the Notice dated the 26th October 1956.

2. *Item No.* 6: A special notice has been received from some members as required by Sections 190, 261, 280 and 281 of the Companies Act, 1956, proposing that the appointment of Mr. T. V. Baddeley, C.B.E., as a Director be made and/or approved in accordance with the provisions of the said Sections. As set out in the special notice received by the Company, the reasons which make the resolution necessary are as follows:—

The Managing Agents of the Company, Tata Industries Private Limited, are authorised by the Articles of Association and the Managing Agency Agreement to appoint Ex-officio and Special Directors to the Board. Since Mr. T. V. Baddeley is a director, officer, member and associate of the Managing Agents, his appointment as a Director of the Company who is liable to retire by rotation can only be made by a Special Resolution of the Company in terms of Section 261 of the Companies Act, 1956, and as he has also attained the age of 67 years his appointment has to be made or approved by a resolution of which special notice has been given in accordance with Sections 190 and 281 of the said Act. It is also apprehended that by virtue of subsection (4) of the said Section 261, although Mr. T. V. Baddeley does not retire from office by rotation at the Annual General Meeting this year, his appointment should be made and/or approved by a special resolution of the Company at the said Annual General Meeting.

Mr. T. V. Baddeley first became a Director of the Company on 26th May 1939 and has for the last several years been actively associated as one of the Directors of the Managing Agents with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his advice as a member of the Board, it is desirable that his appointment as a Director be made and/or approved by Special Resolution in accordance with the provisions of Section 261 of the said Act, and that the age limit prescribed in Section 280 of the said Act shall not apply to him.

3. *Item No.* 7: Mr. R. J. Tata and Mr. S. H. Tata are respectively the uncle and the brother and therefore relatives of Mr. N. H. Tata whose appointment as a director is proposed to be made at this meeting (see under item 8). These two relatives of Mr. N. H. Tata have been employees of the Companies since 1st April 1920 and 1st November 1931 respectively. The present office or place of profit held by Mr. R. J. Tata is that of Carding Master at the Mills and the present office or place of profit held by Mr. S. H. Tata is that of Junior Officer at the Head Office. In view of the provisions of Section 314, it is necessary for this meeting to consent to these two gentlemen holding and continuing to hold their respective offices or places of profit under the Company to enable Mr. N. H. Tata to be appointed as a director.

4. *Item No.* 8: Mr. N. H. Tata was first appointed a director on the Board on 26th August 1947 and continued to remain on the Board of this Company up to 28th March 1956. In view of the provisions of Section 314 of the Companies Act, which came into force from 1st April 1956, Mr. N. H. Tata resigned his office as a director on 28th March 1956 as two of his relatives were employees of the Company. Mr. N. H. Tata is a director, officer, member and associate of Tata Industries Private Limited, the Managing Agents of the Company, who are authorised by the Articles of Association and the Managing Agency Agreement to appoint Ex-officio and Special Directors to the Board and hence he cannot be appointed a director of the Company except by a Special Resolution in respect of which a special notice has been given in accordance with the requirements of Sections 190 and 261 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in this item. As it is in the interest of the Company that it should continue to receive the benefit of his advice and experience as a member of the Board, it is desirable that he be appointed a director.

5. *Item No.* 9: Tata Sons Private Limited, who are Associates of Tata Industries Private Limited the Managing Agents of the Company, are one of the Principal Agents of the New India Assurance Company Limited, with whom the Company places its insurance business. Although it is not clear whether it is necessary to obtain the Company's sanction under Section 359 of the Companies Act, 1956, for greater precaution, the Company has been advised to obtain a resolution in General Meeting. The New India Assurance Company Limited is a leading insurance company and has provided valuable insurance service in the past. Its rates of premia and tariff compare well with other insurance companies of repute and its terms and conditions of policies and contracts of insurance are satisfactory. Tata Sons Private Limited, the holding Company of Tata Industries Private Limited, have been one of the Principal Agents of the New India Assurance Company Limited since its inception in 1919. Mr. A. D. Shroff is a director and member of Tata Sons Private Limited and Mr. D. R. D. Tata is a member of Tata Sons Private Limited and, as such, they are interested in the commission earned.

6. *Item No.* 10: In order to conduct the day-to-day affairs of the Company and, in addition to finance the mills' rehabilitation and modernisation programme, the Company has to borrow moneys, from time to time, from the Company's bankers by way of cash credits and also from other banks and private parties for short terms. Section 293 of the Companies Act, 1956, requires the consent of the Company in General Meeting for the Board of Directors to borrow moneys for the purposes of the Company, where the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business), will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose. Opinions differ as to what constitute 'free reserves' and also as to what exactly are to be regarded as 'temporary loans'. Our bankers are of the view that cash credits granted on hypothecation of stocks in addition to demand pro notes will *not as a rule* be regarded as 'temporary loans'. In view of this uncertainty it is considered necessary and desirable that the Company should pass the proposed resolution. As the shareholders are aware, the Company has embarked upon a scheme for the rehabilitation and modernisation of the Mills on a large-scale. From the Balance sheet now in your hands it will be observed that the Company has already spent a large sum on capital expenditure. Further finance on a substantial scale will be needed for carrying out the full programme of modernisation. It is having regard to this fact that the limit of excess borrowings at rupees one crore has been suggested in the resolution. It is also proposed by the said resolution to ratify and confirm all borrowings after 1st April 1956, together with the amounts previously borrowed for the purposes of the Company. In view of the conflicting opinions as regards the terms "free reserves" and "temporary loans", it is advisable that there should be left no room for doubt in case it is ultimately considered that the total borrowings of the Company have, at any time after 1st April, 1956, exceeded the limit fixed by law.

7. *Item No.* 11: Under the relevant Sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said registers and documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said Resolution are reasonable and convenient from the administrative point of view.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

MARKET GOSSIP

(*Concluded from page* 847)

The Company is one of the leading engineering concerns in the country, with specialised lines of production, particularly those pertaining to railways. For nearly 30 years, the Company has been the largest single producer in India of steel railway sleepers and owns by far the largest unit in India producing bolts and nuts. The Calcutta factory of the Company producing these products is in the advantageous position of having its own rolling mills and furnace plant for making special and alloy steels. The factory at Bhandup (Bombay), which is only three years old, is now the largest producer in the country of high class steel and brass wood screws. In addition, it manufactures safety pins, cotter pins, hypodermic needles, tinmen's rivets and metal-thread screws.

The lines of production followed by the Company offer immense scope in the coming years and it is not surprising that the management has undertaken a vast expansion programme to be completed within the next four years. The cost of the whole development programme, together with normal replacement of fixed assets, will be Rs. 4 crores to Rs. 5 crores.

The object of the present issue is to finance a part of this cost. The Directors hope to be able to meet the balance out of the Company's future earnings and resources which may become available from time to time.

A perusal of the Company's financial results for the past five years shows that the profit (before depreciation and taxation), which had shrunk from Rs. 66.66 lakhs in 1951 to Rs. 24.55 lakhs in 1953, rose to Rs. 57.03 lakhs in 1954 and further to Rs. 107.53 lakhs in 1955. Thus, the profit has grown more than fourfold in the course of the past two years. The trading so far this year, according to the Directors, shows continued improvement. This, together with the state of the order book, leads the Directors to believe that (in the absence of circumstances beyond their control), with the additional finance now to be made available to the Company and with the Company's various development schemes gradually coming to fruition, the profits of the current and future financial periods will show an increase consistent with the growth of the Company. For the current year, the Company has paid an interim dividend of 8 per cent., the corresponding distribution for the previous year being 7½ per cent. The Company is expected to maintain the final dividend at 10 per cent., if not raise it.

The balance-sheet of the Company as on 31st December 1955 reveals that the net fixed assets amount to Rs. 173.38 lakhs. This, together with investments amounting to Rs. 5.21 lakhs and current assets aggregating Rs. 269.57 lakhs, brings the total assets of the Company to Rs. 448.16 lakhs. As against these assets, the liabilities and provisions amount to Rs. 218.37 lakhs. The net assets, at Rs. 229.79 lakhs, are represented by an issued and paid-up capital of Rs. 141.06 lakhs (made up of 1,410,600 ordinary shares of Rs. 10 each) and reserves and surplus aggregating Rs. 88.73 lakhs. It may be noted, in this connection, that, once in the past, the Company's fixed assets were revalued, but this was a decade ago, that is, in 1946, from Rs. 30.47 lakhs to Rs. 126.02 lakhs and the surplus (Rs. 95.54 lakhs) was credited to capital reserve. This capital reserve, along with Rs. 22.01 lakhs drawn from general reserve, was utilised in 1947 to issue 1,175,000 shares of Rs. 10 each as capital bonus to the shareholders. But since then there have been substantial additions to the productive capacity of the Company which have enabled the payment of handsome dividends referred to above on the increased capital without prejudice to the strengthening of its financial position.

PRIVATE ENTERPRISE IN INDIA

(*Concluded from page* 868)

to Mr. Black's letter. Mr. Black refers to State enterprises and private enterprises, and Mr. Krishnamachari, of course, thinks differently on the relative importance of the two sectors. He makes a bold statement that, although the experience of State enterprise has not been very long, at least, in some cases, State enterprise has been found to be more efficient than private enterprise.

In the course of my activities in the Forum of Free Enterprise, I have had to answer questions in different places and particularly, last month, when I was in Calcutta I was pointedly asked whether I had any opinion to express on the working of State enterprises. I was not as outspoken as I should have been. In any case, it would be fair to State enterprise to say that the experience has been so short that it is premature to express any definite opinion. However, since Mr. Krishnamachari has found it fit to make up his mind that State enterprise has been, in some cases, more efficient than private enterprise, I can only suggest to him that he should ask for some impartial assessment of the problem. We, in private enterprise, are very willing to learn. The more we learn and the more we improve, it is better for us and the country. Therefore, if Mr. Krishnamachari were to call for an impartial assessment of the working of State enterprise, private enterprise would have a lot to learn.

Finally, I will examine if private enterprise and democracy are incompatible. Coming as it does from the highest in the land, it does need very close consideration and examination. I would, however, like to state that there are a number of thinking people in India who not only do not agree with the view but, on the contrary, honestly believe that, if free enterprise is not allowed to continue in this country, subject of course to our accepting planned development of the country and the necessary regulations involved, and if free enterprise is going to be thwarted, and restricted in its operations, it can only result in a serious diminution of the democratic way of life, if not its ultimate destruction. I for one have been thinking for some time past and trying to understand if this statement could be correct—that private enterprise and democracy are incompatible. Either I do not understand the content of democracy or I cannot understand the meaning of the statement that "private enterprise and democracy are incompatible." As a matter of fact, we, particularly in the Forum of Free Enterprise, find our view confirmed by thousands of people now in the country that, democracy which is a blessing we enjoy and the democratic way of life which has been assured to us in our Constitution is likely to suffer very severely if free enterprise is not allowed to be practised in this country.

SURVEY

(*Concluded from page* 849)

have observed that, in estimating the capacity required by India, the Mission would be guided by the long-term objectives of the country in the field. But he pointed out that heavy engineering industry should be related to the indigenous capacity in steel production which, indeed, is steadily growing.

A significant point made by the leader of the British Mission is that, though its labours may eventually lead to the actual setting up of plant capacity, the Mission is not concerned with end-results of its work. It was not concerned, he emphasised, as to how many of its recommendations would be accepted or through what agency or arrangements they would be implemented. Evidently, such an attitude was prompted by the unfortunate misunderstanding and comments over the World Bank President's letter to Mr. T. T. Krishnamachari and the well-meant advice contained therein. We appreciate the Mission's anxiety to be free from any charge of attempting to dictate policy to the Government of India, but, at the same time, we hope that the Mission's recommendations, apart from being as objective as possible, will not fail to indicate the conditions under which its proposals will yield the maximum return. It is, of course, up to the Government of India to determine, on the merits of each case, its policy. But it is necessary to stress that the Government's policy should be influenced more by considerations of the need for rapid industrial development, than by half-baked ideologies. Sir Eric's suggestion that Britain has both the real resources and the willingness to consider further enterprise in this country also deserves serious study.

Notice

THE MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 85th Annual General Meeting of the Company will be held at its Registered Office at Supariabaug Road, Parel, Bombay, on Friday, the 23rd November 1953, at 11.30 a.m. (I.S.T.), to transact the following business:—

(1) To adopt the Directors' Report and audited statements of accounts for the year ended 30th June 1956.

(2) To declare a dividend on Preference and Ordinary Shares.

(3) To elect a Director in place of Shri Motilal Tapuriah who retires by rotation under Article 108 of the Articles of Association of the Company, but being eligible, offers himself for re-election.

(4) To appoint and/or approve the appointment of Shri Gopikisan Piramal as a Director of the Company, pursuant to Section 261 of the Companies' Act, 1956, in as much as (*a*) The Managing Agents of the Company are authorised by its Articles and by its Managing Agency Agreement to appoint a Director on the Board, (*b*) Shri Gopikisan Piramal is liable to retirement by rotation of Directors and (*c*) he is an associate of the Managing Agents, and for that purpose, to consider and, if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice is received by the Company and of which Special Notice is hereby given:—

Special Resolution No. 1:—

"Resolved that the Company hereby appoints and/or approves the appointment of Shri Gopikisan Piramal as a Director of the Company."

(5) To appoint and/or approve the appointment of Shri Basudeo Kanoria as a Director of the Company, pursuant to Section 261 of the Companies' Act, 1956, in as much as (*a*) the Managing Agents of the Company are authorised by its Articles and by its Managing Agency Agreement to appoint a Director on the Board, (*b*) Shri Basudeo Kanoria is liable to retirement by rotation of Directors and (*c*) he is an associate of the Managing Agents, and for that purpose, to consider and if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice is received by the Company and of which Special Notice is hereby given:—

Special Resolution No. 2:—

"Resolved that the Company hereby appoints and/or approves the appointment of Sri Basudeo Kanoria as a Director of the Company."

(6) To elect a Director in place of Shri G. M. Adukia, who retires by rotation under Article 108 of the Articles of Association of the Company, but being eligible, offers himself for re-election, and in as much as (*a*) the Managing Agents of the Company are authorised by its Articles and by its Managing Agency Agreement to appoint a Director on the Board, (*b*) Shri G. M. Adukia is liable to retirement by rotation of Directors and (*c*) he is an associate of the Managing Agents, and for that purpose, to consider and, if thought fit, to pass the following Resolution as a Special Resolution of which Special Notice is received by the Company and of which Special Notice is hereby given, as required by Section 261 of the Act.

Special Resolution No. 3:—

"Resolved that the Company hereby re-elects and appoints Shri G. M. Adukia as a Director of the Company."

(7) To appoint Auditors for the current year and to fix their remuneration.

(8) To consider and if thought fit, to pass the following Resolution as a Special Resolution:—

Special Resolution No. 4:—

"Resolved that, subject to the approval of the Central Government, the following Article be substituted for Article 98 of the Articles of Association of the Company, viz.

'The remuneration of each Director for his services for each meeting of the Board or Committee of the Board attended to by him, shall be such sum not exceeding Rs. 150 (Rupees One Hundred and Fifty) as may be determined by the Board from time to time.'"

(9) To consider and if thought fit, to pass the following Resolution as a Special Resolution:—

Special Resolution No. 5:—

"Resolved that, as required by Section 360 of the Companies' Act, 1956, the Company hereby approves of the contract between the Company and Shri Purshottam Baijnath Modi, an associate of the Managing Agents of the Company, for his appointment by the Company as its Secretary on a monthly salary of Rs. 1,500 and with such allowances and benefits as he at present receives from the Company or as may from time to time be determined by the Directors of the Company."

(10) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

Special Resolution No. 6:—

"Resolved that as required by Section 360 of the Companies' Act, 1956, the Company hereby approves of the contract between the Company and Shri Gopikrishna Baijnath Modi, an associate of the Managing Agents of the Company, for his appointment by the Company as its Stores Superintendent on a monthly salary of Rs. 1,500 and with such allowances and benefits as he at present receives from the Company or as may from time to time be determined by the Directors of the Company."

(11) To consider and if thought fit to pass the following Resolution as a Special Resolution:—

Special Resolution No. 7:—

"Resolved that, subject to the approval of the Central Government, the Company doth hereby appoint Piramal Sons Private Ltd. as its Managing Agents for a period of 10 years from the 15th January 1957 at the remuneration and upon the terms and conditions mentioned in the draft Agreement placed before this meeting and initialled by its Chairman and approved by this meeting (but with such modifications thereof as may be required by the Government), and that the Company do enter into and execute the stamped engrossments of the said Agreement in duplicate and that the seal of the Company be affixed thereto in the presence of any two of the Directors and some person appointed by the Directors for the purpose."

(12) To consider and, if thought fit, to approve the draft of the new Articles which will be submitted to the Meeting, and in the event of the approval thereof, with or without modifications, to consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

Special Resolution No. 8:—

"Resolved that the new Articles already approved by this Meeting and for purposes of identification subscribed by the Chairman thereof be approved and adopted as the Articles of Association of the Company, in substitution for and to the exclusion of all the existing Articles thereof."

(13) To consider and if thought fit to pass the following Resolution:—

"Resolved that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies' Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 332, 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company between the hours of 11.0 a.m. and 1.0 p.m. (S.T.), on any working day except when the Registers and Books are closed under the provisions of the Companies' Act, 1956, and of the Articles of Association of the Company, provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of the members as aforesaid between the times above mentioned during the period prescribed by Sub-section 5(*a*) of the said Section 307."

(14) To consider and if thought fit to pass the following Resolution:—

"Resolved that the Board of Directors of the Company be and they are hereby authorised to contribute in any financial year to charitable and other funds not directly relating to the business of the Company or the welfare of its employees, any amounts the aggregate of which may in such financial year amount to Rs. 2,50,000 or five per cent. of the average net profits of the Company as determined in accordance with the provisions of Sections 349 and 350 of the Companies' Act, 1956, during the three financial years immediately preceding such financial year, whichever is greater."

(15) To consider and if thought fit, to pass the following Resolution:—

"Resolved that, in accordance with the provisions of Section 293 of the Companies' Act, 1956, the Company hereby gives its consent to the Board of Directors borrowing monies from time to time for purposes of the business of the Company even though as a result of such borrowings, the monies so borrowed and remaining undischarged for the time being together with monies already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) shall exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

The Share Transfer Books of the Company will be closed from Friday the 9th November 1956, to Saturday the 24th November 1956, (both days inclusive).

By Order of the Board,

For PIRAMAL & SONS,

MOHANLAL PIRAMAL,
Partner,
Agents.

BOMBAY, 5*th October* 1956.

The Dividend, if sanctioned, will be payable from Monday the 26th November 1956 to those shareholders whose names stand on the Register of the Company in the evening of Saturday the 27th October 1956.

Dividend Warrants will be posted in due course to the registered addresses of the shareholders. Change of address, if any, should be notified without delay.

AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE SPECIAL ITEMS OF BUSINESS HAS BEEN SENT BY POST TO EACH AND EVERY SHAREHOLDER AT HIS REGISTERED ADDRESS.

MIGHT IS RIGHT?

"DEEPAVALI," or Festival of Lights as it is popularly called, is celebrated in India every year in commemoration of the victory of justice over injustice, of right over wrong, of wisdom over brute might, and of faith in the dignity of man over egotism and scepticism. It seems to be an irony of fate that, on this auspicious occasion this year, leaders of certain powerful countries in the world should have behaved in such a manner as to give rise, once again, to doubts, in the minds of men whether "might is right" after all. The irony has become a cruel one, indeed, because, of the countries responsible for it, two belong to the democratic world and had earned, in recent years, the reputation of being progressive in their outlook. Britain is known as a country of liberal traditions and as the Mother of Parliaments. France is the country which gave the soul-stirring cry "liberty, fraternity, and equality" in the days when despotism and feudalism were the order of the day. It is true that, for nearly 150 years, these two countries turned out to be great imperialistic powers, but they had salvaged their reputation during the past decade through spectacular renunciation of the major part of their empires and through their unwavering support to the United Nations Organisation, the upholder of international law. That these two countries, in collaboration with Israel, should have committed unwarranted armed aggression on a puny and poorly equipped country—Egypt—has caused a deep sense of sorrow and disappointment among all freedom-loving peoples of the world.

In the same week, there was aggression elsewhere also in the world, in Hungary to be precise. Russia deserves to be roundly condemned for its ignoble act of crushing the freedom movement in Hungary with the weight of its military might. But Russia is known for its ruthlessness and totalitarian methods and it causes no surprise nor disillusionment when it prefers force to peace. It is the action of Britain and France that has outraged the conscience of the free world and weakened the hands of the latter in forcing Russia to yield freedom to the people of Eastern Europe. In fact, it is the storm raised by Britain, France and Israel in West Asia that has put out the lights of freedom which had just begun to flicker in Poland and Hungary after they were blacked out for nearly 17 years. Their expression of sympathy for these victims of fascism and their criticisms of Russia sound unreal after what they have done to Egypt.

It is not only these aggressions that make one to pose the age-old question whether might is right but also the fact that it was the fear of a third world war which made Anglo-French powers to order a hasty cease-fire even before completely fulfilling their objective, namely, seizure of the entire Suez Canal zone. It is difficult to dismiss as pure coincidence their decision to stop fighting in Egypt within a few hours of Russia's virtual ultimatum to them that, if they did not stop their aggression on Egypt, it was determined to enter the fray in support of Egypt. It would appear that the Anglo-French Governments, which completely ignored the weight of world opinion as reflected in the decisions of the United Nations General Assembly and continued hostilities on Egyptian soil, air and sea and brushed aside the language of peace with impunity, had to take notice of Russia's language of war. However deplorable may be Russia's threat to intervene in the war unleashed by Britain in West Asia, the fact remains that that threat has worked well in preventing the conflict from gathering momentum. The Russian action was just a copy of Mr. Dulles's tactics of taking the world to the brink of war, in order to stop a war. In any case, it is the British and French Governments which first took the law into their hands, defied the United Nations and committed aggression. By doing these things, they set a bad example for Russia and tempted it to do likewise. If a third world war had broken out or were to break out in the near future, which God forbid, these two Governments would certainly be guilty of starting it. It is the good fortune of the British and French peoples that better sense dawned on their Governments at least in the nick of time and has so far saved them from this terrible odium.

It used to be said of the Tories in Britain that they were imperialists and war-mongers. The record of Britain in the past ten years had led one to hope that all that was past history. But Sir Anthony Eden and his colleagues in the Government, excepting one man, Mr. Anthony Nutting, Minister of State at the Foreign Office, have belied this impression. By resorting to force to settle their score with Egypt, they have set the clock of Britain's progress back. They have shattered the tremendous amount of goodwill built up for their country by the Labour Party in this part of the world. Earl Attlee, who was recently in this country and had seen for himself the enormous reservoir of affection and love for Britain among all sections of Indian people, was perfectly right in describing the Anglo-French intervention in West Asia as a "mad act." It is apparent that, in his anger against President Nasser, Sir Anthony has lost his sense of proportion and balance of mind and that the French Government, in its anxiety to retain its colonial possessions in North Africa, has exploited his weakness and successfully egged him on to commit a crime which has brought nothing but shame on Britain. And, in Israel, both of them found a very obliging *agent provocateur*. It is a pity that Sir Anthony should have stooped so low, in order to avenge President Nasser's nationalisation of the Suez Canal. Although he got Parliament's vote of confidence in his Government by a majority of 67 votes, there is enough evidence that he has miserably failed to convince the vast majority of his countrymen about the justness of his stand. In fact, it will not be surprising if circumstances force him to resign very soon.

It is unnecessary to discuss the developments at any length to show that the step taken by the British and French Governments was wrong and against international law. Apart from the fact that it has been condemned by the United Nations by an overwhelming majority of 64 to 5, including its trusted ally the U.S., the entire Labour Party has solidly voted against the British Government on this issue. It must be said to the credit of Opposition leaders in Britain that they have thoroughly exposed the hollowness of their Government's stand. Mr. Bevan has described its action as an "unjustifiable and wicked war," contrary to all "civilised principles, humanity and justice", and compared Sir Anthony's ultimatum to Egypt with that of Hitler on the Low Countries in 1940. Mr. Gaitskell, leader of the Opposition, has likened the so-called "police action" of Sir Anthony to that of a policeman who joins with the thief and shoots at the householder. No greater condemnation of the British Government's action is possible. A word of praise is also due to those sections of the British Press—which included the pro-free enterprise contemporary of ours, *The Economist*—which had the courage of conviction to highlight the error of Sir Anthony's judgment and to criticise his actions in no uncertain terms. It is the existence of such vigorous and forthright Opposition to the British Government's undeclared war against Egypt that has sustained the faith of this country in the good sense of the British people and in their capacity to correct the wrongs done by their Government. But for this opposition, India might have decided to sever its connection with Britain and the Common-

wealth, even though such severance would mean a considerable amount of sacrifice.

It must be said to the credit of the U.S. that, right from the beginning of Anglo-French war-like actions in West Asia, it has striven its best to find a peaceful solution. The Suez Canal dispute was well on the way of being solved peacefully, thanks to the able handling of it by the Indian Government and the timely realisation by the U.S. of the pitfalls in the Anglo-French proposals. It might have been solved by now to the satisfaction of all, except, perhaps, of Sir Anthony Eden and the French Premier, M. Guy Mollet, both of whom appear to have developed a personal vendatta against President Nasser and been keen on overthrowing him. That was apparently the reason why they torpedoed a peaceful settlement of the Canal controversy by engineering a plot against Egypt with the help of Israel. But their calculations have not fully materialised, thanks to the right action swiftly taken by the U.S. Government through the medium of the United Nations. Its firm refusal to lend support to the British, French and Israeli Governments and its quick action in mobilising world opinion against the aggressors have saved this planet from going up in flames. All honour to President Eisenhower and his colleagues. At the darkest hour of the world, they did not flinch from their loyalty to the United Nations, the only hope of mankind. In re-electing him as their President with a massive majority, the American people have done the right thing and endorsed his wisdom in the hour of crisis.

All this does not mean that the world is out of the wood. The fire lit by Israel, Britain and France in West Asia has not yet completely died down. It may flare up again at any time, unless these three countries swiftly evacuate their forces from the Egyptian soil. The United Nations General Assembly has already adopted a resolution to that effect. The proposed U.N. police force should be quickly formed, in order to keep peace in West Asia. The big powers should not insist upon their having representation in any such force. By their acts of aggression, Britain, France and Russia have forfeited their claims for rendering such a service to the world. The U.S. will do well to keep out of it, in order to avoid misunderstanding. Australia and New Zealand are unfit to be in it, because they have openly indentified themselves with the Anglo-French aggression on Egypt. There is no need for Russia to take up the cudgels against the invaders into Egypt outside the United Nations. If it does, it will forfeit the sympathy and understanding it has recently won in this part of the world by giving economic aid and by championing the cause of the underprivileged nations of Asia and Africa against Western colonialism.

After the withdrawal of foreign forces from the Egyptian soil, the U.N. should lose no time in settling the Suez Canal dispute. Britain and France should realise now that the countries which agreed to join the Canal Users' Association did not support them in their adventure to seize the Canal by force and that what little prospects there were of their joining them in an economic war against Egypt have now completely gone. They must concede that Egypt has a right to nationalise the Canal and will be well advised to accept, as Egypt has already done, the Indian plan for safeguarding the international interest, as distinct from Anglo-French interest, in the Suez Canal as a waterway of great importance to the peace and prosperity of the world. The Arab countries, on their part, should recognise Israel's right to exist as a sovereign nation in their midst. In view of Israel's flagrant aggression against Egypt last week, they will, however, be justified in expecting a guarantee of good conduct by Israel, presumably by all the members of the United Nations. As the Arab countries are blessed with large deposits of oil, a strategic commodity both in peace and war, they should give an undertaking to the United Nations Organisation that they will not meddle with its development and free flow, so long as the exploitation is carried out in a manner satisfactory to themselves and to those who invest their capital and know-how for this purpose. Such an assurance from them will help banish the fear of Western countries that Arab nationalism might endanger the flow of oil so badly needed by them and the consequent desire to retain their political domination over West Asia, through force if need be. It is only on some such lines that peace in this part of the world can be ensured. And, once real peace in West Asia and Africa is secured, it will only be a question of time for the East European countries to regain their freedom from Russian domination. If the Western powers follow the path of truth and honesty and stand by the high principles of the United Nations Charter, Russian imperialism cannot last long.

AGRICULTURAL TARGETS

EVER since Mr. Nehru stressed that the country should be able to increase its agricultural production even beyond the targets prescribed under the Second Five-year Plan, a new sense of urgency has been imparted to India's agricultural front. There are at least three considerations which underline the need for increased food and agricultural production. In the first place, the country's population is increasing at an annual rate of about 4.2 million a year, so that in the absence of a steady increase in foodgrain production, shortages are bound to develop at some stage or other. Secondly, the increased incomes which will be generated by the progress of the Second Five-year Plan will be generally spent in an underdeveloped country, like India, on the primary necessities of life, namely, food and cloth. This fact, taken in conjunction with the prospect of deficit-financing, should make it clear that the pressure of the new purchasing power on available supplies of food and cloth will be very great and will lead to higher prices, unless the supply itself is suitably augmented. To these factors must now be added the new international developments. Any prolongation of the Suez crisis or any occurrence of similar crises in future will make it extremely difficult for this country to rely on imports of foodgrains. Thus, international considerations, if not national considerations, serve to emphasise the need for national self-sufficiency in foodgrains, oils and fats, sugar and cotton. Indeed, the Government is fully alive to this aspect of the problem. Inaugurating the National Warehousing Board at New Delhi, Mr. Nehru emphasised that India should prepare itself for all eventualities. If there was war, it was inevitable that all supplies from foreign countries would be completely cut off. It was, therefore, "highly essential," he said, that India should be self-sufficient in food and other essential commodities.

In recent months, there has, as is well known, been considerable discussion, both at the Central and the State level, of the problem of increasing agricultural production. The National Development Council, which met in May 1956, felt that it was necessary to raise the targets of agricultural production proposed under the Second Plan. Since then, the Union Ministry of Agriculture and the Planning Commission have been engaged in reviewing these targets in consultation with the State Governments. Detailed discussions on the subject again took place among the State Ministers of Agriculture who met at Mussoorie towards the end of June. The results of these discussions have been reviewed jointly by the Planning Commission and the State Ministers of Agriculture and new targets have been drawn up. The following table gives the estimated production of different agricultural commodities in 1955-56, the targets prescribed under the Plan and the revised targets:

		Estimated production in 1955-56	Targets set in Plan	Revised targets
Foodgrains ..	.. (Million tons)	65.0	75.0	80.4
Oilseeds ..	.. (,,)	5.5	7.0	7.6
Sugarcane ..	.. (,,)	5.8	7.1	7.8
Cotton ..	.. (Million bls.)	4.2	5.5	6.5
Jute ..	.. (,,)	4.0	5.0	5.5

It will be seen from the table above that substantial increases in agricultural production are envisaged by the revised targets. As compared with the 1955-56 output, the revised target for foodgrains implies an increase of 23 per cent., for oilseeds 38 per cent., for sugarcane 34 per cent., for cotton 55 per cent., and for raw jute 37.5 per cent. If the revised targets were realised, agricultural production as a whole would increase by about 28 per cent., the increase in the production of foodgrains being nearly 25 per cent., and in that of commercial crops about 34 per cent. It would appear that considerable emphasis was laid during the discussions on the need to increase the production of millets. In the economy of several States, millets occupy an important position, the total area under *jowar* being 43 million acres and the area under *bajra* being over 27 million acres. The need for stepping up research on improved strains in millets was recognised. The State Governments, in co-operation with the Indian Council of Agricultural Research, are expected to give considerable attention to improving the quality and yield of millets.

The multi-pronged drive for increased agricultural production includes programmes for the multiplication of improved seed, use of fertiliser, irrigation and soil conservation. During the next three to five years, in every State, efforts will be made to cover every acre with improved seed and, along with this, to ensure that every acre of land is supplied with fertilisers and organic manures and green manures. Each State, it is stated, has now a programme for setting up seed farms for raising nucleus seeds and multiplying improved seeds through registered growers, keeping in view the requirement of the entire area to be covered by each seed farm. Provision is being made for setting up co-operative seed stores at the headquarters of every national extension block and smaller stores for each group of about 20 villages; at these stores, fertilisers and agricultural accessories will also be made available. Since good results have been obtained by the combined use of chemical fertilisers and organic manure, each State will organise the production of compost, urban and rural, on the largest scale possible.

In all national extension and community project blocks, special personnel will be provided for work relating to organic manures, use of green manures and utilisation of nightsoil. It is also proposed to give training in manurial work to five to ten selected persons in each village level workers' circle. In opening new national extension service and community project blocks, preference, it is stated, will be given in the early years of the Plan to areas where rapid increase in agricultural production can be achieved. Definite targets will be laid down for each group of villages in charge of an extension worker. Funds proposed for agriculture in the block budgets for national extension and community project areas will not be diverted to other heads of development, and, in these areas as in others, personnel of the State agricultural departments will be responsible for the success of the agricultural programmes.

Much emphasis is rightly placed on enlisting the co-operation of the farmers in the task of carrying out the agricultural programme. It has been suggested that there should be a village *panchayat* and a multi-purpose co-operative society in each village which should see that every family has an integrated plan for the use of improved seeds, fertilisers and organic and green manures and is assisted with short-term credit, in money or kind, for carrying through its plan. Local participation and community effort are envisaged on the largest possible scale in such programmes as minor irrigation and contour building. In some States, minor irrigation works are carried out by Government agencies. Such works, it is suggested, should be regarded in all States as essentially a local community programme in which local contributions in money and labour play a leading role.

But the chief difficulty in implementing the programme may well arise from the fact that no additional financial resources are to be allotted to agriculture. It would appear that the State Governments, in common with the Ministry of Agriculture and the Planning Commission, accepted the view that the maximum effort should be made by all interests concerned within the resources allotted for agriculture under the Plan. It was, however, recognised that, at later stages in the Plan, it might be necessary to make small additions to the allotments available for agriculture, through internal adjustments and in other ways. It remains to be seen whether it will be possible—even assuming there will be no unfavourable weather conditions—to accomplish the higher targets for agriculture without making available larger financial resources to those who are charged with the responsibility for carrying out the programme. There are also two related questions —of credit and transport. Clearly, the credit system has to be suitably geared to the task of financing the production and marketing of additional agricultural produce. Similarly, the transport system should have the necessary equipment to cope with the increased traffic which will flow from the achievement of higher targets for agricultural produce. Serious doubts were expressed about the adequacy of transport system even to meet the traffic needs arising from the lower targets first fixed in the Plan. Now that these targets have been revised upwards in one important sector, namely, agriculture, this problem becomes greater still. It is the duty of the authorities to give sufficient fillip to all modes of transport, in order to ensure that increased production is carried to areas where it is needed and thereby fulfil the purpose for which such production is intended. In this matter, they should not allow ideological considerations to stand in the way.

REACTIONS TO THE WAR IN WEST ASIA

CANADA'S NOVEL EXPERIMENT IN MANAGEMENT OF MONEY

THURSDAY, 5 P.M.

THE Hindu New Year, that is, *Samvat* 2013, was ushered in in the midst of great political tension and grave uncertainty, due to the outbreak of a little war in West Asia just a couple of days before. Trading in all the markets on the *Moorat* day was, therefore, overshadowed by this grim dramatic event. Operators were worried whether this was a prelude to a world-wide conflagration. Unable to take a view, they were reluctant to adopt an aggressive stand either way. This was particularly true of the share markets. The initial reaction was slightly bullish, but the extent of rise in prices was not appreciable. Later on, when hostilities ceased, there was a slight marking down of values. As the week drew to a close, a fractional improvement was seen. On the whole, the shares have finished this historic week on a mixed trend, with the list showing a sprinkling of minor losses and gains. The turnover, too, was in modest proportions. There was, however, a lot of excitement and animated discussion, especially after the stern warning by Russia that it was determined to intervene in favour of Egypt if Britain, France and Israel did not stop fighting. The consensus of opinion in market circles was that Britain and France were both unjust and foolish in unleashing the war dogs in West Asia. Most of them were pained by the action of these two Western Powers, both of which are friends of India. Many were inwardly glad that Russia had the courage to speak in the only language which these powers were in a mood to understand then and are even now of the view that, but for this threat from the Soviet Union, they would not have cried a halt to their aggression on Egypt.

MARKET GOSSIP

The bullion and commodity markets, however, were more sensitive to the little war than the share market. Gold went up by about Rs. 2-8 per tola, as also silver by a like amount per 100 tolas, though today's closing rates reveal that the entire gain has been lost now. Among commodities, cotton futures staged a spectacular rise of Rs. 20 per candy; substantial gains were registered by groundnuts, linseed, castorseed and cottonseed. But, unlike bullion, almost all the commodities have retained the rise in prices that followed in the wake of the outbreak of hostilities. In fact, groundnut, linseed and raw cotton have finished today at levels well above the peaks witnessed when the war fever was strong. Only castorseed and cottonseed are a shade below such peak levels. The exceptional firmness of the former group of commodities is probably due to their intrinsically sound statistical position in relation to the present and the prospective demand for them.

Although more than eleven days have passed since the Finance Minister met the bankers in Bombay, no new steps have been taken by the monetary authorities to raise the supply of funds with the banks. Reports from New Delhi suggest that the Finance Minister is not any the wiser for his meeting with the bankers and that he still feels that there are many conflicting trends in the money and capital markets which require to be explained. He is scheduled to meet the bankers in Calcutta also tomorrow to see what they have to say on the position. Meanwhile, the Finance Ministry is reported to have circulated a questionnaire to representative bodies of banks eliciting detailed information on the position of the money market and its recent trends.

While this search for knowledge by the Finance Ministry is on, conditions in the money market have become more stringent than before. The Reserve Bank has not yet liberalised the conditions under which credit is made available to banks through usance bills. In the absence of any fresh help from this source, a keen bid is being made by banks for the available supply of funds by offering slightly higher rates of interest. As much as 3⅜ per cent. to 3½ per cent. is being offered by some banks for house money, provided the amount involved is fairly large. At the same time, they have raised their rates of interest by half of one per cent. The practice followed in this respect varies from bank to bank. One of the Big Five, for instance, has increased its rate for overdrafts by ½ per cent. for all accounts, while another has done so in a discriminating manner, by applying the increase more especially to those accounts which carry a relatively low rate of interest. The State Bank of India has not yet raised its declared rate of interest on commercial advances, namely, 4 per cent. But it has decided, so we understand, to charge ½ per cent. more for some of its valued clients who have been enjoying hitherto relatively more favourable terms as compared with others. Thus, as anticipated by us last week, bank credit is becoming costlier, which is only as it should be.

• • • •

A new and interesting experiment in central banking operations is being tried by the Bank of Canada. The Bank has abandoned the method of using the discount rate to lead the general level of interest rates. Instead, it has chosen to link the Bank rate to the yield on Treasury bill offerings. This will mean week-to-week adjustment in Bank rate. The Bank announced that the rate would be fixed at a margin of one-quarter of 1 per cent. above the latest weekly average tender rate for 91-day Treasury bills. Since the average tender rate on Treasury bills on Thursday, 1st November 1956, was 3.34 per cent., the Bank rate for the week beginning from that date was 3.59 per cent. as against 3½ per cent. announced on 18th October 1956, to which level it had been raised from 3¼ per cent. The Bank rate will thus be changed every Thursday, the rate depending upon average tender rate.

The adoption of this method might appear as a strange and even weak abandonment of the traditional authority of a central banking institution to set the pace for interest rates. It means that, instead of leading the interest rates, the authorities are willing to be led. In other words, Canada is heading for a financial democracy, in which the king (the central bank) is a constitutional monarch, willing to carry out the behests of the people (the monetary conditions). It would, however, appear that the Canadian central banking authorities do not regard the new device as an experiment at all, but only a confirmation of the practice they have been following till now. Mr. J. E. Coyne, Governor of the Bank of Canada, even convened a Press conference to explain the new device. He pointed out that interest rates were merely a function of relationship between the supply and demand for money. He wanted the public to watch the contractions and expansions of the money supply and not look for an important policy message every time the Bank rate changes. In other words, he wants people to get used to changes in Bank rate in just the same way they are used to changes in interest rates on advances, or deposits, or yields on securities. The Canadian experiment will certainly be watched with interest the world over.

• • • •

Although the world markets were for long aware of the Suez Canal uncertainties, it is true to say that the culmination of this dispute into a conflagration, albeit of a limited character, came as a very unpleasant surprise to nearly all the European and American markets. A nervous tone continues to prevail in the Continental markets even now, though an uneasy cease-fire has come into existence in Egypt. The London Stock Exchange has not yet recovered from the shocks of the little war in Egypt and the Russian warning. Industrials were lower and so were Gilt-edged. Oils were, of course, the worst affected. Tea and rubber shares were dull. Metal shares were generally lower. All this is hardly surprising, considering that the Suez Canal is a vital line of communication for the U.K. and Western Europe. It is through the Suez that the U.K. gets 50 per cent. of its oil, 85 per cent. of its rubber, 95 per cent. of its jute, 70 per cent. of its wool and almost 100 per cent. of its tea. The immediate impact of the crisis was that many of these commodities were marked up in the London market. The following are the latest available quotations for a few important commodities, the figures in brackets indicating the prices before the commencement of hostilities in the Suez area:

Aluminium (per ton) £197 (£197); copper (per ton) £285½ (£272½); gold (per oz.) 252s. (251s. 4½d.); silver (per oz.) 81½d. (80¼d.); tin (per ton) £858¾ (£809½); zinc (per ton) £99⅛ (£96⅜); groundnut oil (per ton) £134 (£130); linseed oil (per ton) £130 (£118½); black pepper (per lb.) 1.9½d. (1.7¼d.); rubber (per lb.) 29½d. (27½d.); sugar (per ton) £33½ (£32-17½) and tea (per lb.) 3.9½d. (3.5d.).

As was only to be expected, the crisis had its effect on freight rates and marine insurance rates. Some continental lines have increased their rates by 20 per cent. to cover the increased costs of operation *via* the Cape. In Bombay, it is learnt that a 15 per cent. increase in freight has come into effect from 7th November for diversion of ships through the Cape. This follows the decision of six shipping conferences, covering all the lines operating on any route between Europe and areas east of Suez, to impose a surcharge of 15 per cent. on freight rates. The higher rate will operate whether a cargo is routed to the Far East *via* the Cape or by way of the Panama Canal. There will be no discount or rebate in the surcharge.

It has been calculated that cargo ships operating between Europe and Indian and Far Eastern ports will take 9 to 15 days longer on the Cape voyage at a daily operating cost around £1,000 per ship. All this, however, is not a mere question of distance, time or costs. For it remains to be seen whether the South African authorities can cope with all the unexpected shipping traffic at their ports. They have no doubt taken some prompt measures designed to handle a larger traffic. But it may be wondered whether port facilities can be readily augmented to meet the demands of an increased traffic. Shipping services may possibly remain disrupted until the Suez situation returns to normal and the Canal, now blocked by more than a dozen sunken ships, is rendered fit for navigation.

As regards insurance, the Institute of London Underwriters is reported to have decided to raise the insurance rate for war and strike, riot and civil commotion risks—or what is called the war and S.R.C.C. risks—by 10s. per £100 on cargoes going through the Suez Canal and also to, from or transhipping at ports in Egypt, Israel, Jordan, Lebanon and Syria. The rate is 5s. per cent. above the highest rate introduced during the weeks following the nationalisation of the Suez Canal when it was thought that traffic through the waterway would be disrupted. The through-Suez rate now stands, it is stated, at a minimum of 10s. 9d. per £100, while the rates for cargoes to, from or transhipping at ports in Egypt, Israel, Jordan, Lebanon and Syria range between 11s. 6d. and 12s. per cent. In Bombay, the marine rates on cargoes *via* Suez have been raised by ½ per cent., with effect from 1st November. Thus, the rate for war and S.R.C.C. risks, which was 3/80 per cent., has been raised to 43/80 per cent. or As. 8.3/5 per cent.

It may seem remarkable that the pound sterling which would normally be affected by Britain's adventure in West Asia, has stood the test of this crisis without serious loss in exchange value. The latest rates for spot sterling, three months' sterling and transferable sterling are $2.78¼-78¾, $2.76¾-76¾ and 274.75-74.90, as compared with $2.78.5/16-78.7/16, $2.76¼-77 and 275 85-75.95 respectively, before the outbreak of hostilities. But this comparative resilience of sterling is due to effective official support and also to the fact that the overseas interests concerned had taken sufficient precautionary measures well in advance. Some of these interests, it is stated, had kept themselves "short" of sterling. Also, many countries, fearing the adverse effect of the West Asia situation on sterling, had already converted their sterling holdings into other currencies. It is also possible that the authorities in many countries which have commercial relations with the sterling area felt that the Suez conflict would be a brief affair and there was no point in generating a panicky pressure on sterling. All these favourable conditions would not continue in the event of any widening of the area of conflict or the prolongation of the Suez crisis. Further, if the West Asian countries, which now hold substantial reserves of sterling, were to unload their holdings, it would mean considerable pressure on sterling. They might be induced to do this out of the fear that, if Britain could freeze Egyptian sterling balances, it could also freeze theirs.

It is, therefore, in the interests of West Asia and India as in those of Britain and West Europe that the whole situation should end peacefully. A third World War, in the context of nuclear weapons, would, of course, only mean a war of total destruction. But even the continuation of the present near-world-war conditions will impose too severe a strain on world economy. The interruption of oil and other supplies has already meant much hardship to Europe. But oil is also vital to the economy of the Middle East. Kuwait and Qatar derive over 90 per cent. of their national income from oil revenues, Saudi Arabia and Bahrein 45-60 per cent., Iraq 33 per cent., and Iran 10 per cent. So far as Israel is concerned, it has no oil reserves. But its economy, already precarious, is particularly vulnerable to international conflict. This small State of 1.9 million people, created in 1948, has a budget which constitutes 50 per cent. of its national income. Defence already accounts for 40 per cent. of the national budget. Its exports, mainly citrus fruits and diamonds, pay for only 20 per cent. of its total imports, the rest being covered by tourism, German reparations, U.S. grants and loans. Prices are already 400 per cent. above the 1950 levels. The State has suffered too through the economic boycott by the Arab countries. It would be exposing its economy to far too many perils, if it did not actively pursue the path of peace.

India, of course, has a "vested" interest in peace. Any international conflict, irrespective of whether India is a party to it or not, would jeopardise all its economic programmes. It has been calculated that any prolongation of the Suez crisis would mean a substantial addition, estimated at Rs. 200 crores, to the outlay on the Plan. But the impact of the crisis might be even more extensive and damaging than what this figure suggests. Imports would become costlier and export promotion well-nigh impossible. It has been computed that, last year, India, along with Pakistan and Burma, received 125,000 tons of machinery through the Canal. Again, India supplied through the Canal 3.1 millions tons of minerals, 480,000 tons of vegetable oils, 600,000 tons of textiles to different countries of Europe. Most of India's exports pass through the Canal and would be adversely affected through shipment difficulties and freight increases. And, if the Suez crisis were unfortunately to deepen or widen into a major conflict, it would, of course, mean a very serious handicap to the implementation of its economic plans.

A major conflict, in which the leading nations of the world, namely, the U.S., Russia and the U.K. participate, would virtually dry up the chief sources of machinery, equipment, and even credit. It must be realised that many aspects of India's expansion programme are intended to be carried out through foreign collaboration. To take only the steel programme, its success is dependent upon the co-operation of the U.K., Russia and Germany. Surely, it is inconceivable that these countries could give their attention to India in the event of a major conflict in which they are engaged. Some indication of the possible effect of a flare-up on only one aspect of India's programme, namely, the rail transport sector, was given this week by Mr. P. C. Bhattacharya, Secretary to the Union Ministry of Finance, and the head of a railway delegation, now in Washington, to discuss a loan from the World Bank. In a Press interview, he said that a flare-up in fighting would disrupt the time-table for delivery of locomotives, modern rolling stock and other equipment valued at 200 million dollars. He said that orders for this equipment were placed last year in Britain, Japan, W. Germany, Italy France, Belgium and Czechoslovakia. He added, "India is directly affected by the situation in West Asia. We are hoping for the necessary time to strengthen our economy and bring happiness to our people. That is very essential from the world's point of view, as well." Clearly, it is not transport alone but all sectors of Indian economy that would receive a severe setback through the extension or even the continuance of international tension. Peace is the only foundation on which India can hope to build its prosperity.

The three common forms of raising capital from the public by joint-stock companies in this country are the issue of ordinary shares, the offer of fixed dividend preference shares and the floating of a

(Continued on page 924)

NARROW MOVEMENTS IN EQUITIES

UNDERTONE QUIETLY STEADY

(From Our Own Correspondent)

BOMBAY, *8th November*

THE activity on the Stock Exchange during the week under review proved to be a dull affair and equities did not show any pronounced trend one way or another. The uncertain situation in the Middle East following reports of a call for cease-fire in Egypt by the U.N. General Assembly, the decision to set up an international force to preserve peace in the Suez Canal area, the occupation of Port Said and Port Fuad by the British and French forces, the warning by Russia of its determination to crush aggression and re-establish peace in the Middle East and the split in the ruling party in the U.K. over the Egyptian issue, caused an erratic trend in prices. The movements were, however, confined to a narrow range, as operators were reluctant to enter into large commitments either way.

On the domestic front, the extreme stringency in the money market, reports of an increase in interest rates on advances by banks, the consequent rise in cost to industries, the stepping up of freight rates by shipping companies, the warning by the Chairman of the Finance Commission that the country must be prepared for a higher level of taxation and the prospect of an increase in cost of development programmes as a result of the international situation were the main bearish factors to curb enthusiasm. The operators were also inclined to await the outcome of the forthcoming A.I.C.C. session when the election manifesto is expected to be issued. The undertone of the market was, however, quietly steady.

In the steel section, Tata Ordinaries moved between Rs. 194-8 and Rs. 192, before finishing Re. 1-4 higher over the week at Rs. 193-8. Indian Irons fluctuated between Rs. 34-14 and Rs. 34-1½ and closed a fraction lower at Rs. 34-4. The announcement of the details about the Company's expansion programme and publication of the financial results for the year ended March 1956 did not evoke any enthusiasm in the market.

Among textiles, Bombay Dyeings came up to Rs. 633-2 from the previous week's closing of Rs. 626-4, but receded to Rs. 628-2 at the close. Centurys gathered no more than Re. 1-8 over the week at Rs. 551, although they touched a high of Rs. 554 during the week. Kohinoors closed Rs. 2 higher at Rs. 348. Central Indias were, however, lower by Rs. 2 at Rs. 133-8, as also Finlays at Rs. 338. Gokaks were done Re. 1 higher at Rs. 240. Indu Ordinaries shed As. 2 to Rs. 12-3, while Khataus moved up by Rs. 3-12 to Rs. 241-4. Lakshmis lost Rs. 2-8 to Rs. 707-8 and Minervas Rs. 5 to Rs. 93-12. New Greats were a shade dull at Rs. 250. Mysore Spinnings dropped Rs. 2 to Rs. 108, while New Kaiser-I-Hinds gained Re. 1-14 to Rs. 130, Podars Rs. 3-2 to Rs. 167-8 and Shree Niwas Re. 1-8 to Rs. 216-14. Simplex changed hands Re. 1-8 lower at Rs. 200. Standards were unchanged at Rs. 477-8, but Svadeshis picked up Rs. 2-8 to Rs. 255. Swans, on the other hand, lost Rs. 2-8 to Rs. 437-8 and Tata Mills As. 12 to Rs. 54-12.

Bank shares were dull, with very little business passing. Barodas were done a fraction lower at Rs. 101-8. Centrals were unchanged at Rs. 53-4 and their new shares at Rs. 57-4. Bank of Indias shed a fraction to Rs. 142-8. United Commercials stood at Rs. 56-4. Bank of Jaipurs provided an exception. The shares attracted enquiries and moved up by Re. 1-4 to Rs. 38-4.

In the insurance section, New Indias were somewhat active. After having been taken up from Rs. 45-4 to Rs. 47, the shares were marked down to Rs. 45-12. Jupiters were done an anna better at Rs. 6-1. Other shares in this section had no business during the week.

The Tata Hydros group ruled steady, among the electricity shares, with a slight marking up in values. Other shares were quiet. Andhra Valleys gained Rs. 3-12 to Rs. 1,211-4, Tata Hydros As. 8 to Rs. 127 and Tata Powers Rs. 2-8 to Rs. 1,267-8. Ahmedabad Electrics staged a retreat from Rs. 94-1 to Rs. 92-8 and Surats from Rs. 116-14 to Rs. 115-10.

In the miscellaneous group, Belapurs were quiet, despite the proximity of dividend, receding from Rs. 252-8 to Rs. 250. The other sugar shares were, however, steady. Walchandnagars disclosed a gain of Rs. 5-10 to Rs. 285-10. Phaltans were a shade better at Rs. 161-8. Bhopals picked up As. 2 to Rs. 17-14. In the cement group, Associated Cements reacted from Rs. 196-4 to Rs. 194. Digvijays were a fraction higher at Rs. 194-4. Orissa Cements gained As. 3 to Rs. 13-5. Among engineering and mining shares, Alcocks were quiet at Rs. 330. Tata Locomotives receded from Rs. 169-8 to Rs. 167-12. Premier Constrctions were a feature with a rise of Rs. 4-4 to Rs. 212. Shivrajpurs were marked up by As. 12 to Rs. 87-4. Indian Coppers were steady at Rs. 4-6¼, while B.B. Petrols lost As. 1¾ to Rs. 3-10¼.

In the shipping and transport group, Scindias, after an early advance from Rs. 19-3 to Rs. 19-6, retreated to Rs. 18-13½ and closed at Rs. 18-15½. Great Eastern Shippings closed unchanged at Rs. 22-6, after moving up to Rs. 22-10. The declaration of a dividend of 6 per cent. on the 'A' ordinary shares for the year ended 30th June 1956, after a lapse of six years, pushed up Premier Automobiles by Rs. 7 to Rs. 115-8. Hindustan Motors were featureless at Rs. 9-7. Among miscellaneous shares, Bombay Burmahs hardened from Rs. 722-8 to Rs. 730 before retreating to Rs. 721-4. At the close, however, they advanced to Rs. 725. British India Corporations shed As. 2 to Rs. 10-15. National Rayons moved between Rs. 265 and Rs. 259-8 and closed at Rs. 261-4. Tata Chemicals were quiet at Rs. 20-2½. Tata Oils gathered As. 4 to Rs. 52-12, while Wimcos receded from Rs. 178-2 to Rs. 175-10.

* * * *

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *7th November*

The outbreak of hostilities in the Middle East and the Hungarian crisis influenced this week's trend of the Stock Exchange. The Anglo-French bombardment of Egypt and the subsequent landing in the Canal area created a sort of war feeling which was an adequate provocation for the speculator to come out of his hiding. The blocking of the Canal and the certain increase in the landed cost of imports via the Cape, it was thought, would be of advantage to certain consumer goods-producing countries, but would affect the second Plan. The hectic speculative activity that followed this week's earlier change in the international political situation was the outcome of first thoughts on the possible inflationary pressure that a war would generate. Genuine investors were, however, prepared to wait and watch, and the lethargy to which the market had fallen since Monday was a result of sombre thinking as to the disastrous effect the blocking of the Canal for a prolonged period would have on the country's economy. Speculators naturally became nervous and began to unload heavily. Values tumbled down, and the genuine investor was left the wiser.

The market was closed on Thursday on account of *Kali Pooja*, and on Friday, instead of the normal sitting, a special *Deepavali* session was held for one hour. Lucky first deals were put through and the market was closed for the week-end to reopen on Monday on an extremely quiet note. The Government's announcement that there would be no change in the tea export duty was hailed and more interest was shown for a time in tea scrips. Market circles were watching what steps New Delhi would take to meet the tremendous increase in demand for money. And the fears of an increase in Bank rate which would result in advancing industrial costs restricted long-term commitments.

Jutes were shown sparse interest, and the number of transactions was few and far between. Such a trend should be attributed to the general lethargy only, as jute goods were this week subjected to good inquiries which lifted up the prices. Nationals declined by As. 9 to Rs. 23-14, but regained to close with yesterday's recovery to Rs. 24-8. New Centrals at Rs. 15-7 registered a fractional improvement. In view of the continuance of the lockout, Waverly declined from Rs. 5-5 previously to Rs. 4-7. Earlier in the week, Barnagores had advanced from Rs. 130 to Rs. 136.

In the engineering section, Indian Irons improved to Rs. 34-11, as against the opening rate of Rs. 33-15, but, during the *Diwali* session, receded to Rs. 34-5. On Monday, the scrip was affected considerably in the knowledge that the proposed one-for-one rights issue of ordinary shares at a premium of Rs. 3-8 per share would not qualify for any dividend for any year to March 1957 or before. The quotation gave way to Rs. 33-9 on renewed selling; however, there was bear-covering yesterday which pushed the rate up to Rs. 34. Texmacos advanced by As. 11 to Rs. 23-2 before declining to Rs. 22-2. Kumardhubis were quiet at Rs. 9-8, with Jessop & Cos. being better at Rs. 37-4 for a time and subsequently declining to Rs. 36-10.

Coals were driven to the market's quiet corner, but, during the earlier speculative uptrend following Middle East developments, Burrakurs had risen to Rs. 16-14 from Rs. 15-15. Subsequently, a gradual decline to Rs. 16-3 was recorded, the rate recovering yesterday to Rs. 16-7.

Teas were the market's steady section throughout the week, but the number of transactions declined gradually in the latter part of the week which was in consonance with the general trend. Moheemas picked up As. 6 to Rs. 24-12. Tezpores were fractionally higher at Rs. 23-12. Jayabirparas improved by As. 3 to Rs. 23-3, while Gairkhattas fell from Rs. 300 to Rs. 284-8 and Patrakolas from Rs. 231 to Rs. 228.

Miscellaneous industrials reflected the general trend and improved earlier, gave way subsequently, and, again, regained to an extent. Thus, Indian Coppers, after being higher at Rs. 4-8, were pushed back to Rs. 4-5. The lockout in the rolling section of National Rollings has entered the eighth week, and the scrip was traded quietly at Rs. 10-10. Niccos were steady at Rs. 26. Indian Wood Products came in for business at Rs. 44-14, as against Rs. 44-8 previously. Orient Papers had picked up As. 6 to Rs. 37-14 before dropping to Rs. 36-13. India Steamships at Rs. 9-15 lost the recent improvement in its entirety.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *6th November*

The Stock Exchange opened the week on a note of cheerfulness after a spell of depressed conditions, but developed weakness in the later sessions. The initial lively appearance was the result of West Asian crisis which induced operators to extend their commitments. The timely action taken by the Council of Management of the Stock Exchange Association relating to deliveries and business in respect of ordinary shares of the planting section also aided the sentiment of operators favourably. Equity values, as a consequence, registered a recovery from the low levels touched in the previous week. The recovery was, however, short-lived. The morale of the market was again greatly shaken by the assessment of the actual incidence of the Plantation Labour Award as made by a leading coffee company in a letter circulated among the shareholders. It is calculated, for instance, that a company with a paid-up capital and reserve of Rs. 43.46 lakhs will have to provide Rs. 36.00 lakhs for implementing the Award and that the annual wage bill will go up by Rs. 8.00 lakhs. In view of the heavy strain on the finances of companies thus, the holders of plantation shares were very much inclined to reduce their stocks and prices tumbled down. Not only were the initial gains completely erased but today's closing rates were substantially lower than those at the end of last week. Textile shares also encountered heavy selling, thanks to reports of consumer resistance in yarn and cloth markets, following high prices and excise duties. In sympathy, banking and other miscellaneous industrials were lower.

The Management Council of the Madras Stock Exchange Association has, as already stated, modified the rules regarding delivery of documents in respect of transactions in ordinary shares of all planting companies quoted in the list; the rules came into effect on 29th October 1956. The modification was decided upon after considering the Plantation Labour Award. Accordingly, in all cases of ready contracts, the seller shall deliver the documents to the buyer within seven days from the date of the contract. If delivery is not effected, the buyer-member can instruct the Exchange to buy-in the shares against the defaulting member and the shares can be bought-in on the next working day without notice to the defaulting member. In every case, the member in default shall pass on the damages or benefit arising from a buying-in to the constituent on whose instructions the shares were sold and by whose default such buying-in resulted.

Rubber shares in the planting section suffered a further sharp break in values. Malankaras and Travancores climbed down by a rupee each to Rs. 31 *ex-div.* and Rs. 24-4, respectively. Nenmenys dropped As. 12 to Rs. 22. Rajagiris fell by a like amount to Rs. 24-8. Anandams receded by As. 8 to Rs. 22-8. Be Bes and Kalpettas finished As. 4 lower each, the former at Rs. 5-1 *cum-div.* and the latter at Rs. 31-12. Kailas declined by As. 2-6 to Rs. 6-3 and Vaikundams by As. 2 to Rs. 34-2. Tea shares lost much ground on account of selling pressure. Nilgiris Teas decreased by a rupee to Rs. 10-8. Waterfalls shed As. 11 to Rs. 6-1. Lucky Valleys and Twyfords slipped by As. 10 each to Rs. 13 and Rs. 19-8, respectively. Nonsuch Teas eased by As. 8 to Rs. 26-8 *cum-div* (final). The Directors of the Nonsuch Tea Estates Ltd. have recommended a final dividend of 10 per cent. for the year 1955-56 on increased capital. The total dividend comes to 20 per cent. Haileyburias lost As. 8 to Rs. 25 and Coorg Teas As. 5 to Rs. 11-12. Devasholas, Emerald Valleys, Highlands, Kalasas and United Nilgiris declined by As. 4 each to Rs. 24-2, Rs. 7-12, Rs. 16, Rs. 14-8 and Rs. 22-4, respectively. Among coffee shares, Cochin Malabars slipped by As. 3 to Rs. 9-8. Consolidateds eased by As. 2 to Rs. 19-10. Coffee Lands, however, evoked special enquiries and gathered As. 8 to Rs. 25-6. Kumargodes were also well favoured As. 7 higher at Rs. 7-6.

Textiles gave way on heavy selling. Rajapalayams went down by Rs. 6 to Rs. 159. Coimbatore Pioneers, Dhanalakshmis and Pankajas fell by Rs. 5 each to Rs. 310, Rs. 410 and Rs. 85, respectively. Annanores receded by Rs. 4-8 to Rs. 172-8. Anglo-Frenchs shed Rs. 4 to Rs. 106. Ravalaseemas were neglected at Rs. 153, as against Rs. 154-8 and Vijayakumars at Rs. 141-8, as against Rs. 143. Metturs retreated from Rs. 442-8 to Rs. 441-8. Vijayamohinis and Virudhunagars lost a rupee each to Rs. 90 and Rs. 38, respectively.

In the miscellaneous section, Rallis declined by As. 8 to Rs. 46-8. Dalmia Cements receded by As. 6 to Rs. 15. Mysore Papers eased by As. 4 to Rs. 16-12. Nundydroogs finished As. 3 lower at Rs. 11-3. Aluminium Industries, Bruntons, Mysore Stonewares and Travancore Cements lost As. 2 each to Rs. 20, Rs. 6-6, Rs. 11-14 and Rs. 11-2, respectively. Textools, however, registered an improvement of Rs. 4 to Rs. 255 *cum-div.* on special buying support.

The management of the East India Hotels Ltd. announces that the entire equity capital offered by the Company recently has been fully subscribed.

NEWS IN BRIEF

THE Bihar Government has set apart 500,000 acres of land for settling Harijans and landless agricultural labourers. It has so far settled landless people on 70,000 acres of land.

A four-member German technical mission, headed by Prof. August Rocker, arrived in India recently to advise the Government of India on the best manner in which German assistance could be utilised for the development of technical education and research in India.

According to a Press note issued by the Union Ministry of Commerce and Consumer Industries, the Indo-Pakistan Trade Agreement which expired on 31st August 1956 and which was extended till 31st October, has been further extended until 31st January 1957. The extension has been agreed upon pending the conclusion of a fresh trade agreement.

The Life Insurance Corporation of India will not book any further life business in Pakistan, Ceylon and Burma because of restrictions placed on the Corporation by the Governments of these countries following the nationalisation of life insurance in India. But the Corporation will continue to serve its present policyholders in the countries.

The Central Water and Power Commission has decided to send a party of engineers and geological experts to the upper reaches of the Kosi tributaries in the Himalayas for exploring dam sites. The construction of dams in this region is suggested for trapping the excessive sand and coarse detritus which the river carries during heavy floods.

The name and constitution of the Hyderabad State Bank have been changed with effect from 22nd October. The Bank is now known as the State Bank of Hyderabad and its entire capital vests with the Reserve Bank. The former will, however, continue to perform commercial banking business and handle, through its offices at district and *tahsil* headquarters, treasury transactions as the agent of the Reserve Bank.

The Government of India has relinquished, with effect from the 1st inst., its administrative control over all training centres and employment exchanges administered so far by the Director-General of Resettlement and Employment. The State Governments have agreed to appoint in their services all those who have been working so far under the Government of India, except those who have not been found suitable for such retention.

The Central Advisory Council of Industries has been reconstituted with the Minister for Home Affairs and Heavy Industries as Chairman. The Council advises the Union Government on the development and regulation of industries scheduled under the Industries (Development and Regulations) Act. The Council consists of 28 members, besides the Chairman. The interest of owners of industrial undertakings, consumer goods manufacturers, employees, primary producers, etc., are represented on the Council.

A group of officials of the West Bengal Government will be shortly proceeding to Japan to study the methods of running cottage and small-scale industries there. The group, which will be led by Mr. Asoka Mitra, Secretary to the Department of Commerce and Industries, will purchase such machinery and equipment as are helpful to the growth of these industries in the State. It will also procure technical implements necessary for properly equipping the existing training schools in West Bengal.

The Bihar Government has decided to spend Rs. 3 crores during the Second Plan period on the organisation of co-operative handloom societies in the State. About one million weavers are directly employed for operating over 200,000 handlooms in the State and about 3.0 million persons depend on the industry for subsistence. According to Mr. Dip Narain Singh, Co-operative Minister of Bihar, 28,000 looms out of a total of 200,000 have already been brought under co-operative societies and the rest are expected to follow soon.

The Government of India has approved schemes for the development of the silk industry in five States, Jammu and Kashmir, Mysore, Madras, Hyderabad and Bombay. The schemes envisage modernisation of silk filatures, provision of more training facilities and establishment of mulberry nurseries and foreign race basic seed stations for the production of raw silk of high quality. The Union Ministry of Production has sanctioned loans and grants amounting to over Rs. 16 lakhs to these States for implementing the schemes.

The Government of India concluded a package deal on 31st October with the Indian Steelworks Construction Company, London, a consortium of leading British firms, to build the 1.25 million-ton steel plant in Durgapur at a cost of nearly Rs. 136 crores. The foreign exchange component of the project is now likely to amount to Rs. 83 crores, instead of Rs. 72 crores, as expected in March last. The total cost of the Durgapur plant was then estimated at Rs. 115 crores. An additional expenditure of Rs. 12 crores may be incurred on the Durgapur township.

Loans aggregating Rs. 70 lakhs have been sanctioned by the Union Ministry of Commerce and Consumer Industries to three State Governments for providing credit to small-scale industries both for long-term and for working capital requirements. The States are Uttar Pradesh, Punjab and Delhi, the loans granted amounting to Rs. 40 lakhs, Rs. 20 lakhs and Rs. 10 lakhs, respectively. With these loans, the Centre has sanctioned a total of Rs. 3.66 crores as loans to small industries since the scheme of financial assistance to small industries was initiated last year.

Mr. M. M. Shah, Union Minister for Heavy Industries, has disclosed that India would import two million tons of steel and one million tons of cement during the current financial year to meet the country's requirements. About 800,000 tons of imported steel have already arrived and the balance is expected soon. The import of two million tons of steel has been decided upon, despite India's tight position in respect of foreign exchange, in order to ensure that the heavy machinery plants which are being set up do not suffer on any account.

