So far as the issue of bonus shares is concerned, the Finance Act 1956 taxes the said issue as well. Thus, I think the Government has fully achieved its object of defeating the practice among higher income group of shareholders having controlling interest in the companies in avoiding taxes as outlined above, which purpose has been particularly achieved by the very stringent provisions of section 23A as it stands at present.

Now, the Finance Act 1956 goes one step further and lays down that, in the case of a company to which section 23A is applicable, any dividend declared by it, which exceeds 6 per cent. and upto the extent that it does not exceed 10 per cent. of its paid-up capital shall be liable to an extra super-tax of two annas per rupee and, on that part of the said dividends which exceeds 10 per cent. of the paid-up capital, the additional super-tax shall be charged at the rate of three annas per rupee. It will be generally seen that, if a company does not distribute 60 per cent. of its income as dividend after payment of taxes the Company has been made liable to pay an additional super-tax of four annas in the rupee and in some cases eight annas in the rupee.

In order to avoid this high rate of super-tax, the company has naturally to declare dividends at a high rate and in a very large number of cases the rate of dividend will be above 6 per cent. and 10 per cent. of the paid-up capital. The object of the Government having been achieved by the amendment of section 23A, by the new definition of "dividend" and by taxing the bonus shares, one comes to the conclusion that this additional super-tax of two annas and three annas per rupee on dividends exceeding 6 per cent. of the paid-up capital is nothing but an overzealous attempt to grab revenue somehow or other and one feels that a private limited company having been already put to other disadvantages in respect of tax as compared with a public limited company, this additional charge on dividends may be called to be wholly unjustifiable and uncalled for and the last straw on the camel's back leading to the creation of conditions forcing the private limited company to think of adopting any possible means for saving tax. On the other hand, in certain cases, where some companies would be interested in declaring high dividends on grounds of commercial expediency will find this additional tax to be a deterrent with unwholesome effect. Looked at from one angle, it also goes against the idea underlying section 23A.

Bad Debts

Now, among the numerous instances of practical administration by the authorities one is the treatment of bad or irrecoverable debts by the income-tax officers. It is generally found that the Income-tax Department is very meticulous in imagining grounds for disallowance of bad debts and the common grounds found in the assessment orders are: "bad debts not proved", "steps taken for recovery do not appear to be sufficient", "debt became time-barred one year ago" or "debt will become time-barred one year later", etc. The decisions in the case of *C.I.T.* vs. *Chitanavis* 6 I.T.C. 453, 458 (P.C.); *B.C.G.A. (Punjab)* vs. *C.I.T.* 1937 I.T.R. 279 and *Bansidar Poddar* vs. *C.S.T.* 1934 I.T.R. 20 to the effect that a time-barred debt is not necessarily bad neither is a debt which is not time-barred necessarily good are not followed in practice. The attitude of the department is the same both in the assessment of banking and moneylending as well as non-banking business concerns. It should be borne in mind that no one likes to write off a debt, especially a bank, and it is only when all the avenues of getting back the debt seem to be exhausted to the assessee that the loss is written off as bad debt. The business man actually losing the money is the best judge of the situation and the legal time-bar for realising it is only one of the various considerations influencing his decision and it is not surprising that, sitting cosily, the income-tax officer finds it very convenient to pass a judgment on the dead thing that sufficient attempts were not made to recover the money whereas it is a fact that, if such formal and legal attempts as are expected by the income-tax officer are taken in all cases, the costs of such steps may well exceed the amounts themselves actually involved. So far as banking concerns are concerned, money is their stock-in-trade and they are always anxious to maintain a record, as far as possible, of the minimum number of bad debts, and, on the other hand, if there happens to be any, in all fairness and justice to their own shareholders, customers and the public at large, they do not wish to hide the reality and continue to show as asset what is not there.

Further, if the debt happens to be realised subsequently, then it becomes taxable at that subsequent point of time if it has been actually allowed by the Income-tax Department in some previous year as a deduction.

It is clear that the treatment of bad debts should be made very liberal for allowing the same as a deduction. It may be argued that, in that case, big business men will take undue advantage by writing off the amount in such years when their income happens to be abnormally high. But I am not at all suggesting that the income-tax officer should allow bad debts without any enquiry and satisfaction on his part; only, so far as the small amounts are concerned, he should not be so meticulous and so far as the big amounts are concerned, before using his hammer, he should arrive at a finding that the intention of the assessee in writing it off was *mala fide*.

It is hoped that, while revising the present law, the legislators will especially bear in mind the practical hardships caused to the taxpayer both in understanding the law and facing its administration. The instances cited above can be multiplied without difficulty but that would be going beyond the limits of the present article.

In the course of a note on India's financial resources, submitted to the A.-I.C.C., Mr. T. T. Krishnamachari, Union Finance Minister, says that India has now a carry-over of about Rs. 100 crores of external assistance authorised in the First Plan period. The recent agreement on imports from the United States makes a further Rs. 137 crores available. The gross amount available by way of steel credits is Rs. 83 crores, though a part of this will have to be repaid during the Plan period. He adds that India can legitimately expect to get substantial loans from the World Bank.

As regards internal resources for implementing the Plan, Mr. Krishnamachari points out that the target for additional taxation mentioned in the Plan is Rs. 450 crores, but there is a gap of Rs. 400 crores which will have to be covered mainly by taxation. The target may have to move up further, because of increases in cost on some items in the Plan, new expenditure on items not covered by the Plan and the desirability of reducing reliance on deficit financing.

Resounding VICTORY!
FIRST AGAIN!
For the third consecutive year a Hindusthan car beats all other cars
(77 competitors, 18 makes) in the official Endurance and Reliability Trial for '56 Jointly organised by AAB (Automobile Association of Bengal) & Calcutta Motor Sports Club.

The Hindusthan Landmaster we used proved perfectly reliable during the Trial. The engine was not stopped for a single moment on the 772-mile run that lasted 25 hours and yet there was no trouble whatsoever.
We had to maintain the prescribed average speeds on good metalled roads as well as on rugged and hilly tracts. Yet, the manoeuverability of our Landmaster, its instantaneous engine response and excellent road holding made it possible for us to drive at the controlled high and low speeds required by the Trial without any difficulty. The well-cushioned seats and spaciousness added to our comfort and kept us relaxed even in this tough and fatiguing Trial.

PROBLEMS FACING G.A.T.T. SESSION

DELEGATES STRESS STABILISATION OF COMMODITY PRICES

A WIDE range of stimulating subjects is being discussed at the Eleventh Session of the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.) which opened at Geneva on 11th October 1956, and in which the thirty-five contracting parties to the G.A.T.T. are participating. Important items included in the agenda thus are: (1) Balance-of-payments Import Restrictions, (2) Customs Tariffs, Charges, etc., (3) Customs Administration, (4) Customs Unions, Free Trade Areas, etc., and (5) Commodity Problems and Surplus Disposal. Discussion on the item "Balance-of-payments Import Restrictions" takes the form of consultations on the discriminatory aspects of import restrictions. Accordingly, parties are expected to hold consultations with five Governments on the discriminatory aspects of the import restrictions which they apply for the purpose of safeguarding their balance-of-payments position and monetary reserves. The five Governments which will consult with the Contracting Parties are: Australia, Ceylon, New Zealand, the Federation of Rhodesia and Nyasaland and the U.K.

The main purpose of these consultations is to afford an opportunity for examining the discriminatory restrictions in the light of the relevant provisions and criteria of the Agreement, and for the exchange of views facing both the countries imposing those restrictions and those affected by such restrictions. A second form in which discussion takes place under this item is that of consultations with Governments applying import restrictions under Article XII. The need for such consultations arose because, as was stated by the U.S. delegate, many changes have taken place in recent years in the economic position of contracting parties, in their balance of payments and reserves, productive capacities and trade interests, stability of their currencies and the balance of internal supply and demand forces. Again, widespread and important changes have taken place in import restrictions and the way in which they are applied. Moreover, hitherto there has not been a general opportunity for consultations between Governments on quantitative import restrictions. Another aspect of the problem relates to the developments in the O.E.E.C. trade liberalisation.

Customs

The item "Customs Tariffs, Charges, etc." includes chiefly consideration of the new Brazilian Tariff, modifications proposed to be incorporated in the Rhodesia and Nyasaland Tariff, anti-dumping and countervailing duties, and others. Under another important item of the agenda, namely, Customs Unions, Free Trade Areas, etc., will be considered the recent proposals for closer economic integration in Western Europe by the formation of a customs union and/or free trade area. The proposed free trade treaty drawn up by the Republic of Central America, and the France-Tunisian Customs Union will also figure in the discussions.

Among the complaints to be considered by the Eleventh Session of the G.A.T.T. are certain Brazilian internal taxes which discriminate against certain French, U.K. and U.S. goods, French Compensatory Tax on Imports, Stamp Tax and Internal Tax on Automobiles, German Turnover Tax as applied to imports of printed matter and the U.S. restrictions on dairy products.

Under the item, "Commodity Problem and Disposal of Surpluses" will be discussed the question of further resolving the differences existing between the Governments in regard to the Draft Agreement on Commodity Arrangements submitted by the Working Party in its report on inter-governmental action to overcome problems in the field of international trade in primary commodities. The second part of the item relates to what is called a matter of serious and continuing concern to many contracting parties. It may be recalled in this connection that at the Review Session, in March 1955, the Contracting Parties adopted a resolution which called for an "orderly liquidation of surplus agricultural products" by the suppliers of those products, after due consultation with the interested parties.

Yet another notable item of the agenda relates to the accession of Switzerland to the G.A.T.T. and the admission of Laos and Tunisia as Contracting Parties.

Views expressed by the leaders of delegations of only a few countries, namely, Australia, Brazil and Ceylon, on certain items on the agenda are available to us so far. Reviewing the past year's developments at the opening of the Session, Ambassador Dana Wilgress, Chairman of the Contracting Parties, pointed out that international trade had increased by 50 per cent. in value and 60 per cent. in volume since 1948. He was, however, alarmed at the great disparity in the gains made by the industrial and non-industrial areas as a result of such increase. In this connection, he observed:

"But, as is clearly indicated in the G.A.T.T. Annual Report, the industrial and the non-industrial areas of the world have not profited equally from these developments. There has been a very rapid increase of trade between the countries that compose the industrial areas—by no less than 80 per cent. in value since 1948. On the other hand, trade between the industrial and non-industrial areas has increased by scarcely half that figure. While there has been a marked increase in the proportion of world trade carried between the industrial areas, the proportion of trade carried between the industrial and the non-industrial areas has actually declined. This disproportion in the share of progress in trade must be a matter of very serious concern, not only for the underdeveloped countries, but for all of us as in most of the countries of the non-industrial group their economic development must depend on the expansion of their foreign trade. This failure of most of the underdeveloped countries to enjoy a comparable share of increasing world prosperity is alarming, particularly in view of the interest that we have in seeing the less developed countries progress towards higher standards of living as rapidly as possible. It must be a matter of great concern to us as contracting parties, and I suggest that representatives might address their minds to the problem—namely, the decline of the relative importance of the underdeveloped areas in world trade—since it seems to me to be a direct challenge to the contracting parties to the G.A.T.T. who, in that Agreement 'recognise that their relations in the field of trade should be conducted with a view to, *inter alia*, raising standards of living . . . and promoting the progressive development of the economies of *all* the contracting parties.'"

Significant Failure

The Chairman further expressed his satisfaction at some of the favourable developments that were witnessed, during the past year, notably the tariff reductions negotiated at the fourth G.A.T.T. Tariff Conference, strengthening of the relations with the I.M.F., and the movement of many of the contracting parties progressively towards liberalisation of import restrictions. Significant failure in two respects, recorded in the past year, had, however, an adverse effect on the G.A.T.T. according to the Chairman. In the first place, there was the failure to bring into force the amendments to the Agreements which were drawn up at the Review Session. Secondly, they had failed to establish the Organisation for Trade Co-operation. He, nevertheless, expressed the hope that the present state of affairs would be brought to a happy end in the current Session.

Looking ahead, he felt that there must, inevitably, be a slackening in the pace of tariff reduction through the methods so far employed. Referring, in this connection, to the proposed Customs Union and the free trade area for the Coal and Steel Community for Europe, he said:

"If these schemes come to fruition, their effect on the development of international trade would be at least as far-reaching as, for example, the repeal of the British Corn Laws in the nineteenth century or the adoption of the policy embodied in the United States Reciprocal Trade Agreements Act. In terms of statistics the Western European countries are today responsible for 40 per cent. of world trade. Of this, about half—or 20 per cent. of world trade —represents commerce between them. These developments are clearly of close concern to the contracting parties as a whole, since the effects of the proposals would not be confined to certain countries but would extend to all countries which have a stake in international trade."

Organisation for Trade Co-operation

The Australian Minister of Trade, speaking at the plenary meeting regretted that the Organisation for Trade Co-operation could not be brought into existence during the past year. He pointed out that this failure and the one to implement the amendments of the Review Session, had a direct bearing on the problems, such as export subsidies and surplus disposals, of Australia and other countries. Voicing the widespread regret over the U.S.'s failure to ratify the proposals for the O.T.C., he said:

"There is no doubt in my mind that the United States Government has itself recognised in many ways that its position in the world economy calls for a vigorous, positive and consistent international commercial policy. Yet, United States leadership is today open to doubt. Acceptance of the Organisation for Trade Co-operation by the United States would restore the confidence of other countries that its trade policy practice as well as precepts is in keeping with the economic facts of international life today. The Australian Government has been authorised by Parliament to accept the Organisation for Trade Co-operation as soon as both the United Kingdom and the United States have done so. Action by the United States will be followed, not only by Australia's acceptance, but also by acceptance by many other countries."

No Subsidy Race

Proceeding, the Minister stated that Australia would be able and willing to meet competition in the world's market so long as that competition was based on comparative costs. But it was not prepared to engage in subsidy race with higher-cost producing countries. The present experience of export trade, which was far removed from the spirit of the amended subsidy provisions of the G.A.T.T., had thus a bearing on the degree of severity of the present import restrictions in Australia, and the need for conserving foreign exchange. In this connection, he pointed out that his country's interests were being increasingly threatened by the surplus disposal programmes of the U.S. "The report shows," he said, "that on a rough estimate the value of shipments of surplus disposals increased from $340 million in 1954 to about $1,000 million in 1955. So large a trade must be a real danger to many legitimate exporters, yet public expressions by Congressional and Administration leaders indicate no lessening in this tempo." He, however, welcomed the measure of care exercised by the U.S. Government in its disposal activities. Nevertheless, he called for a more realistic and objective consideration of the normal trade interests of other supporters. He added: "The practice developed by the United States in recent months of tying fixed levels of its commercial sales to its disposal transactions may look to be good business from its own point of view. From the point of view of other suppliers, thus pre-empted from a commercial market, however, it is indistinguishable in harmful effects from many of the trade practices outlawed under G.A.T.T."

The Australian Minister for Trade, the Rt. Hon. John McEwen, traced the root cause of the surplus problems in the U.S. to the domestic agricultural policies. It was the obligation of the U.S., according to him, to cope with its national problem with a minimum of disruption internationally. This could be achieved both by taking more effective internal measures and by a continued improvement in consultative procedures and "good faith consideration of the legitimate interests of normal commercial traders." Referring to Australia's import restrictions, he said that they should be viewed in the light of two factors, namely, the instability in its export earnings, due both to seasonal and market conditions, and the rapid growth of its economy, with the consequent pressure of demand on imports. He, however, stressed his intention to relax the restrictions, as the gradual improvement of the balance-of-payment position permitted.

Stability of Commodity Prices Neglected

Another representative who dwelt mainly on commodity problems was, Mr. R. G. Senanayake, the Commerce Minister of Ceylon. A notable contribution to the Conference was made by him when he suggested at the outset that the problems of greatest importance should be discussed and resolved at ministerial level. According to him, an aspect of crucial importance to the underdeveloped countries had been totally neglected; and that is stability of commodity prices. He pointed out:

"The absence of provisions relating to commodity prices has made the Agreement completely lopsided, with emphasis being placed preponderantly on the safeguarding of the interests of highly industrialised countries. Had the Havana Charter become a reality, its sixth chapter would have contained the necessary basis for the operation of price stabiisation for commodities. As matters have turned out, it is a sore disappointment to us in the underdeveloped countries that no agreement has been reached after so many long years whereby stability could be provided to primary commodities. Such stabilisation is not of immediate concern to the developed countries, and the question is being asked in our countries whether the G.A.T.T. is not an instrument devised for the benefit merely of the developed countries. Would it not be better, our people ask, to quit the G.A.T.T. and make bilateral arrangements? I need hardly emphasise that if the rule of law is preferable to anarchy in the sphere of tariffs, it is at least equally so in the sphere of prices of primary commodities."

As an example of the benefits that flow from stabilisation, he cited his country's experiment concluded with the Republic of China in 1952. It stabilised the prices of rubber for five years and created confidence in the future of the industry, which strengthened the Government and the private sector in planning the rehabilitation of the industry. Other important benefits which would accrue from stabilisation were: (1) the need of backward countries for building up reserves to safeguard their economies against a steep fall in the prices of commodities would be obviated, and the bulk of those reserves could be diverted towards improving their output, and (2) the formulation of plans of development would be made easier. He further added that the noble objectives of the Havana Charter and the G.A.T.T., namely, raising the standard of living for all and providing full employment, could certainly not be achieved except through the stabilisation of commodity prices. Moreover, he pointed out that, although commodity stabilisation was not of 'immediate' concern to the West, even to maintain its current standard of living. the West should sell its manufactures in the markets of the world. "Where will she find buyers," he asked, "outside her own confines if incomes remain at their existing low level in the East and in Africa and sink lower still, as they must if price stabilisation is not accomplished forthwith?" Mr. Senanayake further referred to the extra-economic repercussions the failure to establish commodity price stabilisation would have. He certainly voiced the feelings of the underdeveloped areas when he said:

"The recent liberation of peoples in the underdeveloped countries from colonial regimes has brought with it a realisation of the right of every individual to a decent standard of living if he is prepared to work honestly for it. We deny that right at our peril. The orderly democratic governments which we now enjoy are likely, in an unreasoning fury, bred of frustration, to be a main object of attack. The prevailing discontents already provide ammunition for subversive groups ever on the alert to seize an opportunity for revolt. I appeal to this Assembly, therefore, to approach the problem of commodity price stabilisation, which is on the agenda of the current Session, in all seriousness and with a firm resolve to secure agreement. That resolve must be proof against deflection by too minute a concern with immediate or petty gains, and fortified by the conviction that through such agreement alone can our common aims be realised peacefully and conformably to human dignity."

New Brazilian Tariff

The Brazilian Finance Minister, Mr. Alkimin. dwelt on the question of his country's Customs Tariff Reform in his address to the Plenary Meeting. He emphasised that his country, despite the urgent requirements of the present economic situation, had no intention of adopting measures which, in the long run, would contribute to a reduction of its foreign trade. The present financial situation, however. compelled the Government to adopt anti-inflationary measures which had already produced salutary results. Four main laws under consideration for this purpose covered, according to the Minister, Customs Tariff, Consumption Tax, Income-tax and Stamp Tax.

Referring to the first of them, namely. Customs Tariffs. for the adoption of which the approval of the G.A.T.T. is required, the speaker said:

"Although the aims of this reform are primarily of an economic nature, it is essential to point out that it is its fiscal effects which require its immediate adoption. The increase in revenue which will result will be one of the most important factors from which the Government will benefit in its campaign against budgetary deficits. And, in reality, there is no alternative to this measure. Inflationary pressure is so great, and the need for prompt and decisive action to re-establish our financial position so urgent, that the question of our commitments towards G.A.T.T. must be considered from a realistic standpoint."

He assured the Conference, however, that the proposed tariff reforms would introduce no new customs element in the composition or the cost of their import trade. "In practice," he said, "we are simply transferring to fiscal revenue the part of the receipts which, under the present auction system, constitute a burden on imports."

Fiscal Aspects

The technical, fiscal and economic aspects of the new tariff, as well as the probable consequences of its application, had been dealt with by the leader of the Brazilian delegation in a statement. Referring to the need for the proposed reform, he said that the existing tariff could not protect the legitimate interests of national production which was developing rapidly. Nor could it bring the revenue needed by the Government in ever-increasing measure to meet the budgetary expenditure. The nomenclature was, again, obsolete and confused and did not provide for many new goods. But what was still worse, according to the speaker, was the present system of import duties and the rate of those duties. For whereas in 1934 the customs revenue constituted 33 per cent. of the total revenue budget. it had taken to less than 3 per cent. in 1955.

Furthermore, according to the Minister, the present levy, based upon specific duties at a time when Brazil was wrestling with inflation, gave no protection to the country. Thus, according to the speaker, the Brazilian Government was convinced that the adoption of new import duties based on *ad valorem* levy corresponded to the immediate and the long-term interests of the country and was also fully justified by the circumstances. He was also convinced, he said, that the interests of the contracting parties would not be affected by the implementation of the new tariff. He, however, stressed that any Government had the right to suspend the application of the concessions granted to Brazil, and that it was ready to negotiate with any party which might possibly feel that there was damage to its interests.

NEW CEMENT KILN

What may be called Asia's biggest cement plant with a daily capacity of 800 tons was set in motion by the Chief Minister of Bihar in the Rohtas Industries in Dalmianagar on 5th November. The new kiln is the third to be started in Dalmianagar and brings the daily output of Rohtas Industries to the level of 2,000 tons per day.

The Rs. 2-crore giant kiln, very appropriately named Asoka Cement Ltd., is 330 feet long. An interesting feature of the plant is that it is said to be the most modern kiln, fitted with a rotary concentrator, and equipment to ensure rapid cooling of the finished product.

Speaking on the occasion of inaugurating the plant, the Chief Minister of Bihar, Dr. Srikrishna Sinha, expressed the hope that the new plant would go a long way towards meeting the cement needs of the country, in general, and Bihar, in particular.

TATA CHEMICAL JOINS DIVIDEND LIST

EARNINGS FOR 1955-56 SHOW SUBSTANTIAL RISE

SEVENTEEN years after its inception, the Tata Chemicals Ltd. proposes to pay a modest maiden dividend of As. 12 per ordinary share of Rs. 10 each or 7½ per cent. per annum without deduction of income-tax. This instance is sufficient to show the extent of sacrifice, patience and risk an investor in equities has to undergo if the country is to have heavy basic industries. It is necessary to emphasise this point, because, in these days of tall talk of a socialist pattern, many forget the importance of incentive to save and invest. Unless an investor is convinced that he will be adequately rewarded in future years, when the enterprise in which he participates begins to make satisfactory profit, for going without a return on his capital for years together during the period of exploration, construction and initial production, it will be extremely difficult to attract capital, especially equity capital, for risk-bearing enterprises to which category almost all the basic industries belong. Unless this fact is recognised by both politicians and labour leaders and is borne in mind by them while drawing up their economic policies and programmes for development, it is idle to expect the private sector to make any solid contribution to the rapid industrialisation of the country; indeed, it will be farcical to claim, as most of them do now, that there is a vast field waiting to be developed by the private sector.

Even the payment of the small dividend of 7½ per cent. after years of struggle and hard work has been possible only by denying the transfer necessary for wiping out the arrears of depreciation. The Company's profit for 1955-56 has been just sufficient to meet the normal depreciation and to contribute a small sum for reducing the arrears of depreciation in the past. Apparently, the Directors must have come to the conclusion that they could not afford to test the patience of ordinary shareholders any longer.

Substantial Profit

Although the increase in the Company's earnings for the year ended 30th June 1956 is not as large as was anticipated by the speculators on the Stock Exchange, it is substantial enough. At Rs. 43.85 lakhs, the gross profit for 1955-56 is Rs. 10.68 lakhs higher than that for the preceding year. The latter year, however, had witnessed a slight setback as compared with 1953-54 for which year the gross profit was Rs. 38.48 lakhs. The Directors have stepped up the provision for depreciation from Rs. 18 lakhs to Rs. 25 lakhs. Half of this amount represents current depreciation, while the other half is towards accumulated arrears of depreciation. The net profit works out to Rs. 16.84 lakhs, or roughly 25 per cent. more than Rs. 13.55 lakhs earned in 1954-55. A small beginning has been made in the creation of reserves by crediting Rs. 3 lakhs to development reserve and Rs. 60,000 to staff gratuities, which is more a contingent liability than a reserve for the benefit of shareholders. The Directors have not given any idea of the accumulated arrears of depreciation yet to be met from the profits of future years. Since no provision has been made for deferred tax reserve nor in full for the development rebate, it cannot be strictly claimed that even the maiden ordinary dividend has been fully earned.

The following table brings out the relevant features of the Company's working during the four years ended 30th June 1956:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale of products	238.16	218.83	200.14	161.59

* For 4½ years. † For 4 years. § For 2 years.

During the year under review, both production and sales showed a substantial increase over previous years, sales having improved from Rs. 218.83 lakhs to Rs. 238.16 lakhs. The improved results were mainly due to higher production and lower costs, coupled with higher realisations in respect of some products. The year's target of production of 50,000 tons of soda ash was exceeded and the average daily production was 137 tons, as against 123 in the previous year. The original rated capacity of the plant has now been attained. The next expansion of this capacity to 200 tons per day, sanctioned by the Government last year, is now well under way and is expected to be completed by the end of the current year. Soda ash accounted for 67.5 per cent. of the Company's total sales, and 62.4 per cent. of the total indigenous production. The production of sodium bicarbonate increased by about 15 per cent., as compared with last year, and the expansion licensed by Government of a 50 per cent. increase in rated capacity, has recently been completed. The total output of caustic soda was only slightly higher, but the share in this of the electrolytic process registered an increase of about 110 per cent. over last year's figure.

Production of benzene hexachloride was satisfactory throughout the year, but, owing to excessive imports, it was found necessary to shut down the plant temporarily from 25th June 1956. It will take several months yet to liquidate the accumulated stocks, and the plant is not expected to resume operation till some time next year. In the field of bromides, the total production of potassium, sodium and ammonium increased by over 40 per cent. as compared with last year. The scheme to double the output of the bromine and bromides plants is progressing satisfactorily and it is hoped to complete it in the course of the year. Production of other chemicals was maintained according to the demand for these products. There was an increase in the production of magnesium chloride during the year as a result of a rise in demand. Production of solar salt was higher by 25 per cent. over last year's figure, while the output of vacuum salt was further stepped up by 40 per cent. The total salt production, both solar and vacuum, came to 130,000 tons, which is the highest annual production achieved so far. The work of expansion at the Company's Aramda salt works has made satisfactory progress. The area of these works is about 574 acres and will be used as a condensing area to draw brine of 22° Be by pipeline to Mithapur during the ensuing season.

Having regard to the growing demand for soda ash by consumer industries under the Second Five-year Plan, the Directors have approved in principle of a further expansion of the installed capacity in respect of soda ash to 400 tons per day, of which a proportion would be of dense variety suitable for the glass and bichromate industries. An application was made to Government and a licence has recently been obtained for this programme. With the proposed increase in soda ash production, the output of sodium bicarbonate will also be increased from 15 tons to 30 tons per day, and the Company has obtained a licence for this expansion too. Both the expansion schemes are expected to be completed within three years, at an estimated cost of about Rs. 2 crores, and will result in a progressive increase in annual production. Proposals for providing the funds required for this programme are said to be under consideration.

The Company's balance-sheet as at 30th June 1956 reflects the picture of a heavy industrial concern still struggling to establish itself firmly from the financial point of view. It has hardly any reserves worth mentioning. Depreciation continues to be in arrears, the extent of which is not known. No provision exists for deferred taxation reserves. The only redeeming feature is the relatively low level of fixed interest-bearing secured loans. The Company's paid-up capital at Rs. 199.96 lakhs is shared by 59,970 five per cent. cumulative preference shares of Rs. 100 each and 1,399,599 ordinary shares of Rs. 10 each. It is supplemented by debentures of the value of Rs. 25 lakhs. As against this, the reserves and surplus aggregate only Rs. 13.57 lakhs. The gross block of the value of Rs. 355.77 lakhs stands at the depreciated value of Rs. 225.39 lakhs. Additions during the year were of the order of Rs. 40.62 lakhs. The current assets of Rs. 169.78 lakhs are more than the current liabilities of Rs. 156.64 lakhs by Rs. 13.14 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 19-15 *cum-div.* On an *ex-div.* basis, the yield works out to 3.9 per cent. per annum, free of tax. This low level of yield, despite the absence of reserves and arrears of depreciation, reflects the investors' optimism about the Company's future. They feel that the Company has turned the corner and expect that, in view of the large expansion programme on hand, it will fare well in the coming years and pay big dividends.

ORIENT PAPER MAINTAINS DIVIDEND

The popularity of the shares of the Orient Paper Mills, Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) in recent years is amply justified by the steady pace of progress maintained by the Company. In addition, the fact that it has secured the necessary licence to establish a paper mill in Vindhya Pradesh is a further step on its steady onward march. In order to finance the expansion, the Directors propose to raise the capital further by Rs. 50 lakhs by issue of 5½ per cent. tax-free redeemable cumulative preference shares.

The Company's results for the half-year ended 31st March 1956 are quite encouraging. The gross profit at Rs. 67.98 lakhs is a shade higher than that for the previous half-year and substantially more as compared with that for the corresponding half of the previous year. The provision for depreciation has been maintained at Rs. 6.00 lakhs. Managing Agents' commission takes Rs. 6.84 lakhs, as against Rs. 6.86 lakhs and Rs. 6.55 lakhs and taxation Rs. 23.00 lakhs, as against Rs. 20.00 lakhs and Rs. 26.00 lakhs in the previous two half-years, respectively. The net profit at Rs. 32.14 lakhs is Rs. 2.29 lakhs lower than the profit for the previous half-year at Rs. 34.43 lakhs but Rs. 6.45 lakhs higher than that for the half-year ended 31st March 1955. The allocation to the reserves is of the order of Rs. 20 lakhs, made up of Rs. 10 lakhs to dividend equalisation reserve and of a similar sum to development reserve. This falls short of the transfers to reserves six months ago by Rs. 2.37 lakhs but is greater by Rs. 3 lakhs as compared with those a year ago. The ordinary dividend is proposed to be maintained at As. 10 per share, or 12½ per cent. per annum. The following table shows at a glance the Company's progress during the past three half-years:

(In lakhs of rupees)

	For the half-year ended		
	31-3-1956	30-9-1955	31-3-1955
Sales	197.63	159.89	165.90
Closing stock	10.09	13.57	8.65
Other income	5.20	6.57	11.55
Expenses	131.38	104.10	117.57

Carry forward	2.12	2.29	2.06

* To repairs and renewals, Rs. 7.00 lakhs.
† To repairs and renewals.

The Directors state that the mills worked satisfactorily during the period except for about a week due to labour trouble. They add that, in view of a marked increase in the cost of production, particularly on account of the increased cost of chemicals and salaries and wages, the profit of the Company should be considered satisfactory. This claim is not unjustified, as will be seen from the table above which shows that, as against an increase of Rs. 37.74 lakhs in sale proceeds, expenses have advanced by as much as Rs. 27.28 lakhs.

Referring to the expansion and modernisation programme of the Company, the Directors say that the major part of the two paper machines, electrolytic bleaching plant and pulp bleaching plant, have been shipped and these are expected to gradually go into production from early 1957. The boiler which was under erection, as well as the two digesters, has been commissioned. The black liquor evaporation plant and the new turbine are under advanced stage of erection and are expected to be put into operation soon. Further, steps have also been taken to improve and modernise the board manufacturing plant.

The Directors further state that a licence has been obtained from the Government of India for establishing a paper mill in the State of Vindhya Pradesh. The capacity of this mill is 100 tons per day. Necessary leases of forests in Vindhya Pradesh have been secured and signed to ensure sustained supply of raw materials for the new project. The paper mill is proposed to be established near Amlai railway station on the Bilaspur-Katni line. The site has been inspected and approved by the Company's technical staff, duly taking into consideration the prerequisites for future expansion of the unit.

The Company's paid-up capital, as disclosed by its latest balance-sheet, stands at Rs. 276.82 lakhs divided into 1,468,250 ordinary shares of Rs. 10 each and 130,000 5½ per cent. cumulative preference shares in tax-free and taxable categories of Rs. 100 each. As against this, the reserves and surplus aggregate Rs. 219.55 lakhs. The Company's debenture capital of 5¼ per cent. mortgage debentures secured against a part of fixed assets stands at Rs. 100 lakhs. The gross block of the value of Rs. 458.62 lakhs has been written down to Rs. 350.88 lakhs. The investments together with interest accrued thereon stands at the impressive level of Rs. 152.43 lakhs. The current assets of Rs. 272.59 lakhs more than offset the current liabilities of Rs. 179.53 lakhs including the provision for taxation amounting to Rs. 93.71 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 36 *ex-div.* On this basis, the yield works out to 3.4 per cent. per annum.

KILLICKS MAINTAIN DIVIDEND

PROFIT TREND DOWNWARDS

A SLIGHT diminution in earnings is disclosed by the audited accounts of Killick Industries Ltd. (Managing Directors: Mr. E. D. Sheppard and Mr. K. G. Milne, Bombay) for the year ended 30th June 1956. This means that the reversal in 1954-55 of the upward trend in earnings witnessed in the four years ended 1953-54, continued during 1955-56 also. The gross profit, which had reached a high of Rs. 35.75 lakhs in 1953-54 and slid down to Rs. 27.84 lakhs in 1954-55, receded further to Rs. 26.27 lakhs during the year under review. Accordingly, the profit for the year is the lowest to be recorded in the past half decade.

In tune with the gross profit, the net profit, too, is lower by Rs. 3.75 lakhs at Rs. 10.98 lakhs. This is arrived at after making higher provisions for both depreciation and taxation, the former at Rs. 2.84 lakhs, as against Rs. 2.11 lakhs and the latter at Rs. 12.45 lakhs, as against Rs. 11.00 lakhs. A heartening feature so far as the shareholders are concerned is that, in spite of the fall in earnings, the distribution to them in the shape of dividend is maintained at 11 per cent., to which level it had been stepped up two years ago from 10 per cent. paid for 1952-53. There has, however, been no allocation to the reserves. Whereas, in the previous year, the various reserves like general, equalisation of dividends, employees' retirement, employees' welfare and development received a total contribution of Rs. 3.83 lakhs, nothing has been set aside this year. It is true that a sum of Rs. 73,460 has been credited to employees' retirement and employees' welfare accounts, but this amount has been charged direct to the profit and loss account, the corresponding debit during the previous year being about Rs. 66,500.

The following comparative table brings out the salient features of the Company's working for the past four years, enabling a study at a glance of its progress in recent years.

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Gross income	49.65	48.43	59.57	50.42
Stock-in-trade	2.45	3.86	5.35	4.85
Expenses	21.97	19.09	24.33	20.66
Gross profit	26.27	27.84	35.75	31.67
Depreciation	2.84	2.11	2.82	2.38
Taxation	12.45	11.00	15.00	13.00
Net profit	10.98	14.73	17.93	16.29
Preliminary expenses written off	..	0.02	0.01	0.50
To reserves	Nil	3.83	7.50	6.61
Dividend	11.00 (11%)	11.00 (11%)	10.45 (11%)	9.00 (10%)
Carry forward	0.04	0.06	0.18	0.21

A close scrutiny of the gross income for the year under review shows that the earnings by way of commission and office allowance from managed companies were lower at Rs. 17.58 lakhs, as against Rs. 18.95 lakhs, while trade investments (gross) yielded a little more, at Rs. 18.66 lakhs, as against Rs. 17.38 lakhs. There was a sharp fall in sale proceeds of ore from Kachidana Mine from Rs. 9.29 lakhs to Rs. 1.40 lakhs. But the major part of this decline was offset by a new source of revenue, namely, sale of John Baker and Sons' products which fetched Rs. 5.76 lakhs during the year under review.

The Company has been granted a licence by the Government for the manufacture of mild steel bolts and nuts, dog spikes and square head coach screws. A few other projects also are under its investigation. The production of engineers' steel files commenced in July 1955. Permission to increase plant capacity has recently been granted by the Government. The sale of the Kachidana property was completed during the year. It had been indicated in the previous year's report that the Government of Madhya Pradesh proposed to work the Korba Coalfield as a State project and that the situation awaited further clarification. The Directors state in their latest report that there is no change in the position reported last year.

Against reserves and surplus aggregating Rs. 35.13 lakhs, the balance-sheet as at 30th June 1956 shows the Company's paid-up capital at Rs. 100 lakhs. There has been an addition of Rs. 5.85 lakhs to the gross block during the year, bringing the total value at the end of the year to Rs. 35.48 lakhs. Of this addition to the fixed assets, the light industries development project alone accounts for Rs. 4.54 lakhs. The gross block has been written down to a book value of Rs. 27.43 lakhs. Investments at cost amount to Rs. 144.36 lakhs, of which shares listed on the Stock Exchanges of a value of Rs. 136.71 lakhs have a market value of Rs. 150.08 lakhs, showing an appreciation of Rs. 13.37 lakhs on investments. Current assets other than investments aggregate Rs. 15.83 lakhs, while the current liabilities amount to Rs. 52.50 lakhs inclusive of the provision for taxation at Rs. 5.73 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 173 *cum-final* dividend of Rs. 7 per share. On an *ex-div.* basis, the shares provide a handsome yield of 6.6 per cent. per annum free of tax.

Points From The Chair

Outlook for Automobiles

"WITH the Government attitude as at present, it seems they are still thinking of reducing the dealers' margin which, in turn, will reduce the dealers' profit. Government have already effected a cut in the margin of profit on the Government Rate Contract Price effective from 1st September this year. This will affect the profits on Government and quasi-Government sales during the current financial year. However, there is no need to be very apprehensive, as we shall be compensated for the decrease in the margin of profit by much greater sales than we anticipate due to the good demand throughout the country as a result of the Second Five-year Plan. During the Second Five-year Plan, both manufacturers and Government expect the demand for vehicles to increase at least two times than what it is today all over the country, specially with the railways not being able to meet the demand thrown on it by Government and other industries. We naturally will also get a fair share of this increase in the truck business and that is why I look forward to the future with some optimism."

LALCHAND HIRACHAND,
Bombay Cycle and Motor Agency, Ltd.

Britain's Economy

"We are now in a totally different position than we were before the Second World War. The economy of a debtor nation, relying for survival upon exports and investing heavily in capital goods, has an inherently inflationary bias, even without the many other factors at present working in the same direction. In our changed situation since the war, it would be much easier for us to deal effectively with a threatened recession than it is to curb inflation, always provided that recession is not brought about by our losing our competitive powers in world markets. There lies the real danger—that we shall price ourselves out of these markets unless inflation is stopped. The issue at stake is so vital that I distrust half-measures. The soundness of our currency and the maintenance and expansion of our export trade should be our primary concern. If, as I believe, the fundamental threats to these include Government expenditure running at a level the nation cannot afford and excessive taxation acting as a brake upon enterprise, ways and means should and could be found to put first things first and to correct the position."

LORD AIRLIE,
British Linen Bank

Problem of Competition in General Insurance

"Although the problems of general insurance are no less embarrassing, they are akin to those in the sister industry. The main problem is the internecine competition. Owing to tariff rates there is perhaps some way out in fire and miscellaneous departments, but there appears to be no remedy against the cut-throat competition and rate-cutting in marine insurance. It appears that this section has become a definite drain to the industry. Whereas other measures will no doubt be necessary, one wonders if the restrictions on commission rates may not be abolished. If it were done, perhaps, the only problem left to be tackled will be of cut-throat competition. I should, however, make it clear that I do not suggest that the overall limit on expenses should also be removed. We are told that the Government were contemplating some measures to curb the evils. Lest we should repeat the mistake, I would wish that the Government take the entire industry in confidence and seek their advice on the problems confronting them."

B. L. JALAN,
General Assurance Society Ltd.

Rising Demand for Fertilisers

"In the chemical industry, and in the fertiliser industry in particular, expansion in research must be matched by a strong development organisation, and we have, therefore, decided on a major programme of expansion of our development facilities at Bramford, near Ipswich, the first stage of which is already operational. In the countries of the world which enjoy an advanced agriculture, there is an increasing demand that fertilisers should give the farmer what he needs in the most reliable, convenient and economic form. New processes are now being developed both in Europe and America, and there is a need for critical assessment of the relative advantages and disadvantages of these new formulations, both solid and liquid, which are being put forward as possibilities for the future. For this work, so vital for the future soundness of the Company's products, we now have the necessary resources. It can be assumed that the Company's fertilisers are backed by fully informed experiment and trial, directed by impartial scientific minds of mature experience."

F. G. C. FISONS,
Fisons Ltd.

COMPANY MEETINGS AND DIVIDENDS

TEEN ALI TEA CO., LTD. Annual General Meeting, Calcutta, 23rd November 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 17th to 23rd November 1956, both days inclusive.

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 27th November 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 7th to 27th November 1956, both days inclusive.

KILLICK INDUSTRIES LTD. Annual General Meeting, Bombay, 27th November 1956. Dividend: Rs. 7 per share (final). Transfer books remain closed from 9th to 27th November 1956, both days inclusive.

JARDINE HENDERSON LTD. Annual General Meeting, Calcutta, 29th November 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 14th to 29th November 1956, both days inclusive.

NATIONAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 30th November 1956. Dividend: As. 12 4/5 per share. Transfer books remain closed from 14th to 30th November 1956, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 30th November 1956. Transfer books will remain closed from 24th to 30th November 1956, both days inclusive.

INDIA JUTE CO., LTD. Annual General Meeting Calcutta, 30th November 1956. Dividend: Rs. 4-11 per ordinary share. Transfer books remain closed from 16th to 30th November 1956, both days inclusive.

MEGNA MILLS CO., LTD. Annual General Meeting, Calcutta, 30th November 1956. Dividend: Rs. 3-12 per ordinary share. Transfer books remain closed from 16th to 30th November 1956, both days inclusive.

INDIAN CARDBOARD INDUSTRIES LTD. Annual General Meeting, Calcutta, 30th November 1956. Transfer books will remain closed from 22nd to 30th November 1956, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 30th November 1956. Dividend: Re. 1 per share, payable on 17th December 1956. Transfer books will remain closed from 20th to 30th November 1956, both days inclusive.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 30th November 1956. Dividend: As. 12 per ordinary share, (maiden), payable on and after 3rd December 1956. Transfer books remain closed from 29th October to 26th November 1956, both days inclusive.

HOARE, MILLER AND CO., LTD. Annual General Meeting, Calcutta, 5th December 1956. Transfer books will remain closed from 23rd November to 5th December 1956, both days inclusive.

BURN AND CO., LTD. Annual General Meeting, Calcutta, 7th December 1956. Transfer books will remain closed from 28th November to 7th December 1956, both days inclusive.

BHAGALPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 7th December 1956. Dividend: As. 8 per share. Transfer books will remain closed from 30th November to 27th December 1956, both days inclusive.

BHARAT COLLIERIES LTD. Annual General Meeting, Dalmianagar, 8th December 1956. Dividend: As. 10 per share. Transfer books will remain closed from 27th November to 8th December 1956, both days inclusive.

INDIA STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 12th December 1956. Transfer books will remain closed from 26th November to 12th December 1956, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Dividend of As. 14 plus bonus of As. 4 per share on 'A' and 'B' ordinary shares for the half-year ended 31st March 1956.

INDIA UNITED MILLS LTD. Interim dividend of As. 10 per ordinary share and one anna per deferred share, for the year 1956, payable on and after 14th January 1957. Transfer books will remain closed from 3rd to 22nd December 1956, both days inclusive.

SHEVEROY ESTATES LTD. Dividend of 10 per cent. on ordinary shares, for the year ended 30th June 1956. Transfer books will remain closed from 23rd to 29th November 1956, both days inclusive.

SOOM TEA CO., LTD. Interim dividend of Re. 1 per share, for the year ended 31st December 1956. Transfer books will remain closed from 19th to 24th November 1956, both days inclusive.

COMPANY REGISTRATIONS

INDIA REINSURANCE CORPORATION LTD. (First Director: Mr. A. D. Shroff.) Business: To transact reinsurance business of all kinds. Authorised capital: Rs. 10,00,00,000. Public company. Address: Registered office of the company will be situated in the State of Bombay.

AHMEDABAD ADVANCE EARNS BUMPER PROFIT

INDIA AND MEGNA JUTES RAISE DIVIDENDS

Ahmedabad Advance Mills Ltd.

THE directors of the above Company (Managing Agents: Tata Industries Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit for the year, after providing for taxation, managing agents' remuneration and depreciation, amounted to Rs. 13,11,721 (Rs. 2,94,748) to which is added the balance brought forward from the previous year's accounts of Rs. 5,408 (Rs. 5,660) making a total of Rs. 13,17,129 (Rs. 3,00,408). From this sum the directors have placed to reserve fund Rs. 8,13,040 (Rs. 2,65,000 to dividend equalisation fund) and to provision for gratuities Rs. 20,000 (Rs. 30,000) leaving a balance of Rs. 4,84,089 (Rs. 5,408). The directors recommend the following dividends for the year ended 30th June 1956:—

On preference shares at Rs. 5 (Rs. 5) per share, free of income-tax absorbing Rs. 50,000 (Rs. 50,000 out of dividend equalisation fund) on 33,000 ordinary shares at Rs. 12 (Rs. 7) per share, without deduction of income-tax absorbing Rs. 3,96,000 (Rs. 2,31,000 out of dividend equalisation fund) and on 7,000 ordinary shares at Rs. 3 per share, without deduction of income-tax Rs. 21,000, leaving to be carried forward Rs. 17,089 (Rs. 5,408).

The directors hope that the results of the year's working, which show a marked improvement over that of the preceding year, will be considered satisfactory.

There was sustained demand for cloth throughout the year at remunerative prices. Unlike the previous two years, the year under review was comparatively free from any serious interruption of departmental working owing to the mills' reorganisation and renovation work. The better results shown are, however, largely due to the benefits derived from the large-scale renovation and modernisation of the mills so far carried out.

The profit shown in the accounts is arrived at after debiting a sum of Rs. 3,00,000 to provide for bonus for the years 1955 and 1956 in terms of the agreement between the Millowners' Association and the Textile Labour Association of Ahmedabad.

During the year, due to heavy unseasonal rains all over the country, the outturn of Indian cotton was substantially lower than estimates, whereas its consumption by mills registered a marked increase. This imparted sustained strength to the futures market in cotton with the February Jarilla contract rising to a record level of Rs. 747. In order to arrest a further rise in prices, Government called upon the East India Cotton Association to suspend futures trading and declared that they considered a limit of Rs. 700 to be reasonable for the contract in the then existing circumstances. A crisis ensued in the cotton market as it was difficult to maintain the price of the contract at this artificial level. Soon after Government called upon the Association to cancel the existing single hedge contract and replace it with two hedge contracts with the object of checking speculation by offering a broader basis so that most varieties of Indian cotton could be tendered. The crisis deepened with the resignation of senior office bearers of the Association to whom this was unacceptable. Subsequently, a compromise arrangement was reached and two hedge contracts, one for Fine MG Jarilla 25/32" and another for Fine MG Vijaya 27/32" were introduced. As a result of the crisis, the futures trading in Bombay was closed from 23rd December 1955 to 18th June 1956. Business in spot, however, continued briskly with many varieties touching the ceiling. The mills were fortunate in covering their requirements of cotton at fairly reasonable rates.

Further progress was made on the mills' reorganisation and renovation programme during the year. A sum of about Rs. 13 lakhs was spent on extension of buildings and installation of new machinery and equipment. The main items covered by this expenditure include a barber colman spooler and warper, a monforts' high production stentering and drying range, a kier, sprinklers, and humidification plants.

By special resolutions passed at the Extraordinary General Meeting of the Company held on the 23rd November 1951, the capital of the Company was increased from Rs. 30,00,000 to Rs. 50,00,000 by the creation of 20,000 new ordinary shares of Rs. 100 each to be offered at a premium of Rs. 50 per share. Out of the said 20,000 new shares offered, 13,000 shares were taken up, leaving a balance of 7,000 shares. During the year under report these 7,000 shares were offered to the holders of the existing ordinary shares at a premium of Rs. 50 per share, in the ratio of one new share to every five existing ordinary shares, in terms of the letter of offer dated the 29th February 1956 issued to the shareholders, and all the 7,000 shares were subscribed for and allotted. As the shareholders are aware, it was one of the conditions of the issue that the holders of these 7,000 shares would be entitled to a quarter of the dividend that may be declared for the financial year ending 30th June 1956. The directors have recommended the dividends for the year accordingly.

Under the budget proposals of the Central Government for 1956-57 the excise duty on cloth was increased from 1st March 1956 by 6 pies per square yard on all categories of cloth, except coarse *dhotis* and *saris*. From 1st September 1956 the duty was again increased very substantially, particularly on medium cloths in which category it was doubled. The total excise duty on cloth now works out to As. 4 on superfine, As. 3 on fine, As. 2 on medium and As. 1¼ on coarse cloth (other than *dhotis* and *saris* on which the duty continues at 6 pies), all on a square yard basis. The handloom cess of 3 pies per square yard on all categories of cloth remains unaltered. The export duty of 10 per cent. *ad valorem* on coarse varieties of cloth which was reduced to 6¼ per cent. on 1st March 1955, was altogether abolished from 15th May 1956.

The Company's buildings, machinery and stocks were insured, as at 30th June 1956, for Rs. 3,25,00,000. Profits and standing charges were insured for Rs. 36,00,000 per annum, the indemnity being payable for 24 months. The installed capacity of the mills is 49,144 spindles and 1,016 looms.

Rs.	1,90,76,368	Rs.	1,90,76,368

India Jute Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

The accounts show a profit on trading of Rs. 5,81,073 (Rs. 2,68,820) which is an increase of Rs. 4,44,290 over that for the previous half-year.

The net profit after charging depreciation, etc., is Rs. 5,74,290 (Rs. 79,842). Adding thereto items relating to previous half-years Rs. 2,416 (Rs. 9,287) and balance of profit and loss account brought forward from last half-year of Rs. 7,731 (Rs. 38,601) there is available for distribution a sum of Rs. 5,84,437 (Rs. 2,63,613 after adding Rs. 1,35,883 being dividend on the investment in the Megna Mills Co., Ltd.). It is recommended that this be disposed of as follows:—

By payment of a dividend of 7½ (5) per cent. per annum for the half-year on 69,600 ordinary shares Rs. 3,26,250 (Rs. 2,17,500) and by payment of a dividend of 6 (5) per cent. per annum on 30,000 deferred shares Rs. 900 (Rs. 750) leaving a balance to be carried forward of Rs. 2,57,287 (Rs. 45,363).

In their report the auditors have referred to the form of the accounts which relate to a period which ended prior to the commencement of the Companies Act, 1956, and therefore, they have been prepared in accordance with the provisions of the Indian Companies Act, 1913, which was in force at that time.

In accordance with the provisions of the working time agreement of the Indian Jute Mills Association, the Mills continued to work with 12½ per cent. looms sealed until the 8th January 1956. This figure was reduced to 10 per cent. from the 9th January 1956, and again to 5 per cent. with effect from the 20th February 1956.

Trading conditions throughout the half-year continued to be difficult. Prices for manufactured goods remained reasonably steady but out of proportion to the cost of the raw material up to the time when production was increased by the unsealing of looms. Thereafter prices of goods fell sharply and it was soon evident that demand was not going to keep pace with the increased output, and Mills' stocks increased each month. This position was aggravated by the steady rise in price of raw jute as the result of damage by floods, transport difficulties, and to the greater offtake due to increased production.

Further consignments of sliver spinning machinery have been received and are in course of installation.

The Articles of Association of the Company provide that once at least in every year the accounts of the Company shall be examined, and the correctness of the balance-sheet and profit and loss account ascertained by auditors and that the same be laid before general meetings of the Company which shall be held once at least in every calendar year. It has been the practice to close the accounts and to prepare a profit and loss account in respect of each half-yearly period ending on the 30th September and the 31st March in each year which, together with the balance-sheet at each date has been laid before the Company in general meeting. Under the provisions of the Companies Act, 1956, each such half-yearly period will be deemed to be a financial year and the usual half-yearly general meeting will be deemed to be an annual general meeting within the meaning of the Act. In consequence (interalia) the directors will be liable to retire, and the auditors shall be re-appointed etc., at each such half-yearly meeting. The directors, having carefully considered the matter and the difficulties attending the preparation of the accounts in conformity with the provisions of the Act, the additional work and expense involved in holding an annual general meeting twice yearly, have decided that the accounts will be closed on the 31st of March in each year to be laid before the Company at an annual general meeting to be held in accordance with the provisions of the Act.

Messrs. Mackinnon Mackenzie & Company Limited, resigned from the office of the managing agents of the Company, and the Company became director-controlled on and from 1st April 1956.

Megna Mills Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

The accounts show a profit on trading of Rs. 7,94,468 (Rs. 5,75,965) which is an increase of Rs. 6,69,486 over that for the previous half-year. The net profit after charging depreciation, etc., is Rs. 4,55,367 (Rs. 3,16,704) adding thereto items relating to previous half-years Rs. 5,156 (Rs. 11,003) and the balance of profit and loss account brought forward from last half-year of Rs. 10,614 (Rs. 8,502) there is available for distribution a sum of Rs. 4,71,137 (Rs. 3,36,209). It is recommended that this be disposed of as follows:—

By payment of a dividend of 7½ (5) per cent per annum for the half-year on 81,652 ordinary shares Rs. 3,06,195 (Rs. 2,04,130) leaving a balance to be carried forward of Rs. 1,64,942 (Rs. 1,32,079).

In accordance with the provisions of the working time agreement of the Indian Jute Mills Association, your Mills continued to work with 12½ per cent. looms sealed until the 8th January 1956. This figure was reduced to 10 per cent. from the 9th January 1956, and again to 5 per cent. with effect from the 20th February 1956.

Messrs. Mackinnon Mackenzie and Company, Limited, resigned from the office of the managing agents of the Company, and the Company became director-controlled on and from 1st April 1956.

National Tobacco Co. of India Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The net profit (after provision of taxation) is Rs. 12,50,822 (Rs. 12,06,160 before providing for taxation) to which is added the balance brought forward from last year of Rs. 9,03,430 (Rs. 10,62,030) making an available balance of Rs. 21,54,252 (Rs. 22,68,190). From this amount the directors have proposed to transfer Rs. 4,00,000 (Rs. 2,00,000) to reserve for capital expenditure. The directors also recommend a dividend of 8 per cent. on ordinary shares absorbing Rs. 6,39,760 (Rs. 3,99,850), dividend on 5 per cent. tax-free first preference shares absorbing Rs. 1,25,000 (Rs. 1,25,000) and dividend on 4½ per cent. tax-free second preference shares absorbing Rs. 89,910 (Rs. 89,910) leaving a balance to be carried forward of Rs. 8,99,582 (Rs. 9,03,430 after providing Rs. 50,000 for reserve for bad debts and Rs. 5,00,000 for reserve for taxation).

Trading results show an improvement over the preceding year. Whilst both sales proceeds and expenditure have not shown any marked changes the Company has been able to increase its income by the sales of more profitable lines. Additionally unmanufactured tobacco sales have contributed to this improvement. Liquid assets have been maintained at a higher level than current liabilities. Overdrafts with banks and short-term loans have been reduced with consequent savings in interest.

Cigarettes: The quality standards of the Company's products are of the highest order and give to the smoker a range of brands each of which gives him the greatest value for his money. The Company has at its disposal—relative to output—greater air-conditioned storage capacity for controlled maturing of its tobaccos, and all manufacturing processes are conducted under controlled conditions. These facilities combined with skilled personnel and modern machinery ensure that the products are of the highest quality. In such a specialised industry improvements in technique and equipment are constantly taking place. The Company's constant endeavours to improve efficiency and quality, entail the introduction of modern equipment in the Cigarette factory, laboratory and printing press, and the directors consider its essential to keep the Company in the forefront in this respect. They have consequently recommended that a sum of rupees four lakhs be placed to capital reserve to finance the improvement programme.

The matter of tobacco and cigarette taxation is one with which the Company in common with all manufacturers is vitally concerned. Current consumption of cigarettes in India is showing an upward tendency. This has helped in some measure to absorb the yearly excesses of India's tobacco crop, thereby giving the tobacco growing industry greater stability. The directors hope Government will take this and other factors into account in planning their future policy in regard to cigarette taxation, particularly in those price categories which cater to the mass of the people.

Unmanufactured tobacco: The year under review saw a clearance of all surplus stocks of unmanufactured tobacco. The bulk of the sales were of low and medium grades on which profit margins are extremely small.

Sales resistance is now becoming more pronounced towards higher grades of Indian tobaccos which are traditionally exported to the United Kingdom. This is due to increased availability of 'preferred' tobaccos, primarily from the U.S.A. and Rhodesia. This prime market for Indian tobacco asks for a cheaper tobacco of better quality. Since exports to the U.K. are large in terms of poundage and high grades are taken, the value of exports to this market are by far the highest. If India is to retain its footing in this market, a reduction in costs by improved methods of production, both in yields and quality, is essential.

In South India, headquarters of the Company's Leaf Division, it has been necessary to embark on a programme of additions and extension to labour amenities as greater emphasis is being laid on improved working conditions. The provision for capital expenditure referred to above will also be utilised in this connection.

Cowcoody Estates, Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. Peirce, Leslie and Co., Ltd., Mangalore) submit the audited accounts of the Company for the year ended 30th June 1956.

The acreage of the properties remains unchanged as follows:—Coffee in bearing 405.38 acres, cardamoms 108.51 acres, oranges 43.27 acres, oranges and robusta 48.30 acres, wet lands 50.16 acres and reserve, waste, abandoned, etc., 223.63 acres.

The Company which was originally incorporated as a private one was converted into public company on 1st December 1955.

The original authorised capital, comprising of 50,000 ordinary shares of Rs. 10 each, was subdivided into 2,50,000 ordinary shares of Rs. 2 each, during the year under report.

After providing for depreciation, taxation and all other charges the accounts show a profit of Rs. 2,60,523 (Rs. 1,24,451) to which is added the balance brought forward from last year of Rs. 81,173 making a total of Rs. 3,41,696. After deducting the interim dividend of 25 per cent. paid on 19th April 1956 absorbing Rs. 63,839 and transferring to general reserve Rs. 1,39,280 there remained a balance of Rs. 1,38,578. The directors recommend payment of a final dividend of 25 (30) per cent. absorbing Rs. 63,837 leaving a balance to be carried forward of Rs. 74,741.

After transferring Rs. 1,39,280 from the profit and loss account the general reserve now stands at Rs. 2,50,000. The position of investments as at 30th June 1956 remained at Rs. 3,31,975, under Government Securities Rs. 1,55,600 and Bank fixed deposits Rs. 1,76,375.

Expenditure on machinery during the year amounted to Rs. 6,844 and represents cost of new spraying equipment purchased during the year.

Coffee: The crop of cwts. 2,381 (1,014) harvested at a cost of Rs. 76.45 per cwt. was delivered to the Coffee Board and has been valued at Rs. 2-6 per point or Rs. 182.11 per cwt. The 1956-57 crop is estimated at 103 tons and the cost of production at Rs. 87.45 per cwt.

Cardamoms: A crop of 535¾ (549) lbs. was harvested and sold at an average price of Rs. 7.21 a lb. The 1956-57 crop is estimated at 840 lbs.

Cuttack Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The revenue account shows a profit on the year's working of Rs. 1,57,512 (Rs. 1,36,059). After adding the profits on sale of investments Rs. 137 (nil) there is a total of Rs. 1,57,649 (Rs. 1,36,059). From this is to be deducted arrears of depreciation Rs. 3,738 (Rs. 4,506), gratuity to retired employees Rs. 1,102 (Rs. 1,968), cost of change-over from D.C. to A.C.—written off Rs. 1,464 (Rs. 1,324), bonus to staff Rs. 4,788 (Rs. 3,425), loss on sale of loose tools Rs. 1,266 (nil) and appropriations—under the Electricity (Supply) Act, 1948 Rs. 45,270 (Rs. 11,387) there is a net profit for the year of Rs. 1,00,021 (Rs. 83,149 after placing Rs. 30,300 for deferred taxation). After adding thereto Rs. 26,455 (Rs. 14,353), the adjusted credit balance brought forward from the previous year and Rs. 44 (Rs. 1,019 being refund of excess profits tax and interest) on account of sundry adjustments there is a credit balance of Rs. 1,26,520 (Rs. 96,256) on profit and loss account out of which the directors have transferred Rs. 50,000 (Rs. 50,000) to general reserve. The directors recommend that the balance, namely, Rs. 76,520 (Rs. 46,256) should be disposed of as follows:—

To pay a dividend of 6½ (3) per cent. for the year 1955 without any deduction for income-tax payable by the Company Rs. 41,252 (Rs. 19,801) and carry forward Rs. 35,268 (Rs. 26,455). These proposals have already been given effect to in the accounts now submitted to the shareholders.

A continuous supply of electricity was maintained throughout the year and as compared with the previous year an increase of 13 per cent. in the number of units sold has been recorded. During the year, the units of electricity sold amounted to 37,44,690 as compared with 33,25,140 in 1954 and 32,27,035 in 1953. The number of consumers and connected load at the close of the year were 3,558 (3,328) and 4,248 kw. (3,946 kw.) respectively. The number of consumers taking supply from the Company continues to increase at a satisfactory rate and prospects are considered good.

Airways (India) Ltd.

The directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

It will be observed that certain non-scheduled operations were carried out and a flight revenue of Rs. 1,71,722 (nil) was earned during the year. Owing to certain restrictions on the non-schedule permit of the Company, fuller use of the aircraft could not be made during the year. These restrictions have since been removed. The Company has now two dakota and one catalina amphibian aircraft. Both the dakota aircraft are now serviceable and are engaged in non-scheduled operation. The catalina aircraft is undergoing overhaul and is expected to be ready for operation soon. Owing to the delay in receiving essential spare parts and components for the catalina aircraft from abroad and the acute shortage of trained flying crew, the Andaman Service could not be commenced during the year.

Mysore Tobacco Co., Ltd.

The directors of the above Company (Chairman: Mr. M. H. Parthasarathy, Bangalore) submitted the audited accounts of the company for the year ended 31st March 1956.

It will be noticed, from the accounts, that the sales recorded a marked improvement during the year reaching the highest figure ever since the inception of the Company. The directors are glad to report that the seasonal conditions during the year were favourable and it was possible to improve the yield of cured leaf per acre by adopting improved methods of cultivation and by the application of higher dose of Chemical manures. The financial result of working, for the year ended 31st March 1956 has resulted in a net profit of Rs. 2,63,598 (Rs. 85,318) after providing for depreciation and taxation. Including the carry forward of Rs. 20,916 (Rs. 35,598) of last year, the amount available for disposal is Rs. 2,84,513 (Rs. 1,20,916). The directors recommend the following appropriations be made out of the same:—

To declare a dividend of 15 (10) per cent. on 1,00,000 shares of Rs. 10 each absorbing Rs. 1,50,000 (Rs. 1,00,000), to transfer to reserve fund Rs. 40,000 (nil), to transfer to dividend equalisation fund Rs. 50,000 (nil) and to carry forward Rs. 44,513 (Rs. 20,916).

The area under tobacco directly under the Company's supervision was 3,140 acres as against 3,040 acres during the previous year. The quantity of cured leaf produced in the Company's own barns was 21,09,058 lbs. and that acquired from the private barn-holders amounted to 7,71,362 lbs. It is gratifying to report that more and more ryots are getting tobacco minded in the rural parts.

Bengal Chemical and Pharmaceutical Works Ltd.

The directors of the above Company (Manager and Secretary: Mr. Satya Prasanna Sen., Calcutta) submit the audited accounts of the Company for the 55th year ended 13th April 1956.

The directors state that the Companies Act, 1956, has brought into effect various changes in administration and accounts and they have prepared the latest balance-sheet and profit and loss account in accordance therewith.

Meeting depreciation, bad debts and all other charges, the profit and loss account this year shows a net profit of Rs. 6,00,993 (Rs. 10,68,235). Out of such net profit the directors have transferred Rs. 1,45,000 (Rs. 5,93,000) to the various reserve funds and accounts. The directors recommend payment of dividends at 7½ per cent. free of income-tax, on preference shares absorbing Rs. 67,500 (Rs. 67,500), 6 per cent free of income-tax, on ordinary shares Rs. 60,000 (Rs. 60,000), 6 per cent. free of income-tax, on medical ordinary shares Rs. 11,962 (Rs. 11,679), 6 per cent. free of income-tax, on 'A' ordinary shares Rs. 66,534 (Rs. 66,534), 6 per cent. free of income-tax, on 'B' ordinary shares Rs. 1,35,282 (Rs. 1,35,282) and at 4½ per cent. free of income-tax, on second preference shares Rs. 53,506 (Rs. 53,506). A sum of Rs. 60,000 (Rs. 60,000) has been set aside for work to be carried on by the Sir Prafulla Research Department of the Company. The distribution of the profit of this year leaves a balance of Rs 1,179 (Rs. 2,374) which together with the balance of Rs. 11,70,055 (Rs. 11,46,322) brought forward from the profit and loss account for the year ended 14th April 1955 amounting to Rs. 11,71,234 (Rs. 11,70,055) has been carried forward.

The work of installation of the new 25-ton sulphuric acid plant has been completed and it has come into operation. It is now in full working condition.

The Company has drawn Rs. 13 lakhs out of the money advanced by the Industrial Finance Corporation during the year making a total of Rs. 25 lakhs in all, out of Rs. 30 lakhs arranged for.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	66,52,725	Block ...	80,49,276
Debentures ...	15,00,000	Stock-in-trade	40,73,877
Reserves ...	45,49,426	Stores and spares ...	7,80,915
Provision for taxation ...	4,90,000	Tools ...	7,826
Liabilities ...	83,42,139	Work-in-progress ...	91,600
Profit and loss account ...	11,71,234	Debts, deposits and advances ...	71,87,297
		Investments	16,36,308
		Cash ...	8,78,425
Rs.	2,27,05,524	Rs.	2,27,05,524

N.B.—Figures within brackets relate to the corresponding period of the previous year.

*Reserves are shown after deducting the debit balance in the profit and loss account brought forward from last year, which amounted to Rs. 4,00,524 including Rs. 867 being adjustments. This year's profit of Rs. 2,073 is deducted from the above debit balance. Total reserves at the end of 1954 stood at Rs. 7,78,552 which includes a sum of Rs. 1,08,057 on account of shares forfeited.

NOTICE

It is hereby notified that LEVER BROTHERS (INDIA) PRIVATE LIMITED have converted themselves into a public limited company and that with effect from 1st November 1956, their name has been changed to HINDUSTAN LEVER LIMITED.

Notices

BURNAND COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Sixty-second Ordinary General Meeting) of the Company will be held on Friday the 7th December 1956 at 11 a.m., at the Registered Office, 12, Mission Row, Calcutta, to transact the following business:—

1. To receive and adopt the Audited Accounts for the year ended 30th April 1956 and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend. The Dividend if declared will be paid to the Shareholders on or after the 12th December 1956 whose names are on the Company's Register on the 7th December 1956 or to their mandatees.
3. To appoint Directors in place of those retiring. In this connection, notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Sections 261 and 281 of that Act to move the following resolution as a Special Resolution at the Meeting:—

   "That Mr. P. N. Banerjee who is an associate of the Managing Agents of the Company and has attained the age of 73 years be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and if thought fit to pass the following resolution, namely:

   "That the Books, Registers and other documents required to be maintained by the Company and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act, shall be available for inspection at the Registered Office of the Company by the persons entitled thereto to the extent and in the manner and on payment of the requisite fees, if any, specified in the aforesaid provisions, between the hours of 10 a.m. and 12 noon on each business day. Provided, however, that the register required to be maintained under Section 307 of the Act shall be open for inspection of the members or holders of debentures of the Company between the times above mentioned only during the period prescribed by sub-section 5 (*a*) of Section 307."
6. As special business to consider and if thought fit to pass with or without modification the following resolutions which will be proposed as special resolutions.

   (1) That the Memorandum of Association of the Company be altered by adding thereto after clause 3 (*u*) thereof the following two sub-clauses:

   "3(*uu*). To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance."

   "3 (*uuu*). To subscribe, contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or fund or for any exhibition."

   (2) That Article 151 (17) of the Company's Articles of Association be deleted and substituted by the two following sub-clauses:

   "(17*a*). To give pensions, gratuities, allowances, bonuses, profit-sharing bonuses or benefits or other charitable aids, payments or monies to or for the benefit of persons who are or have been employed by or who are serving or have served the Company or its predecessors in business or the wives, children, dependents or connections of such person or persons as may appear to the Directors just and proper whether any such person, his widow, children or dependents or connections have or have not a legal claim upon the Company."

   "(17*b*). Subject to the provisions of Section 293 (1) (*e*) of the Companies Act, 1956, to establish, maintain, support and contribute or subscribe to any national, charitable, benevolent, political, public, general or useful object or fund and any institution, society or club, which may be for the benefit of the Company or may be connected with any town or place where the Company carries on business."

The Ordinary Share Register of the Company will be closed from the 28th November 1956 to 7th December 1956, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

CALCUTTA, 12*th November* 1953.

AIR-INDIA INTERNATIONAL LIMITED

(In Voluntary Liquidation)

NOTICE

A GENERAL MEETING OF THIS COMPANY will be held in the Board Room, 4th Floor, Bombay House, Bruce Street, Fort, Bombay, on Friday, 21st December 1956, at 4-30 p.m. when in accordance with the provisions of Section 496 of the Companies Act, an account of the acts and dealings of the Liquidators and of the conduct of the winding-up for the year ended 30th September 1956 will be laid before the Meeting together with the prescribed form of statement with respect to the proceedings in and the position of the liquidation.

AIR-INDIA INTERNATIONAL LIMITED,
(In Voluntary Liquidation),
By Order of the Liquidators,
K. C. BAKHLE,
A Liquidator.

15*th November* 1956.

To all Shareholders of Air-India International Limited (In Voluntary Liquidation) and particularly to:—

Arokkiam Arulsamy Pillai, Ahmedkhan Hajee Goolabkhan, Adi Bejan Tata, Bail Laxminarayan Rao, Don Edwin Dewendra, Camilo De-Souza, Dharm Pall Bhalla, Fahimuddin Ahmed Noori, Mrs. Alice Fonseca, Galwadau Acharige Charles Hamy, Habib Haji Mohmmed Derdiwala, Harendra Chandra Lahiri, Rani Jagadamba Kumari Debi, Jehangir Bejan Tata, Mushtaq Ahmed Dodhy, Mudaliyar Samuel Kanapathi Pillai Appadurai, Frederick Vincent Mascarenhas, Miss Nina Jehangir Gorwala, Mrs. Naja Bejan Tata, Prabhudas Girdhardas Mehta, John Cecil Trevor Perera, Phiroj Behan Tata, Rehmankhan Peerkhan, Rameshchandra Ranchhodbhai Patel, Jose Estevam Silveira, Santdas Kushiram Kirpalani, Sam Bejan Tata, Sagoon Jayadeo Dhond, Mrs. Usha P. Godbole, Dr. Ujagar Singh, Venetexa Srinivasa Sinai Dempo, George Harvey Woodhouse.

DYER MEAKIN BREWERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Registers of the Company will be closed from about 9th December 1956. Shareholders are requested to send in their Transfer Deeds for registration, as no transfers received after that date will be registered until the books re-open after the Annual General Meeting expected to be held shortly thereafter.

K. G. KHANNA,
Secretary.

SOLAN BREWERY, 5*th November* 1956.

BHARAT COLLIERIES LIMITED

THE 12TH ANNUAL GENERAL MEETING OF the Shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Saturday the 8th December 1956, at 12 noon, to receive and adopt the Directors' Report and audited Accounts for the year ended 30th June 1956, to declare dividends at 5½ per cent. on Preference and 6¼ per cent. on Ordinary shares, to elect Directors, and to appoint Auditors.

Share Transfer Books of the Company will remain closed from 27th November 1956 to 8th December 1956, both days inclusive.

By Order of the Board of Directors,
SAHU JAIN LIMITED,
Managing Agents.

DALMIANAGAR, 29*th October* 1956.

N.B.—A member entitled to attend and vote, is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

THE PEERMADE TEA COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THIS Company will pay on the 6th December 1956, an interim dividend of 10 per cent. on the Ordinary Share Capital of the Company in respect of 1956 working.

The Transfer books of the Company will remain closed from the 25th November 1956 to 6th December 1956, both days inclusive.

ASPINWALL & CO. (TRAVANCORE) (PRIVATE) LTD.,
Secretaries.

PATHIRAPPALLY, 6*th November* 1956.

COTTON

(*Concluded from page* 938)

season, the fact that stocks on 1st August 1956 were only about half of what they were a year before, means that export availabilities from Egypt may decline slightly which casts doubt on whether actual exports will be at last season's level. A similar conclusion is reached with respect to trade prospects in Sudan. The decline in carryover stocks in the other African countries is of only minor importance and export availabilities will be primarily related to the current level of cotton production.

In Asia, a most important factor in recent years from the trade viewpoint has been the rapid increase in domestic consumption, particularly in Pakistan. This is likely to continue though possibly with some loss of momentum. With stocks at the lowest level for many years, an increase in production this season in Pakistan over and above what is presently anticipated would be necessary to bring export availabilities up to last season's total. In these circumstances, there may be some difficulty in maintaining cotton shipments this season. In Turkey, with substantial stocks carried forward into the new season, and in Syria, as a result of the expected increase in production, the volume of cotton available for export may be fully equal to last season. In South America, stocks could conceivably be further reduced, but here again export availabilities will be dependent on production this season.

In importing countries, the main influencing factors are the low level of stocks and the price situation. There is little doubt that the uncertainty over cotton prices and the conviction which has recently become a reality, that cotton prices would have to decline, has caused stocks in some countries to fall to below normal levels. The view is held in some quarters that, as soon as buyers are convinced that the bottom has been reached, they will react to rebuild stocks. However, as the table quoted above shows, stocks are not perilously low in Continental Western Europe, while, in the United Kingdom, where, in absolute terms, a real reduction in stock has occurred, stock policy may have been influenced as much by the return to private buying and declining consumption as by prices. In Japan, stocks by any measure are low and, if consumption increases, the inference is that stability in cotton prices would offer some inducement to replenish stocks. It is beyond dispute, however, that stability in cotton prices would do much to stimulate both imports and consumption during the present season.

MONEY RATES HARDEN

(From Our Own Correspondent)

BOMBAY, 14*th November*

Activity in the short-term money market continued to be restricted, due to acute shortage of funds. The efforts of bankers and the monetary authorities to find a suitable solution to ease the stringency have not yet borne fruit. Meanwhile, banks have been offering slightly higher rates to attract funds, but this step has not been very much helpful, because of the scarcity of floating funds. In the inter-bank section, day-to-day money fetched 3½ per cent., while three days' and seven days' money was reported done at 3¾ per cent. and 3¾ per cent., respectively. House money at call was placed at 3¼ to 3½ per cent. for large amounts. Short-term deposits fetched 3½ per cent. for one to three months and 3¾ per cent. for six months.

There has been a further expansion of Rs. 9.37 crores in notes in circulation during the week ended 9th November 1956. This is disclosed by the Reserve Bank's statement for the week under reference. As there has been only a negligible drop in notes held in the Banking Department, total notes issued have gone up by Rs. 9.20 crores, which is covered by a rise of Rs. 10 crores in rupee securities and a decline of Rs. 80 lakhs in rupee coin. In the Banking Department, deposits of the Central Government show a sharp rise of Rs. 10.85 crores and those of other Governments an even sharper fall of Rs. 27.12 crores. Deposits of banks have declined by Rs. 2.40 crores. A decline of Rs. 8.55 crores is noted in balances held abroad and of Rs. 4.64 crores in loans and advances other than to Governments. Advances to Scheduled banks against usance bills during the week amount to Rs. 14.15 crores, but repayments have been more at Rs. 15.16 crores, so that there has been a net reduction of Rs. 1.01 crores in outstanding advances against these bills. In sharp contrast to the increase of Rs. 28.25 crores in investments in the previous week, there has been a reduction of Rs. 9.10 crores during the week under review.

The Scheduled banks' statement for the week ended 2nd November 1956 shows a drop of Rs. 7.53 crores in demand deposits of banks and of Rs. 73 lakhs in time deposits. No notable variation is seen in inter-bank borrowings, while a marked rise of Rs 11.02 crores is disclosed by borrowings from the Reserve Bank, of which those against usance bills account for Rs. 3.13 crores. Borrowings from the State Bank of India also have gone up by Rs. 1.15 crores. On the assets side, advances are up by Rs. 1.02 crores, and bills purchased and discounted by Rs. 7.35 crores. Investments have declined further by Rs. 4.21 crores and cash balances by Rs. 1.37 crores.

The Gilt-edged market presented depressed conditions during the week under review too, with a further sagging in medium and long-term securities. The recession in prices was more marked in State loans. Buyers were scarce, while even small offerings brought about a fall in prices. 3 per cent. 1986 Conversion Loan fell by As. 7 to Rs 73-12 and 3 per cent. 1970-75 by as much as As. 12 to Rs. 88, even at which levels also, they were on offer. 3 per cent. 1966-68 was down by an anna to Rs. 92-6, 3 per cent. 1964 by As. 2 to Rs. 94-6 and 3 per cent. 1963-65 by an anna to Rs. 94-4. 3½ per cent 1974 had sellers at Rs. 98-8 and 3½ per cent. 1967 an anna lower at Rs. 98-7. 3½ per cent. 1965 was unchanged at Rs. 98-7, while 3¾ per cent. 1964 was marked down an anna to Rs. 98-7. In the State loans section, 4 per cent. securities suffered a marked recession. Thus, Bombay 1963 and 1964 dipped by As. 6 to Rs. 100-10 and 1967 and 1970 by As. 2 each to Rs. 100 and Rs. 99-10, respectively. West Bengal 1967 was As. 2 lower at Rs. 99-12. Madras 1968 was done As. 11 lower at Rs. 98. U.P. 1968 shed As. 8 to Rs. 98-2. Andhra 1967 moved down by As. 2 to Rs. 99 and 1968 by As. 8 to Rs. 98-1. M.P. 1963 lost As. 4 to Rs. 99-8, 1967 As. 10 to Rs. 98-6 and 1968 As. 10 to Rs. 98.

In the foreign exchange section, the rupee held its ground in terms of the U.S. dollar, following the steady trend displayed by sterling in the world markets. Banks' selling rate for ready dollars was unchanged at Rs. 481½ per $100 and the buying rate at Rs. 477¼. In terms of the Canadian dollars, however, there was a further weakness, the banks' selling rate rising from Rs. 497¾ to Rs. 499¼ per $100 and their buying rate from Rs. 492 to Rs 493¾ per $100. In New York, spot sterling was unchanged on balance at $2.78-3/16-2.78-5/16. Three months' forward, however, gained from $2.76-9/16-2.76-11/16 to $2.76-11/16-2.76-13/16, while transferable sterling reacted from 274.30-274.45 cents to 273.75-273.90 cents.

METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, 13*th November*

Prices of base metals added sizable gains during the week under review. Although the fighting in Egypt has come to an end, the Canal remains blocked, and it would not be before months that the ships sunk could be pulled out and the Canal made navigable again. Such of the imports of metals which usually come through the Canal will have to be routed via the Cape. The local increase in quotations, therefore, reflected the delays and the additional freight that would have to be incurred. Of course, it should be noted that not all the metals come via the Suez.

From Rs. 195, electrolytic copper improved to Rs. 210. As the price trend was uncertain, in view of the Anglo-French willingness to withdraw their forces from Egypt, consumers were content with purchasing their day-to-day requirements only. Stockists of finished products derived satisfaction at the higher level, and began demanding of manufacturers for earlier deliveries. From Rs. 522, tin shot up to Rs. 542. In Singapore, the rise was higher; as a result, the Indian quotation was far below the replacement cost. Electrolytic zinc improved from Rs. 65-12 to Rs. 69-8, and virgin lead from Rs. 79-8 to Rs. 83.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, 14*th November*

Trading in the bullion market was characterised by a two-sided movement in prices during the week under review also. In the earlier half, prices of both silver and gold receded, in continuation of the downward trend noted towards the close of the previous week. This reaction was more than made good subsequently, both the metals advancing sharply under a spell of speculative buying inspired by encouraging demand in the ready section.

The bearish trend in the first half of the week was attributed to absence of buying and realising pressure from bulls, thanks to the improvement in the Suez situation. Rumours to the effect that substantial sums have been paid by way of customs duty for import of Tibetan coins and the lower offtake in gold, as compared to the arrivals, also had unnerved the bulls.

From Monday onwards, however, the tables were turned and the bulls gained control. Reports that the import of Tibetan coins would soon decline and stop with the onset of winter, as also on account of the rise in the price of coins at Kalimpong, induced bulls to accumulate lines. Further, sentiment was strengthened by the belief that the demand for silver and gold would go up on account of higher agricultural prices and higher wages that are sought to be given to workers. The spurt in offtake in gold from 2,500 tolas to 6,000 tolas per day during the week further encouraged the bulls. This is reflected in the widening of the budla charges against bulls from As. 11 to As. 13 in silver and ¼ anna to As. 3 in gold.

Forward silver (19th November settlement) dipped from Rs. 173 to Rs. 171-13, but rallied to touch a high of Rs. 174-9 to-day. The closing was done at Rs. 174-7. The next settlement (trading in which commenced on the 5th inst.) moved down from Rs. 173-11 to Rs. 172-8, before gaining ground to Rs. 175-4 at the close.

Ready silver (.996 Mint) gave way from Rs. 172-12 to Rs. 171-12, but, in the subsequent recovery, came up to Rs. 174-8 at the close. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 20 bars.

Gold for forward delivery (17th November settlement) was marked down from Rs. 104-10 to Rs. 103-12, before recovering to Rs. 105-6 at the close today. The next settlement finished at Rs. 105-9, as against Rs. 104-10 last week, after going down to Rs. 103-12.

Ready gold gained from Rs. 104-11 to Rs. 105-9. The floating stocks of gold are estimated at 20,000 tolas. The daily average arrivals were 4,000 tolas, while the average offtake was also of the same order.

In New York, silver was unchanged at 91⅛c. In London, spot silver was maintained at 81½d., while forward declined from 80⅝d. to 80⅜d. Gold fell from 251s. 9½d. to 251s. 5½d.

The following comparative table shows the trend of market during the week under review:

	14-11-56	Highest	Lowest	7-11-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	105 9	105 10	103 11	104 11

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

INQUIRIES FOR KIPS SLACKEN

(From Our Own Correspondent)

MADRAS, 12*th November*

With the cessation of hostilities in West Asia, there has been a slackness in inquiries for kips from the U.K., and it is likely that prices may not improve further. Prices in the local market have, however, increased by As. 2 per pound, but this level is not obtainable in the U.K. market.

There is good call for tanned goat skins and prime class tannages have improved by 3d. per lb. Light weights which were comparatively neglected last week are also in demand. Inquiries for lining sheep from the Continent are fair-sized at last levels, but sellers' counter-offers at 6d. more have not so far been followed by importers. It is likely that the buyers may meet half-way.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 10*th November*

During the week under review, the hides and skins market ruled steady. Fresh arrivals from the *mofussil* areas were not as considerable as those in the previous week. Demand for high grade buff and goat was strong. The main purchasers were the local tanners, headed by Messrs. Cooper Allen. The Madras dealers were keen buyers of goat and lighter cow.

The latest available quotations are: Wet salted cow, 1st grade Rs. 380, 2nd grade Rs. 260 and 3rd grade Rs. 140 per score: wet salted buff, 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb 14 ozs. per rupee; goat, 1st grade Rs. 325 and 2nd grade Rs. 300 per 100 pieces; sheep, 1st grade Rs. 300 and 2nd grade Rs. 200 per 100 pieces.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, 14*th November*

Although the futures market opened the week on a cheerful note, in later tradings, it turned easy. The earlier firmness was due to reports of rain and damage to the crop in certain leading cotton tracts. The firmness of the spot section also served as an encouraging factor for the operators. But the news of heavy arrivals of new crop in up-country centres, and the fear that the export quota announcement will be delayed indefinitely undermined the strength of the market and the basis of both the contracts declined. However, values began to look up yesterday on rumours of a likely reduction in excise duty and the expectation that some helpful measure, in the shape of an export quota, will materialise at the next meeting of the Export Advisory Council to be held on Sunday next.

M.G. Jarilla (March 1957) opened the week lower at Rs. 661 and firmed up to Rs. 670-8 the same day, on reports of damage to the crop due to adverse weather. It dipped down the following day on selling pressure induced by heavy arrivals of new crop in upcountry centres and continued its downward drift thereafter, reaching a low of Rs. 643-8 on the 12th inst. Again the trend was reversed and the contract improved to Rs. 654-8 today before closing steady at Rs. 654. The net loss over the week was Rs. 8-8. M.G. Vijay (April 1957) also followed the pattern of trading in Jarilla. Opening at Rs. 760, the contract put on Rs. 7 on the same day before moving down in subsequent sessions, reaching Rs. 743 on the 12th inst. It improved to Rs. 757 yesterday and again declined to Rs. 750-8 today before closing higher at Rs. 754½. The net loss over the week was Rs. 5-8.

The following is the trend of prices of the two contracts for the week:

(In rupees per candy of 784 lbs.)

	14-11-56	High	Low	7-11-56
Jarilla (March) ...	654	668	643	662½
Vijay (April) ...	754½	767	743	760

The spot section put on a better appearance. Earlier, rates advanced on mill buying touched off by adverse weather reports, but demand slackened in subsequent sessions. Over the week, prices registered an improvement, although the basis of delivery contracts remained unchanged. In the export section some inquiry was noted for Bengals, Kaila and Warad. In the foreign section, there was some uncertainty following the reported announcement of the procurement authorisation by the U.S. Department of Agriculture in respect of 146,000 bales of upland cotton. It is believed in trade circles that, inasmuch as the authorisation has been made, authorities here would come out with details of the procedure in respect of imports of American cotton shortly. In view of the commencement of the auction for new crop A.R. Uganda on the 13th inst., importers are anxious to get a clarification from the authorities of the position in regard to the import of East African cotton. The latest available rates (for new crop cottons)—in rupees per candy of 734 lbs.—from Sewri are given below:

Bengal *Deshi* 730; Berar Jarilla 760; Khandesh 795; Vijay (old) 920; Oomra *Deshi* 760; Moglai 750. *Delivery Contracts*: Khandesh 197-3, December 125; Berar 115, Moglai 40 'on' Jarilla; 320 F December 89; 216 F 110; Vijay 13/16" February-March 100 'on' Vijay.

The Karachi cotton market depicted a firm trend during the week. The firmness was due to the improved Middle East situation and reports that a Chinese trade delegation would shortly arrive in Karachi which, it was thought, would conclude purchases of about 300,000 bales of Pakistan cotton. These factors served to impart strength to the market.

N.T.R.G. January which had closed at Rs. 78-3 improved to Rs. 79-1 while March position firmed up from Rs. 77-6 to Rs. 78-6, registering a gain, over the week, of Re. 1. The spot section also was cheerful. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi.

Sind *Deshi* 95; Punjab *Deshi* 81-8; Four F Punjab Roller 81-4; S.G. 82-4; L.S.S. Punjab Roller 81-4; S.G. 83-8; N.T. Roller 83-8; S.G. 87-8; 289 F Punjab Roller 84-8; S.G. 86-12.

The Alexandria market remained closed, due to the abnormal conditions in West Asia. A report received on the 5th inst. stated that the market would remain closed for two weeks. Shippers have cancelled all offers of Egyptian cotton.

Recent auctions of the Gezira Board attracted considerable attention and a further quantity of 15,000 bales are reported to have been sold. The unsold stocks are placed around 30,000 bales. The renewed interest in Sudan cotton is attributed to the withdrawal of offers of Egyptian cotton by shippers and the comparative price advantage of the former over the latter.

Values in the Liverpool market registered a perceptible improvement. Both ready and shipment cotton evoked active trade interest. A substantial amount of business was done in U.S. cotton covering strict Low Middling to Good Middling grade and in staple ranging from 15/16" to 1-3/32". Sudans, East Africans, Mexicans and Peruvians came in for limited trading. Fears of the possibility of the hold-up of shipping through the Suez Canal continuing indefinitely were mainly responsible for the inquiry for ready cotton. Absence of any official information regarding new export quota and increase in freight rates were responsible for the small interest in Indian cotton. The price advantage of American styles precluded any sizable purchase in Pakistan cotton, though *deshi* styles received some attention. Rates of Egyptian Karnak remained steady while Sudan advanced sharply.

The following are the latest available rates—in pence per lb.—from Liverpool, the figures in brackets being last week's closing quotations:

American one Inch Staple Contract: December-January 26.35 (25.85); March-April 25.80 (25.60); May-June 25.6 (25.40). *American Cotton Mixed Growth Contract*: December-January 26.75 (26.50); March-April 26.25 (26.00); May-June 25.9 (25.70). *Egyptian Karnak Cotton*: November-December, January-February, March-April 60 (60). *Sudan Cotton*: November-December 58.80 (55.80); January-February 58.60 (56.00).

Cotton values in the New York market firmed up during the week under review on renewed commission house buying and short covering prompted by smaller Government crop estimate. The Department of Agriculture estimated, on the 8th inst., this year's crop at 13,153,000 bales of 500 lbs. each. This mid-harvest season estimate is 115,000 bales less than the October forecast of 13,268,000 bales. It compares with 14,721,000 bales produced last season and the ten-year (1945-54) average of 13,098,000 bales. The yield is estimated at 403 lbs. per acre, as compared with 407 lbs. in the October estimate and 417 lbs. for the previous season. The production of American—Egyptian type cotton is estimated at 47,200 bales, as compared with 42,900 bales last season.

With the re-election of President Eisenhower, cotton circles are of opinion that the present U.S. cotton policy will continue without any drastic change. Flexible supports, the liquidation of U.S. surplus cotton as rapidly as possible and the soil bank programme are likely to remain as the major instruments of that policy. The chances of a return to a rigid price support at 90 per cent. of parity are now extremely remote. The Commodity Credit Corporation have sold a further quantity of 594,728 bales under the new export sales programme. The average price at average location for basis Middling 1" accepted by the C.C.C. was 26.20 cents per lb.; the minimum price for basis Middling 15/16" at average location continued unchanged at 25 cents per lb. The total sold under the new export sales programme thus far is 5,228,378 bales. The U.S. Department of Agriculture had previously confirmed that they do not intend to limit sales to the 5 million bales level. It is, therefore, generally anticipated that the 1955 loan stocks of about six million bales will be added to the sales catalogue as soon as possible after they are taken over by the C.C.C. at the end of this year. The net stock in the 1956 loan, on the 26th October was 1,613,004 bales. In the 1955 loan the stock on that date was 6,044,623 bales. The C.C.C.-owned stocks after their sale of the 3rd inst. aggregate to around 1,120,000 bales. Total exports for the season till the 1st inst. were reported to be 1,259,976 bales as against 388,710 bales during the same period last season.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	13-11-56	5-11-56	23-10-56
Spot	34.65	34.45	34.04
December	34 20	33.84	33.85
March	34.15	33.90	33.96
May	34.31	34.01	34.03

YARNS DECLINE

(From Our Own Correspondent)

BOMBAY, 14*th November*

The hectic buying at enhanced values noted in the yarn market last fortnight abated during the week under review. In fact, a distinctly easy trend was in evidence, thanks to possibilities of West Asian crisis being solved in the near future. Traders generally expected better arrivals of rayon imported yarn, following resumption of normal shipping via Suez, although a section feared that it might take several weeks before the Suez Canal could be reopened for traffic. It was, however, not so much this expectation as the tight money conditions that induced operators to reduce their commitments. The values of rayon yarns, as a consequence, suffered a sharp recession. In sympathy, staple fibre yarn also gave way. But cotton yarns ruled quietly steady. Offtake by consuming centres was somewhat encouraging. The market was closed today on account of *Kartik Ekadashi*.

Snia rayon yarn (120 dull cones) for December delivery which had jumped up by Rs. 29 to Rs. 764 over the fortnight ended the 7th inst. fell to Rs. 752, a drop of Rs. 12. Spot 120 Italy receded by As. 2-6 to Rs. 3-13. 150 Japan was quiet at Rs. 4-4 and 150 Italy at Rs. 3-11-6. 120 Japan, however, met with special support and picked up 21 pies to Rs. 4-0-3. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade slipped by an anna and a half to Rs. 3-7-9. 150 Bt. cones 1st grade lost an anna to Rs. 3-3-9.

Staple fibre yarn (40×2) for December delivery was subjected to heavy selling pressure and slumped by Rs 20 to Rs. 601. Among spot indigenous yarns (40×2), Kohinoors declined by 18 pies to Rs. 3-8-6. New Greats shed half an anna to Rs. 3-5-6. Centurys lost three pies to Rs. 3-5-9. Citys were unaltered at Rs. 3-6. Among foreign yarns (80×2), Paramounts dropped As. 2 to Rs. 5-14. Fujis decreased by 18 pies to Rs. 5-15-6. K'Suns eased by a like amount to Rs. 6-8.

In the cotton yarn section, 10 counts Moderns advanced by As. 2 to Rs. 15-4. Podars were firm at Rs. 15. Deals in 20 counts Moderns were put through an anna higher at Rs. 19-6. Hinds were fully maintained at Rs. 19-4. Thirty counts were steady. Maduras being quoted at Rs. 24-8 and Arollos at Rs. 22-8. Among 40s, Minaxis and Gokaks were unchanged at Rs. 22-8 and Rs. 27-10, respectively. Moderns, however, declined by As. 4 to Rs. 29. Eighty counts Moderns were well favoured and advanced by Re. 1-8 to Rs. 72-8. Sixty counts, on the other hand, were neglected. Moderns receded by Re. 1-4 to Rs. 60. Finlays dropped a rupee to Rs. 58. Raghuvamshis eased As. 8 to Rs. 57.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those a week before and on the *moorat* day:

	13-11-1956	7-11-1956	2-11-1956 *moorat*

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, 14*th November*

During the week under review the local oilseeds market reflected a buoyant trend. A number of factors have combined to sustain this trend. During the first few sessions of the week, unfavourable weather conditions in the producing areas have maintained the trend witnessed during the last week. Subsequently, demand by shippers-*cum*-speculators for oil, and strong rumours that the potential export demand for castor oil is very brisk, gave further momentum to the trend. The linseed section was also in the limelight on buying inquiries from Australia. Cottonseed staged moderate improvement on professional support.

Groundnut February contract reflected an upward trend during the first two days of the week and declined slightly on profit-taking in the following two sessions. Subsequently, however, it recovered and over the week it gained no less than Rs. 3-2, at Rs. 141-14. In the spot section, December-January put on As. 9 at Rs. 28-3. Groundnut oil ex-mill which commenced the week at Rs. 19-4, however, declined to Rs. 18-12 at the close today.

Castorseed May 1957 contract opened the week at Rs. 142-10 and moved down to Rs. 140-6 on the same day. In subsequent days it received good support and moved up to touch a high of Rs. 152 today before closing the day's session at Rs. 151-12. Ready Madras, too, in the spot, put on Re. 1-10 at Rs. 32-4, and Kanpur rose by Re. 1-12 to Rs. 31. Oil B.S.S. advanced by Re. 1 to Rs. 19-10 and Commercial by As. 14 to Rs. 18-12.

Cottonseed February 1957 opened the week higher at Rs. 86-8 and improved to Rs. 87 the next day. It closed today at Rs. 85-12 which represented an improvement of As. 7 over the week.

Linseed May 1957 contract, too, improved from Rs. 27-4 at the close last week to Rs. 27-10 today. Linseed oil ready was quoted at Rs. 18 as against Rs. 17-12 last week.

Among other seeds, kardi seed Bold ready moved up by As. 8 to Rs. 18-4 and February-March by As. 6 to Rs. 16-10. Niger seed ready and Madras each put on As. 4 respectively at Rs. 27 and Rs. 27-4.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	14-11-1956	7-11-1956	24-10-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 14*th November*

The sugar market continued to rule steady during the week under review also. There was good buying support, induced by rumours of a delay in the monthly release of sugar; the rumours, of course, proved false following the announcement of a release of 160,000 tons made yesterday evening. In fact, the demand was so encouraging that sugar prices recorded a handsome improvement, despite better arrivals of indigenous sugar. The arrivals aggregated 18,600 bags, as against 17,700 bags in the previous week.

Spot large grain indigenous sugar spurted by Rs. 2 to Rs. 94-Rs. 101 per bag. Medium grain rose from Rs. 90-Rs. 93 to Rs. 89-Rs. 91. Small grain was fully maintained at Rs. 89, as also British refined sugar at Rs. 90 per cwts. The stocks of unsold British refined sugar are estimated at about 4,000 tons, the bulk of which is accounted for by sack-torn and damaged sugar.

In the forward section, *Magsar* delivery contract for 'C' grade sugar hardened from Rs. 89-2 to Rs. 89-7 before being quoted today at Rs. 89-3.

The latest monthly release of sugar for sale in the free market, as already stated, amounts to 160,000 tons. This brings the total release so far made to 1,631,000 tons. Excluding this quantity, the stocks of sugar produced during 1955-56 still lying unsold with the mills are estimated at 13 per cent. of output (or about 241,000 tons.)

Several sugar mills in North India and Bombay-Deccan have already started crushing and more are expected to follow suit shortly. Many sugar mills, it reported, are experiencing much hardship on account of tight bank credit and lack of sufficient godown space.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, 14*th November*

Since the possibility of the Middle East flare-up developing into a world conflagration has receded with the cease-fire, Malabar black pepper once again ruled weak with business at a distressingly low ebb. Paucity of inquiries from New York made growers and holders nervous who were reported to be willing to sell even with some concession but without result. Dealers in New York were said to be in a waiting mood in the belief that prices would turn still lower when new crop starts moving. Malabar spot, in New York, was nominally quoted at $0.29, while small inquiries for the shipment during the first half of November at $0.27 were noted.

Alleppey, after coming down to Rs. 662½, is reported barely steady with poor business. Garbled at Cochin is said to be hovering around Rs. 115. Arrivals of new crop have started in small quantity. They are selling at price ranging from Rs. 350 to Rs. 575 according to the quality. A section of the trade fears that with the increase in new arrivals the market will go down if no support is forthcoming from New York; there are no short sales by the exporters in any of the overseas markets. With the cease-fire, local demand from inland consuming centres also subsided.

Singapore showed some improvement with prices for Sarawak black moving from Str.$80 to Str.$83 under speculative buying by rubber interests. But higher prices attracted more arrivals from Sarawak. It is apprehended, therefore, that if no sizable foreign inquiries are seen in the near future, prices there may go down. The latest estimate for Sarawak pepper is placed between 17,000 and 18,000 tons.

The delegation of the Cashew and Pepper Export Promotion Council which went on tour to Europe has now returned. Prospects for any notable expansion of the export of Malabar black in Europe are reported bleak as Sarawak pepper in Europe costs about 50s. per cwt. less than Malabar. India could probably secure some business in European markets if prices for Malabar black were brought down in line with Sarawak by reducing the quality to the Sarawak level.

Italy which was one of India's biggest buyers for Tellicherry pepper is also reported buying Malabar rather sparingly since their export of sausage is reported dwindling. The fear that excessive use of hot spices will cause liver complaint is also one of the reasons for the fall in the demand of pepper in Italy in general.

November shipment and January-February-March are all quoted nominally at $0.27 without attracting buyers. In the delivery section the turnover is much restricted for want of outside interest.

Following are today's nominal quotations: Ready Rs. 93 per Bengal maund and December Rs. 612½-617½ and February Rs. 612½-617½ per candy of 5¼ cwts.

TEA DUSTS IRREGULAR

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 9*th November*

There were approximately 600,000 lbs. on offer in Dust Sale 'V' which was held on Tuesday, 6th November. There was a good general demand, particularly at the bottom, for mixed and fibrous sorts which were generally dearer, but good liquoring and the very best types were irregularly As. 2 easier. Any medium growns with good appearance and of a useful size met a good market and were fully firm to one anna dearer. As was to be expected, there was no demand for Middle East types.

London Market: Sale of 5th November 1956:—Best followed quality. Everything else 6d. to 8d. dearer.

Sale of 6th November 1956:—General advance 4d.

Colombo Market: Sale of 5th November 1956:—Considerably dearer, except for Middle East black dusts. Powdery dusts, particularly, were lower.

Sale of 6th November 1956:—Middle East firm. Other low and medium 5 cents to 10 cents dearer. Good brokens down 30 cents.

Calcutta Market: Export:—Except for Egyptian types stalky Pekoes and light liquoring teas, market very strong and irregularly dearer.

Internal.—25,000 dust. Fair demand at start. Commons As. 4 easier. C.T.Cs As. 3 to As. 4 easier. No Middle East demand. At close, heavy withdrawals. Leaf fair demand irregularly dearer.

Export Quota.—The market for export quota has been very quiet and, although there are buyers available at 27 pies, sellers are scarce.

Forthcoming Auctions:—Dust Sale 'W' will be held on Tuesday, 20th November.

* * * *

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale 30*:— 1,500,000 lbs. Strong general demand, particularly for medium and good medium sorts which are irregularly As. 4 dearer. Best liquoring rather easier, following quality. Whole leaf fully firm."

JUTE GOODS RALLY

(From Our Own Correspondent)

CALCUTTA, 13*th November*

The week under review was earlier highlighted by rumours of possible Russian armed intervention to put a stop to the Anglo-French-Israeli fighting on Egyptian soil. These resulted in sizable additions to prices; subsequently, rumours of cease-fire depressed the prices, and, when the latter reports were confirmed, prices steadied around the lower levels. It was at this stage the stock position as at the end of October was announced. The detailed figures imparted further steadiness to ruling quotations. For, overall stocks declined by 8,500 tons. This had, of course, been expected, as the month of October was a better shipping period than September. In addition, mills should have reported lower production, in view of the shorter number of working hours on account of the *Pooja* holidays, and for the better part of the month three large mills remained closed following a lockout originating from dislocation of work on labour demands. Analysing the stock position, it is found that sacking goods, at 77,200 tons, fell by as much as 11,400 tons, but miscellaneous constructions increased to 8,600 from 7,200 tons and hessian to 30,900 from 29,400 tons. Another cause that can be attributed to the huge decline in the sacking figure was the change of a portion of the sacking looms to the production of hessian, following a shift in demand in recent months.

Shipping figures released fully justified the market's earlier belief of the satisfactory position in the month of October. Sacking shipped totalled 43,177 tons and hessian 36,299 tons, representing increases of 14,921 and 3,776 tons, respectively. These included coastal shipments. However, shipping during the current month would not be as satisfactory as that of last month, in view of the difficulties that have followed the blocking of the Suez Canal. By far the most important news to the market during this week and for which the industry and trade had been earnestly looking forward during the last several months was the New Delhi announcement recognising the East India Jute and Hessian Exchange Ltd., Calcutta, under section 6 of the Forward Contracts (Regulation) Act, and permitting the same to conduct trading in futures contracts and specific delivery contracts in raw jute and jute goods within the city of Calcutta for a period of three years. It had been realised by the trade that forward trading, if conducted on ideal lines, would be a great boon to the industry both in times of depression and buoyancy. Jute goods are subjected to wide fluctuations at all times, as a result of developments both within the country and without. These naturally place the mills in an embarrassing position, and, often in times of depression, lead to uneconomic prices. On such occasions, the mills invariably withdraw from the markets as the last weapon to throw off the demon of speculation and bring back the market to sanity. Now the forward market should be of considerable assistance in the stabilisation of prices at fair levels. It is evident that the Government would look to the working of the Exchange with considerable interest.

In accordance with the recommendations of the Forward Markets Commission, the Government of India has agreed that all transferable specific delivery contracts in raw jute and jute goods entered into in the I.J.M.A. forms prior to the application of section 15 of the Act be treated as valid for nine months in relation to jute goods and three months in respect of raw jute. Exempted from the regulation will be contracts entered into in the I.J.M.A. forms subsequently for a period of six months from the date section 15 of the Act comes into force.

On Tuesday last, strong conditions were in evidence as the threat of armed intervention in the West Asian crisis by the Russians was implied in Marshal Bulganin's letters to the British and French Prime Ministers. It was thought then that the world was being led to a third catastrophe of the century. On speculative buying, rates moved up and ready 40"×10 oz. hessian rose to Rs. 44-6 from Rs. 43-14 overnight and B. twills to Rs. 118-8 from Rs. 117-4. On the following day, prices gave way earlier on rumours of a cease-fire but, as these lacked confirmation before trading came to an end on that day, the rates steadied up. Thus, B. twills, at Rs. 117-2, were fully firm, as were hessians 40"×10 oz., at Rs. 44. Business was also done at these rates. The actual news of cease-fire in Egypt followed, but it did not result in any fall in quotations, as the announcement of the lower stock position on Thursday came to the rescue of bulls. Ready B. twills spurted to Rs. 117-14, as the heavy goods stock figure recorded a modest decline. On the other hand, ready hessian 40"×10 oz. dipped to Rs. 43-15, in view of the slight increase in stocks. By the week-end, quotations were fully steady with B. twills being priced at Rs. 117-14 and 40"×10 oz. hessian at Rs. 44-3. Yesterday conditions reached buoyancy, and keen speculative bidding saw ready B. twills reach Rs. 119-12 and 40"×10 oz. hessian to Rs. 45-4. The Russian inclination to send Soviet volunteers to Egypt and the U.S.A's views on the same together with China's readiness to help Egypt with men and money have resulted in a crop of rumours suggesting increased tension among Big Powers.

In contrast with the uptrend in jute goods, raw jute prices declined by about Re. 1 per maund. This was due to the satisfactory raw material stock position which enabled mills to show interest for nibbling quantities only. Indian northern bottoms declined to Rs. 30 from Rs. 31 and local Daissee bottoms to Rs. 31 from Rs. 32 per maund.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 13*th November*

Good demand was in evidence during the export sale held yesterday. Exporters showed keen interest as, with the low stocks in the United Kingdom and the longer duration ships would remain in journey as a result of re-routing via the Cape, they wanted to avail of as much shipping space as possible. It was realised by the trade that it would not be before months the Suez Canal would again be made navigable.

Fully steady conditions were in evidence during the export sale held this week. Offerings totalled 54,500 packages, most of which had buyers at higher rates. The strongest feature of the sales was stylish B.P.Ss. and whole leaf grades, prices of which rose by As. 2 to As. 4 above valuations. Prices of C.T.Cs. advanced by As. 2 to As. 3, and those of clean commons and good liquoring mediums by As. 2 to As. 4. Darjeelings were taken up at higher rates, and tippy teas rose above valuations. The quotations were: best C.T.C. Assam B.P. Rs. 3-2 to Rs. 3-4, medium Assam B.P. Rs. 2-4 to Rs. 2-5, clean black pekoe Rs. 2-4 to Rs. 2-5, and plain B.P. Rs. 2 to Rs. 2-1.

The deepening of the Middle East crisis and the consequent blocking of the Canal lent strength to quotations for export quotas. The rate, at As. 3 per lb., showed a fractional improvement, but there were no sellers.

Prices in the sale for internal consumption held here on Tuesday last week declined, but, at the lower rates, demand was good. Dusts on offer amounted to 19,589 packages. In striking contrast to the trend during previous sales, buyers on behalf of the Middle East evinced no interest whatsoever in black leafy teas, most of which had to be withdrawn without bids. Poor C.T.Cs. and mediums gave way by As. 2 to As. 3 and the better lots by As. 3 to As. 4. Mediums and commons receded by As. 4. There were heavy withdrawals of Darjeelings and the poor fibrous teas, as, towards the end of the sales, bids were even As. 4 below brokers' valuations. However, early during the auctions, good support was afforded and prices even tended to be higher. The quotations were: best Assam C.T.C. Rs. 2-11, medium Assam C.T.C. Rs. 2-6 to Rs. 2-7, medium Assam grainy dust Re. 1-15 to Rs. 2, and medium Dooars Re. 1-15.

A quantity of 1,138 packages of leaf consisting of residues was offered. Demand was fair but prices were irregular.

London reports revealed fears of shortage in the near future in view of the poor position of stocks. The sales held in Mincing Lane last week reached a stage of buoyancy, and, despite a seasonal decline in quality, the best lots realised higher prices. The trade took from stockists more than the arrivals, and reflecting this is the decline of 2.4 million lbs. during the week ended 2nd November to 107.2 million lbs. It would not be before three to four weeks that stocks would show improvement, and in the meantime the decline would continue. Only after the re-routed tea begins to reach London warehouses, the fall in stocks can be arrested.

Nairobi is the latest entrant in the world centres of auctions. In the first auction held there on Wednesday last, it was reported that a small quantity of 149 chests was catalogued. This met with brisk bidding.

Mixed conditions were reported in the sales held in Colombo last week. While low-grown brokens and mediums gained, high-grown brokens and good fannings searched lower levels. South African buyers were rather quiet. Shipments to South Africa are not affected by the blockade in Suez, but, all the same, shortage of shipping space can present a problem sooner or later.

In the auctions held in Chittagong on Wednesday last, prices generally declined in view of the huge increase in the quantity on offer. Leaf offered aggregated 16,688 packages and dusts 4,274 chests. (Offerings at the next auction scheduled to take place on 21st November would be: leaf 16,500 and dust 4,004 chests). However, fanning grades were shown keen attention, and prices realised were above brokers' valuations.