The Government of India is reported to have dropped the proposal for shifting the Indian Institute of Sugar Technology from Kanpur to Lucknow. But the U.P. Government having decided to expand the Harcourt Butler Institute of Oil Technology in Kanpur, the Indian Institute of Sugar Technology, it is said, can no longer share with the H.B.I.O.T. the building that it does at present. Plans are now under way for the acquisition of a 500-acre site for the Institute of Sugar Technology in the Kalyanpur area of Kanpur. When the Institute shifts to its new site, the attached experimental sugar factory will also move with it, and the production capacity of the factory will be raised from 35 tons to 500 tons a day.

From Abroad

A 98.3 million dollar trade agreement has been signed at Belgrade between Yugoslavia and the United States.

A British firm has just completed the manufacture of the entire installation of a lighthouse assembly, ordered by the Lighthouse Department of the Indian Ministry of Transport, for the island of Perotan, Bombay State. The complicated lens system is in two panels.

The employers and union leaders of Manchester cotton industry have agreed in principle to a new working charter for 50,000 operatives covering the introduction of double-shift working in the spinning mills. Details of the agreement will be announced later.

The general investment duty is to be retained in Sweden, although the duty-free amount will be raised from Kr. 20,000 to Kr. 30,000. The excise duty on sales of new cars and motor cycles is to be made permanent and to be raised from an average 10 per cent. to 12 per cent. of the sales value. The excise duty on second-hand cars will, however, be abolished.

Manufacture of electronic-brains is enjoying a boom period in the U.K., with orders placed for 200 computers valued at £14 million. There are now 10 British companies making these machines and several more are planning to enter the field. It is expected that about 300 to 400 electronic-brains would be manufactured in 1958 at an estimated cost of £30 million.

Soviet Russia will shortly import substantial quantities of raw jute, cotton and hides and skins from Pakistan. These contemplated purchases follow the trade agreement signed between Pakistan and the U.S.S.R. a few months ago when a Russian trade delegation visited Karachi. Soviet Russia will also set up its trade representative's office in Karachi for negotiating trade deals as provided in the agreement.

The Chairman of the German Ford Motor Company has announced that the Company is spending £9 million on capital investment this year and another £7 million next year, with a view to raising the capacity to 450 units daily. At present, 450 units are produced daily by working two and three shifts, involving high expenses for overtime. Output this year is expected to aggregate 90,000 units, as against 80,000 units last year.

One of the latest and most practical of scientific devices is to be presented under the Colombo Plan to the Ceylon Council of Scientific Research by the United Kingdom Government. Now being manufactured at the new model town of Crawley, Sussex, it is a centrifuge—a machine which exploits the natural law of centrifugal force for the quick precipitation of solids from liquids, and for which new applications are constantly being found in science, medicine and industry.

The Institute of London Underwriters increased on 31st October last the insurance rate for war and strike, riot and civil commotion by 10*s.* per £100 on all cargoes going through the Suez Canal and also to, from or transhipping at ports in Egypt, Israel, Jordon, Lebanon and Syria. This rate is 5*s.* per cent. above the highest rate introduced during the week following the nationalisation of the Suez Canal. The through Suez rate now stands at a minimum of 10*s.* 9*d.* per £100, with some exceptions, while the rates for cargoes to, from or transhipping at ports in Egypt, Israel, Jordon, Lebanon and Syria ranges between 11*s.* 6*d.* and 12*s.* per cent.

Shipping lines operating between India and Pakistan and the U.K. and Continent have announced a surcharge of 15 per cent. on freight rates with effect from the 7th inst. which will also apply to bookings already made. The surcharge has been necessitated by the liners having to go round the Cape of Good Hope, following the blocking of traffic through the Suez Canal. The Far Eastern Freight Conference has also announced the imposition of a surcharge of 15 per cent. The Peninsular and Oriental Steam Navigation Company, the Netherlands Line and the Royal Rotterdam Lloyd, too, have increased passengers rates to and from Europe by 20 per cent.

A ten-year agreement for the exchange of technical information has been concluded between Krupps and the U.S. Company Blaw-Knox. The deal will permit both combines to meet most of the requirements in the planning, engineering and construction of ferrous and non-ferrous rolling mills. Krupps has recently entered into a similar but looser working arrangement with the German subsidiary of Brown Boveri and is engaged in similar talks with the Italian Fiat concern. The Company, it is learnt, intends to break away completely from its pre-war policy of working in isolation and to seek as many points of contact with foreign concerns as possible.

The United States will send $89.1 million worth of reserve farm commodities to Yugoslavia to help alleviate the food shortage in that country. The Secretary of Agriculture, Mr. Benson, has announced that Yugoslavia would pay for the shipment in its own currency—dinars. A substantial portion of the repayment will be made available to Yugoslavia in the form of economic development loans. The agreement provides for the shipment and sale of wheat, cotton, lard, cottonseed or soya-bean oil, and inedible tallow. Cost of ocean transportation is set at $9.2 million, which Yugoslavia will repay to the U.S. Government.

A lottery on the refunding of excess payments of preliminary tax has been proposed by the Swedish Minister of Finance as a measure to stimulate private savings. By introducing the scheme, he hopes to freeze about one-third of the estimated Kr. 600,000,000 (£41,000,000) to be refunded during the months of December and January. Two million bonds of Kr. 100 each are to be issued. They can be purchased only by those who are to receive tax refunding and entitle to participation in a lottery with a total prize sum of Kr. 5,500,000, the highest individual prize being Kr. 300,000. The draw is to be held in April next year and the bonds will be redeemable as from 10th May 1957.

PERSONAL

MR. Morarji Desai, who was Chief Minister of Bombay State till 31st October 1956, has been appointed a Cabinet Minister of the Government of India.

Mr. H. Barlind, a Swedish fishery expert, has been appointed by the Food and Agriculture Organisation, Rome, as Fishery Economist (Marketing) in India.

Dr. B. V. Keskar, Union Minister for Information and Broadcasting, left for Moscow on 4th November on a special study tour of State broadcasting systems in Europe.

Sir Robert Hall, Economic Adviser to the British Government, has arrived in India on a six-week visit at the invitation of Prof. Mahalanobis, Director of the Indian Statistical Institute, Calcutta.

Maulana Abul Kalam Azad, Union Education Minister and leader of the Indian delegation to the ninth session of the U.N.E.S.C.O., now being held in New Delhi, was unanimously elected President of the session. He will hold this office until the next session, due to be held in 1958.

Mr. Nathan A. Gardner, Manager of Worthington Corporation's airconditioning and refrigeration export sales department in Harrison, New Jersey, will arrive in Bombay from Karachi on the 10th inst. Mr. Gardner is on a goodwill-*cum*-business trip around the globe in the countries serviced by Worthington products and distributors.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *7th November*

Motor-Tram Co-ordination

How far tramways in Calcutta and its suburbs have been affected by the "pirate" competition was evident in last year's report of the Calcutta Tramways Company, which was constrained, for the first time in many years, to pass the ordinary dividend. There is, however, no gainsaying the fact that we have now arrived in an era eminently of speed with no little regard for comfort and that the "pirates" have come to stay. Motor transport—both of goods and passengers—is of essential necessity to modern civilisation and it is indeed a sign of the times that the proposal has been mooted of a co-ordination of efforts between the Calcutta Tramways Company and the owners of omnibuses plying in and around Calcutta. With a view to concert measures to gain the end in view, a meeting was held in Calcutta in the third week of last month; and it was decided at it that Mr. G. R. Dain, the popular agent of the Calcutta Tramways Company, should prepare a scheme for the consideration of the parties concerned. As will appear from a reference to our motor section this week, Mr. Dain has since submitted a note which, in the absence of consideration by the Home Board, should be regarded as embodying his personal views. However, coming as it does from so high an authority on traffic and transport problem, the note is a document of prime importance.

U. N. E. S. C. O.

INDIA may be pardoned for taking some pride in the tribute which the outgoing President of the United Nations Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.), Mr. Zavala Muniz, paid, at the ninth session of this body, held at New Delhi this week, that it was "fitting and propitious that at this dramatic hour in the history of the world, the session should meet in India which always believed in peace and which has never coveted any territory of others." But this country would be ill serving the cause of peace, if it merely felt a sense of national self-righteousness. What is, of course, necessary is that it should work with other countries, in order to seek the way of peace in resolving outstanding conflicts. But no success can attend such efforts, in the absence of a genuine desire for peace the world over. And it is no small comfort to contemplate that through the U.N.E.S.C.O.'s strenuous efforts, peace may yet win a great victory for mankind.

The U.N.E.S.C.O.'s efforts are necessarily in the nature of long-term investments, to borrow a phrase from economic parlance. They cannot be judged by standards of concrete or immediate return. Even so, its achievements are not inconsiderable. It has established fundamental education centres, stimulated interest in the improvement of school systems and school teaching, facilitated the exchange of scientific and technical information, provided technical assistance to a number of countries and fostered the study of racial and social tensions. It is to this body that the world owes the universal copyright convention and the international convention for the protection of cultural property. Mr. Nehru rightly called the U.N.E.S.C.O. the "conscience of the world community." He pointed out that it was intimately concerned with the dignity of man and the vital importance of freedom.

The preamble to the Constitution of the U.N.E.S.C.O. at once sums up in noble words the scope of its activities and the philosophy of peace. It affirms that "since wars begin in the minds of men, it is in the minds of men that the defences of peace must be constructed." The Union Minister for Education and the newly-elected President of the U.N.E.S.C.O., Maulana Abul Kalam Azad, rightly warned that the organisation "must either become something like a sensitive conscience of mankind even in moments of crisis or it will fail to function as a dynamic force for the good of mankind." Given the goodwill and co-operation of its members, the U.N.E.S.C.O. may well fulfil the great role assigned to it by the sponsors of the United Nations.

INDIA'S SEARCH FOR OIL

A notable development in recent months is undoubtedly the keen interest and effort which the Government of India has been displaying in exploring oil sources, in order to step up domestic output of mineral oil. There is certainly great need to expand oil production, considering that India's requirements, which are now running at an annual rate of about 4½ to 5 million tons, are expected to increase to 10 million tons in the next few years. The search for oil is a process in which success is hard to attain and failures are many. It is, therefore, obviously necessary to take realistic decisions which will provide the necessary incentive for those who undertake this hazardous enterprise. From this point of view, it is, perhaps, to be regretted that the Government's negotiations with the Assam Oil Company, which is concerned with the oil find in Assam, have not been very "smooth." This was revealed by the Union Minister for Natural Resources and Scientific Research, Mr. K. D. Malaviya himself, in the course of a Press interview at Bombay, on Wednesday last week.

Stating the position more specifically, Mr. Malaviya averred that, while some tentative understanding had been reached with regard to the establishment of a rupee company for refining oil with the Indian Government's financial participation, the basis of fixing prices for both the crude oil and the refined products was yet to be settled. The Government, he said, had also agreed to grant a licence to the Assam Oil Company for exploration of a wider area in Assam. It would appear that production of oil from Naharkotiya would go up in 1959 to eight times the present output of 350,000 tons. On the question of prices, Mr. Malaviya said that the Government could not accept the internationally quoted crude oil price as a basis for petrol price in India. He added that the price of oil produced in Assam should be based upon the cost of production in Assam and not on the Gulf of Mexico price. The Gulf price, he said, was based upon the cost of production in the U.S., which might be many times more than the real price in relation to prices in the Persian Gulf from where 80 per cent. of the world supply of oil originated. In view of the fact that the fixation of prices for petroleum is an intricate and technical problem, we invite readers' attention to a special article on the subject appearing elsewhere in this issue.

Mr. Malaviya, who recently returned from a tour of the U.S., Canada and Europe, also said that, contrary to the impressions created by certain foreign concerns in India, he had learned after the tour that Indian petroleum concession rules were in many respects much more liberal than any he had seen. He revealed that, in some countries of the West, particularly Canada, the concession rules for exploitation of oil covered only what was known as the primary stage, the Government being free to call tenders for exploitation of "secondary" oil. Oil received in the secondary stage formed about 85 per cent. of the supplies usually available in any oilfield. As compared with those rules, he said, the Indian Government's conditions were more liberal, in that the authorities permitted a contract of 20 years' duration in the primary stage which was automatically renewed for another 20 years. But one may wonder whether it is right to compare conditions in a country which has not yet mastered the highly technical subject of exploring and refining oil with those in countries which have attained a relatively high degree of technological knowledge and where prospecting has been undertaken more extensively than in this country.

Moreover, the *entrepreneur* engaged in the oil industry in India has to face many uncertainties about the future. Prospecting and development of mineral oil is included in the list of those industries exclusively reserved for the public sector under the Industrial Policy Statement. If the private sector is allowed to operate in this field, it is liable to be nationalised at any time and the quantum of compensation payable by the State shall be decided only by the Government and is not justiciable. Does such a situation exist in Canada or any other Western country? Can the Government say that the duration of the contract is firm, that is, that it will not nationalise the industry during this period? Again, if the Government's intention is to give an automatic renewal for another 20 years, why should it not straightaway give a contract for 40 years? Anyway, the proof of the pudding is in the eating. If conditions for prospecting oil in India are so favourable as is made out by Mr. Malaviya, why is it that *entrepreneurs* do not rush to this country for taking advantage of these conditions? The very fact that Mr. Malaviya had to go round the world in search of technical help and enterprise is sufficient to belie his claim that India is offering better terms for mining oil than other parts of the free world.

TECHNICAL AID

The Colombo Plan Council for Technical Co-operation can legitimately feel proud of its solid contribution to the economic development of South and South-East Asia. Since its inception more than six years ago—on 1st July 1950, to be precise—the Council, according to its latest annual report just published, has arranged training facilities for 4,227 trainees and provided the services of 572 experts. The aggregate aid granted under the Technical Co-operation Scheme during the period July 1950-June 1956 is of the order of £7.62 million (Rs. 9.16 crores), including the cost of equipment already supplied or on order or offered, estimated at £2.00 million (Rs. 2.67 crores). It is true that far larger amounts will be needed in order to tackle satisfactorily the colossal problem of financing technical assistance programmes in the South and South-East Asian region. Even so, it must be admitted that the aid, made available so far, has made possible the approach to a better balance between training at home and abroad and the growth of mutual assistance among the member-countries of the area, as well as from outside.

There was a distinct expansion in technical co-operation among the countries of the Colombo Plan during 1955-56. In that year, as many as 4,227 training places were made available, as compared with 1,022 places in the previous year. Similarly, the number of experts provided was larger, being 180, as against 129 a year before. The expenditure actually incurred by the Council on the Technical Co-operation Scheme during 1955-56 amounted to £2.13 million (Rs. 2.84 crores), which compares favourably with £1.58 million (Rs. 2.11 crores) given in 1954-55.

India is not only one of the major beneficiaries under the Technical Co-operation Scheme but also high on the list of countries providing facilities for trainees from other countries. The total aid granted by India for the training facilities and experts in the past six years amounts to over Rs. 33 lakhs and firm commitments at about Rs. 13 lakhs. It may be noted here that India has received technical assistance from other countries in the shape of 765 training facilities, 110 experts and equipment worth more than Rs. 28 lakhs; the value of equipment ordered or firmly committed stands at Rs. 6 lakhs.

The nature of the training places and experts provided by India is quite significant. Thus, out of the 462 training places, engineering alone accounts for as much as 97 places, followed by statistics with 89 places, education with 70 places, industry and trade with 68 places, and transport and communications with 50 places. The training facilities provided to Nepal have been on a large scale, the number of places which have gone to the nominees of this country being 273. A number of Nepalese have been trained in civil, electrical and mechanical engineering, while others have been admitted to post-graduate courses in pure and applied sciences. Several students have also been admitted to medical colleges. Besides imparting training facilities, India has made available to countries services of 20 experts, of whom 13 have been sent to Ceylon. The International Statistical Education Centre at Calcutta, jointly organised by the Indian Statistical Institute, the International Statistical Institute and the U.N.E.S.C.O., has been providing courses in statistical methods to trainees from South and South-East Asia. The Atomic Research Centre, set up in India with Canadian assistance, is expected to train experts from the region in the development of peaceful uses of atomic energy.

EXPORT DUTY ON TEA

The Government of India sprang a surprise last week on the tea industry by announcing that the export duty on tea for the month of November 1956 would be As. 6 per lb., that is, the same as that levied for the previous month, whereas tea market circles had been expecting a levy of As. 10 per lb., in view of the very high prices fetched by Indian teas in London during October. The higher export duty was expected in accordance with the slab system of export duty introduced in March 1955 and amended slightly in March 1956 under the Budget proposals for 1956-57.

It will be recalled that the Government of India introduced on 1st March 1955 the following slab system of export duty:

When the price of tea	*Rate of duty per lb.*
(1) does not exceed Rs. 2-8 per lb. ...	As. 4
(2) exceeds Rs. 2-8, but does not exceed Rs. 3-4 per lb. ...	As. 6
(3) exceeds Rs. 3-4, but does not exceed Rs. 4 per lb. ...	As. 8
(4) exceeds Rs. 4, but does not exceed Rs. 4-12 per lb.	As. 10
(5) exceeds Rs. 4-12 per lb.	As. 12

The price of tea for the purpose of levying export duty means the price which the Central Government may, having regard to the world prices of tea, fix for this purpose from time to time by notification in the official *Gazette*. The price is usually fixed on the weighted average of all Indian teas sold in London auctions during the previous month. On 29th February 1956, however, the Finance Minister made a slight change in the slab, with a view to "affording relief to the tea industry" and stepping up India's exports of medium teas. Accordingly, the export duty for the slab relating to the price range of Rs. 3-4 to Rs. 4 per lb. was reduced by As. 2 per lb., that is, from As. 8 to As. 6. The effect of this change is that all teas ranging in price from Rs. 2-8 to Rs. 4 per lb. will bear a uniform duty of As. 6 per lb. In other words, the slab in which the export duty of As. 6 per lb. would operate was widened to cover the world price of tea from Rs. 2-9 to Rs. 4 per lb. It was felt in market circles at that time, that prices were not likely to go beyond this range in the foreseeable future and that the reduction in export duty at this higher scale was, therefore, of no immediate consequence. A welcome feature of the change was that it ensured a stable and

fixed rate of duty on a wider range of prices. However, when the "world price" crosses Rs. 4, the incidence of duty comes rather heavily with a sudden increase of As. 4 per lb.

The sharp rise in tea prices in London during October led to the belief that the export duty for the current month might be As. 10 per lb. The Government of India's announcement that the export duty for November would be unchanged at As. 6 per lb. means that the "world price" for the purpose of levying duty has not crossed Rs. 4 per lb. Usually, the Government announces the price and the duty leviable at the beginning of every month. It has, however, made a departure from this practice by not announcing the price for reasons best known to itself. Though the present duty of As. 6 per lb. would be a welcome relief to the industry, the Government would have done well to announce the so-called world price.

BOMBAY PORT TRUST

The increased tempo of economic activity during the final year of the First Five-year Plan, resulting in a larger volume of foreign trade, is duly reflected in a marked expansion in both the quantity of cargo handled by the Bombay Port and its earnings during the financial year ended 31st March 1956. According to the Port Trust's Administration Report for the year, the quantity of cargo handled at the docks and bunders rose sharply from 7.6 million tons in 1954-55 to 10.3 million tons in 1955-56, a record in the history of the Port. What is more noteworthy is that it is nearly double the quantity (5.3 million tons) handled even as recently as 1946-47. The increased traffic in cargo enabled the Port to earn a surplus of Rs. 2.86 crores in its revenue on general account and of Rs. 6.32 lakhs on pilotage account, as compared with Rs. 75.32 lakhs and Rs. 7.61 lakhs, respectively, in 1954-55.

A perusal of the Port's traffic during the last few years shows that, though the year under review is the third one in succession for which the upward trend in cargo handled is maintained, the extent of rise is unprecedented. Be that as it may, the increase in cargo traffic is shared by imports and exports, the total quantity of imports amounting to 6.7 million tons, as against 5.6 million tons in 1954-55, and exports to 3.6 million tons, as compared with 1.9 million tons. There has also been a slight increase in the overseas passenger traffic from 81,057 to 82,931, but the number of coastal passengers has decreased from 435,016 to 403,262.

The aggregate revenue of the Port on general account for the year was Rs. 9.62 crores, as against Rs. 6.78 crores for 1954-55. The total expenditure on this account amounted to Rs. 6.76 crores, having gone up from Rs. 6.03 crores in the previous year. On pilotage account, the revenue has risen from Rs. 17.26 lakhs to Rs. 19.07 lakhs and expenditure from Rs. 9.64 lakhs to Rs. 12.75 lakhs. A notable feature of the financial results for the year is that the actual surplus earned on general account, namely, Rs. 2.86 crores, has far exceeded the revised estimate of Rs. 1.17 crores. The actual surplus on pilotage account, at Rs. 6.32 lakhs, also compares well with the estimated surplus of Rs. 5.05 lakhs. So far as the general account is concerned, the improvement is due to an increase of over Rs. 57 lakhs in receipts and a saving of Rs. 1.11 crores in expenditure.

The total capital expenditure for the year amounted to Rs. 2.87 crores, bringing the aggregate expenditure since the inception of the Port to Rs. 39.31 crores. Of the latter, the book value of assets written off amounted to Rs. 2.27 crores. A sum of Rs. 1.11 crores was drawn during the year from the general fund towards capital expenditure. The total outstanding capital debt of the Port Trust as on 31st March 1956 amounts to Rs. 19.02 crores, of which the amount due to the public is Rs. 6.54 crores and to the Government Rs. 9.07 crores.

A somewhat disquieting feature of the year's working is the unsettled labour situation at the Port throughout the year. There was a number of stoppages of work by Port Trust Labour on one ground or another. The award of the Industrial Tribunal in the dispute between the B.P.T., the Bombay Dock Labour Board and certain stevedore firms, on the one hand, and their workmen, on the other, which was published in June 1955, held, among other things, that there was strong evidence to show that dock workers had been going slow. The report shows that the Port Trust administration has not lagged behind in providing all the amenities possible for staff and labour. Thus, the Trustees sanctioned the construction of 290 self-contained flats for clerical staff and 120 units of quarters for railway gangmen, and menials.

In the face of disturbed labour situation, the working of the Port during the year, with a record quantity of cargo handled, is commendable. The great task of development under the Second Five-year Plan will impose on the Bombay Port a greater responsibility and there is no doubt that the cargo to be handled in the coming years will be much larger. This will imply the creation of additional facilities for handling cargo and it is to be hoped that the Port labour will play its role with a better sense of national responsibility.

THE SAAR PACT

The longstanding dispute over the control of the Saar territory in Western Europe has at last been finally settled, thanks to the successful conclusion of a treaty between France and West Germany. The treaty was signed at Luxemburg on 27th October last. While confirming the already *de facto* return of the Saar to W. German control, the treaty accords certain advantages to France. Thus, France obtains the right to dig, for a period of 25 years, 66 million tons of coal underground in the Warndt—part of the Saar—from pits sunk on French territory. It also obtains the right to delivery of 24 million tons of Warndt coal—no time period is stated—and undertakes to buy 33 per cent. of coal produced in other than the Warndt area of the Saar region. The treaty is subject to ratification by the Governments of the two countries. The Saar will return to Germany on 1st January 1957. During the transition period, exports from Saarland to W. Germany will, in principle, be free of customs duties. W. Germany's exports to the Saarland are to be considerably facilitated. The same applies to the transfer of W. German investment capital to the Saarland.

In addition to the Saar pact, France and W. Germany have signed two other pacts of equal importance. One of these lays down how France may draw water from the Rhine between Breisach and Strasbourg in order to feed the hydro-electric stations by four loop canals which will be paid for by France. France has guaranteed that the water level above Breisch shall not fall below a certain minimum level. In return, W. Germany has renounced the right to share in the power works profits. The second treaty, signed between France. Luxemburg and W. Germany,

HOW OIL PRICES ARE DETERMINED

MAIN FACTORS INVOLVED EXPLAINED

By A Special Correspondent

IT is more necessary to think of oil in terms of international supply and, therefore, in terms of a big-scale interrelated price problem than it is for any other basic commodity. A moment's reflection will show that it is difficult to find a parallel commodity in the modern world which is discussed in similar terms; for example, the basic industries such as steel, and the universal requirements of food and cloth are generally referred to, and organised, on a decentralised or national basis.

This situation for oil has developed because of certain fundamental facts: that few areas of the earth exhibit a production potential for oil in excess of their own requirements; that the need is great and the demand rising faster than for any other source of energy; that oil now forms by far the largest commodity moving in international trade; that oil is risky and expensive to find and demands a high degree of technological skill in the subsequent development of the discoveries, and in the techniques of processing and distribution.

In complete contrast to the other main source of energy, namely, coal, mineral oil is not a labour-intensive industry in the accepted sense of the term. It is to a high degree technological and the tools for search for oil use some of the most advanced techniques available to man; similarly, the processing plants of the industry, the refineries, are examples of mechanical skill and automation, through the most advanced instrumental control, to a remarkable degree.

True Costs

To establish a justifiable price for a ton of coal from a working colliery is a calculation of comparative simplicity; but to establish the true value of a ton of oil flowing from a pipeline it is necessary to establish the true costs of the replacement of that ton of oil, and the main burden of the costs are generally taking place far from the eye of the consumer.

Furthermore, petroleum is traded internationally in two entirely distinct forms: the one as crude oil straight from the ground, and the other as refined products such as petrol, aviation spirits or kerosine, a situation which when not clearly understood has led to considerable confusion.

Prices for the main products at different sources are readily comparable because qualities are closely standardised. But crude oils vary in quality. Crude oil is a generic term, covering a range of qualities from almost solid bituminous substances to very light oils almost usable as motor spirit.

Every crude oil from every field is different to some extent from every other crude oil, and the assessment of the relative values of two crude oils will differ for each refiner according to his equipment and desired products outturn.

Complex Situation

It is a situation of considerable complexity and certainly not one that is responsive to the development of a simple price structure, in the rigid sense of an artificially erected entity.

The oil industry is composed of a number of very large organisations who are capable of undertaking major risks in exploration and who can sustain the burden of continual research and development; in addition, there are a much larger number of other companies who operate on a national or international scale in the various phases of the industry.

Even the largest international companies have marginal surpluses and deficits in the production, refining, transportation and marketing phases of their operations, which are covered by market transactions with non-affiliated entities.

Equilibrium Prices

It is, therefore, reasonable to expect that a pricing system will have grown up which can record the balanced day-to-day adjustment of this situation. An example of that solution exists for the Mexican Gulf area which obviously will be of importance, because of the large crude oil producing and refining capacity based there. There, the day-to-day prices are published by several reporting services, such as Platt's Oilgram Price Service, Reuters Trade Service, etc. The ranges of prices reported represent independent market surveys and are, in fact, a reflection, and no more than a reflection, of the equilibrium of prices caused by supply and demand and is influenced by the pattern and pressures of world oil trade.

There are other important supplying centres. The Caribbean area is a large exporter of both crude and products and here again the posted cargo prices are regularly reported in Platt's Oilgram and other trade journals.

The Persian Gulf area is of lesser importance for the export of products but is of major importance for the export of crude. Output from this region has grown with remarkable speed and moves to most of the main markets of the world.

The fourth main supply source is the Far East area, but, in general supplies of crude and particularly products are marginal to demand and, therefore, as a source it is tributary to the main stream with prices bearing a natural market relationship to prices from other main sources.

Thus, the picture is that of a number of producers, processers and carriers engaged in a flexible trade by sea to markets all over the world. It is sensible and practical that such a pattern calls for, and leads to, a unified world market.

Posted Prices

Any part of the world is exposed, potentially and in fact, to supplies from a number of completely unconnected sources of supply and from numerous enterprises engaged in the trading of oil. Not only is this true, but the movement of certain products in particular must react in sympathy to the price movements and availability of alternative sources of energy moving in international trade, such as coal.

The effect of this mechanism is seen in the posted prices of Middle East crude oil, which area now has a considerable number of companies engaged in production. Crude prices are posted by each of the main supplying companies, each of them makes changes in its posted prices in accordance with its own judgment of the market situation.

When any company makes a change, naturally all the others have to reconsider their prices. After a period of trial and error, the various companies' prices for crude oil of similar quality at the same loading port settle down to a common level, until some new market movement occurs.

No Automatic Formula

There is no common price fixing, nor are prices set by references to any automatic formula. Because of the vast scale of operations and risks involved, most Middle East producing ventures are partnerships involving more than one shareholding company. In such cases, it is not the producing company which posts prices but the trading affiliates of the shareholders, who, having secured title at seaboard to their share of oil produced from the joint venture, sell it competitively on world markets.

Middle East crude oil prices are not set level with U.S. crude prices, nor are they based on U.S. crude prices. They are, of course, economically linked with U.S. crude prices through the world market supply and demand situation, and, reflecting in part the effect of geography, they have settled at a rate substantially lower than U.S. crudes at source. Any suggestion that Middle East crude prices should be lower still implies that production costs are absurdly low, a situation very far from the truth.

Production Cost

"Production cost" in the sense of the current lifting cost of bringing to the surface oil from a discovered and proven underground reservoir (which is what many commentators have in mind) is, of course, but a small item in any evaluation of total production cost to a risk bearing oil-producing company. There have also to be taken into account exploration costs (both in the proven field and in areas which have yielded no return), the ancillary costs of establishing and maintaining communities for staff and workers in desert or jungle areas, the costs of bringing the oil to a deep-water loading point, and the tax payments to the "host" Governments on the generally established 50/50 basis over and above these tangible items, provision has to be made, out of the revenues after tax, for depletion of the underground reserves, to provide funds for the search for new oil resources to assure the continuity of future supplies. (In the U.S., this feature is taken care of by a tax-free "depletion allowance".)

From what has been said, it will be appreciated that the idea does not stand examination that total production costs are very low in the Middle East at the current posted prices. But to attempt to define what is the "right" f.o.b. price of a particular Middle East crude on the basis of cost plus a "fair and reasonable" profit figure, after reducing all the tangible and intangible features of the operation in terms of cash per ton of current production, is not possible unless the problem is examined in a wider context.

Three Main Points

It might be said that only a progressive and urgent spirit has enabled the oil industry as a whole to meet the rising flood of demand for oil, a demand which has increased over sixfold in the last 30 years and now meets over one-half of world commercial energy requirements, and three main points emerge from a study of this progress:

First, the price levels for crude and products have in fact been more stable than any other basic commodity and, taxes excluded, the price indices show a very moderate rise over long periods of time.

Secondly, this background has taken place against rapidly rising prime and overhead costs. The plant, equipment and skills which the industry uses are highly technological, demanding of basic materials in large quantities such as steel and cement, and very extensive use of both heavy and light engineering industries.

Thirdly, the capital requirements to meet this urgent expansion have been enormous.

This matter is of great concern to all users, and potential users, of oil.

Experience over the last several years has shown that the only source from which the greater part of these funds can come is the industry itself, since the capital markets of the world—particularly of the world outside the U.S.A.—cannot provide them on the scale required.

New money is needed not only for expansion but also to help finance replacement so long as rising prices make normal depreciation allowances insufficient for this purpose.

Indeed, the practice of retaining earnings for these purposes is adopted throughout the field of large-scale private enterprise and it is becoming widely recognised that it is essential for the future well-being of industry that this should be so.

Capital Requirements

It follows, therefore, that a substantial part of the net income of expanding industries, and frequently a far greater part than is distributed to shareholders, must be retained in the business. For example, the published accounts of a typical large company show 80 per cent. retained in the business. It is clearly arguable that such earnings cannot be regarded as profits in the conventional sense, but as costs essential to maintaining the business in health and progress.

How large these capital requirements are in the aggregate can be illustrated by the fact that reliable estimates put the fresh capital required by the oil industry, excluding Soviet countries, throughout the world at the equivalent in 1956 of about Rs. 4,000 crores in many currencies.

During the last ten years, investment has been of the order of Rs. 26,000 crores equivalent and in the next ten years may well be double that figure. These aggregate requirements should be considered against the fact that demand outside the U.S.A. is rising markedly faster than internal demand in the U.S.A.

Where, then, does this money go? As a rough guide, it can be taken that, at current costs, the equivalent of Rs. 550 to Rs. 600 new capital is required for every annual ton of new oil demand; in other words, a consumption increase of a lakh of tons would require expenditure of Rs. 5.5 crores to Rs. 6 crores as an average figure for the industry.

Of this sum, rather more than half is required to finance the exploration for, and production of, the oil. The balance goes to finance construction of refineries and processing plant, tankers, marketing facilities, research, etc. If this integrated pattern should fail at one link in the chain, then the unfortunate consequences

LONDON LETTERS

EXPENSIVE TASTES

(From Our Own Correspondent)

LONDON, *3rd November*

BRITAIN'S policy in the Middle East since the troubles began over the Suez Canal bid fair to outweigh all the good of the anti-inflationary drive of the preceding year. Take, for instance, the gold reserves at the end of October. They fell in the month by no less than £30 million to a level of just over £800 million. A year ago, they were about £815 million and, after sinking to a December low of under £760 million, climbed to a July peak of £860 million.

It is no answer to say that the drop between July and October of £60 million is less than the drop between July and October 1955 of about £90 million. For the September payment of the Texas Company in the take-over of the Trinidad Oil Company netted over £60 million in dollars! Without this, the reserves would now be at £740 million!

Effect of Egyptian War

Already, the capital gain of the Trinidad business apart, the reserves have slumped more this year than they did last. This is far from being the whole story, for the end-October figures do not reflect the latest phase, the war with Egypt. After its initial weakness, sterling is holding steady at a discount on par but it would be naive to assume that this is being done at no cost in reserves. There is the underlying speculative move against sterling; the withdrawal of such funds as have not already gone (fortunately most of this is probably now discounted); the bill for the warlike operations themselves, (that is such part as will have to be paid in non-sterling currencies), the cost of rerouting shipping round the Cape and the interruption at least of some part of the Middle East oil supplies with the likelihood of their having to be made good from dollar oil. The Minister of Fuel and Power has already warned the country there may be a shortage ahead. All this is going to mean further drains on the reserves and then before long will come the substantial repayments on the North American loans. Everything points to the end-December figure being well below the comparable "low" of last year.

On the other hand, there is the expense of the Suez affair and the Egyptian war on the internal position. It is odd to find a suggestion current that the Bank rate should now be reduced. That opinion was being increasingly held before the events of this last week on the grounds that the pattern of credit restriction had become effective apart from the cost of borrowing. If borrowing was being confined to the essential minimum then, it was argued, it served no purpose to force a high rate of interest. But wars and reduced bank rate go ill together; yet, if it could be assumed that the war would be quickly over, then there might be merit in reducing the Bank rate at a time when it could do no further harm. The danger in a cut in money rates, unless the external position of the country is outstandingly strong, is in stimulating speculation against the national currency, but, since the war has done this anyway, nothing would be lost on this account.

Markets are in the Dark

The markets, of course, have been all over the place instead of being just dull. Esso Petroleum had put out a large preference share issue at 6 per cent. and found it oversubscribed. That put up industrial fixed-interest securities to a new high level though the issue immediately went to a premium. Now it is at a discount. A big municipal issue has suffered a similar fate, while, as for gilt-edged, they have been pushed down below the original low point of the start of the Suez trouble. This must be bitter for the Chancellor, who was entitled to see British credit steadily improving—and who should indeed witness a gratifying rise (on purely domestic financial grounds) if the war can be ended quickly. On the equity front a bad situation has been made worse, enlivened by a rapid jump up in the prices of the "war equities"—rubber and the metals—followed by slumps in all these prices as the market got news that may be the war would be tidied up quickly. The truth is that the markets—and everybody—are so much in the dark about what is going on both before and behind the scenes that they can only grasp at every item of news and before they have had time to digest it and decide what it means find it overtaken by some other piece of news. In these circumstances, jitteriness is the order of the day with only small business being done. Rising only above the ruck are the Government's new state lottery bonds—or premium bonds as is the polite title, with their prospect of untaxed capital prizes and the certainty of no losses to lure the investor grown weary of more speculative ventures.

Fuel Shortage in This Atomic Age

LONDON, *27th October*

When last week Her Majesty the Queen switched on the first flow of electrical power from an atomic plant to a civil distribution network she was making history. But she was not, as so many people here have supposed, solving Britain's or the world's power problems. The atomic plant, opened with so much publicity at Calder Hall in the Lake District of England, is not primarily designed for civil electrical supply. It is one of four, the first, being built by the Atomic Energy Authority to make, by the use of natural uranium, the enriched substance—plutonium—for atomic bombs or as the detonator in hydrogen bombs. It is, therefore, part of a military programme to build up a stock of war material.

But these stations will produce as a by-product electricity—the immense heat generated being used to produce steam to drive turbo-generators. And Calder Hall is producing now about 40,000 kilowatts, a figure which will be more than doubled when the second unit of this station comes into operation about the end of the year. But the total will be no more than about the equivalent of 250,000 tons of coal—say one-thousandth part of the nation's current energy consumption.

Over the next ten years, the Central Electricity Authority has a building programme, based on the experience of Calder Hall but intended primarily to make civil electricity, which it was thought might produce electricity from atomic energy equivalent to a fuel consumption of 5 million tons. Fortunately, engineering advances in this field have been so rapid that it looks as if each of the planned stations will operate three times as efficiently as the new Calder Hall, twice as efficiently as planned, and produce the equivalent of 10 million tons of coal. That is Britain's atomic programme for the next ten years. How does it measure up to the realities of our power requirements?

Today, coal is used to produce energy at the rate of some 215 million tons a year, oil at the rate of some 35 million tons, water-power usage is still negligible. The total energy usage is equivalent to the consumption of some 250 million tons of coal—to which the atomic programme will, in ten years, add 4 per cent. But, in ten years' time, coal output, if it goes at the planned rate will have increased by 25 million tons, that is, a 10 per cent. increase on today's total energy supplies. So even in this atomic age over the next ten years, we

INDIA'S STERLING BALANCES

AGREEMENT WITH U.K. NOT TO BE RENEWED

THE Governments of India and the U.K. have agreed, after mutual consultation, that the financial agreement signed on 20th July 1953 between the two countries, in respect of the release of sterling balances which India holds in the U.K., shall lapse on 30th June 1957 on which date the agreement is due to expire. Both the Governments consider that there is no ground for renewing the existing agreement on its expiry, for the main purpose of the agreement would have been fulfilled by the time of its expiry.

The decision not to renew the agreement, the official statement explains, does not in any way affect India's right and competence to draw upon its sterling balances. Nor does it affect the position in regard to the treatment of remittances of savings and the voluntary repatriation of investments by U.K. citizens, as secured by section 3 of Article VII of the agreement. This position is in accord with, and follows from, the policy of the Government of India on this subject as enunciated in its resolution dated 6th April 1948 and in the statement made by the Prime Minister in Parliament in April 1949. It is the intention of the Government of India to continue its present policy in this respect.

Object of the Agreement

The main object of the agreement dated 20th July 1953, which has retrospective effect from 1st July 1951, was to regulate the release of the sterling balances of India which had been accumulated during the war years. The agreement was not a new one, but was only a consolidated document of all the provisions contained in the agreement already in force between the two Governments entered into by an exchange of letters on 8th February 1952 between the Finance Minister of India and the British Chancellor of the Exchequer. In fact, the first Indo-U.K. financial agreement on release of sterling balances was signed as early as on 14th August 1947. It was in force originally for a period of six months ended 31st December 1947. It was, however, *eventually* extended for a period of six years ending 30th June 1957 by exchange of letters on 8th February 1952. This extension for a six-year period was meant to settle the problem of sterling balances on a long-term basis without in any way modifying the agreed arrangements made till then for releases of sterling balances.

Terms of the Agreement

On the date of the first agreement, that is 14th August 1947, India's sterling balances had stood at £1,160 million. Under the agreement signed in July 1948, these balances were brought down to about £800 million, as a result of transferring Pakistan's share of the balances to that country, paying to the U.K. Government a tapering annuity to meet India's pension obligations in the U.K. and providing for the purchases of military stores and installations located in India. On 1st July 1951, that is, the date on which the now current six-year agreement came into effect, the sterling balances stood at £643 million. According to the provisions of this agreement, a sum of £310 million, unblocked in 1951, was to be retained as a currency reserve in the current account and this would not be drawn upon without previous consultation with the U.K. Government. It was also provided in the agreement that every year, during the period of currency of the agreement, a sum of £35 million would be transferred from the blocked account to the current account. Such transfers would take place only as and when necessary to maintain a minimum balance of £30 million in the current account, in addition to the currency reserve of £310 million, and will be available for utilisation during each year. Any part of the unutilised portion of the sum transferable in any year would be carried forward and added to the sums available in later periods, provided the minimum balance of £30 million was retained, in addition to the currency reserve. Subject to this condition, India was also free under the agreement to overdraw in any year to the extent of £5 million without prior consultation with the British Government. Any balance remaining in the blocked account on 30th June 1957 would be transferred to the current account. In accordance with the provisions of the agreement, India was thus free to draw £210 million (at £35 million per annum) during the six years ending June 1957, so that the balances on that date will stand at £433 million.

During the first five years of the agreement, India's withdrawal of sterling balances was much less than that provided for in the agreement. Thus, as against £175 million that could be withdrawn during this period, together with £90 million, being the balance of the amount withdrawable under the previous agreement, or £265 million in all, the actual amount utilised was no more than £131.91 million. Again, in the First Five-year Plan, it had been estimated that the sterling balances would decline by £220 million (Rs. 290 crores) on account of excess of imports over exports. In this case also, the net amount withdrawn was no more than £105 million (Rs. 140 crores). These slow net withdrawals from foreign exchange reserves were due, in the main, to an unexpected improvement in India's agricultural production—particularly in foodgrains—which enabled a saving in the foreign exchange budget of the Plan, and to the failure of some of the key industrial projects, included in the programme for the public sector, to materialise. But, of late, there has been a very rapid fall in the sterling balances, as will be seen from the following comparative table:

As on	Sterling balances	
	In crores of Rs.	In million £ stg.
1st July, 1951	857.41	643.05
1st July, 1952	681.60	511.20
1st July, 1953	711.57	533.68
1st July, 1954	749.91	560.13
1st July, 1955	713.90	535.42
31st December, 1955	735.18	551.38
31st March, 1956	749.14	559.60
30th April, 1956	725.65	544.24
31st May, 1956	705.34	529.00
30th June, 1956	681.52	511.14
31st July, 1956	653.47	490.10
31st August, 1956	631.62	473.71
30th September, 1956	615.07	461.30
19th October, 1956	591.42	443.31

It will be noted that, after going up from £535.42 million on 1st July 1955 to £559.60 million on 31st March 1956, the sterling balances gradually declined to touch a low of £511.14 million on 30th June 1956. But, in the subsequent 3½ months, they have shrunk by as much as £67.83 million to stand at £443.31 million. These heavy withdrawals are due to large imports in the face of a downward trend in exports. What is causing anxiety to the country is the fact that, during the last six months, the extent of fall in sterling balances is nearly three-fourths of the sum expected to be drawn during the period of the Second Five-year Plan.

The
QUALITY
that Endures

Three hundred years of history have helped to shape the character of Lloyds Bank. An unwritten charter of confidence has been fashioned from the experience of generations of customers whom it has faithfully served

In its character is the quality that endures.

LLOYDS BANK LIMITED

Incorporated in England

BANK RATE IN BRITAIN

MR. ROY HARROD FAVOURS IMMEDIATE REDUCTION

THERE possibly cannot be two opinions in regard to the need for reducing the Bank rate when conditions are ripe for it. Also, one cannot but agree with Mr. Cobbold, the Governor of the Bank of England, when he pointed out, when addressing the distinguished gathering at the annual dinner at Mansion House last month, that "an indefinite period of credit restriction whether by persuasion, by present technical methods or newly-devised techniques would starve the economy and by inhibiting free competition among the banks would prejudice both their efficiency and their services to the public." Indeed, both Mr. Macmillan and Mr. Cobbold, while admitting that, as a result of the increase in Bank rate, certain notable improvements, such as a check on boom conditions, personal consumption and expansion programmes, reduction in imports, a large measure of stability in price level, had been witnessed, there was a singular unanimity between them when they termed the coming months as "crucial." Any case for a reduction in the Bank rate must, therefore, rest on sound considerations. Those who put forward the case must answer such questions as: Are there any changes in the economy that call for a reduction in the Bank rate? Has the increase in Bank rate succeeded in producing the desired results? To what extent are the results obtained attributable to the increase in Bank rate? Have conditions reached a stage when non-reduction in Bank rate impedes the growth of the economy? Many of these questions have been considered dispassionately by Mr. Roy Harrod in an illuminating article contributed to a recent issue of the *Financial Times*, London.

The author of the article argues that, in assessing credit policy, one must keep attention focussed on its aim. The credit policy, according to him, "is essentially designed to influence decisions—the decisions to make capital outlay, to spend on borrowed money, to consume. It is not well adapted to curing the aftermath of an excess (or of a deficiency, for that matter) of decisions to spend. A boom in fixed capital investment as ours has been must have an inflationary aftermath. Labour and material shortages, slow deliveries, wage-price spiralling have inevitably to continue for some time."

Decision Taken Very Late

Mr. Roy Harrod is of the view that in order to achieve these aims the strong measures of credit control adopted by the Government should have been initiated two years ago, when decisions of capital expansion were being taken by the industry. The decision to raise the Bank rate was taken very late—and the disinflationary policy remained weak, because it was technically impossible to make it strong. Moreover, the impact of the measures would have been much more pronounced than those actually witnessed had the Bank rate been pushed up earlier. In this connection, he observes:

"If only stronger measures had been taken somewhat earlier, we should have been saved from many of our embarrassments in 1955. The expansion plans started in 1954, although excessive, could have been digested without great difficulty; we could have proceeded with the expansion of our investment in a more orderly manner; the wages spiral would not have set in, or not at least with such impetus; above all, we should have been saved from that weakening of world confidence that became so marked in the second half of 1955 and had ramifying effects. It is unfortunate that at the tail end of this episode of inflationary troubles, the Suez crisis should have supervened to revive world scepticism about Britain's future."

He concedes that much depends on the extent of the fresh plans of expansion that are being drawn up for the year ahead. But, if the expansion programmes are not excessive, that is, if there is no fear that, as a result of finance becoming a little easier, "firms in the three or six months ahead would rush forward with fresh plans of expansion on such a scale that would put the economy into an inflationary jam in the coming two years," then the Bank rate should, he contends, be reduced forthwith, and there is no point in keeping it up. And he further contends that, having regard to Britain's capacity to produce more as a result of expansion that has already taken place and to the large export orders for capital goods which it has already accepted, there ought to be an expansion in production in the coming year. Then he goes on to emphasise that "a credit squeeze should be regarded as essentially a short-term weapon; when it has done its work, produced its shakedown, it should be terminated as quickly as possible. It is not desirable that high interest rates should become a habit in Britain. There has been talk in financial circles recently of this country never being able to get back to a 3 per cent. basis. Why not?"

Need for Balance on Current Account

Another important consideration is the need for maintaining a substantial balance on current account in order to meet the requirements of overseas investment. But a corollary of that desire is, Mr. Harrod points out, establishment of low interest rates at home. "It is almost a contradiction," he remarks, "for a high interest rate country to set up as an overseas investor on a substantial scale." Yet another important argument advanced by Mr. Harrod is that, unless interest rates are reduced, National Debt, already large and still further increasing because of the task of finding large sums on a gilt-edged basis, year after year, for the nationalised capital-using industries, will become progressively burdensome. "All this," he observes, "points to the desirability of making 3 per cent. the target for normal times."

Stressing that it is possible to bring down interest rates without undue expansion in money supply, Mr. Harrod says:

"It should not be difficult to bring interest rates down without an undue increase in the quantity of money, provided that the flow of tender Treasury Bills can be kept within manageable dimensions. But it may well prove before long that easy money is not a sufficiently powerful recipe for keeping the economy in reasonably full activity. There are indeed some kill-joy people who would prefer to see people not producing at all than producing consumer goods; but their views are not likely to prevail. Some re-stimulation of consumption will be required before long. But it need not be regretted if the easing of monetary conditions comes first."

Quite apart from these grounds, Mr. Harrod feels that the higher Bank rate has failed to produce transfer of manpower from the consumer goods industries to the capital goods industries. Mr. Harrod hopes that the needed change in Bank rate will not be held up by the idea that it would be bad propaganda for the policy of wage restraint. He points out in this connection:

"This would be to play with fire. Credit policy is a delicate instrument, difficult enough in all conscience to manage; it would be a first-class error to subordinate it to the exigencies of a campaign of 'moral suasion' in the wages field. That campaign must use its own appropriate weapons."

External Aspect

The external aspect is no less important. Bank rate is an instrument of great value in this field. Examining the possible effects of a reduction in Bank rate from this angle, he says:

"Considerable credit easement could be produced without a large reduction of the Bank rate, if this were thought dangerous from the external point of view. But, in fact, those foreign holders of sterling, who do not really need it, have probably already bolted out of it in consequence of the Suez crisis. If this is so, the position may even be a favourable one for testing out the external strength of sterling by a gradual reduction of the Bank rate."

There is also another school in Britain which holds the view that Bank rate should be reduced, because it has failed to serve its purpose. This school, for instance, argues that high interest rates have not curtailed borrowing by the local and public authorities. They have slowed down the growth of production more than that of consumption. They claim that the improvement in the national savings was not entirely due to high interest rates, but was chiefly due to funds already saved.

But all these discussions sound a little theoretical, in view of the latest Anglo-French combined aggression on Egypt and its serious implications to Britain's economy. There are, however, some in Britain who regard this very development as a strong enough ground for reducing the Bank rate. Their theory apparently is that war and war-like activities should be financed on the basis of cheap money, lest the burden of interest charges on public debt would become excessively high. A natural corollary of this contention is that the system of direct controls which was followed during the war and post-war years should also be introduced simultaneously.

WORLD BANK LOAN TO URUGUAY

The World Bank sanctioned a loan of $25.5 million in various currencies to Uruguay on 25th October. The loan is intended to help finance the construction of a hydro-electric power plant on the river Rio Negro, and additional transmission and distribution facilities. The project is expected to increase the generating capacity in Uruguay by about 25 per cent. and forms a part of a programme that is being carried out to provide an adequate power system throughout the country.

The loan is for a term of 25 years, and bears an interest rate of 5 per cent. including the 1 per cent. commission charged by the Bank. Amortisation will begin on 15th October 1961.

BANK OF INDIA COMPLETES FIFTY YEARS

STEADY AND SYSTEMATIC GROWTH

THE year 1956 is an important landmark in the history of the Bank of India, for it marks the completion of 50 years of its existence. To have run a bank on sound lines during these years, successfully steering clear of stress and strain, is itself an achievement of which the management of any financial institution can justifiably be proud. But what makes the achievement of the Bank of India all the more creditable is its success in carving for itself a unique place among the "Big Five" of Indian banks. The progress of the Bank over the past five decades is a story of steady and systematic growth. Considering the difficult times through which the Bank had to pass in its early years, one cannot but admire the work of the pioneers who piloted the affairs of the Bank in its infancy.

The Bank was incorporated on 7th September 1906, and commenced business on 1st November of that year. Three prominent Bombay business men were mainly responsible for sponsoring and establishing it. They were Sir Cowasjee Jehangir, First Baronet, Sir Sassoon David, Baronet, and Mr. Ramnarain Hurnandrai. These promoters foresaw the ample scope that existed for a bank of this kind. They felt the "very pressing need in the trading community for a large measure of the financial facilities which such a bank would afford." They were of the view that there was every prospect that, if worked on sound principles and under prudent and careful management, such a bank, while supplying a need to and conferring a boon on the people of India, would, at the same time, itself become a prosperous and lucrative concern. The remarkable headway which the Bank has made during the past half century, as the table on page 923 indicates, amply bears testimony to the foresight of its founders.

The confidence which the public reposed in the pioneers of the Bank, at a time when several other banking institutions also were coming up, is reflected in the heartening response to the Bank's first capital issue. Except for a small sum of Rs. 43,000, the entire capital of Rs. 50 lakhs was taken up by the public within a few months of its issue. The very sound principles and prudent management which continue to be the watchwords of the Bank from its inception have not only enhaced its reputation but built up more and more public confidence. This is illustrated by the success of the Bank's four subsequent issues of capital which were offered at a premium of 100 per cent. In 1919, for the first time, the Bank's paid-up capital was increased from Rs. 50 lakhs to Rs. 1 crore by the issue of 100,000 shares of Rs. 100 each, Rs. 50 paid-up, at a premium of Rs. 50 per share. Long afterwards, that is in 1944, the Bank increased the capital by Rs. 50 lakhs on similar terms. In 1948 and again in 1951, the Bank issued fresh capital to the tune of Rs. 50 lakhs each time and, as on previous occasions, the shares were issued at a premium of Rs. 50 each. The response from the shareholders was quick. The sum of Rs. 2 crores thus collected by way of premium on the new issues was credited to the reserve fund, which at the end of 1955 stood at Rs. 3.52 crores. To mark the fiftieth anniversary of the Bank, the Directors recently issued bonus shares to the shareholders by capitalising a sum of Rs. 50 lakhs from the reserves, thus returning in kind a part of the premium collected from them earlier.

The story of the success of the Bank's new issue of shares will read more interesting if studied against the background of the events which took place during the intervening years. In less than a decade from its inception, that is in 1913, a banking crisis developed, leading to failure of many leading banks. Public confidence in Indian joint-stock banks was shaken by these failures, as a result of which development of banks was thwarted. In the following year, the First World War broke out and the war years provided an exacting time for banks in general. With the advent of peace, the country

COTTON PRODUCTION IN PAKISTAN

HIGHER OUTPUT AND READY MARKET EXPECTED

COTTON, one of the most important cash crops of Pakistan and second only to jute in importance, is grown mainly on irrigated land. Nevertheless, weather conditions have a direct bearing on the size of the crop. Thus, the 1955-56 production of 1,768,000 bales (of 392 lbs. each), though it exceeds the previous season's outturn by 196,000 bales, is lower than what would have been the case had nature been more considerate. The prospects for the current season (1956-57) are, however, better and a still larger crop is expected. Pakistan cottons, which account for about 38 per cent. of the country's foreign exchange earnings, are mainly short- and medium-stapled.

The chief commercially propagated American varieties (medium-staple) are: 4F, L.S.S.; 124F, 199F, 289F and M4 (N.T. Sind). The latter two are comparable to U.S. Middlings. 4F is in great demand in Japan and Lancashire. The main short-staple cotton grown in West Pakistan are Sind *Deshi* and Punjab *Deshi*. East Pakistan grows only short-staple cotton (⅜" to ⅝"), known to the trade as "Comilla," the coarsest cotton in the world. Foreign countries are also showing considerable interest in Pakistan cotton. In view of the important role of cotton as an earner of foreign exchange every effort is being made to increase production and improve the quality of lint.

As a result of the vigorous drive to promote cotton cultivation undertaken by the Government and the Pakistan Central Cotton Committee, acreage and production of cotton registered sizable improvement in the 1955-56 season. The area under the crop during the season was 3,537,000 acres and production of lint 1,768,000 bales (of 392 lbs.). This compares favourably with the nine year average (1947-56) of 3,129,000 acres and 1,470,000 bales. The yield per acre of 195.9 lbs. for the year was also higher than the nine year average of 184.2 lbs. and is the highest on record since 1952-53. Out of the 3,537,000 acres under cotton, only 53,300 acres were in East Pakistan. The following table gives the acreage, production and yield per acre for the nine years since 1947-48:

Acreage, Production and Yield, 1947-56

Year	Area (1,000 acres)	Production (1,000 bales of 392 lbs. each))	Yield (pounds per acre)
1947-48	3,091	1,112	141.0
1948-49	2,704	1,008	146.1
1949-50	2,862	1,287	173.5
1950-51	3,011	1,517	197.5
1951-52	3,370	1,045	191.0
1952-53	3,467	1,900	214.3
1953-54	2,928	1,444	193.3
1954-55	3,195	1,572	192.1
1955-56	3,537	1,768	195.9
Average	3,129	1,470	184.2

Under its cotton expansion plan, the Government of Pakistan has fixed a target of 2.5 million bales to be achieved within the next three or four years. A comprehensive scheme prepared by the Pakistan Central Cotton Committee for the achievement of the target within the specified period has been accepted by the Government. The latter has already adopted measures like distribution of fertilisers, plant protection, etc., in order to increase production. Vigorous propaganda is being conducted through the medium of the cinema, leaflets, posters and the like to encourage increased use of chemical manures. Further, demonstration plots are also being set up to acquaint the cultivator with the ways in which manures can be used to the best advantage. The Government also subsidised the sale of fertilisers up to 66⅔ per cent. of the price, till 29th February 1956. As the adoption of fertilisers has become more wide-spread, the subsidy has since been reduced to 58 per cent. During the last season, the total supply of fertilisers aggregated 50,500 tons. But, in view of the fact that Pakistan has a cropped area (all crops) of more than 50 million acres, this is a very insignificant quantity. Efforts are, therefore, being made to make available to cultivators still larger quantities of fertilisers. During the current season (1956-57), about 145,700 tons of fertilisers are planned to be imported. In order to save foreign exchange and to make the country self-sufficient in respect of supply of fertilisers, a factory for the manufacture of Ammonium Sulphate has already been established at Dawoodkhel, in West Pakistan, with an output capacity of 50,000 tons a year and production is expected to start towards the end of 1956. The Government is also planning to start two more fertiliser factories, one in West Pakistan with an annual capacity of 200,000 tons and another in East Pakistan, capable of producing 100,000 tons of fertilisers a year.

Equally vigorous has been the drive to control cotton pests. During the year 1955-56, 19,780 acres of cotton were treated with chemicals against pests and for the current year the target for aerial and ground spray together is about 100,000 acres. Out of this, 45,000 acres have been treated already by ground spray and 5,000 acres by aerial spray. Besides, 27,700 maunds of cotton seed, sufficient for sowing about 100,000 acres, were also treated with organic mercurials. It is expected that, despite bad weather and inaccessibility of places due to flooding, the target for the season will be achieved.

Complete figures regarding the acreage under the crop during this season are not available at present and hence it is difficult to have a definite idea of the crop for the current year. However, an article in the latest monthly publication of the International Cotton Advisory Committee, Washington, attempts an estimate of the production prospects for the current season. Apart from the fact that there were heavy rains during July, floods have also done considerable damage to the crop. The data so far available, observes the article, indicate that the total area in Lahore, Rawalpindi and Multan will together be about 1,791,000 acres and that in Bahawalpur, Peshawar and Dera Ismail Khan 497,000 acres, 10,000 acres and 3,000 acres, respectively. Assuming that the acreage in Hyderabad and Khairpur will be the same as given in the first forecast for the last season, i.e., 913,000 acres, the total area in West Pakistan is estimated at 3,214,000 acres. Total area under cotton in East Pakistan is placed at 53,000 acres. Together, the area under cotton crop in Pakistan in the current year works out to 3,267,000 acres. As regards output, it is held that the dry spell in the month of August, has been beneficial to the crop and it is expected that, if there is no other calamity before the harvest, production may, according to official estimate, be about 1,918,000 bales. i.e. 150,000 bales more than that of the previous season. Trade estimates for the season, however, place the crop lower at 1,885,000 bales. The first official estimate of cotton acreage places the area under the crop at 3,336.000 acres as compared with the first estimate for the previous season of 3,080,000 acres.

Outlook for Export

With the prospect of a good crop of at least 1,885,000 bales during the current season and a carryover of 115,000 bales, it is estimated that total visible supply would amount to 2 million bales. Of this, mills in Pakistan are expected to consume about one million bales, as compared with 938,000 bales during the 1955-56 season. This expectation of increased consumption is based on the likelihood of an expansion in the spindleage and loomage. Total number of spindles and looms working up to 30th June 1956 were 1.62 million and 23,460, respectively. This is expected to increase, by the end of 1957, to 1.7 million and 24,110, respectively. Stocks with most mills are very low and it is expected that there will be brisk demand in the early months. On the assumption that mill consumption will be about a million bales, it is estimated that one million bales would be available for export. It may be noted here that, during the season ended 31st August 1956, exports of cotton aggregated 903,800 bales. Out of the one million bales available for export, Japan and the Continent are expected to purchase 500,000 bales. The U.K. and Australia together are expected to take 100,000 bales and another like quantity by Hongkong and the U.S.A. The balance of 300,000 bales is expected to be purchased by Poland, Hungary, Austria, Czechoslovakia, U.S.S.R. and China.

SYNTHETIC FIBRES

A recent survey of the developments in the American fibre situation, made by some analytical experts in the U.S., reveals a distinct shift from cotton, to synthetics. If the spectacular rise of the newer man-made fibres during 1948-55 is any indication, synthetics might, it is felt, well exceed 50 per cent. of the total dollars spent by mills on all fibres by 1960, the share of acetate and rayon also being 20-25 per cent. In contrast, the share of cotton will decline from 36 per cent. to about 31-35 per cent. and of wool from 14.8 per cent. to 10.5-14 per cent. Indeed, the survey warns:

"The revolution in textiles shows no signs of abating. Its continuance makes imperative decision involving multi-million dollar stakes and affecting every level of the industry. The need is not only for flexibility to meet rapidly changing conditions but, even more, for anticipation of such changes. 'Wait and see' policies will well turn out to be too little and too late."

In this connection, it may be noted that Japan has given top priority to the development of rayon textile industry under its Economic Self-support Five-year Plan. The Plan provides for the expansion in exports of spun rayon fabrics from 302.5 million square yards in 1954 to 686.0 million square yards in 1960. Likewise, exports of rayon filament fabrics are proposed to be raised by 122.3 million square yards to 386.0 million square yards.

India has also launched upon a fairly ambitious scheme for the expansion of the rayon textile industry. The scheme envisages a rise of 46 million lbs. to 68.3 million lbs. in the installed capacity of continuous filament rayon and of 16 million lbs. to 32 million lbs. in staple fibre. The implementation of the scheme involves an investment outlay of Rs. 24 crores. The export target for rayon fabrics fixed for 1960-61 is 10 million yards.

AMBAR CHARKA

Arrangements have now been completed to achieve the target of manufacture and distribution of 75,000 Ambar Charkas by the end of March 1957, according to a Press note issued by the Government of India. Out of the total of 300 *parishramalayas* (training-*cum*-production centres) proposed to be set up during the current financial year (1956-57), 152 have already been set up. About 28 *vidyalayas* (training institutions) have started functioning. Over 10,200 spinners are undergoing training in the operation of the Charka in the different parts of the country and more than 1,060 instructors are also receiving training. By the end of September last, over 14,200 Charkas had been manufactured, of which 7,800 were distributed to production centres.

The Union Ministry of Production has (up to 30th September 1956) released grants and loans aggregating Rs. 3.05 crores to the All-India *Khadi* and Village Industries Board which is carrying out the Ambar Charka programme. The Board has, however, not spent more than Rs. 63.51 lakhs.

It is expected that commercial production of Ambar cloth will begin by the end of next month. At present, the production of yarn and cloth is being carried on at the training centres only.

Meanwhile, the Ahmedabad Textile Industries Research Association is continuing experiments for improving the efficiency of the Charka. The Cotton Technological Laboratory, Bombay, has also made some improvements on the Charka.

U.K. TEXTILE DELEGATION TO INDIA

A delegation of British cotton textile interests is scheduled to arrive in India shortly "to discuss the stabilising of imports of cotton textile goods into Britain." The delegation will be led by Sir Cuthbert Clegg, Vice-President and former Chairman of the Cotton Spinners and Manufacturers' Association. With Sir Cuthbert Clegg will be Lt.-Colonel J. B. Whitehead, Managing Director of the Lancashire Cotton Corporation; Mr. C. Henniker-Heaton, Director of the Master Cotton Spinners Federation; Mr. W. Crossley, of the Textile Finishing Trades Association; the Hon. J. S. T. Hawke, Chairman of the Cotton and Rayon Merchants Association; Mr. W. Roberts, President of the United Textile Factory Workers' Association. and Mr. T. D. F. Powell, of the Cotton Board, as Secretary of the delegation.

The British delegation will meet leaders of the Indian textile industry for general talks on subjects of mutuel interest. As all branches of the British textile industry and both manufacturers and employees will be represented, it is expected that the talks will cover every aspect of the question of the importation of Indian textiles into the U.K.

SIGNS OF RECOVERY SEEN IN LANCASHIRE

FUTURE OF FORWARD TRADING IN COTTON

By Our Special Correspondent

MANCHESTER, 30*th October*

AFTER the series of recessions and revivals which have been the lot of traders in Lancashire since the war there is invariably a tendency to distrust signs of recovery which occur from time to time. Almost a year ago, pressure for supplies of cotton and rayon goods began to mount encouragingly and optimism again rose in the mill towns. The improvement was then ascribed to the need for suppliers of home trade textiles to replenish the stocks which had become so depleted during a summer of unusual warmth.

MANCHESTER LETTER

Unfortunately the hopes that brighter conditions would continue were not fulfilled and the subsequent period of uncertainty arising from the twin factors of foreign cloth imports and hesitancy over future cotton prices curtailed the offtake to little more than hand-to-mouth quantities. Now a fresh upsurge of demand has been encountered and while the cynics are asking how long it will last, the more optimistic among traders are taking advantage of the situation while the sun shines.

Any assessment of immediate prospects must be made on a relative scale. Gone are the days when bulk lines were predominant and Lancashire firms were able to look ahead with confidence. Yet the experience of the past few weeks has enabled many producers to act in a firmer manner than for a long time past in contemplating new business. Prices for yarns have been raised and full rates have been quoted for any goods required. Cases are known where individual mills have order lists extending into the early months of next year, in striking contrast to recent experience when many companies have been struggling from week to week to keep machinery engaged and operatives together.

The inevitable outcome of an expansion in the turnover after so lengthy a setback, involving a persistent drift of labour from the industry, has been the uncovering of gaps in manpower which cannot be easily filled. As a result, the tendency has lately been for delivery terms to be extended and distributors who required goods urgently have not always been able to secure their supplies as quickly as they had anticipated.

Higher Production

The broadening demand for Lancashire textiles has been followed by Cotton Board figures showing that in the week ended 13th October the spinning mills achieved their highest net recruitment for two and a half years. There was a gain of 213 full-time workers and 40 part-timers.

Production of single yarn also showed an improvement. At 17,720,000 lbs. it was the highest since January this year.

A Cotton Board spokesman said in Manchester that the returns were "encouraging" and pointed to the increased activity which has developed in the industry.

Printing Prospects

Mr. Roger M. Lee, the Chairman of the Calico Printers' Association, took the opportunity at the annual meeting to survey textile trends since the end of the Association's financial year in June. He told stockholders that a "continued decline" in commission printing business at the start of the July-September quarter had been arrested during the last few weeks and that the impression now was that raw cotton prices would be stable for some time to come—or, if not stable, that prices would advance rather than decline. "For this reason our customers now seem more inclined to place orders but unfortunately the tendency is for a return to seasonal business with consequent peaks and troughs which are neither good from the point of view of our customers nor from the point of view of management in their attempt to maintain a constant labour force," commented Mr. Lee.

It was difficult at this time of the year to prophesy about the progress of the Association's merchant departments but at the present time there were two good signs: invoicing were higher than at this time last year and the merchandise ranges had been better sampled "than probably ever before."

Qualifying these remarks—described by a stockholder as a "vein of optimism"—Mr. Lee said there were some elements which induced "a strong note of caution." The Australian position was very bad and the flow of new bookings had been reduced to a "mere trickle." At home, the credit restrictions had persuaded distributors to keep stocks low and the making-up trade was not anxious to commit itself too far.

Contraction—The Facts

So much attention was centred on the startling figures showing the number of closed mills in Lancashire since 1951 given by Mr. W. T. Shackleton at Harrogate, that some of the other details he provided about recent trends within the industry might well be overlooked.

One significant fact which emerges is that the threat to weaving capacity by the closing of mills has sharply risen since the beginning of last year. Already in the first half of this year 55 sheds containing 15.142 looms have closed down against 59 mills with 12,036 looms in the whole of 1955. In contrast, the quantity of spinning and doubling machinery in mills closing this year has been very much smaller than in the previous 12 months.

A breakdown of the losses in the labour force since the end of 1951 shows that the doubling section has suffered the most. In spinning and weaving the wastage has been very similar at more than one in five, but in doubling it has been almost one in three, whereas the finishing section has lost about one in eight of its manpower. The full fall in available labour is 75,840 in 4½ years.