LINSEED MOVES UP

(Messrs. A. Bradley and Co.)

CALCUTTA, 12*th November*

Firmer conditions prevailed in the linseed market during the week under review. Prices registered an advance. Ready stocks were very scarce, owing to extremely small arrivals from producing centres. Sellers were reserved, and buyers were fairly keen, notably for ready goods, despite appreciably higher price levels. Turnover was small, due to prevailing scarcity of ready goods. Fairly keen local enquiries helped to maintain prices in the oil section and an appreciable advance was noted, thanks to better demand and firmness of seeds section.

The latest available quotation for Ready-November is Rs. 25 per maund.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 12*th November*

Foodgrain prices were firm during the week and gains were recorded by all cereals. The war news from West Asia suggesting the blockade of the Suez Canal is considered in trade circles to be a major factor which may delay imports of foodgrains into the country. But Government circles are of the view that the import programme will not be much affected, as bulk of the imports of wheat will be from America which will be shipped from ports on the U.S. Pacific Coast while rice imports will be from Burma. Actual arrivals of foodgrains during October were 104,000 tons of wheat and 60,000 tons of rice. During the current and the ensuing months, food imports are expected to be of the order of 300,000 tons and 400,000 tons, respectively.

Wheat recorded an improvement of As. 12 to Rs. 15-10 per maund for average quality and Rs. 16-14 for farm quality. Brisk demand from the millers of Bihar and poor local arrivals—at an average of 100 maunds daily—added to the bullish trend. Most of the local demand was met by fair price shops. The Government has opened a number of such shops in rural areas which were lastly affected by excessive rains and floods. In these areas, wheat is being sold at the subsidised price of three *seers* per rupee. Demand on such shops is very heavy, due to appreciable advance in coarse grain prices. Wheat has also recorded strident advance in other markets in the country, despite heavy supplies of imported wheat rushed by the Government.

Rice, however, ruled quiet, following increased arrivals of new crop into the market and good crop reports in the markets in the South. Gram spurted to a new high of Rs. 13 per maund for local quality and Rs. 13-12 for Punjab produce, although local stock was still heavy at 110 *khaties* of 800 maunds each. Barley and *bejhar* advanced, due to good demand for seeds and poor local stocks. Other coarse grains also went up, the week-end prices being: Barley Rs. 14, *bejhar* Rs. 13-12, *maize* Rs. 13, *bajra* Rs. 13-12, *jowar* Rs. 13-8 and *guwar* Rs. 10 per maund.

Pulses recorded a hardening trend, in line with the general bullish trend in the price of other grains and good ready demand to O.T.R. destinations. Peas *dara* green was transacted at Rs. 13-8 and white quality at Rs. 14-4 per maund and the week's offtake aggregated 6 *khaties*, leaving the balance peas stock at 35 *khaties*. *Arhar* recorded gain of As. 8 to Rs. 13-4 per maund, with stock position put at 72 *khaties*. Other pulses also registered fractional gains during the week, the prevailing prices as on Monday being: *Urd* Rs. 17-8 to Rs. 19-8, *moong* Rs. 15 and *masoor* Rs. 17-6 per maund.

Pulses futures recorded sharp gains on vigorous bull support from Punjab and east U.P. The latest quotations were at the highest level of the week at: Peas *mangsir* Rs. 12-15, *jeth* Rs. 10-10, white *mangsir* Rs. 12-13 and white *jeth* Rs. 11-2; *arhar mangsir* Rs. 12-12-9 and *jeth* Rs. 11-3-6 and *urd maha* Rs. 16-14-9.

DEMAND FOR SUGAR BETTER

(From Our Own Correspondent)

HAPUR, 12*th November*

The sugar market was a bit lively during the week, due to better demand from all consuming centres in the country. Prices, however, were mostly unchanged, as supplies were easy, thanks to good stocks of old quality and commencement of production of new quality in many factories in west U.P. The latest prevailing mill delivery prices of sugar as on Monday were: Jaswant Rs. 27-13; Simbhauli Rs. 28-4; Mawana Rs. 27-2 to Rs. 28; Daurala Rs. 28 to Rs. 29; Amroha Rs. 27-4; Bijnore Rs. 27-4; Mansoorpur Rs. 27-10 to Rs. 29; Rampur Rs. 30; retail Rs. 30 per maund.

The *khandsari* market continued to be dull and depressed. Stocks were good while demand was poor. Prices ranged between Rs. 22 and Rs. 26 per maund according to quality.

New *gur* arrivals were quite large, the daily average being 3,000 to 4,000 maunds. Due, however, to good demand from Gujerat and easy loading facilities in the form of free supplies of wagon, *gur* ruled steady at Rs. 14 to Rs. 15-6 per maund. All the arrivals found ready offtake and the old stock was dwindling fast; it was put at 5,000 mds., the quotation being Rs. 11 per maund. Arrivals are likely to increase very soon.

Future *gur* prices spurted to new heights on vigorous bull support. On Monday, *fagan* delivery was quoted at Rs. 10-8-3, the highest level of the week.

EARNINGS OF INDIAN IRONS RISE

(Concluded from page 939)

part the increased working capital the Company will necessarily require."

The aforesaid schemes of extensions are in respect of the Company's Burnpur works. The Company has also on hand an expansion scheme in respect of its Kulti works. The first portion of this scheme, namely, to develop the manufacture of large diameter spun cast iron pipes up to 27" diameter, is now well in hand and production is expected to commence in the latter half of 1957. The initial expansion will raise the capacity from 4,500 to 12,000 tons of pipes per month, and the final development will yield 20,000 tons per month. Simultaneously, another plant is being erected to deal with the increased demand for pipe bends and specials, which are a necessary corollary to the augmented production of spun pipes.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 33-15¼ *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 3 per cent. per annum, free of income-tax.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend or first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. ‡ Less income-tax. (a) Ohra Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (b) Investments.
(b) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (c For seven month ended 31st March 1956.
† New Central Jute Mills—Dividend for 1956 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Centra. Jute Co., with effect from 1st December 1954.
‡—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

INDUSTRIAL POLICY STATEMENT X-RAYED

(*Concluded from page 933*)

4. Mining of iron, manganese, chrome, gypsum, sulphur, gold, and diamond.
5. Mining and processing of copper, lead, zinc, tin, molybdenum, and wolfram.
6. Aircraft.

The second category defined in the 1956 Resolution lists 12 industries "which will be progressively State-owned and in which the State will therefore generally take the initiative in establishing new undertakings, but in which private enterprise will also be expected to supplement the effort of the State ... either on its own or with State participation."

The first seven of the 12 industries enumerated below have been transferred from the list of 18 which were subject to Central regulation and control under the 1948 Resolution:

1. All other minerals except "minor minerals" as defined in section 3 of the Miner

TRENDS IN FOREIGN TRADE

THE meetings of the Import and Export Advisory Councils held at New Delhi last weekend provided a good opportunity for taking stock of India's performance in the sphere of foreign trade and for the authorities to get an idea of what could be done to improve the position in future. An appraisal of recent trends revealed a picture which is disturbing somewhat. Imports have been running at a higher pace than in 1955 and 1954, while exports have been at a lower level. The adverse balance of trade has widened and the foreign exchange reserves are fast shrinking. Export prices have either declined or risen only fractionally where they have, while import prices have gone up rather substantially. The outcome is that the terms of trade have worsened against India, as it has done for most of the exporters of primary produce.

A few figures to illustrate the aforesaid trends may be stated. During the nine months ended September 1954, imports aggregated Rs. 429.11 crores. In the same period of 1955, they went up to Rs. 454.98 crores. In the current year, they have been higher still. Actual imports during January-July 1956—seven *months*—were Rs. 438.14 crores. On the basis of figures quoted by the Commerce Minister, Mr. D. P. Karmarkar, at the Import Advisory Council meeting, they aggregated no less than Rs. 594 crores for the first nine months of this year. The monthly average of imports for this latter period was Rs. 66 crores, as compared with Rs. 50.55 crores and Rs. 47.70 crores for the corresponding period of 1955 and 1954, respectively. In other words, imports in 1956 have been running at a rate 32 per cent. higher than in 1955 and 37.5 per cent. higher than in 1954.

Exports have not kept pace with this trend. For the nine months ended September this year, they are estimated at Rs. 439 crores, as compared with Rs. 457 crores and Rs. 335 crores for the same period in 1955 and 1954, respectively. The average monthly exports work out to Rs. 46.5 crores for the first nine months of the current year, as against Rs. 50.12 crores and Rs. 42.70 crores for the corresponding period of 1955 and 1954, respectively. It will be noted from this data that, after going up in 1955 as compared with 1954, exports have actually declined in 1956, whereas imports have advanced rapidly and progressively. The volume index (base: 1952-53=100) shows that the monthly average imports in the first half of 1956 was 134, as compared with 108 and 93 in the same period of 1955 and 1954, respectively, the corresponding figures for exports for the three half-years being 108, 108 and 93. This means that, while the volume of imports rose enormously during January-June 1956, that of exports remained more or less static at the level attained in the first six months of 1955. On top of this, there has been a steady fall in the export value index from 95 in January 1956 to 91 in June 1956, the average for the six months being 91, as against 94 for the corresponding period of 1955. In the case of imports, however, the price index shows a rise from 85 in the first month of 1956 to 90 in the sixth month of that year, though the average for the first half of the year as a whole is a point less at 88. The conclusion that clearly emerges from these volume and value indices is that, unit for unit, exports of India earned less, while it had to pay more for its imports.

As a result of excess of imports over exports, the adverse trade balance has been growing. From Rs. 50.05 crores in the official year 1953-54, it rose to Rs. 62.72 crores in 1954-55, and still further to Rs. 81.52 crores in 1955-56. During the first six months of 1956-57, that is, April to September 1956, it is estimated to have nearly trebled, the exact figure for the half-year being of the order of Rs. 121.86 crores. This trend still continues; in October 1956, the adverse trade balance, according to provisional figures, was well over Rs. 16 crores, and these do not include the outcome of the trade with Pakistan which is generally against India owing to large imports of raw jute. The result of these adverse balances is a depletion of India's foreign exchange reserves. On 18th November 1955, that is, a year ago, these reserves stood at Rs. 717.93 crores; now, as on 16th November to be precise, they are no more than Rs. 553.67 crores, that is, a drop of Rs. 164.26 crores. They have now reached a level which is only about Rs. 150 crores above the minimum currency reserve of Rs. 400 crores and that with only eight months of the second Five-year Plan gone.

Alarming as this position may appear on the face of it, there is no cause for feeling unduly perturbed over it. The large adverse balance is not the outcome of unplanned imports. On the contrary, it is due largely to purchases of capital goods, essential raw materials and consumer goods necessary for implementing the development schemes included in the first and the second Plans. The quantum of imports of luxury articles is relatively small and would not substantially alter the position even if they were completely cut out. In the first nine months of 1956, India has spent, according to Mr. Karmarkar, nearly Rs. 6 crores more than in the corresponding period of last year on imported chemicals; similarly, it has spent Rs. 36 crores more on machinery, Rs. 4½ crores more on electrical goods and Rs. 8 crores more on non-ferrous metals. Again in 1956, India will be importing 1.8 million tons of iron and steel, costing approximately Rs. 135 crores; of this quantity, 1.5 million tons have already arrived. These figures compare with 558.000 tons, valued at Rs. 43 crores, imported last year. None can say that these imports were not essential. Again, it is common knowledge that countries embarking on a large development programme usually have a big deficit in foreign trade. There is, therefore, nothing abnormal about the present experience of India.

Although the heavy import surplus is not due to any unplanned effort and is in keeping with the needs of the country's development programme, it is necessary to emphasise that there is no reason whatever for complacency. All possible efforts must be made to exercise the largest measure of economy in the use of foreign exchange consistent with the developmental needs and to earn as much foreign exchange as possible through stimulation of exports. The urgency of this task cannot be minimised, because the foreign exchange gap assumed in the Plan is as large as Rs. 1,200 crores. It is, of course, true that all this amount cannot be found by a surplus of exports over imports during the five-year period and that a good part of it is, therefore, sought to be covered through bor

little more effectively and with positive benefits. Fortunately for India, the markets for tea and jute goods look like improving and, though the blocking of the Suez Canal, through which two-thirds of India's foreign trade pass, is a formidable handicap, it is possible to tide over the situation, provided the internal transport and the handling at the ports are efficient and quick. But the basic condition for success in export trade is an increase in domestic production of almost everything, mineral ores, agricultural produce, manufactured goods, etc. This is not a job of the Commerce and Industry Ministry alone but also of the Ministries of Agriculture, Finance, Transport and Labour at the Centre, as well as that of the counterparts of these ministries in the States. Unless the production of such raw materials as jute, cotton and oilseeds goes up, India cannot strengthen its export drive. This is obvious from the latest decision of the Government of India not to permit, for the present, exports of raw cotton and groundnut. There is a good market now for these commodities in foreign countries, but, because domestic supply of these is not adequate in relation to demand, as is clear from a rise in their prices, the Government has found it necessary to stop their exports. It is also obvious from the decision of the Government, some months ago, to reimpose the cut in the production of jute goods. One of the factors that necessitated this step was inadequate supply of raw jute.

Again, unless there is sufficient transport—railway, road and sea—it will not be possible to move the available supplies in time to the export markets. Hence the Ministry concerned must be active. The importance of the Finance Ministry to the success of export drive will be evident from the fact that the fiscal policy and its administration can make and unmake export markets. The Labour Ministry is by no means the least important, as witness the effects of the awards and laws relating to working conditions of workers on the cost of export commodity. The latest Plantation Award in Madras State, if applied without substantial modification, will virtually wipe out most of the plantation estates in the Nilgiris, thereby seriously affecting the foreign exchange position of the country. The producers and manufacturers, too, have to display a greater sense of responsibility than at present in producing quality goods and in developing export markets. The availability of easy profits in the home market has engendered a sense of complacency among a large number of them in so far as export promotion is concerned. Several of them seem to feel that it is the business of merchants and the Commerce Ministry to explore and develop export markets for their manufactures. It is high time they gave up this attitude and realised that active export promotion is a part of their function.

It is suggested that India will stand to gain more if it concentrates on exports of finished goods instead of on raw materials and semi-processed goods. The economic force behind this argument cannot be refuted, for it will mean more employment within the country and greater foreign exchange realisation. Accordingly, this principle should be followed wherever possible. But, at the same time, the policy-makers should take a realistic view of world trends. It may not be possible for them to follow it in all cases, because, if India does not supply what the importing countries want, some other countries may be ready to fill the breach, resulting in the complete loss of its export markets for some of the raw materials and partly finished goods. The policy to be followed in such cases should be to encourage the export of finished goods through indirect assistance, while placing no restrictions on exports of these goods in the raw state or partially processed state. The essential point to be noted here is that any attempt at dictating to importing countries, especially when there is a buyers' market, or when some of them, too, want to provide employment to their people by establishing manufacturing industries or final processing units, will invariably fail.

Another vital point that requires reiteration is that India cannot succeed in developing a progressively expanding export trade in manufactured goods, unless its industries are equipped with modern plant and machinery. It may be possible to compel, albeit up to a point, domestic consumers to accept whatever the type and quality of goods that are produced under the Government's policy aimed at supporting cottage and small-scale units and/or based on fears of unemployment among factory workers consequent upon introduction of up-to-date equipment. But this policy will not work in the case of exports, as is clearly evident from the setback in cotton textile exports. It is to be hoped that at least the acuteness of the foreign exchange problem will open the eyes of the authorities to the necessity of following a more realistic policy.

ATOMIC ENERGY

RUSSIA'S dramatic announcement of a seven-point disarmament plan which includes the destruction and the halting of further manufacture of nuclear weapons, has again brought to the fore the importance of utilising the latest achievements in science, signified by atomic development, for peaceful purposes. Much concern has been felt in India over the repeated experiments in nuclear explosions, and this country has steadily campaigned for facilities for using the atomic energy in the interests of human welfare and progress. Last week, a non-official resolution was moved in the Lok Sabha calling for the setting up of an international scientists' commission to investigate the effects of, and the extent of harm caused by, nuclear and thermo-nuclear tests and for bringing moral pressure to bear on the nations making these tests to desist from such experiments. Speaking on this resolution, with the spirit of which he was in perfect agreement, Mr. Nehru deplored the "fear psychology" which made nations undertake those tests; each was actuated by the fear that, if it did not undertake these tests, the other would.

Atomic energy is one of those great scientific achievements of the modern age which have both constructive and destructive possibilities. But the deliberations of the International Atomic Energy Conference, which adopted last month at New York the 23-article statute for an International "Atoms for Peace" Agency, have given rise to the hope that the entire world will soon be able to participate in the benefits of atomic research. The Conference unanimously decided that the headquarters of the Agency will be in Vienna. Under the agreement, the Agency will supply fissionable material to member-States for chemical processing. The U.S. delegate, Mr. James J. Wadsworth, was voicing the feelings of all countries of the world when, at the conclusion of the Conference, he said: "We have done something here that makes it more likely that we and our children will live out our lives in peace." The Conference elected six additional members to the Preparatory Commission: Argentina, Japan, Egypt, Peru, Indonesia and Pakistan. The twelve original members are the sponsoring governments of Australia, Brazil, Canada, Czechoslovakia, France, India, Portugal, South Africa, the Soviet Union, Britain and the U.S. The Commission will lay the Agency's groundwork, choose the Board of Governors and appoint an Executive Secretary and staff. The Agency is expected to get under way next summer or autumn.

It is gratifying to note that the Executive Board of the U.N. Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.), at its meeting last week at New Delhi, has recommended to the General Conference a detailed programme for the work of the Organisation in the field of atomic energy for peaceful uses. The U.N.E.S.C.O.'s work in this field would be concentrated on the training of experts, the study of the biological effects of ionizing radiations and the use of radio-isotopes in scientific research. It was proposed that the Organisation should convene in 1958 an international conference which would obtain an exchange of information on methods used in various countries for training all specialists in the atomic field. The Conference would also examine international measures to achieve exchange of teachers and students. As regards the effects of ionizing radiations, it was suggested that U.N.E.S.C.O. might lend the necessary instruments for measurement of radiations and send qualified operators to service them. Finally, as the use of radio-isotopes in research was likely to assume the greatest importance in the next few years, it was proposed that U.N.E.S.C.O. might convene, towards the end of 1957, an international conference to discuss problems of utilisation of radio-isotopes in biology, physics and chemistry.

Any sustained progress in the application of atomic energy to peaceful purposes will depend upon the measure of international co-operation that will be forthcoming. So far, many of the leading industrialised advanced countries, notably the U.S., the U.K. and Canada, have given ample evidence of their willingness to lend a helping hand to underdeveloped countries in order to promote the peaceful uses of atomic energy. Last month, President Eisenhower gave the new International Atomic Energy Agency a pledge of an initial 11,000 pounds of uranium-235 *plus* as much as all other nations contribute till 1960. This is the first offer of fissionable material received by the Agency and is a striking indication of the U.S.'s sincerity and keenness to promote peaceful use of atomic energy by all the countries of the world. Further, he approved, last week, six additional steps to advance his atoms-for-peace programme. Under this programme, the U.S. would make available to other nations nuclear fuel for use in power or research reactors at prices identical with those charged by the U.S. Atomic Energy Commission to domestic users. He also approved of an offer to purchase at specified prices plutonium and uranium produced in reactors abroad which are fuelled with uranium-235 furnished by the U.S. The materials so acquired by the U.S., the President said, would be used solely for peaceful purposes. The U.S. would, of course, provide safeguards against diversion of materials by other nations to military purposes. The six-point programme, approved by the President, consists of:

(1) Establishment of the new schedule of charges for U-25 sent abroad.

(2) Authorising the A.E.C. to extend the present co-operative agreements beyond the existing term of 10 years.

(3) Establishing prices for plutonium and uranium-233 to be purchased by the United States from foreign operators of reactors.

(4) Decision by the Commission that it stands ready to purchase at the above-mentioned prices all the plutonium and U-233 produced abroad during the period ending 30th June, 1963.

(5) A proposal by the Commission to ask Congress for authority to establish guaranteed prices for plutonium and U-233 for periods not to exceed seven years. This would provide the same assurance to foreign nuclear power programmes as given to domestic programme.

(6) A decision to consider exchange of American U-235 for source material—such as uranium ore or concentrates—with co-operating nations.

The uranium-235 that is being offered by the U.S. to other nations will be taken from 20,000 kilograms (44,000 pounds) allocated by the President in the last three years for peaceful uses abroad. It is from this allocation that the U.S. contributed 5,000 kilograms last month to the International Atomic Energy Agency. Clearly, the President's six-point programme is designed to help other nations acquire what might be called the essential nuclear raw material. It would, as the President himself said, enable other nations to have a "firm assurance of the fuel supplies necessary for the continued operation of nuclear power installations, and thus it will facilitate arrangement for financing." These measures, he said, would permit "closer estimate of net nuclear fuel costs and will add firmness to the planning now under way in friendly nations for nuclear power, thereby accelerating their atomic power development." Appropriately enough, he added: "We shall strive ceaselessly to attain the day when the uses of the energy of the atom fulfil mankind's peaceful purposes."

India is making steady but less spectacular progress in the sphere of atomic energy, thanks to the intrepid efforts of Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission. Construction work has started on the Atomic Energy Establishment at Trombay. The capacity of the thorium plant has been increased and a plant for producing uranium fuel elements for future reactors is being set up. The construction of the first swimming pool reactor has been completed, the reactor having reached criticality for the first time on 4th August last. Generous co-operation by Canada has made it possible for this country to commence work on a reactor of the NRX type; it is likely to go into operation in the first half of 1958. In the course of the debate in the Lok Sabha, to which reference was made at the outset, Mr. Nehru revealed that, in about four or five years' time, India should be in a position probably to use a good deal of nuclear energy. Nothing brings out more clearly India's essentially peaceful approach to the problem of atomic energy than its decision to make available the facilities of its reactor for the use and benefit of scientists from other countries of South-east Asian region and beyond.

STALEMATE IN SHARE MARKETS

SALES TAX REFORM—BRITAIN'S MOVE TO PREVENT DUMPING

THURSDAY, 5 P.M.

THE share markets are lifeless. There is very little activity; unable to take a view, speculators are idle. With several attractive new issues coming, investors are concentrating their attention on them, neglecting the existing ones. There has, however, been a slight improvement in the value of almost all the popular counters, presumably due to bear covering. Substantial sums of money have already been contributed by investors to the first call of the new issues of the A.C.C. and the T.I.S.Co. The Guest, Keen, William issue was heavily oversubscribed, the stringency in the short-term money market notwithstanding. Applicants are expected to receive only a partial allotment, believed to be less than half. Very soon, the Indian Aluminium, Dunlop Rubber, Indian Irons and Hindustan Lever—all first class investments—will be in the market. There are also a few more issues, some of which are preference shares. It is rumoured in market circles that Burmah-Shell may come out with a fresh offer of Rs. 2 crores in preference shares. According to one reliable estimate, the total amount raised by these new industrial issues will be of the order of Rs. 40 crores.

MARKET GOSSIP

The prospectus relating to the offer of the shares of Hindustan Lever Ltd. is already in circulation and will appear in the Press in a few days. Messrs. Unilever Ltd., London, who are the sole owners of Hindustan Lever, are offering to Indian investors 557,000 ordinary shares of Rs. 10 each, equal to 10 per cent. of the paid-up capital of the Company, at a premium of Rs. 6-8. The full details of this offer will appear in our next issue. Meanwhile, suffice it to say that market circles regard the issue price of these shares as very attractive. At the existing level of taxation and given the continuance of present trading conditions, the Company expects that the profits for 1957 would enable it to distribute a dividend of Re. 1-6 per share. On this basis, the yield on this investment works out to 8.33 per cent., free of tax. There is also a reasonable chance of capital appreciation. For 1956, the Company has paid an interim dividend of As. 8 per share and expects to pay a final dividend of As. 6 per share some time in May 1957 to which the buyers of shares now offered for sale will be entitled. Moreover, as the vendors propose to give share certificates and blank transfers to successful applicants, the shares will be marketable almost immediately after allotment. There are unmistakable signs of a great rush for this share, the list for which opens on 3rd December 1956 and will remain open up to 3 p.m. on 5th December 1956.

* * * *

There has been a sizable recession in the cotton market, where the Jarilla contract has slumped from a high of Rs. 660½ on 15th inst. to Rs. 641½ today, the corresponding quotations for the Vijay contract being Rs. 762 to Rs. 746½. Apart from technical factors, the keen disappointment of traders over the Government's failure to permit export quota for cotton lies at the root of the drop in cotton. An official Press note issued late on Wednesday night states that, in view of the present high level of prices of cotton, the Government does not consider it desirable to announce an export quota at this stage. Trade circles were inclined to think that, in view of the difficult foreign exchange position of the country, the Government would be willing, nay, even anxious, to permit exports of cotton, consistent with domestic needs. Apparently, the Government, which cannot be unaware of the foreign exchange aspect of the cotton export issue, is in no hurry to announce the quota. Cotton circles estimate the current season's supply of Indian cotton at around 6.9 million bales, inclusive of about 1.8 million bales of carry-over cotton and 5.1 million bales of commercial crop. Domestic mill consumption may account for about 4.8 million bales. This will leave a surplus of about 2.2 million bales. Even after allowing for carry-over stocks of 1.9 million bales at the end of the season, a quota of 350,000 bales could be allotted for export.

But it remains to be seen whether the commercial crop would turn out to be as large as 5.1 million bales. Indian weather has been particularly freakish of late, not to speak of the precise effect of the recent floods on the quality and quantity of the crop. Although the supply position is not likely to be seriously impaired through the grant of a small quota, it is, perhaps, just as well that the Government should have some firm estimates of the current season's crop before framing the export policy. Again, it may not be altogether inadvisable to adopt a "wait-and-watch" attitude towards cotton exports, considering that so long as the Suez Canal is blocked and freight rates are rising, it may be difficult to arrange for prompt shipments or strike firm bargains. The whole picture—the domestic crop picture as well as the more uncertain international situation—is likely to become clearer in the near future, when India should be better able to strike a mean between the advantage of earning foreign exchange through exports and the disadvantage of a smaller supply of cotton in the country.

* * * *

The Government's decision in relation to exports of oilseeds is in tune with the observations made by the Union Minister for Commerce and Heavy Industries, Mr. Morarji Desai, at the Export Advisory Council. Referring to the demand for exports of groundnut oil, he said that it was an article of consumption by the poorer people who derived more nutrition from oil than from any other commodity. The Government, he said, could not take a risk and had to proceed cautiously with regard to fixation of export quota for oil. In saying this, Mr. Desai was not exaggerating the risk involved, inasmuch as oil prices have risen steeply in recent months. The index number of prices of oilseeds (Base: year ended August 1939=100) now stands at 555, as compared with 394 a year ago. Similarly, the index number of prices of vegetable oils has moved up from 382 to 584. Clearly, it is this consideration that has weighed with the Government in its decision not to allow exports of groundnut oil. An official Press note says that the question of export of groundnut oil was considered by the Government and adds: "Export of this important article of food has to be considered with great care and now, particularly so, in view of the high ruling prices. Having regard to all relevant factors, Government has decided not to announce any export quota." The Government has, however, decided to allow export of nigerseed oil, kardiseed oil, groundnut oilcake and coconut oilcake freely within a ceiling upto the end of February 1957.

The denial of an export quota for groundnut oil served as a damper to the oilseeds market. Groundnut February delivery declined to Rs. 141-2 today, as against Rs. 144-10 yesterday, though, even at today's level, it is only slightly lower than the last week's level of Rs. 141-14. There was a sympathetic marking down of values in other sections of the seeds market. Judging from the Government's recent export policy announcement, it looks as though the Government is unwilling to sacrifice the domestic consumer for the sake of earning foreign exchange. It remains to be seen whether the authorities can continue this policy for long.

* * * *

The long-awaited "Central Sales Tax Bill" has now been introduced in the Lok Sabha. No subject has aroused greater judicial controversy nor any aspect of fiscal administration caused greater inconvenience to the commercial community than the tax on inter-State sales. All the wealth of India's legal talent has been employed—should one say, wasted?—on the determination of the States' rights to levy tax on inter-State trade, as well as the definition of inter-State trade and export-import trade. The tax on inter-State sale has also earned the unique distinction of being a subject on which the Supreme Court felt it necessary to reverse its judgment. After once holding that the State where the goods imported from another State are consumed has a right to levy a tax on the inter-State transaction, it reversed its decision by declaring that taxation of inter-State sales is ultra vires the Constitution. But the Central Government recognised that this judicial interpretation of the Constitution would deprive the States of a lucrative source of revenue. Meanwhile, the trade interests have consistently represented the case for Central administration of at least inter-State sales tax. Their anxiety over a speedy and equitable settlement of the issues involved in the subject will become clear when it is realised that, in this country, it is practically impossible for a trader—whether he is a small retailer or the chief of a mighty firm with branches in all parts of the country—to run his business without importing goods from other States or exporting them outside the State where he resides.

The three chief features of the Central Sales Tax Bill are: (1) Centralisation of powers to levy a tax on inter-State sales and decentralisation of its authority in the sense of delegation of the right to the States for imposing on behalf of the Central Government a tax on such sales; (2) definition of what constitutes inter-State trade; and (3) declaration of certain commodities as being of special importance to inter-State trade and imposition of restrictions on States' powers to levy tax on these commodities. Legally speaking, the Central Government has derived powers to regulate inter-State trade by virtue of the Constitution (Sixth Amendment) Act, 1956, whereby taxes on inter-State trade were brought within the purview of the legislative jurisdiction of Parliament and restrictions could be imposed by the Central Government on a State's powers to levy a tax on sales or purchase of goods within the State where the goods are of special importance to inter-State trade. Accordingly, the Bill, now brought forward, is within the legislative competence of Parliament.

Briefly, the Bill authorises the State Governments to impose, on behalf of the Central Government, a tax on the sale or purchase of goods in the course of inter-State trade or commerce. In other words, the State Governments are agents for the levy and collection of tax on inter-State trade. For this purpose, the States are authorised to prescribe the same system of registration, assessment, etc., as prevails in the States concerned under their own sales tax system. This has been done, in order to avoid a double system of sales tax within the State and the other in connection with the tax on inter-State trade. Secondly, the Bill seeks to define the circumstances in which a sale or purchase becomes taxable by a particular State and no other. It also seeks to define as to when a sale or purchase of goods may be said to take place (1) in the course of export out of India, (2) in the course of import into India and (3) in the course of inter-State trade. As regards the rate of tax, the Bill seeks to levy a tax of one per cent. of the turnover of a dealer on sales made by him in the course of inter-State trade or commerce.

Finally, the Bill declares certain commodities as being of special importance to inter-State trade and lays down restrictions and conditions as to the rate and system of levy. These commodities are: Iron and steel, coal, cotton, hides and skins, jute and oilseeds. Iron and steel will include pig iron and iron scrap, iron plates sold in the same form in which they are directly produced by the rolling mill without further processing or fabrication, steel scrap, steel ingots, steel billets, steel bars and rods, steel plates, steel sheets, sheet bars and tin bars, rolled steel sections and steel alloy, steel sold in the same form in which they are directly produced without further processing or fabrication. Coal will include coke in all its forms. Cotton is defined as "all kinds of cotton (indigenous or imported) in its manufactured form, whether ginned or unginned, baled, pressed or otherwise but not including cotton waste." Hides and skins include the raw or pressed state of this commodity and jute its baled or unbaled state. Oilseeds are defined as seeds yielding non-volatile oils used for human consumption or industry or in the manufacture of varnishes, soaps and the like or in lubrication and volatile oils used chiefly in medicines, perfumes, cosmetics and the like. These goods have been declared as "goods of special importance to inter-State trade or commerce." It has been provided that the tax on the sale or purchase of these goods inside a State shall not exceed two per cent. of the sale price thereof and such taxes shall not be levied at more than one stage in a State.

Clearly, the Bill seeks to fill the vacuum which has prevailed in the sphere of inter-State sales tax in recent months and also to ensure that no chaos is allowed to develop in that sphere such as the one that prevailed during the period when sales tax on inter-State trade was being collected by the State Governments. For one thing, centralisation will bring a certain uniformity in regard to rate, collection and administration of the tax. Secondly, the dealers in the goods of special importance to inter-State trade will benefit through the regulation of the system of levy and the restrictions that are being imposed on the rate of levy. When this Bill becomes law, it will be necessary for the State Governments to set up a "central" wing in their sales tax department, in order to look after the collection and administration of the tax on inter-State trade. It is to be hoped that the State Governments will see that this wing is manned by experienced personnel who will, without, of course, binding themselves legally in any way, give not only clear directions but even positive guidance to traders in relation to sales tax problems.

* * * *

During the inter-war years, the U.K. and certain European countries used to find it difficult to maintain their export markets in the face of the "dumping" activities of some exporting nations. Generally speaking, Japan was the target of attack, for that country, according to its accusers, would frequently resort to dumping its goods abroad through currency manipulations and excessively low production costs. Japan, it used to be said, was paying its labour less than what the workers deserved to get and thereby was obtaining a price advantage for its manufactured goods in export markets. All this ceased to be an important problem in the post-war years, thanks to the fact that the world demand for goods far outstripped the available supplies. Apparently, this era of a comfortable sellers' market is drawing to a close. Exporters are now beginning to see that export markets cannot be built in a day, nor can they be maintained without effort. An important effect of the growing difficult conditions in the export markets is that countries are resorting to special currency concessions to exporters and giving liberal credit terms to their overseas importers. But when competition threatens the very existence of domestic industries, there is really no alternative to protectionist duties.

Not all countries, however, are able to raise duties in this manner. For one thing, they would not like to raise tariffs against all countries indiscriminately. Secondly, the abrupt introduction of strong protectionist measures might offend the spirit of the G.A.T.T. Thirdly, the raising of protectionist wall may lead to undesirable reprisals from other countries. The U.K. seems to find itself in this position today. While it is willing to face normal or legitimate competition, it would like to arm itself against unfair competition in the shape of "dumping". It is shortly expected to introduce an Anti-dumping Bill. Last week, the Government issued the ways and means resolution providing for the imposition of customs duties to safeguard British industries against dumping and the import of subsidised goods. This is a preliminary stage before the introduction of the Bill. Since the Bill imposes a new charge on the public, it has to be preceded by adoption of a ways and means resolution. The Board of Trade, it is stated, will be empowered to impose duty, in addition to the full amount of any other duty, where it appears (1) that goods have been dumped in the U.K.—that is, their export price is less than the fair market prices in their country of origin, and (2) that some Government outside Britain has subsidised the exports. A memorandum explaining the resolution says that the term "subsidy" is used in the sense of indicating money or equivalent of money given to traders or producers by a Government or other authority. To prevent evasion, the "country of origin" will be defined in such a way that goods which have been subjected to a minor process of manufacture since they left a country will still be held to have originated in that country.

The details about the memorandum have not yet become available in this country. It is, therefore, difficult to say what, according to the U.K.,

(Continued on page 1030)

EQUITIES LISTLESS

UNDERTONE STEADY

(From Our Own Correspondent)

BOMBAY, *22nd November*

CONDITIONS in the share market during the week under review were far from cheerful. In the absence of any stimulating news, activity was confined to a very modest range and movements in prices were narrow. Textiles and a few miscellaneous industrials, however, attracted some attention, the former on reports that the export demand for cotton textiles had improved and on prospects of India entering into an agreement with Indonesia for export of textile goods, and the latter on encouraging corporate news.

There are several contributory factors for the market's listlessness. Among these are: (1) continued stringency in the money market; (2) the forthcoming new issues and rights issues of leading industrial concerns—according to one estimate these will amount to about Rs. 40 crores; (3) the sharp fall in export earnings during the first nine months of the year, which the Union Minister for Commerce and Consumer Industry described as a matter of serious concern in the context of implementing the second Five-year Plan; and (4) budget uncertainties. Operators were also in a mood to wait and watch the Congress election manifesto, in which they expect a more clear-cut policy of the ruling party towards the private sector. The undertone of the market, however, remained fairly steady.

In the steel section, Tata Ordinaries moved between Rs. 194-4 and Rs. 192-4 before closing at Rs. 192-12, as against the previous week's close of Rs. 192-8. Indian Irons hardened from Rs. 34-5½ to Rs. 34-12, but the gain was more than wiped out yesterday when they touched Rs. 34-1½. Today, there was a partial recovery to Rs. 34-6.

Textiles sustained the morale of the market and moderate gains were recorded over the week. Bombay Dyeings strengthened from Rs. 619-6 to Rs. 626-14 and after a dip to Rs. 620-10, recovered to Rs. 625 at the close. Centurys advanced over the week by Rs. 7 to Rs. 551-8, though the highest level touched for the week was Rs. 554-12. Kohinoors were erratic, moving between Rs. 341 and Rs. 346-4, before finishing Re. 1-8 higher at Rs. 343-8. Central Indias were dull at Rs. 132, while Bradburys recorded a rise of Rs. 16-4 to Rs. 220. Finlays held their ground at Rs. 335. Gokaks gathered a rupee to Rs. 239-8. Indu Ordinaries were steady around Rs. 12-1½. Indore Malwas were a shade quiet at Rs. 146-14. Khataus were steady at Rs. 237-8. Models attracted some attention and gained Rs. 3-2 to Rs. 181-14, inspired by the encouraging results for the year ended 30th June 1956. Morarjee Mills moved up by Re. 1-4 to Rs. 261-4. New Greats were unchanged at Rs. 250 and New City Mills at Rs. 146-4. Osmanshahis fell sharply by Rs. 10-8 to Rs. 79-8. Shree Niwas were steady at Rs. 213-12. Sholapurs reacted from Rs. 1,800 to Rs. 1,590, while Simplex hardened by Rs. 2-4 to Rs. 198-4. Standards by Rs. 3-12 to Rs. 477-8 and Svadeshis by Rs. 2-8 to Rs. 256. Tata Mills were unchanged on balance at Rs. 53-12.

Business in bank shares was very much limited, but the undertone remained steady. Barodas were done As. 12 better at Rs. 102-4. Centrals gained As. 8 to Rs. 55 and their new shares As. 8 to Rs. 59. Bank of Indias were well maintained at Rs. 143-8. United Commercials were down by a rupee at Rs. 56 and Punjab Nationals by Rs. 5-8 at Rs. 51.

A quiet tone prevailed in electricity shares. Tata Hydros were marked down by Rs. 2 to Rs. 124 and their new shares by Rs. 3 to Rs. 119. Tata Powers shed Rs. 13-12 to Rs. 1,251-4. Andhra Valleys were held at Rs. 1,200, but their new shares shed Rs. 17-8 to Rs. 1,160. Ahmedabad Electrics gathered As. 5 to Rs. 91-14 and Surat Electrics As. 10 to Rs. 114-6. Bombay Suburbans were unchanged at Rs. 110.

Sugar shares were steady, with moderate gains in prices. Belapurs advanced by Rs. 2-8 to Rs. 251-8, Phaltans Re. 1-4 to Rs. 159-8 and Walchandnagars Rs. 3-12 to Rs. 283-12. Bhopals, however, shed As. 6 to Rs. 17-8. Cement shares were quiet. Associated Cements fluctuated between Rs. 196-12 and Rs. 194-8 before closing Re. 1-8 lower at Rs. 195. Digvijays were marked down from Rs. 169-8 to Rs. 164 and their Rights from Rs. 35 to Rs. 25. Dalmia Cements shed As. 4 to Rs. 14-8 and Ashokas As. 4 to Rs. 12-8. Jaipur Udyogs changed hands As. 2 lower at Rs. 12-11. In the engineering and mining group, Alcocks were unchanged over the week at Rs. 322-8. Premier Constructions were in the limelight with a rise of Rs. 7-12 to Rs. 213-12, on expectations of a higher dividend for the current year, in line with the increase in distribution by some of the companies belonging to the group. Tata Locomotives were dull at Rs. 168-8, Larsen and Toubros were lower by As. 12 at Rs. 17-4. Shivrajpurs were marked up by Re. 1 to Rs. 86-8. Indian Coppers were unchanged at Rs. 4-3, while B.B. Petrols were a shade better at Rs. 3-5½.

Among shipping and transport shares, Scindias staged a rise early in the week from Rs. 19-8¼ to Rs. 19-11, but this was more than wiped out subsequently when the shares receded to Rs. 19-5½ at the close. Great Eastern Shippings declined by As. 6 to Rs. 21-12. India Steamships were brisk and advanced from Rs. 9-12½ to Rs. 10-8½, following the release of the Company's accounts for the year ended 30th June 1956 which show excellent results. Hindustan Motors were maintained at Rs. 9-6, while Premier Automobiles gathered As. 12 to Rs. 116. Among miscellaneous industrials, Bombay Burmahs (old) advanced from Rs. 692-8 to Rs. 701-14 before reacting to close at Rs. 696-4. Their new shares hardened by Rs. 2-8 to Rs. 252-8. British India Corporations dropped As. 4 to Rs. 10-7½. National Rayons moved up by Rs. 2-12 to Rs. 262-4 and Killick Industries were taken up Re. 1-8 higher at Rs. 173. Tata Chemicals softened from Rs. 19-15 to Rs. 19-12½. Tata Oils lost As. 12 to Rs. 50-12 and Wimcos Re. 1-4 to Rs. 175.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *21st November*

Opening under extremely dull and drab conditions, the Calcutta Stock Exchange made an earnest attempt to recover lost ground as the week progressed. Values had been hammered to such low levels in the last week and the earlier part of the week under review that the recovery was necessarily slow and painful. However, since Monday profit-taking checked the pace of the recovery. The Reserve Bank of India's announcement lifting restrictions on credit against paddy and rice just on the eve of the busy season was the turning point which arrested the lethargy and gave sufficient provocation to bulls to shake off their indifference. Even then business passing was small but all the same a stage of recovery set in. Genuine investment was negligible in view of the proximity of further new issues of capital.

The announcement by the Reserve Bank increasing its bill discount rate by ¼ per cent. to 3.5 per cent. did not have any effect on trading, because this was only an adjustment to the hardening rate in the money market. The stock market is dried of funds, and any measure to increase supply would be welcomed. In money market circles, the suggestion has been made that a measure to ease the present tight situation would be to offer advances against import bills. With the remarkable increase in imports of both industrial raw materials and machinery, huge sums are regularly blocked in import bills. With the longer time now ships take to reach India *via* the Cape of Good Hope, the above suggestion is well worth consideration by the Reserve Bank of India.

Judging from the buoyancy in the jute goods market, jutes should have accounted for a fairer outturn and an equally fairer rise in prices. However, the general shrinkage of funds and the uncertainty about an improvement in the working results of mills affected sentiment.

In coals, Burrakurs were exceptionally strong. Opening at Rs. 17-6, they rose to quote at Rs. 18-11 by Monday. There was some amount of profit-taking yesterday, and the rate sagged to Rs. 18-6. Central Indias were fractionally better at Rs. 7, while Bengals declined from Rs. 488 to Rs. 484. Western Bengals, at Rs. 6-6, put on an improved appearance.

Greater interest was shown in minings. Karanpura Developments moved up to Rs. 18-9 from Rs. 18-2, while Indian Coppers recovery to Rs. 4-6 was just a temporary phase, as they gave way to Rs. 4-5. Burma Mines met with business at Rs. 2-13, as against Rs. 2-12 previously.

Engineerings followed the general trend of the market. Indian Irons improved to Rs. 33-11 from Rs. 33 to close at Rs. 33-4. Likewise, Texmacos finished at Rs. 22-4 after rising from Rs. 22-7 to Rs. 22-15. On balance, at Rs. 35-8, Jessop & Cos. were lower by As. 4, while Indian Standard Wagons improved to Rs. 221-8 from Rs. 220.

Among shippings, India Steamships rose to Rs. 10-6 from Rs. 9-12 following the publication of strikingly good results for the year ended March 1956. The declaration of a dividend of 10 per cent., as against *nil* for the previous year, has made the counter an attractive possession. With the rapid increase in Indian participation in carrying the country's foreign trade, the future of the Company is assured and great.

In the miscellaneous industrials section, Indian Cables recorded a smart rise from Rs. 33-2 to Rs. 34-8 on good dividend prospects. Metal Boxes realised Rs. 29-10, as against Rs. 29-6 a week before. Indian Aluminiums hardened to Rs. 16-11 from Rs. 16-5, while Dunlop Rubbers fell from Rs. 27-8 to Rs. 27-1 and Imperial Tobaccos from Rs. 14-7 to Rs. 14-1. B.I. Corporations closed at Rs. 10-9 after recovering from Rs. 10-9 to Rs. 10-13.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *20th November*

The crisis in the Stock Exchange which followed the publication of the Plantation Labour Award abated during the week under review. In fact, the market depicted a firm trend. The firmness was aided principally by the grant of an interim stay of the Award by the Supreme Court, pending the hearing of the Madras Planters Association's petition four to six weeks later. The fixation of minimum prices for planting company shares, together with the modifications of rules regarding delivery of documents in respect of transactions, also had a significant effect on the market. Reports of expansion of several cotton mills, too, imparted strength to the market.

Coffee shares evoked good buying enquiries, thanks to hopes of the companies recovering from consumers a portion of the increased cost arising from the Award. Cochin Malabars jumped up by Re. 1-3 to Rs. 10-4. Coffee Lands spurted by Re. 1-2 to Rs. 26-2. Consolidateds rallied As. 8 to Rs. 19-8. Amalgamated Coffees were fully maintained at Rs. 12-10. Rubber shares were firm on similar hopes of reduced incidence of the Award; the hopes were based on the fact that rubber prices were fixed by the Government of India on the advice of the Tariff Commission. Kailas registered a rise of As. 10 to Rs. 6-6. Rajagiris advanced by As. 4 to Rs. 24-12. Thirumbadis gathered 18 pies to Rs. 2-4-6. Malankaras were steady at Rs. 30, as also Kalpettas at Rs. 31-4. Pullangodes at Rs. 3-2 *ex-right* and Be Bes at Rs. 4-15 *cum-div.* Among tea shares, Periakaramalais strengthened by a rupee to Rs. 8-10. Talayars hardened by As. 4 to Rs. 11-12. Nelliampathys improved by As. 3 to Rs. 3-8. Peermades were firm at Rs. 31-4 *cum-div.* (interim). Perksides, however, were neglected at Rs. 18-6 *cum-div.* (final), as against Rs. 18-6, reflecting the operators' disappointment over dividend. The Directors of the Perkside Estates Co., Ltd., have recommended a final dividend of 10 per cent. on ordinary shares for the year ended 30th June 1956, bringing the total to 15 per cent., as against 25 per cent. for the previous year.

Textiles elicited excellent attention of traders on reports of capital expansion by several mills. Rajalakshmis were in the limelight, their quotation advancing by Rs. 20 to Rs. 185. Metturs forged ahead from Rs. 442-8 to Rs. 46. Lakshmis climbed up by Rs. 17 to Rs. 275 and 'A' shares by Rs. 9-8 to Rs. 137-8. Coimbatore Cottons put on Rs. 13 to Rs. 405. Janardhanas and Premiers moved up by Rs. 10 each, the former to Rs. 112 and the latter to Rs. 280 *cum-right*. Anglo-Frenchs, Coimbatore Pioneers and Spinnings gathered Rs. 7 each to Rs. 107, Rs. 305 and Rs. 97, respectively. Ranga Vilas improved by Rs. 6 to Rs. 92, Venkatesas by Rs. 5 to Rs. 180, Buckinghams by Rs. 4-8 to Rs. 200 and Vijayakumars by Rs. 4 to Rs. 144. Dhanalakshmis were better by Rs. 3 at Rs. 398.

Good buying enquiry was in evidence in the banking section. East India Distilleries advanced by Re. 1-12 to Rs. 30. Andhras picked up Re. 1-4 to Rs. 12-12. Deccans gained a like amount to Rs. 12-6. Indias were fully maintained at Rs. 16-6, Mysores at Rs. 46 and United Breweries at Rs. 215. Travancores were done at Rs. 14-10 *cum-div.*, as against Rs. 13-3. The Directors of the Travancore Sugars and Chemicals Ltd. have recommended a dividend of 10 per cent. on ordinary shares for the year ended 30th April 1956, which compares favourably with 7½ per cent. for the previous year.

Among *miscellaneous* industrials, Textools were in special request, their quotation rising by Rs. 11 to Rs. 266 *ex-div.* F.A.CTs gathered As. 6 to Rs. 6-12 and Mettur Chemicals As. 3 to Rs. 10-3. Ranes changed hands at Rs. 14-8 *cum-right*, as against Rs. 12-4. Rane (Madras) Ltd. has obtained sanction from the Controller of Capital Issues for the issue of 45,960 ordinary shares of Rs. 5 each as bonus to the ordinary shareholders as on 15th December 1956 in the ratio of one bonus share for every share held by capitalising a sum of Rs. 2,29,800 out of reserves. Mysore Papers were subjected to selling and dropped As. 10 to Rs. 17-6. Sen-Raleighs receded by As. 8 to Rs. 14-8. Dalmia Cements lost As. 6 to Rs. 14-10 *cum-right* and India Cements As. 4 to Rs. 30-4 *cum-div.* (interim).

'INVESTORS' CHART' AND 'COMMERCIAL CHART'

One of the most useful means of providing a guide to investors in shares and traders in commodities is the presentation of price fluctuations through charts. Mr. Mukund Guruji, cotton, bullion and share broker, Bombay, has been rendering this useful service for some years past and has kept the tradition this year also, by bringing out two attractive charts, namely, the *Investors' Chart* and the *Commercial Chart*.

The *Investors' Chart* presents the weekly highest and lowest prices of eight leading and active shares on the Bombay Stock Exchange from 1951 to the first week of October 1956. The scrips chosen are: Tata Steel Ordinary, Indian Iron, Bombay Dyeing, Kohinoor, Century, Bombay-Burmah, Associated Cement and Scindia. Mr. Guruji's method of presentation of the fluctuations in distinct colours makes the reading of the chart easy and provides a real guide.

The *Commercial Chart* gives the weekly highest and lowest quotations of cotton Jarilla, castorseeds and bullion and weekly closing prices of groundnuts. In cotton and castorseeds, the forward delivery prices are chosen, while for groundnuts and bullion the ready delivery quotations are given. Except in the case of cotton, the price movements are given for the period from 1951 to the first week of October 1956. In respect of cotton, the chart covers the period from 12th November 1952 to 5th October 1956, because the forward market had remained closed from 25th May 1950 to 11th December 1952.

The charts are printed on good paper and are priced Rs. 5 each.

NEWS IN BRIEF

THE Government of Bihar has declared the sugar industry in the State to be a public utility service for six months with effect from the 10th inst.

The Indian railways lifted 114.05 million tons of goods in 1955-56, 7.8 per cent. more than in the previous year. Goods earnings during this period improved by Rs. 21.48 crores to Rs. 177.43 crores.

The Union Government is considering the question of granting liberal loans to the private sector for the development of shipping, according to Mr. O. V. Alagesan, Minister for Transport. These loans are estimated at Rs. 17 crores during the second Plan period.

The Punjab Government proposes to construct a three-mile tunnel at a cost of Rs. 4½ crores for providing irrigation to Gurgaon, Delhi and Rajasthan. The tunnel which will have its water-supplies from the Western Jumna Canal would, when completed, irrigate 400,000 acres of land.

Oil production in India is expected to go up to seven million tons by 1961 and the Government proposes to spend Rs. 30 crores for oil exploration in the second Plan. The present production in the country is 400,000 tons, as against a consumption of four million tons. A programme involving an outlay of about Rs. 9 crores has already been accepted by the Government.

A cement factory with an annual production capacity of 200,000 tons is to be set up in Pondicherry as one of the major industrial projects under the second Five-year Plan. The necessary licence for the setting up of the plant has been granted to a Madras industrialist. The licence stipulates that the factory should start production within a period of 18 months.

The Union Government proposes to set up a factory for the manufacture of diesel engines shortly at Visakhapatnam. The factory, according to Mr. K. C. Reddy, Union Minister for Production, will be entirely a State undertaking and will concentrate on the production of marine diesel engines. There are also plans for the construction of a dry dock at Visakhapatnam which can berth ships with a tonnage of 20,000.

The Tariff Commission has taken up for investigation the claim of the calcium lactate industry for continuance of protection beyond 31st December 1957. It proposes to conduct a public inquiry sometime in the third week of next month. Firms, persons or associations interested in this industry or in industries that consume calcium lactate are asked to submit their views to the Secretary to the Tariff Commission, Bombay.

The Central Minimum Wages Advisory Board has made certain recommendations in regard to the fixation of hours of work and rest intervals for agricultural labour. The consensus of opinion among the members of the Board is that there need not be any exemption in the matter of fixation of hours of work and rest intervals in the case of agricultural employment. The recommendations have been brought to the notice of State Governments for their consideration.

Twenty-one schemes for the manufacture of cement, envisaging an annual production capacity of 3,785,500 tons, have been approved recently by the Government of India. Fifteen of these schemes involve the setting up of new factories, while the rest are aimed at substantial expansions of existing units. Meanwhile, manufacture of Pozzolan, a substitute for cement, is being experimented at Bhakra. Pozzolan, it is said, will result in increased economy and efficiency in the production of concrete.

With the recent acquisition of a cargo vessel and a tanker aggregating 12,400 tons by two shipping companies, India's shipping tonnage has crossed the half-million-ton mark. The shipping tonnage stands today at 511,077 G.R.T. The first Five-year Plan envisaged a rise in shipping tonnage from 390,707 G.R.T. to 600,000 G.R.T. by 1956. Indian shipping companies have now some 36 vessels under construction in India and foreign yards, the tonnage of which aggregate some 200,000 G.R.T.

The Governments of India and Pakistan signed letters of agreement on the 14th inst. at New Delhi for the import of 105,000 tons of cement from Pakistan into India against the contract entered into sometime ago by the Indian State Trading Corporation. Arrangements have also been made for the supply to India, by West Pakistan, of 30,000 tons of cement in exchange for the supply of a similar quantity of cement by India to East Pakistan. Pakistan had sought this facility in order to avoid transport problems.

An Export Promotion Council for leather has been formed with the support of the Government of India in order to maintain and promote the export of tanned hides and skins and leather goods. This is the eighth in the chain of such councils sponsored by the Government to maintain and develop export markets for Indian products. The other seven councils already in existence are those for cotton textiles, silk and rayon, plastics, engineering goods, cashew and pepper, tobacco and mica. The Joint Chief Controller of Imports and Exports, Madras, is the Chairman of the Council. It has as its members representatives of the industry and trade.

Strike notices have been served by units of the I.N.T.U.C.-sponsored Bihar Colliery Mazdoor Sangh on the managements of 56 collieries in the Jharia coalfields. The miners who will go on strike from 1st December have demanded withdrawal of a notice served under the Industrial Disputes Act by managements concerned for the termination of an agreement arrived at several years ago between labour and managements at the initiative of the former Chief Labour Commissioner of the Government of India, Mr. S. C. Joshi. The agreement, known as the Joshi Agreement, relates to conditions of service and wage rates for specified types of work.

* * * *

From Abroad

The average earnings of factory workers in the U.S. reached a new high of $82 a week in October 1956. At the same time, a new October employment record of 66,174,000 was achieved.

Japan is expected to buy a Calder Hall type atomic power station from the U.K., if the various points of detail raised by the Japanese mission which visited the U.K. recently are settled satisfactorily.

The U.S. Department of Commerce has reported that 1,075,000 U.S. citizens travelled abroad in 1955 and spent $590 million during their tour. In Europe and the Mediterranean area, 482,000 Americans spent nearly $427 million.

Negotiations are progressing between British and Spanish banks for the conclusion of a credit of about £20 million to supply Spain with British-manufactured hydro-electric and ancillary machinery. An agreement is expected to be reached shortly.

Ten more locomotives purchased by the Iranian Government from the American General Motors Corporation have arrived at the Persian Gulf port of Bandar Shahpur. This brings to 40 the number of U.S. locomotives in Iran. Thirty others are to be shipped shortly. They were purchased through a U.S. Import-Export Bank loan.

The foreign trade of West Germany reached a new peak in October 1956. Exports amounting to £245 million were 23.7 per cent. higher than in October 1955 and imports of £233.8 million were up by 19.6 per cent. Germany's trade surplus for the January to October period aggregated £188.1 million, as compared with £153 million in the corresponding period of 1955.

The British and European shipping companies operating in the Persian Gulf, which recently imposed a 15 per cent. surcharge on freight rates following the blocking of the Suez Canal, have further raised the surcharge to 20 per cent. with retrospective effect from 7th November. The companies consider that the 15 per cent. surcharge is sufficient to cover the additional charges of re-routing the ships round the Cape of Good Hope.

Four Japanese technicians are due to leave for a six-week survey of the market for diesel engines in Argentina. The mission will explore the possibility of exporting medium and light engines for lighting and agricultural purposes in rural areas. The team is sponsored by the Japanese Export Plant Technical Association, the members of which are industrial equipment producers.

It is reported that Japanese officials foresee no immediate problems regarding the supply of oil and other raw materials as a result of the hold-up in traffic through the Suez Canal. A shortage of vessels, however, is feared and, consequently, Japanese operators are attempting to charter foreign ships on a long-term basis. Also, the Government is drafting a plan to restrict the chartering of Japanese vessels by foreigners.

The American Merchant Marine Institute has announced that world shipbuilding this year has reached its highest peak since the World War II construction boom. On completion of present construction, the total ocean-going merchant marine fleet will be 80 per cent. larger than in 1939 and 27.8 per cent. larger than it is now. All countries have shared in the increased tonnage on order last year, except Russia and Finland.

Tramp shipping rates have reached such high levels over the past few months that very old merchant ships unable to operate profitably at lower and more normal rates have now been put back into service. Statistics published by the Chamber of Shipping show that only 45,054 gross tons of merchant shipping were laid up for reasons other than repair in British ports at the beginning of October, the lowest tonnage figure for 4½ years and 58,019 tons lower than a year ago.

Two major British concerns—Anglo-Saxon Petroleum Company and Imperial Chemical Industries—are currently interested in new investment projects in Japan. The former has made a £8,793,750 loan to its subsidiary company—Showa Oil Company—for the construction of an oil refinery with a daily capacity of 40,000 barrels. This will be the largest refinery in Japan. The I.C.I. proposes to establish technical links with two Japanese firms for the manufacture of terylene.

The Japanese Foreign Office has created an Economic Co-operation Committee, headed by Mr. Morio Yukawa, Chief of the Foreign Office Economic Affairs Bureau, to strengthen commercial ties with South-East Asia and Latin America. The Committee will investigate the lag in Japanese private investment in the underdeveloped countries. It will also study questions relating to the creation of overseas investment organs, determination of the enterprises most suitable for foreign investment and revision of Japanese legislation covering governmental financial support of foreign investment.

PERSONAL

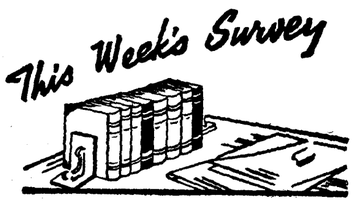
PRIME Minister Jawaharlal Nehru has accepted the invitation of the U.S. President to visit the United States of America. He proposes to reach Washington on 16th December 1956 and will proceed to New York on the 20th.

Mr. Chandra Shekhar Jha, at present Joint Secretary in the Ministry of External Affairs, has been appointed Ambassador of India to Japan. He will assume charge of his new post towards the middle of February next year.

Mr. F. Edwards of The Belapur Co., Ltd., and Mr. S. K. Somaiya of the Godavari Sugar Mills Ltd. have been elected President and Vice-President, respectively, of the Deccan Sugar Factories Association, Bombay, for the year 1956-57.

Mr. J. K Doshi has been elected Chairman and Mr. E. C. Pavri, Vice-Chairman of the Bombay Regional Council of the Institute of Chartered Accountants of India, for the year 1956-57.

Mr. A. J. John, a former Finance Minister of the old Travancore-Cochin State, has been appointed Governor of Madras, *vice* Mr. Sri Prakasa, appointed Governor of Bombay. Both are expected to assume charge of their respective offices early in December.



REGULATION OF INDUSTRIES

THE first reading of the Bill further to amend the Industries (Development and Regulation) Act 1951 had a smooth passage in the Lok Sabha last week. The proposed addition of 31 more industries to the schedule of 42 industries already under Central Government control was welcomed by many members in the House as a fresh move towards planned industrial development. It was, however, three assurances given by the Minister for Heavy Industries, Mr. M. M. Shah, that ensured for the Bill a smooth passage. They were: (1) All cases of delay or bias for or against any particular industrialist in granting licences will be looked into and expeditiously disposed of; (2) the Government will pay full attention to the interests of the underdeveloped regions in fixing priorities for opening new industries; and (3) a council for the development of non-ferrous metals will be set up shortly.

By giving these assurances, Mr. Shah has certainly shown due respect to the points raised by the spokesmen of the private sector in Parliament. During the debate, Mr. G. D. Somani criticised the Licensing Committee for the abnormal delays in granting licences for the starting of new industries and urged the Government to see that applications for new licences were put before the Committee within a month of their receipt. When the Committee rejected an application, the concerned party should, he suggested, be given an opportunity to appeal to the higher authorities. Mr. Somani also suggested the creation of a special development wing in the Ministry of Heavy Industries to help industrialists who secured licences for new industries till the units went into production. Mr. Shah was, however, silent on this plea, as well as on the suggestion, put forward by Mr. G. L. Bansal, that the industrial undertakings which have closed down should be allowed to reopen after registration and that there should be no insistence on their taking out fresh licences as provided for in the Bill. Mr. Bansal's suggestion is quite pertinent and will, if accepted, help save for the unit concerned the licence fee and also avoid a lot of delay which otherwise would occur through the undertaking having to take out a fresh licence.

FREE TRADE AREA

One of the important items that came up for discussion at the Geneva session of the G.A.T.T. —the session still continues—related to what is now familiarly called the "Free Trade Area Scheme." The discussions covered the plans of the six European coal-steel community nations to create a common market or customs union, as well as studies within the O.E.E.C. for a wider free trade area and liberalisation measures. No detailed account of either the discussions or the decisions taken at the session is available yet. Press reports, however, reveal that the coal-steel community nations expressed their willingness to submit for consideration to the G.A.T.T. any treaty that might have been drawn up after its signature but before its submission to Parliaments for ratification. At the end of the debate, the Contracting Parties agreed that, on the question of O.E.E.C. liberalisation, the appropriate course for countries having particular problems in this connection would, in the first instance, be to have recourse to Article 22 of the G.A.T.T. They also agreed to include plans for tariff reduction on the agenda of the next session.

In the course of the debate, Mr. T. Swaminathan of India whole-heartedly supported the idea of forming a union leading towards closer economic integration, subject to the condition that there was no attempt to reduce the trade of other countries. Emphasising that India's trade with Europe should not be reduced, he said: "The Government of India will study the customs union and free trade area proposals with extreme care." This is only as it should be, considering the far-reaching implications of the proposals. Whatever may be the ultimate decision of the Government of India, as also the Governments of other countries, due care must be given to ensure that the proposals will not result in a restricted regional arrangement contrary to the spirit and the objectives of the G.A.T.T.

RURAL CREDIT IN ASIA

The fact that the population dependent upon land continues to form a large proportion of the total population in Asian countries and that the revolutionary land reforms are drying up the traditional sources of finance lends a new urgency to the search for solutions for the rural credit problems in this region. No one can pretend that the problems are easy of solution. But it is significant that, in nearly all the countries, the authorities are alive both to the gravity and the magnitude of the issues involved. Nearer home, the All-India Rural Credit Survey did much to spotlight the unconscionably high rates of interest charged by moneylenders in the villages and the comparatively minor, and even practically insignificant, role played by the organised credit institutions, namely, the co-operatives, the Government agencies and the commercial banks. The Survey showed that, while the agricultural moneylenders and professional moneylenders dominated the rural credit scene—they account for nearly 70 per cent. of the credit made available to the farmers—the Government agencies accounted for a mere 3.3 per cent. of the total rural credit needs and the co-operatives for no more than 3.1 per cent. of such needs. Again, some areas are virtually a paradise for moneylenders who charge anything up to 70 per cent. by way of interest. In Orissa, for instance, the loans borrowed at over 25 per cent. interest form 70 per cent. of the farmers' borrowings, the proportion for W. Bengal being 40 per cent., and for U.P. 29 per cent.

It is hardly to be expected that conditions in other parts of Asia should be very different from those in India. Indeed, this is confirmed by the findings of a report prepared by the joint agriculture division of the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.) and the Food and Agriculture Organisation (F.A.O.). The most important feature of agricultural credit in Asia, the report emphasises, is the overwhelming part played by moneylenders. Only in Japan have co-operatives had a larger share; they account for over one-third of all borrowings by farmers, as against 3 per cent. in India and 14 per cent. in Thailand. The interest rates are also high in all Asian countries. If they may go up to 70 per cent. in India, the Philippine moneylenders will sometimes charge as much as 400 per cent. In Thailand, relatives charge about 18 per cent., village shopkeepers 28 per cent., moneylenders 31 per cent., and landlord or agricultural moneylenders 45 per cent. Interest rates range between 50 and 100 per cent. in Indonesia. Of the countries of the E.C.A.F.E. region, only Japan has a well-developed co-operative credit system; there, co-operatives handle 74 to 92 per cent. of the foodgrains (rice, wheat, barley, etc.) sold by producers, and in a number of other commodities they handle about 50 per cent. Interest rates in that country have been brought down to between 5 and 10 per cent. Moreover, a large proportion of loans from relatives in Japan are believed to be free of interest.

The prevailing high rates of interest, according to the report, are a reflection of the weak position of the small farmer and of the lack of banking institutions and co-operatives in rural areas. To some extent, the problem is aggravated by tenancy conditions and the tie-up between credit and marketing. Further, the pressure of population on land is heavy in all the countries of the region and is continually increasing. Thus, the net area sown per head of the population has declined by 24 per cent. in 20 years in India and by 32 per cent. in 30 years in the Philippines; in 13 selected countries, the *per capita* area under cereals decreased by 9 per cent. in 27 years. In certain Indian States, one-half to two-thirds of the annual holdings are of less than five acres; in East Java over 95 per cent. of the farmers have only one to two acres; in the Philippines nearly one-fifth and in Thailand 15 per cent. of the total holdings are less than one hectare in size. The tenancy problem is acute in many countries. In the Philippines, about 42 per cent. of the cultivators are tenants. In Thailand, about one-fourth of the area covered by holdings of 4.8 hectare and above in the fertile central plain is being cultivated by tenants without practically any security of tenure. Over large areas, share croppers have to pay 50 per cent. or more of the crop as rent. In Japan, however, the proportion of the area cultivated by tenants has declined from 40 per cent. of the total land in 1947 to a mere 9.34 per cent. in 1952.

Against this background of high interest rates and small holdings, the report finds that a complete reorganisation of the agricultural credit structure appears desirable. Co-operatives, it is stated to be generally agreed, provide the best basis for agricultural credit. But governments will have to assume the major, if not full, responsibility for providing funds. Co-operatives, it is urged, have to adopt an integrated approach to credit and marketing activities and have to begin dispensing credit on the basis of the repaying capacity of the borrower rather than on the security of his immovable property. It is not, however, clear whether the report has examined the larger question, namely, whether it is right that co-operatives should thrive on finance provided by the government or why commercial banking has not penetrated to rural areas. But the report has rightly stressed that in order to break the vicious circle of "poverty-debt-and-high-interest-rates," measures designed to raise agricultural productivity must go hand in hand with improvements in the credit system.

DEBATE ON TARIFF BILL

It is not surprising that the debate on the Indian Tariff (Amendment) Bill, 1956, passed by the Lok Sabha on Thursday last week, was dull and drab. For the Bill did not incorporate any change in the official tariff policy; it merely sought to give statutory enforcement of the decisions already taken by the Central Government as a sequel to the recommendations made by the Tariff Commission. Thus, the Bill aimed at granting protection to the calcium carbide industry till 31st December 1958 and continuing protection to fourteen other industries, including sago globules and tapioca, pearls, cocoa powder and chocolate, non-ferrous metals, ball bearings, bicycles (including parts and accessories thereof), and power and distribution transformers.

In the course of the debate, some members complained of delay in the submission of recommendations by the Tariff Commission and their implementation by the Government. Mr. G. L. Bansal, for instance, said that the Commission had for some time past been slow in its work and that the Government, despite a statutory provision stipulating three months for taking action on the recommendations, had invariably taken more time. In his reply to these complaints, Mr. M. M. Shah, Union Minister for Heavy Industries, agreed that there was a reduction in the number of reports submitted by the Commission during 1955-56, but attributed the delay to two factors. First, the Commission was asked to go thoroughly into two major industries, namely, locomotives and automobiles. Secondly, it had also been asked to go into the cost of production of certain units, bearing in mind the interests of consumers. Claiming that the Commission was dealing expeditiously with all references made to it for protection of industries, Mr. Shah gave the assurance that due care was being exercised by the Government to avoid delays. He even declared that, if it became necessary to expand the Commission or to augment its staff, the Government would take action on those lines.

The calcium carbide industry figured prominently in the debate. The consensus of opinion among the members was that the industry required tariff protection. Some were, however, indignant as to why it had not been possible for the industry to manufacture calcium carbide at the cost at which foreign agencies were supplying it in India after bearing the transport cost. To quote a member: "All the raw materials for the manufacture of calcium carbide are available in India and there should be no difficulty in producing this product at a lower price." The Government was, accordingly, urged to ensure that proper price was charged for the product. It was also urged to take steps to ensure that the purity of the product was maintained and that uneconomic units were made economic. Mr. Shah's reply to these observations was as follows:

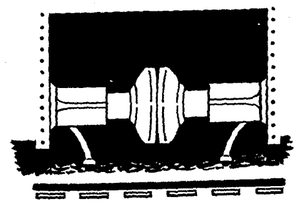
"The cost of production of calcium carbide by the unit near Calcutta cannot be reduced, because of the high cost of electricity and the bad quality of limestone. This unit has been authorised to expand its production, so that its overhead charges can be reduced. Four more units for the production of calcium carbide have been licensed, but some technical difficulties have to be overcome."

Another industry which figured prominently in the debate was fruit preservation. One of the members criticised the Government's policy of allowing imports of even fruit products which are easily available in the country. The Government, said he, had not done much to help promote the industry. This charge was stoutly refuted by the Minister for Heavy Industries. He revealed that the Central Food and Agriculture Ministry had taken a number of steps to promote the fruit preservation industry. It was proposed, according to him, to spend Rs. 1.25 crores in the next few years for developing the industry. The steps already taken had borne some fruit; the production had gone up from 9,000 tons in 1952 to 20,000 tons now.

U. S. TRADE POLICY

The Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.) have done well to refer to a working party the examination of the American Government's second annual report on the waiver, granted on 5th March 1955, in connection with the U.S. Agricultural Adjustment Act. This waiver, it will be recalled, permits the U.S. Government to apply "conflicting measures" with a view to solving the problem of agricultural surpluses, subject to the latter's assurance that it would take steps for the gradual elimination of restrictions on imports. The U.S. Government, it is stated, has not

(*Continued on next page*)



Probably not—unless, of course, you're building railway wagons! Bogie bolsters provide the pivot point and carry the load too. Naturally we, at Mukand, *are* interested in bogie bolsters because we manufacture them. But they are only one of the many items we cast for the railways. Among the others are:

buffer plungers and casings, axle boxes, cross heads, drag castings, bogie columns, steam elbows, brake hanger compensating beam brackets, etc.

The Second Five Year Plan calls for a total of 1,20,869 *new* locomotives, coaches and wagons. All this means that there will be a vast demand for railway parts. The Mukand steel foundry—one of the few casting these—is working round the clock to meet the needs of Indian Railways. By 1958 we plan to produce at least 7,800 tons of steel castings annually. And as our expansion programme gathers momemtum we at Mukand will contribute more and more to India's industrial progress.

are you interested in Bogie Bolsters?

Ports measure the nation's pulse...

Watch the cranes at any one of our six major ports—loading India's produce into ships and unloading the raw materials she must have. It is in these ports that the economic pulse can best be measured. And as the economy expands, the pulse beats faster.

During the next five years Rs. 71 crores will be spent on developing major ports and harbours, and five crores for some 150 minor ports along India's coastline. Also four crores will be used to build new lighthouses and modernize existing ones.

In most of India's big ports, ships are fuelled by the Bunkering Service operated by Burmah-Shell. We supply many special lubricants for vessels of all kinds; diesel oil and petrol for port equipment; bitumen for surfacing dock roads and roofs; and grease for slipways...in fact we are rather proud of our part in India's nautical life.

BURMAH-SHELL

PROBLEMS OF FOREIGN TRADE DISCUSSED

MR. MORARJI DESAI MAKES GOOD IMPRESSION

By A Special Correspondent

NEW DELHI, 20*th November*

DELHI LETTER

SOME divergent views were expressed at the Import and Export Advisory Council meetings held here last Saturday and Sunday. Mr. Morarji Desai, the new Minister for Commerce, Consumer Industries and Heavy Industries, who took charge of the portfolios only on the 14th instant, addressed both the meetings briefly. This was by way of inauguration. In doing so, he did not elaborate his viewpoint and left the details to his deputy, Mr. Karmarkar. Mr. Desai, however, appeared to be somewhat forthright in expressing his views. He appealed to the industry to co-operate fully with the Government in conserving the much needed foreign exchange.

He pleaded for complete co-operation from the industrialists in cutting down imports of non-essential goods and in postponing importation of some other commodities to better times, particularly of such items which could await such postponement. He referred to the recent developments in West Asia and said that, at the present stage, it was not possible to gauge the impact of such happenings on India's import trade, particularly where imports of plant and machinery were concerned. The idea behind was, as he emphasised later, to cut down imports to the minimum levels of consumer goods, with a view to conserving India's foreign exchange resources for the import of essential machinery and industrial raw material for implementing the second Plan.

Imports, he added, had their essential impact on the development of indigenous industries. Therefore, in the interest of providing incentives for the growth of indigenous industries, he said, "we have to curtail import of many items which ordinarily we may have allowed." He appealed to the trade to co-operate fully with the Government, so that the latter would not be placed in an embarrassing position of saying "no" to the trade; but, if the trade did not come forward to do this, then he warned that the Government would have to be strict.

Giving some details of the pattern of India's import trade, Mr. Karmarkar pointed out that the recent international developments were rather disturbing and might even cause considerable dislocation in India's import trade. The additional freight charges, the increased cost of insurance, dislocation and delay in supplies, the diversion of shipping round the Cape of Good Hope consequent upon the closure of the Suez Canal, all these would result in an appreciable shrinkage in the volume of cargo that could be carried to and from India's ports. The present situation, Mr. Karmarkar added, gave a new note of urgency to reorient the country's foreign trade, compelling both the Government and the trade to think in greater detail and in broader terms than before with a view to achieving the larger objective of economic development of India quickly in the coming years.

Trend of Trade

In his opinion, India's current foreign exchange resources could not be expected to finance the development programme envisaged in the second Plan. Unfortunately for the country, exports were running at a lower level than was hoped. During the second half of 1955, India's exports stood at a value of Rs. 313.47 crores, while they fell to Rs. 290.23 crores in the first six months of the current year and amounted to only Rs. 92.07 crores in the months of July and August last. On the other hand, imports had increased to Rs. 385.75 crores in the first half of the current year from Rs. 323.46 crores in the second half of 1955; and during the two months of July and August last, imports had amounted to Rs. 125.91 crores. The result was that India's adverse balance of trade had increased from Rs. 9.99 crores in the second half of 1955 to Rs. 95.92 crores in the first six months of the current year. During the two months of July and August 1956, the adverse balance of trade stood at Rs. 33.84 crores.

This position, Mr. Karmarkar said, cast a heavy responsibility on all in the country. With a view to balancing the country's foreign trade, every nerve had to be strained to see that commodities that could be produced within the country were not imported and only minimum quantities were allowed to be imported that were absolutely needed for the implementation of the second Plan. It was, therefore, essential, Mr. Karmarkar said, "for us to so adjust our import policies and procedures as to secure maximum possible economy in the expenditure of foreign exchange and largest possible diversion of goods that are required to feed our developing industries."

More Production Needed

Addressing the Export Advisory Council, Mr. Morarji Desai said that India should export more and agreed with the views expressed by the exporters assembled at the meeting that the country should be able to ship more of finished goods instead of raw materials. He was, perhaps, thinking aloud when he asserted that exports of some articles and commodities, which were in keen demand in foreign countries, could not be freely allowed unless price levels within the country were kept up. In other words, he was of the opinion that the bulk of the poorer sections of the people in the country should not be put to undue and untold hardships and sufferings as a result of allowing large exports of such essential goods as vegetable oil and cloth simply for the purpose of earning foreign exchange. The remedy, therefore, Mr. Desai said, lay in the hands of the industry. The industry had to produce more, in order to be permitted to export such goods and at the same time be in a position to ensure stabilisation of internal prices of these commodities.

Mr. Karmarkar, who addressed representatives of the export trade after Mr. Desai, said that the actual performance of the country's export trade in the first nine months of the current year had not been very reassuring. During this period, India had earned only Rs. 439 crores of foreign exchange, which compared unfavourably with Rs. 457 crores during the corresponding period of nine months in 1955. The comparatively low earnings might be due partly to a fall in the external price level of the commodities that figured in India's export trade. The index of declared values for the half-year ended June 1956 stood at 91, as compared with 94 for the corresponding period in 1955. But the consequences of this downward trend had been to some extent offset by a slight improvement on the quantitative side; because the volume index stood at 109 for the first half of the current year, as against 108 for the corresponding period in the previous year. With the increasing pressure of home demand for domestically manufactured goods, the Minister for Trade said, the internal price level was also going up. If this pressure continued to rise, then it was quite possible that India's exports might be jeopardised to some extent.

Despite the fact that Mr. Morarji Desai had assumed his new office only just three days before he addressed the Export and Import Advisory Councils, he was able to show a certain amount of grasp of the subjects. During the discussions in which he took keen interest, he displayed a freshness of outlook by putting forth a number of arguments in favour of or against, as the case may be, disclosing thereby a keen and alert mind. He was able to impress everyone assembled at the meeting that the person who has come to guide the business of India's trade and industry would not be found wanting in any way. On the contrary, everyone felt that he would prove equal to the task.

Evidence of these qualities was manifest when Mr. Desai stressed with force and logic the need for encouraging quality control of finished goods meant for export. Besides their own individual gains, the industrialists had to remember, Mr. Desai said, that India's fair name was involved in every such transaction. No sacrifice would be too great, he said, for preserving the fair name of India abroad and in that task the role exporters had to play was not in any way insignificant. A great responsibility devolved on them and he hoped they, too, would rise to the occasion.

India's export trade could make headway, Mr. Desai opined, mainly through increased production of certain commodities such as oilseeds, raw cotton, etc. The increase in production of raw materials should be adequate enough to cater to both the internal and the foreign markets. Although most of the export promotion sections of the trade are being encouraged by the Government, the results achieved so far are not tangible. Even in cloth, India's exports are confined mostly to coarse and coarse-medium mixed. Although India has been taking the second place in the export trade in cloth next only to Japan, the value of cloth exported by India is far below that of the U.K. In other words, while the U.K. has been exporting quality cloth and with finer designs, India is still content with manufacturing and exporting coarser and medium varieties. Unless and until Indian economy, not only in cloth but in many other manufactured articles also, improved to levels which are at par with some of the Western countries' production, India's competitive capacity in the export market would be less.

SURVEY

(*Concluded from previous page*)

taken any effective steps to implement the assurance. In fact, it proposes to continue the restrictions applied under section 22 of the Act. Presenting the report to the plenary session of the G.A.T.T. at Geneva the other day, Mr. Carl Corse, the U.S. delegate, for instance, clearly stated: "It will be necessary to continue the present level of restrictions for a further period of time."

The report of the U.S. Government evoked severe criticisms from several delegates, especially those from Denmark, Canada, New Zealand, Pakistan, Australia, Union of South Africa and the Netherlands. There was consensus of opinion among these members that, although, since the waiver was granted, the U.S. had reduced the number of commodity groups for which import controls are imposed, the most important controls still remained in force and there seemed little prospect of their removal. The progress made towards elimination of restriction was, it was contended, practically *nil*.

From the discussions held at the Geneva session of the G.A.T.T., it is abundantly clear that the grant of the waiver to the U.S. Government in connection with the Agricultural Adjustment Act has relieved the U.S. of substantial obligations under the G.A.T.T. The existence of the waiver, in the opinion of many, has a seriously damaging effect on the G.A.T.T. and on international trade. The surplus problem of the U.S is the result of internal agricultural policy. According to the New Zealand delegate, the situation existing in the U.S. has "grave repercussions" for countries which are vitally dependent on exports of agricultural products. These countries are adversely affected not only by the shutting out of the U.S. market against them but also by the mere existence of the huge surpluses overhanging the world market and the disposal of some of the surpluses overseas at concessional prices.

It is against this background that one has to assess the implications of the recent adoption of the Soil Bank proposals in the U.S. which are designed to reduce crops by taking land out of production. The proposals may no doubt be expected to lower the surplus stocks of agricultural commodities in the U.S. But it is argued that the proposals will, as Baron C. A. Bentinck, the Netherlands delegate, pointed out, still maintain the protective umbrella over world markets and, as a consequence, make necessary the isolation of the U.S. market as regards some agricultural products. Elucidating this point, Baron Bentinck observed:

"Apart from the protection given by the waiver, other complementary measures such as export subsidies are required and are likely to be required in the future. Most of the products supported by United States agricultural policy cannot be completely absorbed by the home market and, in my view, the Soil Bank alone will not bring production and home consumption into balance. Therefore, a part of the production has to find consumers abroad and, because of the high price levels in the United States, this is by no means an easy operation. A wide range of export incentives has been instituted. Many of them do not fully comply with the philosophy of G.A.T.T. and can harmfully interfere with the interests of other Contracting Parties."

There is, in the opinion of many Western observers, considerable force in these remarks of Baron Bentinck. Unless the U.S. Government takes more direct and positive measures, there is no hope, according to them, of the present imbalance in world trade being corrected and a free and multilateral system of trade being established.

MANAGEMENT IN ECONOMIC GROWTH

ADVICE TO BUSINESS MEN IN UNDER-DEVELOPED COUNTRIES

By Robert L. Garner

PRESIDENT, INTERNATIONAL FINANCE CORPORATION

[This article is adapted from the author's address to the First Inter-American Management Conference of the Pan American Council of the Comite International de l'Organisation Scientifique, held at Santiago, Chile, on 13th November 1956.—ED.]

TODAY, the shortage of industrial management and skills is greater than the shortage of capital. It is my belief that the greatest factor regulating the pace of industrial development in underdeveloped countries will be availability of people with experience and skills. For generations North America has presented the world the greatest opportunities for growth. Now its physical frontiers have largely been reached—the modern way of life has spread to every corner of the United States. Its economy has reached a certain maturity—though it continues to be marked by vigour, expansion and change. That the great masses of people in the underdeveloped countries are still living in their accustomed ways—in the traditions of their ancestors—is true. It is only in this generation that the motor car, the airplane, the spread of the printed word, radio and movies have opened their eyes to what others have, and have stimulated their desires to share in such abundance.

It is obvious, of course, that, in a number of places, some of them have made remarkable progress in expanding private industry, particularly during the past decade. Let no one discount what has been achieved. But, as compared to the possibilities, they have merely made a beginning. In reality, these countries are the new lands of opportunity. They provide the new frontiers. This is the way they should think of them. But, in order that the alluring vistas of this prospect shall not turn into a mirage, let us recognise some of the requirements which must be met if they are to convert their desires and possibilities into tangible and continuous accomplishment. These requirements have been worked out by trial and error elsewhere; they have been tested and proved. It is the part of wisdom for these countries to give them due weight.

First, let me make one or two general observations. During the years I spent in the World Bank, I participated in financing many projects in Latin America, and other underdeveloped countries, largely to provide basic facilities—power, roads, railways, ports—those things which industry needs to turn its wheels and move its goods. These facilities must, in large part, be supported by Governments. Their continued expansion is necessary to further growth. They require great sums of capital, usually more than can be found for all of such needs, so that many useful facilities which can only be provided from public sources must be deferred to the future. The World Bank has continually presented this argument when urging Governments not to engage their efforts and money in enterprises suitable for private capital. We have also pointed out the generally disappointing results from public operation of industrial ventures.

As a second general observation, experience has demonstrated the importance of political and financial stability, if economic development, particularly in industry and commerce, is to move with confidence and continuity.

Task of Business Men

Frequent changes of personalities in Government throughout the world, widely fluctuating currencies, unbalanced budgets, erratic administration—these things are much greater deterrents to the orderly carrying on of modern industry and business than to the farmer, living on his land, and to the small villager with his small shop or handicraft. These latter may ignore the ups and downs of shifting politics, but not the enterpriser risking his capital in factories and markets which take years to build and develop.

Thus, the business men, with their eyes on the future, have a self-interest and a responsibility to use their influence to promote public stability and orderly administration, even at the sacrifice of some immediate personal advantages. Perhaps, they can make progress in this direction if they promote a better understanding of how the private enterprise system works and how it can produce benefits for all, so that their Governments will be encouraged to create a climate in which they can profitably and usefully conduct their business, and attract foreign private enterprise to come in and work along with you.

Furthermore, I think it would be greatly in their interest to give due attention to the more widespread adoption of the standards of business practices which have been developed over the years in the countries of greatest experience and success in business enterprise—respect for the validity of contracts; pride in the quality of products; realisation that continuing business rests on mutual advantage of buyer and seller and upon the satisfied customer. These stadards are not merely honourable, they are likewise profitable.

Characteristics of Modern Industrial Systems

Now I should like to comment briefly on some of the fundamental characteristics of the modern industrial system as I have come to know it, particularly in the United States and Canada.

1. It is competitive, growing, changing; no business can survive by remaining as it was, or even as it is today. This leads to constant search for better management, machines, methods, skills.

2. Increasingly business becomes more complex. No longer is it sufficient to make a good product and allow the customer to buy it. It must be sold with skill and initiative. Furthermore, management must devote much of its effort to problems of taxes, labour and public relations, to planning ahead for the managers, plants and products of the future.

3. And it follows that, in large enterprises, business management has come into the hands of professionals who have replaced the dominant individual who started, built up and directed every aspect of the company.

Now management is a team, which needs, of course, to be headed by a man of competence, firmness and leadership but with great delegation of authority and responsibility to associates who have been selected and trained with little regard to their social or family ties.

4. This system imposes a discipline of work upon all engaged in it, from top to bottom.

5. Almost a unique element in this competitive system is that the producer sets his goal to reach the largest possible number of customers. Thus, he seeks constantly to reduce his cost and his price, so that more and more people can afford to buy. This principle of expanding volume by lowering prices has been predominant in American industry, with the automobile affording the most dramatic example. The history of North American enterprise proves that this is not only the most profitable policy for the owners and managers, but that it supplies the best goods to the most customers, all to the benefit of the country's overall economy.

I have analysed the industrial system as made up of the sizable corporations. I do not forget that the small enterprise, created and managed as an individual business, continues to play an important part in the North American economy and that new ones are being steadily created. The system has a real place for them, and, in the future, as in the past, the most successful will be the seeds out of which new big businesses will grow.

Role of Good Citizens

6. And, finally, to a remarkable degree, there has grown up among North American companies acceptance of the role of good citizens of the

REFORM IN THE USE OF CHEQUES

KEEN DISCUSSION IN BRITAIN

THE unanimous recommendation of the Committee on Cheque Endorsement (known as the Mocatta Committee) in Britain to do away with endorsement of order cheques by the payee when presented for payment through a collecting bank and the favourable reception by banks and business circles to the reform (*vide* page 934 of *Commerce* dated 17th November 1956) have set the British public thinking whether any more reforms are not called for in respect of drawing of cheques. In fact, ever since the publication of the Mocatta Committee report, various suggestions on this subject have appeared in a section of the British Press. Two of these stand out prominently. They are: (1) the practice of writing the amount on the face of the cheque both in words and figures should be simplified, by mentioning the amount in figures only, and (2) the two-penny stamp duty on cheques should be abolished or at least reduced.

It may be noted that the main consideration which weighed with the Mocatta Committee in recommending the abolition of endorsements on cheques was that a substantial saving of unproductive work would be achieved. The reform will be beneficial to banks, as well as to business concerns, because they handle quite a large number of cheques. So far as banks are concerned, it will save a lot of time and energy to their staff who have now to spend a lot of time in closely examining both sides of the cheques and scrutinising the payees' endorsements. It will also involve some economy in expenses. It is stated that banks in Britain spend £500,000 per annum in the examination of endorsements alone and an annual expenditure of £1 million is incurred by their customers in the endorsement and examination of cheques.

The other two suggested reforms mentioned above are mainly from the point of view of customers, but the first of them, namely, that the amount on cheques need be written only in figures, instead of in both words and figures as at present, will involve some risk to banks. Similarly the second suggestion, the one relating to stamp duty, will mean some loss to the Exchequer.

Those who advocate the first reform draw the analogy of writing the cheque portion of a dividend warrant, in which the exact amount is not shown in words. They say that this practice in case of dividend warrants has operated for very many years satisfactorily and has been extended to commercial usage in many directions where the number of cheques drawn warrant the issue by mechanical process. The present method of drawing cheques was introduced many years ago, when more leisure was at the disposal of people and the use of cheques was comparatively restricted. Times have, however, changed and the number of cheques now issued by both commercial undertakings and the general public has vastly increased. It is, therefore, argued that a study of the simplification in the form and the drawing of cheques is warranted. It is further suggested that it is possible to introduce a simplified and standardised cheque form which will give adequate protection to banks without the necessity of the drawer having to write the amount in words. The considerable saving in clerical work involved in drawing cheques in their present form and in checking by bank staff is also advanced as an argument in favour of the idea.

The suggestion to do away with writing amounts on cheques in words is not, however, free from risk and there is, therefore, some opposition to this reform. It is said that there cannot be the same protection to the drawer and the banker alike as to the correctness of the cheque as there is now when the amount is stated in words and figures. Further, the risk of fraudulent alterations of the amount will be greater if this reform is carried out. Thus, the amount in figures written by hand can be easily increased by altering the digits or adding to the digits, unless the drawer of the cheque is so careful as to leave no space for such insertions. No doubt, the surfaces of cheques have been scientifically improved and the erasing and altering of figures are easily detectable, but it is claimed that they are not foolproof. Again, there is a greater risk of a single altered figure passing unnoticed than a whole word.

The opponents of this suggested reform further point out that dividend warrants cannot be considered on par with cheques, for, in the case of the former, the amounts involved are usually small and the appearance of large amounts will naturally lead to a query by the paying cashier. Even if there is a loss as a result of inadvertence it will not be much. It may be that the risk involved in this reform is relatively small in the case of commercial concerns which use cheque-writing machines with coloured inks. But individuals and small concerns, who are far more in number than the big commercial undertakings, cannot be expected to use these machines and there is, therefore, the risk of fraudulent alterations in these cases. It is claimed by those who advocate the reform that, in certain circumstances, banks do pay cheques on which the amount is shown in figures only. In reply, the opponents say that figures are readily accepted by all banks only for shillings and pence at the end of a broken sum, such as "Nine pounds 17s. 6d.," but they ask whether the person drawing a cheque should not be sufficiently interested in safeguarding himself and his bank against possible frauds by spending a few more seconds in writing out the amount in words.

To come to the other reform, namely, the use of stamp-free cheques or the reduction of stamp fee from 2*d.* to 1*d.* The supporters of this reform point out that the use of cheques should be maximised as a measure of credit control. The indirect gains from the stimulation of the use of cheques would be worth far more to the Government than the direct loss of revenue by the abolition of stamps on cheques. In America, for instance, the normal method of paying for every purchase in shops is by cheque, supplies of which issued by local banks can be had at the counters. Cash transactions then are largely confined to sums less than a dollar. It may be noted here that, in India, there is no stamp duty on cheques, whereas in the U.K. a stamp fee of twopence has to be affixed to every cheque.

While there appears to be considerable opposition to stating the amount of the cheque in figures only, the Mocatta Committee's recommendations relating to endorsement of crossed order cheques seems to enjoy a very large measure of support. Thus, commenting on the Committee's suggestion, a spokesman of the Chartered Institute of Secretaries observes:

"The Mocatta Committee, in its report to Parliament, is to be congratulated in that it recommends a straightforward change in the law to eliminate the endorsement of any cheque collected by a bank on behalf of a customer who is the payee, while retaining endorsement if the cheque is to be negotiated to a third party or paid over the counter.

"In advocating the abolition of endorsement, the Chartered Institute of Secretaries—fearing that agreement and time would not be found for legislation—drew attention to the alternatives of (*a*) the introduction of an entirely new instrument which was not, as is a cheque, subject to the Bills of Exchange Act, 1882, and (*b*) the extended use of crossed bearer cheques, since these obviate endorsement.

"The Committee wisely favours legislation, although it observes that the crossed bearer cheque is a safe document for use by the drawer and that there might be considerable scope for informing the banking public further in the matter.

"The Institute urged that the abolition of cheque endorsement should not entirely preclude the use of a cheque as a receipt and discharge. The Committee rightly doubts if the receipt on a cheque adds any evidential value to that which the paid cheque itself provides. But to meet the needs of drawers of cheques (such as insurance institutions and hire-purchase companies) who desire receipts on cheques, the London Clearing Bankers will continue the examinations of cheque receipt forms for customers by **arrangement in suitable cases.**

"In this connection, it is again suggested that the opportunity should be taken of ensuring that the receipt is given on the face of the cheque and not on the reverse. It might further be considered if any endorsement remaining necessary after the law is altered could be given similarly. The use of the face of the cheque saves time and avoids the checking of receipt or endorsement being overlooked, such checking being in future the exception rather than the rule.

"In view of the exhaustive and able investigation by the Committee of a highly technical and difficult subject, it is to be hoped that all concerned will support an unopposed measure coming before Parliament, since neither House is likely to find time in the near future for an opposed Bill."

NEW FORCES ENDING BOOM-BUST CYCLE

Mr. Sumner H. Slichter, Harvard University economist, says that powerful new forces on the American business scene are eliminating the traditional boom-and-bust cycle. "The economy is outgrowing the business cycle," he told the eastern regional meeting of the New York Society of Security Analysts last week. Powerful cross currents, Mr. Slichter said, today strengthen the nation's economy. However, he predicted that "a slow rise in prices is likely in the long run." He cited the following trends that reduce the danger of the business cycle:

Increase in the number of important industries, such as plastics, airlines, natural gas, electronics, air conditioning and frozen foods.

Long-term planning by top management, which makes business spending less sensitive to "short-run changes" in the economy.

Changes in wage-payment patterns that reduce the severity of recessions. "A considerable number of companies," he said, "are making wage contracts for several years that call for a wage increase each year."

The stabilising effects of the banking system.

"The banks are now strong enough," the economist said, "so that they can be counted upon, in most instances, to try hard to expand their earning assets in periods of business contraction. This change in the behaviour of the banks is a great contribution to economic stability." Corporate mergers can help to meet the needs for larger size and greater diversity, Slichter noted. "The country undoubtedly needs many more mergers than it is getting, particularly among small enterprises and concerns of medium size," he told the analysts. "I do not assert that all mergers are wisely and properly planned, and I do not condone the buying of companies for the purpose of milking them. It is important to remember, however, that there are sound economic reasons for most of the mergers that are occurring."

BANK CREDIT AGAINST RICE AND PADDY

The Reserve Bank of India has withdrawn the restrictions on banks advancing against paddy and rice, with effect from 14th November 1956, in order to enable the genuine credit requirements for harvesting and marketing of these commodities being met by banks. It will be recalled that the restrictions were imposed on 17th May last, under which all Scheduled banks and two State-associated non-scheduled banks were prohibited from raising the credit limits and/or granting fresh advances in excess of Rs. 50,000 against paddy and rice. The banks were also required to increase the margins by not less than 10 per cent. of the value of the commodity.

Following this restriction, the level of bank advances against paddy and rice declined from Rs. 24.8 crores as on 11th May 1956 to Rs. 4.5 crores on 12th October 1956, partly as a result of banks' efforts and partly owing to the operation of seasonal factors. As the object of the above restrictions has thus been achieved and as more bank finance will be required for movement of crop in the next few months, the Reserve Bank does not feel the necessity for continuing the restriction. Explaining the reasons further, the Reserve Bank says, in a *communique* issued on 14th November 1956, as follows:

"In the next few months, in most parts of the country, the harvesting of paddy will be taking place, and finance will be required from banks for both its movement from the production to the marketing centres and for temporary storage. Since it is essential that the genuine requirements of producers and traders for harvesting and marketing of paddy and rice should be met by banks, and since the object of the directive has already been achieved, it is no longer considered necessary to keep in force the restrictions imposed.

RISE IN LIVING STANDARDS OF AVERAGE U.S. FAMILY

TAXATION AND HIGHER PRODUCTIVITY ENSURE BETTER DISTRIBUTION OF INCOMES

AVERAGE U.S. family living standards have risen 33 per cent. since 1929 as a result of the "levelling-up" process in the U.S. economy which has steadily broadened the distribution of personal income during the past quarter century. This "levelling-up" process consists of a shift of families from the low-income bracket to the middle-income bracket rather than the "levelling-down" of high-income families into lower-income brackets. As a result, the proportion of families in the low-income group is shrinking rapidly, and the great majority of American families are now in the middle-income group.

The broadening of U.S. personal income distribution has been called "one of the great social revolutions in history" by Dr. Arthur F. Burns, Chairman of the President's Council of Economic Advisers. However, this has come so gradually and peacefully that few have realised the enormous shift that has taken place. The salient facts in this American social revolution are:

(1) Total family purchasing power (total family income after deductions for federal income taxes and for price rises) increased 93 per cent. from $134,600 million in 1929 to $259,800 million in 1955.

(2) At the same time, the number of families increased 44 per cent. from approximately 36 million in 1929 to 52 million in 1955. (The term family is used here to include unattached individuals as well as multi-person families.)

(3) Despite this increase in the number of families, the growth of total family purchasing power was so much greater that the average purchasing power per family increased 33 per cent. from $3,730 in 1929 to $4,980 in 1955.

(4) Such an increase in average purchasing power per family means, in effect, that average U.S. family living standards, as measured by the ability to buy, also rose 33 per cent. from 1929 to 1955.

Two factors are chiefly responsible for the more equitable distribution of family income in the United States over the past quarter century. One factor is the increase in productivity (output of a worker per hour). This has increased at an average annual compound rate since 1929 of between 2 and 3 per cent., with the average productivity increase in recent post-war years higher than the 25-year average. The increase in productivity has brought, in turn, a rapid rise in workers' wages relative to other forms of income such as dividends and interest, rent, and proprietors' income.

Personal Income-tax

The other major factor is the progressive personal income-tax. Under this type of taxation, the higher the person's income, the higher is his tax rate. The minimum federal tax rate on taxable income is 20 per cent. It rises as high as 91 per cent. of a single individual's taxable income above $200,000 and on taxable income above $400,000 of a married couple.

Total income of American families (before taxes) reached a record high of $288,000 million in 1955, the report said. This represented a gain of $15,000 million or 5 per cent. over the previous year. During the past quarter century, the average annual compound rate of growth of total family income (before taxes and measured in terms of 1955 prices) was a little under 3 per cent.

Of the 52 million families in the United States, the Commerce Department said, about 23 million or 45 per cent. had before tax incomes of more than $5,000 last year. It said about 7.5 million or 14 per cent. received incomes between $4,000 and $5,000, and about 21.5 million or 41 per cent. received incomes of less than $4,000. It added that about 4.1 million or 8 per cent. received incomes above $10,000.

When distributed among all the 52 million families, total family income (before taxes) in 1955 averaged $5,520 per family, a rise of 3 per cent. over 1954. After payment of an average federal income-tax of $540 per family, the after-tax income per family averaged $4,980 in 1955, a rise of 2.7 per cent. over 1954.

Because a relatively few people with large incomes can have a disproportionate effect when total family income is divided by total number of families to obtain an average income per family, statisticians prefer to know what the median family income is. The median is the middle-most figure—income received by families at the centre of the income scale, the point where the number of families with incomes higher than that point is exactly equal to the number of families with lower incomes. The median (before tax) income of U.S. families, in 1955, was about $4,000, or 7 per cent. more than the previous year.

Distribution by Income Group

Yet another way to show the trend in American family incomes is to compare the distribution of U.S. families by income groups. The 1955 statistics—when compared with 1947 figures, for example—show fewer families in the lower income brackets and more families at the higher levels all along the line. Here are the comparative figures for 1947 and 1955 on distribution of families by income groups, expressed in percentage of total 52 million families:

Family Income (before taxes)	1947	1955
Under $2,000	24	16
$2,000-$2,999	19	12
$3,000-$3,999	19	13
$4,000-$4,999	13	14
$5,000-$5,999	8	13
$6,000-$7,499	7	13
$7,500-$9,999	5	11
$10,000-$14,999	3	5
$15,000 and over	2	3
Total	100	100

A similar trend is noted by comparing the 1947 and 1955 figures on distribution of total U.S. family income among family income groups, as expressed in percentages of total U.S. family income:

Family Income (before taxes)	1947	1955
Under $2,000	7	4
$2,000-$2,999	12	5
$3,000-$3,999	16	9
$4,000-$4,999	14	12
$5,000-$5,999	10	13
$6,000-$7,499	11	15
$7,500-$9,999	10	16
$10,000-$14,999	8	10
$15,000 and over	12	16
Total	100	100

The shift in actual numbers of families from the lower to the middle and higher income groups in 1955 further illustrates this trend in American family income.

Shift to Upper Income Group

Last year, the number of families with before-tax incomes under $5,000 were 600,000 fewer than there were in 1954. And the number of families with before-tax incomes ranging from $5,000 to $10,000 increased by 1,200,000 over the previous year. The upper-income families—families with incomes of $10,000 and more—also increased, but at a slower rate, adding 400,000 new families. Between 1947 and 1955, the number of families with incomes over $5,000 annually more than doubled—from 10,800,000 in 1947 to 23,000,000 in 1955.

Economists find in this trend an explanation for the enormous increases that have taken place in recent years in retail sales, automobile sales, house and commercial construction, and, of course, expansion of industrial plant and equipment to take care of present and future demands.

TRENDS IN WOOLLEN GOODS INDUSTRY

PRODUCTION OF YARN AND FABRICS UP

THE current calendar year (1956) is expected to witness an appreciable rise in the output of woollen textiles in India. During the first seven months ended July, for instance, as much as 8.86 million yards of woollen and worsted fabrics came off the looms, as against 6.41 million yards in the corresponding period of 1955, representing a rise of nearly 39 per cent. On this basis and assuming that the July level of output—1.47 million yards—has been maintained in the subsequent months, the aggregate production of fabrics for the whole of 1956 may be estimated at more than 16.22 million yards, which compares very favourably with 13.58 million yards in 1955 and 13.75 million yards in 1956. This figure, however, falls considerably short of the industry's estimated rated capacity —on double shift basis—of 48 million lbs. by over 66 per cent.

The rise in the output of woollen and worsted fabrics in recent months has followed an improvement in the supply position of yarn. This, in turn, must be attributed partly to higher domestic output and partly to larger imports. The production of woollen and worsted yarn during the first seven months of the year amounted to 14.04 million lbs., as against 10.88 million lbs. a year before, or an increase of 29 per cent. The increase in yarn production was rendered possible by larger imports of raw wool and wool tops; they aggregated 12.28 million lbs. during January-July 1956, as against 9.98 million lbs. a year before. The imports of wool yarn from abroad in the same period aggregated 2.08 million lbs., as against 1.51 million lbs.

Trend of Output

The following table indicates the trend of output of woollen (as also worsted) yarn and fabrics—month by month—during the seven months ended July 1956, as compared with the same period last year:

(Yarn in million lbs.; fabrics in million yards)

	Yarn		Fabrics	
	1956	1955	1956	1955
January	1.73	1.40	1.23	0.81
February	1.90	1.47	1.19	0.82
March	1.97	1.74	1.29	1.01
April	1.86	1.55	1.08	0.88
May	2.06	1.43	1.15	0.62
June	2.17	1.52	1.45	1.05
July	2.35	1.77	1.47	1.22
Total ..	14.04	10.88	8.86	6.41

The improvement in the production of woollen (as also worsted) yarn and fabrics during the seven months of 1956 was shared by all the States, as will be seen from the figures given below:

(Yarn in million lbs.; fabrics in million yards)

	Yarn		Fabrics	
	Jan.-July, 1956	Jan.-July, 1955	Jan.-July, 1956	Jan.-July, 1955
Punjab	4.23	2.85	2.46	1.94
Bombay	4.02	3.06	1.69	1.43
Uttar Pradesh ..	1.98	1.07	1.37	0.58
W. Bengal	1.79	1.44	0.70	0.62
Bangalore	1.42	1.32	2.23	1.76
Saurashtra	0.40	0.39	0.32	0.22
Jammu and Kashmir..	0.20	0.16	0.11	0.19

The foregoing statement reveals that the increase in yarn output was particularly marked in the Punjab, being 1.38 million lbs. The production in Uttar Pradesh was also substantially higher by 910,000 lbs. The bulk of the rise in fabrics production was accounted for by Uttar Pradesh, the actual extent of the rise being 800,000 yards. The Punjab and Mysore States reported an increase of 520,000 yards and 470,000 yards, respectively.

Capacity Expands

The upward trend in the production of woollen textiles—yarn and fabrics—in recent months has followed an increase in the rated capacity of the industry through the establishment of new units and expansion of the existing units. The total number of spindles in place has gone up during the first Five-year Plan period by 40,618, that is, from 116,800 spindles in 1950-51 to 157,448 spindles in 1955-56. Of the total of 157,448 spindles, 61,032 spindles are capable of producing 17 million lbs. of woollen yarn and 96,416 spindles are designed to produce 21 million lbs. of worsted yarn. In the weaving sector, the number of looms in existence has risen from 2,099 in 1950-51 to 3,950, (the capacity in terms of yardage being 48 million yards of woollen and worsted fabrics) in 1955-56. Taking into account the expansion that has taken place against schemes approved since April 1956, there will be 186,184 woollen spindles (62,768 woollen and 123,416 worsted) with an aggregate capacity of 45.5 million lbs. and 4,051 powerlooms with a total capacity of 50 million yards of fabrics (woollen and worsted). The spinning and weaving capacities, it may be noted here, are said to be much more than the estimated overall requirements of 27.0 million lbs. of yarn and 20.0 million yards of fabrics.

There is thus considerable surplus of capacity in the woollen textile industry. The Planning Commission, therefore, feels that there is no scope whatever for expansion in the spinning and weaving sectors of the industry. Nevertheless, the Commission feels that a rigid ban on further expansion is not desirable, as various other factors which require special consideration have to be taken into account. Particular attention is drawn to the need for converting some of the existing units into economic units wherever feasible and necessary. Incidentally, it may be noted that there are at present 15 spinning units, 25 composite mills and 79 powerloom factories.

Exports Rise

Thanks to the high level of woollen textile output and favourable trading conditions, exports of woollen piecegoods have registered a notable improvement of late. During the first seven months of 1956, shipments of piecegoods aggregated 45,121 yards valued at Rs. 6.30 lakhs, as against only 2,859 yards valued at Rs. 25,607 in the corresponding period of 1955. The number of shawls exported was also higher at 13,752 (Rs. 2.73 lakhs), as against 5,863 (Rs. 1.27 lakhs). Exports of carpets and rugs, however, suffered a slight setback; they amounted to 5.58 million lbs., which compare unfavourably with 5.66 million lbs. But the value of exports was higher by Rs. 2.68 lakhs at Rs. 232.86 lakhs. The exports of other sorts of woollen manufactures were also less, being 293,997 lbs. (Rs. 7.01 lakhs), as against 397.569 lbs. (Rs. 10.91 lakhs).

India's export trade in raw wool recorded a marked improvement. The quantity of wool actually shipped during the period under review was 20.85 million lbs., the figure for the corresponding period of 1955 being 14.69 million lbs. The foreign exchange earned was, therefore, higher at Rs. 627.68 lakhs, that is Rs. 199.26 lakhs more than what was earned a year before. The U.S. and the U.K. purchased larger quantities of raw wool from India, their actual intake being 8.72 million lbs. and 8.54 million lbs., as against 6.60 million lbs. and 6.85 million lbs., respectively. The Soviet Union contracted to buy 3.5 million lbs. of wool during the period January-September 1956. The major portion of this quantity is reported to have been shipped in the last month or two.

Seeing is believing

...AND WHAT THEY SEE IN

TRAYOPHANE* PRINTED BAGS THEY BUY!

Many tests with manufacturers and retailers have shown that Trayophane bags bring in bigger sales. The customers like them because they're hygienic, convenient, weather-proof. The shop-owners know that Trayophane bags reduce waste, save time at the counter!

Now for the first time Trayons offer these colourful eye-catching bags in a range of sizes—up to 12.5/8" x 23.1/32". You can order your own special bag—with your name printed on it. Write for particulars today!

TRAYOPHANE* PRINTED BAGS — ECONOMIC! HYGIENIC! CONVENIENT!

COTTON TEXTILE EXPORTS

Reviewing the trend of cotton cloth exports from India to West Asian countries, we observed in these columns only last week that, unless some energetic measures to remove the series of handicaps facing the export trade were taken, there was the danger of the country completely losing the textile markets in West Asia in the coming years. This view was very forcibly stressed by Mr. P. M. Shah, Editor, *Indian Exporter and Importer*, who recently undertook a study tour of the West Asian countries, while giving the impressions of his tour to the members of the All-India Exporters' Association, Bombay, at a meeting held the other day. India, Mr. Shah declared, was fast losing its markets in the West Asian countries and was likely to lose a good portion of the trade with the ports of the Persian Gulf, if timely measures were not taken jointly by the Government and the trade "to rehabilitate the lost ground." Indeed, he said, "It is a misnomer to call the West Asian countries as our natural markets." This warning, by the way, applies as much to cotton textiles as to other items of export such as tea, spices, jute textiles and engineering goods.

Mr. Shah analysed the factors responsible for the setback to cotton textile exports to the West Asian region. According to him, several countries in the region are having their own textile manufacturing plants. The production of grey sheetings and other coarse varieties of cloth are protected by the respective countries through imposition of high tariffs on foreign imports. The preferential tariff arrangement within the Arab countries is another reason why it is not possible for Indian coarse and medium varieties to compete with the local manufacturers. With regard to fine and superfine counts, Japan, the U.K. and the East European countries are competing with one another and India has practically no chance to sell these varieties there.

Speaking about handloom products, Mr. Shah observed that they could not be marketed in West Asia, as there was no publicity. To quote him: "We are going by default in this respect." These observations of Mr. Shah are very pertinent. The Cotton Textiles Export Promotion Council does not seem to have taken any step designed to boost exports of handloom cloth. It is concentrating its attention entirely on mill cloth. One would want to know whether the Council has been set up to promote exports of only mill cloth. It will be strange to note that the samples exhibited by the Indian embassies in some of the West Asian countries are those which, it is said, are not at all wanted by the consumers. What earthly benefit is there in spending huge sums of money on such publicity?

To revert to Mr. Shah's speech. He put forward two specific suggestions for the consideration of the Government and the trade. First, necessary and proper publicity should be given to our products in West Asian countries. Secondly, barter arrangements with some countries will enable India to stabilise its markets there.

Wholesale textile sales in the U.K. recorded a seasonal rise in September, 1956, although it was less marked than in the period 1952-55. The index, prepared by the Wholesale Textile Association in collaboration with the Bank of England (1950=100), rose from 87 in August to 132 in September, compared with an increase from 82 to 132 in the same month last year. Women's and children's wear reached its highest point since October, 1955, rising from 96 to 138. Piecegoods, on the other hand, only increased from 54 to 69, the lowest September level since the series began in 1950.

A wool carding factory, the first of its kind in India, will shortly be established at Porbandar at an estimated cost of about Rs. 10 lakhs. When the factory goes into operation, a substantial quantity of imports of carded wool is expected to be stopped. It is also expected that raw wool, hitherto exported to Europe for carding, will be retained in India to be carded and used for industrial purposes. The total annual exports of raw wool from India are valued at more than Rs. 5 crores, of which wool worth Rs. 3 crores is shipped from Jamnagar.

PRODUCTION OF CLOTH DECLINES

COTTON INDUSTRY'S CENTRAL AGREEMENT ON SHIFT WORKING

From A Special Correspondent

MANCHESTER, 13*th November*

MANCHESTER LETTER

PRODUCTION and manpower statistics, which have for some considerable time past displayed the continued decline in activity in Lancashire mills, have lately taken on a new significance in view of the sustained pressure for supplies which has developed. Contrary to the position in the spinning section, where yarn output has gradually overtaken corresponding production figures a year ago, the volume of cloth being turned out still lagged behind the 1955 level, at least until the end of September.

Holiday influences, which were still at work, make direct comparisons difficult, but total production of cotton, rayon and mixture cloth for the first nine months of this year was 147,000,000 yards lower than in 1955, which in turn showed a fall of nearly 200,000,000 yards on the 1954 level. Once again it is mainly the impact of curtailed output of cotton cloth that is responsible for the decline, the reduction being nearly 300,000,000 yards in cotton fabric output this year compared with 1954.

At the same time, there is evidence from the latest returns that the gap between current output and last year's figures is narrowing. During September, the average weekly production of all types of cloth was 43,310,000 linear yards against 44,480,000 yards in September 1955. The final stages of the holiday season were responsible for some interference with output in both years.

Workers Drift

Hopes that the unfortunate drift of workers from the mills may be halted by the improvement in trade are gaining ground on account of recent recruitment figures. In the spinning section, at least, the drain of labour seems to have been halted for the time being but the time-lag in the weaving branch makes it impossible as yet to gauge the overall position. The following table, however, shows how manpower has dwindled in the past five years, taking the comparative totals of operatives on the books of employers at the end of September in each case:

	1951	1953	1955	1956
Spinning	123,850	111,130	100,200	96,630
Doubling	32,200	25,790	22,400	21,070
Waste spinning ..	7,260	7,100	7,050	7,340
Weaving	156,390	138,600	129,300	118,280
Total ..	319,700	282,620	258,950	243,320

It has already been noted that the situation in the doubling branch has deteriorated more in ratio to the other sections but the loss of labour in spinning and weaving also is very substantial when compared with 1951. An interesting development has been the improvement in the manpower position in waste spinning, which has never been as adversely affected as the other sections. The current total of 7,340 operatives has only once been exceeded in recent years—and that by a mere 10 workers.

New Spinning Pact

Mills in the main section of the cotton spinning industry will be permitted to work from 6 a.m. to 11 p.m. under a new charter which sets out the industry's first central agreement on shift working. The first official details of the new charter, announced after negotiations lasting twelve months, show that workers agreeing to staff double day-shifts will put in a 38½ hour week but receive the same rate of pay as for the ordinary 45 hour week. A joint statement by the Federation of Master Cotton Spinners' Association Ltd. and the National Association of Card, Blowing and Ring Room Operatives said the aim was to encourage re-equipment and modernisation by making the maximum use of machinery.

The new charter also includes a new wage structure based on work study principles, designed to make the fullest use of manpower and machinery. The introduction of the system as an alternative to the existing system is subject to the joint consent of management and operatives at a particular mill. After a trial period of three months a ballot of the workers concerned will decide whether it should continue permanently.

The Employers' Federation will issue to its members a list setting out what are considered by both parties to be fair working conditions for an up-to-date cotton industry.

Surplus Cotton Sales

Presidential elections in the United States are invariably watched closely by Lancashire cotton interests in view of their possible bearing on policy plans for the future of the raw material. Mr. Eisenhower's victory ensures continuity of the recent cotton disposal programme.

The success of this venture has been a vital factor in textile trading throughout the world and has paved the way to the current expansion in business in Lancashire. Once traders were reassured that no violent drop in prices was likely and recognised that the level of values set by the American Administration would be maintained, confidence began to return to buyers.

In the first three months of the current cotton season exports of raw material from the U.S. reached 1,260,000 bales. This compared with only 388,710 bales in the same period last season. Shipments in August were the highest for 20 months back and were the highest August exports since 1933.

The latest Commodity Credit Corporation sales of nearly 600,000 bales have taken the total cotton so earmarked for shipment abroad under the competitive bid system to well over 5,000,000 bales, which was the original estimate of the quantity likely to be disposed of under the programme. In some quarters, it had been assumed that this represented the maximum volume of supplies to be sold in this way but it is now clear that the American Administration intends to carry on with its plan in view of its excellent progress.

There has lately been reports that the stocks held by the Corporation have been so reduced that the remaining cotton is not very desirable in quality. Another factor, which is believed to have led to the recent movement of larger supplies, has been the dissatisfaction expressed by consumers at some of the cotton received after the early auctions. Replacements have been needed to satisfy the requirements of customers.

Evidence has been accumulating that a more encouraging tone has lately prevailed in the Liverpool market for raw cotton. Spot and shipment sales have certainly increased and the details now being published of such business indicate a considerable expansion in turnover.

When statistics were first issued at the beginning of September weekly sales aggregated little more than 20,000 bales but by early this month trading had trebled. Most of the business done was in North American cotton which represented 214,361 bales, out of the total sales of 380,507 bales during the past two months. Business in Sudan and other Egyptian type cotton amounted to 68,684 bales while the turnover in South American qualities accounted for 43,124 bales.

Machinery Sales

A sharp reduction in shipments of British-made textile machinery in September brought the nine-month total by weight to little more than the figures recorded in the past two years. The volume of shipments was only 87,398 cwt., as compared with as much as 150,000 cwt. sent abroad in some earlier months of the year. For the first three quarters of 1956 exports of plant amounted to 1,237,267 cwt. valued at £34,087,936, as against 1,220,233 cwt. worth £31,788,354 a year ago.

India continues to be by far the largest consumer of British textile machinery, absorbing 308,819 cwt.—a quarter of the total. Purchases by India have been stepped up by nearly 100,000 cwt. this year. In contrast, there has been a sharp reduction in the quantity of plant taken by the Soviet Union, which for the first nine months of 1955 absorbed 131,782 cwt., while this year takings amount to 66,913 cwt. An even bigger change has been recorded in trade with Pakistan, which has progressively shrunk from 231,302 cwt. in 1954 to 197,187 cwt. last year down to 46,473 cwt. this year.

Interest is naturally being taken in the purchases of textile machinery on behalf of Egypt, shipments rising from 35,597 cwt. last year to 67,177 cwt. Several European markets continue to equip part of their mills with British plant, Western Germany having taken 39,245 cwt., the Netherlands 34,039 cwt., Belgium 40,474 cwt., and France 47,056 cwt. Shipments to the U.S. are slightly higher at 42,432 cwt. and increased sales have been recorded for Mexico at 46,900 cwt.

Nearly 40 countries are included in the Board of Trade figures showing textile machinery

CONFERENCE ON COTTON GROWING PROBLEMS

EXTRA LONG-STAPLE—YIELD PER ACRE

IN India, the cultivation of cotton, one of the most important cash crops of the country and one which feeds India's biggest organised industry, namely, the cotton textile industry, is faced with many problems both economic and technological. The latter came up for a detailed discussion recently at the seventh Conference on Cotton Growing Problems, held at Chandigarh, early this month, under the presidentship of Mr. B. N. Uppal, Agricultural Commissioner of the Government of India. Sponsored by the Indian Central Cotton Committee, the Conference was attended by sixty-five delegates from the various cotton-growing States. More than eighty papers on various aspects of cultivation of cotton, such as cotton breeding and genetics, cotton technology and statistics, cotton agronomy and diseases and pests were read at the Conference. The Committee deserves to be congratulated for endeavouring to bring the experience and knowledge of experts in the field to bear upon specific problems of cotton growing.

Inaugurating the deliberations of the Conference, Sardar Pratap Singh Kairon, Chief Minister of Punjab, laid particular stress on two problems, namely, the need to evolve extra long-staple cotton and improvement of the yield per acre. He said that the Punjab can justifiably feel proud of the fact that it has successfully tided over the difficult cotton supply position created by the Partition of the country. The Partition, it may be recalled, cut off more than 40 per cent. of the supply of medium and long-staple cotton from the canal-irrigated areas which went to the share of Pakistan. Owing to the initiative and lead given by the Government, the Indian side of the Punjab was able to explode the myth generally held that East Punjab is not suitable for growing American type cotton. Despite the fact that research and extension workers had to work under great handicaps, numerous improved strains of American cotton were developed which proved very popular with cultivators both within and outside the State. The success of the attempts at evolving and popularising new and improved strains was so remarkable that 75 per cent. of the cotton acreage in the Punjab today is under American cotton and there is every possibility that within a short period of time the Punjab will emerge as the second largest cotton-producing region in the country.

In this connection, the Minister referred to the great potentialities of the State for increasing cotton output in future when the Bhakra Dam project is completed. In the Punjab alone, the project is expected to provide irrigation facilities for an area of over 40 lakh acres which will enable an additional area of five to six lakh acres to be brought under cotton. This will considerably increase the output of cotton. But the fact, however, should be borne in mind that cotton production plans cannot be based entirely on expansion of area and increased irrigation facilities, as the latter are required for other crops also. In view of this, the Minister emphasised that attempts should be directed towards devising methods for increasing the yield per acre through intensive cultivation.

Extra Long-staple

Dwelling upon the need for evolving extra long-staple cotton, Mr. Kairon pointed out that, in the context of planned economic development, the demand for finer cloth could be expected to increase as a direct result of the general rise in the standard of living that was bound to occur. This underlines the necessity for paying greater attention to improving the quality of cotton. At present, India is importing long-staple cotton to the tune of five to six lakh bales valued at about Rs. 50 to Rs. 60 crores. Domestic production of long-staple cotton, in addition to making India self-sufficient in respect of raw materials required for manufacturing fine fabrics, will also enable considerable saving of foreign exchange urgently required for other purposes.

Referring to the role of scientists, the Minister said that, both in evolving better varieties and in improving the yield per acre, their services were invaluable. He also paid a well deserved tribute to the Central Cotton Committee, the oldest commodity committee in India, for the commendable work it had done in furthering research and development work on cotton.

In his presidential address, Mr. B. N. Uppal observed that the results of cotton research in the Punjab were of great economic significance to the country. He pointed out that, though the original target for production fixed in the first Five-year Plan had been achieved, there was no room for complacency, inasmuch as mill and export demands were rapidly increasing. It was with this fact in mind that the target for cotton production fixed under the second Plan had been revised upwards from 5.5 million bales to 6.5 million bales. As the limit of extension of the cotton acreage had almost been reached, the emphasis in the Plan would be on yield per acre. It was against this background, he observed, that the proposals of the Government of India to establish composite regional research stations for cotton, millets, and oilseeds should be viewed. He expressed the hope that the State Governments concerned would place the necessary land and other facilities at the disposal of the Central Cotton Committee for the establishment of research stations.

Cotton as Summer Crop

Among the papers read at the Conference, particular reference may be made to a note on the possibilities of cotton production in the rice fallows of Andhra State where paddy is at present cultivated mostly under single-cropped conditions. It was pointed out that, as a summer-subsidiary-*cum*-remunerative crop, cotton could be fitted into the rotation in the place of an inadequately irrigated second crop of paddy or green manure or groundnut. It was suggested that, to start with, a minimum of a million acres could be immediately brought under cotton which would produce about 5 lakh bales of quality cotton, costing about Rs. 20 crores, as additional production in the State. In addition, the farmers would also be benefited to the extent of about Rs. 2½ crores worth green residue which would contribute considerably to the fertility of the soil. It may be observed that this suggestion is well worth pursuing as an experimental measure, particularly because a similar experiment, carried out in the Cauvery region of the Madras State, is reported to have given encouraging results.

Another interesting paper read at the Conference was one on the breeding of extra long-staple cotton in India. The results of experiments conducted in Surat, Madras and other centres, according to this paper, showed that the possibilities of evolving extra long-staple cotton of 1.1/16" to 1.1/8" are most promising. In fact, the two outstanding Indo-American strains 170-Co. 2 and 134-Co. 2M released for general cultivation had very good staple length. Its only defect, from the technological point of view, was that, as compared with East African cotton, it lacked in yarn strength. There is no doubt, the paper observed, that, with a little more effort, this range of cotton imports could be replaced by domestic production within a few years.

MILL CONSUMPTION OF COTTON IN SEPTEMBER

Mill consumption of cotton during the first month of the current season, that is, September 1956, aggregated 431,710 bales (of 400 lbs. each), comprising 377,978 bales of Indian and 53,732 bales of foreign cotton, as compared with 428,153 bales during the same month last season comprising 382,979 bales of Indian and 45,174 bales of foreign cotton. Out of the 53,732 bales of foreign cotton consumed, 12,741 bales were Egyptians, 10,473 bales Sudan, 27,314 bales East Africans, 1,933 bales U.S. cotton. In the month of September 1955, Indian mills consumed 15,048 bales of Egyptian, 8,448 bales of Sudan, 17,053 bales of East African and 4,076 bales of U.S. cotton. As will be seen from the table below, consumption of East African cotton increased from 17,053 bales to 27,314 bales while that of U.S. cotton declined from 4,067 bales to 1,933 bales.

(In bales of 400 lbs.)

	September	
	1956	1955
Indian	377,978	382,979
Foreign:		
Egyptian	12,741	15,048
Sudan	10,473	8,448
East Africans	27,314	17,053
Russians	14	23
Others	1,257	535
U.S.A.	1,933	4,076
Total foreign ..	53,732	45,174
Grand total ..	431,710	428,153

The table shows that there has been a slight fall in the consumption of Indian cotton by mills during the opening month of the current season.

In recent years approximately 6,00,00,000 square feet of Shalimar Tar roofing materials, made in India, from Indian materials by Indian labour, have been used by Public Authorities, Industry and individual house owners, on the roofs of their properties—The demand increases yearly.
Shalimar Tar have built and are now operating the only high speed continuous machine for manufacturing roofing felt in India.

Since time immemorial man has expressed his feelings through music. From the primitive drum beat to the highly developed symphony, music is the cherished heritage of all peoples. Music binds us together through its universal appeal.
Like music, shared aims and effort form a close bond. This is evident in India today where technicians from abroad are working with their counterparts here to develop industries, erect giant projects, increase trade and commerce.
A constant supply of our petroleum products essential to such joint enterprises is a major note in this new symphony of progress.

SUGAR OUTPUT IN BOMBAY TOUCHES ALL-TIME RECORD

CAPACITY OF INDUSTRY TO BE STEPPED UP

THE past sugar season (1955-56) may be described as a landmark in the history of the Bombay-Deccan sugar industry. For the season witnessed an all-time record output of white sugar, the quantity actually produced being 202,470 tons. This compares very favourably with 173,579 tons in 1954-55 and 126,665 tons in 1953-54, representing a rise of as much as 16.6 per cent. and 60.0 per cent., respectively. It will be interesting to note here that the output of 202,470 tons of sugar during the season under review accounts for nearly 11.0 per cent. of the aggregate all-India production of 1,859,000 tons.

The production performance of the Bombay-Deccan sugar mills is, indeed, creditable, considering the series of stresses and strains to which the industry has been subjected. Particular mention must be made of the Bombay Government's policy relating to canal water supply to the cane farms of factories. Despite repeated requests by the factories, the Government has not cared to augment water-supply, with the result that the sugar mills have not been able to grow cane to the full extent of even their guaranteed areas. Mention must also be made of the irksome and unjustified control over molasses and alcohol exercised by the Government in pursuance of the object of making prohibition a success. Another handicap facing the sugar industry is the tendency legislation, which, while it permits the sugar mills to retain the existing holdings of agricultural lands, does not allow purchase of lands. The legislation is beset with the dangerous consequence of gradually disintegrating the sugarcane farms as and when the leases terminate. What is worse, the State Government is vested with wide powers to modify the conditions between the lessor and the lessee and change the lease rent, for the determination of which even the profits accruing on sugar manufacture can be considered. In addition to all these, there are the additional burdens placed on the sugar industry by the recent labour awards and the utter disregard of the State Government for the improvement of roads in factory areas which at present are in a deplorable condition.

Production and Despatches

The following table gives an idea of the trend of sugar output and also despatches from factories—month by month—during 1955-56, as compared with 1954-55:

(In tons)

	Production		Despatches	
	1955-56	1954-55	1955-56	1954-55
November	13,781	13,503	13,304	2,678
December	31,332	29,634	12,560	9,313
January	34,482	34,450	12,876	9,951
February	37,659	33,234	17,149	13,776
March	40,600	35,586	7,389	13,195
April	29,233	19,923	18,039	14,073
May	12,369	7,249	15,587	17,892
June	3,014	..	15,039	18,044
July	..	..	18,245	14,001
August	..	..	17,981	12,737
September	..	..	2,474	9,238
October	..	..	40,516	13,446
Total ..	202,470	173,579	188,159	148,344

The rise in sugar production in Bombay during the season under review followed a marked rise in the quantity of sugarcane crushed; it amounted to 1,736,000 tons, as against 1,486,000 tons in 1954-55 and 1,077,000 tons in 1953-54. There was a setback to the cane crop, the aggregate output of cane during 1955-56 being 5.12 million tons, which compares unfavourably with 5.48 million tons in the previous season. Despite this setback, the sugar mills did not experience any difficulty in securing adequate supplies of cane, for two reasons. First, the production of cane on the farms owned by the factories was higher. Secondly, the private cultivators sold a larger quantity of their cane crop to the factories, instead of converting it into *gur* themselves or selling it to professional *gur* producers. This, in turn, must be attributed to the fixation of higher prices for cane by the Government of Bombay, following an agreement reached with the Deccan Sugar Factories Association. Under the agreement, the factories were required to pay for cane delivered at the gates of factories a minimum price of Rs. 44 per ton, which represented a rise of Re. 1 over that fixed for 1954-55. It was also higher by Rs. 4-12-2, as compared with the minimum price of Rs. 39-3-10 fixed by the Government of India.

The availability of larger supplies of cane enabled the sugar mills to extend their crushing operations. The average duration of the crushing season in Bombay during 1955-56 was 153 days, as against 142 days in the previous season and 112 days in the season preceding it. The all-India average was 145 days. The average recovery of sugar from cane registered a slight improvement, from 11.67 per cent. to 11.70 per cent. The official final estimate, however, places the average lower at 11.51 per cent., as against 11.68 per cent.

When the season began on 1st November 1955, five mills in Bombay had commenced crushing and, by 1st February 1956, all the 15 mills were working in full swing. Two factories stopped crushing during the week ended 15th April and, by 23rd May, all the units had stopped operations.

Expansion in Capacity

The steady upward trend in the production of sugar in Bombay-Deccan in the past two years has followed a marked expansion of 42.5 per cent. in the rated capacity of the sugar industry in the first Plan period. The aggregate capacity—calculated on the basis of an average working season of 120 days and sugar recovery of 10 per cent.—amounted to about 158,000 tons in 1955-56, as against 110,000 tons at the commencement of the first Plan (1950-51). The improvement in the capacity of sugar industry has been due, to a great extent, to the expansion in the size of the existing units. Over the Five-year Plan, only one new sugar mill—a co-operative venture—was established.

The tempo of activity in the Bombay-Deccan sugar trade will be considerably accelerated in the next five years, so ambitious is the scheme of development drawn up for the industry. The scheme envisages a rise in the rated capacity of the industry by as much as 228,000 tons, that is, from 158,000 tons in 1955-56 to 386,000 tons in 1960-61. The additional capacity contemplated represents over 31 per cent. of the total capacity of 726,000 tons licensed. Licences have been issued for the establishment of 17 new sugar factories and substantial expansion of seven existing units. A special feature of the additional capacity licensed is the provision for setting up as many as 14 cane growers' co-operative sugar mills.

WORLD SUGAR

A reference to the deliberations of the International Sugar Conference which concluded at Geneva on the 2nd inst. was made in these columns last week. The official details of these deliberations since made available reveal that the aggregate basic export tonnages of member-countries amount to as much as 5,897,000 metric tons plus a special reserve for four exporters of 140,000 tons for 1957 and of 190,000 tons for 1958. The total export quota of 6,037,000 tons for 1957 compares with the estimated free market requirements of 5,325,000 tons. India has been allotted an export quota of 25,000 tons for 1957. The breakup of the export quotas—in thousand tons—among the other countries is given below:

Belgium (including Belgian Congo) 50; Brazil 175; China (Taiwan) 665; Colombia 5; Cuba 2,415; Czechoslovakia 275; the Dominican Republic 655; France 20; Eastern Germany 150; Haiti 45; Hungary 40; Indonesia 350; Mexico 75; Netherlands 40; Peru 457; the Philippines 25; Poland 220; U.S.S.R. 200; and Yugoslavia 20.

The export quotas of the Czechoslovak Republic and the People's Republics of Poland and of Hungary do not include their exports of sugar to the U.S.S.R. and these exports are outside this agreement. The U.S.S.R. export quota is, therefore calculated without taking into account imports of sugar from the above-mentioned countries. Costa Rica, Ecuador, Nicaragua and Panama may each export to the free market up to 5,000 tons raw value a year.

A special reserve of 140,000 tons in 1957 and 190,000 tons in 1958 shall be established and allocated thus: China 95,000 tons; India 25,000 tons; Indonesia 50,000 tons in 1957; and the Philippines 20,000 tons. The allocated tonnages in this special Reserve are subject to reductions and increases, but they will not carry any entitlement to participation in the redistribution of shortfalls, neither will shortfalls in these tonnages be redistributed. Portugal, which has traditionally exported to Rhodesia and Nyasaland, and which made a reservation concerning her status as an exporting country in signing the 1953 Agreement, will have its position regularised by a new provision to be inserted after paragraph (6) of Article 14A as follows: "Portugal to which no basic export tonnage has been allotted under Article 14 may export to her traditional markets of Rhodesia and Nyasaland up to 20,000 tons and shall have the status of an exporting country."

In determining export quotas in effect, priorities shall be applied in accordance with the appropriate provisions of the Agreement. Thus, the first 50,000 tons will be allotted to Cuba; the next 15,000 tons to Poland; the next 10,000 tons to Haiti; the next 25,000 tons to Czechoslovakia; and the next 10,000 tons to Hungary.

The next exports of the exporting territories covered by the Commonwealth Sugar Agreement will be 2,490,018 metric tons (or 2,450,000 English long tons) in 1957 but will be increased by 50,000 long tons in 1958 to enable Commonwealth exporters to share in the increase in the consumption of Commonwealth territories.

"SUGARCANE RESEARCH AND DEVELOPMENT"

The Indian Central Sugarcane Committee (I.C.S.C.) must be congratulated on the venture to publish a quarterly journal devoted to sugarcane research and development (Editor: P. C. Chandra, Secretary, I.C.S.C., New Delhi. Price: Re. 1-8). The journal will serve as a suitable medium for the dissemination of information on the progress achieved from time to time in the sphere of cane research and development. The journal contains articles written by experts and a review of important literature on cane published in the country and abroad. Statistical data relating to sugarcane, sugar, *gur* and *khandsari* are also included in it. The main emphasis will, of course, be on the agricultural sector of sugar economy, as well as on *gur* and *khandsari* industry, because the needs of the white sugar industry are already being catered to by the Sugar Technologists Association of India. The utility of the publication is proposed to be increased by the inclusion, as a special feature, of a "Cane Grower's Forum" in which experts in various fields can pose specific problems of practical importance to the cane grower and throw such light on questions as might help reach a solution thereof.

While welcoming the publication of the journal, it must be stressed that the results of research should be published in as non-technical a manner as possible and in an easily understandable way. This is of the utmost importance, considering the fact that the majority of cane growers in India are illiterate. Otherwise, the results of research conducted in the laboratories, though they are very valuable, may not actually reach the cultivator.

TARGET FOR COAL IN SECOND PLAN

PRIVATE SECTOR TO GO AHEAD WITH PRODUCTION

THE Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association, the three main organisations representing the producers of coal in the private sector, have asked their member collieries to proceed with the implementation of their production plans, so that the target of additional production set for the private sector of the industry under the Second Five-year Plan can be achieved in time. It will be recalled that the target of additional output for the private sector under the Plan is 10 million tons, out of a total of 22 million tons. The allocations to the various coal areas are: Raniganj, 5.70 million tons; Jharia, 3.25 million tons; Karanpura, 0.55 million ton and Central India, 0.50 million ton.

The decision to take on hand the additional production plan follows the discussions which the producers had with the Coal Controller recently. The Coal Controller would appear to have told the producers that the industry could take all plans for increased production as having the general approval of the Government, except in cases where, under statutory provisions or rules, the specific approval of the Coal Controller, the Coal Board or other authority was necessary, as, for instance, the opening of new mines, opening or reopening of seams, etc. The Coal Controller is said to have expressed the hope that, within the above flexible framework and subject to the limitations outlined by him, the private sector could go ahead with their production plans.

A section of the industry is, however, apprehensive about the possibility of achieving the target under the existing restrictions placed on the industry. They are not sure of getting adequate transport and siding facilities, loading accommodation, pilot and depot capacity, etc. Besides, they point out that the policy of the Coal Board and the Mines Department is not conducive to higher production. The restriction on production in the name of conservation and safety stands in the way of quick development. In the Jharia Coalfield, for instance, the private sector is required to raise production by 3.25 million tons, of which coking coal will account for 2.25 million tons. According to the Coal Controller, the pegging on output of coking coal will, no doubt, be applied and its production will continue to be subject to ceiling limits fixed by the Coal Board. The Coal Controller did not give an assurance that the pegging would be relaxed or withdrawn when necessary. He, however, expressed the hope that the Coal Board might revise the ceiling limit from time to time.

There is some force in what the producers say. As it is, the pace of expansion in output has not been very encouraging so far during the current year and it will be a creditable achievement on the part of the private sector, if, in spite of the impediments, it is able to succeed in attaining the target fixed in the Second Five-year Plan. The following table shows the trend of output and despatches during the first nine months of the current year, as compared with those in the corresponding period of 1955:

(In tons)

	Raisings		Despatches	
	1956	1955	1956	1955
January	3,196,089	3,152,967	2,788,689	2,671,573
February	3,340,389	3,248,578	2,690,633	2,502,267
March	3,360,456	3,304,154	2,835,244	2,764,412
April	3,223,355	3,233,135	2,864,950	2,693,664
May	3,314,435	3,175,335	2,871,114	2,743,546
June	3,196,087	3,074,672	2,877,245	2,658,339
July	3,167,406	2,956,326	3,010,020	2,755,971
August	3,310,952	3,118,751	3,176,064	2,879,565
September	3,123,341	3,378,385	2,820,219	2,802,059
Total ..	29,239,410	28,642,283	25,934,178	24,471,396

The sharp decline in output and despatches during September are mainly due to the labour strike in the Raniganj coalfield. The raisings in the month under reference are the lowest for the current year so far. The decline during the month has more than offset the sharp rise noted in August. The total output for the nine months is only about 600,000 tons more than that in the corresponding period of 1955. Production during October cannot be expected to exceed the previous month's performance, because the strike continued for nearly a fortnight last month. The after-effects of the strike, as also flooding in some parts of the collieries, might adversely affect production even during the current month. It will not be surprising, therefore, if the current year's total output were to fail to rise above that attained in 1955 to some extent.

With the fall in despatches during September, the upward trend noted since February last has been reversed. The stocks at the end of the month, however, show a decline from 3,023,206 tons to 2,881,037 tons.

"INDIAN COAL NEWS"

There are very few journals in India which provide adequate information on the day-to-day developments in the coal industry. The need is, however, being fulfilled by the *Indian Coal News* edited and published by Mr. H. R. Rakshit, Calcutta. This fortnightly journal is intended to keep the people in the coal industry informed of the news, rules and regulatory orders which emanate from various sources. Another object of the journal is to keep the general public informed about the happenings in the coal industry in India—its development and progress. A perusal of two issues, which we have received, shows that the purpose will be amply served. The annual subscription to the journal is Rs. 7-8, inclusive of postage.

More than 2,00,000 miles
– and this LEYLAND 'COMET'
runs smoothly as ever!

Forward-controlled chassis, designed specially to combine large body space with easy handling; 6-cylinder vertical direct-injection compression ignition engine; average payload 7½ tons

It's the only 7½-ton payload chassis made in India!

Mr. Jagadeeshwariah, well-known Secunderabad operator, bought his first Leyland 'Comet' five years ago. "This chassis has now covered over 2 lakh miles and it has proved to be extremely reliable and economical. I unhesitatingly recommend that there is no finer vehicle obtainable today," he says. Mr. Jagadeeshwariah now has four 'Comets', and is thinking of buying a *fifth* 'Comet' to add to his fleet!

The Leyland 'Comet' passenger chassis offers *extra* reliability and safety. Special springs for more comfortable riding. Choice of two models. Widely used by State Governments, Municipalities and leading firms and organisations.

FORWARD TRADING IN RAW JUTE AND JUTE GOODS

MAIN FEATURES OF COMMISSION'S RECOMMENDATIONS

THE Government of India's decision to accept the recommendation of the Forward Markets Commission to permit the resumption of futures trading in raw jute and jute goods within the city of Calcutta has not come as a surprise to the industry and trade. For it is in line with the Government's own recognition of the need for the establishment of a properly organised futures market in Calcutta for raw jute and jute goods as soon as possible. In fact, the question as to the desirability of resuming futures trading in raw jute and jute goods was taken up by the Commission, following the Government's directive early in January last that the Commission should proceed to invite applications from the concerned associations for recognition for the purpose under the Forward Contracts (Regulation) Act, 1952.

Before we proceed to examine in detail the Commission's conclusions on the need for resuming futures trading, it will be useful to record, in brief, the Government's resolution on the Commission's recommendations:

"The Forward Markets Commission, having considered the applications for recognition received from associations for forward trading in raw jute and jute goods, has recommended that section 15 of the Forward Contracts (Regulation) Act be applied to raw jute and jute goods within the city of Calcutta. The Commission has recommended that section 17 of the Act should continue to be applied to the whole of India in respect of raw jute as at present, except in the city of Calcutta, and should be applied to the whole of India in respect of jute goods, except in the city of Calcutta. The Government of India have accepted these recommendations, the effect of which is to permit forward trading in raw jute and jute goods within the city of Calcutta only.

"The Government have also accepted the Commission's recommendation that the East India Jute and Hessian Exchange Limited, Calcutta, be recognised under section 6 of the Forward Contracts (Regulation) Act in respect of all varieties of raw jute and jute goods for a period of three years. The Exchange should conduct trading in futures contracts as well as in transferable specific delivery contracts. The grant of recognition to the Exchange will be conditional upon its previously adopting the Articles of Association and by-laws to the satisfaction of the Commission.

"The Commission has also recommended that all transferable specific delivery contracts in raw jute and jute goods entered into in the I.J.M.A. forms before the application of section 15 of the Act be treated as valid, for three months in respect of raw jute and for nine months in respect of jute goods. While accepting this recommendation, Government have also decided that contracts entered into in the I.J.M.A. forms subsequently for a period of six months from the date section 15 of the Act becomes applicable will be exempted from regulation."

Jute Enquiry Commission's View

The resumption of futures trading in jute and jute goods has been long overdue. It will be recalled that hedge trading in raw jute had till now been prohibited under section 17 of the Forward Contracts (Regulation) Act, 1952, and in jute goods under the West Bengal Jute Goods Act, 1950. For some time past, the authorities have been considering the question of reopening the futures market. It was examined, among others, by the Jute Enquiry Commission 1953, which, in its report published in March 1954, discussed at some length this question and came to the conclusion that the establishment of a futures market in jute and jute goods was necessary and that, for the proper functioning of such a market, a single well-knit and regulated association like the East India Cotton Association, Bombay should be set up. The Commission was also of the view that, for the balanced operation of the futures market, dealings in both raw jute and jute goods should be started simultaneously. The Commission recommended that a body, with a broad-based constitution representing all interests and wider bases for business and necessary checks against speculation, should be formed by the voluntary co-operation of those in the trade who were interested in futures trading. The Government of India accepted in principle the Commission's recommendation in respect of a futures market for jute and jute goods.

Thereafter, the matter was taken in hand by the Forward Markets Commission. In its report, submitted in December 1954, the Commission recommended that the ban on forward contracts in raw jute (other than non-transferable specific delivery contracts) under section 17 of the Forward Contracts (Regulation) Act, 1952, might be continued for some time more. It had also recommended that section 17 of the Act might be extended to jute goods, with the proviso that non-transferable specific delivery contracts would be excluded from its operation. In other words, this meant the maintenance of the *status quo* in respect of jute goods also, except that the legislative basis of the ban was shifted from the West Bengal Jute Goods Act, 1950, to the Forward Contracts (Regulation) Act, 1952. The Commission's idea was to bring the regulation of both raw jute and jute goods under a single authority, so that the substitution of section 15 of the Act in place of section 17 in due course would be facilitated. The Commission felt that there were no compelling circumstances then which called for the immediate resumption of forward trading, though the usual procedure in respect of recognition of associations might be followed. The Government of India agreed to the continuation of the application of section 17 of the Act to raw jute, but, by a notification in March 1956, exempted all forward contracts in which delivery was given or taken at the jetty or railway siding of jute mills and stocks were insured during transit. It did not, however, think it expedient to extend the application of section 17 of the Act to jute goods also, as it was of the view that the object was already achieved by the West Bengal Jute Goods Act, 1950. The Government agreed, as already pointed out, that the real solution to the problem lay in the establishment of a properly organised futures market in Calcutta for raw jute and jute goods as early as possible. It, accordingly, asked the Forward Markets Commission to proceed with the task of inviting applications from the concerned associations for recognition for the purpose. Such, in brief, is the background for the latest enquiry of the Commission and its recommendations.

Reasons for Resuming Futures

The main reason for the Commission now favouring resumption of futures trading in jute and jute goods, reversing its earlier decision, is that the position has considerably altered since 1954. The increased supply of raw jute and the expanding output of manufactured goods, it says, make it necessary to have a well organised jute futures market, in order to provide stability to the jute economy. The Commission is convinced that the dealers who purchase the bulk of the stocks from the mill and the shippers who handle the exports of jute goods need to hedge their stocks and cover themselves against the risk of changes in price.

The various factors which have brought the change in position, to quote the Commission, are: (1) The area under jute cultivation has expanded from 1.24 million acres in 1954-55 to 1.58 million acres in 1955-56 and the production of jute from 2.93 million bales to 4.14 million bales: efforts are being made to extend the cultivation of jute further; (2) import of raw jute from Pakistan has gone up from 1.24 million bales in 1954-55 to 1.47 million bales in 1955-56; and (3) production of jute goods has increased considerably from 88,900 tons per month in January 1956 to 98,900 tons in June, following the unsealing of looms by 7½ per cent. out of the 12½ per cent. of the total looms put into cold storage. As the offtake did not keep pace with the increase in production, the stocks of mills rose sharply from 78,400 tons to 125,000 tons during this period.

The second reason attributed by the Commission for allowing forward trading now is the emergence of illegal operations in both raw jute and jute goods, in the absence of an organised futures market. This illegal trading is said to be on a more organised scale in jute goods, thanks to the somewhat ambiguous wording of the provisions of the West Bengal Jute Goods Act, 1950, which govern the trading in jute goods. Thus, the *fatka* market is being operated by the speculators on the basis of differences which are settled without delivery of goods every fortnight. The purchases and sales at the end of every fortnight are usually shown as cancelling each other in the books of the operators. The transactions take the character of gambling and the constant manipulations of prices in these markets exaggerate the movement of prices. The establishment of a regulated futures market will, therefore, meet the needs of genuine speculators and discourage the resort to gambling.

The Commission also considered the question whether the I.J.M.A. contracts and the *pucca* delivery orders should be exempted from the purview of the Forward Contracts (Regulation) Act, 1952, when section 15 of the Act is applied to jute goods. The I.J.M.A. represented to the Commission that it was urgently examining the position of both the raw jute contract and the gunny contract and requested that, in the meantime, section 15 of the Act should not be applied to jute goods, lest normal trading, including export trade in jute goods, should be brought to a complete standstill. While expressing its sympathy with the object of safeguarding the export trade in jute goods and its anxiety to avoid any dislocation of the existing machinery of trade, the Commission has come to the conclusion that there is no case for exempting these contracts from the operation of the Act and that such exemption, if granted, is likely to lead to undesirable consequences. Giving its reasons for drawing such a conclusion, the Commission says:

"In the past, the futures markets in jute and jute goods have been subject to serious speculative pressure which has done incalculable harm to the jute economy. The purpose of applying section 15 of the Act was to exercise effective control over all forms of transferable specific delivery contracts and to ensure that the trade in these contracts was carried on in the interest of the trade and the public interest and in accordance with the by-laws of a recognised association which would operate under the direction of the Commission. The I.J.M.A. contracts accounted for the bulk of the trade and, if these were exempted, there was no point in applying the Act to jute goods at all, as there was little left to regulate. The members of the I.J.M.A. and the shippers need not then become members of any recognised association and submit to any regulations under the Forward Contracts (Regulation) Act, 1952. If the principal functionaries in the jute trade did not join the recognised association, hardly anyone else will need to. There would besides be nothing to prevent unscrupulous persons from starting associations ostensibly carrying on business in the I.J.M.A. contracts, but, in fact, for indulging in speculative activities. This would nullify the effectiveness of the recognised association. The Commission has, therefore, come to the conclusion that it is necessary for the success of any association to be recognised under the Forward Contracts (Regulation) Act, 1952, that it should cover *all* transferable specific delivery contracts, including those conducted on the basis of the contracts of the I.J.M.A. The Commission is of the view, however, that the trading by-laws and working procedures of the recognised association should be so formulated as to cause the least amount of dislocation in the established processes of trade."

The Market Chosen

After carefully considering the respective claims of the different associations for recognition, the Commission has selected the East India Jute and Hessian Exchange Ltd., as the most suitable one. The Commission also considers that the scheme for reconstitution of the Exchange with a new set of Articles of Association and trading by-laws prepared by the *Ad Hoc* Sub-committee appointed for such purpose by the I.J.M.A. is generally satisfactory. The scheme does not, however, cover the existing system of trading in jute goods on the basis of the I.J.M.A. forward contracts and the transferable *pucca* delivery orders (P.D.O.) issued by mills. As the Commission is of the view that there is no need for exempting the I.J.M.A. contracts and P.D.Os. from the purview of the Act, it feels it necessary to modify the scheme proposed by the *Ad Hoc* Sub-committee in such a manner as would enable the existing I.J.M.A. contracts in jute goods and the P.D.Os. to continue to be operative under the regulation of the East India Jute and Hessian Exchange Ltd. The Commission has come to the conclusion that the Exchange should conduct trading in transferable specific delivery contracts in jute goods, in addition to the hedge contracts as proposed. The I.J.M.A. contracts and the transferable P.D.Os. would then be dealt as transferable specific delivery contracts in jute goods under the rules of the Exchange and there would be no dislocation in the existing pattern of trading. The Commission has also examined the question whether the East India Jute and Hessian Exchange Ltd. should conduct trading in transferable specific delivery contracts in raw jute also, in addition to hedge contracts in raw jute as proposed, and has come to the conclusion that there was no need for the introduction of such contracts in raw jute. The reasons given by the Commission are: (1) forward contracts in raw jute have remained banned since October 1953, under section 17 of the Forward Contracts (Regulation) Act, 1952; (2) while the Indian Jute

(Continued on page 1019)

NORTH INDIAN TEA IN OCTOBER

OUTLOOK CONSIDERED GOOD

THERE would appear to be a feeling in Calcutta tea trade circles that the market barometer is now set fair and that their hopes that prices of common tea would stabilise somewhere above the cost of production are nearer to realisation. This sense of optimism is apparently based on the general improvement in tea prices during October 1956 and the Government's decision not to raise the export duty on tea from As. 6 to As. 10 per lb. for the current month. This latter decision is taken as an indication of the Government's appreciation of the need for giving relief to the producer of common tea.

During the month under review, tea auctions in Calcutta, as was anticipated earlier, enjoyed a favourable market. This was mainly due to the small quantity of tea on offer, as there were only three sales during the month. In fact, the export offerings in the first sale held on 4th October were, of necessity, limited to slightly below 50,000 packages due to the imminence of the *Puja* holidays. Another factor which led to the sharp rise in prices was the hectic buying by outmarkets, particularly towards the end of the month, as a result of expectations that the export duty would go up to As. 10 per lb. in November.

The opening sale for export market of the month witnessed a strong internal buying in preparation of the *Puja* break in the middle of October. Common and low medium broken pekoes dominated the sale and advanced by about As. 3 per lb. Black fannings received good support, but in the subsequent sales, they received less attention, due to (1) the continued tension in the Middle East where these types are popular, and (2) difficulty in obtaining freight for countries in this troubled area. C.T.C. teas, which were only of ordinary rains quality, met with less support and consequently declined in price in each successive sale. The U.S.S.R. continued its strong support, with the result that Darjeelings, particularly leaf grades, enjoyed good sales. The final sale opened with a good general demand, but this could not be maintained as the sale progressed, as buyers were apprehensive whether the teas bought late on the 29th October, the date of the last sale, could be documented in time for submission to the customs by the last date of the month.

A noteworthy feature of the month's export sales was that the price concertina closed further, following an increase in the price of common broken pekoe and decline in that of best C.T.C. Assam B.P. Thus, by the final sale of the month, common B.P. rose by almost As. 4 to Re. 1-13-6 per lb., while, in the same period, the quotation for the best C.T.C. Assam B.P. declined by about As. 8 to Rs. 3 per lb. The general expectation is that this trend will continue and the price range between good quality and common tea may be less than Re. 1 per lb. before the end of the year.

The following table shows the prices fetched in export sales during the month, as compared with the final sale of the previous month:

	Sale 19 29-10-1956	*Sale* 18 22-10-1956	*Sale* 17 4-10-1956	*Sale* 16 14-9-1956
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Common B.P. ..	2 1 0	2 9 0 to 2 4 0	2 0 0	1 13 0
Plain B.P.	1 13 0 to 1 13 0	1 12 0 to 1 13 0	1 12 0 to 1 12 0	1 9 6 to 1 10 0
Medium Assam B.P. ..	2 1 0 to 2 2 0	2 2 0	2 2 0 to 2 3 0	2 0 0
Best C.T.C. Assam B.P.	3 0 0	3 2 0 to 3 3 0	3 6 0	3 8 0 to 3 10 0

For the internal market, three dust sales were held, with an average offering of 18,000 packages per week, which meet with good general demand. The demand, however, weakened towards the close. As in the case of export sales, the gap between the prices of the lower quality and the best varieties narrowed down considerably, as the following table indicates:

	Sale 19 30-10-1956	*Sale* 18 23-10-1956	*Sale* 17 5-10-1956	*Sale* 16 26-9-1956
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Medium Dooars dust. .	2 2 0 to 2 3 0	2 5 0	2 1 0 to 2 2 0	2 1 0
Medium Assam grainy dust	2 3 0	2 5 0 to 2 6 0	2 4 0	2 2 0 to 2 3 0
Medium Assam C.T.C. dust	2 8 0 to 2 9 0	2 10 0	2 6 0 to 2 8 0	2 8 0
Best Assam C.T.C. dust	2 14 0	2 14 0 to 3 0 0	3 0 0 to 3 2 0	3 4 0 to 3 8 0

The quotation for the best Assam C.T.C. dust in the last sale of the month was the lowest for the season up to the end of October. There has, however, been a further decline in the price of this variety in the current month.

The Government of India's decision to maintain the export duty on tea for November at As. 6 per lb. has been welcomed by all sections of the trade. The latter are greatly heartened that the representations made to the Government of India have not been in vain and that the Government is willing, in the long-term interest of the industry, to forgo a small return to the Treasury, thereby providing the much needed relief to the common tea producer. Commenting on the Government's decision, Messrs. J. Thomas & Co., Ltd., observe, in their monthly review for October, as follows:

"The lower duty should prove valuable in the immediate stabilisation of prices for common and low medium teas, while from a long-term point of view, it should lend considerable strength to the competitive position of Indian tea. With a ten-anna duty, Indian common tea, which has been steadily losing ground in the world markets, would have been even more difficult of sale and our exports seriously affected. It is hoped that the same principle will be followed in the coming months and the duty retained at six annas to ensure smooth trading."

Referring to the outlook for the current month and the prospects fod the rest of the season, Messrs. Thomas & Co. say:

"The trend of the market during the month of November will be largely dependent on the international situation. Provided there is no stoppage of shipping, the Calcutta market should strengthen, as the basic demand for tea is likely to be good. Buying from the Middle Eastern countries may be temporarily suspended until the fighting is over and peace is restored. There is a possibility of an increase in the freight rates, if the ships have to take the longer route *via* the Cape and, until the situation is clearer, it is possible that there may be a temporary reduction in the tempo of purchase by the European countries, including the U.K.

"Although the U.K. stock, customs, and afloat figures are somewhat higher than at the same period in 1955, these should be regarded as very low, taking into account the present situation, and 'spot' teas in London should come to a strong market. If supplies from India and Ceylon were to be temporarily cut off or delayed, a great shortage of tea is visualised in London. Common and medium teas have advanced by over a shilling in the last two weeks in London and have, for the first time in the season, sold at a premium over Calcutta.

"The world black tea crop to the end of September is only 7 million lbs. in excess of 1955 and with the early closure of plucking in North India, it is unlikely that the world supplies will show an increase at the close of the season as compared with 1955. Shipments from India and Ceylon, especially from North India, continue to forge ahead of 1955, though there may be a slight fall in exports during the coming months, especially if shipping conditions are difficult.

"The U.S.S.R. and Eire purchased substantial quantities of tea during the closing sales of October and are likely to operate on the same scale subject to the international situation being favourable. Eire has, so far this season, purchased a very small quantity of tea, both India and Ceylon, and if the deficit is to be made up, it is inevitable that its purchases will have to be stepped up during the coming months.

"While it is difficult to make a forecast of the tea market under the present unsettled conditions, statistically the position is sound and once the Middle East question is settled, good strong demand should prevail. The effect of the recommendations of the Calcutta Tea Regulation Committee is bound to be felt sooner or later, and a possibility of the further strengthening of the market, especially for the bulk of the lower quality teas, is not altogether to be ruled out. The market for common and low medium teas, which has shown signs of revival during October, may show a further improvement, while high-priced C.T.C. teas may tend to depreciate slightly, thereby closing the price concertina as the season progresses."

The world crop at the end of September amounted to 853.2 million lbs., as compared with 846.2 million lbs. a year before and 834.7 million lbs. at the close of September 1954. Stocks in London as on 26th October 1956, including teas afloat, amounted to 174.5 million lbs., as against 142.4 million lbs. on the corresponding date of 1955. Shipment of North-east India tea to the U.K. during January-October 1956 amounted to 237.52 million lbs., while that in the corresponding period of 1955 was no more than 153.47 million lbs.

PROBLEMS OF FOUNDRY INDUSTRY

GOVERNMENT'S EFFORTS TO AUGMENT RAW MATERIAL SUPPLY

SOME of the basic problems of India's foundry industry figured prominently in the speech of Mr. K. L. Jalan, Chairman, Indian Foundry Association, Calcutta, delivered at the recent annual meeting of the Association as well as in that of Mr. M. M. Shah, Minister for Heavy Industries, who was present on the occasion. Both Mr. Jalan and Mr. Shah recognised the importance of the foundry industry to India's national economy and the fact that the industry's progress had been hampered by raw material shortages, particularly by the shortage of pig iron. Mr. Shah gave the assurance that the problems were receiving the Government's attention and that efforts were being made to ensure that the supply of raw materials was augmented both by increased domestic production and imports.

Mr. Jalan said that the total pig iron requirements of the foundry industry by 1960-61 would be nearly 800,000 tons. Since these requirements could not be met entirely from domestic sources, it was essential that the Government should plan for imports in a way that would ensure a "continuous" flow of raw materials. While on the question of pig iron supplies, he said he would like to mention the possibility of establishing low-shaft furnaces for production of pig iron. Such furnaces, he said, would be helpful, because they would permit larger utilisation of inferior ores, lignite and non-coking coals. Besides the shortage of pig iron, there was also the question of inadequate supply of hard coke. In this connection, he observed that the Association's estimates of hard coke requirements in 1960 had been confirmed by the findings of the Fuel Research Institute which estimated the requirements at 80,000 tons per month by 1960. Mr. Jalan said that the foundries alone, which were the largest consumers of by-product hard coke, would require about 40,000 tons per month in the second Plan period.

Transport

Alluding to transport, Mr. Jalan calculated that the total number of wagons required daily for the movement of pig iron alone to the foundries will be between 1,560 and 2,080 by 1960-61 and that about 600 to 800 wagons per day would be needed to carry hard coke. He added: "Thus, the total daily wagons required for the foundries for the movement of only two important raw materials—pig iron and hard coke—will be about 2,500. If we take into consideration the movement of other raw materials and the finished products to and from the producing centres the total number of wagons required will be at least 5,000 per day. The supply of the required number of wagons to the foundries is extremely essential if production is not to be hampered."

While Mr. Jalan welcomed the Government's decision to establish plants for heavy forging and castings—the capacities of forge shops, steel foundry and grey iron foundry will be about 7,000 tons, 14,000 tons and 12,000 tons, respectively, in the initial stages and rise subsequently to 12,000 tons, 30,000 tons and 30,000 tons—he appealed to the Government not to undertake medium and small castings, in view of the fact that the capacity of the existing foundries for these castings was already idle. He said:

"Due care should be taken to ensure that the Government do not start manufacturing light castings in future on the ground of sufficient orders not forthcoming for heavy castings after the foundry is established. It would be desirable if the requirements of heavy castings is assessed correctly and a beginning is made with the present requirements with suitable provision to expand as the future demand for heavy castings expands."

Mr. Shah, in the course of his speech, referred to the points raised by Mr. Jalan. He pointed out that efforts were being made to augment raw material supplies to the foundry industry both from domestic producers and imports. He estimated that the three Government-owned steel plants, which would go into production between 1958 and June 1959, would produce 2.25 million tons of finished steel and 650,000 tons of pig iron. With the completion of expansion plans of the Tata Iron and Steel Co., Ltd., the Mysore Steel Works and the Indian Iron and Steel Co., Ltd., the country would have 4.5 million tons of steel and 885,000 tons of pig iron by the end of the second Plan; the pig iron production might even go up to 1 to 1.2 million tons. But the Government is fully alive to the current shortage of pig iron in the country and has arranged to import some 180,000 to 200,000 tons of pig iron this year. As regards the question of installation of low-shaft furnaces for production of pig iron, Mr. Shah said that it would be necessary to carry out large-scale pilot experiments before such furnaces were installed. The Government had already approved of two schemes for experimental purposes and would await the results of their operation before it took a decision in favour of extensive use of low-shaft furnaces. But he had no doubt that these furnaces were going to "revolutionise" the manufacture of iron and steel in this country, particularly the manufacture of pig iron.

Proceeding, Mr. Shah agreed with the Chairman so far as the difficulties of obtaining B.P. 2 hard coke were concerned. He cited the report of the Coke Oven Projects Enquiry Committee which had estimated the deficit in the supplies of hard coke at 380,000 tons, after taking into account the capacities of existing coke plants and their expansion plans. The present annual production of hard coke is about 2.6 million tons, of which 2.1 million tons are used by the steel plants themselves. The by-product hard coke produced by the coke oven plants and used by foundries is estimated at 250,000 tons. By 1960-61, the hard coke requirements of the country are expected to aggregate 0.9 to 1 million tons per year, exclusive of the requirements of steel plants which will produce their own hard and metallurgical coke. Even after taking into account the capacities of the existing hard coke plants and their expansion plans, the production of coke will not be more than 600,000 to 650,000 tons. The Government is, therefore, installing a big coke-oven plant at Durgapur with an annual capacity of 280,000 to 300,000 tons. It also wants to encourage the present hard coke manufacturers, in order to accelerate their proposed expansion plans. So far as soft coke is concerned, there is no difficulty in increasing the production of soft coke by the collieries.

In conclusion, Mr. Shah referred to Mr. Jalan's plea for not extending the scope of the output of the State-owned forging-*cum*-foundry shop to medium and small castings. He said that the main function of the Government-owned unit was to cater to the demands of the heavier and medium-sized castings and forgings. But he thought that "no shop of this nature could be planned without covering a wider range of production." He, however, felt that, in view of the large-scale expansion that was taking place in the sphere of engineering industries, the foundry industry need not entertain any apprehension over the manufacturing programme of the Government-owned forging-*cum*-foundry shop.

(*Concluded from next column*)

heavy taxation, the artificial and arbitrary restrictions imposed by the permit system, the uneconomical laden weight limits and uncertainty about nationalisation, were resolved, India would be able to take "fuller advantage of the special capital investment of over Rs. 400 crores which is being incurred on its roads." There is also another advantage in giving a fillip to road transport, namely, the wider opportunities for employment it provides. For, as Mr. Kennedy himself pointed out, the U.S., with a population of roughly half of India's, employs 9.8 million people or over 6 per cent. of its entire population on motor transport and allied industries, the corresponding figure for India at present being a mere 1.6 million.

The Voroshilovgrad thermal electric station, one of the largest in the Ukraine (Russia), has produced its first power. As soon as it is fully built its capacity will reach 600,000 kw. The sixth Five-year Plan (1956-60) devotes considerable attention to thermal stations. In some cases, the construction of these stations is of greater advantage than hydro-electric stations. This pertains to regions with extensive fuel resources—lignite, peat and combustible shales.

DEVELOPMENT OF ROADS

IMPORTANCE STRESSED BY MR. W. G. KENNEDY

IT is becoming increasingly clear that the implementation of the industrial and agricultural programmes in the second Plan might be held up, unless urgent attention is given to the development of transport. Although the development of the railways is vital to India's progress, it is no less important that the other forms of transport, namely, vehicular transport and shipping, should receive equal attention. The Government no doubt is alive to the need for giving encouragement to road transport. But it is to be feared that, while the authorities recognise the importance of roads, they do not always realise that expenditure on roads, if it is to be economically productive, should be accompanied by measures designed to improve road transport. This was one of the points made out by Mr. W. G. Kennedy, Secretary of the International Road Federation, London, in the course of an interesting talk at a Press conference, held in Bombay early this month.

Mr. Kennedy, who is now in India on a short visit to acquaint himself with road problems in India, pointed out how greatly the U.S. owed its prosperity to road transport. In the U.S., 77 per cent. of all goods was moved by road. Again, long-distance inter-State road transport in the U.S., according to Mr. Kennedy, accounts for 25 per cent. as much traffic as the railways carry. It would appear that, in the U.S., the employment of articulated vehicles and truck-trailer and tractor-trailer combinations has reduced road operating costs to levels comparing very satisfactorily with those of other forms of transport. Much attention, Mr. Kennedy said, had been devoted to road transport in that country where the people had realised the economic importance of good roads. One of the earliest watchwords of the average American citizen two decades ago was: "You pay for good roads whether you have them or not: you pay more if you do not have them."

Use of Roads

On the question of road development in India, Mr. Kennedy agreed that, while it was being attended to, it could not be denied that the country was not making adequate use of the roads it already had. He said that it had been found that, including the truck equivalent of bullock carts in India, the density of traffic in Indian roads was two vehicles per mile, as against 15 to 20 vehicles in many parts of the world. He felt that it was this inadequate use of the roads that had led to a severe and unbearable strain on railways and to transport bottlenecks. He added:

"It is observed that, while railway capacity in India increased from 92 million tons before the first Plan to 115 million tons by the end of that Plan, and it will increase further to 164 million tons by the end of the second Plan, the overall transport deficit is outstripping such capacity at a vastly increased rate. For example, the gap between demand and supply of railway transport in 1955-56 is stated to have been 5 million tons, whereas the gap estimated towards the end of the second Plan is roughly 35 million tons or seven times as acute as in the first Plan. During my visits to various places in India in the past fortnight, I have heard and seen a great deal of the general awareness of the need to overcome this bottleneck in the only way possible which is by employing road transport to bridge this great gap between demand and supply. I could not help feeling, however, that all proposals for expanding road transport were more or less vague and nebulous and the feeling is inescapable that, unless more speedy measures are taken to remove some of the handicaps now rigorously limiting the use of road transport, the effectiveness of the contemplated measures may prove very much inadequate.

"These handicaps make an imposing list and have evolved themselves by degrees during the past two decades when India concentrated on railways to the exclusion of road transport. High taxation, amounting to five times as much as in the U.S.A. on road transport, and the inability of the intending providers of transport in most parts of the country to get through inter-State permits are two of the foremost handicaps. Equally important is the low carrying capacity permitted for vehicles, which raises transport costs to prohibitive levels. The short duration of a permit which is often restricted to one year or less at a time, is another great deterrent to the expansion of road transport. Apparently, this low limit has been fixed to facilitate nationalisation if and when it is decided upon, but now that it has been decided that goods transport shall be left in the hands of the private sector during the second Plan period, one can see little justification for not increasing the permit period to at least five years."

Finally, Mr. Kennedy rightly felt that, if the main handicaps in India, namely, the very

(*Continued in previous column*)

NEW PRODUCTS AND PROCESSES

Temperature Control

ONE of the most difficult problems in the manufacture of silicon transistors vaives is that of ensuring that the temperature of the silicon crystal, which forms the heart of the transistor crystal valve, is accurately controlled while the crystal is being drawn, or pulled. A new system for controlling the temperature of silicon crystals during their manufacture, which has now been developed by the Minneapolis-Honeywell Regulator Company, is said to enable the temperature to be controlled with exceptional accuracy during this drawing process. Operation of the system depends on the use of a temperature detection device incorporating a special sapphire rod. This rod transmits the radiant energy of the heat from the carbon crucible in which the molten silicon is contained to a thermopile, which converts this heat energy into electric current capable of actuating the temperature recording and control units of the system. A series of specially designed electronic proportional control units are used to ensure that the temperature recordings are rapidly converted into control "orders" for the maintenance of the derived temperature.

Electric Typewriter

A portable electric typewriter by Smith-Corona Incorporated of the U.S. will be on the market by 1957, the Company states. Work on the development of this has been going on for five years, and is treated as highly secret in regard to competitors. The machine is practically the size of a standard portable typewriter. It is enclosed in a case of aluminium, covered with vinyl, and plugs into a wall socket like an electric fan. The weight is about 5 lbs. heavier than a manual portable. Some of the operations that are automatic on an office electric typewriter have to be manual on the portable model. They include carriage return, back spacer and tabulator. This is because no electric motor powerful enough to handle them can be compressed to the size for a portable model. The new machine will go on the market early in the New Year, priced at $187. Electric office machines sell from between $425 and $600. The Company says it expects to sell between 25,000 and 30,000 of the new machines next year. The biggest market is expected to be small business men and professional men who do typing at home. So far no competitor of Smith-Corona in the typewriter field has announced a portable electric machine. Remington Rand and Royal McBee Corporation say they are doing research in the field.

Modifying Butyl Rubber

A commercially practical chemical modifier for butyl rubber has been developed by the Monsanto Chemical Company in association with Esso Research and Engineering, according to a statement by Monsanto. The Esso firm is an affiliate of Standard Oil of New Jersey. According to the President of Monsanto, Dr. C. A. Thomas, the chemical, which is to be sold under the name of "Elastopar," doubles the resilience and strength under strain of unmodified butyl synthetic rubber. This takes place in the course of processing. Monsanto is at present producing Elastopar in semi-commercial quantities, and distributing samples to rubber manufacturers for testing. The application could have considerable impact on the tyre industry, it is claimed. At present butyl has a number of qualities which recommend it for use in car tyres, such as softness and freedom from squeal, but it tends to develop too much heat under road conditions. A chemical treatment to prevent this was previously known, but it required higher production temperatures, and longer mixing times than in the conventional butyl process. Elastopar, on the other hand, can be added to the product mix without interrupting the standard process of manufacture, it is said.

Microfilm Reader

An instrument for reading microfilm, including 16-mm. and 35-mm. film, which can be used on a desk top, is available from Micro Methods (17, Denbigh Street, London S.W.1). The equipment is not large and can be carried in its case quite easily. The reading "head" of the instrument can be rotated through 360 degrees and can be adopted for film strips, transparencies and for projection on wall or ceiling. It can take reels of film ranging in length from 50 to 100 feet. The light source is a 12-volt, 42-watt lamp with reflector; other equipment includes a built-in transformer and pressure plates to protect the film. These plates can be opened and closed either automatically or by hand. It is stated that both hand-driven and motorised versions of the reader are available. The motorised model has remote control switches for forward and reverse motion and for slow and fast speeds.

Plastic Covers

A technical concern, Verkoopassociatie van Metaalindustrieen, Overtoom, Leliegracht 13, Amsterdam, has put on the market entirely transparent plastic covers for protecing drawings, blue-prints, instruction cards, etc., which are kept clean in the covers and are easy to read through them. These plastic covers are supplied in sizes of 220x305 mm. (8.7x12 ins.) up to 1,400x2,500 mm. (55x98 ins.); they are 0.2 mm. (0.008 in.) tick. They are open at the top and provided with reinforced holes for filing in a ring binder or the usual filing systems. If desired, the covers can have a particular emblem or company name printed on them. Blue plastic ring binders with rings can also be supplied to match.

ANNUAL MEETING OF UNITED NILGIRI TEA ESTATES CO. LTD.

MR. E. H. STANES EXAMINES THE PROPOSAL FOR REPLANTING FUND

THE Plantation Enquiry Commission's recommendation for the creation of a tea replanting fund by the Tea Board, to which each garden should contribute Rs. 50 per acre per annum, came in for a critical examination at the hands of Mr. E. H. Stanes, Chairman of the United Nilgiri Tea Estates Company, Ltd., when he addressed the Thirty-fourth Annual General Meeting of the Company, held on 9th October 1956. The following is a summary of Mr. Stanes's speech:

"The main point I would stress is that the maintenance of our profits, in spite of continually increasing costs of production, and a heavy fall in selling prices, has been largely due to our expansion programme and the very much higher crop harvested.

"Between 60 per cent. and 70 per cent. of our crop is normally exported, and produces for India, at a very rough estimate, some Rs. 2½ crores of foreign exchange.

"Our average dividend over the first 20 years was 6½ per cent. and during this period was also repaid some Rs. 4 lakhs of debentures. There was during this period comparatively little money left over for development or higher cultivation expenditure. We started with 502 acres tea and now have 1,702 acres tea in bearing and 71 acres immature. All of the additional acreage, except the recent purchase of Korakundah, has been planted by us. This represents a continuous process of development. Our capital has increased from Rs. 4 lakhs in 1925 to Rs. 21,93,280 today, 31 years later, which represents only the very low figure of Rs. 1,300 per acre of mature tea."

Plantation Enquiry Commission's Recommendation

Referring to Plantation Inquiry Commission's recommendation, Mr. Stanes said that the report seemed to have many valuable suggestions to make, but he wished to comment in particular on their recommendations for replanting.

"The Commission has recommended that the Tea Board should draw up, in consultation with the producers, a programme of phased replanting as well as replacement and renewal of machinery and equipment. The Government should ensure that the tea gardens make the necessary financial provision for this programme before they declare dividends or repatriate profits. The Tea Board should appoint development staff to assist the States framing such programmes and to co-ordinate and implement them. Another suggestion of the Commission is that the Government should arm itself with powers to make investigations and issue directions necessary for the proper maintenance of fixed assets including replanting in any tea estate. It has recommended that a tea replanting fund should be created in the Tea Board to which each garden should contribute Rs. 50 per acre every year. The amount would be held in the fund by the Tea Board to the credit of the garden concerned. Tea gardens should be allowed to withdraw from the fund such amounts as may be necessary for the purpose of replanting, according to a programme approved by the Tea Board. The scheme may be applied only to gardens of 100 acres and above. As the major portion of the acreage and production are accounted for by estates over 100 acres, the scheme will cover 96.1 per cent. of the total acreage and 99 per cent. of the production in the country.

"As it affects this Company it appears that we should be expected to pay Rs. 85,000 per year to the Tea Board for a replanting fund, and more later as additional acreage comes into bearing. This money can only come from the funds we have been providing in the past for our development reserve, and can, of course, only be provided if profits permit. It is a blanket provision which would appear to take no account of the vast difference between estates and districts, or between North-East and South India, or crop per acre.

Replanting

"I agree that a tea bush is a wasting asset, and that it will eventually die or cease to produce leaf. As I see it, there are three reasons for replanting. (1) The tea has been planted in unsuitable land and should be uprooted and replanted elsewhere. This applies to the 150 acres on Korakundah which we do not even include in our acreage figures, as it is unproductive. (2) So many bushes have died through old age or natural causes that the yield per acre has become unremunerative. This will vary with climatic conditions, but on our high-grown teas I would consider 60 years a low average figure. (3) Scientific research has developed a disease-resistant hardy tea bush producing good quality leaf in large quantities. Though not improbable this is not yet in sight.

"I now return to this proposal of a contribution of Rs. 50 per acre to be paid to the Tea Board to be kept for us, as if we were incapable of running our own business. It is a sum sufficient to curtail all chance of continuing to develop as we have done in the past. It is apparently to be frozen, unless an approved replanting programme is put forward. Frozen unproductive money can do the country no good. Any reasonably run company can provide its own funds for replanting as long as there is not a slump.

"Except for reason (3) above—an eventuality not yet in sight— I reckon that it is 30 years, perhaps longer, before we need consider starting replanting. In 30 years we should have paid into the Tea Board something over Rs. 25 lakhs, which is more than the present capital of the Company.

Very Difficult Problem

"Are we going to get interest on this money? Is it going to be available to us at this long period ahead, and what will it be worth then in terms of cost of replanting per acre? Is it going to be allowable as a deduction from profits for taxation purposes? I do not envy the Tea Board in the very difficult problem they have been set.

"I have known our estates intimately over more than 30 years. They have never looked better and more healthy than they do now after having given us our biggest crop. If we have to start replanting in 30 years' time probably 50 acres per year is the most that it is practical to do. Taking, say, six years as a high-grown tea to come into production, and on present cost of replanting, our expenditure could rise to between Rs. 1 lakh and Rs. 1½ lakhs per annum, and I presume we should, at, the same time, have to contribute, say, Rs. 90,000 to the Tea Board. *We should never be able to spend the Rs. 25 lakhs that had accumulated, the interest alone on it would pay for our replanting without any further contributions from us.* I am a business man, and I am afraid these theoretical proposals, which can be made to sound like practical business, just make me mad. I would further say that it would be misappropriation if moneys contributed by us were given to other estates to do their replanting."

A refrigerator invented by Mr. F. Trombe, head of the National Centre for Scientific Research, produces 1 kilogramme of ice per hour, thanks to the sun's rays. It is fitted with a circular mirror which catches the sun's rays, concentrates and directs them to reservoir containing ammonia. Under the influence of the sun's rays, the gas becomes warm, is compressed, then passes into cooling tubes and expands into an evaporator, thus producing a very low temperature. It can function for years without any alteration.

EXPORT CREDIT INSURANCE IN AUSTRALIA

SCHEME DESIGNED TO COVER 85 PER CENT. LOSS

MUCH interest has been aroused in this country over the possibility of instituting a scheme for export credit insurance, thanks to a comprehensive report on the subject by the Export Credit Guarantee Committee (Chairman: Mr. T. C. Kapur) published this year. Trade and commercial bodies have generally welcomed the idea of an export credit insurance scheme, for they have all realised the valuable assistance such a scheme could give to export trade. It has also been realised that Indian exporters cannot successfully compete in world markets with its rivals who are aided in their own countries by well-organised credit insurance schemes. It is noteworthy that more and more countries now feel that such schemes are very necessary in the interests of export trade. Among the countries which have recently taken up this question in great earnest, mention must be made of Australia where the Exports Payments Insurance Bill has received Royal Assent.

Importance of Scheme

The importance of export credit insurance scheme to national economy was emphasised by Mr. McEwen, Minister for Trade, when he spoke on the second reading of the Bill. He pointed out that experience had shown that the risk of non-payment in export transactions deterred exporters from increasing their trade, particularly in markets with which they had not previously done business. Again, some exporters, because of the payment risk involved and because of difficulties of financing sales on credit terms, had not been able to meet their competitors' terms of sale in certain markets. It was in order to meet these difficulties, he said, that the Government had decided to provide export payments insurance facilities.

Under the Australian scheme, the Exports Payments Insurance Corporation, which will be a statutory body, is being set up with an initial capital of £500,000. Further funds may be provided in future by way of advance out of moneys appropriated by Parliament for the purposes of the Act. All insurance contracts issued by the Corporation are guaranteed by the Government. The total liability for outstanding contracts at any particular time is, however, limited to £25 million. Participation in the scheme is entirely voluntary, but an exporter, who utilises the facilities under the scheme, should be prepared to offer a fair spread of risk. Thus, he cannot select only his worst risks for insurance.

Risks Covered

The Corporation, according to *The Review*, London, will insure insolvency of the overseas buyer or against the overseas buyer's inability to obtain foreign exchange to remit payments. It will also cover the risk of failure of the overseas buyer to pay within 12 months of the due date, the risk of war, rebellion, hostilities, revolution or other disturbances in the overseas country and any other cause outside the control of the exporter and arising outside Australia. If experience in working the scheme shows that there is genuine need for covering additional risks, the whole position, it is stated, will be further considered. The Corporation will not, however, extend credit to exporters. Nor will it enter the general field of insurance. Thus, it will not insure against fire or pilferage or damage to goods, or against marine or other risks that are nominally insured with insurance companies.

It may be noted here that the Indian scheme, drawn up by the Export Credit Guarantee Committee, envisages the coverage of all the risks that are sought to be covered by the Australian Corporation. There is, however, one difference. The Indian scheme contemplates the coverage of only 80 per cent. of commercial risks, 85 per cent. of political risks and 50 per cent. of unrecouped expenses incurred over promotional campaigns. It is not clear whether the Australian scheme covers "promotional" expenditure risks. But the maximum limit for cover is set at 85 per cent., as compared with 80 per cent. under the Indian scheme. The Australian scheme does not also seem to make any difference between political and non-political risks. Be that as it may, the scheme recognises that the loss covered can only be a certain percentage of the value of the risk offered for cover. This limitation is rightly defended on the ground that, if the exporter is compelled to carry a portion of the loss himself, he will exercise normal commercial prudence in his export transactions and will also take a direct interest in recovery action in the event of a loss being sustained.

General Set-up

The general set-up of the Australian Corporation is also similar to the one suggested by the Indian Export Credit Guarantee Committee. Thus, the Corporation will be a statutory body, independent of existing Government departments. It will be under the control of a single Commissioner and will be responsible to Parliament through the Minister. The views of the exporters, manufacturers, the commercial community in general and of the trading banks on the operations of the Corporation will be expressed through a Consultative Council consisting of 10 representatives of these interests.

The Minister will not interfere in matters of day-to-day administration of the Corporation. But the Corporation will keep the Minister informed of its decisions in matters of policy relating to the conduct of the business. The Minister's approval is required in regard to classes of insurance contracts that may be entered into, the nature of risks that may be covered and the undertaking of liabilities in relation to trade with particular countries. Under these three heads, if the Corporation and the Minister do not agree or agreement is not reached within a reasonable time, the Minister may determine the policy to be followed. The approval of the Minister is not required in relation to any particular insurance contract nor is he empowered to determine that the Corporation shall or shall not enter into any particular contract. Thus, the Corporation has the maximum of freedom but Parliament retains an appropriate measure of control through the responsible Minister.

MARINE MARKET

Some important problems of the marine market were discussed in an address delivered at the Insurance Institute of London by Mr. G. W. Hogsflesh, the Chairman of the Institute. Among these problems, the rising cost of repairs to ships is one with which marine insurers all over the world are familiar. Mr. Hogsflesh pointed out how repair costs had gone up by 25 per cent. between 1953 and 1955 and said that they might go up by another 25 per cent. by the end of 1958. He referred, in particular, to the damage caused to the Liberty-type vessels. He added: "I can't help feeling that we are entering into an extremely expensive era of these war-time built vessels, for, after all, they were built on a short-time policy and have now done almost 15 years of hard and useful service."

A major post-war development, according to Mr. Hogsflesh, has been the growth of national marine markets with the cushion of reinsurance treaties placed in other markets. Referring to this development, he said: "Much of this business used to come direct to the London market, but now only comes by way of reinsurance and with excessive overriding commissions." He warned that, "unless some brake is placed on these deductions, many of the more prudent underwriters in our market will say they are not prepared to go on writing business which is just about breaking even."

In conclusion, Mr. Hogsflesh referred to what he called the "credit" side of the marine business. He said:

"On the credit side of our business there is a big factor which is often not mentioned or given very little publicity, and that is the increase in our premium income as a result of the increased value of both new and second-hand tonnage. In an article in *Fairplay* some time last year, for a standard 9,500-ton diesel engine ship the price at the end of 1945 was quoted as £265,000 or £28 per ton deadweight. In June 1955, that figure had gone to £665,000 or £70 per ton deadweight. With this tremendous rise in shipbuilding costs, owners have periodically reviewed their values, and looking through my books I find that in the last five years a great many ships have increased in value from 25 per cent. to 40 per cent. Another factor that dispels the gloom is the lack of major casualties during the last two years. The Liverpool Underwriters Association figures do show that reported casualties to vessels of 500 gross tons and over have increased by approximately 8 per cent. in comparison with 1954, but the majority of these are in the smaller category vessels. I am optimistic enough to think that as far as our bigger and higher-valued vessels are concerned there has been a great improvement in aids to navigation, and in particular, in the standard of the operators. Many of us during the war had an opportunity to play about with a cathode-ray tube, and it struck me most forcibly how much the trained operator could see on his screen compared with my own casual observation. I well remember being on the bridge of one of our big passenger liners whilst on trials about 12 months ago, and when we were looking at the radar screen, the second officer told me that his radio officers could see far more on the screen than he could. Another point is the improving standard of maintenance of the radar sets. This, of course, does not apply to the same degree to the smaller tonnage where there are fewer officers, and possibly, the standard of operation and maintenance is not so high.

"The growing use of non-combustible materials in the big new passenger liners will be a great help towards lessening the fire hazard in the future. This latter risk I still consider to be one of the shipowners' major problems in our big passenger liners, and as leader on the Cunard Fleet, I can't help shuddering sometimes when I see in the stop press of my evening paper that the fire brigade has been called to one of the *Queens* in Southampton. ... I hope these factors will remove some of the gloom in your minds, and as far as I am concerned, I think we can face the future with confident optimism provided there is no complacency, and we are always alert to meet the changing conditions as we approach the new atomic age."

PILFERAGE IN DOCKS

Pilferage is one of the ugly features of the working of the docks in many parts of the world. This is a problem of particular interest to marine insurers who are often called upon to pay heavy losses arising out of loss of goods in ports. In this connection, it is gratifying to note that the authorities in Bombay are able to detect an increasingly larger number of thefts which take place in the port. Thus, in 1955-56, according to the latest Administration Report of the Bombay Port Trust, the total number of theft cases detected was 200, as against 155 in 1954-55. The police, the B.P.T. staff and 'outsiders' were all responsible for detection, their respective shares being 165, 3 and 32, as against 71, 8 and 76 in 1954-55 respectively.

The following table gives the classification of thefts in 1954-55 and 1955-56 according to the nature of goods:

Number of Thefts

	1954-55	1955-56
Foodgrains and foodstuffs	9	9
Motor car accessories	11	13
Metals	35	18
Injections and medicines	8	8
Cycle accessories	17	29
Liquor	6	8
Cloth	2	11
Machinery	4	14
Copper (wire, bars and cables)	9	8
Steel files and saw blades	8	5
Spices	..	4
Radio valves	1	..
Sewing machines	1	..
Miscellaneous	54	78
Total ..	155	200

It will be seen from the table above that while "metals" attracted the pilferers' attention most in 1954-55, it was "cycle accessories" that invited their notice most in 1955-56. It is, of course, difficult to draw any valid conclusion from the above table, in view of the fact that the figures relating to the total quantity of goods arriving under each head are not available. Nevertheless, it looks as though accessories of motor cars and cycles lend themselves to being stolen, presumably because they are easily carried and have a ready market.

ANNUAL MEETING OF T. I. CYCLES OF INDIA LIMITED

SIR A. RAMASWAMI MUDALIAR'S SPEECH

NEED FOR PRODUCING QUALITY PRODUCTS URGED

THE Seventh Ordinary General Meeting of the Shareholders of T. I. Cycles of India Ltd., Madras, was held on Tuesday, 6th November 1956, at the registered office of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, presided.

The Secretary read the notice of the meeting and placed before the meeting the proxies received which were recorded.

The Chairman delivered his speech and, thereafter, asked the shareholders whether they had any questions to put in the light of the speech and in the light of the Directors' report and the audited balance-sheet and profit and loss account for the year ended 30th June 1956 which had been in their hands for some time. No questions were asked.

The following resolutions were unanimously adopted.

The Directors' report and the audited balance-sheet and the profit and loss account for the year ended 30th June 1956 were adopted.

A resolution that a dividend of 6 per cent. for the year ended 30th June 1956 be paid was adopted.

Sir Ivan Stedeford and Shri A. M. M. Murugappa Chettiar, the retiring Directors, were re-elected.

Messrs. Fraser & Ross and Shri P. S. Gopalakrishnan, the retiring Auditors, were re-appointed Joint Auditors of the Company for the year 1956-57 and their remuneration fixed.

The meeting terminated with a vote of thanks to the Chair.

Chairman's Speech

The following is the text of the Chairman's speech:—

"GENTLEMEN,

"It gives me very sincere pleasure to welcome you to this annual meeting of the T. I. Cycles of India Limited. The Directors' report and the audited acounts and balance-sheet for the year ended 30th June 1956 have been before you for some time and, with your permission, I shall take them as read.

"The year under report has been full of events, some of which pleasant and some causing concern and anxiety to your Directors. Taking the latter first, during the year, there have been some labour difficulties which affected the progress of your factory. In my last report, I referred to the 'go slow' movement which was spreading among industrial workers in many industries and in different parts of the country. Unfortunately, the movement overtook your factory workers some time in November of last year and, in spite of every effort made by the management, the workers went on strike from 19th December. The factory came back to normal only in April. During all this period, the Managing Directors and the supervisory staff at the factory were constantly in touch with the labour officers and the Ministry of Labour, both in the State and at the Centre, and extended to them every measure of co-operation possible to bring the strike to an end. In spite of all this, owing to bad leadership of outside leaders, the old workers whom we had trained and who were happy in their work with us did not resume work. However, very soon after, wiser counsels prevailed among the workers themselves and the factory had its full complement of workers, both old and new, early in April. The piece-work system was accepted and is now working with satisfaction both to the workers and to the management. The wages of the workers on the piece rate are higher than they were before and have given much satisfaction.

"I refer to more pleasant events which occurred during the year. A most modern and up-to-date canteen was completed and declared open by the Chief Minister of Madras in May 1956. The occasion was taken by the Chief Minister and the Minister for Labour to advise the workers against being misled by interested people. The construction of the administrative building, which I referred to in my last speech, has practically been completed. Factory 'B' has been extended to house the machinery for the manufacture of freewheels and it is expected that freewheels will be manufactured from the beginning of 1957.

Company's Target

"Under the Development of Industries Act, your Company has been permitted to manufacture 2 lakh bicycles and 1 lakh set of bicycle components on a single shift. Your Board of Directors have accepted this target and are arranging for the necessary equipment and machinery to be installed in the factory to achieve this target on the basis of a single shift. Certain balancing equipment has been found to be necessary, the licence for which has been obtained and orders for such machinery have been placed abroad. With this additional plant and machinery, the capacity of your factory on single shift will be as fixed in the target and it is obvious that any additional demand that may be made will then be more easily achieved on a balanced basis by doubling the shift.

"It gives me special pleasure to repeat what I stated last year that the quality of your products are so well appreciated that Hercules cycles are in great demand throughout the country. Thanks to their whole-hearted co-operation we have continued to enjoy the benefit of technical advice from our colleagues in Birmingham. The present monthly output is, on an average, 15,000 bicycles. But the demand is greater than what we can conveniently meet, especially as there is a back-log of orders owing to closure or partial working of the factory during the earlier months of this year. According to the second Five-year Plan, it is estimated that at the end of 1960, the annual offtake will be about 1.25 million bicycles and, according to present trends, this target is not an impossible one.

Quality Should be Maintained

"Several manufacturers have been licensed to produce complete bicycles and, in addition, many scores of operators have been given licences to produce cycle parts. The desire to have small-scale units spread all over the country, partly to manufacture parts and mostly to assemble completed cycles, which the Government has in view, is a commendable one and large-scale manufacturers have no reason to criticise this policy. The assembly of cycles from parts manufactured by various persons or factories is a normal thing in many countries. There is, however, one safeguard which is absolutely necessary and which I trust the Development Councils and the Government would always keep in mind. The cycle is a poor man's means of transport and it is necessary that he should get the best product in return for the hard-earned savings which he invests in a cycle. The quality of every part should, therefore, be strictly tested and only those who produce parts of the desired quality should continue to have licences extended to them for the manufacture thereof. I am aware that the Indian Standards Institute is setting up standards for indigenous cycles and cycle parts with the help of technical experts. I hope that no false sense of sympathy for the cottage industrialist or the small-scale industrialist will influence anyone to lower the standard prescribed by the Indian Standards Institute.

"The new Companies Act has come into effect from 1st April this year and it has brought in its wake many problems to industry. All the implications of the various provisions of the Act, some of which at first sight seem to be rather contradictory, have not yet been fully ascertained. The statutory obligations of a company have increased enormously as a result of the Act and your Directors have done everything possible to ensure that the provisions of the Act are properly observed. But, with the best legal advice, it is difficult to be absolutely certain that the provisions of the Act are correctly understood and fully implemented. The day-to-day administration of the business has become complicated in the light of the provisions of the Act. I do venture to hope that second thoughts will be paid by the Government towards revising some of the provisions and making other provisions more certain and definite than they appear to be now.

Amenities to Labour

"I have referred to the canteen that was opened, which is subsidised to a certain extent by your Company, with the result that the workers get cheap and healthy food at the canteen. I have always believed that amenities of this kind are far more valuable to the workers than merely increased bonuses or even merely increased wages. The management will continue to follow this policy without, however, in any way derogating from the cash earnings of the workers which is now satisfactorily fixed on a piece-rate system. The economic progress of the country and, particularly the success of the Five-year Plan, depends very largely on the co-operation which the industrial workers extend. It is no consolation even to the Government to criticise the employers continuously, if productivity diminishes on account of the intransigence of workers. Most employers are anxious that the industrial units under their control should produce as much as possible and that there should be industrial peace.

"While appreciating the efforts of the Government to improve the conditions of workers and recognising the various legislative measures that have been adopted for the purpose, it seems to me that the time has come for the Government to examine whether in most cases, leadership of trade unions should not be confined to those who are engaged in that industry, especially as the scope of membership has now been widened by recent legislation. There seems to be no case for outsiders to lead labour union movements in most instances and I feel that there are better chances of an understanding between the management and the workers if direct relationship is established between the two without the intermediary of an outsider who knows neither the management's difficulties nor much less the real handicaps of workers. The stage has come when workers have been sufficiently educated about their rights to be in a position to find their own leadership from within.

"I would like to conclude by expressing the appreciation and thanks of the Company to the Government of Madras and to the Government of India for all the help, assistance and encouragement that we have continuously received from both the Governments during the last few years. The Minister of Commerce and Industry, who fostered the cycle industry, is now in charge of Finance, but continues to show the same interest in the industry. The Minister of Heavy Industry and other Ministers, both State and Central, have assisted us with their wise advice and counsel from time to time. I trust that they have also noted with satisfaction the progress that this Company has made in all directions. Lastly, I should like to pay my tribute to the office staff and the supervisory staff in the factory and the workers for the co-operation that we have received."

Carrying passengers and freight, Indian Airlines Corporation has an average load of about 4,500 lb. on every flight

SOMETIMES, freight claims aboard an aircraft come first. Would-be passengers are disappointed — especially if they hear afterwards of vacant seats. But, remember, the weight of a passenger may be taken up by a consignment of life-saving drugs, a shipment of vital foodgrains, or a bag of important mail!

The payload of an aircraft is made up by passengers *and* freight — it cannot be reckoned in terms of the number of seats provided. Please remember this, if *you* fail to get a seat on a certain flight. Remember, too, that Indian Airlines Corporation belongs to the people of India . . . and its wings fly in the service of all!

Notices

THE PRAGA TOOLS CORPORATION LIMITED

NOTICE

THE TWELFTH ANNUAL GENERAL MEETING of the PRAGA TOOLS CORPORATION LIMITED will be held at the Registered Office of the Company at 17, Saifabad, Hyderabad-Deccan, on Monday the 17th December 1956, at 11 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Manufacturing, Trading and Profit and Loss Account for the period 1st January 1955 to 31st December 1955.
2. To elect a Director in place of Shri Naoshir S. Chenoy, who retires by rotation in accordance with Article 109 of the Articles of Association of the Company and being eligible offers himself for re-election.
3. To appoint Auditors for the current year and fix their remuneration.
4. To consider and if thought fit to pass the following resolutions as special resolutions pursuant to Section 261 of the Companies Act, 1956, with or without modifications.

AS SPECIAL RESOLUTIONS

(Requiring Special Notice)

(a) "Resolved, in view of the provisions of the Section 261 of the Companies Act, 1956, that appointment of Shri T. M. Jagtiani, Operative Director, the Singareni Collieries Co.. Ltd., an officer of the Managing Agents, be and is hereby made and/or approved as required by the provisions of the said section as a Director of the Company notwithstanding the fact that he is an officer of the Managing Agents of the Company."

(b) "Resolved, in view of the provisions of Section 261 of the Companies Act 1956, that Shri C. Damodar Reddy (Secretary to Government, Finance Department, Government of Hyderabad), an officer of the Managing Agents, who retires by rotation and is eligible for re-election, be and is hereby re-elected as a Director of the Company, notwithstanding the fact that he is an officer of the Managing Agents of the Company."

N.B.—Explanatory Statement in respect of the above annexed hereunder.

The transfer books of the Company will be closed from Monday the 10th December 1956 to Monday the 17th December 1956, both days inclusive.

By Order of the Board,
For THE PRAGA TOOLS CORPORATION LIMITED,
P. M. REDDY,
Operative Director,
Managing Agents,
(Industrial Trust Fund).

HYDERABAD-DECCAN,
Dated 31st October 1956.

Note.—Any member of the Company entitled to attend and vote at the meeting of the Company shall be entitled to appoint another person (whether a member or not) as his proxy to attend and vote instead of himself.

EXPLANATORY STATEMENT

(As required by Section 173 of the Companies Act, 1956)

Item No. 4-(a).

Under Section 261 (4) of the Companies Act 1956 Shri T. M. Jagtiani, Operative Director, The Singareni Collierics Co., Ltd., an officer of the Managing Agents, continues to be a Director of the Company upto the next Annual General Meeting. Although Shri T. M. Jagtiani does not retire from office by rotation at this Annual General Meeting his appointment should be made and/or approved by a special resolution of the Company at the said Annual General Meeting. A special notice dated 31st October 1956 under Section 261 (2) of the Companies Act, 1956, has been received by the Company from a member notifying his intention to move the resolution as set out in the item No. 4-(*a*).

Item No. 4-(b).

Under Section 261 (4) of the Companies Act 1956 Shri C. Damodar Reddy (Secretary to Government, Finance Department, Government of Hyderabad), a Director of the Company and an officer of the Managing Agents, who retires by rotation and is eligible for reappointment, cannot be appointed a Director of the Company except by a Special Resolution. A special notice dated 31st October 1956 under Section 261 (2) of the Companies Act, 1956, has been received by the Company from a member notifying his intention to move the resolution as set out in the item No. 4-(*b*).

For THE PRAGA TOOLS CORPORATION LIMITED,
P. M. REDDY,
Operative Director,
Managing Agents,
(Industrial Trust Fund).

HYDERABAD-DECCAN,
Dated 31st October 1956.

THE ELLORE ELECTRIC SUPPLY CORPORATION, LIMITED

(Registered Office: MADRAS)

NOTICE OF THE 22nd ANNUAL GENERAL MEETING OF SHAREHOLDERS.

NOTICE IS HEREBY GIVEN THAT THE 22nd Annual General Meeting of the Ellore Electric Supply Corporation, Ltd., will be held at the Registered Office of the Company, No. 20, Second Line Beach, Madras, on Monday the 24th December 1956, at 11 a.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1956.
2. To consider the declaration of a final dividend of 10 annas per share or 6¼ per cent. free of income-tax for the year ended 31st March 1956, making a total of a rupee per share or 10 per cent. for the year.
3. (*a*) To appoint Sri S. Sabhanathan as a Director of the Company pursuant to Section 261 of the Companies Act, 1956, and if thought fit to pass the following resolution which will be proposed as a special resolution, in respect of which a special notice as required by Section 261 of the said Act has been received by the Company and the relative explanatory note concerning which is set out below:—

   "Resolved that Sri S. Sabhanathan who is a member of Messrs. Chandrie & Co. (Private) Ltd., be and hereby is appointed as a Director of this Company by this special resolution as required under Section 261 of the Act."

   (*b*) To appoint other Directors to the Board as recommended in the Directors' Report.
4. To elect Auditors for the current year and fix their remuneration.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 10th December to 24th December 1956, both days inclusive.

By Order of the Board,
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director.
Managing Agents.

MADRAS, *12th November* 1956.

Note:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself and a proxy need not be a member.

(*b*) Sri S. Sabhanathan is a member of Messrs. Chandrie & Co. (Private) Ltd., who are the Managing Agents of the Company.

Sri S. Sabhanathan was elected as a Director of the Company at its Annual General Meeting held on 29th September 1955 and will not vacate his office this year but for the provisions of Section 261(4) of the Companies Act. The Directors feel that his services to the Company as a Director will be highly beneficial to the Company and hence, recommend his appointment as required under Section 261 of the Act.

(c) The Dividend when sanctioned at the Annual Meeting will be paid on or after 24th December 1956 to those shareholders whose names stand on the Register of Members on 10th December 1956.

By Order of the Board,
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director.
Managing Agents.

RECENT TRENDS IN WORLD TRADE

TERMS OF TRADE OF PRIMARY PRODUCING COUNTRIES DETERIORATE

THE year 1955 saw remarkable developments in the field of international trade. Between 1954 and 1955, the volume of goods moving in external trade between the free countries of the world rose by nearly 9 per cent. which represents the highest rate of increase ever occurred since the 12 per cent. rise registered between 1950 and 1951. It must, however, be borne in mind that the latter reflected principally the effects of the post-war recovery and, to some extent, the increased trade in raw materials due to the Korean war. A significant feature of the world trade in 1955 was that it kept pace with the volume of world industrial production which was also about 10 per cent. higher than in 1954. Further, not only did the volume of trade touch new peaks, but the actual tempo of increase too was accelerated. In 1953, exports increased by 4 per cent. over that of the previous year, and the 1954 export figure represented an increase of 6.4 per cent. over the 1953 figure. As compared with this, exports in 1955 were higher by 8.6 per cent. over the 1954 level. The high level of imports and exports in the first quarter of 1956 indicates that the gains made in 1955 are being maintained. A broad outline of the recent changes in the trend of world trade is given in an article in the September (1956) issue of the *Monthly Bulletin of Statistics*, published by the Statistical Office of the United Nations.

The article observes that, during the period January 1955 to June 1956, prices of imports and exports were dominated by the price level in the industrial countries, and that the increase in the volume of goods moved has, through its effect on freight rates, resulted in a slight deterioration in the terms of trade of primary producing countries. The recent rise in the volume of trade was accompanied by a rise of about 25 per cent. in trip charter rates for dry cargo vessels between the first quarter of 1955 and the second quarter of 1956 and a rise of about 50 per cent. in trip charter rates for tankers. This has resulted in an increase in the share of ocean freights in the cost of exports and imports which adversely affected the primary producing countries to a greater extent than in the industrialised countries. In the case of the latter countries, prices of exports and imports moved up by the same amount as the domestic wholesale prices which had risen by 3 to 5 per cent. The imports of the primary producing countries, which are, to a large extent, goods of higher value per ton on which changes in freight rates have a small influence, have generally moved up, in average price, in the same way as the exports of industrial countries. But the average prices of the exports of the primary producing countries, upon which changes in ocean freight exercise a greater proportional effect have, as a rule, remained constant or moved down slightly. It appears, therefore, that the domestic price levels in industrial countries, have, as already stated, dominated the prices in external trade. This, coupled with the rise in freight rates, resulted in a deterioration in the terms of trade of producers of primary products.

The price index of primary commodities, which stood at 102 in 1954, fell to 98 in the second quarter of 1955, rose slightly to 99 in the first quarter of 1956, and still further to 101 in the second quarter of 1956. The unit value index of exports of manufactured goods, which stood at 99 in 1954, improved to 102 in the last quarter of 1955 and 103 in the first and the second quarters of 1956. The following table illustrates the trend.

TABLE I

Index Number: 1955=100

(Price data based on values in U.S. dollars)

	1954	1955	1956	
			1st quarter	2nd quarter
*World exports .. (In million U.S. dollars)	75,950	82,550	21,300	..
*World imports .. (,,)	78,800	87,950	22,900	..
World exports :				
Volume index	92	100	101	..
Unit value index	100	100	101	..
Exports of manufactured goods :				
Volume index	92	100	102	..
Unit value index	99	100	103	103
Price index of primary commodities	102	100	99	101
Ocean freight index :				
Dry cargo, trip charter ..	74	100	111	118
Tanker cargo, trip charter ..	69	100	116	156

* Excluding U.S.S.R., Eastern Europe and Mainland China.

It will be interesting to compare the recent developments with movements in the terms of trade over a longer period of time. Between 1938 and 1955, the volume of goods traded internationally increased by 64 per cent. and their average price by 142 per cent. In that period, the average price of manufactured goods increased by only about 100 per cent. Thus the terms of trade shifted, between 1938 and 1955, against manufactured goods, and most of this shift took place between 1938 and 1948. As noted above, since 1955, there has been a distinct reversal of this trend.

The volume of manufactured goods exported has risen, since 1938, more or less in proportion to the rise in total production of manufactured goods and more than the volume of exports as a whole. As the table below shows, the index of manufacturing production, which stood at 50 in 1938, increased to 110 in 1955 and the index of total exports which stood at 69 in 1938 increased to 113 in 1955. As compared with this, the index of exports of manufactured goods rose from 54 to 114 during the period. This clearly indicates that the share of manufactured goods in the total export trade is steadily increasing. The following table illustrates this trend:

TABLE II

*Trends Since 1938 in External Trade**

Index Numbers (1953=100)

(Price data based on values in U.S. dollars)

	1938	1948	1954	1955
Value				
Total exports	28	72	104	113
Exports of manufactured goods.	27	66	103	113
Volume				
Total exports	69	70	105	113
Exports of manufactured goods.	54	64	105	114
Manufacturing production ..	50	72	100	110
Mining production	61	82	101	110
Price				
Total exports	41	103	99	99
Exports of manufactured goods.	50	102	98	99
Terms of trade of manufactured goods	143	100	98	100

* Excludes the exports and production of the U.S.S.R., Eastern Europe and Mainland China.

On the price front also, since January 1955, finished goods have been leading other commodities. For instance, the average price of manufactured goods exported has, after January 1955, increased by about 3 per cent. whereas, the general level of export prices has increased only about 1 per cent. As Table I quoted above shows, the unit value index of world exports increased from 100 in 1954 to 101 in the first quarter of 1956, whereas, the unit value index of exports of manufactured goods increased, during the same period, from 99 to 103.

Certain commodities have, during the year ended June 1956, shown particularly interesting price movements. The coffee price index (base 1953=100) moved up during the period from 97 to 105 after having moved steadily downward from a high of 149 in the second quarter of 1954.

Similarly, the price index of tea moved up, albeit slightly, from 115 to 116; it had previously shown a decline (from a high of 175 in the fourth quarter of 1954) which was more marked than the corresponding decline in the coffee index. The index for cocoa, which had reached a high of 176 in the second quarter of 1954, declined to a figure of 77 in the second quarter of 1956.

The trade in rice is of importance to a large part of the world. Because of the prevalence of inter-governmental long term contracts, it is difficult accurately to assess the trend of its price. Figures in which inter-governmental transactions have been given their appropriate weights indicate that rice prices have been declining steadily since 1953. In the second quarter of 1956, the index was at 70. The price index of wheat has also declined in the same period to about 89. The prices of maize and barley had declined from their 1953 levels but began to rise in 1955, and in the second quarter of 1956 slightly exceeded their 1953 levels.

Between the first and second quarters of 1956, the price index for fats, oils and oilseeds rose by 10 points because of rises in the prices of lard and vegetable oils, particularly olive oil and groundnut oil. The price index for natural rubber, starting at 143 in the second quarter of 1955, rose to 197 in the third quarter and declined for the three succeeding quarters, reaching 145 in the second quarter of 1956. From its exceptionally high value, 238, in 1951, the index had fallen to 98 in the second quarter of 1954 and had then begun to rise again towards its recent values. The prices of three major non-ferrous metal ores, lead, zinc, and tin (each of which follows rather closely its metal price), have dropped appreciably from their highs in 1951. Copper ore prices, on the other hand (which also follow the metal price), have, except for a minor setback in 1954, had an almost uninterrupted rise up to the second quarter of 1956.

The conclusion that emerges from this analysis is that the primary producing countries are facing a grave problem. Till recently, though their share in the aggregate export trade of the world was proportionally less, the terms of trade at least were in their favour. But, of late, the trend has been reversed, as witness the price trend of exports of manufactured goods and of primary products.

INDIA'S RICE AREA IS ONE-THIRD OF WORLD ACREAGE

The area under rice in India is about one-third of the total world acreage under rice. India's production is one-fourth of the total world production and its average yield per hectare is 1,220 kgs. of paddy, whereas the world average is 1,650 kgs.

India is the second largest producer of rice in the world, the first place going to China. In 1954-55, India produced 24 million metric tons of milled rice, Pakistan 8 million metric tons, Thailand 3.6 million metric tons, and Burma 3.8 million metric tons. India is a large consumer too. In 1954, it imported roughly one-eighth of the internationally traded rice. India's intake of rice *per capita* is, however, low. Taking the post-war average (1947-48), rice consumption per person in India/Pakistan was about 68 kgs. per year, as against 164 kgs. per year in Burma, 121 kgs. per year in Indonesia, and 102 kgs. per year in Japan. During 1954, the price of milled rice in India was around Rs. 16-12 per maund, as against Rs. 38-3 in Indonesia, Rs. 27-6 in Malaya, Rs. 14-15 in Egypt, Rs. 14-14 in Pakistan and Rs. 37-2 in the U.S.A.

Of the total area under rice in India, roughly one-third is irrigated. The rest generally thrives on rain water. During 1954-55, the area under Japanese method of paddy cultivation was about 1.3 million acres and the total additional production as a result of this method of cultivation came to some 600,000 tons. In 1954-55, the highest yield per acre obtained in respect of a plot entered for crop competition in Madhya Pradesh was 5,606 lbs., as against the average yield per acre of about 632 lbs. of cleaned rice. The inter-State movement of paddy by rail and river was 1.3 million tons, as against 1 million tons in 1953-54. The marketable surplus of rice in India is about one-third of total production; the rest being retained in villages for local consumption and seed.

This information regarding Indian rice statistics and other countries of the world is available in a brochure entitled *Indian Rice Statistics* brought out recently by the Directorate of Economics and Statistics, Union Ministry of Agriculture.

The United States can use its great steelmaking capacity as a deterrent to war, according to the *Steel Magazine*. Capable of 40 per cent. of the world's steelmaking capacity, the U.S. can out-produce any other nation. Despite the six-week strike, the U.S. will probably make about 114.5 million tons this year. Russia, second largest steel producer, made 49.5 million tons of ingots in 1955, and presumably is operating at capacity. If its production continues to increase at the rate it has in the last seven years, it will turn out around 53.5 million tons in 1956. The U.S. capacity to make steel for ingots and castings will near the 132-million-ton level by January next. This is 33 per cent. more than at the start of the Korean war six years ago (99,392,800 tons) and 60 per cent. more than at the beginning of World War II 15 years ago.

JARDINE HENDERSON'S PROFIT LOWER

DIVIDEND, HOWEVER, MAINTAINED

THE trying and difficult conditions through which the jute industry has been passing in recent times and the return of tea prices to more normal levels have had, as one would expect, their repercussions on the earnings of the companies which manage such enterprises. A notable instance in point is that provided by Messrs. Jardine Henderson Ltd. (Managing Director: Sir George Mackinlay, Calcutta), as per their accounts for the period ended 31st March 1956. The earnings, which had followed an upward trend in the previous two years, suffered a perceptible setback though the turnover was substantially large. The gross profit had increased from Rs. 34.36 lakhs for 1953-54 to Rs. 43.05 lakhs for 1954-55. But it has sharply declined by Rs. 10.49 lakhs to Rs. 32.56 lakhs for 1955-56. This is in contrast to the increase in sales from Rs. 9.93 crores to Rs. 13.13 crores. The amounts provided for depreciation and taxation have also been pruned. Thus depreciation has been credited with only Rs. 1.32 lakhs, as against Rs. 1.36 lakhs, and taxation with Rs. 11.90 lakhs as against Rs. 15.25 lakhs for the previous year. In sympathy with the gross profit, the net profit at Rs. 19.34 lakhs is markedly lower than the previous year's profit by as much as Rs. 7.09 lakhs, while it is only slightly better than the profits for 1952-53 at Rs. 17.81 lakhs.

The fall in earnings, however, has not affected the distribution to shareholders which has been maintained at 7½ per cent., now for the fourth consecutive year. Before the dividend was reduced to this level, it was kept unchanged at 10 per cent. consistently for five years from 1947-48 to 1951-52. The fall in profit has had its reactions on the allocations to reserves, too, as witness the meagre provision of only Rs. 2.00 lakhs to general reserve, as against Rs. 3.00 lakhs a year ago. Again, whereas last year a sum of Rs. 5.00 lakhs had been utilised to write off goodwill and Rs. 2.00 lakhs had been credited to the superannuation fund, no provision has been made for these accounts this year.

The following table shows at a glance the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	13,12.86	9,92.92	8,20.81	12,44.62
Stocks	37.70	28.68	17.52	39.50
Commissions, allowances, etc.	43.17	56.48	50.27	45.52
Dividend on investments	10.75	15.59	6.91	6.31
Net interest earned	..	..	0.44	1.79
Purchases	12,95.37	9,87.67	7,77.33	12,38.39
Expenses	47.93	45.49	44.78	43.90
Loss on sale of investments	0.05	..	0.05	..
Gross profit	32.56	43.05	34.36	30.91
Depreciation	1.32	1.36	1.27	1.10
Taxation	11.90	15.25	13.30	12.00
Net profit	19.34	26.43	19.79	17.81
To general reserve	2.00	3.00	2.50	2.00
,, goodwill written off	..	5.00	..	..
,, superannuation fund	..	2.00	..	..
Dividends—				
5½ per cent. preference	2.03	2.03	2.03	2.03
Ordinary	15.00 (7½%)	15.00 (7½%)	15.00 (7½%)	15.00 (7½%)
Carry forward	5.12	4.70	5.26	4.54

It will be noted from the table above that a great bulk of the increase in sales has been offset by a similar rise in purchases. But what has really affected the gross profit is the decline in commissions and allowances earned as well as in dividends on investments, the former from Rs. 56.48 lakhs to Rs. 43.17 lakhs and the latter from Rs. 15.59 lakhs to Rs. 10.75 lakhs.

Commenting on the Company's working during the year under review, the Directors state that the jute industry, in which the Company has substantial interests, experienced another difficult year and, despite an increase in production, earnings both from commission and dividends showed a further reduction. Similarly, commissions and dividends received from tea companies registered a marked reduction on the previous year, resulting from the revision of tea prices to more normal levels. The trading activities of the Company, however, have recorded an overall improvement.

The Company is one of the well-known managing agency and trading houses in Calcutta. It was converted into a public limited joint stock company in 1946. Its activities cover a wide and varied range from managing agency work to general trading and agency, shipping and insurance agency, gunny export and dealings in yarn and fertilisers. In furtherance of the Directors' policy to diversify the Company's interests and expand the scope of its activities, the entire share capital of the Kassipur Co., Ltd., which manufactures roofing felts and laminated packaging materials, was acquired by the Company in March 1956. The Directors state that no income has yet accrued from this investment but expect that it will prove to be a satisfactory one to the Company. One of its subsidiaries, the Behubor Co., Ltd., acquired the entire share capital of the Mangaldai Tea Co. Private Ltd., in July 1955.

The Company's reserves and surplus as at the end of March 1956, amount to Rs. 62.42 lakhs, as against a paid-up capital of Rs. 250 lakhs, made up of 50,000 5½ per cent. cumulative preference shares of Rs. 100 each and 200,000 ordinary shares of Rs. 100 each fully paid-up. The provision for taxation stands at Rs. 6.26 lakhs and the current liabilities including provision for taxation aggregate Rs. 402.88 lakhs. The gross block of the value of Rs. 37.47 lakhs has been written down to a book value of Rs. 26.38 lakhs. The goodwill, valued (at cost) at Rs. 35.27 lakhs, has been written down to Rs. 25 lakhs. The Company's investments (at cost) in Government securities and in shares amount to Rs. 258.79 lakhs and in shares of subsidiary companies, Rs. 142.78 lakhs. Of the investments in shares of companies other than subsidiaries, those costing Rs. 249.79 lakhs are quoted on recognised stock exchanges. The approximate market value of these as on 31st March 1956 at Rs. 167.47 lakhs shows a depreciation of Rs. 82.31 lakhs which, however, is not fully covered by the reserves. The other current assets aggregate Rs. 262.34 lakhs.

The Company's Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 85 *ex-div.* On this basis and on that of the proposed dividend, the yield on the shares works out to 8.8 per cent. per annum. It may be noted here that these shares have been steadily declining in value. Over a year ago, they were being quoted at Rs. 125; then, they lost ground to stand at par early in August last, but, by the beginning of this month, they had dropped further to Rs. 94. Such continuous fall reflects the large depreciation in the market value of the Company's investments and the investors' view that the outlook for jute and tea industries is highly uncertain.