In such circumstances, it is only natural that recruitment has received a severe setback. An analysis of the number of juveniles on the books of employers in June showed little change in the proportion in spinning and doubling, which was about one in twelve. In weaving, however, only about one in twenty were juveniles. To quote Mr. Shackleton: "This is clear evidence that in not so many years there will be an acute shortage of workers in the industry and that means we shall have to continue to find new ways of deploying our labour to the best advantage."

Machine activity in the mills this year compared with 1951 shows the remarkable change which has occurred in the use of the different kinds of spindleage. While the quantity of ring spindles in place is now slightly higher than five years ago, the number of mules has declined by nearly 25 per cent. Even more revealing are the statistics for running spindles, which show rings only 2 per cent. lower in 1956 than in 1951 but mules 41½ per cent. down. The number of mule spindles running in June this year was only 8.770,000 against 15,010,000 in 1951.

Shifts in Spinning?

A new work-and-wages charter affecting 50,000 Lancashire cotton workers, including the terms and conditions for the operation of double shifts in modernised mills, has been agreed in principle by the Master Cotton Spinners' Federation and the National Association of Card, Blowing and Ring Room Operatives, the biggest union in the cotton spinning industry.

A joint announcement issued in Manchester by Sir Alfred Roberts. General Secretary of the Association, and Mr. C. Henniker-Heaton, Director of the Federation, said that negotiations had been in progress for a year on the issues of working conditions in mills, wage structures, and shift working. Separate meetings of the two organisations had approved the agreement and details would be embodied in formal documents as soon as possible.

The new charter, it is believed, will help to improve the industry's efficiency by introducing an alternative wage structure based on work study principles.

Future of Futures

Many and varied have been the causes which have combined to hamper the activities of raw cotton futures markets since the war. In the light of experience it can now be seen that the revival of such trading in Liverpool came at an inopportune moment when yarn and cloth business was declining from its peak. Subsequent conditions have never really given the market a chance. In New York, trading has been entirely hampered by the latest developments in the disposal of surplus supplies initiated by the United States Government.

On all sides raw cotton traders feel that their attempts to introduce free futures markets are being hamstrung by the action of officialdom. Economic forces have moved away from the ideas prevalent before the war and it is very doubtful whether business on these lines

MILL CONSUMPTION OF COTTON

RECORD LEVEL REACHED IN 1955-56

THE expectation generally entertained in cotton circles that mill consumption of cotton would set a new record in the 1955-56 season just ended has been borne out by actual figures for the whole season which have now become available. According to the statistics compiled by the Office of the Textile Commissioner, Bombay, mills in India consumed during the season 4,968,707 bales (of 400 lbs. each), comprising 4,365,456 bales of Indian and 603,251 bales of foreign cotton. This is the highest level of consumption ever reached since the partition of this sub-continent and compares favourably even with the pre-partition peak of 4,887,996 bales in 1944-45. A point to remember is that not only has there been an increase in aggregate consumption, but the quantity of Indian cotton consumed has been steadily rising, while, at the same time, the share of foreign cotton in the total quantity of cotton absorbed by mills has been declining. Thus, consumption of indigenous cotton increased from only 2,516,963 bales in 1950-51 to 4,365,456 bales in 1955-56, while that of foreign cotton (including Pakistan cotton) declined from 1,105,125 bales to 603,251 bales during the same period. It may also be noted that, during the 1955-56 season, India did not import any Pakistan cotton.

Coming to the principal varieties of Indian cotton consumed by mills during the period, it may be noted that, as usual, Jarilla varieties, including Virnar, Malvi and Virum, topped the list accounting for 1,047,211 bales, followed by Punjab American (216F and 320F and L.S.S.) aggregating 693,134 bales and Broach Vijay accounting for 511,510 bales. During the previous season mills consumed, among others, 1,118,280 bales of Jarilla varieties, 545,390 bales of Punjab American and 542,345 bales of Broach Vijay. Other important varieties of cotton consumed by mills during 1955-56 were: Bengal *Deshi* 130,661 bales, Dhollera 189,934 bales, Kalyan 250,993 bales, Jayadhar 161,548 bales, Madras Cambodia 165,640 bales and Laxmi 172,572 bales.

Of the 603,251 bales of foreign cotton consumed during the period, Egyptians accounted for 186,759 bales, Sudan Egyptians 117,719 bales, East Africans 251.875 bales, and U.S.A. 26,522 bales. The following table gives the variety-wise breakdown of foreign cotton consumed during 1955-56:

Consumption of Foreign Cotton in 1955-56

(In bales of 400 lbs. gross)

Variety	1955-56	1954-55
Egyptians:		
Ashmouni	6,963	288
Giza 30 and 31	69,417	54,802*
Karnak	96,925	132,149
Menouff	13,600	7,518
Other Egyptians	454	544
Total Egyptians	186,759	196,301
Peruvians	5,301	7,049
Sudan Egyptians	117,719	49,892
Sudan American	5,164	646
East Africans	251,875	217,433
Russians	1,020	..
Americans:		
U.S.A.	26,522	148,069
Mexico	716	..
Brazilians	..	1,919
Belgian Congo	1,888	2,557
Other foreign cotton	6,287	792
Pakistan cottons	..	4,916
Total foreign cotton	603,251	630,474

* Giza 30 only.

Total stocks of Indian and foreign cotton as on 31st August 1956 were of the order of 1,613,587 bales, comprising 1,408,233 bales of Indian cotton and 205,354 bales of imported cotton, as compared with the total stocks of 1,622,683 bales as on the corresponding date in 1955, comprising 1,443,424 bales of Indian and 179,259 bales of foreign cotton. It is evident from these figures that the stock position of foreign cotton has improved from 179,259 to 205,354 bales, while that of locally grown cotton has deteriorated from 1,443,424 bales to 1,408,233 bales. The period of availability, at the current rate of consumption, of the aggregate stock held on 31st August 1956 is estimated at 3⅞ months, as against four months a year before.

An examination of the State-wise consumption of cotton shows that Bombay State, accounting for 1,918,732 bales of Indian and 494,424 bales of foreign cotton, continues to be the largest cotton consuming State in India. The second position, of course, is occupied by Madras, and the third and fourth positions by Uttar Pradesh and Madhya Bharat, respectively. The following table gives the State-wise consumption of cotton in the 1955-56 season, along with the comparative figures for the 1954-55 season:

(In bales of 400 lbs. gross)

States	Indian cotton		Foreign cotton	
	1-9-1955 to 31-8-1956	1-9-1954 to 31-8-1955	1-9-1955 to 31-8-1956	1-9-1954 to 31-8-1955
Bombay:				
Bombay Island	1,101,361	1,072,425	177,735	196,132

LONG-STAPLE COTTON

While the case for imports of long-staple cotton to meet the requirements of the fine and superfine spinning sections of India's cotton textile industry is indisputable at present, it does not in any way lessen the importance of encouraging the production of such cottons within the country itself. Apart from the fact that this will reduce the country's dependence on foreign sources of supply, there is the further advantage that it will bring about a considerable saving of foreign exchange. One of the best ways in which this can be done is to enable the cultivators to get a fair price and a ready market for their produce. But, recently, complaints are heard that the Government's policy has not been very helpful so far as the producers of long-staple cotton are concerned.

The tempo of long-staple cotton production in Bombay State, for example, has been very encouraging during the First Five-year Plan period. Both acreage and production have steadily increased. Area under long-staple cotton in 1951-52 was only 17,000 acres and it has increased to over 260,000 acres in 1955-56. Similarly, production increased from only 8,500 bales in 1951-52 to about 135,000 bales during the same period. This is, indeed, a very welcome trend, but it must be pointed out that producers and traders are complaining that they are finding it difficult to dispose of the crop at a reasonable price. For instance, of the 135,000 bales of long-staple cotton produced in the 1955-56 season, only 115,000 bales have been sold, leaving a balance of 20,000 bales with farmers' co-operative societies and cotton dealers and processors.

This state of affairs is attributed to the policy of the Government which, by, allowing imports of long-staple cotton from East Africa, Egypt and the U.S.A., has provided room for stiff foreign competition. Mills also are inclined to carry on with the familiar types of imported cotton rather than to experiment with indigenous growths. Owing to this preference for foreign styles, even though locally grown long-staple cotton has a price advantage over the former, it has failed to find a ready market. A section of the trade and industry feels, therefore, that, unless the Government takes immediate steps to prevent the imports of foreign cotton of the same variety, the enthusiasm of growers to produce more will be dampened.

A new synthetic fibre, tacryl, the first to be developed in Sweden, was recently demonstrated at a meeting of chemistry experts in Stockholm. It is the outcome of seven years' research at the Ljungaverk plant of the Stockholms Superfosfatfabriks AB. Tacryl is an acrylic fibre and is thus related to orlon. The raw material is polyacrylnitril and the product is built up from coal, air and water. Kerosene at a temperature of 130° C is used as a solvent.

The new fibre is used in combination with wool or rayon wool and the final product is said to be characterised by a pleasant feel and good thermal insulation. It is sun-, weather- and wind-proof and retains pleating and other shaping, which makes it especially suitable for wash-and-wear trousers, etc. The common drawbacks of other acrylic fibres, their fragility and the tendency to attract dirt are said to have been largely overcome.

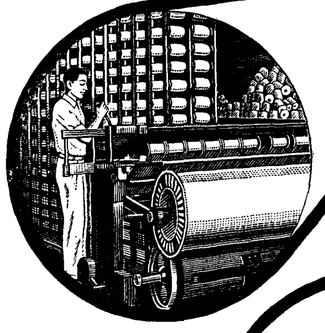
SAVED... Rs. 21,000 a year on LUBRICATION COSTS alone!



A PROMINENT textile mill in Ahmedabad is saving Rs 21,000 a year — because its management asked for our free advice!

After careful study, our lubrication expert found that the mill was over-lubricating its machinery — with the wrong grades of oil. Now, every month, the mill uses three thousand pounds fewer; *thirty-six thousand pounds of industrial lubricants saved every year!*

Choosing the right grade

Our experts are backed by the world's greatest *lubrication experience*, 90 years of it. Besides, they have the right oils to work with — a full range of MOBIL Industrial Lubricants! No wonder they can give you correct lubrication, with the right grade of oil.

MOBIL Lubricants have been developed over many years of scientific research, and they are constantly being improved. When our expert says: 'Use MOBIL Lubricants,' he is offering your machinery the finest protection that science can devise, or money can buy.

Correct lubrication is a matter for experts. Our advisory service is free — why not ask us to help you?

RAISING EFFICIENCY OF SUGAR INDUSTRY

MR. A. P. JAIN'S CHARGE AGAINST MILLOWNERS

MANY impartial observers will deplore the charges made against the sugar industry by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his speech at the 24th Annual Convention of the Sugar Technologists' Association of India, held at Kanpur on 28th October 1956. Mr. Jain came out, for instance, with the rather harsh and uncharitable charge against the sugar millowners to the effect that the latter had not made up their minds as to how best they could expand and develop the industry. This is not a case of a person living in a glass house throwing stones at others; it is the case of a person who is more guilty pointing the accusing finger at another who is less guilty. The history of the Indian sugar industry in the past decade contains sufficient evidence to prove that the inability of the industry to set its house in order has been due, to a considerable extent, to the unhelpful attitude of the authorities themselves. The Governments—Central and State—have all along been pampering the raw material supplier—that is, the cane grower—out of political considerations, as witness the irrational system of fixing a high minimum price for cane irrespective of quality. Again, the Governments are treating the sugar industry as a milch-cow; the total incidence of taxes to which sugar is subjected works out to as much as 25 per cent. of the price.

Apart from the heavy and unjustifiable tax impost on such an essential item of consumption as sugar, the sugar industry is subject to some irksome official controls, such, for instance, as the Tenancy Legislation and the control over molasses—a by-product of sugar—and alcohol exercised by the Government of Bombay. Since a detailed reference to the Tenancy Legislation has been made in our last week's issue, it is unnecessary to dwell on it again. To turn to the latter aspect of the sugar industry. The alcohol industry, as Mr. K. J. Somaiya, one of India's leading sugar industrialists, aptly declared at the recent convention of the Deccan Sugar Technologists' Association (India), has suffered at the hands of the State authorities who have imposed all sorts of restrictions on the production and sale of alcohol in pursuance of the object of making prohibition a success. To quote Mr. Somaiya:

"The molasses problem as a whole has been grossly mishandled for the last many years. This year, it has reached breaking point and hardly any molasses has been lifted from any of the sugar factories. It would be a problem to store the molasses of the next season. Even permission to throw it away or destroy it has been refused. Quite a number of distilleries have been set up by the industry. However, licences for some have not been issued for over a decade and the investment is rotting away. In other cases, the units are working under capacity. It would, therefore, not be proper for me to cast reflection on the enterprising spirit of the industry for failure to exploit their by-product resources. The discouraging attitude of the Government and the uncertainty regarding the offtake of the alcohol has left the alcohol industry in Deccan in crippled condition."

There is considerable force in Mr. Somaiya's aforesaid observations. As this journal has repeatedly stressed, unless the Government revises its policy governing molasses and alcohol, there is no chance of improving the conditions of the alcohol industry. The need for ensuring a healthy development of this industry is twofold. First, it is an industry which produces an article which is used not merely in blended fuels but also in the manufacture of a wide range of goods, including alcohol lamps, antifreeze for automobile radiators, oil refining, paints, varnishes, inks and perfumes. Secondly, to the extent this industry is developed, there will be economical disposal of surplus molasses produced by sugar factories which, incidentally, will go to reduce the cost of sugar production.

The foregoing account gives a glimpse of the serious handicaps facing the sugar industry. Surely, the Minister cannot be unaware of the handicaps under which the sugar industry has to work. One would, therefore, welcome from him a helpful and constructive policy towards the sugar industry rather than an indictment of the managements of sugar mills for their alleged sins of commission and omission. He described the growth of the sugar industry as "whimsical, unplanned and incongruous." The blame for this lies as much on the authorities as on the industry. Mr. Jain would have done well if he had addressed his advice—"you should understand the problems, circumstances and conditions of the sugar industry"—to the State Governments, instead of to sugar millowners.

It is, however, gratifying to note that, in the course of his address, Mr. Jain offered Government assistance designed to make the sugar industry more economic. According to him, the Government is prepared to offer help to uneconomic units, in order to enable them to raise their crushing capacity to 1,000 tons a day. It is also prepared to provide extension facilities to factories with a daily cane-crushing capacity of 1,000-2,000 tons. While the offer of assistance is welcome, its actual utilisation depends on the availability of regular and adequate supplies of sugarcane at a reasonable price. There are several units, especially in the States of Uttar Pradesh and Bihar, which are located in areas which are either unsuitable for growing cane or far removed from the cane-growing regions. Mr. Jain did well to reiterate the need for shifting such units to areas having surplus cane, so that "they can benefit by the facilities offered by the Government." In this connection, he alluded to the changing pattern of the sugar trade in India and observed:

"The pattern of sugar trade in India is going to change substantially in the near future. The change that is coming is likely to be to the disadvantage of Uttar Predesh and Bihar, two of the leading sugar manufacturing States in India. The price at which sugar is going to be produced by Bombay and other States of South India will be lower than the prices of U.P. and Bihar products. The consumption of sugar is barely 20 per cent. of its production in U.P. and the same applies to Bihar. I wonder where the surplus produce of U.P. and Bihar will be sold, if its prices remain higher than those of South India sugar. The bulk of additional sugar capacity and new licences have been granted this year chiefly to South India. Out of ten lakh tons of additional capacity, licences have already been issued for about 9.9 lakh tons."

These are, indeed, pertinent remarks which the sugar mills in U.P. and Bihar should ponder. They must endeavour their best to improve their standard of efficiency, so that they will compete with factories producing cheaper sugar in South India. Reassuring is the statement of Mr. Jain that, in order to assist the sugar industry and to reduce the cost of sugar manufacture, the Centre is considering a suggestion for linking the price of cane to the sucrose-content. As this journal has stressed on more than one occasion, the system of linking the price of cane to weight, ignoring completely the quality aspect, is very defective. The cultivator is interested in yield of cane per acre only and devotes little attention to its quality. If the cane grower is to be made conscious of both the vital aspects of cane cultivation, namely, sugar-content and yield, it is imperative that the payment for cane should be based not only on the weight of the cane but also on the percentage of sugar contained in it. After all, the quality of cane delivered to the factories plays a very important part in the economy of sugar production, so that the measures designed to improve sugarcane will have far-reaching effects on the fortunes of the cultivator and the sugar industry.

CANE CRUSHING IN U.P.

It will be recalled that, three weeks ago, the Government of India announced its decision to allow, up to 12th November 1956, a concession of As. 4 per maund on cane crushed to all those sugar mills in the U.P. which commenced crushing operations by 4th November. In addition, a reduction of one anna per maund was allowed in the minimum price for cane. This decision would appear to have induced several mills to commence crushing operations earlier than usual. Thus, despite the dislocation in road communications caused by the recent unprecedented rains, 13 sugar mills in U.P. had actually started crushing by the 4th inst.

SUGAR PRODUCTION AND STOCKS

The total sugar production in India during the season 1955-56 (up to the end of September) was 1,859,784 tons, as against 1,588,400 tons in the corresponding period of 1954-55, according to the Indian Sugar Mills Association.

The offtake of sugar from factories during the period aggregated 1,599,800 tons, as compared with 1,101,000 tons a year before; in the month of September alone, 155,000 tons were lifted, a rise of 27,000 tons over the offtake in the same month last year.

The closing stocks of indigenous sugar as on 30th September 1956 amounted to 677,500 tons, as against 536,300 tons a year before.

MECHANISATION OF COAL MINES

EFFECT ON PRODUCTIVITY

THE use of machinery in coal mining in the main coal-producing countries of the West has progressed very far indeed. The tendency is now to automatise as completely as possible the whole mining process, in order to raise productivity in the mines. In Russia, for instance, the mechanisation of coal mines has not only fundamentally changed the conditions of work in mines but also raised labour productivity manifold. The use of "combine," that is, a combination of machines performing several operations simultaneously, has increased the labour productivity by 25 per cent. during the last five years and has reduced the cost of production per ton by 14 per cent.

It is doubtful whether India will also seek to automatise completely coal mining, when the Government's policy is to provide employment to as many people as possible. Nevertheless, the use of machinery in the coal mines of this country has been on the increase. In 1954, for instance, out of the 853 coal mines, 477 were using mechanical power in some form or other. The machinery used for production purposes consist of coal-cutting machines, drills, mechanical loaders, mechanical conveyors, haulage machinery, etc. In 1954, coal-cutting machines numbering 495 were used in 149 collieries and were responsible for cutting about 8.2 million tons of coal, out of a total output of 36.88 million tons, as compared with 306 machines used in 1947 by 97 mines to raise an output of 3.76 millions out of a total of 30.14 million tons. The number of mines using electrical energy increased from 183 to 349 during this period, the aggregate horse-power showing an increase from 137,633 to 222,006. The number of mechanical loaders in operation, however, declined from eight in 1951 to five in 1954, the maximum quantity of coal loaded falling from 193,000 to 93,000. Mechanical conveyors of an aggregate length of 33,753 feet assisted in moving 1.17 million tons of coal from the coal face during 1954, as against 720,000 tons conveyed in 1951 by conveyors of a total length of 14,879 feet. Information regarding the number of mechanical drills and other types of machinery is not available.

Statistics relating to the percentage of coal handled mechanically and the output per man-shift (o.m.s.) for the last five years ended 1955 show that the use of machinery has certainly improved the output per man-shift (in spite of the fact that extra labour would be employed in attending to the machines), as will be borne out by the following table:

Year	Percentage of coal			O.M.S. (tons)		
	Cut by machines	Loaded by machines	Conveyed by machines	Miners and loaders	All persons (u.g. and o.w.)	Overall
1951 ..	18.9	0.6	2.1	1.03	0.56	0.34
1952 ..	19.2	0.5	2.4	1.04	0.56	0.35
1953 ..	22.2	0.2	2.7	1.05	0.57	0.36
1954 ..	22.2	0.3	3.2	1.09	0.58	0.37
1955 ..	22.8	0.3	3.4	1.10	0.59	0.37

u.g.—Underground. o.w.—Open workings.

In assessing the improvement in o.m.s., it should be borne in mind that mechanisation is only one of the factors influencing productivity, which depends on various other factors, such as type and stage of mining, nature of coal, use of explosives (in conjunction with coal-cutting machines), working conditions, experience and skill of the labour force, etc.

An interesting study was recently undertaken by the Department of Mines, Union Ministry of Labour, at the instance of the Director, Public Management Studies (Planning Commission), on the productivity in coal mines in relation to machinery used. The results of the study are contained in an article in the latest issue (September 1956) of the *Indian Labour Gazette*. To measure precisely the effect of the use of a particular type of machinery on productivity is, however, difficult, because, as already pointed out, the productivity in mines depends on many other factors also. In a study of this kind, it is necessary to keep these "other" factors constant. But they are numerous and are not measurable in statistical terms. Even in respect of the measurable factors requisite details are not available. The study is, therefore, designed to give an idea of the productivity in mines on the basis of the data available. For

STORAGE OF AGRICULTURAL PRODUCE

NETWORK OF WAREHOUSES TO BE ESTABLISHED

By Krishan Chand, I.C.S.
JOINT SECRETARY, MINISTRY OF AGRICULTURE

[An important recommendation of the Rural Credit Survey Committee (1951-54) relates to development of warehousing as a means of extending credit facilities. This article indicates the role warehousing will play in India's agricultural progress and the direct benefits the farmer will derive from it. It also shows how the National Co-operative Development and Warehousing Board—inaugurated on November 7 by the Prime Minister—proposes to establish a network of warehouses in the country and promote agricultural progress.—ED.]

WAREHOUSING, a much misunderstood term in India, is often confused with simple storing operations. It is storing, no doubt, but is a regular industry and an important adjunct of marketing. As marketing becomes more and more orderly, storing would need to become more and more specialised, and would require special agencies working on a commercial basis. In short, warehousing is specialised storing for commercial gain by specialised agencies. The importance of warehousing has been stressed by a number of committees. As far back as 1928, the Royal Commission on Agriculture in India referred to the urgent need to provide warehouses and said:

"The future may see in operation in India, the type of licensed warehouses conducted for profit within the market premises somewhat on the lines of the system which exists in the United States of America. The nature of agency providing such facilities is not of first importance. The urgent need is of accommodation at the disposal of the cultivator at moderate cost."

The Central Banking Enquiry Committee in 1932 laid even greater stress on warehousing, and remarked "that considerable improvement of the credit situation and the money market in India can only, under present conditions, be achieved by improving and extending as soon as possible the storage and warehousing of goods in order to enlarge the basis of credit system." Similar recommendations were made by the Agricultural Finance Sub-Committee of the Policy Committee on Agriculture, Forestry and Fisheries (Gadgil Committee) in 1944, and by its Co-operative Planning Committee in 1946. The Marketing Sub-Committee of that Policy Committee also stressed the importance of warehouses. In 1949, the subject was thoroughly studied by the Rural Banking Enquiry Committee which recommended the setting up of a Warehousing Development Board, financed jointly by the Central Government, the Reserve Bank and the Provincial Governments. In the First Five-year Plan, the Planning Commission also strongly recommended to the State Governments and the Reserve Bank to take all necessary measures for development of warehousing.

State Activity in Warehousing

The Reserve Bank of India—one of whose main responsibilities is to provide adequate credit for agricultural operations at reasonable rates of interest—has also been devoting a great deal of attention to the subject. In 1944, the Bank addressed to all Provincial Governments a letter bringing out the importance of warehouse receipts which could serve as collateral for providing credit to agriculturists who deposit their produce in the warehouses. For facilitating action in the Provinces, they appended a model Bill to the circular which could serve as a basis for provincial legislation.

Again, in December 1948, the Reserve Bank circulated another model Bill, redrafted on the basis of suggestions received from some of the State Governments and, along with the Bill, appended a set of model rules for this purpose. But for a new activity such as this, public support was not forthcoming in adequate measure. This experience fortified the general conclusion of the Rural Credit Survey Committee that, to rehabilitate the agriculturist, an all out drive, based on integrated development of credit, marketing, processing and warehousing, with State participation, was essential. Accordingly, it recommended that warehousing should be undertaken by the State itself.

Salient Features of Warehousing Act

These recommendations were accepted by the Government, and the Agricultural Produce (Development and Warehousing) Corporations Act, 1956, was passed by Parliament in June 1956. The Act provides for the constitution of a National Co-operative Development and Warehousing Board and Central and State Warehousing Corporations.

This Board was set up on 1st September this year under the chairmanship of Mr. Ajit Prasad Jain, Minister for Food and Agriculture. It consists of representatives of the Central Government, the Reserve Bank and the State Bank of India, the Chairman, Forward Markets Commission, and nine non-official members.

The function of the Board generally is to plan and promote programmes for the production, processing, marketing, storage, warehousing, export and import of agricultural produce through a co-operative society or a warehousing corporation. One of its specific functions is to develop warehousing by subscribing to the share capital of the Central Warehousing Corporation or to advance loans or grant subsidies to that Corporation or any State Warehousing Corporation.

Warehousing Corporation

The actual execution of the warehousing programme will be undertaken by the Central Warehousing Corporation and the State Warehousing Corporations in each of the 13 States that came into being on 1st November. The Central Warehousing Corporation will set up about 100 warehouses at centres of all-India importance during the course of the Second Five-year Plan. These warehouses will have a capacity ranging from 10,000 to 20,000 tons, as needed at a particular place. The State Corporations will be set up at centres of more local importance about 250 warehouses whose capacity will range from 1,000 tons to 10,000 tons. At the same time, co-operative societies will be assisted to set up godowns at centres below sub-divisional level where there will be no warehouses of corporation.

These warehouses and godowns will, it is expected, provide storage accommodation to the extent of about 3 million tons. The commodities which will be accepted at these warehouses, to start with, will be foodstuffs, including edible oilseeds, cattle fodder, including oilcakes, and other concentrates, raw cotton (ginned as well as unginned) and cottonseed, raw jute and vegetable oils.

More commodities will be added as experience is gained and more space becomes available.

A large technical staff will be required to man these warehouses. Each warehouse will have, besides the warehousemen, a fumigation assistant and a technical assistant. It will be the duty of the fumigation assistant to examine the commodities from the point of view of freedom from disease and to ensure their wholesomeness during storage. The technical assistant will be responsible for grading of the commodities, and will have a small laboratory at his disposal for this purpose.

It is estimated that, apart from the accountants, clerical and labour staff, about 899 technical personnel will be required. Since persons with experience of the working of licensed warehouses are not available, the persons appointed will be given intensive training before they are posted to the warehouses.

Legislation must exist in each State to license and regulate the working of the warehouses. At present such legislation exists in Andhra-Telangana, Bombay, Bihar, Madras, Karnataka, Kerala and Madhya Pradesh. The remaining States of Punjab, Rajasthan, Assam, West Bengal, Orissa and Uttar Pradesh have yet to enact legislation. They are expected to do so shortly.

Warehouse Receipts as Security for Credit

The most important aspect which the Government has in view in undertaking this programme of setting up a chain of warehouses all over the country is the creation of warehouse receipts which can serve as a collateral security for the provision of credit to the agriculturists. For each lot deposited in a licensed warehouse, a receipt will be issued to the depositor showing the quantity and the quality of the goods deposited. This receipt could be discounted with any bank to obtain loans or transferred to any other person, since it will be a negotiable receipt.

Incidentally, the existence of banking facilities in the rural areas is a prerequisite for the measure to be effective. Steps, therefore, are being taken to open branches of the State Bank of India in areas where none exists at present.

This facility should go a long way towards eliminating distress sales by the cultivator at the time of harvest. The credit available will enable him to put his goods on the market as and when found most profitable and not necessarily at the time of harvest, when prices are low on account of heavy arrivals. At the same time, the consumer will be assured of a regular flow of goods to the market on a more or less even price all through the year.

Other Advantages

The creation of the warehouse receipt and the consequent provision of credit are not the only advantages which can be claimed for warehousing. The storage of goods in warehouses constructed on scientific lines and looked after by expert technicians trained in scientific storage will eliminate large losses through insects, pests, rats, etc. Even on a conservative estimate, these losses amount to about 3 million tons every year in the case of foodgrains alone.

Another advantage which will accrue in the matter of smooth trading will be the grading of produce to be stored in these warehouses. Workable standards for various grades are being evolved in respect of all the commodities which will be accepted in the warehouse and all lots coming into the warehouse will be graded. When these grades become well recognised all over the country, not only will higher returns be assured to the producer but trading in these quantities will become smoother. It will then not be necessary physically to check the commodities nor will trading by samples be necessary. Mere indication of grades would assure to the purchaser the quality for which he pays.

In the task of national reconstruction, warehousing is but one of the many activities in hand. But, without a widespread programme of warehousing, marketing cannot be made more orderly, huge wastes cannot be eliminated and, above all, adequate credit at cheap rates with an assured recovery cannot be extended to the cultivator. The National Co-operative Development and Warehousing Board which has been set up is meant to fulfil this need.

The International Rice Commission, which will commence its session in Calcutta on 12th November, will discuss various problems concerning paddy cultivation. Weeding, use of fertilisers, storage and processing of rice, mechanisation of cultivation and the relationship between soil, water and plant will be the principal items on the agenda of the session.

According to Dr. Ralph W. Phillips, Deputy Director of the agricultural division of the F.A.O., the annual loss of 10 per cent. of the world's total output of cereals caused by pests and insects would be studied and remedies sought by the conference. The use of rice fields for fish-culture is another subject likely to be discussed by the conference.

Q. 49

WEST EUROPE FACES SHORTAGE OF OIL

EFFECT OF SUEZ CRISIS

AN immediate effect of the Suez crisis is the shortage of oil in W. European countries which is likely to become more and more acute if the crisis becomes a prolonged affair. Already, several of these countries are preparing themselves for introducing rationing of oil. It is true that all shipping and oil interests were aware of the fact that oil supplies would be endangered through the outbreak of hostilities in the Suez Canal area. Indeed, it is this knowledge that prompted some oil companies to place orders for large oil tankers that would enable them to bring substantial quantities of oil via the Cape. But the Suez crisis has grown worse in an unexpected manner, so that oil and shipping companies have not had time to take all the precautionary measures they would have liked. So far as India is concerned, it is unlikely that the impact of the crisis on the country's oil supplies will be very heavy, thanks to the fact that these supplies come from the Persian Gulf which is situated to the east of the Suez. It is, however, important to this country too that the area of hostilities should not extend beyond the region to which it is now confined.

Almost the first measure which the British authorities took after their decision to intervene in the Egypt-Israel conflict was to advise the U.K. merchant shipping to keep clear of the Suez Canal and Israel waters until further notice. This warning was passed on to shipowners by the U.K. Chamber of Shipping and owners began to follow the advice by sending radio instructions to their vessels *en route* to the Canal either to sail instead around the Cape of Good Hope or to stay in any port on the way to Suez. It is needless to point out that shipping and freight costs between Europe and ports to the east of Suez will rise sharply if vessels are diverted round the Cape.

Source of Supply

By far the most important—at any rate, the immediate—effect of the Suez crisis is the shortage of oil supplies in Europe. Middle East is the main source of supply of oil to Europe, the former accounting for nearly 75 per cent. of the latter's total requirements of 100 million tons a year of crude and refined products. It is estimated that nearly 65 million tons of oil are shipped through the Canal to European countries. It is this quantum of supply that will suffer through any prolongation of the Suez hostilities. A factor which might complicate the situation is any act of sabotage or strike in the Middle East oilfields.

In the U.K. the present stocks of oil, estimated at about 5 million tons, could serve the country for six to eight weeks. France is said to possess about two months' supply of oil. Prompt steps have been taken by the U.K. Ministry of Fuel and Power in order to meet the threat of a shortage of oil. An Order-in-Council has been issued under the Defence Regulations giving the Government wide powers over the use of petroleum products. It would, however, appear that no decision to reintroduce the rationing of petrol has been taken yet. Much will, of course, depend on the U.S. assistance in the matter of oil supply. It is presumed that the U.S. will not deny oil to Europe, for that would be to penalise the whole of W. Europe for Anglo-French action. In any case, this would mean some dollar drain for Europe, estimated at $200-250 million per year.

Large Tankers

The efforts that are being made to build large tankers for carrying the oil via the Cape are likely to be intensified. The distance from the Persian Gulf through Suez to North-West Europe is about 6,000 miles while the distance round the Cape is about 11,000 miles. Shipment of oil round the Cape will certainly cost more, though the increase in costs can be held within reasonable limits through shipping the oil in large tankers. In this connection, a correspondent in the London *Financial Times* has given some interesting figures. He says that the cost of shipping crude oil from Kuwait in the Persian Gulf to a port in the U.K. in a tanker of 19,500 tons is about 22s. per ton. If this cost were taken as 100, the cost of shipping the oil round the Cape would be 139. If a tanker of 32,000 tons were used, the indices of the "Suez" and the "Cape" costs would be 88 and 118 and if a 45,000-ton tanker were employed they would be 85 and 91 respectively. In other words, the cost of using a 45,000-ton tanker round the Cape is actually cheaper than the cost per ton of using a 19,500-ton tanker on the Suez route. The majority of world tanker-vessels, however, are under 35,000 tons. There are at present only 21 tankers of over 45,000 tons in service. This means that, in the immediate future—that is, pending the construction of super-tankers—the cost of transporting oil via the Cape would be higher than that of carrying it through the Canal.

OIL INDUSTRY IN U.S.S.R.

The U.S.S.R's oil industry has made rapid strides in the last four decades. In 1913, the country was producing only 9·2 million tons of oil but, by 1955, production had expanded to 71 million tons. The country has also been fortunate in striking oil in new areas. It is stated that 89 new oil deposits were discovered in 1951-55 besides the 164 oil layers found in the already worked areas. The sixth Five-year Plan (1956-60) envisages a 65-70 per cent. increase in the prospected oil reserves. Extensive prospecting operations, it is stated, will be undertaken in Siberia, the Far East, Kazakhastan and other regions. Oil extraction is to be increase to 135 million tons at the end of the Five-year Plan.

Production of light oil-products will be doubled. This will be achieved by a rational combination of the primary oil refining with the extensive utilisation of the catalytic processes in production. There will be large changes in the distribution of the oil-refining industry. New plants are being constructed in Siberia, Kazakhastan, Central Asia, Byelorussia, the Ukraine and the central part of the U.S.S.R. The pumping of oil through pipes will increase sixfold. New high capacity oil mains 14,500 kilometres long are being constructed for this purpose. The solution of the problems of the sixth Five-year Plan is indissolubly connected with the greater role of science and engineering, the use of atomic energy and radio-active radiation for improving the technology of prospecting, boring, oil extraction and oil refining. During the next five-year period, the speed of boring will be increased by 95 per cent. in prospecting and by 85 per cent. in drilling exploitation-wells.

In oil extraction, efforts will be made to improve the exploitation of the deposits by maintaining layer pressure in order to make extensive use of hydro-breaks in the poorly permeable zones, and to bring the areas, where artificial influence is brought to bear on the oil deposits, to 82 per cent. of the total oil extraction by 1960. An increase in oil extraction requires the intensification of the processes at the functioning enterprises. This is expected to yield an increase of 25 per cent. in the total production of light oil products. At the same time, new enterprises for the primary refining of 45 million tons of oil and for cracking 26 million tons of raw oil are to be built.

INDUSTRY EVERYWHERE

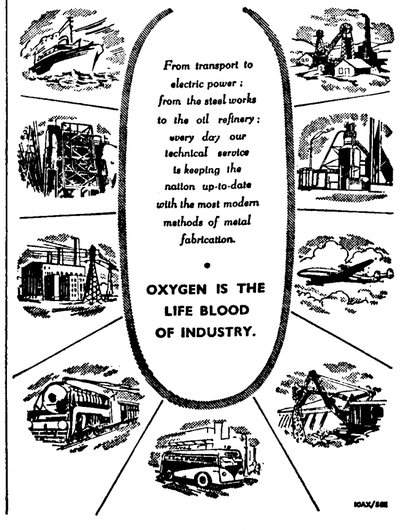
THE INDIAN OXYGEN & ACETYLENE CO., PRIVATE LTD.



DURGAPUR STEEL WORKS

INDO-BRITISH AGREEMENT SIGNED

THE Union Government's steel programme, as is well known, envisages the establishment of three steel plants with a capacity of about one million tons of steel ingots each, the sites chosen for the plants being Rourkela, Bhilai and Durgapur. While the Rourkela and Bhilai plants are being set up under German and Russian assistance, respectively, the Durgapur steel plant is the result of Indo-British co operation. It is gratifying to note that, though the Durgapur steel project was conceived much later than the other two projects, swift steps have been taken in placing the project on a firm basis of Indo-British agreement.

Under the terms of the agreement, signed in New Delhi towards the end of October last, the Indian Steelworks Construction Company, Ltd. (I.S.CON.)—a consortium of 13 British companies—is to equip and construct for the Government of India an integrated iron and steel works at Durgapur, West Bengal. The construction programme provides for the completion of the entire works by 31st July 1961, though the first and second blast furnaces will be in operation by 31st October 1959 and 30th April 1960, respectively. Again, the Consortium has agreed to install before 30th April 1960, the soaking pits, the 42-inch blooming mill, the intermediate mill and the continuous billet mill. The steel-making shop and the rolling mill plant will be completed later, while the installation of the wheel, tyre and axle plant will mark the final stages of the construction programme.

Output

The Durgapur Works are designed to produce about 1·2 million tons of ingots per year and 360,000 tons of surplus pig iron. The provisional programme of the output by the rolling mill and wheel, tyre and axle plant is for 790,000 tons based on an ingot production of one million tons and will be made up of forging blooms and billets (100,000 tons), billets for re-rolling (150,000 tons), merchant bars and sections (440,000 tons), sleepers (60,000 tons) and wheels, tyres and axles (40,000 tons).

The decision to build the Durgapur steel works is based on the recommendations of the Colombo Plan mission which was proposed by the British Government and which, under the leadership of Sir Eric Coates, visited India in April 1955, to advise the Government of India on the development of the iron and steel industry. The works will cover an area of about seven square miles. The work of site preparation has already been commenced.

Consortium

The companies of the consortium applying their collective experience to the construction of this large iron and steel works are:

Davy & United Engineering Co., Ltd., Head, Wrightson & Co., Ltd., Simon-Carves Ltd., and The Wellman Smith Owen Engineering Corporation Ltd., for the engineering and supply of mechanical plant and equipment for the principal sections.

British Thomson-Houston Co., Ltd., The English Electric Co., Ltd., General Electric Co., Ltd., and Metropolitan-Vickers Electrical Export Co., Ltd., for all electrical machines, plant and equipment.

Joseph Parks & Son, Ltd., Sir William Arrol & Co., Ltd., Dorman Long (Bridge & Engineering) Ltd., and Cleveland Bridge and Engineering Co., Ltd., for the fabrication of structural steel for buildings, etc.

The Cementation Co., Ltd., for all civil engineering work at site.

The technical co-ordination of the principal sections and ancillary departments, the engineering of the services for gas, water, steam, fuel and air services and the road and rail services has been carried out by the Metallurgical Equipment Export Co. Ltd. (M.E.E.CO.), the British company which discussed with the Government of India, in 1955, the construction of the works by a British consortium and laid the foundations of I.S.CON. Both the M.E.E.CO. and I.S.CON. have as consultants for all electrical engineering matters Messrs. McLellan & Partners. Consultants for the Durgapur and other steel projects of the Government of India are International Construction Co., Ltd., of London.

While for the most part the plant and buildings for the Durgapur works will be manufactured in the United Kingdom, some 33,000 tons of steel, it is stated, will be fabricated in India by sub-contractors to the British companies. In addition, certain refractories and construction materials will be obtained from Indian sources.

NEW PRODUCTS AND PROCESSES

Machines for Mixing

MIXING machines stated to be superior to the standard type of propeller or vane mixer have been developed by Plenty and Son (Eagle Iron Works, Newbury, Berks). In place of the more familiar agitator shaft and propeller the new machines use a component known as an "Impelator" which is claimed not only to set in motion the material being mixed, but to combine centrifugal force, suction, shearing action and counter current whirl. The "Impelator," consists of a number of small conical tubes mounted round the periphery of a set of discs. One set is fitted to the bottom of a vertical rotating shaft while above this is a second set which is adjustable up and down the shaft. Others may be added according to the height of the vessel in which the mixing is being carried out. It is stated that the conical tubes are set at such an angle that controlled turbulence in an upward and downward direction is created and that the liquid, or mixture of liquid and solid, passes through the tubes and impinges on the already moving bulk of the mass. A rapid shearing action between the particles of each of the materials is produced and a well dispersed and homogeneous mixture of minute particle size obtained. Standard types available include a laboratory model with a stainless steel shaft and "Impelator." This has a variable speed motor which will give from 600 to 2,000 revolutions per minute. Another model is suitable for vessels up to 18 inches in diameter and quantities up to 30 gallons while a third, which is available in several sizes, is suitable for large capacity vessels. The material for those parts of the mixer which come into contact with the product being treated are normally made from stainless steel but other metals, which can also be given special protective coating, can be used if necessary.

Sand Filter

An industrial undertaking, Industrieele Maatschappij Activit N.V., Nieuwendammerkade, in Amsterdam (the Netherlands) has now designed a filter in which the liquid filtered is supplied both from the top and the bottom, the purified liquid being drawn off by means of a drainage element in the fine material in the top of the filter layer. That part of the liquid which flows from top to bottom passes through a thin layer of sand only. The pressure on this top layer prevents any displacements in the filter bed caused by the upward pressure of the liquid current supplied at the bottom. This represents the bulk of the liquid filtered and passes through the largest column of material. The downward stream rapidly decreases as a result of the clogging of the top layer. The period capacity, i.e., the quantity of liquid that can be filtered between two cleanings of the filter, is about 20 times greater than that of the conventional sand filter. The linear filtration rate is 20 to 30 m. (65 to 98 ft.) per hour. This filter can be used for the filtration of surface and waste water, removing iron and manganese, the filtration of flakes such as aluminium hydroxide and ferric hydroxide, and also for the filtration of sugar juices, fruit juices, crude glucose juices, oils, solvents, pectin, alginates, etc., and for liquids which have hitherto been regarded as unfiltrable. This filter has been patented in many countries.

Transistor Heat Control

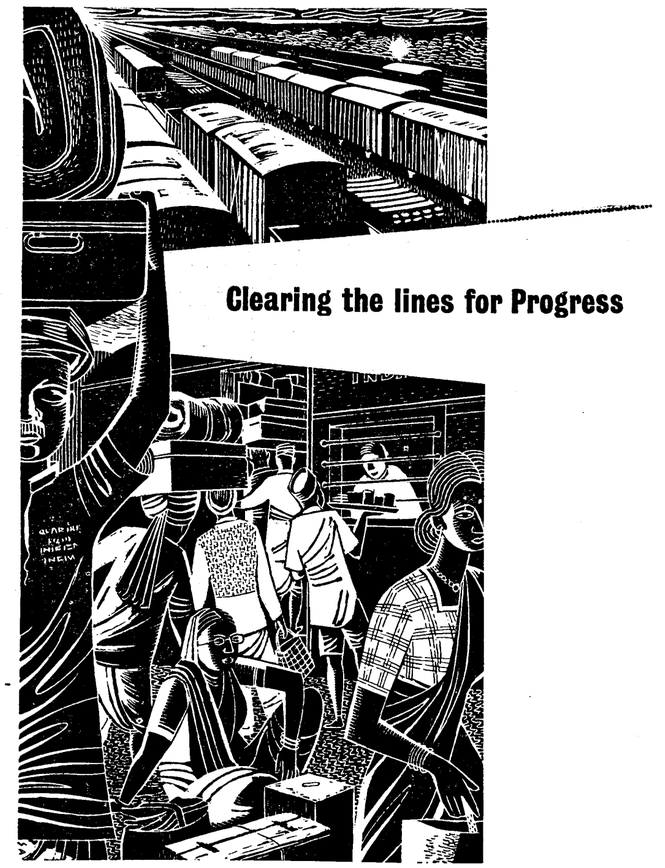
A new electronic temperature control system for use in industrial plant of all kinds which has an exceptionally rapid and sensitive response to temperature changes and yet uses no valves and incorporates no optical devices has been developed in the U.K. The system, which will become available commercially in the near future, depends for its operation on an infra-red sensitive photo-transistor which responds to changes in the intensity of the infra-red rays emitted by hot materials while remaining unaffected by changes in the intensity of ordinary visible light. Other advantages of the system, which can be fitted into a conventional six-inch by ten-inch case, are the fact that it requires no amplifiers and consumes only three-quarters of a watt of electrical power.

Wrought Steel

Wrought steel may provide a new type of corrosion-resistant material for use by industry. Recent experiments carried out in the U.K. have indicated that piled, or "wrought" steel made by virtually the same process as wrought iron may possess considerably greater resistance to corrosion than ordinary steel under conditions where rapid surface pitting and other corrosion damage would normally occur. This greater corrosion resistance is due to the presence of parallel zones of alloy-steel in the wrought steel which are absent in the ordinary steel. Experiments into the development of reliable production methods for the bulk manufacture of good quality wrought steel are now being carried out.

Radio Direction Finding

A new type of radio direction finding system is now being developed in Britain. The system, which is at present only in the early stages of development, will use wavelengths of the order of 10 centimetres. The system is expected to provide instantaneous bearings of transmitters in any selected sector of the sky, displaying them on a single cathode ray tube. The main problem involved in the work is the design of a suitable single aerial system of satisfactory performance. This difficulty is, however, being overcome and the resulting unit should, according to the scientists developing it, enable exceptionally accurate and rapid direction finding to be achieved.



More wheels may turn and more machines may manufacture... but this extra activity is meaningless without more transport to move passengers, raw materials and finished products. That's why of every rupee set aside for the Second Five Year Plan—an *industrial* plan, above all—no less than 3 annas will be spent on developing India's railways.

The Plan's allotment of Rs. 900 crores, will be used for rehabilitation of railway track and equipment, as well as to build 842 miles of new track, to buy 2,258 locomotives, 11,364 passenger coaches and 107,247 wagons, and to improve passenger amenities and working conditions for railway staff.

Burmah-Shell supply a lot of oil to Indian railways. And the railways move a lot of oil for Burmah-Shell. In fact, in one year, they carry not far short of *650 million* gallons of oil to cities, towns and villages in every corner of the country. Railways and the oil industry do a vital job for each other—and they're doing it round the clock, year in, year out.

PROGRESS OF LIFE INSURANCE IN BRITAIN

IMPRESSIVE INCREASE IN PREMIUM INCOME

THE U.K. has established for itself a unique place in world insurance, thanks to the rich traditions it has built up and successfully maintained for several decades now. It is a tribute to private enterprise in that country, of which insurance is a distinguished section, that year after year, new record levels are reached in all fields of insurance, more particularly in life insurance, both ordinary and industrial.

In 1955, according to the figures published by the British Life Offices' Association and the Associated Scottish Life Offices, ordinary life assurance business rose by £147 million over the previous year. The total of individual and new group sums assured was £1.108 million. These figures show the results of the ordinary branch of life assurance and do not include the business of the industrial branch. The number of new individual policies taken out was 820,000 for an average sum assured of £1,030 as compared with 759,000 policies in 1954 of an average value of £1,000. Premium income for the year in respect of life assurance was £250 million as compared with £231 million in 1954. For annuities, the premium income was £97 million, an increase of £11 million over the previous year. Total premium income increased by £30 million to £347 million.

Continued progress, it is stated, was made in staff life assurance and pension schemes for employees. The broad picture at the end of 1955 was that some 2,475,000 workers were covered by either life assurance or pension benefits and the great majority were covered by both types of protection. The amounts assured aggregated £1,537 million in 1955 as compared with £1.269 million in the previous year while future pension rights exceeded £340 million per annum as against £295 million in 1954. Next year, the associations point out, is the first full year in which the Budget concessions regarding annuities will operate. One is the exemption from tax, within limits, of premiums paid for pension annuities by the self-employed and others not covered by superannuation schemes. The other is the provision that only the interest content of a purchased life annuity shall be subject to tax.

The total assets of life offices relating to ordinary life business amounted to £2,624 million or an increase of £219 million over 1954. This takes no account of industrial life business amounting to £1.081 million, an increase of £58 million. Examination of the employment of the funds of the life offices and the investment classification shows the great change in the attitude of managements towards equities which has taken place since the First World War. The summary shows that 15.5 per cent. of the funds were in ordinary stocks and shares as compared with only 5 per cent. 30 years ago. Investment in debentures and preference shares amounted to 21½ per cent. and in British and Commonwealth Government, Provincial and Municipal Stocks, 33 per cent. Of the remainder, 16 per cent. was in real property, ground rents and other investments and 14 per cent. in mortgages. Commenting on the growth of these funds and their significance to the stock markets, the London *Financial Times* says:

This year, and more particularly next, the natural rate of growth of assurance funds will be increased sharply by the concessions granted in the last Finance Act to pension annuities for the self-employed. These concessions were regarded by the Chancellor at the time as an integral part of his savings budget, and life assurance is perhaps the most important factor in the secular growth of personal savings. Its contribution is best measured by the increase in life funds from year to year. In 1955, income of £486 million (from premiums and investments) exceeded outgoings of £267 million (on benefits, tax and managements expenses) by £219 million—almost double the figure for 1951. To this must be added the £38 million increase in the assets of industrial life offices, giving a total increase in personal savings through this medium of £277 million. The official figure for total net personal savings last year is £814 million. Saving through life assurance—omitting private superannuation schemes, which bring in a further large contribution—accounts for a third of this amount. It seems obvious that the long-term growth of personal savings (which has proved to have an important influence on total investible funds) is closely involved with the growth of insurance and pension schemes.

"How are these funds, which represent so large a proportion of personal savings, channelled into investment? This year, for the first time, the Association has provided a break-up of the movement's investment portfolio. Only 33 per cent. of its funds are in gilt-edged stocks. Thirty per cent. are invested in mortgages and real property, 21½ per cent. in industrial prior charges, and 15½ per cent. in industrial equities. A rough comparison with the practice of leading insurance companies and with the Board of Trade's analysis of all insurance company assets suggests that these figures represent a further slight move away from gilt-edged and into other forms of investment. It is plain that funds of this size must have a major influence on the behaviour of the stock markets. Precise figures cannot be produced, but a rough example or two will illustrate the order of importance. Ordinary and industrial life funds, together with an allowance for the 682 private schemes recently investigated by the Association of Superannuation and Pension Funds, may have invested £55 million of new money in ordinary shares last year (neglecting the effect of switching) against total new cash issues of around £225 million. Their total investment in prior charges may amount to upwards of £950 million, against a nominal total of quoted securities of around £2,700 million, while their new investment in prior charges during the year may have amounted to £75 million, against a new issues total of £124 million. The examples are only illustrative. The companies' investments are measured in uncertain book values and their portfolios must include a large number of unquoted securities. But it is clear that the importance of the funds they control is already very large and is growing rapidly."

In the context of the urgent need for the U.K. to fight inflationary conditions in its economy, it is gratifying to note that industrial life assurance, has also made significant progress. The Chairman of the Industrial Life Offices Association, Mr. M. Wilcock Holgate, revealed recently that the returns of 24 companies and societies transacting over 98 per cent. of the industrial life (home-service) assurance business during 1955 showed that premium income in this branch rose to £155 million, and industrial assurance funds increased by over £58 million to £1,081 million. Including subsidiaries, their total premium income in the industrial, ordinary and general branches was £288 million. The combined life assurance funds of these offices amounted to £1,787 million at the end of 1955, as compared with £1,684 million a year earlier, showing a contribution to net savings of £103 million.

HEALTH INSURANCE

With the extension of the Employees' State Insurance Scheme to 38,000 employees in Madurai, Ambasamudram and Tuticorin in Madras State, with effect from 27th October 1956, the Scheme will now cover about 1.1 million employees in 40 industrial centres in the country. For the administration of the Scheme there will be one local office, one sub-local office and two pay offices in Madurai, one local office at Vikramasingapuram (Ambasamudram) and one sub-local office in Tuticorin. Medical care will be provided by the State Government under the service system, and eight whole-time dispensaries (six in Madurai, one in Ambasamudram and one in Tuticorin) have been set up. Part-time arrangements have been made at two places in Ambasamudram. Medical facilities provided by the Madura Mills, the Mahalakshmi Mills and Meenakshi Mills at Madurai and Madura Mills at Ambasamudram and Tuticorin are also being utilised. Provision has been made for an ambulance van at Madurai for transport of insured persons to hospitals. Arrangements exist for in-patient treatment for insured persons at existing hospitals.

A reference to the administration of the medical benefits under the Scheme was made by Mr. M. Bhaktavatsalem, Minister for Agriculture, Madras, in the course of his speech, made at Madurai on the occasion of the inauguration of the Scheme. He said:

"Regarding the administration of medical benefits, I have to observe that the Corporation has approved three systems through which the same could be made available to the employees, viz., the service system, under which full-time dispensaries are set up by the Corporation, the panel system, wherein services of private practitioners are utilised in any area and, thirdly, the system of utilising the existing medical arrangements already provided by the employers. In Coimbatore, we are utilising all these systems—the panel system being used in the urban area, where private practitioners are available in adequate numbers and the State Insurance dispensaries in the suburban areas where private practitioners are not available. This arrangement is working very satisfactorily there. In Madras, we have arranged only the service system and have also utilised the existing dispensary run by one of the large employers. In Madurai, Ambasamudram and Tuticorin, there appears to be no necessity, so far, for utilising the services of private practitioners and so we have set up our own full-time dispensaries and are also utilising the medical arrangements already in existence in some of the major industries in these areas."

INSURANCE EMPLOYEES

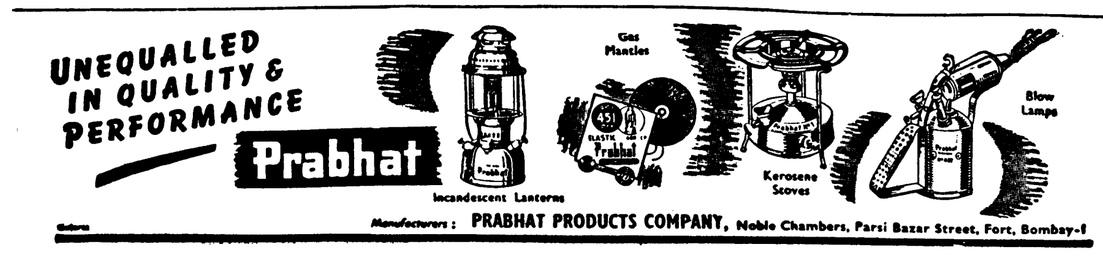
The General Council of the All-India Insurance Employees' Association, at its meeting held at Calcutta, decided to give a call to all its members to go on a token strike on 5th December 1956. The Council has further decided that if its demands, which include upward revision of pay scales, were not conceded it would "issue directives for any action including continued strike." This decision will be widely deplored because thousands of policyholders are bound to suffer considerable hardship in the event of any "continued strike." The employees would thereby lose the goodwill of the public. In this connection, it is noteworthy that the Chairman of the Life Insurance Corporation, Mr. H. M. Patel, reiterated, at New Delhi, that the implementation of the new scales of pay would not mean any monetary loss to the employees.

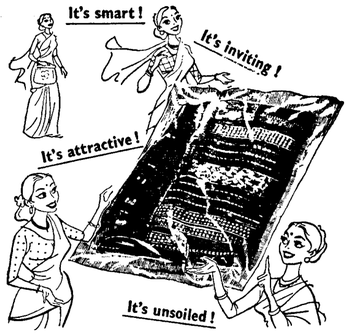
Mr. Patel said that during his recent visit to the zonal offices of the Corporation, he was surprised to find a certain "misunderstanding" among the employees in regard to the new scales. The new scales, he said, were, in effect, meant for the new entrants. While fitting the existing employees into the new scales, it was definitely the intention of the Corporation to ensure that they continued to receive year after year, throughout the duration of their service, the same emoluments as they would have received if they had continued in their original scales of pay and dearness allowances, i.e., pre-Corporation pay scales and allowances. But this was subject to these employees possessing the required standards of efficiency.

Mr. Patel said that not only the present emoluments of these employees but also their annual increments as they became due from time to time in future in their existing grades, would be fully protected. The fitting in of these employees in the new grades would not reduce either the amount of their contribution to the provident fund or the gratuity to which an employee would be entitled on retirement. Pensionary rights where the employees contributed to a pension fund would also be fully protected and any adjustment of basic pay would not affect these benefits. However, if in the implementation of the new grades any employee was adversely affected, he would be happy to go into his case if it was brought to his notice.

As regards bonus, Mr. Patel said that the Corporation as a State enterprise, must necessarily conform to Government's policy which was opposed to the grant of any form of bonus. The Corporation, however, felt that those employees who had been enjoying bonus should not be deprived of it altogether. It had, therefore, been decided to give them during 1957 three-quarters of the usual quantum of bonus received by them in the past, the remaining quarter being credited to a Staff Amenities Fund. The intention of the Corporation was to see that the employees received various benefits over and above their norms, salary and allowances. He hoped that the Corporation would be able to decide in the near future what these benefits should be. He pointed out that these benefits, when decided upon, would benefit all the employees of the Corporation whereas the bonus hitherto given benefited only the employees of some companies as all insurance companies did not grant bonus. Even the quantum of bonus varied from company to company.

The Government of India and the Planning Commission are considering a proposal to associate the nationalised life insurance scheme with housing projects so as to enable an increasing number of people from the low-income groups to utilise State aid to build their own houses. This was recently revealed at Ahmedabad by the Union Minister for Labour, Mr. Khandubhai Desai, when he was declaring open the tenements constructed by the City Municipality for low-income workers.





Of course... it's wrapped in

TRAYOPHANE

The new name for Trayons Transparent Film

★ TRAYOPHANE makes your products look *smart*, elegant!

★ Its perfect transparency means greater *visibility!*

★ TRAYOPHANE *protects* your product from dust, dirt and grease!

★ The vivid, brilliant colours of TRAYOPHANE make your sale *easy!*

★ And TRAYOPHANE is *cheap* too! A sheet 30" × 20" costs less than six pice! It's available in rolls and sheets.

Give your product Trayophane sales-appeal! Why not write to us for a free sample catalogue?

SOME THOUGHTS ON HOUSING PROBLEM IN URBAN INDIA

NEED FOR RELAXATION OF RENT RESTRICTIONS

By Dr. S. G. Panandikar

ARTIFICIAL restrictions were imposed upon the rents of houses in the larger cities and towns of India by passing Rent Control Acts for the first time during the First World War. The restrictions, however, were not very rigorous and were, moreover, removed soon after the war by repealing the Acts. From that time, until the middle of the Second World War, there were no restrictions upon these rents and their growth was determined by the economic law of demand and supply. This, combined with the availability of building materials, enabled the supply of houses in urban India to keep pace with the increase in the demand for them. Hence, there was no shortage of houses on the whole; the rents remained at a reasonable level; and the relations between the owners and occupants of houses remained very friendly.

From the middle of the war, however, while the demand for houses increased rapidly owing to the increasing migration of people from rural to urban India, the supply could hardly increase owing to the great shortage of building materials. Hence, many State Legislatures passed Rent Control Acts, freezing the rents at the level at which they stood at the beginning of the war and giving various other concessions and privileges to the tenants. Although it is now 11½ years since the end of the war and although the situation regarding the availability of building materials has eased to a great extent, the number of new houses that have been or are being constructed is very inadequate and this increase is being partly offset by the increasing number of falling old houses, on account of the financial inability of their owners to keep them in repair. At the same time, the demand for houses has gone on increasing, owing to the continuing influx of people into the urban areas, resulting from the Partition of India and the growth of industries. This has been regarded as a sufficient reason by the State Legislatures to keep the Rent Acts in force. But these Legislatures and the State Governments have failed to realise that these Acts, with their stringent provisions, are the very reason for the supply of houses lagging far behind the demand and for the very strained relations between owners and occupants of houses. Any lawyer practising in the Small Causes Courts will be able to say how strained these relations are and how much time of these courts is taken up by the "Rent Act" cases.

Hardships of Houseowners

A large proportion of the owners of houses are middle class people, who have invested their life's savings in them, hoping that the return from the houses will give them a moderate income without trouble, in their advanced age. Many of them have constructed houses on plots of co-operative societies, borrowing a part of the money required for such construction from the societies, hoping to repay the loans in a few years out of the rent received from the tenants of these houses. Many of these owners have been disillusioned and placed in serious financial difficulties by their tenants, who have taken undue advantage of the provision of the Rent Acts, which enables them to file suits at any time against their landlords in Small Causes Courts for the declaration of the standard rent and to stop paying any rent to their landlords until the suits are disposed of. Many tenants occupy accommodation agreeing to pay the rent demanded by the owners, then file suits in the Small Causes Courts on the ground that the rents which they have been called upon to pay are higher than the standard rents and stop the payment of any rent from the time of the filing of the suits until the Courts decide the cases a couple of years afterwards. The Acts have laid down no time limit for the filing of such suits. Hence, tenants who have paid their rents for many years file such suits whenever a quarrel arises between them and the landlords, merely to harass the latter.

Moreover, if tenants fail to pay the rents, the owners find it very difficult and costly to recover them under the present Rent Acts by filing suits in the courts. A tenant must fall in arrears of rent for six months before the landlord can file a suit against him. Then, the landlord must give a month's notice to the tenants. After this, the landlord has to pay a large amount of stamp fee before the suit is admitted by a court. Then the court takes a couple of months for the issue of summons. The tenant can manage to delay the service of the summons for three or four months by urging various excuses, such as wrong spelling of his name. He may even successfully evade the serving of the summons, in which case, the landlord has to bear the cost of serving it on him by publishing it in the newspapers. When the suit at last comes up before the court, the tenant and his lawyer manage to obtain several adjournments, extending over many months, by bringing forward various excuses. During all these months, the landlord not only does not receive a pie from the tenant by way of rent, but is also greatly harassed by having to appear in court many times and having to pay the fees of the lawyer engaged by him. After all this expense, trouble and harassment, the landlord seldom gets the rent from the tenant, because when the tenant feels that the decision of the court is near, one night he quietly removes all his belongings from the flat or tenement, puts a lock on its front door and disappears. The landlord then obtains an *ex-parte* decree from the court, but he cannot execute it against the tenant, because the latter's whereabouts are unknown. Thus, after all this trouble, the landlord loses rent for about three years, and has to undergo further trouble and expense in legal proceedings to obtain possession of the empty flat or tenement, which the disappeared tenant has locked up. In a city like Bombay, the landlord can obtain a distress warrant, by which he can recover arrears of rent extending over three months, by attaching the property of the tenant. But the recovery of rent in this manner is also far from easy. Moreover, this provision is not applicable to most of the other cities and towns.

Standard Rents

The provision of the Rent Control Acts, whereby the owners can charge the tenants only the "standard rent," which is defined as the rent which was paid in 1941, is most unfair to the owners. It is true the Rent Acts have been recently amended so as to allow the owners to raise the standard rent of residential accommodation by 6 to 30 per cent. in different areas of urban India. But, when the present prices of other vital necessaries of life, such as food and clothing, are five times their prices, which prevailed in 1941, and when the present cost of repairs of houses is five to six times that in 1941, where is the justice of allowing the owners to charge only 6 to 30 per cent. higher rents than they were charging the tenants in 1941?

The result of all the injustices of the Rent Acts to the owners of houses is that the prices of all houses have tumbled to a great extent, the owners are unable to keep their houses in repair, the number of houses becoming unfit for habitation owing to this reason is increasing with the passage of each year and people have become very unwilling to invest their savings in the construction of houses. These injustices become more glaring when it is seen that Governments have taken care to provide for the exclusion of the houses owned by them and by local bodies, such as Port Trusts and Municipalities, from the operation of the Acts, and that, in some cases, during the last 15 years, the Governments and local bodies have increased several-fold the rents charged by them to their tenants.

The Second Five-year Plan prepared by the Planning Commission of the Government of India states that, in 1951, for an urban population of 62 million, there were 10 million houses; that the shortage of houses was roughly reckoned at about 2.5 million; that by 1961 the total urban population is expected to increase by about 33 per cent., and that, in the absence of effective measures, the shortage of houses in 1961 may be twice as much as in 1951, that is, 5 million. The Plan estimates that, during the First Plan period of 1951-56, the public authorities and private enterprise provided about 700,000 and 600,000 housing units, respectively. The latter figure, in the writer's opinion, is an exaggeration, but limitation of space prevents him from arguing this point. The Plan has taken Rs. 10,000 as the average cost of the construction of a house and has provided for Rs. 87 crores for the construction of houses in urban areas by the public authorities during 1956-61. If this amount is actually spent during the Second Plan period, the additional houses constructed will be 87,000 by 1961. This means that private enterprise must come forward to construct at least 2,830,000 houses by spending Rs. 2,830 crores, if the shortage of houses is to be made good by 1961.

Some Suggestions

What has been stated above makes clear that there is no chance of private enterprise coming forward to construct even a small fraction of the above number, unless the extremely unfavourable situation in which it is placed by the Rent Control Acts is improved. Governments and other public authorities cannot construct more houses than those provided in the Second Plan, because there are numerous other equally urgent demands upon their financial resources. The people must, therefore, depend upon private enterprise for the houses which they need urgently. And if private enterprise is to play its part energetically, the Rent Control Acts should be amended on the following lines:

(1) Houseowners should be allowed to charge substantially higher rents than those which they were charging in 1941. Tenants should be enabled to pay the higher rents by their employers, including Governments and public bodies, giving them a proportionately higher dearness allowance.

(2) Tenants should be allowed a time limit of one year only, from the date of the occupation by them of accommodation, for filing suits for declaration of standard rent.

(3) As soon as a tenant falls into arrears of rent for three months, the owner should be enabled to recover it by granting him a distress warrant.

Further, the courts should be instructed to administer the Acts evenly, instead of one-sidedly in favour of the tenants, as they have done hitherto, to reduce the number of adjournments which they grant in suits and to decide the suits within a few months of filing.

It should be borne in mind that the above reforms are suggested in the interests of the vast body of the people themselves, who are suffering great miseries on account of lack of accommodation, and not in the interests of the owners of houses. If these reforms are carried out, there is no doubt that private enterprise will come forward to construct houses in large numbers and that blackmarketing in housing accommodation will disappear just as blackmarketing in foodstuffs disappeared with the increase in their supply.

The Bank of India Ltd. Head Office Building in Bombay

A half century of Banking

'IT is believed not only that there is ample scope for a Bank of this kind but that there is a very pressing need in the trading community for a larger measure of the financial facilities which such a Bank would afford, and that there is every prospect that, if worked on sound principles and under prudent and careful management, such a Bank, while supplying a need to and conferring a boon on the people of India, would, at the same time, itself become a prosperous and lucrative concern.'

These words are from the first prospectus of the Bank of India Ltd., which started on 7th September 1906 with an issue of Rs 50,00,000. Small beginnings indeed, but even then its founders predicted a great future.

Today, with 36 Offices throughout India, the Bank has amply proved itself. It is represented overseas by 11 Branches, it has 92 Foreign Correspondent Banks abroad and Agents in most foreign centres. Its staff, in India alone, totals over 2,000. The Bank has a Paid-up Capital of Rs 2,50,00,000, a Reserve Fund of Rs 3,52,00,000 and a Working Capital of nearly Rs 100 crores.

Not chance, but prudence, caution and wise stewardship have been the cornerstones of the Bank's success. Thus, for the past 50 years it has withstood the trials of two world wars, banking crises, market fluctuations and political changes; and continues to play a vital, ever-increasing role in Indian commerce and industry.

All types of Banking business transacted:
Current Accounts — Savings Bank Accounts — Fixed Deposits — Loans and Overdrafts — Cash Credit Accounts — Discount of Bills and Hundis — Safe Custody — Foreign Exchange and Letters of Credit — Demand Drafts & Telegraphic Transfers — Executor and Trusteeship — Safe Deposit Vaults — Guarantees etc.

AGENTS: In all the principal countries of the world.