(Concluded from next column)

very large proportion of their profits as dividends and we trust that due note of this fact will be taken and legislative relief given accordingly.

The financial position of the Company, as can be seen from its balance-sheet as at 30th June 1956, is quite sound. The paid-up capital stands at Rs. 70 lakhs, divided into 35,000 six per cent. cumulative preference shares of Rs. 100 each and 350,000 ordinary shares of Rs. 10 each. The reserves and surplus aggregate Rs. 19.69 lakhs. The gross block of the value of Rs. 79.82 lakhs has been written down to Rs. 52.37 lakhs. Of this latter amount, the net value of leasehold land and development is shown at Rs. 37.73 lakhs, buildings at Rs. 11.15 lakhs, and plant and machinery at Rs. 1.40 lakhs. Current assets aggregate Rs. 78.21 lakhs and exceed current liabilities by no less than Rs. 37.32 lakhs. A notable feature of these assets is their strong liquidity. Thus, of their total, gilt-edged securities alone account for Rs. 40.85 lakhs and cash (and bank) balances for Rs. 12.72 lakhs. Stores, spares, and stocks amount to Rs. 18.87 lakhs and book debts to no more than Rs. 5.70 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 26-2 *ex-div.* At this rate and on the basis of a dividend of 12½ per cent. the yield works out to 6.2 per cent.

So far as the current year is concerned, the following remarks from the Directors' report will be noted with interest:

"This season the market has so far been on a rather more satisfactory level so far as our Company is concerned but it is not possible to foresee the new season's results in view of the unsettled international situation.

"In accordance with the agreement reached between the Indian Tea Association and representatives of labour and as advised by the Government of India, bonus to the labour force in respect of the seasons 1953 and 1954, amounting to Rs. 5,37,088 has been charged and set against the profit and loss account balance brought forward from last year. This agreement covers the seasons up to and including 1956. An estimated provision has been made for the amount in respect of the season covered by these accounts but this figure will not be finally determined until early next year."

Since the Directors' report was signed, the tea markets have been ruling firm, the crisis in West Asia notwithstanding.

SHARP FALL IN PROFIT OF BROOKE BOND

BIGGER CROP OFFSET BY LOWER PRICES

THE comparatively larger production of tea in North India for the year 1955, coupled with better yields in other producing countries, have had the effect of pushing down tea prices, thereby affecting the earnings of many concerns engaged in this field of enterprise. This is clearly reflected in the earnings of Brooke Bond Estates (India) Ltd. (Chairman: Mr. F. R. Bagley, Calcutta), as disclosed by its accounts for the year ended 30th June 1956. The sharp fall in earnings has necessitated a drastic cut in the dividend which, at the rate of 12½ per cent., bears no comparison to the impressive rate of 47½ per cent. declared for the previous year. It is, however, the same as that for 1953-54.

The gross profit which had made a steep rise from Rs. 22.02 lakhs for 1953-54 to Rs. 52.63 lakhs for 1954-55, has made a depressing retreat to Rs. 20.91 lakhs for the year under review. Despite this fall, the provision for depreciation has been well maintained at Rs. 3.24 lakhs, as against Rs. 3.21 lakhs in the preceding year. Taxation takes up only Rs. 6.20 lakhs, as against Rs. 19.50 lakhs a year ago. This gives an idea of the extent to which the Exchequer, too, has suffered as a result of shrinkage in the profit-margin of the tea industry. The Managing Agents, too, get less, their commission for the period up to 31st March 1956 being no more than Rs. 1.38 lakhs, as against Rs. 2.78 lakhs for 1954-55. The net profit at Rs. 10.09 lakhs is less than half of that for the previous year at Rs. 27.14 lakhs while it is only a shade better than Rs. 9.73 lakhs earned in 1953-54. No allocations were made to the reserves in the previous year in spite of the bumper profits, but, out of the profits for the year under review, a small provision of Rs. 3,269 has been made for capital reserve under fire loss replacement and Rs. 2.65 lakhs for contingencies. The year's dividend at 12½ per cent. absorbs Rs. 4.38 lakhs. After payment of the preference and ordinary dividends, there remains a balance of Rs. 5.16 lakhs to be carried forward, as against Rs. 9.33 lakhs brought in.

The Company's proceeds from sale of tea amounted to Rs. 72.32 lakhs, as against Rs. 111.00 lakhs and Rs. 64.86 lakhs, respectively, for 1954-55 and 1953-54. Commenting on the year's working, the Directors observe thus:

"The financial results for the year are, of course, on a very much lower level than the previous year when record prices were realised and in the last Directors' report it was forecast that such prices would not be maintained. The average sale price realised for the year after deducting all tea sale charges and cost of export rights was Re. 1-15 per lb., as compared with Rs. 2-14-1 for last year. The average price realised on the gross sale proceeds was Rs. 2-1-6 per lb. The North Indian crop for 1955 was considerably larger than for 1954 and was in fact an all-time record and this, coupled with the other producing countries having bumper yields and the credit squeeze in the United Kingdom, had the effect of depressing prices. . . . Weather conditions on the whole were good during the season which finished strongly and the final crop of made tea for the year amounted to 3,607,438 lbs., as against 3,258,393 lbs. for the year ended 30th June 1955 and our original estimate for 1955-56 of 3,430,000 lbs."

The Directors further state that, during the year, a new tax was imposed by the West Bengal Government effective from 1st April 1956 of one anna per lb. on all teas entering Calcutta and its suburbs. Messrs. Brooke Bond India Private Ltd. ceased to be the Managing Agents of the Company.

The Company's estates consist of 2,578.71 acres under mature tea and 255.10 acres under immature tea.

The Directors have made some pertinent remarks on two of the several points made by the Plantation Enquiry Commission. On of these is that many tea companies do not provide for a proper up-rooting and replanting programme in order to make good tea bushes which have outlived their natural life. The other is that plantation companies do not build up their financial reserves by a limitation of dividends. Referring to the former, the Directors say: "We would like shareholders to know that this Company has had a replanting programme in operation for several years which provides for replacement of old areas in a regular cycle." Commenting on the second, they remark: "We would once again, in this connection, make reference to Section 23A of the Indian Income-tax Act which imposes penal taxation on Companies subject to its provisions, as we are, which do not distribute a

(Continued in previous column)

RESULTS OF BURN & CO. IMPRESSIVE

RESERVES STRENGTHENED HEAVILY

EXCELLENT are the results of Messrs. Burn & Co. Ltd. (Managing Agents:) Messrs. Martin Burn Ltd., Calcutta), for the year ended 30th April 1956. The gross, as well as net, profit has nearly doubled. The amount credited to reserves is about thrice as much as in the previous year. The Exchequer gets more than two and a half times the income and corporation taxes it collected from the Company last year. The shareholder, too, receives a higher return. In fine, the Company's achievements in 1955-56 are quite impressive and have justified the confidence of investors in this leading engineering company in India.

The Company's gross profit at Rs. 120.97 lakhs for 1955-56 is almost double that earned in the previous year. This has raised the upward trend of the profit curve quite steeply. The gross profit for the year under review is probably a fresh record in the history of the Company. The net profit, after making substantially higher provision for Managing Agents' remuneration, depreciation and taxation, works out to Rs. 55.09 lakhs, a cent per cent rise as compared with the preceding year's profit of Rs. 27.78 lakhs.

The policy of appropriation of profit pursued by the Directors evokes admiration. It indeed requires considerable courage and confidence in the future on the part of any board of directors to set aside large sums of money to the reserves, in view of the talks of socialistic pattern of society and possibilities of stiff taxation on accumulated savings. Out of the net profit of Rs. 55.09 lakhs, the Directors have ploughed back no less than Rs. 36.31 lakhs, that is, approximately two-thirds of the profit. This action of the Directors indicates that they have proceeded to allocate the profit having in mind the larger interests of the country. They have, of course, increased the dividend also, but only by a third, from 15 per cent. to 20 per cent. This increase is nothing as compared with that either in the provision for taxation (from a mere Rs. 15.75 lakhs to Rs. 40 lakhs) or in the transfers to reserves.

The strengthening of the reserves has been done under various heads, such as provision for taxation contingencies Rs. 2.67 lakhs, development rebate Rs. 5.14 lakhs, reserve for works reconstruction and expansion Rs. 10.50 lakhs, and reserve for Salem project Rs. 18.00 lakhs. As against this, the previous year's allocations of Rs. 13.50 lakhs consisted of Rs. 10.50 lakhs for reserve for works reconstruction and expansion and Rs. 3.00 lakhs for provision for taxation contingencies.

The salient features of the Company's working results for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 30th April			
	1956	1955	1954	1953
Sale proceeds	832.01	632.07	576.59	537.88

* Approximate only.
† On the increased capital of Rs. 84 lakhs, doubled by the capitalisation of Rs. 42 lakhs in March, 1954.

It will be seen from the table that the turnover for the year under review has substantially increased, as compared with the previous year. The Directors state that, while the output for the year at many of the Company's works was not unsatisfactory, the increase in the value of sales is, to a great extent, due partly to a rise in prices occasioned by higher cost of steel and partly to the fact that the various refractory works at Raniganj and Durgapur worked a full year, whereas, in the previous accounting year, four of the works remained closed for approximately eight months. They add that, following the long closure of the four works at Raniganj and Durgapur, the pipe works at Raniganj was not reopened, as they had come to the conclusion that the plant was obsolete and further operation unprofitable. The site being unsuitable for re-equipment on modern lines, the Directors are of the view that it would be more profitable to employ any funds that could be made available for the purpose, in establishing a magnesite works in South India, adjacent to the source of the raw materials. Explaining the reasons for this decision, they observe:

"In the manufacture of magnesite bricks and shapes, the magnesite has to be burned twice. In the first burning or sintering the loss of weight of the magnesite amounts to approximately 50 per cent., so even if only the first burning be made at site there arises an immediate saving of 50 per cent. in railway freight. At present the railways transport the raw magnesite to your Lalkoti works at Raniganj from Salem in South India, a considerable distance, so it will be readily appreciated that the saving on railway freight alone renders attractive the proposition of manufacture of magnesite products near the source of supply of the raw material. The Directors have concluded negotiations with the Magnesite Syndicate Ltd. of the United Kingdom for the purchase, on favourable terms, of the mines, properties and leases of that Company at Salem and in order to provide for this project a sum of Rs. 18 lakhs has been set aside from the profits of the year under review as an initial contribution towards the finance involved."

The financial position of the Company, as disclosed by its latest balance-sheet, is impressive. It has a paid-up capital of Rs. 112.00 lakhs, made up of Rs. 28 lakhs in cumulative preference shares and Rs. 84 lakhs in ordinary shares of Rs. 100 each. Of this ordinary capital, as much as Rs. 72 lakhs represents the amount capitalised from reserves over a period of half a century. The reserves and surplus aggregate Rs. 132.09 lakhs, that is, Rs. 20.09 lakhs above the present capital. Loans secured against usance bills and discounted by a commercial bank amount to Rs. 10 lakhs. The gross block of the value of Rs. 386.09 lakhs has been written down to a book value of Rs. 154.84 lakhs of which freehold land takes up Rs. 11.96 lakhs, buildings Rs. 55.85 lakhs, plant and machinery Rs. 83.93 lakhs, furniture Rs. 1.85 lakhs and livestock and vehicles Rs. 1.25 lakhs. The investments in Government securities and shares of other companies, together with interest accrued thereon, amount to Rs. 7.03 lakhs. Loans and advances total Rs. 70.27 lakhs. In all, the current assets, including cash and bank balances, aggregate Rs. 492.53 lakhs and cover the current liabilities of Rs. 470.58 lakhs, including Rs. 64.99 lakhs as provision for taxation, by a considerable margin.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 371 *cum-div.* On an *ex-div.* basis, and taking the dividend for the year at 20 per cent., the yield works out to 5.7 per cent. per annum.

KUMARDHUBI FIRECLAY AND SILICA

The Kumardhubi Fireclay and Silica Works Limited, which until recently was a subsidiary of the Burrakur Coal Company, Ltd., proposes to make a "rights" issue of 150,000 ordinary shares of Rs. 10 each at par. The Burrakur Coal Company, Ltd., which already has an investment in the Fireclay Company, is entitled to take up 74,750 shares at a total cost of Rs. 7,47,500 and this additional investment will raise its total holding in the latter company to 41.53 per cent. It will also increase the percentage of its total paid-up capital in companies of the same group to 18.4 per cent.

The Kumardhubi Fireclay and Silica Works Ltd. requires additional capital to finance the second stage of the expansion of their fireclay section which will increase production by a further 12,500 tons per annum. The development of the steel industry in the second Plan will, it is expected, open up a ready market for this additional output. The Company has been consistently paying a dividend of 15 per cent. over the last five years beginning from 1951 and the expectations are that it will be maintained on the increased capital also. The Directors of the Burrakur Coal Company have recommended this investment to its shareholders and, if approved, necessary application will be made to the Central Government to comply with the provisions of Section 372(3) of the Companies Act, 1956.

COMPANIES FORMED IN NORTHERN ZONE IN OCTOBER

Twelve private companies, with an authorised capital of Rs. 40.40 lakhs, were formed in the Northern Region, consisting of Delhi, Punjab, P.E.P.S.U. and Rajasthan, during the month of October 1956. Of these, one company formed in Delhi had an authorised capital of Rs. 10 lakhs.

Of the four companies, having an authorised capital of Rs. 25.90 lakhs, which have gone into liquidation, one was a public limited company, having an authorised capital of Rs. 20 lakhs. Two companies increased their paid-up capital. Bonus shares were issued by a company in Delhi, capitalising its reserves.

COMPANY MEETINGS AND DIVIDENDS

BROOKE BOND ESTATES INDIA LTD. Annual General Meeting, Calcutta, 27th November 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 7th to 27th November 1956, both days inclusive.

OODLABARI CO., LTD. Annual General Meeting, Calcutta, 28th November 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 20th to 28th November 1956, both days inclusive.

ETHELBARI TEA CO. (1932) LTD. Annual General Meeting, Calcutta, 28th November 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 19th to 28th November 1956, both days inclusive.

JARDINE HENDERSON LTD. Annual General Meeting, Calcutta, 29th November 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 14th to 29th November 1956, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 30th November 1956. Dividend: Re. 1 per share, payable on 17th December 1956. Transfer books remain closed from 20th to 30th November 1956, both days inclusive.

TATA CHEMICALS LTD. Annual General Meeting, Bombay, 30th November 1956. Dividend: As. 12 per ordinary share, (maiden), payable on and after 3rd December 1956. Transfer books remain closed from 29th October to 26th November 1956, both days inclusive.

GILLAPUKRI TEA AND SEED CO., LTD. Annual General Meeting, 30th November 1956. Dividend: Rs. 3-8 per share (includes interim dividend of Re. 1-8 per share). Transfer books remain closed from 21st to 30th November 1956, both days inclusive.

MOHEEMA LTD. Annual General Meeting, 1st December 1956. Dividend: *Nil.* Transfer books remain closed from 21st November to 1st December 1956, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Half-yearly General Meeting, Calcutta, 4th December 1956. Dividend: Re. 1-14 per share. Transfer books remain closed from 21st November to 4th December 1956, both days inclusive.

INVESTMENT AND FINANCE CO., LTD. Half-yearly General Meeting, Calcutta, 4th December 1956. Dividend: Rs. 2-8 per share. Transfer books remain closed from 21st November to 4th December 1956, both days inclusive.

BURN AND CO., LTD. Annual General Meeting, Calcutta, 7th December 1956. Dividend: Rs. 20 per share. Transfer books will remain closed from 28th November to 7th December 1956, both days inclusive.

BHAGALPUR ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 7th December 1956. Dividend: As. 8 per share. Transfer books remain closed from 30th November to 7th December 1956, both days inclusive.

PHASKOWA TEA CO., LTD. Annual General Meeting, Calcutta, 8th December 1956. Dividend: *Nil.* Transfer books will remain closed from 28th November to 8th December 1956, both days inclusive.

ELLENBARRIE TEA CO., LTD. Annual General Meeting, Calcutta, 8th December 1956. Dividend: *Nil.* Transfer books will remain closed from 28th November to 8th December 1956, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 13th December 1956. As. 8-2/5 per share (includes an additional payment of As. 2 per share). Transfer books will remain closed from 7th to 13th December 1956, both days inclusive.

PEERMADE TEA CO., LTD. Interim dividend of 10 per cent. on the ordinary shares, payable on 6th December 1956. Transfer books will remain closed from 25th November to 6th December 1956, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Interim dividend of 5 per cent. (As. 8 per per share) on the ordinary shares. Transfer books will remain closed from 6th to 20th December 1956, both days inclusive.

SOOM TEA CO., LTD. Interim dividend of Re. 1 per share for the year ended 31st December 1955. Transfer books will remain closed from 19th to 24th November 1956, both days inclusive.

COMPANY REGISTRATIONS

KHANDELWAL UDYOG PRIVATE LTD. (First Director: Mr. Ramprasad Khandelwal.) Business: General dealers and contractors. Authorised capital: Rs. 25,00,000. Private company. Address: 'Prem Niwas', 13, Altamount Road, Bombay 26.

THE INDIAN LINK CHAIN MANUFACTURERS LTD. (First Director: Mr. V. N. Nevatia.) Business: Manufacture of link chains, mechanical engineering and other machinery. Authorised capital: Rs. 10,00,000. Public company. Address: 101, Sion Road, Bombay 22.

LIGHTHOUSE CINE CORPORATION PRIVATE LTD. (First Director: Mr. K. S. Nanda.) Business: Motion picture production and distribution. Authorised capital: Rs. 10,00,000. Private company. Address: Registered office of the company will be situated in the State of Bombay.

ADUKIA AND SONS PRIVATE LTD. (First Director: Mr. Kashiprasad Adukia.) Business: Dealers in estates, lands and buildings. Authorised capital: Rs. 5,00,000. Private company. Address: 188, Kalbadevi Road, Bombay 2.

MOHAN SONS (BOMBAY) PRIVATE LTD. (First Director: Mr. Natverlal M. Jalundhwala.) Business: Dealers and importers. Authorised capital: Rs. 5,00,000. Private company. Address: 125, Mahatma Gandhi Road, Bombay 1.

MACNEILL AND BARRY STEPS UP DIVIDEND

SHARP FALL IN PROFIT OF GILLAPUKRI TEA

Macneill and Barry Ltd.

THE directors of the above Company (Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1956.

The balance brought forward from the previous year was Rs. 6,21,756 (Rs. 5,49,296). The profit for the year ended 31st March 1956, was Rs. 52,02,590 (Rs. 37,39,053) to which is added the surplus on sales of capital assets Rs. 3,750 (Rs. 8,967) making a total of Rs. 58,28,096 (Rs. 43,42,053). After providing for taxation Rs. 20,75,000 (16,75,000) there is a balance available for disposal of Rs. 37,53,096 (Rs. 26,67,316). The dividend on preference shares paid on 1st November 1955, and 1st May 1956, absorbed Rs. 4,05,624 (Rs. 4,05,624) leaving for disposal an amount of Rs. 33,47,472 (Rs. 22,61,692). The directors propose that this sum be dealt with as follows:—

By transfer to harbour boating replacement reserve Rs. 2,66,348 (Rs. 2,21,186), transfer to general reserve Rs. 8,00,000 (Rs. 2,00,000) and payment of a dividend on ordinary shares for the year to 31st March 1956, at the rate of 11 (7½) per cent. per annum Rs. 16,50,000 (Rs. 11,25,000) leaving to be carried forward Rs. 6,31,124 (Rs. 6,21,756 after paying Rs. 93,750 being supplemental dividend for the year ended 31st March 1950 to comply with section 23A).

The improvement in the Company's profit for the year is due mainly to the dividends received from the Company's investment in the tea industry in respect of profits of season 1954. Unfortunately, the results of the Tea Companys concerned for season 1955 will not be so satisfactory nor is the current outlook for the industry encouraging. In the other industries in which the Company is mainly concerned, namely, coal, jute and inland shipping, trading conditions were depressed throughout the year and although at present there is some improvement in the jute industry, the outlook in general cannot be reviewed with optimism.

The Company's Act, 1956, with its many limitations on the remuneration of managing agents became effective from 1st April 1956, and will have considerable effect on the Company's earnings.

Towards the end of the year under review, the Company acquired the remainder of the issued share capital of Kilburn & Co., Ltd., and this Company is now a wholly owned subsidiary.

With regard to the disposal of the balance available on profit and loss account, it is the Company's intention to expand the activities of the harbour boating fleets and to this end new craft have been ordered. The transfer to harbour boating replacement reserve which is recommended, will bring this reserve upto Rs. 10 lakhs. The transfer which is recommended to general reserve will bring this reserve upto Rs. 25 lakhs.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

	Rs. 4,63,61,537		Rs. 4,63,61,537

Gillapukri Tea and Seed Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea crop.—A crop of 7,494 mds. 16 srs. was secured and sold at an average price of Rs. 2-7-2 as compared with Rs. 3-7 per lb. obtained for the previous season's crop of 5,855 mds. 4 srs. The Tea market was subject to wide fluctuations during the whole of the period of sale of last season's crop and a feature has been the increasing tendency for the price difference between the best teas and medium quality teas to widen.

Estimate.—The directors estimate an outturn of 8,000 mds. of teas at a total cost of Rs. 10,40,000 only. In this connection it may be mentioned that while upto 15th October 1955, the outturn was 6,229 mds. 37 srs. on the said date of the current year it came upto 6,704 mds. 23 srs.

Looking into the demand of the present market for only quality teas, the directors are keen on it and an able guidance of Rai Sahib H. B. Kanoi, one of the eminent and experienced tea planters of Assam, is being availed of for the purpose, free of cost.

After providing for depreciation a sum of Rs. 29,805 (Rs. 28,438), the season's working resulted in a gross profit of Rs. 3,47,003 (Rs. 7,92,654). After deducting therefrom compensation to ex-secretaries and agents for the loss of their office Rs. 2,00,000 (Rs. 80,265 being commission), directors' commission Rs. 3,470 (Rs. 7,224) and provision for taxation Rs. 1,20,000 (Rs. 2,80,000), there is a balance of Rs. 23,533 (Rs. 2,70,165 after providing Rs. 1,55,000 for general reserve). After taking into account last year's balance of profit and loss account at credit amounting to Rs. 5,997 (Rs. 13,832) and after transferring from general reserve Rs. 1,65,000 (*nil*) an amount of Rs. 1,94,531 was found available for the year, a tax-free interim dividend at 15 (*nil*) per cent. or Re. 1-8 per share, on 50,376 fully paid shares of Rs. 10 each of the Company was declared already by the board on 21st March 1956 and disbursed subsequently totalling Rs. 75,564 (*nil*). The directors now recommend a final tax-free dividend at 20 (80) per cent. or Rs. 2 (Rs. 8) per share absorbing Rs. 1,00,752 (Rs. 2,88,000) leaving a credit balance of Rs. 18,215 (Rs. 5,997) to be carried forward to next year.

While the results of the year 1955 have been far below those of 1954, this is not surprising, if the directors judge that the 1954 results were unprecedented and in comparison 1955 results are rather encouraging, if they take it into consideration the wide price fluctuations which prevailed throughout the year and increase in manufacturing costs for adjustment of bonus to labour for the year 1954 to the extent of Rs. 85,965 in total, according to the terms of Tripartite Agreement reached at New Delhi in January 1956.

Accounts in brief are as under:

Liabilities	Rs.	Assets	Rs.

		Other assets	1,483
		Cash ...	2,101
Rs.	25,92,267	Rs.	25,92,267

Ethelbari Tea Co., (1932) Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955 for your perusal and adoption.

Tea crop.—A crop of 5,817 mds. 34 srs. was manufactured and disposed of for sale with export quota rights in Calcutta and foreign markets 4,508 mds. 30 srs., for sale in Calcutta for internal consumption 1,235 mds. 38¼ srs. and staff consumption, shortages on sampling and handling, etc., for which no price was obtained 73 mds. 5½ srs. The teas realised an average price of Re. 1-14-3 per lb. as compared with Rs. 2-7-9 per lb. obtained for the previous season's crop of 5,948 mds. The shortfall of 682 mds. in the crop as compared with the estimate was due to extreme adverse weather conditions in Dooars during the season under review.

No extension was made during the year and the area under cultivation remained unchanged at 447 acres as registered with the Tea Board.

On the request of the Board, Rai Sahib H. B. Kanoi, one of the most experienced tea planter of Assam, inspected the garden during the year free of charges.

The revenue and profit and loss account for the year shows a net debit balance of Rs. 50,427 (profit of Rs. 5,37,391). This, however, is not the true picture of the fact due to the following reasons:—

The Company had to pay a total compensation of Rs. 52,000 to the ex-Garden Manager and the ex-Managing Agents for their loss of services as was agreed upon and which the directors already reported in their report for the year ended 31st December 1954, under the heading "Management." That bonus to the garden labour amounting to more than Rs. 65,000 for the year 1954 had to be provided for. That an abnormal fall in prices of Dooars teas prevailed throughout the season, as may be seen from the facts stated above under the heading "Crop."

In the circumstances, the directors recommend that (*a*) the sum of Rs. 50,000 lying to the credit of "Reserve for building and machinery" be transferred to "General reserve," as already considerable expenses have been incurred on these fixed assets from the liquid funds of the Company during the year, (*b*) the sum of Rs. 95,000 be transferred to the credit of the profit and loss account from the total "General reserve" thus to be available, (*c*) a payment of tax-free dividend of 12½ (50) per cent. or Re. 1-4 (Rs. 5) per share utilising Rs. 43,750 from the credit balance of the profit and loss account thus to be created. The recommendation of the above dividend is to some satisfaction of the directors, in view of the adverse conditions that prevailed in Dooars teas' business during the season under review as revealed above.

The application to the Controller of Capital Issues during the year under review for issuing bonus shares to the existing members of the Company in proportion of two fully paid shares for each five shares held by them, necessary permission was accorded in 1956 and 14,000 fully paid ordinary shares of Rs. 10 each have subsequently been allotted and issued as bonus shares.

Season 1956.—The directors estimate an outturn of 6,750 mds. of teas at a total cost of Rs. 8,10,000 only. In this connection it may be mentioned that while up to 15th October 1955 the outturn was 4,308 mds. in 1956 on the said date it came up to 5,061 mds.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	5,70,483
Reserves ...	3,00,000	Stock of tea	6,40,411
Provision for taxation ...	1,31,529	Stores ...	83,852
Liabilities ...	9,95,325	Debts, deposits and advances ...	1,27,757
		Investments	2,94,603
		Cash ...	9,921
		Profit and loss account ...	50,427
Rs.	17,76,854	Rs.	17,76,854

Teen Ali Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea crop.—A crop of 7,548 maunds was manufactured and has been disposed of for sale in Calcutta for export 7,076 maunds and for sale in Calcutta for internal consumption 472 maunds. The average price per lb. realised was Rs. 2-2-6 as compared with Rs. 3-1-10 per lb. obtained for the previous season's crop of 7,166 maunds. The Company's export quota for season 1955 was 5,557 maunds. The area under cultivation at 31st December 1955 was 526.50 acres.

The revenue account shows a profit of Rs. 3,50,545 (Rs. 9,52,370) and after deducting from this commutation of a pension Rs. 46,811 (*nil*), staff commission and bonus Rs. 30,926 (Rs. 56,800), managing agents' commission on profits Rs. 3,845 (Rs. 3,20,000), depreciation Rs. 54,018 (Rs. 52,974) and bonus to labour—1953-54 Rs. 1,05,174, there remained a balance of Rs. 59,771 (Rs. 5,01,663). After adding to this the interest on investments (net) Rs. 4,677 (Rs. 1,202), forfeited dividends Rs. 620 (Rs. 16) and excess provision for taxation —written back Rs. 10,000 (*nil*), there is a net profit for the year of Rs. 75,068 (Rs. 5,04,285). After adding to this the adjusted credit balance of Rs. 39,464 (Rs. 36,468) brought forward from the previous year, there is a credit balance of Rs. 1,14,332 (Rs. 5,40,753) on profit and loss account. The directors recommend to pay from this balance a dividend of 20 (60) per cent. for season 1955 without any deduction for income-tax payable by the Company Rs. 90,000 (Rs. 2,70,000) and carry forward Rs. 24,532 (Rs. 45,753).

Bonus to Labour.—In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

Estimates for season 1956, have been framed for a crop of 7,200 maunds of tea to cost Rs. 9,89,093 which excludes Rs. 81,300 being expenditure of a capital expenditure.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,000	Block ...	8,01,681
Reserves ...	7,80,000	Stock of tea	7,38,176
Provision for taxation ...	2,53,819	Stores ...	1,34,714
Liabilities ...	5,32,907	Advances and deposits	1,17,172
Profit and loss account ...	24,532	Investments	1,98,391
		Cash ...	51,124
Rs.	20,41,258	Rs.	20,41,258

Ellenbarrie Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a loss of Rs. 627 (profit of Rs. 3,50,166). On transfer of this sum to profit and loss account and after sundry adjustments including a transfer of Rs. 40,000 (*nil*) from revenue reserve account, there is a balance at credit of that account of Rs. 3,837 (Rs. 3,10,526 from which the directors transferred Rs. 1,25,000 to buildings and machinery reserve and a dividend of 15 per cent. was also paid) which it is proposed to carry forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus, the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

The result of the season's working is disappointing owing to the greatly increased cost of statutory concessions to labour and adverse market conditions, while unfavourable growing conditions, tea pests, the large number of bushes uprooted as a result of the 1954 drought and the present replanting programme had a depressing effect on the crop.

Tea crop weighed out at 4,803 maunds as compared with 5,016 maunds harvested in 1954. The average selling price per lb. was Rs. 1-14-7 as against Rs. 2-11-8 in 1954. Planted area remains at 499.71 acres.

Estimates for 1956 provide for a crop of 5,600 maunds at an outlay of Rs. 7,38,750, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	4,47,806
Reserves ...	4,00,102	Stock-in-trade ...	6,33,607
Provision for taxation ...	47,711	Stores and supplies ...	54,942
Liabilities ...	4,87,977	Quota rights receivable	20,360
Profit and loss account ...	3,837	Loans and advances ...	45,160
		Investments ...	200
		Cash ...	37,552
Rs.	12,39,627	Rs.	12,39,627

Phaskowa Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

In accordance with an agreement for the payment of bonus to labour reached on an industry-wise basis early in 1956, the exact formula for which has yet to be finalised, it appears probable that the entire trading profit of Rs. 9,968 (Rs. 2,61,189) will be absorbed in meeting this commitment, and hence this sum has been provided for and the profit thereby reduced to *nil*. (Last year there was a final available balance of Rs. 2,45,127 from which the directors transferred Rs. 75,000 to revenue reserve and Rs. 65,000 to buildings and machinery reserve. They also paid a dividend of 30 per cent. and carried forward Rs. 30,127.) The reserve of Rs. 8,000 for taxation is necessary as it has not yet been finally agreed with Government in which assessment years part payments of labourers' bonus will be admitted as chargeable items.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve representing the present written down value of these assets has been opened.

Tea crop was 2,987 maunds as compared with 3,201 maunds in 1954. The average selling price was Rs. 1-12-5 per lb. as against Rs. 2-10-0 per lb. in the previous year. Planted area remains at 347.62 acres.

Estimates for 1956 provide for a crop of 3,200 maunds at an outlay of approximately Rs. 4,56,040 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,000	Block ...	3,14,964
Reserves ...	3,59,080	Stock-in-trade	3,47,608
Provision for labour bonus	9,968	Stores and supplies ...	27,640
Provision for taxation ...	35,554	Quota rights receivable	10,597
Liabilities ...	1,34,042	Loans and advances ...	12,722
Profit and loss account ...	688	Investments	43,862
		Cash ...	31,939
Rs.	7,89,332	Rs.	7,89,332

Oodlabari Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel and Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea crop.—A crop of 8,321 (7,865) maunds was manufactured and disposed of for sale in Calcutta for export 6,457 maunds and for sale in Calcutta for internal consumption 1,864 maunds. The teas realised an average price of Re. 1-11-1 per lb. as compared with Rs. 2-12-2 per lb. obtained for the previous season's crop of 7,865 maunds. The Company's export quota for season 1955 was 5,707 (5,559) maunds. No extensions were put out during the year and the area under cultivation remains unchanged at 578.33 acres.

Increase of Capital.—In June this year a sum of Rs. 3,20,000, being part of the reserve account of the Company, was capitalised by the creation of 32,000 new shares as fully paid-up. These shares were allotted free to the existing shareholders of the Company in the proportion of one share for every one share held by them on 26th June 1956. The shares so distributed ranked in all respects *pari passu* with the existing shares and were to participate in any dividend declared after 26th June 1956. The effect of the above capitalisation on the relationship between the capital and the reserve account of the Company is as follows:—

		Position as shown in the balance sheet	*Position at date*
		Rs.	Rs.
Capital ...	:: ::	3,20,000	6,40,000
Reserve account	:: ::	6,50,000	3,30,000
Total	.. Rs.	9,70,000	9,70,000

The revenue account shows a profit of Rs. 2,08,430 (Rs. 9,43,581) and after deducting from this gratuity to retired employee Rs. 567 (*nil*), staff commission and bonus Rs. 15,832 (Rs. 79,605), managing agents' commission on profits Rs. 1,160 (Rs. 16,943), reserve for taxation Rs. 40,000 (Rs. 2,80,000), depreciation Rs. 30,336 (Rs. 24,464) and bonus to labour for 1953-54 Rs. 96,816 there is a balance of Rs. 23,719 (Rs. 5,36,821). To this is added interest on investments net Rs. 9,841 (Rs. 2,035) and excess provision for taxation—written back Rs. 20,000 (*nil*) giving a net profit for the year of Rs. 52,560 (Rs. 5,40,471). After adding to this the adjusted credit balance of Rs. 55,916 (Rs. 42,343) brought forward from the previous year, there is a credit balance of Rs. 88,476 (Rs. 5,82,814) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Pay a dividend of 12½ (75) per cent. for season 1955 on the increased capital of Rs. 6,40,000, without any deduction for income-tax payable by the Company Rs. 80,000 (Rs. 2,40,000) and carry forward Rs. 8,476 (Rs. 42,814 after placing Rs. 70,000 to reserve account, Rs. 1,50,000 to buildings and machinery reserve account, Rs. 50,000 to contingency reserve account and Rs. 30,000 to hail insurance reserve account).

Referring to the qualification in the auditors' report, the directors have to explain that as these accounts relate to a period prior to the commencement of the Companies Act, 1956, they have been prepared in accordance with the provisions of the Indian Companies Act, 1913, which was in force for that period.

Bonus to Labour.—In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

Estimates for season 1956 are provided for a tea crop of 8,000 maunds at a total cost of Rs. 10,01,388 which excludes capital expenditure to the tune of Rs. 2,04,060.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,20,000	Block ...	6,26,920
Reserves ...	8,94,996	Stock of tea ...	3,28,293
Provision for taxation ...	3,21,004	Stores ...	1,21,552
Liabilities ...	3,08,765	Debts, deposits and advances ...	1,22,765
Profit and loss account ...	8,476	Investments ...	5,98,709
		Cash ...	55,002
Rs.	18,53,241	Rs.	18,53,241

Moheema Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a loss of Rs. 50,144 (profit of Rs. 2,69,910). On transfer of this sum to profit and loss account and after sundry adjustments, including transfers of Rs. 1,00,000 from revenue reserve and Rs. 1,20,000 from buildings and machinery reserve, there is a balance at credit of that account amounting to Rs. 1,217 (Rs. 10,713 after transferring Rs. 75,000 to revenue reserve and Rs. 1,35,000 to buildings and machinery reserve and also after payment of arrears of preference dividends of 6 per cent. for the years 1950 to 1952), which the directors propose to carry forward.

The accounts of your Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets valued at Rs. 1,88,000 as per last account have now been shown at their written down value and in addition assets which had been written off to 31st December 1954 have been brought back into account. As a result, a sum of Rs. 1,10,437 representing depreciation which was not previously written off has been charged to profit and loss account.

Tea crop weighed out at 4,560 maunds which compares with 4,507 maunds harvested in 1954. The average selling price was Rs. 1-11-7 per lb. as compared with Rs. 2-9-1 per lb. in the previous year. Planted area under tea cultivation remains at 673.37 acres.

Estimates for 1956 provide for a crop of 4,700 maunds at an outlay of Rs. 7,47,400, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	7,65,701
Reserves ...	30,000	Stock-in trade ...	3,08,013
Provision for taxation ...	10,900	Stores and supplies ...	35,048
Liabilities ...	5,31,995	Quota rights receivable	7,074
Profit and loss account ...	1,217	Debts and advances ...	22,836
		Cash	35,440
Rs.	13,74,112	Rs.	13,74,112

New Swadeshi Mills of Ahmedabad Ltd.

The directors of the above Company (Chairman: Mr. R. N. Podar, Bombay) submitted the audited accounts of the Company for the year ended 31st March 1956.

The accounts after providing for managing agency commission amounting to Rs. 5,11,380 and industrial bonus for the calendar year 1955 aggregating to Rs. 6,61,190 show a profit of Rs. 20,69,184. The last year's profit brought forward is Rs. 75,601 and profit of Nagda branch upto the year ended 31st March 1955, which was transferred to Ahmedabad during the year, is Rs. 1,63,842. Adding both these amounts to the profit of this year of Rs. 20,69,184, the total comes to Rs. 23,08,627 from which the directors propose to make the following appropriations as per provisions made in the accounts.

To depreciation on block Rs. 5,27,949, to provision for taxation for the year 1955-56 Rs. 7,00,000, *less* saving in provision for income-tax made during the previous years Rs. 3,00,000; transfer to general reserve Rs. 10,64,822, provision for proposed dividends: on 26,145 ordinary shares of Rs. 100 each at 7 per cent. (free of tax) Rs. 1,83,015 and on 2,892 preference shares of Rs. 100 each at 5 per cent. (less tax) Rs. 10,664 leaving to be carried forward Rs. 1,22,177. The revenue result of Pakistan branch has not been incorporated in the above.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,93,175	Block ...	27,00,000
Reserves ...	24,33,616	Stock-in-trade	71,25,716
Provision for taxation ...	9,66,042	Stock-in-process ...	2,93,681
Liabilities ...	67,64,484	Stores and spare parts	5,28,297
Profit and loss account ...	3,44,175	Debts, deposits and advances ...	25,82,170
		Investments	3,20,100
		Cash ...	1,51,528
Rs.	1,37,01,492	Rs.	1,37,01,492

N.B.—Figures within brackets relate to the corresponding period of the previous year.

SUTLEJ COTTON MILLS LIMITED

RESULTS FOR 1955-56 EXCELLENT

THE Directors' Report and the audited accounts of the Sutlej Cotton Mills Limited at Okara, West Pakistan (Managing Agents: Messrs. Birla Brothers Private Limited), for the year ended 31st March 1956, portray another successful working year for the Company.

The results shown by the Company are splendid, though it worked under certain handicaps during the year under review. The Directors have reported that the Mills' production was adversely affected, as, throughout the year, there was a persistent shortage of standard consumable materials and stores, due to the stringent import policy of the Government of Pakistan. The Mills, therefore, had to depend mostly upon locally available materials.

The Directors have further reported that the comparative fall in the profits of the Company is mainly due to the growing severity of competition in the cotton textile industry in Pakistan, where a large number of new mills has been recently set up. It has been reported that the Pakistan market is now saturated with the coarse and medium type of cloth and the Directors are now very wisely contemplating to switch over the Mills' production to finer qualities, wherein there is still considerably vast scope. Moreover, attempts are also being made to secure and build up new markets in East Pakistan as well.

Profit High

The profit in India and Pakistan, after providing for interest, Managing Agents' commission and depreciation, stands at a high figure of Rs. 98,19,371. Out of this, Rs. 59,45,000 and Rs. 9,41,500 have been provided for taxes in Pakistan and India, respectively, leaving a net profit of Rs. 29,32,871. After transferring therefrom Rs. 18,00,000 to general reserve and Rs. 3,00,000 to dividend equalisation fund, there remains a sum of Rs. 8,32,871. This sum, together with the balance of previous years, amounts to Rs. 39,69,553.

Of this amount, Rs. 9,00,000 have been apportioned for the payment of dividend at Rs. 6 per ordinary share of Rs. 10 each. The balance of Rs. 30,60,553 is proposed to be carried forward.

The working of the Company during the last three years is outlined in the following table:

	1953-54	1954-55	1955-56
Net sales (*less*—excise duty and selling expenses)	4,11,09,801	3,18,03,576	2,91,45,316
Establishment, manufacturing and other expenses	8,55,545	8,55,880	3,92,166
Net profit (after providing for depreciation but before providing for India and Pakistan taxes) ..	2,19,55,446	1,36,72,265	98,19,371
Provision for taxes in India and Pakistan	1,28,05,000	72,67,500	68,86,500
Provision for depreciation ..	9,70,189	10,42,639	7,09,056
Transfer to general reserve ..	75,00,000	50,00,000	18,00,000
Transfer to dividend equalisation fund	10,00,000	5,00,000	3,00,000
Transfer to miscellaneous reserve..	6,13,692	6,92,776	10,97,879
Rate of dividend on the face value of shares	50%	60%	60%

Large Reserves

One very important and noteworthy feature of the Company's balance-sheet as at 31st March 1956 is that the authorised capital of the Company has been raised from Rs. 75 lakhs to Rs. 2 crores. The policy of building up reserves followed by the Company is quite commendable. The general reserve alone stands at the huge figure of Rs. 2,73,00,000. Besides, there are dividend equalisation fund and miscellaneous reserve of the order of Rs. 30,00,000 and Rs. 40,80,155, respectively.

The following is a summary of the Company's balance-sheet as on 31st March 1956:

Capital and Liabilities	Rs.	Property and Assets	Rs.
Authorised capital ..	2,00,00,000	Gross block	99,62,158
Issued, subscribed and paid-up capital ..	15,00,000	*Less*—Depreciation ..	79,53,780
General reserve ..	2,73,00,000		20,08,378
Miscellaneous reserve ..	40,80,155	Sundry assets ..	4,80,68,617
Dividend equalisation fund	30,00,000		
Reserve for taxation..	47,00,792		
Sundry liabilities ..	55,35,490		
Profit and loss account	39,60,553		
	Rs. 5,00,76,990		Rs. 5,00,76,990

QUESTION HOUR IN PARLIAMENT

Petrol Prices

THE Government is unable to lower petrol prices in India. While it is fantastic that the Indian consumer has to pay more for petrol drilled in India, the question cannot be separated from other and larger issues. The Government is, however, very much concerned in the matter. The steps which the Government has to detach prices in India from the basic price of petroleum products fixed globally in the Gulf of Mexico are rather complicated questions connected with many other matters. Till we can produce enough oil here, we cannot do anything we like. So long as we get oil from abroad, our hands are tied. But we are making efforts to bring down prices.

* * * *

Atomic Energy

India is concentrating its attention on the production of atomic energy and, when it produces it, it will have to consider whether it is economical to run a locomotive by coal, electricity or atomic energy. Japanese scientists have not yet reached a definite blue-print stage for the production of atomic-powered locomotives.

—*Jawaharlal Nehru*

Dunlop Rubber Company

The Government has taken care to see that the participation of Indian capital will be more than before in the new shares which the Dunlop Rubber Company has been permitted to issue. In the fresh issue, the percentage of foreign capital will be 51, as against 71 in the old issue. The rest 49 per cent. will be Indian capital. The Government has acted according to the Tariff Commission's recommendations. The question before the Government and the country is whether the increased demand for tyres should be met or not.

—*T. T. Krishnamachari*

Balance of Payments

During 1955-56, India's net invisible earnings amounted to Rs. 24.7 crores from transportation, including shipping and Rs. 4.3 crores from insurance. In 1955-56, India had a favourable balance of payments with countries of Australia, New Zealand, Burma, Ceylon, Malaya, Aden, Iraq, the U.S.A., Canada, the Philippines, the Netherlands, Afghanistan, Iran, Saudi Arabia, Ethiopia, Indonesia, Thailand, Argentina, China and Poland.

* * * *

Indian Aluminium Company

The Indian Aluminium Company has been permitted to raise fresh capital in the country. About 87.2 per cent. of the ordinary shares and 69.7 per cent. of the total paid-up capital, including the preference shares of this Company, are held by the Canadian shareholders. (No big loan has been made to the Indian Aluminium Company. It is not the Government policy to discourage the private sector.—*T. T. Krishnamachari.*)

—*B. R. Bhagat*

Tea Agreement

In quality and quantity, India is holding the ground in the matter of tea export and it will continue to hold the ground. The International Tea Agreement expired on 31st March last. An extension is still under negotiation.

* * * *

Most-favoured-Nation Treatment

The Governments of South Viet Nam and India have agreed to accord each other most-favoured-nation treatment in respect of their tariffs.

* * * *

Small Industries

Forty-seven extension centres throughout the country for small industries have been sanctioned and are in various stages of implementation.

—*Nityanand Kanungo*

Woollen Fabrics to Russia

Prices and other details for the immediate purchase of 250,000 yards of woollen fabrics by the Soviet Union from India have been finalised. These fabrics will be sold to the Soviet Union at a fair price.

—*D. P. Karmarkar*

Raw Film Manufacture

India is negotiating with an East German firm the question of setting up a plant for manufacturing raw film in India. The negotiations are expected to be completed in three to six months.

—*M. M. Shah*

Neiveli Project

An East German technical expert team visited the Neiveli lignite project in Madras State. The question of setting up a steel plant in Salem district has not been specifically dealt with in the report submitted by the team. It only points to the possibility of melting crude iron by means of high temperature lignite coke in low-shaft furnaces. The report deals mainly with mining and utilisation of lignite and underground water conditions at Neiveli.

* * * *

Refinery Gases

The question of utilising the gases of the Burmah-Shell and Stanvac Refineries in Bombay for the manufacture of fertilisers will be taken up after the Union Food and Agriculture Ministry has decided about the upward revision in the production of fertilisers in the Second Plan period.

* * * *

Korba Coalfields

Preliminary work on a pilot quarry has begun in the Korba coalfields in Madhya Pradesh and it is expected to go into production by the beginning of 1957.

Coal and Salt Prices

No scheme has so far been drawn up for making coal and salt available throughout the country at uniform or very nearly uniform prices. Proposals to this effect are, however, under consideration.

—*Satish Chandra*

Wage Boards

Five or six wage boards, which will cover nearly two-thirds of the workers engaged in factories will be set up before the end of the year. The headquarters of the wage boards will be located at places most convenient to workers in the industries. The steel industry will be one of the industries to be covered by the wage boards.

—*Khandubhai Desai*

Educated Unemployed

It has been decided to set up some pilot projects based on the recommendations of the study group on educated unemployed. Such schemes of the State Governments as fall within the purview of these pilot projects are being considered by the Government.

* * * *

Employees' State Insurance

A decision to extend facilities for medical care to the families of insured persons under the Employees' State Insurance Scheme has been taken by the Government. About 6 to 7 million persons will benefit by this new decision. The rate of employees' contribution will not be increased as a result of the decision. The rates of special contribution payable by employers will, however, be raised from ¾ per cent. to 1¾ per cent. in non-implemented areas and from 1¼ per cent. to 3½ per cent. in implemented areas. The State Governments were consulted before taking this decision and they were in favour of covering the families of the workers also.

—*Abid Ali*

Oil Survey

A Canadian survey team has undertaken an aero-magnetic survey of the Jaisalmer area and a stretch of 10,000 line-miles in the Gangetic and Punjab plains for oil. The survey is conducted under the Colombo Plan. The Government of India has not so far requested the Canadian Government for further assistance for exploration of mineral oil.

—*K. D. Malaviya*

Notices

THE VELLORE ELECTRIC CORPORATION, LIMITED

(Registered Office: MADRAS)

NOTICE

THE TWENTY-SEVENTH ANNUAL GENERAL Meeting of the Vellore Electric Corporation Limited will be held on Monday the 24th December 1956 at 12 noon (S.T.) at the Registered Office of the Company, No. 20, Second Line Beach, Madras-1, to transact the following business:

1. To receive and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March 1956.
2. To declare dividends on Preference and Ordinary Shares.
3. (*a*) To elect a Director in the place of Mr. C. Gopalan who retires by rotation and is eligible for re-election.

   (*b*) To appoint a Director in the place of Sri M. Subbaraya Aiyar who retires by rotation and also vacates office under Section 261 of the Companies Act. As he is aged 71 years and is also an Associate of Messrs. Chandrie & Co., Private Ltd., the Managing Agents of the Company, he can be reappointed by a special resolution as required under Sections 261 and 281 of the Companies Act, 1956. Special Notice has been received by the Company to move for his appointment as a Director by the following resolution which will be proposed as a Special Resolution:—

   "RESOLVED that the age limit under Section 280 of the Companies Act shall not apply to Sri M. Subbaraya Aiyar who is aged 71 years and that he be reappointed as a Director of the Company by this Special Resolution notwithstanding the fact that he is an Associate of Messrs. Chandrie & Co., Private Ltd., who are the Managing Agents of this Company."

   (*c*) To appoint two more Directors.

   (*d*) To appoint Auditors for the current year 1956-57 and to fix their remuneration.

   (*e*) Any other subject that may be brought up before the meeting.

The Share Transfer Books of the Company will remain closed from 10th December 1956 to 24th December 1956 both days inclusive.

By Order of the Board,
For CHANDRIE & Co., (PRIVATE) LTD.,
(Sd.) S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, 12*th November* 1956.

Note:—A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

If the dividends as recommended by the Directors, viz., a final dividend of 3 per cent. less tax on Preference Shares and 5 per cent. tax-free on ordinary shares, making a total of 6 per cent. less tax on preference shares and 10 per cent. free of tax on ordinary shares for the year ended 31st March 1956, are passed at the meeting, the payments will be made on or after 24th December 1956 to those members whose names appear on the Company's register on 10th December 1956.

EXPLANATORY NOTE

as required by Section 173 of the Companies Act, 1956 in regard to the Special business under items (b) *and* (c) *set out above.*

(*b*) Sri M. Subbaraya Aiyar has been a Director of this Company from the time of its incorporation and has been rendering very valuable services to the Company. He is aged 71 years and if he is to be reappointed, the Company in General Meeting must state that the age limit shall not apply to him. Further, he is a member of Messrs. Chandrie & Co., Private Ltd., the Managing Agents of this Company who are authorised to appoint two Directors. He is also the father of Sri S. Venkataraman who is a Director of the Managing Agents. Hence, as he comes within the definition of "an Associate" of the Managing Agents and under Section 261 of the Companies Act, a special resolution is required for his appointment as a Director. Both resolutions require special notice. Such a special notice has been received by the Company and the special resolution as stated in the agenda will be moved at the meeting. The Directors feel that the services of Sri M. Subbaraya Aiyar as a Director should not be lost and that he should continue as a Director and give his valuable assistance.

(*c*) Under the Articles of Association of the Company the Managing Agents are entitled to appoint two persons as Directors. Under Article 96 (*a*) the Madras Industrial Investment Corporation Ltd. has got the right to appoint a Director to the Company so long as the Loan by that Corporation to the Company is outstanding. Thus three of the Directors of the Company do not retire by rotation. As Section 255 lays down that at least two-thirds of the total number of Directors should be persons liable to retire by rotation. The Directors recommend that two more Directors may be appointed so that the number of Directors appointed by the Company be six. The total number of Directors permitted by the Articles is nine.

By Order of the Board,
For CHANDRIE & Co., (PRIVATE) LTD.,
(Sd.) S. VENKATARAMAN,
Director,
Managing Agents.

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Transfer Books of the above Company will be closed from the 30th November 1956 to the 29th December 1956, both days inclusive.

By Order of the Board of Directors,
W. H. BRADY & CO., LTD.,
Managing Agents.

To the Shareholders of the Belapur Company, Limited, and in particular to: Mr. William Abel and Rajabali Hasom Paroo and Sons Ltd.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 21*st November*

The most important development of the week, since our last report, was the Reserve Bank's announcement raising the rate of interest on advances to banks against usance bills from 3½ per cent. to 3¾ per cent. with effect from today. This, however, did not give rise to a corresponding increase in interest rates in the short-term money market, though the scarcity of floating funds was as keenly felt as in the previous week and the pressure of demand for bank credit witnessed no relaxation.

The one effect of the Reserve Bank's decision to raise its rate on advances to banks against usance bills was that till today a large number of banks availed themselves of the facility at the lower rate of interest as much as possible. In fact, it is reported that there was a "rush" from banks yesterday, being the last day for which the lower bill rate was applicable.

In the inter-bank section, day-to-day funds were mostly done at 3½ per cent. and at 3 per cent. after clearing hours. Three days' and seven days' money were done at 3⅝ per cent. and 3¾ per cent., respectively. House money at call fetched 3½ to 3¾ per cent. for large amounts. Short-term deposits fetched 3½ per cent. for one to three months and 3¾ per cent. for six months.

The Reserve Bank's statement for the week ended 16th November 1956 discloses a fall of Rs. 9.30 crores in notes in circulation and an increase of Rs. 10.69 crores in notes held in the Banking Department. The consequent increase of Rs. 1.39 crores in total notes issued is covered by a corresponding rise in rupee coin. In the Banking Department, deposits of the Central Government have dropped by no less than Rs. 11.58 crores and those of other Governments by Rs. 7.88 crores. A small decline of Rs. 74 lakhs is also noted in deposits of banks. There has been a fall of Rs. 6.71 crores in balances held abroad and of Rs. 7.33 crores in loans and advances other than to Governments. Fresh advances to banks against usance bills during the week amount to Rs. 3.88 crores, but repayments have been more at Rs. 5.49 crores, so that the outstanding advances show a net decline of Rs. 1.61 crores. A further reduction of Rs. 15.08 crores is noted in investments.

The Scheduled banks' statement for the week ended 9th November 1956 shows a rise of Rs. 2.33 crores in demand deposits and a small decline of Rs. 46 lakhs in time deposits. Inter-bank borrowings are lower by Rs. 0.97 lakh. Borrowings from the Reserve Bank have fallen by Rs. 4.57 crores and those from the State Bank by Rs. 2.31 crores. On the assets side, a sharp fall of Rs. 8.97 crores is noted in advances. Inland bills purchased and discounted have gone up by Rs. 4.65 crores, while foreign bills have declined by Rs. 2.09 crores. Investments are lower by Rs. 1.39 crores, but cash balances have risen by Rs. 1.77 crores.

The gilt-edged market ruled quiet with a further marking down in prices of some of the securities. The volume of business was very small. It is, however, noteworthy that the rot in the more active State loans noted for some weeks past was arrested, thanks to the intervention of the life Insurance Corporation which offered some support to these loans. But there was a further setback in loans of M.P., Punjab, Orissa, Mysore, Andhra and Saurashtra.

Among Central Government securities, 3 per cent. 1986 Conversion Loan fell by As. 3 to Rs. 73-9, even at which level there were sellers, 3 per cent. 1970-75 shed As. 2 to Rs. 87-14. 3 per cent. 1966-68 was on offer at Rs. 92-6. 3 per cent. 1964 and 1963-65 were unchanged at Rs. 94-5 and Rs. 94-4, respectively. 3½ per cent. 1962 held its ground at Rs. 97-14 and 3½ per cent. 1961 at Rs. 99-4. 3½ per cent. 1964 was placed an anna lower at Rs. 98-5 and 3½ per cent. 1965 was on offer a shade lower at Rs. 98-6½. 3½ per cent. 1967 had sellers at Rs. 98-6.

In the foreign exchange market, the rupee ruled steady in terms of the dollar, banks' selling rate for ready dollars being maintained at Rs. 481½ per $100 and their buying rate at Rs. 477¼ per $100. There was, however, a further weakness of the rupee in terms of the Canadian dollar, banks' selling rate moving up from Rs. 499½ to Rs. 500¼ per $100 and their buying rate from Rs. 493¾ to Rs. 494¾ per $100. In New York, spot sterling was well maintained at $2.78-3/16-2.78-5/16. Three months' forward was, however, marked down from $2.76-11/16-2.76-13/16 to $2.76⅜-2.76½. Transferable sterling gained a little from 273.75-273.90 cents to 274.00-274.10 cents.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 19*th November*

During the week under review, the conditions of hides and skins market were stable. Demand for goods of different category was strong. New arrivals were considerable. The main purchasers were the local tanners. During the week, ample purchases were effected by the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 380, 2nd grade Rs. 290 and 3rd grade Rs. 140 to Rs. 150 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; goat, 1st grade Rs. 300 to Rs. 325, and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

BULLION FLARES UP

(From Our Own Correspondent)

BOMBAY, 21*st November*

A sudden rise of over a rupee in the price of silver today was the outstanding feature of the week's trading in the bullion market. This is attributed to strong speculative support on rumours that the supplies of silver coins from Tibet would stop. At present, these silver coins are imported against export of cloth and other commodities. The report goes that these exports would be diverted to other countries in order to increase India's foreign exchange earnings. Gold also moved up sizably, the strength of silver and gold offtake in the ready section being the main bullish factors.

In the earlier part of the week, the movements in both silver and gold were confined to a narrow range, but the undertone remained steady, sustained by the good demand in gold.

Silver for forward delivery (19th November settlement) was slightly marked down early in the week from Rs. 174-7 to Rs. 173-8 due to hesitancy on the part of operators to go long further, following rumours about the possibility of more arrivals of coins from Tibet. There was, however, a recovery to Rs. 174-4, before the settlement ran cut. The December settlement reacted from Rs. 175-4 to Rs. 174-6, but crept up to Rs. 175-4 yesterday and jumped up today to Rs. 176-9.

Ready silver (.996 Mint) closed at Rs. 176-1, as against the previous week's closing at Rs. 174-8, after moving down to Rs. 173-9. The floating stocks of silver are estimated at 1,100 bars. The daily average offtake during the week was 16 bars.

Forward gold (17th November settlement) shaded off from Rs. 105-6 to Rs. 104-14 at the opening of the week, but slowly advanced before the settlement ran out at Rs. 105-6. The December settlement was initially marked down from Rs. 105-9 to Rs. 105-1, before it gathered strength to touch a high of Rs. 106-5 at the close today.

Ready gold scored a gain of As. 11 over the week at Rs. 106-4. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals during the week were 3,000 tolas and these were well absorbed by a corresponding demand.

In New York, silver was maintained at 91⅛c. In London, however, spot silver hardened from 81½d. to 81¾d. and forward from 80⅝d. to 80¾d. Gold weakened from 251s. 5½d. to 251s. 2¼d.

The following comparative table shows the trend of market during the week under review:

	21-11-56	Highest	Lowest	14-11-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.999 fine Mint) ..	106 4	106 5	105 1	105 9
Forward*	106 5	106 6	105 1	105 9
Sovereign	69 8	69 8	69 4	69 8
SILVER				
Ready (.996 fine Mint) ..	176 1	176 2	173 9	174 8
Forward†	176 9	176 10	174 6	175 4
London Silver Ready ..	81¾d.	81¾d.	81⅛d.	81⅛d.
London Forward	80¾d.	80¾d.	80⅝d.	80⅝d.
London Gold	251s. 2¼d.	251s. 5½d.	251s. 2¼d.	251s. 5½d.
New York Silver	91⅛c.	—	—	91⅛c.

* 17th December settlement.
† 18th December settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

LINSEED ADVANCES

(Messrs. A. Bradley and Co.)

CALCUTTA, 19*th November*

Linseed prices displayed a notable advance during the week and a generally firmer undertone was in evidence. Insufficient ready goods to meet the crushers' demands and keener enquiries for oil following firmer advices from overseas were the chief factors maintaining the market. Small activity was recorded for near, as well as forward new crop deliveries, but sellers were on the whole reserved. The oil section was firm in anticipation of further fresh exports. Buyers were fairly keen, while the sellers remained reserved.

The latest available quotations per maund are: Ready-November Rs. 26; November-December Rs. 26 and April-May Rs. 22-8.

KIPS BULLISH

(From Our Own Correspondent)

MADRAS, 19*th November*

The kips market has been bullish. Stockholders quote very high prices as the Middle East situation looks complicated and has not eased. U.K. buying is small, in view of high prices quoted at origin. Trading has been patchy and a few top marks have been sold at pretty higher prices. Demand centres round medium and heavy weight kips and superior marks of cow calf and buff calf.

In the tanned skins section, best tannages are in good request from the U.K. and the Continent Demand for lining sheep from the Continent is fair-sized.

The next London tanned skins public sales will commence on 3rd December next, when 650,000 tanned goat and 230,000 sheep will be available. As demand for spot stocks seems active, prices are expected to improve at the auctions.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 21*st November*

The declining trend of cotton values, noted in the past few weeks in the futures market, was arrested during the week under review, thanks to the expectation of an export quota announcement. The firmness of other commodity markets also appeared to have bullishly affected the sentiment. But the rise in values would have been more marked but for the emergence of certain factors which dampened the enthusiasm of operators. These were: (1) heavy arrivals in upcountry centres and decline in the premiums in interior markets, (2) uncertainty regarding the actual size of the export quota that may be announced, and (3) reports that the quality of the present arrivals of new crop had been adversely affected by the recent rains. These factors led to cautious buying. Nevertheless, the undertone of the market was steady throughout the week and both the contracts registered some improvement.

M.G. Jarilla (March 1957) opened the week Re. 1-8 lower at Rs. 652½ and improved to Rs. 660½ on firm advice from the oilseeds market and upcountry buying. Expectation of export quota announcement further helped sentiment. On reports of heavy arrivals, the contract declined to Rs. 649 on 17th inst. It again improved to Rs. 662½ on Monday, obviously stimulated by the speech of the Union Commerce Minister at the Export Advisory Committee meeting the previous day. However, profit-taking and hedge selling followed which took the contract down to Rs. 652½ the next day. Opening today at Rs. 649, it again improved to Rs. 656½ and closed steady at the same rate.

M. G. Vijay (April 1957) followed the pattern of trading in Jarilla. Opening lower, at Rs. 752½, the contract firmed up to Rs. 762 the same day. Earlier gains were shed in subsequent sessions and it came down to Rs. 752½ yesterday. Opening today at Rs. 749½ the contract touched Rs. 758 before winding up the session at Rs. 758.

The following is the trend of price of the two contracts for the week:

(In rupees per candy of 784 lbs.)

	21-11-56	High	Low	14-11-56
Jarilla (March) ...	656½	662½	649	654
Vijay (April) ...	758	762	749½	754½

In the spot section, there were moderate inquiries for good quality cotton and prices were steady. Mill interest was noted for Laxmi, Khamgaon, Surti (old crop), Khandesh and Berar. Rumours that the Government is likely to release fresh export quotas in the near future led to exportable styles remaining firm. Shippers bought superior quality Bengals, C.P. I, C.P. II, Wagad and Oomra *deshi* and a fair volume of business is reported to have been done in these styles. In the foreign section, some business was put through in American G.M. 1-5/32". There were also good demand for ready lots of African cotton. Delivery contracts were easy. The latest available rates—in rupees per candy of 784 lbs.—from the spot market at Sewri are given below, the figures in brackets being last week's closing quotations:

Bengal *Deshi*	735	(730);	Berar Jarilla 750 (760);
Khandesh	785	(795);	Vijay (old) 920 (920);
Oomra *Deshi*	760	(760);	Moglai 745 (750);

Delivery Contracts:

Khandesh	107	(125)	ON Jarilla
Berar	92	(115)	ON Jarilla
Moglai	45	(40)	ON Jarilla
320 F.	88	(89)	ON Vijay
216 F.	108	(110)	ON Vijay
Vijay 13/16" ...	97	(100)	ON Vijay

The firm trend noted in the Karachi cotton market last week gathered further momentum during the week. This was due mainly to the keen interest shown in Pakistan cotton by overseas buyers. Inquiries from China and Japan were noted for N.T. and a sizable business is reported to have been put through in this variety. Local spinner demand was also good. Although the current year's crop is expected to be better than the previous year's, mill consumption is also rapidly rising and is estimated to reach one million bales, as compared with 938,000 bales in the previous season.

N.T.R.G. January which had closed at Rs. 79-1, improved to Rs. 82-5 and March delivery put on, over the week, Rs. 3-7 to Rs. 81-13. The spot section too presented a firm trend and fair improvement in values was noted. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Punjab *Deshi* 82; 4F Roller 82-5; S.G. 87-5; Punjab Roller 85-5; S.G. 90-5; 289 F.N.T. Roller 88-1; 289 F. Sind S.G. 92-1; 289 F. Punjab Roller 89-5; S.G. 95-5.

The Alexandria cotton futures market continued to be closed during the week under review. It is reported that shippers have not yet reinstated their offers. There is no information regarding any sales, but there are rumours of the possibility of large barter transactions with East European countries.

The auctions at Khartoum, after evoking considerable interest initially, have again become featureless with slow bidding. No sales were made at the auctions on 31st October and the 3rd of this month. On the 1st and 2nd inst., total sales were 900 bales each of CG6L and DG6L.

It is reported that satisfactory prices were obtained at the auction held on the 13th inst., by the Lint Marketing Board for new crop A.R. Uganda, covering a quantity of 15,000 bales. At the auctions held on the 15th inst., covering a further quantity of 15,000 bales, the prices fetched were much higher. The following were the auction prices converted to c.i.f. Bombay—the figures in brackets being the price obtained at the previous auction: A.R. BP. 52 Rs. 1,725 (Rs. 1,660 to Rs. 1,670); A.R. Busoga Rs. 1,625 (Rs. 1,480); A.R.

Bukhedi Rs. 1,495 (Rs. 1,430); A.R. Jinja Rs. 1,375 (Rs. 1,330 to Rs. 1,335).

The Liverpool cotton market ruled firm during the week. The firmness was due mainly to the renewed inquiries for ready cotton. The cheerful conditions which prevailed in the yarn and cloth market also appeared to have imparted strength to the cotton market. Mill interest was mainly for U.S. cotton and, as a consequence, prices of all grades and styles of U.S. cotton firmed up. The rise in price was also due to the reported decision of the U.S. Department of Agriculture to raise the C.C.C. floor selling price progressively by adding carrying charges. But the point has not been reached at which comparable Middle and Far Eastern growths can compete with American varieties. Users of Indian Oomra *deshi* made tentative inquiries for new crop shipments. However, the difficulty of getting shipping facilities, higher freight charges and domestic price delayed purchases. An official statement by the Indian Government on export quota is eagerly awaited. The Liverpool American futures contracts remained firm, while Egyptian cotton contracts were steady and Sudan improved. The latest available rates—in pence per lb.—from Liverpool are given under:

American Cotton One Inch Staple Contract: December-January 26.70; March-April 26.33; May-June 26.00; July-August 25.60. *American Cotton Mixed Growth Contract*: December-January 27.65; March-April 26.75; May-June 26.30; July-August 25.93 *Egyptian Karnak Cotton*: November-December, January-February, March-April 60; *Sudan Cotton*: November-December 59.30; January-February 59.10.

The post-election rally in prices continued in the New York cotton market during the week, strengthened further by the expanding volume of export sales, and domestic mill demand. Commission house buying and short covering met with only limited offerings. Active conditions prevailed in the spot section also. It is reported that growers continued to offer current ginnings freely at prices at or above loan levels. Domestic mill demand was good, particularly for distant deliveries. Inquiries from abroad covered a wide variety of descriptions and a good volume of business was transacted. The total purchases in the fourteen spot cotton markets for the week ended 8th inst., were reported to be 542,700 bales as against 406,000 bales during the previous week. The large turnover reflects also the sales made by the C.C.C. under the new export sales programme. United States Secretary for Agriculture, Mr. Benson, has declared that sales of U.S. Government-owned cotton would continue and that no "cut off point" had been set for such sales. The Commodity Credit Corporation announced on the 7th inst. that it would add 25 points carrying charges for the November sales under the new export sales programme and would increase carrying charges 15 points monthly thereafter.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	20-11-56	13-11-56	5-11-56
Spot	34.55	34.65	34.45
December	34.46	34.20	33.84
March	34.25	34.15	33.90
May	34.31	34.31	34.01

YARN FORGES AHEAD

(From Our Own Correspondent)

BOMBAY, 21st *November*

The yarn market which ruled distinctly easy last week picked up considerable strength during the week under review. The chief inspiring factor was the fear of an acute scarcity of rayon and staple fibre yarn supplies and enhanced prices in the coming weeks. The fear was based on the expectation that imports of yarns from Continental countries would be not only delayed but also costlier, since they had to come via the Cape of Good Hope. The operators were of the view that it would take some months before normal traffic was resumed in the Suez Canal. There was also good ready demand from Punjab side. Buying enquiries broadened, as a consequence, and prices of rayon and staple fibre yarns forged ahead. Last week's losses were completely recovered and today's closing rates were higher than those of fortnight before. In sympathy with these yarns and following better advices from cotton market, the cotton yarn section exhibited a firm trend.

Snia rayon yarn (120 dull cones) for December delivery forged ahead from Rs. 752 to Rs. 782. Spot 120 Italy jumped up by As. 3 to Rs. 4. 150 Japan rallied As. 2 to Rs. 4-6. 150 Italy was fully maintained at Rs. 3-11-6. 120 Japan, however, eased by an anna to Rs 3-15-3 for want of support. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade advanced by an anna to Rs. 3-11-9. 120 Bt. cones 1st grade gathered a like amount to Rs. 3-8-9.

Staple fibre yarn (40×2) for December delivery registered a rise of Rs. 26 to Rs. 627. Spot Citys and Centurys hardened by nine pies each to Rs. 3-6-9 and Rs. 3-6-6, respectively. Kohinoors improved by half an anna to Rs. 3-9. New Greats were done at Rs. 3-5-3. Among foreign yarn (80×2), K'Suns met with good buying support and strengthened by As. 2 to Rs. 6-10. Paramounts put on an anna to Rs. 5-15. Fujis increased by six pies to Rs. 6.

In the cotton yarn section, ten counts elicited special attention of traders. Podars picked up As. 8 to Rs. 15-8. Moderns advanced by As. 4 to Rs. 15-8. Among 20s, Hinds and Moderns rose by As. 2 each, the former to Rs. 19-6 and the latter to Rs. 19-8. Deals in forty counts were put through at higher rates. Moderns moving up by As. 4 to Rs. 29-4 and Gokaks by As. 2 to Rs. 27-12. Among 60s, Finlays were on special request and rallied Re. 1-8 to Rs. 59-8. Moderns were also well supported and hardened by Re. 1-4 to Rs. 61-4. Raghuvamshis were firm at Rs. 57. Eighty counts Moderns rose by As. 8 to Rs. 73. Thirty counts Maduras were fully maintained at the last week's level of Rs 24-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	21-11-1956	13-11-1956	7-11-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)-

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, 21st *November*

Seeds traders have anxiously awaited the proceedings of the Export Advisory Council which met last week at New Delhi. But it is to be feared that no definite indication was available from the deliberations of that body so far as the future of the export policy in relation to oilseeds and oils is concerned. Mr. D. P. Karmarkar, Union Minister for Trade, said that oils and oilseeds were a very "hopeful" source for increasing our foreign exchange earnings. This was because the world demand for these commodities was increasing. But, unfortunately, because of the increase in home demand, he said, India had not been able to export as much as it could. The internal prices were tending to rise and India's earnings from this item during the current year had fallen short of expectations and lagged very much behind the figures for 1955. He added: "It should, however, not be difficult to step up the production of oilseeds in the long run and to tighten the belt in the short run so as to make it possible for this sector of our economy to make its rightful contribution of our foreign exchange resources."

Mr. Morarji Desai, Union Minister for Commerce and Heavy Industries, replying to the discussions, referred to the plea for increasing the export quota of groundnut oil and oilcakes. Mr. Desai said that this required careful consideration. In the matter of oilcakes, it was a commodity which was required within the country and, therefore, Government had to fix the export quota without affecting internal requirements. The question of fixing an export quota for oil was also a difficult problem. It was an article of consumption by the poorer people who derived more nutrition from oil than from any other commodity. If the price of oil went up, it would disturb the internal trade of the country. Therefore, the Government could not take a risk but had to proceed cautiously with regard to fixation of export quota in regard to oil.

A notable feature of the seeds market during the week under review was the spurt in prices in the earlier part of the week, under the leadership of castorseed. Initial firmness was attributed to reduced arrivals in certain upcountry centres due to rains in or near the producing areas and, so far as castorseed was concerned, to encouraging foreign advices and reported increase in castor oil prices. Traders also expected that the Government would adopt a bold policy in relation to exports of seeds. These expectations did not materialise. On the contrary, Mr. Morarji Desai's observations at the Export Advisory Council showed that the Government would be cautious in permitting exports of oils and seeds. This served as a damper to traders' enthusiasm. Further, advices from certain interior centres, particularly from Madras, indicated that whether had improved and that arrivals had increased. The initial rise in prices was, therefore, not maintained. Nevertheless, the price levels at the end of the week under review were generally higher than those which prevailed last week.

In the groundnut section, groundnut, February delivery, commenced the week at Rs. 144-4 and rose on good support from speculative interests and crushers to touch a high of Rs. 149-10 on the 16th inst. Thereafter, it gradually lost ground and was quoted as low as Rs. 143-10 on 20th inst. The contract, however, moved up to Rs. 144-10 today, thereby showing a net gain of Rs. 2-12 over the week. Groundnut, Khandesh quality, was quoted at Rs. 33-4, as against Rs. 32-8, last week, and December-January Rs. 30-8, as compared with Rs. 28-4 a week ago. Groundnut oil was steady in the neighbourhood of Rs. 18-14.

Castorseed, May delivery, came in for good support both in the beginning of the week and at its close. Opening the week at Rs. 159-4, as against the last week's close of Rs. 151-12, it spurted to Rs. 162-8 and still further to Rs. 165 on 17th inst. It would appear that overseas enquiries were not encouraging at high prices. The result was a decline in the local market. Castorseed, May, declined to touch a low of Rs. 155 on 20th inst. Today, however, the market again gathered strength and the contract moved up to Rs. 164-8, thereby gaining Rs. 12-12 over last week's quotation. Castorseed, Madras, had buyers at Rs. 34-6 as compared with Rs. 32 last week. Castor oil commercial improved from Rs. 18-12 to Rs. 20-10 and B.S.S. from Rs. 19-10 to Rs. 21-10.

Some export business has been done with Australia in linseed. May delivery opened the week at Rs. 29-11 and moved up to Rs. 29-13. But the rise was not sustained in the following days so that it gradually declined to Rs. 28-6 yesterday and still further to Rs. 28-3 today at which level it was As. 5 above the closing price last week. Linseed Bold ready was done at Rs. 33-8. The distant positions lacked support and February-March was quoted at Rs. 29-10. Linseed oil improved by As. 12 over the week to Rs. 17-12.

Among other seeds, Cottonseed, February delivery was quoted at Rs. 85, kardiseed Bold at Rs. 20 and nigerseed at Rs. 27-8, as against Rs. 85-12, Rs. 18-4 and Rs. 27 last week.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	21-11-1956	14-11-1956	7-11-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 21st *November*

Sugar prices were well maintained during the week under review too. Demand from consuming centres, especially from upcountry markets, was very encouraging. There were, besides, reports of a rise of Re. 1-8 per bag in the ex-mill quotations for North Indian as well as Bombay-Deccan sugar. In fact, prices of sugar would have registered a marked rise but for the continued large arrivals of indigenous sugar into the market; they aggregated 23,100 bags, as against 18,600 bags and 17,700 bags a week and a fortnight before, respectively.

Magsar delivery contract for "C" grade sugar advanced from Rs. 89-2 to Rs. 89-14 per bag. Today, however, it was slightly lower at Rs. 89-11.

In the spot section, British refined sugar firmed up by a rupee to Rs. 91 per 2 cwts., thanks to paucity of stocks. Spot indigenous small grain sugar was fully steady at Rs. 89 per bag, as also medium grain at Rs. 90-Rs. 92 and large grain at Rs. 94-Rs. 101.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 21st *November*

In the earlier part of the week under review, Malabar black pepper ruled quiet with prices fractionally lower under fear of expansion of new arrivals. Inflow of new crop which showed improvement in quality continued to increase but not to the usual expectations during this time of the season. Prices of pepper, being low, growers were more disposed to wait till the proper development of "stone" instead of marketing light unmatured berries at throwaway prices. Most of the arrivals of the matured new pepper were taken up at round about the parity of Rs. 600-625. This has naturally affected the level of old pepper for which it is difficult to find buyers at Rs. 650 at Alleppey. In the later part of the week, however, market steadied up to some extent, particularly on the news of the long awaited dock strike in New York and in sympathy with castorseeds. The longshoremen strike, however, failed to lift up the prices for spot pepper in New York. Spot, after touching $0.28½, is now being quoted at $0.29¼. But the demand from grinders failed to pick up as they seemed to have temporarily covered. Stocks with the New York dealers are also reported to be adequate to hold through the strike period.

Singapore is reported steady to quiet with small business passing in spite of speculators trying to manipulate in anticipation of renewed demand from Europe in the near future. Djakarta is also quiet but steady owing to poor demand. Lampong, on the whole, seems to have lost its position in the world market as most of the big European firms which were formerly operating are now taking very small interest.

Alleppey hovered round about Rs. 650 for the old crop while garbled at Cochin changed hands from Rs. 110 to Rs. 112½.

New York after taking up some parcels per named steamer at $0.27 continued to haggle for low prices. It is reported some parcels were sold at $0.26¾.

In ASTA section November to March is nominally quoted at $0.26½. Some short covering in December was done at $0.26¼. In the delivery section, the market ruled quiet with prices fluctuating on news of pressure of new arrivals at Alleppey.

Suez has now become a dragging affair and hence the pepper market, which was once fluctuating on the news from the Middle East, is now moving on its own merits.

Today's nominal quotations are—Ready delivery Rs. 94 per Bengal maund; December delivery Rs. 610-15 per candy of 5½ cwts., and February delivery Rs. 616-12 per candy of 5½ cwts.

MEDIUM TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 16th *November*

Approximately 1.5 million lbs. were offered in Sale No. 30 and met a strong general demand, particularly for medium and good medium types which were irregularly As. 4 dearer. Although there were a few invoices with good quality on offer, the assortment in general showed a slight decline in quality compared with the previous sale, and buyers were discriminating in their purchases. In consequence, highgrowns were As. 3 to As. 4 easier and sometimes more. Medium and good medium brokens met a very strong demand from exporters and any teas of this type were fully As. 4 dearer. Whole leaf grades continued to be well supported and sold at around last rates. The following are the quotations:—

	1956 Rs.	a.	p.
Plain B.P.	1	12	0

London Market: *Sale of 12th November* 1956.—*About steady.*

Sale of 13th November 1956.—4-D. dearer.

Colombo Market: *Sale* of 12th November 1956.—Irregular advance ten to thirty cents all liquoring teas. Others unchanged.

Sale of 13th November 1956.—Highgrowns opened firm closed 20 to 30 cents lower. All liquoring fannings 20 cents lower. Medium brokens firm lowgrown 5 to 10 cents dearer, including gulf types.

Calcutta Market: *Export.*—Except thin liquoring orthodox Assam broken pekoes and some B.Ps. strong general demand. Prices irregularly dearer.

Internal.—20,000 dust. Good general demand started easier closed As. 1 to As. 2 dearer. Leaf 1,600. Irregularly As. 2 to As. 4 dearer.

Export quota.—There has been increased activity in the quota market and business has been effected at 35 pies and there are still buyers available at this price.

Forthcoming auctions.—Sale No. 31 will be held on Tuesday, 27th November and Dust Sale "W" on 20th November.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wires:

"*Dust Sale W*:—650,000 lbs. Strong general demand. Prices irregularly one onna higher."

BUOYANCY IN JUTE MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 20th *November*

The Prime Minister's warning in his foreign affairs statement to Parliament on Friday last that the danger of a world war was as great as before the cease-fire in Egypt led to fully buoyant conditions in the jute markets. Prices advanced most impressively, and with the additions made during this week there was the apprehension that the Indian goods might reach levels as to price them out of world markets. However, the threat of a war is a great provocation to the speculator who during the week made every attempt to increase his stocks. Moderate genuine business was also put through, and the report of a higher consumption figure for burlap in the United States during the month of October was another powerful factor which imparted strength and sentiment to the market. The need to divert jute supplies from the Chittagong and Chalna ports via the Cape route, the longer time new fibre shipments would take, and the increase in the landed cost of fibre supplies in the importing countries—all British Conference lines plying their ships between British ports and the Far East have increased the freight rate by 15 per cent.—would cause some dislocation to production in Dundee and other mills in other countries dependent on the Pakistani raw material. Cost of production would naturally move up. These factors also contributed to push up prices for the Calcutta-produced goods, and it can be said that the advancing trend would bring in fresh dividends to the stockists and the industry. So long as the Suez Canal remains blocked and Dundee mills pay increased freight on raw jute imports, Calcutta goods are likely to maintain the higher trend.

During the week under review, one more producing unit declared a lockout following labour trouble. This was the Budge Budge Mills. The lockout in the four units in Shamnagar continued. Since the latter group remained locked-out for the better part of October, the market and the trade were not surprised in the announcement, according to which in the month of October production was only 80,400 tons, as against 84,500 tons in the previous month.

In hessian, as well as sacking goods, there was keen buying for export also. The United States showed added interest in hessian; presumably that country is contemplating building up stocks in view of the uncertain future. Ready B. twills opened the week at Rs. 119-12, at which rate there was heavy speculative buying, following reports of increased tension among the big powers on account of the Middle East crisis, deepened by the Anglo-French-Israeli reluctance to accept that part of the U.N. resolution calling for the immediate withdrawal of all foreign troops from Egypt. Ready hessian 40″×10 oz. was fully steady at Rs. 45-4. On Tuesday, prices eased as on account of the closure of the Futka market on that day, there was no speculative support. This resulted in fractional recession in prices, B. twills being quoted at Rs. 119-4 and 40″×10 oz. hessian at Rs. 45. On Wednesday, speculators indulged in profit-taking to depress the rates for the above two representative constructions to Rs. 118-10 and Rs. 44-12, respectively. Early on Thursday, prices improved following speculative manipulations, but fell towards the close, ready B. twills finishing at Rs. 118-9 and ready 40″×10 oz. hessian at Rs. 44-15. On Friday and Saturday the market reached a stage of extreme buoyancy for reasons already discussed. By the week-end, B. twills had reached a high of Rs. 121-4 and 40″×10 oz. hessian Rs. 46-4. Forward rates also moved on the heels of ready goods, but neither of the constructions carried a premium. For the demand was more for ready goods and, in view of the uncertain future, there were not many in the market who were prepared to brave entering into forward commitments. Although conditions were steady yesterday, prices slightly slided down. B. twills were thus priced at Rs. 120-8, ready 40″×10 oz. hessian at Rs. 46-3, and the eight oz. hessian at Rs. 37-4. Mills were eager to sell.

Additions to prices were also recorded in the different raw jute constructions. However, in view of the satisfactory stock position, mills preferred to give only restricted support. Sellers who were closely watching the upward movement in jute goods were reserved and anticipated more support from mills. Upper Assam bottoms were lifted to Rs. 32 from Rs. 31, and local daisee bottoms to Rs. 32-8 from Rs. 31-8.

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 20th *November*

Strong demand was again in evidence during the export sale held yesterday. British buyers were very active, and a further rise in prices was reported. Trade reports from London that since the diversion of ships via the Cape route stock in British warehouses had fallen by 20 million lbs. were noted and contributed to the local strength.

Local trade circles may not differ from Mr. Harmar Nicholls, Joint Parliamentary Secretary to the British Board of Trade, with his view that there would be no shortage of tea in Britain; but the need to replenish stocks and the report that descriptions of all sorts catalogued during the tea auctions held in London during last Wednesday were sold at higher rates were adequate pointers hinting at the possibility of shortfalls which might prove only temporary. For tea afloat as on 2nd November was stated to be 65.5 million lbs., as against 40 million lbs. at the same time last year.

A further rise in prices is foreseen. The crop regulation scheme comes into effect as from today and between now and 30th November plucking in the gardens situated in North-East India would stop. Teas unfit for sale in Calcutta auctions would also be destroyed. The latter work has already begun. Consuming countries would probably attempt to increase stocks in view of the uncertain international political situation. However, as to how to obtain as much shipping space as would be needed would be a problem, in view of the longer time loads would take to reach destinations. Exports have during recent months registered increases over those of 1955. There is also the fear that supplies to the Middle East countries would be affected considerably if tension around the Suez Canal area continued.

The Commerce Minister's encouraging reference to greater prospects for tea exports in his speech to the Export Advisory Council on Sunday last was naturally noted with satisfaction, as the tea trade also shares in his optimism. Exports during the nine months to September were as high as 356 million lbs., as against 260 million lbs. in the corresponding period last year. Tea is now being exported in greater quantities not only to the traditional customer-countries of India but also to the U.S.S.R. and other communist countries. The present goodwill mission of the Chairman of the Tea Board to the United States will, it is expected, yield good results. The interesting suggestion by Mr. Singhania, President of the Federation of Indian Chambers of Commerce and Industry, that Calcutta and Cochin should be converted into international marketing centres for tea, was noted; the Government's policy is to auction as much tea as possible within the country itself. But, at the same time, direct exports to the Mincing Lane auctions are also permitted (this year's ceiling is 160 million lbs.) inasmuch as tea from all producing countries compete and participate in the London auctions. Any absence of Indian tea at the British auctions will, it is felt, affect Indian tea considerably.

As stated, fully steady conditions were in evidence during the export sale held yesterday. The strong demand resulted in excited bidding. Offerings aggregated 58,400 packages. Fannings and the poorest sorts improved by As. 2 to As. 4 and all other teas excepting the best C.T.Cs and the better liquoring medium Assam B.O.Ps which remained firm, gained by an anna to As. 3. Darjeelings and whole leaf grades fully reflected the general conditions. The quotations were: best C.T.C. Assam B.P. Rs. 3-2, medium Assam B.P. Rs. 2-6 to Rs. 2-7, clean black pekoe Rs. 2-6, and plain B.P. Rs. 2-2 to Rs. 2-3.

There was a further rise in the price for export quota rights. While sellers demanded 39 pies, buyers offered 37 pies.

Dusts offered during last week's sales for domestic consumption amounted to 21,231 packages, and leaf grades 1,460 packages. There was a visible improvement in demand as the sale progressed, and this not only reversed the easier trend noted at the opening of the sale but led to a fair rise in prices. The keenest attention of buyers was devoted to poor residue teas, prices of which were forced up by As. 4 to As. 6. Poor fibrous C.T.Cs improved by As. 2 to As. 4 and the better C.T.Cs by an anna to As. 2, while the high-priced lots eased by As. 2. Medium Dooars and commons rose by an anna to As. 2. The quotations were: best Assam C.T.C. Rs. 2-11 to Rs. 2-12, medium Assam C.T.C. Rs. 2-8 to Rs. 2-9, Assam grainy dust Rs. 2 to Rs. 2-1, and medium Dooars Rs. 2.

The green teas among the leaf grades declined by As. 2 to As. 4, while the remainder was in good demand and rose by As. 2 to As. 4.

METALS RULE FIRM

(From Our Own Correspondent)

CALCUTTA, 20th *November*

Prices of base metals ruled firm during the week under review, although there was no anxiety on the part of consumers to rush to the market. Manufacturers of metal products took a serious view of the closing of the Suez Canal, and of the strengthening of the East-West cold war following the Anglo-French-Israeli disinclination to withdraw their forces from Egypt. One immediate development of the closure of the Canal has been the announcement by British Shipping Conference Lines of an increase in freight rates by 15 per cent. in respect of cargo from the Far East to British Ports and *vice-versa*. Although the blocking of the Canal does not affect copper shipments to this country, the strength of this metal on the London Metal Exchange and the apprehension of a possible dislocation of supplies in the event of the present tension among the big powers reaching a climax pushed the local quotation for electrolytic copper from Rs. 205 to Rs. 207. The rate, however, gave way subsequently to Rs. 202 on reports that a fair quantity was afloat now and would be reaching the country's ports in the near future. Tin staged an early rise to Rs. 538, but soon receded to Rs. 536. Importers were reluctant to enter into commitments as the prevailing price was below replacement costs. From Rs. 83, lead recorded a fractional recession to Rs. 82-8. The satisfactory supply position resulted in little activity. Electrolytic zinc closed at Rs. 68-4, as against the opening rate of Rs. 69.

FOODGRAINS RISE FURTHER

(From Our Own Correspondent)

HAPUR, 19th *November*

The recent upward trend in foodgrain prices was maintained during the week under review also. Wheat average quality was quoted at Rs. 15-12 and farm quality at Rs. 17 per maund. Arrivals from producing centres during the week were meagre, the daily average being 50 maunds. Outside buying enquiry was mainly on behalf of the millers from Bihar. The week's offtake aggregated 4 *khaties* and local wheat stock was put at 65 *khaties*.

The Government fair price shops for wheat here and in rural areas have gone a long way towards checking the rise in wheat prices and demand on such shops is daily increasing in rural areas. Sowings of the *rabi* crop except in areas which are still water-logged is nearing completion and harvesting of late paddy crops is finished.

Rice, however, ruled quiet at unchanged price levels, due to pressure of arrivals of new crops into the market.

Gram hardened, following good offtake aggregating 6 *khaties*. It was quoted at Rs. 13 per maund for local quality and at Rs. 13-6 for Punjab produce, with local stock put at 104 *khaties*. Barley and *bejhar* ruled quiet, due to a fall in the demand for seeds, while other coarse grains ruled steady. The week-end prices as on Monday were: Barley Rs. 13-8; *bejhar* Rs. 13; maize Rs. 12-14; *bajra* Rs. 13-10; *jowar* Rs. 13; and *guwar* Rs. 10 per maund.

GOOD DEMAND FOR SUGAR

(From Our Own Correspondent)

HAPUR, 19th *November*

Despite the release of a further quantity of 1.60 lakh tons of sugar for free sale, sugar prices hardened during the week, thanks to increased demand from all consuming centres in the country. The undertone of the market, however, was subdued, due to good stocks of old quality sugar—put at 5.42 lakh tons—and expectation of increased overall production this season due to early crushing by factories in U.P.

The latest mill delivery prices of sugar as on Monday were: Jaswant Rs. 28-2; Simbhauli Rs. 28-6; Mawana Rs. 27-4 to Rs. 28-8; Daurala Rs. 28 to Rs. 29; Amroha Rs. 27-8; Bijnore Rs. 27-8; Mansoorpur Rs. 27-10 to Rs. 29; Rampur Rs. 31-8; retail Rs. 30-4 per maund.

The *khandsari* market ruled quietly steady. Demand was poor. Inferior grade was quoted at Rs. 20 to Rs. 22 per maund and superior grade between Rs. 24 and Rs. 26 per maund.

Owing to increasing arrivals in almost all the producing centres and poor outside support at higher prices, ready new *gur* eased slightly towards the week-end, and was now quoted at Rs. 13 to Rs. 14-8 per maund. Arrivals were at an average of 5,000 maunds daily and most of the offtake was to the consuming areas of Greater Bombay. New *gur* stock was lower at about 5,000 maunds, the prevailing price of that quality being Rs. 10-8 per maund.

Gur fagun delivery opened at Rs. 10-8-3 on Monday last and touched the highest during midsession at Rs. 11 on bull support, but declined to Rs. 10-11-1¼ at the close on Saturday.

STOCK & SHARE QUOTATIONS

Abbreviations :—D. = Deferred shares. P.O. = Preferred Ordinary shares. Y = Accounts published yearly. H. = Accounts published half-yearly. C. = Company has Preference shares. T. = Company has Debentures. N. = Nominal quotations. x.d. = Ex. Dividend. c.d. = Cum. Dividend. i = Interim Dividend. *f* = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves *include general and other* reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

The Company has option to redeem a debenture at 103 per cent. on 1st May 1963, on six months' notice. ‡‡ Option to repay at par on 6 months' notice, on or after 1st January 1961.

MARKET GOSSIP

(*Concluded from page 975*)

would constitute a subsidy. For instance, will liberal export credits constitute a subsidy? Or, will differential currency rates or facilities for retention of whole or a part of the foreign exchange earned by an exporter for his own use be regarded as subsidy? From the limited information on the scope of the Bill, it is difficult to determine whether such practices will come within the meaning of "subsidy."

So far as this country is concerned, these interpretations of the term "subsidy" will not affect its exports to the U.K. for the simple reason that India does not adopt differential currency rates, or give special currency inducements to exporters, much less outright subsidy. But certain textile interests in that country have represented to the British Government that the fact that Indian mills are enabled to buy their domestic cotton at prices below the world levels through controls on price and exports constitutes an element of "subsidy." The question is whether, on such an interpretation of the word, any restrictions are likely to be placed on India's textile exports to Britain. This is a very ticklish point, for Britain too is following similar practices in regard to some of its manufactured goods. It is not surprising, therefore, that Press reports from London aver that the Bill will not affect exports of cloth by India or Hong Kong to Britain. It would appear that the Minister of State to the Board of Trade, Mr. A. R. W. Low, has made it clear that the Bill was not intended to tackle "legitimate low cost trade." Indian exports of low-priced cloth, the Minister stated recently in Parliament, came under this heading of legitimate trading. He is also reported to have said that the anti-dumping measures envisaged in the Bill would not apply to Indian export controls which enabled the Indian textile industry to get its raw material at low cost. Indeed, this is the correct view of the textile situation in India, for it is certainly open to a country to conserve the raw material for the benefit of its domestic industry. Any slight advantage to manufacturers that may flow from this policy can by no means be regarded as a measure of subsidy.

WORLD BANK LOAN TO NICARAGUA

The World Bank has granted a loan of $1.6 million to the Empresa Nacional de Luz y Fuerza of Managua in Nicaragua, an autonomous Government corporation supplying power to the Managua area. The loan, which is guaranteed by the Republic of Nicaragua, is for a term of 15 years and carries interest at 4¾ per cent. per annum, including the one per cent. commission charged by the Bank. Amortisation of the loan will begin on 1st October 1959.

The loan will supplement the one of $7.1 million granted in July 1955 to finance the foreign exchange costs of constructing a 30,000 Kw. thermal power plant and expansion of the distribution system in Managua. The latest loan is for the purpose of providing additional foreign exchange needed for the power project. The Grace National Bank of New York is participating in the loan, without the World Bank's guarantee, to the extent of $101,000, representing the first two maturities falling due in October 1959 and April 1960.

The total amount of loans granted by the World Bank so far to various projects in Nicaragua is $23 million.

Personal income in the United States in September was at an annual rate of $328,500 million, an increase of $17,500 million over the annual rate in September of last year, according to the U.S. Department of Commerce. Personal income represents the total of wages and salaries, as well as net income of farm and non-farm proprietorships, dividends and interest, and rents received by landlords. It also includes a variety of other types of individual income. For the first nine months of this year, the annual rate of personal income is estimated at $322,500 million, or about six per cent. more than in the first nine months of last year.

Notice

THE INDIAN CABLE COMPANY LIMITED

THE DIRECTORS HAVE DECIDED TO recommend at the forthcoming General Meeting of the Shareholders to be held on the 21st December 1956, Dividends for the year to 31st March 1956, as follows:—

(a) Dividend on Cumulative Participating Preference Shares at 12½ per cent. free of Income-tax.

(b) Cash Bonus on Cumulative Participating Preference Shares at 2½ per cent. free of Income-tax.

(c) Dividend on Ordinary Shares at 12½ per cent. free of Income-tax.

(d) Cash Bonus on Ordinary Shares at 2½ per cent. free of Income-tax.

By Order of the Board,
B. J. WOODLEY,
Managing Director.

CALCUTTA, 13*th November* 1956.

VOL. XCIII. No. 2387 BOMBAY, 1st DECEMBER 1956 PRICE Rs. 1/8

DEMAND FOR WAGE INCREASE UNTIMELY

THERE has been a marked revival of widespread labour unrest in India for some months now. This unrest has not been confined to any particular section of working class but has been noticeable in almost all ranks, from such responsible and well-paid skilled workers as officers on board ships and assistant harbour masters to low-paid unskilled workers in a factory or a municipality. Not a day passes without workers' demonstration in some centre or other in the country. At present, workers in Government departments and public utilities are more restive than in other sources of employment. The proposed all-India strike of dock workers has just been deferred. The employees of the Life Insurance Corporation have decided to stage a token strike next week. Employees of some State Governments have been silenced for the present by the grant of a small rise in their pay. A few months ago, a similar gesture was made by the Central Government to satisfy the demands of its low-income employees. Many an employer in the non-State sector, too, is being faced with constant demands for more wages and amenities.

It is significant that most of these demands came to be voiced only after price levels began to rise towards the close of 1955 or early this year; and they have gathered momentum in consonance with the rise in the cost of living and the consequent fall in the purchasing power of the rupee. The basic cause for the feeling of discontentment among the working class, including the vast majority of middle class, therefore, is the failure of Government to hold the price line at a reasonable level. This failure, in turn, is due (1) to the adoption of unrealistic economic policies, especially since 1952, which has prevented production of essential consumer goods from keeping pace with the increase in demand, and (2) to inefficiency on the part of the Food Ministry in keeping the country's larder well stocked at opportune moments, so that there may always be sufficient stocks of foodgrains to cope with the rising demand and the vagaries of the monsoon.

While there is thus some cause for discontentment among the working class in general, there is scarcely any justification for demanding a general, blanket increase of 25 per cent. in the wages of all workers, as is being done by the leaders of the Indian National Trade Union Congress, popularly known as the I.N.T.U.C. This demand was first voiced in May last. Since then, the leaders have been assiduously preparing the workers to expect that such an increase is justly due to them. Having done this, they have set their machinery in motion to secure their demand. They have called upon the affiliated unions throughout the country to ask for a general rise in wages and to serve notices on employers to that effect. Indeed, notices have already been served on the Ahmedabad Millowners' Association and other employers are about to receive similar notices. The Government has been discretely silent on this demand coming from the labour wing of the Party in power. It is not known whether the Cabinet ever discussed this demand and, if so, what decisions were taken. There are, however, reports that, while the Finance Minister is strongly opposed to it on the ground that it will accentuate the inflationary pressure, the Labour Minister is in sympathy with it. These reports have been neither confirmed nor denied. In an article to the Press on Independence Day, the Labour Minister, Mr. Khandubhai Desai, a prominent leader of the I.N.T.U.C. till he joined the Union Cabinet, remarked that "the demand for a wage increase appears to be justifiable," though he qualified this statement by saying that "we have to proceed in a rational manner."

Till this week, the employers, too, did not say much on this demand. It was only on Tuesday this week that the President of the Employers' Federation of India, Mr. Homi Mody, came out with a rejoinder, apparently because the I.N.T.U.C. leader has given enough evidence that he means business. In a statement to the Press, Mr. Mody described the I.N.T.U.C.'s demand as "irresponsible" and the reasons adduced in its favour as "unconvincing." To charge the I.N.T.U.C. with irresponsibility may sound a little harsh, but, if a polished speaker and highly responsible leader of employers like Mr. Mody were to use such a strong and unpalatable expression, it must be based on sound conviction. Although Mr. Mody has not given any statistical data either to disprove the contentions of the I.N.T.U.C. President, Mr. S. R. Vasavada, or to support his claims, he has said enough in his brief statement to bring out the inappropriateness of the demand for a wholesale increase in wages by one-fourth. Apart from any economic reasons—there are many of them—the demand is improper on two good procedural grounds. First, Mr. Vasavada himself has been pressing for the appointment of wage boards. It is not fair on his part to insist on a 25 per cent. straight increase in wages even before the formation of these boards. It is for the wage boards to determine the level of wages. Secondly, as Mr. Mody observed, the whole question of wages is at present being studied by the Joint Consultative Board of Industry and Labour, in which the I.N.T.U.C. is adequately represented. The Union Ministry of Labour also is already busy with the appointment of wage boards for all the important industries and the collection of data relating to the wage structure in the different industries, the rate of production and the ratio of profit to the level of wages. Workers should wait till these studies are completed and the wage boards give their verdict. Meanwhile, the vast majority of them suffer little inconvenience, as the increase in their cost of living is neutralised by a rise in their dearness allowance, so that their real income remains unaffected.

If there is any section of Indian society which has received a considerable amount of benefit in recent years it is the workers in factories and plantations, numbering no more than 4 million approximately, or a little less than 1 per cent. of India's total population. The contention of some labour spokesmen that the real wages of workers today are less than even the pre-war levels is not correct. On the contrary, the index of real earnings even in 1954, the latest year for which figures are available, was 2.7 per cent. higher than in 1939. This small increase masks the substantial improvement which has been obtained by workers in such major industries as textiles, iron and steel, cement and engineering. During the decade ended 1954, whereas the index of real earnings rose in geometrical proportion at an average rate of 3.9 per cent. per annum, the rise in the index of productivity was of the order of 2.7 per cent. only. During the 15 years, 1939 to 1954, the average rate of increase (geometric) in the index of real earnings was of the order of 0.4 per cent., while that of productivity was still less at 0.2 per cent. It is thus clear that the rate of growth in real earnings was on the whole higher than that in productivity. This statistical information, compiled by the Union Ministry of Labour, all along presided over only by acknowledged labour leaders, disproves the contention of those who claim to speak for labour that the increase in wages has not kept pace with the rise in productivity. A pertinent point that needs to be stressed here is that improvement in productivity is not the sole result of exertion by labour. On the contrary, it will be true to say that it was due mainly to intensive utilisation of existing equipment and/or introduction of new machinery, not to speak of new techniques. Perhaps, the increase in productivity per worker would have been more but for the high ratio of manpower employed per machine as compared with other advanced countries in the world.

Other available data also confirm the view that the factory worker in India has been having quite a fair deal. The Union Minister for Labour, Mr. Khandubhai Desai, himself admitted in Parliament, during its last summer session, that real wages of industrial workers in India had gone up by 20 per cent. in the last five years. This increase is higher than the 18 per cent. rise (Planning Commission's estimate) in the *per capita* national income during the five years of the first Plan. Again, it is practically the same as the increase in industrial production. According to the second Five-year Plan, the revised index, with 1951 as the base, shows for 1955 a level of industrial production about 22 per cent. higher than in 1951. Another point that requires to be borne in mind while judging the demand for a general increase in wages is that the incomes of industrial workers are already very much more than the general standard of national income. As against a *per capita* national income of Rs. 269 per annum (Central Statistical Organisation's estimate for 1954-55), the average annual incomes of factory workers for 1954 in some of the States were as follows. For purposes of comparison, the 1947 and 1939 figures also are given alongside:

	(*In rupees*) 1954	1947	1939
Assam	1,231	755	264
Bihar	1,450	820	415
Bombay	1,273	978	370
Punjab	1,048	628	296
Orissa	895	493	162
Uttar Pradesh	997	673	235
West Bengal	1,057	568	248
Madras	822	560	176

It will be observed from the foregoing table that, even in the relatively less developed regions of India such as Orissa, Madras and Assam,

the average annual income of factory workers is three to four times the *per capita* national income. It is also true to say that an industrial worker gets many times the earnings of agricultural labour. Further, he has secured a number of benefits such as provident fund, sickness insurance, retrenchment and lay-off compensation, leave with pay and better working conditions under the Factories Act. Besides these, a number of fringe benefits have also been accorded to factory workers under the awards given by the Tribunals. Several progressive employers—the T.I.S.Co., the A.C.C. and the Indian Aluminium Company, to mention only three instances—have, on their own initiative, taken special steps to secure for their workers as high an income as is consistent with productivity. Many other employers also are beginning to realise the value of such voluntary understanding with their workers. The growth of this healthy trend—healthy for all, that is, the employer, the employee, the State and the consumer—will be checked by the demand now being made by the leaders of the I.N.T.U.C.

It is not suggested here that factory workers are entitled to no further increase in wages. Nor is that the view of employers. In his statement to the Press, Mr. Homi Mody concedes, very rightly of course, that, "as productivity increases, profits rise, and the general standard of living goes up, workers have a right to claim a fair share in the fruits of their labour." What is objected to is the demand for an increase in wages unrelated to economic and other considerations. Surely, the present is by no means the opportune time for effecting a general upward revision of wages. Price levels are already high and supply of even essentials of life is limited. In such a situation, more purchasing power in the hands of workers, the majority of whom are not accustomed to save and invest in fruitful channels, will only aggravate the upward trend in prices and raise the cost of development projects included in the second Plan. Those who lead the I.N.T.U.C. are undoubtedly able men. On a dispassionate consideration of the pros and cons of the issue, they will, we hope, recognise the force of the aforesaid arguments. They should not, as responsible leaders, put forward uneconomic demands, even if it be for political considerations. And it will be most unfair, if they try to enforce their demand by unilateral action. They will, therefore, be well advised to heed the suggestion of Mr. Mody, namely, to sit down at a conference table with the representatives of employers and adjust their differences in a spirit of genuine understanding and respect for each other's rights and obligations. It is to be hoped that, in any such talks, both the sides will not overlook the legitimate interests of consumers.

ECONOMIC INCENTIVES

ALTHOUGH well-intentioned politicians and impatient administrators often frown upon economic incentives as an unworthy source of inspiration for economic activity, there is no getting away from the fact that there is no acceptable alternative to such incentives. The well-known "carrot-and-stick" analogy still sums up the problem in a most effective manner. If it is not permissible to use the profit-motive, represented by the carrot, in order to move the economic donkey forward, the alternative is to use the stick as, in fact, is being done in the totalitarian countries today. But no one can pretend that the stick is an acceptable weapon. At any rate, no one will suggest that it is a democratic instrument. Nor is the absence of "democratic" element the only defect in the "stick" method. Actually, as certain recent events in some parts of Eastern Europe have shown, the stick is apt to break and cause irremediable damage to national economy.

Apart from the human and other arguments that could be urged against the use of the stick, the one important consideration which should counsel patience in its advocates is that it is not even tolerably efficient as an instrument. If the stick thus stands discredited even as an instrument for economic progress, it is perhaps best that this country should think more in terms of the "carrot" than in those of the stick. For one thing, the "carrot" theory has greater historical evidence of success to back it. The countries which tried it in the past and continue to stick to it today have been able to make more real progress—and make it with less tears—than those which have wielded the stick. Secondly, the "carrot" is more in tune with India's traditions and its present democratic institutions. This aspect was admirably emphasised by Mr. E. D. Sheppard, Chairman of Killick Industries Ltd., in the course of his speech at the annual meeting of the Company, held this week, in Bombay. Mr. Sheppard said: "We in India have rejected the stick theory and the concept of the authoritarian State as being alien to the traditional Indian way of life. Can we not, therefore, accept as a nation the logical corollary of introducing the carrot in its stead?" He wondered how the very men who would resist to the utmost limitations on their social *and political* rights are those who "accept without demur controls over such matters as production, profits, wages and prices and feel that it is perfectly reasonable for Government to regulate them." He rightly felt that this "inconsistency" would lead to a frustration of the national economy.

The "inconsistency" to which Mr. Sheppard referred—the ardour for political liberty coexisting with a certain indifference, if not antagonism, to economic freedom—can be traced to an erroneous impression that no economic *freedom is necessary for political liberty* and that the former leads to undesirable concentration of power and exploitation of the people for the benefit of a few. It is the task of free enterprise in this country to show how deplorably wrong such a view is, and also to demonstrate that it can and does play a more beneficent role than its detractors allow it credit for. This task is by no means easy, for in this

country, where all energy had so long been concentrated on winning political freedom, the importance of economic freedom has never received the recognition it deserves. Further, by being constantly described as a "private sector," free enterprise has become associated in the minds of the public as the private affair of a few individuals. It is best that free enterprise wages its war against this terminological tyranny. Appropriately enough, Mr. Sheppard was at some pains to show that there was nothing "private" about the private sector. He said:

> "'Private sector' is a term which is at variance with the system which it purports to describe. There is nothing private about the finances and accounts of the major industrial units existing within the so-called private sector. These units of free enterprise are as public as they can be. They are subjected to continuous and close audit, and are available for scrutiny to a wide range of people. The goods which these industries produce and the products which they market are sold only because there is public requirement for them and at a price which this public is prepared to pay. Shareholders of these so-called private sector units, in fact, represent a wide cross section of public society. The recent passage of the new Companies Act into law has stripped the last vestige of even legitimate privacy from these joint-stock companies. Furthermore, the tendency to associate the private sector with the relatively few major corporate industries is itself quite wrong. The truth of the matter is that the so-called private sector consists of all business activity and commercial endeavour except those few units which are operated and owned by the State. The vast range of these business and commercial interests varies from the largest industrial concerns, on the one hand, to the small shopkeepers carrying out their day-to-day trade in the bazaar, on the other, and it is all these who are denoted by the misused term 'private sector.'"

Indeed, the "private sector," as Mr. Sheppard pointed out, is best described as the "people's sector"—despite the risk this phrase runs through its assonance with "people's democracies"—while the public sector is best known as the "State sector." Further, the phrase "people's sector" would more appropriately describe the real function of the units in this sector and also demonstrate how thin is the difference between those units and the so called "co-operative units." For, as Mr. Sheppard pointed out, a joint-stock company, a distinguished variety of organisation in the people's sector, is nothing but a co-operative society in the fullest sense of the term. He argued—and very rightly too—that its "capital is created by co-operative faith in its venture, its direction is provided by those who reflect in their persons co-operative choice, its factories are worked by co-operative endeavour and finally its products are sold only if there is co operation from the consuming public." To counter the argument that a handful of shareholders cannot constitute a co-operative society Mr. Sheppard pointed out that, in the steel industry and in the cement industry, there was one shareholder for every worker, in the textile industry one shareholder for every two workers and in the electricity industry ten shareholders for every worker. In other words, numerically speaking, shareholders as a class are no less important—and may sometimes be even more important—than the workers.