DEVELOPMENT OF INDIAN WOOL TRADE

SOME RECENT TRENDS ANALYSED

By Manoobhai Doongursee
PRESIDENT, BOMBAY WOOL MERCHANTS ASSOCIATION

THE history of wool trade in India dates back to over a century. Britishers came to this sub-continent primarily as traders; their political motives, however, developed later as opportunities presented themselves. For obvious reasons, the country's overseas trade was developed by the then rulers in such a way that their own country—the U.K.—and countrymen benefited the most. As a result, London came to be established as a premier channel for selling various Indian merchandise in the international markets. Like many other produce, Indian wools—popularly known as East Indian wools—were marketed abroad almost exclusively through the medium of Liverpool auctions which were conducted by just four brokers who had, and are still having, a sort of monopoly for marketing these wools. Till recently, it was imperative that all wools imported into the U.K. on consignment basis must be offered for sale through the Liverpool auctions.

Liverpool Auctions

In developing the Liverpool market, European and other firms have played a very vital role. The practice of allowing clean advances to the shippers for purchasing raw wool for cleaning and pressing into bales and consigning the same to Liverpool auctions for sale through those firms was very common. This gave a great fillip to the development of Indian wool export trade.

Besides the United Kingdom, Continental and American buyers have also been covering their requirements of East Indian wools from the Liverpool auctions. Thus, a large proportion of Indian wools imported into the United Kingdom has been re-exported to other countries—sometimes the number of re-exported wool bales exceeding the quantity actually consumed in the United Kingdom. Nevertheless, all along, the United Kingdom has been the chief patron of Indian wools, acclaimed as the best carpet wools in the world.

Trade with U.S.

Although the evidence of direct export of Indian wools to the U.S. in any appreciable quantities has been of the recent past, America has continued to be a very important customer of our wools—next only to the U.K.—and has been operating through the Liverpool auctions for several decades. With the change in times, the idea of selling wools on firm contract basis was developed. Initially, some European firms monopolised this type of business. In view of the risks involved in shipping wools to the Liverpool auctions for sale on consignment basis, the idea of selling wools on contract terms, on the basis of type samples established by the shippers, became more and more popular. Ultimately, Indian firms also succeeded in establishing connections with the overseas buyers, particularly in the U.S., for selling wools on firm contract basis. It is, indeed, gratifying to recall the confidence reposed by the U.S. buyers in the Indian shippers, as, today, 100 per cent. letters of credit are opened by the former in favour of the latter to cover shipments against contracts.

A study of the past 50 years' statistics reveals that, from the fiscal year 1907-08 to 1921-22, very insignificant quantities (less than a million pounds in a year) of Indian wool were shipped directly to the U.S. and other foreign countries. The average ratio of total exports of Indian wools to all foreign countries (largely to the U.S.) to the total exports of the commodity to the British Empire (mostly to the U.K.) during these years, has been of the order of 1 : 50. From the year 1922-23, however, direct exports to the U.S. have been steadily increasing and, by the year 1929-30, the abovementioned ratio came to about 1 : 5, that is, direct exports of raw wool to the U.S. increased ten times during the brief interval. Today, the U.S. buys very substantial quantities of raw wool directly from India on firm contract basis. This is clearly indicated from the export figures given below:

Export of Raw Wool from India to various countries

Year April-March	Total exports	Share of		
		U.K.	U.S.	Other countries
Pre-Partition—	Lbs.	Lbs.	Lbs.	Lbs.
1943-44	22,082,254	11,755,765	5,670,878	4,655,611
1944-45	25,083,080	13,587,074	11,425,441	970,565
1945-46	39,491,462	10,663,979	27,321,989	1,405,503
1946-47	43,469,351	15,464,756	25,638,950	2,365,645
Post-Partition—				
1949-50	27,262,771	14,219,494	10,236,552	2,806,725
1950-51	25,370,851	14,077,052	8,851,573	1,842,226
1951-52	18,294,516	11,420,610	4,125,169	2,748,737
1952-53	37,906,018	18,121,296	12,193,687	7,083,035
1953-54	20,694,052	14,908,404	3,601,542	2,184,106
1954-55	30,806,144	17,254,804	11,551,411	1,999,909
1955-56 (11 months)	30,040,374	16,245,410	11,162,166	2,633,298

It will be seen that, in certain years, exports to the U.S. even exceed those made to the U.K.

Auctions Losing Ground

This significant increase in the volume of direct business with the U.S. and other countries has resulted in a reduction in the quantities purchased by these countries in the Liverpool auctions. The following figures are self-revealing in this connection:

Year	Total bales offered in auctions	Total bales sold in auctions	Total bales purchased by		
			U.K.	Continent	U.S.
1949-50 ..	90,476	56,858	45,481	6,468	4,909
1950-51 ..	80,696	56,809	46,792	6,757	3,260
1951-52 ..	105,926	32,642	26,140	2,873	3,629
1952-53 ..	72,613	36,754	28,976	5,583	2,195
1953-54 ..	70,815	32,794	27,939	4,673	282
1954-55 ..	75,809	32,557	28,571	3,882	104
1955-56 ..	49,044	17,741	15,190	2,381	170

N.B.—These are combined figures of both India and Pakistan wools.

It has been observed that the practice of shipping Indian wools to Liverpool auctions is fast losing its former charm and the forward business is preferred by many an Indian shipper.

The following figures indicate the remarkable increase in forward sales of wool made in the U.K. over the past four years:

Total Sales in U.K. (India and Pakistan) in Bales

	1952	1953	1954	1955
Through Liverpool auctions ..	48,482	40,793	44,657	37,790
Forward sales through Liverpool ..	14,358	20,292	31,225	33,279
Forward sales through Glasgow ..	13,500	19,000	22,500	23,000
Total forward sales ..	27,858	39,292	53,725	56,279

This change is mainly due to the fact that, on occasions, shippers have lost heavily through the Liverpool auctions as the result of periodical heavy declines in prices that have been witnessed by the wool trade. In view of this change in outlook, several restrictions attaching to the sale of wool in Liverpool through the auction system have been removed of late. Today, shippers can sell their wools in the U.K. through any firm, without offering the same in the auctions, and the former monopolistic position enjoyed by a few brokers is no more in existence.

Production and Consumption

Export of wool from India has been subject to various controls, of late. Total ban on the export of wool was imposed in July 1950, which was lifted only in 1950. Then came the 30 per cent. *ad valorem* export duty in November 1950. These measures were taken by the Government to safeguard the interests of the indigenous cottage industry. The export duty was abolished in March 1952 and, for some time, free licensing of wool under a ceiling was continued. Since September 1953, however, a quota system has been introduced by the Government chiefly for the following two reasons:

(1) It afforded a reasonable compromise between the conflicting interests of the exporters and the indigenous industry, and

(2) also for the reason that under free licensing, up-country exporters found that they were unable to participate in the export trade, and many genuine shippers were not able to enter it before the ceiling was reached.

The trade has, on several occasions, pleaded with the Government for lifting all controls on the export of wool from India in the light of the availability of larger exportable surplus. However, disagreement had always prevailed, in the past, between the trade and the Government on the statistical data. Fortunately, very recently, these differences have been ironed out and the figures acceptable to the Government and the trade are as under:

	Million lbs.
Annual production ... ... (wool year: October-September)	... 60
Annual consumption ...	... 25
Annual exportable surplus ...	... 35

As against the aforesaid annual surplus, our average annual exports of wool (after the partition of the country in 1947) have been of the order of 27 million lbs.

Trade Formula

The trade has, therefore, urged upon the Government for the abolition of the present quota system and to place raw wool on the free export list. Should it not be possible, the trade has represented for free export of wool up to a ceiling of 35 million lbs. (which is the exportable surplus). To obviate the Government's objections to such a policy, it has been proposed that export licences be issued only on the production of certificates of grading (issued by the Government authorities) covering the wool bales intended for export. It is strongly felt that the acceptance of this suggestion will not only continue to safeguard the interests of the indigenous industry, but will also help develop the export business in raw wool with the U.S. and other countries with the removal of present uncertainties attaching to the issue of export quotas every six months and restoration of healthy competition.

Grading and Marking Schemes

The major development in India's wool trade during the post-war period has been the introduction, in February 1955, of compulsory grading and marking of raw wool before export. This has brought about general improvement in the condition of the wools exported from this country. The grading and marking scheme is based on considerations of colour, yield (clean content) and specifications of general standards of cleaning and preparation. The Agmark labels affixed to the wool bales graded and packed for export indicate the colour and yield (say over a certain specified percentage) and grade (that is, mixed, limed, ginned, etc.). Goods not conforming to the specified minimum standards of cleaning are not allowed for export. Actual yields are, however, proposed to be indicated on the Agmark labels and the certificates of grading after a modern set of testing machinery is acquired by the Central Wool Testing Laboratory for the establishment of analytical results. One more laboratory is also due to be set up by the Government in Saurashtra very shortly.

The wool grading scheme is also intended to step up exports of the commodity through quality control.

The Union Government also proposes to introduce in the near future a grading and marking scheme for goat hair exported from the country, quite a lot of which is consumed by the U.S.

Wool in Five-year Plan

Among other commodities, the wool producing industry has also been allotted its due place in the country's Second Five-year Plan. The Ministry of Food and Agriculture has drawn up a scheme for better and larger production of wool in India. The scheme aims at increasing the wool output by 50 per cent. through the establishment of hundreds of sheep and wool extension centres to be spread over different regions. The scheme envisages supply of improved rams of the appropriate breed to flock-owners at concessional rates, establishment of demonstrational units to popularise better methods of breeding, feeding, disease control, management of sheep and grading of wool. Modern ways of shearing the sheep, use of sheep-cleaning tanks and various other aspects of sheep husbandry will also be demonstrated to flock-owners. For the purpose of wool analysis, a fleece testing laboratory is proposed to be set up at each of the new farms proposed, for undertaking cross-breeding programme.

Much more requires to be done in this country to bring about a radical change in this industry and improvement in the otherwise nomadic life of the shepherds. It is expected that this scheme will go a long way towards achieving the desired results. The increased production of wool will undoubtedly bring about substantial increase in our wool export business with various countries and ensure better luck

Carrying passengers and freight, Indian Airlines Corporation has an average load of about 4,500 lb. on every flight

SOMETIMES, freight claims aboard an aircraft come first. Would-be passengers are disappointed — especially if they hear afterwards of vacant seats. But, remember, the weight of a passenger may be taken up by a consignment of life-saving drugs, a shipment of vital foodgrains, or a bag of important mail!

The payload of an aircraft is made up by passengers *and* freight — it cannot be reckoned in terms of the number of seats provided. Please remember this, if *you* fail to get a seat on a certain flight. Remember, too, that Indian Airlines Corporation belongs to the people of India . . . and its wings fly in the service of all!

THE STANDARD MILLS COMPANY LIMITED

NOTICE

To
THE SHAREHOLDERS OF
THE STANDARD MILLS CO., LTD.

Sirs/Mesdames,

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Mafatlal House, Backbay Reclamation, Bombay 1, on Friday the 30th day of November 1956, at 4 p.m. (S.T.), to consider and if thought fit, to pass with or without modifications the following Resolutions, Nos. 1 to 6 as Special Resolutions and No. 7 as an Ordinary Resolution.

1. *As Special Resolution*:

"Resolved that the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

2. *As Special Resolution*:

"Resolved that the provisions of the Memorandum of Association of the Company with respect to the objects of the Company be altered—

(1) by inserting therein immediately after para (3) of Clause III thereof the following new para (3A):

'(3A) To carry on in all its branches the business of producers, manufacturers, purchasers, refiners, importers, exporters, sellers of and dealers in cement, asbestos, alumina cement, Portland cement, lime and limestone, kankar plasters, gypsum, artificial stone and materials of every kind used in the manufacture thereof, whiting, clay, concrete, gravel, sand, sacks, bricks, tiles, building materials of all kinds and all materials analogous to or connected therewith and the business of miners, metallurgists, builders, contractors, quarry owners and to purchase and vend all materials, raw products or otherwise and all articles in any way connected with the said business and to acquire, erect, construct, establish, operate and maintain cement factories, limestone quarries, workshops and other works,'

and

(2) by inserting in para (7) of Clause III thereof the words: 'ginning and pressing factories, printing presses, factories for the manufacture and production of cement and allied products' between the words 'paper mills' and ' and other factories' appearing in the said para."

3. *As Special Resolution*:

"Resolved that in accordance with the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all contracts to be entered into by the Company with M/s. Textile Engravers Private Ltd., an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, for supply of copper and other printing rollers to the Company and for rendering to the Company services as engravers, turners and polishers, etc., provided that:—

(a) the prices or amounts charged by the said Company are at rates or scales which are not less favourable to the Company than the market rates or scales or are otherwise reasonable, and

(b) the said orders shall be reported to the Board of Directors for information."

4. *As Special Resolution*:

"Resolved that in accordance with the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of the renting by the Company from M/s. Mafatlal Gagalbhai and Company Private Ltd., an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company of a portion admeasuring 2,353 sq. ft. of the building of the said Mafatlal Gagalbhai & Co. Private Ltd., known as 'Mafatlal House,' in Backbay Reclamation as a monthly tenant from 1st January 1956 at a monthly rent of Rs. 1,177 and that the Company do after 1st March 1958 continue the said tenancy for such further period and on such terms as the Directors of the Company may deem proper."

5. *As Special Resolution*:

"Resolved that in accordance with the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of the existing arrangement made by the Company with The Sassoon Spinning and Weaving Company, Ltd., an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company for the supply by the said Sassoon Spinning and Weaving Company, Ltd., to the Company air-conditioning facilities for the Company's Office premises admeasuring 2,353 sq. ft. in 'Mafatlal House,' Backbay Reclamation, Bombay, from 1st January 1956 at the rate of Rs. 538 per month and that the Company do after the 1st March 1958 continue the said arrangement for such further period and on such terms as the Directors of the Company may deem proper."

6. *As Special Resolution*:

"Resolved that in accordance with the provisions of Section 360 of the Companies Act, 1956, the Company doth hereby approve of the Agreement dated 22nd February 1956 made by the Company with The Sassoon Spinning and Weaving Company, Ltd., an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company for processing cloth and yarn manufactured by the said Sassoon Spinning and Weaving Company Ltd., on the terms therein contained and that the Company do after the 1st March 1958 continue the said arrangement for such further period and on such terms as the Directors of the Company may deem proper."

7. *As an Ordinary Resolution*:

"Resolved that in accordance with the provisions of Section 359 of the Companies Act, 1956, the Company being satisfied that the insurance premia or other charges made by The Jayabharat Insurance Company Ltd., for insurance in respect of the Company's property, assets and goods are at rates of tariff which are not less favourable to the Company than the market rates or are otherwise reasonable, the Company hereby authorises M/s. Pransukhlal & Co. Private Ltd., an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, to retain all commission, or other remuneration already earned or to be earned by them hereafter as the Principal Agents of The Jayabharat Insurance Company Ltd., in regard to all contracts of insurance or insurance policies which have been or which may at any time hereafter be entered into by the said Insurance Company with the Company."

Note.—The member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself or herself and a proxy need not be a member.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956

In respect of Resolution No. 1.

The Companies Act, 1956, which came into force on 1st April 1956 having effected considerable changes in the law and procedure relating to companies, it has become necessary for the Company to bring its Articles in line with the requirements of the said Act. As the alterations are numerous, it has been considered desirable to substitute a new set of Articles for the existing Articles of Association of the Company.

Copies of the existing Articles and the new set of Articles are kept at the Registered Office of the Company for inspection of the members at any time during office hours to enable the members to compare the same with a view to ascertain the changes proposed to be effected. A copy of the draft new set of Articles will be furnished to any member on his applying for the same.

In respect of Resolution No. 2.

The Company has large surplus funds lying in Call Deposits with the Banks. It is desirable to utilise the same in expanding the scope of the Company's activities and to embark upon new industries. There is ample scope for starting a cement industry in Saurashtra and the Company has obtained a licence from the Government of India for starting and establishing a Cement Factory in that State and also a Certificate of Approval from the Government of Saurashtra. The business of cement manufacturing has not been expressly provided for in the Company's objects but it seems to fall within the words of paragraphs 4. 7 and 15 of Clause III of the Company's Memorandum of Association. In order to preclude any question of doubt in the matter, it is desirable that the Company should alter the provisions of its Memorandum with respect to its objects so as to provide expressly for carrying on the business of producing, manufacturing and dealing in cement.

In respect of Resolution No. 3.

The Textile Engravers Private Ltd. have been for some time past supplying to the Company copper and other printing rollers required for the Company and have also rendered to the Company services as engravers, turners and polishers. They are Associates of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. It is, therefore, necessary to pass a Special Resolution under Section 360 of the Companies Act, 1956, approving all the contracts to be entered into by the Company with them for the supply of copper and other printing rollers and for rendering services to the Company as engravers, turners and polishers, etc.

The following Directors of your Company are partners of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, and they are also Directors and/or Members of Textile Engravers Private Ltd., holding shares in the said Company set against their respective names and as such are interested in the remuneration Textile Engravers Private Ltd. may receive from the Company:—

1. Shri Arvind N. Mafatlal, Member holding 5 shares.
2. Shri Yogindra N. Mafatlal, Member holding 5 shares.
3. Shri Rasesh N. Mafatlal, Director & Member holding 5 shares.

Shri Hemant B. Mafatlal, a partner in M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, is a Director and Member holding 5 shares in Textile Engravers Private Ltd., and as such is interested.

In respect of Resolution No. 4.

The Company has rented from Mafatlal Gagalbhai & Co. Private Ltd., a portion of their building known as "Mafatlal House," in Backbay Reclamation, as a monthly tenant on a monthly rent of Rs. 1,177 from 1st January 1956. Mafatlal Gagalbhai & Co. Private Ltd. are an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. The said premises are suitable for the Company's office and will be required by the Company even after 1st March 1958. It is, therefore, necessary for the Company to pass a special resolution approving of the said tenancy and also continuing the same after 1st March 1958 for such further period and on such terms as the Directors may deem proper.

The following Directors of your Company are partners in M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company, and they are also Directors and Members holding shares in Mafatlal Gagalbhai & Co. Private Ltd., as set out against their respective names and as such they are interested in the said contract of tenancy:—

1. Shri Arvind N. Mafatlal—Director and Member holding 1,158 Ordinary Shares and 5,250 Preference Shares.
2. Shri Yogindra N. Mafatlal—Director and Member holding 1,308 Ordinary Shares and 5,250 Preference Shares.

3. Shri Rasesh N Mafatlal—Director and Member holding 1,458 Ordinary Shares and 5,250 Preference Shares.

Shri Hemant B. Mafatlal is a partner in M/s. Mafatlal Gagalbhai & Sons, the Managing Agents of the Company. He is also a Director and Member of Mafatlal Gagalbhai & Co. Private Ltd. and holds 3,650 Ordinary Shares and 1,760 Preference Shares in the said Company and as such he is also interested in the said contract of tenancy.

In respect of Resolution No. 5.

The Company has made an arrangement with the Sassoon Spinning and Weaving Company, Ltd., for supply to the Company of air-conditioning facilities from 1st January 1956 for the Company's office in "Mafatlal House" at the rate of Rs. 538 per month. The Sassoon Spinning and Weaving Company, Ltd., are an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. The said facilities are beneficial to the Company and it is in the interest of the Company to continue the same even after 1st March 1958. It is, therefore, necessary under Section 360 of the Companies Act, 1956, to approve of the said arrangement and to continue the same after 1st March 1958 for such further period and on such terms as the Directors may deem proper.

The following Directors of your Company are interested in the said arrangement inasmuch as they are Directors and Members holding the number of shares in the Sassoon Spinning and Weaving Company, Ltd., set against their respective names:—

1. Shri Arvind N. Mafatlal, Director and Member holding 550 shares.
2. Shri Yogindra N. Mafatlal, Director and Member holding 550 shares.
3. Shri Kaushikprasad Chandulal, Director and Member holding 550 shares.
4. Shri Jayantilal D. Vasa, Director and Member holding 3,000 shares.

Shri Hemant B. Mafatlal is a partner in the firm of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. He is also a Director and Member of the Sassoon Spinning and Weaving Company, Ltd., holding 50 shares and as such he is also interested in the said arrangement.

In respect of Resolution No. 6.

By an Agreement dated 22nd February 1956 made between the Company and the Sassoon Spinning and Weaving Company, Ltd., the Company has agreed to process the cloth and yarn manufactured by the Sassoon Spinning and Weaving Company, Ltd., for a period of two years commencing from 1st of March 1956 on the terms therein mentioned. The Sassoon Spinning and Weaving Company, Ltd., are an Associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. The said terms are fair and reasonable. The said arrangement is beneficial to the Company and it is in the interest of the Company to continue the same after 1st March 1958 for such further period and on such terms as the Directors may deem proper.

The following Directors of your Company are interested in the said arrangement inasmuch as they are Directors and Members holding the number of shares in the Sassoon Spinning and Weaving Company, Ltd., set against their respective names:—

1. Shri Arvind N. Mafatlal, Director and Member holding 550 shares.
2. Shri Yogindra N. Mafatlal, Director and Member holding 550 shares.
3. Shri Kaushikprasad Chandulal, Director and Member holding 550 shares.
4. Shri Jayantilal D. Vasa, Director and Member holding 3,000 shares.

Shri Hemant B. Mafatlal a Partner in the firm of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company is a Director and Member of the Sassoon Spinning and Weaving Company, Ltd., holding 50 shares and as such he is interested in the said Agreement.

In respect of Resolution No. 7.

M/s. Pransukhlal & Co. Private Ltd. are one of the Principal Agents of The Jayabharat Insurance Company. Ltd. The Company has been since long placing its insurance business with The Jayabharat Insurance Company, Ltd., through Pransukhlal & Co. Private Ltd. The Jayabharat Insurance Company.Ltd. is a leading Insurance Company and has rendered valuable insurance service to the Company in the past. Its rates of premia and tariff compare well with other insurance companies of repute and its terms and conditions with respect to policies and contracts of insurance are satisfactory. Pransukhlal & Co. Private Ltd. are an associate of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company and hence it is necessary under Section 359 of the Companies Act, 1956, to pass an ordinary resolution authorising Pransukhlal & Co. Private Ltd. to retain the commission earned or to be earned by them on all the insurance work of the Company placed or hereafter to be placed by the Company with The Jayabharat Insurance Company, Ltd., through them.

The following Directors of your Company are partners of M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company and they are also Directors and Members of Pransukhlal & Co. Private Ltd., holding the number of shares in the said Company set out against their respective names and as such they are interested in the commission or remuneration to be paid by The Jayabharat Insurance Company, Ltd., to Pransukhlal & Co. Private Ltd.

1. Shri Arvind N. Mafatlal, Director and Member holding 7 shares.
2. Shri Yogindra N. Mafatlal, Director and Member holding 7 shares.
3. Shri Rasesh N. Mafatlal, Director and Member holding 28 shares.

Shri Hemant B. Mafatlal is a partner in M/s. Mafatlal Gagalbhai and Sons, the Managing Agents of the Company. He is also a Director and Member holding 32 shares in Pransukhlal & Co. Private Ltd. and as such is interested.

By Order of the Board,
FOR THE STANDARD MILLS CO., LTD.,
MAFATLAL GAGALBHAI & SONS,
Managing Agents.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Thirty-ninth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Friday the 30th November 1956, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March 1956, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend on the Ordinary share capital. The dividend, if declared, will be paid on or after the 17th December 1956, to those Shareholders whose names appear in the Company's Register on the 30th November 1956, or to their mandatees.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions.

(1) That sub-clause 3(16) of the Memorandum of Association of the Company be deleted and substituted by the following two sub-clauses:—

"16(a). To subscribe, contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition."

"16(b). To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance."

(2) That Article 150(18) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:—

"(18a). Subject to the provisions of Section 293 (1) (e) of the Companies Act 1956 to establish, maintain, support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institutions, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

"(18b). To give pensions, gratuities, allowances, bonuses, profit-sharing bonuses or benefits or other charitable aids, payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such person, his widow, children or dependents or connections have or have not a legal claim upon the Company."

6. As special business to consider and if thought fit to pass the following resolution, namely:

"That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times above menticned only during the period prescribed by sub-section 5(a) of Section 307."

The Share Registers and the Transfer Books of the Company will be closed from the 20th November 1956 to the 30th November 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, 5*th November* 1956.

STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF THE 3rd October 1956 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Director of the Central Board to fill the vacancy caused by the resignation of Shri Vithal N. Chandavarkar, NOTICE IS HEREBY GIVEN that I have accepted the nomination proposing the name of Shri Pratapsinh Mathuradas of 9, Wallace Street, Fort, Bombay, as valid. The said nomination being the only valid nomination received, Shri Pratapsinh Mathuradas shall be deemed to be elected a Director of the Central Board of the Bank at the said Local Meeting of the shareholders proposed to be held on 14th November 1956 which Meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

P. A. ENGINEER,
Secretary and Treasurer,

INDIA STEAMSHIP COMPANY LIMITED

ORDINARY GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Ordinary General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Wednesday the 12th December 1956, at 10-30 a.m., in order to transact the following business:—

1. To receive the Directors' Report and audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1956.
2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March 1956.
3. To confirm the payment of Interim Dividend and to declare a final Dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March 1956.
4. To approve the continuance of Directorship of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), and if thought fit, to pass the following resolution of which a special notice as required under Section 281 of the Companies' Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

"RESOLVED that pursuant to the provisions of Section 281 of the Companies' Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has attained the age of 69 years, do continue to act as a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him."

5. To approve pursuant to Section 261 of the Companies' Act, 1956, the continuance as a Director of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who was re-appointed a Director at the Ordinary General Meeting held on 20th December 1955, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative Explanatory Statement concerning which as required by Section 173 of the said Act, is annexed hereto.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company, and thereby an associate of the Managing Agents, do continue his appointment as a Director."

6. To appoint a Director in place of Sir B. P. Singh Roy, K.C.I.E., who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following resolution as Special Resolution of which a special notice as required under Section 261 of the Companies' Act has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

"RESOLVED that pursuant to the provisions of Section 261 of the Companies' Act, 1956, Sir B. P. Singh Roy, K.C.I.E., a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, Ltd., the Managing Agents of the Company, and thereby an associate of the Managing Agents and who retires by rotation be and is hereby re-elected a Director of the Company."

7. To appoint a Director in place of Maharajadhiraja Sir Udaychand Mahtab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.
8. To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.
9. To elect Mr. R. K. Mitra, a Director of the Company, who retires by rotation and is eligible for re-election.
10. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 26th November 1956 to 12th December 1956, both days inclusive.

By Order of the Board,
A. MUKERJI,
Assistant Secretary,
India Steamship Co., Ltd.

CALCUTTA, *31st October* 1956.

The dividend, if sanctioned, will be made payable to those Shareholders whose names stand on the Register of the Company on the 26th November 1956 and the Dividend Warrant will be posted from 8th January 1957 onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES' ACT, 1956.

1. In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), has attained the age of 69 years and hence his continuance as a Director needs your approval by a resolution in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Sections 190 and 281 of the Companies' Act, 1956. Sir A. Ramaswami Mudaliar joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company, by retaining him as a Director of the Company.

2. In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), as a Director, be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), became a Director of the Company in the year 1947 and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the management of the affairs of the Company and of which he has been the Chairman since the date of his appointment. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his continuance as a Director be approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

3. In respect of Item No. 6 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir B. P. Singh Roy, K.C.I.E., as a Director, be made and/or be approved in accordance with the provisions of the said Act. The Managing Agents of the Company, Messrs. Lionel Edwards, Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir B. P. Singh Roy, K.C.I.E., became a Director of the Company in the year 1945, and has for the last several years been associated as one of the Directors of the Managing Agents who are entrusted with the management of the affairs of the Company. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance as a Member of the Board, it is desirable that his appointment as a Director be made or approved by a Special Resolution in accordance with the provisions of Section 261 of the Act.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Tenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta 1, on Thursday the 29th November 1956, at 11 a.m., for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March 1956, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.

(3) To appoint Directors in place of those retiring.

(4) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

(5) To fix the remuneration of four Directors who are not Managing Directors.

(6) To consider and if thought fit, to pass the following resolution which will be proposed as an Ordinary Resolution in compliance with the provisions of Section 228 of the Companies Act, 1956:—

"That subject to the rights and powers of the Company's Auditors to visit all or any of the Company's Branch Offices and to have access at all times to the books and accounts and vouchers of the Company maintained at such Branch Offices, the Accounts of the Branch Offices of the Company need not be audited by a person qualified for appointment as auditor of the Company pursuant to Section 226 of the Companies Act, 1956."

(7) To consider and if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

"That with effect from the commencement of the Companies Act, 1956, and in compliance with the provisions of Section 314 thereof, consent be and the same is hereby accorded to Mr. Sree Lal Mehta, a relative of Mr. Girdharilal Mehta, a Managing Director of the Company, holding and continuing to hold an office or place of profit as an Assistant to the Company on such terms as to remuneration or otherwise as have been or may be agreed from time to time between such Assistant and the Company."

The Transfer Books of the Ordinary Shares of the Company will be closed from the 14th November to the 29th November 1956, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA 1, *1st October* 1956.

Notes.—Payment of any Dividend declared will be made only to those Members whose names are registered in the books of the Company on the 29th November 1956, or to their Mandatees.

No application for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

FUTURES TRADING IN COTTONSEED

BOMBAY CITY RESUMES IT AFTER A LONG INTERVAL

THE decision of the Forward Markets Commission to permit futures trading in cottonseed under the by-laws of the Bombay Oilseeds Exchange as from 30th October fulfils a long-felt need. It may be pertinent to recall, in this connection, that the Commission, after carefully considering the representations of associations such as the Indian Central Cotton Committee and the Cotton Advisory Board, and the views of interested individuals and Governments, expressed in its report, submitted to Government in July 1955, that futures trading in cottonseed might be resumed. The consideration that weighed with the Commission at that time was the fact that the requirements of futures trading in cottonseed had been fully met by the commodity concerned. Its production has been increasing for some years past, and the demand for it has been large almost from every part of the country. Moreover, its supply is homogeneous in character. It is also suitable for being stored for quite an appreciable period. The Commission has also taken note of the fact that the prices of cottonseed in different parts of the country are influenced by local conditions and fluctuate from time to time. Besides, prior to the imposition of the ban on hedge trading in cottonseed, such activity was prevalent almost in every part of the country. The decision of the Commission on the eve of *Deepavali*, thus, represents the implementation by the Government of the foremost of the recommendations made by the Commission in its Report mentioned at the outset. Before referring to the terms of the hedge contract for cottonseed and the conditions under which hedge trading is allowed, it may be pertinent to recall briefly the history of futures trading in cottonseed and its importance to the cotton-growing States of India.

Of the three commonly known types of cottonseed, namely, naked, non-fuzzy and fuzzy, the second category is predominant in India. Cottonseed production in India is concentrated mostly among the States of Bombay, Madhya Pradesh, Hyderabad and the Punjab, all of which have a large number of ginning factories. These States account for more than 70 per cent. of the production of cottonseed in the whole country. Of these States, Bombay is by far the largest producer and accounts for no less than 28 per cent. of the total production. Madhya Pradesh ranks next with 17 per cent., while Madhya Bharat, Hyderabad and the Punjab account for 9 per cent. of the total quantity produced in the country. The total production, which was adversely affected during the Second World War and, subsequently, due to the partition of the country, stood at only 7.6 lakh tons in 1948-49. In 1954-55, however, it was as high as 16.1 lakh tons. The target fixed for 1960-61 in the Second Plan is 20 lakh tons.

The chief use to which cottonseed is put is cattle-feed. Of the total production, it is estimated that only 10 per cent. is used for seeding purposes and 5 per cent. for crushing into oil, the balance being used for fodder. Though the crushing capacity of the mills was 1 lakh tons of oil, in 1953-54, only 48,000 tons of seed was crushed, yielding about 6,000 tons of oil.

Imports into and exports out of India of cottonseed during the last decade have been negligible. The Government, however, has been allowing export of cottonseed oil since 1954, and that of cake since February 1955 in limited quantities.

Regulated markets in cottonseed are few, for the reason that the seed is marketed only near the ginning factories. Important assembling markets include among others, Bombay, Ahmedabad and Palej in Bombay, Khangaon and Amraoti in Madhya Pradesh, Indore, Ujjain and Ratlam in M.B., Jalna, Nanded, and Hyderabad in Hyderabad (Deccan), Amritsar, Ludhiana and Rohtak in the Punjab, Bhatinda in P.E.P.S.U. and Hapur in U.P. Futures trading started in Bombay as far back as 1926 and in Madhya Pradesh in 1936. In the State of Hyderabad, it was only of recent origin.

Trend of Prices

Forward prices of cottonseed at Bombay market for the brief period between 1939 and 1943 indicated an upward trend along with other commodities. At the beginning of the year 1939, for example, the January 1939 contract was quoted at Rs. 22-3. By September 1939, the prices rose to Rs. 25 10. The rising trend continued, and the January 1942 contract, which opened at Rs. 26 5, was quoted at Rs. 28-12 at the close of the year. In September 1943, the Government of India banned forward trading in cottonseed as part of its measures for keeping inflation under check. Though there was no ban on futures trading in cottonseed between 1946 and 1949, no business was transacted in Bombay market. Subsequently, however, the ban applicable to edible oils was extended to cottonseed also by the issue of the Cottonseed (Forward Contracts Prohibition) Order, 1949. The Order was also extended to Part B States in May 1952. On the expiry of the ban on 26th January 1955, the prohibition was further extended by notifications issued under the Forward Contracts (Regulation) Act, 1952, according to which Section 15 of the said Act was made applicable to cottonseed in the whole of India, except Greater Bombay, and Sections 17 and 18(3) to Greater Bombay. As a result, "transferable specific delivery contracts for the purchase or sale of cottonseed entered into otherwise than between members of a recognised association or through or with any such member became illegal all over the country and even non-transferable specific delivery contracts within the limits of Greater Bombay could be entered into only with the members of the Bombay Oilseeds Exchange Ltd., or through or with any such member."

The prices of cottonseed reflected more or less a bullish tendency since the outbreak of World War II until about February 1952. This was attributed by the Forward Markets Commission to the diversion of the area from under cotton to foodgrains and partition of the country. The Korean war boom also played its part. The increase in prices was, however, checked subsequently through liberalisation of imports and increased production of cottonseed. Consequently, the price level in May 1955 was 33 per cent. lower than the peak level witnessed in November 1949.

Plea for Hedging Facilities

The view that, in the absence of hedging facilities in cottonseed, the prices of cottonseed would be seriously depressed was forcefully stressed by a number of associations and individuals in their representations to the Commission. It was also explained to the Commission that, because of the fact that the cottonseed markets were numerous and catered only to areas in their neighbourhood, the interests of trade would not be protected, unless the number of centres and associations to be recognised for futures trading in cottonseed were much larger than those in the case of cotton or other oilseeds.

The following table gives the production of cottonseed in the important producing areas in the three years 1953-54 to 1955-56:

(Figures in '000s of tons)

Name of the State	1953-54	1954-55	1955-56
Bombay	3,82	4,23	4,23
Madhya Pradesh	2,26	2,21	1,51
Hyderabad	1,33	1,26	1,09
Punjab	1,28	1,46	1,56
Madhya Bharat	1,18	1,11	1,19
Saurashtra	71	84	83
PEPSU	63	76	45
Uttar Pradesh	19	14	9
Total ..	11,40	12,01	11,00

In response to the notification of the Forward Markets Commission inviting applications from associations desirous of being recognised for regulating forward trading in cottonseed, the Commission received 30 applications from various parts of the country. A majority of these applications came from the three States, Bombay, the Punjab and Hyderabad. It may be recalled that for the purpose of the consideration of the applications, the whole country was divided into five regions on the basis of homogeneity obtaining in respect of production and consumption of cottonseed in various States. After a careful consideration of the merits of the various centres, such as the number of competing centres in the region, the attitude of the State Governments concerned, the experience of the association in futures trading in cottonseed and other commodities, and the proximity of the centre to the producing areas and crushing centres, the Commission recommended that futures markets should be immediately established in respect of cottonseed in at least six centres, namely, Amritsar in the Punjab, Batinda in P.E.P.S.U., Ujjain in Madhya Bharat, Nanded in Hyderabad, and Ahmedabad and Bombay City in the State of Bombay.

The granting of permission to these centres, however, was made conditional on the associations concerned previously carrying out modifications in their articles of association and the by-laws suggested by the Commission. In the case of Bombay City, for example, the Commission stipulated that a number of modifications should be effected in the constitution and by-laws of the Bombay Oilseeds Exchange Ltd. before recognition could be granted. The principal modifications suggested were that the Exchange should allow members of other associations who were not members of the Exchange to become members without paying any admission fee and by paying a deposit of Rs. 5,000 only; that the Exchange should revise the panel system to make the Board more representative of the different interests concerned, and that it should lay down more precise definitions of certain terms, namely, 'buyers,' 'sellers' and 'brokers.' Another modification suggested was that the present system of elections to the Board should be revised so as to provide for the voting to be conducted on the basis of a general franchise. Again, the Exchange was also to hold fresh elections after recognition was granted. It was also called upon to consider ways and means of providing increased ring space. The Exchange was also required to organise a strong secretariat, with adequate administrative and technical staff.

After a Long Interval

The recognition granted to the Bombay Oilseeds Exchange Ltd. for resuming hedge trading in cottonseed after an interval of 13 years is thus the first step in the direction of granting recognition to similar centres suggested by the Commission in other parts of the country. The recognition which came on the eve of the formation of a bigger composite Bombay State is all the more significant. According to the estimates of the Commission, the arrivals of cottonseed in Bombay City accounted for 24 per cent. of the total oilseed arrivals in 1953. Again, of the arrivals of 2.48 lakh tons of oilseeds in 1954 and 1.19 lakh tons in 1955, into Bombay City, cottonseed accounted for 66,000 tons and 20,000 tons, respectively. In the same way, the proportion of cottonseed oil was also high—as much as 6,000 tons in 1953—forming 9.7 per cent. of the total arrivals of all vegetable oils. Moreover, Bombay City enjoys many other advantages, such as favourable geographical position, natural harbour, terminal market with connections with markets all over the world, and so on. Again, important vegetable oil industries are located in the city. Being an industrial and commercial centre, Bombay City has also well organised banking facilities. Above all, the city has traditions and experience in futures trading, as well as a large number of operators eligible to take risks either as sellers or as buyers.

The hedge trading in cottonseed will be spread over three contracts. February, May and September. The first of the contracts was opened on Tuesday, 30th October 1956. It is stated that the white and non-white qualities of the small cottonseed will form the basis of the contract which is designed to cover the hedging needs of almost all cottonseed-producing areas in the country. The contract provides for delivery of ready goods at upcountry centres, the number of centres chosen for this purpose being 40 towns. The unit of trading will be 100 candies of 784 lbs. each. One of the conditions of the contract specifies a discount of Re. 1-4 per candy for delivery of ready goods at upcountry centres. For the purpose of delivery, the rate of non-white small cottonseed will be equal to the rate of small cottonseed, while that of the white small variety will be Rs. 5 per candy less than that of the basic quality, namely, small cottonseed.

Traders expect active trading in cottonseed, of which the country is producing no less than 14 lakh tons a year. Nearly four-fifths of the production is covered by the present hedge contract.

The resumption of hedge trading was formally inaugurated on Tuesday, 30th October 1956, by Mr. Y. B. Chavan, now Chief Minister of Bombay, who, in a brief speech, expressed the hope that futures trading in this commodity would result in some benefit not only for the trading community but also for the country as a whole. Mr. Ramdas Kilachand, President of the Exchange, outlined the history of futures trading in cottonseed and remarked that this seed occupied an important place on the list of agricultural products in the country. Although the bulk of the seed was being utilised as cattle-feed, the production of cottonseed oil as an industry was progressively expanding, thanks to encouraging export possibilities. The first deal of 100 candies of cottonseed for the February contract was put through at Rs. 78-4 per candy and, after a while, the rate went up to Rs. 82 per candy.

CREDIT FOR SMALL INDUSTRIES

Loans totalling Rs. 70 lakhs have been sanctioned by the Union Ministry of Commerce and Consumer Industries to three State Governments for providing credit to small-scale industries both for long-term as well as working capital requirements. Uttar Pradesh has been granted a loan of Rs. 40 lakhs, Punjab Rs. 20 lakhs and Delhi State Rs. 10 lakhs. With these loans the Centre has sanctioned Rs. 3 66 crores as loans to small industries since the scheme of financial assistance to small industries was initiated last year. Different State Governments have made a provision of about Rs. 1.5 crores, making a total of nearly Rs. 5.2 crores for providing credit to small industries.

A noteworthy feature of the scheme is that loans are given on easy terms up to 75 per cent. of the value of the security offered including assets created out of the loan. A nominal interest of 3 per cent. is charged on the loans to individual *entrepreneurs* while in the case of industrial co-operatives the rate is further reduced to 2½ per cent. In the case of loans below Rs. 2,000 only personal bonds are taken. A majority of the State Governments have accepted the general principle of the scheme.

U.K. TRADE WITH INDIA

During the eight months ended August 1956, exports of Britain to India were as high as £113,311,000, as against £82,740,000 during the corresponding period of 1955. Exports for the whole of 1955, it may be noted, amounted to only £129,793,000.

Imports of the U.K. from India during the same period, namely, January-August 1956, were, however, lower at £95,685,000, as against £105,567,000 in the corresponding period of 1955. The U.K.'s imports from India during the whole of 1955 were of the value of £158,949,000.

The following tables give the value of exports and imports of some of the main items that figure in the U.K.-India trade:

(Value in 000's of £)

	Full year	8 months Jan.-Aug.	
	1955	1955	1956
Total all exports	129,793	82,740	113,311
Of which:			
Machinery other than electric ..	32,344	20,305	30,375
Electric machinery, apparatus and appliances	16,246	10,229	14,322
Chemicals	16,148	10,320	12,354
Road vehicles and aircraft	10,038	6,777	8,002
Total all imports	158,949	105,567	95,685
Of which:			
Tea	76,420	48,466	39,891
Leather and manufactures and dressed furs	12,625	8,707	8,716
Animal and vegetable oils, fats, etc. ..	8,497	5,044	7,542
Miscellaneous textile manufactures ..	14,400	10,756	8,077

U.S. IMPORTS INCREASE

American imports this year are running some 15 per cent. ahead of last year, the Commerce Department reported recently. General imports for the January-August period this year totalled $8,439.7 million, compared with $7,353 million, for the corresponding period a year ago. General imports in August this year were valued at $1,049.1 million, nine per cent. above August a year ago.

Two major changes were recorded in August. Imports of vegetable food products and beverages dipped to $212.7 million from a July total of $251.6 million, due chiefly to lower imports of raw coffee. Imports of metals and manufactures rose from $192.6 million to $224.9 million. This was attributed chiefly to greater trade in nickel pigs, nickel oxide, ferro-manganese and copper concentrate.

DEVELOPMENT OF INDIAN WOOL TRADE

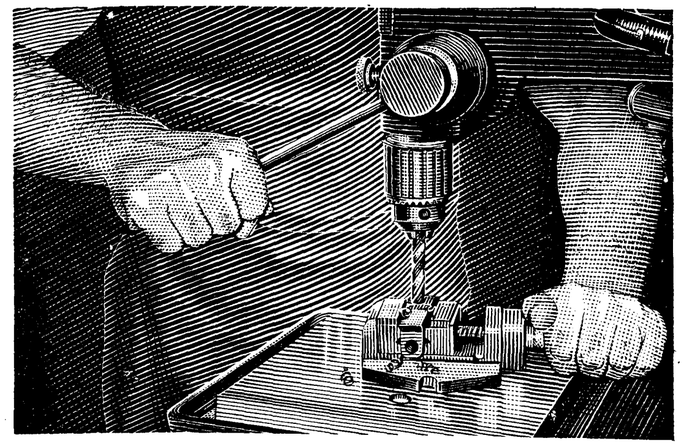
(*Concluded from page 898*)

for the owners of about 40 million sheep heads presently available in the country.

There is no doubt that, in the development of our export business with the U.K., the U.S. and other countries, the shipping companies have played a valuable role. But for their co-operation, export trade would have been impossible.

The large quantities of raw wool and goat hair now directly exported from India to the U.S. are a great boon to the shipping companies operating between the two countries. Ever since the Second World War, freight rates have, however, been steadily increased. The rise has been so phenomenal that in case of Madras goat hair and other tannery products, the ocean freight at times exceeds the value of the produce, with the result that it is difficult to export these products to the U.S. It will, therefore, be fitting if the concerned lines were to pay added attention to this aspect and bring about a reduction in freights wherever possible. The entry of some U.S. lines in the India-U.S.-carrying trade has been very welcome, as it has served as an indirect check on further increase in the ocean freights through creation of healthy competition in the otherwise monopolistic position.

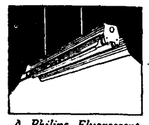
For some years past, there has been increasing use of synthetic wool in the U.S. carpet industry. Whatever be the competition from the man made wool, virgin wool will continue to have its pride of place in the world of fibres. We are increasingly feeling that there is no substitute for wool. Accordingly, the demand for this king of fibres will always be there and shipping will continue to contribute vitally to the expansion of mutual trade relations between India and the U.S. and other countries.



give these hands better light—*at less cost!*

A factory cannot afford faults—because faults mean hold-ups, unfulfilled quotas, reduced profits. That's why most modern factories have fluorescent lighting. Production experts have discovered that a good light reduces faults greatly... increases production.

Philips 'TL' Fluorescent Lamps give more than three times more light than filament lamps of the same current consumption! That's real economy! And the light is not harsh—it lights up the working bench evenly. The worker's eyes do not get tired easily if the lighting is well planned! He can do better work. Install Philips 'TL' Fluorescent Lighting and watch output go up... costs come down.



A Philips Fluorescent Lamp gives more than three times more light—lasts on an average 7,500 hours!

PHILIPS

'TL' FLUORESCENT LAMPS & FITTINGS

—make light work for you!

Can we advise you? The Philips Lighting Service Bureau will be glad to show you how you can use fluorescent lighting in your factory—free of charge and without obligation. Please write to Philips Electrical Co. (India) Private Ltd.

GREAT EASTERN SHIPPING'S RECORD PROFIT

DIVIDEND RAISED—BIG EXPANSION UNDERTAKEN

THE statement of accounts of the Great Eastern Shipping Company, Ltd. (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay), for the year ended 30th June 1956, discloses a substantial increase of Rs. 16.04 lakhs to Rs. 46.38 lakhs in the gross profit. This is even better than the record profit of Rs. 40.29 lakhs earned in the year 1953-54 by as much as Rs. 6.09 lakhs. This rise in profit compares favourably and is commensurate with the improvement in freight earnings. Thus, the Company has established a new peak in gross profit.

The net profit also, after providing for Managing Agents' commission at Rs. 2.77 lakhs (Rs. 1.23 lakhs in 1954-55 and Rs. 1.60 lakhs in 1953-54) and depreciation at Rs. 18.66 lakhs (Rs. 18.73 lakhs in 1954-55 and Rs. 24.35 lakhs in 1953-54), stands at the comfortable level of Rs. 24.95 lakhs, as against Rs. 10.38 lakhs for 1954-55 and Rs. 8.34 lakhs for 1953-54. After making a higher allocation for reserves at Rs. 15.00 lakhs, the Directors have recommended a dividend of 15 per cent. on the ordinary shares (that is Re. 1-8 per share) which absorbs Rs. 9.00 lakhs. The Company's maiden dividend on its 5½ per cent. preference capital absorbs Rs. 1.37 lakhs. After writing off brokerage and expenses on the issue of preference share capital amounting to Rs. 21,990, a sum of Rs. 33,815 is carried forward, as against Rs. 1.48 lakhs brought in.

An important change made in the accounts of the Company is the transfer of excess provision in the depreciation fund, amounting to Rs. 38.40 lakhs, to the deferred taxation reserve.

The following comparative table gives an idea of the Company's progress during the past three years.

(In lakhs of rupees)

	[For the year ended 30th June			
	1956	1955	1954	1953
Freight earned	191.70	193.16	167.32	170.28
Other income	31.57	20.34	5.40	3.75
Expenses—				
Charter hire	37.45	33.57	29.20	48.37
Stevedoring, claims, etc. ..	25.78	44.86	27.90	26.58
Coal, fuel, oil, etc.	35.18	37.02	30.46	27.55
Other expenses	78.48	67.71	44.87	46.47
Gross profit	46.38	30.34	40.29	25.06
Managing Agents' commission	2.77	1.23	1.60	1.42
Depreciation	18.66	18.73	24.35	10.02
Taxation			6.00	6.00
Net profit	24.95	10.38	8.34	6.71
Brokerage and expenses on pref. capital written off	0.22			
Reserve fund	15.00	10.00	3.00	3.00
Dividend—				
5½ per cent. preference ..	1.37		5.00	3.50
Ordinary	9.00	*		
	(15%)		(10%)	(10%)
Carry forward	0.84	1.48	1.10	0.76

* A bonus ordinary share for every 5 ordinary shares was issued in lieu of dividend, by capitalising a sum of Rs. 10 lakhs out of the general reserve. This is equivalent to a dividend of 20 per cent.

As in the previous year, the freight earnings during the year under review also have been arrived at after payment of Rs. 10.79 lakhs (Rs. 20.25 lakhs in the previous year) to owners of chartered vessels. The gross freight earnings for the year under review thus amounts to Rs. 202.49 lakhs which is, however, slightly lower by Rs. 1.46 lakhs, as compared with those for 1954-55. The rise in "other income" is due to a general improvement in other sources of revenue such as hire on chartering steamers, interest on securities and deposits, miscellaneous receipts inclusive of demurrage, detention charges, etc. Another welcome feature of the year is the decline in total expenses by Rs. 6.27 lakhs. Referring to the working of the Company during the year under review, the Directors say, in their latest report, as follows:

"The improvement in the results has been due to the employment of some of the vessels of the Company in tramp trades at higher freight rates, trading in freight and expansion in the agency business of the Company, etc. It may be pointed out that these improved results have been achieved in spite of the uneconomic coastal freight rates and the obligation of the Company to carry coastal cargoes. The existing fleet of the Company is treated as a coastal fleet by the Government and the Company is allowed to engage some of its owned vessels in the overseas trades only if it substitutes these vessels by time-chartered ships or newly acquired ships on the coast. The present charters of the Company will expire during February-May 1957. Although these charters have been effected at much lower rates than those prevailing today, the Company is losing continuously in respect of their operation on the coast. The prices of tonnage have soared so high and the international freight market has reached such a peak level that it is no longer possible either to purchase or time-charter ships for coastal trading without losing far more heavily in the coastal trade."

The aggregate average tonnage employed during the year amounted to 67,505 dw.t., as compared with 82,109 dw.t. in the previous year. This is, however, the second best record in the history of the Company. Of this, the owned tonnage accounts for 48,216 dw.t. and chartered tonnage for 19,289 dw.t., as against 49,055 dw.t. and 33,054 dw.t. respectively, in 1954-55. A commendable achievement of the Company is its entry in the tanker trade. The motor tanker *Bianca* purchased by the Company at a cost of Rs. 89,13,192 has been renamed as m.t. *Jag Jyoti* and given on time-charter to an oil company for the transport of mineral oil products on the coast. The Company's committed expansion programme includes orders for one motor cargo ship of 10,080 deadweight tons with Hitachi Shipyard, Osaka, Japan, one motor cargo ship of 4,650 dw. tons with Hindusthan Shipyard, Visakhapatnam and another motor cargo ship of 11,000 metric dw. tons with Ottensener Eisenwerke, Hamburg, Germany. The Government has granted loans for meeting the bulk of the construction cost of the first two vessels. Their sanction for the grant of loan towards the construction cost of the third vessel is awaited.

The Directors state that, having regard to the necessity of an adequate capital structure, especially in view of the expansion programme of the Company, they have recommended that the authorised capital of the Company be increased from Rs. 1 crore to Rs. 2 crores and that the equity share capital of Rs. 60 lakhs be raised by another Rs. 60 lakhs by issuing new shares to the existing shareholders in the proportion of one new equity share for one equity share already held by them. The Controller of Capital Issues has already sanctioned the issue of new equity shares at par and the extraordinary general meeting to be convened will consider the increase in the authorised capital of the Company, and issue of further capital.

The balance-sheet of the Company as on 30th June 1956, shows that the paid-up capital stands at Rs. 85 lakhs divided into 600,000 ordinary shares of Rs. 10 each and 25,000 5½ per cent. tax-free redeemable cumulative preference shares of Rs. 100 each. The reserves and surplus aggregate Rs. 82.44 lakhs. The provision for taxation stands at Rs. 17.40 lakhs. The current liabilities amount to Rs. 192.93 lakhs, having risen from Rs. 97.62 lakhs a year ago. Of these liabilities, loans from Government amount to Rs. 141.91 lakhs, as against Rs. 68.27 lakhs a year ago. The gross block of the value of Rs. 331.00 lakhs has been written down to Rs. 271.45 lakhs. Of the above block, capital outlay on fleet alone amounts to Rs. 327.97 lakhs. The current assets stand at Rs. 106.33 lakhs, of which cash balances are Rs. 46.99 lakhs.

B.B. PETROLEUM'S EARNINGS BETTER

The financial results of the British Burmah Petroleum Company, Ltd. (Chairman: Mr. A. P. Faickney, Johannesburg), for the year ended 31st March 1956, show that the Company's gross profit has improved from £34,168 in the previous year to £37,419. However, it is substantially lower than the profit earned for 1953-54 at £87,997. After providing for depreciation on office furniture at £14 (£14 for 1954-55 and £6 for 1953-54) and taxation at £5,610 (£3,345 for 1954-55 and £2,520 for 1953-54), the net profit stands slightly higher at £31,793, as against £30,809 in the previous year. As in the case of the gross profit, the net profit is also considerably lower than the profit for 1953-54 at £85,471. The dividend has been maintained at 5 per cent. It absorbs £37,500, leaving a balance of £35,276 to be carried forward, as against £40,981 brought in.

The rise in profit was mainly due to the receipt of £14,333 being the maiden dividend received by the Company on its holdings in the Burma Oil Company (1954) Ltd. The dividend from its South African subsidiary was, on the other hand, reduced from £42,000 to £33,600, despite the slight increase in the latter's earnings. Nevertheless, the profit of the B.B. Petroleum would have been still higher but for the increase in its administrative expenses from £13,223 to £16,190.

This Company continues to act as Technical Managers to the South African Torbanite Mining and Refining Company, Limited, the Colas South African Limited Group of Companies, Bitroid Limited and Decorative Boards (Proprietary) Limited. With the completion of the transfer of its merger assets to the Burma Oil Company (1954) Limited, the Company's interests and activities now fall into two sections, namely, an investment interest in the oil industry in Burma and an industrial interest in South Africa, and the Chairman, in his statement to the shareholders, says that the Directors are giving consideration to the best policy to pursue having regard to these diversities of Eastern and South African interests.

MORARJEE MILL REPORTS IMPRESSIVE PROFIT

LARGE SUMS CONSERVED

THE results of the Morarjee Goculdas Spinning and Weaving Company, Ltd (Managing Agents: Messrs. Piramal and Sons, Bombay), for the year ended 30th June, 1956, are very encouraging. The gross profit at Rs. 39.62 lakhs is twice as much as that (Rs. 19.37 lakhs) for 1954-55 and exceeds the 1953-54 level (at Rs. 24.19 lakhs) by over Rs. 15 lakhs. This is not surprising, because the period under review was one of the best ones in the recent history of the Indian cotton textile industry.

The appropriation policy followed by the Directors is very sound and commendable. Nearly one half of the gross profit—Rs. 18.46 lakhs to be precise—has been credited to depreciation account. Of the remainder, a substantial portion, as much as Rs. 8 lakhs, has been set apart for taxation. In view of these heavy allocations to essential reserves, the net profit is actually lower and no other provision has been made for reserves. A slight increase in the dividend from 14 per cent. to 15 per cent. has been made. At Rs. 1.41 lakhs the sum carried forward is a shade higher than the amount brought in.

The following comparative table presents a synoptic view of the Company's progress since June 1953:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale proceeds	352.59	371.78	332.22	309.59
Closing stocks	73.90	81.68	92.61	81.95
Cotton consumed	146.44	166.76	164.19	165.84
Other raw materials, stores, fuel and power consumed ..	39.83	39.66	37.85	32.67
Expenses	117.50	135.11	116.73	113.23
Gross profit	39.62	19.37	24.19	9.93
Managing Agents' commission.	3.48	1.94	2.42	0.99
Depreciation	18.46	4.92	5.09	3.17
Taxation	8.00	1.11		0.85
Net profit	9.68	11.40	16.68	4.92
E.P.T. refund	..	..	..	0.79
To reserves	..	4.20	7.69	..
Dividends—				
4½ per cent. preference ..	0.78	0.78	0.78	0.78
Ordinary	7.76	7.24	7.24	6.21
	(15%)	(14%)	(14%)	(12%)
Carry forward	1.41	0.27	1.09	0.13

It will be observed from the table that the gross profit has staged an impressive rise despite a fall in sale proceeds and closing stocks. This is due mainly to the saving in the cost of cotton consumed and expenses.

In their report to the shareholders the Directors state that, during the year under review, additions to the machinery of an aggregate value of Rs. 28.53 lakhs were made. These consisted of (1) 5 Barber Colman's auto spoolers, 3 super-speed warpers, (2) 1 set of Reiters comber, (3) 4 super fully automatic Sweiters' pirn winders, (4) 1-Monforts shearing cropping machine, (5) 1 6-colour Kleinwefers printing machine, (6) 1-Monforts finishing, stentering and chamber drying, (7) 1 Wakayama stenter (Japan), and (8) 1 Scholert raising machine (France), etc. The Directors further state that, under the expansion and modernisation programme undertaken by the Company, more orders for new machinery to the tune of approximately Rs. 20 lakhs were placed during the year under review.

The financial position of the Company, in so far as one can see from its balance-sheet as at 30th June 1956, is sound. The reserves and surplus amount to Rs. 38.47 lakhs, which compare with the ordinary capital of Rs. 51.75 lakhs. It may appear from this that the reserves are rather small, but it should be borne in mind that, of the ordinary capital, as much as Rs. 34.50 lakhs represent capitalisation of reserves. Besides, the entire preference capital of Rs. 17.25 lakhs also represents bonus shares. In other words, of the total paid-up capital of Rs. 69 lakhs, no less than Rs. 51.75 lakhs constitute past profits ploughed into the capital account. The fixed assets also have been written down very well, from Rs. 235.58 lakhs to Rs. 59.39 lakhs; this latter figure includes Rs. 30.31 lakhs being the cost of additions to the block account during the year under review alone. The Company's complement consists of 70,104 spindles and 1,652 looms. Another notable feature of its financial strength is the large surplus of current assets (amounting to Rs. 164.36 lakhs) over current liabilities (Rs. 116.28 lakhs) inclusive of the provision for taxation at Rs. 10 lakhs.

The Rs. 100 paid-up ordinary shares are currently quoted at Rs. 260 *cum-div.* to yield 6.1 per cent. per annum.

NATIONAL ELECTRICAL INDUSTRIES LTD.

MR. CHUNILAL B. MEHTA'S SPEECH

THE Ninth Annual General Meeting of the National Electrical Industries Ltd. was held in Bombay on 29th October 1956. Addressing the shareholders on the occasion, the Chairman, Mr. Chunilal B. Mehta, referred to the successful efforts of the Company in raising its production and sales, as also as its profit during the past year. He also announced the Directors' proposal, subject to the Government's sanction, to capitalise a part of the reserves and issue bonus shares in the ratio of one share for every three shares held.

The following is the full text of Mr. Mehta's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you all here to this ninth annual general meeting.

"The results of the working for the year ended 31st March 1956 are already known to you through the audited statements of accounts and the Directors' report posted to you earlier.

"In my address to you at the seventh annual general meeting I had mentioned that we would have to continue to make efforts to increase the volume of turnover, in order to be able to maintain the same level of profits. We have made successful efforts during the last year to achieve larger volume of production and sales. This has enabled us to earn a slightly higher profit, in spite of the increase of nearly Rs. 1,20,000 in labour costs.

"During the year the Government of India announced that imports of electrical motors from 3 to 10 h.p. will be permitted because of the increased requirements of the country. It is, however, hoped that this only represents a short-term policy and that the restrictions on the import of motors will again be reimposed as soon as the production of the indigenous industry has increased sufficiently to cope with the country's demand.

"I am glad to inform you that the Directors propose, subject to your approval, and the sanction of the Government, to issue one bonus share for every three ordinary shares held by you. The Directors feel that the free reserves which have been built up in the past few years should now be capitalised and thereby increase the paid-up capital of the Company.

"It is a matter of gratification that our longstanding dispute with the trade union for the bonus payable to our workers has been settled amicably and an agreement covering a period of five years from the years 1952-53 to 1956-57 has been signed with them. In this connection, I may add that the payment of Rs. 95,000 representing bonus for the first three years, upto March 1955, has already been paid to the workers.

"Your Directors, therefore, hope that the settlement of this bonus issue will further help to cement the existing cordial relations between the management and the labour and assist to strengthen the efficiency of our working.

"In conclusion, I wish to thank the staff and workers of our Company for the efforts they have put in during the last year."

TATA IRON AND STEEL

The production of pig iron by the Tata Iron and Steel Company, Ltd., during the quarter ended 30th June 1956, that is, the first quarter of the Company's current financial year, amounted to 290,900 tons, which shows an increase of 10,100 tons over that in the corresponding period of 1955, while despatches have declined from 34,200 tons to 19,100 tons. The output of steel ingots also records a rise from 255,900 tons to 265,700 tons. The output of saleable steel amounted to 195,300 tons, as compared with 194,600 tons in the first quarter of 1955-56. Despatches, on the other hand, show a fall from 197,000 tons to 191,100 tons.

The net value of the materials despatched during the quarter under review, after deducting from the invoices the rate payable to the Government, freight on outward traffic, commissions, discounts and rebates paid to other parties, amounted to about Rs. 860 lakhs. This amount includes about Rs. 50 per ton to be credited, after taxes, to a separate development fund earmarked specifically for capital expenditure on the expansion programme of the Company under the relevant agreement with the Government.

The Automobile Products of India Ltd., Bhandup, Bombay, announces that it has placed a repeat order to the value of £1,000,000 for Meadows 330 diesel engines and gear boxes with Henry Meadows Limited, of Wolverhampton, England. This order follows the previous one of the same value placed earlier this year. Mr. P. Matthen, Director and General Manager of the Automobile Products of India Ltd., who returned early this month from Europe, stated in Bombay that his company is also making arrangements to manufacture progressively the range of world-famous Meadows Diesel Engines.

Points From The Chair

International Tea Agreement

"IN a year when tea prices generally were low, the level of prices realised for our teas can be considered as satisfactory, and brokers have commented most favourably on the high standard of manufacture maintained. Had the International Tea Agreement, which expired in March 1955, been renewed with added signatories to it, I would have felt greater confidence in the future. However, I regret that I am unable to report the renewal of this agreement due mainly, I understand, to unreasonable demands for increases in production quota by some of the signatory countries, other than India, to the previous agreement. That this delay in completing a fresh agreement should occur, when more countries are producing increasing quantities of tea, is all the more unfortunate and I sincerely hope that for the benefit of the industry in general the Government's commendable efforts to secure a renewal of the agreement will bear fruit in the fairly near future."

J. N. A. HOBBS,
Kalasa Tea & Produce Co., Ltd.

Future of General Insurance

"With growing opportunities for development of general insurance business alongside the country's economic progress in the coming years, we may feel confident about the future. There are, however, some problems which face general insurance companies at this moment. The Government's economic policies and programmes have not yet taken a fixed or final shape. Although, at the time decision was taken to nationalise life insurance in India the then Finance Minister was pleased to say that the Government had decided not to nationalise general insurance, because general insurance was part and parcel of the private sector of trade and industry and functioned on a year-to-year basis and that no useful purpose would be served by nationalisation of general insurance, yet we hear voices from time to time urging the Government to remove general insurance from the field of private enterprise. Any uncertainty regarding the future pattern of management of general insurance business is bound to act as a check on the healthy expansion and progress of the business. It would, therefore, be very helpful if the Government gives a categorical assurance that this industry will remain in the private sector."

M. CT. MUTHIAH,
United India Fire & General Insurance Co., Ltd.

Present Economic Position of U.K.

"The degree of awareness among the general public of the continuing dangers of the present economic position of this country is, I believe, far greater today than it was a few years ago. The very fact, however, of living for so many years in a precarious situation without being overtaken by actual disaster has to some extent dulled the apprehension of a lot of people. Inflation has, in fact, produced an illusory sense of well-being through the stimulation of business activity produced by the general desire in times of rising prices to buy today what it would otherwise be prudent to put off buying until tomorrow. What is, however, putting an end to such illusions is the hard fact of our need to sell our goods in the markets of the world under increasing competitive conditions. I have reiterated this theme many times in the past and I make no apology for returning to it again."

SIR GREVILLE S. MAGINNESS,
Roneo Limited

Wool Trade in Australia

"The average price for greasy wool was 61.5d. (Aust.) per lb. compared with 70.9d. (Aust.) per lb. for 1954-55, representing a fall of about 13.3 per cent., but as an indication of the strong ending to the wool selling season the average price for June 1956 was 64.5 d. (Aust.) per lb. which was above the season's average. In the early part of the selling season lack of confidence in values by buyers brought about a fall in prices, but with improved consumption of woollen goods in a number of countries including the U.S.A. and Japan, prices for wool became stabilised in October 1955 and a buying spurt developed in March 1956 which reached a peak in June. The problems confronting the wool-selling brokers in Australia during the past season were many, due to interruptions to sales in February 1956 as a result of a waterfront strike followed by further cancellations of sales in Brisbane in April and in Sydney and Newcastle in June consequent upon industrial trouble connected with the shearing strike. Fortunately, a settlement of that strike was arrived at late in the season in New South Wales and Victoria, but it continued in Queensland to the detriment of all concerned until the middle of October 1956. The current wool-selling season which opened in Australia in August has shown a further strengthening of wool prices and demand has continued to be satisfactory with widening competition."

MR. MAURICE LUBBOCK,
Australian, Mercantile, Land and Finance Co.

COMPANY MEETINGS AND DIVIDENDS

CUTTACK ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 19th November 1956. Transfer books will remain closed from 12th to 19th November 1956, both days inclusive.

TIRRIHANNAH CO., LTD. Annual General Meeting, Calcutta, 21st November 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 7th to 21st November 1956, both days inclusive.

DIBRUGARH CO., LTD. Annual General Meeting, Calcutta, 22nd November 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 8th to 22nd November 1956, both days inclusive.

MORARJEE GOCULDAS SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 23rd November 1956. Dividend: Rs. 15 per ordinary share, payable on 26th November, 1956. Transfer books remain closed from 9th to 24th November 1956, both days inclusive.

DARJEELING TEA AND CHINCHONA ASSOCIATION LTD. Annual General Meeting, Calcutta, 23rd November 1956. Transfer books will remain closed from 12th to 23rd November 1956, both days inclusive.

CENTRAL INDIA COAL DOUBLES DIVIDEND

PROFITS OF ASHER TEXTILES HIGHER

Central India Coal-fields Ltd.

THE directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1956.

The profits for the year, after providing Rs. 3,97,355 (Rs. 1,25,000) for depreciation, amounts to Rs. 2,45,758 (Rs. 1,33,037), which, together with the balance brought forward from last year's account of Rs. 14,019 (Rs. 5,907), makes a total of Rs. 2,59,777 (Rs. 1,38,944). The directors recommend payment of a dividend at the rate of As. 8 (As. 4) per share absorbing Rs. 2,49,850 (Rs. 1,24,925) leaving a balance to be carried forward to the next year's account of Rs. 9,927 (Rs. 14,019).

Working at both the collieries of the Company during the year continued to be fairly satisfactory, although the Pure Chirimiri Colliery is badly handicapped due to occurrence of severe roof trouble inside the mine. Total raisings for the year were 1,62,721 tons and despatches were 1,54,307 tons. The supply of empty wagons continued to be a big problem as in the past and the raisings of the Company were also limited to a great extent due to inadequate supplies of the same. 67,314 tons of coal were raised at the Orient colliery, where the Company is acting as a raising contractor to Messrs. Orient Paper Mills Limited, who own that colliery.