Few people realise that it is this shareholding community that has to bear the brunt of all the attacks on the private sector. A major part of this community belongs to that wider section, the middle class. This should be clear from a recent survey into shareholdings conducted by the Reserve Bank which showed that, in the sample of shareholders studied, those who had an income of Rs. 4,000 and below constituted 42 per cent. and those with an income between Rs. 4,000 and Rs. 8,000, constituted another 17.8 per cent. Thus, nearly, people with incomes less than Rs. 8,000 constitute about 60 per cent. of the total shareholding community. These men spring from the long-neglected middle class—a class which has given the country its best political leaders, sincere social workers, competent professional classes and conscientious technicians and administrators. "The contributions which these people make," Mr. Sheppard said, "come from intelligence, character and example." He pertinently added: "For the most part they do not clock in and clock out for eight hours a day, but are always on duty. They are compelled to keep up a standard of living not merely for the sake of appearance, but in order to play their part in the social life which they guide and nurture." And it is this class which finds that it is becoming increasingly difficult to maintain its living standards. Mr. Sheppard did well to point out that, "unless this process of deterioration in its standard of life, and therefore, in the morale of the people constituting this class, is arrested, an irreplaceable component of the industrial and commercial structure of the country will be dangerously weakened, and no amount of planning or legislation will be able to replace it or revive it."

The reason for their neglect lies in the fact that they have no political champions. While the farmers and industrial workers have their advocates, the middle classes alone are the political orphans of this country—friendless in the political field and victims of vigorous and continuous, though not deliberate, attacks in the economic field. And yet, it is undeniable that this class deserves not only to be kept alive but fostered and strengthened in the interests of all that is best and noblest in this country's traditions and in those of its progress. Mr. Sheppard hit upon an apt simile to bring out the importance of the middle class. He compared this class to the "leaven" of the mass and stated that without leaven, the mass cannot rise. He deplored that "in India, today, too much time and attention is being devoted to the mass and far too little to the leaven of the mass."

The Government's exclusive preoccupation with the masses—no one suggests that it is ill-conceived—should not blind it to the interests of the middle class. It is seldom realised that many aspects of the Government's economic policy impinge most heavily on the middle class. Whether it is the textile policy limiting the overall output of mill cloth or the import policy which seeks to restrict the imports of certain so-called luxuries which are in fact conventional necessities for the middle class or simple failure to hold the price-line, it is the middle class which bears the brunt of the burden. It is true that this class too should share its part of the fiscal and other burdens imposed on the community. But all available evidence shows that this class is made to bear a disproportionate share of the burdens. Any continuance of this trend would mean the break-up of the middle class without which this country would find it difficult to make any genuine, healthy progress—political, social or economic.

SENTIMENT IN SHARE MARKETS BETTER

TATA LOCOMOTIVE—TITAGHUR PAPER—BOMBAY BURMAH—HINDUSTAN LEVER

THURSDAY, 5 P.M.

MARKET GOSSIP

A DECIDEDLY better feeling has come to prevail in the share markets. After displaying a quiet tone in the earlier days of the week, equities have looked up. Reports of improvement in cloth offtake at slightly higher prices have revived confidence in textile shares. Steel shares still remain generally neglected, though, since yesterday, some speculative support is being extended to Indian Irons on vague rumours of early capitalisation of reserves. It remains to be seen whether the rumours are true or just a ruse by some interested parties to get out of their commitments in this scrip. Encouraging financial results of some companies, such as T.E.L.Co. and National Insulated Cables, have engendered buying fervour in engineering shares in Calcutta as well as Bombay. The stay order granted by the Supreme Court in regard to the South Indian Plantation Award has arrested the rot in Bombay Burmahs and the plantation scrips on the Madras Stock Exchange, where the minimum prices have been lifted. In the Calcutta market, a slight improvement in turnover has taken place, thanks to bargain hunting by investors.

With the General Elections scheduled to take place in March, the budget session of Parliament will be a dull affair. Knowledgeable circles are of the view that the Budget to be presented on 28th February next will be a tentative one, as in February 1952, when only a White Paper was presented, and that it may not contain any new tax proposals. They feel that the present Government will leave this job to its successor that will be chosen by the people. This means that the markets will get the usual budget jitters only in May and June, instead of January and February. But it remains to be seen whether, between now and June next, there will be no fresh taxation, not even new or additional indirect taxes. The Government's need for money is so pressing that we wonder if it can afford not to levy those indirect taxes which it ordinarily imposes at the end of every February. It is true that the Government has power to vary the excise and customs duties at any time it likes. That, however, is no reason why it should not follow a procedure which is more appropriate.

While, therefore, it is not prudent to rule out the possibility of some indirect taxes being imposed by the Government when it presents the tentative budget in February, it seems safe to assume that no fundamental changes in the system of direct taxation are likely. So, one may have to keep oneself in suspense for another six or seven months more for knowing whether there will be (1) a capital gains tax, (2) a tax on total wealth and (3) any other similar novel taxes. Incidentally, this will give the Finance Minister a longer interval to think about the changes he wishes to make in the taxation system. Mr. Krishnamachari, if he gets re-elected, as he surely deserves to be, will try to impart a bit of his originality to the fiscal policy of the Government.

* * * *

The effect of stringency in the short-term money market is being increasingly felt by the Gilt-edged securities. In the past one month, the Conversion Loan has lost Re. 1-5 and 3 per cent. 1970-75 more than Rs. 2. Other long- and medium- dated loans also have slipped back. The downward trend in State loans has not been completely checked yet, though the pace of fall has slowed down. It is stated that the Reserve Bank has put the Life Insurance Corporation into funds to the tune of Rs. 10 crores by taking over a part of its short-dated investments in the Central Government Loans, so that the Corporation may extend effective support to State Loans floated in September last and restore confidence among investors. So far, the Corporation is believed to have bought about Rs. 2 crores worth of these securities, without making any perceptible impression on the market. Apparently, a more vigorous and sustained attempt requires to be made by the Corporation, if stability is to be imparted to the State loans section of the Gilt-edged market.

* * * *

The recommendation of the Directors of the Tata Locomotive and Engineering Co., Ltd., to pay a maiden dividend of Rs. 6 per share on the Company's ordinary shares for the year ended 31st March 1956, after payment of 5 per cent. preference dividend for the year and wiping out all the arrears thereof, has caused little surprise in the share market, as it had already been well anticipated and discounted in prices. The maiden distribution may be considered a modest one, considering that the shareholders had to wait patiently for a long period of over 10 years. Nevertheless, it is a creditable performance, because of the large arrears of preference dividend, amounting to Rs. 35 lakhs, that had to be cleared. This small dividend has been possible because of the Government's acceptance of all the major recommendations of the Tariff Commission in respect of the prices of the Company's locomotives and boilers. It is stated that the Commission's recommendations have fully satisfied most of the Company's claims, and that the Company will receive, as a result, a sizable sum which had been outstanding on the boiler account.

At the current market price of Rs. 172, the yield on the shares works out to about 3.5 per cent. per annum, free of income-tax. This may appear to be low, but the share belongs to the category of sound "growth scrips," that is, equities with considerable potential for capital appreciation. Further, it is confidently expected that the Company will be able to raise the dividend level next year. Although it is too early to anticipate this with any large degree of certainty, the optimism is based on the grounds that there are no arrears of preference dividend and that the turnover for the current year will be much greater. Further, the Company's outturn of trucks will shortly be doubled from 6,000 to 12,000 units. The long-term outlook for the Company is no doubt good, because of the large expansion programmes it has on hand.

* * * *

The decision of the Titaghur Paper Mills Co., Ltd., to go ahead with the establishment of a third pulp and paper mill in Orissa at a huge cost is an outstanding example of what private *entrepreneurs* can do for the development of the country, given the freedom to do so. The Company already possesses two paper mills in West Bengal, having an aggregate manufacturing capacity of 13,200 tons of finished paper per annum. The renovation programme of these two mills is in progress and it has been found physically impossible to expand the mills at the existing site. The Government of India has, therefore, granted a licence to the Company to erect a third mill in Choudwar in Orissa, with an initial annual production of 12,000 tons.

Details of this project now available go to show that, in the first instance, the mill is being planned to have two machine units with the possibility of further extension later. The first phase will cover the installation of one paper-making machine and the auxiliary equipment together with the requisite chemical and preparatory plant to provide pulp. This phase is expected to cost Rs. 1.75 crores. After this is completed and production begins, the second phase will be undertaken with the installation of second paper-making machine and auxiliary equipment. It is estimated to cost a further sum of Rs. 65 lakhs.

The advantages of the third mill at Choudwar (Orissa) are: (1) the site chosen is close to the bamboo forest areas leased to the Company by the Orissa Government; (2) cheaper raw materials are available; (3) the site is easily accessible by water, rail and road communications; and (4) some important items of machinery and plant can be had from the existing mills. The cost of the project will be financed partly from the Company's own resources and partly from the loan of Rs. 1 crore which the Industrial Credit and Investment Corporation has agreed to provide. The loan will carry interest at the rate of 5½ per cent. and will be repayable in 15 years.

The distribution on the ordinary shares for the six months ended March 1956 has been raised by As. 2 to Re. 1-2 (including a cash bonus of As. 4) per share of Rs. 10 each. The shares are being currently quoted at Rs. 40 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5.8 per cent. per annum, free of income-tax.

* * * *

The various conjectures about the incidence of the award of the Special Tribunal for Plantations, South India, on the Bombay-Burmah Trading Corporation Ltd. have been set at rest by the Chairman's public announcement this week. The incidence consists of the retrospective liability for the past four and a half years and the future annual liability. In a notice to the shareholders of the Company, explaining the position, he says that the award has a direct effect on the Company's Mudis, Nilgiris and Singampatti groups of estates, all of which are situated within one or other of the districts for which the award is applicable. In addition to substantial increases in daily wages payable to labourers and in salaries or dearness allowance due to staff, the award seeks to enforce additional increased costs in the form of retiring gratuities and increased provident fund benefits and amenities in the form of way expenses, issue of blankets and jute hessian aprons to pluckers and a free tea ration to all employees.

The award, if implemented in the present form with retrospective effect from March 1952, is estimated to cost the Company Rs. 89.41 lakhs by way of increased wages alone. This sum is made up of Rs. 15.35 lakhs in respect of estates staff and Rs. 74.06 lakhs for estates labour. These figures do not include any provision for pre-provident fund compensation or for gratituities on the scale of the award to those members of the staff who retired after April 1952, but before the publication of the award. The Chairman points out that it is not possible to estimate at this stage the liabilities under these heads. Further, the rates of bonus for labour for the years 1952 and 1953, he adds, are still under adjudication.

The future annual additional revenue expenditure is expected to be in the region of Rs. 24.5 lakhs, should the award be implemented in its entirety, exclusive of staff and labour retirement provisions. It is also pointed out that, in arriving at the above figures, no account has been taken of income-tax or agricultural income-tax.

The Company, in concert with others vitally affected, has appealed to the Supreme Court with a petition for interim stay and the Court has, as already stated, granted leave to appeal against the award.

The publication of the aforesaid information has not adversely affected the market value of

(*Continued on page* 1072)

WAS IT NECESSARY?

THE Ariyalur Railway disaster, in which 145 passengers travelling by the Madras-Tuticorin Express perished in the early hours of 23rd November, has caused country-wide sorrow, and, as is only to be expected, country-wide indignation. This is the second serious accident of its kind in a year and follows the earlier disaster near Hyderabad on 1st September, in which 121 persons were believed to have lost their lives. Both the accidents were tragically alike, in that the trains came to their sorry fate through flood-cracked bridges. Members of Parliament only reflected the immediate reaction in the country when, in the course of the debate on the Ariyalur tragedy, they were sharply critical of the efficiency of the railways.

The saddest man in the country today is undoubtedly that sensitive, painstaking and conscientious Minister for Railways, Mr. Lal Bahadur Shastri. Unable to withstand the deep distress he felt over the tragedy, he did what appeared to him best in the circumstances—he submitted his resignation. The loss of so able a Minister who, during the period of his office, has shown a rare grasp of the transport problems and brought to his high office a sense of fair-mindedness, impartiality and devotion to duty, will be—as it is being—widely regretted. Considering that transport threatens to be the weakest link in the second Plan chain, Mr. Shastri's exit from the Cabinet now will create a void that will be difficult to fill. In India's onward economic journey, it is a great risk to change horses mid-stream. A democratic set-up no doubt implies ministerial changes. But one may wonder whether Mr. Shastri's resignation, born of righteous self-condemnation, was really inevitable or the only way out of what is admittedly a difficult situation for a man of his sensitive temperament. Mr. Nehru paid a high and well-deserved tribute to Mr. Shastri when he said: "A man of the highest integrity, loyalty, devoted to ideals, a man of conscience and a man of hard work." Despite his understandable regret over the loss of so valuable a colleague, Mr. Nehru has accepted the resignation on the ground that, "from the broader point of view of constitutional propriety, we should set an example in this and no man should think that, whatever might happen, we carry on in the same way without being affected by it."

Surely, it is all so tragic that a constitutional precedent in ministerial resignation should be created out of nothing more than an accident. Without in any way seeming to minimise the gravity of the disaster, we feel that it is wrong to allow accidents to determine the continuance of a minister in office. Pending the outcome of the judicial inquiry which has been ordered, it is, perhaps, best to suspend judgment on the Ariyalur disaster. But a few facts, mentioned by the Government spokesmen, go to show that the disaster was as unpredictable as it was tragic. Four trains had passed the bridge safely after midnight before the ill-fated Express crossed it. The highest flood level recorded for the last 28 years was 9 feet below the rail level. With the best will in the world, it would be difficult to prevent an accident of this kind—and that in country where the source of floods might lie several miles away from the scene where they strike heaviest. All this is not said in extenuation of the accident, but to show that no moral responsibility need necessarily attach to an accident, however tragic it may be in itself. Or, to look at the Ariyalur disaster in another light, would ministerial resignation have still been regarded as a necessary democratic procedure if it was a goods train that preceded the Tuticorin Express and not the Express itself that was involved in the disaster? The question is: Should accidents be allowed to determine democratic precedents?

Nevertheless, if Mr. Shastri's resignation is, as it now seems, irrevocable, then it is best that he should be associated in some responsible way with the conduct of the Government's transport policy. Again, he will not have laid down the seals of his office in vain, if it has shocked all ranks of the railway administration—the high as well as the low—into a new and higher sense of responsibility. There is a great deal to be said in favour of a vigorous return to a stricter discipline to the administration—a discipline, which, many fear, has been lost through excessive reliance on "softness" towards employees. It should be possible for the authorities to be good as well as firm.

EQUITIES CLOSE ON A STEADY NOTE

BOMBAY BURMAHS MARKED UP

(From Our Own Correspondent)

BOMBAY, *29th November*

THE Stock Exchange remained featureless during the major part of the week under review. The volume of business was at a low ebb, but the trend of prices was slightly downward due to lack of support and scattered liquidation by bulls. During the last two days, however, activity revived to some extent and equities looked up, making good in most cases the earlier losses. The better sentiment towards the close was inspired by reports of improvement in textile exports, the speculative support to Indian Irons on the eve of the Company's annual general meeting, at which more light is expected to be thrown by the Chairman on the Company's negotiations for loan with the World Bank, and renewed enquiries for Bombay Burmahs on hopes of a favourable settlement being arrived at regarding the Company's capital reorganisation. On balance, barring a few scrips, the entire list disclosed small changes. The undertone at the close was steady.

In the steel section, Tata Ordinaries slipped down from Rs. 192-12 to Rs. 190-4, but gained ground to close at Rs. 192. Indian Irons shaded off from Rs. 34-6 to Rs. 33-14, before gathering strength to Rs. 34-6½ at the close on renewed speculative support.

Textiles were a little depressed in the earlier half of the week, but gave a lead to the other sections in the subsequent recovery. Bombay Dyeings were erratic, moving between Rs. 631-4 and Rs. 621-14, before closing Rs. 3-12 higher on balance at Rs. 628-12. Centurys were marked down from Rs. 551-8 to Rs. 544-8, but shot up to finish at Rs. 552. Kohinoors shaded off from Rs. 343-8 to Rs. 340 on Monday. In the subsequent upward movement, they were conspicuous with a rise to Rs. 347. The closing was done at Rs. 346. Bradburys gathered Rs. 10-10 over the week at Rs. 230-10. Central Indias came down from Rs. 132 to Rs. 129-8, but recovered to Rs. 131-8. Finlays were up by Rs. 3 at Rs. 338. Gokaks were steady at Rs. 239, India United Ordinaries at Rs. 12-2½ and Indore Malwas at Rs. 147-8. Khataus lost Rs. 3-12 to Rs. 233-12 and Models Re. 1-14 to Rs. 180. Mysore Spinnings, advanced by Rs. 9-8 to Rs. 110. New City Mills shot up by Rs. 8-12 to Rs. 155, while New Greats held their own at Rs. 250. Podars were done Rs. 3-2 higher at Rs. 170, while Sassoon Spinnings shed Rs. 3 to Rs. 40. Shree Niwas changed hands Re. 1-4 lower at Rs. 212-8. Simplex shed Rs. 3-4 to Rs. 195. Standards gained Re. 1-4 to Rs. 478-12, while Svadeshis dropped Re. 1-12 to Rs. 254-4. Tata Mills were quietly steady at Rs. 53-8.

Bank shares were quiet and business was on a reduced scale. Centrals were dull at Rs. 54-12. Their new shares were down by As. 12 at Rs. 58-4. Bank of Indias lost Re. 1-4 to Rs. 142-4, but their new shares were maintained at Rs. 141. Barodas were As. 8 better at Rs. 102-12 and Union Banks As. 3½ higher at Rs. 7-9. United Commercials were done at Rs. 55-12.

Insurance shares were featureless and activity was limited. New Indias changed hands As. 8 lower at Rs. 45-4 and British India Generals As. 2 lower at Rs. 13-8. Indian Mercantiles were taken a rupee better at Rs. 43 and Vulcans at the self-same rate of Rs. 15-8.

Very minor variations were noted in electricity shares. Ahmedabad Electrics retreated from Rs. 91-14 to Rs. 90-15, before gaining to Rs. 92-13. Bombay Suburbans gained As. 5 over the week to Rs. 110-5. Surats were, however, lower by As. 10 at Rs. 113-12. Tata Hydros stood As. 8 higher at Rs. 124-8 and Tata Powers Re. 1-4 better at Rs. 1,252-8. Andhra Valleys held their ground at Rs. 1,200, but their new shares moved up by Rs. 3-12 to Rs. 1,163-12.

Proximity of dividend announcement pushed up Belapurs, in the sugar group, from Rs. 251-8 to Rs. 253-8. Phaltans looked up by Re. 1-8 to Rs. 161. Bhopals were quiet at Rs. 17-6, as also Walchandnagars at Rs. 263-2. Cement shares were conspicuously dull. Associated Cements moving within a range of Re. 1-12 between Rs. 193-4 and Rs. 195. The closing was done at Rs. 194-12. Digvijays were marked down further from Rs. 165 to Rs. 161, while their Rights were bid a rupee higher at Rs. 26. Jaipur Udyogs lost As. 3 to Rs. 12-8, while Orissa Cements were held at Rs. 13-7. Among engineerings, Alcocks eased from Rs. 322-8 to Rs. 317-8. Tata Locomotives provided a feature in this group, with keen bidding early in the week in anticipation of a dividend of Rs. 6 per share for the year ended 31st March 1956, which pushed them up from Rs. 168-8 to Rs. 173. After a short-lived recession to Rs. 170-4, the shares moved up to Rs. 172 on the eve of the dividend announcement. The declaration of a dividend of Rs. 6, which was in conformity with the market's expectation, did not, therefore, result in any further rise in price, and the shares closed at Rs. 172. Larsen and Toubros were quiet with a loss of As. 8 at Rs. 16-12. Premier Constructions dropped Re. 1-12 to Rs. 212. In the mining group, Shivrajpurs were dull, but steady, at Rs. 86-12. Indian Coppers were quiet at Rs. 4-3¼ and B.B. Petrols at Rs. 3-5½.

Among shipping and transport group, Scindias gave way from Rs. 19-5½ to Rs. 19-1, but the loss was mostly made good when the shares finished at Rs. 19-4½. Great Easterns were done at Rs. 17-6 *ex*-right, as against Rs. 21-12 *cum*-right a week ago. Their Rights were done at Rs. 4-4. India Steamships changed hands at Rs. 10 *ex*-div. (final div. As. 8), as compared with Rs. 10-11 *cum*-div. last week. Hindustan Motors were dull at Rs. 9-4, the Company's slightly better results for the year ended 31st March 1956 not having produced any impression on the operators. Premier Automobiles were depressed from Rs. 116 to Rs. 114-8. In the miscellaneous group, Bombay Burmahs were prominent during the last two days with a jump from Rs. 683-12 to Rs. 705, after having been lowered from Rs. 696-4. Their new shares stood Rs. 2-8 lower at Rs. 250. British India Corporations shed As. 2 to Rs. 10-5½. National Rayons moved in a narrow groove and closed a shade better at Rs. 263. Killicks were steady at Rs. 173-4, on the Chairman's statement at the annual general meeting that the Company could face the future with confidence. The Chairman also stated that the Company had received permission to increase its production in steel files factory and licence had been granted for expanding its manufacturing lines. Several other projects were also being closely studied by the management. Tata Chemicals were dull at Rs. 19-8½ and Tata Oils at Rs. 50. Wimcos were featureless at Rs. 174-6.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *28th November*

A fair recovery in prices was recorded on the Calcutta Stock Exchange during the week under review on revival of buying at lower levels. Better advices from the commodity markets also contributed to the improved sentiment, although lack of funds invited a quiet trend at intervals. Stay of the Madras Plantation Award by the Supreme Court and the fair demand for tea at advancing prices made tea shares an attractive possession. Naturally, therefore, teas claimed a considerable portion of the funds available in the market. Investors in other counters kept away from the market, as they desired to set apart funds for taking part in the public offer of shares of Hindustan Levers and other issues shortly expected. Reports of the possibility of dock workers' strike were viewed with alarm as such a strike would bring foreign trade to a complete standstill. Already shipping space has become restricted, in view of the rerouting of ships via the Cape. Further, the mounting deficit in foreign trade, Rs. 16 crores for October, had been a further cause for misgiving whether the industrial progress could be maintained as planned.

Budget uncertainties have already begun to loom large in the minds of operators. General elections are to follow the presentation of the Budget proposals for a portion of the year, and although it is believed that, in view of the proximity of the elections, there would be nothing surprising in the Budget, the fear is entertained that the swing towards socialism would be a feature of the election manifesto of the Congress. At any rate, the Finance Minister is expected to raise Rs. 50 crores more from changes in existing taxation and/or additional taxation.

With the fall in prices of jute goods, the recovery in jute shares was arrested. Nationals closed at Rs. 23-6 after having improved from Rs. 23-9 to Rs. 24. Indias were as low as Rs. 122, as against Rs. 140-8 previously. Howrahs were unchanged at Rs. 21-10. Naihattis were pulled down from Rs. 86 to Rs. 75, but New Centrals recovered to Rs. 14-6 from Rs. 14-2.

In coals, Burrakurs were taken from Rs. 18-11 to Rs. 19 earlier in the week and after a recession once again rose to quote higher at Rs. 19-2. At Rs. 9-10, South Karanpuras were better by As. 6, while Western Bengals were extremely quiet at Rs. 6-3.

Selected counters in the engineering section received greater attention. Braithwaites hardened to Rs. 27-10 from Rs. 27-5. Jessop & Cos. were better at Rs. 35-10 for a time, but receded soon to Rs. 35. Texmacos were steady at Rs. 22-5. Indian Irons opened at Rs. 33-3, and after rising to Rs. 33-7 reacted to close at Rs. 33.

Teas were put through at advancing rates on interested buying. Considering the general lethargy of the market the number of transactions in teas was remarkable. From Rs. 21-0, Methonis were raised to Rs. 22-6. At Rs. 20-6, Ranicherras added one point. At Rs. 21-0, a similar rise was recorded in Brooke Bonds. Nagaisurrees advanced to Rs. 215 from 205, and Dibrugarhs to Rs. 26-10 from Rs. 26-4. Gungarams changed hands at Rs. 207, as against Rs. 190 previously and Bishnauths strengthened to Rs. 25-6 from Rs. 24-12.

Selected counters in the miscellaneous industrials group received more attention. Niccos were in strong demand, in view of improved prospects and the expansion of electricity in the second Plan. The scrip gained from Rs. 27-10 to Rs. 28-14. Indian Cables were fully steady at Rs. 33-8 and this counter attracted more attention following the publication of a satisfactory working report. National Rollings were quiet at Rs. 10-9, although the two-month-old lockout ended on Monday following a settlement with the workers. India Steamships, after being higher at Rs. 10-11, sagged to Rs. 9-15. Indian Coppers were quiet at Rs. 4-3, as were Orient Papers at Rs. 35-12.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *27th November*

After a brief spell of firmness last week, the Stock Exchange once again staged a relapse during the week under review. This followed the removal, with effect from the 23rd inst., of the minimum prices for the ordinary shares of planting companies. These prices, it will be recalled, were fixed on the 8th inst. by the Stock Exchange Association with a view to arresting the downward trend in values following the Plantation Labour Award. Delivery in shares, however, shall continue to be made by the seller to the buyer within seven days from the date of the contract. Thanks to the removal of floor prices, scrips of several planting companies which could not be freely dealt with due to floor prices were offered freely on renewed fears of reduced return on investments as a result of the implementation of the Award. The recommendation of the Plantation Enquiry Commission that dividends should be restricted also sapped the morale of the market. While holders of planting shares were thus interested in reducing their position, buyers were very much reserved; they preferred to await the outcome of the compromise efforts between labour and management of planting companies. Textiles also ruled easy, with the exception of a few selective scrips which met with good support induced by reports of encouraging performance of many Coimbatore mills in the current year and schemes of capital expansion contemplated. Banking and miscellaneous industrials were neglected, with prices drifting lower.

Rubber shares were subjected to heavy selling and suffered a sharp recession in values. Mlamallays were marked down by Rs. 4-12 to Rs. 45. Thamarapallys dropped Re. 1-8 to Rs. 30. Rajagiris fell by As. 12 to Rs. 24. Kailas receded by As. 6 to Rs. 6 and Pullangodes by As. 5 to Rs. 2-13. Malankaras and Teekoys shed As. 4 each to Rs. 29-12 and Rs. 11-12, respectively. Tea shares also encountered sizable losses. Kalpettas decreased by Rs. 2-4 to Rs. 29. Waterfalls were neglected at Rs. 5-6 *cum-div.*, as against Rs. 6, reflecting the operators' disappointment over the cut in dividend to 15 per cent. declared for the year ended June 1956, which compares unfavourably with 20 per cent. for the previous year. Nenmenys, Nonsuchs and Peermades fell by Re. 1-4 each to Rs. 20-12, Rs. 24-4 and Rs. 30 *cum-div.* (final), respectively. Cottanads and Highlands retreated by a rupee each, the former to Rs. 21-2 and the latter to Rs. 14-12. Blue Mountains climbed down from Rs. 5-9 to Rs. 5-4-6 *cum-div.* The Directors of the Company have recommended a dividend of 15 per cent. for the year ended June 1956, as against 20 per cent. for 1954-55. Alageswars declined by As. 12 to Rs. 3-11-3. Periakaramalais slipped by As. 10 to Rs. 7-7. Talayars eased by As. 8 to Rs. 11-4. United Nilgiris lost a like amount to Rs. 21. Among coffee shares, Cochin Malabars gave way from Rs. 10-4 to Rs. 9-10. Rajendras decreased by As. 4 to Rs. 12-4. Balmadies shed As. 2 to Rs. 3-10. Consolidateds were lower by an anna at Rs. 11-7. Amalgamateds were quiet at Rs. 11-14. The Directors of the Amalgamated Coffee Estates Ltd. have not recommended any dividend for the year ended March 1956 also.

Textiles, as already stated, ruled easy. Radhakrishnas declined by Rs. 10 to Rs. 360. Buckinghams suffered a fall of Rs. 4 to Rs. 196. Venkatesas shed Rs. 3 to Rs. 177. Janardhanas and Vijayakumars receded by Rs. 2 each to Rs. 110 and Rs. 142, respectively. Loyals eased by Re. 1-4 to Rs. 53-12, Anglo-Frenchs by Re. 1 to Rs. 106 and Cambodias by As. 8 to Rs. 15-8. There were, however, good enquiries for Lakshmis which advanced by Rs. 10 to Rs. 285. Rajalakshmis spurted by Rs. 9 to Rs. 194. Bangalore Woollens picked up Rs. 8-12 to Rs. 575. Coimbatore Cottons rose by Rs. 8 to Rs. 413. Cannanores hardened by Rs. 2-8 to Rs. 174-8 *cum-div.* (interim 7½ per cent. for the year ended March 1956). Rajapalayams gathered Rs. 3 to Rs. 157. Metturs and Premiers put on Rs. 2-8 each to Rs. 462-8 and Rs. 282-8 *cum-right*, respectively.

In the banking section, Punjab Nationals encountered selling and fell by Rs. 3-8 to Rs. 50-8. Bank of Mysores dropped Rs. 3 to Rs. 255. Indian Bank Rs. 95 paids declined by Rs. 2 to Rs. 195. Fully paids and Rs. 70 paids lost a rupee each to Rs. 202 and Rs. 152, respectively. Indian Overseas shed a similar amount to Rs. 144.

Among miscellaneous industrials, Rallis climbed down by Rs. 4 to Rs. 41. Sen-Raleighs retreated from Rs. 14-8 to Rs. 14-2 *cum-right*. F.A.C.Ts. declined by As. 5 to Rs. 6-7. Central Scientifics declined by As. 4 to Rs. 7. Aluminium Industries were done lower at Rs. 19-10, as against Rs. 19-14. Mysore Papers and Mysore Stonewares lost As. 2 each to Rs. 17-4 and Rs. 11-12, respectively.

Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Ltd., disclosed at Jamshedpur last week that the loan of $75 million (about Rs. 36 crores), granted by the World Bank to the Company for its expansion programme, became effective from 20th November, after all legal formalities and an inspection of the Company's documents by World Bank officials had been completed. The loan is intended to raise the Company's output of steel to 2 million tons (ingot) by the middle of 1958. Incidentally, this loan, negotiations for which were completed last June, is the largest ever granted by the Bank to an Asian country and the largest to an industrial unit anywhere.

NEWS IN BRIEF

THE total cattle population in India in 1952-53 stood at 155 million, of which 40 million were cows and 21 million buffaloes, yielding about 510 million maunds of milk per year.

According to the information available with the Council of Scientific and Industrial Research, as many as 1,348 scientists and technologists in the country are unemployed.

The Union Ministry of Agriculture has decided to set up 4,282 seed-farms during the second Five-year Plan period for supplying quality seeds to cultivators. These seed-farms will be dispersed over different States, each having an area of 25 acres.

The 16th annual general meeting of the Indian Chemical Manufacturers' Association will be held at Calcutta on the 8th inst. Mr. Manubhai Shah, Minister of Heavy Industries, Government of India, will inaugurate the meeting.

A high-level committee on inland water transport is expected to be set up shortly. The committee will consider the master plan prepared by the Central Water and Power Commission. The plan includes schemes to connect Cochin with Calcutta and the Narbada with the Ganges by inland canals.

The Government of India has decided to continue financial assistance to selected voluntary organisations for the implementation of the Family Planning Programme under the second Five-year Plan. This assistance will be given for opening new family planning clinics and maintenance of existing ones.

The President of the I.N.T.U.C., Mr. S. R. Vasavada, has announced that the organisation would shortly serve notices for an equitable wage increase in the seven major industries in the private sector, namely, textile, cement, coal, steel, sugar, jute and engineering. A demand will also be made for the appointment of wage boards for these industries.

The total output of iron ore in India increased from 318,583 tons in August 1956 to 332,014 tons in September 1956. Returns received from 107 mines for the month of September show despatches aggregating 232-753 tons to the iron and steel plants and 131,290 tons to the export market. The reported stocks as at the end of the month amounted to 1,333,928 tons.

The Government of India has set up a Co-ordination Committee for public co-operation with Mr. G. L. Nanda, Union Minister for Planning, as Chairman. The functions of the Committee will, among others, be to facilitate systematic and integrated action on the part of the Ministries of the Central Government and to approve proposals to be financed from funds provided in the Plan for special schemes of public co-operation.

Work on the Bombay television station is scheduled to commence in 1957-58 and provision for it will be made in the next financial year. Surveys are already being made for selection of a suitable site for erecting the television station. Equipments for the purpose of experimental investigation have been purchased. Preliminary steps for procuring technical advice about the standard, frequency of operation, etc., in relation to Indian conditions have also been taken.

A French Railway Engineer, Mr. M. Boulougne, has been appointed as a Consulting Engineer to the Indian railways for the electrification schemes. Mr. Boulougne was a member of the French Railway Mission which recently submitted a report to the Government of India on certain technical issues connected with railway electrification. According to present proposals, the electrified route mileage on the Indian railways is expected to be more than trebled by the end of the second Five-year Plan period. A provision of Rs. 80 crores has been made in the Plan for this purpose.

The Government of India has, on the advice of the Salt Advisory Committee and in consultation with the State Governments concerned, decided not to levy any royalty on the by-products of salt recovered during salt manufacture on Government lands. This decision has been taken to encourage salt manufacturers to recover as many by-products as possible, particularly gypsum and sodium sulphate, during the process of salt production. The recovery of by-products helps not only in improving the quality of salt but also in filling the gap in the requirements of a number of raw materials required by the chemical industry.

The Government of India has granted licence to a Calcutta firm to set up a soda ash-*cum*-ammonium chloride factory at Moghulsarai. The U.P. Government, which has already decided to advance loans to the tune of over Rs. 3 crores to the private sector to set up heavy industries, has sanctioned a loan to the firm for setting up the proposed factory. The total investment involved is about Rs. 2.9 crores. The rated capacity of the factory will be 120 tons soda ash and 120 tons of ammonium chloride per day. The factory will employ over 300 skilled and 350 unskilled persons on a permanent basis, in addition to other persons in the supervisory scale.

Several industrial schemes for the manufacture of machinery and engineering goods have been approved by the Government of India. Under one of the schemes, a new factory is proposed to be set up at Bharatpur (Rajasthan) for the manufacture of 300 coaching underframes per year. There are three schemes for the manufacture of electric motors, of which one envisages the setting up of a new undertaking at Coimbatore for the manufacture of 600 electric motors per year of capacity up to 15 h.p. The firm will also be allowed to manufacture 1,800 centrifugal and self-priming pumps per year. A factory in the Punjab is to be permitted to expand its capacity for the manufacture of rivets, bolts and nuts to 60 tons per month and a new undertaking in the same State will manufacture 300 tons of steel bolts, nuts and rivets per month. A new undertaking is proposed to be set up in West Bengal for the manufacture of structural steel processing factory sheds and building frames, industrial plants and forgings at a rate of 14,400 tons per year, to be increased to 16,800 tons later. Another West Bengal firm will expand its capacity for the manufacture of 133 tons to 166 tons of aluminium and 100 tons of aluminium container sheets per month.

The Government of India has decided that blanket import licences for controlled categories of iron and steel falling under the licensing jurisdiction of the Iron and Steel Controller will be issued by the Iron and Steel Controller after taking into account the past imports of the applicant and the pending licences held by him. The licences will be restricted only to items which can be freely licensed. All import licendes, both blanket and quota, will be issued as provisional in the first instance. On the strength of the provisional licences, orders can be placed and importers can open letters of credit in favour of their foreign suppliers. The licences will be confirmed when importers produce before the licensing authority a copy of the orders placed on foreign suppliers and the original acceptance of orders. Licences will be valid for import only to the extent of value, tonnage and category of material or confirmed licences. Licences not confirmed within 60 days from the date of issue will be treated as lapsed. Clearance of goods will not be permitted against provisional licences which have not been confirmed.

From Abroad

The Swedish Bank rate has been raised from 3½ per cent. to 4 per cent.

The International Nickel Company of Canada has cut the price of domestic copper by 0.25 cent to 34.75 cents per lb.

Sweden will continue its present 12 per cent. tax on capital investments, but maximum tax-free investment has been increased from Kr. 20,000 (£1,400) to Kr. 30,000 (£2,070).

Norway's oil and petrol consumption has increased by 600 per cent. in the last ten years, according to a survey published by the Norwegian insurance company "Storebrand." In the same period, consumption in the world as a whole has increased by only 300 per cent.

The Japanese Ministry of International Trade and Industry has approved an application by three leading steel companies to raise steel prices by 2,500 yen to 4,000 yen per ton. It is felt that the latest rise will adversely affect Japan's competitive position in exports of ships and heavy machinery.

The supply of cigarettes and manufactured tobacco, of machinery for the manufacture and packaging of cigarettes, and supply of certain electrical equipment for motor vehicles will be referred to the Monopolies Commission by the British Board of Trade for investigation and report.

The British Tea Trade Committee has described rumours that tea will be rationed as entirely unfounded. But it adds that, with the higher prices now obtaining in world markets, there will have to be an increase in retail prices of some teas. The Committee says that the U.K. stock situation is good.

The U.S. Agricultural Department has announced the issuance of Public Law 480—authorisation to India permitting the latter to buy in rupees 400,000 metric tons of U.S. wheat or wheat flour worth $23,222,000. Sales contracts may be made from 30th November 1956 to 31st August 1957, with deliveries between 30th November 1956 and 30th September 1957.

Pakistan's first Industrial Credit and Investment Company, sponsored by the Government, will start operations shortly. The Government has succeeded in negotiating a dollar loan worth Rs. 2 crores with the World Bank. The Pakistan Government is making available to the Company an interest-free loan of Rs. 3 crores. In addition, the State Bank of Pakistan will contribute a loan of Rs. 2 crores at a minimum interest rate. The Company will have an initial capital of Rs. 2 crores.

The U.S. Administration is believed to be inclining towards a Marshall Plan type of programme to assist Western Europe to secure Western Hemisphere oil, with the difference that the countries benefiting will be expected to pay dollars as long as they can. After that, some form of assistance, including grants as well as loans, may be employed. It is reported that the Administration will work through the Organisation for European Economic Co-operation in supplying the 17 member-nations, as it wants the latter to accomplish as much as possible without U.S. assistance, including the marshalling of tanker capacity and the finding of funds to purchase dollar oil.

The U.S. dock workers resumed the loading and unloading of ships in the U.S. Atlantic and Gulf ports on the 25th ultimo, halting, under Government injunction, a strike which had lasted for nine days. Mr. William Bradley, President of the International Longshoremen's Association, ordered compliance with a 10-day temporary court order issued by a federal judge under the terms of the national Taft-Hartley Labour Act. If the 60,000-member union and the employers do not reach agreement on a new contract within the 10 days, the Government is empowered to seek an injunction banning a work stoppage for an 80-day period, during which negotiations will be continued. A major issue in the strike is the union's demand for an agreement covering all Atlantic and Gulf ports. The employers insist that separate contracts must be negotiated for individual port areas.

PERSONAL

MR. M. C. Setalvad, Attorney-General, Government of India, left Bombay for Paris *en route* to The Hague on Thursday last.

Mr. B. Ramakrishna Rao, former Chief Minister of Hyderabad, was sworn-in as Governor of the new Kerala State last week.

Mr. U. N. Mahida, Chief Engineer, Government of Bombay, Public Works Department (Irrigation), has been elected President of the Central Board of Irrigation and Power.

Mr. Yezdezard Dinshaw Gundevia, at present Deputy High Commissioner for India in the United Kingdom, has been appointed High Commissioner for India in Ceylon. He will assume charge of his new post towards the middle of March next year.

Dr. S. K. Mukherjee, Technical Officer, Ministry of Production, Government of India, returned to Bombay on Friday last, after a tour of the United States, East and West Germany, Italy and other countries. During his tour, he studied new developments in the field of production of fertilisers.

Mr. A. D. Wenzel, Managing Director of the Firestone Tyre and Rubber Company, has been elected President of the Indian Roads and Transport Development Association for the coming year and Mr. J. F. Sinclair, General Manager of Burmah-Shell in India, its Vice-President. Mr. B. V. Vagh continues as executive Vice-President.

Mr. P. C. Bhattacharya, Secretary (Expenditure), Union Ministry of Finance and leader of the Indian delegation for talks with the World Bank, arrived in Bombay from London last Thursday, accompanied by Mr. B. K. Nehru, Joint Secretary, Union Ministry of Finance, and Mr. Y. T. Shah, Joint Director, Finance, Railway Board, after a two-week stay in the U.S.

Mr. N. R. Das, of the Forest Research Institute and College at Dehra Dun, is attending lectures at the chemistry and food technology department of the Borough Polytechnic, South London, in order to study the latest British techniques in the development of resin adhesives. He has gone there under the Technical Co-operation Scheme of the Colombo Plan and expects to stay at the Borough Polytechnic until next summer. Later, he will spend some time at the Forests Products Research Laboratory at Princes Risborough in Buckinghamshire and at other forestry units in England and Scotland.

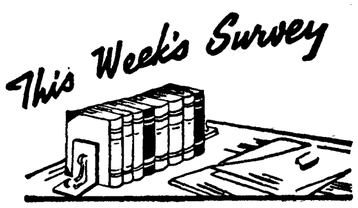
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *28th November*

Emergency Finance

The Supplementary Finance Bill, which was introduced in the Simla session and postponed for discussion in a special session in New Delhi this month, has had a chequered career. Drastic amendments in respect of the duty on machinery, reduction of taxable income to Rs. 1,000 and increase in postal rates were carried in the Assembly with the result that the Government lost four crores of increased taxation. His Excellency the Viceroy then summoned the party leaders who were stoutly of the opinion that this deficit should be made up by further retrenchment, while the Executive Council was adamant that the Bill should go through as it is. The effect was that His Excellency the Viceroy sent the Bill back to the Assembly with the request that it should be passed as it was presented—that is, without the amendments referred to above. When this recommendation was taken up for consideration, last week, elected members of all unofficial parties, with the exception of three, besides the European group, walked out simultaneously. The Assembly then proceeded to consider the official amendments restoring the cuts and these were all accepted in a thin house; but by the time the Finance Member rose to move the third reading of the recommended Bill, those who walked out had returned to their seats and they succeeded in rejecting its passage by 63 votes against 48. The Bill has since been certified by His Excellency the Governor-General under the extraordinary powers he possesses as "essential in the interest of British India" and it was placed before the Council of State on Monday. It is sure to pass through the upper house without any amendment and become the law of the land this week-end.



PRODUCTION INDEX

THE Federation of Indian Chambers of Commerce and Industry has done well to urge the Government of India thoroughly to examine the method of compiling the index of industrial production and other indices, with a view to making them reflect truly the trends in the economy. Index figures, it is common knowledge, provide an easily understandable means of judging a country's progress, be it in the field of industry or agriculture or commerce. Viewed thus, it is, indeed, unfortunate that the Government of India has not yet taken any steps to compile the index of industrial production on a rational basis. On the contrary, the general index of industrial production, published every month, is so defective that they mislead the public to a great extent. To cite an instance, the production index (Base: 1951=100) for June 1956 has been shown as 197.7, as compared with 151.0 in May, 134.7 in April and 128.5 in March. Taking these figures as they are, it will be seen that industrial production during June was higher by over 31 per cent. But really speaking, the rise in production is, as the Federation points out, notional, inasmuch as it is based largely on the steep increase recorded by the index of sugar production which rose from 601 in May to the high level of 1,643 in June. Elucidating this point further, the Federation says:

"... Unlike production in other industries, increases or decreases in sugar are calculated not by reference to monthly averages of the base period but by reference to the corresponding months. A small increase in sugar production in terms of quantum during off-season months as compared with the corresponding period in the base period is capable of vitiating the whole trend of general index. This is because sugar production commands the same weight of 4.27 per cent. throughout the year."

In view of the aforesaid defect, the Federation suggests that, in the case of seasonal industries such as sugar, either the weights assigned to them should be changed according to the seasonal trend, or the increase or decrease in production in the particular months over the corresponding months of the base period should be calculated as percentage of the average production. This suggestion is quite pertinent and must be implemented. It may be said in passing that the Government of India has already appointed a special committee to modify the present system of compiling the index number of wholesale commodity prices. It has also set up a technical advisory committee to consider the question of compiling, on an all-India basis, the cost of living index numbers for middle classes, as well as for other sections of the population, industrial working classes, agricultural labourers and cultivators. It is to be hoped that the Government will constitute a similar committee for formulating a rational system of industrial production index.

TEXTILE SITUATION

Mr. A. D. Shroff, Chairman of the Ahmedabad Advance Mills, did not certainly cry "wolf" when he declared, in the course of his speech at the annual meeting of the Company on Tuesday this week, that, unless the cotton mill sector was allowed to expand its capacity, black markets would again flourish, living standards would be artificially arrested and the largest organised industry throttled to stagnation. Domestic demand for cloth is going up at a fast rate, thanks to a continuous rise in population and an increase in the community's purchasing power. Even on a conservative basis, the *per capita* consumption of cloth at the end of the next five years may be about 22 yards, as against about 16 yards at present. In addition, there is the need for exporting at least 1,000 million yards, if not 1,200 million yards, per annum. The total requirements of cloth work out to as much as 10,000 million yards—3,400 million yards more than the current rate of output of both mills and handlooms.

The gap to be covered is thus very big. The handlooms and powerlooms can cover only a negligible portion of the gap, say, by about 600 million yards. The entire balance of 2,800 million yards will definitely have to come from the mill sector. Otherwise, a cloth situation which is worse than what it is today will, as Mr. Shroff clearly warned, be experienced by the millions of consumers in India. Reassuring is his statement that the mills are prepared to meet this large increase, although such calls for an investment of nearly Rs. 133 crores in new plant capacity. If, despite this assurance, the Government were to persist in its present policy, it would have itself to take the entire blame for any shortage of cloth and high prices that may occur in the coming years. The writing on the wall is clear, and the sub-committee of the Cabinet recently appointed to consider cloth targets should view the problem dispassionately, without being influenced by ideological considerations.

This point needs to be specially stressed. For it will be recalled that, notwithstanding expert advice, the Government did not allow the mills to expand their capacity, a policy which was based on too much reliance on the handlooms. The policy has proved a miserable failure and the country is now experiencing a virtual cloth shortage, leading to a rise in prices. Instead of arresting the rise through augmenting supplies by allowing mills to expand output, the Government has raised the excise duty on cloth appreciably. There is no exaggeration whatever in the observation of Mr. Shroff that the increase in excise duty is so staggering that it has thrown the cloth markets into a state of near-panic. "The markets," he said, "have become so bad that mills have been forced to allow substantial rebates, in many cases up to 100 per cent. of the recent rise in excise duty, to induce merchants to fulfil their commitments." How heavy is the tax burden on consumers of cloth will be evident from the fact that, by way of excise duty alone, the Government of India will collect approximately Rs. 75 crores in a full year, of which Rs. 35 crores were added with one stroke of the pen in September last, and in many varieties of coarse and medium varieties, the burden of excise duty and sales taxes now amounts to 25 per cent. or more of the total sale price. Surely, it is sad that the consumers have to pay such high indirect taxes on an essential item of consumption as cloth and that on account of the shortsighted policy of the authorities.

MANAGEMENT AUDIT

With the rapidly growing expansion in the size of industrial organisations in India, the task of industrial management has become increasingly complex and difficult. That is not all. The concentration of responsibility and authority in a few hands which flows from such large-scale organisation tends to give rise to so many other problems such as delays in planning, execution, etc., which vitiate the efficiency of the whole organisation. Viewed thus, the problem of ensuring the efficient working of a large-scale unit is not only an important one, but is essential to the progress of industry.

A tool which has been increasingly put to use in the West in order to raise industrial efficiency is what is called "management audit." In a speech delivered last week before the seventh annual meeting of the Bureau of Industrial Statistics, Calcutta, Mr. Jehangir J. Ghandy, Special Director, Tata Iron and Steel Co., Ltd., made out a strong case for the application of this new technique widely in India. Explaining the value of the method, Mr. Ghandy said that it lay in "auditing" the actual performance of an enterprise against certain accepted standards of efficiency. This involves drawing up of certain principles or rules to form the basis of such comparison. The virtue of this method is that it does in the field of management what financial audit seeks to do in the field of finance, and provides a detailed picture of the organisation and management to the top authorities. Another advantage of this tool, according to Mr. Ghandy, is that it will facilitate the process of delegation of responsibility and authority—a step forward in efficient management so essential in these days of large-scale organisations. The aim of such "audit," as Mr. Ghandy stated, is not to censor or cross-examine the "line executives," but only to use it as a tool for ensuring the efficiency and prosperity of the industry.

But management audit is not a work that can be entrusted to ordinary administrators or auditors. Defining the type of the agency that can be entrusted with the job and the scope of its work, Mr. Ghandy pointed out that it was essential that the agency selected for such "audit," as also the administration, should have a clear understanding of the organisation of the enterprise and its relation to management functions. The agency for this purpose, according to the speaker, could either be a single individual, with vast experience and knowledge in the field, or a committee. Because of the circumstances obtaining in the country, it might be possible, he suggested, to entrust the work to an expert official or committee in the organisation itself. Mr. Ghandy was aware, however, that this procedure might vitiate the findings of the auditors, and fail the purpose of such "audit," unless adequate steps were taken to prevent chances of pressure and influence being brought to bear upon them by the fellow officers in the works, in order to cover the managerial weaknesses, instead of exposing them. He, therefore, suggested that the individual or the committee, as the case may be, selected for the purpose, should work directly under and report to the managing director or the top management.

Explaining the role of statistics, in this connection, Mr. Ghandy pointed out that a great deal of statistical work in the nature of investigations into profit-sharing plans, the operation of incentive plans, etc., was necessary to make the scheme successful. Moreover, statisticians could also play, he stressed, an important role, if they also had practical training and experience in the processes and techniques of production. In the case of smaller organisations, the "audit" itself could be conducted, he suggested, by an agency like the Bureau of Statistics.

On the same occasion, the role of statistics in solving the complex business problems was also stressed by another speaker, namely, Mr. P. C. Sen, West Bengal Minister for Food and Supplies. He rightly observed that these business problems, in so far as they were quantitative in character, could be tackled by the statistician. For, he pointed out, facts constituted the basis of business judgments and planning, and statistical methods provided means of assessing and appraising these facts. There were several other advantages to be gained by the use of maximum statistical techniques. These benefits were as varied as increasing the productivity per unit of capital, elimination of wastage in raw materials and fuels, increasing operating efficiency, and quality, and attaining stronger competitive position. It is to be hoped that the Calcutta Bureau of Industrial Statistics, which has been doing valuable work in these directions, will serve as the venue, where the modern tool of "management audit" can be tested and perfected for wider use in the country.

WHAT IS RETRENCHMENT?

The interpretation placed by the Constitution Bench of the Supreme Court on section 25F of the Industrial Disputes Act has the effect of removing much of the confusion over the issue whether the workers are entitled to compensation on total or partial retrenchment following either a *bona fide* closure of the business or its transfer to another employer. The occasion for the interpretation of the said section arose when the Barsi Light Railway Company which was taken over by the Central Railways and Sri Dinesh Mills Ltd., Baroda, which was closed down for genuine causes, preferred appeals to the Supreme Court against the decision of the High Court of Bombay that they were liable to pay compensation to the workmen retrenched under Clause B of section 25F of the Industrial Disputes Act. While those retrenched in the case of the Barsi Light Railway Company were several, in the case of the Baroda mill, all the employees, numbering 470, were involved.

The judgment delivered by the Supreme Court, reversing that of the Bombay High Court, was based on the meaning read by it into the definition of the word "retrenchment" contained in section 2(00) and used in section 5F of the Industrial Disputes Act. Mr. Justice Das, who delivered the judgment, interpreted the word "retrenchment" to mean only discharge of surplus labour or staff by the employer of an existing or continuing business for any reason whatsoever other than as "punishment inflicted by way of disciplinary action," and it had no application where the services of all workmen had been terminated by the employer on a real and *bona fide* closure of business, as in the case of the Dinesh Mills Ltd. or where the services of all workmen had been terminated by the employer on the business or undertaking being taken over by another employer as in the case of the Barsi Light Railway Company.

Mr. Justice S. K. Das further pointed out that, though a number of industrial tribunals had awarded compensation to workmen on closure of business, it was only by way of equitable relief for a variety of reasons, and not because "retrenchment" had acquired any special connotation. Moreover, if it had been the intention of the legislature to give statutory effect to those decisions which had awarded compensation on real and *bona fide* closure of business, it would have done so in as many words, instead of being merely content by adding a definition clause, every requirement of which was fulfilled by the ordinarily accepted meaning of the word "retrenchment." His Lordship also felt that it was reasonable to assume in enacting section 5F of the Act through an amending legislation in its last session, Parliament had only standardised the payment of compensation to workmen retrenched in the normal or ordinary sense in an existing or continuing industry. It will be pertinent to note here that, because the interpretation of the Bombay High Court was contrary to the intentions of the Government, the Industrial Disputes Act was amended a few months ago, in order to clarify the position. The judgment of the Supreme Court is, therefore, in keeping with what the authorities had originally in view. It is true that such an amendment to the Act would not have been necessary had the Government waited for the aforesaid decision of the Supreme Court. But several healthy amalgamations of companies highly beneficial to the community as a whole could not be effected, because of the interpretation of the Bombay High Court. Consequently, the Government thought it better to make its intentions clear by amending the Act.

EXPORT POLICY FOR OILS

The oil mill industry is very critical of the Central Government's policy governing exports of vegetable oils and oilcakes. Speaking at the recent meeting of the Export Advisory Council, Mr. G. V. Swaika, President of the Bengal Oil Mills Association, for instance, declared that the crucial difficulties of the industry were imperfectly appreciated by the Government, as witness the adoption of vacillating export policy. Such a policy, he pointed out, had affected the confidence of foreign buyers. Indeed, Mr. Swaika warned that India was losing its markets for oils and oilcakes in overseas countries.

The above criticism is not altogether unwarranted. The export trade in vegetable oils and oilcakes has suffered a distinct setback of late. The aggregate shipments of these during the first seven months of 1956 were only 107,047 tons and 27,452 tons, as against 234,771 tons and 96,226 tons, respectively, in the corresponding period of 1955. But the setback is due not so much to the Government's export policy as to the available supplies falling much short of demand—indigenous and overseas. The total output of oilseeds in 1955-56 is estimated at 5.60 million tons, which compares unfavourably with 6.24 million tons for 1954-55. Consequently, the production of oil has been at a lower rate. Reduced supplies thus in the wake of excellent demand from indigenous *vanaspati* interests and overseas purchasers has resulted in the spiralling up of prices. The index number of vegetable oil prices (Base: August 1939=100) now stands at 593, as against 382 a year before, representing a rise of as much as 55 per cent. It is not yet clear whether the output of edible oilseeds in the 1956-57 season will be large enough to meet the growing domestic demand and still allow a surplus large enough to permit liberal exports. It will be interesting to note here that, while the fall in the quantum of vegetable oil exports during the January-July 1956 period as compared with the same period last year is 55 per cent., that in value is lower by only 36 per cent. at Rs. 16.81 crores, as against Rs. 26.46 crores.

When prices of vegetable oils, or, for that matter, any other commodity, rise to dizzy heights, the Government has, naturally enough, to take steps to arrest the boom in commodity markets. Restrictions on exports, either through a cut in the quantum of exports or by way of an export duty, constitute an effective way of restraining the rise in prices. After all, the interests of the domestic consumer cannot be sacrificed too much for the sake of earning foreign exchange. It should not be forgotten, in this connection, that internal economic stability is as much important as attaining a balance in external trade.

That the Government has not been incorrect in deferring the sanction of an export quota for groundnut oil and groundnuts is borne out by

PRIME MINISTER'S FORTHCOMING VISIT TO UNITED STATES

ASSAM TO HAVE AN OIL REFINERY?

By A Special Correspondent

NEW DELHI, *27th November*

DELHI LETTER

ALTHOUGH the winter season continues to attract many foreign dignitaries, including the Buddhist divine, the Dalai Lama, in connection with the celebration of the 2,500th anniversary of Buddha's *parinirvana* in the capital, the economic interest for the present is focussed on the forthcoming visit of Prime Minister Nehru to the United States of America and the discussions he will be holding there with President Eisenhower and other responsible people. This may prove to be the turning point in the history of the world, particularly in that of underdeveloped countries. The significance of the Prime Minister's visit is, however, heightened by the contemplated visit of Mr. Sherman Cooper, former U.S. Ambassador in Delhi, in the next few days. It is already reported that Mr. Cooper has been briefed by President Eisenhower to have firsthand information about India's second Five-year Plan and its implementation. Mr. Nehru will have discussions with President Eisenhower not only on the controversial and political subjects but on many other topics of economic interest also. In fact, Mr. Nehru is bound to discuss with American statesmen the present world situation and its deeper significance, to many economic issues and impress upon the American President that, unless and until the leading powers in the world approach the economic problems in the right direction, the solution of political problems will continue to bristle with great and unforeseen difficulties.

In this connection, it is being frequently mentioned in Parliamentary circles here that the damage caused to the world economy by the recent closure of the Suez Canal will be much greater than originally assumed. They cite in support the assessment of the total cost of damage made by no less a person than Mr. Richard Casey, the Australian statesman with a keen knowledge of world affairs. According to his estimate, the average global loss due to the closure of the Suez Canal is of the order of £250 million a month. At this rate, if the Suez Canal closure continues for three months or more and there appears to be every reason to expect that the Canal would not be cleared before three months, then the total damage may well run into many more millions of pounds sterling. Besides this, it has been reported that, as a result of the blowing up of oil pipes in Syria, the economy of Iraq and other countries has suffered to a considerable extent. In France and the U.K., petrol has already been rationed and considerable damage has been caused to the refinery industry on account of inadequate supply of crude oil. If all these losses are computed in terms of actual sterling, then the total cost will be many times higher than the actual cost of financing the Aswan Dam, the failure to accommodate which by the leading powers of the world has led to so much dislocation in the world economy.

In other words, these economic problems that have been created as a consequence of failure to understand their implications in the proper perspective will continue to disrupt and disclocate world economy. It will also continue to maintain great imbalance in the living standards of the world, which is the primary cause of many "isms" in the world.

Foreign Exchange

It is in this context that Parliamentary circles are assessing the forthcoming visit of Prime Minister Nehru to the U.S. The crux of the present position in India is the fact that the crisis in West Asia and its aftermath would certainly cause a certain amount of dislocation in the implementation of the current Five-year Plan. As matters stand at present, the prospect of India earning more foreign exchange through increased exports does not appear to be very promising. It was only last week that the new Minister for Commerce, Consumer and Heavy Industries, Mr. Morarji Desai, had to defer the issue of customary export quota for raw cotton, groundnut and groundnut oil which used to be announced at this time of the year. Although his contention that exports of these commodities should not be encouraged so long as there is no increased production and the internal price level is not maintained at a particular level may be sound, the fact remains that the capacity of the country to earn the much needed foreign exchange will continue to be jeopardised in the coming few months. These commodities alone were responsible for earning a little more than Rs. 48 crores worth of foreign exchange last year and if no export of these commodities is at all to be allowed, there is bound to be a significant decline of India's foreign exchange earnings. It is obvious that exports of other commodities and manufactures would not be able to offset this loss of foreign exchange. It is, therefore, necessary for the Government to secure substantial sums of money from foreign countries either by way of loans or grants or through borrowings from the International lending institutions.

Within the last six months, it may be noted further, India has lost about Rs. 150 crores of its sterling securities on account of its adverse trade balance. If this state of affairs continues for some more period, India will have to curtail its imports not only of comparatively non-essential consumer goods but also of some essential industrial goods. But such cuts will endanger the rapid implementation of the second Five-year Plan.

It is the general belief here that when the former U.S. Ambassador, Mr. Cooper, comes to Delhi in the next few days and discusses with Government officials and other public men some of the problems connected with the implementation of India's second Plan, his attention will be drawn to this aspect of the matter. And it is the feeling in informed circles here that some tangible help to relieve the existing bottleneck of foreign exchange will be forthcoming from the U.S. in the coming months.

It may be possible for India to get a temporary loan from the International Monetary Fund; but this kind of approach will enable it only to tide over the difficulties temporarily. If a long-term solution is to be found, India will have to secure loans either from the World Bank or from the leading powers. The representatives of the Government of India have already had discussions with World Bank officials for getting loans for implementing India's development projects. Although it is stated that the World Bank has refused to make any firm commitments, it is felt that the Government of India will continue to get substantial sums of money in the coming years in respect of some specific projects. In the next two or three weeks, a number of experts from the World Bank will be visiting India, in order to have a thorough examination of the various development projects for which loans have been asked by the Government of India.

There is also a move in Government circles to secure a number of "Liberty" ships from the U.S. on a long-term credit basis. It is reported that the Government will ask for a dozen of such Liberty ships; but Parliamentary circles are of the view that the number of such ships should be increased at least to 30 or 40. In such a case, it will have a twofold effect, in the sense that not only India will secure ships on long-term loan basis but also that these ships will be earning sufficient freight by carrying cargo to foreign countries and thereby save the country a lot of foreign exchange which India has now to pay to foreign shipping concerns. Everything, however, will depend upon America's attitude to help India in solving its economic problems.

Comforting news has come from Assam stating that oil has been found in the Moran area which is somewhere near the Nahorkhatiya area where a number of oil wells have been sunk recently. Although the Minister for Natural Resources and Scientific Research, Mr. Malaviya, has stated in Parliament lobbies and elsewhere that India will be able to produce about seven million tons of crude oil in the Assam area alone, this has not been taken quite seriously. It is believed that at least about 4.5 million tons of crude oil can be produced from these oil wells in Assam and efforts are being made to establish a refinery in Assam as early as possible. The Chief Minister of Assam was here last week, when he had discussions with the Prime Minister and other concerned Ministries on this subject.

Oil in Assam

It is common knowledge now that Assam is keen on having the refinery within its borders, in order to improve its economic position. It would now appear that the Government of India has also been persuaded to accept this point of view. It is, therefore, quite likely that a refinery with a capacity of one to two million tons may be set up in Assam; and it is likely that another refinery will be set up in Calcutta also. It is understood that, during its discussions with M.Ps from Assam, the Committee set up by the Government for studying this question had put it to the members whether they would be willing to have another refinery established in Calcutta, as a big refinery could not be set up in Assam because of many limitations. The consensus of opinion among the Assam members of Parliament was that something was better than nothing.

This question is bound to come up before the National Development Council when it meets here on 8th and 9th December. Besides, the National Development Council will also discuss the progress report relating to the last year of the first Five-year Plan and the first annual plan of the second Five-year Plan now nearing completion. The entire Planning Commission is, so to say, busy with this work for the past few days and, according to present indications, these reports will be placed on the table of the Houses of Parliament in the next few days.

(*Concluded from page 1027*)

the fact that, despite this decision, the market for vegetable oils and oilseeds has been ruling firm again, after a momentary setback towards the close of last week. The present trend of world markets for these commodities also seems to be upward and, if internal price levels are not to be influenced by this external boom to the detriment of domestic consumers, something has to be done to keep the exports under check. Nevertheless, it is important, as Mr. Swaika rightly urged, that, as far as possible, a stable and long-term policy for export of vegetable oils and oilcakes should be followed. Mr. Swaika was also justified when he asked the Government to formulate the export policy on an annual basis, taking into account the crop situation. He, however, went too far when he averred that the policy should not be changed in the middle "even at some risk to maintenance of internal supply, the export being viewed on sacrifice principle."

In the course of his speech, Mr. Swaika put forward four other suggestions. These related to (1) abolition of export duty; (2) simultaneous announcement of export policy for oils and oilcakes; (3) regular quota for export of oilcakes, especially groundnut cake and copra cake; and (4) reservation of a suitable crusher's quota, especially for oil mills in West Bengal. While the last three suggestions deserve consideration, the plea for a complete withdrawal of export duty on oils and oilcakes is not fully justified. For export duties act as a barrier to importing inflation from abroad. To take the case of groundnut oilcake, for instance. At the time of writing, the price of this in the Indian market is ruling at Rs. 245-259 per ton, as against the foreign quotation of Rs. 493 (c.i.f. U.K. and Continent). When the difference between the two prices is so big, there is no reason why the Government should not take a portion as export duty. The present rate of duty, namely, Rs. 230 per ton, may, however, be very high. Considering the rise of 15 per cent. in freight charges lately effected by almost all the shipping companies, Mr. Swaika's plea for a reduction in the duty seems to have some force.

FIRE — MARINE — ACCIDENT

THE ROAD TO RUIN

SIR ANTHONY'S FOLLY

From Our Own Correspondent

LONDON, *17th November*

LONDON LETTER

THE Suez adventure which is unfortunately not yet at an end, has finished any prospect of tax relief at the end of the current financial year or of a favourable balance of payments. Indeed, not only is it certain that the favourable balance for the first six months will be wiped out, but the second half-year will show a deficit in invisibles which may well set the gold reserves down to an all-time record low.

The mystifying thing is that the country has not yet woken up to the full results of Eden's folly, and it is right to express it in personal terms, for the responsibility lies on him and the Chancellor of the Exchequer. The Cabinet were divided on the issue of the ultimatum to Egypt and Sir Anthony Eden got his way only by a bludgeoning use of his authority as Prime Minister. Yet, the Conservative Party in the House appears as capable of cheering disastrous consequences as it was of cheering the first news of strong arm measures.

But though the Prime Minister and the Government may as a result of that national sentiment embodied in the phrase "My country right or wrong" avoid being made scapegoats for the whole affair, the country will over the next few months steadily have to meet the bill.

Real Foreign Exchange Loss

This week's parliamentary debate has given an opportunity for some assessment of what this will be. It can be put under two heads. First of all the loss of revenue on Middle East oil and the loss on higher freights; secondly, the dollar cost of replacing oil. It is reckoned that the blocking of the Canal reduced by a third the total shipments from Persian Gulf ports and, since these normally amount to 6 million tons a month, the loss is some 2 million tons representing a net revenue loss, after allowing for costs and royalties, of some £10 million. The shipments from the East Mediterranean were at the rate of about 2¼ million tons a month and the loss here is again some £10 million. This is a real foreign exchange loss, since the expenses that are set off against the revenue will have to be incurred in respect of replacement oil.

The balance of Persian Gulf oil, some 4 million tons, will at the present mounting freight rates, cost perhaps an additional £40 million. This gives a net loss of revenue of £60 million. It is true that a large slice of this can be passed on to France and other European countries who are supplied with oil from the Middle East, and the U.K.'s share may thus be reduced to some £20 million. To this sum must be added the extra cost of Far Eastern and Australasian freights, perhaps £2 million, and the extra cost of the Suez operations over and above the budgeted cost of the Middle Eastern establishments. This is not likely to be less than about £8 million, thus giving a total of £30 million a month which may well continue over the next six months at a cost of some £180 million. That is the measure of the blow to this country's balance of payments.

Disastrous Price

So far, American replacement oil has not become available, but, assuming that 4 million tons a month can be shipped to Europe, it will only be at an *extra cost* of the order of £15 per ton, say, a total of £60 million a month. Again, the Continent of Europe will have to bear the greater part of this and the U.K.'s bill may be only $60 million a month or $360 million over the next six months. It is a disastrous price and it is as well to appreciate that France will find the burden equally heavy and all West European countries will have to suffer similarly.

But there is a third heading of cost which it is impossible to compute at present. The cost to industry of cuts in road transport services, (already the principal haulage organisation in this country is reducing its trips by 10 per cent.) and the cost in efficiency which a temporary reduction in fuel oil supplies will also bring. On top of that much be added the general disruption of import and export trade and the loss of goodwill in some of Britain's *and* France's export markets. For a rich country to have embroiled itself in a folly of this nature would have been difficult enough to understand, but for a country battling against inflation, struggling to keep down its import bill, struggling to raise exports and to build up its gold and dollar reserves, it is an action which the gloomy might suppose illustrated the classical dictum "whom the gods wish to destroy they first drive mad"!—*All Rights Reserved.*

• • • •

THE POLITICAL STORM

LONDON, *23rd November*

THE Government, by postponing the imposition of petrol rationing for one month, may have hoped to soften the blow. But, as each prospective cut in industrial and commercial supplies is revealed, so a growing sense of the disaster crushing down on British industry spreads through all sections of the population. It is not lessened by the frustration of garage proprietors compelled to operate a voluntary rationing system against a growing background of complaining customers.

Supplies of fuel oil to industry are to be cut 10 per cent. (this is operating already) and this affects all oil-fired heating systems. It also affects oil-fired furnaces in the steel and metal industries which are presumably bound to show a *pro rata* drop in output. Supplies of diesel oil are being cut 20 per cent. and the effect of this will be felt through all classes of manufacturing industry—probably more by the smaller firms. Road transport is being cut 50 per cent. and this is bound to affect supplies of materials to industry and the movement of goods to and from the ports. The effect on export trade is bound to be adverse, so that the general drop in output will be accompanied by a fall in exports.

Meanwhile, of course, stocks of oil are beginning to fall with the unloading of the last of the Mediterranean cargoes and no one can say whether the future holds a long-term or a short-term famine. The immediate overall cut in supplies is some 40 per cent., but apparently this will be reduced to 20 per cent. when the diverted Persian Gulf tankers reach here via the Cape. But the worrying aspect for industry is the continuance of the muddle—not knowing when and how it is going to end.

The sense of depression in the country, as the ineffectualness of the Franco-British adventure is realised, is making even Government supporters at last critical of their Government. On the one hand, the "Suez Group"—40 M.P.s who want a firm hand over the Canal—are threatening the Government against wavering; on the other, the rank and file are wondering where "firmness" is going to get them and the country. If the Government pleases the Suez Group by staying in Port Said till it has got "guarantees" out of the Egyptians, it will get no oil or dollars from America and the Canal will stay blocked. If it gives way and surrenders to the pressure of the United Nations, then the Suez Group may, in their fury, be prepared to pull the Government down, force an appeal to the country and hope that the Nation will rally behind an imperialist policy. Outside the group, there is no confidence in the Conservative Party that they would return to power and Mr. Butler has no intention of letting the Government collapse and of going to the country if he can possibly avoid it.

But Mr. Butler has to reckon with colleagues that want to maintain the firm front in Washington and his dilemma—in spite of his brave words indicating the unity of the Government and the rightness of its present policy—is real. Every week that passes with nothing to show but less and less oil, rising costs as industrial production falls, and a worsening payments balance, carries not only a strong message to Mr. Butler but to every industrialist in the country. He cannot go on in the face of growing disaster, doing nothing to avert it. And, in another month, the American loan payment falls due and the effect on the gold reserves at the end of December will be plain for all to see. Mr. Butler is too much of a realist to wish to pit the British economy against the United Nations—yet that is what is happening at this moment. Thus, incredible as it may seem, the Government is in danger and, only if it can successfully compromise with all the forces with which it is contending—internal as well as external—will it survive.—*All Rights Reserved.*

AMERICAN LETTER

IMPACT OF SUEZ CRISIS

CAPITAL MARKETS IN GOOD SHAPE

From Our Own Correspondent

NEW YORK, *15th November*

ALL markets in the United States reacted sharply to war threats arising out of the Suez Canal crisis and to the strike of longshoremen along the entire Atlantic and Mexican Gulf coast ports which handle substantially more than one half of all United States' imports, exports and sea-borne passenger traffic. Threatened Soviet intervention by "volunteers" in the Middle East raised the threat of war far greater than that in Korea. Whether the threats were idle remains to be seen. Nevertheless, the securities and commodities markets responded instantaneously.

Trading was indecisive. There was a good deal of hesitation in securities' investments, except those of a strictly domestic nature. In the commodities markets, sugar, which has long been an ingredient in the manufacture of munitions, rose sharply and the vegetable oil markets were also strong, another potential war ingredient product. Such developments make plain the great anxiety which is held here over the threat of war on a considerable scale. It remains despite the arrival of United Nations armed forces in the Middle East which is strictly a token exhibition and so far is not an effective striking or even a police force.

International Repercussions

Meanwhile, the blocking of the Suez Canal has also had international repercussions. The now necessary shipment around the Cape of Good Hope has produced the highest tanker freight rates since the Korean war. Britain had to cut its oil consumption by 10 per cent. and it is prepared to go further. Nobody here or elsewhere knows at this writing how extensive the damage to the Canal is.

The longer shipping time by the new route has resulted in a somewhat acute shortage of shipping space of all classifications. This was aggravated by the dock strike in the United States and has added to the uncertainties. The prospects of a settlement of the walkout are as yet uncertain. Therefore, the duration is impossible to predict at this time.

There has not been much advance buying in anticipation of the strike and a tighter inventory situation of some imported commodities may develop. Overseas orders and enquiries for such items as wheat, soyabeans and oil have been very substantial, but they are mostly for future delivery, beginning in December, by which time the strike should have been settled. However, it is not unreasonable to assume that the combination of Suez and the strike is to lead to a tighter supply situation and, thus, higher prices until the Middle East international waterway is reopened and the cumulative effects of the walkout here have been eradicated.

Tranquillity

Outside of that, the domestic American scene is one of tranquillity. The outcome of the elections has assured continuity of policy. The overall outlook is still the best, although some soft spots are developing. Private building is lower than last year both in terms of dollars and in units. This deficiency will be made up, however, by Federal and State spending for new projects. Automobile production is certain to be lower, aluminium output will be smaller and fewer shares will probably be traded than in 1955. The furniture industry suffered a sharp drop in shipments and there has been an increase in inventories, owing to lower sales.

These soft spots are not considered too serious, since employment and income remain at top levels and there is no reason to assume that they will drop. Bank profits, corporate earnings and dividends are higher than in many years and businesses of all sizes and descriptions are benefiting.

The savings level has also remained fairly steady, although the increase is smaller than in preceding years. Some experts have suggested for some time that there won't be enough savings to take care of capital needs. This is a relatively serious problem. Accelerated automation is becoming more expensive every year. Thus, the sinews to provide productivity are at a premium and the amortisation of old equipment is no longer sufficient to provide for the

LOK SABHA PASSES STATE BANK OF HYDERABAD BILL

MINISTER'S REPLY TO CRITICISM ABOUT BANK'S WORKING

AFTER a brief discussion the Lok Sabha passed, on 20th November 1956, the State Bank of Hyderabad Bill, which seeks to transfer the share capital of the Hyderabad State Bank to the Reserve Bank of India and to provide for its proper management and matters connected therewith or incidental thereto. The Bill was introduced in the Lok Sabha on 28th August last, but, for want of time, it was not taken up before the House adjourned for the winter session. In the meantime, an ordinance, named the State Bank of Hyderabad Ordinance 1956, was promulgated by the President on 26th September to provide for the transfer, in view of the fact that the reorganisation of States was to take place on 1st November, which was the main reason for the taking over of the Bank by the Reserve Bank, and in view of the fact that Parliament was not in session. The Bill, when enacted, will replace the Ordinance. The name and constitution of the Hyderabad State Bank were also changed with effect from 22nd October 1956, the "appointed day" for the vesting of its entire capital assets with the Reserve Bank of India. The Bank is now known as the State Bank of Hyderabad.

The Hyderabad State Bank was constituted in 1941 under the Hyderabad State Bank Act, with 51 per cent. of its share capital being held by the former Government of Hyderabad and the rest by private shareholders. The State Government has been enjoying certain powers in regard to the management of the Bank. Later on, after the integration of the State with the Indian Union, the Bank was functioning as the agent of the Reserve Bank for conducting Government business in the Hyderabad State. With the reorganisation of the States, the offices of the Hyderabad State Bank conducting Government Treasury work are distributed over three States, namely, Andhra Pradesh, Bombay and Mysore. In view of this change, it has been found necessary to provide for (1) the devolution on one single authority of the functions of the State Government of Hyderabad in relation to the Bank, (2) the more effective performance, by the Bank, of the Government business as agent of the Reserve Bank, and (3) the unified control and management of the Bank, in order to enable it to implement a programme of subsidised extension of banking facilities to the public.

Compensation

The Bill, accordingly, provides for the transfer of the shares of the Hyderabad State Bank to the Reserve Bank of India. The Bill also provides, under section 6(1), for the payment of compensation to the State Government and other registered shareholders of the State Bank for such transfer an amount calculated at the rate of Rs. 94-4-6 in Indian currency for each share of the face value of O.S. Rs. 100 equivalent to Rs. 85-11-6 in Indian currency. In the course of the reply to the debate on the Bill, Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, disclosed that, after taking into consideration all the assets and liabilities of the Bank, the Reserve Bank had estimated the assets of the Bank to be Rs. 129 lakhs. The compensation to shareholders would amount to Rs. 71 lakhs, which compares with the total paid-up capital of the Bank amounting to Rs. 64.28 lakhs and reserves Rs. 65.14 lakhs.

Section 6(2) of the Bill provides that, notwithstanding the transfer of the shares to the Reserve Bank under section 6(1), any shareholder who, immediately before the "appointed day," is entitled to payment of dividend on the shares of the Hyderabad State Bank held by him is entitled to receive from the Hyderabad Bank (a) all dividends accruing due on his shares in respect of any year which ended before the "appointed day" and remaining unpaid; and (b) dividends, if any, authorised by the Central Government in respect of any period immediately preceding the "appointed day" for which the Hyderabad State Bank has not declared any dividend. An official amendment to this clause was accepted by the House. Explaining the amendment, Mr. Guha said that the State Bank of Hyderabad, that is, the re-named institution, would not entertain the liability of any shareholders claiming a minimum dividend of 3 per cent. for any period for which the previous bank had not declared a dividend. He added that any dividend already declared by the Bank, but not yet paid, would certainly be paid.

The State Bank of Hyderabad, as it is now called, will, if so required by the Reserve Bank, act as agent of the latter at any place in India where it has a branch and where there is no branch of the banking department of the Reserve Bank for (a) paying, receiving, collecting and remitting money, bullion and securities on behalf of any Government in India, and (b) undertaking and transacting any other business which the Reserve Bank may, from time to time, entrust to it. Subject to the provisions contained in this Act, the State Bank of Hyderabad will carry on and transact the business of banking as defined under the Banking Companies Act 1949, and will engage in such one or more of the other forms of business as are specified under the Act. In fine, while the corporate character of the old Hyderabad State Bank is being retained, all the other provisions of the Hyderabad State Bank Act, 1350F, have been repealed and replaced by more suitable provisions in the present Bill.

An important provision in the Bill is that nothing in the State Bank of Hyderabad Act will affect the power of the State Bank of India to acquire the business of the Hyderabad Bank in accordance with the provisions of section 35 of that Act and, where the business of the Bank has been so acquired, the Bank will, on such acquisition, stand dissolved and the State Bank of Hyderabad Act will be ineffective.

During the debate on the Bill, one of the communist members from Andhra demanded an enquiry into the working of the Bank. He alleged that the senior executives of the Bank had advanced money running into crores, out of which at least Rs. 2 crores would have to be written off as bad debts. He reminded the Minister that even the Reserve Bank had, as early as 1954, drawn attention to what it called "certain undesirable features" in the working of the Hyderabad State Bank. In reply, Mr. Guha said that there had been some criticism about the working of the Bank and the Reserve Bank had to make some enquiry. But the member's remarks about the working of the Bank were somewhat exaggerated. It was not correct to say, the Minister added, that those who were responsible for "misdeeds" were kept in important positions in the Bank. He, however, said that action would be taken against those officials who were found guilty. The Minister also made it clear that the Reserve Bank was taking over the Bank, primarily because of the States Reorganisation.

Incidentally, a member asked when the other banks recommended by the Rural Credit Survey Committee would be taken over by the Government. The Minister replied that the entire share capital of the Saurashtra Bank and the Patiala State Bank had been subscribed by the former Saurashtra and Patiala Governments, respectively. As banking was a Union subject, there was some difficulty in these two former States running these banks. For the present, however, the Bombay Government would now run the Saurashtra Bank and the Punjab Government the Patiala State Bank. In the case of the remaining banks recommended to be taken over by the Government, the Minister went on to add, the State Governments were not holding a majority of the shares. The State Governments had not contributed a pie towards the share capital of some of them. Nevertheless, the Government of India had examined how far these banks recommended by the Rural Credit Survey Committee could be helpful for spreading rural credit, but had not come to any definite decision.

WARNING TO U.S. AGAINST INFLATION

The Organisation for European Economic Co-operation (O.E.E.C.) has warned the U.S. authorities to avoid the growth of inflation by prompt adjustments of monetary and fiscal policies. A study prepared by the Organisation points out that, while a steady rise in economic activity is desirable and necessary, the situation needs to be watched carefully, particularly that relating to certain items of consumer spending on durable goods, as inflationary forces could develop quickly and get out of control, if timely measures are not taken.

The course of fixed capital expenditure by private investors will have a decisive influence on the level of aggregate effective demand and economic stability requires that this should not be overextended. According to the O.E.E.C., there is ample evidence that business in the U.S. is increasingly undertaking major investment programmes on the basis of long-term considerations. Long-term programming is particularly encouraged by the anticipation of increased consumer demands from 1960 onwards as a result of the high birth rate during and immediately after the war. Although the long-term nature of these investments in itself imply some stability in expenditures, and are likely to be increasingly related to the development of new products and processes, there is still some concern that capital expenditure programmes have been speeded up too fast. And the disturbing element of the situation is the financing of these investments increasingly out of borrowings. In the U.S. this tendency has been particularly marked in recent times. For instance, whereas in the first half of last year business had to get from external sources less than 20 per cent. of the funds it required to finance new investments, in the first half of this year it had to get more than one-third of its needs for this purpose from such sources. For these reasons, the report says, continued monetary restraint, in order to encourage more orderly timing of the programmes, will probably prove necessary.

In its discussion of the U.S. foreign trade, the report draws attention to the strong European demand for imports from the U.S. since the beginning of 1955 and a significant increase in absorption by the U.S. of imports from Europe. While this is a welcome trend, a disappointing development, according to the report, is that the rise in purchases by Europe in the U.S. exceeded the latter's purchases or investments in Europe.

U.K.'s MONETARY POLICY CRITICISED

The United Kingdom's monetary policy came in for sharp criticism by Mr. T. Balogh, a distinguished British economist. Addressing the Institute of Bankers a few days ago, Mr. Balogh declared that, as monetary management had failed, there should be a return to "commonsense" methods of managing economic affairs. He said that, for the fourth time since the end of the war, Britain was experiencing a balance of payments crisis and the authorities were again caught unawares. Referring to the official policy, Mr. Balogh observed: "Their reaction to the crisis was not to eradicate the fundamental cause, namely, the insufficiency of productive investment relative to our most dangerous competitors, but to restrict credit."

He pointed out that, while the efficacy of higher interest rate as a device for cutting outlay was itself uncertain, the assurances of the Chancellor of the Exchequer and the Governor of the Bank of England that they would not permit a serious economic setback has paralysed the interest rate mechanism. Business men assumed that prices would continue to increase and saw no reason to expect a decline in interest rates. The situation had so developed that, far from regulating economic activity, interest became a cost to be charged against price. While there was no risk of a serious economic setback, this transfer of the incidence of the higher capital cost would be successful. He pointed out that "this fundamental change in the functioning of the mechanism has not been assimilated either by bankers or by economists."

COMMERCIAL BANKS AND RURAL SECTOR

CHANGE IN OUTLOOK NEEDED TO RENDER EFFECTIVE SERVICE

By Dr. M. H. Gopal
PROFESSOR OF ECONOMICS, FORD FOUNDATION, UNIVERSITY OF MADRAS

IN considering the rate of growth of commercial banks in India, some problems present themselves, specially in relation to the current economic climate of the country and the contemplated socio-economic set up. Below is outlined in brief one such problem which can be put in the phrase *Expansion in resources* vs. *flexibility in policy*. It raises the questions: What is the immediate objective of the country? What can commercial banks do to help realising it?

The story of commercial banking in India since the first Presidency Bank was started in 1806 has been marked, by and large, on the one hand, by the emphasis on the financing of trade and commerce, mainly in urban areas, accompanied by neglect of the financing of all-round economic development. Thus, even in 1951, less than three per cent. of the total advances of the Scheduled banks and a little over five per cent. of those of the non-Scheduled banks were for agricultural purposes, a substantial portion of which was to tea, coffee and rubber plantations. This assistance accounted for less than one per cent. of the cultivators' total borrowing. It was marked, on the other hand, by the emphasis on "safety first and profits most" maxim in preference to a constructive and enterprising policy. Some of the more prosperous banks—for example, the Imperial Bank of India—declared dividends varying from 12 to 16 per cent. since 1921, considering this rate as "prudent and conservative." (Chairman's address to the shareholders on 31st March 1955.)

These features are, no doubt, traceable largely to the nature of commercial banking itself which has specialised in certain types of business and deals traditionally with certain kinds of economic activity. Perhaps prior to the birth of free India, the accumulation of resources, the declaration of a high rate of dividend, the restriction of operations to short-term transactions and to towns, and sometimes even a conservative loan and deposit policy may have had a great deal of justification.

But the needs of the developing economy of today are different. A wider and more flexible functioning of banks and a closely integrated credit mechanism are essential. *Territorially*, an extension of banking facilities to rural areas, and *functionally*, a broadening of the sphere of action have become necessary. Such a change in approach demands a balancing of adequate flexibility with soundness in banking; of conservatism and prudence with dynamism and enterprise.

Capital Formation

This flexibility in outlook has many facets but I shall refer to only one, and that in relation to capital formation in the rural sector. The accepted economic policy of the country, namely, planned development of the mixed type, requires a high rate of saving and investment, which depend on thrift. To some extent, the State can, through taxation, enforce compulsory saving. But to a large degree, and if the unique treasure of individual freedom is not to disappear, voluntary saving through financial institutions is necessary and it is here that the commercial banks could play a significant role. As the Chairman of the Punjab National Bank told the 107th annual general meeting in April 1954: "We have to mop up the idle funds in the country, but, if there are no banks except in the cities and towns, much progress in this respect cannot be achieved . . . . Large funds are available in the rural and semi-urban areas which... are lost to the development of the country."

While all tools of inducing savings and all varieties of banks have to be harnessed to the maximum extent possible, commercial banks can help by reorienting their policy. No doubt, the rural areas are poor, and, therefore, have at present a low savings margin, but, in view of the growing attention to economic development in the countryside, deposits of the time and savings varieties may be attracted from the rural regions by an expansion of sound banking facilities. Thus, a progressive institution can open branches in taluq headquarters and market towns. Sustained propaganda of a truly educative character can popularise the savings habit by neutralising the effects of conservatism and illiteracy with regard to depositing funds in banks. Further, although the interest rates should not vary much between the urban and rural sectors, yet a new type of deposits similar to savings bank accounts, can be introduced. All this should be possible through the greater rationalisation of bank administration, in general, and of wage and salary structure, in particular, and through a little relaxation by the State of the existing restraints, such as the Shop and Establishments Act and the controversial Industrial Tribunal Awards.

Such a change in policy has to face some initial difficulties. It is almost certain that, in the early stages of such penetration of banking activities into taluq towns, the net operational return would be small and even negative; but, in the longer run, it is sure to pay its way. Moreover, even an institution motivated by profit should consider its overall position rather than that in a particular area or direction. This policy also demands a close understanding—much closer than what probably prevails today—among commercial banks in zoning out areas of operation, instead of duplicating their services. It also requires a broader and bolder approach by the banks in abandoning the traditional view of being merely a moneylending institution and purveyor of credit and in regarding themselves as one of the key services in national development.

Loan Policy

The commercial banks could also serve another purpose in the rural sector, and this in the direction of a loan policy. Whatever the advantages of these banks as savings-inducing agencies, there would still be three minor problems to be met: First, until the co-operative movement develops widely enough to finance agricultural operations on any appreciable scale, there would have to be an *ad hoc* arrangement. Secondly, the suggested commercial bank-co-operative society *entente* will take some time, effort and tradition to become effective. Finally, even if the co-operatives expand, they may not be able to satisfy all the financial needs of the farmer—the long, the intermediate and short-term ones.

In view of these considerations, the commercial bank-co-operative society partnership may assume another aspect. The co-operatives may specialise in long and intermediate-term credit, for which they are ideally fitted, and the commercial banks could carry on their short-term transactions, which is their chosen field in the urban areas today. There would thus be a twofold co-ordination between the banks and the societies in the collection and flow of rural savings as well as in the zoning of the loan policy. Such a division of function in deposits-*cum*-loan operations, would provide the banks with two facets of rural operations—savings, collection and short-term loans—and the societies, two others—intermediate and long-term lendings.

In addition to the short-term farm loans, the banks can provide, incidentally, another service, namely, exchange and safe deposits. From the farmers' point of view, they can give quick service; they are easily approachable and, if tactfully managed, they can provide the necessary confidence to the farmers which they most need in a country like ours.

In this connection, a recent controversy may be recalled. The 1954 Rural Credit Survey of the Reserve Bank of India recommended that the commercial banks should not be encouraged to extend their deposit-receiving activities in rural areas, whereas the Rural Banking Enquiry Committee of 1950 suggested that the banks should expand in the countryside. The Credit Survey's opinion appears to be based partly on the fact that short-term financing is largely of the movement and marketing of crops against produce which, in a subsistence economy, is limited in scope. The opinion is to a large extent related to the hope that the salvation of rural India lies in the co-operative movement.

Complementary Instruments

These premises are broadly true, except for two considerations. First, the contemplated economic development in the country and the growing contact of the village with the city are rapidly altering the subsistence economy into a market one, and the movement and marketing of goods as well as the monetisation of transactions are growing in importance. Greater facilities for remittance and short-term credit would very soon be needed, and the commercial banks have to step in. Further, the co-operative medium is a very desirable ideal, but its progress in the last fifty years and the lack of the basic conditions for its success, for example, education, loyalty to the society, business habits, etc., make the medium largely an ideal not realisable in the immediate future. While, therefore, the *ultimate* solution lies in co-operative institutions, the current need has to be met through commercial banks, and the moneylender. After all, in a planned economy, co-operative and commercial banks can be converted into complementary instruments by bringing about a more integrated credit structure.

Such integration requires State action as well as a great deal of understanding between the two kinds of organisations and particularly greater responsiveness from the commercial banks. The nationalisation of the Imperial Bank of India, along with the probable integration of some other commercial banks like the Banks of Mysore and Hyderabad, is a forestate of things to come. I am not concerned here with the ethics or even the economics of this decision. It is not enough to say, as the Chairman of the Imperial Bank did, that "it is difficult to see what justification there can be for an institution primarily engaged in commercial banking to be merged into a system of co-operative banking for the purpose of revitalising the latter or for expanding rural credit at the possible expense of commercial banking." (Address to the shareholders—31st March 1955.)

(*Continued on page* 1071)

RATIONALISATION OF TEXTILE INDUSTRY

ITS URGENCY AND IMPORTANCE

ALL those who oppose rationalisation of the cotton mill industry will do well to ponder the statement of Mr. W. T. Winterbottom, the newly elected President of the International Federation of Cotton and Allied Textile Industries, at a Press conference in Manchester on Monday, 26th November 1956. Mr. Winterbottom clearly warned that, unless the textile and other allied industries were kept up-to-date with modern machinery and modern methods, they would be faced with great danger of obsolescence. The industries, he declared, were on the edge of a new era of development in textiles. Rapid progress was being made in man-made fibres, new finishes were being adopted and important changes were taking place in machinery. Drawing attention to these developments, Mr. Winterbottom observed:

"The rate of advance at the present time is rapid and, looking back, we have gone a long way from the time when we were merely crude manipulators of raw materials. In the 1930's, our story was one of interminable discussions in all European countries of the problems of redundancy and surplus capacity in machinery, and something of the same kind has happened since the war. Now the position is different. Unless we can be up-to-date with modern machines and modern methods, the great danger we have to face is one of obsolescence. I am convinced that we should no longer waste time in considering, around conference tables, how existing plant can be reduced to meet demand. Obsolescence of existing plant, as new machines are developed, is going to take charge of that problem, and we shall have our work cut out to keep pace with the latest developments. No textile industry of any country can make progress without looking over its national boundaries. Our problems, our aims and our responsibilities are international."

This warning is, indeed, most timely and wholesome, especially so far as India is concerned. The domestic consumption of cloth is growing at a rapid rate and, if this upward trend is to be sustained, the consumer should be supplied with quality cloth at an economic price. It is this factor which imparts urgency to the need for applying technological developments to production of textiles. The need is no less imperative from the point of view of stimulating exports, what with the importance of foreign exchange to implement the series of schemes designed to augment the living standards of the masses.

Augmenting Consumption

Mr. Winterbottom struck a note of realism when he said that, in the long run, the future of the cotton and allied textile industries of the world could only be secured by an increase in the consumption of textiles, in general. Experience, according to him, is proving that the application of modern techniques of market research and sales promotion, allied to intensive efforts to improve style and design, can stimulate demand and develop new outlets. He was of the view that continuously increasing standards of living in all countries furnished new and larger markets for textiles. A comparison between national income and consumer expenditure showed that many domestic and foreign markets could be greatly expanded. To quote Mr. Winterbottom again: "Here lies an opportunity for the textile industries of the world to work together for their common benefit. Therefore, our International Federation is giving its full support and co-operation to all efforts to improve quality, style and design and to extend the use of market research and sales promotion."

In the opinion of Mr. Winterbottom, the advent of the new man-made fibres is a welcome development. It has provided the textile industries with a wider choice of raw materials and enables them to manufacture new and more varied products for their customers. A comparable advance has been made through the development of new finishes in textile fabrics, made from both new and traditional fibres.

Speaking about the work of the Federation, Mr. Winterbottom revealed that its activities covered all the present-day economic and technical aspects of the cotton and allied textile industries. The membership includes, we are told, trade associations from seventeen countries, including all the West European nations, the U.S., Egypt, and Japan. With its present structure, the Federation represents approximately two-thirds of the world's total cotton spindles and looms. It provides a forum in which the cotton and allied industries of the world can meet and discuss their common problems. Moreover, these problems are discussed in a non-political atmosphere, a point which is of the utmost importance, considering the outstanding problems which face the cotton industry today.

In the course of his statement to the Press, Mr. Winterbottom made a prominent reference to the efforts now being made at a high political level to create a common market for Western Europe. He welcomed the creation of such a market, since that, in his view, would benefit consumer goods industries like textiles. He averred that competition would be stimulated, a development that would inevitably accelerate the process of increasing efficiency in the textile industries of all the countries covered in the common market. Categorically declaring that there could be nothing unhealthy about it, he said: "No one would shun, because of extreme competition, what must surely become one of the world's most attractive markets. At the same time, the International Federation is especially fitted to see that competition is fair and that certain trading practices which could endanger the common market are not allowed to develop."

Competition

Mr. Winterbottom admitted that it was easy to exaggerate the possible dangers of excessive competition among the European countries. But he added that the present difficulties of these countries were caused by increased competition from newly developing textile industries outside Europe. He opined that the European countries would be in a much better position to meet this competition, if they were united in a common market.

Regardless, however, of whether or not the common market for Western Europe is created, the main task of the International Federation in the fnture, Mr. Winterbottom emphasised, would be to establish a balance between the interests of the cotton and allied textile industries in the traditional manufacturing countries and the industries in the newly developing areas, mainly those of the Eastern Hemisphere. Discussing the issue further, he made the following significant remarks:

"In this regard, the industrial and non-political character of our organisation makes its influence of exceptional importance. We have already welcomed the representatives of the Japanese textile industry to our councils and they have seen that our activities, even where directed, as I have already mentioned, to the intricate problem of processing imported cloth, are not unmindful of their interests. Solutions have been found and misunderstandings avoided. Still more is this necessary today when ideas of voluntary restraints on trade are being advocated. The Japanese industry has been asked by its Government to limit exports to the U.S.A.; the U.K. Government has asked the British cotton industry to seek from India a similar limitation on exports to the U.K. In both cases, great issues are at stake, G.A.T.T. in relation to Japan, Imperial Preference in relation to India. In both cases, Governments are activated more by national interest than by those of the cotton industry. It is right that it should be so, but it is also right that, as industrialists, we should see that our international organisation takes note of these developments and has them continually under review."

The sum and substance of Mr. Winterbottom's remarks are that there should be a mutual understanding between the textile industry of the developed countries and that of the underdeveloped countries about competition and the sharing of markets. The issue is by no means so simple as he makes it out to be. He is inclined to criticise the Governments, apparently of the underdeveloped countries, of being so narrow-minded as to be extremely nationalistic in their outlook. The impression that prevails in this part of the world about European, especially British, textile interests is that they, too, are taking a narrow view of their own business, when they ask countries like India to curtail their exports of cotton textiles to the U.K. and the Continent, instead of taking into account the broader issue of Indo-British or Europe-Asian trade.

POWERLOOMS IN BOMBAY

The decision of the Governments of Bombay and Punjab to introduce powerlooms in the handloom sector must be widely welcomed. The schemes of these two Governments have already been approved by the Centre, which has announced loans and grants amounting to Rs. 32.84 lakhs for the installation of 1,100 powerlooms in the current financial year, out of the 35,000 proposed to be introduced in the next two years. Of this amount, Bombay accounts for Rs. 19.09 lakhs (Rs. 17.52 lakhs loans and Rs. 1.57 lakhs grants) and the Punjab accounts for Rs. 13.75 lakhs (Rs. 13.32 lakhs loans and Rs. 42,750 grants).

The Bombay Government's scheme envisages setting up of 600 powerlooms in Jetpur, Wadhwan, Palitana, Junagadh and Jamkhambalia—all in the co-operative fold. The major portion of the loan received from the Centre will be utilised for the purchase of powerlooms and provision of share capital to the working members of the co-operatives and working capital for the looms. A sum of Rs. 2.79 lakhs will be provided for opening preparatory and processing plants. Half of this sum will be treated as loan and the other half as grant for meeting the recurring expenditure on the servicing of powerlooms.

In the Punjab, 500 powerlooms will be established during 1956-57, of which 125 will be in the co-operative field, the balance of 375 being given to individual weavers. It is proposed to set up a training-*cum*-demonstration centre, preparatory and processing plants, and workshops.

The readiness and the earnestness with which the Bombay and Punjab Governments have implemented the scheme of introducing powerlooms in the handloom, sector are certainly commendable. They are in striking contrast to the regrettable decision of the Andhra Government not to introduce powerlooms. The very economic structure of the handloom industry is, as this journal has ere now pointed out, defective. The industry being highly labour-intensive in character, not only is its rate of output low but its cost of production also is high. This is the basic problem of the handloom industry. It is to be hoped that the Andhra Government will retrace its steps and emulate the example of the Bombay and Punjab Governments. If, however, it refuses to do so, it will only be allowing the other States to march over it in the task of placing the handloom industry on a sound and secure footing.

INDIAN TEXTILES FOR INDONESIA

Press reports aver that negotiations among India, Indonesia and the U.S. are in progress for the conclusion of a tripartite agreement under which U.S. cotton will be used for the manufacture in India of textiles for supply to Indonesia. When concluded, this will be the second such agreement entered into by India, the first one being the Indo-U.S.-Burma textile pact. Indonesia is one of the traditional markets for Indian textiles; it now accounts for over 10 per cent. of the total quantity of mill-made piecegoods sent out of India per annum. Of late, there seems to have been a setback to shipment of cloth from India to Indonesia. During the first seven months of 1956, India exported only 28.80 million yards of cloth, as against 36.83 million yards in the corresponding period of 1955. The downward trend is in contrast with the marked improvement noted during 1955 when mill cloth shipments to Indonesia aggregated as much as 90 million yards, which compare very favourably with 33 million yards in 1954. In the same year, it may be noted, imports of cloth by Indonesia from Japan were substantially lower at 108 million yards, as against 284 million yards in 1954.

Simultaneously with the reports relating to the tripartite textile agreement comes the announcement of the withdrawal, with effect from 12th November 1956, of the Indonesian Government's import ban on cotton textiles and yarn. Reporting this development, the *Texprocil Bulletin* has advised the Indian exporters to contact their customers in Indonesia with their offers without delay. The *Bulletin* has urged the exporters "to be alert in offering quality goods at competitive prices," as the competition from China, Hong Kong, and East European countries such as Poland and Czechoslovakia is expected to be severe.

INDIA AND U.K. TEXTILES

The view that it will not be in the interests of the British textile trade in the present circumstances to seek a revision of the Indo-U.K. trade agreement of 1939 was expressed by Mr. Peter Thorneycroft, President of the Board of Trade, in the House of Commons the other day. The Indian duty on British cotton textiles, Mr. Thorneycroft said, was 25 per cent. *ad valorem* which gave Britain a preferential margin over foreign supplies of between 20 and 40 per cent; there was a small excise duty. He no doubt admitted that Indian cotton textiles were allowed to be imported into Britain free of duty, but made it clear that the trade agreement had to be judged as a whole. "Britain," to quote him, "does enjoy a preference of between 20 and 40 per cent. in this market (India) which is favourable from our point of view. I know there are wider issues involved and talks are to take place between the cotton textile industry in this country and in India. I think we should allow these talks to take place and see what the results are."

PRICES OF RAW COTTON AND CLOTH MOVE UP

HUNGARIAN REFUGEES TO BE EMPLOYED

From Own Special Correspondent

MANCHESTER LETTER

MANCHESTER, 20th November

IT is now nearly four months since the Suez Canal crisis first flared up, with repercussions which have re-echoed round the world. The effect of subsequent actions has intensified a movement set in motion by the original seizure of the waterway so that industry and commerce are still anxiously scanning the prospects and operating in a fog of uncertainty.

The development caught Lancashire at a moment when demand was already gathering weight and provided the basis for as startling a transformation in the textile scene as has taken place for many a year back. The sudden switch from virtual stagnation to active participation in a keen and increasing demand has created a fresh set of problems for spinners and manufacturers.

From searching desperately for orders many have had to turn their attention to looking for labour to restart idle plant. Memories of the post-war recruitment campaign to secure workers from European countries have been revived by the reported intention of some firms to offer employment to Hungarian refugees.

An Inevitable Consequence

An inevitable consequence of the confused events in the Middle East and the threat to shipping has been the rise in prices for the raw material and cotton goods, which has been particularly marked since the beginning of this month. The following table shows the general advance which has taken place over the period:

(In *d.* per lb.)

,, 16..	26.90	58.80	27.25	59.00	60.38	91.75	175.50

Quotations would in any event have been expected to harden as a result of the increased demand for textile products but the interruption in the free flow of supplies of Sudan cotton in particular has been sharply reflected in recent price movements. Difficulty in securing adequate quantities of cotton suitable for spinning the finer counts is already being experienced and occasional instances have been reported of mills with substantial orders on hand being idle through lack of suitable cotton.

Protest in Abeyance

Any form of representation to the Government by the Lancashire cotton industry on the subject of cheap foreign cloth imports is almost certain to be suspended until the Cotton Board mission returns from India and Hong Kong. This emerged at a conference in Manchester of 220 delegates representing cotton workers throughout Lancashire. The conference was called by the United Textile Factory Workers' Association to discuss progress in the campaign to persuade the Government to limit cloth imports.

Replying to suggestions for a monster petition to the Government, Mr. Lewis Wright, General Secretary of the Amalgamated Weavers' Association, said nothing could be worse at the present time when the Cotton Board mission was about to visit India and Hong Kong to say in the friendliest possible way, "This is our problem: What are you going to do about it?"

A few delegates favoured more "independent action" by the unions to exert pressure on the Government but Miss Alice Foley, Secretary of the Bolton Weavers' Association, urged: "It is time we behaved like sensible adults." She called for a policy of orderly concentration and the provision of compensation for displaced operatives. She pointed out Lancashire was losing trade to Sweden and Germany—countries with a comparable standard of living to ours. The Government could not be blamed for that and suggested that something was wrong with the industry. She added: "If we think we are going to build a prosperous, competitive industry with only 70 per cent. of our machinery working and mills scrambling for operatives, we are deluding ourselves."

Trading Results

The autumn revival which has rapidly turned the Lancashire cotton market from a buyers' to a sellers' province has come too late to make any sharp imprint on the results of textile companies which are now being announced. These figures must stand or fall by the experience of trading over a longer and less favourable period, when users were operating entirely from hand to mouth and business was spasmodic in the extreme.

From reports issued within the past week, however, the position of spinners continues to show a more encouraging aspect compared with other sections. For instance, the Directors of Crosses and Heatons Ltd., the Bolton mill group, have been able to report "reasonably satisfactory" trading during the half-year to the end of September. Order books, they say, are now longer than they have been for some considerable time. Another of the larger amalgamations, Combined English Mills, of Atherton, increased trading profits for the year to the end of September by £150,000.

An important factor in assessing these results is that 12 months has now elapsed since the "D" scheme was abandoned by the Government, being replaced by an all-round tax at a lower rate. This change has been to the benefit of those spinning and manufacturing firms concentrating on the finer qualities and there has been noticeable evidence that merchants have found the sale of top-grade goods broadening as a result of the reduction in tax.

Such conditions have failed to react favourably on the accounts published by Horrockses Crewdson & Co., the vertical textile concern which has been increasingly active in the fashion field in recent years. Despite lower tax charges, the need to provide £113,,000 for losses caused by falls in raw cotton prices against only £35,000, has resulted in the group declaring a net loss of £35,000 against profits of over £92,000.

Manchester Firm's Move

The century-old Salford textile manufacturing firm, Sir Elkanah Armitage and Sons, is to set up a branch factory at Barrow-in-Furness to produce cotton canvas and duck. The mill will also be capable of handling the newer textile fibres.

To move away from the traditional cotton manufacturing area of Lancashire will help to solve the firm's manpower problems. Mr. P. Gordon Armitage, Chairman, said: "Local conditions affecting this development are considered to be very favourable both in quantity and quality of labour."

Many Lancashire textile firms are finding it difficult to recruit the workers they require to staff idle machinery and nearly 6,000 vacancies for spinning and weaving workers exist. Barrow has more than a thousand out of work and the unemployment percentage of 3.7 is the highest in the north-west.

New Source of Labour?

Hungarian refugees are to be offered jobs in the Lancashire cotton industry. The world's biggest spinning group, the Lancashire Cotton Corporation, has told the Ministry of Labour it is ready to take 100 refugees at the outset and probably more later.

A spokesman of the Corporation's labour department said: "We shall take the Hungarians as trainees and settle them as we did with the European volunteer workers and Austrians."

The Corporation has been the biggest employer of foreign labour in the cotton industry. At the post-war peak 1,650 European workers found jobs in its mills. Now the total is about 500.—*All Rights Reserved.*

CLOTHING TRADE EXHIBITION

The first International Clothing Trade Exhibition will be held at Olympia, London, from 28th May to 1st June next year. Clothing manufacturers and makers-up from many countries are expected to attend. One of the chief features will be a display of the latest machinery for the clothing factory.

FREE WORLD COTTON STOCKS

SUBSTANTIAL REDUCTION ANTICIPATED THIS SEASON

A DISTURBING factor in the international cotton situation at present is the record carryover stocks at the beginning of the current season. Total world carryover on 1st August 1956 which is placed at 22 million bales (of 478 lbs.) is sufficient to feed the spindles in the free world for nine months. This is more than twice as much as the stocks held at the beginning of the 1951-52 season and exceeds the previous season's carryover by 1.4 million bales. It may be observed, however, that this gain in stocks is much less than had been anticipated. The reasons for this failure of stocks to rise as sharply as had been expected are: (1) a reduction in the production estimates for 1955-56, (2) an improvement in consumption and (3) an increase in net movement of cotton to the Soviet bloc. And it is precisely these factors which are likely to prevent the situation from deteriorating further.

Another noteworthy feature is that the entire increase in the stocks occurred in the United States, whereas, elsewhere in the free world, stocks virtually fell. In the United States, stocks have increased from 11.2 million bales to 14.5 million bales, which is the largest carryover on record, substantially exceeding the previous record of 13.0 million bales on 1st August 1939. The United States carryover of 14.5 million bales is more than 60 per cent. of the global stocks and about 80 per cent. of those held in all exporting countries. According to the United States Department of Agriculture, the staggering build-up in stocks resulted from a declining level of exports, attributable mainly to the maintenance of production in foreign countries, increase in the volume of sales of foreign cotton for export at prices below those in effect for U.S. cotton and anticipation abroad, particularly in 1955, that U.S. export prices would be reduced under an export sales programme. Thus, the United States, which exported 3.8 million bales in 1953-54 and 3.4 million bales in 1954-55, shipped only 2.2 million bales in 1955-56. In the case of other countries, exports increased from 7.2 million bales in 1954-55 to 8.9 million bales in 1955-56. Therefore, even though the volume of international trade in cotton in the 1955-56 season increased appreciably, the United States failed to share in the increase. The following table gives the distribution of the stocks held as on 1st August 1955 and 1956:

*Distribution of Stocks in the Free World**
(In million bales)

Location	1955	1956
United States	11.2	14.5
Elsewhere—		
United Kingdom	0.5	0.4
Continental Europe	1.7	1.4
Japan	0.4	0.4
India	2.4	1.9
Other net importers	0.3	0.3
Net exporters other than U.S.	3.3	2.9
Afloat	0.2	0.1
Total outside U.S.	9.3	7.4
Total free world	20.5	21.9

* Preliminary estimate.