The Award of the All-India Industrial Tribunal (Colliery Disputes), which was published in May 1956, has brought about a very heavy increase in the wages of the colliery labour amounting to more than 40 per cent. of the previous emoluments. The cost of production to the industry has been further increased by the Tribunal, which has awarded labour additional paid festival holidays for seven days in a year. Besides this, the new Mines Regulations have also come into force and the cumulative effect of the Tribunal award and the Regulations has been a very heavy increase in the cost of producing of coal. To counterbalance this increase in cost, the Government of India announced a general increase in the selling price of coal by Rs. 3 per ton. This increase, it may be added, is totally inadequate and falls far short of the total increase in the cost of production of the coal industry in general.

In the formulation of the second Five-year Plan, the Government announced the target for production of coal at 60 million tons by the end of the year 1961. As the present production of coal is approximately 38 million tons, it would be necessary to increase production by about 22 million tons to achieve the target. The private sector has been allotted 10 million tons as its share in the increase in production of coal, the balance increase to be effected in the public sector. In view of the above, the Company has formulated plans to increase production of coal substantially at its mines. It was for this purpose that the Company, in an extraordinary general meeting, increased its authorised share capital from Rs. 1 crore to Rs. 2 crores and an application has been made to the Government under the Industrial Development and Regulations Act for the grant of licence for expansion of production.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,97,750	Block ...	34,53,430
Liabilities ...	7,46,782	Stock of coal	1,55,892
Profit and loss account ...	9,927	Stores and spare parts	6,73,734
		Other assets	22,653
		Debts, deposits and advances ...	10,82,790
		Investments	1,60,274
		Cash ...	2,05,686
Rs.	57,54,459	Rs.	57,54,459

Asher Textiles Ltd.

The directors of the above Company (Managing Agents: Messrs. Setna & Co., Tirupur) submitted the audited accounts of the Company for the year ended 30th June 1956.

After deducting all working expenses and interest and providing Rs. 1,99,331 (Rs. 1,62,569) for depreciation, the year's working resulted in a net profit of Rs. 4,96,494 (Rs. 3,45,545). From this, a sum of Rs. 8,730 has been expended on donation and a sum of Rs. 1,356 on income-tax for 1950-51, leaving a balance of Rs. 4,86,388 to the credit of the profit and loss account. A sum of Rs. 12-8 had to be paid by way of dividend in excess of the sum of Rs. 1,49,800, the appropriation approved at the last annual general meeting. With the balance of Rs. 1,968 carried forward from last year there was a sum of Rs. 4,88,356 to the credit of the profit and loss account. The directors have recommended the following appropriations therefrom:

To general reserve Rs. 70,000, to provision for taxes Rs. 2,35,000, to pay a tax-free dividend of 15 (12½) per cent. to the ordinary shareholders Rs. 1,79,790 (Rs. 1,49,813) and to carry forward to next year Rs. 3,566 (Rs. 1,968). The directors inform that 4,800 new spindles referred in their report dated 15th September 1955 have been received bringing the total spindleage to 24,800. These new spindles are in the course of erection and are expected to work in a short period. The cost of these spindles is about Rs. 3,33,000. As already mentioned in the directors' report dated 15th September 1955, orders were placed for 38 cards, one slubbing frame, two simplex frames, two drawing frames and one scutcher. Of these, we have received 18 cards, one slubbing frame and one simplex frame and the balance is expected to be received in about six months time. The machinery so far received is partly under erection and partly working. These additional machinery had to be ordered for as the preparatory machinery was found insufficient. The cost of these additional machineries is expected to be about Rs. 6 lakhs. The directors have installed one cone winder and the mill's cone yarn is very popular in the local market. They intend adding one more cone winder costing about Rs. 46,000.

In the year under review there was power cut. It varied from 25 per cent. to 50 per cent. In spite of working the generator to make up a portion of the cut, there was an appreciable fall in production of yarn during the power cut period. The power cut lasted for 2½ months. The directors hope that with the extra machinery to be installed the result for the year ending 30th June 1957 will be brighter.

Having regard to the extent and volume of the Company's business, past and prospective, and especially in view of the expansion programme, the directors feel that inclusive of the loan already borrowed and still outstanding they should have power to borrow upto the limit of Rs. 25 lakhs, under various heads, such as key loan, open loan, bill discounting facilities, deposits, etc. They have therefore to request the shareholders to empower the board of directors to borrow monies required for the Company's business from time to time although the monies to be borrowed after the commencement of the Companies Act, 1956 together with the monies already borrowed by the Company and outstanding immediately before the commencement of the said Act (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) may exceed the aggregate of the paid-up capital of the Company and its free reserves, provided that the aggregate of the borrowings outstanding at any one time (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) shall not exceed Rs. 25 lakhs.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,98,600	Block ...	15.72.521
Reserves ...	5,57,596	Stock-in-trade	20,83,967
Provision for taxation ...	3.07.345	Stores ...	2,61,082
Liabilities ...	23,08,773	Other assets	589
Profit and loss account ...	3,566	Debts, deposits and advances ...	3,36,031
		Investments	1,08,585
		Cash ...	13,105
Rs.	43.75.880	Rs.	43.75.880

Tirrihannah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 4,34,400 (Rs. 6,88,711) to which must be added the balance of profit brought forward from 1954 of Rs. 23,024 (Rs. 5,908) making a total of Rs. 4,59,424 (Rs. 7,02,776). From this must be deducted provision for taxation Rs. 1,63,054 (Rs. 2,33,830), adjustment Rs. 49,593 (Rs. 1,714 stores written off) and depreciation on fixed assets Rs. 41,258 (Rs. 44,208) leaving a balance of Rs. 2,05,519 (Rs. 4,23,024). The directors have transferred to buildings and machinery reserve Rs. 1,00,000 (Rs. 1,50,000) leaving an available balance of Rs. 1,05,519 (Rs. 1,23,024 after placing Rs. 1,50,000 to general reserve). This amount, the directors recommend, should be distributed as follows:—

In payment of a dividend at the rate of 10 (10) per cent. for the year ended 31st December 1955, on 10,000 cumulative preference shares of Rs. 10 each, absorbing Rs. 10,000 (Rs. 10,000), in payment of a dividend at the rate of 30 (40) per cent for the year ended 31st December 1955, on 22,000 ordinary shares of Rs. 10 each, absorbing Rs. 66,000 (Rs. 88,000) and leaving to be carried forward Rs. 29,519 (Rs. 25,024).

The saleable crop weighed out at 8,585 (7,116) maunds against an estimate of 7,300 (7,000 maunds, and was disposed of at an average price of As. 30.94 (As. 42.20) per lb.

The estimate for season 1956 provides for a saleable crop of 8,000 maunds at a total revenue expenditure of Rs. 7,64,388.

Despite the substantial increase in the crop made in the year, the fall in the prices obtained for the teas has adversely effected the results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20 000	Block ...	5,17.592
Reserves ...	7,00,250	Stock of tea	5,11.093
Provision for taxation ...	4.41 759	Stores ...	1,76 802
Liabilities ...	3,64,086	Other assets	3,304
Profit and loss account ...	29,519	Debts, deposits and advances ...	1,53.646
		Investments	4,103
		Cash ...	4,89.074
Rs.	18.55.614	Rs.	18.55.614

Dibrugarh Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 4,24,769 (Rs. 9,53,348) to which must be added the balance of profit brought forward from 1954 of Rs. 54,692 (Rs. 5,120) making a total of Rs. 4,79,461 (Rs. 9,65,658 including adjustments). From this amount must be deducted provision for taxation Rs. 1,47,000 (Rs. 3,40,267), adjustment account Rs. 97.344 (*nil*) and depreciation on fixed assets Rs. 41,196 (Rs. 40,699), leaving a balance of Rs. 1,93,921 (Rs. 5,84,692). From this the directors have set aside to buildings and machinery reserve Rs. 50,000 (Rs. 50,000) leaving an available balance of Rs. 1,43,921 (Rs. 5,34,692). The directors recommend, payment of a dividend at the rate of 20 (40) per cent. for the year ended 31st December 1955, on 45,000 ordinary shares of Rs. 10 each, absorbing Rs. 90,000 (Rs. 1,80,000) leaving to be carried forward Rs. 53,921 (Rs. 54,692 after transferring Rs. 3,00,000 to general reserve).

The saleable crop weighed out at 7,245 (7,222) maunds against an estimate of 7,000 (6,500) maunds, and was disposed of at an average price of As. 37.88 (As. 52.09) per lb.

The estimate for season 1956 provides for a saleable crop of 7,250 maunds at a total revenue expenditure of Rs. 9,35,462.

The fall in the average price of tea from As. 52.09 per lb. for season 1954 to As. 37.88 per lb. in season 1955 has adversely affected the profits.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50.000	Block ...	7,72.620
Reserves ...	7,25,800	Stock of tea	6,43.997
Provision for taxation ...	3,07,000	Stores ...	1,35,289
Liabilities ...	4,72,503	Debts, deposits and advances ...	1,28.564
Profit and loss account ...	53,921	Cash ...	5,28 754
Rs.	22,09.224	Rs.	22.09.224

Mysore Glass and Enamel Works, Ltd.

The directors of the above Company (Director-in-charge: Mr. Shankar Rao P. Ogale, Bangalore) submitted the audited accounts of the Company for the year ended 31st March 1956.

The Factory stopped production from 31st August 1955 for reasons given below and remains closed till now. The Company suffered a heavy loss during the year 1954-55, for reasons stated in the last annual report. A notice was given to the **workers, through their Union on 24/26th March** 1956, informing them that unless they agreed to the withdrawal by the Company of all *ex-gratia* allowances and amenities which were very liberally provided for by the Company during prosperous times, the Factory would have to be closed and since they refused to come to reasonable terms offered by the Company, production was stopped from 31st August 1955.

Protracted negotiations with labour to come to some reasonable settlement, through the good offices of the Hon'ble Minister for Labour and the Labour Commissioner in Mysore, also through private sources, were going on for over 10 months and finally the matter of closure of the Factory was referred by Government to the Industrial Tribunal and the enquiry before the Tribunal is now going on.

In the meantime, one of the Unions, with a membership of about 110 persons, agreed to receive an agreed figure of compensation and thereby withdraw all the claims consequent on the closure and an award was passed by the Industrial Tribunal as far as their claims were concerned and this amounts to about Rs. 37,500. The dispute in respect of the other workers is pending before the Industrial Tribunal.

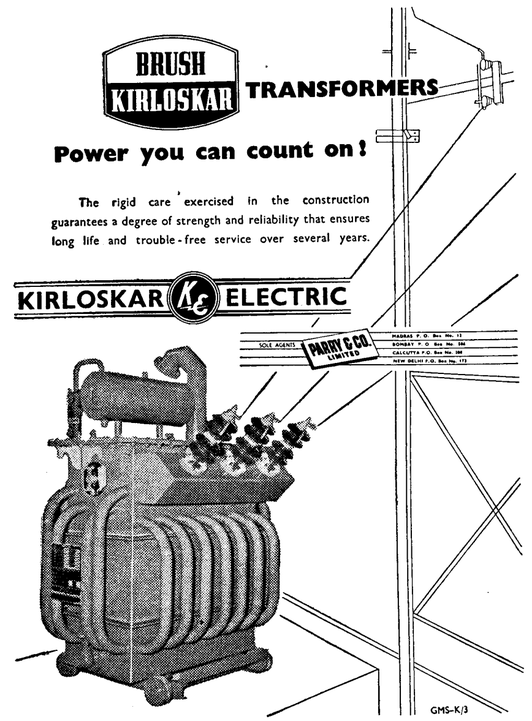
Although the Factory has been closed for over the past 14 months, the Company has had to incur expenditure on essential Factory and other staff and pay for water, electric power, interest on loans, insurance premia, licence fees, etc., and whatever resources the Company had at the time of closure, have now been exhausted.

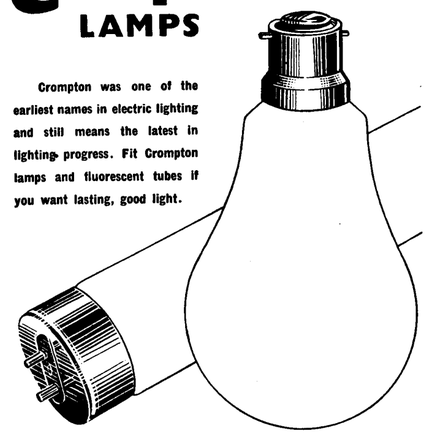
Simultaneously the directors carried on negotiations with the Kissan Products (Private) Ltd. for licensing the Factory to them for mainly manufacturing glass bottles required for their own use and for other purposes. An agreement is being entered into and detailed terms of the agreement will be available for inspection, at the registered office of the Company during office hours and will be placed before the next general body meeting.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,35,585	Block ...	5,22,611
Reserves ...	**1,54,692**	Stock-in-trade	15.334
Liabilities ...	**1,81,891**	Stores ...	58,837
		Other assets	62,867
		Deferred expenses ...	24,292
		Debts, deposits and advances ...	8,345
		Investments	38,555
		Cash ...	2,646
		Profit and loss account ...	2,38,681
Rs.	9.72.168	Rs.	9.72.168

N.B.—Figures within brackets relate to the corresponding period of the previous year.





SUEZ CRISIS CAUSES ANXIETY TO GOVERNMENT

IMPORTANCE OF MACHINERY-MAKING INDUSTRY

By A Special Correspondent

NEW DELHI, *6th November*

DELHI LETTER

WITH the onset of the winter season, the capital has begun to take a busy appearance. Flags and festoons decorate the main entrances and thoroughfares of the city. The attraction has been further enhanced by the colourful display of the flags of the 77 nations of the world participating in the current conference of the United Nations Educational. Scientific and Cultural Organisation, the ninth session of which was inaugurated here only yesterday.

Perhaps, for the first time since the withdrawal of British power from India in 1947, one is able to come across such a large number of foreigners in Delhi. All the hotels and special accommodation are filled up by foreign delegations to the conference. The unusually delightful *Diwali* has synchronised with the conference and the historic reorganisation of States and the arrival today of the Emperor of Ethiopia. All this has certainly made the people of the capital more gay than usual. But the Suez crisis has undoubtedly created a sense of anxiety. In their wake, the Suez developments have created special problems for the Government. The External Affairs Ministry has been busy and the Prime Minister is often seen with an anxious face. The threat of war in the Suez area has created a sense of gravity and urgency in the official mind and, grave concern is visible on the faces of important Government officials.

Middle East

The Planning Commission, perhaps, is considerably worried over the developments in the Middle East. The implications of the closure of the Canal on India's foreign trade are being assessed by high officials of the Planning Commission. But a section of the Commission still hopes and also expresses the view that the present crisis is only temporary and everything will become normal at least after a few weeks. Hence, according to these officials, India's Second Five-year Plan will not be jeopardised to any large extent as a result of the Middle East crisis. However, this unforeseen development has presumably made the Commission become particularly interested in the rapid industrial development of the country. If anything, the crisis has served to focus attention on the folly of depending on imports for India's requirements of vital industrial raw materials and machinery and on the need for India to build up its machine-making industry as quickly as possible.

The Eric Coates Mission is already on tour in the Bengal area. On its return, the Government of India will no doubt impress upon the members of the Mission that they should formulate their plans for the establishment of heavy industries in the country in such a way as to enable India to manufacture its essential machinery items as early as possible. In this connection, it will be recalled that the Russian mission has already submitted its report for the establishment of one or two big plants for the manufacture of machinery in India and members of the Planning Commission might be influenced to give high priority in implementing this scheme. Now that Mr. Morarji Desai, former Chief Minister of Bombay, will soon be taking over charge of the Ministries of Commerce and Consumer Industries as well as the Ministry of Heavy Industries, he will be expected to give practical shape to the above ideas. Mr. Desai has already earned a reputation as an able administrator and perhaps his administrative ability will find ample scope for the speedy execution of plans for the establishment of machinery industries in the country and for the building up of heavy machinery in India.

Machinery Industry

These ideas will also be discussed in the forthcoming meeting of the National Development Council. In the preparation of the memoranda for the guidance of the Council, emphasis is being placed on the necessity of building up machinery-manufacturing industry in the country and also on the implications of the Suez crisis to the economy of the country. The Council will also be considering the progress report for the last year of the First Five-year Plan which is being got ready as also the first annual plan for the second Five-year Plan. The Planning Commission is understood to be busy completing these two reports.

In the third week of this month, there is going to be a meeting of two important bodies, namely, the Import and Export Advisory Councils. The Government of India will be sounding the views of the merchant community on the various problems affecting the country. No doubt, during the last six months, the Government has been eating away speedily the country's accumulated sterling balances. Although Mr. T. T. Krishnamachari, the Finance Minister, does not take a pessimistic view of the fast depletion of these balances, there are people even inside the Government of India who are not able to reconcile themselves completely to this phenomenon and to the possible effect of this on the future of the Indian economy.

It is, therefore, possible that the new Minister for Commerce, Consumer Industries and Heavy Industries, Mr. Morarji Desai, will try to impress on the business community the urgent necessity for augmenting India's exports. The Government has already constituted an Export Promotion Board which is holding its meeting periodically for assessing the prospects of India's trade with a number of other countries. Considerable stimulus is being given to many of the export promotion ideas and it is likely that a detailed memorandum will be placed by the Government before the business community enumerating the steps that the Government has taken and is likely to take in the next few months with a view to increasing the country's foreign trade and seeking the business community's complete co-operation in the Government's efforts.

It may also be noted, in this connection, that the Minister for Heavy Industries, Mr. M. M. Shah, has recently given an assurance to the business community that the latter would not be unduly harassed by the income-tax officials. The income-tax officers, he said, would adopt "a realistic and not a legalistic" attitude in reopening cases under section 34 of the Income-tax Act and on no account would any assessee be unduly harassed. On the other hand, he expected the business community to play its role well so that "we can raise most of the resources required for financing the Second Plan within our country and lessen our dependence on the doubtful quantity of foreign aid." This statement by the Minister may be taken to represent fairly well the Government's overall view and the Government's realisation that, after all, it could not ignore the capacity of the private sector in building up the industry of the country.

Export Trade

The Commerce and Industry Ministry has generally taken the view that in enhancing India's export trade, industrial raw materials as well as agricultural produce have a definite and decisive role to play. The targets for agricultural production, set under the Second Plan, have now been revised upwards. The National Development Council is expected to study the financial aspect of the problem of raising agricultural output. It may be mentioned here that, in the augmentation of India's agricultural production, considerable emphasis is being placed on oilseeds, raw cotton and other commercial crops. It is possible that the new Commerce Minister, Mr. Morarji Desai, will emphasise the importance of sending more vegetable oils, short-staple cotton, pepper and other spices to foreign countries for the purpose of increasing India's foreign exchange resources. The demand for vegetable oils, spices, etc., in foreign countries continues to be good. There should be no difficulty in marketing some of these commodities if India is able to produce more. The Council is also expected to emphasise this point while asking the Government to direct its efforts in this particular direction.

Suez Crisis

Another aspect of the programme of industrialisation that is being constantly discussed in New Delhi is the impact of the Suez crisis on India's developmental activities. Although no clear or definite picture is yet available, it is felt that, because of the closure of the Canal for shipping, India's freight charges might go up by about 20 per cent. If this happens, then during the Second Five-year Plan period, India may have to pay an additional sum of Rs. 200 crores by way of freight alone. This will be an additional charge on the Plan outlay and the necessary money will have to be found. It remains to be seen whether this will spur the Government to fresh taxation. It is not possible to guess at present as to what types of additional taxes will be imposed and in what manner they will be imposed. Perhaps, the ensuing session of Parliament will be able to give some broad indications. The limelight of the coming session, which will meet here on 14th November will doubtless be stolen by the developments in Egypt. Much of the time is bound to be taken up in discussing several aspects of the Suez situation. Although it is certain that members of Parliament will insist on a detailed discussion of India's foreign policy, it is also likely that the economic implications of the Suez crisis will also loom large in the debates.

Notices

TENDER NOTICE

TENDERS ARE INVITED FROM ESTABLISHED foundries in India only for the supply of Forty Thousand Tons of Cast Iron C.S.T. 9 Sleeper Plates, Broad and Metre Gauge, to be supplied by 30th June 1957.

2. No raw material will be arranged by the Railways.

3. Applications for copies of tender documents should be made to the Deputy Director, Works, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 10th November 1956 onwards on any working day during office hours.

4. Tenders will be received up to 13.00 hours on 1st December 1956 and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

P. R. CHOPRA,
Deputy Director, Works, Railway Board.

NEW DELHI, *30th October* 1956.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

AT A MEETING OF THE BOARD OF Directors held on the 31st October 1956, the following Dividends were recommended to be paid for the half-year ended 31st March 1956, without any deduction for Income-tax paid by the Company:—

On 1st Preference Shares	8% per annum
On 2nd Preference Shares	4½% per annum
On Preferred Ordinary Shares	10% per annum
On "A" and "B" Ordinary Shares—	
Dividend at Annas 14 per share and a Bonus of Annas 4 per share.	

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

THE INDIA UNITED MILLS LIMITED

THE DIRECTORS OF THE COMPANY HAVE declared an Interim Dividend of Annas 10 (Annas Ten) per Share on Ordinary Shares and Anna 1 (Anna One) per Share on Deferred Shares, for the year 1956. This will be payable on and after Monday the 14th January 1957 to those Shareholders whose names stand on the Register of the Company on Saturday the 22nd December 1956.

The Share Transfer Books of the Company will be closed from Monday the 3rd December 1956 to Saturday the 22nd December 1956, both days inclusive.

By Order of the Board,
C. N. BENGALI,
Secretary.

BOMBAY, *25th October* 1956.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *7th November*

The last two weeks, which this report covers, witnessed very stringent conditions in the short-term money market. The large disbursement to the tune of Rs. 8.5 crores to textile workers in Bombay before *Diwali* and the heavy subscriptions to the issue of Guest, Keen Williams Ltd. deprived the market of all the available supplies, with the result that banks were unable to get their requirements from the market. They had, therefore, to seek, once again, temporary accommodation from the State Bank of India or the Reserve Bank of India. These factors, together with reports that higher interest rates were being offered in Calcutta, kept money rates firm. The volume of business was, however, extremely small.

Inter-bank call money was keenly bid at 3½ per cent., though some banks were reported to have offered slightly higher rate. House money at call fetched 3¼ to 3⅜ per cent. and short-term deposits 3½ per cent. for all periods from one to six months.

The Reserve Bank of India statement for the week ended 2nd November 1956, shows a sharp rise of Rs. 24.70 crores in notes in circulation. This is in distinct contrast to the decline of Rs. 10.65 crores noted in the previous week. Notes held in the Banking Department are lower by Rs. 25.45 crores, as against a rise of Rs. 12.06 crores a week before. The decline in total notes is thus of the order of only Rs. 75 lakhs, which is covered by a similar fall in rupee coin. There has, however, been a fall of Rs. 29.81 crores in foreign securities. This follows a decline of the same order in the week ended 26th October. As in the previous week, there has been a corresponding rise in rupee securities. In the Banking Department, a drop of Rs. 2.01 crores is noted in the Central Government's deposits (as against an increase of Rs. 1.24 crores in the previous week). For the second week in succession, there has been a sharp rise in deposits of other Governments, the aggregate increase being of the order of Rs. 41.35 crores. Deposits of banks have further risen by Rs. 3.48 crores. On the assets side, balances held abroad have gone up by Rs. 16.50 crores, bringing the aggregate rise for the last two weeks to Rs. 37.13 crores, thus making up partially the decline in foreign securities during the two weeks. Loans and advances to Governments have gone down by Rs. 3.82 crores. Other loans and advances are up by Rs. 11.38 crores in the week under review, of which advances to Scheduled banks against usance bills account for Rs. 3.13 crores. Fresh advances during the week against these bills have been of the order of Rs. 11.98 crores, but repayment of maturing bills amounts to Rs. 8.85 crores. Another notable feature is the sharp rise of Rs. 28.25 crores in investments.

Small variations in deposits of banks are disclosed by the Scheduled banks' statement for the week ended 26th October 1956, demand deposits having gone up by Rs. 85 lakhs and time deposits by Rs. 1.47 crores, the corresponding increases in the previous week being Rs. 10.64 crores and Rs. 63 lakhs, respectively. Inter-bank borrowings have also risen by Rs. 4.08 crores, while those from the Reserve Bank stand reduced by Rs. 3.43 crores. On the assets side, an increase of Rs. 92 lakhs is noted in advances, a fall of Rs. 61 lakhs in inland bills purchased and discounted and a rise of Rs. 1.93 crores in foreign bills. Investments have been reduced by Rs. 1.21 crores and cash balances by Rs. 2.05 crores. There has, however, been a rise of Rs. 4.26 crores in money at call and short notice.

There was a further setback in gilt-edged securities during the fortnight under review. During the major part of the period, the downward trend appeared to have halted, due to reports that the Reserve Bank had come forward to support a few loans. This trend proved short-lived, as the Bank's support was confined only to short-dated securities. There was, therefore, a revival of offerings in Central Government loans, which together with the persistent selling pressure in State and Corporation loans depressed sentiment. The undertone at the close was quiet.

3 per cent. 1986 Conversion Loan was marked down by an anna to Rs. 74-3. 3 per cent. 1959-61 was, however, unchanged at Rs. 97-15 and 3 per cent. 1963-65 at Rs. 94-5. 3 per cent. 1964 was nominally quoted at Rs. 94-8. 3 per cent. 1966-68 had sellers As. 2 lower at Rs. 92-6. 3 per cent. 1970-75 shed As. 4 to Rs. 88-12, at which level also it attracted sellers. 3½ per cent. 1962 was unchanged at Rs. 97-14, while 3½ per cent. 1961 was an anna better at Rs. 99-4. 3½ per cent. 1964 and 1965 dropped an anna to Rs. 98-7. Among State Loans, 4 per cent. Bombay loans were all marked down, 1963 and 1964 by As. 4 to Rs. 101, 1967 by As. 8 to Rs. 100-2 and 1970 by As. 2 to Rs. 99-12. West Bengal 4 per cent. 1968 shed As. 2 to Rs. 99-10. Among 4 per cent. Madras loans, 1963 and 1964 were marked down by As. 2 to Rs. 99-6 and 1968 by As. 3 to Rs. 98-11. U.P. 4 per cent. 1963 and 1964 sagged by As. 4 to Rs. 99-6, 1967 by As. 2 to Rs. 99 and 1968 by As. 5 to Rs. 98-10.

In the foreign exchange section, banks' selling rate of ready dollars was unchanged at Rs. 481¼ per $100, while their buying rate rose from Rs. 476¾ to Rs. 477¼ per $100. In terms of the Canadian dollar, however, the rupee ruled weak, the banks' selling rate of ready dollars rising from Rs. 495 to Rs. 497¾ per $100 and their buying rate from Rs. 489¾ to Rs. 492 per $100. In New York, sterling displayed a weakening trend, the spot sterling declining from $2.78¼-2.78⅜ to $2.78.3/16-2.78.5/16. Three months' forward fell from $2.77.1/16-2.77.3/16 to $2.76.9/16-2.76.11/16 and transferable sterling from 276.35-276.45 cents to 274.30-274.45 cents per $100.

BULLION MOVES UP

(From Our Own Correspondent)

BOMBAY, *7th November*

The bullion market presented a two-sided trend during the fortnight under review. During the major part of the period, bullion prices showed a sharp upturn, the bullish trend having been inspired by the political developments in West Asia and the usual pre-*Diwali* increase in demand. The rise in gold was particularly noteworthy, in that it took the price to the highest level for the last seven months. During the last three days, however, there was a reversal of the trend, following the United Nations General Assembly's call for a cease fire in Egypt and the quick slowing down of the crisis. There was a decline in offtake in both the metals, which affected the sentiment. On balance, however, both silver and gold ruled higher than a fortnight ago.

Silver for forward delivery (19th November settlement) advanced from Rs. 171-5 to Rs. 173-3 on 29th October. After a short-lived recession to Rs. 172-6, the bullish trend revived, lifting the price to Rs. 175 on the 1st inst. Subsequently, however, there was a retreat to Rs. 173-4 on the 5th and further to Rs. 172-14 today before closing at Rs. 173.

In the ready section, the good demand for the metal raised its (.996 Mint) value from Rs. 170-15 to Rs. 174-12, but the subsequent falling off in offtake from 25 bars to 15 bars per day resulted in the price dropping to Rs. 172-12 at the close today. The good demand in the ready section during the pre-*Diwali* week is also reflected in the narrowing of the discount, at which ready was quoted under forward, from As. 6 to As. 4. The floating stocks of silver are estimated at 1,400 bars. The daily average offtake during the fortnight fell from 25 bars to 15 bars.

Forward gold (17th November settlement) moved up from Rs. 103-7 to a high of Rs. 106-8 (the highest touched since 22nd March last) on the 2nd inst. Thereafter, there was a steady recession to Rs. 104-10 at the close today.

Ready gold gained from Rs. 103-9 to Rs. 106-14, before retreating to Rs. 104-11. The premium which the ready metal commanded over the forward widened from As. 2 to As. 6, but soon narrowed down to an anna today. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,200 tolas, while the offtake was 2,900 tolas.

In New York, silver remained unchanged at 91⅜c. In London, however, spot silver hardened from 80½d. to 81½d., a new post-war record, and forward from 79⅝d. to 80⅝d. Gold also moved up from 251s. 5½d. to 252s., but shaded off yesterday to 251s. 9½d.

The following comparative table shows the trend of market during the fortnight under review:

	7-11-56	Highest	Lowest	24-10-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	104 11	106 14	103 8	103 9

* 17th November settlement.
† 19th November settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, *7th November*

The steady trend noted in the sugar market two weeks ago gathered momentum in the past fortnight. Apart from the *Deepavali* demand for sugar, the operators were somewhat favourably influenced by the delay of 2-3 weeks in the commencement of crushing operations by the Bombay-Deccan sugar mills. The improvement in prices may not, however, persist in the coming weeks; one can even expect a downward trend. This expectation is based on the impending normal monthly release, scheduled to be announced on Monday next week. Moreover, there are reports of the sugar mills being eager to dispose of their old stocks before commencing crushing. The aggregate quantity of sugar now lying unsold with the mills is estimated at 550,000 tons. At this time last year, there was an unsold balance of 525,000 tons of sugar, but these included a very large quantity of imported sugar. The heavy stock position of indigenous sugar, coupled with the anticipated rise of over 2 million tons in the current season's production, thanks to good condition of cane crop, may exert a bearish influence on the trend of sugar market.

During the fortnight under review, spot large grain indigenous sugar advanced by Rs. 2 to Rs. 92-Rs. 101 per bag, following good buying support induced by festival demand. Medium grain improved by a rupee to Rs. 89-Rs. 91. Small grain gained a like amount to Rs. 89. British refined sugar rose by As. 8 to Rs. 90 per 2 cwts.

In the forward section, *Magsar* delivery contract for 'C' grade sugar put on As. 6 to Rs. 89-6. It was fully steady at this price today.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

COTTON FUTURES RECOVER

(From Our Own Correspondent)

BOMBAY, *7th November*

The bearish trend noted in the cotton futures market in recent weeks appears to be temporarily halted and prices have begun to look up, thanks to recent political developments in West Asia. Fair improvements were recorded by the market during the latter part of the fortnight under review. But it cannot be said that sufficient confidence has been gained so as to induce a sharp advance in values. There are till a number of factors which exert a bearish influence on the market. They are (1) the uncertainty over the announcement of an export quota and the possible revision of export duty owing to shipping difficulties following the outbreak of hostilities in the Suez Canal area, (2) accumulation of cloth stocks with mills and (3) prospect of a better crop this season. The dampening influence of these factors was also evident in the poor volume of *Moorat* business put through on the 2nd inst. In the spot market also, where *Moorat* trading was done on the 5th inst. turnover was only half the size of business, usually transacted on such occasions in the past.

M. G. Jarilla (March 1957) which opened at Rs. 649½, as against the previous close of Rs. 650½, declined further, on heavy selling pressure, to Rs. 636 on 26th October. But the flare-up on the Egyptian border induced a sharp advance in price and the contract shot up to Rs. 665½ on 31st October, as compared with the previous day's closing of Rs. 645½. Values eased again and after improving to Rs. 665 yesterday, the contract again declined to Rs. 657 today before closing at Rs. 662½. M.G. Vijay (April 1957) followed more or less the same course. Opening at Rs. 752 on the 25th October, it declined to Rs. 733½ the next day, before commencing its upward course, reaching the high of Rs. 769 on the 1st inst. After having fallen to Rs. 751 on the 5th inst., it again improved to Rs. 763 today, before closing at Rs. 760.

The following is the trend of prices of the two contracts for the period under review:

(In rupees per candy of 784 lbs.)

	7-11-56	High	Low	24-10-56
Jarilla (March) ...	662½	666½	636	650½
Vijay (April) ...	760	769	733½	752½

The rates on the day of *Moorat* trading were as follows:

	Jarilla	*Vijay*
Opening	659½	761¼
High	661	764
Low	650½	753
Closing	652	754½

The spot market at Sewri also ruled fully steady. Although earlier, an easy trend was in evidence, the political situation in West Asia induced a rise in price. Mills were not enthusiastic in buying. However, certain varieties, particularly Vijay attracted attention. In the export section, some inquiry was noted but uncertainty over the export quota announcement brought business to a standstill. It is reported that the first auction of East African cotton at Kampala would start on 13th November and would be subsequently held for five days during the month. The latest available rates (for new crop cottons)—in rupees per candy of 784 lbs.—from the spot market at Sewri are given below:—

Bengal *Deshi* 700; Berar Jarilla 750; Khandesh 785; Vijay (old) 925; Oomra *Deshi* 750; Moglai 750; *Delivery Contracts*: Khandesh 197-3 December 125; Berar 115; Moglai 45 'on' Jarilla; 320 F December 88; 216 F. 110; Vijay 13/16" February-March 100 'on' Vijay.

The Karachi cotton market ruled easy during the fortnight. The easiness was due mainly to lack of overseas demand, especially from West-European countries. Difficulties in shipping, due to the trouble in the Suez Canal area, have adversely affected export demand. China and Russia are reported to have shown considerable interest in certain varieties of Pakistan cotton. N.T.R.G. January, which had closed at Rs. 78-8, declined to Rs. 77-11 on the 5th inst. But a better trend was evident yesterday and it improved to Rs. 78-3. The March position, after having fallen to Rs. 76-15, advanced yesterday to Rs. 77-6. The spot section ruled steady during the period. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 95; Punjab *Deshi* 80; 4 F Punjab Roller 80-8; S.G. 81-12; L.S.S. Punjab Roller 80-12; S.G. 82-12; N.T.R.G. 82-12; S.G. 86-12; 289 F Punjab R.G. 83-12; S.G. 84-12.

Due to the fighting in Egypt, latest information from the Alexandria cotton market is not available. Compared to the closing rates of 23rd October, the market ruled easy till 31st October. Karnak November and January dropped 4 and 6 points respectively, while Ashmouni contracts also declined considerably.

The latest available rates—in tallaris per pound—from Alexandria are given below:

Karnak: November 110.10; January 107.25; March 105.65. *Ashmouni*: December 76.85; February 76.55; April 76.40.

Although earlier in the week an easy trend was in evidence in the Liverpool cotton market, values advanced sharply on outbreak of hostilities in West Asia. There was active short covering in both American and Sudan contracts due to fears of a hold-up in shipping through the Canal which, it was feared, would result in much delay in shipment of Sudan, East African, Indian and Pakistan cotton. But values were held in check by hedge selling. On the whole, it seems that developments in the Middle East were taken comparatively calmly by traders. There were good inquiries for most grades of U.S. cotton. Mill demand for both ready and shipment cotton continued to broaden. There was moderate turnover in East African,

Peruvian, Russian and Brazilian cotton. Indian Oomras also came in for business. The following are the latest available rates—in pence per lb.—from Liverpool: *American One Inch Staple Contract*: December-January 25.85; March-April 25.60; May-June 25.40; *American Cotton Mixed Growth Contract*: December-January 26.50; March-April 26.00; May-June 25.70; *Egyptian Karnak Cotton*: November-December 60.00; January-February 60.00; March-April 60.00; *Sudan Cotton*: November-December 55.80; January-February 56.00.

Values in the New York cotton market ruled more or less steady during the period under review. There was active selling by spot houses which was offset by trade and commission house buying. Nervousness over the West Asian situation induced some price fluctuations which, however, were limited to a narrow range.

The Commodity Credit Corporation sold, against bids received on 16th October, 466,922 bales of surplus Government-owned cotton. This brings the total sales to date to 4,633,660 bales. The average price was 26.29 cents per lb., basis middling 1" at average location and the minimum price for middling 15/16" at average location was unchanged at 25 cents per lb. It is reported that the U.S. Department of Agriculture has no intention of limiting C.C.C. sales to five million bales. There are still six million bales in the 1955 Loan to be taken over by the C.C.C. on 31st December.

The following are the latest available quotations from New York, as compared with those of a fortnight and three weeks before:

(In cents per lb.)

	5-11-56	23-10-56	16-10-56
Spot ...	34.45	34.04	34.45
December	33.84	33.85	34.00
March	33.90	33.96	34.17
May	34.01	34.03	34.13

RAYON YARN FORGES AHEAD

(From Our Own Correspondent)

BOMBAY, *7th November*

The yarn market has started the new year on a note of buoyancy. The past fortnight, including the *moorat* session, has witnessed hectic buying at enhanced values, although there was slight reaction today on news of cease-fire in Egypt. The bulls are holding the market in their grip, their enthusiasm to extend commitments having been whipped up by the West Asian crisis. Since the Suez Canal is practically closed for traffic, rayon yarn imports from the Continent have been greatly affected. It is feared that arrivals of imported yarn in the coming weeks would be not only less but also costly, on account of higher freight charges. Induced by these fears, traders are busy making purchases, while sellers are very much reserved with a view to taking advantage of scarcity in the next few weeks. Rayon yarn prices, as a result, have forged ahead. Today's closing rates are substantially higher than those a fortnight before. In sympathy with rayon yarns and on reports of limited stocks of 40 x 2 varieties in consuming sectors, staple fibre yarns are also ruling distinctly firm. The cotton yarn section, too, presents a cheerful appearance, thanks to better cotton prices.

Snia rayon yarn (120 dull cones) for December delivery jumped up by Rs. 30 to Rs. 655 in the *moorat* session before finishing lower at Rs. 764 today. October delivery which stood at Rs. 715 on 24th October was squared up at Rs. 730 six days later. Although business in February contract was commenced a week ago, no transactions have so far been reported. During the fortnight under review, spot 150 Japan registered a rise of As. 4-6 to Rs. 4-4. 120 Italy rallied As. 3-6 to Rs. 3-15-6. 120 Japan advanced by As. 2-9 to Rs. 3-14-6. 150 Italy hardened by an anna to Rs. 3-11-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade strengthened by As. 2 to Rs. 3-4-9. 120 Bt. cones 1st grade gathered 21 pies to Rs. 3-9-3.

In the staple fibre yarn section, 40 x 2 December position met with good buying support and jumped up by Rs. 14 to Rs. 615 in the *moorat* session. A further gain of Rs. 6 was added thereafter, so that the closing rate today was Rs. 621. Business in October delivery was terminated at Rs. 589 on the 30th October, as against Rs. 595 a fortnight ago. Spot 40 x 2 Kohinoors spurted by As. 2 to Rs. 3-10. New Greats and Centurys were both better by half an anna at Rs. 3-6. Citys put on three pies to Rs. 3-6. Among foreign yarns (80 x 2), Paramounts firmed up by As. 3 to Rs. 6. K'Suns rose by a like amount to Rs. 6-9-6. Fujis increased by As. 2-6 to Rs. 6-1.

Over the fortnight, cotton yarn prices were generally higher. Ten counts Moderns advanced by As. 2 to Rs. 15-2. Deals in 20 counts Moderns were put through higher at Rs. 19-5, as against Rs. 19-4. Among 30s, Maduras moved up by As. 8 to Rs. 24-4. Apollos were fully maintained at Rs. 22-8. Forty counts came in for business at enhanced prices, Minaxis advancing by Re. 1-8 to Rs. 29-4 and Moderns by As. 4 to Rs. 29-4. Among 60s, Raghuvamshis hardened by a rupee to Rs. 57-8. Moderns were better by As. 4 at Rs. 61-4. Eighty counts Moderns rose by As. 8 to Rs. 71. Mahendras were firm at Rs. 70-8.

Imports of rayon yarn into India during the month of October 1956 were lower as compared with the previous month (September), being 4.56 million lbs., as against 4.92 million lbs. Imports of staple fibre yarn were also less; they aggregated 77,073 lbs., which compare unfavourably with 88,122 lbs. a month before. The quantity of staple fibre imported, too, was very much less, being 2.19 million lbs., as against 2.77 million lbs.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those on the *moorat* day and a fortnight before:

	7-11-1956	2-11-1956 *moorat*	24-10-1956
	Rs. a.	Rs. a.	Rs. a.

80s Mahindra	70 8	70 8	70 0

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *7th November*

During the fortnight under review the oilseeds market ruled firm. During the first four days of the fortnight, the market was active mostly as a result of brisk buying by *vanaspati* producers and crushers, comparatively small arrivals of groundnut and persistent demand from overseas for castor oil. Subsequently the changed international situation and persistent bear covering gave further fillip to the upward trend. Weather conditions in the producing areas, such as Andhra Pradesh, South-West Madhya Pradesh, etc., also helped the upward trend.

A significant event that took place on the eve of *Deepavali* was the resumption of futures trading in cottonseed after an interval of 13 years. Trading was inaugurated on Tuesday, 30th October, by Mr. Chavan, Chief Minister of Bombay.

Murat trading took place on 2nd November. While all the oilseeds gained in the *murat* trading, castorseeds, May contract touched a new peak on that day.

Groundnut February 1957 contract which closed at Rs. 128-14 a fortnight ago, jumped up to Rs. 136 on 31st October, and further advanced to Rs. 138-12 at the close today. It thus increased by Rs. 9-14, during the fortnight. In the spot section, December-January put on no less than Rs. 1-13 at Rs. 27-10 during the same period. Khandesh Quality ready increased by Re. 1 to Rs. 33-12. Groundnut oil ex-mill was quoted As. 6 higher at Rs. 19-2 and railway receipt rose by As. 6 to Rs. 18-12.

Linseed May 1957 contract improved similarly by as much as Rs. 1-4 to Rs. 27-4 during the fortnight under review. In the spot section, Bold ready was As. 10 higher at Rs. 31-14. February March also improved by Rs. 1-4 to Rs. 28-14. Linseed oil ready was done As. 6 higher at Rs. 17-12.

Castorseed May 1957 contract made a spectacular jump from Rs. 131-4 a fortnight ago to Rs. 141-6 today, gaining thereby no less than Rs. 10-2. In the spot section Kanpur improved by Rs. 1-4 to Rs. 29-4. Oil B.S.S. at Rs. 18-10 reflected an increase of As. 8, and Oil Commercial As. 11 over the fortnight.

Cottonseed February 1957 contract, trading in which commenced on 30th October, was quoted at Rs. 78-4 at the commencement. On the same day, it closed at Rs. 82-4. It spurted further subsequently and closed today at Rs. 85-5.

Among other seeds, over the fortnight, Kardiseed Bold ready did not reflect any change, while February-March was As. 8 higher at Rs. 16-4. Nigerseed ready and Madras were respectively at Rs. 26-12 and Rs. 27.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	7-11-1956	24-10-1956	17-10-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

BLACK PEPPER ERRATIC

(Messrs. Parekh & Co.)

BOMBAY, *7th November*

Erratic tone was witnessed throughout the week in Malabar black pepper, with prices moving either way on occasional bouts of selling and buying, following the news received from time to time from the Middle East. There being no notable short sales, pepper did not show so wild a fluctuation as other commodities, the prices of which were lifted mainly owing to pressure of short-covering. The highest and the lowest at Alleppey were Rs. 732½ and Rs. 675, respectively. Cochin, after touching Rs. 126, came down to Rs. 119 in the wake of report of cease-fire in Egypt. Singapore, after showing hectic rise of nearly Str.$8 within a day, came down from Str.$90 to Str.$82. New York spot touched the highest at $0.32 but is now barely steady at $0.31 without interest from grinders. The dealers in the U.S. are not following up the rise in the primary market, as there is still pressure of sales of unsold consignments by weak holders. A consignment of about 300 tons of Lampong Black shipped by the Indonesian exporters is reported to be exerting pressure on the spot market.

Reports of cease-fire seems to have imparted a sober tone and prices are receding, with sellers for November shipment for Malabar Black at $0.27½, while buyers are difficult for December and Jan.-Feb.-March shipments even at $0.27.

In the delivery section, December touched Rs. 640 but came down later to Rs. 615 with small interest. Both buyers and sellers being cautious, turnover was restricted.

With prospect of new arrival in the near future, the tendency for Malabar Black at present appears to be uncertain. Prices are likely to go down when pressure of new arrivals will be felt in the terminal markets, as there are no worthwhile forward sales in the overseas markets by way of hedge. But, with any deterioration in the Middle East, it is likely to swing in the opposite direction both here as well as in the consuming countries, as shipments for the last two months are smaller and there are no forward purchases by the grinders.

Following are today's nominal quotations: Ready delivery Rs. 90 per Bengal maund, December delivery Rs. 610-Rs. 615, February delivery Rs. 616-Rs. 621 per candy of 5½ cwts.

FAIR DEMAND FOR TEA

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, *2nd November*

Although there were approximately 1,300,000 lbs. advertised for Sale No. 29, only 600,000 lbs. came up for auction. This was due to teas being sold by private treaty before the sale, due to the possibility of an increase in export duty for the month of November. The quality of teas on offer did not show much change on the previous sale. There was only a fair demand and low medium and medium descriptions were As. 2 to As. 3 easier. Good medium and better liquoring teas were As. 4 to As. 6 lower. Whole leaf grades had good demand at lower rates. The following are the quotations:

	1956 Rs. a. p.
Plain B.P.	1 9 6
Low medium B.O.P.	2 0 0
Medium B.O.P.	2 3 0
Good B.O.P.	2 14 0 nominal
Well made black leaf O.P. ...	2 9 0

London Market: Sale of 29th October 1956:—Irregular. Three pence dearer.

Sale of 30th October 1956:—Plain firm. Others easier.

Colombo Market: Sale of 29th October 1956:—Black leaf irregular slightly easier. Others firm to dearer.

Sale of 30th October 1956:—Active and dearer. All useful liquoring tea low-grown and plain U.V.As. lower.

Calcutta Market: Export:—Except for better liquoring types, whole leaf grades and thin liquoring mediums, market started strong to dearer, but weakened as sale progressed.

Internal:—19,000. Fair general demand. Weakened towards close. Best C.T.Cs. one to two annas easier. Remainder As. 2 to As. 4 easier. Middle East As. 2 to As. 3 easier. Leaf 1,800. Fair demand. Irregularly easier rates.

Export Quota:—During the week the market dropped from 36 pies to 27 pies, at which figure a fair amount of business has been done. At the time of writing, there are limited buyers at 27 pies.

Forthcoming Auctions:—Sale No. 30 will be held on Tuesday, 13th November and Dust Sale 'V' on 6th November.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale V*:—600,000 lbs. Good general demand. Very strong and dearer at the bottom, but good liquoring medium and best irregularly As. 2 easier. Medium sorts of good appearance fully firm to one anna dearer."

JUTE BUOYANT

(From Our Own Correspondent)

CALCUTTA, *6th November*

Influenced by the Middle East situation and by the subsequent refusal of Britain to accept the U.S. resolution calling for an immediate cease fire, jute markets reached a state of buoyancy by the time the week under review came to a close. The opening was on quiet terms, but prices gradually rose as the series of news of the changing situation in the Suez Canal area came one after another in quick succession. Overseas buyers began increasing their commitments overnight, as they naturally desired to have more stocks fearing a prolongation of the war which is now confined only to a limited sphere. Speculators were naturally active. To add momentum, there was the report of increased interest being shown by the United States. The lockout in the three mills in the Shamnagar area continued as no settlement between the labour and the management has so far been arrived at over matters which dislocated work in these mills a couple of weeks ago. Production during the month of October was lower, and, with a slight improvement in shipping, stock figures, when released, would add to the force of the present bullish trend.

The report that during the month of September burlap consumption in the United States fell to 80 million yards from 83 million yards and that stocks at the end of September were higher by 1 million yards failed to have any adverse effect in Calcutta, in view of the uptrend for causes stated above. The different constructions of raw jute also rose sharply, and mills bought heavily. As a result, sellers' quotations were final and stockists refused to listen to counter-bids. Those who had commitments to fulfil with mills rushed to the market and made purchases at prices which were higher than the rates contracted. Prices in the mofussil area were higher than the Calcutta rates, and the first reaction in the Dacca export market to the Anglo-French action in Egypt and the blocking of the Canal was an increase in raw jute prices by £3 per ton *c.i.f.* London and the Continent. There were reports during this week that some of the dealers, who had entered into commitments to supply Daissee jute (the best produced variety in India), were supplying the real Daissee mixed with other varieties, prices of which were lower by Rs. 2 as compared with those of the real Daissee. This resulted in a rise in the price of real Daissee by a further Rs. 2 per maund, in order to maintain the difference in prices between Daissee, and Tossa, Jungli and Western varieties parading as Daissee.

After a quiet opening on Tuesday last, jute goods firmed up as reports about the deteriorating situation in the Suez Canal area came in. From Rs. 115-10, ready B. twills advanced to Rs. 117 and ready 40" 10 oz. hessian improved by As. 8 to Rs. 42-12. The advances attracted fresh buying by overseas buyers and speculators. Business was done by mills at the increased rates, and on Wednesday ready B. twills hardened further to Rs. 118-10 and 40" 10 oz. hessian to Rs. 43-14. Thursday was closed on account of *Kali Pooja*, and on Friday mills reported fair business. On account of *Diwali*, the Fatka market was closed on Friday and Saturday. It was on Friday the market reached almost a state of buoyancy, and B. twills were quoted at Rs. 119-8 and 40" 10 oz. hessian at Rs. 44-8. There was a pause over the week-end, and this caused a slight recession in prices on Saturday, ready B. twills sagging to Rs. 118-8 and 40" 10 oz. hessian to Rs. 44-4. Forward positions in B. twills were quoted at a premium. Following speculative selling the recession continued yesterday also with the ready 40" 10 oz. hessian being marked down at Rs. 43-14 and ready B. twills at Rs. 117-4.

Mills gave active support to the raw jute market. In view of the rising nature of prices, sellers were naturally inclined to sell as little as possible. From Rs. 30-8 local Daissee bottoms rose to Rs. 32. Upper Assam bottoms were done at Rs. 31-8, as against Rs. 30 earlier. Cuttings fetched Rs. 130 per bale. Trade circles have continually felt that there can be no stronger cause for Pakistan to revise the high export duty on raw jute than the Indian disinclination to support the Pakistani prices which are higher. However, this has so far not made the authorities think on realistic terms by reducing the export prices and the duties. Now comes the report from Sweden that the Swedish textile workers have sought protection for their jute goods from the lower-priced Indian imports. This is a clear indication that higher prices in Pakistan for the raw fibre are not only causing renewed attempts in India to increase jute output but contribute indirectly to make the Indian goods cheaper in world markets. Although both these developments are good to the jute industry, the broader interests of the jute industry taken as a whole both in India and in Pakistan require a realistic approach by the authorities in Pakistan to making raw jute prices sufficiently attractive.

TEA PRICES HARDEN

(From Our Own Correspondent)

CALCUTTA, *6th November*

The turn of events in the Middle East after Britain and France started hostile operations against Egypt and the blocking of the Suez Canal by Britain sinking an Egyptian ship were the main factors for the bullish trend in the export tea sale held yesterday. Last week's auctions for both export and internal consumption had shown that demand was beginning to decline, but the worsening of the international political situation following the troubles in Hungary and over the Suez Canal was responsible for improving the sentiment of bidders.

British buyers are expected to lift more and more quantities as stocks in British warehouses as on 19th October represented only about 10 to 12 weeks' consumption. It should be noted that, during the sale on Wednesday last in London, prices advanced strikingly. Export demand, especially from the United States, was a feature which should have been prompted by the delays new shipments were bound to suffer as a result of diversion of the shipping route via the Cape. During the sales held in Colombo on Tuesday last, it was reported that buyers on behalf of the United States, Australia, South Africa and the United Kingdom were keen bidders.

The trade and industry owe their grateful thanks to the Government of India for accepting their earnest plea not to increase the tea export duty which would now remain at As. 6 per lb. throughout the month of November. Presumably, New Delhi would take up the question of revision by the end of this month. For the one-sentence announcement of the Ministry of Commerce and Consumer Industries does not say anything about the trade demand on New Delhi to accept the Plantation Inquiry Commission's recommendation to fix the export duty after taking into consideration London prices for a period of six months and not for one month. In view of the Egyptian situation and the increased demand for tea, all consuming countries would naturally build up their stocks and London prices are bound to pick up further in the coming weeks.

Reports from the Upper Assam area indicate that meagre space has been provided by the North Eastern Railway authorities for carrying tea to Calcutta auctions. As a result of this, there has been heavy accumulation of tea in several gardens, and there is a strong case for the railway to provide more wagons. In accordance with the direction of the Calcutta Tea Regulation Committee, destruction of tea unfit for sale in Calcutta auctions has commenced.

During the internal sale held on Tuesday last, dusts offerings amounted to 18,949 chests. As the fair general demand noticeable at opening petered out as the sale progressed, prices were subjected to substantial declines. Medium C.T.Cs gave way by As. 2 to As. 4, the poorer sorts by As. 3, the best liquoring C.T.Cs by an anna to As. 2, non-wither Dooars by As. 2 to As. 3, and Assams of orthodox manufacture by As. 2 to As. 4. Black teas suitable for export also lost by As. 2 to As. 4. The quotations were: medium Assam grainy Rs. 2-3, best Assam C.T.C. Rs. 2-14, Assam C.T.C. Rs. 2-8 to Rs. 2-9, and medium Dooars Rs. 2-3.

Leaf grades totalling 1,617 packages met with support at irregularly easier rates

During yesterday's export auctions, offerings amounted to 56,200 packages. There was strong demand and prices advanced. The best features of the sale were low medium and clean common kinds, the prices of which improved by As. 2 to As. 3. Particular attention was paid to B.O.Ps and black leaf fannings. Good support was given to non-wither Dooars which rose by As. 2. A steady trend was in evidence in medium Assams of orthodox manufacture, medium B.P.s, and fannings. There was less demand for the high-priced C.T.Cs but the other lots of this category sold well. As a result of keen competition, prices of well-made whole leaf grades and stylish B.Ps rose As. 2 above brokers' valuations. However, the high-priced B.O.Ps were As. 2 lower. In common with the rest of the market, Darjeelings were also fully steady. The quotations were: best C.T.C. Assam B.P. Rs. 3. clean black pekoe Rs. 2-2 to Rs. 2-3, medium Assam B.P. Rs. 3-3, and clean B.P. Re. 1-14 to Re. 1-15.

There was an improvement in the quotation for export quota rights per lb. From 27 pies the rate advanced to 29 pies and business was done at 28 pies.

LINSEED STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, *5th November*

Steady conditions prevailed in the linseed market during the week. Some small transactions were recorded daily, chiefly for ready and near positions. Arrivals were very scarce and sellers were reserved, whilst crushers displayed keen interest, owing to better enquiries for linseed oil. Fresh overseas business was, however, still at a standstill.

The latest quotation for Ready-November is Rs. 24-2 per maund.

HIDES BULLISH

(From Our Own Correspondent)

MADRAS, *6th November*

The kip market is excited, because E.I. tanners expect that prices would improve considerably, if large-scale military operations take place in the Middle East. Several steamers have been diverted *via* the Cape of Good Hope, and freight rates have been increased by 15 per cent. with effect from tomorrow. If U.K. buying is slow and shipping facilities are poor, price increases may not materialise and E.I. tanners would be disappointed. At present, sellers of hides and skins are reserved and are quoting fantastic prices. The market is bullish and will take a week to settle down to reasonable trading level.

Arrivals of hides and skins are small, due to rains and stocks in the market are not large.

HIDES BUOYANT

(From Our Own Correspondent)

KANPUR, *4th November*

During the week under review, the hides and skins market ruled buoyant. Although supply of fresh goods was considerable, there were keen enquiries for good quality cow and buff, induced by Soviet demands for high class footwear. The demands were met mainly by Kanpur and Agra parties. The main purchasers of goods were Messrs. Cooper Allens. Madras dealers were lukewarm during the week.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 270 and 3rd grade Rs. 140 to Rs. 160 per score; wet salted buff 1st grade 1 lb. 12 ozs. to 1 lb. 13 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep 1st grade Rs. 350 and 2nd grade Rs. 250 per 100 pieces.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *5th November*

Quiet conditions prevailed in the foodgrains market during the week. Supplies of wheat in the market were plentiful, following increase in the number of fair price shops opened by the Government. The Government has now opened fair price shops in rural areas also where wheat is being sold at the subsidised rate of three *seers* per rupee. Great storage facilities for storing and preserving permanent reserve of foodgrains are being made at Hapur where a silo-*cum*-elevator type of structure with a capacity of 10,000 tons is to be erected very soon. In addition, bag storage structure with a total capacity of 15,000 tons is also planned.

Average quality wheat eased slightly to Rs. 14-12 per maund, and although local arrivals were small at an average of 100 maunds daily, most of the demand was met by fair price shops, the sales of which increased to an average of 350 maunds daily. Local wheat stock ran down by two *khaties* during the week to 73 *khaties* estimated today, as against 118 *khaties* a year before. Farm quality, however, ruled steady at Rs. 16-4 per maund, due to consumer buying enquiry in the face of poor arrivals.

Rice also ruled quiet during the week. There were increased arrivals of new crop in the market. The prevailing prices as on Monday were: *Basmati* Rs. 23 to Rs. 28-8; *rangooni* Rs. 20; *manipuri* Rs. 19-8; coarse quality Rs. 15-8.

Gram was much in demand during the week. The week's offtake at 6 *khaties* was mostly at unchanged price level, due to heavy stock position at 115 *khaties*, as against 35 *khaties* only at this time last year. Barley and *bejhar* recorded sharp gains during the week, due to good demand in the face of poor stock position. With the beginning of the arrivals of the new *bajra* crop in the market, maize recorded a slight fall, on account of the division of consumer demand in both these cereals. The latest prices as on Monday were: Gram local Rs. 12; Punjab produce Rs. 12-6; barley Rs. 12-12; *bejhar* Rs. 12-4; *maize* Rs. 11-12; *jowar* Rs. 13; *bajra* Rs. 13; and *guwar* Rs. 9-12 per maund.

The demand for peas and *arhar* was mostly in the form of pulses, but prices continued steady during the week at unchanged levels. Peas *dara* green was transacted at Rs. 12-6 and white quality at Rs. 13-4. The local stock was put at 42 *khaties*. *Arhar's* offtake during the week aggregated 7 *khaties*, which reduced the local stock to 79 *khaties*, at unchanged price level of Rs. 12-8 per maund. Prices of other pulses also ruled steady. *Urd* was quoted at Rs. 17 to Rs. 19, *moong* at Rs. 14-6 and *masoor* at Rs. 16-12 per maund.

Pulses futures recorded sharp gains in the earlier part of the week on bull support, influenced by war in the West Asia, but most of the gains were lost towards the week-end, due to profit realisation at the highest levels. The latest quotations as on Monday were: Peas: *mangsir* Rs. 11-13-9; *jeth* Rs. 9-12-6; white *mangsir* Rs. 11-15-6 and white *jeth* Rs. 10-3-9; *arhar: mangsir* Rs. 12-3-3 and *jeth* Rs. 10-9-6; *urd maha* Rs. 16.

SUGAR DULL

(From Our Own Correspondent)

HAPUR, *5th November*

The sugar market continued dull and quiet, despite slightly better trade enquiry due to festive season. The supply position is easy, thanks to heavy accumulated stocks with factories aggregating 625,000 tons. A substantial section of sugar factories in the State of U.P. has decided to start crushing earlier in response to the Government's offer to compensate them for the resulting cut in their return. Despite dislocation in road communications in west U.P. due to unprecedented rains, most of the factories in the areas have begun cane-crushing operations. It is expected that the State's sugar factories, numbering 67, will be in a position to crush as much as 295 million maunds of cane, as against 277 million maunds last year.

The latest mill delivery prices of sugar here are: Jaswant Rs. 27-14; Simbhauli Rs. 28-4; Mawana Rs. 27-6 to Rs. 28-4; Daurala Rs. 28 to Rs. 29-4; Amroha Rs. 27-4; Bijnore Rs. 27-4; Mansoorpur Rs. 27-10 to Rs. 29-4; Rampur Rs. 30-4; retail Rs. 30 per maund.

The *khandsari* market was dull with little trading. The new season will start after a month. Prices vary between Rs. 22 to Rs. 26 per maund, according to quality.

With increased arrivals to 2,000 maunds put today, ready new *gur* lost a rupee per maund. Outside demand was not very active at high prices. Old stock was fast dwindling and was estimated at 8,000 maunds. Dry quality was transacted at Rs. 11 and new quality at Rs. 12 to Rs. 14-8. After an early spurt on war news in West Asia, future *gur* touched the highest at Rs. 16-8-3, as against the week's opening at Rs. 9-14-3, but later declined and on Monday was quoted at Rs. 10-3-9.

MANCHESTER LETTER

(*Concluded from page 885*)

will ever return, irrespective of the entirely different price levels now ruling.

A report lately issued on the world's futures markets compiled by the United States Council of the International Chamber of Commerce, contends that the chief obstacles are exchange controls, price and import regulations and direct Government intervention. Few traders connected with this type of business will argue with these findings.

In some quarters a move is being canvassed to promote a meeting of the leaders of the various cotton exchanges. Joint action by a representative body consisting of delegates from New York, New Orleans, Liverpool, Bremen, Havre, Alexandria, Karachi and Bombay might not prove possible but discussions on the mutual problems which are facing all these exchanges in different countries could do little harm. To be truly effective such a conference would need to be attended by members of the economic branch of the Government of each of the countries represented.—*All Rights Reserved.*

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. F.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend or first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. ‡ Less income-tax. (a) Ords. ills have paid dividend at As. 0½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments. (l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,80,000 shares are bonus shares. (s For seven months ended 31st March 1954. † New Central Jute Mills—Dividend for 1955 is on shares of Rs 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 in to shares of Rs. 10 each.

BANKING

(*Concluded from page 883*)

was faced with the problem of building up its economy and banks had their own role to play in this task. The part played by the Bank of India was by no means small. Within five years from the cessation of war, there was again a change in the economic climate of the world. The post-war boom having spent itself, a set-back in economic activity set in, followed soon by the Great Depression of 1929, as a result of the collapse of the U.S. economy. Although it took a little longer for the effects of this depression to be felt in India, the Bank was able to weather the storm well, but not without its profits being affected. A few years later, when banks were able to shake off the effects of the depression, the Second World War broke out in 1939, which created more acute problems, including the war-time and post-war inflation. The war and post-war years, no doubt, helped banks build up their deposits and emerge stronger. The years 1948 and 1949 were of great significance to the banking world, inasmuch as they witnessed the nationalisation of the Reserve Bank of India and the enactment of the Banking Companies Act, which gave wide powers to the Reserve Bank to regulate, control and inspect all banks in India. The year 1951 opened a new chapter in the economic history of the country with the inauguration of the development plan on a five-year basis. The nationalisation of the Imperial Bank of India in 1955 and of life insurance business in 1956 was of no small significance to the banking world, in that it created a not unnatural fear that banks also would be n

Germany. Its capital will amount to 102 million marks (£8,400,000). Luxemburg will provide two million marks (£160,000), while France and W. Germany will equally share the rest. Navigation fees on the Moselle will, in principle, be equivalent to those on the German rivers Main and Neckar. Details of the navigation fees and control of navigation will be in the hands of the Moselle Commission of French, W. German and Luxemburg representatives. Its seat also will be at Trier.

The Saar Pact and the two other treaties signify a welcome development on the West European economic front. They serve to emphasise the fact that, given goodwill and an attitude of "give and take" on the part of the parties to a dispute, economic adjustment can be ensured to the satisfaction of both.

MARKET GOSSIP

(*Concluded from page 875*)

debenture loan carrying a fixed rate of interest. There are also other methods of corporate financing, but these are not common in India. Even the issue of debenture capital has been less in vogue in recent years. The Indian Aluminium Company Ltd., has, however, hit upon a new and interesting method of raising funds from the public by offering convertible loan stock to its shareholders. The Company, it may be noted here, had issued new ordinary shares (411,000 shares of Rs. 10 each at a premium of Rs. 2-8 per share) only very recently. Apparently, it does not want to enlarge further its equity capital immediately. The issue now proposed was, however, not unexpected; for the Chairman of the Company had already given an indication of it in his speech at the last annual general meeting.

The Company proposes to issue convertible loan stock amounting to Rs. 2,68,13,200 and carrying interest at the rate of 5 per cent. per annum. The loan stock will, in the first instance, be offered to the existing ordinary shareholders on the basis of Rs. 200 nominal value of the stock for every 15 shares held. The stockholders will have the option to convert every Rs. 200 nominal value of the stock into 15 fully paid ordinary shares at any time up to 15th December 1957; into 14 shares during the period from 1st January 1958 to 30th June 1960, inclusive; and into 12 shares during the period from 1st July 1960 to 15th December 1970, inclusive, after which date the option to convert will cease. On 2nd January 1971, and on the same date in each succeeding year, the Company will redeem at par stock amounting to Rs. 25 lakhs per annum until the entire stock is redeemed. The Company has, however, the option to redeem at par all or any of the stock outstanding at any time after 31st December 1970, after giving three months' notice. If the Company elects to redeem a part of the stock, the part to be redeemed will be selected by drawings. It will redeem at par the whole or any part of the outstanding stock on 2nd January 1981.

The proceeds of the issue will be utilised to finance the construction of an aluminium smelter at Hirakud in Orissa. The initial capacity of the smelter is 10,000 tons of aluminium ingot per year. It is capable of being expanded to 20,000 tons or more per year. The project is expected to be completed by the end of 1958.

A feature of the terms of the issue is that the stockholders have sufficient time to watch the progress of the Company during the next one year, as also its financial results for the calendar year 1956, due to be published some time in March-April 1957, before deciding to convert their holdings of stock into ordinary shares. In the meantime, they are assured of a fixed and fair return of 5 per cent., albeit taxable. Even if they chose to convert after 15th December 1957, the terms, namely, the diminishing number of shares which they will get, are not unreasonable, considering the prospect of an impressive increase in the earning capacity of the Company.

The Company's results for 1955 showed a substantial improvement over those for the previous year, with the result that the Company was able to resume dividend on its ordinary shares, after a break of two years, with a distribution of 9 per cent. per annum. Its working during the current year is expected to be more encouraging, in view of the fact that the full benefit of the increased capacity of the Alupuram smelter is available this year, and the Company can be expected to maintain the dividend, if not increase it. The current market value of the Company's shares is Rs. 15-14, giving a yield of 5.67 per cent. per annum. It may be noted here that, if a shareholder who takes up the debenture-stock decides to exercise the conversion before the first specified date, he will get the new equity at the rate of Rs. 13-5-6. If an investor wants to take advantage of the proposed offer, he will have to buy from the market 15 shares for every loan stock of Rs. 200, which will later on yield another 15 shares on conversion, if made before 15th December 1957. This means in all an investment of Rs. 438-2 at the current market value of the Company's shares, namely, Rs. 15-14 per share. The net cost of each share will then be about Rs. 14-10, at which rate and on the basis of the last dividend the yield works out to a little over 6 per cent.

After the Hirakud project comes into being, the earnings of the Company should be substantially higher. The proposed convertible loan stock thus combines the attraction of a secure rate of return over a number of years with the option of conversion for possible greater returns or capital appreciation which one can legitimately expect from the equity of a growing and expanding industrial enterprise.

ECONOMIC EFFECTS OF CRISIS IN WEST ASIA

ALTHOUGH the end of the political crisis in West Asia is not yet in sight, the respite on this front makes it possible to attempt a sober assessment of some of its economic effects. That the crisis would certainly lead to disruption of the traffic in this vital waterway, the Suez, which connects no less than three continents had been known before. Only, the actual events have served to bring out more clearly how important it is that the Suez Canal must be restored to normalcy and world traffic allowed to pass through it with minimum delay. Whatever might be the political aspect of the problem—we do not say that it is less important—the interests of the economies of world trade demand that all countries should strive to make the Canal both fit and safe for navigation.

How soon the Suez can be rendered physically fit for navigation—apart from the administrative, political and other questions involved—will depend on the speed with which the ships which have been sunk in the Canal are removed. The removal of sunken ships is an expert's job. And it will be a considerable time before this job can be completed, in view of the fact that no less than 20 ships—some put the number at a higher level—are believed to be blocking the Canal. One estimate puts the time that may be required for clearing the Canal at a minimum of three months. Perhaps, it may take more. Much will also depend on what the ships were carrying at the time they were sunk. If they were carrying concrete, for instance. it would be difficult to clear the Canal speedily.

The immediate impact of the West Asian crisis has been felt by Western Europe, though, in an indirect way, it is shared by many countries in all continents. There is, first of all, the direct cost of the Suez operations to the two European countries, the U.K. and France. The U.K. Minister of Supply, Mr. Reginald Maudling, revealed, in the course of a debate in the House of Commons this week, that the expenditure in the financial year 1956-57 falling on the Exchequer as a result of intervention in West Asia was not likely to exceed something between £35 and £45 million. The Opposition party in Britain believes that this is an underestimate. No estimate of the cost of the Suez operations to France is yet available. But it may be of the same order as Britain's. The direct cost of the Suez operations is, however, only one aspect of the economic impact. Another aspect of this event is the effect on imports and exports of W. Europe as a whole. Imports of raw materials to W. Europe, which pass through the Suez, have been affected adversely. Exports have, of course, suffered in two ways. In the first place, exports of manufactures have now to be sent along the costlier round-the-Cape route. Secondly, export industries, in so far as they are dependent upon raw materials coming from East of the Suez, will find it difficult to stick to their production schedule. No recent statistics about the stocks of raw materials are available. But, in the U.K., stocks of tin, lead and rubber, at the end of August 1956, were sufficient to last the country for less than two months. stocks of raw wool for less than four months and tea stocks for less than three months. Assuming that this level of stocks has been maintained at the beginning of the Suez crisis, it should be clear that, if the Suez Canal were not restored for traffic in the next two months, Britain would be compelled to import more and more of its requirements through the longer Cape route which would, of course, mean both delay and higher costs. Indeed, this is the position of W. Europe as a whole.

Further, it must be noted that, both for exports and imports, the cost of transport through the Cape route is certainly higher than that of the Suez Canal route, even after making allowance for the fact that no Canal dues are to be paid. It has been estimated that the additional cost of operating a vessel of 10,000—13,000 tons from the U.K. to India round the Cape is of the order of £27,500. Earnings in a voyage to India might come to £135,000. Freight rates have recently been increased by 15 per cent. But it will be seen that the increase in freights hardly covers the additional costs of operation. In other words, there is the possibility of a further increase in freight rates in the event of any continued closure of the Canal. Indeed, the freight rates in the tramp shipping market, which reflect the supply and demand position more accurately, have been rising very rapidly. Tramp freight rates are about 25 to 30 per cent. dearer than those quoted by Conference ships. Transatlantic coal freight rates, for instance, are reported to have touched a peak of 89s. per ton for November shipment. An interesting feature of the tramp freight market is that many charterers are unwilling to arrange tonnage at present rates for periods very far ahead. Presumably, this is due to the fact that they expect the rates to go up further. This is of particular relevance to countries like Britain which are net importers of tramp tonnage. For an increase in tramp freight rates will mean a drain on the economies of the countries concerned. An allied problem is that of invisible income. Many countries will find that invisible earnings will diminish, notably the earnings from tourism.

The most important of the economic effects of the Suez crisis is undoubtedly the reduced supply of oil from the Middle East. World output of oil is of the order of 800 million metric tons, of which the U.S.'s share is 46 per cent., Canada's 2.2 per cent. Venezuela's 14 per cent., Russia's 8.8 per cent. and Middle East's 20 per cent. Europe, it is estimated, imports about 125 million tons of oil a year, of which about 60 million tons pass through Suez, 35 million tons from the eastern Mediterranean pipeline terminals and 30 million tons from the Western hemisphere. The continued blocking of the Canal, together with the damage to some of the pipelines caused by sabotage, have already been a source of serious concern to Europe. The U.K. Government has just decided to cut oil consumption (estimated at about 20 million tons annually) by 10 per cent. The oil companies are being required to reduce deliveries to their customers to 90 per cent. of what they would normally have supplied. The 10 per cent. cut, it is stated, will not apply to certain essential services, including public passenger transport. It is, however, believed that the cut will not adversely affect industrial production. But the Government has announced that, if the Suez Canal remained blocked for some considerable length of time, more stringent measures might be necessary. Sufficient coupons, it is stated, have been printed, in order to facilitate the introduction of petrol rationing, if the necessity for rationing should arise at all. Rationing or restrictions on consumption of oil are also contemplated in a number of European countries.

The U.S. is in a position to relieve the European oil shortage to a considerable extent. It would appear that Texas, which accounts for about one-fifth of world oil output, could increase its production rapidly. The U.S.. on the whole, should be able to increase its production by 75 million tons. If all this additional production could be diverted to Europe, it would of course mean an immense relief to the Continent. But there are some difficulties. For one thing, in the U.S. itself, there are pipeline bottlenecks which render rapid increase in oil output difficult. Secondly, there is the difficulty of transport. There is, it is stated, more oil available in the U.S. than there are tankers to carry it to Europe. New tankers are no doubt being built in the world's shipyards. The total tonnage of oil tankers on order from the world's shipyards at the end of June 1956, is estimated at 20 million. But most of this tonnage is due to be delivered by 1960-61. In the immediate future, transport, and not supply, is the more important problem in oil.

In any case, American oil, it cannot be too strongly emphasised, has to be paid for in dollars, a scarce currency. This means almost a double disability for the sterling area. The sterling oil companies have no oil to sell for sterling, so that they earn no foreign exchange for the sterling area at present. In addition to this loss, dollars have to be found for meeting the oil requirements of the sterling area. This development has come at a time when the balance of payments position of many members of the sterling area is by no means very comfortable. India, Pakistan and Ceylon are all in urgent need of more foreign exchange than they are able to earn. Further, the closing months of a calendar year generally witness a sizable demand for many sterling area commodities. But the countries which produce them may find it difficult to reap the full advantage of this demand, thanks to the transport and other difficulties arising out of the Suez crisis. The sterling area's gold and dollar reserves at the end of October 1956, slumped to $2,244 million from $2,328 million at the end of the previous month. The end-October level is the lowest touched since February this year. Although the shooting war in the Suez crisis took place only towards the close of October, it is believed that the general uncertainty brought about by the crisis was one of the factors responsible for the fall in reserves. The end-November figures are bound to show a further fall in reserves, for they will reflect the full impact of this unfortunate little war.

To India, the crisis precipitated by Britain, France and Israel has a painful economic significance. This country's fortunes are closely bound up with the progress of its economic development programmes. But these programmes are bound to suffer as a consequence of the closure of the Suez Canal to traffic. Its export trade will be retarded, while its imports are bound to cost more; thanks to an increase in

freight rates. Most of these imports consist of plant and machinery from W. Europe. The authorities are fully alive to the possible effects of the continued closure of the Suez Canal on India's second Plan. This is one of the main reasons why this country should actively interest itself in the cause of peace and restoration of normalcy in West Asia.

STATE TRADING IN COFFEE?

THE Plantation Enquiry Commission, which submitted its report on tea to the Government of India a few months ago, is stated to have finalised its findings on coffee and forwarded the report to the Government. On the subject of exports of this beverage, the Commission has recommended, so it is said by reliable sources, that the Coffee Board should directly undertake exports and that suitable steps should be taken to maintain the quality of coffee meant for export. The Chairman of the Coffee Board, Mr. K. Srinivasan, seems to have already anticipated this recommendation, for, as will be seen from a reference to his speech at the fourth meeting of the Board on page 930 of this issue, he has advocated the same step, albeit in a slightly modified form. He wants the Board itself to try and sell a portion of the exportable surplus to particular countries and build up future markets for Indian coffee. While the grounds on which the Plantation Commission has supported its suggestion are not known, Mr. Srinivasan has offered some specious arguments. These are:

(1) It is not certain whether the present method followed by the Board, namely, selling large quantities of coffee in the course of a short period, is conducive for getting the best price possible.

(2) There is a limit to what the few members of the trade who now participate in the export sales can handle. The implication of this remark is that the amount of coffee available for export is more than what the existing traders can handle.

(3) The exporters are generally inclined to get only the best possible price; they are not very much interested in developing new markets.

The first argument ignores the fact that coffee is a seasonal crop, like any other agricultural commodity, and that it has to be marketed before the next crop sets in. If the suggestion is that, in times of large production, a part of it should be put into reserve storage, in order to induce the trend of prices in favour of the seller, it is entirely a different question. But it is extremely doubtful whether India can influence the world price of coffee to any significant extent, as its share in world coffee trade is very small, being less than one per cent. Since world coffee prices fluctuate widely, stockpiling of coffee seeds in the hope of getting better prices in future is a very risky business. The value of this proposal is, accordingly, dubious. But, even supposing, for argument's sake, that it is a sound policy, there is no reason why the entire export trade should not be handled by private traders, without the Coffee Board having to enter this field.

The second argument is even more untenable. The private sector in export trade, in general, has been quite successful in marketing in foreign countries whatever surplus India had for export in any commodity. There is no reason to feel that it will not be equal to the task in the matter of coffee. One does not know on what grounds Mr. Srinivasan has come to the conclusion that the coffee trade might not be able to handle the full volume of exportable surplus. Did he consult the trade on this matter? At best, in the 1956-57 season, the surplus available for export may be of the order of 12,000 to 13 000 tons. This is not very much, as compared with the past performance of the trade. In 1954, for instance, the trade quite easily handled 9,600 tons. The trade could have exported more had the Government given more quotas sufficiently early. It is common knowledge that, every time, it is only after considerable agitation from the planters the Government invariably announces the export quotas. If in one year the trade could export nearly 10,000 tons, there is no basis for coming to the conclusion that it would not be able to find markets for another 2.000 or 3,000 tons. Similarly, the third contention of the Chairman of the Coffee Board—who is an official of the Government—will also not stand scrutiny. All past experience shows that exporters invariably try to nurse and maintain the markets they gain. It will be interesting to know from Mr. Srinivasan if he has any information to the contrary.

It is not known how the Board will interest itself in the export trade in coffee. Will it have its own separate organisation for effecting sales in foreign countries or will it act through the State Trading Corporation? In either case, it will be State trading, for the Coffee Board is, for all practical purposes, no different from a wing of the Government. It may be mentioned, in this connection, that, in the disposal of the last crop, two innovations were made. One was the sale of a lot of five tons through the Trade Commissioner's office in London. The other was the sale of 500 tons to Russia through the State Trading Corporation. The sale through the Trade Commissioner's office obtained Rs. 4 per cwt. more than the price fetched at the auctions in India. The Board did not, of course, have to pay separately for all the trouble taken by its own staff in the various services connected with the export, nor did it include the cost of the services of the Trade Commissioner. Further, it is by no means certain whether an export sale held on the corresponding date in India would not have fetched the additional Rs. 4 per cwt. In fact, the average range of prices for the same grades at the export sale in India is more than Rs. 4 per cwt.

The Russians bought 500 tons of coffee through the State Trading Corporation and evidently it is this more than the complicated sale in the London market that the Chairman has in mind when he speaks of State trading in coffee. The Russians paid the prevailing market prices for the grades selected and there is no reason to suggest that they would not have done so, if they had to buy the same coffee through the private trade, as in the case of tea, cashew or pepper which they have been buying in India. The State Trading Corporation, we are told, charged the same commission on the transaction as any broker would. A point that needs to be specially mentioned here is that, in selling coffee to Russia, the S.T.C. does not have to undertake the trouble and cost of breaking into a competitive trade either by its expert knowledge of the field or by the quality of its services. The wastages of State trading would be apparent only when it has to take its chances with other traders in the open market and has to establish new contacts and find fresh outlets. As a privileged body, pressing into its services the Statutory Commodity Boards and established marketing mechanism, there is little that the S.T.C. does for earning a commission.

It is obvious that the State is trying to enter the coffee trade through the backdoor. It has already entered the import trade in silk and may possibly do so in raw rubber. For entering the export trade in coffee, it has put forward the novel but untenable argument that private traders will not be able to export the larger surpluses that will be available in the coming years. If, in the years of bigger crops, the established traders are not to get bigger export quotas, how are they to compensate themselves during years of smaller crops when their quotas will be cut? In any case, there is very little in Mr. Srinivasan's speech to suggest that he was speaking for the Board and that his comments in this respect arose from any formal decision of the Board. Whichever way it may be read, the Coffee Board Chairman's suggestion on State trading in coffee exports is indicative of a broader trend in Statutory Commodity Boards. With the changes brought about in these Boards during 1953-54, the producer-representatives are reduced to a minority and the officially appointed chairmen are more spokesmen of the Government than of the collective views of all sections of the Boards.

DILEMMA OF ASIAN TRADE

ASIA and the Far East have shown some signs of better economic health. On account of the greater increase in exports, countries of this region were able to reduce their adverse balance of trade from $1,020 million at the end of 1954 to $307 million at the end of 1955. But this should not make one oblivious of the important fact that, as a proportion of world exports, trade between underdeveloped and industrially advanced countries and between underdeveloped countries themselves continued to decline, though the absolute value of trade in each direction increased. Between 1954 and 1955, the share of world trade represented by exports between the industrial countries themselves rose from 37 to 38.7 per cent., while the share represented by exports from industrial to non-industrial countries dropped from 25.8 to 25 per cent. and that represented by exports from non-industrial to industrial countries fell from 26.3 to 25.7 per cent. The share of world trade taken by exports between the non-industrial countries alone shrank from 10.9 to 10.6 per cent.

The contrast becomes more striking, if one takes a longer period into consideration. The volume of imports of raw materials and fuels from non-industrial areas rose by only about 10 per cent. between 1938 and 1955, despite the massive growth of world industrial output and the rise of about 70 per cent. in world trade as a whole. Now, what is this trend due to? How can the failure of non-industrial countries to share fully in the expansion of world trade be explained? It is true that increasing shipments of surplus agricultural commodities by the United States have tended to aggravate the decline in the value and volume of certain agricultural exports from other countries. But the root of the trouble is to be found in the fact that countries exporting primary products are suffering from a secular change in demand from the developed countries. The relative decline in the use of natural raw materials, whether by economies or by substitution, and the increased output of these commodities in the industrial areas themselves inevitably affected their imports from the raw material producing countries.

This new development in world trade poses an important problem for the underdeveloped nations, the majority of which have to depend heavily on their export earnings to finance imports of essential consumer goods and capital equipment needed for economic development. The delicate position of their economies is heightened by the helpless dependence of many countries on the exports of a few principal commodities, which, in turn, are susceptible to violent fluctuations. How will they be able to maintain and increase the volume of their trade and diversify its composition, the absence of which hitherto has deprived their economies of the resilience which is associated with a broad-based economic structure? What procedures and arrangements would best promote multilateral trade among the countries? These and other related questions came up for examination at a recent session of the Trade Sub-Committee of the United Nations Economic Commission for Asia and the Far East held at Tokyo from 29th October to 5th November. A notable feature of the Conference was its record attendance of 130 representatives from 29 Asian and other countries and territories and observers from the I.L.O. and various international non-Governmental bodies. This is a happy reflection of the increasing popularity of the E.C.A.F.E. as a fully representative forum for a close study of the economic problems of the region.

The discussions ranged over a wide field of Asian trade topics. The delegates were agreed that the region's trade, which had been favourable in 1955 and to some extent so far in 1956, benefited much from the encouraging world economic conditions and increased foreign aid. But they stressed that export earnings would have to increase even more rapidly, if Asian economic development were to be sustained. It was recognised, at the same time, that conditions were by no means favourable for a rapid development of exports. The situation of the raw material markets, where an upward rise in prices is not shared by all of Asia's major export commodities, the heavy dependence of the majority of Asian countries on export earnings from a few raw materials and other obstacles continue to bedevil economic expansion. Being acutely aware of the need for expansion of exports, the E.C.A.F.E. Secretariat put forward a proposal for the establishment of training centres for trade promotion personnel which was endorsed by the Conference. India and Japan are reported to have immediately responded by offering host facilities for training.

Another obstacle in the way of expansion of trade, which came up for discussion, is the shortage of shipping and port facilities which continues to be a source of constant anxiety. As the Indian delegate rightly pointed out, the very substantial increase in trade now being aimed at may well receive a very serious setback, unless the shipping interests of the world give some thought to matching tonnage with the demand which is likely to grow. He also pointed out that, hitherto, there had been very little indication that shipping companies were also prepared to aid the economic development of underdeveloped countries. He suggested that the situation in the charter market could be eased, if the U.S. could release some ships from their mothball fleet for this purpose. It is to be hoped that this latter country, which is playing an increasingly important role in fostering economic development of the free world, will seriously consider this suggestion.

THURSDAY, 5 P.M.

MARKET GOSSIP

THE pride of place must go to the short-term money market this week, because of certain important developments. In the first place, stringency has become more acute than in the previous weeks. There were, of course, more lenders in inter-bank day-to-day money but this was due to special reasons. Secondly, the very presence of more lenders of day-to-day money induced some of the banks, who had a certain amount of surplus funds, to create a new classification of usance deposits. Hitherto, there used to be, broadly speaking, inter-bank call, or day-to-day, money, house money repayable at call, and term deposits for short periods, say, one month, two months, three months and so on. To these classifications, some inter-bank lenders have added three days' and seven days' money. Early in the week, when some borrowers were reluctant to pay more than 3 or 3¼ per cent. for day-to-day money, the banks with a little surplus to lend quoted for a fixed period of three days or one week. A small volume of business was done on this basis at 3⅜-3½ per cent. and 3½-3¾ per cent., respectively. The third important development was the Reserve Bank's decision to raise its lending rate against usance bills from 3¼ per cent. to 3½ per cent., with effect from the 21st inst. And, finally, the Reserve Bank has withdrawn the restrictions on advances by banks against paddy and rice imposed on 17th May last. This has been done with a view to enabling the banks to meet the genuine credit requirements for marketing the new rice crop.

In order to help the banks to increase their lendable surplus, the Reserve Bank offered to buy short-dated Government securities maturing up to 1962. It would appear that some of the banks availed themselves of this facility and increased their cash holdings. This was responsible for the appearance of more lenders in the inter-bank section. Banking circles are of the view that this facility cannot carry them very far. Most banks prefer to keep their short-dated investments as a second line of defence for emergencies. What they would really like to part with from their investment portfolios are the long- medium- and long-dated securities. But the Reserve Bank does not want to support them, as it would tantamount to Government redeeming its loans at a time when it needs more funds. Since there is no support for these dated loans, they are steadily going down in value.

There has been a considerable amount of dissatisfaction over the way in which the authorities have allowed the State loans to become orphans. In recent years, the banking system has gone to the rescue of State Governments whenever they floated new loans, in response to their requests. The banks now complain that, when they are in need of funds for financing genuine trade demand, there is none to support these loans. The Reserve Bank, as a matter of policy, has been refraining from buying the State loans, apparently because the States have been borrowing large sums of money against its advice. Some change in the official policy was, however, visible this week. The Life Insurance Corporation bought a few State loans, especially that of Madras. It is believed in market circles that this support was inspired and backed by the Government. It is possible that the Government may have advised the Reserve Bank to support the State loans through the Insurance Corporation. The extent of such assistance so far has not been adequate to arrest the rot in these loans. Even today, there were sellers in Madras Government's latest 4 per cent. loan at Rs. 97-15-6, as against the issue price of Rs. 99-12 two months ago.

The proposed increase in the usance bill rate from 3¼ per cent. to 3½ per cent. comes at a time, when it is likely to be misconstrued as an indication of the monetary authorities' desire to push up interest rates. Many students of the money market consider it to be a little incongruous with the needs of the market. It is contended that the market is in need of more resources for financing genuine needs of the trade, a fact acknowledged by the authorities. Why then, they argue, do they take a step which is calculated to aggravate the stringency?

Those who pose this query will do well to read again the Reserve Bank's explanation in its *communique* reproduced below:

"It was stated in the press *communique* issued by the Reserve Bank on 3rd February 1956, that the bill market had been a striking success during its operations for about four years and that banks had been making full use of the scheme to provide themselves with funds during the busy season. The continuance of the concessions in respect of the rate of interest and the stamp duty was reviewed by the Reserve Bank and it was decided that, with effect from 1st March 1956, advances to banks under the scheme should be made at 3½ per cent. and the concession in respect of the stamp duty withdrawn from that date.

"The working of the scheme has again been reviewed recently and, taking into account the present economic and banking trends, it has been decided that, commencing from 21st November 1956, the rate of interest on advances to banks under the scheme should be at the Bank rate, that is, at 3½ per cent. per annum. This rate will apply to new advances granted as from that date."

It may be added here that it was only last week that several banks enhanced their interest rates on advances by ½ per cent. Contrary to expectations, the increase of ½ per cent. in the usance bill rate in the beginning of February last did not reduce the popularity of the bill market scheme. Actually, the amount of accommodation availed of by the banks through this facility so far during the current year is far higher than in the previous year; according to the Reserve Bank's latest weekly statement, the total amount advanced to Scheduled banks against usance bills from 1st January 1956 to 9th November 1956 was Rs. 344.34 crores, as compared with Rs. 202.08 crores in the corresponding period of last year and Rs. 225.44 crores in the whole of 1955. To have cheap money at the time of deficit financing—a respectable term for inflation—is certainly not a sound monetary policy. The present stringency in the money market reflects a malady far deeper than a seasonal phenomenon. The real solution for it lies in measures calculated to attract more deposits by the banking system. It is to this problem that banks and the Reserve Bank should address themselves.

* * * *

The highlight of this week's trading on the Stock Exchange is the sudden collapse of the shares of Bombay Burmah on Monday from Rs. 717-8 to Rs. 675, soon after the extraordinary general meeting of the Company held on that day at 11-30 a.m. This sharp recession was due to heavy selling pressure said to have been induced by fears about the implications of the Madras Industrial Tribunal's award, giving increased wages to plantation workers in Madras State with retrospective effect from 1st April 1952, to the Company's finances. As the broad effects of the award were known several days ago, the sudden drop in the shares may seem somewhat surprising. But there is a story behind it. It would appear that, after the extraordinary general meeting of the Company was over, some shareholders, almost all of whom are members of the Stock Exchange, clustered round the Chairman and informally asked him about the exact impact of the award on the Company. And the Chairman seems to have given the indication that the cost would be about Rs. 1 crore, an amount far in excess of the earlier estimates of the market. The few who got this valuable information are believed to have immediately rushed to the market and exploited it by going short on a scale which looked like a bear raid.

Subsequently, however, the shares regained a good part of the earlier loss and finished today at Rs. 692-8. The recovery is mainly due to bear-covering on hopes that the award, against which the planters are appealing to the Supreme Court, would not stand. Various estimates of the burden on the Company, as a result of the award, are being given. The Chairman of the Company, as already pointed out, estimates it at about Rs. 1 crore, while market circles place it at Rs. 70 lakhs and an annual recurring expenditure of Rs. 15 lakhs. There is also a feeling in certain quarters that the Company (as well as other companies so affected) would get a tax refund to the extent of two-fifths of the amount, so that the net burden would not be as heavy as is feared. Another section feels that this line of reasoning is not correct. According to it, if the planters do not win the appeal and have to pay the increased wages for the last 4½ years as per the award, then the profits of the companies concerned for the year in which the higher wages are paid would, to that extent, be affected and they would get a corresponding tax relief. In short, the companies have to pay the total sum involved and this would, therefore, prove to be a great strain on them. The last date by which the award has to be implemented is the 22nd inst., unless the planters obtain, in the meantime, an interim stay of the award.

Another interesting development concerning Bombay Burmah during the week was the Chairman's elucidation, on behalf of the Board, of the points raised by the Bombay Shareholders' Association at its informal meeting held on 25th October 1956, a detailed reference to which was made in our issue dated 27th October. In the course of a statement he cleared the misapprehensions held by the shareholders in respect of the numerical order of the resolutions proposed for the extraordinary general meeting of the Company on 12th November. The resolution 2(a) had proposed to introduce a new article in the Articles of Association of the Company seeking to define the two classes of members. The resolution 2(b) sought to amend the voting rights of the shareholders. The Shareholders' Association held the view that the resolutions were deliberately arranged in such a manner as to deprive the shareholders of their right to throw out resolution 2(a). Accordingly, they wanted the resolution 2(b) to be considered first and 2(a) subsequently.

In his statement, the Chairman made it clear that the order of the resolutions had been determined merely by the numerical order in which they occur in the Company's Articles and by no other consideration. In order, however, to meet the expressed wishes of certain shareholders, he said, resolution 2(b), which sought to amend the voting rights of the shareholders, in accordance with section 87 of the Companies Act, 1956, would be considered first and, if thought fit, passed. Thereafter, subject to the consent of the shareholders, the meeting would be adjourned for an appropriate period to consider the other resolutions.

The Company's Chairman also cleared the misapprehension held by the shareholders regarding resolution 2(a). He said that in that resolution the new Article 12A was proposed on the advice of the Company's legal advisers to define two classes of members (not shares) of the Company. The proposed Article was purely procedural. It did not and could not create any rights which did not already exist and its sole purpose was to facilitate reference to the High Court under section 391 of the Companies Act, 1956. As regards the rights of the holders of the 100 shares of Rs. 2,500 each issued to the late Mr. William Wallace under the agreement dated 22nd July 1864, the Chairman pointed out that they were provided for in the agreement and those rights were not sought to be altered or amended.

In line with the Chairman's statement, the extraordinary general meeting held on the 12th inst. passed only the resolution seeking to amend the voting rights, under which every member present in person or by proxy will have one vote in respect of every Rs. 25 of the paid-up equity capital held by him. The meeting also decided to adjourn consideration of the other resolutions to 10th December 1956. The Chairman suggested that, during the interval, the shareholders' group and its solicitors could meet the Company's legal advisers to discuss the legality of the proposals. It is to be hoped that both the parties will come to an early understanding and work out a compromise formula in respect of capital reconstruction.

* * * *

Two important bankers' conventions just held in California, one in San Francisco and the other at Los Angeles, brought into focus the somewhat bitter controversy which is raging in the U.S. over interest rates. The sharpest criticism is that steadily increasing rates have hurt small business, while the giant industrial corporations are literally unaffected by the tight money policies. There is, according to our American correspondent, a good deal of logic to this charge.

The banks' reserve requirements in the U.S. run between 18 and 20 per cent. of the demand deposits. This is considerably higher than the proportion of similar reserves in other countries. This, coupled with higher interest rates in all areas of the U.S. financial world, has produced a considerable stringency of funds. Bank lending is done on the principle that an account with a six or seven figure balance is entitled to first attention when it comes to loans. Naturally, the little fellow and small business get less consideration. In that sense, the charge is justified. However, it is impossible to prove statistically that anyone has been unable to get a loan, or to what extent damage has been done. In fact, on an overall basis, the loan demand is enormous and has been rising steadily in the past two years. This applies to both personal and business loans and has been the result of record employment and production.

The U.S. banks still promote personal loans, because they are very profitable. Such advances run from 12 to 24 months at a rate of somewhere between 3 and 5 per cent. and they are being paid off in monthly instalments. Defaults are negligible at the rate of ¼ to ½ of 1 per cent. of outstandings. The interest, however, is deducted in advance. It is, in effect, a discount rate, so that true interest rates are double, or between 6 to nearly 10 per cent.

Loans for the purchase of automobiles are equally profitable and they run up to three years, although such length of maturity is being discouraged. Consumer credit, as a whole, is rising constantly, thanks to good incomes and general confidence in the future. While savings are increasing, the rate of gain is less than a year ago and there is much concern that thrift will not keep up with the increasing demand for new capital. The latter is based on a growing population and on greater and more costly automation in industry to pay for higher wages. Thus, there is the fear of inflation which pervades official and private economic thinking. The entire subject of money policies will soon be investigated by a committee of the U.S. Congress.

One of the typical comments on the subject of inflation came from Mr. Theodore V. Houser, Chairman of Sears, Roebuck & Co., the big mail order house. It was the retailers' point of view. He said, in part, there was a slow and almost irresistible inflationary trend in the American economy, and added: "In periods of civilian optimism such as at present, with industry operating at or near capacity, inflationary pressures are created which spill over into labour, new materials, finished goods' prices and demand for all forms of goods and services." Speaking of monetary policy in relation to retail trade which has been the subject of discussion in several other countries, Mr. Houser said: "I wonder if a more serious aspect of Federal Reserve action is not the fact that it operates only on the employer level and restrains labour only through an adverse effect on the employer."

The situation gives support to the suggestion advanced in other quarters of need for a top level economic council with the President of the U.S. as chairman. There is an embryo of such a group in existence now, but its effectiveness is being questioned. Looking at business conditions throughout the U.S., it looks as though the 1956 volume of business will exceed that of the previous year and that 1957 will be even better. These projections are based on a continued high level of capital investment for plant and expenditures for equipment, a continued high level of Government expenditures and an increase in instalment credit granted *vis-a-vis* repayments.

EQUITIES MARKED DOWN

CLOSING TREND, HOWEVER, SLIGHTLY BETTER

(From Our Own Correspondent)

BOMBAY, 15*th November*

A REACTIONARY trend was in evidence on the Stock Exchange during the week under review. Equities were subjected to fairly heavy selling pressure which was the cumulative effect of several bearish factors. The improvement in the political situation abroad, the prospect of higher wage demand in industries, as indicated by Mr. S. R. Vasavada in his statement that the I.N.T.U.C. would press for higher wages in the textile industry, dearer bank credit, following the increase in interest rates on advances by banks, the slump in Bombay Burmah shares on fears about the heavy impact on the Company as a result of the Plantation Award, and the absence of any relief in excise duty on cloth were all responsible for the easy trend. Towards the close, however, there was a smart recovery.

In the steel section, Tata Ordinaries drifted down from Rs. 193-8 to Rs. 189, but gained to Rs. 192-8 at the close. Indian Irons reacted from Rs. 34-4 to Rs. 33-12, before steadying up to Rs. 34-5½.

Textiles suffered marked losses on selling pressure induced by slackness in demand for cloth and absence of any relief in excise duty. The losses were, however, made good to a sizable extent today. Bombay Dyeings were marked down from Rs. 628-2 to Rs. 600-10, but recovered to Rs. 619-6 at the close. Centurys dipped from Rs. 551 to Rs. 536-8, before gaining to Rs. 544-8. Kohinoors shed on balance Rs. 6 to Rs. 342, though the shares had touched a low of Rs. 336-8 during the week. Central Indias shed Re. 1 to Rs. 132-8. Finlays dropped Rs. 3 to Rs. 335, Gokaks Re. 1-8 to Rs. 238-8 and Indu Ordinaries an anna to Rs. 12-2. Indore Malwas were placed at Rs. 148-2 *ex-div.*, as against Rs. 157-8 *cum-div.* (interim dividend Rs. 5). Minervas gave way from Rs. 93-12 to Rs. 90 and Models from Rs. 189-6 to Rs. 178-12. Mysore Spinnings moved down by Rs. 7-6 to Rs. 100-10. New Citys were done at Rs. 146-4, having dropped from Rs. 175, while New Greats were maintained at Rs. 250. A loss of Rs. 3-12 to Rs. 213-2 was noted in Shree Niwas. Simplex was marked down by Rs. 4 to Rs. 196, Standards by Rs. 3-12 to Rs. 473-12, Svadeshis by Re. 1-8 to Rs. 253-8 and Tata Mills by Re. 1 to Rs. 53-12. Sassoon Spinnings shed Rs. 2-8 to Rs. 43.

Bank shares ruled steady, with most of them being done at higher rates. Centrals changed hands Re. 1-4 higher at Rs. 54-8 and their new shares Re. 1-4 better at Rs. 58-8. Bank of Indias gained Re. 1 to Rs. 143-8. Barodas were unchanged at Rs. 101-8, but United Commercials, after a decline from Rs. 56-4 to Rs. 55-12, recouped to Rs. 57. Punjab Nationals were dull at Rs. 56-8.

Business in insurance shares was small and far between. The undertone was also quiet. New Indias were done Re. 1-4 lower at Rs. 44-8 and Universal Fire and Generals lost Re. 1-8 to Rs. 11.

Electricity shares also ruled easy, with selling pressure spread over the entire section. Ahmedabad Electrics changed hands As. 15 lower at Rs. 91-9. Bombay Suburbans moved down from Rs. 110-10 to Rs. 109-6, before closing better at Rs. 110. Surat Electrics slipped from Rs. 115-10 to Rs. 113-12. Tata Hydros were marked down by a rupee to Rs. 126, Tata Powers by Rs. 2-8 to Rs. 1,265 and Andhra Valleys by Rs. 11-4 to Rs. 1,200.

Sugar shares, in the miscellaneous section, were quiet, Belapurs dropping from Rs. 250 to Rs. 249. Phaltans declined by Rs. 3-4 to Rs. 158-4 and Walchandnagars by Rs. 5-10 to Rs. 280. Cement shares kept a steady tone. Associated Cements, after an early dip from Rs. 194 to Rs. 191-8, rallied to close at Rs. 196-8. Digvijays were done at Rs. 169-8 *ex-right*, as against Rs. 194-4 *cum-right* a week ago. Their rights were placed at Rs. 35. Orissa Cements were steady at Rs. 13-4 and Jaipur Udyogs at Rs. 12-13. In the engineering and mining group, Alcocks receded from Rs. 330 to Rs. 317-8, but finished better at Rs. 322-8. Tata Locomotives were erratic, moving between Rs. 169-12 and Rs. 165, before closing Re. 1-8 higher at Rs. 169-4. Premier Constructions shed Rs. 6 to Rs. 206 and Larsen and Toubros As. 10 to Rs. 18. Mahindra and Mahindras were maintained at Rs. 15-14. Shivrajpurs lost Re. 1-12 to Rs. 85-8. Indian Coppers As. 14 to Rs. 4-5 and B.B. Petrols As. 5 to Rs. 3-5½.

In the shipping and transport group, Scindias were active. After a slight marking down from Rs. 18-15½ to Rs. 18-8, the shares briskly advanced to Rs. 19-10 today, before closing at Rs. 19-81. The Directors' decision to recommend a dividend of Re. 1 per share for the year ended 30th June 1956, as against As. 8 per share paid for the previous year, provided the main bullish factor. Great Easterns were lower by As. 4 at Rs. 22-2. India Steamships also were lower by As. 2½ at Rs. 9-12-6. Premier Automobiles were steady at Rs. 115-4, while Hindustan Motors shed As. 2½ to Rs. 9-6. A feature of the trading in the miscellaneous group is the slump in Bombay Burmahs from Rs. 725 to Rs. 676-4, on nervous selling due to fears about the impact of the Plantation Award. At the close, however, they recovered to Rs. 692-8. Their new shares lost on balance Rs. 13-12 to Rs. 250. British India Corporations moved down by As. 3½ to Rs. 10-11½. Killick Industries lost Rs. 2 to Rs. 171-8. National Rayons moved within narrow range and closed Re. 1-12 lower at Rs. 259-8. Tata Chemicals were quiet, losing As. 3½ to Rs. 19-15. Tata Oils gave way from Rs. 52-12 to Rs. 51-8. Wimcos were dull but steady at Rs. 176-4.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, 13*th November*

The most outstanding event of the week under review was the fixation, by the Madras Stock Exchange Management Council, of minimum prices for all the ordinary shares of planting companies quoted in the official list at the closing rates as on the 8th inst. This decision was taken by the Council with a view to stemming the persistently downward trend in prices since the publication of the Plantation Labour Award. It was only on 24th October 1956 that the Council, forced by the need for arresting a sharp break in values, announced modification of rules regarding delivery of documents in respect of transactions in ordinary shares of all planting companies. This action, however, failed to have any significant effect on the market which continued to be in the grip of bears, thanks to most pessimistic interpretation of the Award's implications on the future of plantation companies. There was an unprecedented wave of selling and equity values tumbled down to touch very low levels on the 8th inst. In fact, panicky conditions were in evidence. In view of this and in order to improve the morale of the market, the Management Council of the Stock Exchange decided, as already stated, to enforce minimum prices for shares of plantation companies. This is the second time in the history of the Exchange that such a decision has been taken; the previous occasion was in March 1947, when following the crisis in trading as a result of the Liaquat Ali Khan budget, the Exchange authorities had fixed minimum prices for all shares.

Over the week, plantation shares were depressed. Among rubber shares, Malankaras and Tropicals dropped a rupee to Rs. 30 *ex-div.* and Rs. 35, respectively. Kalpettas fell by As. 8 to Rs. 31-4. Kailas receded by As. 7 to Rs. 5-12. Thirumbadis lost As. 2 to Rs. 2-3. Deals in tea shares were put through at reduced rates. United Nilgiris climbed down by As. 12 to Rs. 21-8. Nilgiris and Periakaramalais declined by As. 8 each, the former to Rs. 10 and the latter to Rs. 7-1. Talayars shed As. 6 to Rs. 11-8 *ex-div.* Kil Kotagiris eased by a like amount to Rs. 6-10. Blue Mountains slipped by As. 5 to Rs. 5-9. Haileyburias, Highlands and Lucky Valleys were lower by As. 4 each at Rs. 24-12, Rs. 15-12 and Rs. 12-12, respectively. Peermades gave way by As. 4 to Rs. 31-4 *cum-div.* (interim). The Directors of the Peermade Tea Co., Ltd., have recommended an interim dividend of 10 per cent. on ordinary shares for the year ended December 1956. The total dividend paid for the year 1955 was 35 per cent. Among coffee shares, Savamalais climbed down by a rupee to Rs. 24-4. Consolidateds dropped As. 10 to Rs. 19. Cochin Malabars fell by As. 7 to Rs. 9-1. Coffee Lands were neglected at Rs. 25, as against Rs. 25-6 last week-end.

Textile shares continued to be subjected to heavy selling pressure, thanks to renewed reports of consumer resistance in yarn and cloth, not to speak of tight money conditions and rumours of a rise in Bank rate. Dhanalakshmis were hammered down by Rs. 15 to Rs. 395. Coimbatore Pioneers slumped by Rs. 12 to Rs. 298. Rayalaseemas fell by Rs. 8 to Rs. 145. Anglo-Frenchs and Rajapalayams receded by Rs. 6 each to Rs. 100 and Rs. 153, respectively. Pankajas gave way from Rs. 85 to Rs. 80. Rajalakshmis and Coimbatore Spinnings shed Rs. 3 each to Rs. 165 and Rs. 90, respectively. Cannanores declined by Rs. 2-8 to Rs. 170. Ranga Vilas lost a similar sum to Rs. 86. Saradas eased by Rs. 2 to Rs. 134. Vijayakumars finished Re. 1-8 lower at Rs. 140. Premiers, however, proved an exception and advanced by Rs. 5 to Rs. 270 *cum-right* on good buying support. The Premier Mills (C.B.E.) Ltd. has decided to raise the paid-up share capital from Rs. 12.5 lakhs to Rs. 25 lakhs by the issue of 12,500 equity shares of Rs. 100 each for cash at par to holders as on 20th November 1956.

Selling was quiet pronounced in the banking section and values drifted lower. Indian Overseas fell by Rs. 4 to Rs. 146. Bank of Mysores suffered a decline of Rs. 3 to Rs. 259. Indian Banks Rs. 95 paids shed Rs. 2 to Rs. 197. Rs. 70 paids Re. 1-8 to Rs. 151-8 and fully-paids Re. 1 to Rs. 208. Travancore Banks eased by As. 2 to Rs. 18-4.

Sugar shares also lost ground. United Breweries receded by Rs. 2 to Rs. 215. E.I.Ds. decreased by As. 14 to Rs. 28-4. Krilampudis declined by As. 4 to Rs. 36-8, Travancores by As. 3 to Rs. 13-3 and Deccans by As. 2 to Rs. 11-2.

Among miscellaneous industrials, India Cements were neglected at Rs. 30 *cum-div.* (interim), as against Rs. 31-2. The Directors of the Company have declared an interim dividend of 3¾ per cent. on ordinary shares for the half-year ended 30th September 1956. Rallis retreated by Re. 1-8 to Rs. 45. Indian Steel Rollings dropped As. 6 to Rs. 14 and F.A.C.Ts As. 4-6 to Rs. 6-6. Mysore Glass decreased by As. 4 to Rs. 4. Bruntons, Champion Reefs, Spencers and Standard Motors lost As. 2 each to Rs. 6-4, Rs. 7-14, Rs. 16-8 and Rs. 11-6, respectively.

COMPANY INTELLIGENCE

Dalmia Cement (Bharat) Ltd.

The Directors of the Dalmia Cement (Bharat) Ltd. have decided to issue 356,250 preference shares of Rs. 10 each at par and 3,180,000 ordinary shares of Rs. 2-8 each at par. The consent of the Central Government has been obtained for this issue. The preference shares will be offered, in the first instance, to the existing holders of preference shares of Rs. 40 each in the ratio of six preference shares of Rs. 10 each for every preference share of Rs. 40 held. Likewise, the ordinary shares will be offered, in the first instance, to the existing holders of ordinary shares of Rs. 2-8 each in the ratio of three ordinary shares of Rs. 2-8 each for every ordinary share of Rs. 2-8 each held. The preferential right of the holders of preference shares of Rs. 40 each and ordinary shares of Rs. 2-8 each to subscribe towards fresh issues of capital will cease after 31st January 1957.

The proceeds of the proposed issue will be utilised to finance the expansion of the Company's works at Dalmiapuram, Madras State, from the present capacity of 750 tons to about 1,250 tons per day. The new shares will participate in dividend to be declared for the accounting year 1957 and any subsequent years. The new ordinary shares of Rs. 2-8 each will rank *pari passu* with the existing ordinary shareholders of Rs. 2-8 each. The new preference shares of Rs. 10 each will also rank *pari passu* with the existing preference shares in proportion to the capital paid-up in the matter of dividend and assets on winding-up.

* * * *

Indian Aluminium

The shareholders of the Indian Aluminium Co., Ltd. at an extraordinary general meeting held on 12th November, approved the issue of Rs. 2,68,13,200 5 per cent. convertible loan stock repayable 1971-81. Until the end of 1970 stockholders will have the option of converting their stock into ordinary shares at varying rates depending on the length of time the stock is held. Aluminium Limited, Canada, the Company's principal shareholder, has expressed its intention to subscribe to one half of the issue, and by limiting its subscription to this amount, in accordance with the expressed desire of the Indian Government, is providing an opportunity for increased participation by Indian capital. The stock will be offered to the shareholders of the Company as on 20th December next and, if necessary, at a later date to the Indian public.

The profit for the first nine months of this year are reported to exceed substantially the profit for the whole of last year and the Board of Directors have declared an interim dividend of 5 per cent. payable to the shareholders in the books of the Company as on 20th December 1956. The allotment of shares offered in the recent rights issue was completed on 12th November and these shares will qualify for the interim dividend.

* * * *

Arrangements have been concluded for the formation of a company to be known as "ACC-Vickers-Babcock (Private) Ltd.," with the joint collaboration of Associated Cement Companies Ltd., of Bombay, and Messrs. Vickers Ltd. and Babcock and Wilcox Ltd., both of London. The new company has for its objective the building of a heavy engineering works in the vicinity of Durgapur in West Bengal designed to manufacture cement-making machinery, mining machinery, large pumps, heavy gears, steam generating plant of all types, pressure vessels, cranes and mechanical handling equipment. The construction of the proposed works is expected to commence as soon as the Government of India's approval, which is being sought, is obtained.

PREMIUM BONDS IN U.K.

Although fiscal prudes will decry any attempt on the part of a Government to lend its name to a lottery, it is interesting to note that the U.K., the home of conservative canons of public finance, has now started its "premium savings bonds" scheme involving thousands of prices. The main features of the scheme will be read with interest. The bonds are being sold in £1 units, the maximum allowed per holder being £500. Each £1 bond bears a number which goes into a draw for prizes again and again, month after month, for as long as the holder holds it. Prize amounts range from £25 each—there will be 20,000 prizes of this amount—to £1,000 each, of which there will be 100 prizes. The first draw will be made in June 1957 and thereafter, draws will be made each month. Bonds must be held for six months to qualify for the monthly draw. Yet another feature of the scheme is that winners' names will not be published. Again, all prizes are free from U.K. income-tax and surtax. An attractive advertisement, issued by the National Savings Committee, stresses the fact that a bond-holder cannot lose his investment—for he can always cash it—but may win a prize. It would appear that the scheme has already attained considerable popularity. One wonders why a similar scheme should not be tried in India where the belief in astrology and good fortune often leads people to different kinds of lotteries.

OIL PRICES

In the article entitled "How Oil Prices are Determined," which appeared in our last week's issue (page 880), the last sentence in the third column of that page, which was continued on page 923, should read as follows:

"If this integrated pattern should fail at one link in the chain, then the unfortunate consequences would not take long to appear. There is, therefore, responsibility in this pattern, and in the diversification of the enterprises employed, safety and continuity."

NEWS IN BRIEF

OVER thirty industrial firms dealing in instruments have joined together to form the All-India Instrument Manufacturers' and Dealers' Association. The Association will have regional councils in important places like Delhi, Calcutta and Madras.

The Government of Uttar Pradesh has asked the State's Director of Agriculture to set up a committee of research experts to investigate the possibility of growing flood-resisting as well as flood-dodging food and cash crops in districts threatened by floods each year.

The glass industry has undertaken the production of a number of new items during the last five years. The items include penicillin vials, sheet glass of sizes less than 16 ozs., and over 32 ozs., glass tubing by automatic drawing, narrow-mouth thermos flasks, and decorated aerated water bottles.

The Government of India has sanctioned a further loan of Rs. 38 lakhs for the Nagarjuna-Sagar project, bringing the total so far sanctioned to Rs. 149 lakhs. The project, a venture of the Andhra Government, is estimated to cost Rs. 85 crores and, when completed, will irrigate 2.1 million acres.

The Standing Committee of the All-India Port and Dock Workers' Federation has reiterated its earlier decision to go on a country-wide strike. The Committee has decided to give another 15 days to the Government to reconsider the workers' demands, failing which the workers will go on strike from 1st December.

The prospects of coal mining in Tripura were recently studied by Mr. A. P. Acharya, Regional Coal Controller of Assam, and steps are expected to be taken shortly to develop the coal mining industry there. The coal seams of the region cover an area of five square miles and are estimated to yield nearly 30,000 tons a year.

Prospecting of diamond mines in some places in the former Hyderabad State is expected to be carried out in the coming year by the Union Government. It is held that there are fair chances of locating diamond deposits in the region. The Government will also conduct a geophysical survey and investigation to locate the hidden coalfields in the State.

Caltex (India) Ltd., will inaugurate on the 19th inst. an eight-week training course for the first group of ten Indian Army officers. Mr. R. Arnold, District Superintendent of Operations, a training specialist, will personally conduct a comprehensive course which will give the Army officers a detailed overall training in the methods and procedure of handling petroleum products.

A new overseas exchange with direct radio links with 15 major capitals of the world was opened at Bombay on the 12th inst. The exchange will also be linked up with 19 other countries via the London International Exchange. It will enable efficient operation of India's increased overseas traffic, which now varies between 100 and 150 calls to the capitals of the world daily.

Under an agreement signed between the Technopromimport Trade Organisation of the U.S.S.R. and the Government of India, the latter will purchase from the former six portable field radio communication sets, three 12-ton diesel engine trucks and other equipment at a total cost of Rs. 3.5 lakhs. The equipment will be used by field parties conducting geophysical and geological operations.

An Institute of Company Secretaries has been set up with its headquarters in Calcutta, in order to meet the increasing demand for professional company secretaries. The Institute enjoys the support of the Government of India. It will be on the lines of the Institute of Chartered Accountants of India and will impart training in matters relating to Company Law and hold examinations. Those who pass the examinations will qualify for membership of the Institute.

The Labour Association of the Mysore Iron and Steel Works has unanimously agreed to accept the industrial truce between the Association and the management for a period of five years, during which time no fresh demands will be placed and no strike will be launched. The demands which have been conceded by the management relate to grant of three months' bonus and enhancement of wages of daily-paid employees and also of certain categories of monthly salaried employees, with effect from 1st November 1956.

The Government of India has decided that, until further orders, the export procedure governing cotton textiles prescribed in General Order No. 1 (Revised)—Central Excise of 1949, dated 21st January 1949—should be followed and the exporters given the same facilities which they had been enjoying before the introduction of the Bank Guarantee Scheme by the Department of Economic Affairs. This means withdrawal of the Bank Guarantee Scheme and reintroduction of the 1949 export procedure prescribed in the abovementioned order.

An official analysis of the regional distribution of plywood factories in India reveals that West Bengal has the largest number of units. Out of 64 factories which are on the approved list of the Government of India, 34 are located in West Bengal, 13 in Assam (including North East Frontier Agency), six in Travancore-Cochin, five in Madras, two in Mysore and the rest in other States. The total annual rated capacity is estimated at about 150.57 million square feet. Apart from these, there are a large number of unapproved factories, most of which are concentrated in and around Calcutta.

The Sindri Fertiliser Factory has set up a new record of daily, weekly and monthly production of ammonium sulphate during October 1956. The highest daily production of 1,357 tons was achieved on 28th October, the previous record being 1,317 tons on 30th October 1952. Production for the month of October 1956 was 32,397 tons with a daily average of 1,045 tons, the corresponding previous figures being 31,228 tons and 1,007 tons in January 1956. The highest weekly production of 8,064 tons was also achieved during October, the previous record being 7,830 tons.

The Coir Board of the Government of India proposes to establish a coir research Institute with a model factory in West Bengal. A group of experts is now touring the country to examine the possibilities of manufacturing mattress and bristle fibre in the country on Ceylonese methods. According to Mr. P. K. Dewar, leader of the group, though India produces over 3,000 million coconuts annually, only about 43 per cent. of the husks from these coconuts is utilised for extraction of fibre. The Coir Board has also decided to open a showroom and a sale depot for all kinds of coir products in Calcutta.

The Union Ministry of Commerce and Consumer Industries has approved an extensive project for the establishment of small industrial estates in Community Project areas with a view to fostering the development of small industries in rural areas. In the second Five-year Plan, more than 620 model villages are to be constructed in the Community Development blocks. Small industrial estates, costing between Rs. 2 lakhs and Rs. 5 lakhs, will be started as part of this integrated scheme. Model village areas, where power and other facilities are available, will be selected for starting these estates. Efforts will be made to provide essential service facilities for the development of industries which the small *entrepreneurs* cannot afford individually. It may be recalled that work on more than 15 industrial estates has already been initiated. This programme is estimated to cost over Rs. 5 crores. Many of these estates, relatively large in size, are situated in or near urban areas.

The Government of India has raised the target of jute production in the country under the Second Five-year Plan from 5 million bales originally fixed to 5.5 million bales. This was disclosed by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, while inaugurating the annual meeting of the Central Jute Committee in Calcutta, on Saturday last week. It may be noted in this connection that the actual production during the year 1955-56 amounted to 4.14 million bales, as compared with 2.93 million bales. The total requirements of the industry are placed at 7.2 million bales, if all the mills were to work to full capacity. In addition, extra-factory consumption is estimated at about 150,000 bales. The Planning Commission provided for 5 million bales from internal production and to import the balance, during the Second Plan period. It was of the view that it should be possible to produce the additional quantity of 1 million bales over the then estimated output of 4 million bales for 1955-56 through intensive cultivation, with the ultimate object of achieving an average yield of three bales per acre of good quality jute.

* * * *

From Abroad

The World Bank has agreed to loan Persia $75 million for financing development projects. An agreement is due to be signed shortly.

A new Anglo-Soviet petrol company has just been founded in London under the name U.S.S.R.-Anglo Petroleum Company. The Company's object is to trade in Russian petrols in the British and Commonwealth markets.

According to Mr. John Bell, Director of the U.S. Operations Mission, the economic aid granted to Pakistan by the United States Government during the financial year (1955-56) aggregated more than Rs. 76 crores.

The Government of Nepal has decided to open eight rural credit banks with a total capital of Rs. 47 lakhs during the current year to help agriculturists. This is part of the Government's first rural credit scheme which will be expanded later.

The United Nations has asked a Rotterdam firm and a Danish firm to clear the Suez Canal. As a first step, three Dutch and three Danish experts will go to Egypt to view the situation and estimate the expense for the clearance which will be met by the U.N.

A series of strikes recently by workers cost the Japanese steel industry a production loss of 250,000 tons. According to a spokesman of the Ministry of International Trade and Industry, the Government is contemplating an emergency importation of 100,000 to 200,000 tons of rolled steel.

The Soviet Union is planning another giant hydro-electric scheme in the eastern regions of the U.S.S.R. to hasten the development of heavy industry in Razakhstan and Siberia. The scheme envisages the building of 11 hydro-electric power stations along the most important river of West Siberia, Irtysh.

A trade agreement between Pakistan and China is likely to be concluded soon. A Chinese trade delegation will arrive in Pakistan shortly to negotiate the first trade agreement between the two countries. China is interested in Pakistan cotton and jute, while Pakistan can import coal, industrial raw materials, silk and machinery from China.

PERSONAL

MRS. Vijayalakshmi Pandit, Indian High Commissioner in London, left for London on Saturday last.

Sardar-e-Ali Gen. Mohammed Omer Khan has been appointed Ambassador of Afghanistan to India.

Mr. K. C. Reddy, Union Production Minister, returned on Monday this week after a tour of Russia, the U.K. and West Germany.

Dr. H. J. Bhabha, Chairman, Atomic Energy Commission, returned from Geneva last week after attending the U.N. Atomic Energy Agency Conference held at New York recently.

Mr. Morarji Desai, until recently Chief Minister of Bombay, was sworn-in as a Central Cabinet Minister on Wednesday this week. Mr. Desai will be in charge of the Ministries of Commerce and Consumers Industries and Heavy Industries.

Mr. P. M. Agerwala, General Manager, Bombay Telephones, left for Rome *en route* to Geneva to attend the plenary assembly of the U.N. Consultative Committee for Telegraphs and Telephones, a permanent organ of the International Telecommunication Union.

Mr. George R. Latham has arrived in Bombay as the U.K. Trade Commissioner *vice* Mr. G. J. Husted who has been posted to Melbourne. Mr. Latham was hitherto in West Africa where he set up a U.K. Trade Commission covering the Territories of the Gold Coast, Sierra Leone and the Gambia.

Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture, has been elected Chairman of the International Rice Commission for the next two years, *vice* Mr. S. Tobato of Japan. Mr. C. S. Christian of Australia and Mr. Truong Van Hien of Viet Nam have been elected first and second Vice-Chairmen, respectively.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 14*th November*

War Clouds Lowering Over the Far East

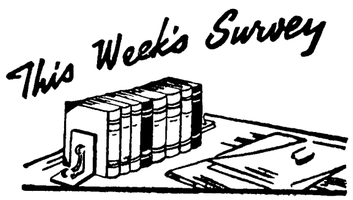
It has been predicted by publicists who profess to know that the Pacific—a common word for anything that is peaceful and appeasing—will be the scene of the next big war. True it is that Europe, after centuries of systematised, wholesale slaughter, had more war than it could conveniently stomach between 1914 and 1919, and it is inconceivable that a fresh outbreak of any dimensions will occur in that part of the world for many years. But in other latitudes and longitudes, especially where the inhabitants played an inconsiderable part in the great conflict, belligerency still prevails—for them *horrida bella* has no horrors—and every little nation has displayed the desire for a shindy, so that it may share with the big ones a respect for its own prowess. In the quarrel now fomenting between the two great nations of the Far East, China and Japan, there is something more than any mere wish for a scrimmage. China, with her new-found sense of nationalisation full upon her, chafes under the burden of Japanese commercial domination; Japan, on the other hand, is fearful as regards the safety of her interests in Manchuria and is constantly on the alert in checking Soviet aggression from the north. The situation is ominous. It looks like war. But does it mean war? If war occurs the League of Nations will have its own dear little self to blame; for the League of Nations, flamboyant in its pretensions, is just about as helpless in diplomatic mediation as a new-born babe, crying in the wilderness with no voice but a cry.

The Japanese Finance Ministry has announced that Japan's sterling balance had dropped from £100 million at the end of March this year to £40 million at the end of September. Japan's dollar holdings increased from $896 million to $1.041 million during the same period. The Ministry said that it was not worried over the decline in sterling balances, as the dollar holdings were increasing.

An agreement has been signed between Ceylon and Germany, according to which the latter will provide Ceylon technical and other aids, as envisaged in the Commercial Agreement entered into by the countries two years ago. Technical aid will be given chiefly by establishing model workshops in Ceylon for encouraging small industries and by making available to Ceylon services of a number of technicians.

The Ceylon Government has enforced price control covering a wide range of foodstuffs within the municipal limits of Colombo with effect from the 6th inst. Rice, sugar and flour, however, are not included in the list, as the import of these items are the monopoly of the Government. Food dealers will be asked to furnish returns of stocks they have in hand. The new regulations are designed to check profiteering and hoarding of essential foodstuffs.

During the year ended March 1956, Iran received an income of £35 million from exports of oil. Total production during the period reached 17 million tons, of which 7.4 million tons were refined at Abadan. In the seventeen months from the signing of the October 1954 Oil Agreement, production of oil in Iran rose steadily, yielding a total oil revenue to Iran of £46.5 million. The oil resources in Iran are now operated by an international consortium, in which the British Petroleum Company holds 40 per cent. interest.



ECONOMIC STATEMENT

THE economic statement adopted by the All-India Congress Committee (A.-I.C.C.) at its Calcutta session this week, is a fairly well-balanced assessment of the economic situation in the country. There are no loud protestations of the "State-alone-can-do-it" attitude. If there is no specific appeal for co-operation to the private sector, there is also no jarring emphasis on the essential virtues of the public sector. At any rate, Pandit G. B. Pant, the Union Home Minister, averred, in the course of the debate on the statement, that they had "prejudice against none and the private sector is welcome." The statement, however, seems to by-pass the controversial issues. This is welcome in the sense that it probably indicates that the Government is not seriously concerned over keeping alive the cold war against the private sector. But it is anybody's guess whether this is a prelude to any "change of heart" in the Government or the party in power. But the statement is not entirely free from faulty reasoning and cannot escape the charge of insufficient appreciation of economic realities.

The broad features of the statement, the full text of which is published elsewhere in this issue, may be easily summarised. It affirms its adherence to the ideal of "socialist pattern of society" and, not for the first time, takes it for granted that the country has accepted socialist pattern of society as its goal. It will certainly seem odd to any democratic observer that the Congress Party should regard itself as the sole representative of the people and equate itself, as the ruling party, with the country as a whole. The truth is that there are many who do not agree with its policy of socialism.

Referring more specially to economic issues, the statement stresses that, during the Plan period, the present agricultural production should be raised by at least 35 per cent. which would also be the key to keeping the inflationary forces in check. It lays emphasis on the development of heavy industries without which there can be no rapid industrialisation. It admits that deficit financing can be practised only if prices are stable and other essential consumer goods are available in adequate quantities. Export promotion and restriction of imports receive adequate emphasis as means of achieving success in the foreign exchange front. The essential conditions which, according to the statement, must be fulfilled in the interests of the success of the Plan are: stability of prices, mobilisation of internal resources without creating inflationary pressures and conservation and improvement of foreign exchange resources.

As a general review of economic problems, the statement is, perhaps, unexceptionable. But a closer analysis reveals certain inconsistencies. For instance, how do the authors of the statement hope to reconcile the aim of price stability with the pursuit of small-scale industry ideology which is not conducive to rapid increase in production. Further, large emphasis is placed on agrarian co-operatives, in particular, and on co-operation, in general. But this ignores all the recent experience which suggests how dismally the co-operatives have failed to deliver the goods. Again, while the mobilisation of domestic resources is rightly emphasised, no mention is made of the Government's fiscal policy on which such mobilisation depends. At one place, it insists that, in determining the proportion of incomes which must be set aside for savings, one should not subject the common people to too great a strain. At another place, it insists that "each person in the country, however small, can and should have the privilege of participating in this progress of building up the country by making his own maximum contribution to savings and investment."

The fact is that the problem of raising sufficient savings to match the requirements of the Plan is a difficult one and cannot be solved so long as the Government subjects a tiny section of the country's population to fiscal onslaughts. Given the necessary incentive, maximum savings would become possible. But the provision of such incentives might conceivably mean a certain liberalisation of the Government's tax policy for which the authorities do not seem to be prepared. In the absence of such incentives, Mr. Pant's statement to the effect that the private sector is "welcome" to make its contribution sounds somewhat hollow. After all, this sector cannot make any real contribution if its wings are continuously clipped by heavy taxation and too many restrictions, not to mention the frequent attacks on the philosophy of free enterprise which have the effect of disheartening *entrepreneurs*.

It is, however, noteworthy that the framers of the economic statement are alive to the gravity of the international situation and to its impact on India's economic development. They affirm that the "country's hopes and plans for progress are bound up with the continuance of peace in the world." They warn that the nation "must be prepared for any emergencies that might arise." We have no doubt that the country will be ready for the sacrifices the Government may expect from it. At the same time, the ever-uncertain world outlook, it is to be hoped, will induce the Government to become less doctrinaire and more realistic in its economic policies.

INVEST WISELY

AND WELL

You may be prudent enough to save a portion of your income, but perhaps you are hesitant to decide on a safe investment.

Let this not disturb you. Your Bank is in touch with the leading brokers and will make their expert advice available to you quickly and without charge.

Your Bank will also keep your investments in safe custody and collect and credit to your account interest and dividends as and when they fall due.

It does not matter where you reside—the State Bank of India has a net-work of offices through which it offers to place these and other services at your disposal.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than five hundred offices waiting to serve you throughout India.

SISTAS 58-2

INDUSTRIAL DISPUTE

A clear interpretation of the term "industrial dispute" as defined in section 2(K) of the Industrial Disputes Act was given by Mr. Justice Venkatarama Iyer, Judge of the Supreme Court, the other day. Dealing with the appeal preferred by the Central Provinces Transport Ltd., Nagpur, against the Labour Appellate Tribunal's judgment urging the reinstatement of and compensation for a dismissed employee, His Lordship observed that the preponderance of judicial opinion was clearly in favour of the view that a dispute between an employer and a single employee could not *per se* be an industrial dispute, but it might become one if it was taken up by the union or a number of workmen. There was, he added, considerable reason behind it. Elucidating this point, His Lordship said:

"Notwithstanding that the language of section 2(K) is wide enough to cover a dispute between an employer and a single employee, the scheme of the Industrial Disputes Act does appear to contemplate that the machinery provided therein should be set in motion to settle any disputes which involve the right of workmen as a class, and that a dispute touching the individual rights of a workman is not intended to be the subject of an adjudication under the Act when the same has not been taken up by the Union or a number of workmen."

This interpretation should set at rest the conflicting opinions expressed over the question whether a dispute by an individual workman is an industrial dispute as defined in section 2(K) of the Act. Mr. Justice Venkatarama Iyer examined the three distinct lines of approach adopted by the deciding cases. These were: (1) A dispute which concerns only the rights of individual workers cannot be held to be an industrial dispute; (2) a dispute between an employer and a single employee can be an industrial dispute as defined in section 2(K); and (3) a dispute between an employer and a single employee cannot *per se* be an industrial dispute, but it may become one if it is taken up by the union or a number of workmen. These divergent lines of approach cause much confusion. What is worse, the definition of the term "industrial dispute" given in some of the Acts of State Governments is at variance as compared with that given in section 2(K) of the Act. The C.P. and Berar Industrial Disputes Settlement Act, for instance, recognises the right of an employee to agitate over his individual rights. It was for this reason that His Lordship dismissed the appeal preferred by the Central Provinces Transport Ltd., in which it had raised the contention that, under the Act, there could not be an industrial dispute in respect of the demand by an individual employee for reinstatement.

SMALL-SCALE INDUSTRIES

The Central Government's decision to help the small-scale industrial units in securing a much larger sphere of stores than what is now being purchased by it has not come as a surprise. For the Government is wedded to the policy of ensuring a speedy development of the small-scale industry sector, thanks to considerations of employment potential. The outlay earmarked for the development of this sector (including village industries) in the Second Five-year Plan is as much as Rs. 200 crores, which represents 22.5 per cent. of the aggregate outlay of Rs. 890 crores on "industries and mining." One of the means to implement this scheme of development successfully lies in assisting the small-scale industries to participate to a greater extent in the Centre's stores purchase programme. This aspect was forcefully stressed, first by the Stores Purchase Advisory Committee and later by the American expert, Mr. Kennard Weddel, who, after examining the technical side of the development of the small-scale industry sector, drew up a programme of encouragement. It is as a sequel to these recommendations that the Central Government has, as stated at the outset, decided to augment its purchases of stores from small-scale industries.

The new procedure governing stores purchase lays down that some of the requirements of Government will be met exclusively from small-scale industries. It also lays down that, in respect of items which can be purchased only from large-scale units, sub-contracts for ancillaries and components may, where it is possible, be given to small units. The National Small Industries (N.S.I.) Corporation and the Regional Small Industries Service Institutes will help the large-scale units in finding suitable small units to which sub-contracts may be given. Such help is of special importance, considering the existence of a large number of small units in the country, estimated at more than 30,000. As regards tenders for Government contracts, the items will be divided into two sections. In the first section, tenders will be invited from all parties and the small industries may be accorded a "suitable and reasonable" price differential up to a maximum of 15 per cent., the actual quantum being decided in each case on merits. In the second section, a portion of the indent will be reserved for the N.S.I. Corporation. For the unreserved portion, the normal procedure for tenders will be followed, while, for the reserved portion, small industries nominated by the Corporation will be eligible for a price differential, the prices being fixed on the basis of the results of the tender to be opened.

In addition to earmarking an increasing share of Government purchases for the small industries and granting a price differential on some stores, the Central Government has announced two other concessions. First, tender sets and specifications other than certain priced specifications such as those of the Indian Standards Institution and Indian railways will be supplied through the N.S.I. Corporation. Secondly, tenders will be accepted without deposit from those units which are certified by the Corporation to have attained a sufficient degree of competency to fulfil Government orders. A special organisation is proposed to be set up in the Corporation for the necessary liaison between the Centre's purchasing departments and the small industries.

The aforesaid measures will surely give some fillip to the development of small industries. But it must be emphasised that the policy of patronising products of these industries should not be extended so far as to overlook completely the vital considerations of price, quality and delivery. The real, effective solution for revitalising and expanding the small-scale industries lies not merely in earmarking of markets or granting of price preferential, but in the removal of limitations—organisational and technical—under which these industries function.

MARKETING OF COFFEE

The season 1956-57 promises to be a record one for the Indian coffee crop. The seasonal conditions are said to be satisfactory, despite some recent heavy rains in certain areas, and the production is likely to exceed the record crop of 33,410 tons reached in 1955-56. With such a prospect, the attention of the Coffee Board is naturally concentrated on the best way of marketing another large crop. A detailed note on marketing for the first half of the year, prepared by the Marketing Committee, is being considered by the Board. The Marketing Committee has estimated the likely receipts during the year at 35,890 tons. Unofficial estimates, however, place the crop at as high as 40,000 tons. Internal consumption is expected to absorb 26,775 tons and the quantity available for export is likely to be 7,924 tons.

The prospects for marketing the surplus in coffee and the possible steps for enlarging and retaining the markets abroad for Indian coffee were indicated by Mr. K. Srinivasan, Chairman of the Coffee Board, at the thirty-ninth meeting of the Board, held last week. He said that, following the sale of 500 tons of coffee to the U.S.S.R. in June last, there had been enquiries from the same country, as well as from Czechoslovakia and Yugoslavia, and their requirements would be supplied out of the new crop. "Apart from these very welcome additions to our market," Mr. Srinivasan added, "it seems to me very necessary that we should open up other markets, now that our exportable surplus is steadily growing and is likely to grow further in years to come."