The outlook for the current season, however, is not as gloomy as would appear from the facts mentioned above and the U.S. Department of Agriculture is confident that it would be able to reduce substantially its holdings of surplus cotton. It has predicted that world stocks on 31st July 1957 would be lower, with world consumption exceeding production for the first time since 1950-51 and that U.S. stocks may be down by about 2.5 million bales. This conclusion is borne out by a study of the stock position outside the United States and trends in consumption. According to the Department of Agriculture, stocks of old crop in foreign exporting countries are practically exhausted and stocks in nearly all importing countries are at or below the level usually considered as minimum working requirements. For instance, stocks on 1st August 1956 in Continental Western Europe are estimated to have been 1.4 million bales, as compared with 1.7 million bales at the beginning of the previous season, while the United Kingdom had a carryover of 0.4 million bales, as against 0.5 million bales on 1st August 1955. In Japan also, there has been a reduction in stocks. Another encouraging factor is the trend of consumption. Cotton consumption last season set a new all-time record. For the free world as a whole, it rose to 28.5 million bales, an increase of some 900,000 bales as compared with the 1954-55 season. The following table gives the estimates of consumption for the 1955-56 season as compared with that for the two previous years:

Consumption Statistics
(In 1,000 bales)

	1953-54	1954-55	1955-56*
United States	8,576	8,841	9,202
Other countries	18,270	18,788	19,288
Net importing countries†	11,198	11,001	11,034
U.K.	1,834	1,761	1,550
W. Europe	5,471	5,519	5,502
Japan	2,441	2,142	2,340
Others	1,452	1,579	1,642
India	3,990	4,120	4,300
Net exporting countries	3,082	3,617	3,954
Total free world	26,846	27,579	28,490

* Partly estimated. † Excluding India.

Consumption in the United States was 9.2 million bales, an increase of nearly 400,000 bales, as compared with 1954-55. As will be seen from the table, aggregate consumption outside that country is estimated at about 19.3 million bales or an increase of over half a million bales. Consumption in net importing countries remained at the previous season's level of 11 million bales. A noticeable decline in consumption in the United Kingdom was matched by a corresponding increase in Japan. In Continental Western Europe, it remained at 5.5 million bales. There was a decline in France and Italy and in some smaller countries but this was offset by an increase in the Federal Republic of Germany. Significant increase was also registered in Mexico, Brazil, Egypt and Canada.

Consumption in India, as is well known, forged further ahead and rose to 4.3 million (Indian cotton only) bales in 1955-56. In contrast to Western Europe and Japan, the increase in India has been continuous over the last six years and further increases are anticipated in the current season also. An impressive gain was evident in Pakistan also, where consumption is estimated to have risen to 800,000 bales, which, on the basis of the present *per capita* consumption, makes that country more or less self-sufficient in cotton textiles.

The major part of the increase in consumption in the free world in recent years occurred outside the traditional textile manufacturing centres, namely, in net exporting countries. This was true last season also. Consumption in net exporting countries, outside the United States, increased by 300,000 bales, but the increase was not as large as in the previous season. The increase in consumption in Asia since the end of the war has been continuous and quite spectacular. Consumption roughly doubled in the last 10 years and, in contrast to the pre-war period, Asia now consumes much more cotton than Western Europe.

The above analysis has certain implications to consumption prospects for this season. In the traditional cotton textile areas, cotton consumption appears to be held in check by competition from synthetics and a disinclination, on the part of consumers, to use rising incomes to buy more cotton textiles. Year-to-year fluctuation seems to be mainly a matter of business conditions in the textile industry and it appears that this season's outcome will largely depend on this factor. On the other hand, there is a sustained rising trend in consumption of cotton in the underdeveloped countries, where incomes are low, populations often are large, and *per capita* cotton consumption is still substandard. Prospects for the world this season will depend in no small degree on how strong is the rising trend in Asia and Latin America. If there are no untoward developments which might affect their economic expansion, there is every reason to expect the trend to gather momentum.

In Western Europe, barring any down turn in the general level of economic activity, significantly lower and possibly more stable raw cotton prices are factors which count in the consumption outlook for this season. To some extent, the failure of consumption to expand in recent seasons has been a sequel to the increased self-sufficiency in the underdeveloped countries. Since there is no indication at present of a reversal of this trend, no spectacular rise in consumption is likely.

Taking all the factors mentioned above into consideration, the Agricultural Marketing Service of the U.S. Department of Agriculture believes that it will be able to export more cotton this season and bring about a sizable reduction in its carryover stocks. The unprecedented success of the new export sales programme—C.C.C. sales aggregated 5.6 million bales as on the 16th of November—has further strengthened the hope. The Department also believes that the quantity of cotton consumed in the U.S. in 1956-57 will be close to 9.2 million bales, same as last year. The factors that engender this expectation are the lower support prices and high level of consumer income. The Department is, however, not unaware of certain limiting factors such as the build-up of cloth inventories and increased production of synthetics.

SUDAN COTTON

The latest estimate of Sudan cotton for the 1956-57 season places the current year's crop at 620,400 bales (of 400 lbs. each), as compared with 525,800 bales during the last season. The total area under cotton is estimated at 725,153 feddans. The following table gives details regarding area and yield:

	Estimated yield (In bales of 400 lbs.)	Acreage (Feddans)
S G B 'B' variety	121,900	115,115
S G B 'L' variety	172,000	130,244
A L/W L	21,000	20,104
Private Estates	166,500	141,600
Gash (K S and K L)	42,500	70,000
Tokar	43,000	97,000
Americans	45,500	151,000
Total	620,400	725,153

The expectation is that, of the estimated production of 620,400 bales, 562,500 bales would be long and extra long-staple cotton, as compared with 490,000 bales in 1955-56. Production of long-staple cotton in the Sudan has been on the increase since 1952-53, in which year it was only about 420,000 bales.

ANNUAL MEETING OF KILLICK INDUSTRIES LIMITED

CHAIRMAN, MR. E. D. SHEPPARD'S SPEECH

MISCONCEIVED NOTIONS ABOUT PRIVATE SECTOR DISPELLED

THE Ninth Ordinary General Meeting of Killick Industries Ltd. was held in Bombay on 27th November 1956. Addressing the shareholders on the occasion, Mr. E. D. Sheppard, Chairman of the Company, drew attention to the process of distortion which had set in seeking to identify the term "private sector" with something that is anti-social and anti-national. He said that there was nothing private about the units which constitute the so-called "private sector," particularly after the passage of the Companies Act.

The following is the full text of Mr. Sheppard's speech:

"GENTLEMEN,

"You will recall that, during the course of the speech which I made last year at this meeting, I attempted an analysis of the political and social thinking prevailing in the country in so far as it affects the formulation of economic policy. As a conclusion from this analysis I suggested that there was no alternative to the coordinated efforts of both the State and free enterprise, and that, in order to achieve as quickly as possible a better life for all in India, the fullest advantage must be taken of the contributions which each system is best capable of making. In effect, this implied the application of 'mixed economy' or, as I would prefer to call it, of 'joint endeavour'.

"Since then, the Avadi Session of the Congress Party has decided that the economic development of the country is to be directed, towards the achievement of 'a socialistic pattern of society'. Various policy pronouncements and Acts of Parliament which have followed in the wake of this decision give the impression that it is to be implemented by a process of establishing uniformity and an official discouragement of incentives or individual gain. Indeed, the thoughtful mind cannot help but feel the strongest misgivings that, if it is along these lines that the socialistic pattern is to be pursued, it will eventually lead to frustration, and the belying of the hopes for a fuller life which so many millions of people have pinned on it.

"In a recent article entitled 'The Dynamic Society', a leading economist has dubbed the philosophy which forms the basis of this type of economic thinking as being 'like a dog in a barnyard. It cannot lay eggs itself and it will not let the hens do so'. This writer points out that when men are not allowed to strive for their dreams and to enjoy the fruits of their strivings, they consume everything they produce from day to day and so make it necessary for the State to force them to abstain, in order to save and build tools for the future.

Carrot and Stick Theories

"The same economist points out that there are two methods by which the economic donkey can be propelled forward. One is to offer him a carrot and the other is to beat him. In both the cases, the result is forward movement. Similarly, there are two dynamic economic systems prevailing in the world today. One is that of free enterprise, or development through individual incentive, and the other that of the authoritarian State and its methods of compulsion.

"We, in India, have rejected the stick theory and the concept of the authoritarian State as being alien to the traditional Indian way of life. Can we not, therefore, accept as a nation the logical corollary of introducing the carrot in its stead? We are not prepared to accept interference with our political freedom, or with such matters as the freedom of speech, and of the Press; why then should we take a completely different stand in relation to economic freedom? In this sphere people who would resist to the utmost limitations being imposed on their social and political rights, accept without murmur controls over such matters as production, profits, wages, and prices, and feel that it is perfectly reasonable for Government to regulate them. In my view this is an inconsistency which could lead to a frustration of the national economy.

"The terms 'capital' and 'capitalist' have over a period of years been misinterpreted and distorted so much that in the public mind they are now associated with systems which are completely at variance to their real activities. 'Capital' is widely identified with an undesirable concentration of power and the accumulation of personal wealth, rather than what it, in fact, is, namely, the savings of people which have been created by hard work and self-denial and which are thus available to start more good things growing. Now a similar process of distortion is in being which seeks to identify the term 'private sector' with something that is anti-social and anti-national. 'Private sector' is a term which is at variance with the system which it purports to describe. There is nothing 'private' about the finances and accounts of the major industrial units existing within the so-called 'private sector'. These units of free enterprise are as public as they can be. They are subjected to continuous and close audit, and are available for scrutiny to a wide range of people. The goods which these industries produce and the products which they market are sold only because there is public requirement for them and at a price which this public is prepared to pay. Shareholders of these so-called 'private sector' units, in fact, represent a wide cross section of public society. The recent passage of the new Companies Act into law has stripped the last vestige of even legitimate privacy from these joint-stock companies.

A Misnomer

"Furthermore, the tendency to associate the 'private sector' with the relatively few major corporate industries is itself quite wrong. The truth of the matter is that the so-called 'private sector' consists of all business activity and commercial endeavour except those few units which are operated and owned by the State. The vast range of these business and commercial interests varies from the largest industrial concerns, on the one hand, to the small shopkeepers carrying out their day-to-day trade in the bazaar, on the other, and it is all these who are denoted by the misused term 'private sector'.

"If it is necessary, as it apparently is, to differentiate within the mixed economy between those activities which are State-controlled and State regulated, on the one hand, and those which operate through the initiative of individuals, on the other, then I would suggest that a more accurate description of the two sectors would be to rename what is today called the private sector as the 'People's sector' and the public sector as the 'State sector.' Such renaming would, I feel, go a long way towards removing the unfortunate and erroneous association of ideas in the minds of the public regarding the structure of free enterprise.

"We hear also a good deal of talk these days by socialistic planners of the desirability for increasing co-operative societies. I submit that a joint-stock company is nothing but a co-operative society in the fullest sense of the term. Its capital is created by co-operative faith in its venture, its direction is provided by those who reflect in their persons co-operative choice, its factories are worked by co-operative endeavour and finally its products are sold only if there is co-operation from the consuming public. The doctrinaire socialist, who suppresses or distorts facts that do not fit in with the theories that he has imbibed during his student days, tends to brush this argument aside with the remark that a handful of shareholders cannot be described as a co-operative society. To meet this contention, I think, it will interest you to know that in the major industries in India the ratio of shareholders to workers employed is approximately as follows:

Steel	...	1 shareholder to 1 worker
Cement	...	1 shareholder to 1 worker
Textiles	...	1 shareholder to 2 workers
Electricity		10 shareholders to 1 worker

"Surely, the logical result of a dispassionate appraisal of all the facts is that the existing policy, namely, that of a constantly increasing State sector, and, by implication, a proportionately smaller people's sector, should be exactly reversed and the best interests of India would be served by the State doing only those things which the people cannot do by the exercise of their own initiative and judgment in the arena of the world market place. Can any Government truthfully say that it knows this market place better than its people know it?

"On the subject of the use of terms which come to have a meaning foreign to their purpose, one must also comment on the 'classless society' so much in current vogue. Inasmuch as this term denotes a society from which has been banished hereditary privilege and unwarranted opportunity, and means the creation of a social organisation to which each one is entitled to contribute on merit alone, its implication can only be welcomed. Unhappily, this is not the concept that is meant by those who so constantly refer to it. The type of 'classless society' which these people appear to have in mind is one in which all men are dragged down to a level of uniform poverty.

Legislative Action Will Not Succeed

"Such a society must, of necessity, be a third class society. Any deliberate attempt to abolish a class by taxation or any other legislative means will never succeed in abolishing 'class'. For, in the vaccum so created, an official bureaucratic aristocracy would emerge at once. What it would achieve would be to abolish variety, character, and those inspirational gifts which alone save a country from colourless uniformity. It is the personal vision and the difference between people that count and help towards the making of a nation. This difference of outlook must inevitably express itself in a search after varying environments. 'Class' is not a matter of money and still less is it one of social ambition. It comes from the free exercise of choice in culture, environment, and the differences which life has to offer; it cannot be 'ironed out' for the human soul does not lend itself to the process of laundry.

"It is interesting to note the revulsion which has appeared in England against the dose of doctrinaire socialism that was injected into the economic system of that country for the five years immediately after the last war. In practice socialism has meant the creation of huge irresponsive public corporations and the extension of bureaucracy. Nationalisation has not succeeded in changing the lives of the workers but has only added to the steady concentration of power in the hands of official classes. Trade unions have became the strongholds of restrictive practices, limiting not merely industrial output but, far more important, liberties of individuals and those of minorities. It has become very clear to me that what people want is, as far as possible, to be allowed to choose from a bigger selection of things—material and spiritual. The way to satisfy them is not to cut down to a common size every one else's choice. That is precisely the way to deprive the community of the flexibility, the diversity, and the incentives upon which the policy of plenty and a dynamic society must depend. The right way is to create incentives that lead to an increase in the total national product and thereby level upwards and not downwards.

Plight of Middle Class

"I would like, during the course of my talk this afternoon, to deal especially with the plight of the middle class of our country and the constantly increasing bleakness of the future which faces it.

"That the middle classes are depressed, that they are being destroyed by taxation and the high cost of living, that some Finance Minister of the Government of India must do something about it—and that none ever does; these are the truisms which have been with us ever since 1947.

"What is this middle class and whom does it comprise? I would suggest that it embraces all those people who work with their brains and derive their income from salaries and professional fees or from the active management of property, those who do most of the organising and creative and inventive work from which the nation gains its vitality. The spread of this class stretches from the clerk and salesman, at one end, to business executives and professional men, at the other. The thread which unites them is social rather than financial. The contribution which these people make come from intelligence, character and example. For the most part they do not clock in and clock out for eight hours a day, but are always on duty. They are compelle

"GUR" AND "KHANDSARI" IN SECOND PLAN

FIRST PHASE OF DEVELOPMENT PROGRAMME APPROVED

IT is surprising that the Government of India should have taken as many as seven months to give the green signal for implementation of a development scheme for the *gur* and *khandsari* industry in twelve States during the current financial year (1956-57). The scheme envisages training of 450 workers from different States at the Central Training Centre, Kanpur, construction of improved furnaces, organisation of co-operative societies and grant of subsidy for implements, as well as for the introduction of efficient juice clarification, packing and grading. The Union Production Ministry has sanctioned grants and loans amounting to about Rs. 25 lakhs for implementing the scheme. In addition to this amount, over Rs. 4.4 lakhs are given as grants by the Centre to several States for the purpose. Now that only four months are left for the year to close, it is highly doubtful whether the States will be able to spend even this modest amount.

The above scheme is only the first phase of an ambitious programme of development drawn up for the *gur* and *khandsari* industry under the second Five-year Plan. The industry accounts for an aggregate outlay of as much as Rs. 7.0 crores which represents over 18 per cent. of the total outlay of Rs. 38.8 crores earmarked for village industries. In addition to this, a sum of Rs. 5 crores has been earmarked for the development of the palm *gur* industry. The provision made in the first Plan, it will be recalled, was a bare Rs. 1.0 crore. As in the first Plan so also in the second, the development programme aims primarily at improving the level of technical efficiency through the introduction of better equipment and processes. This is only as it should be, considering that the present process of *gur* and *khandsari* manufacture involves much waste. It is calculated that the sugar recovered from cane crushed for making *gur* and *khandsari* is only 6½ per cent., as against 10 per cent. obtained when it is crushed in factories for making white sugar. In other words, the loss of sugar is of the order of 40 per cent.

Loss for the Country

On this basis and taking the average price of sugar at about Rs. 700 per ton, the net loss for the country as a result of utilising the cane for the manufacture of *gur* and *khandsari* may be estimated at approximately Rs. 80 crores. This estimate has been arrived at as follows:

(In million tons)

Total output of sugarcane during 1955-56 ...	57.75
Less—15 per cent. used for chewing and planting purposes	8.46
Net supply available	49.29
Cane crushed in factories for making white sugar	18.68
Cane crushed for producing *gur* and *khandsari*	30.61

It will be seen from the foregoing figures that the bulk of the sugarcane grown in the country is used for making *gur* and *khandsari*, the actual share being as much as 53 per cent. The target of sugarcane production to be hit in 1960-61 is fixed at 78 million tons, a rise of 20 million tons as compared with the output in 1955-56. Excluding the 11.7 million tons used for chewing and planting purposes and 25.0 million tons to be crushed by factories for making white sugar, the balance of 41.3 million tons will be utilised by the cottage sector for producing *gur* and *khandsari*. It is thus evident that this sector will continue to be the most important means of sugarcane disposal. Incidentally, it may be noted that, as it is, the *gur* and *khandsari* industry provides direct employment to about 2.1 million persons on a seasonal basis and to 70,000 on a whole-time basis in the rural parts. The aggregate value of production is estimated at Rs. 100 crores, if not more.

In the development programme for *gur* and *khandsari* industry, the Planning Commission has done well not to lay too much stress on the quantitative aspect of expansion. For the scope for any appreciable expansion in the consumption of *gur* and *khandsari* is very limited. With the improvement in the living standards of the masses in the coming years, the enlarged consumer demand for sweetening agents is bound to be in favour of white sugar, rather than either *gur* or *khandsari*. In fact, a rise in the standard of living will, as the Planning Commission has rightly pointed out, almost certainly be accompanied by a continuous shift in the demand from *gur* and *khandsari* to sugar. The shift in the next five years is expected to be of the order of 185,000 tons. On this basis, the estimated requirements of *gur* and *khandsari* may be placed at 3.63 million tons, or 60 per cent. of the anticipated total domestic consumption of 6.05 million tons of all the three sweetening agents; the balance of 2.42 million tons represents the consumption of white sugar. Moreover, the industry offers relatively small and unimportant opportunities of additional employment. The programme, when fully implemented, is expected to provide whole-time and seasonal employment for just 25,000 more persons.

Handicaps Must Be Removed

Considering the crude and wasteful methods of *gur* manufacture, the unorganised nature of the industry, and the lack of modern facilities for stocking, transporting and marketing, it is, indeed, imperative that energetic measures should be taken to remove these handicaps. Otherwise, there is no chance of the quality of the products being improved and cost of production reduced. The Planning Commission has fully recognised this aspect, as witness its statement that efforts will be focussed on the technical side, on the introduction of power-driven crushers and improvement of pans and furnaces, and on the formation of *gur* producers co-operatives, with a view to dealing with the problems of improving the keeping capacity of *gur*, proper storage, packing and standardisation of quality. As for the *khandsari* sector, efforts will be directed mainly to research and improvement of technique. The possibility of adopting the vacuum pan process on a decentralised basis for the manufacture of *khandsari*, will, it is said, be investigated.

Of all the rural industries, *gur* and *khandsari* are perhaps the most complicated, so much so that the mere introduction of improved appliances, suitable clarificants and better types of furnaces will not solve the problem. There is a technique in every process which has to be thoroughly understood and sufficiently practised. It is this factor which imparts urgency to the need for imparting training to workers, so that operations can be performed with care and precision, in order to obtain maximum results. Further, since *gur* has great food value, it has to be properly graded and sold with suitable packing for being popularised among the middle and high income group of people. The Government of India has accordingly decided to open a number of grading stations in the States. These stations will enable the *gur* producers to reap the benefit of better quality output graded according to statutory rules. The Government has also decided to give subsidies for encouraging cane growers to use improved implements as well as for developing the *gur* industry by other means such as use of efficient juice clarificants, packing and grading.

WORLD SUGAR

Further official details of the deliberations of the International Sugar Conference held at Geneva recently are now available. These reveal that, besides accepting amendments to the World Sugar Agreement, the Conference adopted four resolutions, of which information about two is available. One of them aims at the promotion of increased sugar consumption and new uses for sugar, and recommends that the International Sugar Council should consider the establishment of a permanent committee for this purpose. The other resolution is concerned with the possibility of Japan having to import, in exceptional circumstances, more from exporting countries than their quotas under the Agreement would allow, and requests the Council to consider, as far as possible, any request from the Japanese Government in these circumstances.

COAL SHORTAGE IN EUROPE

E.C.S.C. TALKS WITH BRITAIN

THE Organisation for European Economic Co-operation is making every effort to meet the prospective fuel oil shortage in West European countries by voluntary cuts in consumption and by entering into negotiations with the U.S. for additional supplies. In the meantime, the European Coal and Steel Community is seized of the problem and its repercussions on coal supplies to the members of the community. As it is, the consumption of coal by the six nations of the E.C.S.C. exceeds their production and this shortfall is made up by imports. The prospective shortage of oil has, therefore, made the problem of coal shortage in these nations more acute, as there will be a distinct move to substitute coal for oil.

One of the solutions to this problem suggested by the Belgian Government is that both oil and coal should be made subject to an international allocation scheme. It is contended that it would be pointless to adopt the allocation scheme to one fuel, without extending it to the other. In fact, the Oil Committee of the O.E.E.C. has suggested the introduction of such a scheme for oil and this is being studied by the countries concerned. There is, however, some opposition to the introduction of an allocation scheme for coal, as it is feared that it would mean the declaration of a state of shortage by the High Authority of the E.C.S.C. and the implementation of its emergency powers. The High Authority itself has so far been reluctant to introduce a coal rationing system. It is, however, suggested in some circles that the High Authority may be forced by circumstances to do so, as a result of the fuel shortage following the closure of the Suez Canal. It is stated that of the oil imported by the six countries of the E.C.S.C., 47 per cent. comes through the Suez Canal and 27 per cent. through the pipelines of the Iraq Petroleum Company, which are now cut off.

Aggregate Coal Output

The aggregate coal production of the six nations of the E.C.S.C. during 1955 was 246.4 million tons, while consumption amounted to 262.6 million tons. The shortfall was met by withdrawal of 3.2 million tons from stocks and net import of 13 million tons from outside countries (including gross imports amounting to 16 million tons from the U.S.). During the current year, production up to the end of October is up by 3.4 million tons, but the demand also is said to be on the increase. Imports from the U.S. have steadily increased from 5.9 million tons in the first quarter of the year to 6.8 million tons in the second quarter and 8.6 million tons in the third. In the current quarter, imports from the U.S. are expected to go up further to over 10 million tons, on account of the decline in production in Belgium resulting from loss of labour after the pit disaster in Marcinelle. In all the countries of the Community, demand is pressing on the available supplies.

The opposition to rationing of coal supplies is mainly based on the fact that supplies can be increased by raising imports from the U.S., if necessary, to 50 million tons per annum. The one possible effect of enlarging supplies from the U.S. is that it may lead to inequitable prices among the member-countries of the Pool, if Germany, France and Belgium keep the cheaper coal for themselves and the Italian, Luxemburg and most of the Dutch markets are supplied with the costlier U.S. coal. Some of the coal producers are confident that they can, if authorised, make a fairer and more flexible supply arrangement than is possible by an official allocation scheme. According to them, the shortfall in Belgian output is of the order of only 2 to 3 million tons per annum and this can be partly made up with the help of Hungarian labour now available. Even if the industries now using fuel oil convert their equipment to the use of coal, their annual consumption will not be more than 6 million tons. It is, therefore, argued that the immediate needs can be met by increasing the import from the U.S.

No Export from U.K.

The Continental countries feel that, in view of their willingness to join in the collective effort to overcome the shortage of oil, Britain also should contribute to their effort by increasing supplies of coal to them. Britain does not favour this idea, as an increase in the export of coal to Europe would have to be offset by imports from elsewhere. Such a step is considered a less economic proposition, apart from the extra foreign exchange cost to Britain, than importing the extra coal needed by the European countries direct from the U.S. Britain's short-term position is, however, considered much stronger than that of the Continental countries. Stocks in Britain now amount to 23 million tons, equivalent to 10 per cent. of a full year's consumption. There is also a view in Britain that the position is not so tight in the European countries as is made out. Technical experts are of the opinion that the changeover from oil to coal in industries has got only a limited scope and that, therefore, the coal shortage is not likely to be aggravated. The substitution would it is estimated, mean an additional annual consumption of 5 to 6 million tons in both Britain and the E.C.S.C. countries. This represents only one per cent. of their total annual consumption of about 500 million tons. It is also considered that the changeover from oil to coal in the case of steel plants would take at least six months.

The problem was, however, discussed by the Council of Association between Britain and the European Coal and Steel Community at a two-day meeting in London a few days back. It was finally agreed that the U.K. was not in a position to export coal to other European countries. The Council also agreed that the U.K. Government and the High Authority of the E.C.S.C. should keep in close touch with each other, in order to arrive at a united view in dealing with any worsening in the situation that might arise. The U.K. Government would appear to be anxious to co-operate as fully as possible with Continental countries in this matter, in view of the latter's assistance to it in meeting the fuel shortage by cuts in their consumption and other measures.

COAL AND COKE FOR SMALL INDUSTRIES

The Government of Bombay is taking adequate steps to ensure a regular and sufficient supply of coal and coke to the small-scale industries in the State. As a preliminary step in this direction, the requirements of such industries are being ascertained by the State Coal Controller, who has already addressed a circular letter to holders of wagon priorities of coal and coke and holders of coal and coke permits concerned, requesting them to fill in their requirements and difficulties, if any, in a *proforma*. Small-scale industrial units may obtain a copy of the *proforma* from the State Coal Controller, Bombay. On receipt of such information, the matter would be taken up with the Coal Controller, Calcutta, for any additional coal and coke required.

A small-scale factory for this purpose is a unit which has capital assets of less than Rs. 5 lakhs and which employs less than 50 persons, if working with power, or less than 100 persons, if working without power.

COAL PRODUCTION IN FRANCE

In an effort to make the best of its coal resources, which are often difficult to reach and are going low in places, France has maintained since 1951 a yearly output of about 57 million tons of coal, thus surpassing its pre-war record of 55 million tons, set in 1929-30. The 1953 and 1954 figures were slightly lower, due to commercial difficulties which compelled the mines to slow down their rate of production. But 1955 has been a brisk revival of demand. Yet, throughout the period, productivity, which is the true barometer of industrial progress, showed a continued increase. It is measured, in the coal-mining industry, by the underground worker daily-output, viz., the quantity of coal produced in a day by the average underground worker. Towards the middle of 1955 that quantity was equal to 3,527 lbs., as compared with 2,994 lbs. in 1952, 2,704 in 1938 and 2,165 in 1930. Or, to use another way of illustrating the progress achieved, 145,000 underground men, working an average 285 days, produced some 58 million tons in 1955, while 209,000 men working 300 days produced a lesser quantity in 1930.

PROGRESS OF KORBA COAL PROJECT

The production of coal in a pilot quarry in the Korba Project in Madhya Pradesh is expected to begin early next year. As a result of the drilling so far carried out it is possible to plan for opening of three open cast mines and one underground mine. Disclosing this, in reply to a question in the Rajya Sabha last week, Mr. Satish Chandra, Deputy Minister for Production, said that work on the underground mine was expected to be started very soon and, according to present expectations, coal would be touched in April 1957. Work on the other two open cast mines would also be taken in hand in a few months when the machinery, indented for, would arrive.

The Deputy Minister added that a team of Russian experts had just arrived in the country to study the Project Report prepared by an Indian team for coal mining in the Korba region. The team would advise generally on the mining methods to be adopted for the speedy and economic working of the mines and the type of machinery to be used.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray ?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what ?
Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

PLANTATION ENQUIRY COMMISSION'S REPORT ON COFFEE

REGIMENTATION OF INDUSTRY ADVOCATED

AFTER two and a half years of labour, the Plantation Enquiry Commission submitted its second report dealing with the coffee industry two weeks ago and the report was duly presented to both the Houses of Parliament on 20th November 1956. As in the case of tea, the full text of the Commission's report has not been made available to the Press. Only a summary of the report prepared by the Government has been published. Even now, the full text of the report on tea is not available. This is a very unsatisfactory state of affairs from the point of view of editors of newspapers who are expected to read such reports for commenting on them.

The Commission, it will be recalled, was constituted in April 1954 to enquire into the conditions of the three main plantation industries, namely, tea, coffee and rubber. The Commission's first report on tea was submitted to the Government in August last, while the third one on rubber is yet to be submitted. The Commission's recommendations on coffee more or less follow the pattern of those on tea. Some of them are so drastic that they amount to a strict regimentation of the industry. The official Press summary of the Commission's recommendations provides sufficient ground for the conclusion that the recommendations do not fall very much short of nationalisation of the whole industry.

Main Recommendations

The main suggestions of the Commission in respect of coffee are: (1) the creation of replanting fund to which every estate of 25 acres and above should contribute a fixed sum; (2) regulation of area under coffee according to the needs of production; (3) establishment of a warehousing corporation to take over from pool agents all functions connected with marketing of coffee, except the curing of coffee; (4) fixation by an independent expert body of the price to be paid to the producer; (5) the handling of export trade in coffee directly by the Coffee Board; (6) rational distribution of profit; (7) levy of countervailing export duty equal to the Central excise duty; (8) adjustment of excise duty on different types of coffee according to their market value; (9) collection of sales tax by the Centre; and (10) the formation of joint farming co-operative societies, with the State as a partner, by small holders.

Describing the importance of the coffee industry to the economy of South India, the Commission points out that its annual production is of the value of about Rs. 10 crores and it provides employment for over 200,000 persons. Its contribution to the Central Exchequer is about Rs. 90 lakhs by way of excise duty and Rs. 11 lakhs by way of income-tax. Besides, the States also benefit by levy of agricultural income-tax. India's position in the world coffee industry is insignificant, its production constituting only one per cent. of the total world output. The industry is sustained largely by the internal market which is also steadily expanding.

Replanting Fund

The Commission finds that a large part of the area now under coffee is too old to bear an economic crop and is due for replanting. It points out that, though the production of coffee has increased considerably during the past 15 years, the yield per acre has not shown any significant rise. In more recent years, however, the coffee growers, according to the Commission, have shown a greater awareness of the need to raise the yield, as witness the increase of 44 per cent. in the yield per acre of arabica and 3 per cent. in the case of robusta between 1950 and 1953. The Commission also draws attention to the fact that the yield in India is about 60 per cent. of that in most of the important coffee-growing countries. It has, therefore, laid great stress on the need for carrying out a phased programme of replanting. Unless this is undertaken urgently, it feels, certain coffee lands will have to be abandoned during the next ten years and this will seriously affect production. In this connection, the Commission suggests that each coffee estate should be required to lay aside every year a certain sum of money for the specific purpose of financing programmes of replanting. Elaborating its suggestion further, the Commission says:

"The Government should take steps to ensure that estates make a provision for the replanting of the area allotted to them by the Coffee Board, before they declare dividends or repatriate profits. The amount paid by each estate should be held to the credit of the estate concerned in a separate fund, called the 'Coffee Replanting Fund' by the Coffee Board. The estates may be allowed to withdraw from the fund such amounts as may be necessary for the purpose of replanting according to a programme approved by the Coffee Board.

"The fund should be used only for replanting. Necessary legal powers will have to be taken by the Government to compel each estate to contribute to the fund. The scheme may be applied, in the first instance, to estates of 25 acres and above. Contribution to this fund should be allowed as an admissible charge for the purpose of computing agricultural income-tax. The Coffee Board should have development staff for this purpose distinct from its advisory service."

High Dividends

The Commission finds that coffee planting companies have distributed very high dividends, ranging from 20 per cent. to 30 per cent. on inflated capital, raised by capitalisation of reserves, and have not made sufficient provision for replacement of fixed assets which consist mainly of coffee trees. Despite the large profits made by the industry, its internal resources have not been sufficient to meet the present replacement costs. The Commission feels that companies should have followed a more prudent policy in the distribution of dividends and conserved a larger part of their profits. It, however, hopes that they will adopt a more prudent policy in future and put by larger funds for financing schemes of development.

The second recommendation relating to this subject is that the Coffee Board should be invested with powers for regulating the extent of area under coffee in relation to the needs of production. In this connection, it points out that only 53 per cent. of the area owned by the estates is actually cultivated with coffee. About 15 per cent. of the reporting area is suitable for coffee cultivation, but is not yet planted. The Commission has also recommended that necessary amendments in the Coffee Act should be made to vest powers in the Board for licensing coffee production.

An extensive analysis of the primary marketing of coffee has brought the Commission to the conclusion that the present agency system for pooling of coffee has given rise to certain unfair practices. Though it is conceded that all the pool agents do not indulge in such undesirable methods, the Commission is, nevertheless, of the view that any system which provides scope for possibilities of such abuse is not a sound one and should be changed. It has, therefore, suggested that the agency functions performed by pool agents should be taken over by a warehousing corporation under the ægis of the Coffee Board, leaving the curing to the existing agents. The Corporation will be responsible for ensuring that the coffee it receives for storage bears the quality marks given by the grading inspector before it leaves the curing house. It will effect deliveries against supply orders issued by the competent authority. If the existing pool agents are not willing to undertake curing alone, the Corporation should set up its own curing organisation as a separate department.

Cost of Production High

The Commission has discovered that the cost of production of coffee has been rising since 1950, especially the cultivation and general charges. The overall increase in expenditure between 1950 and 1953, according to the Commission, is partly due to greater expenditure on manuring, spraying and pests control. Commission to managing agencies and directors, it says, is a big item of expenses for companies under managing agencies. "These higher costs," it adds, "lead to the fixation of higher basic release prices by the Coffee Board and, due to the sheltered market for Indian coffee, these higher costs have a tendency to be passed on to the Indian consumer in the shape of higher selling price." The Commission has, therefore, recommended that an independent expert agency should estimate the cost of production of various types of coffee in a most scientific manner. The agency should standardise forms for cost of production returns by estates.

At the same time, the Commission suggests that the independent expert body should fix the price to be paid to the producer. This body should be appointed by the Government and should not be a "grower-dominated" one. The Commission wants this body to fix the basic price on the basis of cost *plus* return to the grower in consultation with the representatives of the latter. Referring to the present system of valuation of coffee as F.A.Q. (fair average quality) with *plus* and *minus* points, according to quality, the Commission says:

"There is a case for investigation whether this valuation was properly done. The responsibility for assessment should be on a committee of the Board which should contain representatives of both sections. The basic price for different types of coffee need not be based on an integrated differential scale based on a basic price for arabica. It could be based for each type of coffee on its cost *plus* return on investment. The price so arrived at shall be the basic price for fair average quality of each type of coffee. Prices for grades and quality will be related to this price. The pool release price will be derived from this basic price for each type of coffee."

Creation of Two Funds

In regard to the distribution of sale proceeds to the growers, the Commission suggests that exports of each type of coffee should be valued at the prevailing internal auction price. This value and the amount realised on internal sales of each type of coffee shall be pooled together and distributed according to the points assessed for producers of each type of coffee on the basis of grades and quality. The surplus realised in export sales, that is, the actual value realised less the calculated value for exports on the basis of internal auction value, should, the Commission recommends, be set apart in equal proportions for a "price assistance fund" and a "consumer subsidy fund." The former fund should be utilised for making up the loss in times when the Board is unable to pay the basic price, based on cost *plus* return, from the amount realised by sale of crop. The other fund is to be utilised for subsidising the internal retail sales, that is, for enabling the Indian consumer to get coffee at reasonable prices. The Commission suggests that the "surplus" income resulting from a gain in weight of coffee in storage as a consequence of absorption of moisture during storage should also be credited to the above funds.

The Commission has no doubt made some suggestions for promotion of exports. Among these are: (1) the high quality of coffee earmarked for export should be kept up; and (2) more of this quality coffee should be produced and made available for export. Perhaps, the most important of the Commission's recommendations is that the export trade should be undertaken directly by the Coffee Board. The Press summary of the report does not give any reasons for the suggested change in the handling of the export trade. The export of coffee, the Commission says, is at present "concentrated in the hands of a few non-Indian firms," and the export sales should be dealt with by a separate department of the Board.

Analysing the trend of profits from 1946 to 1953, the Commission says that the percentage of gross profits to total capital employed, as well as gross sales, has been very high. It points out that, in the case of sterling companies, the percentage has gone up from 12.6 in 1946 to 29.4 in

ROLE OF FUNDAMENTAL RESEARCH IN IRRIGATION

ADMINISTRATIVE POSTS SHOULD BE MANNED BY TECHNICIANS

THE vital importance of fundamental research in irrigation and the benefits of appointing engineers in chief administrative posts in departments connected with public works were stressed by Mr. S. L. Malhotra, Chief Engineer, P.W.D. Irrigation Branch, Punjab, in the course of his presidential address at the annual meeting of the Central Board of Irrigation and Power, held last week at Bombay. Inaugurating the meeting, the Governor of Bombay, Mr. M. C. Chagla, praised the work of Indian engineers, some of whom were the "best in the world." He exhorted the engineers to work for the attainment of self-sufficiency in food through construction of irrigation works and prevention of floods.

During the past 30 years of its existence, the Central Board of Irrigation and Power has done considerable service in the cause of the profession. As Mr. Malhotra pointed out, it brings together the highest talent in the land and provides a forum for intelligent discussion of technical advances. Its research sessions, which are held annually in different parts of the country, contribute considerably to the pooling of knowledge and exchange of technical information. The Board also collaborates with research work carried out by other national organisations, such as the Indian Council of Agricultural Research, Council of Scientific and Industrial Research, Central Road Research Institute, Central Building Research Institute, Central Board of Geophysics and many academic bodies affiliated to universities. The Board also functions as the national committee for the International Commission on Large Dams, International Commission on Irrigation and Drainage, International Association for Hydraulic Research and other international organisations. Its activities include co-ordination of research, maintenance of a library and collection and dissemination of knowledge on irrigation and allied subjects.

In the course of his address, Mr. Malhotra discussed the question of appointing technical men in administrative posts in the Public Works Departments. He pointed out that the question had been repeatedly examined and the verdict had generally gone in favour of having chief engineers as secretaries to the Government in these departments. He recalled that the Irrigation Commission, which had examined the question in 1903, had advocated the wider adoption of the practice of appointing chief engineers as secretaries of these departments. If a chief engineer were the secretary of the Public Works Department, he would be better able to initiate and pilot engineering schemes. He would be able to deal with the schemes in a "clear and convincing manner," thanks to his intimate knowledge of the subject. So far as non-technical aspects were concerned, Mr. Malhotra said, the Finance Department already exercised considerable control over the Public Works Department, so that the "introduction of a layman-secretary does not improve matters." He recalled, in this connection, Mr. Nehru's general observations on this subject. Addressing the National Development Council, Mr. Nehru said: "I think that scientific and technical personnel should be introduced not only in technical processes but in administration also." After commending these words to the attention of his audience, Mr. Malhotra said:

"The problems of today are problems of science and technology. We have, therefore, to attract the first-rate intellect of the country, to tackle them; otherwise, we may be failing in fully mobilising our natural resources for the welfare of our people. When in technical work non-technical intermediaries intervene, the technical talent feels hurt, and in course of time, gets shy of bold action. Authority brings forward initiative, enterprise and drive. Subjugation of intellect leads to thwarting of talent, to frustration and to a general feeling of despondency. It is with that conviction that responsible engineering organisations in the country have repeatedly represented that not only the technical personnel should be allowed to handle the administration of their departments at Government level without interference from non-technical intermediaries, but that the technical and scientific services should also be upgraded and brought in line with other administrative services. We are happy to find that our Prime Minister subscribes to our views. We do hope that there will soon be implementation of his directives and the existing unwholesome non-technical control of engineering departments at Governmental level will have ended, before long."

There is no doubt that, in purely technical departments like the Public Works Department, it would be a great gain to see that they are placed under the charge of technical men. Thus, the atomic energy establishment in India has gained much through its being in charge of a renowned scientist, Dr. Bhabha. Public Works Departments should be able to do their work more expeditiously if they were manned by experienced engineers at all important levels of administration. If it is nevertheless felt that a non-technical man with special administrative talents should also be associated with the running of these departments, a compromise solution is the one suggested by Mr. Chagla, namely, the appointment of a non-technical man as a joint secretary to the departments, that is, in addition to having a chief engineer as secretary.

Mr. Malhotra did well to bring out the importance of fundamental research in irrigation. He deplored that lack of knowledge of some of the basic characteristics of hydraulic phenomena, behaviour of soil and proper utilisation of construction materials had often "handicapped the progress of our designs and even the pace of construction." It would appear that some of these problems had to be referred to foreign laboratories because the necessary research facilities were not available in India. More recently, however, the Central Board of Irrigation and Power has undertaken to direct fundamental research for which purpose special allotment has been made in the second Plan. Now that this country has embarked upon large constructional works—some of the works to be included in the third Plan are believed to be more intricate and elaborate than the earlier ones—it is essential that facilities for fundamental and applied research in irrigation and allied subjects should be improved and extended.

OIL PROGRAMME

The Union Minister for Natural Resources and Scientific Research, in the course of his speech at a meeting of the Consultative Committee of the Congress Parliamentary Party, held last week at New Delhi, stated that he was looking forward to a total production of seven million tons of oil in India by the end of 1961, as against the present output of 400,000 tons and estimated consumption of four million tons. Mr. Malaviya stated that the Government proposed to spend Rs. 30 crores for oil exploration in the Second Five-year Plan; a programme involving an expenditure of Rs. 9 crores over the next two years had been approved. The programme of work in the next two years would include structural drilling in Kangra district of the Punjab which would be started very soon. In Jaisalmer, Mr. Malaviya said, some foreign geophysical experts will be associated with the drilling operations. A French party would arrive in India in the next few weeks to negotiate with the Government in regard to the terms of their participation. The Government would also start structural drilling in Cambay in Kutch. But the arrival of drilling machinery, he said, had been delayed because of the Suez crisis. The Minister stated that the Government was also going ahead with the organisation of Oil and Gas Commission at Dehra Dun. Some of the consultants in the Commission would be Russians. In West Bengal, where the oil exploration was undertaken by the Stanvac Company, the programme was going according to an agreed schedule. In Assam, too, work was going on satisfactorily. The Committee appointed for investigation of a suitable site for oil refinery, he said, would shortly submit its report.

It may be mentioned, in this connection, that a Press report from Calcutta avers that oil has been struck in the new oilfield in Moran area of the Assam Valley. Drilling for a second well in the same area is expected to commence soon. In Nahorkatiya, 20 deep wells have now been completed and tests on the 21st well are in progress. It is estimated that the Nahorkatiya oilfield alone can produce 2½ million tons of crude oil in a year, which is the equivalent of about 700 million gallons, for 20 years at least. There will also be 45 million cubic feet of gas daily. This volume is equivalent to more than 500,000 tons of fuel oil.

SHORTAGE OF TANKERS

Due to the uncertain international situation and the blocking of the Suez Canal, which are expected to increase sharply the pressure on shipping space and consequently take the freight rates higher up, sellers of second-hand vessels have become practically scarce, according to reports of ship sales and purchase markets in London. The owners of standard type ("Liberty," "Victory," etc.) vessels, who were previously in the market for selling their vessels are reported to have withdrawn from the market. They are now reported to be reassessing the values that their ships might fetch in the changed circumstances of international tension. A boom in charter rates and ship prices, similar to that witnessed during the Korean war, is being talked about and tentative price indications of a "Liberty" are around £600,000 (about Rs. 80 lakhs), which was the highest price touched during the Korean boom. The tramp freight rates have already reacted sharply to the international situation. Last week, a rate of 84s. per ton, it was reported, was paid in New York for a single coal voyage from the U.S. to the Continent, which was a jump of 10s. or 14 per cent. per ton, in the matter of five or six days. Indications are that the rate would soon move upto 90s.

INSURANCE FOR DURGAPUR STEEL PLANT

The biggest example of a single insurance, perhaps unique in the whole history of insurance, to cover a complete project, is provided by the joint insurance taken out by the Government of India and the Indian Steelworks Construction Company covering the giant Durgapur integrated steel works project in West Bengal. One of the largest Contractors' All Risks Insurances ever to be placed, this new insurance, taken under the conditions of the contract agreed to by the Government of India and the Indian Steelworks Construction Company, will give cover for £100 million.

The Indian Steelworks Construction Company, which is a consortium of 13 British companies, is entrusted with the construction of the Durgapur steel works. The work on this project has already begun with the signing of the final contract on 31st October by the agreeing parties. As could be expected of any such large project involving a huge capital outlay, wherein adequate insurance to cover all risks should, of necessity, come as a natural corollary, many British insurance companies, including Lloyd's, and Indian insurers, are participating in the risk. It is understood that practically the entire London market is involved in one way or another, either by way of insurance or reinsurance.

DIESEL-ELECTRIC SHUNTING LOCO

A Diesel-electric shunting locomotive of new design, for heavy use, has been developed by the Yorkshire Engine Company, Ltd., Sheffield. It is being made in two models, one of 200 h.p. the other of 400 h.p. The machines are fitted with Rolls-Royce Diesel engines and British Thomson-Houston transmission equipment, and they are complementary to each other in that the power equipment of the larger model duplicates that of the 200 h.p. model. The larger model has a weight of 48 tons and a wheelbase of 11 ft. Its starting tractive effort is 30,000 lbs., and at a continuous rating speed of 8 m.p.h. has a tractive effort of 13,100 lb. Maximum permissible speed is 23 m.p.h. Two sets of power equipment are arranged, one on each side of the central driver's cab, and they are linked to one set of controls for multiple working. Should one power set break down—or for light-duty working—the locomotive can be worked effectively on the other set. The 200 h.p. models of the new design are built in 0-6-0 and 0-4-0 types, weighing 30 tons. They have a maximum tractive effort of 18,000 lb. and a continuous tractive effort of 7,400 lb. at 7 m.p.h.

The trials of the s.t. *Brikodar*, which is the fourth among a series of seven tugs that are to be delivered to the North Eastern Railway by Hooghly Docking and Engineering Company, Ltd., were successfully completed on 20th November at the measured mile on the river Hooghly near Garden Reach.

The second steam tug to be entirely built in this country, the s.t. *Brikodar*, will be used by the North Eastern Railway to haul goods across the Ganga at Mokameghat. It is 159 feet in length and is powered by reciprocating steam engines developing 850 h.p. at 200 r.p.m. The main castings of its engines were carried out by the Indian Iron and Steel Company, Ltd., at their works at Kulti. The rest of the work on the engines and boilers, and the assembly and fitting out of the vessel were completed by Hooghly Docking and Engineering Company, Ltd., who are the first manufacturers of steam tugs in India.

NEW PRODUCTS AND PROCESSES

Instrument for Geological Survey

A BATTERY-OPERATED instrument designed for geological surveying, mapping, and prospecting for radio-active ores and for the examination of mine workings has been developed in conjunction with Britain's Atomic Energy Research Establishment. When the instrument is used in conjunction with the associated beta probe unit, assay work can be carried out in the field. The equipment, by Ericsson Telephones Ltd., of Beeston, Nottingham, is known as the "1368" Field Ratemeter. The instrument is a particle counter which incorporates a junction-type transistor and four Geiger-Muller tubes. The counter rate is shown on a 50-microampere indicating-meter calibrated in milli-Röntgens per hour. Five ranges available in the instrument cover count rates of 0 to 25 milli-Röntgens per hour. An accuracy of either 10 per cent. or 2 per cent. can be chosen by operating a selector switch, and the speed of response of the instrument depends on the accuracy chosen. The power supplies are all derived from three 1.5V torch cells, and a stabiliser ensures that the instrument is not affected by changes in battery voltage between 3V and 4.5V. The beta probe unit obtains its power supplies from the Ratemeter through a 6 ft. cable. It is used for making assays of radio-active ores, and for the detailed examination of rock facings and mine workings which are inaccessible to the Ratemeter operator. The total weight of the equipment is 28 lbs., which includes the Ratemeter, probe unit, with extension handle, headphones, sample holders, filling-funnel for assay work, tools, spare parts, and canvas haversack, the complete supply being contained in a lightweight-alloy suitcase. The Ratemeter itself weighs 8½ lbs.

All-synthetic Rubber Tyres

The first automobile tyres made in the United States entirely of synthetic rubber were recently produced by the Esso Research and Engineering Company in New York. The new tyres are made of butyl, a synthetic rubber created from oil refinery gases. Passenger car tyres now in use consist of a synthetic rubber known as GR-S, plus a lesser amount of natural rubber. Butyl is the material from which practically all automobile inner tubes have been made since World War II. Its air-holding properties are said to be about 10 times better than those of other types of rubber, whether natural or synthetic. Intensive road and laboratory tests have shown that the new all-butyl tyres have several advantages over other tyres currently in use, according to the manufacturers. These include immunity to atmospheric or chemical attacks which cause other rubbers to crack, smoother riding qualities, and a low noise level. The butyl tyres do not "squeal" when rounding corners, according to the company. Esso Research said that road tests show that the all-butyl tyres stop much quicker than GR-S and natural rubber tyres on both wet and dry pavements. The company credits much of the success in developing the new tyres to the perfection of a butyl latex. This permits for the first time the bonding of butyl rubber with tyre cord on existing plant equipment. Butyl was invented in 1937 by William J. Sparks and Robert M. Thomas of Esso Research, which is a scientific affiliate of the Standard Oil Company of New Jersey. Since that time more than $13,000,000 has been spent on its research and development. An Esso spokesman said that two large tyre companies are interested in the new tyres. Several companies have been approached with the intention of starting tests on the tyres for possible use as original equipment on new cars.

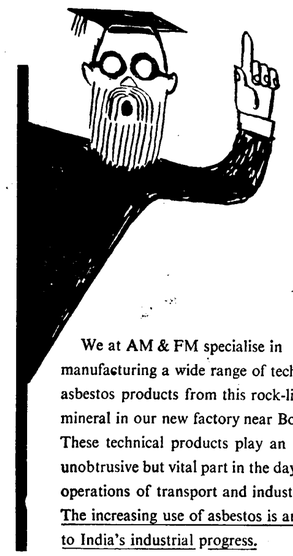
Improved Soft Solders

Research on the development of new soft solders of improved performance, which has been carried out by the Battelle Institute for the Tin Research Institute, has led to the development of a number of new tin-led alloy solders which have unusually long life at temperatures of the order of 223 degrees Fahrenheit. The performance of these solders (which have a high tin content) at high temperatures can be improved, the experiments have shown, by the addition of small quantities of germanium, nickel, or cerium. The addition of low concentrations of zinc, bismuth and antimony is also, it is claimed, beneficial. The potential importance of the new solders lies in their use for soldering car radiators where operating pressures of the order of 16 pounds per square inch are used. Higher operating temperatures are experienced in such high pressure radiators than occur in conventional car radiators.

Electrified Wire Equipment

Electrified wire is being increasingly used for fencing off meadows, since compared with the use of barbed wire less than half the number of posts are required which can, moreover, be thinner. A factory Philips N.V. at Eindhoven the Netherlands, producing electric and electronic products and equipment has manufactured an electronically-operated live wire equipment, which conforms to the new international safety specifications and is perfectly safe for man and beast. This equipment is of a simple, sturdy design, without moving parts or accumulator; it is connected to the lighting circuit and gives very powerful electronically-excited shocks. The case is weatherproof, and the equipment calls for very little maintenance. The electric fence insulators made by the same concern provide efficient and reliable insulation under all temperature and weather conditions.

"Hydrated Magnesium Silicate..."



...a fibrous mineral possessing resistive properties to combustion, corrosive liquids and other chemical and physical phenomena. ...or just asbestos...one of the most useful minerals known to man. It is made up of millions of tough, thin, tightly-compressed fibres, and is acid and fire-resistant.

We at AM & FM specialise in manufacturing a wide range of technical asbestos products from this rock-like mineral in our new factory near Bombay. These technical products play an unobtrusive but vital part in the day-to-day operations of transport and industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

AWARD IN CALCUTTA PORT DISPUTE

TRIBUNAL HOLDS HARBOUR MASTERS' ACTION AN AFFRONT TO COMMUNITY

SEVERE structures were passed by Mr. F. Jeejeabhoy, the sole member of the Industrial Tribunal which investigated the dispute between the Calcutta Port Commissioners and the Assistant Harbour Masters, on the latter's behaviour and attitude towards authorities. Referring to the *en masse* resignation of 24 Assistant Harbour Masters after the constitution of the Tribunal with the object of "forcing" the authorities to accept their claims, Mr. Jeejeabhoy said that the action was an affront to the community and had caused damage "to the discipline of public service which one expects from officers entrusted with such responsible duties."

It will be recalled that the Assistant Harbour Masters did not accept the recommendations of the Lokur Committee which submitted its findings in February 1955. Nor were they satisfied with the decisions taken by the Government in March 1956. The Government thereupon appointed the Tribunal on 30th August, to determine how the Lokur Committee's recommendations should be amended or supplemented generally and with special reference to the scale of pay and period of service required to reach the maximum of the scale, the payment of overtime work and the basis of its computation and the claim for all acts of mooring and unmooring. On 1st September 1956, the majority of the Assistant Harbour Masters gave seven days' notice of strike and on 6th September they sent letters of resignation. Following certain negotiations, they returned to work on 10th September.

Night Fees

In the course of his award, Mr. Jeejeabhoy said that he agreed with the Lokur Committee's view that no further night fees should be granted; the night fees paid previously had been consolidated into the basic salary when that salary was raised from Rs. 650 to Rs. 800 in 1951. In this connection, he pointed out that a summary of the work done by the Assistant Harbour Masters showed that there had been a substantial reduction in the work done by them from 1952 to 1955. He felt that they had plenty of home life and leisure within the nature of their calling. He disallowed the claim for a special night allowance in addition to the present basic salary range of Rs. 900 to Rs. 1,750. It seemed to him that the officers had been very well treated not only in the matter of salary scales but also in the matter of their allowances and benefits. There must be few services, he observed, in which a new recruit at an early age was able to secure a starting emolument of Rs. 1,405 and reach the maximum in a period of 16 years and 4 months, in addition to which he was allowed two schemes of provident fund, one of which was contributory bearing a fair rate of interest. It was also to be noted that the conveyance, uniform and messing allowances were free of income-tax. Mr. Jeejeabhoy, however, accepted the claim for fees for mooring and unmooring operations for which the Government had already offered to pay Rs. 20 for each such operation.

In conclusion, Mr. Jeejeabhoy felt compelled to take "serious notice" of the action of the Assistant Harbour Masters in going on a strike even after the reference of the dispute to adjudication. He could understand a poor workman living on the margin of poverty having to go on strike as a last resort to better his state of living but it was astounding that officers who, on appointment, drew straightaway a total emolument of Rs. 1,405 and on reaching the top of the scale, Rs. 2,090, should cheaply indulge in a strike for small allowances on which the Government after full consideration, had given a decision, and for which the Government, had gone out of its way to appoint a Tribunal. He observed that nothing could be more deleterious to discipline than that class I officers so highly placed should have even thought of going on strike. It was legitimate for them to make representations, but in a restrained manner and not in the language which they used. But it was never legitimate for them to press such claims in a manner which constituted blackmail of the community. When an officer of the category of Assistant Harbour Master applied for the post which he was given he became a servant of the public, and the public which sustained him naturally expected from him the duties and obligations which he implicitly undertook by the very terms of his appointment.

The Assistant Harbour Masters, as public servants, Mr. Jeejeabhoy said, should have realised that upon the appointment of a Tribunal, they had secured a constitutional means of redress, and they must have also known that if they struck work after a Tribunal had been appointed, they would be committing an illegal act. When, therefore, these Assistant Harbour Masters after the constitution of the Tribunal went on strike for their small grievances, and sent in resignations *en masse* with the object of forcing Authority to accept their claims, they were doing something which was an affront to the community; their action had done damage not only in terms of money, but to that discipline of public service which was expected from officers entrusted with such responsible duties. They must consider themselves fortunate that they had been helped to retrieve an untenable position, for, if the Government had been forced to take action against them under the Essential Services Ordinance, it would have meant grave harm to themselves and their families and their Master Mariner's Certificate, if tainted, would have had a very depreciated value.

There is no doubt that officers who hold a key position in an industry or service owe a special responsibility to the public and should not take the law in their hands. Further, if highly-placed officers themselves resort to strike, it will only encourage the subordinate employees to rise in revolt against established authority. After all, indiscipline is infectious to a degree. From this point of view, Mr. Jeejeabhoy did well to emphasise that it was a standing dictum of the Labour Appellate Tribunal that, while it would do its utmost to see that justice prevails as between the parties before it, it would never countenance, much less encourage, acts of indiscipline—a dictum which has been consistently followed and applied and recently upheld by the Supreme Court.

RISE IN U.S. PRODUCTIVITY

Two new U.S. Labour Department reports show how men and machines are co-operating in an attempt to keep U.S. productivity on an upward spiral. One study said output per man-hour of basic steel industry production workers rose in the eight-year period 1948-55 by a total of 28 per cent. The other study, dealing with the impact of installation of automatic machinery in a large city bakery, said more output per man-hour was accomplished "with a minimum of friction to the workers as a result of favourable employer-employee relations." Similarly, the Labour Department said that while better equipment and more modern production methods influenced higher steel industry productivity, "human factors, also, have influenced the productivity trends."

"Unions and management," the steel study said, "have helped achieve better pay scales, pension programmes, increased leisure, and machinery for resolving grievances. Production per man-hour has increased through the effort, skill, organisation, and application of both management and labour." It added: "Adoption of technological improvements has been facilitated by a work force with ability to learn, change and adapt, and by management willing to experiment and invest in new machinery and research." While the annual basic steel productivity rate of increase averaged 2.9 per cent. over the eight-year period 1948-55, it varied widely from year to year. The increase was sizable at 9 per cent. in 1950, but productivity declined by 2.5 per cent. in 1954 and rose to 11 per cent. in 1955. The study said steel productivity was affected by changes in volume of operation due to the fluctuating business cycle. Generally, the more fully steel plants were utilised, the more efficient and productive was their operation. Output per man-hour was defined as the ratio between labour time consumed and the number of products produced. The department said many factors can change the ratio, among them efficiency of machines, rate of operation, flow of material and parts, worker skill and effort, management efficiency, and status of management-labour relations.

The bakery, the other study explained, consolidated a number of scattered plants into one modern unit where bread is baked by push-button methods. The study said that by advance planning the bakery management and its labour union made the conversion work. "From the standpoint of the company," the study said, "the effort to modernise, on the whole, has been successful. Capacity has been enlarged. Unit labour costs have been reduced although wages have risen steadily. Losses due to wastage and spoilage have been reduced." It added: "So far as the workers are concerned, the consensus, expressed through the local union president, was that the result of the changes, on the whole, were advantageous to them. The union and the company take pride in the orderly transition that well-established collective bargaining made possible." Both studies were made by the department's Bureau of Labour Statistics.

MUNICIPAL WORKERS

The Supreme Court held, in a case arising out of an appeal by the Baroda Borough Municipality, that the workers employed in a municipal department engaged in the supply of electric energy were not entitled to claim bonus out of the surplus earnings in that department. The case of workmen employed in the electricity department of the Baroda Municipality, who had demanded bonus out of the surplus earnings in that department, was first heard by the Industrial Labour Tribunal, Bombay, which rejected the claim of the workers. The Tribunal rejected the claim for bonus, because among other reasons (1) the Municipality was not a profit-making concern, (2) the balance of earnings over outgoings could not be treated as a "profit" in the business sense of that word, (3) the Municipality consisted of both earning and spending departments and it was not permissible to create an invidious distinction between the different employees of the Municipality by granting bonus to workmen in one department only. The Labour Apellate Tribunal, Bombay, however, upheld the workers' claim and thereby reversed the Industrial Labour Tribunal's judgment. The Supreme Court has now reversed the judgment of the Apellate Tribunal.

Mr. Justice S. K. Das of the Supreme Court, delivering the judgment, stated that it was clear to them that, having regard to the provisions of the Bombay Municipal Boroughs Act, 1925, under which the Baroda Municipality was constituted, the earnings of one department could not be held to be gross profits in the ordinary commercial or trading sense; nor could the principles governing the grant of bonus out of such profit after meeting necessary or prior changes be applied to the present case. Considering the question with reference to the facts of the present case, His Lordship said, it was clear to them that the different activities of the Baroda Municipality constituted one integrated whole and the activities of the different departments of the Municipality were not distinct or unconnected activities so as to permit the isolation of one department from another or of an earning department from a spending department. From this point of view also, the claim to bonus was not maintainable.

For these reasons, the Court came to the conclusion that the Industrial Tribunal had come to the correct decision and, accordingly, allowed the appeal and set aside the order of the Labour Appellate Tribunal. Rebutting the contention of the employees that the maintenance of separate accounts by the Municipality showed that it did treat the income of the electricity department separately from that of the other departments, Mr. Justice Das said: "The maintenance of separate accounts of a particular department of the Municipality does not alter the nature or quality of the property or income therefrom. The property or income is still municipal property within the meaning of the Municipal Act. Maintenance of separate accounts for a particular department is in the nature of an internal accounting arrangement."

DOCK STRIKE IN U.S.

The U.S. President, Mr. Eisenhower, has invoked the national emergency provisions of the Taft-Harley Act in a move to end the Atlantic and Gulf-coast longshoremen's strike which has paralysed shipping in the U.S. eastern coast. Mr. Eisenhower, in an executive order, said that the strike, if continued, would, in his opinion, "imperil national health and safety." He has appointed a three-man board of enquiry for investigating the dispute.

It may be recalled that the dock workers in all East Coast and Gulf ports went on strike on 16th November, following the breakdown of negotiations between the shipping companies and the International Longshoremen's Association. The most controversial issue which remained unsettled was the demand for a guaranteed eight-hour day. The employers had offered only a four-hour guarantee for any man called to work any day. Both sides, however, had made valuable concessions on other issues. The Union reduced its original 52 demands to 20, while the employers offered to give an increase of 32 cents an hour in wages under a three-year contract and two paid holidays to men working 28 hours in a holiday week. The Federal mediators failed to effect a settlement of outstanding issues. The strike, which followed the breakdown of negotiations, affects 60,000 longshoremen and is reported to be the most wide spread in U.S. history.

PROVIDENT FUNDS ACT

A Bill to amend the Employees' Provident Funds Act so as to extend it to plantations, mines and commercial establishments employing 50 or more persons has been introduced in the Lok Sabha. The Bill also seeks to empower the Government to extend the Act by a notification to specified establishments employing less than 50 persons. A proviso lays down that the Government should give at least two months' notice before notifying such an extension. It may be mentioned here that the original Act applied to factory industries only and was recently extended by a notification to 17 factory industries in addition to the six industries to which it had been applied in the first instance.

During the month of July 1956, the total time-loss due to industrial disputes was of the order of 525,000 man-days or 7 per cent. higher than in the previous month. The number of fresh disputes arising during July 1956 was 79, involving 62,524 workers.

MYSORE TOBACCO COMPANY, LIMITED

SPEECH OF MR. M. H. PARTHASARATHY AT NINETEENTH ANNUAL MEETING

ROLE OF TOBACCO INDUSTRY IN SECOND FIVE-YEAR PLAN EMPHASISED

ADDRESSING the shareholders of the Mysore Tobacco Company, Ltd., at their Nineteenth Annual General Meeting held at Bangalore on 27th October 1956, Mr. M. H. Parthasarathy, M.Sc., Chairman of the Company, pointed out how the tobacco industry could play a great part in furthering the aims and objectives of the second Five-year Plan. The extension of tobacco cultivation and expansion of production, he said, would not only improve the economic condition of the ryots but also open out employment opportunities for a large number of people.

The following is the full text of Mr. Parthasarathy's speech:

"GENTLEMEN,

"I have pleasure in welcoming you to this nineteenth annual general meeting of the Company.

"The directors' report and the audited accounts have been in your hands for some time. With your approval, we shall take the notice convening the meeting, the report of the Directors and the accounts as read.

"You may all be aware that I took over charge of the duties of the Chairman and Managing Director of this Company from Sri T. Shamanna, I.A.S., on 28th December 1955 on account of his transfer to Bhadravathi as Vice-Chairman of the Mysore Iron and Steel Works. Your Directors have placed on record separately their appreciation of the valuable services rendered to the Company by Sri T. Shamanna, during his term of office.

Accounts

"The accounts in your possession give a comprehensive picture of the financial results of the Company's trading during the year under review and I believe you will regard these results satisfactory. Before moving the adoption of the Directors' report and the audited accounts, I would like to make a few observations on the tobacco production.

"As you may be aware, 'tobacco,' which was introduced into this country towards the end of the sixteenth century, is now grown in over nearly 9 lakhs of acres. India today stands third in the world, next to the United States and China, in tobacco production. The annual output to all varieties is in the neighbourhood of 555.5 million pounds. In Mysore, we have nearly 10,000 acres under Virginia tobacco.

Highly Specialised Industry

"Tobacco production has become a highly specialised industry requiring greater technical skill in cultivation and curing. The commercial value of the leaf depends on the combination of different elements of quality, such as leaf size, thickness, elasticity, burning quality, body and aroma and our aim has all along been the production and supply of quality leaf not only to obtain highest returns for ourselves but also to produce such type of leaf that our buyers are most interested. Though the successful production of tobacco is dependent to a large extent on the favourable seasonal condition, certain features of culture have important effect on the quality of tobacco production. The choice of the seed, the most suitable type of soil, the rotation, spacing of plant in the field, spraying for control of diseases and pest, topping, suckering, and methods of harvest, curing and handling are important factors in the production of quality leaf and you will agree with me that, in any effort at improvement of quality, the first emphasis is rightly to be placed on the cultivation of the type of green leaf required for our purpose of curing and its timely harvest. Your Directors have taken necessary action to provide technical and material aid to the suppliers of green leaf, with a view to improving practices in the fields of our Company's growers. However, both the green leaf grower and the cultivator-*cum*-curer face a number of problems. Of the many problems, it may be mentioned that pest and diseases still remain the major factors affecting the industry, inasmuch as they reduce both the quantity and quality of production.

"I wish to say that in the development of the industry, there is need for more scientific information for solving practical problems of the ryots and its extension to the field and education of the ryot in improved techniques of production. As you are all aware, these programmes have been included in the expansion of research in the second Five-year Plan and your Directors have fully realised and are exerting to see that greater production of quality leaf is produced.

"By a perusal of the balance-sheet of the Company under review it may be noticed that the total sale realisation during the current year reached the highest target ever reached during the lifetime of the Company and the gross profit also has been good.

"It is gratifying to report that the uneasy conditions that prevailed during the past two or three years when we had difficulty in disposing of our low grades, has been overcome. This year, we have not been left with even a pound of previous year's tobacco which has not been sold.

Expert Opinion Available

"I am also glad to report that it has been the privilege of the Company to obtain expert opinion in the matter of curing, grading and marketing, from our esteemed customers, the Indian Leaf Tobacco Development Company, Ltd. I will be failing in my duty if I do not make reference to the appreciative efforts of Mr. W. E. Nicholson, who was till recently a Director of the Indian Leaf Tobacco Development Company, Ltd., and who, on retirement, has sailed to England. I am very happy that Mr. E. G. Willis, who has succeeded Mr. Nicholson, comes with extensive experience and knowledge of tobacco business and I hope that he will continue to extend his co-operation to our Company, in the years to come.

"I am also happy to report that the policy of extending help to the curers who want to put up their own barns and supply cured leaf to the Company is being continued. In fact, it was possible for us to acquire larger quantities of cured leaf during the year ended 31st March 1956 than in the past, on account of the co-operation extended by the private curers to this Company.

Grading Station

"In order to facilitate the handling of the cured leaf obtainable from the Goribidnur area where we have a big clientele of private barnholders, your Directors have already taken up the erection of a grading station, where, in course of time, it may be necessary to put up a redrying plant.

"I may also mention here that the quantitative supply of cured leaf in the private sector during the current year is as good as ever, in spite of adverse seasonal condition.

"The management and employees have maintained good relationship throughout the year and it was possible to improve the pay scales of the employees by granting weightage to their service. It is hoped that, with the improvement in their working conditions, the employees will exert more to improve the efficiency of production.

Great Part to Play

"The tobacco industry has a great part to play in furthering the aims and objectives of the second Five-year Plan. The extension of tobacco cultivation into new areas in National Extension Projects and expansion of production would improve not only the economic condition of the ryots of the region but also open out employment opportunities to a large number of people and help the solution of underemployment and unemployment in rural areas.

"With the inauguration of a bigger Mysore State from 1st November 1956, I fervently hope that the activities of the Mysore Tobacco Company also will have to be extended and your Directors will examine carefully as to what best can be done within their powers.

"Before concluding, I wish to acknowledge with gratitude, the continued assistance and encouragement given by the Government of Mysore from time to time for this Company.

"I also acknowledge with thanks the valuable advice, guidance and co-operation received from my esteemed colleagues on the Board. The staff and the officers of the Company deserve particular mention for their loyal services and exemplary work.

"I now move that the Directors' report and the audited accounts for the year ended 31st March 1956 be adopted."

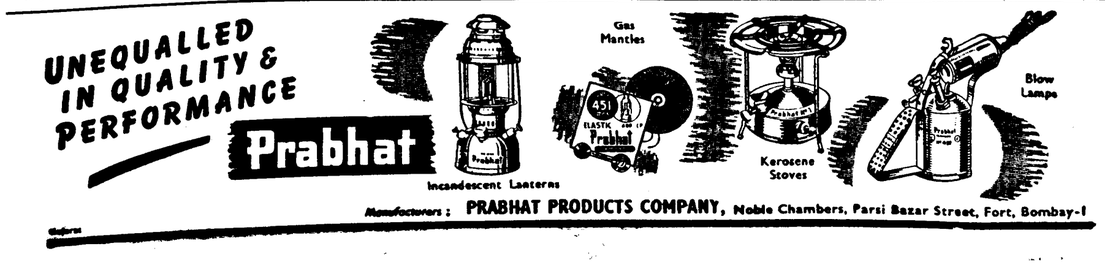
MINIMUM WAGES

The need for the removal of disparities, if any, in the minimum rates of wages fixed by the former administrations of the areas now integrated with Bombay State was stressed by Mr. Din Dayal Gupta, Minister for Labour, inaugurating last week, at Bombay, the first meeting of the Reconstituted Bombay States' Minimum Advisory Board. The problem, he added, was particularly conspicuous in the case of employment in the *bidi* industry. The Board is to advise the Government on the revision of minimum rates of wages in respect of employment in road construction, building operations and stone-breaking and crushing work.

In the course of his speech, Mr. Gupta referred to the practical difficulties in adhering to the time limit laid down in the Minimum Wages Act for review of minimum wages and revealed that the Government of India had consented to amend the Act suitably. The Minister pointed out that State regulation of minimum wages had arisen out of the recognition that labour was not a marketable commodity to be regulated by the laws of demand and supply and that its minimum needs must be adequately satisfied, but, at the same time, productivity and employment encouraged.

FACTORIES ACT

During the third quarter of 1956, the Government of Bombay convicted 59 occupiers and 34 managers of 75 factories in Bombay and Bombay Suburban, Thana and Kolaba districts and imposed fines in 408 cases for contravening the provisions of the Factories Act, 1948. The cases of contravention, which resulted in imposition of fines, included failure to provide a canteen as per orders of the court and allowing or requiring workers to work beyond notified hours of work. Thirty-seven occupiers and 21 managers were convicted for allowing or requiring the workers to work otherwise than in accordance with the notice of periods of work, 21 for not maintaining a register of adult workers of the factory, eight in each case for not complying with the provisions of weekly holidays and for not securely fencing machinery; three for not displaying notice of periods of work for adults in the factory. Two persons were convicted in each case for not providing first-aid appliances, for not applying for registration and grant of licence, for not providing washing facilities for workers and for not sending notice of accident to the Inspector.



NATIONAL INSURANCE COMPANY, LIMITED

MR. LAKSHMIPAT SINGHANIA ON FUTURE OF INDIAN INSURANCE

LIFE INSURANCE PLAYS A GREAT PART IN NATION-BUILDING

THE Forty-ninth Annual General Meeting of the National Insurance Company, Ltd., was held in Calcutta on 27th November 1956, under the chairmanship of Mr. Lakshmipat Singhania, President of the Company. Speaking on the occasion, Mr. Singhania said that Indian life insurance was expected to reach a new business level of Rs. 1,000 crores within the next few years. He was of the view that the achievement of this target was more than a certainty, because of the fact that the national income during the Second Plan period was expected to rise more than it did during the First Plan period. Mr. Singhania wanted the Government not to lose sight of this important factor, as life insurance played a great part in collection of small savings, utilised in nation-building projects.

The following is the full text of Mr. Lakshmipat Singhania's speech:

"GENTLEMEN,

"I welcome you to this meeting with a mixed feeling. This year embarks a new era in your Company's future on account of the rational changes brought about by the nationalisation of its life business which has been conducted for the last 50 years. Actually, the Company had completed its half a century's public service when it handed over the life business to the State this year. The nationalisation of insurance has opened a new chapter in the history of insurance in India which will now be carried by the State sector. Your Company will henceforth confine its activities only to general business like fire, marine, accident, guarantee, motor accident, etc.

"Events happening in the world today are beyond the expectations of all peace-loving nations, specially India, which has worked so hard during the last 10 years, ever since becoming free, to bring about world peace. So much so that neutrality itself is being questioned on account of invasion and interference of liberty in Egypt and Hungary. The world of today, which till recently was preaching the gospel of peace, has all of a sudden taken recourse to the law of the jungle where might was right and mutual distrust the order of the day. Co-existence has yielded ground to co-destruction and the United Nations has become a place for debates and arguments between the power blocs. Military pacts are replacing trade agreements and science which could have been utilised in the service of humanity is without the least hesitation occupied in destroying it. I simply fail to understand what man has made of man. This is all due to an unlimited desire for power based on force and subordination rather than on mutual goodwill and understanding and, if this continues, we may not be far away from a third world war which will be a war of destruction of humanity. Our peace-loving Prime Minister is working hard and making all attempts even today and I am sure he will continue up to the last to guide the world towards peace.

Biggest Experiment in Democratic Planning

"Under such unsettled circumstances, it is not unnatural that the economic life of our country has been disrupted and fear about the fulfilment of our ambitions crept in. The country has recently completed its first Five-year Plan and embarked on the second Five-year Plan. This type of planning, the biggest experiment in democratic planning in the living world, has increased the national product by 18 per cent. and *per capita* income by 11 per cent. over 1950-51. The Plan has recorded a sharp rise in industrial production, even more than the Plan targets, and the index of industrial production has gone up from 100.0 per cent. in 1951 to 130.0 per cent. in 1955. Similarly, the index of agricultural output has gone up from 100.0 per cent. to 120.0 per cent. during the same period. But more than anything else, it has made the people plan-conscious and created a momentum which is expected to gather greater and greater force in course of time.

"The Second Plan which estimates to spend Rs. 7,200 crores, that is, Rs. 4,800 crores in the public sector and Rs. 2,400 crores in the private sector of national economy, is expected to increase national product by 25 per cent. and *per capita* income by 18 per cent. over the 1955-56 level. The most important feature of the Second Plan is a greater emphasis on industrial production, specially of heavy and basic industries.

"The Second Plan is ambitious, but the greatest handicap is the shortage of Rs. 900 crores in foreign exchange requirements which will have to be met from foreign borrowings. The world events and the closure of the Suez Canal will increase this gap to a further extent and thus hamper our second Five-year Plan. During the first four months of the current year our adverse trade balance has shown an unprecedented rise and has reduced our sterling reserves to the extent of about Rs. 130 crores.

"The private sector is, in my opinion, a misnomer, as most of the production in the country uptil now has been carried by this sector and even a tiller of the soil or a small shopkeeper in the farthest corner of the country is a private *entrepreneur*. The public sector, which again I feel in the present contrast of things is a misnomer, should be called only a State sector. The so-called private sector is a more representative sector than any other sector, although it cannot be called a free sector, not being free in its functions, and may be termed as 'people's sector.'

Socialist Society

"The country has adopted the socialist pattern of society as its ultimate objective. The term 'socialist society' in my opinion is quite wide. Therefore, any sector which deals as a people's sector should cover in the pattern of socialist society. However, the adoption of the practice in the present context is to encourage more of State sector which unfortunately may lead to concentration of power in few hands than the public at large. It is a very doubtful question whether in doing so, the country is going to be benefited by way of increased production and lower cost, as otherwise the very object of decentralisation of economic power is hit at the root. The people of a free nation in a democratic set-up should be allowed to have equal opportunities to work and live instead of being compelled by statutory laws, because in that case it leads to totalitarian system of working rather than to democratic methods. We want our people to be independent rather than dependent and thus be a burden on the State.

"Of late, the public finance has been squeezed to a much greater extent. According to the two Plans, the disbursements are not keeping pace due to the delayed fulfilment of the planned objective, whereas the system of collections are continuing on the same footing. The result is that the money supply with the public increased to the tune of Rs. 204.82 crores from Rs. 1,979.49 crores in 1950-51 to Rs. 2,184.31 crores in 1955-56 during the first Five-year Plan, which means an increase of 10.4 per cent. against an increase of 18 per cent. in the national income. By the end of August 1956 the total money supply registered a decline and came down to Rs. 2,140 crores. At the same time, money disbursed goes to such areas and people who have no habit of investment or banking and has created a problem before the country and the scarcity of finance in the market has been evident in recent months. The only remedy in my opinion is unhampered production and distribution of consumer goods in India to have better circulation of such money. This would also help raising the standard of living of the people and maintain price at a low level, as other methods adopted for collection of small savings would not or rather cannot keep pace in present circumstances.

Nationalisation of Life Insurance

"The Government, in its zeal to take up a built-up industry, nationalised life insurance business on 19th January 1956 and took over the activities of all companies carrying on life business in India. It is not necessary for me to go in detail at this moment into the merits and demerits of nationalisation. It is a *fait accompli*. The question is whether such nationalisation is going to benefit the country as a whole, more than what has been done in the hands of the people. The progressive figures of the last few years of this business reveal that the insurance industry was playing its part with the economic growth of the country. If you take new insurance business of the First Plan period, the total business jumped from Rs. 139.5 crores in 1950 to Rs. 229.5 crores in 1954. That means a rise of 65 per cent. in four years whereas the national income has risen by 18 per cent. only. It was expected that within a few years Indian insurance would reach a new business of Rs. 1,000 crores. Since during the Second Plan national income is expected to rise more than during the First Plan, achievement of this target was more than certain. I wish that the Government should not lose sight of this important factor, as life insurance was playing a great part in collection of small savings from door to door and utilising the same in nation building by investing in Government securities, housing and industries. I wish that this important source should flourish greater and greater and we should have place in parity with the world insurance according to the economic condition of our country. It is difficult to visualise, at the moment, what is going to be, but I wish to emphasise with all the force at my command that, if the figures do not rise to our expectations, we would be doing a great disservice to the nation for interfering with an industry which was serving the country so well.

"It was also expected at the time of nationalisation that foreign life business of the Indian companies—here I take pride in saying that the National was one of the leading companies doing foreign life business—would be returned back to the Indian companies. But unfortunately, the Government has changed its mind and it seems that they are going to carry on the same themselves. I do not know what is going to be the future of this business. As I have said on so many previous occasions, I wish that our country should do their utmost to increase this business which is an invisible export and a foreign exchange earner. With the taking over of foreign life business, our foreign general business will also be hampered and building of that organisation in foreign countries by Indian insurers will be another uphill task.

Poor Compensation

"Coming to compensation, I feel that we cannot call the compensation proposed to be paid worth the name. It is hardly one per cent. of the life fund the Government has taken over. Banking and insurance is practically the same business. While nationalising the Imperial Bank of India, the Government paid certain compensation which was considered to be inadequate and worked out at 8 per cent. of total assets. But in case of insurance companies compensation is not even 1 per cent. of the total life fund. Moreover, that is not an investment to be made by the Government, but only a pre-payment of the surpluses which the insurance companies had rightfully earned during decades of successful working of this industry. Even that has not been paid uptil now, although it is about 11 months since insurance was nationalised. I hope the authorities would do their best to pay off this compensation which would go a long way at least in rehabilitating the general business and also helping those who had all their investments in insurance companies and lost all income due to nationalisation.

"The utilisation of the life fund in nation-building activities is of no less importance. I will only deal with the investment in the private sector, which at the time of nationalisation was of the order of about 16 per cent. It was emphasised and re-emphasised by the Government that this percentage in the private sector would be maintained, which was helping the investment market to a great extent. But since nationalisation nothing or very little money has been invested in private industry, with the consequence that the investment market has been deprived of a great support. I hope that the Government would keep up to the assurances given at the time of nationalisation and maintain the tempo by investing in private

A copy of this Offer for Sale, having attached to it the documents required by Section 60 of the Companies Act, 1956, and specified below, has been delivered for registration to the Registrar of Companies, Bombay.

Consent of the Government of India has been obtained to this Offer by an Order, of which a complete copy is open to inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

The Application List for the ordinary shares now offered for sale (including the shares preferentially offered to the employees of Hindustan Lever Limited as mentioned below) will open at 10-30 a.m. on the 3rd day of December, 1956, and will close at 3 p.m. on the 5th day of December, 1956, or later, at the discretion of the Offeror.

HINDUSTAN LEVER LIMITED

(FORMERLY LEVER BROTHERS (INDIA) PRIVATE LIMITED)

(*Incorporated on 17th October, 1933 under The Indian Companies Act, 1913*)

SHARE CAPITAL

Authorised :	*Issued and fully Paid :*
Rs. 5,57,00,000 in 55,70,000 Ordinary Shares of Rs. 10 each	Rs. 5,57,00,000

Unilever Limited, London (sometimes referred to in this Offer for Sale also as "the Offeror") is the beneficial owner of the whole of the issued capital of the Company which, with the exception of seven shares, is registered in their name.

LOAN CAPITAL

The Company has created no mortgage or debentures and has no other loan capital.

The Company has bank overdraft facilities secured by guarantee by Unilever Limited or by hypothecation of stock in trade, but on 31st October, 1956, no amount was outstanding. The Company has a current account with Unilever Limited and from time to time is indebted for goods and services supplied in the normal course of the Company's business. On 31st October, 1956, this account showed an amount due by the Company to Unilever Limited of Rs. 21,19,922.

OFFER FOR SALE OF

5,57,000 ORDINARY SHARES OF Rs. 10 each fully paid at Rs. 16-8-0 per share (including a premium of Rs. 6-8-0) payable in full on application.

Unilever Limited invite applications for the purchase from them of the above shares.

In addition to paying the purchase price to Unilever Limited the purchaser (or transferee) will have to bear the stamp duty on the transfer of the shares from Unilever Limited.

Applications must be made on the official form and in the case of applications from the public must be forwarded to the brokers to the Offer named below or to any of the branches of the National Bank of India Limited at the addresses stated on the application form.

It is intended to reserve a maximum of 55,700 (i.e. 10 per cent.) of the above 5,57,000 shares for offer in the first instance to the employees of Hindustan Lever Limited at the above price of Rs. 16-8-0 per share (including a premium of Rs. 6-8-0) payable in full on application. Applications from employees for these shares must be made on BLUE application forms and must be for 25 or 50 shares only.

Applications for the shares offered for sale to the public must be made on WHITE application forms and must be for 50 shares or a multiple thereof.

Any of the shares reserved for the employees of Hindustan Lever Limited which are not purchased by them will be available to meet applications from the public.

The shares offered for sale will rank for any dividends which may hereafter be declared.

HISTORY

The Company was incorporated in India as a private company on 17th October, 1933, under the Indian Companies Act, 1913, with the name Lever Brothers (India) Limited. Shortly after incorporation the Company took over the Lever soap business established in India in the nineteenth century by Lever Brothers of Port Sunlight, Cheshire, since when the Company has carried on business continuously.

On 8th October, 1956, but with effect from the close of business on 31st December, 1955, by virtue of Orders of the Bombay High Court the Company was amalgamated under Sections 391 and 394 of the Companies Act, 1956, with the undernoted Companies whose assets thereby vested in the Company subject to their liabilities, duties and covenants:—

(1) THE HINDUSTAN VANASPATI MANUFACTURING COMPANY PRIVATE LIMITED (sometimes referred to in this Offer for Sale also as "HVM").

(2) WILLIAM GOSSAGE & SONS (INDIA) PRIVATE LIMITED.

(3) JOSEPH CROSFIELD & SONS (INDIA) PRIVATE LIMITED.

These companies (hereinafter collectively referred to as "the merged companies") have now ceased to exist. Previously they were closely associated with the Company all being wholly owned subsidiaries of Unilever Limited. Since the amalgamation the Company has been carrying on the combined business comprising the manufacture and sale of soaps, detergents, toilet preparations and glycerine, together with vanaspati, margarine, edible oils and oilcake, formerly products of HVM which since 1932 has been the largest producer of its kind in India.

Following the amalgamation, the Company was converted to a public company on 27th October, 1956, and changed its name to Hindustan Lever Limited on 1st November, 1956.

BUSINESS

The Company's main aim has always been to sell good quality products at fair prices. Its products now include SUNLIGHT and LIFEBUOY soaps, LUX toilet soap, LUX soap flakes, RINSO soap powder, VIM scouring powder, DALDA and LOTUS brands of vanaspati, BLUE BAND and other margarines, and MARVO cooking medium. The rights in India to all the trade marks applied to these products are the property of the Company. The Company has arrangements with companies of the Unilever Group outside India by which it manufactures and sells their products in India for its own account; these products include PEARS transparent soap and talcum powder, REXONA toilet soap, BREEZE toilet soap, ERASMIC shaving stick, and shaving cup soap, HIMALAYA BOUQUET toilet and talcum powder, PEPSODENT and GIBBS S.R. toothpastes and GIBBS dentifrice, CALIFORNIAN POPPY hair oil and ERASMIC coconut hair oil. The Company also produces industrial and B.P. quality glycerine which it sells under its trade marks PYRAMID and WHEEL. The Company also sells the soapless detergent powder SURF; supplies of this product are at present imported from the United Kingdom, but local manufacture is planned.

The Company's products are distributed throughout India. The Company's sales offices in Bombay, Calcutta, Delhi and Madras and its depots at Gauhati, Cochin and Bangalore deal directly with over 13,000 wholesalers and stockists in over 3,000 towns. The Company's 375 salesmen are in touch with about 2,00,000 shops that deal in the Company's products.

As a member of the Unilever Group, the Company has access to Unilever's international knowledge and experience of the manufacture and marketing of detergents, edible fats and toilet preparations. To a great extent because of its membership of the Group, the Company has made a valuable contribution to the development of the soap and vanaspati industries in India and continues to do so.

The basic raw material of the Company's soap and vanaspati manufacturing business is vegetable oil. The quantities (to the nearest thousand tons) of such oil processed by the Company and by HVM whose business is now amalgamated with the Company, during each of the five years ended 31st December, 1955, are given below; a predominant part—about 88 per cent. in 1955—is purchased within India.

	Tons
1951	81,000
1952	91,000
1953	89,000
1954	97,000
1955	1,04,000

PERSONNEL

For many years the training of Indian employees for higher posts, whether technical or commercial, has been an important part of the Company's policy and selected personnel are sent overseas for special courses of instruction and for observation of advanced practices. More than 85 per cent. of the managerial staff are Indians.

In recent years during which relations between employers and workers in all industries have been subjected to many strains and stresses the Company has been loyally served by its workers and has on its part endeavoured to think and act progressively in all matters pertaining to wages, conditions of work, retirement provisions and welfare. The wages and salaries paid by the Company have been acknowledged on several occasions by Labour Tribunals as the highest in the industry.

The number of people employed by the Company exceeds 6,000.

SUBSIDIARIES

The Company has four wholly owned subsidiaries. They are:—

United Traders Private Limited and Van den Berghs (India) Private Limited, neither of which are trading at present, and

Levers Associated Trust Private Limited and Levindra Trust Private Limited, both of which are trust companies managing the Provident Fund of the Company's employees.

FACTORIES

Situation and Address	Approximate Area Acres	Nature of Tenure	Main Products
Haji Bunder, Sewri, Bombay	24.0	Leasehold to 1983 with option for renewal to 2032	Soap, toilet preparations, glycerine, vanaspati, margarine and oil cake.
Garden Reach, Calcutta	3.4	Leasehold to 2008	Soap, toilet preparations and glycerine
	9.0	Freehold	
Athpur, Shamnagar, W. Bengal	15.2	Freehold	Vanaspati
Grand Trunk Road, Ghaziabad, U.P. ..	19.7	Freehold	Vanaspati
Edamalaipatti Pudur, Tiruchirapalli, S. India	39.5	Freehold	Vanaspati

The Factories are well situated for the purposes of securing regular supplies of raw materials and ensuring efficient distribution of manufactured products to all parts of the country. They are equipped with modern plant and machinery, adequately provided with railway sidings, water and power and are maintained in good working condition.

Negotiations have been completed for acquiring a lease from the Government of Bombay of a site of about 0.9 of an acre in the area known as Back Bay Reclamation on which the Company proposes to erect a Head Office building to house members of its staff at present dispersed over five buildings in Bombay City.

AUDITORS' REPORT

The following is a copy of the Report received from the Company's Auditors, Messrs. A. F. Ferguson & Company:—

BOMBAY, 12*th November*, 1956.

THE DIRECTORS,
UNILEVER LIMITED,
BLACKFRIARS,
LONDON, E. C. 4, ENGLAND.

Gentlemen,

We have examined the audited accounts for the five years to 31st December, 1955, of Hindustan Lever Limited (formerly Lever Brothers (India) Private Limited) and those of its subsidiary companies at that date, all of which were wholly owned, namely :—

United Traders Private Limited
Levers Associated Trust Private Limited
Levindra Trust Private Limited

and those of the following companies (hereinafter collectively referred to as "the merged companies"), whose assets and liabilities were on 8th October, 1956, transferred to Hindustan Lever Limited, namely :—

The Hindustan Vanaspati Manufacturing Company Private Limited (hereinafter referred to as "HVM")
Joseph Crosfield & Sons (India) Private Limited
William Gossage & Sons (India) Private Limited

We have also examined the audited accounts of Van den Berghs (India) Private Limited which was a wholly owned subsidiary of HVM but which, on 8th October, 1956, on the abovementioned transfer of assets and liabilities, became a wholly owned subsidiary of Hindustan Lever Limited.

We have also examined the audited accounts of the following companies (hereinafter referred to as "the liquidated companies") for the four years to 31st December, 1954, and the period to 27th July, 1955, namely :—

The North West Soap Company Private Limited
The Premier Soap Company of India Private Limited

which, as wholly owned subsidiaries of Hindustan Lever Limited, went into voluntary liquidation on 28th July, 1955, and held their final meetings in the liquidations on 23rd October, 1956.

Throughout the years under review we have acted as auditors of all the above companies.

No audited accounts of any of the above companies have been made up since 31st December, 1955.

1. **PROFITS**—We report that the combined profits of Hindustan Lever Limited, its subsidiary companies as at 31st December, 1955, and the liquidated companies, and the profits of each of the merged companies (in the case of HVM, combined with those of its former subsidiary company) all arrived at on the basis set out below, were as follows :—

Year ended 31st December	Hindustan Lever Limited and its subsidiary companies	HVM and its subsidiary company	Joseph Crosfield & Sons (India) Private Limited	William Gossage & Sons (India) Private Limited	AGGREGATE		
	PROFITS BEFORE TAXATION				Profit before taxation	Taxation as defined in (ii) below	Profit after taxation
	Col. 1	Col. 2	Col. 3	Col. 4	Col. 5	Col. 6	Col. 7	Col. 8
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1951	1,28,85,262	11,67,798	35,228	37,766	1,41,26,054	61,36,005	79,90,049
1952	1,80,39,423	4,52,080	36,087	39,961	1,85,67,551	80,65,280	1,05,02,271
1953	1,64,71,799	82,80,750	35,753	39,170	2,48,27,472	1,07,84,433	1,40,43,039
1954	1,71,65,259	(*53,31,230*) Loss	35,758	38,052	1,19,07,839	51,72,468	67,35,371
1955	1,90,86,815	57,34,820	36,569	39,509	2,48,97,713	1,08,14,944	1,40,82,769

(i) The profits shown in columns 2 to 6 inclusive have been arrived at after charging all expenses of working and management, interest, and depreciation and after making such adjustments as are in our opinion necessary. Depreciation has been charged throughout the five years on a consistent basis and, in aggregate, exceeds the total income-tax allowances exclusive of initial allowances and development rebates.

(ii) The taxation shown in column 7 has been calculated on the profits shown in column 6 at the rate of 6.95 as. in the rupee. This is the combined rate of income-tax and super-tax applicable to the profits of the companies for each of the years under review before taking into account the effect of dividend distributions out of such profits. In respect of 1955, the Finance Act, 1956, imposed on companies taxation additional to the basic rate of 6.95 as. to the extent that dividends declared during 1955 exceeded 6 per cent. of issued capital. On the basis of the Finance Act, 1956, and the present issued capital, the additional taxation payable by Hindustan Lever Limited in future years will be as follows :—

On the first Rs. 33,42,000 of dividends	Nil
On the next Rs. 22,28,000 of dividends	2 as. in the rupee
On the balance of dividends over Rs. 55,70,000	3 as. in the rupee

The aggregate actual taxation paid or calculated as payable by Hindustan Lever Limited, its subsidiaries and the merged companies is as follows :—

Year ended 31st December	Rs.
1951	60,74,497
1952	75,94,460
1953	90,12,026
1954	80,44,480
1955	1,38,42,031

2. **DIVIDENDS**—The following rates of dividend were paid in respect of the five years to 31st December, 1955, by Hindustan Lever Limited and the merged companies :—

The capital of each company consisted wholly of fully paid ordinary shares of Rs. 10 each

Year ended 31st December	Hindustan Lever Limited		HVM		Joseph Crosfield & Sons (India) Private Limited		William Gossage & Sons (India) Private Limited	
	Paid-up Capital Rs. Lakhs	Rate %	Paid-up Capital Rs. Lakhs	Rate %	Paid-up Capital Rs. Lakhs	Rate %	Paid-up Capital Rs. Lakhs	Rate %
1951	138	Nil	133	Nil	0.8	Nil	3.2	Nil
1952	200	Nil	133	Nil	0.8	Nil	3.2	Nil
1953	200	25	133	Nil	0.8	200	3.2	50
1954	200	55	133	30.075	0.8	Nil	3.2	Nil
1955	200	37.5	133	50	0.8	56.25	3.2	18.75

3. **NET ASSETS.**—The net assets, based on the audited balance sheets as at 31st December, 1955, of Hindustan Lever Limited, its subsidiary companies at that date, each of the merged companies, and Van den Berghs (India) Private Limited at that date a subsidiary company of HVM, after making such adjustments as we consider necessary, were as follows :—

	Hindustan Lever Limited	The subsidiary companies of Hindustan Lever Limited	HVM	Van den Berghs (India) Private Limited, a subsidiary company of HVM	Joseph Crosfield & Sons (India) Private Limited	William Gossage & Sons (India) Private Limited	AGGREGATE

* *This represents a net dividend declared on 22nd February* 1956 *in respect of* 1955.

We are, gentlemen,

Yours faithfully,
A. F. FERGUSON & CO.,
Chartered Accountants.

PROSPECTS

The consumption of products of the types manufactured by the Company is likely to increase as the standard of living is raised. The Company expects to win a fair share of any increased prosperity that may accrue to the industries concerned.

Assuming a continuance of present rates of taxation the Directors estimate that the consolidated net profit of the Company and its subsidiaries for the year ending 31st December, 1956 (after taking into account taxation of Rs. 108 lakhs of which Rs. 19½ lakhs is in respect of the capitalisation of Rs. 157 lakhs of profits on 11th October, 1956) will not be less than Rs. 90,00,000. On the 1st November, 1956, the Company paid an interim dividend of 8 annas per share absorbing Rs. 27,85,000. If the estimated net profit is realised and there is no substantial change in trading conditions the Directors would expect to recommend that a final dividend for the year 1956 of 6 annas per share, free of income-tax, be paid before the end of May, 1957.

For the future it is the intention of the Directors (in the absence of unforeseen circumstances) to recommend the distribution of a large part of the Company's profits by way of dividend. For example, if the estimated level of profit for 1956 is maintained and there is no substantial change in rates of taxation or trading conditions, the Directors would expect to recommend for the year ending 31st December, 1957 a total dividend of not less than Rs. 1-6-0 per share free of income-tax. On the sale of the shares now offered the Company will become a Company to which Section 23A of the Income Tax Act, 1922, applies.

As will be seen from the Auditors' Report, one of the merged companies (HVM), the business of which is now carried on by the Company and is primarily concerned with the manufacture and sale of vanaspati, incurred a loss in 1954. In that year the price of Indian groundnut oil fell heavily. The profits of this particular business—as indeed of the Vanaspati Industry as a whole—are governed to a great extent by price fluctuations in the Indian groundnut oil market. These fluctuations in recent years have been very wide.

STATUTORY AND OTHER INFORMATION

The Offeror was the promoter of the Company but no sum was paid to the Offeror for its services as promoter.

During the two years preceding the date hereof the Company issued 20,00,000 Ordinary Shares of Rs. 10 each credited as fully paid to Unilever Limited in consideration of the vesting in the Company of the assets of the merged companies and it also issued during this period 15,70,000 Ordinary Shares of Rs. 10 each credited as fully paid to Unilever Limited by capitalising Rs. 1,57,00,000 of profits standing to the credit of general reserve.

No amount has been paid to the Company by way of premium on any shares within the two years preceding the date hereof.

Apart from the dividends referred to in the report of the Auditors, the shares above referred to, the sum of Rs. 5,22,590 being remuneration paid to the Directors and Secretary of the Company and the sum of Rs. 2,84,43,747 being payments made to or to be made to Unilever Limited for goods and services in the ordinary course of the Company's business, no amount or benefit has been paid or given within the two years preceding the date hereof to the promoter or any officer of the Company. It is not intended that the Company should pay or give to the promoter any amount or benefit other than such amounts as may become payable to the promoter in the ordinary course of the Company's business. It is not intended to pay or give any amount or benefit to any officer of the Company other than normal remuneration.

Except as beneficial owner of the whole of the Company's issued share capital and as a creditor of the Company from time to time in the normal course of the Company's business, the Offeror has no interest in the profits or property of the Company. The other members of the Company have no beneficial interest in the profits or property of the Company.

Since incorporation the Company has capitalised profits standing to the credit of general reserve (including the Rs. 1,57,00,000 referred to above) as follows: 20th March, 1937, Rupees Six Lakhs; 29th December, 1937, Rupees Eleven Lakhs; 22nd July, 1939, Rupees Three Lakhs; 20th August, 1940, Rupees Two Lakhs; 17th November, 1942, Rupees One Lakh; 6th September, 1943, Rupees Six Lakhs; 19th February, 1945, Rupees Thirteen Lakhs; 7th September, 1945, Rupees Twelve Lakhs; 24th December, 1946, Rupees Six Lakhs; 31st December, 1951, Rupees Fifty Lakhs; 22nd August, 1952, Rupees Sixty-two Lakhs; 11th October, 1956, Rupees One Hundred and Fifty-seven Lakhs. The Company applied the amounts capitalised in paying up in full ordinary shares of the Company of Rs. 10 each of a nominal amount equal to the profits capitalised. All the shares were allotted to the Offeror or its nominees, or subsidiaries of the Offeror incorporated in the United Kingdom or their nominees.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

The premium receivable on the shares now offered for sale will be retained by the Offeror. No part of the proceeds of this Offer for Sale is receivable by the Company. The Offeror will pay all the expenses in connection with this Offer for Sale except the stamp duty on the transfers from the Offeror to the persons in whose names the shares are registered which will be payable by those persons. The Offeror will also pay brokerage as indicated below. The total expenses, including brokerage, payable by the Offeror are estimated to be Rs. 3,50,000.

No commission (except brokerage as hereinafter mentioned) was paid during the two years preceding the date hereof or is payable to any person in consideration of his subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for shares in the Company.

All the Directors are whole-time Directors and are not required to hold any qualification shares.

No Director had any interest in the promotion of the Company and neither the promoter nor any Director has any interest in any property acquired by the Company within the two years preceding the date hereof or proposed to be acquired by it other than the promoter's interest as a member of the Company and beneficial owner of the whole of its share capital.

No sums have been paid or agreed to be paid to any Director in cash or shares or otherwise by any person to induce him to become or to qualify him as a Director or otherwise or for any other purpose whatsoever for services rendered by him in connection with the promotion of or formation of the Company.

Mr. A. J. C. Hoskyns-Abrahall is the beneficial owner of £200 Unilever Limited 8 per cent. Cumulative 'A' Preference Stock.

The Articles of Association of the Company contain provisions to the following effect:—

(a) The profits of the Company which shall from time to time be determined to be divided shall be divisible among the members in proportion to the capital paid up on the shares held by them respectively.

(b) Unless otherwise determined by a general meeting the number of Directors shall not be less than three and not more than eleven.

(c) The Directors including the Managing Director, if any, shall be paid out of the funds of the Company by way of remuneration for their services such sums as the Company in general meeting may from time to time determine, and such remuneration shall be divided among them in such proportions and manner as the Directors may determine, and, in default of such determination within the year, by the Chairman. If any Director shall be called upon to perform extra services or make special exertions or efforts the Board may arrange with such Director for such special remuneration for such extra services or special exertions or efforts either by a fixed sum or otherwise as may be determined by the Board and such remuneration may be either in addition to or in substitution for his normal remuneration. A Director who is not a resident of Bombay City may be paid such sum as the Board may consider fair compensation for travelling, boarding, lodging and other expenses incurred in attending meetings of the Board in that City. If any Director is called upon to go or reside out of Bombay City on the Company's business, he shall be entitled to be repaid any travelling or other expenses incurred by him in connection with the business of the Company.

(d) Save as required by the Companies Act, 1956, no restrictions are imposed by the Articles of Association on the Directors' powers of management and the control of the Company's affairs is vested by the Articles of Association in the Directors.

(e) Subject to the provisions of the Companies Act, 1956, the Board may appoint from time to time any one of its number as Managing Director of the Company for a fixed term not exceeding five years at a time upon such conditions as it thinks fit and may vest in such Managing Director such of its powers as it thinks fit and such powers may be made exercisable for such period or periods, and upon such conditions and subject to such restrictions as it may determine. The remuneration of the Managing Director shall be determined in the same manner as that of a Director.

The Board has not appointed a Managing Director and it is not its present intention to do so.

(f) The Directors may from time to time at their discretion raise or borrow or secure the payment of any sum or sums of money for the purposes of the Company. Provided, however, where the moneys to be borrowed together with the moneys already borrowed (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid-up capital of the Company and its free reserves (not being reserves set apart for any specific purpose) the Board shall not borrow such moneys without the consent of the Company in General Meeting. The provisions of the Articles of Association relating to borrowing are qualified by the relevant provisions of the Companies Act, 1956.

(g) Every officer or agent of the Company shall be indemnified out of the assets of the Company against any liability incurred by him in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under Section 633 of the Companies Act, 1956, in which relief is granted to him by the Court.

(h) Save as hereinafter mentioned in regard to joint-holders, on a show of hands every member who (being an individual) is present in person or (being a corporation) is present by a representative, shall have one vote. Upon a poll every member who (being an individual) is present in person or by proxy or (being a corporation) is present by a representative or proxy shall be entitled to one vote for each share held by him. No person may vote in person or by proxy if there remains unpaid any call or other sum due on any of his shares.

(i) If there be joint registered holders of any shares, any one of such persons may vote at any meeting either personally or by proxy in respect of such shares, as if he were solely entitled thereto, provided that, if more than one of such joint-holders be present at any meeting either personally or by proxy, that one of the said persons so present whose name stands higher on the Register of Members shall alone be entitled to vote in respect of such shares, but the other or others of the joint-holders shall be entitled to be present at the meeting. Several executors or administrators of a deceased member in whose name shares stand shall for the purpose of the Articles be deemed joint-holders thereof.

(j) The Articles of Association contain no restriction on the transfer of fully paid-up shares. The Directors may decline to register a transfer of any partly paid shares to a person of whom they do not approve and may also decline to register a transfer of partly paid shares on which the Company has a lien.

(k) The special rights attaching to any class of shares may be varied, modified, commuted, affected, abrogated or dealt with by any agreement between the Company and any person purporting to contract on behalf of that class provided that such an agreement is ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of that class or is confirmed by a resolution passed at a separate General Meeting of the holders of shares of the class and supported by the votes of the holders of at least three-fourths of the shares of that class.

MAIN OBJECTS

The main objects of the Company include the manufacture and sale of soap, soap powders, detergents, toilet requisites, vanaspati, margarine, edible oils, cattle food and foods of all kinds.

All the objects of the Company are in law main objects and therefore a copy of the objects clause of the Company's Memorandum of Association is annexed hereto and forms part of this Offer for Sale.

CONTRACTS

The following contracts, not being contracts entered into in the ordinary course of business, which are or may be material have been entered into by the Company during the two years preceding the date hereof:

No.	Date	Particulars
1	2nd May 1955	Assignment of the Trade Mark "Breeze" registered in India under No. 128300 to Erasmic Company Limited of Unilever House, London.
2	1st February 1956	Assignment of the Trade Mark "Bris" registered in India under No. 163139 to Erasmic Company Limited of Unilever House, London.
3	12th November 1955 to 18th September 1956	Correspondence between the Company and the Government of Bombay by which the latter has accorded sanction to the grant of a lease of a site at Backbay Reclamation, Bombay, of approximately 4258 sq. yards for a period of 99 years at a ground rent of Rs. 12 As. 8 per sq. yd. on condition that the Company erects thereon an Office Building of not less than Rs. 12 lakhs in value within the first four years of the said lease.
4	27th September 1956	Agreement between the Company and its workmen employed in its factories at Sewri, Bombay, represented by Lever Brothers Employees' Union, Bombay, fixing generally the terms and conditions of employment for the years 1955 to 1960 both inclusive, and, in particular, fixing pay-scales, dearness allowance, grading of hourly-rated jobs, provident fund, gratuity and incentive payment and bonus.
5	10th October 1956	Resolution passed by the Company in general meeting on 10th October, 1956, voting as the annual remuneration of all the Directors collectively a sum not exceeding Rs. 8 lakhs to be apportioned among them as they may determine.

(Continued in column 3 above)

UNDERWRITING

This Offer is not being underwritten.

APPLICATIONS FROM THE PUBLIC, which must be for 50 shares, or a multiple thereof, must be made on the official WHITE application form and will be declined if not so made. WHITE application forms, together with a remittance for the full amount payable on application, should be sent to any of the branches of the National Bank of India Limited, or to the Brokers to the Offer, at the addresses as given on the application form. A separate remittance must accompany each form.

APPLICATIONS FROM THE STAFF OF HINDUSTAN LEVER LIMITED for the shares reserved in the first instance for them, and which must be for either 25 or 50 shares, must be made on the official BLUE application form and will be declined if not so made. These forms are obtainable only from the offices of Hindustan Lever Limited mentioned in the last paragraph of this Offer for Sale. BLUE application forms, together with a remittance for the full amount payable on application, should be sent to the Secretary of Hindustan Lever Limited at Scindia House, Dougall Road, Ballard Estate, Bombay. A separate remittance must accompany each form.

All remittances should be made by cheque or draft drawn on a bank in any one of the following towns: Bombay, Calcutta, Madras, Bangalore, Amritsar, Cawnpore, Delhi, New Delhi, Tuticorin, Cochin. Application forms sent with cheques or drafts drawn on banks in towns other than those stated above may be refused.

Cheques or drafts should be made payable to "National Bank of India Limited A/c Unilever" and should, for the applicant's protection, be crossed "A/c Payee only."

The Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance of the applicant's remittance will be returned, in which event bank commission, if any, will be payable by the applicant.

Acceptance will be notified by the despatch of a definitive share certificate in the name of Unilever Limited together with a blank transfer executed by that company or on its behalf as transferor. These documents will be sent by registered post at the risk of the applicant. The Company has agreed to waive the transfer fee for the registration of such tranfers from the Offeror.

A brokerage of 4 annas per share will be paid by the Offeror to the Managing Brokers in respect of all acceptances. The Managing Brokers will pay 2 annas per share to Certified Brokers of any recognised stock exchange and to the National Bank of India Limited on the basis of acceptances of applications received and bearing their stamp. In addition to the 2 annas per share, the Managing Brokers will pay to Messrs. Place, Siddons and Gough, Messrs. Kothari and Sons and the National Bank of India Ltd. remuneration for any additional services rendered by any of them to and at the request of the Managing Brokers.

The consent in writing of the abovementioned Bankers, Solicitors and Brokers to act in their respective capacities has been obtained and none of them has withdrawn their consent to the issue of this Offer for Sale. Messrs. A. F. Ferguson & Co., have also given and have not withdrawn their written consent to the issue of this Offer for Sale with their Report included in the form and context in which it is included.

The foregoing written consents, copies of the contracts numbered one to five above and the written statement of the adjustments made by the Auditors in arriving at the figures shown in their Report and giving the reasons therefor have been attached to the copy of the Offer for Sale, which has been delivered to the Registrar of Companies, Bombay, for registration.

The documents mentioned below may be inspected at the Registered Office of the Company, Scindia House, Dougall Road, Ballard Estate, Bombay, during usual business hours (excluding Saturdays) until the Application List has been closed.

(1) The Memorandum and Articles of Association of the Company.

(2) Copies of the Contracts numbered one to five above.

(3) Copy of the order of the Central Government giving consent to the Offer for Sale.

(4) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of The Hindustan Vanaspati Manufacturing Company Private Limited, in the Company.

(5) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of Joseph Crosfield and Sons (India) Private Limited, in the Company.

(6) Copy of the order dated 8th October, 1956, of the High Court of Judicature at Bombay under Sections 391 and 394 of the Companies Act, 1956, vesting the assets (subject to the liabilities, duties and covenants) of William Gossage and Sons (India) Private Limited, in the Company.

(7) The original Report of Messrs. A. F. Ferguson & Co., as set out herein and a copy of their statement as to the adjustments made by them in arriving at the figures shown in their Report and giving the reasons therefor.

(8) Copies of the balance-sheets and profit and loss accounts upon which the Report of Messrs. A. F. Ferguson & Co., Bombay, is based, for the 5 years ended 31st December, 1955.

Copies of the Offer for Sale and WHITE application forms may be obtained by the public from all Indian branches of the National Bank of India Limited and from the Brokers. Copies of the Offer and BLUE application forms may be obtained by the staff from the Registered Office of the Company at Scindia House, Dougall Road, Ballard Estate, Bombay, and from the Company's offices at 4 Lyons Range, Calcutta; 12/1 Delhi-Ajmeri Gate Scheme, Delhi; 11/14 Armenian Street, Madras; Mattancherry Main Road, Cochin; 2 Central Street, Bangalore; Athgaon Road, Gauhati; Grand Trunk Road, Ghaziabad; Edamalaipatti, Pudur, Tiruchirapalli.

Dated at Bombay this seventeenth day of November, 1956.

OFF TO A GOOD START

The Second Five Year Plan has allocated Rs 710 crores for industrial and mining developments, which is an increase of Rs. 537 crores over the First Plan. Village and small-scale industries receive Rs. 200 crores—an indication of the all-round industrial effort conceived in the Second Five Year Plan.

In this unprecedented expansion of our industries, paper will play an important role. In mills, mines, construction yards... wherever plans and estimates have to be made...paper will provide the means of record and communication.

COCOA POWDER AND CHOCOLATE INDUSTRY

CONTINUATION OF PROTECTION BEING CONSIDERED

THE question whether protection should be continued to the cocoa powder and chocolate industry has once again come up before the Tariff Commission. An enquiry into the question was commenced by the Commission on the 19th inst. It may be recalled that the first enquiry into the industry was made by the Indian Tariff Board in 1946, followed by two other enquiries, one in 1949 and the last in 1954. Following the recommendations of the Commission in 1954, the Government of India granted protection to the industry at the standard rates of 31¼ per cent. *ad valorem* in the case of cocoa powder, and 50 per cent. *ad valorem* in that of covering chocolate, other than confectionery. Although this protection is due to expire on 31st December 1956, the Government has provided for its continuation for a further period of one year, namely, till the end of December 1957, on an *ad hoc* basis. Thus, the industry has enjoyed protection already for a period of nine years.

Now that the Commission is seized of the question, it will be appropriate to discuss briefly the progress of the industry during the past several years, and the problems that are still being faced by it, and examine how far the industry fulfilled the obligations arising from the protection it has been enjoying. Indeed, the Chairman of the Tariff Commission, Mr. K. R. Damle, himself has dwelt on these issues at considerable length while speaking on the occasion of the commencement of the public inquiry into the question. At present, the industry consists virtually of only one producer, namely, the Sathe Biscuit and Chocolate Co., Ltd., Poona. It has a rated capacity of 450 tons for covering chocolate and 150 tons for cocoa powder on a single-shift basis. Another unit, namely, Messrs. Cadbury-Fry (India) Ltd., is expected to commence production before the end of this year, its rated capacity being 340 tons for covering chocolate and 125 tons for cocoa powder. Thus, when the second unit also goes into production, the rated capacity of the industry will be 970 tons of covering chocolate and 275 tons of cocoa powder on single-shift basis. There are some small units which are engaged in the production of cocoa powder and chocolate from time to time, but their production has not been on a commercial scale.

The progress of the industry as judged by the production figures presented by the Chairman in his speech has not been very bright. The following table, presented by Mr. Damle, indicates the total production of covering chocolate and cocoa powder and the amount of imports between 1951 and January-June 1956:

Year	Production	Imports	Total potential supply
1951	164.1	269.6	433.7
1952	198.6	148.2	346.8
1953	155.1	332.2	487.3
1954	110.9	240.2	351.1
1955	98.9	34.2	133.1
1956 (Jan.-June)	36.0	92.3	128.3

As will be seen from the table above, production, which touched the highest in 1952, has been steadily declining. Imports were high till 1954, but declined later. This trend, viewed in the context of a similar decline in production at home and of the normal amount of carry-over stocks with the producers, leads to the conclusion that the demand has steadily declined. There is, however, the possibility—to the examination of which the Commission has rightly addressed itself—that the unusually large imports in 1953 and 1954 might have been responsible for causing a decline in the offtake of the indigenous product in subsequent years.

Problems

This brings one to the consideration of the problems facing the industry. In the first place, the important feature of the industry, as Mr. Damle pointed out, is its total dependence on foreign sources for its important raw material, namely, cocoa beans. The magnitude of this factor will be clear when it is remembered that cocoa beans account for no less than 65 per cent. of the ruling value of the finished products, namely, cocoa powder and covering chocolate, taken together. The developmental work started in Madras and Mysore by the respective Governments for the production of cocoa indigenously has produced no appreciable results. Yet most of the cocoa plants in these two States are not only very young but the area under cultivation is so small that the production of indigenous beans is practically negligible. Mr. Damle's observations on this subject suggest that the chocolate producers should have taken major steps by now for developing cocoa plantation, especially as there are, according to him, no insurmountable difficulties in this country for growing cocoa trees. He was of the view that the fact that, even after nine years of protection, the industry continued to be dependent upon imported raw materials could not be regarded as a very satisfactory feature. This dependence of the industry on imported raw material has rendered the prices of the products of the industry sensitive to the prices of the imported raw material. As a result, when the prices shot up, as, for instance, during 1954-55 and 1955-56, the demand for chocolates suffered an immediate setback. This is so, particularly because the elasticity of demand for cocoa powder and chocolate is very high, the consumption of these productions being the result of an acquired taste. The adverse effects of a fall in demand caused by high prices linger for a long time and persist even when prices are again lowered. The prospects of success for the industry would be definitely much better, if the country produced its own requirements of cocoa beans.

Price of Sugar

A second problem facing the industry relates to the price of sugar which is another raw material of the industry. It may be recalled that the Tariff Commission in its report in 1954 expressed its inability to support the industry's demand for special facilities in the form of supply of sugar at reduced prices, for the reasons that sugar constituted only about 10 per cent. of the raw material cost of the products and that any special arrangement made for this industry would establish a precedent for providing similar facilities to other industries using a greater proportion of sugar as raw material. Despite this clear-cut and convincing ground on which this demand was rejected, the industry has again requested the Commission to reconsider its earlier decision.

The industry has also been experiencing difficulties in the disposal of cocoa powder, due to lack of demand for indigenous cocoa butter used in chocolate coatings. The Commission had recommended in 1954 that the Sathe Biscuit and Chocolate Company, the only producer, should take steps for the expansion of cocoa butter with a view to meeting the entire domestic requirements. But the Company has not been able to utilise fully its capacity for the production of cocoa butter, because the latter product has been priced out by cheaper alternative forms of chocolate coverings, such as fats. Further, the imported chocolate butter has been cheaper than the indigenous chocolate butter produced by no less than Rs. 4-8 per lb.

Following the recommendations of the Commission in 1954, certain measures taken by the Government have helped improve the position of the industry to some extent. The Commission, for instance, had recommended in 1954 that cocoa beans should continue to be exempt from import duty, and that they should be placed on O.G.L. Accordingly, imports of cocoa beans have been duty-free, while import licences have been made available freely and kept valid for one year so as to enable the importers to buy the beans under favourable conditions.

A notable improvement in the quality of the indigenous products is reported. Mr. Damle said that the views received by the Commission indicated "a considerable improvement" in the quality of the products and that no specific defects had been reported to it.

NEWSPRINT FACTORY

The Minister for Heavy Industries disclosed in the Lok Sabha on 21st November that a newsprint factory with a capacity of 30,000 tons would be set up in the public sector at Shankarnagar, Andhra Pradesh. The Minister also stated that the Government was also taking further steps to meet the domestic requirements which were expected to go up to 140,000 tons by 1960-61. The Minister pointed out that the newsprint factory was already under production at Nepanagar, Madhya Pradesh, and had produced, during the year 1955-56, 3,055 tons. At this level, the production of the factory had reached the optimum level of 60 tons a day. With the completion of certain readjustments to the pulp plant in the course of the next year, production was expected to go up to 100 tons a day. It was also revealed by the Minister that a committee under the chairmanship of the Inspector-General of Forests had been set up to go into the question of further newsprint manufacture in the country.

a better life for all

WHEREVER INDIAN ALUMINIUM COMPANY has extended its production operations—from Bengal to Travancore, from Travancore to Bihar, from Bihar to Bombay—it has continuously sought to provide a better life for all its employees, and for its customers everywhere, in the shape of better products for a variety of new applications.

And now the industry moves to Orissa, where the Company is installing a new smelter which will more than double the country's production of aluminium. As in other phases of India's national effort, this smelter is dedicated to an era of plenty and a better life for all.

INDIA STEAMSHIP REPORTS BUMPER PROFIT

DIVIDEND RATE DOUBLED

THE note of confidence expressed by the Directors of the India Steamship Company, Ltd. (Managing Agents: Messrs. Lionel Edwards Ltd., Calcutta), in their report submitted a year ago, about the prospects of the Company's working for the year 1955-56 has, fortunately, not been belied. The financial results, as shown by the accounts for the year ended 31st March 1956, make a sharp and welcome contrast to the gloomy and depressing trend witnessed in the three previous years. Profits have considerably improved, the allocations to reserves have been increased and the anxious, but nevertheless patient, ordinary shareholder, who had to forgo his dividend in the previous two years in the larger interests of the Company, has been adequately rewarded by having his dividend doubled to 10 per cent. from 5 per cent. paid on the previous occasion, that is, for the year 1952-53.

The Company appears to have turned the corner. The downward trend in profit which was in evidence in the three preceding years has yielded to one of rising profits, creating, as it were, a fresh landmark in the Company's history. Thus, the gross profit, which had touched a low of Rs. 26.87 lakhs in the previous year, advanced by as much as Rs. 62.27 lakhs, to reach the impressive level of Rs. 89.14 lakhs. The year's profit is even better than the previous high for 1951-52 at Rs. 76.27 lakhs. The net profit, too, after making substantially higher allocations for depreciation and taxation, stands at the level of Rs. 37.73 lakhs as against a mere Rs. 88,000 a year ago. The improved results have enabled the Directors to set aside a sum of Rs. 15.00 lakhs to general reserves, as against *nil* in the previous two years.

As already mentioned, the Directors have recommended a stepping up of the dividend to 10 per cent., that is, Re. 1 per share, from 5 per cent. for 1952-53 and 1951-52. The year's dividend of 10 per cent. is made up of an interim dividend of As. 8 per share and a final dividend of a like amount. It may be noted here that the Company had paid the maiden dividend at the rate of 5 per cent. per annum only four years ago; the following year it was repeated, only to be accompanied by a total suspension for the two subsequent years.

It is noteworthy that the Company has been able to show the abovementioned satisfactory results, despite the continued difficult labour conditions in ports which led to needlessly long detention of ships and delays in clearing them. This year's performance of the Company could, therefore, be said to reflect a high degree of efficiency by the management.

The Company's freight earnings during the year under review rose substantially from Rs. 401.00 lakhs to Rs. 526.12 lakhs, as will be seen from the comparative table given below:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Freight earned	526.12	401.00	360.28	393.48
Other income	2.22	1.72	1.31	2.57
Expenses	439.20	375.85	330.70	331.17
Gross profit	89.14	26.87	30.89	64.88
Managing Agents' commission..	8.91	2.68	3.09	6.61
Depreciation	41.50	22.88	26.04	23.13
Taxation	1.00	0.42	0.77	5.00

To general reserve	15.00	..	..	18.00
Dividends—				
5 per cent. cum. preference ..	1.25	1.25	1.25	1.25
Ordinary	22.50 (10%)	..	..	11.25 (5%)
Carry forward	0.26	1.28	1.65	1.91

Commenting on the year's working, the Directors observe thus:

"During the period under review, ten ocean-going vessels were employed on the liner service in the India-U.K.-Continental run. The Company had also one vessel exclusively employed on the coastal trade in India. The Company is pursuing its policy of expansion of the fleet and, accordingly, two new vessels, *Indian Resolve* and *Indian Resource*, have been acquired and were delivered by the builders, Messrs. Howaldtswerke of Hamburg, and they started on their maiden voyages in March 1956 and June 1956, respectively. As these ships started operating after the closing of the financial year under review, their earnings are not reflected in the freight earned during the year. After the close of the financial year, the Company disposed of one of its old vessels, namely, s.s. *Indian Importer*, at a favourable price, leaving the strength of the Company's fleet at 12 vessels. During the year, the Company's fleet made 26.5 voyages, against 22 in the last year. The round voyage of a Company's ship took on an average about 13.7 days less than in the previous year. This was as a result of special steps that have been taken to obtain a better turnround for the ships, both in India and abroad. This is in spite of the fact that the delays and detentions in ports continued as in previous years."

The delays and detentions encountered at the ports, and to which a reference is made by the Directors in their report, have resulted in a boosting of the port charges by Rs. 36.07 lakhs over last year's figure. The other items which have also contributed to the increase in expenses are salaries and wages which account for a rise of Rs. 11.07 lakhs, repairs, maintenance and surveys for Rs. 8.39 lakhs, bunkers, stores and victualling for Rs. 8.44 lakhs and insurance for Rs. 5.00 lakhs.

The balance-sheet of the Company, as on 31st March 1956, shows the paid-up capital at Rs. 250 lakhs, consisting of 25,000 five per cent. cumulative redeemable preference shares of Rs. 100 each and 2,250,000 ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 90.25 lakhs, besides a reserve for taxation of Rs. 8.00 lakhs. Loans secured from the Government of India by mortgage of ships included in fleet account for Rs. 550.46 lakhs. The current liabilities total Rs. 155.64 lakhs. There has been an addition of Rs. 142.30 lakhs to the fleet account during the year, bringing it to a total gross value of Rs. 866.24 lakhs and the total block account to Rs. 964.48 lakhs. This has been written down to a book value of Rs. 741.48 lakhs. The current assets aggregate Rs. 312.87 lakhs.

The Directors state that the prospects for the current year (1956-57), in so far as they can be judged from the working of the Company so far, appear to be bright.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 10-4 *ex-div.* On the basis of the year's total dividend at 10 per cent., the yield works out to 9.8 per cent. per annum.

HASIMARA TEA CUTS DIVIDEND

Drought conditions in the early part of the year and the consequent lower production, labour unrest resulting in increased wages for workers, and the payment of bonus to them for the years 1953 and 1954 on a retrospective basis to which the company had to agree, were the factors that were cumulatively responsible for the Hasimara Tea Company, Ltd. (Managing Agents: Messrs. Davenport & Co. Private Ltd., Calcutta), disclosing a net loss for the year ended 31st December 1955. These adverse developments have had such a marked reflection on the Company's earnings that the gross profit for the year at Rs. 10,41 lakhs stands in depressing contrast to the handsome profit of Rs. 58.23 lakhs for 1954 and of Rs. 35.08 lakhs for 1953. After providing for essential provisions such as managing agents' commission (Rs. 3.01 lakhs), depreciation and replacement of assets Rs. 5.65 lakhs and taxation (Rs. 3.34 lakhs), the year's working has shown a net loss of Rs. 1.59 lakhs, as against a net profit of Rs. 33.64 lakhs for 1954 and of Rs. 23.72 lakhs for 1953. In view of this, the Company has had to withdraw a sum of Rs. 3.50 lakhs from general reserve to pay a small dividend of 10 per cent. on the ordinary shares absorbing Rs. 3.20 lakhs. That the Directors were willing to recommend substantially higher dividends when the profits of the Company warranted such action is amply evidenced by the fact that, as against a dividend of 25 per cent. for 1953, they paid a high rate of 60 per cent. for 1954. The latter consisted of two payments, namely, an interim dividend of 10 per cent. and a final one of 50 per cent.

The withdrawal from the reserves this year, as mentioned above, stands in contrast with the credit of Rs. 13.50 lakhs made last year, of which renewals and additions reserve got Rs. 6.00 lakhs, general reserve Rs. 6.50 lakhs and staff reserve Rs. 1.00 lakhs. The corresponding provision for 1953 was of the order of Rs. 8.33 lakhs.

The Company's sales proceeds of tea during the year under review fetched Rs. 107.10 lakhs. Although this is slightly better than the 1953 figure at Rs. 106.08 lakhs, it is appreciably lower than the 1954 sales at Rs. 135.55 lakhs. While sales and profits have tended to decline, expenses have followed an upward trend. The year's expenses at Rs. 98.54 lakhs almost equal the proceeds from sales and are Rs. 19.95 lakhs above the 1954 expenses aggregating Rs. 78.57 lakhs. The items on which these have gone up are cultivation, manufacture and upkeep of equipments and repairs to buildings. Besides, a provision for bonus to labour for 1953 and 1954, requiring Rs. 7.50 lakhs, has also been charged to the 1955 expenditure account.

Commenting on the year's working, the Directors state thus:

"Drought was again experienced at Hasimara early in the year, which, together with a strike of labour that affected three of the four Hasimara divisions seriously from the 22nd August to the 8th September, reduced outturn to 6,072,776 lbs. of tea, compared with 6,371,277 lbs. in 1954, the crop being disposed of entirely on the Calcutta auctions. The total net average sale price realised from the Hasimara division was As. 27.68, as against As. 33.70 and the total working costs per pound of tea produced in the same division was As. 23.81, as against As. 19.34 in the previous year. An increase of three annas in the daily wages was given by the industry, in consultation with labour representatives, to workers on Duars and Terai estates, from the beginning of the year; and in Darjeeling an increase of 1½ annas daily was agreed to by the industry from the 1st April and a further increase of two annas per day was imposed by Government notification from the 1st July. These increases cost 1.2 annas per pound of tea at the Hasimara divisions and 2.05 annas per pound at Tumsong. In addition, early in 1956 the industry was obliged to agree to retrospective payment of bonus to labour for the years 1953 and 1954 for which purpose we have provided Rs. 7,50,520 in the accounts under review, equal to 1.98 annas per pound of tea produced and approximately to 25 per cent. of the ordinary capital of the Company; and it is expected that the Company will be required to make a proportionate payment for 1955 too.

"Working costs were enhanced by the short crop made and by the necessity to undertake extensive river protection work, to which reference was made in our last report. Labour indiscipline throughout the year affected adversely the standard of leaf plucked and of teas made. Estimates for 1956 have been based on a total crop of 78,200 maunds at a total cost of Rs. 88,68,469, equal to a revenue cost of production of 23.68 annas per pound of tea, inclusive of the recent additional imposition of West Bengal Entry Tax of one anna per pound."

The Company's total area under cultivation extends to 4,235.05 acres of which 4,003.50 acres are mature and 231.55 acres immature.

The balance-sheet of the Company, as at 31st December 1955, discloses a healthy financial position. The paid-up capital at Rs. 35.00 lakhs (divided into Rs. 3 lakhs in seven per cent. cumulative preference shares of Rs. 100 each and Rs. 32 lakhs in ordinary shares of Rs. 10 each) is supplemented by reserves and surplus aggregating Rs. 57.06 lakhs. Loans secured from a commercial bank against hypothecation of crop and export rights amount to Rs. 6.82 lakhs. There is a reserve for taxation amounting to Rs. 11.32 lakhs. The gross block of the value of Rs. 96.70 lakhs stands written down at Rs. 53.66 lakhs. The current assets aggregate Rs. 82.47 lakhs, of which stores and supplies account for Rs. 15.31 lakhs, stock of 1955 crop Rs. 42.54 lakhs, investments in Government securities, shares and debentures Rs. 5.80 lakhs and cash in hand Rs. 4.32 lakhs. These assets cover the current liabilities, amounting to Rs. 25.91 lakhs, by a very comfortable margin.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)

Points From The Chair

Outlook for Copper

"WITH REGARD to copper, the world picture is one of streng demand, increasing output and fluctuating prices. Although in the future there will no doubt be periods of alternating shortages and temporary over-supply, accompanied by fluctuations in price, it would appear that one can look forward to an increasing world use of the metal with producers endeavouring to satisfy demands in the hope of ensuring stable markets and stable prices. During the year 1955 world production of copper, excluding the U.S.S.R., increased by nearly 250,000 long tons, or some 10 per cent. of the 1954 production. In Northern Rhodesia, which is one of the important areas of world production and in which your company's interests in copper are situated, the 1955 output actually decreased by some 8.7 per cent. compared with 1954, as the result of interruptions arising from labour disputes. Such disputes have occurred again during the year 1956 and will no doubt recur from time to time, as is likely in an industry whose main labour force is largely derived from a people emerging from primitive to industrial conditions. Considerable experience in the problems in human relations which face the copper producing companies of Northern Rhodesia is available and is being wisely and patiently used by those concerned in working out the solution to these problems."

D. A. B. WATSON,
Johannesburg Consolidated Investment Co., Ltd.

Life Insurance

"It is not necessary for me to go in detail at this moment into the merits and demerits of nationalisation. It is a *fait accompli*. The question is whether such nationalisation is going to benefit the country as a whole, more than what has been done in the hands of the people. The progressive figures of the last few years of this business reveal that the insurance industry was playing its part with the economic growth of the country. If you take new insurance business of the first Plan period, the total business jumped from Rs. 139.5 crores in 1950 to Rs. 229.5 crores in 1954. That means a rise of 65 per cent. in four years whereas, the national income has risen by 18 per cent. only. It was expected that within few years Indian insurance would reach a new business of Rs. 1,000 crores. Since during the second Plan, national income is expected to rise more than during the first Plan, achievement of this target was more than certain. I wish that Government should not lose sight of this important factor, as life insurance was playing a great part in collection of small savings from door to door and utilising the same in nation-building by investing in Government securities, housing and industries. I wish that this important source should flourish greater and greater and we should have place in parity with the world insurance, according to the economic condition of our country. It is difficult to visualise what it is going to be at the moment, but I wish to emphasise with all the force at my command that, if the figures are not rising to our expectations, we would be doing a great disservice to the nation for interfering with an industry which was serving the country so well."

LAKSHMIPAT SINGHANIA,
National Insurance Co., Ltd.

Standard for Cycle Parts

"Several manufacturers have been licensed to produce complete bicycles and, in addition many scores of operators have been given licences to produce cycle parts. The desire to have small-scale units spread all over the country, partly to manufacture parts and mostly to assemble completed cycles, which the Government has in view, is a commendable one and large-scale manufacturers have no reason to criticise this policy. The assembly of cycles from parts manufactured by various persons or factories is a normal thing in many countries. There is, however, one safeguard which is absolutely necessary and which I trust the Development Councils and the Government would always keep in mind. The cycle is a poor man's means of transport and it is necessary that he should get the best product in return for the hard-earned savings which he invests in a cycle. The quality of every part should, therefore, be strictly tested and only those who produce parts of the desired quality should continue to have licences extended to them for the manufacture thereof. I am aware that the Indian Standards Institute is setting up standards for indigenous cycles and cycle parts with the help of technical experts. I hope that no false sense of sympathy for the cottage industrialist or the small-scale industrialist will influence anyone to lower the standard prescribed by the Indian Standards Institute."

A. RAMASWAMY MUDALIAR,
T. I. Cycles of India, Ltd.

Tube Products of India

"Good progress has been made towards the establishment in India of our new tube company, which, in association with Messrs. Murugappa and Sons, I reported last year. Indeed, so satisfactory has this been that we have high hopes of commencing production in the spring of next year. I am looking forward to attending the opening ceremony, at Avadi, near Madras, of the first stage of this promising new enterprise. The progress made during the year in research and development has strengthened our conviction that our programme of long-range scientific research, designed to advance our technological developments, will be of great value to our operating companies. Towards this end, we are grouping our various technological sections at one Technological Centre in suitable premises at Walsall Airport. Four of the sections—Control Engineering, Nuclear Engineering, Plastics Development and Data Handling and Computing—are already installed there. There may be nothing new in principle in what is called 'automation,' but there is something new in the scope of electronic applications to manufacturing processes and machinery and in the bold attacks now being made in various countries on conventional methods with these powerful modern weapons."

SIR IVAN STEDEFORD,
Tube Investments Ltd.

COMPANY MEETINGS AND DIVIDENDS

BURN & CO., LTD. Annual General Meeting, Calcutta, 7th December 1956. Dividend: Rs. 20 per share, free of tax. Transfer books remain closed from 28th November to 7th December 1956, both days inclusive.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Annual General Meeting, Coonoor, Nilgiris, 8th December 1956. Dividend Re. 1 per share (final). Transfer books remain closed from 1st to 15th December 1956, both days inclusive.

CARRON TEA CO., LTD. Annual General Meeting, Calcutta, 8th December 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 28th November to 8th December 1956, both days inclusive.

NEW CINNATOLLIAH TEA CO., LTD. Annual General Meeting, Calcutta, 12th December 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 12th December 1956, both days inclusive.

INDIA STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 12th December 1956. Dividend: As. 8 per share (final). Transfer books remain closed from 28th November to 12th December 1956, both days inclusive.

CLEVEDON TEA CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: *Nil*. Transfer books will remain closed from 4th to 14th December 1956, both days inclusive.

OCTAVIUS STEEL & CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Transfer books will remain closed from 8th to 14th December 1956, both days inclusive.

HASIMARA TEA CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: Re. 1 per share. Transfer books remain closed from 1st to 14th December 1956, both days inclusive.

AMLUCKIE TEA CO., LTD. Annual General Meeting, Calcutta, 15th December 1956. Transfer books will remain closed from 1st to 15th December 1956, both days inclusive.

DUNCAN BROTHERS & CO., LTD. Annual General Meeting, Calcutta, 15th December 1956. Dividend: Rs. 6 per share (final). Transfer books will remain closed from 6th to 15th December 1956, both days inclusive.

MODEL MILLS NAGPUR LTD. Annual General Meeting, Bombay, 17th December 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 26th November to 17th December 1956, both days inclusive.

PRAGA TOOLS CORPORATION LTD. Annual General Meeting, Saifabad, Hyderabad-Deccan, 17th December 1956. Dividend: *Nil*. Transfer books will remain closed from 10th to 17th December 1956, both days inclusive.

INDIAN CABLE CO., LTD. Annual General Meeting, Calcutta, 21st December 1956. Dividend: Re. 1-8 per share (includes a cash bonus of As. 4 per share). Transfer books will remain closed from 8th to 21st December 1956, both days inclusive.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 24th December 1956. Dividend: Re. 1 per share (includes interim dividend of As. 6 per share.) Transfer books will remain closed from 10th to 24th December 1956, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Annual General Meeting, Madras, 24th December 1956. Dividend: As. 8 per share (final). Transfer books will remain closed from 10th to 24th December 1956, both days inclusive.

TRAVANCORE SUGARS AND CHEMICALS LTD. Dividend of Re. 1 per ordinary share, for the year ended 30th April 1956. Transfer books will remain closed from 4th to 17th December 1956, both days inclusive.

COMPANY REGISTRATIONS

RAMJI DAYAWAHLA AND SONS PRIVATE LTD. (First Director: Mr. Lalbhai R. Dayawala.) Business: Manufacturers of machinery and mechanical engineers. Authorised capital: Rs. 20,00,000. Private company. Address: Palla St., P.O. Nanpura, Surat.

EASTERN INSULATION CO. PRIVATE LTD. (First Director: Lt.-Col. W. P. Horsburgh.) Business: Mechanical and electrical engineers. Authorised capital: Rs. 5,00,000. Private company. Address: Hague Building, Sprott Road, Ballard Estate, Bombay.

VYAPAR UDYOG PRIVATE LTD. (First Director: Mr. Chiranjilal Badjate.) Business: General traders and commission agents. Authorised capital: Rs. 5,00,000. Private company. Address: 12/14, Chandra Niwas, Bora Bazar Street, Fort, Bombay.

QUESTION HOUR IN PARLIAMENT

Sterling Balances

THE Government of India is still considering what steps to take in order to make up the fall in the sterling balances recently.

* * * *

Restriction on Banks

Restrictions on bank advances against rice, paddy and other foodgrains are being withdrawn. The withdrawal is necessary, as the busy season has practically started and the existing restrictions are adversely affecting primary producers. The directive issued by the Reserve Bank two months ago to the Scheduled banks that their advances against wheat and other foodgrains, grain and other pulses, and cotton textiles should be restricted has had its effect on the upward trend of prices. The advances on paddy and rice came down to Rs. 4.43 crores on 25th October, as against Rs. 24.77 crores on 11th May last as a result of the directive. As far as textiles are concerned, the advances by banks were Rs. 62.02 crores towards the end of August and went up to Rs. 71.19 crores on 26th October. Mr. Bansal said that, in spite of the directive, the advances against textiles and yarn had gone up. Does this not mean that, at a time when the demand for textiles in the country is the highest, the mills are being forced artificially to carry huge stocks with them? The rise in advances does not mean that the banks have failed to abide by the directive of the Reserve Bank. The fact that prices of textiles have gone down a bit justifies the imposition of the restriction on the textile trade. So far as the mills are concerned, if the offtake of textiles from the mills is less, then, naturally, their stocks go up. As the stocks rise, there is a certain amount of increase in advances. The question of controlling prices has to be attacked on several fronts. Credit squeeze is only one of the several methods of controlling prices and, by itself, it will not do the trick. It is quite likely that, in certain pockets, there may be a reverse trend. But, by and large, the effect we want to occur is occurring and we are satisfied about it. It is a fact that the price of paddy and rice in South India has not shown any tendency to come down.

—*T. T. Krishnamachari*

Foreign Help for Second Plan

A sum of Rs. 269 crores has been promised for the execution of the second Five-year Plan from foreign countries. The sum includes spillovers from the first Plan but does not include the World Bank loans and loan assistance for the steel plants. The countries from where the money will come are: The U.S., including U.S. private organisation like the Ford and Rockefeller Foundation, Canada, Australia, New Zealand and Norway.

* * * *

Blocked Cash Balances

The value of blocked cash balances and securities in India as on 30th June last was Rs. 22.27 lakhs. They related mainly to infringement of import control and exchange control regulations, capital assets of emigrants to non-sterling area countries or capital assets of non-sterling area nations retiring to their own countries, and accounts of beneficiaries, who were either never resident in India or had left India prior to the imposition of exchange control.

—*B. R. Bhagat*

Indo-Pakistan Bank Pact

The interim reply received from the Pakistan Government indicates that Pakistan is not ready to accept unconditionally the recommendations of the joint Implementation Committee set up under the Indo-Pakistan Banking Agreement. Most of the banks affected being Indian, the implementation of the recommendations of the Committee will depend mainly on the action taken by the Pakistan authorities.

—*A. C. Guha*

Cement Supplies

Since the State Trading Corporation took over the cement business, the Government has been able to control the allocations on a priority basis. It is true that availability of cement is rather difficult these days, but the Government is trying to import 700,000 tons to meet as much of the demand as possible. The gate sales of cement to users—one or two bags for small purposes—have been stopped.

* * * *

Sugar Machinery Manufacture

There are at present six firms manufacturing items of sugar mill machinery other than crushing plant and centrifugals against specific orders. Apart from this, the Government has licensed six more firms under the Industries (Development and Regulation) Act, in order to cover the manufacture of complete range of sugar machinery in India.

* * * *

Electrical Equipment

There are about 101 factories in India for the manufacture of electrical equipment and machinery. Out of these, 89 are Indian-owned and 12 are either wholly or partly owned by foreign firms. The total capital invested in these factories is about Rs. 15 crores. Out of this, about Rs. 4.55 crores represent foreign paid-up capital in the 12 factories mentioned above.

—*M. M. Shah*

Foodgrains Prices

The upward trend in the price of foodgrains two months ago has now been almost arrested as

a result of the steps taken by the Government of India. The measures taken by the Government included the import of foodgrains from abroad—both wheat and rice—and the opening of about 18,000 fair-price shops all over the country. The Government has changed its earlier policy of selling large quantities of foodgrains to wholesalers for distribution, as they used to make considerable profit. The Government now sells grains directly to retailers on the understanding that they will sell them at a small margin of profit. For example, wheat sold by the Government at Rs. 14 per maund should be sold only at Rs. 14-8 per maund. The prices at which the Government releases foodgrains to retailers—Rs. 14 per maund for rice—are by no means high. The Government is not in a position to fix and announce prices of agricultural commodities before the commencement of the sowing season, as demanded by the All-India Farmers' Council, because the Government does not have enough data on the cost of production of the various agricultural commodities.

—Ajit Prasad Jain

Purchase of Ships

Orders for ships worth over Rs. 23 crores have been placed with several countries during the recent visit of the Government of India's Director-General of Shipping to the U.K., Germany, Italy and other countries. Within six months of the first year of the second Plan, shipping companies, both in the public and in the private sectors, have been able to place orders for ships worth over Rs. 36 crores—almost the total money allotted for shipping in the second Plan period. Purchase of ten-year-old second-hand ships can be considered. But it is not easy to get such ships and only ships which are 15 and 20 years old are available for sale. About the steps taken to get ships from the reserve fleet of the U.S., India did approach the U.S. in this connection prior to the recent Presidental election. India was told that legislation by the Congress would be necessary for the transfer of such ships and such legislation could not be undertaken in view of the Presidential election then. At present, India does not have enough ships. The Government has asked private shipping companies to divert some of their ships to Russian ports if possible. But they have not been able to do that. As soon as India gets more ships, the number of Indian ships plying to Russian ports will be increased.

—Lal Bahadur Shastri

Mercantile Marine Cadet Training

The question of starting a mercantile marine cadet training institution at Cochin is under consideration. The details have not yet been worked out. If started, this institution will be in addition to the three already set up in the country.

• • • •

Shipping Target

There is no proposal at present to revise the shipping target set out in the second Five-year Plan.

• • • •

Indo-Pakistan Traffic

Passenger traffic to and from Lahore has shown a 15 per cent. increase since January this year. The opening of the Ferozpur (India)-Kasur (Pakistan) route is under correspondence with the Pakistan Government.

—Shah Nawaz Khan

Crop Insurance

The Government of India will consider the question of implementing the scheme of crop insurance on receipt of the report of the Food and Agricultural Organisation Working Party on Crop Insurance. The report was considered at the third F.A.O. regional conference for Asia and the Far East held at Bandung in October this year.

• • • •

Food Reserve

A total of 237,543 tons of foodgrains was stocked by the Centre as reserve up to the end of September 1956. The break-up of this reserve is: Paddy 28,948 tons, rice 97,930 tons and wheat 110,665 tons. About 166 fair-price shops have been opened in Malabar district so far.

—M. V. Krishnappa

PLANTING

(Concluded from page 1038)

1953, and in the case of Indian companies the rise is less marked, having gone up from 13.47 to 16.14, while non-Indian rupee companies show a fall in this percentage, attributable not to a fall in the level of profits, but to the increase in capital employed. The net profits after tax per cwt. of sterling companies have fallen from Rs. 14 to Rs. 12 from 1946 to 1953 and those of non-Indian rupee companies from Rs. 55 to Rs. 32, while those of companies under Indian management show a rise from Rs. 39 to Rs. 60. The Commission attributes the higher profits per cwt. of Indian companies not to the realisation of a higher price by them, but to their comparatively lower cost of production. It goes on to say that the share of distributed profit to net profit (after tax) in 1952 and 1953 has ranged over 50 per cent., although in individual cases and in certain areas the percentage has been very much less. The percentage of gross profits to fixed assets in all groups, the Commission says, has been very much above the figure considered adequate by the cost accountant. The net profit per acre of proprietory and partnership concerns—Indian as well as non-Indian—has increased between 1939 and 1953. The Commission has, therefore, suggested that a scheme similar to that suggested by it regarding the tea industry for a rational distribution of profits should be worked out in respect of coffee plantation companies, so that the various interests of the industry, namely, the shareholders, the staff and the labour, will get a legitimate share of the profits.

As regards taxation of the industry, the Commission has recommended that a countervailing export duty equal to the Central excise duty should be levied on coffee. It has also suggested that the incidence of excise duty should be related as far as possible to the market value of the goods. Accordingly, it has recommended that the excise duty on arabica parchment should be increased to As. 3½ per lb., that on arabica cherry should be maintained at As. 3 and that on robusta should be reduced to As. 2½ per lb. The Commission considers the levy of a sales tax by State Governments as an impediment to coffee trade. This impediment should be removed by making sales tax a central levy and distributing the proceeds to the States concerned.

Small Growers

The Commission has devoted some attention to the problems facing small growers. Its study has led to the view that an improvement in the economic condition of those holding less than 15 acres and who supplement their income by outside labour lies in the general schemes of State Governments for raising the level of employment and the standard of living of agricultural landholders. According to the Commission, 34,218 families, with a rural population of 1.5 lakhs, are engaged in growing coffee on holdings below 25 acres. The group holding 10 acres and below, which should be considered uneconomic unless supported by holdings of other crops, is found to be the largest in number. The main problem relating to small growers is inadequacy of land. The Commission says that, instead of increasing the number of individual small holdings, the owners thereof should be induced to form a joint farming State-partnered co-operative society, which will take more lands under cultivation. The Commission, however, recognises that, under existing conditions, there is no possibility of establishing large-sized joint farming societies on an extensive scale for all small growers. While there is scope for this type of societies, it adds, the progress will be limited by conditions like the amount of long-term advances from Government, the availability of trained personnel for management as well as supervision, income from other sources, the response from small holders and the leadership they can throw up. The farming societies should not pool the land, but permit each individual holder to cultivate his existing holding and any new area added to it.

In his minute of dissent, Mr. Sivaswamy, one of the members of the Commission, has called for the abolition of the managing agency system in the coffee industry. For, according to him, as compared with proprietory concerns and director-controlled companies, the rupee companies under Indian and non-Indian managing agencies had less increase in reserves between 1946 and 1953, less working funds per acre in 1953, less increase in capital formation in 1953 over 1946 and more percentage of aged plants. Their upkeep charges and commission to managing agencies and directors were high. Mr. Sivaswamy has also advocated the co-operative method of organisation for sale of coffee. He calls for a change in the composition of the Coffee Board. According to him, an official whole-time Board in charge of production and finance, acting on the advice of elected advisory bodies of different interests, will be a logical evolution of the present Coffee Amendment Act. Further, he has favoured the formation of a separate marketing board.

(Concluded from next column)

is intended to satisfy the statutory requirements and will enable Lord Sinha to be re-appointed a Director at all material times in the future.

2. Resolution (*b*) in item 5 of the above Notice is intended to enlarge the statutory borrowing power of the Board of Directors to enable them to borrow moneys from time to time for the purposes of the Company in excess of the limit prescribed by Section 293 (1) (*d*) of the Companies Act 1956. The effect of the resolution is to restore the position which prevailed under the Company's Articles prior to the 1st April 1956.

Notice

MCLEOD AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE 33rd ANNUAL GENERAL MEETING of the Members of McLeod & Co., Ltd., will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 24th day of December 1956, at 4 p.m., for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December 1955, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Messrs. C. L. Bojoria and A. T. Doig who retire by rotation and who, being eligible, offer themselves for re-appointment.
4. To appoint Auditors for the year ending 31st December 1956, and to fix their remuneration.

As Special Business

5. To consider, and if thought fit, to pass the following resolutions:

(*a*) "That Lord Sinha of Raipur, who attained the age of sixty-nine years on the 22nd August 1956, and who was, at a general meeting held on the 27th December 1954, appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation be and is hereby permitted to continue in office as such Director, and it is hereby declared in conformity with the provisions of Section 281 of the Companies Act, 1956, that the age limit prescribed by Section 280 of the Act shall not apply to him."

Special notice dated the 1st October 1956, of intention to propose the above resolution has been received by the Company.

(*b*) "That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes."

The Share Transfer Books of the Company will be closed from 10th December 1956 to 24th December 1956, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLeod & Co., Ltd.,
C. HOCKLEY,
Secretary.

"McLeod House",
3, Netaji Subhas Road,
Calcutta-1, 21*st November* 1956.

Note.—Payment of any dividend declared will be made only to those members whose names are registered in the Books of the Company on the 24th day of December 1956, or to their mandatees.

No applications for warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. Lord Sinha of Raipur has been a Director of the Company since 16th October 1952, and attained the age of sixty-nine years on the 22nd August 1956. Unless, as provided by Section 281 of the Companies Act, 1956, a resolution is passed by the Company in general meeting specifically declaring that the age limit prescribed in Section 280 shall not apply to him, he will not be eligible for re-appointment as a Director of the Company when his current term of office terminates by retirement of Directors by rotation. Resolution (*a*) in item 5 of the above Notice, of which special notice of intention to propose it has been received by the Company,

(Continued in previous column)

RESULTS OF MODEL MILLS BETTER
JUBBULPORE ELECTRIC MAINTAINS DIVIDEND

Model Mills Nagpur Ltd.

THE directors of the above Company (Chairman: Mr. Badridas Daga, Bombay) submit the audited accounts of the Company for the year ended 30th June, 1956.

The working of the Company during the year has resulted in a profit of Rs. 7,24,202 (Rs. 4,85,766). Deducting from this, previous year's unwritten off balance of profit and loss account amounting to Rs. 2,59,166 (Rs. 7,44,932) there remains a credit balance of Rs. 4,65,036 (debit of Rs. 2,59,166) which the directors recommend should be appropriated as under:—

To payment of dividend at Rs. 7-8 (Rs. 7-8 out of dividend equalisation fund) per share free of tax Rs. 2,80,028 (Rs. 2,80,028) and balance carried forward to next year's account Rs. 1,85,008 (debit of Rs. 2,59,166). The directors hope that considering the facts mentioned below, the result obtained during the year will be regarded as satisfactory.

During the year under review there was a long drawn out labour strike in both the two Mills at Nagpur. Although there was no point of dispute between the workers and the Management in the Company's Mills, the strike continued in sympathy for the dispute of the workers in the neighbouring Mills and the consequences had to be suffered by the company's Mills. This has affected the results of the year under report to a considerable extent. During the year the Mill worked for 234 days only in all the three shifts.

The income-tax assessment for the years 1951-52 and onwards are still to be completed and in view of the unabsorbed depreciation and the assessment losses incurred in the previous years it is expected that the Company will not be liable to pay any Income-tax or Corporation-tax during the year under report. Hence no provision for taxation is made.

There was a continuous rise in the prices of cottons throughout the year, particularly in the second half of the year. At the end of the year, the price was approximately 15 per cent. higher than at the beginning. This was, however, compensated by brighter conditions in the cloth and yarn markets. The demand throughout the year was good.

As stated in the previous reports, the condition of the Spinning section having extremely deteriorated, the directors placed orders for supply of 76 spinning frames (40 warp and 36 weft) from Texmaco, at a total cost of over Rs. 20,00,000 (20 lakhs) and have also ordered casablanca conversion materials for 63 spinning frames at a total cost of approximately Rs. 4,00,000 (Rs. four lakhs). The delivery of these frames has now started and about 20 Frames have already been received. When the installation is completed, it is expected to increase production of the Company's Mills substantially. It is further contemplated to add about 30 carding engines, a new calendering machine and certain other processing machines and the directors are considering ways and means of raising finance for the same.

As required by the Section 211, Schedule VI, Note (e) of the Companies Act, 1956, the amount accumulated in the depreciation fund account upto 30th June 1955 has been allocated proportionately on income-tax scale to the various fixed assets. No provision has been made during the current year on account of the insufficient profit remaining after the adjustment of previous year's loss.

The State Government of Madhya Pradesh introduced duty on consumption of electrical energy, whether purchased or produced for own consumption, the rates charged being 1½ pie per unit of energy consumed for power and 1 anna per unit of energy consumed for lighting and fans. This will amount to over Rs. 1,25,000 annually in the case of the Company.

The control prices of coal and the Railway Freight have also been increased and this is likely to affect the Company to the extent of over Rs. 80,000.

During the year under review the excise duty on coarse and medium cloth has been raised from 6 pies a yard to 1 anna a yard with effect from 1st March 1956. This has been further raised by 1 anna a yard on medium cloth and half anna a yard on coarse cloth, excluding coarse sarees and dhoties, from 1st September 1956. It is said that this has been done with a view to check the rising prices of cloth and also to mop up the surplus profits of the Industry. However, the effect of such action on an uneconomic unit like that of the Company is very adverse and only the results of next year would show to what extent this will adversely affect the working of the Company's Mills.

Messrs. Bansilal Abirchand Dadabhoy & Co., who had been acting as the managing agents of the Company for several years, have resigned their office with effect from 31st March 1956. Since then the Company is director-controlled.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	94,91,850	Block ...	93,13,241
Reserves ...	21,56,146	Stock-in-trade ...	64,04,717

Liabilities ...	56,15,417	Debts, deposits & advances ...	8,50,699
Profit and loss account ...	4,65,035	Investments ...	25,000
		Cash ...	5,41,670
Rs.	1,77,50,651	Rs.	1,77,50,651

Jubbulpore Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

Since satisfactory progress has been maintained for the past six years, resulting in the reasonable return as per the provisions of the Electricity (Supply) Act, 1948, being exceeded, it has been necessary to reduce the charges for electricity supplies, therefore, as from 1st July 1956, the tariffs to ordinary consumers were reduced by approximately six per cent., and reductions have also been made in the case of certain bulk supply consumers.

Under an arrangement with the Madhya Pradesh Electricity Board the Company is supplying approximately 1,600 K.V.A. to the Board for use in Katni. Erection of the boiler that was ordered approximately two years ago will be commenced very shortly. A comparative schedule of sales and revenue for the past three years is as hereunder:—

Half-year ended	*Unit Sold*	*Revenue* Rs.
30th September 1953 ...	10,663,476	11,90,024
31st March 1954 ...	10,110,661	13,41,740
30th September 1954 ...	10,930,412	12,50,517
31st March 1955 ...	10,890,087	14,09,573
30th September 1955 ...	11,938,468	13,70,467
31st March 1956 ...	12,382,075	14,48,370

After providing for all charges and placing Rs. 19,073 (Rs. 17,959) to statutory contingencies reserve, Rs. 1,47,067 (Rs. 83,983) to Tariffs and dividends control reserve and Rs. 58,000 (*nil*) to general reserve, there remains a balance of Rs. 1,45,682 (Rs. 1,45,579) including Rs. 27,739 (Rs. 27,527) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 8 (8) per cent. per annum free of income-tax for the half-year Rs. 89,982 (Rs. 89,982), an additional payment of As. 2 (As. 2) per share Rs. 28,119 (Rs. 28,119) and carrying forward to next half-year Rs. 27,581 (Rs. 27,478).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,49,700	Block ...	40,11,494
Reserves ...	21,15,253	Stores, coal, fuel etc. ...	5,26,626
Provision for taxation ...	2,46,400	Expenditure on capital work-in-progress ...	7,63,321
Liabilities ...	21,34,548	Tools and instruments	26,647
Profit and loss account ...	1,45,682	Obsolete assets ...	480
		Debts and advances	5,18,169
		Investments	1,40,032
		Cash ...	9,04,814
Rs.	68,91,583	Rs.	68,91,583

Muttra Electric Supply Co., Ltd.

The directors of the above Company (Chairman: Mr. G. D. Bhagat, Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

The number of consumers connected to the Company's system as at 30th September 1955, was 2,572 as compared with 1,841 at the close of the corresponding previous half-year. The revenue has increased by Rs. 51,171 when compared with the corresponding previous half-year. Satisfactory progress is being maintained as indicated in the following schedule:—

Period	*Units Sold*	*Revenue* Rs.
Year ended 31st March 1953	2,976,633	4,95,829
Half-year ended 30th September 1953 ...	1,621,133	2,68,495
31st March 1954 ...	1,435,161	2,44,591
30th September 1954 ...	1,648,199	2,72,420
31st March 1955 ...	1,538,904	2,66,699
30th September 1955 ...	1,871,153	3,23,591

After providing for all charges and placing Rs. 3,183 (Rs. 2,974) to statutory contingencies reserve and Rs. 5,000 (*nil*) to general reserve and also providing Rs. 22,427 (Rs. 14,688) for director-in-charge's remuneration (which is payable subject to the approval of the shareholders) there remains a balance of Rs. 32,372 (Rs. 26,057) including Rs. 9,915 (Rs. 2,295) brought forward from the previous half-year available for distribution, and this the directors disposed of as follows:—

By payment of a dividend at the rate of 6 (6) per cent. per annum free of income-tax for the half-year Rs. 20,991 (Rs. 20,991) and in carrying forward to next half-year Rs. 11,381 (Rs. 5,066).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,99,850	Block ...	5,89,662
Reserves ...	1,35,018	Stores, coal and fuel	1,59,438
Provision for taxation ...	81,633	Tools & instruments	8,127
Liabilities ...	4,69,586	Expenditure on capital work-in-progress ...	10,610
Profit and loss account ...	32,372	Debts and advances ...	1,48,869
		Investments	4,07,126
		Cash ...	94,627
Rs.	14,18,459	Rs.	14,18,459

Carron Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a profit of Rs. 1,28,216 (Rs. 4,31,500). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 1,05,886 (Rs. 3,36,924), of which the directors have transferred Rs. 40,000 (Rs. 75,000) to revenue reserve account. In January 1956 an agreement was entered into between the representatives of the industry and the employees on an industry-wide basis by which a bonus becomes payable to labourers for the years 1953 to 1956 inclusive. The joint payment for 1953-54 appears in the accounts but the exact formula for calculating the amounts due for 1955 and 1956 is at present under consideration and provision for the estimated amount for 1955 has also been made. The directors recommend that a dividend of 7½ (25) per cent. be declared at the annual general meeting, leaving Rs. 20,886 (Rs. 46,924) to be carried forward.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Tea crop amounted to 7,625 maunds as compared with 7,551 maunds in 1954. The average selling price realised was Re. 1-13-7 per lb. as against Rs. 2-3-10 per lb. in the previous year. Planted area remains at 602.32 acres.

Estimates for 1956 provide for a crop of 7,000 maunds at an outlay of Rs. 8,79,280 including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	8,48,764
Reserves ...	7,74,645	Stock-in-trade ...	8,21,486
Provision for labour bonus	19,000	Stores and supplies ...	70,089
Provision for taxation ...	2,03,973	Loans and advances ...	97,156
Liabilities ...	3,15,230	Investments	61,115
Profit and loss account ...	20,886	Cash ...	35,124
Rs.	19,33,734	Rs.	19,33,734

Naihati Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

After crediting Rs. 1,72,751 (*nil*) being refund of income-tax for earlier years and after providing Rs. 2,67,166 (Rs. 1,86,047) for depreciation, the profit and loss account showed a profit of Rs. 10,141 (Rs. 2,82,726) which was reduced by loss brought forward from previous half-year of Rs. 3,19,252 (Rs. 7,08,068) leaving a net loss of Rs. 3,09,111 (Rs. 4,25,342) and this amount the directors has been carried forward.

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

It has not been possible to keep the fine spinning unit wholly employed throughout the period, but orders are more satisfactory for ensuing months.

The directors are pleased to advise that the appeal against the Income Tax Officer's demand for tax referred to in our last report has been successful and a sum of Rs. 1,72,751 has been credited in the profit and loss account for the half-year under review.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,48,900	Block ...	83,53,894
Debentures ...	25,00,000	Capital expenditure in progress ...	12,511
Reserves ...	38,40,147	Stock-in-trade	26,04,769
Liabilities ...	42,62,135	Stores and spare gear	11,83,068
		Oil and coal	36,312
		Debts, deposits and advances ...	25 81,863
		Investments	2,47,829
		Cash ...	21,823
		Profit and loss account ...	3,09,111
Rs.	1,53,51,182	Rs.	1,53,51,182

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE EIGHTY-SECOND ANNUAL GENERAL MEETING of the Shareholders of THE CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, on Monday the 24th December 1956, at 4-30 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 30th June 1956, and the audited Balance Sheet as at 30th June 1956.
2. To declare a dividend on Preference Shares.
3. To appoint a Director in place of Sir Vithal Chandavarkar, Kt., who retires by rotation, and is eligible for re-appointment, and to consider, and if thought fit, to pass the following resolution, of which special notice as required by Sections 190, 280 and 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Sections 280 and 281 and other applicable provisions (if any) of the Companies Act, 1956, Sir Vithal Chandavarkar, Kt., who has attained the age of 69 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him."

4. To appoint a Director in place of Mr. D. R. D. Tata, who retires by rotation, and is eligible for re-appointment, and to consider, and if thought fit, to pass the following resolution, as a Special Resolution, of which special notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. D. R. D. Tata, who retires by rotation and is eligible for re-appointment, and who is a director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board) be and is hereby re-appointed a Director of the Company."

   The reasons, which make this resolution necessary, are more fully set out in paragraph 3 of the Explanatory Statements referred to in Note (*a*) below and which paragraph 3 for the purpose of Section 261 shall be deemed to be incorporated in this Notice.

5. To appoint and/or approve the appointment, pursuant to Section 261 of the Companies Act, 1956, of Mr. N. H. Tata who was appointed a Director at the Ordinary General Meeting held on 9th November 1955, and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Sections 190 and 261 of the said Act has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, the appointment of Mr. N. H. Tata, a Director of the Company, who is also a director, officer, member and an associate of Tata Industries Private Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board) be and is hereby made and/or approved, as required by the provisions of the said Section 261."

   The reasons, which make this resolution necessary, are more fully set out in paragraph 4 of the Explanatory Statements referred to in Note (*a*) below and which paragraph 4 for the purposes of Section 261 shall be deemed to be incorporated in this Notice.

6. To consider, and if thought fit, to pass the following resolution required under Section 359 of the Companies Act, 1956:—

   "The Company being satisfied that the insurance premia or other charges made by the New India Assurance Company Limited for insurance in respect of the Company's properties, assets, goods and all other insurances are at rates which are not less favourable to the Company than the market rates and are otherwise reasonable, it hereby authorises Tata Sons Private Limited, associates of Tata Industries Private Limited, the Managing Agents of the Company, to retain all commission or other remuneration already earned or to be earned by them at any time hereafter as one of the principal agents of the New India Assurance Company Limited in regard to all contracts of insurance or insurance policies which have been or which may at any time hereafter be entered into by the said New India Assurance Company Limited with the Company."

7. To consider, and if thought fit, to pass the following resolution required by Section 293 of the Companies Act, 1956:—

   "RESOLVED that pursuant to sub-clause (1) (*d*) of Section 293 of the Companies Act, 1956, that the Company hereby consents to the Board of Directors of the Company borrowing moneys for the purposes of the Company from time to time even though the moneys so borrowed together with the moneys already borrowed by the Company and remaining outstanding or the amount for the time being and from time to time remaining undischarged of the moneys so borrowed together with the moneys already borrowed may be in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose Provided that such excess shall not be more than Rupees three crores at any time and Provided further that in computing the amount of borrowings whether already made or to be made the amounts of temporary loans obtained from the Company's bankers in the ordinary course of business shall be excluded."

   "RESOLVED further that the Company hereby ratifies and confirms all borrowings by the Board of Directors after 1st April 1956 which, together with the amounts previously borrowed by the Company, are in excess of the aggregate of the paid-up capital and free reserves of the Company."

8. To consider, and if thought fit, to pass the following resolution:—

   "RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions, at the Registered Office of the Company between the hours of 10-30 a.m. and 1-00 p.m. (S.T.) on all working days, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection of members or holders of debentures of the Company, if any, as aforesaid between the hours abovementioned during the period prescribed by sub-section 5 (*a*) of Section 307."

9. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 22*nd November* 1956.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items 3 to 8 set out above are annexed hereto.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will be closed from Friday the 30th November 1956 to Friday the 28th December 1956, both days inclusive.

(*d*) If dividend on Preference shares, as recommended by the Directors, is passed at the meeting, the payment will be made on and after Wednesday the 26th December 1956, to those shareholders whose names are on the Register of the Company on the 24th December 1956.

Annexure to the Notice dated the 22nd November, 1956, convening the Annual General Meeting on the 24th December 1956.

EXPLANATORY STATEMENTS

(As required by Section 173 of the Companies Act, 1956)

The following Explanatory Statements, as required by Section 173 of the Companies Act, 1956, set out all material facts relating to the special business mentioned in the Notice dated the 22nd November 1956.

2. *Item No.* 3: Sir Vithal Chandavarkar, Kt., who retires by rotation and is eligible for re-appointment, has attained the age of 69 years and hence he cannot be appointed a Director of the Company except by a resolution, in respect of which special notice has been given in accordance with the requirements of Sections 190, 280 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Sir Vithal Chandavarkar, Kt., joined the Board of Directors of the Company in 1938. He is a businessman of wide and varied experience and during the long period of his association with the Company, he has rendered very valuable services to the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

3. *Item No.* 4: Mr. D. R. D. Tata is a director who retires by rotation of directors and he is eligible for re-appointment. A special notice has been received from some members as required by Sections 190 and 261 of the Companies Act, 1956, proposing that Mr. D. R. D. Tata be appointed a Director in accordance with the provisions of Section 261. As set out in the special notice received by the Company, the reasons which make the above resolution necessary are as follows:—

The Managing Agents of the Company, Tata Industries Private Ltd., are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board. Since Mr. D. R. D. Tata is a director, officer, member and an associate of the Managing Agents, his appointment as a Director of the Company who retires by rotation can only be made by special resolution of the Company in terms of Section 261 of the Companies Act, 1955. Mr. D. R. D. Tata joined the Board in 1949 and has, for the last several years, been associated as one of the Directors of the Managing Agents, with the management of the affairs of the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

4. *Item No.* 5: A special notice has been received from some members as required by Sections 190 and 261 of the Companies Act, 1956, proposing that the appointment of Mr. N. H. Tata as a Director be made and/or approved in accordance with the provisions of Section 261. As set out in the special notice received by the Company, the reasons which make the above resolution necessary are as follows:—

The Managing Agents of the Company, Tata Industries Private Ltd., are authorised by the Articles of Association and the Managing Agency Agreement to appoint ex-officio and special directors to the Board. Since Mr. N. H. Tata is a director, officer, member and an associate of the Managing Agents, his appointment as a Director of the Company who retires by rotation can be made only by a special resolution of the Company in terms of Section 261 of the Companies Act, 1956. It is also apprehended that by virtue of sub-section (4) of the said Section 261, although Mr. N. H. Tata does not retire from office by rotation at the Annual General Meeting this year, his appointment should be made and/or approved by a special resolution of the Company at the said Annual General Meeting. Mr. N. H. Tata joined the Board in 1947 and has, for the last several years, been associated as one of the Directors of the Managing Agents, with the management of the affairs of the Company. As it is in the interest of the Company that the Board should continue to receive the benefit of his advice as a member of the Board, it is desirable that his appointment as a Director be made and/or approved by a special resolution in accordance with the provisions of Section 261.

5. *Item No.* 6: Tata Sons Private Limited, who are the holding company of Tata Industries Private Ltd., the Managing Agents of the Company and therefore its associates are also one of the Principal Agents of the New India Assurance Company Limited with whom the Company places its insurance business. It is not clear whether or not it is necessary to obtain the Company's sanction under Section 359 of the Companies Act, 1956, to enable Tata Sons to retain the commission it earns from the New India Assurance Company Limited on the insurance business placed by the Company with the Insurance Company. However, for greater precaution, the Company has been advised to obtain a resolution in General Meeting authorising such retention. The New India Assurance Company Limited is a leading insurance company and has provided valuable insurance service in the past. Its rates of premia and tariff compare well with other insurance companies of repute and its terms and conditions of policies and contracts of insurance are satisfactory. Tata Sons Private Limited, the holding company of Tata Industries Private Limited, have been one of the Principal Agents of the New India Assurance Company Limited since its inception in 1919. Mr. A. D. Shroff and Mr. N. H Tata are Directors and Members of Tata Sons Private Limited, and Mr. D. R. D. Tata is a Member of Tata Sons Private Limited and, as such, they are interested in the commission earned.

6. *Item No.* 7: In order to conduct the day-to-day affairs of the Company and, in addition, to finance the Company's Scheme for renovation and re-organisation of the mills, the Company has to borrow, from time to time, large sums of money from the Company's bankers by way of cash credits and also from other sources. Further, the Managing Agents are negotiating, on behalf of the Company, with the National Industrial Development Corporation, New Delhi, for a loan of Rs. 1,50,00,000 to finance the abovementioned renovation and reorganisation scheme. Section 293 of the Companies Act, 1956, requires the consent of the Company in general meeting for the Board of Directors to borrow moneys, where the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose. As opinions differ as to what constitute 'free reserves' and also as to what exactly are to be regarded as 'temporary loans', in order to remove doubts and for greater precaution, it is considered necessary and desirable that the Company should pass the proposed resolution. As the shareholders are aware, the Company has embarked upon the scheme for the renovation and reorganisation of the Mills, on a large scale, for which capital expenditure on a substantial scale will be needed and has already been partly incurred. It is having regard to this fact that the limit of excess borrowings at Rupees three crores has been suggested in the resolution and it is considered desirable to obtain the ratification and confirmation of the Company in General Meeting to borrowings already effected.

7. *Item No.* 8: Under various sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions, on keeping the said Registers, Books and Documents open for inspection by the persons entitled thereto, so that not less than two hours in each day are allowed for inspection. The restrictions sought to be imposed by the said resolution are considered reasonable and desirable from the administrative point of view.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

THE WEST COAST ELECTRIC SUPPLY CORPORATION LIMITED

Registered Office: MADRAS

NOTICE OF THE 22nd ANNUAL GENERAL MEETING OF SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE 22nd Annual General Meeting of the West Coast Electric Supply Corporation Ltd., will be held at the Registered Office of the Company, No. 20, Second Line Beach, Madras-1, on Monday the 24th December 1956, at 1 p.m.

1. To consider and adopt the Directors' Report and the Audited Accounts for the year ended 31st March 1956.
2. To consider the declaration of a final dividend of 2½ per cent. less tax on Preference Shares and 5 per cent. tax-free on Ordinary Shares making a total of 5¼ per cent. less tax on Preference Shares and 10 per cent. tax free on Ordinary Shares for the year ended 31st March 1956.
3. To appoint Auditors for the current year and fix their remuneration.
4. To consider the appointment of Directors:
   (*a*) Special notice as required by Section 261 of the Companies Act has been received by the company for the appointment of Sri S. Viswanatha Mudaliar as a Director of the Company by a Special Resolution and the following Resolution will be proposed as a Special Resolution:—

   "RESOLVED that Sri S. Viswanatha Mudaliar who is a Director and member of Messrs. Chandrie & Co., Private Ltd., be and hereby is appointed as a Director of this company by this Special Resolution as required under Section 261 of the Companies Act, 1956."

   (*b*) The following resolutions will be moved for the appointment of Sri M. Subbaraya Aiyar as a Director of the Company:—

   (i) *To be moved as a Special Resolution*:

   "RESOLVED that the age limit under Section 280 of the Companies Act shall not apply to Sri M. Subbaraya Aiyar who is aged 71 years and that he be appointed a Director of the Company by this Special Resolution notwithstanding the fact that he is an Associate of Messrs. Chandrie & Co., Private Ltd., who are the Managing Agents of this Company." Special notices have been received for this resolution.

   (ii) *To be moved as a Special Resolution*:

   "RESOLVED that consent be and is hereby accorded to the appointment of Sri R. Sambasivan, B.A., B.E., A.M.I.E., who is holding office as District Engineer of the West Coast Electric Supply Corporation Ltd., on a salary of Rs. 750 p.m. plus Dearness and other allowances though he is a relative of Sri M. Subbaraya Aiyar, a Director of the Company."

   (*c*) To appoint a Director in the place of Sri K. V. Suryanarayana Ayyar who retires by rotation and is eligible for reappointment.
5. Any other subject that may be brought up before the Meeting.

The Share Transfer Books of the Company will remain closed from 15th December 1956 to 24th December 1956 both days inclusive.

By Order of the Board,
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS, 16*th November* 1956.

Note:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The dividends when sanctioned at the Annual General Meeting will be paid on or after 26th December 1956 to those shareholders whose names stand on the Register of Members on 15th December 1956.

EXPLANATORY NOTE

4. (a) Sri S. S. Thiyagaraja Mudaliar and Sri S. Viswanatha Mudaliar were appointed as Directors by the Company at the General Meeting held on 5th November 1954 and 26th December 1955 respectively. As they are Directors and members of the Managing Agents, both of them vacate their office under section 261 of the Companies Act, 1956. Sri S. S. Thiyagaraja Mudaliar is not standing for appointment as a Director by the Company. Sri S. Viswanatha Mudaliar offers himself for appointment as a Director and he can be appointed a Director by a Special Resolution for which special notice has been given. Special notice has been received by the Company for the passing of a Special Resolution appointing him as a Director. The Directors recommend his appointment.

(*b*) Sri M. Subbaraya Aiyar has been a Director of this Company from its inception and has rendered valuable and inestimable services to the Company and has been greatly responsible for bringing up the Company to its present position. He is aged 71 and he can be appointed a Director after the Company states that the age limit shall not be applicable to him. Special notice has been given to the Company regarding the same. He holds one share in the Managing Agents company, viz., Messrs. Chandrie & Co., (Private) Ltd. and is also the father of Sri S. Venkataraman, A.C.A., who is a Director of the Managing Agents. Hence, his appointment as a Director should be by a Special Resolution for which special notice is required and has been given to the Company. Hence, the first resolution will be proposed as a special resolution for the appointment of Sri M. Subbaraya Aiyar as a Director as per the provisions of Section 281 and 261 of the Companies Act, 1956.

Shareholders may be aware that an Extraordinary General Meeting of the Company was held on 31st March 1956, at which the Company passed a Special Resolution as required under Section 314 for Sri R. Sambasivan, B.A., B.E., A.M.I.E., holding an office of profit as District Engineer of the Company. Sri R. Sambasivan is the brother's son of Sri M. Subbaraya Aiyar. Subsequently he resigned his Directorship.

The Directors are of opinion that the Company should not lose the services of Sri M. Subbaraya Aiyar as a Director and have persuaded him to accept a Directorship. The Directors think that the shareholders also will feel that Sri M. Subbaraya Aiyar, should be in the Directorate of the Company. Hence, the two resolutions for his appointment as a Director will be proposed as Special Resolutions.

By Order of the Board,
For CHANDRIE & Co. (PRIVATE) LTD.,
S. VENKATARAMAN,
Director,
Managing Agents.

Notices

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-seventh Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Saturday the 15th December 1956, at 11 a.m., for the following purposes:—

THE MODERN MILLS, LIMITED

NOTICE TO SHAREHOLDERS ONLY

NOTICE IS HEREBY GIVEN THAT THE following resolutions in *connection with the* issue of new shares were passed by the Board of Directors of the Company at their meeting held on 21st November 1956.

"RESOLVED that, subject to the conditions *prescribed* by the consent of the Controller of Capital Issues, 22,130 *ordinary shares of Rs. 50* each in the existing capital of the Company be issued and offered in the first instance at a premium of Rs. 10 per share to the holders of the existing ordinary shares on the Register of Members of the Company as on 14th December 1956 being the date of the offer (with the right to renounce in favour of nominees approved by the Board), in the proportion of one new ordi*nary share for every two ordinary shares held* by them on such date, and that in respect of any member *holding less than two ordinary* shares or such number of shares as shall not be complete multiples of two ordinary shares, fractional certificates shall be issued entitling the holder of each such fractional certificate on presentation to the Company along with one other like fractional certificate and a sum of Rs. 60 together with a completed form of application within the time limited for that purpose as hereinafter provided to apply for and be allotted one new ordinary share of Rs. 50 each (fully-paid), and that the full amount for each new ordinary share taken up, plus the premium (making in all Rs. 60 per share), shall be paid to the Company together with the application for shares in terms of the offer and that such offer be made by notice specifying the number of new ordinary shares which each holder of existing ordinary shares shall be entitled to apply for and take up, wholly or in part, and also the number of Fractional Certificates, and limiting the time, viz., upto 15th February 1957, by which date the offer, if not accepted in the terms thereof, will be deemed to be declined with liberty to the Directors from time to time to extend the time for acceptance as aforesaid either generally or in respect of any particular holder or holders; and that such shares as shall not be taken up in response to *such offer shall, with the* previous permission of the Controller of Capital Issues, if necessary, be disposed of and allotted by the Directors on such terms and conditions as they may think most beneficial to the Company and to such persons, whether shareholders of the Company or not, as the Directors may think fit.

"RESOLVED that the said 22,130 new ordinary shares, shall for all purposes rank *pari passu* with the existing ordinary shares of the Company, except that they shall not rank for any dividend declared in respect of any period prior to the 1st November 1956 and consequently they will not rank for any dividend that may be declared for the year ended 31st *October 1956.*"

Notices making the offer to Shareholders are being posted separately.

THE TRANSFER BOOKS OF THE COMPANY WILL BE CLOSED FROM FRIDAY THE 14TH DECEMBER 1956, TO FRIDAY THE 21ST DECEMBER 1956, BOTH DAYS INCLUSIVE.

By Order of the Board.

N. SIRUR & Co., PRIVATE LTD.,

Managing Agents,

NOTICE

THE LAST DATE FOR RECEIPT OF ACCEPTances against the Letters of Right in connection with the fresh issue of Capital by the Company has been changed from 30th January 1957 to 28th February 1957, thus extending by one month the time allowed for acceptance of the Rights.

By Order of the Board of Directors,

For DALMIA CEMENT (BHARAT) LIMITED,
For HARI BROTHERS PRIVATE LIMITED,

J. DALMIA,

Director,

Managing Agents.

DATED 20*th November*, 1956.

NATIONAL INSURANCE COMPANY, LTD.

(*Concluded from page* 1044)

industries, thus augmenting speedy economic growth of the country.

"Now coming to your Company, as I have said earlier, *we have suffered the most.* Not only the life business has been nationalised by the Government but the Company's subsidiary, namely, *the National* Fire and General Insurance Company, has also been taken over and your Company has to *rebuild completely* both at the head office, as well as the various branches, where the business so far was run as *a combined business.* I am confident that, in course of time, we would again build up the Company and serve the nation in the same way as we have been traditionally doing for the last 50 years.

General Business in 1955

"You must have noticed that in the present balance-sheet only the results of the general departments have been shown. This is because the accounts of the life department have been published by the Custodian and which, I understand, have already been circulated to the shareholders. Henceforth, only the accounts of the general departments would be submitted.

"The total net premium income of all the departments was Rs. 19,24,761, comprising Rs. 4,59,753 of fire, Rs. 6,40,214 of marine and Rs. 8,24,794 of miscellaneous. Against this, previous year's total business was Rs. 15,07,617, composed of Rs. 4,23,855 of fire, Rs. 5,26,642 of marine and Rs. 5,57,120 of miscellaneous. Thus, there is an overall increase of Rs. 4,17,144. Though the net result shows a loss in the balance-sheet, it is mainly due to the loss in devaluation of Pakistan currency amounting to Rs. 66,555 and provision for the increased reserve of unexpired business in all the departments, that is, from 60 per cent. to 100 per cent. in case of marine and 40 per cent. to 50 per cent. in case of fire and miscellaneous departments. The loss during the year has been set off against the brought forward balance of the last year and the Company is still in a position to pay a dividend of 6 per cent., free of income-tax, for the year, absorbing Rs. 90,000, which has been recommended for your consideration, and the balance is to be carried over to the next year.

"In the end, I solicit the good wishes and co-operation of you all in the great task of rebuilding this renowned institution of 'National,' and bringing the same on the forefront.

"With these few words, I propose that the Directors' report and the audited accounts for the year 1955 be adopted."

MONEY RATES UNCHANGED

(*From Our Own Correspondent*)

BOMBAY, 28*th November*

Extreme scarcity of floating funds continued to be the main feature of the short-term money market during the week under review. With the busy season having commenced and with the lendable resources of banks having been depleted already, the paucity was more acutely felt during the week. The result was that activity in the market remained considerably restricted and interest rates were nominally quoted at the previous week's levels.

Inter-bank business in day-to-day funds was placed at 3½ per cent. Three days' and seven days' deposits were unchanged at 3⅜ per cent. and 3½ per cent., respectively. House money at call was done at the self-same rate of 3½ to 3⅜ per cent. Short-term deposits were bid at 3½ per cent. for one to three months and 3⅜ per cent. for six months.

A further decline of Rs. 4.05 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 23rd November 1956. Notes held in the Banking Department have again gone up by Rs. 5.04 crores, so that the increase in total notes issued over the week is only Rs. 99 lakhs. This is covered on the assets side by a corresponding rise in rupee coin. There has been a reduction of Rs. 4.97 crores in foreign securities and an increase in rupee securities of the same order. In the Banking Department, Central Government's deposits have risen by Rs. 3.28 crores and those of other Governments by Rs. 54 lakhs, while deposits of banks have fallen by Rs. 1.17 crores. A decline of Rs. 6.83 crores is noted in balances held abroad, so that the total contraction in the foreign exchange reserves during the week is of the order of Rs. 11.80 crores. Loans and advances other than to Governments are up by only Rs. 72 lakhs, whereas advances to Scheduled banks against usance bills show a net rise of Rs. 4.53 crores. Fresh advances against these bills during the week amount to Rs. 13.94 crores, while repayments have been of the order of Rs. 9.41 crores.

The Scheduled banks' statement for the week ended 16th November 1956, shows a marked rise of Rs. 9.97 crores in demand deposits and of Rs. 3.12 crores in time deposits. Inter-bank borrowings are lower by Rs. 66 lakhs and borrowings from the Reserve Bank by Rs. 7.61 crores. On the assets side, a further decline of Rs. 5.14 crores is noted in advances. This follows the fall of Rs. 8.97 crores noted in the preceding week. Inland bills purchased and discounted have, however, maintained their upward trend with a further rise of Rs. 4.83 crores. Foreign bills show a drop of Rs. 73 lakhs. Investments have gone down by Rs. 41 lakhs, while cash balances have risen by Rs. 46 lakhs and money at call and short notice by Rs. 1.70 crores.

The Gilt-edged market remained dull and quiet during the week under review. Buying interest was confined to only those securities in which payment of half-yearly interest is due on 1st December. Otherwise, most of the securities were on offer and the volume of business was on a negligible scale for want of buyers. The State loans, which had received some support from the Life Insurance Corporation in the previous week, were friendless, with a further decline in prices in some of the loans.

3 per cent. 1986 Conversion Loan continued to attract sellers at Rs. 73-4, which represents a fall of As. 5 over the week. 3 per cent. 1970-75 suffered the heaviest fall during the week, being marked down from Rs. 87-14 to Rs. 86-15. 3 per cent. 1966-68 was, however, unchanged at Rs. 92-6. 3 per cent. 1964 was an anna better at Rs. 94-6. 3 per cent. 1963-65 attracted buyers due to proximity of interest payment and rose by As. 2 to Rs. 94-6. 3½ per cent. 1962 stood at Rs. 97-14, while 3½ per cent. 1961 gained As. 2 to Rs. 99-6 due to support from voucher-eaters. 3½ per cent. 1964 was dull at Rs. 98-5, 3½ per cent. 1965 at Rs. 98-7 and 3½ per cent. 1967 at Rs. 98-6.

Among State loans, 4 per cent. 1968 Madras and U.P. were down by an anna each at Rs. 97-15. M.P. 1964 and 1968 fell by As. 2 to Rs. 98 and Rs. 97-14, respectively. Mysore 1968 also dropped As. 3 to Rs. 97-15.

In the foreign exchange section, the rupee continued to hold its ground in terms of the U.S. dollar, but displayed further weakness in terms of the Canadian dollar. Thus, banks' selling rate for ready U.S. dollars was unchanged at Rs. 481½ per $100 and their buying rate at Rs. 477¼. Banks' selling rate for ready Canadian dollars rose from Rs. 500½ to Rs. 503⅛ per $100 and their buying rate from Rs. 494⅞ to Rs. 497½ per $100. The strength of the rupee in terms of the U.S. dollar is apparently due to the steady tone maintained by sterling abroad. In New York, for instance, spot sterling was well held at Rs. 2.78.3/16-2.78.5/16. Forward sterling (three months), however, showed a slight recession from $2.76⅜-2.76½ to $2.75⅛-2.75¼. Transferable sterling hardened from 274.00-274.10 cents to 274.90-275.05 cents.

LINSEED RISES FURTHER

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 26*th November*

A further advance in linseed prices was noted during the week and the undertone remained steady. Arrivals were very poor and crushers were keen buyers. A fair daily turnover was recorded, chiefly for November-December deliveries, at progressively higher prices. In the oil section, values increased, following the higher trend prevailing in the U.K. Keen enquiries from shippers and crushered, resulted in a fairly active week, despite reserved sellers. Some fresh export business was possible, owing to a better overseas' demand.

The latest available quotations are: November-December Rs. 26-8 and April-May Rs. 22-10 per maund.

BULLION RECEDES

(*From Our Own Correspondent*)

BOMBAY, 28*th November*

The spurt in bullion noted towards the close of last week proved to be a short-lived affair, as an easy trend came to prevail during the week under review. Forward silver was at one time marked down by Rs. 2-2 to Rs. 174-7 and forward gold by Re. 1-5 to Rs. 105. There was, however, some recovery in the last two days, but the earlier loss was only partially made good.

The bulls, who had bought heavily in silver on Wednesday last week on rumours that the supplies of coins from Tibet would soon stop, turned to be sellers as the rumours proved baseless. Moreover, there were reports this week that a large amount of import duty on the Tibetan coins had been paid, which, if proved correct, would bring a heavy consignment of silver to the market. Large inflow of unrefined metal and slackness in offtake in the ready section also sapped the enthusiasm of the bulls, while the bears made the best out of the situation by hammering down the prices.

Gold also relapsed in sympathy with silver. Demand in the ready section was also lower, as compared with the arrivals.

Silver for forward delivery (19th December settlement) retreated from Rs. 176-9 to Rs. 174-7, but gathered ground to touch Rs. 175-6 before closing at Rs. 175.

Ready silver (.996 Mint) fell from Rs. 176-1 to Rs. 173-15, but advanced to Rs. 174-4 at the close. The discount at which the ready metal was quoted under forward widened from As. 8 to As. 12, reflecting the slackness in demand and increase in floating stocks. The floating stocks are reported to be 1,500 bars. The daily average offtake during the week was 16 bars.

Forward gold (18th December settlement) gave way from Rs. 106-5 to Rs. 105 before recovering to Rs. 105-7 at the close.

Ready gold was marked down from Rs. 106-4 to Rs. 104-12, but regained to close at Rs. 105-3. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were of the order of 3,500 tolas, while the offtake was no more than 2,800 tolas on an average per day.

In New York, silver was unchanged at 91⅛c. In London, spot silver was maintained at 81⅜d., while forward dropped from 80⅝d. to 80⅜d. Gold suffered a decline from 251s. 2⅛d. to 250s. 8⅜d.

The following comparative table shows the trend of market during the week under review:

	28-11-56	Highest	Lowest	21-11-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

METALS MOVE UP

(*From Our Own Correspondent*)

CALCUTTA, 27*th November*

Influenced by the persistent inflationary spiral which the uptrend in the commodity markets released following the blocking of the Suez Canal, base metals steadied to higher levels during the week under review. From Rs. 205, electrolytic copper improved to Rs. 210. The supply position was tight, and consumer demand was on the higher level. There was also good demand for fire-refined copper, the price of which at Rs. 210 was on par with the imported electrolytic material. Tin opened at Rs. 536 and, after giving way to Rs. 530, regained to close at Rs. 537. This was 15 points below the replacement cost. A moderate quantity changed hands. The supply position for the ready metal is becoming tight. New arrivals are not expected for some time. There is every reason, therefore, for the local quotation to reach the replacement cost in the near future, following which only importers could enter into fresh commitments. From Rs. 82-8 lead improved to Rs. 84. Higher advices from London and New York were received with satisfaction by stockists. There was also good demand from consumers. Arrivals were also moderate. In common with the general trend, electrolytic zinc was steady. However, the stock position being satisfactory, consumers made only day-to-day purchases. For this reason, the price improved only fractionally to Rs. 70-8 from Rs. 69-8.

KIPS STEADY

(*From Our Own Correspondent*)

MADRAS, 26*th November*

The volume of trading in kips in the local market was fair-sized, and clearance kept pace with arrivals. Prices paid were an anna per pound higher than during the middle of the month. U.K. enquiries were brisk for medium and heavy weight cow hides and premium class buff calf.

There was good call for prime goat skins, as well as for market quality goat and sheep at increased prices. Semi-prime sheep skins were also in good demand at last prices.

Raw markets were firmer and prices were kept up by tanners' purchases.

COTTON FUTURES BEARISH

(*From Our Own Correspondent*)

BOMBAY, 28*th November*

It looks as though the morale of the cotton futures market has been lost once again. The market is now in the grip of bears and the bulls have receded to the background. The expectation that an export quota would be announced has been completely belied. The Government of India has decided not to issue any export quota at present. The decision has come as a bolt from the blue and, as a sequel, cotton futures have suffered a sharp setback. The Government's explanation for not granting the quota is that the ruling prices are high. This, however, has failed to convince market-men who point out that cotton futures have of late been ruling at relatively low levels as compared with those which prevailed when futures trading was resumed in June last. The justification for the Government's decision appears to stem from the price behaviour not of the futures market but of the ready section. The quotation for Vijay of 13/16" staple for February-March delivery, for instance, is around Rs. 100 'ON', although the relevant futures contract has a basis 27/32". This certainly shows that the spot and futures sections are not related to each other and trade circles generally feel that the hedge contract should be suitably revised so as to remedy this disparity.

The decision of the Government gave a further opportunity for bears to hammer down prices and the selling pressure which closely followed the announcement resulted in a virtual landslide in values. Even reports of recent rains in certain leading cotton tracts and damage to the quality of the crop failed to have any appreciable effect. Both the contracts, as a result, touched new low levels.

M. G. Jarilla (March 1957) opened the week at Rs. 643, as against the previous week's closing of Rs. 656-8. It succumbed to selling pressure and fell to Rs. 640 the same day. On reports of damage to quality of crop due to rains, it improved the next day to Rs. 647-8. Speculative selling, induced by reports of heavy arrivals in upcountry centres, again pushed down the contract to Rs. 629½ on the 26th inst. Towards the close of the week, however, a mild recovery was in evidence, thanks to firmness of oilseeds market. Opening at Rs. 637-8 today, the contract improved to Rs. 641 before finishing the day at Rs. 640½. The net loss over the week was Rs. 16. M. G. Vijay (April 1957) opened the week at Rs. 647 and, after improving to Rs. 756 the next day on adverse weather reports, fell to Rs. 735 on the 26th inst, due to selling pressure, before finishing higher at Rs. 746 today. The net loss over the week was Rs. 12.

The trend of price of the two contracts during the week is given below:

(In rupees per candy of 784 lbs.)

	28-11-56	High	Low	21-11-56
Jarilla (March) ...	640½	647¼	629½	656½
Vijay (April) ...	746	756	735	758

The spot section put on a better appearance, due mainly to moderate volume of mill buying. Vijay, Wagad and Berar attracted attention. Deals actually put through, however, were considerably limited, since mills were expecting a further fall in prices. The delivery contracts also ruled easy. In the export section, enquiries were noted from Japan and the Continent, but shippers were not in a position to offer anything, in view of the absence of an export quota. The most important development of the week in the foreign section was New Delhi's announcement of the policy in respect of import of American cotton. The announcement said that import licences would be issued for 150,000 bales of American cotton with 1-1/16" staple and above under Public Law 480 of the U.S.A. The two main features of the policy are: (1) fixation of the exchange rate at Rs. 478-2 for $100 and (2) status quo in bank guarantee. The last date for contracting under the above notification is 29th June 1957, while shipment period is between 7th November 1956 and 31st July 1957. An announcement by the Joint Controller of Imports said that licences would be issued against contracts made after 7th November 1956. This means that such of the contracts as had been entered into before 7th November 1956, in anticipation of the policy announcement at a later date, do not come under this programme. Following the announcement, importers became active and some business was reported to have been done in California Acale St. Middling 1⅛" at Rs. 1,345. Ready lots of East Africans also attracted attention. The trade was awaiting a clarification of the Government's policy regarding imports of East African cotton, the absence of which have prevented importers from participating in the recent auctions at Kampala and taking advantage of the attractive prices offered.

The latest available spot rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal Deshi 740; Berar Jarilla 760; Khandesh 780; Vijay 920 (old crop): Oomra Deshi 760; Moglai 745. Delivery contracts: Khandesh 197/3 December 108, Berar 85 and Moglai 40 ON Jarilla; 320 F 78, 216 F 98 and Vijay 13/18 January-February 100 ON Vijay.

The Karachi cotton market ruled firm during the week under review too. Overseas enquiries and local mill demand were both brisk. The decision of the Government of India not to release an export quota at present aided the sentiment of the market favourably. N.T.R.G. January shot up by a rupee to Rs. 84-6. March position improved by a like amount to Rs 82-13. The spot section also put on a cheerful appearance and values advanced uniformly. The following are the latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

4 F Roller 83; S.G. 88; Punjab Roller 88-8; S.G. 91-8; 289 F.N.T. Roller 89, 289 F.N.T. Sind S.G. 99; 289 F. Punjab Roller 90-8; S.G. 96-8.

After remaining suspended for more than three weeks with effect from 31st October trading in the Alexandria cotton futures market was resumed on the 26th inst. Prices were lower as compared with

the previous closing quotations and the undertone was easy. The latest available rates—in tallaris per lb.—from Alexandria are given below, the figures in brackets being the closing rates as on 31st October.

Karnak: November 108.60 (111.10); January 105.75 (107.25); March 106.50 (105.65); *Ashmouni*: December 76.70 (76.85); February 76.80 (76.55); April 77.40 (76.40).

Active interest was again witnessed in Sudan auctions at Khartoum. At the auctions held from the 7th to the 15th inst., the Gezira Board sold about 25,000 bales of cotton. The exact quantity of unsold stocks is not known; it is expected to be small. It appears that the Gezira Board has successfully completed the marketing of almost all of last season's crop and carryover.

Cotton values recorded appreciable gains in the Liverpool market. Mill demand for ready and shipment cotton continued to remain firm. Ready lots of cotton attracted very good attention, owing to the fear of a hold-up in shipping consequent on the U.S. dock workers' strike. Long-staple California El Paso and American-Egyptians figured prominently in shipment purchases. Indian and Pakistan cotton also evoked some interest.

Both the American type contracts advanced on trade buying, with offerings restricted to small hedge selling. Purchases by a prominent Anglo-American spot house lent further support to the market. The reopening of the Alexandria futures market aroused no interest. Egyptian contract was neglected, while Sudans firmed up. The latest available rates—in pence per lb.—from Liverpool are as under, the figures in brackets being last week's closing quotations: *American One Inch Staple Contract*: December-January 27.40 (26.70); March-April 26.72 (26.33); May-June 26.30 (26.00); July-August 25.90 (25.60). *American Cotton Mixed Growth Contract*: December-January 28.45 (27.65); March-April 27.25 (26.75); May-June 26.78 (26.30); July-August 26.46 (25.93). *Egyptian Karnak*: November-December, January-February, March-April 60 (60); *Sudan*: November-December 61.30 (59.30); January-February 61.10 (59.10).

The New York cotton market ruled easy during the week. Owing to quiet conditions in the spot section and textile markets, the volume of business in the futures section was rather limited. The dock workers' strike temporarily held up the flow of U.S. cotton to foreign markets. Switching from nearby December to more forward positions was the principal feature of trading this week. New crop deliveries rallied sharply, with demand attributed to Soil Bank considerations.

Sales of C.C.C. cotton continues at a high rate. A further quantity of 422,522 bales was sold on the 16th inst., bringing the aggregate sales thus far to 5,650,378 bales. The average price for basis Middling 1" (average location) accepted was 26.62 cents and the minimum price for basis Middling 15/16" (average location) was 25.25 cents. The 1955 loan cotton amounting to some six million bales will come to the C.C.C. on 31st December, but it will be about March before this cotton is catalogued for sale. Exports during the week ended 15th inst. were 141,310 bales. Total exports for the season till that date were 1,631,232 bales, as against 460,404 bales during the same period last season.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	27-11-56	20-11-56	13-11-56
Spot	34.45	34.55	34.65
December	34.35	34.46	34.20
March	34.16	34.25	34.15
May	34.17	34.31	34.31

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 28*th November*

The firm trend noted in the yarn market last week abated during the week under review. In fact, the market ruled distinctly easy. Rayon yarns were particularly depressed, thanks to selling pressure induced by fears of heavy arrivals of Japanese yarns in the coming weeks and slackness in the demand from consuming centres. Further, the high levels to which prices had been pushed up last week themselves attracted profit-taking. In sympathy with this trend and following reports of enlarged offers by mills, staple fibre yarns also suffered a setback. Cotton yarns ruled quiet, with the exception of superfine yarns (produced out of foreign cotton) which met with good buying support and registered a handsome improvement in prices.

Snia rayon yarn (120 dull cones) for December delivery was hammered down by Rs. 17 to Rs. 765 per case of 200 lbs. February position was neglected at Rs. 783. Although business in this delivery commenced several weeks ago, transactions actually put through continued to be at a low ebb. Spot 150 Japan receded by half an anna to Rs. 4-5-6 per lb. 120 Japan shed three pies to Rs. 3-15-3. 150 Italy was quiet at Rs. 3-11-6 and 120 Italy at Rs. 4. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade was done at Rs. 3-5. There were deals in 120 Bt. cones 1st grade at Rs. 3-8-9, same as last week.

Staple fibre yarn (40×2) December contract dropped Rs. 6 to Rs. 621. February position changed hands at Rs. 630. Spot New Greats fell by 18 pies to Rs. 3-4. Citys declined by 15 pies to Rs. 3-5-6. Centurys lost nine pies to Rs. 3-5-9. Kohinoors retreated from Rs. 3-9 to Rs. 3-8-9. Among foreign yarns (80×2), Paramounts receded by an anna and a half to Rs. 5-13-6. K'Suns eased by an anna to Rs. 6-9. Fujis shed six pies to Rs. 5-15-6.

In the cotton yarn section, offtake of coarse and medium counts was very low, with prices remaining practically unchanged. Ten counts Moderns and Podars were both gathered at Rs. 15-8, same as last week. Twenty counts Moderns were unaltered at Rs. 19-8. Hinds, however, elicited some enquiries and picked up As. 6 to Rs. 19-12. Thirty counts Maduras encountered selling and slipped by As. 4 to Rs. 24-4. Among 40s, Moderns lost As. 4 to Rs. 29, while Gokaks advanced by Re. 1 to Rs. 28-12 on good buying support. Superior counts yarns, as already stated, were well favoured at enhanced rates. Eighty counts Moderns rallied Rs. 3 to Rs. 76. Elphinstones hardened by a like amount to Rs. 71. Finlays strengthened by Rs. 2 to Rs. 80. Among 60s, Raghuvamshis advanced by Re. 1-8 to Rs. 58-8. Moderns put on Re. 1-4 to Rs. 62-8. Finlays gathered a rupee to Rs. 60-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	28-11-1956	21-11-1956	13-11-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)-			
120 Dull Cone Snia December	765 0	782 0	752 0
120 Dull Cone Snia February ..	783 0	—	—
120 Japan (per lb.)	3 15	3 15½	4 0½
150 Japan (per lb.)	4 0	4 6	4 4
120 Italy (per lb.)	3 11½	4 0	3 13
150 Italy (per lb.)	3 5	3 11½	3 11½
Staple fibre yarn (per case of 200 lbs.)—			
40×2 December	621 0	627 0	601 0
40×2 February	630 0	—	—
40×2 New Great (per lb.) ..	3 4	3 5½	3 5½

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 28*th November*

The oilseeds market displayed a firm trend during the week under review. Fear of late arrivals arising from reports of unfavourable weather conditions, and nervous bear covering helped the groundnut section to make a strident advance. The presence of crushers and upcountry buyers in the market were additional factors of strength. Consequently, by the end of the week, prices of this edible product had more than recovered the loss sustained after the Government's decision not to allow exports of groundnut oil and seeds for the present.

In the castor section, prices reached the highest level for several years. Nervous bear covering produced unprecedented hardening of the prices of both seed and oil. Though prices eased slightly towards the middle of the week on long liquidation and fears of a change in the Government's export policy after December, and of a rise in the export duty on oil, nervous bear covering in oil in the face of scarcity of sellers, enabled the market to advance again. In addition, better overseas advices and the firmer trend of the groundnut section, gave further momentum to the trend.

Linseed, too, made handsome headway on strong advices from overseas markets and revival of buying interest from them. Cottonseed, nigerseed and kardiseed were sympathetically higher.

In the groundnut section, February 1957 Contract, which opened the week easy at Rs. 141-8 following the Government's announcement not to allow exports for the present, fluctuated within narrow limits, during the first four sessions of the week, though the trend was slightly upward. On the 27th, however, the contract made a spectacular advance on nervous bear covering, from Rs. 143 on the previous day to Rs. 148-14. This rise was sustained further today and the peak level touched today was as high as Rs. 151. Over the week, the contract has made a handsome advance of Rs. 4-4. In the spot section, however, there is no gain in the value as compared with the previous week's closing rate, the advance is perceptible as compared with the opening levels of the week. Bold F.A.Q. was quoted at Rs. 31-12, that is, As. 12 over the opening level, and December-January was done at Rs. 29-14, Re. 1-12 more than that on the 22nd inst. Groundnut oil ex-mill put on As. 6 to finish at Rs. 19-4 and Railway Receipt As. 2 at Rs. 18-12.

Castors May 1957 contract commenced the week at Rs. 162 on the 22nd inst. and reached the high level of Rs. 172-8 on the 24th, and subsequently declined to Rs. 166 at the close of the next day on profit-taking. On the 27th, however, it advanced again on short-covering and the record level of Rs. 175-0 was seen today, before the contract finished at Rs. 172-4. In the spot section, Bold Ready rose by Rs. 3-2 over the week to Rs. 37-8 and ready Madras by As. 3 to Rs. 37-8. Oil B.S.S. appreciated by Rs. 3-4 to Rs. 24-14. There was a gain of like amount in Commercial which stood at Rs. 23-14 today.

Linseed May 1957 contract also reflected a trend similar to that of castor futures. After opening at Rs. 28-2, it went up to Rs. 29-5 on the 24th, but reacted nominally on the following day. Subsequently, it advanced further to Rs. 30-3 at the close today. In the spot section, Bold Ready improved by Rs. 2-8 to Rs. 36 and February-March by Rs. 2 to Rs. 31-10. Linseed oil Ready was quoted Rs. 3-10 higher than a week ago.

Cottonseed futures commenced the week at Rs. 84-4, moved up to Rs. 85-12 on the following day and, after slightly reacting on the following two days, went up again to Rs. 86-8 on the 27th, and finally finished further up at Rs. 86-12 today.

Among other seeds, kardiseed Bold ready put on Re. 1-8 at Rs. 21-8 over the week, and nigerseed Madras rose by Rs. 2-4 to Rs. 30-4.

The Government of India has decided to release for export 10,000 tons of nigerseed oil and kardiseed oil, 5,000 tons of coconut oilcake, and 15,000 tons of groundnut oilcake. It is stated that shipments against the quotas will be valid up to the end of February 1957 or till ceiling is reached, whichever is earlier.

As for nigerseed export, it is further stated that exporters who are able to effect shipments of nigerseed oil and/or kardiseed oil hereafter and produce evidence of shipment thereof will on application be granted quotas of nigerseed equal to the quantity of nigerseed oil and/or kardiseed oil shipped by them.

The maximum quantity of coconut oilcake an exporter along with his branches or associated concern holding the same income-tax verification certificate number for all ports will be 100 tons while that for groundnut oilcake will be 300 tons. The export of these goods is allowed to all permissible destinations except Portuguese possessions in India.

Exporters have been warned not to enter into long-term commitment, as licensing of these commodities will be stopped as soon as the ceilings fixed are reached.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	28-11-1956	21-11-1956	14-11-1956
	Rs. a.	Rs. a.	Rs. a.

Ready	21 6	17 12	18 0

SUGAR WELL MAINTAINED

(From Our Own Correspondent)

BOMBAY, 28*th November*

The sugar market was thick with rumours of the Government allowing export of 100,000 tons of sugar. The rumours were based on enquiries for Indian sugar from West Asian countries, as well as from Pakistan and Ceylon, following the continued suspension of traffic through the Suez Canal. Further, the ex-mill quotations for both Bombay-Deccan and South Indian sugar ruled firm, thanks to encouraging demand from all sides. Arrivals of indigenous sugar into the market were also less, being 14,900 bags, as against 23,100 bags in the previous week. Sugar prices, as a consequence, continued to be well maintained during the week under review.

In the forward section, *Magsar* delivery contract for 'C' grade sugar improved from Rs. 89-12 to Rs. 90-6 per bag. It was fully steady at this rate today.

Spot indigenous large grain sugar rose by a rupee to Rs. 94-Rs. 102. Small grains was steady at Rs. 88 and medium grain at Rs. 89-Rs. 92. British refined sugar was unchanged at Rs. 91 per bag of 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

MALABAR PEPPER DECLINES

(Messrs. Parekh & Co.)

BOMBAY, 28*th November*

After maintaining a steady tone for some time, following sporadic buying by bulls and Calcutta interests, Malabar black pepper gave way under pressure of arrivals both at Cochin and Alleppey. New arrivals, which averaged about 125 candies until now, augmented to 250 candies with chances of further increase hereafter. At the moment, arrivals of ginger are reported to be heavy and, if the receipts of pepper also prove large, as is generally envisaged, a further fall is anticipated by the trade, since there is very small hedge selling by exporters in any of the foreign markets.

Some of the bulls are banking upon the belief of a potential demand from Russia during the month of December. But, with the closure of the Suez Canal, chances of Russian buying in the near future appear to be meagre. Further, in view of the recent shipping agreement between Russia and India, there will be more regular shipping service between these two countries and, therefore, if at all Russia buys, she will buy in lots of a few hundred tons for shipment during more than one month and not in quantities of thousand tons to be shipped during a particular month, as was the case in the past. If purchases by Russia are thus spread over a period of more than a couple of months, it is not likely to have a bullish effect, as the exporters then will not be in a hurry to buy.

It is rather surprising that New York is not putting in any notable inquiries, though Malabar pepper is the cheapest among other pepper like Sarawak and Lampong and despite dock strike. Although demand from Europe and the U.S.A. is reported to be poor, Sarawak and Lampong are steady, because of sizable buying by a speculator there. The only redeeming feature is that the pre-

sent price is considered cheaper. As a result, there may be some investment buying off and on.

In the A.S.T.A. section, after a small business in November-March shipment at $0.27½, it is now being quoted at $0.26¾ with few buyers.

In the delivery section, market for December, after showing some improvement under pressure of covering by shorts and profit-taking, came down to Rs. 620, with the tendency being downward.

The following are today's nominal quotations: Ready Rs. 94 per Bengal maund and December Rs. 620/25 and February Rs. 625/30 per candy of 5¼ cwts.

STRONG DEMAND FOR TEA DUSTS

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 23*rd November*

Dust Sale 'W', which was held on Tuesday, 20th November, contained approximately 6¼ lakh pounds. There was a strong general demand for all types, particularly at the bottom for mixed and fibrous sorts, and prices advanced irregularly by one anna.

London Market: *Sale of 19th November* 1956:—Plain 4d., Medium 3d. dearer. Best firm.

Sale of 20th November 1956:—Very strong. Much dearer.

Colombo Market: *Sale of 19th November* 1956:—Strong demand. Firm rates, except thin fannings. Black sorts slightly dearer.

Sale of 20th November 1956:—Strong demand. Best brokens firm. Everything below best 10 to 20 cents dearer including gulf types.

Calcutta Market: *Export*:—Strong general demand, particularly for fannings and whole leaf grades. Prices generally dearer, except for best qualities.

Internal:—24,000 dust. Good general demand. Commons dooars medium Assams As. 1 to As. 2 dearer. C.T.C.s irregularly firm.

Export Quota:—There has been renewed activity in the export quota market and business has been effected at 42 pies.

Forthcoming Auctions:—Dust Sale "X" will be held on Tuesday 4th December.

* * * *

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 31:—1,400,000 lbs. Very strong general demand, particularly for medium sorts which are As. 2 to As. 3 dearer. Best sorts rather easier, following quality. Whole leaf much dearer."

TEA PRICES RULE FIRM

(From Our Own Correspondent)

CALCUTTA, 27*th November*

Strong demand at advancing prices was once again the feature in the export sales held yesterday and in the internal auctions of last week. London rumours envisaging tea rationing in view of the blocking of the Suez Canal, although denied by the Tea Trade Committee, as also the Committee's announcement of the inevitability of an increase in the retail price of tea, boosted local sentiment.

Tea stocks in British warehouses for the week ended 16th November, described by the Committee as good, amounted to 96 million lbs., which represented consumption of about ten weeks, and were higher by about 1¼ million lbs. compared to the previous week. Tea afloat as on 16th November was stated to be 52 million lbs. or six weeks' requirements. It was noted here that actual stocks in Britain was very low, and that this was due to the longer time ships take to reach London. The bulk of the supplies to Britain are sent from India, Pakistan and Ceylon. And ships from these countries are diverted through the longer route.

Since the prices in London during the current month have been advancing, there is an apprehension that the export duty on tea might be raised by the Government. Though prices had advanced during the month of October also, the Government did not increase the duty, in view of the trade opinion that such rise would have a reactionary effect on local auctions.

According to a statement made in Parliament by the Minister for Consumer Industries, the Tea Board has been authorised to make a provisional allotment of export quota to tea estates to the extent of 50 per cent. on the crop basis. Mr. Kanungo, the Minister, also stated that the question of the extension of the International Tea Agreement, which had expired in March 1955, was still under negotiation.

Offerings during yesterday's export sale amounted to 64,800 packages. There was good general demand, which slackened towards the end of the sale. That showed demand was fully satisfied. Prices of non-wither Dooars, all fannings, and best orthodox teas rose by As. 3 to As. 4. Medium Assam poorest teas rose by As. 2. Among C.T.Cs, the very brokens gained by As. 2. Darjeelings were best C.T.Cs were hardly wanted, and other lots gave way by an anna to As. 2. Darjeelings were fully steady. Clean black pekoes were bid at quoted rates, while the better whole leaf grades remained quiet. The quotations were: best C.T.C. Assam B.P. Rs. 3 to Rs. 3-2, medium Assam B.P. Rs. 2-8, clean black pekoe Rs. 2-6 to Rs. 2-7, and plain B.P. Rs. 2-5 to Rs. 2-6.

A further rise was recorded in the price for export quota rights. After advancing to As. 7¼ from As. 5¾, the price steadied around As. 6¾, at which rate business was recorded.

Dusts on offer in the sales held here on Tuesday last for internal consumption aggregated 23,871 packages. Strongest features included poor residue teas, prices of which gained by As. 2 to As. 3.

A similar rise was recorded in the prices of non-wither Dooars. Dooars, medium Assams and commons gained by an anna to As. 2, with the more leafy teas remaining in the forefront. The better Darjeelings were irregular, but the plainer lots shared in the general advance by an anna to As. 2. The quotations were: best Assam C.T.C. Rs. 2-11, medium Assam C.T.C. Rs. 2-9, medium Assam grainy dust Rs. 2-2 to Rs. 2-3, and medium Dooars Rs. 2-1 to Rs. 2-2.

Leaf offerings amounted to 1,695 packages, which were absorbed at higher prices.

During the tea sales held in Chittagong on Wednesday last, conditions were fully steady. Opening prices were higher by As. 2, and in the keen bidding that followed prices added by another As. 2.

JUTE GOODS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, 27*th November*

In the earlier part of the week under review, jute goods continued to rise and by Thursday had reached the highest level. The steady uptrend was a result of considerable speculative activity. From Friday onwards, however, a downward movement was in evidence. Mills were enthusiastic sellers, and, although fair genuine business was also put through, the heavy offerings could not be fully absorbed. So far during this month, shipping has been satisfactory, and this indicates that foreign consumers are stockpiling some quantity in view of the uncertainties about the future, although international tension has somewhat eased. Sacking shipped from 1st to 20th November aggregated 27,400 tons and hessian 26,700 tons, representing increases of 1,500 and 3,700 tons, respectively, over the figures for the corresponding period in the month of October. These figures should be considered highly satisfactory, because October in itself was a better shipping month. The market naturally expects a further decline in stocks of jute goods with mills as at the end of this month. Not only sales have increased, but the production loss in four mills which remain closed on account of labour troubles should also be taken into consideration.

However, the stage for any steps to increase production has not yet arrived. For one thing, it is quite possible that the higher demand should prove a purely temporary feature, and if the steps now being taken by the United Nations and the United States to solve the problems created by the big powers in Hungary and Egypt succeed, as they are bound to, there would certainly set in a lull in the jute goods market. For, overseas consumers in that event would like to fall back for some time on the stockpiled quantity in an attempt to bring down prices to the pre-crisis level. In the meantime, there is satisfaction in both trade and industry circles that stocks are declining and are expected to reach manageable proportions in the near future. However, any suggestion to unseal looms now remaining idle is looked down with dread, as the experience that followed this year's earlier unsealing which brought the industry to a crisis, is fresh in the minds of traders. It was not unnatural, therefore, for the trade and industry to read cautiously what the Commerce Minister Mr. Karmarkar said on this subject in his speech at the meeting of the Export Advisory Council in New Delhi a week ago. He hoped that the recent re-sealing of 7.5 per cent. of the looms, which followed rising stocks month after month, depressing prices to uneconomic levels, was only a short-term measure. For, in his opinion, demand for India's jute goods would go up, in view of increased agricultural production the world over and increased economic activity in consuming countries. Mr. Karmarkar referred to the recent increases in the export duty on raw jute by Pakistan. These, market circles consider, have caused an increase in cost of production, reduced imports of the Pakistani fibre to the minimum, and made mills look more and more to the indigenous output.

During the week under review, good business was done in hessian. The United States was increasing hessian stocks, and reports of higher consumption there also aided sentiment. On Tuesday last, ready 40" 10 oz. hessian rose from Rs. 46-3 to Rs. 46-8. Ready B. twills advanced to Rs. 121-6 from Rs. 120-8. Since orders on both constructions were being received at a satisfactory rate, speculators indulged in increasing their stocks and on Wednesday B. twills touched the highest rate at Rs. 122-8, and hessian 40" 10 oz. at Rs. 47-8. On Thursday also, rates were maintained at these levels, but heavy selling by a tired bull operator arrested the uptrend. On Friday, other bulls joined him, and in the profit-taking that followed, B. twills receded to Rs. 121-4 and 40" 10 oz. hessian to Rs. 46-14. By the week-end, these constructions had given way to Rs. 119-12 and Rs. 45-14, respectively. Mills continued to sell, and at these rates genuine business was also put through. Yesterday, a further recession in prices was recorded. Ready B. twills sagged to Rs. 119 and ready 40" 10 oz. hessian to Rs. 45-10. Overseas buyers were hesitating to enter into commitments.

Reports of strong conditions in Pakistani markets cheered the sentiment of raw jute sellers who pushed up local prices. The increase in prices of jute goods was another favourable factor for raw jute stockists to reject all counter-offers to their quotations. However, mills persistently refused to purchase at the higher prices, which factor, coupled with the subsequent fall in the prices of jute goods, caused a recession in raw jute. Thus, Indian northern bottoms after being higher at Rs. 32-8 sagged to Rs. 31-8. Local daisee bottoms fell to Rs. 32 from Rs. 32-8. Latest quotations are given below. Those of a week ago are given in brackets for comparison:

HIDES CHEERFUL

(From Our Own Correspondent)

KANPUR, 25*th November*

During the week under review, the hides and skins market put on a cheerful appearance. General supplies were good and the demand for them was strong. There was a buoyant feeling in the cow section, in view of the strong demand for high grade cow, necessitated by Soviet orders for footwear, to be supplied mainly by Kanpur and Agra parties. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 370, 2nd grade Rs. 280 and 3rd grade Rs. 140 per score; wet salted buff 1st grade 1 lb. 13 ozs. and 2nd grade 1 lb. 15 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 225 per 100 **pieces; sheep 1st grade Rs.** 300 and 2nd grade Rs. 200 per 100 pieces.