In view of the prospect of the foreign markets for Indian coffee being enlarged, the Coffee Board Chairman said that it would seem necessary to think again in terms of destinational quotas or of straight trading by the Coffee Board with some foreign countries. He was not, however, sure whether the Board could realise the best price possible for all lots put out for export by present methods, if large quantities of coffee were to be sold in the course of a short period. The object of the Board seems to be not to get the best price at all times, but to have a steady and secure market even if it means slightly lower prices. Mr. Srinivasan seemed to suggest that this object could not be attained, if the export field was left to private traders. For, he said:

"There is a limit to what the few members of trade who now participate in the export sales can handle perhaps, and there is the possibility of that amount of coffee, in excess of what they could conveniently handle, fetching lower prices, or not moving even; it should be possible, however, to sell larger quantities in the course of a few months at favourable prices and the range of price of lots can be confined to narrow limits of fluctuation, if more exporters with substantial resources should enter the field. We all expect the exportable quantities to increase year by year. While the exporter may be interested in selling the coffee at a given time to anyone abroad who gives him the best price, and may not be inclined to give as much attention always as may be desirable about seeking new markets, or nursing or holding markets where he has gained entry, the Coffee Board, it seems to me, has to do just this, and has to take a longer view even subordinating immediate benefits."

The Coffee Board Chairman did not, however, suggest that the few private traders who now participate in the export sales should altogether be eliminated and the entire export trade should be handled by the Coffee Board. He wanted the Board to consider whether it should not itself try and sell a portion of the exportable surplus to particular countries and build up future markets for Indian coffee.

So far as prices abroad are concerned, Mr. Srinivasan hoped that, in the absence of any serious indications to the contrary, world prices would continue to be at favourable levels and that this would be another good year for the industry. Internally, the prices had been held steady, with the variations confined to narrow ranges. The steady trend was attributed by Mr. Srinivasan to three factors, namely, (1) the provision for an adequate carryover at the end of the calendar year, (2) a reasonably accurate estimate of the probable consumption, and (3) the proper regulation of not only the quantity of coffee offered for sale each month but also the types and grades.

Another problem which the Coffee Board is seized of is the movement of stocks and storage. This problem will assume greater proportion when the production is enlarged under the Board's development plan. It would appear that a large quantity of coffee is usually left over just before the onset of the monsoon at the coast, where a sizable proportion of the crop grown inland is taken for curing, though almost all the sales in the first half of the year are ex-coastal stocks. It has, therefore, been found necessary all these years to shift the stocks left over for storage inland, till they are disposed of to save them from the effects of the monsoon on the coast. According to the Coffee Board Chairman, a sum of Rs. 115 to Rs. 120 per ton is being spent on this transfer. In 1956, the quantity shifted from the coast was 2,577 tons and the expenditure involved works out to about Rs. 3 lakhs. The quantity so shifted may increase year by year as production goes up. Apart from the huge expenditure involved, this raises the problem of finding accommodation inland. It is found that the inland curing houses do not have accommodation for stocks so transferred as their own stocks would not have moved. Extra godowns have to be hired, while those on the coast will have to be kept empty. The solution is, therefore, to build proper moisture-proof godown accommodation on the coast, which at the same time will save the annual expenditure on transfer of stocks. The Coffee Board is examining this question in consultation with the Central Food Technological Research Institute and with the co-operation of the curers.

WHY NOT SET UP A PAPER MILL?

Let us help you to set up a small or medium paper mill in your district. We will help you in every way, including survey of local raw material possibilities, market survey, supply of machinery, erection of mill, choice of production lines, technical advice, training of personnel at our plant, marketing of products—in fact, everything for the economical and profitable operation of a compact mill capable of producing a variety of papers and boards. Investment of Rs. 3 lakhs to Rs. 15 lakhs for 1 to 5 tons daily output.

Fort, BOMBAY

RICE PRODUCTION

The importance of raising the agricultural output, particularly of food, has always been a matter of much concern to both advanced and backward countries. Apart from this, nearly all countries want to be self-sufficient in food. Of the various food crops, rice, however, occupies a prominent place as the staple food for half the population of the world. For large sections of the Asian population, in particular, rice forms the chief diet. Any improvement in the techniques of rice production is, therefore, of considerable interest to Asian countries. The fifth session of the International Rice Commission now being held at Calcutta has thus a special significance to all Asian countries.

Presiding over the inaugural meeting, Dr. Punjabrao Deshmukh, the Union Minister for Agriculture, stated that, in the world, rice occupied more than 240 million acres of land which, on an average, produced annually about 160 million tons of clean rice. He rightly emphasised that it was predominantly an Asian crop—about 91 per cent. of rice being produced and consumed in South-East Asia alone extending from Indo-Pakistan sub-continent to Japan. He further stated that no crop had entered the lives of so many people and had been of such considerable economic importance as rice in all Asian countries.

The real impetus to agricultural development in India was given only in the course of the First Five-year Plan. As the Director-General of the Food and Agricultural Organisation, Mr. B. R. Sen, stated, during his inaugural address at the session, until recently agriculture was the most neglected subject in South-East Asia, though it was the main occupation of the people. In India, however, some encouraging results have been noticed through efforts at improving the output of foodgrains. Thus, in 1953-54, a peak production of about 68.7 million tons of foodgrains including pulses was reached. Even though the actual production in the subsequent two years has fallen slightly, the overall production in 1955-56, estimated at 63.5 million tons, is higher than the target of 61.6 million tons in the First Five-year Plan by 1.9 million tons. The increase in population, however, sets at naught all premeditated calculations, so that, in the sphere of food production, the progress achieved so far still falls far short of actual requirements.

The Union Minister for Agriculture commended the Japanese method of cultivation introduced in the country to which he attributed the recent increase in rice production. He hinted at the possibility of raising the target of 4 million acres under this method of cultivation, fixed at the end of the Second Five-year Plan, to at least 10 million acres. The practice of the Japanese method, as a whole, he pointed out, had given additional yield at the rate of half a ton per acre on an average. At this rate, an addition of 10 million acres to the area under this method of cultivation would by itself add 5 million tons to the output of rice in the country. Such an increase would cover almost 50 per cent. of the total additional foodgrains production aimed at in the last year of the Second Plan. Further, investigations carried out at various centres, according to Mr. Deshmukh, have led to development of strains suitable for different conditions. These varieties include food-resistant plants for Bihar, flood and drought resistant strains for Bengal and deep water paddies for Assam and Bihar. These improved varieties have stepped up the yield in different States from anything like 15 to 30 per cent. Similar investigations in Kashmir have revealed the possibilities of growing rice at high altitudes of about 7,000 feet in place of millets and other coarse grains. Concluding, the Minister expressed the hope that the Commission would evolve appropriate formulæ for improving the quality of rice and said that this aspect of investigation was of special importance for a country like India.

It is clear from the foregoing that rice production could, by proper methods, be stepped up to meet the country's needs.

ECONOMIC POLICY STATEMENT VAGUE

AUSTERITY FOR PEOPLE—PLAN TO BE RESTUDIED

By A Special Correspondent

NEW DELHI, *13th November*

DELHI LETTER

INDIA'S Parliament, which begins its winter deliberations tomorrow, will have an interesting session in the coming weeks. Although a number of official and non-official Bills of economic importance are likely to be discussed and passed, for the present, the attention of practically all sections of the House is being focussed on the foreign policy. In view of the exciting times we are passing through and also as a result of frequent discussions that are taking place between the Government of India and the other important powers of the world during the last few days, the Prime Minister's promised statement on foreign affairs is keenly awaited. Several members of Parliament who are on the informal consultative committee on foreign affairs have, as a matter of fact, made written requisitions to the Prime Minister to make such a statement clarifying India's stand and it is expected that the Prime Minister will make the statement on Thursday.

An indication of the ruling party's forthcoming economic policy has already been given to the public by way of a resolution recently passed by the All-India Congress Committee at its Calcutta session. The operative portion of the resolution is couched in rather vague terms, so that it is capable of being interpreted according to the likes and dislikes of certain people. The Congress is an omnibus association, consisting of different sets of people whose interests are often conflicting with one another. And, therefore, perhaps, persons who have been responsible for drafting the resolution, have intentionally kept the main operative portion of the resolution vague. For instance, the resolution policy says, *inter alia*, that "in industry, the interests of the workers must be identified with the industrial unit in which they are working and they should be increasingly associated with the management of the industry." But it is noteworthy that the manner and the quantum of the workers' association in managing the industrial units have not been specifically laid down. The entire gamut of this resolution is to appeal to the common people to make a sustained effort and undergo sacrifices for carrying out the Second Five-year Plan. The Home Minister, Pandit Gobind Ballabh Pant, who moved the resolution, exhorted people to produce more, consume that much which was absolutely necessary and to impose a "self-denial ordinance" in the interest of maintaining the price level.

Foreign Trade

Mr. Morarji Desai, the erstwhile Chief Minister of Bombay, is expected to assume charge of the Ministry of Commerce and Industry on 14th November, so that he will have sufficient time to address the forthcoming Export and Import Advisory Councils which are meeting here on 17th and 18th November. It may be mentioned in this connection that Mr. Morarji Desai is not likely to announce any new policy, in view of the fact that he will be somewhat new to the atmosphere of Delhi. Further, he would naturally be given some time to assimilate and chalk out a policy in order that it should bear his own impress. Even the Secretary of the Ministry, Mr. S. Ranganathan, is comparatively new to the Ministry by reason of the fact that he has taken charge only recently. Hence the Minister's address at the meetings of the Export-Import Councils may not reveal any new policy, apart from the fact that it will take into account the heavy deterioration in the balance of payment position and stress the importance of augmenting India's exports, in order to reduce the adverse balance of trade which has taken rather alarming proportions during the last seven or eight months.

In view of this development, it is quite likely that the Government will try to liberalise exports of certain goods which are in greater demand in foreign markets, as, for instance, vegetable oils, spices, etc., so that India can earn a sizable amount of the much needed foreign exchange. A hint to this effect has already been given by the Home Minister, Pandit Pant, at the A.-I.C.C. session in Calcutta where he said that the implementation of the Second Plan should be done through the adoption of certain amount of austerity by the people. The problem of financing the Plan, Pandit Pant said, would not be difficult "provided every one of us behaves in a proper way and every one makes his contribution to the fulfilment of the Plan." In the light of this statement, it is believed that export promotion may take the form of allocating specific quotas even at the expense of the internal market in respect of some important raw materials and manufactured goods.

Due to large-scale importation of industrial raw materials and manufactured goods, particularly from the Western European countries, the country is faced with a keen shortage of foreign exchange. Imports of iron and steel and other capital goods from West European countries have been rapidly increasing, creating thereby considerable imbalance in India's balance of payments position. In order to meet this situation, the Government of India has been trying to obtain from the International Monetary Fund a stand-by credit of 100 million dollars. Anyway, the Government, while approaching for this loan, is extremely conscious of the fact that it should take sufficient measures to restrict overseas payments to a minimum, so as to conserve foreign exchange resources. Hence, imports of luxury goods and even of some avoidable articles are likely to be banned or restricted.

Foreign Capital

This apart, a certain section of the Government of India is of the opinion that India should take sufficient measures to attract foreign capital, in order to facilitate implementation of the Second Plan quickly and without any setback in schedule. The other day, at an important meeting, Dr. P. S. Lokanathan, until recently the Executive Secretary of E.C.A.F.E., said that there was nothing wrong in inviting foreign capital to develop an underdeveloped country like India, provided there were no political strings attached thereto. He cited some examples in this connection. Even England in the early years of industrialisation was trying to attract foreign capital from Holland and other countries. The same was the case with the U.S.A., he said, which attracted large amounts of British capital prior to World War I. It is therefore necessary, he asserted, that India also should follow the same steps to attract foreign capital by offering liberal terms.

One important feature which needs stressing in this connection is the determination of official spokesmen about quickening the pace of economic development. In the course of a recent address made by the Minister for Heavy Industries, Mr. Manubhai Shah stressed the fact that the industrial targets laid down in the Second Plan should be considered as the minima and not as maxima. He has been insisting that the private sector should reach the targets laid down within the first three years of the Plan period itself, so that it could be in a position to develop other industries. How this objective is to be attained has, however, not been explained by him yet; but it is to be hoped that, in the coming months, he will clarify his attitude to help industries in the private sector in such a way as to enable them to achieve the targeted production within the first three years of the Plan.

In the course of a small note circulated by the Finance Minister to the delegates of the A.-I.C.C. in Calcutta, Mr. Krishnamachari has attempted to pave the way for the implementation of some of his pet ideas and objectives. He has stressed the importance of augmenting internal resources for financing the Plan through increased, higher and even diversified taxation, better collection of existing taxes, and by readjustment of some of the important projects as would yield maximum benefits to the country in a shorter space of time and by restricting expenditure on some other projects which could be postponed for better times. It is from this angle that efforts are now being made by the Finance Ministry and the Planning Commission for a re-study of the Plan. There is also a move by the Planning Commission to examine the development projects of various States from a fresh perspective and impress upon the Chief Ministers, who will be assembling in Delhi for attending the next meeting of the National Development Council on 8th and 9th December, on the necessity for rigidly adhering to these views. In other words, there would be a pruning of the development plans in the States during the coming weeks, so that they could be included in the budget for 1956-57. The Government of India itself is not in a position to achieve its declared objective of implementing the programmes envisaged for the first year of the Second Plan due to various factors.

COUNTING THE COST OF SUEZ ADVENTURE

From Our Own Correspondent

LONDON, *10th November*

LONDON LETTER

INEVITABLY, the political consequences of the Suez adventure, which everyone recognises cannot be fully envisaged at the moment, has occupied men's minds in this last week. It is recognised that the train of the Middle Eastern powder barrel has been set ablaze and that daily more and more explosives is being heaped upon it. Whether the fire can be put out before the explosion take place must be the predominant question. But, since it is a question without immediate answer, the City is meanwhile counting the economic cost. The stock markets continue uncertain, saved from a more serious collapse by the small turnover of business. While there is hope that the crisis may only be temporary, no investors wish to lose substantial sums by selling out now.

The most important development has naturally been on oil supplies and their accompaniment, the tanker and general freight rates. Sir Anthony Eden's war has now cost the use of the Canal for not less than three months. Indeed, every day that passes informs the British public of yet more block ships discovered! His war has also cost the pipelines running through Syria down to the Persian Gulf and, in spite of the paucity of news here about the Gulf Sheikdoms, it is generally surmised that supplies from these have also dried up and that very substantial damage has been done to the refinery and oil loading equipment. And, while estimates are already being made of how soon the Canal can be reopened, the estimators ignore that Egypt has not yet given permission for the removal of any of the block ships in the greater part of the Canal which she controls, and is unlikely to do so until there is a settlement in her favour. She holds all the best cards, now that Britain and France have been obliged by the United Nations to accept a "cease-fire." They cannot attack again, they cannot move down the Canal and the United Nations Police Force which is intended to replace them can do no more than hold the peace! Egypt remains master of a blocked canal. Her only loss is that part of the revenues which were being paid directly into Egyptian accounts and, with a cessation of operating costs, it is doubtful whether she is out of pocket at all. Whoever bears the cost of repairing all the damage that has been done, and the damage that will be caused by further neglect, it is not likely to be Egypt!

The facts are, therefore, plain. Middle Eastern oil has been cut off for not less than three months—and in the end it may be that the repairing of damages to the installations feeding the Mediterranean and the Persian Gulf ports may take longer than reopening the Canal. With 25 per cent. of supplies gone, Britain has to turn to American and Venezuelan supplies and pay the dollar cost, but, even paying the price, there is bound to be a gap in the flow of oil and the Minister of Fuel and Power has already asked the oil companies to cut deliveries to all consumers by 10 per cent. This affects supplies of fuel oil as much as supplies of petrol. So far, an informal rationing system has begun, in order to induce as much voluntary economy as possible in usage. In any event, the machinery for rationing does not exist, except in paper plans, but the Ministry is at this moment pushing ahead with all the apparatus of a full-blown rationing scheme for all users. Whether it will have to bring this scheme into effect, depends upon whether a term seems likely to be set to the break in supplies which the existing stocks coupled with voluntary economies can bridge. But the prospect at the moment is not favourable.—*All Rights Reserved.*

AMERICAN LETTER

PERSONAL VICTORY FOR MR. EISENHOWER

From Our Own Correspondent

NEW YORK, *8th November*

AN analysis of the election results in the United States can lead only to one conclusion. The American people have given an overwhelming vote of confidence to President Eisenhower and the policies his Administration has pursued, both politically and economically. The popular vote for the President was 33,212,325, while Mr. Adlai Stevenson, his opponent and former Governor of Illinois, scored 24,192,953 votes. Owing to the peculiar electoral college system which goes back to Colonial days here, Mr. Eisenhower carried 41 States out of 48. It was a very impressive performance. Party lines were broken all over the country. Labour leaders, who have been traditionally Democratic and who have boasted unsuccessfully that they could deliver the multi-million labour vote, have failed again.

The vote for the President and Vice-President Nixon on the Republican ticket was all the more impressive, because the voters returned a Democratic House of Representatives and the Senate is also under Democratic control this time. It was a vote for confidence in people rather than in parties. The campaign of the major candidates was televised all over the country on the major networks and millions of people had a chance to look at those who ran for office and make up their minds for themselves without moving out of their living rooms. As I said in previous despatches, the President's popularity stems from his personality and traits, his sincerity, his undisputed integrity and his fairness in all matters. This was not a victory for the Republican Party, it was a personal Eisenhower victory.

Another consideration which may have entered the minds of the voters is that, according to a recently passed law, a President may serve only two terms of four years each. Previously, there was always the temptation for any occupant of the White House to pull all cords of the political organ to aspire for yet another term. It no longer exists. Thus, greater objectivity is certain to be present during a second Presidential term. The disturbed Middle Eastern situation also played in Mr. Eisenhower's favour. The man, under whose command Europe was liberated, is trusted by the American people to know what he is doing or not doing on actual or potential battlefields. In other words, his stewardship is not questioned. The ending of the war in Korea and the general prosperity which prevails in the U.S. were also important factors, as well as Washington's refusal, up to this writing, to become involved in the Suez Canal crisis along with the former Allies, Great Britain and France.

It was a selective voting based on performance and merit—the very basis on which the Eisenhower campaign was conducted. He never vilified his opponents, while the latter made wide references to the President's health and being a "part-time President." This back-fired in the public mind and psychology. It may be said again, at this point, that Mr. Eisenhower was offered to succeed former President Harry Truman on the Democratic ticket, but nothing ever came of it. As a soldier, he never belonged to either party. He finally chose the Republican Party which he has lifted out of the doldrums of 20 years of undecisiveness between conservatism and liberalism. The schism still exists, but the President's actions have bridged the gap.

The stock market on the first day after election showed considerable strength. On the second day—after—it faltered a bit, but that was due chiefly to developments in the Middle East which are viewed in this country with alarm, particularly because no immediate solution of the obvious dilemma is seen here.

The blocking of the Suez Canal poses a serious problem, it is felt. The price of oil may double out of that area owing to greater shipping costs. If any further difficulties arise, the economic health of the Arab nations may be affected seriously. The controversy between Israel and its neighbours also remains unresolved, although there are vague suggestions that the United Nations will be permitted to take some positive action.

The illness of U.S. Secretary of State, Mr. John Foster Dulles, who is in hospital with an intestinal cancer operation, should have no effect on Washington foreign policy. The acting Secretary, Herbert Hoover, jr., is an extremely able man. He is the son of former President Herbert Hoover. Like his father, he is a mining engineer by profession. He spent considerable time in the Middle East and knows more about the intricacies, both economic and political, than Mr. Dulles.

India and the rest of the world should be reassured in the stability of Washington policy by the election returns. All those elected on the executive and legislative levels of Governments here, are non-radical, conservative but liberal-minded.

There has been as much Democratic support for Mr. Eisenhower as there has been by the Republicans. It means continuity and no change in the actions and measures which may be taken by official Washington.

On the overall economic scene, the outlook is as rosy as ever. Predictions by qualified economists include that, with some foreseeable setbacks in some lines, prosperity will continue into 1957 and perhaps beyond that, so far as can be gauged at this time. Tighter money rates will probably lead to lower bond prices, but better corporate earnings. Savings will have to be stepped up to meet the increasing demand for investments in long-term projects.

To sum up the political picture, as an aftermath of this election, President Eisenhower has produced a political revolution in the large cities of the North in the U.S. It was a Democratic stronghold for about 30 years. As stated above, all party lines have been broken. What is also significant is that President Eisenhower had a 9 million plurality this year, against 6,621,242 in 1952. His popular vote was increased percentagewise, in nearly all parts of the country. In the Republican era between the end of the First World War and the election of Herbert Hoover in 1928, the Republicans held a steadily declining majority in the 12 largest cities of the U.S. From then on, Franklin D. Roosevelt put together an overwhelming coalition of southern states and northern industrial cities which President Eisenhower broke wide open in 1952 and even more so this year.—*All Rights Reserved.*

INDUSTRIAL POLICY STATEMENT X-RAYED BY AN AMERICAN

VERDICT GENERALLY FAVOURABLE TO GOVERNMENT

By Harry Robinson

RESEARCH ECONOMIST, STANFORD RESEARCH INSTITUTE, CALIFORNIA

[This report was prepared by the author during the summer of 1956 while serving in India on an Institute project for the Ministry of Commerce and Industry of the Government of India. The objective of the project is to provide assistance to the Government of India in the analysis of private-investment needs and opportunities. Mr. Robinson, who is spending all of 1956 in India on this project, maintains his headquarters in New Delhi but travels frequently to other commercial and industrial centres in the country. In the summer of 1955, Mr. Robinson visited Pakistan, Ceylon, Thailand, Indonesia, Japan, and the Philippines on an Institute project, during which he studied various private investment conditions, needs, and opportunities.]

PRIME Minister Nehru restated India's industrial policy on 30th April 1956, when he read a new resolution on the subject before the Lok Sabha, or lower house of Parliament. This statement replaces the former resolution of 6th April 1948. It is significant to note that the two resolutions are not to be read together to form a composite document. The apparent changes in theory, emphasis, and procedure represent a recasting of the pattern for nationalisation and industrial development in the public and private sectors, and reflect the trend of official thinking since 1948. The release of the revised statement was timed to precede Parliament's adoption of the Second Five-year Plan for social and economic development. The need for renovating the 1948 statement had been long recognised. Many changes had taken place in India during the past eight years which made the document outmoded.

The two most important changes were (1) the enactment of the Constitution in 1950, which established a democratic form of Government in India, and (2) Parliament's acceptance of the 1954 resolution whereby India adopted a socialistic pattern of society as the objective of social and economic policy. Of lesser, though important, significance are supplemental legislative enactments such as the Industries (Development and Regulations) Act of 1951 and the Company Act of 1955. Also, during this period, India gained in breadth of perspective and experience, especially through the promulgation and creditable completion of the First Five-year Plan.

The nationalisation of the life insurance companies in January of this year, coupled with the knowledge that the 1948 Resolution was to be revised, created fear in the minds of the investing public. The upward trend in the commodity market was halted, and it is quite likely that a continued delay in the release of the 1956 Resolution could have retarded development and expansion of the private sector. A close study of the 1956 Resolution reveals that careful thought has gone into the drafting of the new statement—which must be regarded as a highly important document. Barring unforeseeable political changes, its principles are likely to govern throughout the Second Five-year Plan.

Upon analysis, there appears to have been a desire to shroud certain policies in ambiguous terms and to state in an indirect way that India has dropped the 1948 programme of acquiring privately-owned industries operating in those fields which had been reserved for exclusive development by the State.

The Resolution leaves much to be desired by the private investor, particularly a foreign investor, in the way of removing misgivings and uncertainties. There is, however, the assurance that the private sector will be permitted to continue and encouraged to expand so long as it conforms to the Constitution's basic principles. For a layman attempting to justify the method of presentation, it may be fair to state that, in a certain sense, ambiguity may be understandable during this period in which India is developing a socialistic society. The Government has stated repeatedly that it does not intend to follow a well-defined socialistic pattern, but to evolve a pattern to suit the needs of the people and the temperament of the times. Rather than be forced into definite commitments, it appears that this "feel-as-you-go" technique is the one which will govern regardless of the uncertainties such a policy engenders. This procedure permits deviations to be made which politically might not be possible were the Government to commit itself at this time to a well defined programme.

1948 and 1956 Resolutions Compared

The 1948 Resolution established three Government monopolies: the manufacture of arms and ammunition, the production and control of atomic energy, and the ownership and management of railway transport. Six industries were listed in which the State (Central, Provincial, and State Governments and other public authorities) would assume exclusive responsibility for establishing new undertakings. Exceptions could be made when, in the national interest, the State would find it necessary to secure the co-operation of private enterprise, subject to prescribed Government control. The six industries were coal, mineral oils, iron and steel, aircraft manufacture, shipbuilding, and the manufacture of telephone, telegraph, and wireless apparatus, exclusive of radio-receiving sets. All other industries were normally open to the private sector, but 18 specific fields were subject to Central regulation and control.

The 1956 Resolution discards this breakdown, and in its place classifies industry in three categories. It defines the role the State will play in each, pointing out that "it is always open to the State to undertake any type of industrial production."

The first category lists seventeen industries, the future development of which will be the exclusive responsibility of the State. As in the 1948 Resolution, the same qualifying statement is found, that the State may secure the co-operation of private enterprise in the establishment of new units when the national interests so require, provided that the State will ensure through majority participation in the capital, or otherwise, that it has the requisite powers to guide the policy and control the operations of the undertaking.

As might be expected, the 17 industries include the six in which expansion had been exclusively reserved for the State in the 1948 Resolution, and the three monopolies. The scope of the monopoly covering arms and ammunition is expanded to include allied items of defence equipment. A fourth monopoly, air transport, is added, since the Indian airlines were nationalised during the 1948-56 period. The generation and distribution of electricity is included, because this public utility is controlled by the State through legislative measures. All of the six remaining industries, except aircraft, were transferred from the list of 18 industries which had been subject to Central regulation and control under the provisions of the 1948 Resolution. These six, which pertain mainly to minerals and heavy equipment, are described as follows:

1. Heavy castings and forgings of iron and steel.

2. Heavy plant and machinery required for iron and steel production, for mining, for machine tool manufacture, and for such other basic industries as may be specified by the Central Government.

3. Heavy electrical plant, including large hydraulic and steam turbines.

COTTON CLOTH EXPORTS TO WEST ASIA

SHARP SETBACK IN RECENT YEARS

IT looks as though India is fast losing its markets in cotton piecegoods in West Asia. The past two years have witnessed a sharp setback in the exports of mill-made cloth to this region. The share of the six most important countries in the region—Aden, Bahrein Islands, Saudi Arabia, Iraq, Iran and Kuwait—in the aggregate shipment of mill piecegoods from India during the year ended March 1956 was only 11.0 per cent., as against 12.6 per cent. in 1954-55 and over 19.0 per cent. in 1953-54. The quantity of cloth that was actually exported to these countries during 1955-56 was 74.85 million yards, which compares unfavourably with 95.75 million yards and 133.72 million yards (estimated) in the preceding two years, respectively. Following reduced shipments, the country's foreign exchange earnings from cloth exports to the countries suffered a fall, the figure for 1955-56 being Rs. 4.78 crores, as against Rs. 6.29 crores in the year before and Rs. 8.92 crores in the year previous to it. The decline in the value of these exports over the past two years was steeper than that in the quantity, being 46.4 per cent., as against 44.2 per cent.

An idea of the trend of cloth exports to the aforesaid six countries of West Asia in the past three years can be had from the following table:

(In million yards)

	1955-56	1954-55	1953-54
Aden	38.07	51.16	80.10
Bahrein Islands	3.18	2.44	3.06
Saudi Arabia	17.91	11.71	18.69*
Iraq	8.32	11.42	10.68
Iran	2.97	12.29	3.15
Kuwait	4.40	5.73	18.04
Total ..	74.85	95.75	133.72*

* Estimates only.

It will be seen from the above figures that the bulk of the drop in mill cloth shipments from India to the region under reference is accounted for by Aden, the actual extent of the fall being 25.6 per cent. in 1955-56 and 36.1 per cent. in 1954-55. The intake of cloth by Kuwait has also been steadily declining. Exports to Iran and Iraq which were somewhat higher in 1954-55 fell again during the year under review. Saudi Arabia and Bahrein Islands, however, purchased slightly larger quantities of Indian mill cloth in 1955-56 as compared with the previous year.

Powerful Competition

The sharp setback to India's exports of cotton textiles to West Asia must be attributed to powerful competition from the Soviet Union, Eastern Europe and Japan. In Iran, for instance, the Soviet Union is said to have emerged as a predominant supplier of cloth, followed by Japan. The East European countries such as Czechoslovakia, Poland and Hungary are also said to be supplying considerable quantities of cloth. Thanks to the competition from all these countries, India stands today last in the list of suppliers. About five years ago, it will be recalled, India was meeting practically the entire cotton textile needs of Iran. Similarly, India is losing ground in the textile market of Bahrein Islands in favour of the U.K., Soviet Union and Japan. In Iraq, India's main competitor has been Japan which, it is reported, is supplying almost all types of textiles with first class finish, get-up, required assortment and packings. The U.K. has also been supplying large quantities of goods like white shirtings and printed chintz.

A number of factors has contributed to the recession in the competitive position of India *vis-a-vis* other countries in the textile markets of West Asia. An interesting account of these factors is given by Mr. M. N. Savani, a leading exporter of Bombay, who recently toured the West Asian countries, in a report published in the *Texprocil Bulletin*. According to Mr. Savani, the following are the main causes for the marked setback to India's cloth exports to Iran:

The taste of the consuming public has shifted during the last five years from coarse and medium varieties to fine and superfine cloth. It is evident that India cannot supply cloth in the latter two varieties in competition with the other suppliers.

The mill industry and handloom sector enjoy a beneficial position so far as coarse and medium varieties of cloth are concerned, as there are very heavy import duties on the same. Moreover, the imports of grey cloth, coatings, etc., are entirely prohibited with a view to encouraging the home industry.

Barter agreements recently executed by Iran with countries such as Russia, Poland and Czechoslovakia facilitate imports of textiles from those countries and, to that extent, adversely affect the business with India.

India has not been able to supply textiles with consistency in quality and prices and in the required folding, assortments, packing, etc.

There are very severe complaints about the packing of Indian cloth, and late and irregular deliveries effected by the Indian mills.

India is not in a position to supply cloth with the same finish, appearance and get-up as done by Japan and other suppliers.

Iran prefers to have printed items in different assortments. The mills in India, however, stipulate unreasonably large quantities to be purchased for each colour and design. This, therefore, discourages the Iranian importers from purchasing Indian cloth.

It is also complained that various varieties, though not in fast colour, are stamped as such and thereby the consumers do not place much reliance on the Indian varieties. To cite an instance, almost all types of leopards which are dyed in black with sulphur colour are stamped as "Fast Colour" but the colour fades away quickly even in the first wash.

India supplies only 24-yard pieces and that too in single-folds, while Iran prefers to have coloured weft shirtings and dyed poplins in 29" as well as 36" widths with double-foldings and in 40-yard pieces.

India is not in a position to supply printed chintz, shirtings, dyed poplins, etc., on rolls, whereas the other countries do so. This is very important, since the retailers in Iran pay about As. 2 more per yard, if cloth is supplied on rolls, instead of in pieces.

Even as regards prices, it is found that the quotations of Indian shippers based on the present level of mill prices make the landing cost in Iran about 10 per cent. higher than prices prevailing in Iran for the same varieties. Incidentally, it is stated that, under barter arrangements, the Soviet Union has agreed to supply to Iran cotton textiles at considerably low prices, perhaps the lowest that can be offered by any country in the world.

Protecting Indigenous Industry

The foregoing position may be said to be more or less the same in the other importing countries of West Asia as well. Moreover, several of these countries are taking steps to encourage the development of cotton textile industry. The review of Mr. Savani reveals that Iran has started its own mill industry and is meeting the requirements of textiles to some extent. Lebanon, too, has its own textile mills, most of which are manufacturing nearly all the varieties of textiles, including even towels, superior shirtings, furnishing fabrics, etc. As such, this country needs very little of foreign cloth, excepting superior varieties of cloth such as bleached voiles and heavy suitings which are mostly imported from the U.K. and Japan. A very heavy duty is levied on imports of textiles into Lebanon, with a view to protecting the home industry. Syria has also a very efficient mill industry which is in a position not only to meet the entire requirements of the country but also to export to adjoining places like Jordan, Lebanon and Iraq. The import duty levied by this country on foreign textiles is very high. There are a few cotton mills in Iraq which produce mostly grey cloth. The Government appears to be very anxious to develop the domestic industry, as witness the imposition of very heavy duties on imports of all textiles.

Three Other Causes

In addition to all these factors, there are three other specific causes which are standing in the way of India expanding its textile export trade with West Asia. First, the markets in this region enjoy considerable credit facilities accorded to them by Continental suppliers, Indian shippers however, insist on payment on cash basis. Secondly, the cost of transport is very high so far as India is concerned. It is stated that the shipping freight on cloth exported from Japan to Persian Gulf ports is less than that on cloth sent by India, despite India's proximity to these ports. Thirdly, the salesmanship of Japan and other countries is far superior to that of India. The Japanese exporters have their own agents in several countries who keep themselves in constant touch with the markets and who help in giving speedy delivery of goods.

The foregoing account serves to emphasise that, unless India takes some energetic measures to remove the series of handicaps facing the export trade in cotton piecegoods, there is the danger of the country completely losing the textile markets in West Asia in the coming years. Mr. Savani has rightly stressed the importance of a detailed study being made of the varieties which are imported largely by Iran and other countries from sources other than India and the full particulars thereof, such as construction of cloth, processes utilised to produce the same and saleable prices, being obtained and widely circulated among exporters and mills in India, so that they can emulate the other countries in these matters. The shippers should endeavour to see that the overseas buyers are assured of cloth supplies according to the specifications and samples shown and that shipments are quite prompt. The mills must scrupulously observe the specifications laid down for packing different varieties of cloth and supply the cloth as contracted, that is, with consistency in quality, finishing and delivery.

EXPORT OF RAYON TEXTILES

The prospects of India exporting large quantities of rayon textiles to Afghanistan, Iran, Iraq, Kuwait, Bahrein and Dubai are quite good, provided the Indian manufacturers and shippers offer their goods at competitive rates and also meet the requirements of the markets. This, at any rate, is the view of the three-member delegation sponsored by the Silk and Rayon Textiles Export Promotion Council which returned to India recently after over 20 days' tour of these countries. The view is based on the immediate reactions of the various importers and others interested in Indian rayon textiles.

During its stay abroad, the delegation is said to have particularly impressed upon the importers the commendable progress achieved by the rayon industry in India in recent years, the advantage of trading with India, in view of its proximity to these countries, and, therefore, its ability to meet orders much more quickly than other countries and cater even to very small dealers. The display of the samples which the delegation carried with it to various countries, it is reported, evoked considerable appreciation. The delegation has procured some "trial orders" in almost all these countries for small quantities "which will no doubt assist considerably in reintroducing Indian goods into these traditional markets."

THE SPINNING RICKSHAW

A new type of spinning machine, called the "Spinning Rickshaw," has been produced at the workshop of the woollen carding and finishing centre of the Rajasthan Government at Bikaner. It has been developed by Mr. J. Eshuis, of the U.N. Food and Agriculture Organisation, whose services have been made available to the Rajasthan Government to advise it on matters concerning wool utilisation in rural industries.

The new spinning machine has certain distinctive features which may make it a definite improvement on existing *charkas*. It is intended for family or group spinning, for as many as ten persons may spin at one time on this machine. An additional person pedals on a bicycle crank to provide the motive power. The spinners work in a comfortable sitting position. With only a slight adjustment of the foot, the friction drive can be put into operation and the speed of the bobbin and flyer controlled. The operator uses both hands for drafting and feeding the raw wool, while the new mechanism gives regular twist in all spindles, as all the wheels revolve at the same speed. All parts of this "rickshaw" can be easily made by a village carpenter.

EFFECT OF SUEZ CRISIS ON U.K. MILL INDUSTRY

CLOTH EXPORTS DECLINE

From A Special Correspondent

MANCHESTER, *6th November*

JUST at a time when conditions in the textile trade in Lancashire were showing distinct signs of brightening, the storm-clouds have again gathered menacingly over the international scene. Much will depend on the scale of the hostilities which are being conducted, and the repercussions arising from the actions of other countries. If the struggle can be restrained within a narrow area the reaction on prices and supplies may be temporary and relatively slight. Any extension of the war to other theatres could spark off a movement even more spectacular than that which followed the outbreak of fighting in Korea.

MANCHESTER LETTER

Whatever the outcome of the present confusion, it can safely be assumed that values will be fully maintained for all types of goods and commodities. It would, in fact, be surprising indeed if a sharp advance in all prices was averted. Already there have been indications that producers are holding out for higher rates, irrespective of the firmer tone of the market as a whole.

An obvious case in point is the position of Sudan cotton. If future supplies have to be brought round the long sea route costs will be raised enormously and substitutes for long-staple cotton will not be easily obtained.

Another aspect of the situation lies in the changed position in Lancashire, whose productive capacity is now very much reduced compared with even a few years ago. The quantity of machinery in place has fallen as mills have gone out of business, but additionally the number of workers available has sharply diminished for the same reason.

Doubts were already being cast on the ability of the industry to cope successfully with the increased demand experienced during the past month or two. Delivery terms in many cases were being extended by producers who were finding difficulty in maintaining output due to labour shortages. Should the current action in the Middle East involve further pressure on the flow of goods from the mills, drastic steps might be necessary to provide supplies in the quantity required for urgent use.

Export Slump

With ten months of the present year gone and trade returns covering the first three-quarters of 1956 to hand, it is already obvious that Lancashire's export trade in cotton and rayon goods has taken yet another sharp plunge into the depths. Nor can any consolation be gained from delving into the individual performances of sectional interests or the countries to which cloth is still being sent. The decline in overseas trade is not confined to any particular branch or area.

The table below shows the major outlets absorbing cloth shipped from this country, not all of which was originally woven in Lancashire mills:

(In million sq. yds.)

	Cotton Cloth First nine months			Rayon Cloth First nine months		
	1956	1955	1954	1956	1955	1954
Sierra Leone	11.5	10.1	8.8	1.3	2.2	3.0
Gold Coast	15.4	34.0	24.4	1.3	2.1	2.8
Nigeria	21.4	39.4	41.1	1.5	2.2	5.1
South Africa	41.5	42.7	67.3	11.9	11.5	18.8
Rhodesia and Nyasaland..	20.2	16.5	30.5	14.3	10.6	12.0
Australia	61.1	81.8	97.7	12.7	19.5	30.0
New Zealand	25.1	30.2	29.3	10.0	12.5	14.6
Eire	10.5	10.2	10.6	4.9	6.5	5.8
Belgian Congo	12.4	16.2	10.3	..	..	..
French West Africa ..	10.4	12.2	11.8	..	..	..
United States	9.2	9.0	7.7	..	..	..
India	7.4	3.5	2.8	..	..	..
Total—All countries ..	355.9	428.7	497.3	93.6	104.0	138.3

Combined exports of cotton and rayon cloth have already declined by 190,000,000 yards from the 1954 level and despite the current improvement in trade it has never been suggested that export business has contributed to the revival in demand.

So far as the particular types of cotton goods shipped abroad are concerned, the main fall has been in printed fabrics, which, in the first nine months this year, were barely 120,000,000 yards, as against 170,000,000 yards in 1954. Smaller setbacks have been encountered in other sorts, although dyed goods now represent only 95,000,000 yards, as against nearly 150,000,000 yards two years ago. Bleached cloth exported so far this year aggregated 88,500,000 square yards, as against 104,000,000 yards in 1954.

To complete the unprepossessing picture, imports of all types of cloth over the nine months show a slight increase on the 1955 figures, being 291,000,000 square yards, as compared with 284,000,000 square yards. Smaller arrivals of cotton grey cloth have been offset by the purchase of increased quantities of finished goods and rayon fabrics from abroad.

European Common Market

The Manchester Chamber of Commerce has invited constructive comments on the proposed European Common Market from its 5,000 members. In its official journal, the Chamber said that such an integration of trading in a large market of the world could provide answers to some problems facing industry in this part of the world. It certainly presented a challenge to British industry and if it was not faced realistically perhaps there would be ground for feeling that an opportunity for participation in a new model for international trading had been lost.

"The Chamber is studying the problem," said the report, "and in our desire to ensure the widest coverage we would be glad to welcome any constructive comments from members."

The Directors of the Chamber have told the Chancellor of the Exchequer and the President of the Board of Trade that they support the idea of talks on the common market project. They believe, however, that the British Government should not commit itself before publishing a White Paper on the scope of the plan and consulting industry and commerce.

The scheme has been described "as an attractive idea" by Mr. J. W. S. Utley, Chairman of the Condenser and Allied Spinners and Manufacturers Association, in his annual review. The effect such a free trade area would have on individual countries and industries was problematical.

Referring to possible effects on members of the Association as producers of household textiles, Mr. Utley said: "The volume of our goods going to the Continent is small and we find it impossible to compete with the prices that other countries such as Italy and Germany are asking for products which, though not strictly comparable to ours, are nevertheless performing similar end-uses."

Mission to India

Seven Lancashire cotton trade leaders will go to India later this month to start talks in Bombay aimed at curbing the flow of duty-free cloth from the Commonwealth into Britain. Talks with Indian millowners were originally suggested by Sir Anthony Eden in discussions with the Indian Premier, Mr. Nehru.

Named as leader of the delegation by the Cotton Board in Manchester, last week, was Sir Cuthbert Clegg, a former Chairman of the Cotton Manufacturers' Association. Accompanying him will be Lt.-Col. James B. Whitehead, Managing Director of the Lancashire Cotton Corporation, the biggest mill group in the industry; Mr. C. Henniker-Heaton, Director of the Master Spinners' Federation, representing 450 mills; Mr. W. Crossley for the Textile Finishing Trades Association; the Hon. J. S. T. Hawke, Chairman of the Cotton and Rayon Merchants' Association, representing nearly 1,000 firms and Mr. William Roberts, President of the United Textile Factory Workers' Association, on behalf of all the Lancashire cotton trade unions. Mr. T. D. F. Powell, Export Director of the Cotton Board, will act as Secretary to the mission.

Imports of cotton and rayon fabrics into the United Kingdom in the first nine months of this year aggregated nearly 300,000,000 square yards. India alone has sent more than 100,000,000 yards of cotton grey cloth, worth over £5,000,000. Numerous protests have been made by Lancashire textile leaders at the continued arrival of large quantities of duty-free cloth from the Commonwealth. Representations to the Government have so far met with no success.—*All Rights Reserved.*

PROSPECTS FOR WORLD TRADE IN COTTON

EXPORTS EXPECTED TO REACH NEW PEAK

THE divergence between the centres of production and consumption of cotton in the world is so conspicuous that a significant volume of the total output of the crop enters into international trade. During the 1955-56 season, of the total free world production of 30.5 million bales (of 478 lbs), an aggregate of 11.1 million bales entered into trade between nations. But the factors that influence the volume of trade in cotton are so variable that it is difficult to estimate accurately in advance, the size of the trade that is likely to result. An article in the latest monthly publication of the International Cotton Advisory Committee, however, has made an attempt to project the trade prospects for the current season, based mainly on the performance of cotton trade in the past season and the trend obtaining at present.

The article notes that the 1955-56 export figure of 11.1 million bales represents one of the highest level of trade for the post-war period and exceeds the previous season's 10.6 million bales by half a million. The share of the United States in the total trade fell from 3.4 million bales in 1954-55 to 2.2 million bales in 1955-56, whereas, for growths outside the United States the season was, in many respects, exceptional, exports aggregating 8.9 million bales, as compared with 7.2 million bales in 1954-55. Of the major cotton-producing countries other than the United States, exports from Mexico, Sudan, and Syria set new records and the same was true of central America and some of the smaller cotton-producing countries in Asia and Africa. During the period, exports from Mexico aggregated over 2 million bales, as against 1.2 million bales for the whole of the previous season. Similarly, Sudan exported 452,000 bales of cotton during the first 10 months of the last season, as compared with only 299,000 bales for the entire 1954-55 season. Exports from Egypt also improved from 1.08 million bales to 1.4 million bales in the last season. Exports from Turkey and Brazil, however, declined significantly. As noted above, the U.S., as a residual exporter, shipped only 2.2 million bales. During the 1955-56 season, net importing countries tended to consume more than they imported and, consequently, aggregate stocks in these countries actually declined. However strong the incentive to do so might be, it is doubtful if stocks in these countries could be drawn down much further. Accordingly, consumption requirements will, to a very large extent, have to be met out of current imports.

India stands in a special class by itself. It was normally a net importer of raw cotton. But, during the last season, it changed into a net exporter, though only in a small degree despite an increase in consumption and a decline in production. The result was that stocks were drawn down by some 600,000 to 700,000 bales. Production during the current season is expected to increase, but consumption also may go up, and it is difficult, at present, to say how the supply and demand situation will affect imports. Nevertheless, in view of the fact that imports into this country consists mainly of long-staple cotton needed for the fine spinning section of the domestic industry, imports will probably continue to be substantial not only in the current but even during the coming years.

Another notable feature of the international cotton trade during the last season was the increasing two-way trade with communist countries and it has developed, recently, to such an extent as to make it a factor in any realistic analysis of cotton trade. During the 1955-56 season, for instance, exports to the Soviet block aggregated 900,000 bales, as compared with 500,000 bales in the previous season. There is no indication, at present, of a slow down in the pace of export to communist countries, on the other hand, it is likely to be accelerated, in view of the fact that Egypt, Pakistan and some other countries are increasingly looking to countries outside the free world for an outlet for their cotton. It must be added, however, that this increasing volume of trade with communist countries is the most difficult variable to consider in estimating the volume of trade.

In so far as the volume of trade depends upon a number of variables, any estimate of export prospects has necessarily to be a conditional one. If consumption remains stable and trade with communist countries continues at its present level, cotton shipments during the current season, according to the journal, will have to be at least as large as last season's 11.1 million bales. If consumption in net importing countries increased or if there were any inclination to rebuild stocks in these countries, an increase in trade would become more than a probability. An analysis of consumption in the free world shows that, in 1955-56, consumption increased to 28.49 million, as compared with 27.57 million in the previous season. The increase took place mainly outside the traditional textile manufacturing centres—that is, in net exporting countries. Inasmuch as there is a sustained rising trend in consumption of cotton in underdeveloped countries (and it is unlikely that this trend will be changed in the current season), consumption is likely to increase. As will be seen from the following table, the stock position outside the U.S., at present, is also not unfavourable to an increase in consumption:

Stocks as on 1st August

(In 1,000 bales)

Year	Western Europe		United Kingdom		Japan	
	Quantity	Equivalent months consumption	Quantity	Equivalent months consumption	Quantity	Equivalent months consumption
1951 ..	1,515	3.6	1,225	8.4	686	4.5
1952 ..	1,399	3.4	1,284	9.9	524	3.0
1953 ..	1,589	3.5	1,017	6.7	523	2.6
1954 ..	1,597	3.5	877	6.0	529	3.0
1955 ..	1,685	3.7	549	4.3	429	2.2
1956* ..	1,557	3.4	435	3.4	385	2.0

* Estimated.

From this analysis, it would appear that overall trade prospects are, indeed, favourable, with the likelihood of an increase in exports.

As regards export prospects of individual countries, it is almost certain that the U.S. will export much more cotton this season than it has done in the previous season. It is widely held that exports from that country would be much higher than the last season's 2.2 million bales. This, of course, assumes a total production outside the U.S. roughly equal to the 1955-56 level and a favourable climate for cotton consumption. It is also held in some quarters that there may be some tendency to increase stocks in consuming countries. The following table shows the estimated scope for exports from the U.S. in the current season:

(In million bales)

Item	1955-56	1956-57*
Free World disappearance outside the U.S.A.:		
Consumption	19.3	19.5
Exports to U.S.A.	0.1	0.1
Exports to Communist countries ..	0.9	0.9
Destroyed	0.1	0.1
Total ..	20.4	20.6
Supply (excluding U.S.):		
Production	15.9	16.0
Imports from Communist countries	0.3	0.3
Decrease in stocks	2.0	0.3
Total ..	18.2	16.6
Deficit	2.2	4.0

* Nominal estimates.

The table shows that total disappearance in the free world, outside the U.S., in the current season is likely to be higher at 20.6 million bales, while supply (excluding the U.S) will be lower at 16.6 million bales. This means that there will be a deficit of 4 million bales and, therefore, a much higher level of exports of U.S. cotton is likely to take place. Sales under the new C.C.C. sales programme already aggregate 5.2 million bales. Under the substitutions rule, some of this cotton has been sold to domestic consumers. The journal says: "However, under penalty, this volume of cotton will eventually have to be shipped this season." It is believed that a considerable portion of these has actually been sold for export. Substantial funds, it is stated, will also be available to finance cotton exports during the current season. Upto the middle of last August, Government funds available amounted to $314 million, including the $60 million credit to Japan approved by the Export-Import Bank. This is sufficient to finance nearly 2 million bales at current prices. Last season, funds used amounted to $305 million and financed 1.7 million bales.

Export availabilities outside the United States are likely to decline this season. Stocks in net exporting countries, on 1st August 1956, were only 2.9 million bales; consumption continues to expand and it is doubtful if these two factors will be cancelled out by any possible increase in production this season. In fact, if production is no higher than last season, there will be a significant reduction in export availabilities and aggregate exports from these countries would inevitably decline.

In comparing trade statistics of this season with those of the last, however, it is worth noting that, in some instances, reduced production and/or depleted stocks make it impossible to export at last season's level. In Mexico, for example, production is estimated at 1.8 million bales, of which no more than 1.4 million bales will be available for export, as compared with actual exports last season of 2.0 million. Despite the probability of some increase in production this

EARNINGS OF INDIAN IRONS RISE

LARGE ADDITIONS TO RESERVES

THE financial results of the Indian Iron and Steel Company, Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta), for the year ended 31st March 1956, which disclose a sizable increase in earnings, and the circular attached to the Directors' report giving details of the Company's new expansion scheme, have made very little impression on the share market. This is not surprising in the context of the grave uncertainty which has engulfed the market on account of political developments abroad and the fiscal policy of the Government in the coming months. Moreover, the market does not seem to have got over the disappointment caused by the Government of India's refusal to accommodate the Directors' request for permission to declare a higher dividend. This refusal and the Government's line of reasoning for it have rendered the prospects of an increase in the dividend level in the near future remote. Consequently, buyers in the Company's scrip are scarce.

While such is the reason for the lack of bullish fervour in the I.I. & S.Co. shares, it cannot be denied that the Company has fared quite well during 1955-56. The gross profit for the year under review amounts to Rs. 8.18 crores, an increase of Rs. 1.41 crores over that for the previous year. This is the second year in succession, after the Company took over the Steel Corporation of Bengal, in which the upward trend in profit has been maintained—the gross profit for 1953-54 being no more than Rs. 3.48 crores. It must, however, be noted that the pace of increase in 1955-56 was slower than in the previous year. Even the rise that was recorded in 1955-56 was due to the increase in the retention prices with effect from 1st April 1955. For there was no expansion in output during the year; on the contrary, the output of pig iron and steel experienced a slight shrinkage. This was not unexpected, because the production in 1954-55 touched an exceptionally high level. The consequent increase in profit in that year was, as the Chairman pointed out at the last annual general meeting, a windfall, not expected to be repeated. It is, however, gratifying to note that the Company has been able to keep the output well above that attained in 1953-54.

Appropriations

Out of the gross profit of Rs. 8.18 crores (which has been arrived at after providing for repairs and renewals a sum of Rs. 1.91 crores, the same as in the previous year), the Managing Agents' remuneration absorbs Rs. 35.58 lakhs, as against Rs. 35.79 lakhs for 1954-55. The provision for depreciation has been maintained at Rs. 1.20 crores, while that for taxation has been raised from Rs. 2.25 crores to Rs. 2.88 crores. These essential allocations leave a net profit of Rs. 3.75 crores, which compares well with that of Rs. 2.96 crores for the previous year. In addition to the provision for taxation made as above, the Directors have transferred to the reserve for tax contingencies Rs. 23 lakhs, as against only Rs. 21 lakhs allocated a year ago. As in the previous year, a sum of Rs. 59.50 lakhs has been set aside to the plant rehabilitation reserve, made up of Rs. 52 lakhs for the steel plant rehabilitation and and Rs. 7.50 lakhs for the Kulti blast furnaces rehabilitation, in accordance with the recommendation of the Tariff Board. In addition, the Directors have created two new reserves this year, namely, the extensions special reserve and general development reserve. The former, which has been allocated Rs. 29.48 lakhs out of the year's profit, is in accordance with the agreement with the Government, under which the effective increase in retention price granted for the five years ending March 1960 should, after allowance for taxation, be transferred to a special fund to be utilised solely for the purpose of financing the expansion programme. The other reserve has received Rs. 7 lakhs, representing the approximate tax saving by reason of the development rebate applicable in respect of plant and machinery installed during the year. "Although the amount is small in relation to the profit earned," the Directors point out in their report, "it has been thought desirable at this stage to institute this reserve, in view of the large development rebate likely to accrue in future as the various stages of the expansion programme are completed." The allocation to the works and ore mines new extensions reserve has been maintained at Rs. 1 crore, while that to the general reserve has been raised from Rs. 43.70 lakhs to Rs. 85 lakhs. Thus, in all a sum of Rs. 3.09 crores, as compared with Rs. 2.29 crores last year, has been ploughed back from the profits for the year under review.

The balance available out of the profit for distribution to the shareholders is not sufficient to repeat the ordinary dividend at the previous year's level, after paying the preference dividend, and the Directors have, therefore, had to draw a small sum of about Rs. 15,000 from the previous year's surplus. If the increase in ordinary dividend had been permitted by the Government, it would have meant a cut in the allocation to the general reserves.

The following table presents the salient features of the year's working during the year, as against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds (including items used in works)	30.44.88	27.35.41	19.58.13	12.97.75
Other income	26.92	23.98	17.66	95.03
Closing stocks	3.25.80	4.55.08	4.15.87	4.34.10
	21.86.70	20.81.36	16.28.14	12.07.76
Expenses*	8.18.27	6.77.29	3.47.65	1.85.02
Gross profit	35.58	35.79	19.56	11.54
Managing Agents' remuneration				
Provision for—

* Approximate only and include provision for repairs and renewals.
† Exclude the pig iron used in the Company's own foundries.

As will be noted from the above table, the output of pig iron for the year under review has shrunk by 8,615 tons to 706,986 tons. The production of steel ingots has, on the other hand, gone up, albeit by only 3,387 tons, to a fresh record high of 531,505 tons. This has, however, been more than offset by the decline in the output of saleable steel by 8,103 tons to 452,910 tons. Considering the fact that the previous year's production of steel was exceptionally high and could in no way be regarded as constituting a standard, the performance during the year under review can be said to be impressive.

Extension Programme

The main points of interest to the shareholders are the progress made so far in the Company's 1953 extension programme and the details of the 1956 expansion scheme to be launched and the expenditure to be incurred thereon. But before doing so, it may be useful to refer here to the financial position of the Company as at 31st March 1956. The reserves and surplus, as at that date, aggregate Rs. 12.37 crores, as against a paid-up capital of Rs. 7.88 crores. Of these reserves, capital reserve accounts for Rs. 1.16 crores, general reserve for Rs. 1.65 crores, development and plant rehabilitation reserve for Rs. 4.87 crores, repairs and renewals reserve for Rs. 1.46 crores, taxation contingencies reserve for Rs. 1.76 crores, debenture sinking fund for Rs. 66.03 lakhs, share premium account for Rs. 61.45 lakhs, and workmen's compensation for Rs. 13.56 lakhs. Outstanding secured loans amount to Rs. 7.88 crores, including Rs. 1.30 crores on account of 4½ per cent. first mortgage debentures, Rs. 3.81 crores being the second mortgage loan taken from the Government of India and Rs. 2.77 crores representing the amount drawn out of the loan sanctioned by the World Bank to the extent of $31.5 million (Rs. 15 crores). Unsecured loans aggregate Rs. 2.98 crores, being the amount drawn so far out of the special unsecured advance to the tune of Rs. 10.18 crores granted by the Government of India from its steel equalisation fund for financing the 1953 expansion programme. The current liabilities and provisions amount to Rs. 10.18 crores, of which provision for taxation alone accounts for Rs. 3.39 crores. On the assets side, there has been addition of Rs. 1.13 crores to the gross block during the year, bringing the total value of the block to Rs. 21.64 crores; the written down value of it at the end of the year was Rs. 14.08 crores. The capital work-in-progress aggregates Rs. 3.92 crores, of which 1953 extensions account for Rs. 3.72 crores. The current assets amount to Rs. 23.29 crores.

To revert to the Company's two extension schemes. Though from a technical point of view, the two schemes are regarded as one, they are treated as entirely separate and independent of each other on financial grounds. The 1953 scheme, which continues to make steady progress, is intended to raise the productive capacity of the Company's Burnpur works to an annual output of 700,000 tons of saleable steel and 1,300,000 tons of foundry pig iron. The programme will be completed in two main stages, the first by the end of 1957 and the second a year later. The Company obtained a loan of $31.5 million (Rs. 15 crores) from the World Bank to finance the expenditure on this scheme. It also got a loan facility of Rs. 2.9 crores from the Government of India, in addition to the existing loan facility to the tune of Rs. 5 crores and the facilities granted have been consolidated. As already pointed out, the amount so far drawn under the Government of India loan facilities is Rs. 3.81 crores.

The 1955 extension scheme, which is to be undertaken at the request of the Government of India in furtherance of its Second Five-year Plan, aims at raising the steel making and finishing mills capacity of the Company by a further 100,000 tons, giving a total output capacity of 800,000 tons of saleable steel and 280,000 tons of foundry pig iron per annum. Referring to this scheme, the management, in the course of a circular to the shareholders, observes:

"It has become apparent that the production of 400,000 tons of foundry pig iron by your Company contemplated in the 1953 expansion programme would be in excess of the country's requirements having regard to anticipated production by other plants to be set up and one of the objects of the further expansion is accordingly the conversion of the surplus iron into steel. For this purpose, an addition to the finishing mill's capacity is necessary which, apart from increasing the output capacity of steel by 100,000 tons per annum, will result in a greater proportion of the output being available in the form of fully finished steel with a consequent reduction in the quantity of steel produced in the semi-finished form of billets requiring further processing before being available for commercial use."

Cost of the Scheme

As regards the cost of the scheme and the arrangements that are being made by the management to obtain the necessary finance therefor, the circular says:

"The entire cost of the new expansion scheme is estimated at approximately Rs. 14.8 crores (£11.1 million). Your Directors have already commenced negotiations with the International Bank for Reconstruction and Development for a loan covering the amount that is anticipated will be spent abroad in connection with this scheme together with the amount necessary to cover interest and commitment charge on the loan during the construction period against a further first charge on the whole of the Company's assets and undertaking. With a view to facilitating such loan from the Bank the Company has given notice to the holders of the first mortgage debentures issued under the Trust Deed dated 12th March 1937 of its intention to redeem on 1st January 1957, at the stipulated premium of £2 per cent., the £691,450 debentures presently outstanding. The amount involved in redeeming such debentures is £705,279 (Rs. 94,03,720). The Government of India and the State Bank of India, as holders of the equal ranking second charges on the Company's undertaking, have communicated their agreement to the creation of the proposed further first charge in favour of the International Bank for Reconstruction and Development.

"It is proposed that the expenditure to be incurred by the Company in Indian currency in connection with the new expansion programme, as also the amount required to repay the Company's first mortgage debentures, should be raised by the issue of new ordinary shares of Rs. 10 each. Pending finalisation of the loan arrangements with the International Bank for Reconstruction and Development it is not possible to state with certainty what amount will have to be found by the Company out of its own resources towards finance of the expansion programme, although it is not anticipated that this sum will exceed approximately Rs. 5.35 crores (£4,012,500), to which must, of course, be added the amount necessary to repay the outstanding first mortgage debentures.

"The sanction of the Controller of Capital Issues has been obtained to the issue of 5,183,708 new ordinary shares of Rs. 10 each under the Capital Issues (Continuance of Control) Act, 1947, and although his sanction was sought to the issue of such shares at par, he has directed that they should be issued at a premium of Rs. 3-8 per share.

"It is, therefore, intended to issue 5,183,708 ordinary shares of Rs. 10 each for cash at a premium of Rs. 3-8 per share ranking in all respects pari passu with the existing ordinary shares, save and except that they will not participate in any dividend declared in respect of any period ending on or before the 31st March 1957. Any surplus resulting from the proposed issue over the expenditure referred to above will be utilised towards meeting in

(Continued on page 961)

WORLD SUGAR AGREEMENT AMENDED

THREE PRICE ZONES INSTEAD OF SINGLE MAXIMUM AND MINIMUM PRICES

AT long last, the International Sugar Conference has succeeded in modifying the World Sugar Agreement of 1953 in such a way as to ensure "stabler market conditions." After deliberating for nearly a month at Geneva, the Conference ended on the 2nd inst. with the unanimous adoption of a protocol amending the Agreement; the amendment seeks to revise export quotas and entails a new mechanism for action to be taken with certain price ranges. The first session of the Conference held at New York from 21st May to 20th June 1956, it will be recalled, ended in a virtual deadlock, thanks chiefly to the disagreement among the sugar-exporting countries. Thus, Indonesia, Formosa, the Philippines and the Dominican Republic pressed for an upward revision in individual quota for the free markets in the world. In addition, Cuba, which exports as much as 50 per cent. of the sugar under the Agreement, rejected all attempts at persuading it to accept a cut in quota.

The two months that followed the end of the New York session witnessed violent fluctuations in world sugar prices. Cuban raw sugar (f.o.b. Cuba) at New York swiftly moved up to 3.41 cents per pound—the highest for two years—but dropped thereafter to as low as 3.22 cents, that is, 0.03 cent below the International Sugar Agreement minimum of 3.25 cents. The Sugar Council did, of course, take corrective measures, first to arrest the upward trend in prices and then to prevent the fall. But, while the earlier step met with complete success, the later step failed to achieve the object. For the pressure on the free sugar market of supplies from producing countries which are not members of the Agreement was so heavy as to make the working of the Agreement as a price stabiliser precarious, to say the least. It was at this juncture that the Geneva session of the World Sugar Conference commenced on 4th October last.

Formidable Task

One of the first and formidable tasks to which the delegates to the Geneva session had to address themselves was to bring about a compromise between the conflicting interests in world sugar trade. The producers of sugar who were not members of the Agreement were prepared to join the pact only if their demand for higher quotas than had so far been offered them were conceded. At the same time, several members of the Agreement, including Cuba, pressed for increases in their quotas and it was even suggested that Formosa would leave the pact unless its quota was raised. The basic difficulty was, therefore, "how to make for new members inside the Agreement and, at the same time, to meet the demands of those producers who are already parties to it."

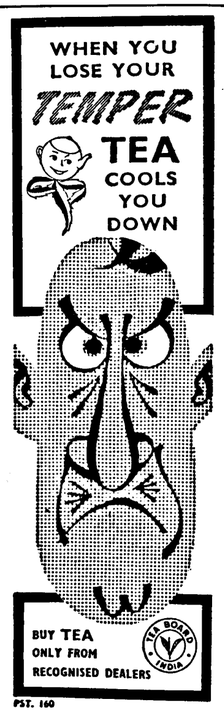
So long as the aforesaid difficulty persists, the mere fixation of hard and fast single maximum and minimum prices as laid down in the Agreement cannot be expected to impart stability to the world sugar market. The World Sugar Conference has done well, therefore, to revise the basic export tonnages of member-countries—the details of the revision are not available—and to decide on a new mechanism for action to be taken with certain price ranges. Accordingly, three price zones have been created: (1) A medium zone—described as the target zone—between 3.25 cents and 3.45 cents per lb.; (2) an upper zone between 3.45 cents and 4.00 cents; and a low zone between 3.25 cents and 3.15 cents. If the prices of sugar rise and reach the 3.25-cent limit, the full export quotas will be released. Above 4.00 cents, there will no longer be any quotas. If prices fall and decline below the 3.75-cent limit for 17 consecutive market days, an automatic reduction of 2.5 per cent. takes place and the Sugar Council will meet within seven days to decide on further reductions. If the Council does not agree and if the price keeps falling, a further automatic reduction of 2 per cent. will take place. If they agree, they can reduce the quotas to 90 per cent. of this agreed maximum. In case prices go below 3.15 cents, the 90 per cent. limit does not apply.

The protocol amending the World Sugar Agreement will be enforced with effect from 1st January next, provided that, by that date, it is formally accepted by Governments holding 60 per cent. of the votes of importing countries and 75 per cent. of the votes of exporting countries. If, however, the prescribed votes are not received, the countries which have accepted the protocol may agree to put it into force among themselves. In any event, the Agreement in its present form will not continue after the protocol is enforced.

Concurrently with the U.N. World Sugar Conference, the International Sugar Council held occasional meetings. At the end of the meetings, the Council fixed the aggregate initial sugar export quotas of member-countries for the year 1957 at 4,351,375 metric tons (raw value), which represent a reduction of ½ per cent. in the basic export tonnages. The quotas will be distributed among the exporting countries *pro rata* to their basic export tonnages. A reserve of 20,000 tons is set up for 1957, from which additional export quotas may be allotted in order to meet special cases of proved hardship. The initial export quotas—amounting to 4,351,375 tons—fall short of the Statistical Committee's estimate of free market requirements for 1957—5,325,000 tons—by 973,625 tons and of the final estimate of 5,080,000 tons for 1956 by 728,625 tons.

The proposed amendments to the World Sugar Agreement and the cut in export quotas announced by the Council would appear to have had no effect so far on the world sugar market. Cuban raw sugar (f.o.b. Cuba) at New York continues unaltered at 3.25 cents per pound. A recent review of the sugar trade reveals that some purchases of sugar have been made by France and the Lebanon. Chile is considering offers of 60,000 tons for shipment in November-March. Syria and Ceylon have also called for tenders, West Germany has invited offers of Belgian beet sugar, and French Morocco is expected to have held a tender last week.

Meanwhile, reports from Cuba suggest that this country may not remain the source of surplus supplier that it has been in the past five years. For it is feared that there will be a cut in sugar output in the current season, on account of shortage of rain which has affected the cane crop. Moreover, the stocks of sugar that will be lying unsold with Cuba at the end of the year are estimated at a little over 700,000 tons, the whole of which has already been reserved for the U.S. market during 1957-58. But what effect the change in the statistical position of Cuban sugar will have on world sugar prices will depend on the prospects of production in other countries.



PST. 160

ENCOURAGING CO-OP. SUGAR MILLS

PLEA FOR REVISION OF POLICY

MR. Jayantilal J. Mulji, President of the Deccan Sugar Factories Association, deserves to be thanked for being very brief in his address to the seventeenth annual general meeting of the Association held in the city last week-end. Instead of making the customary detailed review of the developments in the sugar industry and the trade, particularly in the Bombay-Deccan, and repeating the same old problems confronting them, Mr. Jayantilal did well to confine himself to the three most disquieting features of official sugar policy. They related to encouragement given to co-operative sugar mills, utilisation of cane cess and control over molasses. His observations on these issues were not only pointed but also quite pertinent.

Speaking about the co-operative sugar factories, Mr. Jayantilal declared that it would not be a wise policy for the Government of Bombay to continue diverting public funds on the establishment of more co-operative units in the State, especially when the Government needed every available rupee for financing the Second Five-year Plan. In support of his contention, he pointed to the unfavourable working results of the Kopargaon Co-operative Sugar Factory for the past year. This factory, we are told, has incurred a loss of Rs. 1 lakh, after providing only Rs. 2.82 lakhs for depreciation, as against the normal depreciation provision of Rs. 9 lakhs which should have been made. Further, the amount due as interest on loans has been capitalised, instead of being debited to the profit and loss account. What is worse, the loss has occurred despite the fact that the factory (like other co-operative units) is exempt from payment of income-tax and is also not required to pay high wages, or to provide amenities to workers on the farms which supply cane.

Cane Cess

The Deccan Sugar Factories Association President was also justified in criticising the way in which the Bombay Government was utilising the cane cess. He said: "The roads in the factory areas are sadly neglected by the Local Boards and the Public Works Department. The failure of the Government to improve and develop these roads is all the more deplorable, because, though the sugar factories pay to the State Government about Rs. 75-80 lakhs every year by way of cane cess, not a single rupee out of this amount is utilised for the improvement and development of roads in the areas where the sugar factories are situated." There is considerable force in these remarks. But the excuse of the Government for not utilising even a portion of the cane cess for this purpose has been that the Sugarcane Cess Act does not permit such expenditure. This excuse is, to say the least, a lame one. Why should the Government not amend the Act in such a way as to permit the Cess Fund to be utilised for development of roads in factory areas?

Mr. Jayantilal was equally justified in criticising the control over molasses and alcohol exercised by the Government of Bombay. How this control has adversely affected the sugar mills in the Deccan was lucidly described by him as follows:

> "The heavy accumulation of molasses with a large number of member factories has been a continuous source of worry to them. The rigid policy of the Bombay Government in not allowing this unavoidable by-product of sugar to be exported to any other State in the Union, even against the no-objection certificate from the importing State, has further aggravated the situation. The molasses tanks being filled to capacity, the factories are faced with the problems of finding storage for the fresh accumulating stocks of molasses, and the situation has become very critical since the new season has started and fresh molasses have begun to pour in. Even the destruction of molasses to make room for the new season's production by throwing it into rivers is not allowed by Government authorities, who have suggested to the factories to adopt the costly method of destroying it by draining it into especially dug furrows and covering it with earth, with the stipulation that these operations should be carried out under the supervision of excise constables."

There is, of course, nothing new in the aforesaid statement. We have ourselves drawn attention to the several disquieting consequences of molasses control on more than one occasion. By referring to this subject, Mr. Jayantilal has sought to reiterate the deplorable fact that a valuable by-product like molasses, which fetches a decent price to the sugar mills in all other parts of the world, has to be destroyed and, even for its destruction, the factories are called upon to incur further expenditure.

U.K. COAL BOARD'S PROBLEMS

INCREASED LABOUR ABSENTEEISM

THE National Coal Board of the U.K. is faced with many problems, such as wiping off of the accumulated deficit, loss of productivity through absenteeism, strikes, etc. On top of these, it is now confronted with fresh demands by coal miners. The National Union of Mineworkers (N.U.M.) has submitted a series of demands, which include a shorter working week, an extra week's holiday, sick pay, pension improvements and alterations in the bonus shift payment—all "fringe (or non-wage) benefits," as they are called. It is, however, noteworthy that the N.U.M. has not so far asked for an increase in wages, as the other leading trade unions have done. But the threat is already there that a claim for higher wages would we submitted as soon as signs of a falling-off in the miners' standard of living appears. The Scottish miners are reported to have asked the National Executive to ask for a rise in wages, but the leaders have not succumbed to the pressure so far.

Meanwhile, negotiations are going on between the representatives of the National Coal Board and the N.U.M. over the demand of the latter in respect of the bonus shift payment. At present, miners work five shifts a week, but are being paid for six shifts. If, however, they do not work a shift without excuse, they forfeit the pay not only for that shift but also for the bonus shift. The miners are of the view that this penalty is too heavy and want it to be removed. They also ask for the bonus shift payment to be spread over the five working shifts. The National Coal Board fears that, if the demand is conceded, it will remove the industry's main deterrent to absenteeism and will result in a loss of 4 million tons of coal per year. The Board points out that absenteeism has already been on the increase this year and has so far cost about 2.9 million tons of coal. It has, nevertheless, been conducting negotiations with the workers' representatives. It has also proposed to the Union leaders that acceptance of the miners' claim should be made conditional on one of the following factors:

(1) the annual output of coal should reach a certain level;

(2) shifts worked per man-year should reach a specified figure; and

(3) improved attendance and reduction of losses through disputes.

The Union leaders have not so far agreed to any conditions for granting their claim, but have expressed their willingness to discuss the Board's proposals.

The National Coal Board's problem is not one of paying higher wages, but of ensuring that a miner does a full day's work for the wage he earns. It is anxious to reduce the loss of output through deliberate absenteeism, unofficial strikes and restrictive practices. In the current year so far, the number of man-hours lost through strikes has been less, but absenteeism has been on the increase. It is true that there has been an improvement in output per man-shift, but this is almost entirely due to the extension of power-loading in the mines.

The Board's fears are no doubt not without grounds. But to reject the miners' claim may prove equally disastrous, in that they might resort to strikes leading to loss of production. The Board has, therefore, commenced negotiations with the N.U.M., with a view to reaching an agreement and ensuring an improvement in productivity.

It will be interesting to present in this context a few statistics in respect of the industry, so as to give a better perspective to the above problem. The output of coal up to the third week of October this year amounted to 181.83 million tons, that is, 362,000 tons per day ahead of the 1955 rate. All except 10,000 tons of this increase is accounted for by opencast working. Imports have declined from 9.55 million tons to 4.65 million tons. Exports and bunkers so far amount to 8.05 million tons, as compared with 10.19 million tons in the corresponding period of 1955. Stocks (including those at collieries and opencast sites) stood on 20th October at 22.66 million tons, as against 21.15 million tons a year ago. This is the highest level reached since the war. Stocks of house coal, authracite and boiler fuel with coal merchants show a rise from 1.73 million tons to 2 million tons. This is partly due to the fact that many domestic consumers have switched over to oil-burning heating appliances.

THIEVES AMONG THE RUBBER

RESPONSIBILITY OF THE BOARD

THE monsoon has come to an end and the three months of peak rubber production have begun. The growers are again faced with the threat of widespread rubber thefts. Earlier this year the growers in Mundakayam area of Kerala State had estimated 25 per cent. of their output being lost through pilferage. Now that the rains are over, stealing has again increased and reports from the producing areas indicate that gangs of thieves are active again. They are bolder and are obviously diversifying their business; they now steal barbed wire, tiles, high-yielding plants from the nurseries and clearings, easily removable items of estate supplies, in short, anything that can be carried. In one recent case, a daylight entry was made into a rubber factory and, according to one report, a member of the estate staff who has been active in preventing thefts was beaten up and thrown into a drain with a broken leg. The stage may soon be reached on the rubber estates when it may not be worthwhile for producers to maintain their properties in the hope of securing a crop.

Although the thefts should be a matter for the Government under its primary responsibility for law and order, considering the peculiar problems in plantations, the growers in certain areas paid for a motorised contingent of the police force. In some areas, this has had a salutary effect in reducing the incidence of thefts but it could not prevent pilferage from estates in outlying areas.

How Does It Happen?

Rubber is a tightly controlled commodity in India. The producers, dealers and users are separately licensed and without a licence duly issued by the Rubber Board nobody can handle rubber in their own names. Although nearly 23,000 tons are produced per annum, over 80 per cent. of the output comes from the larger units and almost the whole of it is sold by them direct to the manufacturers. Taking the average monthly output at 2,000 tons, the quantity that would reach dealers of all descriptions (i.e., excluding manufacturers) cannot amount to more than 500 to 600 tons. Similarly, most of the rubber is bought and used by some three large manufacturers whose purchase depots are located not far from the producing centres, although there are over 250 establishments consuming rubber in India. In other words, the quantity of rubber which has to be handled by dealers or intermediaries is not only known but also is such that a fairly effective physical check of the dealers and channels of movement should be possible.

At the height of the rubber thefts earlier in the year, the Rubber Board had to consider representations from some of its producer members on this question. According to the Board Chairman's reading of the Rubber Act, 1954, and the Rules framed thereunder, the Board was incapable of exercising any control over the issue of licences or over the physical movement or stock of rubber. After this interpretation of the Rubber Act in May this year, the matter was taken up at a meeting of the Board on 17th October 1956 and it was possible to make the Board accept a decision, so that no fresh licences should be issued to dealers in areas where there already exist a number of licensed dealers, at least until the Government of India take a decision on the proposal of the Board to make certain amendments to the Rubber Act so as to enable the Board to exercise more control over the issue of licences.

Although no more licences are to be issued by the Chairman for the time being, till recently the Board has been issuing far too many licences when it is considered against the limited quantity of rubber that can be handled by the increased number of licensed dealers. Nevertheless, even this limited improvement over the position in May is considered helpful by the producers.

A complicating factor in the situation has been the free-handed issue of licences by the Board to all who applied for them. During 1955-56, over 140 dealers' licences were issued, although the quantity of rubber to be handled by the dealers had not visibly increased. Rule 39 of the Rules framed under the Rubber Act is specific about the discretion of the Board in the matter of issuing licences and the details called for in the application form themselves provide a certain amount of protection against the Board being obliged to freely issue licences to all and sundry who ask for them with the requisite fee and two certifiers who own rubber to the extent of not less than 15 acres each.

With every additional dealer, the problems of control and detection of thefts have become more complicated. There are many squatters who sit on the edges of estates with five or six rubber trees within their compounds and, by virtue of that possession, act as the source of much rubber that eventually appears in the illicit trade. The fact that they are nominally growers of rubber enables them to act as fences for stolen rubber from the neighbouring estates. Similarly, the possession of stolen rubber by persons holding the Board's licence frustrates police action under the Criminal Procedure Code. Aiding and abetting those stealing and disposing of rubber are the problem of identifying rubber from the source.

With the subsidised replanting scheme, the small and the large grower alike are to be subjected to periodic and minute inspection from the date of inspecting the old rubber to be felled to the time of coming into production in the eighth year of the new rubber. The number of plants to the acre, felling, clearing, weeding, cover crops, fencing, manuring, the type of planting material and subsequent maintenance over the long period of non-productivity are all subject to inspection and approval by a large Field Inspectorate established by the Board. Any instalment of the subsidy that is now offered can be refused at any time if the Field Inspectorate is not satisfied that the planting and upkeep operations have not been done satisfactorily. A Board which has such wide powers of inspection should find it equally easy to establish an effective check on the trade in rubber, so that the licences issued by it do not become a cover for widespread thieving and illicit trade in rubber.

Large Estates Suffer Most

Most of these thefts occur in areas where there are large estates, transport is quick and easy to the assembling markets, a large number of growers and dealers operate, and above all, where union activities are at its peak. Whether union activity leads to a breakdown of law and order position and provides the ideal conditions for widespread thieving or not has not been clearly established but its occurrence during periods of such activities is marked.

The Board has a responsibility to ensure protection to the grower against the licence issued by it being used as a cover for thefts. It should have used a more judicious control over the issue of licences at least to ensure a better exercise of its own control. The magistracy in generally letting off rubber theft offenders with more leniency than the courts show towards dry law offenders is not discouraging the spread of an offence which has serious social and economic consequences. The State Government could, if it realises the gravity of the rubber theft situation, put matters right in this connection.

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

SHARP FALL IN STOCKS OF JUTE GOODS

OUTPUT CONTINUES TO RECEDE

THE firm trend in prices of jute goods since the beginning of the current month has to a large extent been due to keen overseas buying influenced by the developments in West Asia. The trend was also helped by the fall in production of jute goods during October and the sizable decline in stocks, thanks to the improvement in shipping. The statistics of production and stocks for the month of October, released by the I.J.M.A., show that the downward trend in output has persisted for the fifth month in succession, and the fall in stocks over the month has reversed the upward trend noted at the end of the previous month.

The production of jute goods during the month under review amounted to 80,400 tons, as compared with 84,500 tons in the previous month and 89,600 tons in August 1956. With this decline, the production has successively fallen from a high of 101,700 tons in May 1956. It must, however, be noted that the fall in output during October is of the order of only 4,100 tons, as against 5,100 tons noted in September and 4,500 tons in August. It should also be noted that the past month was the first full one in which the industry worked with an idle capacity of 12½ per cent. of the looms, following the resealing of 5 per cent. of the looms on 17th September. The sealing of 5 per cent. of the looms represents a cut in production of 5,000 to 5,500 tons per month. It may, therefore, be wondered why the shrinkage in output is less than that which would normally be expected from the sealing of the looms. An explanation for this is to be found in the fact that the number of hours worked during the month was 203.5, as against 197.5 in September.

The following table shows the output of jute goods during the month under review, as compared with that in the previous two months and that in the corresponding month of 1955:

(In tons)

		October, 1956	September, 1956	August, 1956	October, 1955
Hessians	.. ..	34,700	35,500	35,400	30,700
Sackings	.. ..	40,500	43,800	46,200	43,500
Others	.. ..	5,200	5,200	6,000	4,600
	Total ..	80,400	84,500	89,600	78,800

The decline in production during the past month is mainly accounted for by sackings, which have fallen by 3,300 tons, as against a decline of 4,400 tons in the previous month. With this recession, the output of sackings for the month is brought to the lowest level since May 1954. The production of hessians also, which had been going up in the previous two months, has fallen, albeit by a small extent.

The total stocks of jute goods at the end of the month aggregated 116,700 tons, showing a welcome decline of 8,500 tons over the month. This fall in stocks is in distinct contrast to the rise of 1,700 tons noted a month before, as will be seen from the following comparative table:

(In tons)

		As on 31st Oct., 1956	As on 30th Sept., 1956	As on 31st Aug., 1956	As on 31st Oct., 1955
Hessians	.. ..	20,900	29,400	28,200	29,700
Sackings	.. ..	77,200	88,600	88,600	29,000
Others	.. ..	8,600	7,200	6,700	3,600
	Total ..	116,700	125,200	123,500	62,300

The decline in stocks is not surprising in the context of the fall in production and the reported improvement in shipments. It will be interesting to note that the stocks have been brought to the lowest level since April 1946. This does not mean that the mills have got over the main source of worry, namely, the high level of stocks. For the stocks are still very much higher than those at the close of October 1955. The fall in stocks is solely accounted for by sackings, which have gone down by as much as 11,400 tons. Stocks of hessians, on the other hand, have gone up further by 1,500 tons and those of other manufactures by 1,400 tons. Despite the fall of 11,400 tons, sackings constitute a high proportion of the total stocks, as was the case in 1954 and 1953. In 1955, however, the stocks were comparatively well balanced, with a slightly higher proportion of hessian stocks. It is not surprising, in the circumstances, that the mills are diverting their attention to the manufacture of more hessian than sacking. This is evident from the steady level of hessian output in recent months, despite the re-sealing of looms.

We don't know...

We don't know whether worries turn Black Hair into Grey Hair or not, but we do know that whatever may be the cause of Greying of Hair, Loma surely turns them back to Dark Hair.

IMPORTANCE OF DIESEL ENGINES

MR. M. M. SHAH REVIEWS INDUSTRY'S PROGRESS

THE inroads which diesel engines have made into such diverse fields as rail traction, road transport and marine propulsion serve to emphasise the importance of these engines to industrialisation of the country. In many industrial fields, diesel engines provide the main motive power. Appropriately enough, the Government has constituted a Development Council for Internal Combustion Engines, Power Pumps, Compressors and Blowers. The number of Development Councils so far constituted is ten. The other councils deal with heavy chemicals (acids and fertilisers), heavy chemicals (alkalis), bicycles, paper, pharmaceuticals and drugs, heavy electrical industries, light electrical industries, art silk and wool and sugar. These councils function as technical liaison bodies between the Government and the industries concerned.

Addressing the tenth meeting of the Development Council for Internal Combustion Engines, Power-driven Pumps, Compressors and Blowers, held this month at New Delhi, Mr. Manubhai Shah, the Union Minister for Heavy Industries, reviewed the progress of the industry and also indicated the future lines of its progress. The production of diesel engines has greatly increased in recent years. Thus, in 1955, diesel engines to the tune of 102,200 h.p. were produced, as against 72,460 h.p. in 1951. In 1956, production is expected to go up to 154,880 h.p., while the target under the Second Five-year Plan has been set at 205,000 h.p. Similarly, production of power-driven pumps in the current year is expected to be 56,180, as against 34,441 in 1955 and 47,990 in 1951, the target under the Second Plan being 86,000. Mr. Shah averred that there should be no difficulty in reaching, or even in exceeding, the targets. But he rightly suggested that the industry should "try to diversify the production so as to cover all the major categories of engines and pumps required in the country and build up some export programme in this useful engineering line."

Foreign Exchange

If the industry producing diesel engines, pumps, compressors and blowers fulfils the targets set for it, then the country should be able to save a sizable amount of foreign exchange which would otherwise have to be spent on imported equipment. The following table gives the value of domestic production, dependence on imports and the total estimated value of targets in the Second Plan:

Production and Requirements

(Rs. in crores)

	1955		1960-61‡	
	Output	Imports	Requirements	Domestic production
Diesel engines (non-vehicular) ..	2.0	2.2	8.0	5.5
Diesel engines (vehicular)	0.03	5.4	14.0	10 to 14†
Pumps*	1.6	1.8	8.5	7.0
Compressors	†	2.2	7.0	4.0
Blowers and exhaust fans	0.03	0.48	2.0	1.0

* Other than special purposes.
† Rs. 4,000.
‡ The minimum targets to be reached by 1960-61 is Rs. 10 crores.

Diesel engines, as is well known, are produced in a wide range of h.p.—small horsepower engines in the range 0 to 3, medium horsepower engines in the range of 3 to 50, and high horsepower engines in the range of 50 and above. It would appear that the manufacture of the second group of diesel engines, namely, 3 to 50 h.p., has become fairly well-established in India. The number of factories engaged in the production of these is 17. The installed capacity is about 22,000 engines. In 1955-56, the production had been 10,755 engines. The total production during 1951 was 7,246 engines and during 1954 8,654 engines. This shows the rapid progress that has been made. Two firms are engaged in the manufacture of engines above 50 horsepower and two more have been licensed. These are for fitting to vehicles but could and are being used, in other countries, for industrial purposes as well. Recently, a firm has been licensed for diesel engines of 30 horsepower for fitting to agricultural tractors while another scheme for the manufacture of high speed engines in the range of 100 to 1,000 horsepower has also been approved. The Government, it is stated, is contemplating to undertake the production of marine propulsion and auxiliary engines of medium speed in the public sector at a capital cost of about Rs. 3 to Rs. 4 crores. This factory is programmed to manufacture seven slow-speed engines of about 3,000 h.p. each during the Second Plan period and 15,000 h.p. per annum of marine auxiliary engines during the same period.

Distinct Gaps

Despite the progress that has been made so far, there are, according to Mr. Shah, certain distinct gaps in the production of diesel engines. In the first place, the capacity for the production of diesel engines in the range 3 to 50 h.p., he said, is inadequate. It would appear from past sales that more than 50 per cent. of the demand in this range is for vertical engines below 6 h.p. There is a shortage of vertical engines in this range and no production of such engines in the range 11 to 15, 20 to 30 and above 40 h.p. The gap deserves to be filled, particularly because vertical engines in this range find various industrial applications like power generation, constructional equipment, road rollers, air compressors and tractors. Referring to this deficiency in the reduction of diesel engines, Mr. Shah said:

"It is, therefore, in this field of manufacture of vertical engines that more manufacturers should come forward to set up new or expanded capacities. An application for a licence for the manufacture of such engines in 6-12 horsepower range with foreign collaboration is also under consideration. Several more schemes are still necessary in this field and, therefore, more manufacturers should come forward."

The second gap is for the production of low horsepower engines 0 to 3 h.p. which find industrial application of different kinds, namely, prime mover of pneumatic plants especially for portable air compressors, pumps, etc. Since the demand for this range of engines has not been assessed, it would be difficult to say whether a separate factory producing only this type of engine would be necessary or not. Mr. Shah indicated that the existing manufacturers of medium horsepower engines could, without much additional capital equipment, undertake the manufacture of these low horsepower engines.

Vertical Engines

The third gap is the absence of domestic manufacturing capacity in respect of vertical engines above 50 h.p., suitable for use in earth-moving equipment, compressors and electric generators. The Panel, appointed by the Government some time ago, to investigate the possibility of the manufacture of earth-moving equipment, has submitted an interim report. The Panel, it is stated, has indicated that there is ample scope for the manufacture of at least four types of earthmoving equipment which would require power units of 100 to 200 h.p. In this connection, Mr. Shah said:

"I would like to stress that although there is scope for the manufacture of vertical diesel engines in the range of 10 to 200 h.p., the demand in some particular sub-ranges may not be sufficient to keep the cost sufficiently low. It is, therefore, necessary that the development is planned with maximum inter-changeability of parts in order to keep down the cost of manufacture. Maintenance of a high standard of quality is another aspect which needs constant attention. I am happy to note, in this connection, that you are already formulating plans to test engines in accordance with the specifications to be prepared by the Indian Standards Institution."

As regards the manufacture of power-driven pumps, there are 27 firms engaged in their production with an installed capacity of 65,500 pumps per annum; four more firms have been recently given licence for manufacture in this field. Of these 27 firms, two are now manufacturing bore-hole pumps with a total capacity of about 1,500 per annum. The production for the 12 months, July 1955 to June 1956, was 39,276 horizontal pumps and 1,371 bore-hole pumps. The indigenous contents in both types of pumps, it is stated, is over 90 per cent. Now the main gap in this line of production is the absence of production capacity for pumps used for special purposes like pumping acids, alkalis, petrol, sewage, etc. In the sphere of compressors and blowers, there are four firms licensed for manufacture of air compressors in the range 7.5 C.F.M. to 530 C.F.M. Of these, one is planning manufacture in collaboration with a foreign firm. Two additional schemes, it is stated, are also under consideration. None of the firms, Mr. Shah said, had gone into regular production yet. Only one firm is stated to be manufacturing blowers on an organised basis with foreign collaboration. A few other firms are also producing industrial fans but on specific orders. In 1950, about 70 blowers were produced. A sub-committee of the Council is now engaged in assessing the demand for blowers.

Technical Training

In conclusion, Mr. Shah referred to the raw material position and trained personnel for the industry. He stated that the Government was aware of the difficulties experienced by the industry due to the non-availability of adequate quantities of raw materials such as pig iron, coke and alloys. He, however, assured the industry that necessary measures are being taken to relieve the raw material position. Referring to the problem of technical personnel, Mr. Shah said he was happy to note that the Council was already seized of the problem and had appointed a sub-committee to prepare schemes for imparting technical training. He emphasised that every established industry should arrange to train new technical personnel to the extent of over five per cent. of its total strength. This is a valuable piece of advice, considering that training-within-industry is an accepted mode of imparting technical education in many countries. To a certain extent, industrial managements could, and ought to, relieve the State in the sphere of technical education. In some ways, they are better fitted for this task, since they know precisely the knowledge and skills which their men should possess.

JAMSHEDPUR INSTITUTE

Since its inception in 1921, the Jamshedpur Technical Institute, which celebrated its thirty-fifth anniversary this month, has trained 560 engineers and 1,100 skilled artisans. The Institute is helping to fulfil Jamsetji Tata's injunction to "let the Indian learn to do things for himself." At present, there are some 1,350 students on the Institute's rolls, including employees and others who are taking advantage of part-time courses to improve their prospects.

The Institute, which is run by the Tata Iron and Steel Company, Ltd., provides training annually for 13 graduates in mechanical engineering and metallurgy under a scheme sponsored by the Union Ministry of Education. It also provides vacation training to engineering graduates from all parts of Inda. Since last year, the Institute has been assisting the State-owned Rourkela project by providing training facilities for 36 senior personnel, 10 graduate engineers and 100 artisans. Another example of the Institute's contribution lies in the fact that a large number of former trainees of the Institute hold key positions in Rourkela and other State-sponsored enterprises. The Institute offers a special course for Adibasi and Scheduled Caste candidates to prepare them for the regular artisans' course, on which 12 seats are reserved for them.

A recent development is the mason training sceme to prepare men for the highly specialised job of brick-laying in steel furnaces. Formerly, this trade was the preserve of a hereditary profession, but, in the changing social pattern of the country, men of all communities volunteer for this work. Another notable contribution of the Institute is the development of scores of trade tests—objective methods of selecting men for a skilled job. Trade specifications prepared in the Institute, it is stated, are in demand by a large number of industrial units all over the country.

AN INDO-BRITISH VENTURE

Greatly increased industrial output, if it is not to sacrifice quality in the process of acceleration, calls for an abundant supply of performance-proved tools. In this connection, it is gratifying to note that an Indo-British venture has launched a scheme for the manufacture of electric tools in India, and that production as already commenced. The collaborators on this project are the Wolf, Electric Tools Ltd., London, and Rallis India Ltd., Bombay. This venture, the first of its kind in India, will go a long way towards ensuring adequate supplies of electric tools. And the close collaboration of the participating firms, both of which are well established, and the frequent exchange of technical experts will ensure that the Indian-made Wolf tools would be of the same high quality as those made in England. An interesting feature of this venture is that indigenous materials are being largely used in the manufacture of these tools.

NEW PRODUCTS AND PROCESSES

New Concrete Breakers

ROAD drilling and concrete breaking equipment, said to be quiet enough to be operated at night without causing disturbance, is to be marketed in this country by Drills Development (51, Beauchamp Place, London, S.W.3). The equipment is at present being manufactured in Italy by Società Brevetti Pinazza of Milan and is part of a range of rock drills and concrete breakers which are also to become available in the U.K. Elimination of the characteristic noise of pneumatic drilling has been achieved by using a flexible drive to operate the drill instead of compressed air. Power is obtained from compact petrol engines or electric motors. The drills are said to use only one-fifth of the power required to operate an equivalent pneumatic drill of the same weight and working on an air pressure of 70 to 80 lbs. per square inch. Another advantage is that no large compressor unit is required as in the case of the more familiar pneumatic drill. For road excavations and demolition of concrete structures there is a unit with either a 2.5 h.p. petrol engine or an electric motor. Flexible drive units are 9¾ feet long and up to three can be coupled together without loss of power. The set is provided with demolition tools, chisels and a tool container with accessories. Spade-shaped tools and an earth rammer are available. Pinazza drilling equipment for mining and quarrying has also been developed. For rock drilling there is equipment designed to bore holes 1.3 inches wide to a maximum depth of 6½ feet. The set consists of a 3.5 h.p. four-stroke petrol engine coupled to a rotary compressor and mounted on a strong tubular frame. The compressor is used for blowing waste from the bore hole. The flexible drive units are each 8 feet 10 inches long and they can be coupled together for greater length. Drill bits have a maximum length of 5 feet. Another rock-drilling set has been designed to bore holes to a depth of 16½ feet. This has a 5.5 h.p. petrol engine and flexible drive units in lengths of 9¾ feet. A further model is powered by a 4.5 h.p. electric motor.

New Titanium Processes

At least four new processes for manufacturing titanium are currently under development. In one of these processes in which titanium iodide is used as the raw material, the iodide is decomposed by heat to produce the titanium. A pilot plant using this process is now operating and is producing, it is claimed, titanium of 99.9 per cent. purity. Another of the new processes involves a special form of sodium reduction. This process has the advantage that it leads directly to the formation of titanium metal, the intermediate titanium sponge form being eliminated. The third new process which is also at the pilot plant stage, consists of a modified electrolytic process in which many of the difficulties previously experienced with this form of titanium production have, it is reported, been eliminated. Although no details are as yet available, about the fourth new titanium production process, it is known that it has now reached the final stages of development.

Novel Insecticides

A radically new development in the field of insecticides can be expected to result from the discovery of a so-called "juvenile" hormone in insect larvæ. This substance has recently been found to be secreted in the heads of a number of different types of insects. Experiments have shown that because of this the hormone chemical can be used to kill insects in a particularly efficient manner. The hormone speeds up the grub growth and hastens its metamorphosis into its fully mature or adult form. It can thus be used in a similar fashion to a hormone weed-killer to make insect grubs grow more quickly than they are really ready to do, thereby killing them. As an insecticide the hormone compound possesses the great advantage that, while it is most unlikely that the insect pests will ever build up a resistance to its lethal effect, it is, at the same time, quite harmless to human beings.

Atomic Locomotive

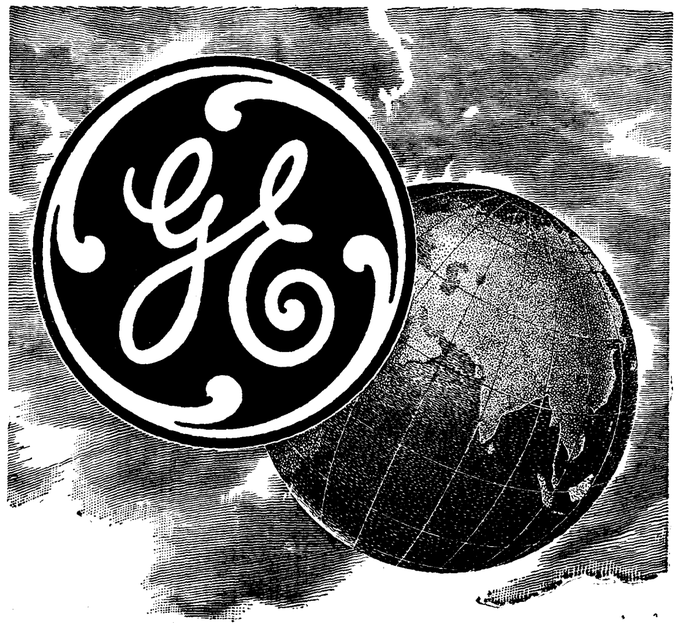
The Walter Kidde Nuclear Laboratories of the United States is considering the development of an atomic powered locomotive. Experimental work will be done under a contract awarded by the Denver and Rio Grande Western Railroad and the Baldwin-Lima-Hamilton Corporation, locomotive manufacturers. The laboratories will make a preliminary technical and economic study of a mobile nuclear reactor plant for possible application to locomotives. The reactor reportedly differs radically from any being proposed for other projects.

Preventing Mine Disasters

The Japanese Bureau of Mines will attempt to prevent future underground mine disasters by the use of radioactive isotopes. The radioactive elements will be poured into surface water and test bores near mine shafts and then traced as they filter through the ground, thus mapping underground pools and fissures. They hope to locate potential floods and cave-ins this way. The test will be used in 20 mines, and if successful, will be extended to all mines.

Smallest Radar Set

The U.S. Army has announced the development of the world's smallest known radar set. The set, which has a range of 6,000 yards, is contained in a metal case 14 inches high and 14 inches long. It is powered by a small motor generator which can easily be carried by one man. The combined weight of set and generator is about 85 pounds—in contrast to most radar outfits that weigh a ton or more. Instead of a visual signal, the set produces an audible signal when it detects a vehicle or soldier.



Trusted around the world

Around the globe, General Electric people are working to make life better with the finest of electrical products and services. In India, the G. E. equipment, research and engineering experience have been employed in many power, industrial and educational projects... planned for the progress and prosperity of the country. Look for the G.E. monogram... a sign backed by 77 years of electrical skill and experience... a sign you can *trust*.

TOWARDS HAPPY INDUSTRIAL RELATIONS

SOME METHODS OF ENLISTING WORKERS' CO-OPERATION

INDUSTRIAL peace is not an uneasy truce in which both sides, the management and the workers, are just willing not to break it. It is—at least, ought to be—a more positive state of affairs in which the two parties are continuously aware of each other's problems, and, what is more, have a mutual appreciation of their difficulties. This implies that the workers are responsibly led and the managements evince a keen interest in workers' welfare and also in educating the workers to appreciate the problems involved in running industrial enterprises.

It is not enough if a worker is kept at his job out of mere 'fear of the sack." This particular variety of sanctions is bound to break down under conditions of full employment. In any case, collective action, which is a feature of trade unionism in all countries of the free world, has eliminated the "fear of the sack." A better approach is the one that is designed to enlist the workers' active co-operation. This cannot, of course, be done through just one particular measure, for it implies an integrated approach to the whole question of industrial relations. There is, first of all, the method of employing a sound "grievance procedure." This eliminates the chances of sudden and unruly behaviour by aggrieved employees. Nevertheless, it has only a limited value. For a worker or groups of workers may not have a definite grievance to ventilate and yet suffer from a vague feeling of neglect—an irrational "grievance" psychology. No grievance procedure can cure the workers of this feeling. Joint committees are a more effective way of associating workers with managements. This method, if it were adopted continuously, would engender in the workers a co-operative attitude of great benefit to themselves and the management.

Sharing of Profits

Active participation of workers implies also sharing of profits. There are, again, many ways in which this is brought about. There is the simple method of promoting competent men to positions of responsibility. Then, there is the method of rewarding the men who give ideas which, when they are translated into action, benefit the enterprise in which they are engaged. The system of bonuses, based on profits or, more appropriately, on productivity, is only another variation of the general policy of enlisting the workers' co-operation. But a more recent method is that of making the workers shareholders in the concerns in which they are employed. This is part of the movement towards "people's capitalism" or "property-owning democracy" which has gained some momentum in the U.K. and the U.S. Some interesting information about the progress of this movement in the U.S. was given by Mr. G. Keith Funston, President of the New York Stock Exchange, when he addressed the American Chamber of Commerce, in London. Mr. Funston said that, apart from the 115 million people who, by saving through life assurance and pension funds, were thus indirect owners, there was a direct ownership of corporate stocks by 8 630,000 people, or one out of every twelve adults. These people were not the wealthy. The average American family income was about $5,000 a year; 38 per cent. of their shareholders earned less than that, and almost two-thirds under $7,500. Mr. Funston illustrated the widespread ownership of company stocks with the American Telephone and Telegraph Company. The 54 million shares of this $10.000 million Company, he said, were owned by 1,400 000 people, about 200,000 being the Company's workers. Over half of the Company's owners held less than 100 shares and the average holding was 38.

It was through this gathering-in of the people's savings that Mr. Funston saw the solution to the capital needs of the American economy estimated at about $60,000 million in equity capital alone in the next ten years. Advertising by the New York Stock Exchange and its member firms had been one of the ways in which this widespread ownership of public companies had been encouraged. New techniques had been developed, making it possible to invest as little as $40 every three months in securities listed on the New York Exchange. This "educational programme" had received strong encouragement from American companies and business men, who had learned that "no company has the right to allow itself to be unexplained, misunderstood or publicly distrusted."

Apart from enlisting workers' participation in corporate capital structure, managements should periodically give the workers some basic knowledge and information about the trends in revenue and expenditure. After all, no sound management has anything to lose by such disclosure. On the contrary, it has a great deal to gain, for the workers will then know that their share in the prosperity of the enterprise they serve is not inconsiderable. Excessive demands by workers often spring from a bargaining spirit or sheer ignorance of the financial position of their employers. This tendency could be corrected by managements through educating the workers in the financial set-up of the industrial units they serve. In this connection, it is interesting to note that, even in the U.K., only a small proportion of companies give such information to the workers. though, of course, this proportion is necessarily larger than in India. Thus, Mr. H. Weston Howard, Chairman of Hayward-Tyler & Company, in the course of a paper read at the British Institute of Management Conference, held recently at Harrogate, stated that probably less than 20 per cent. of British companies give financial information to employees, and that, even within this 20 per cent., most companies concentrated only on telling the story of the annual report and accounts.

Frankness

Mr. Howard's paper was based on an investigation carried out by the Institute. This survey disclosed that, although employees on the whole were interested in having financial information about their company, even the senior staff of the firms, where surveys were held, did not, on the whole, appear to have an outstandingly better grasp of company affairs than the average employees. Incidentally, it would be interesting to know the position in India by holding a surprise test for the executives of Indian firms, to find out how much they know about the companies they serve. Commenting upon the state of knowledge among company executives in the U.K., as revealed by the survey, Mr. Howard said: "This is a valuable conclusion and certainly a very startling one. I would strongly urge all companies to make a real effort to educate their senior executives in the use of figures in administration." Referring to the question of giving financial information to the workers, he stressed that the managements should be frank in their approach to the whole problem. He said: "If it is desired to have a working force with confidence in its management, there is no better way of doing it than by being completely frank about everything, including finance."

Balance-sheets

In India, where the workers are less educated than those in the highly industrialised countries, there is no point in giving elaborate financial information. The overall picture could, of course, be presented to them in a form which they will understand. A graphical representation of the pattern of revenue and expenditure now forms part of the balance-sheets and annual reports of a few concerns, of which special mention deserves to be made of the T.I.S.C.O. and A.C.C. This practice deserves to be emulated by other industrial concerns in India. Perhaps, under Indian conditions, the best way of presenting the information is to represent the whole revenue by one rupee and to work out how many annas and pies went to buy raw materials and to pay wages, taxes. dividends, and so on. Yet another interesting method of giving financial information is to work out how many days' earnings were required to pay for raw materials, wages, dividends and to satisfy that sleeping but ever-awake partner, the Government. Company accountants, with some imagination, should be able to devise many interesting ways of presenting the basic financial data to the workers so as to convince them that there is no bottomless purse from which higher wages could be drawn and, further, that it is wrong to think that the shareholders and the management are wicked giants continuously swallowing the lion's share of the profits.

PRODUCTIVITY DAY

A new day in the calendar—"Productivity Day"—was launched recently by the Israel Government Productivity Institute in Haifa. Meetings of employees and management were held in factories and visits by families of employees were arranged. The radio and cinemas helped bring before the public the importance of higher productivity. Productivity rose by 4.3 per cent. last year, while in industry alone it increased by 7.1 per cent. This was reported by Mr. David Moushine, Director of the Institute. Among the winners of the Kaplan Prizes this year are an immigrant worker whose production soared above that of his veteran mates; an engineer who devised a gadget which reduced costs; and a productivity council for its good work in encouraging efficiency and in bettering labour relations. About a third of the 200,000 employees in industry, agriculture and transport are paid according to output, according to Mr. A. Gilat, organiser of the 150 productivity councils. Of these, 15,000 were granted income-tax remissions for especially high output.

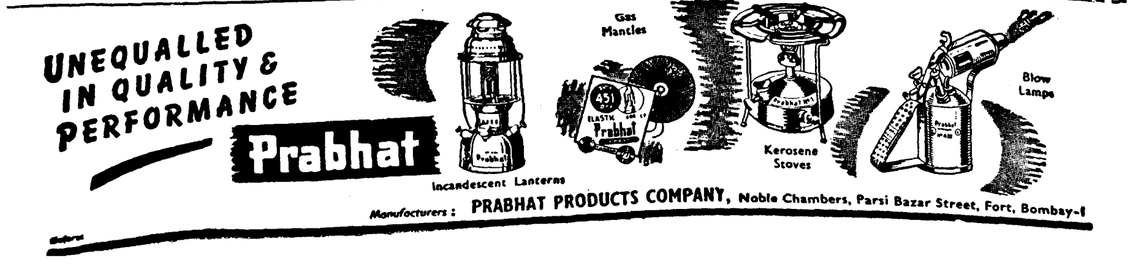
DOCK LABOUR BOARD

On the coming into force of the Calcutta Dock Workers (Regulation of Employment) Scheme, 1956, which has introduced several new features such as piece-rate system of payment and payment by results following the Vasist Committee Report on dock labour, the Government of India has constituted a new Calcutta Dock Labour Board, with effect from the 8th October 1956, replacing the Board constituted under the old scheme, in September, last year. Mr. I. N. Wankawala of the Scindia Steam Navigation Company, Calcutta, who represented the Indian National Steamship Owners' Association on the previous Board, continues to represent the Association on the new Board. Mr. R. K. Mitra, I.C.S, Chairman of the Calcutta Port Commissioners continues to be the Chairman of the new Board while Mr. R. M. Ray has been appointed the Deputy Chairman of the Board. Mr. Ray will be a whole-time employee of the Board with wide powers under the new Dock Workers Scheme.

DOCK WORKERS' STRIKE

The leaders of the All-India Port and Dock Workers' Federation have had discussions with the officials of the Union Ministry of Transport. It would appear that the Government impressed upon the leaders the need for withdrawing the strike threat, in view of the international situation and the urgent necessity to clear the goods arriving in the ports in connection with the implementation of the Second Five-year Plan. It is learnt that the leaders have agreed to postpone the strike which was scheduled to take place on the 15th inst.

There is, as is well known, a move on the part of dock workers to boycott British and French ships at Indian ports; this action is being advocated as a mark of protest against the Anglo-French action in Egypt. Referring to this move, Mr. S. R. Vasavada, President of the Indian National Trade Union Congress, stated last week, at Ahmedabad, that it would be 'unwise' for a section of the people of this country to take any action before the Government's final policy was known. Bombay dock workers are also reported to be contemplating a move to boycott Russian ships as a mark of protest against Russian aggression on Hungary.



INFLATION-PROOF INVESTMENTS

INDEX-REGULATED LOANS—THEIR MERITS AND DEFECTS DISCUSSED

[It now looks as though inflation will be with the world for a long time to come. If it is not possible to eliminate it altogether it is at least necessary that devices should be found whereby the adverse effects of inflation are kept within bounds. The subject of inflation and the future of interest rates were discussed in a recent issue of the Monthly Bank Letter *of the First National City Bank of New York, to which we drew readers' attention in our issue dated 13th October 1956. In view of the fact that the world is faced with the problem of inflation, the authorities in many countries are devoting considerable attention to the question of evolving inflation-proof investments. In this connection, an article in the September issue of the* Index, *the monthly economic review of the Svenska Handelsbanken, discusses the pros and cons of linking the value of savings and investments with the value of money. The article, which we reproduce below, summarises the issues involved and is bound to be read with interest in this country which, thanks to deficit-financing contemplated in the Second Five-year Plan, also faces the prospect of inflation.—*ED.]

RENEWED interest in a special type of protection against a depreciation in the value of money—index-regulated loans—has been aroused by an investigation recently completed by Professor Tord Palander at the request of the Minister of Finance. The investigation has not given rise to any lively discussion—the topic being overshadowed by the coming General Election—but the problem is nevertheless important and certainly worthy of discussion also outside strictly specialist circles.

The need to protect one's assets against losses arising from a depreciation in the value of money is as old as money economy. Savers have always attempted to ward off the adverse effects of inflation by placing their assets in such investments as follow the general rise in prices, e.g. land, buildings, jewellery, gold etc. However, it is not possible for all savers to invest their money in tangible assets and small savers, in particular, have found themselves in an unfavourable position. It has been more easy for those with larger savings to invest in property or productive undertakings and it has also been easier for them to purchase shares whereas, for small savers, these possibilities have been more limited. A one hundred per cent. investment in tangible assets would, strictly speaking, mean that all such investments were made by the savers themselves, but this is certainly impracticable in a modern society practising money economy and an extensive division of labour. Moreover, the investment units are often of such magnitude as to exceed the resources of individual savers. It is thus clear that the need for financing in a modern society cannot be satisfied unless a considerable proportion of private saving is in the form of monetary claims such as bonds, bank deposits, insurance policies etc.

Price Index

This raises the question how to protect those whose savings are in nominal assets against the losses to which such assets are exposed as the result of inflation. The method that has time and again been suggested is the tying of monetary claims to a price index and this question has become even more topical during the long period of full employment and rising prices that has predominated since the 'thirties. The problem has aroused particular interest in the United States, Finland and Denmark. In Sweden it was the subject of a Parliamentary debate following upon a motion presented in 1952.

Advocates of index-regulation on the credit market maintain that such a system has advantages both from the points of view of economics and fairness. Inflation involves a redistribution of assets and debts in a manner which is unfair to the lender and gives the borrower undeserved profits. Such a redistribution, even if not fully prevented, would at least be reduced if the monetary claims could be adjusted to changes in the general price level. In other words, the chances of "cashing-in" on the inflation would be lessened.

As concerns the purely economic advantages, the main argument is the favourable effect on saving. It is maintained that the public's interest in depositing money in a bank account and purchasing bonds would be increased if savers were freed from the fear of falls in the value of money. It is further claimed that index-regulated credits would discourage speculative purchases and investments. During an inflationary cycle it is sometimes worthwhile to borrow money and purchase goods or means of production with a view to making a speculative profit. Such speculations would be less attractive if the borrowers were aware that the amount of the credit was going to keep pace with the general rise in prices and that the speculative profit would be partly or entirely absorbed in covering the increased principal. Thus, under certain conditions, index-regulated loans would lessen the demand for goods and thereby act as a counter-inflationary measure.

"Index-mindedness"

Opponents of index-regulated loans point out that a changeover to such regulated credits would result in an extension of "index-mindedness" which, in itself, encourages inflation. Index-regulated loans would, as do index-regulated wages, have a detrimental effect on price stabilisation rather than a beneficial one. The question of index regulation is then viewed exclusively from the point of view of costs. A company borrowing money to finance its business activity must, when fixing prices, allow for the expected increase in principal in the same way as it allows for other expected cost increases. This aggravates price increases in a period of inflation.

A further observation has been that the introduction of index-tied bonds would cause unnecessary fluctuations on the bond market. General price expectations normally change rapidly and, if the value of the bonds were related to a price index, the market prices of bonds would be subject to considerable changes. Institutions such as insurance companies, pension foundations, etc., would be greatly inconvenienced by this increased instability on the bond market.

In practice, index-regulated loans have only been tried out on a small-scale and in most of the countries concerned they have played a very insignificant rôle. This has been the case in France, U.S.A., China and Israel. Only one index-regulated loan has been floated in Sweden; a debenture loan issued by the Consumers' Co-operative Society in 1952. It is a 20-year loan at 3 per cent. interest and the principal is to be repaid with compensation for the increase in the cost of living, but with the top limit of 150 per cent. of the original nominal value. The only country to issue index-tied loans on a wider-scale has been Finland where, in 1945, the evacuated Karelian refugees received compensation in bonds of this kind. The current position is that a considerable proportion—presumably one-third—of the Finnish State's long-term debts are in the form of index-regulated bonds. The Finnish National Pension Foundation and the Finnish insurance companies make it almost a general rule to tie their loans to an index.

In 1953, the Finnish banks decided to apply index-regulation to advances and deposits but the scheme was not introduced until the 1st May 1955. The commercial banks ceased to apply the system at the beginning of 1956, but the savings banks and the co-operative credit societies are still applying it. In June 1956 a total of 7,700 million marks had been deposited in index-linked accounts with the latter institutions, while deposits of this kind in the commercial banks when the system was discontinued amounted only to 160 million marks. The banks are entitled to debit the borrowers for the costs of the index addition on deposits but hitherto they have not availed themselves of this possibility.

Finnish Experience

It seems probable that inflation–proof investments might have been adopted on an even larger-scale in Finland had the official policy not served to counteract it. The Finnish Government, who have themselves issued index-tied loans on a large-scale in recent years, have prevented other borrowers from doing likewise. The postponement from 1953 to 1955 of the introduction of index-linked bank accounts was partly due to interference on the part of the Minister of Finance. When this form of loan was later introduced the interest on index-tied accounts was compulsorily fixed at a rate 1 per cent. lower than that for other forms of long-term deposit. Furthermore, index-regulated deposits were denied the exemption from income and capital tax which had been applicable from 1950—and is still applicable—in respect of other types of deposit. In view of the strong competition for borrowed capital that prevails in Finland, it is an advantage for the State to be able to dominate the issue of index-tied bonds.

THE GENERAL ASSURANCE SOCIETY LIMITED

FORTY-NINTH ANNUAL GENERAL MEETING

IDEOLOGICAL PREDILECTION ACTUATED NATIONALISATION, SAYS MR. B. L. JALAN

THE view that the alleged malpractices and misappropriation of funds in life insurance business did not constitute convincing reasons for nationalising the industry was expressed by Mr. B. L. Jalan, Chairman, General Assurance Society Ltd., in his address at the Forty-ninth Annual General Meeting of the Society held at Ajmer on 7th November 1956. The failure of the Government to check the so-called evil trends, he said, became, ultimately, the crime of the industry and the Government took recourse to it as argument for nationalisation. Mr. Jalan added that the only conclusion one could draw was that it was the ideological predilection of the Congress Party which actuated the fateful step.

The following are extracts from Mr. Jalan's speech:

"When we met here about a year back on the same occasion we had noted with gratification the happy signs of reassuring developments on the international horizon. The Suez Canal dispute has assumed proportions of a world-wide conflagration. Even our insurance industry could not escape these diplomatic overtures as we recall that the London Underwriters raised the war rates on both cargo and hull, negotiating through the Suez Canal. Before serious and frantic efforts, led amongst others by our own Prime Minister, could materialise the whole situation has worsened by invasion of the Egyptian territory by Israel and military intervention of England and France. World opinion, including public opinion in Britain, has expressed itself in unequivocal terms. It is hoped that peace forces will ultimately prevail and the wrong perpetrated will be retraced.

"On the other hand, we will recall that early in the year the Russian leaders themselves finally exploded the myth of a happy Soviet society by denouncing the communist regime of about 30 years since the dawn of the Stalin era. We have not forgotten the outbursts of discontent in East Germany. Recent popular developments in Poland and Hungary have further exposed the role of the Soviet activities in the so-called people's democracies of Eastern Europe.

Unhappy Events at Home

"Nearer home, we have witnessed during the last few months a few unhappy events arising out of the States Reorganisation programme. Such untoward occurrences do not augur well for the unity of the country and smack of fissiparous and parochial tendencies.

"With the even faster means of transport and communications and increasing rate of intercourse between peoples, the world is becoming smaller and a more compact unit. Historically, therefore, redistribution of areas, intra-national or international, seem to be a bit anachronistic. One wonders if the country should not have been divided on the more convenient geographical and administrative regional bases, facilitating balanced economic growth. Indeed, ever since the formation of Andhra, I have been suggesting the redistribution of the country on the basis of geographical zones. The idea of zones appears to have fascinated our Prime Minister also and the Government has taken some steps in this direction.

"While we met here last year, an unprecedented round of floods had overtaken the country including the Punjab and Delhi. It is unfortunate that they have appeared this season again with more severity.

"These floods have an even larger bearing on the general economic situation in the country and generally on the fulfilment of our planned programmes. The commodity prices have shown an upward tendency during recent months. This tendency has been more spectacular in respect of foodgrains and other agricultural crops. Between May 1955 and September 1956, the General index of wholesale prices (with the year ended August 1939 as the base) showed an increase of 78 points or 23 per cent. But the index in respect of food articles has advanced by 117 points or 43 per cent. As against these, the rise in prices in respect of manufactured articles has been much less marked; the index advanced only 4 per cent.

Monetary Expansion

"On the one hand, these variations in prices have to be set against the decline in prices a year before, and on the other, against the several measures of controls invoked or proposed by the Government. The changes in the price structure have to be studied further in the light of the food policy followed and the monetary expansion generated by the Government. Actuated by the crop of 1954-55, almost all reserves of foodgrains had been liquidated. Furthermore, there has been an expansion of money supply during 1955-56 to the tune of Rs. 264 crores, as against, and in addition to, an expansion of Rs. 127 crores a year earlier. Three-fourths of the expansion was accounted for by the increase in currency alone.

"Disregarding these basic circumstances of the situation, we seem to seek the remedy in increased tempo of taxation and rigid controls. The Government does feel that the features of the situation are only temporary and more of a correctional nature. If so, taxation cannot and will not cut any ice. Moreover, so long as the tempo of Government spending continues in search of 'green fields and pastures new' of the public sector, taxation, particularly direct, will only defeat its own purpose. If currency inflation is the established feature, it is immaterial whether the purchasing power is brought to the market by this or that sector.

Controls

"Public memory is proverbially short, but I am sure we have not forgotten the difficulties involved in rigid commodity controls on production, distribution and prices prevalent during the war and immediate post-war periods. Such controls not only do not check prices but are notorious for creating artificial scarcities and other complications. These measures only indicate the philosophy guiding the economic policy of the Government. Thus, the nationalisation of the Imperial Bank and life insurance in the country and promulgation of the Companies Act were followed in quick succession by the Industrial Policy Resolution of the Government of India dated 30th April 1956.

"I recall that the Prime Minister had, in the larger interest of the country, given an assurance that it was not the intention of the Government to nationalise existing industries, because that did not create fresh capital and income in the country. The resources of the State could be better utilised in sponsoring new and neglected lines of economic activity. Hardly had the echoes of the Prime Minister's assurance died out than the Imperial Bank and life insurance were nationalised. I am constrained to say that we have not quite followed this confusion. I will strongly urge the Government that the Prime Minister's assurance should be carried out both in letter and spirit.

"I agree that we have been presented with a *fait accompli* and it is no use crying over spilt milk. But, as the question of nationalisation of life insurance touches the frontiers of our fundamental economic philosophy, I will like to examine these arguments.

Limit on Investment Should be Raised

"The Government appears to have given the assurance that they will continue to make available to the private sector of industry the same proportion of funds as heretofore. If that be so, it is not understood how does the Government intend to employ this industry as a source of funds for the implementation of the second or, for that matter, third Five-year Plan. If, however, this is the intention, there is an easier recourse available to the Government, namely, increasing the limit of investment in Government and allied securities from 50 per cent. to 60 per cent. or even 70 per cent. It may be interesting to note here that the total investment of life insurance companies in the United States in Government securities, including those of the Federal, State, Local and Foreign Governments, total about Rs. 5,760 crores, out of total assets of about Rs. 40,230 crores in 1954. This share constituted less than 15 per cent. of the total assets. In the same year, such securities constituted a share of 54.9 per cent. in India. As against this the share of business securities represented 45 per cent. in the United States of America and only less than 15 per cent. in India.

"Among the two arguments of malpractices and misappropriation of funds, I will take the latter first. The business of about 165 insurers was nationalised. A searching investigation was conducted by the Government of the affairs of all companies, by specially appointed investigators and custodians. Misappropriation of funds was detected in three or four cases. There is reason to believe that, except in one case, misappropriation may have been resorted to after the act of nationalisation. Misappropriation of funds in one or even three or four cases cannot by any sane judgment be a sole reason for nationalisation of an industry which was conducted by more than 165 companies and which is older than half a century. There are always certain rotten apples in every basket. Nobody argues, I am sure, that because there have been stray instances of the so-called 'scandals' in Government enterprises, the Government has no right to start these or other industries. Moreover, there cannot be any doubt that such cases were only stray instances and certainly not the general rule.

Malpractices

"There has been, similarly, vague talk about other malpractices in the industry. The only source of malpractices was the fierce internal competition. This was sought to be checked by limits on commission, which gave rise to the evil of rebating. Now certain type of competition reflected in one form or another will be present in every industry in the free sector as a result of market mechanism. If this mechanism was allowed to have its play, uneconomic units would have faced the wall and industry would have returned to normal functioning. If it was desired not to allow any company to collapse, it was the responsibility of the controlling authority to institute and implement suitable means to curb the tendencies. The Government took the initiative and shouldered this responsibility. But the Government control not only failed to curtail the fierce competition but it gave rise to worse problems. Further, the Government also failed to devise suitable ways and means to improve the situation. This failure of the Government and the worse problems, as a consequence thereof, have become the crime of the industry and, strangely enough, the Government has taken recourse to it as argument for nationalisation.

"In view of what I have said so far, we can get only one conclusion, that it was ideological predilection which actuated the fateful step. However, we have, on the contrary, repeated assurances of our Prime Minister that the policy of India will not be governed by ideological fancies and prejudices in internal and economic no less than international affairs. We hope that this cleavage will draw closer and closer and it will be possible to reconcile Government measures with the avowed objects enunciated by our Prime Minister.

"The Government proposed, in the first instance, to allow insurance companies to operate life insurance business abroad. A conference was also called to devise a formula as to what companies should be allowed to do so. We also offered our services for the same. All of a sudden, however, it was announced, without taking us in confidence, that the Government had already decided that the Life Insurance Corporation itself would transact this business.

"Although the problems of general insurance are no less embarrassing, they are akin to those in the sister industry. The main problem is the internecine competition. Owing to tariff rates there is perhaps some way out in fire and miscellaneous departments, but there appears to be no remedy against the cut-throat competition and rate-cutting in marine insurance. It appears that this section has become a definite drain to the industry. Whereas other measures will no doubt be necessary, one wonders if the restrictions on commission rates may not be abolished. If it were done, perhaps, the only problem left to be tackled will be that of cut-throat competition. I should, however, make it clear that I do not suggest that the overall limit on expenses should also be removed.

"We are told that the Government is contemplating some measures to curb the evils. Lest we should repeat the mistake, I would wish that the Government takes the entire industry in confidence and seeks their advice on the problems confronting them.

"Among the new measures, perhaps some kind of test for the business-worthiness of the companies is being proposed. If this is an effective measure it will no doubt be very useful. But this is only the negative aspect. I believe we should explore possibilities of ways and means to deal with 'uneconomic units.' If some voluntary efforts can be initiated as, for example, amalgamation of smaller uneconomic units with larger units, the industry will benefit immensely.

"It is also understood that there may be stricter inspection of companies. It may achieve some results, but what will actually help the industry is a constructive approach. We should devise a programme first to put the industry on sounder footing and provide conditions for its smooth functioning. The type of inspection envisaged will play then a very important role in combing out any discrepancies which may be left over.

"We have taken a very salutary and welcome step in establishing a Reinsurance Corporation of India. I recall with great pleasure that I had submitted a scheme to the Government about three years back for establishing such a corporation. We are glad that this Corporation will be collectively owned and operated by the companies themselves.

Working Results

"Now coming to the results of the working of the Society, as you must have noticed from the accounts, the same have been divided and we have presented exclusively the results of the operations of the general department.

"The profit and loss account has shown a net profit of Rs. 95,646 which is transferred to the appropriation account. This includes a sum of Rs. 1,34,125 transferred from shareholders life profit account, representing the surplus allocated to shareholders out of the actuarial valuation conducted for the period ended 31st December 1954. On the contrary, our profit was depleted by the loss on exchange on account of the devaluation of the Pakistani rupee to the tune of Rs. 2,64,530.

"It would not be out of place if I mentioned here, in the interest of achieving the better underwriting results we did not hesitate to curtail sizably the reduction in the accident department in the midst of overall expanding business. Thus, whereas our fire and marine premium income showed increases, the premium income in the accident and miscellaneous department was curtailed by more than 50 per cent.

"We had a carry forward from last year of Rs. 1,07,856. After providing for the dividend declared for that year, there was a net surplus of Rs. 47,856 brought forward to the appropriation account. Adding to this the net profit for the year and tax adjustment with the life department, we had a balance of Rs. 1,71,667 for appropriation. As you are now aware, I am glad to say that your Directors have recommended payment of a dividend at the rate of 6 per cent. on the paid-up capital of the Society.

Promising Outlook

"I am confident, you will agree with me that the overall atmosphere is cheerful and optimistic and there is every reason to believe that we will make further strides of progress. In the midst of expanding economy and accelerated pace of industrialisation, the Society will not only have its own share of promise and success, but it will, in its own humble way, contribute to the rebuilding of the nation as one of the sinews of modern progress. Whereas life insurance was an integral part of the Society's business and strength, I can assure you that, in its own sphere, the position of our existing business will be jeopardised on no account. Indeed, this will only prompt us to consolidate our position further and serve the industry with renewed vigour."

(a) 3,56,250 Preference Shares of Rs. 10 each at par offered in the first instance to the holders of Preference Shares of Rs. 40 each, in the ratio of six Preference Shares of 10 each for each Preference Share of Rs. 40 held.

(b) 31,80,000 ordinary shares of Rs. 2-8 each at par offered in the first instance to the holders of ordinary shares of Rs. 2-8 each, in the ratio of three ordinary shares of Rs. 2-8 each for each ordinary share of Rs. 2-8 each held.

CONSENT OF THE CENTRAL GOVERNMENT HAS BEEN OBTAINED TO THIS ISSUE BY AN ORDER OF WHICH A COMPLETE COPY IS OPEN TO PUBLIC INSPECTION AT THE HEAD OFFICE OF THE COMPANY. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE CENTRAL GOVERNMENT DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

As the Government of India has sanctioned expansion of Dalmiapuram Cement Works in Madras State from the present capacity of 750 tons of cement daily to about 1,250 tons per day, further capital is being issued for which sanction of the Controller of Capital Issues has been obtained *vide* letter No. R-332-CCI/56, dated 3rd October 1956, as amended *vide* letter, dated 1st November 1956.

The newly issued shares shall participate in dividend declared for the accounting year 1957 and any subsequent financial period. The newly issued ordinary shares of Rs. 2-8 each shall rank *pari passu* in all respects with the existing ordinary shares of Rs. 2-8 each. The newly issued Preference Shares of Rs. 10 each shall rank *pari passu* with the existing Preference Shares of Rs. 100 and Rs. 40 *each in* proportion to the capital paid up in the matter of dividend and assets on winding up and shall carry the right to a preferential cumulative tax-free dividend of 6 per cent. per annum, but will participate in dividend at 7 per cent. in the event of a dividend above 10 per cent. being declared on ordinary shares and will be entitled to 7½ per cent. in case of dividend at 20 per cent. and above being paid on ordinary shares and also an additional half per cent. rising upto 9 per cent. along with 10 per cent. further rise in the dividend on ordinary shares but will have no further rights to participate in the profits or assets.

The voting rights attaching to the newly issued Preference Shares of Rs. 10 each shall be in accordance with the provisions of Section 87 (2) of the Companies Act, 1956, while the voting rights attached to the existing Preference Shares of Rs. 100 and Rs. 40 each are wider.

The Renunciable Letters of Right will be issued to persons who are registered as on 30th November 1956, as the holders of the shares carrying the Right, and for this purpose, the share transfer register shall remain closed from 19th November 1956, to 30th November 1956, both days inclusive. The Letters of Right are expected to be posted by 10th December 1956. Those who do not receive their Letters of Right to which they may be entitled by 15th December 1956, should write to the Company.

Normally one Letter of Right for each class of shares, that is, preference and ordinary shall be issued to the shareholders for full number of shares of each class respectively to which they may respectively be entitled. But if any shareholder desires to renounce the whole or any part of his Right in favour of one or more persons for one or both class of shares, he may intimate in advance to the Registered Office of the Company the denomination in which he would like to get the Letters of Right to avoid wastage of time over getting split letters later on. This, however, does not prevent Right holders from applying for splitting of Letters of Right after issue but within the time allowed for the purpose. The last date for receiving requests for splitting Right Letters would be 31st December 1956.

On and after 31st January 1957, preference shares of Rs. 40 each and ordinary shares of Rs. 2-8 each shall cease to have any preferential right of subscribing towards fresh issues of capital.

The last date for receiving Acceptance forms duly completed in all respects will be 31st January 1957. The shareholders will have to pay full value of the shares accepted along with the Acceptance form. The form can be sent and the total amount paid in one of the following two ways:

(i) By sending the form together with remittance for full value to the Registered Office of the Company at Dalmiapuram, so as to reach there not later than 31st January 1957.

OR

(ii) By handing over the form and the amount of full value to the Bankers of the Company, M/s. National Bank of India Ltd. in any of its branches in India on or before 31st January 1957.

Allotment letters will be issued as early as possible after completion of Allotment but no other receipt or acknowledgment of Acceptance Forms will be sent. Share certificates will be issued within 9 months of allotment.

The working results of the Company for the past few years are as follows:—

Year	Production of Cement in tons.	Gross profits earned before providing for depreciation and Managing Agents' Commission.	Depreciation provided.	Dividend on		
				Pref. shares.	Ordy. shares.	Defrd. shares.
		Rs.	Rs.			
1952 ..	2,28,950	40,01,482	11,31,311	6%	6¼%	*Nil*
1953 ..	2,20,256	40,75,904	12,48,101	6%	10 %	10 %
1954 ..	2,70,000	64,90,088	10,60,722	6%	10 %	10 %
1955 ..	2,66,285	68,23,654	5,37,945	7%	12½%	12½%

The total original value of the gross block at the end of 1955 has been Rs. 1,86,81,654. Total depreciation including initial depreciation, provided till end of 1955 has been Rs. 1,29,96,995. The 250 tons plant was installed before war some time in 1939 and the 500-ton plant was installed after war in 1949, bringing the daily production of the works to the present level of 750 tons per day.

All correspondence regarding the new issue should be addressed to the Registered Office of the Company. Shareholders are requested to make it a point to quote always their register of members folio number. The reference will avoid all possibilities of mistake and ensure prompt attention. It is presumed all shareholders have already taken note of their number. Those who have not, are requested to do it now. They will find it at the left side over their name appearing on the envelope in which the circular regarding the new issue has been sent to them or on the Letter of Right that will be sent.

INDIAN INCOME TAX ACT
NEED FOR AMENDMENT

By S. S. Jhunjhunwala, Advocate

RECENTLY, there was a news item in the papers that the Government harbours the intention of drafting a fresh Income Tax Act with a view to simplifying the law and we presume, also to systematise the same. This is quite welcome news, as the move is towards meeting a long-felt need for scrapping the present Income Tax Act and one remembers what has been rightly pointed out by Mr. J. B. Kanga and Mr. Palkhivala in their commentary on the Act:

"It is passing strange that an Act which brings more revenue to the Government than any other and which makes a welfare State possible should be the most untidy Act on the Indian Statute Book. It is an Act exiled from order and system. The bones of dead sections are scattered all over the Act."—(*Preface to the Third Edition* of The Law and Practice of Income Tax. *By Kanga and Palkhivala*—1953.)

The said writers pointed out some references in particular sections of the Act to such other provisions of the Act as were *non-existent*. Now the Legislature has tried to correct these errors and slips but various sections, notably sections 4, 4A and 4B, can still serve as good models for those interested in illogical treatment and complication of plain things. Several anachronisms had crept into the Act after 15th August 1947, since when there has been a spate of amendments necessitated by historical events. One cannot grudge the unenviable plight of the law-drafters, who have also taken care to rectify the same as and when noticed. On the whole, a good portion of the complexity and clumsiness of the statute is attributable to the haphazard growth of and changes in the law from time to time, especially since 1939, the determining motive of which has almost consistently remained that of stopgapping the loopholes whose benefits the alert taxpayers have not failed to avail of. All the same, it cannot be gainsaid that the lack of clear understanding and vision on the part of the law-framers in regard to both their own intentions and the effect of particular words chosen for the sections has not made an insignificant contribution to the march of this very important law of ours to its present deplorable state in theory as well as in its practical application by the Income-tax authorities.

The purpose of this very brief survey is to content myself with only two instances from both the angles, namely, theoretical and practical, which, in fact, are interconnected and not easily separable.

Section 23A

The well-known, though perhaps not well-understood, Section 23A of the Indian Income Tax Act was introduced, and has been modified from time to time, with a view to checking the avoidance of payment of higher rate of super-tax by individuals. The process of avoidance usually practised was that a limited company—private or public—was floated; huge profits accrued to the company but the company was subject to income-tax and super-tax only at a uniform rate, which rate proves to be less than the rates applicable to individuals having higher scales of income. The said profits were not distributed as dividends, as dividends entailed further tax liability in the hands of its higher income group of shareholders. But, in the place of the same, bonus shares were issued which were free of tax and, in extreme cases, the companies were sent to liquidation thus entailing release of capital assets of the company in the hands of recipients which, again, was not taxable. As section 23A alone was found to be insufficient for the purpose, the definition of the word "dividend" was amended in 1955 and again this year. Section 2 (6A) of the Act is now formidable and comprehensive enough to treat as dividend for this purpose what is not and cannot be regarded to be so in commercial practice. This definition of "dividend," on the other hand, is a specimen of drafting acumen determined to achieve a particular result and it is interesting to quote it in full:

"(6A) 'Dividend' includes—

"(*a*) Any distribution by a company of accumulated profits whether capitalised or not, if such distribution entails the release by the company to its shareholders of all or any part of the assets of the company;

"(*b*) any distribution by a company of debentures (debenture-stock or deposit certificates in any form, whether with or without interest) to the extent to which the company possesses accumulated profits, whether capitalised or not;

"[(*c*) any distribution made to the shareholders of a company on its liquidation, to the extent to which the distribution is attributable to the accumulated profits of the company immediately before its liquidation, whether capitalised or not];

"(*d*) any distribution by a company on the reduction of its capital to the extent to which the company possesses accumulated profits which arose after the end of the previous year ending next before the 1st day of April 1933 whether such accumulated profits have been capitalised or not;

"(*e*) any payment by a company, not being a company in which the public are substantially interested within the meaning of section 23A, of any sum (whether as representing a part of the assets of the company or otherwise) by way of advance or loan to a shareholder or any payment by any such company on behalf or for the individual benefit of a shareholder, to the extent to which the company in either case possesses accumulated profits; but 'dividend' does not include—

"(i) a distribution made in accordance with sub-clause (*c*) or sub-clause (d) in respect of any share issued for full cash consideration where the holder of the share is not entitled in the event of liquidation to participate in the surplus assets;

"(ii) any advance or loan made to a shareholder by a company in the ordinary course of its business where the lending of money is a substantial part of the business of the company;

"(iii) any dividend paid by a company which is set off by the company against the whole or any part of any sum previously paid by it and treated as a dividend within the meaning of clause (*e*), to the extent to which it is so set off.

"*Explanation*—The expression 'accumulated profits,' wherever it occurs in this clause, shall not include capital gains arising before the 1st day of April 1946, or after the 31st day of March 1948."