FOODGRAINS QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 26*th November*

Quiet to steady conditions prevailed in the foodgrain market during the week under review. The Union Food Minister said in the Lok Sabha that the upward trend in foodgrain prices two months ago had almost been arrested, thanks to the steps taken by the Government.

The U.P. State Government is worried about the scarcity conditions created by the heavy rains and floods and has approached the Centre with a request for increasing its original quota of 100,000 tons of imported wheat to 200,000 tons of foodgrains, including 30,000 tons rice. It is without any stocks of coarse grains at present and is likely to purchase some stocks from Madhya Pradesh and Rajasthan.

Wheat prices at Hapur ruled steady at Rs. 15-14 per maund for average quality and at Rs. 16-14 for farm quality. Imported wheat sold by the Government through fair-price shops at Rs. 14-8 was being resold in the market at a profit. Outside buying enquiry for wheat continued from Bihar and the week's offtake aggregated 4 *khaties*, reducing local stocks to 64 *khaties*. Local arrivals were at an average of 50 maunds only and most of the demand was met by fair-price shops. Renewed spell of rain in the first week of November hindered prospects of *rabi* sowings and large tracts of land in Bulandshar, Meerut and most of the eastern districts of U.P. remain unsown.

Rice, ruled quiet, due to increased arrivals of new crop into the market. Gram, also ruled quiet, owing to heavy stock position—101 *khaties* of about 800 maunds each. *Bajra* improved during the week, due to increased seasonal demand, while maize eased slightly, following better supply position. Other grains held steady and prices as on Monday were: Barley Rs. 13-6; *bejhar* Rs. 13; maize Rs. 12-10; *bajra* Rs. 14 per maund.

Peas and *arhar* continued to attract good demand mostly in the form of pulses from O.T.R. destinations, Madras and Bengal. Peas ready touched new highs of Rs. 14 per maund for *dara* green and Rs. 15-8 for white quality and the local stock which had run down to 26 *khaties* only was now concerned by local bulls. *Arhar* ruled quiet at Rs. 13-4 per maund, with local stocks put at 55 *khaties*. Other pulses, however, eased slightly on better stock positions. The latest prevailing prices are: *Urd* Rs. 17 to Rs. 19; *moong* Rs. 15-8; and masoor Rs. 18 per maund.

While peas futures improved in line with the ready section during the week, other pulses futures ruled quiet. The latest prevailing quotations as on Monday are: Peas: *mangsir* Rs. 13-6-6, *jeth* Rs. 10-7, white *mangsir* Rs. 12-0-3 and white *jeth* Rs. 10-13 *arhar*: *mangsir* Rs. 12-12-4½ and *jeth* Rs. 11-2-6; *urd maha* Rs. 17-15.

SUGAR ACTIVE

(From Our Own Correspondent)

HAPUR, 26*th November*

The sugar markets ruled active during the week, due to good buying enquiry from almost all consuming areas, and mill delivery prices improved for all the factories. Wholesalers, however, were reluctant to enter into any large-scale commitments, as they anticipated a further improvement in prices. The total offtake of sugar during 1953-56 season (November 1955 to October 1956) amounted to 1,748,000 tons as against 1,217,000 tons during the previous season. Most of the factories in west U.P. have begun their crushing operations for the new season.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. ‡ Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1956.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

KILLICK INDUSTRIES LIMITED

(*Concluded from page 1035*)

to keep up a standard of living not merely for the sake of appearances, but in order to play their part in the social life which they guide and nurture.

"Universal adult franchise in our country encourages politicians to look solely to the masses and to ignore the middle class as though it were negligible. Since independence the well-being of the industrial working class has been the special care of the Central and State Governments, as also that of the majority of parliamentarians. As has recently been stated by the Labour Minister of the Government of India, there has been a rise in the real wages of this class. Not only can no one object to this, but, indeed, if the raising of the standard of life of all people in the country is to be achieved, then we must regard the betterment of the living conditions of this particular class as a matter of great satisfaction and unstinted pleasure. At the same time, one hears that the agricultural class, which, of course, constitutes the great majority of the Indian people, has also taken a few, albeit faltering, steps forward on the path to a better life. It is the hope of all people that this trend will be emphasised and speeded as rapidly as possible.

"But what of the middle class? When attention is focussed on their betterment there appears to be a curious lack of interest in it. No political champions come forward to safeguard their interests. As has been suggested earlier, the reason for this may well be purely one of numbers—in a population of 360 millions they do not appear to warrant the interest and attention of those standing for Parliament

MARKET GOSSIP

(Concluded from page 1023)

the Company's shares. On the contrary, after going down to about Rs. 683-12 on Monday, they have risen to close at Rs. 705. This is not surprising, because a few privileged operators had pumped out the information from the Chairman unofficially a fortnight ago, as was then described in these columns, and exploited it to their advantage. The revival of this counter at present is based on two hopes: (1) an early fructification of the scheme for capital reorganisation, and (2) a substantial modification of the Plantation Award by the Supreme Court in favour of the companies. It is just possible that both the hopes may materialise but it must be added that the Supreme Court will hear the appeal of the planters only some time early next year. Meanwhile, there are reports indicating the possibility of a settlement being reached between the workers and the management out of court. The Madras share market, however, does not seem to set great store by these reports, as witness the renewed weakness of plantation shares in that centre.

* * * *

The list for 557,000 ordinary shares of Hindustan Lever Ltd., offered by Unilever Ltd., London, at Rs. 16-8 each, will open on Monday the 3rd inst. The issue will doubtless evoke excellent response from the investing public. Indeed, it will be heavily oversubscribed and its allotment will be a task to the offerers. The chief merits of the issue are already well known, thanks to the wide publicity it has received in the Press. Nevertheless, a few lines on the prospects for the Company will not be out of place.

The offer represents a notable landmark in the history of Unilever enterprises in India, in particular, and the growth of international co-operation in the service of the country, in general. The manufacturing activity of Hindustan Lever is wide and varied, covering as it does soaps, detergents, toilet preparations, tooth pastes, *vanaspati*, margarine, glycerine, edible oils and oilcake. The factories are well situated from the point of view of not merely securing regular supplies of raw materials but also ensuring efficient distribution of manufactured products to all parts of the country. What is more, they are equipped with modern plant and machinery, adequately provided with railway sidings, water and power, and are maintained in good working condition.

Hindustan Lever is one of the enterprises the success of which seems to be assured. The consumption of the products of the type produced by the Company is bound to increase in the coming years, what with the rise in population, increase in national income and the consequent improvement in the living standards of the masses, growth of urbanisation following industrialisation, and better water-supply in rural areas. All these factors will push up the demand for such consumer articles as soaps, toilets and *vanaspati*. The domestic requirements of soap, for instance, are estimated to be substantially higher at the end of the second Plan period, being as much as 300,000 tons, as against 200,000 tons in 1955-56, a rise of 50 per cent. This means an increase of 7½ oz. to 26 oz. in the *per capita* consumption, even which is quite low, as compared with some of the developed countries. The use of synthetic detergents for washing rayon, silk, nylon, etc., and as industrial cleaning agents will also increase, along with the consumption of soap. The estimated consumption of detergents is placed at about 10 per cent. of the total soap output. Similarly, the domestic requirements of *vanaspati* are expected to rise from 255,000 tons in 1955-56 to about 380,000 tons, representing an increase of 50 per cent. In addition, it is possible to step up exports from 15,000 tons to 20,000—25,000 tons.

There is thus a bright future for the group of industries which Hindustan Lever represents. Reassuring is the statement of Mr. A. J. C. Hoskyns-Abrahall, Chairman of the Company, at a Press Conference held last week, that the Company shall continue "to contribute to the promotion of these industries on the basis of fair competition in the service of the consumer and joint efforts in all matters of common interest affecting the industry as a whole." On the basis of this assurance, and Unilevers' present offer of shares to the public, Hindustan Lever can justifiably claim the distinction of having achieved "a fruitful association of Indian resources and talent with Unilevers' technical and marketing experience gained in various parts of the world."

While on the strength of experience, resources and large scope for expansion it can be said that it is a sound investment to place one's savings in the scrips of Hindustan Lever, it is necessary to sound a note of caution. The Company belongs to an industry the financial fortunes of which are subject to large variations, as the prices of its raw materials, mainly oils, fluctuate over a wide range. Like all agricultural produce, vegetable oils lack price stability. They move back and forth rather frequently and markedly. The prices of finished products, however, cannot be altered so often, especially when the prices of raw materials go up, as the industry is a highly competitive one. Consequently, any sharp rise in the price of vegetable oils invariably cuts into the profit-margin of the manufacturers. To the credit of the offerers it must be said that they have made a pointed reference in the prospectus to this aspect of their Company's business. But the issue price is fixed at so low a level that this risk is well covered. As mentioned in these columns last week, the yield on the shares works out to 8.33 per cent. which is high enough for an equity of this sort. It may be noted here that the return on the shares of Tata Oil (Rs. 25 paid-up, now quoting Rs. 50), Hindustan Levers' main competitor, is no more than 6 per cent.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2388 BOMBAY, 8th DECEMBER 1956 PRICE Rs. 1/8

ANOTHER BRISK MOVE TOWARDS SOCIALISATION

THE supplementary budget presented to Parliament by Mr. T. T. Krishnamachari, Union Minister for Finance, a few hours after our last issue went to press, is a compliment to his alertness and an instance of his devotion to the Congress Party's cherished objective of a socialist pattern of society. He was keenly aware that he and his colleagues at the Centre and in the States alike would be busy at the hustings during the latter half of February and early March and as such would not be in a position to pay serious thought to the framing of budget proposals usually presented on the last day of February every year. The alternative to a supplementary budget is to wait till the new Parliament assembles and a new Government is formed. That would mean a delay of three, if not four, months, and the loss of revenue for this period by way of fresh taxes that may be proposed then. It would also mean uncertainty about the rates of taxation on profits to those joint-stock companies that generally decide the appropriation of their profits for the current accounting year in the first half of next year. In view of the Government's pressing need for more revenue, it is not surprising that Mr. Krishnamachari has chosen not to adopt this alternative. The gain to the Exchequer as a result of the taxes now introduced may be no more than Rs. 4 crores for the current fiscal year. But, in the present state of affairs of the Government, every little bit counts. Moreover, if viewed against the consequences of the alternative mentioned above, the gain is much more. Any discussion of the appropriateness or otherwise of introducing a supplementary budget as has been done now is, therefore, unreal and only of academic importance. Indeed, to the extent the proposals of direct taxation are applicable only to the financial year 1957-58, this budget is rather a preliminary to the 1957-58 budget than a supplementary to the 1956-57 budget presented in February last by Mr. C. D. Deshmukh. It is true that a large number of indirect taxes also figure in the current proposals and that they have already come into force. But the Government has powers to introduce them at any time of the year through Executive order, subject to approval by Parliament later.

There is also another important reason why Mr. Krishnamachari has chosen to act now, instead of waiting till May or June next. And that is political. Both the leading leftist parties in the country—the Praja Socialists and the Communists—have decided to join hands in order to oppose the Congress Party in the elections. One of the grounds of their attack against the Congress will be that the latter is a capitalist-backed party. By imposing new taxes that will hit only the capitalists, urban landlords and the vast managerial class—in short, all property owners—the party in power can conveniently denounce such a charge. It is significant that the Finance Minister has not imposed any taxes that will directly hit the man in the street who counts most in the General Elections. Some of the indirect taxes may have an adverse effect on him, but that will be in so remote a manner that he will not even feel it. Since no business man wants the Congress Party to be defeated at the polls, it will be unrealistic on his part to criticise this budget on procedural grounds. It may be argued that no such budget was presented on the eve of the last General Elections five years ago. But conditions then were different. The Government's revenue position was buoyant, thanks to the Korean war boom and the first Plan had not got well under way. The balance of payments position was quite comfortable, with balance of trade and terms of trade alike being highly favourable to India. In fact, the financial position of the Government was so good that no new taxes of any great significance were imposed even in the budget presented after the elections in 1952. Further, Mr. Krishnamachari is different from Mr. C. D. Deshmukh, who was the Finance Minister then. He is one of those who do not let the grass grow under their feet. This is evident, as we shall presently show, from some of the changes proposed by him in the tax system.

The Finance Minister states that his present taxation proposals are the result of two considerations, (*a*) the requirements of the Plan and (*b*) the general economic situation. To take the latter first. The price line has been breached. At 430, the index number of wholesale prices exceeds the limit of safety by 30 points. And there is no knowing whether it will not rise further. All available indications are that it may very well go up further. If further hardship to the community is to be prevented and the Plan is to progress without more tears, such a possibility has to be averted. This is one aspect of India's present economic health. The other aspect relates to the foreign exchange position. This position is by no means satisfactory. Since the end of March 1956, the foreign exchange reserves held by the Reserve Bank have declined from Rs. 746 crores to Rs. 543 crores—a drop of over Rs. 200 crores. At the present level, the foreign balances are very close to the minimum level that has to be maintained. The country, therefore, cannot afford to sustain the rate of withdrawal that took place in the past seven or eight months. Every effort has, therefore, to be made to reduce the demand for imports and to encourage exports.

To what extent will the present proposals serve the two purposes mentioned above? The increases in import duties are well designed for checking non-essential imports and for transferring to the Exchequer the excess profits that are likely to be made by the trade due to restrictions on the quantum of imports. Nor can one seriously object to the corresponding increase in excise duties. These imposts may, of course, lead to a rise in prices, but that will happen only in those goods which are not quite essential. It is, however, not convincing to claim that the additional direct taxes will serve the purpose of keeping the price level down, for they will lead to neither a rise in the supply of goods nor any appreciable fall in the volume of that purchasing power which impinges on the supply of articles essential to life such as food, cloth and houses. It can be argued that the imposition of a higher dividend tax, the revival of capital gains tax, the control sought to be exercised on the resources of companies in the non-State sector, and the enhancement of the burden on Section 23A companies—all these steps will be useful to the Government for countering the workers' insistent demand for more wages and that to the extent they help the Government in this direction, they make a contribution, albeit indirect, to holding the price line. But this justification holds good only on paper, as witness the open support extended by two Union Ministers, Mr. Khandubhai Desai (Labour) and Mr. Gulzarilal Nanda (Planning) to the workers' demand for a straight increase of 25 per cent. in their wages. The significance of this support lies in the fact that it was offered four days after the new tax proposals were announced.

It cannot be denied that a heavy dose of taxation will have a psychologically bearish effect on prices of almost everything. Such an effect, however, will only be a passing phase. An enduring impression on prices can be brought about only through increased production. Mr. Krishnamachari is quite aware of this point. Yet he has taken steps that will only retard the pace of expansion in production at a time when the pace should be as fast as possible. It must be noted here that we do not say that production will be adversely affected. Nor do we say that production will not expand. No business man with any foresight will cease to work just because taxation has become very heavy. It will not pay him to do so. Since he has to live, he will work and produce. Hence, although during the past five or six years the burden of taxation has gone up steeply, production, too, has been rising. It is this fact that has apparently engendered a feeling of cynical disregard among the powers-that-be for the business man's protests against higher taxation, increasing bureaucratic controls and growing extension of the public sector. But what is, unfortunately, overlooked or is not realised is that the growth in production would have been greater than what it has been had the incidence of taxation been less heavy and had there been fewer incursions and interference by the Government. Considering the economic momentum which this country had received during the war years, the growth has been much less than what was possible and what would have materialised if the freedom of free enterprise had not been severely restricted. The pressures at various points in our economy to which Mr. Krishnamachari refers in his budget speech are mainly the outcome of sacrificing the pace of progress at the altar of some vague and outmoded ideologies.

Now to take the other consideration that influenced the Finance Minister to put forward the new tax proposals, namely, the requirements of the Plan. We have already conceded that the wide range of additions to and alterations in the customs duties are in consonance with this need. But the changes made in the scheme of direct taxation are more in keeping with the ideological aspects of the Plan than with the practical

requirements. They will, of course, net in some more money for the Government, but that will be negligible as compared with the large deficit in the resources required to implement the whole Plan. While the saying that many a little makes a muckle is quite pertinent in the present context, the setback to confidence among investors and enthusiasm among *entrepreneurs* caused by the Finance Minister's proposals will more than offset the small gain to the Exchequer. It is pertinent to bear in mind, in this connection, that all that these proposals seek to do is to transfer the financial resources from the non-State sector to the State sector. They do not create new resources of any significant order that will facilitate the smooth implementation of the Plan in both the sectors. Nor does it necessarily mean that the transfer of resources from the private to the public sector will lead to a more productive and profitable utilisation, in view of the serious administrative *limitations from which the public sector suffers.*

All the proposals, however, admirably serve, at least on paper, the economic philosophy of the Plan which is identical to that of the Congress Party. Thus, the capital gains tax is designed to prevent the rich getting richer as a result of rapid economic development envisaged in the Plan with all its inflationary implications. In introducing this tax so early in the stage of our economic development, the Finance Minister's aim is to prevent concentration of wealth in a few hands and growth of more vested interests, that is, to prevent aggravation of inequalities in income and wealth. The steep dividend tax, too, has the same objective in view. When coupled with the control on depreciation and other reserves, it has the added advantage of vesting in the hands of the bureaucracy powers for directing the disposition of funds belonging to the private sector. Thus, Mr. Krishnamachari has mounted the guns against free enterprise from a few more strategic points. This socialisation is worse than nationalisation. Human nature is such that mere possession of power to control and direct a productive asset, without actual ownership and responsibility for successful management is likely to inflict great harm on the nation. Ultimately, this state of affairs is likely to lead to the growth of an irresponsible and corrupt bureaucracy rather than to swift economic progress, without which there can be no improvement in the living standards of the people and no real Welfare State. Has the party in power any safeguards to avert such a danger?

INDIAN AND CHINESE AGRICULTURE

THE similarity between China and India is not merely confined to the large size of the two countries or to their population. Both have a relatively underdeveloped, though not primitive, economies. If China's economic progress was arrested through long periods of civil war and confusion, Indian economy suffered—though relatively less—damage through colonial administration. Both are, however, engaged in the difficult task of economic reconstruction and of compressing several decades of economic progress into a few compact five-year plans. And yet, the history of the two nations has, in recent years, run its course in different directions. While China has chosen the totalitarian path, *India is determined to pursue the democratic.* Thus, economic experiments in the two countries are being carried out under mutually exclusive conditions. It is this factor which invests a comparative study of China and India with a new significance. Their economic experiments are, therefore, of great relevance not only to the two countries but to the world at large.

China, like India, is a predominantly agricultural country. According to accounts of several observers, China has made some rapid strides of progress. The latest document on agriculture in China, which incidentally is about the best and the most informative that has come so far, is the Report of the Indian Delegation to China (headed by the Union Deputy Minister for Food and Agriculture, Mr. M. V. Krishnappa) which visited that country in July-August this year. It is a well-documented and interesting story of recent trends in Chinese agriculture. It is not all a simple tale of the delegation having gone, seen and been conquered by China. For there are passages in the book, where the delegation has been somewhat critical of what it saw and observed. It is not a panegyric of praise. But the delegation was, on the whole, favourably impressed with many things it saw. This in itself is a tribute to Chinese agriculture, considering how greatly that country's economy had been ruined at the time it set out on its great economic adventure of improving the living standards of the people.

There are certain basic difficulties in comparing living conditions in the totalitarian with those of free countries. This arises from the fact that several services are provided free by the Government in totalitarian countries. Whether the services are as efficient or as widespread as they are claimed to be is a different, though an important, question. Bearing this limitation in mind, it is interesting to note that China has not altogether been able to solve the problem of giving the people an adequate level of income or in reducing the inequalities in income. The minimum salary of a clerk is Rs. 70 per month, while the managers of private industries or State-*cum*-private enterprises get a salary of Rs. 2,000 per month plus dividend on their capital which in some cases is as high as Rs. 4,000 to Rs. 5,000 per month. But prices are high—cotton shirting Rs. 4 per yard, cotton suiting Rs. 8 to Rs. 10 per yard, shoes Rs. 30 to Rs. 40 per pair.

As in India, Chinese economic programme is in the form of five-year plans. The first Five-year Plan (1953-57) which involves a total outlay of 76,640 million yuans (Rs. 15,328 crores), aims at an increase of 23.3 per cent. in industrial production and 98.3 per cent. in agricultural production. The second Plan aims at an increase of 100 per cent. in industry and 35 per cent. in agriculture, as compared with the 1957 levels. The total sown area is said to have expanded from 349 million acres in 1952 to 373 million acres in 1955; the area under food crops has expanded from 277 million acres to 292 million acres. The following figures give the output of major crops in 1955, together with the output in 1952 within brackets:

(In million tons)

Food crops 172 (152), of which paddy 76(67) and wheat 77(67); soya beans 8.9(9.4); cotton 1.5(1.3); jute 0.25(0.30); sugarcane 7.9(7.0); sugarbeet 1.6(0.5); peanuts 2.9(2.3); rapeseed 0.9(0.7) and tea 0.1(0.81).

The per-acre yield of agricultural crops have generally risen since 1952 and are higher than in India. For paddy, it is 2,386 lbs. per acre in China, as against 1,085 lbs. in India. The corresponding figures for other crops in China and India, respectively, are: wheat 766 lbs., 715 lbs.; cotton 234 lbs., 89 lbs.; jute 1,971 lbs., 942 lbs. and sugarcane 35,437 lbs., 32,000 lbs. China has thus a much higher per-acre yield than India. It is not clear whether the figures can be taken as accurate, considering that the statistical services in China were organised only recently.

Co-operative farming is now the most prevalent and the most widely accepted (or enforced) form of agricultural organisation in China. The Chinese authorities insist that the nation "could not stand with one foot on socialistic industry and the other on a peasant economy." Mao Tse-Tung is reported to have warned that "if positions in the countryside are not held by socialism, capitalism will assuredly occupy them." Land reform in China, the Report points out, was a "gigantic" event; about 118 million acres of land were distributed among 300 million peasants. This was followed by a country-wide movement for setting up agricultural co-operatives. There were only 19 producers' co-operatives in 1950. But in 1954, there were as many as 114,366. In 1955, the number of agricultural co-operatives rose to 633,742 and in May last, it had exceeded 10 million (?), thereby covering 91.2 per cent. of the 110 million rural households in the country. There are two types of co-operatives—the "elementary" and the "advanced" types. In the elementary type, the principal means of production such as land and farm tools are put under a single centralised management and gradually turned into their common property; the co-operative pays each member (besides wages for labour) an appropriate sum as dividend out of its annual income, commensurate with the amount and quality of the land the member pools into the co-operative. The "advanced" type of co-operative is a socialist collective economic organisation in which the peasants joining the co-operative must turn over land and tools to the collective ownership of the co-operative. The elementary co-operative tends to remain relatively small, while the advanced tends to become steadily larger.

The Chinese authorities have denied that any form of coercion was used to compel peasants to join the co-operatives. But they agreed that they carried on intensive propaganda and also tried to "regulate" the Chinese peasants indirectly through sales and purchases and other controls and also through monopoly of credit and offer of other inducements for making them join "mutual aid" teams and, then, the agricultural co-operatives. Clearly, this is sufficient coercion. And it must be noted that propaganda could be very effective when it is undertaken by the only party in the country—a party which insists upon strict code of conduct and behaviour from its 10 million members.

Commenting upon the lessons of Chinese experience to India the Report says:

"The agricultural situation in India differs from that in China in several ways. In particular, here we have had and propose to have continuity of development such as has not been possible in China. Our social and economic changes follow upon one another and it is only over a period of a few years that a full picture emerges. Secondly, we place perhaps greater reliance on local planning and local initiative and we endeavour to build up an economic structure in which there should be integrated planning at the level of the village, the district, and the State and for different regions in the country. In the third place, on the whole, we have less pressure of population than exists in China. Fourthly, while it is far-reaching in scope, our land reform is based fundamentally on the idea of peasant proprietorship. It is our goal to reorganise our rural economy on co-operative lines, but, this is a task to be accomplished over a period of years."

The delegation has called attention to another important aspect of Chinese agriculture —the method of close planting. This method is stated to be the opposite of the Japanese method of paddy cultivation. It would appear that, though the Japanese method has resulted in higher yields, it has revealed a few defects, such as "lodging" and a high percentage of unfilled grains. The delegation has suggested detailed investigation of the Chinese technique of close planting.

From its experience in China, the delegation has made a number of useful recommendations. Besides making a general plea for an accelerated pace of land reform and the development of "genuine co-operatives through the voluntary participation by peasants," the Commission has suggested the building up of strong technical cadres in agriculture, rural engineering and co-operation at different levels. Credit, it is suggested, must be made more speedily available to the farmers—within a week or two. Other suggestions are: top priority to multiplication and distribution of improved seeds, further research work on improved strains, research on the utility of bacterial fertilisers, the strengthening of engineering sections of agricultural departments and increased attention to the design of improved implements.

Again, it has rightly stressed the need for guaranteed minimum prices for the principal agricultural crops such as foodgrains, cotton and jute. The minimum prices should be sufficient to induce farmers to put in increased doses of labour and fertilisers and adopt superior agricultural practices. It argues that there need be "no fear that price stabilisation operations will be too risky for us." This is because the surplus in India, as in China, is "marginal, temporary and manageable." It adds: "As long as our problem continues to be one of shortages and our main problem is to organise for increasing production, we should not be worried that the policy of price stabilisation will lead to over-production. Even when prices are temporarily stable or rising, an assurance regarding minimum prices is helpful, as it allays the fear of an abnormal downward swing." Here is a convincing plea for price support for agricultural produce. We have repeatedly pointed out that this issue, difficult though it may be, cannot be indefinitely postponed and that sooner or later it will have to be faced. The sooner it is done the better it will be for India's agriculture. After all, a system of price support is a democratic way of giving the farmer a security which, in a totalitarian regime, he can get only at the cost of personal freedom and that pardonable pride of ownership which is the best spur to efficient effort in farming.

SOME REFLECTIONS ON TAX PROPOSALS

TWO UNION MINISTERS OFFEND CANONS OF PROPRIETY

THURSDAY, 5 P.M.

THE fresh taxation proposals announced by the Government on Friday last caught the share markets unawares. The slight improvement in values and sentiment, which had been noted towards the close of the past week, was completely shattered. There was a drop of 5 to 10 per cent. in equity values overnight and investors suffered a heavy depreciation running into several crores of rupees. Although there has been a partial recovery in prices since Tuesday, the closing rates reveal substantial losses over a wide front, as compared with those a week ago. Excepting electricity and one or two miscellaneous scrips, all others have suffered a distinct setback. The spurt witnessed during the latter half of the week is due mainly to bear covering and some small selective buying based on considerations of yield and prospects of bonus issues by some of the companies that wish to escape the penal rates of taxation on their high rates of dividend. Market sentiment as such is still not in favour of any perceptible rise in prices. The shock given by the Finance Minister is so severe that neither investors nor speculators can get over it so soon.

MARKET GOSSIP

* * * *

In two articles elsewhere in this issue, the arguments for and against capital gains tax and the basis of the levy are explained. It will be noted from them that, both in incidence and scope of its coverage, this tax is worse than the one introduced by the late Mr. Liquat Ali Khan for the first time in India. Yet, it is true to say that the shock given by Mr. T. T. Krishnamachari is not of the same intensity as that administered by Mr. Liaquat Ali. It is not difficult to explain this phenomenon. For some years past, the country has been led to expect a capital gains tax. The Planning Commission has been saying that it will be necessary to use this tax weapon at some stage or other when the second Plan is in operation. The Taxation Enquiry Commission also gave a qualified blessing to the proposal. The Congress President, if not the entire Congress Party, has favoured its early introduction. Dr. Kaldor, the British specialist, who had been invited by the Government of India to advise it on taxation matters, strongly supported its reintroduction. In his report to the Government, he has adduced several arguments in support of a tax on capital gains and convincingly met those that were advanced against it. After reading Dr. Kaldor's advocacy, many had come to the conclusion that the revival of this tax in the budget for 1957-58 was almost certain. It is one of those taxes which are politically impossible to be kept out of the system for long.

To say that the imposition of capital gains tax had become inevitable does not necessarily mean that it is an equitable one. This tax is something that is alien to the system of taxation prevalent in India. If it is to be had, then the whole system must be remodelled, not on the lines of the scheme proposed by Dr. Kaldor which includes the impracticable expenditure tax, but on the one in vogue in the U.S. This, however, is something which is too much to be expected from the Congress Party. It almost amounts to asking for the moon. One has, therefore, no alternative but to accept the impost in the spirit that what cannot be cured has to be endured.

* * * *

In the conditions prevailing in India, capital gains tax will be evaded in many ways. Its extension to property and the reduction in the minimum amount of capital gains exempted will make its administration extremely difficult and widen the scope for corruption. It increases also the scope for discretion by income-tax officers and, therefore, the room for harassment by them. But to a Government the policies of which are determined mainly on ideological considerations these arguments will not sound convincing.

In its representation to the Government, the Indian Merchants Chamber, Bombay, has made an important point against capital gains tax. It is this:

"A tax of this character will bring about a distortion of the transactions in the capital assets, because, in a period of capital gains, there will be resistance to sell and, when there are losses, the inducement to avail of the consequent set-off would act as a stimulus to sell. It must not be ignored that investment, particularly by the middle-class investor, is made not merely for annual returns, but also in the hope that the value will appreciate in the long run. The tax, therefore, will prove to be a definite disincentive to the smaller investor."

If the introduction of capital gains tax is inevitable, then the earlier it is done the better. For by [illegible] it on investors after the boom on the Stock Exchanges has gathered momentum and reached its zenith, as was done early in 1947, would be to [illegible] a severe blow on the market from which it would take several years to recover. It is always [illegible] to prevent a boom rather than allow it to [illegible] and then take drastic measures to bust it. [illegible]stors now know what taxes they will have to [illegible] and as such can be expected to exercise [illegible] care while buying equities. There is, therefore, [illegible] something to be said in favour of Mr. T. T. Krishnamachari's contention that "for a developing economy like ours, it is necessary to take early action" in regard to this tax.

The increased tax on dividends and the compulsion on the companies to deposit a part of their reserves and depreciation funds are really unwarranted. The Finance Minister says that the former measure is meant to discourage payment of big dividends and encourage ploughing back of profits. If this is the objective, a direct control on dividends is preferable to a penal tax. But the truth is that **is not the main object.** The Government needs more money and the administration of a direct control on dividend is a nuisance for it. A stiffening of the dividend tax serves these purposes of the Government well.

The rigid control which the Government proposes to have on the reserves by asking the companies to deposit a part thereof with the Reserve Bank may actually act as a disincentive to conservation of profits. Many companies will rather prefer to pay the penal dividend tax and distribute large dividends than hand over their reserves to the Government and wait on its sweet will and pleasure for their refund when they need them. Their reaction will be to pay the shareholders well *while the going is good.*

Another combined effect of both the proposals will be to give a fresh impetus to companies to capitalise their reserves as quickly as possible and to the extent permissible under the Government's formula for issue of bonus shares already in force. The object in doing so will be to pay as little dividend tax as possible and to reduce the amount of reserves required to be deposited with the Reserve Bank. The companies issuing bonus shares will, of course, have to pay a tax on bonus shares, but looking to the present attitude of the Government towards the private sector and the prospects of a stiffer tax on such issues later, they may be inclined to capitalise the reserves earlier than the Government expects.† In any case, both the proposals are inimical to the adoption of sound financial policies by company managements, as well as to economic development. The Government is, therefore, ill advised in resorting to them.

* * * *

The Government's insistence on control over the reserves of companies is unnecessary, especially as it has sufficient powers under the Company Law to prevent interlocking of funds and cornering activities of managing agents. It will affect the confidence of *entrepreneurs* and constitutes a new impediment to the flow of foreign private capital. The whole concept is based on a lack of confidence in the private sector that it will play its part in accordance with the needs of the Plan. There is no justification whatever for this attitude of Government towards the private sector. The authorities seem to have forgotten the simple maxim in human relations that only confidence breeds confidence.

The more one thinks of this proposal the more is one convinced that it is a retrograde step and has no parallel in any other free country. As these lines are written, there are reports that the Finance Minister is contemplating some changes in this provision in favour of the companies. But that does not go far enough. The entire proposal should be withdrawn, as it offends the fundamental principles of democracy. It may be noted here that the delegation of powers in this regard, empowering the Government to prescribe the amount to be deposited, the manner in which the deposits are to be made, the time when and how the refunds are to be made, as also the rate of interest, if any, on the amounts so deposited, covers a wide field of legislation by Executive order.

Quite apart from all these considerations, the aforesaid compulsion will seriously curtail the working capital of companies and aggravate the demand for bank credit. Many companies may find themselves in the ridiculous position of having to deposit with the Reserve Bank a part of their reserves and essential provisions at low rates of interest and to borrow from commercial banks at high interest rates for meeting their requirements of working finance.

* * * *

Another tax proposal of the Government which will have a direct bearing on the money market, besides the one referred to above, is the abnormal increase in the stamp duty on bills of exchange from a flat rate of a mere As. 2 per Rs. 1,000 to a ceiling of Rs. 10 per Rs. 1,000. For the present, it is proposed to fix the stamp duty at half of this rate, that is, Rs. 5 per Rs. 1,000. This increase, when it comes into force in a few days, will push up the cost of banks' borrowing from the Reserve Bank against usance bills by nearly ½ per cent. Only a few days ago, the rate of interest on these bills was raised from 3¼ to 3½ per cent., so that very shortly the effective rate of interest on these bills will be 4 per cent. The Finance Minister has made it clear that the increase in this duty is "a fiscal measure with a monetary intent." It is thus clear that he wants the bank credit to become costlier.

* * * *

A supplementary budget, imposing fresh burdens on industry, is a sufficiently serious disincentive to investors. But, when it comes on top of international political uncertainties, it could inflict —as it has done—grave damage to the investing class. As if these factors were not enough, the agitation for an outright increase of 25 per cent. in wages is rapidly gathering momentum. But the question is whether responsible Ministers should add fuel to the fire by lending their unilateral support to this agitation. And yet, this is precisely what happened at Ahmedabad where the Union Minister for Labour, Mr. Khandubhai Desai, and the Union Minister for Planning, Mr. Gulzarilal Nanda, declared two days ago that the workers' demand was reasonable and just. It is somewhat strange, to say the least, that the Ministers should so openly associate themselves with the workers' demand, especially when the other party to the dispute, the employers, have not even had a full opportunity to consider the demand and the workers themselves have not yet given convincing arguments in support of their demand. One thought that the philosophical basis of the industrial labour legislation in this country was the consideration that the Government could bring to bear an unprejudiced mind on industrial disputes. Surely, when two of the leading Ministers align themselves with one of the disputants, it amounts to prejudging the issue in a way that is against all canons of propriety.

What are the arguments by which the Ministers supported the workers' demand? Mr. Khandubhai Desai said that the demand for a wage increase was reasonable, inasmuch as production had gone up and national wealth had increased. The demand, he said, could be conceded without upsetting the Plan. Indeed, if the wheels of production had to be kept going, the millions of workers and peasants, he averred, had to be enabled to purchase the goods that were being produced in the country. The Labour Minister pointed out that the main purpose of planned development was the improvement in the standards of living which could be achieved only by increasing the purchasing capacity of the workers. He declared that, even if the workers had not demanded a rise in their wages, the Government itself would have been compelled to raise the wages, for it had ultimately to see that additional production led to increased consumption as well.

The last argument is a particularly strange one, for, besides being an indirect incitement to labour, it enunciates a somewhat dangerous principle. It means that, if there is surplus production, the Government will be compelled to raise the wages of workers. This is a queer way of trying to bring about an equilibrium between supply and demand. But, in the present situation, the argument itself is a fallacious one. For the country does not suffer from excess supply. If anything, the malady is one of shortages of all varieties of goods. And the prospects are that, in the coming months, this malady will become acute.

Mr. Gulzarilal Nanda supported the "reasonable" demand for a wage rise, regretting that not even five per cent. of the labour force in the country had been receiving a living wage. He believed that the present distribution of national wealth did not give justice to the workers and the situation had to be remedied. He felt that the increase in wages of workers since 1947 only compensated the workers for their loss since 1939. The present scales of wages, he said, had, therefore, no relation to the existing conditions. It is not clear on what grounds Mr. Nanda argues that the wages are not in line with present economic conditions. It is much less clear how he can reconcile this support for a wage rise with the imperative need to curb inflationary conditions, on the one hand, and the capacity of the industry to pay, on the other.

Voicing the legitimate grievance of employers at this partisan intervention from ministerial quarters in a potential industrial dispute, Mr. H. P. Mody rightly characterised the Ministers' pronouncement as "deplorable" in the extreme. He felt that it was bound to create an apprehension in the minds of industrialists that the scales were weighed against them. "If this is the way in which important issues concerning labour and industry are to be decided," he remarked, "then the best thing would be to do away with whatever machinery exists for the consideration of the disputes or differences which arise from time to time. Let the trade unions be allowed, in effect, to decide them." He pointed out that it was only two months ago that, at a meeting of the Joint Consultative Board of Industry and Labour, it was decided that "constituent organisations of the Board should submit detailed and factual notes which, in their opinion, would provide a base for a fuller consideration of the matter." He then went on to say that "without waiting for these detailed and factual notes, or giving the matter any other thought, the spokesmen of the Government have supported the demand for a blanket increase in wages." He added: "It is amazing that such a pronouncement should have been made by Ministers of Government at this stage. The trade unions have not yet presented their case in any detail and the employers have had no opportunity of examining the questions at issue. Ultimately if there is no agreement between the parties, the matter would have to go before the wage boards which are about to be constituted. Before any such steps are taken, the two Ministers have lent the weight of their high authority to the demand put forward by the I.N.T.U.C."

It will be interesting to know as to what the rest of the Ministers at the Centre have to say on this question. Do they agree with the views of Messrs. Khandubhai Desai and Gulzarilal Nanda? We are afraid that both these Ministers by their statements in public have placed the Government in an embarrassing position. They have certainly paved the way for a spiral of wages and prices chasing each other, at a time when the Finance Minister is trying hard to bring down the prices and check inflation. For it is now difficult to see how the Government could hold back the demand for more wages. Incidentally, the statements by the aforesaid two Ministers clearly expose the lack of co-ordination, let alone unanimity of views in the Central Cabinet.

†One of the big cotton mills in Bombay, the Century Mills, has just decided to issue bonus shares in the proportion of one share for every three shares, subject to the permission of Controller of Capital Issues.

EQUITIES HIT BY TAX PROPOSALS

MODERATE RECOVERY AT CLOSE

(From Our Own Correspondent)

BOMBAY, *6th December*

THE most unexpected and disquieting event of the week so far as the share market was concerned was the announcement of additional tax proposals by the Union Finance Minister in his supplementary Budget presented to the Lok Sabha on Friday last. The proposals, in brief, are: (1) re-introduction of capital gains tax, (2) increase in super tax on dividends in excess of 6 per cent. and (3) imposition of control on reserves of companies. The proposals took the operators by surprise who, without even waiting for an assessment of their implications, raided the market immediately with offerings. There was a sharp fall in prices of almost all scrips, some of which touched the lowest levels for some months past. There was no inclination on the part of operators to do any business in the first two days after the announcement of the Budget proposals.

On second thoughts, however, equities staged a moderate recovery, making good a part of the earlier loss. Though there was no hectic activity, the market appeared to have overcome the earlier panic. Nevertheless, operators were cautious in enlarging their commitments. The better sentiment was mainly due to the feeling that, in the case of most of the companies, the incidence of super tax on dividends in excess of 6 per cent. would be small and even in those cases where the incidence is large the companies would be able to bear the burden without pruning the dividend. Further, there was an impression that some companies might revise their ideas about the prudence of issuing bonus shares and consider the question of capitalising a part of the reserves in order to lessen the burden of taxation. Good financial results by a few leading companies also contributed to better sentiment.

In the steel section, Tata Ordinaries, after an initial hardening from Rs. 192 to Rs. 193-4, slumped to Rs. 180. Subsequently, however, they recovered to Rs. 184 and closed at Rs. 183-4. Indian Irons retreated from Rs. 34-6¼ to Rs. 31-2, following the Budget proposals and on news that the annual general meeting of the Company, which was scheduled to be held on 30th November, was postponed to 7th December, as a protest against the Government's decision not to permit an increase in dividend. In the subsequent recovery, the shares came up to Rs. 31-13¼ and closed at Rs. 31-11.

There was a heavy marking down in values of textile shares, but extreme losses were cut by replacement buying and bear covering. Bombay Dyeings came down from Rs. 628-12 to Rs. 581-4, but rallied to touch Rs. 602-8 before finishing at Rs. 598-2. The fall in Centurys was much sharper earlier in the week, the scrip having declined from Rs. 552 to Rs. 506. Latterly, however, rumours about the possibility of a bonus issue lifted them up to Rs. 543 today. The closing was done at Rs. 536-8. Kohinoors receded from Rs. 346 to Rs. 316, before gaining to Rs. 336. Central Indias was comparatively unaffected and closed at Rs. 132. Finlays shed over the week Rs. 18 to Rs. 320, Gokaks Rs. 3 to Rs. 236, Indu Ordinaries As. 4 to Rs. 11-14¼ and Indore Malwas Rs. 6-14 to Rs. 140-10. Khataus were lower by Rs. 6-8 at Rs. 226-4 and New Kaiser-I-Hinds by Rs. 10 at Rs. 120. New Greats held their ground at Rs. 250 and New City ruled steady at Rs. 155-10. Sassoon Spinnings shed Re. 1 to Rs. 39, Shree Niwas Rs. 6-4 to Rs. 206-4 and Simplex Rs 8 to Rs. 187. Standards were marked down by Rs. 15-10 to Rs. 463-2, Svadeshis by Rs. 12-8 to Rs. 242, Swans by Rs. 20 to Rs. 411-4 and Tata Mills by Rs. 2-4 to Rs. 51-4.

Bank shares were quiet in consonance with the general trend and business was dull. Barodas were featureless at Rs. 102-4. Central Banks dropped Re. 1-12 to Rs. 53 and their new shares As. 12 to Rs. 57-8. Bank of Indias were quietly steady at Rs. 141-8, while United Commercials changed hands Re. 1 lower at Rs. 54-12.

Activity in the insurance section was very much restricted and the undertone was easy. New Indias retreated from Rs. 45-4 to Rs. 43.

Electricity shares provided a feature with small investment enquiries and a rise in values on reports of favourable amendments to the Electricity Bill. Ahmedabad Electrics were taken As. 6 higher at Rs. 92-3. Bombay Suburbans were done As. 10 better at Rs. 110-15 and Surat Electrics picked up As. 10 to Rs. 114-6. Tata Hydros gathered Re. 1-8 to Rs. 126 and Andhra Valleys Rs. 12-8 to Rs. 1,212-8, while Tata Powers shed Rs. 10 to Rs. 1,242-8.

Among sugar shares, Belapurs hardened early in the week from Rs. 253-8 to Rs. 258-8 on optimism regarding dividend. The dividend has been maintained at 32 per cent. per annum on the increased capital. After a slipping down to Rs. 244, the shares rallied to Rs. 253-8, before winding-up at Rs. 251. Bhopals were down by As. 10 at Rs. 16-12, Phaltans by Rs. 5 at Rs. 156 and Walchandnagars by Rs. 8-2 at Rs. 275. In the cement group, A.C.C. receded from Rs. 194-12 to Rs. 183 before gaining to Rs. 188. Digvijays were done Rs. 7 lower at Rs. 154, Jaipur Udyogs As. 7½ down at Rs. 12-0½ and Orissa Cements As. 5 lower at Rs. 13-2. Among engineering shares, Alcocks were brought down over the week by Rs. 16-4 to Rs. 301-4. Tata Locomotives declined from Rs. 172 to Rs. 158, but soon advanced to Rs. 167, following the publication of the Directors' report and accounts for the year ended 31st March 1956, which were encouraging. Premier Constructions dropped Rs. 15 to Rs. 197. In the mining group, Shivrajpurs shed Rs. 3-12 to Rs. 83, Indian Coppers As. 9¼ to Rs. 3-10 and B.B. Petrols had business at Rs. 3-0½ *ex-div.*, as against Rs. 3-5½ *cum-div.* last week.

Great Easterns provided this week's highlight in the shipping and transport group, with a rise of Re. 1-6 to Rs. 18-12 on optimism about the current year's working. Scindias suffered a loss of As. 8 at Rs. 18-12½, the lowest touched for the week being Rs. 18. India Steamships lost As. 4½ to Rs. 9-10½. Premier Automobiles receded from Rs. 114-8 to Rs. 108 and Hindustan Motors from Rs. 9-4 to Rs. 8-11.

In the miscellaneous section, Bombay Burmahs were hammered down from Rs. 705 to Rs. 633-12, but soon the shares rallied on rumours that an agreement in respect of capital reconstruction was imminent and that bonus shares might be issued. At the close, they were a shade lower at Rs. 657-8. British India Corporations were lower by As. 8½ at Rs. 9-13. Killicks were done at Rs. 166 *ex-div.*, as against Rs. 173-4 *cum-div.* a week ago. National Rayons receded from Rs. 263 to Rs. 253-12. Tata Chemicals changed hands at Rs. 17-13 *ex-div.*, as against Rs. 19-8½ *cum-div.* last week. Tata Oils fell by Rs. 2-12 to Rs. 47-4, while Wimcos were a shade steady at Rs. 173-12.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *5th December*

The plethora of taxation proposals introduced in the Lok Sabha by the Finance Minister sent down equity prices so conspicuously during the week under review that a recovery would certainly be painful and prolonged, if at all a recovery set in. Mr. Krishnamachari's list of excuses which he narrated, while speaking in support of the tax proposals which are estimated to yield an annual income of Rs. 16 crores to the exchequer from mostly the trade and industry, was nothing short of a miniature budget speech, which showed that the commercial community could not plan even for the duration of the budget year and should not be surprised by further major changes in taxation at any time.

In market circles, the consensus of opinion is that the effect of the new proposals would place at the disposal of the public sector a considerable portion of the profits of the private sector. In other words, the private sector's profits would be utilised for the widening of the Government sector. Depreciation allowances and development rebates are to be taxed, unless a certain amount of the same is deposited with the Reserve Bank or the Government. Whichever course is followed, the net effect is that Government would have more funds, call them taxes or deposits! In both cases, the money would not be available for the use of the companies in times of tightness in the money market. This would increase the dependence of companies on bank overdrafts, thus raising working costs. The increased rates of super tax on dividends based on the percentage of the paid-up capital have caused gloom in the market. These, in effect, mean that first class concerns, shares of which have appreciated, would suffer. This would gradually destroy one of the main incentives in share market investment. The only hope lingering in the market is that, as and when the proposals come up for discussion in Parliament, Treasury Benches would have time to think over the havoc that the new taxes would cause in the investment market and modify the measures in such a way as not to kill the goose that lays the proverbial golden egg.

If more causes for the setting in of doldrums on the Exchange were required, they were amply provided by the Indian National Trade Union Congress's demand for increased wages in the engineering, jute, textile, cement, steel, coal and sugar industries on the plea that the first Plan had brought in more prosperity to these industries. The jute industry in this State is threatened with a general strike. The rise in the export duty on tea and a weakening trend in this week's tea auctions affected sentiment in tea shares. The proposal to increase the super tax payable by companies declaring dividends in excess of 6 per cent. of paid-up capital, it was thought, would hit hard tea companies.

Coals, after an early recovery, fell back following the imminent modification of mining leases. From Rs. 6-15, Central Indias dropped to Rs. 6-13, and Bengals at Rs. 460 were lower by Rs. 23. Burrakurs, after rising to as high as Rs. 22-15 from Rs. 19-1, eased to Rs. 20-4. South Karanpuras slumped to Rs. 10-3 from Rs. 11-1, while Katras Jherriahs were earlier better at Rs. 63.

Textiles shared in the general decline, Kesorams losing As. 5 at Rs. 16-3 and Elgin Mills Re. 1-4 at Rs. 27-4.

With sellers over, jutes were far from interesting. Nationals were as low as Rs. 21-3, as against Rs. 23-10 earlier in the week. At Rs. 151, Deltas were lower by four points. Hooghlys were traded at rates varying from Rs. 21-12 to Rs. 23.

In the engineering section, speculative Indian Irons were considerably affected following news of the postponement of the Company's annual general meeting to 7th December "by the direction of the ordinary shareholders. . . . in token of the shareholders' protest against the limitation on the dividend on the ordinary shares." From Rs. 35-2, the rate moved down to Rs. 29-12, before closing at Rs. 30-7. Jessop & Cos. slided down from Rs. 34-11 to Rs. 29-12 before recovering to Rs. 32-7. Likewise, Texmacos lost to Rs. 19-4 from Rs. 22-7 before gaining to Rs. 20-3. At Rs. 26-8, Braithwaites lost Re. 1-6 on balance. Burn & Cos. had business at Rs. 331, as against Rs. 347 previously.

Miscellaneous industrials shared the general sentiment. However, yesterday a small note of recovery was in evidence. Indian Coppers moved down from Rs. 4-4 to Rs. 3-7, and India Steamships from Rs. 9-15 to Rs. 9-9. From Rs. 28-4, Niccos fell to Rs. 27.

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *4th December*

Panicky bull liquidation and considerable bear pressure characterised the trading on the Madras Stock Exchange during the week under review. The heavy tax imposts announced by the Union Finance Minister on Friday sapped the morale of the market. The levy of capital gains tax, the increase in super tax on dividends, and the control on reserves of companies were interpreted to mean a great blow to capital formation and investment in corporate enterprises. Some in the market even feared that the Finance Minister might come out with more drastic tax measures in his forthcoming budget to be presented at the end of February next. The dampening effect of the fresh tax imposts on the market was so great that operators were busy liquidating their stocks and getting out of the market, while buyers were extremely scarce. Equity values, as a consequence, tumbled down and, even at very low rates, there were no buyers at all.

Textiles, in particular, were subjected to distress selling, leading to a debacle in prices. Lakshmis were hammered down by Rs. 45 to Rs. 240. Metturs slumped by Rs. 32-8 to Rs. 43. Rajalakshmis dropped Rs. 19 to Rs. 175 and Coimbatore Cottons Rs. 18 to Rs. 395. Lakshmis 'A's and Bangalore Woollens fell by Rs. 15 each to Rs. 125 and Rs. 560, respectively. Janardhanas retreated by Rs. 13 to Rs. 97. Dhanalakshmis receded by a like amount to Rs. 387. Coimbatore Pioneers declined by Rs. 11-8 to Rs. 292, Buckinghams by Rs. 11 to Rs. 185 and Balasubramania 'B's by Rs. 10 to Rs. 130. Ranga Vilas shed Rs. 8 to Rs. 83. Radhakrishnas lost Rs. 7-8 to Rs. 352-8. Coimbatore Spinnings and Venkatesas were lower by Rs. 7 each, the former at Rs. 88 and the latter at Rs. 170. Ango-French eased by Rs. 6 to Rs. 100. Rajapalayams receded from Rs. 159 to Rs. 154, Cannanores from Rs. 174-8 *cum-div.* from Rs. 53-12 to Rs. 50-12. Maduras slipped by Rs. 2-12 to Rs. 47.

In the planting section, tea company shares came in for heavy selling at substantially reduced rates. Kalpettas moved down from Rs. 29 to Rs. 25 *cum-div.*, reflecting operators' keen disappointment over the cut in dividend to 20 per cent. for the year ended April 1956, as against 27½ per cent. for the previous year. Nelliampattys fell from 3-6 to Rs. 2-12 *cum-div.* The Directors of the Company have recommended a dividend of only 10 per cent. for the year ended June 1956, which compares very unfavourably with 25 per cent. for 1954-55. United Nilgiris, Peermades and Highlands dropped a rupee each to Rs. 20, Rs. 29 *cum-div.* (interim) and Rs. 13-12, respectively. Lucky Valleys receded by As. 12 to Rs. 12-12. A similar loss was suffered by Twyfords which were done at Rs. 18-8. Mid-

(*Continued on page 1123*)

NEWS IN BRIEF

THE Government of India has sanctioned Rs. 2,85,700 for the setting up of a co-operative match factory at Banaras.

A provision of Rs. 5.54—Rs. 5.05 crores by the States and Rs. 0.49 crore by the Centre—has been made for the settlement of landless labour during the second Plan period.

Fisheries contribute about Rs. 27 crores to the country's national income every year and engage about 75,000 craft of various types along a coastline of about 3,000 miles, giving employment to some 750,000 fishermen.

The Railway Board has decided to set up a Coach Furnishing Factory near Perambur at a cost of about Rs. 3.70 crores. The factory is expected to employ about 250 people and its annual production capacity will be 350 coaches.

The Government of India has accepted the Tariff Commission's recommendations regarding the prices to be paid for boilers and locomotives purchased by the Railway Board from the Tata Locomotive and Engineering Company, Ltd.

Twenty-six Soviet experts will arrive shortly to assist India in its oil exploration programme, under an agreement signed on the 26th inst. The team will work on oil exploration projects currently undertaken by the Oil and Natural Gas Commission in the Punjab.

The Central Government is planning to set up advisory boards in all the States to assist it in formulating plans for integrated industrial development. The proposed boards will advise on fitting the industrial claims of States in the national development programme.

Export of crude glycerine will hereafter be licensed freely to all permissible destinations other than the Portuguese possession in India. Licences will be endorsed on shipping bills submitted along with an application in the prescribed form and Treasury chalan of appropriate value.

Messrs. Vitro Engineering Division of New York has been appointed by the Central Government as technical consultants for the Rs. 22-crore Nangal fertiliser-*cum*-heavy water project. The project which will utilise 160,000 kw. of power is expected to be commissioned by March 1959.

The proposed Mahi project envisages the construction of a dam across the Mahi River in Banswara district of Rajasthan State, intercepting a total catchment area of 1,800 sq. miles. The reservoir will store 9,142 million cubic feet of water, of which 6,770 million cubic feet will be utilised for irrigating an area of 70,000 acres annually. The project will develop the backward area of Banswara district. Its estimated cost is put at Rs. 1.95 crores.

The Federation of Industrial Co-operatives, Hyderabad, has decided to undertake immediate manufacture of Ambar Charkhas according to specifications laid down by the All-India *Khadi* and Village Industries Board. The Andhra Government has decided to introduce about 13,500 Ambar Charkhas in the State—10,000 in the 11 districts of the former Andhra districts and 3,500 in the Telengana district.

The Finance Commission, constituted in June last under Article 280 of the Constitution, has submitted its interim recommendations for the year 1957-58. The Commission has so far visited three States, namely, Assam, Orissa and West Bengal. As it is not possible to frame final views until it completes its discussions with other State Governments, the interim recommendations have been made in order to enable the Central and State Governments to frame their budgets for the ensuing year.

The Government of Kerala proposes to build up a special industrial service cadre for business-like management of industrial concerns owned or managed by it, as recommended by the Committee appointed by the State Government under the chairmanship of its Finance Secretary. There will be junior and senior grades in the cadre and the existing personnel may form the nucleus. Industrial concerns will be divided into different categories and recruitment in future will be 50 per cent. from Government service and 50 per cent. from outside. A system of training in business management will also be evolved.

The gold mining industry in Mysore State with an annual production of about 200,000 ounces of gold passed into the public sector on 29th November 1956, with the Mysore Government taking over its control and management. The mines, which were operated by British companies for the past 75 years, will hereafter be administered by a Board of Management, headed by Mr. S. Nijalingappa, Chief Minister. One of the representatives of Messrs. John Taylor and Sons will also be a member of the Board. Mr. S. Muninanjappa, Senior Administrative Service Officer, has been appointed full-time Vice-Chairman and Managing Director of the undertakings.

A Bill seeking to replace the system of "individual hiring contracts for telephones by statutory rules" has been introduced in the Lok Sabha by Mr. Jagjivan Ram, Minister for Communications. The Bill amends the Indian Telegraph Act, 1885, which is not comprehensive enough to cover conditions under which telephones might be given, transferred, shifted, withdrawn or discontinued. It also seeks to do away with individual contracts, but existing hiring contracts will not be rendered null and void. It contains a provision for arbitration in settlement of disputes that may arise between the telephone authority and the telephone subscribers after the system of hiring contracts have been replaced by statutory rules. The rules will be framed later.

In view of the importance agricultural production has acquired in the second Five-year Plan, the Union Ministry of Agriculture has decided to keep a close watch over agricultural developments in the States, for which an Extension Division will soon be established. The four branches of the Division will be Progress Wing, Extension Training Directorate, Farm Advisory Service and Farm Information Bureau. The officers of the Progress Wing will regularly visit the States to evaluate their progress in agricultural development schemes. They will also activate existing agencies for timely supply of the means of production. The Extension Training Directorate will train village level workers, block level officers and rural home science agents. The Farm Advisory Service will head a team of extension specialists in various fields such as crop improvement, soil fertility and fertilisers, soil and water conservation, etc. The Farm Information Bureau will produce popular literature for farmers and village level workers on the basis of researches in the Central and State research organisations.

From Abroad

The Pakistan Shell Oil Company has made an offer to the Government for setting up an oil refinery in Pakistan at a cost of Rs. 40 crores.

The Government of France has introduced the rationing of its rapidly dwindling supplies of gasoline with effect from 29th November. Denmark has also introduced petrol rationing.

A group of German engineers and industrialists has arrived in Egypt to survey the possibilities of helping the construction of the Aswan Dam. The team includes representatives of the famous German combine Krupp-Demag.

New records in production, personal income and employment have been set in the U.S. Total output of goods and services reached an annual rate of $414,000 million in the third quarter of this year, and the rise is continuing. Personal income after taxes was at the record rate of $288,000 million, and employment, excluding farm workers, reached a seasonally adjusted high of 51,800,000.

The delegation of British cotton textile interests which was scheduled to arrive in India at the end of November last for talks with Indian millowners has postponed the visit until January 1957. The postponement is a sequel to the diversion of shipping via the Cape of Good Hope, following the closure of the Suez Canal for traffic.

The Japanese Ministry of International Trade will soon introduce a Bill in Parliament which will empower the Ministry to form all types of cartels, establish monopolistic buying and selling agencies, and accelerate mergers. It is reported that the Ministry has stipulated that the measure should remain in force for five years from the date of enactment.

The Planning Commission of Pakistan is understood to have approved the construction of a steel mill at Multan with an initial production capacity of 70,000 tons a year and capable of subsequent expansion to 250,000 tons. The initial stage of the project is estimated to cost Rs. 17 crores. It will use low grade (about 30 per cent. iron content) ore to be found in Kalabagh in West Pakistan, employing the Krupp Renn process.

Iron Age, a trade magazine of the U.S., estimates that American steel producers will be importing at least 40 per cent. of their iron ore needs by 1975. According to it, the U.S. will need 169 million gross tons of iron ore annually by 1975 to support an annual steel production of 167 million net tons and greatly expanded iron casting needs, with increasing dependence on foreign ore.

The U.S. Government has put into effect its emergency programme to supply Western Europe with upto 1,100,000 barrels of oil daily. Mr. Arthur S. Fleming, Mobilisation Director, has asked the Secretary to the Interior to activate the Industry's West Asian Emergency Committee. This Committee, representing 15 oil companies, has standby plans to pool production, distribution and tanker facilities to ease the European petroleum crisis.

Pakistan has constituted a National Economic Council, consisting of eleven members, with the Prime Minister as the *ex-officio* Chairman. The Council will review the overall economic position of the country and advise the Federal and Provincial Governments on the formulation of plans in respect of financial, commercial and economic policies. In formulating such plans, the Council will aim at ensuring uniform standards of attainment in economic development in all parts of the country.

A new and cheaper air service from Delhi to London is now being advertised by the agents of the Afghan Aryana Line via Kabul and Moscow. The Delhi-London fare by this route is Rs. 1,212 as against the Rs. 1,414 special concession tourist fare charged by other international airlines which take the West Asian route. Afghan Aryana Line flies with passengers from Delhi to Kabul and from there to Moscow by the Soviet Airlines "Aeroflot" and onward to London, Paris and other Continental destinations by the S.A.S. Scandinavian line.

A Government Bill now before the Indonesian Parliament seeks to grant mining concessions for three years for exploration and for 30 years for exploitation. The Bill seeks to regulate mining in Indonesia in a general manner only and states that mining oil will be regulated by a separate law. All minerals within the Indonesian territory are declared State property. Concession rights and licences based on the Netherlands Indices Mining Act, which the Bill supersedes, will remain effective on the understanding that the holders of such rights and licences will adapt themselves to the new Act within a certain period of time.

A recent survey is reported to have revealed that the quantum of American economic aid to Pakistan has been far in excess of the latter's capacity for absorption, with the result that large funds are lying unspent. Pakistan has been unable to formulate programmes of development on which the allotted American aid could be usefully spent. Of the $170 million economic aid given during the fiscal year ended 30th June last, $72 million were spent on food imports alone and the $36 million intended to be spent on constructive developmental activity remain unspent, because there are no specific projects formulated on which funds can be utilised.

A Paris appeal court has dropped consideration of a case in which it was faced with the problem of deciding whether the Suez Canal Company was French or Egyptian. The appeal is against a lower court judgment based on the decision that the Company is Egyptian. In November 1955, the lower court had imposed a suspended prison sentence of six months on a banker, Mr. Alexis Comte, for selling Suez Canal Company shares without declaring them to the Exchange Office. Under the French law, all dealings in foreign shares have to be reported to the Exchange Office. The appeal court has been informed that, by an arrangement with the Finance Ministry, Mr. Comte pays a fine to the Ministry.

The demand for second-hand ship tonnage is reported to be mounting in the U.S.A. due to recent developments in West Asia and the boom conditions are expected to continue as long as the Suez Canal remains closed. The diversion of Canal traffic has brought about higher freight rates and has increased tonnage requirements because of the longer haul round the African continent. As a result of the sharp rise in ship values, some vessels, particularly tankers, now command twice the price they did at the beginning of the year. At least in one instance, a ship destined for the scrap yard was sold at a price that is considered a good figure. A 20,000-ton tanker built in 1953 also changed hands at $4,750,000, an amount that more than recompenses the original owner for the cost of having the ship built in Japan three years ago, not counting trading profits to date.

PERSONAL

SIR Joseph Kay, K.B.E., Managing Director of Messrs. W. H. Brady & Co., Ltd., returned to Bombay from the U.K. last week.

Sardar K. M. Panikkar, India's Ambassador-designate to France, left Bombay for Paris on Monday.

Mr. Chou En-lai, Prime Minister of the People's Republic of China, accompanied by Marshal Ho Lung, Vice-Premier, arrived in India last week.

Mr. Tanka Prasad Acharya, Prime Minister of Nepal, arrived in New Delhi this week on a 16-day official visit at the invitation of the Government of India.

Mr. P. S. Rau, till recently Administrator of Kerala, will resume charge as Chairman of the Damodar Valley Corporation towards the end of December.

Mr. P. S. Narayan Prasad, India's Executive Director of the International Monetary Fund, arrived here last week for consultations with the Union Government.

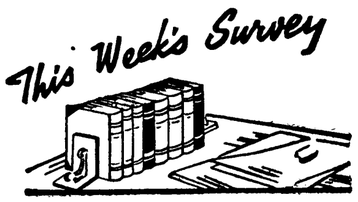
Mr. Ellsworth Bunker, retiring President of the American Red Cross, has been appointed United States' Ambassador to India, in succession to Mr. John Sherman Cooper. He is expected to take over his post in India early in January.

Mr. John Sherman Cooper, a former U.S. Ambassador to India, arrived in New Delhi last week as special representative of the U.S. President, for discussing details of Prime Minister Nehru's forthcoming visit to the U.S.

Mr. Stanley W. G. Lehman, former Assistant General Manager of Standard-Vacuum Oil Company at Bombay, and Mr. James V. Pickering, who also served in India in the same Company, have been elected to the Board of Directors of Standard-Vacuum Oil Company, New York.

Mr. G. Parthasarathi, at present Chairman of the International Commission for Supervision and Control in Viet Nam, has been appointed Ambassador to Indonesia in succession to Mr. B. F. H. B. Tyabji. He will assume charge of his new post about the middle of January next year.

Mr. Triloki Nath Kaul, at present Joint Secretary in the Ministry of External Affairs, has been appointed Chairman of the International Commission for Supervision and Control and leader of the Indian delegation in Viet Nam, in succession to Mr. G. Parthasarathi. Mr. Kaul will assume charge of his new appointment in February next year and will hold the personal rank of Ambassador.



MOTOR VEHICLES BILL

THE Joint Select Committee of Parliament to which the Bill to amend the Motor Vehicles Act had been referred in August last, has, by and large, taken a constructive and helpful attitude towards private road transport. Although the Bill, as amended by the Select Committee, does not meet all the demands of road transport operators, it is significant that the Committee has generally further relaxed the provisions in the original Bill with a view to facilitating private transport. In doing so, the Committee has reflected the new trend of thought in the Government and the Planning Commission both of which appreciate the need for a realistic policy in respect of all forms of transport. It is further gratifying to note that the Government has even succeeded in carrying the opposition with it for, in the debate on the amended Bill in the Lok Sabha, few dissentient voices were raised except over the question of compensation. The Bill, which was adopted by the Lok Sabha last week, had a smooth passage.

The changes made by the Select Committee, as the Union Minister for the Railways, Mr. Lal Bahadur Shastri, who piloted the Bill in the Lok Sabha claimed, are definite improvements in the original Bill. The Committee has proposed the appointment of one authority instead of two envisaged in the original Bill, for the purpose of developing, co-ordinating and regulating the operation of transport vehicles for areas or routes common to two or more States. This authority is to be known as "Inter-State Transport Commission," to be appointed by the Central Government. The Committee has abolished mileage restrictions for the grant of a public carrier's permit between places connected by railways. It has increased the period of permits issued to private operators. In the case of stage carriages (passenger vehicles), the period of permit will continue to be three to five years, while, in the case of public (goods) carriers, the period might be increased to five years. The Committee has provided for grant of permits for running buses to co-operative societies.

The Committee has doubled the rates of compensation (contemplated in the original Bill) payable to private operators whose transport undertakings are nationalised before the expiry of their permits. The new rates are: (1) Rs. 200 for every complete month or part thereof exceeding 15 days of the unexpired period of a permit, and (2) Rs. 100 for any part of a month not exceeding 15 days of such unexpired period. The minimum compensation payable to the holder of a permit for each vehicle has also been raised from Rs. 200 to Rs. 400. A road transport service undertaken by a municipality will also be regarded as a State transport undertaking. No compensation is, however, payable to private operators whose permits are not renewed after the expiry of the periods stipulated in the permits. The Committee has recommended that in cases of nationalisation, State Governments should take over from private operators vehicles and other useful equipment.

Some welcome assurances were given by the Deputy Minister for Transport, Mr. O. V. Alagesan, when he replied to the debate on the Bill. He said that the Government recognised that road transport had to play an important role in the country's economy. He adduced some reasons to show that nationalisation of transport was a "phantom" and not a "reality" —a thing of which the transport operators had no need to be apprehensive. In the first place, the railways could not carry all the available traffic and there would always be need for road and other forms of transport to supplement the effort of the railways. There was no question of private sector *versus* public sector; it was a question of private sector-*cum*-public sector. Secondly, the nationalisation of transport was not possible due to lack of funds. He pointed out that, as against a sum of Rs. 100 crores which will be needed for the nationalisation of passenger bus services, the Government had provided only Rs. 27 crores in the second Plan for nationalisation purposes; in the first Plan, only Rs. 12 crores were provided, out of which Rs. 10 crores were spent. Thirdly, the States had been advised to prepare their schemes of nationalisation beforehand, so that private interests would know which routes would be available to them for running bus services. These considerations, to which Mr. Alagesan referred, are no doubt calculated to infuse some confidence in road transport operators. But so long as State Governments are determined to pursue nationalisation of road transport even in the face of well-meant advice by the Central Government and the Planning Commission, there will always be a lurking fear among the operators that the future is not altogether bright for them. Instead of merely stating that the lack of funds stands in the way of nationalisation of road transport, the Government will do well to announce clearly that for a definite period—this should be more than five years—it does not contemplate State ownership of road transport.

INDIAN SHIPPING

The case for tramp and tanker tonnage and for facilities to augment the tonnage on the coastal trade was ably presented by Mr. A. H. Bhiwandiwalla, Chairman of the Great Eastern Shipping Company, Ltd., at the annual meeting of the Company held this week at Bombay. There is no doubt that in certain orthodox shipping quarters in this country there is some prejudice against tramp shipping. This prejudice probably springs from the consideration that tramp shipowners are fair-weather, rather than fast, friends of the country and that they cannot always be relied upon to deliver the goods. Assuming, without necessarily conceding, that there is some truth in this criticism, there is no denying the fact that tramp shipping, which continues to play an important role in the shipping world, could be of great assistance to any country that is short of shipping space. Mr. Bhiwandiwalla pointed out that the post-war development of shipping showed that countries which stuck to liner services only had increased their tonnage at a slower pace than the countries engaged in tramping. The growth and development of Indian tonnage plying on the high seas, he said, could be brought about only if the Government permitted tramp operators to follow considerations of operational efficiency and gainful employment which would assist the rapid expansion of the merchant fleet. He pleaded for the removal of the Government restrictions on letting out Indian ships on time-charter to foreigners." He rightly urged that the whole economics of tramp shipping lies in consolidation of gains won in a period of prosperity which would enable the operators to face succeeding periods of adversity.

The Great Eastern deserves to be congratulated on its acquiring, early this year, the "first ever Indian-owned" tanker. Since then, the Government of India has also acquired a tanker, so that a beginning has been made towards building up a tanker fleet for the country. Referring to the Government's declared intention to acquire and operate further tankers in the public sector, Mr. Bhiwandiwalla hoped that it was not "Government's unalterable intention to exclude private enterprise from the task of nation-building in this important field." He, therefore, requested the Government to "dispel the doubts and declare categorically that it will change its policy towards acquisition of tankers or super-tankers by Indian shipping companies." Incidentally, the building up of a tanker fleet will, as the Chairman of the Great Eastern said, require considerable funds. It remains to be seen whether additional funds will be allocated for this purpose.

The need for augmenting the tonnage on the coastal trade acquires an additional significance in the context of the growing shortage of nearly all means of transport. Mr. Bhiwandiwalla estimated that coastal trade may be expected to increase progressively from three million tons to five million tons per year. More ships will be needed to carry this expanding volume of trade as well as for replacing the older coastal vessels that may have to be scrapped. To acquire new ships is by no means easy. For the shipyards of the world are fully booked and delivery of new ships cannot be expected before the next three or four years. In these circumstances, the Company's former General Manager, Dr. Sudhir Sen, has certainly rendered a signal service to this country through his skilful advocacy in the U.S. of the case for the release of ships from that country's mothball fleet for India's use. It would appear that the Government of India and the Indian Ambassador, Mr. G. L. Mehta, also lent their "weighty support" to India's plea for use of American ships. Mr. Bhiwandiwalla hoped that the U.S. would make available at least 12 Liberty ships to this country. These ships, as he pointed out, will help India meet the difficulties in transport which are bound to arise with the progress of the second Five-year Plan. Before releasing the ships, the U.S. Government is said to insist on an undertaking by this country that the ships will be used only for India's coastal trade and not compete with the U.S. liners. Surely, India should have no difficulty in giving this undertaking.

ONE MORE BURDEN ON MILLS

One more burden has been imposed on the cotton mills of Bombay. The Industrial Court has awarded that the mill workers are entitled to receive gratuity for past service up to a maximum of 15 months' basic wages. The rate of gratuity for every completed year of service is fixed at one month's basic wage for the period prior to the enforcement of the Provident Fund Act, 1952 and half a month's basic wage thereafter. The basic wage for the calculation of gratuity, it is laid down, will be the average of the basic wage payable to a worker during the last 12 months of service. No worker who is dismissed for misconduct will, however, be entitled to gratuity. The other salient features of the award, which is given retrospective effect from 22nd November 1954, are as follows:

> The workers will get gratuity in case they are mentally or physically incapacitated for further service or on voluntary retirement or resignation after 15 years' continuous service.
>
> On termination of service by mills after 10 years' continuous service but less than 15 years, the workers will get three-fourths of a month's basic wage for each completed year before the Provident Fund Act was enforced and half a month's wage thereafter. They will receive fuller gratuity, if their services are terminated after 15 years.
>
> For purposes of reckoning continuous service, breaks not exceeding six months should be condoned, but the period or periods of such breaks must not be included in calculating the number of years of continuous service. Service should include service under the previous management whether in the particular mill or in a sister concern under the same management.

The incidence of the award that actually falls on the cotton mill sector cannot be assessed accurately, since it varies from mill to mill, depending on the total labour strength and on the number of workers retiring every year. From the figures cited by the Industrial Court itself, it is gathered that the burden of gratuity scheme is pretty heavy. Assuming that 6,000 to 8,000 workers—or 3 to 4 per cent. of the 213,623 employed, excluding clerks, nurses and supervisors—retire every year and taking the minimum qualifying period of 15 years' service, the industry will have to pay annually over Rs. 51 lakhs. According to the Millowners' Association, the average of workers leaving service every year comes to 13,000-15,000 and, taking the average service of each employee as 10-15 years, the amount of gratuity payable will come to as much as Rs. 2.25 crores a year.

This is one more straw on the camel's back and goes to add to the various burdens that have been imposed on the industry in recent years. The increase in dearness allowance given by the Industrial Court in 1953 (Rs. 18 lakhs), the rise by adjustments and increments to the technical and supervisory staff (Rs. 6 lakhs), contribution to Employees' State Insurance Scheme, covering families of workers also with effect from 1st April 1957 (Rs. 81 lakhs), and contribution to Provident Funds Act at the proposed rate of 8-1/3 per cent. (Rs. 240 lakhs)—all together cost Rs. 345 lakhs per annum. In addition, the mills have to pay bonuses aggregating Rs. 250 lakhs and bear a large part of the recent increase in excise duty on cloth. And yet, the Industrial Court avers that the cotton mill industry can bear the burden of gratuity. Indeed, the Court declares: "The industry should not grudge giving a *modest* (italics ours) gratuity to those who retire after long service, if it does something towards sweetening the lives of those whose toil and sweat have contributed to the prosperity of the industry."

No one will, of course, grudge payment of gratuity to workers in case they are mentally or physically incapacitated for further service or in case of death. But the question is whether the worker should be entitled to such multiple benefits as gratuity, retrenchment and lay-off compensation, and provident fund. The Industrial Court should have awarded gratuity only for the period prior to the Provident Fund Act. One would even have no objection if the Court had decided to introduce a system of gratuity based on superannuation. One would have also no objection if the Court had recommended gratuity after the present five-year bonus agreement expires in 1958. This agreement, it will be recalled, binds all mills, irrespective of whether they make profit or incur loss, to distribute every year as bonus a minimum of 15 days' wages—that is, 4.8 per cent. of the annual wage bill—with a maximum limit of 25 per cent.

The Industrial Court has not stopped merely at granting the award on gratuity; it has sought to evoke the sympathy and admiration of the working class, as witness its general observations over issues which do not at all pertain to the issue under consideration. Categorically declaring that the gratuity scheme recommended by it is quite within the capacity of the cotton mill industry, the Court observes: "If the industry has capacity to pay more, we think there would be a case for an increase in wage rather than a higher gratuity, as, to the large variety of workers, their present needs mean more than what they may be entitled to as gratuity on cessation of service." This statement as well as its view that the industry has made "rapid strides" in rationalisation, will, we are afraid, be interpreted by the spokesmen of labour as an indirect support to the demand for higher wages.

PROTECTED INDUSTRIES

While the case for the protection of infant industries stems from the economic necessity of encouraging indigenous production, its continuance should definitely be conditional upon satisfactory performance of the industries protected both in respect of efficiency of production and the pace of progress. For the consumer cannot and should not be expected to pay too high a price for propping up uneconomic industries, if they do not hold out the promise of being able to do without such aid in the not too distant future. The body which investigates and recommends the grant of protection to industries is naturally bound also to assess the progress of protected industries before advising the continued retention of fiscal favours. The consumers will then feel that their sacrifice has not been in vain, but has resulted in the progress of industries receiving protection.

A review of the progress of protected industries, contained in the Fourth Annual Report of the Tariff Commission for the year April 1955 to March 1956, is, therefore, of general interest. A study relating to the realisation of installed capacity of protected industries in the latter half of 1955 by the Commission revealed that, in the case of three commodities, namely, aluminium ingots, refined copper and titanium dioxide, actual production was slightly in excess of the capacity reported. This was due, in the case of the aluminium industry, to the fact that the standard of efficiency was actually higher than was assumed earlier. In the case of titanium dioxide, the non-occurrence of the anticipated normal breakdown, it was pointed out by the producer, resulted in production exceeding the reported capacity. The increase in the output of the converter blower, as a result of colder conditions, was responsible for increased production of refined copper.

Of the remaining goods for which comparative data were available, production during the period fell short of installed capacity, the fall being heavy in the case of cotton and hair beltings, oil pressure lamps, cocoa powder, antimony, calcium lactate, bleaching powder, bleach liquor; hydroquinone, oleic acid, stearic acid, etc., while the percentage of unutilised capacity was heaviest, as much as 75 per cent., in the case of chocolate (covering), calcium chloride and cotton baling hoops. The chief reasons for this under-utilisation, as given by the producers, were lack of orders, irregularity of demand and shortage of transport facilities.

As regards the volume of production, the report says that, as compared with the previous year, improvement was registered by all goods falling under the capital goods industries group, except cotton beltings. Of the six goods falling under the consumer industries group, for which comparable data were available, four, namely, electric brass lamp holders, electrical accessories, oil pressure lamps and buttons registered increases in production, while in the other two, cocoa powder and chocolate, there was a fall.

The output of the majority of goods falling under the industrial raw materials and consumable stores industries group registered improvement, while output declined in the case of protected steels other than high speed and stainless steel, antimony, sodium bichromate bleaching powder and cotton baling hoops. Of the five items falling under transport industries group, for which data were available, all registered a notable increase in 1955 though, during the first quarter of 1956, a fall was evident in some of them, particularly automobile hand tyre inflators, sparking plugs and bicycles.

The existence of a large number of varieties in the protected articles and a wide range of wholesale prices, it is stated, makes it difficult to form an idea of the movement of prices during the period. It may, however, be observed that no articles in the capital goods industries group registered a decline in wholesale prices during 1955, while only one item in this group, namely, spindles, registered a decline in the first quarter of 1956.

The data with regard to the average daily number of workers employed in the protected industries during the half-year ended 31st December 1955 were available in respect of 35 industries. Among these, 11 industries employed less than 100 workers, on an average, per day, another 11 industries engaged between 101 and 1,000 workers. Substantial employment of between 1,001 and 3,000 workers was provided by 10 industries, while still more substantial employment was provided by the aluminium, plywood tea chest and bicycles industries.

The Report also refers to the activities of the Commission during the year which have been wide and varied. During the period under review, the Government made four new references to the Commission, one was the claim for protection by the calcium carbide industry, the remaining three being enquiries relating to the fixation of uniform retention prices; the industries concerned were: steel produced by the major producers, automobiles and locomotives and boilers. The Commission held, during the period covered under the Report, 10 tariff enquiries and two price fixation enquiries. It also submitted to the Government reports on 12 tariff enquiries and four price enquiries. Ad *hoc* extension of protection till the end of December 1956 was recommended for ball bearings industry, non-ferrous metals industry, plastics industry and power and distribution transformers industry. The recommendation was accepted by Government and given effect to by the Indian Tariff (Third Amendment) Act, 1955. The Commission's recommendations relating to soda ash and titanium dioxide, however, were not accepted.

POSTAL ACTIVITY

A general increase in the volume of postal traffic is reflected in the report of the Posts and Telegraphs Department for the year 1954-55, the fourth year of the first Five-year Plan. Thus, the number of post offices in the country rose from 45,907 at the beginning of the year to 49,790 at the end of the year. The total number of telephones increased from 220,000 to 247,000, the number of telephone exchanges from 4,604 to 5,049 and the number of telegraph offices from 8,233 to 8,792. The Department handled 2,768 million postal articles in 1954-55 as against 2,672 million in 1953-54. Similarly, the number of telegrams handled increased from 29.3 million in 1953-54 to 30.5 million in 1954-55, while the number of effective trunk telephone calls in 1954-55 was 15.1 million as against 12.5 million during the previous year. The revenue of the Department increased from Rs. 44.1 crores in 1953-54 to Rs. 46.6 crores during the year under review, while expenditure increased by Rs. 2.2 crores during the same period to Rs. 43.97 crores.

Besides opening more post offices, the authorities took steps to speed up transmission of mails in rural areas. Thus, in 1954-55, 182 runners' lines of 3,094 miles were replaced by motor services. Substantial increases were registered in the mileage of wires and cables. The increasing efficiency of the telegraph services was reflected in the continued decrease in the percentage of express, including priority, telegrams booked during the year under review. The number of express telegrams booked was 23.7 per cent. of the total, as against 25.8 per cent. in 1953-54 and 29.1 per cent. in 1952-53. Again, during the year, telegraph service in the Devnagari script was extended to 123 additional stations bringing the total number of offices where this service was available to 647. The percentage of urgent telephone calls also continued to decrease during the year, the number of such calls being 20 per cent. of the total, as compared with 20.6 per cent. in the previous year and 23 per cent. in 1952-53. Telephone rental and local call cess during the year showed an increase from Rs. 6.43 crores to Rs. 7.12 crores, while advance rental recovered under the "own-your-telephone" scheme showed a marked reduction from Rs. 76 lakhs to Rs. 45 lakhs.

The accounts relating to the transactions of the Post Office Savings Bank, which is intended to serve the common man, show that nearly 5 million people made use of its facilities in 1954-55, as against 4.8 million in the previous year. The following table gives the results of the working of the Savings Bank in 1954-55 and 1953-54.

	1954-55	1953-54
No. of Accounts		
At the beginning of the year	5,060,886	4,829,668
At the close of the year	5,384,147	5,069,886
Amount (Rs.)		
Balance at the end of the year	2,56,49,32,859	2,31,95,74,596
Average balance in each bank	2,15,576.8	1,96,141.9
Average balance at credit of each depositor	476.4	457 5

It should be possible for the authorities to make the Savings Bank facility increasingly popular, thanks to the increase in living standards and personal incomes anticipated under the second Plan. But they must first ensure that transactions are effected speedily and that the Bank's working hours do not synchronise with the time of working of other institutions. In this connection, it is gratifying to note that the authorities have introduced cheque facilities as an experimental measure in the Bombay G.P.O. The results of this experiment will be awaited with interest.

NATIONALISED LIFE INSURANCE

The nationalisation of life insurance business has become a *fait accompli* and the *entrepreneurs*, who had built up the business, no longer discuss the merits or, demerits of nationalisation. They are anxiously watching to see how far the experiment is going to be more beneficial to the country than was the case when they handled the business. Their more immediate concern is over the delay in the payment of compensation. This concern is understandable, particularly in the case of composite companies, for whom the compensation amount, meagre as it is, will go a long way towards building up their general insurance business.

Mr. Lakshmipat Singhania, President of the National Insurance Company Ltd., who referred to this aspect in his address to the shareholders, said that the compensation proposed to be paid was not worth the name, representing as it did hardly one per cent. of the life fund of the companies taken over by the Government. In the case of the Imperial Bank of India, the Government had paid a compensation, inadequate as it was, amounting to 8 per cent. of the Bank's total assets, while that proposed for life insurers was not even one per cent. of the life fund. It was not an investment to be made by the Government, Mr. Singhania said, but only a pre-payment of the surpluses which the companies had rightfully earned during decades of successful working. Even this had not been paid yet, though it was about 11 months since the Government took over the business.

The sense of disappointment of the former life companies at the Government's going back on some of its assurances was also voiced by Mr. Singhania. The Government, for instance, had assured, at the time of nationalisation, that the foreign life business of Indian companies would be returned back to them. It has, however, changed its mind and proposes to carry on the foreign business itself. So far as the composite concerns like the National Insurance Company, Ltd., were concerned, Mr. Singhania feared that the Government's action would affect their general business abroad also and the hard task of building up of such business by Indian insurers would become harder still.

Another instance of the Government not having kept its word, according to Mr. Singhania, is the investment of life fund in the private sector. At the time of nationalisation, such investments were of the order of 16 per cent. and this proved to be of great help to the investment market. The Government had, Mr. Singhania said, given the assurance that this percentage would be maintained. After nationalisation, he found, nothing or very little money had been invested in private industry, thus depriving the investment market of large support. Mr. Singhania, however, hoped that the Government would stick to its earlier assurance and maintain the tempo of investment in private industries, thus helping the speedy economic growth of the country.

FINANCE MINISTER TAKES PARLIAMENT BY SURPRISE

WASTAGE OF PUBLIC FUNDS MUST BE CHECKED

By A Special Correspondent

NEW DELHI, *4th December*

THE Finance Minister, Mr. T. T. Krishnamachari, sprang a surprise on Friday last, by announcing his budget proposals. Exactly after 5 p.m., when the House was practically thin and when there was barely a quorum, he was seen walking into the Lok Sabha with a brief case, which is rather unusual for him. Spectators, however, felt that he had something important to announce; but little did they expect the budget proposals. Most of the members were away, not knowing that the Finance Minister would be announcing his surprise supplementary budget and a number of taxation proposals conservatively estimated to yield Rs. 16 crores per annum.

DELHI LETTER

The Finance Minister's view was that the Government should maintain a stable price level internally and that, despite greater demands of the Five-year Plan, it should not resort to deficit financing to any large extent. In other words, he was of the opinion that Government should mobilise internal resources as much as possible and then only think of resorting to other means, in order to implement the Plan. When he claimed that the era of deficit financing was over, he probably meant that the nation should be prepared to make greater sacrifices, in order to attain the targets as stipulated in the Plan.

The Planning Commission had originally fixed a target of Rs. 850 crores by way of additional taxes during the entire Plan period and out of this the Central Government's share was about Rs. 450 crores. It is generally felt by responsible people, both inside the Government and outside, that the target for additional taxation and revenue was deliberately underestimated by the Planning Commission, largely with a view to preparing the ground gradually for imposing additional taxation. Now that Indian economy is expanding at an appreciable rate, and industrial production is running ahead at the rate of more than 10 per cent. every year, it is suggested that Government would be able to get more money in the coming years even at the rate of existing taxation. Now that additional taxes are being imposed and the Finance Minister has already hinted that the second full-fledged budget, probably in May next, would contain further taxation measures, the possibility of Government getting more revenue will be appreciably greater. The Central excise revenue has already recorded a phenomenal increase during the first Five-year Plan period from about Rs. 50 crores to well-nigh Rs. 180 crores this year. The Central excise is now being broad-based and, with increase in production in every sector of industry, the scope for more revenue from this source will be large.

Oil Exploration

In case the Government were able successfully to explore additional mineral oil resources within the country in the next two or three years, the Central excise will show further large-scale expansion. The capacity of the Government to get more revenues will also increase, not only by way of increased taxation but also by way of profits on oil. It is, perhaps, with this view that the Government of India is reported to have under active consideration measures calculated to create conditions conducive to intensive oil exploration in different parts of the country.

Actually, however, according to a tentative programme, about 500,000 square miles of territory, excluding coastal areas coming under the Continental Shelf, has been classified as oil or gas-bearing area scattered throughout the length and breadth of the country. The petroleum concession rules are also likely to be revised both in respect of the grant and period of lease of areas for oil prospecting operations, keeping in view the utilisation of private enterprise wherever possible and necessary. Considering, however, the large tracts of territory involved and the amount of preliminary detailed investigation necessary before any particular area can be treated as fully explored, it is quite reasonable to suppose that a good deal of time would elapse before sufficient attention could be paid to all the areas by the Oil and Natural Gas Commission itself. Therefore, a study of the petroleum concession rules has been undertaken by the Ministry of Natural Resources and Scientific Research with a view to utilising private enterprise to the extent considered necessary and feasible and also in conformity with the latest industrial policy resolution of the Government.

Responsible people here, however, are not able to see eye to eye with the Finance Minister in regard to additional taxes imposed by him. It is thought that, when the Government is desirous of strengthening the industrial growth in the country, it should have allowed due encouragement and scope for capital formation and encouraged the flow of risk capital in industries. When such is the need, some of the new taxes will doubtless have a restraining effect on capital formation. It is a moot point whether Government has sufficient manpower of the right sort to cover the lag in the private sector by itself undertaking more responsibility for industrialisation. It has also been suggested in certain informed quarters that the labour employed in certain units of industries within the public sector is much more than what is actually needed or manageable. But those who realise this position have not been courageous enough to advise the Government to give more freedom and encouragement to the private sector. All these go to suggest that the Government should move with great caution in the matter of extending the public sector. Otherwise, the obvious and inevitable result would be wastage of public funds.

Regard for Taxpayers' Money

The regard for taxpayers' money should be kept all the more in the forefront, since, in the second Plan period, capital investment in the public sector is going to be expanded from about Rs. 100 crores to nearly Rs. 1,000 crores. This is surely a very big jump. And, as Government spokesmen have often mentioned, there is no secret about the fact that the public sector is going to be expanded tremendously. But the question is whether, in an underdeveloped country like India, such a big stride, especially in key and strategic industries, is feasible. The Minister for Heavy Industries, Mr. Manubhai Shah, made it clear in the Rajya Sabha recently, while speaking on the Industries (Development and Regulation) Amendment Bill, that the missing gaps in the whole chain of industrialisation in the country had to be filled in and that too without any loss of time. He also gave the break-down of the figure of Rs. 1,000 crores to be invested by Government in the public sector. According to him, the three steel factories alone might cost about Rs. 500 crores. But the important point which the Government should not lose sight of is whether it has enough technical and managerial experts to man all these enterprises.

Mr. Shah, of course, said that many in the country were under a wrong impression that the Government had not enough technical experts. He stated that the entire Development Wing was being manned by, perhaps, the best technical talent available in the country. He also boasted that the best technicians that could be found in India were with the Government, whether in regard to aluminium industry, engineering industries or chemical industries. This claim, however, does not answer the question whether the number of technicians it has is adequate to meet the huge development plans it has undertaken to fulfil.

FARMERS IN THE ASCENDANT

PRICES GUARANTEED

From Our Own Correspondent

LONDON, *1st December*

THE long battle between Government and Farmers has ended in a complete victory, or to be cynical, a 97½ per cent. victory for the farmers. In 1947, the Labour Government decided to crystallise for all time the preferred position in which farmers were put by the war-time needs of the economy by guaranteeing prices and markets for all basic farm products. But the Agriculture Act was loosely worded and, though year by year the farmers have, in fact, received at the annual review, which takes place each February, satisfactory guaranteed prices, they have always been suspicious that the Government would try to wriggle out of its obligations. Each year when both sides, Government and the three Farmers' Unions of the United Kingdom, met, they eyed each other with suspicion: the Government convinced that the farmers wanted too much (some members sympathised with the M.P. who declared that the farmers were featherbedded) and the farmers convinced that the Government were not interested in the health of the industry but only in knocking down the guaranteed price as far as possible.

LONDON LETTER

This latter suspicion has been growing to such an extent over the past two years that farmers were becoming nervous in their long-term planning, with rumours in all directions that the Government might even revoke the 1947 Act and, in any case, were liable, without warning, to slash the guarantees, in order to enable the Chancellor of the Exchequer to show a surplus on his budget. As the Chancellor took steps to reduce the subsidies to the consumers, such as subsidies on milk and bread, so farmers became convinced that their turn would come next. In self-defence, they launched a campaign throughout the country urging M.Ps to force the Government to reveal its intentions and demanding to know where they stood in long-term planning.

Dissatisfaction of the Government's approach to agricultural prices was heightened by the fact that, when food rationing was still necessary three to five years ago, the Government would push up the price of any commodity which it wanted to see expanded, and then the moment the expansion had taken place they would slash the price. This has happened in particular with pigs and milk. The farmers rightly pointed out that no sound agricultural policy could be based on such wild fluctuations. The Government has now conceded their case and has assured the farmers that the total value of the guaranteed farm products in any year would not be reduced through a cut in guarantees more than 2½ per cent. below the level of the previous year. Thus, this year the guaranteed commodities are estimated to be worth £1,150 million and next February, if there are cuts in any guarantees, they must not reduce the total value to less than 97½ per cent. of this figure.

So much for the global total; but each individual livestock commodity is also guaranteed that its price will not be reduced more than 4 per cent. in any year or more than 9 per cent. in any three years. Crops sown annually are assured against a drop of not more than 4 per cent. in any one year.

There is no question but that the farmers are well pleased with their bargain; on the other side of the account, taxpayers are anxiously asking themselves whether increases in agricultural efficiency could not be expected to reduce costs of production beyond the rate of about 3 per cent. per annum. The question is all the more insistent, in that the Government has also decided greatly to increase the capital assistance given to farming. Up to now, a farmer had to live in a "hill district" with poor land to qualify for a grant for capital improvement. Now it does not matter where he lives; the Government will grant a third of the capital expenditure in fixed equipment and in the long-term improvement of grass and arable land. But the average annual expenditure under this head is not considered likely to exceed about £5 million per annum.

There must always be lip service in these arrangements to increased agricultural efficiency. Uneconomic units are supposed to be merged before qualifying for grants, but the British farmer has so far shown remarkable resistance to any proposals to collectivise him in any way. And the general criticism can still be made against the price guarantees that they give money indiscriminately to the large-scale farmer who has succeeded in reducing his costs and does not need aid, to the middle-scale farmer whom they turn into an economic proposition and to the small-scale farmer whose head they keep above water.—*All Rights Reserved.*

AMERICAN LETTER

PRICES OF COMMODITIES RISING

GROWTH OF INSURANCE SPECTACULAR

From Our Special Correspondent

NEW YORK, *29th November*

THE thinking of traders and merchants in the United States is still dominated by the Suez Canal crisis. Intertwined with it is the fear of armed intervention by the major world powers. As a result, pivotal commodities' prices have been skyrocketing. It is a development similar to previous war-scares and actual wars. Prices are responsive to interruption in communications, higher freight rates, shortages of shipping space and so on.

Specialists suggest at this point that the first traditional stage of the war-scare market has been reached. There were increases in the prices of world sugar, vegetable oils and wools in all international markets. Gains in prices in other items were subject to statistical positions, subsidies, surpluses of all forms and descriptions and other similar factors. Weather around the world has also played an important part in traders' minds.

Since prices in futures trading have been rising almost everywhere, except in those items where a surplus exists, the only reasonable conclusion being drawn is there is still a feeling of apprehension and a sense of insecurity. In the last few days this has lessened somewhat, but threats to tranquillity remain.

The market development is parallel to what happened in the past. The outbreak of war in 1939 stimulated sharp price advances. There was a slight recession later.

The fall of France saw prices go down to the pre-war level and then a long advance got under way. There was no visible change when the United States entered the conflict after Pearl Harbour. The shipping and war-time transportation pattern had been established before that time.

When the Korean war broke out, another price advance got under way. It stimulated one of the sharpest gains on record. The peak was reached in February 1951.

Oils

Perhaps the most important item to watch in the next few weeks, according to observers here, will be oils. The United States finally made arrangements to ship oil to Western Europe, in order to make up some of the deficiency which has been created by the blocking of the Suez Canal. Twelve tankers are to sail soon from this side. Meanwhile, rationing of fuel has been put into effect on the Continent.

Freight rates and prices are still going up. The feeling here is that international developments are likely to keep the markets unsettled for a long time. Not particular cheerful news to American farmers came from Australia where the Canberra Government announced an increase of 50 per cent. in the amount of beef, veal, mutton and lamb which may be exported to destinations outside the United Kingdom and the colonies in 1956, 1957 and 1958.

Indeed, foreign transactions have become a predominant factor in the commodity markets which are much more indicative of sentiment than the securities' markets. Widespread hoarding by European housewives—it was the first time this happened since the last war—was one of the main factors recently.

Foreign transactions recently concluded were chiefly centred in wheat, soyabeans, soyabean oil and maize, known as corn in the United States. France, for example, purchased 375,000 bushels of soyabeans, Western Germany also bought moderate quantities and the United Kingdom got hold of a fair amount of maize. There is a constant stream of such orders arriving at these shores.

Shipping space is still tight, despite, at least temporary, settlement of the longshoremen's strike by Court order. But the atmosphere at the docks is still tense and resentment over the fact that no settlement has been reached on new contract terms shows up in lazy work and slowdowns which, unfortunately, are uncontrollable.

Otherwise, the economy in this country continues humming at top speed. The Christmas shopping season is getting under way and

PLACE OF "HUNDI" IN CREDIT SYSTEM

SHROFFS' MEMORANDUM TO LAW COMMISSION

THE question whether it is desirable to omit, after the lapse of a certain period, the saving clause provided for the usage of *hundis* in section 1 of the Negotiable Instruments Act, in view of the need for bringing about uniformity in mercantile usage, has been under the consideration of the Law Commission. In this connection, the view that *hundis* perform a useful function and that their removal will result in the dislocation of the activities of indigenous bankers all over the country is expressed by the Bombay Shroffs' Association in a representation submitted to the Commission.

The said clause of section 1 of the Negotiable Instruments Act is to the effect that the Act does not affect any local usage relating to any instrument in an oriental language, "provided that such usages may be excluded by any words in the body of the instrument which indicate an intention that the legal relation of the parties thereto shall be governed by this Act. ...." The Association points out that the incorporation of this saving clause, when the Bill was on the anvil in 1879, was effected after strong protests and agitation from many quarters, and that such incorporation indicated the realisation on the part of the Government of the strength of custom and usage governing *hundis*, and of the serious consequences the omission of the clause would have on agriculture, commerce and trade of the country. It further notes that, though the Select Committee of 1879 held the view that the provisions of the Bill would induce the native mercantile community gradually to discard their customs and usages in favour of the corresponding rules contained in the Bill, the fact that no single case has so far been reported in which the proviso (that the *hundi* can be brought under the provisions of the Act by inscribing on its body words to the effect that the *hundi* should be governed by the provisions of the Act) has been made use of, is clear proof that the mercantile community has not found the provisions of the Act to be more convenient than the corresponding usages of the *hundi*. This fact, according to the Shroffs' Association, strengthens the case for the retention of the *hundi* as a negotiable instrument.

Need for Uniformity

Referring to the suggestion, advanced by the Law Commission, that, in view of the need for the uniformity of law in the context of international transactions, the saving clause as to local usages should be omitted after the lapse of a certain period, the Committee states that that question does not arise, because *hundis* have no international significance, as they are exclusively and primarily used for inland purposes. That apart, such uniformity should only follow the ensuring of uniformity in certain more important respects between the provisions of the Act and international law. It should also be noted that, because of the legal complexities involved in bringing about uniformity in the laws of the various countries, even the agreement reached among the countries at a convention at Geneva as far back as 1930 to bring about that uniformity remained unfulfilled. Besides, it is difficult to define in a uniform way what is described in the Act as "reasonable time," not to mention the differences in working hours from place to place and trade to trade.

Turning to the agreement that differing customs and usages regarding *hundis* create confusion, the Shroffs' Association claims that, during the last 75 years, the customs and usages have been so thoroughly established through judicial decisions that no confusion is now felt about them. Moreover, these usages have been codified and incorporated in the rules and regulations of different *Sharafi* Associations. It is possible, the Committee admits, to bring about greater uniformity in the practices connected with *hundis* prevailing in various parts of the country, but total abolition of *hundis* in favour of other negotiable instruments is unthinkable, because of the dislocation it would bring about in the commercial sectors of the country. The smoothness and security it has afforded all these years have also proved, beyond doubt, its utility. It is significant, the Law Commission has not stated the disadvantages of *hundis* as they are at present or the relative advantages of other negotiable instruments over the *hundi*.

The Association further claims that of the three instruments, namely, the cheque, bill of exchange and *hundi*, the *hundi* has wider availability and is the oldest in use. While the banks deal more with the first two types, the most widely used among shroffs are *hundis*, though none of them can dispense with any one type of instrument. The relative usefulness of these instruments is determined, again, by what they cost, the credit they provide and according to other circumstances, such as time and place. That is not all. Just as shroffs, joint-stock banks and co-operative banks have their utility in the credit structure of the country, so also the three classes of credit instruments perform a useful role. All the three instruments together make up this aggregate credit mechanism and the removal of any one would create a void, at least for a fairly long time. If the cheques and bills of exchange are capable of affording better security, facility and usefulness, the Association argues, they would automatically displace the *hundi* in course of time. Where is the need then to suppress this useful and popular instrument through legislation?

Proceeding, the Association explains how the elimination of the *hundi* will create a vacuum. In the first place, it has availability even in the remotest corners of the country which a cheque does not possess because of the absence of banks or their branches in a large number of towns, not to speak of villages. Besides, it has greater negotiability and better security than the other types of instruments. Secondly, the *hundi* can be cashed in one day, even after banking hours, whereas a cheque takes a day or even two to clear. Thirdly, thefts occur in the case of cheques more frequently than in the case of *hundis*, because the writing on the cheque is easily obliterated and the instrument encashed quickly. But, in the case of the *hundi*, the identity of the payee, usually a shah, has to be established before payment can be made.

Better Facilities

The Association also cites some usages of *hundis* which provide better facilities than the corresponding provisions of the Negotiable Instruments Act. Firstly, whereas in the case of a bill of exchange initialling on it by the drawee on presentment makes him the acceptor and imposes a liability on him to pay the amount of the bill, in the case of a *hundi* noting of the date of presentment on it by the drawee does not involve any such liability. Such noting is intended to provide only proof of presentment. Secondly, while a *hundi* (sight) can be kept standing for three days and retired on the fourth day if after presentment the payment is not effected, and thus provides for adequate time to obtain necessary advice from upcountry, a bill of exchange, under similar circumstances, is to be retired, according to the provisions of the Act, on the same day. Thirdly, the fees charged by the Sharafi Association for noting for protest and for dishonour of a *hundi* are nominal, being half an anna for noting and As. 4 up to Rs. 1,000 and As. 8 thereafter for issuing a *majarnama* (a certificate in proof of dishonour). The fees charged by the notary public for similar work, however, are very much higher. In addition, a *majarnama* has the weight of a court award, while a noting for protest and for dishonour done by the notary public serves only as evidence in a court of law. On the basis of these advantages, the Association claims that a *hundi* is more economical, efficient and useful than either of the other two instruments, namely, cheque and bill of exchange.

Adverse Effects

The Committee feels that the elimination of the *hundi* will have a telling effect on the huge organisation of the shroffs which is knit together through the use of *hundis*, and reaches out to the remotest villages. It would adversely affect the flow of finance to agriculture, internal trade and small-scale industries. Again, the moneylenders and the small traders in the villages who are thoroughly acquainted with the practices connected with the *hundi* for many generations, will find it exceedingly difficult to understand the intricacies of the Negotiable Instruments Act. Consequently, the rural areas which are not served by banks would be hard hit and starved of credit.

The Association has, therefore, stressed that the Law Commission's approach should be based on considerations of practical utility and not of imaginary satisfaction of uniformity. Customs and usages, it says, should be codified into law. Conversely, law should reflect customs and usages, as in the case of Law of Merchant of England. That does not mean that the law should be rigid; it should take into account the changes in practices of business men. It is, therefore, necessary, says the Association, that the protection which the usage of *hundi* enjoys should either be continued or incorporated as part of the law in the Negotiable Instruments Act.

COMMONWEALTH DEVELOPMENT

The British House of Commons approved last week, without division, a motion by Sir Albert Braithwaite (Conservative) urging the Government to invite other members of the Commonwealth to set up a Commonwealth machinery to develop the natural resources throughout the Commonwealth and in the Colonial territories. It will be recalled that the same member had tabled a motion during the last session of Parliament urging the Government to bring about an annual economy in national expenditure to make available an amount equal to 5 per cent. of the nation's revenue for providing the communications and other utilities necessary for the further development of natural resources all over the Commonwealth. But the Government made it known that such a method of financing the development work in the Commonwealth was alien to the British Treasury tradition. Advocating the setting up of a Commonwealth Development Council, Sir Albert pointed out that areas which achieved self-government would still need British advice and encouragement.

The Under Secretary for Commonwealth Relations, replying on behalf of the Government, said that the machinery already in existence for such development was probably sufficient. He cited, in this connection, agencies such as the Commonwealth Economic Committee, Colonial Development Corporation, Commonwealth Development Finance Company, the Export Credits Guarantee Department, the Colombo Plan and the World Bank. The Under Secretary further pointed out that the British Government would discuss these specific suggestions with members of the Commonwealth.

It may be noted that acceptance of a private motion by the House of Commons does not bind the Government.

TRAVEL ALLOWANCE

The Government of India proposes a drastic reduction in the basic allowance of foreign exchange for visits abroad. The proposal is part of the official drive to conserve foreign exchange resources and to prevent the misuse of individual allotments. It is understood that the proposed reduction in the basic allowance quota may be as high as 50 per cent. from the present allowance of £700 for a two-year period for soft currency areas. In future, wives of people going overseas on business may be prevented from undertaking pleasure trips. Visits for *bona fide* health reasons, however, may be permitted. It has also been suggested that official delegations proceeding overseas should be carefully scrutinised in terms of personnel to ensure that unnecessary expenditure of foreign exchange is avoided.

AMENDMENTS TO INCOME-TAX ACT

MAIN PROVISIONS OF FINANCE BILL EXPLAINED

PRESENTING the supplementary Budget for the current year in the Lok Sabha on 30th November 1956, Mr. T. T. Krishnamachari, Finance Minister, proposed some taxation measures, which seek to yield Rs. 16 crores per annum. These taxation proposals are contained in two Finance Bills he introduced for the purpose. One of these, Finance (No. 3) Bill, 1956, seeks to amend the Indian Income-tax Act, 1922. The main provisions of this Bill are: (1) revival of capital gains tax from the financial year 1957-58; (2) increase in special super-tax for the year 1957-58 on companies paying dividend in excess of 6 per cent.; (3) control on depreciation and other reserves of companies, and (4) levy of additional super tax on Section 23A non-investment companies. Along with the new tax proposals, the Finance Ministry circulated to the members of the House a memorandum explaining the changes in the Income-tax Act proposed in the Finance Bill.

The first proposal, namely, levy of capital gains tax, is not a new one. For tax on capital gains forms part of the existing Income-tax Act, though the relevant provisions have been dormant for some years now. It was first introduced by the late Mr. Liaquat Ali Khan in 1947, but was given up after two years. Explaining the proposal to reintroduce this levy, the memorandum says:

"The Bill proposes to revive, with some modification, the scheme which was in existence for the taxation of gains resulting from the sale, exchange or transfer of capital assets during the period 1st April 1946 to 31st March 1948. The new scheme will apply to capital gains arising on or after 1st April 1956. The following table sets forth the important points in respect of which the new scheme differs from the old:

Provisions in the old scheme	Corresponding provisions in the proposed scheme.
I. *Computation of Capital Gains :* In computing the amount of capital gains the assessee was given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January 1939.	In computing the amount of capital gains the assessee is proposed to be given the option to adopt, instead of the actual cost of the asset, its fair market value as on 1st January, 1954.
II. *Rate of Tax :* 1. In the case of *non-company* assessees, only the excess of capital gains over Rs. 15,000 was subjected to tax.	In the case of *non-company* assessees, it is proposed not to levy a tax on capital gains if (i) the capital gains do not exceed Rs. 5,000 or (ii) the total income, including the capital gains, does not exceed Rs. 10,000.
2. In the case of *non-company* assessees, special rates of tax were prescribed for capital gains, ranging from one anna in the rupee to five annas. The rates of tax were thus not related to the total income of the assessee.	In the case of non-company assessees, it is proposed to relate the rate of tax on capital gains to the other income of the assessee. One-third of the capital gains will be added to the other income, and the income-tax rate applicable to the sum so arrived at will be the rate at which the whole of the capital gains will be charged to tax.
3. In the case of *companies*, tax was not charged, if the amount of capital gains did not exceed Rs. 15,000, but where the gains exceeded Rs. 15,000, the whole amount was taxed.	It is proposed to tax the full amount of capital gains.
4. In the case of *companies*, the rate of tax for capital gains was the ordinary income-tax rate applicable to a company.	No change is proposed in this respect.
III. *Items of Capital Gains exempted from tax :* The following gains were exempted from the tax :	
(1) Gains arising on the transfer of property on compulsory acquisition for public purposes ;	It is proposed to drop this exemption.
(2) gains arising on the distribution of assets on the dissolution of a firm or an association of persons or on the liquidation of a company ;	Do. Do. Do.
(3) gains arising on the sale of residential property possessed by assessee or his parent for seven years or more ;	It is proposed to drop this exemption (but see item (9) below).
(4) gains arising on the sale of building, plant and machinery belonging to a business, invested in the purchase of a new building plant or machinery within a specified period ;	It is proposed to drop this exemption.
(5) gains on the transfer of assets to an irrevocable trust ;	Do. Do. Do.
(6) gains arising on the distribution of assets on the total or partial partition of a Hindu undivided family ;	It is proposed to retain this exemption.
(7) gains arising on the transfer of assets by will, bequest or gift ;	Do. Do. Do.
(8) gains arising on the transfer by a parent company of its assets to a 100 per cent. Indian subsidiary ;	Do. Do. Do.
(9) gains arising on the sale of residential property which had been occupied by the assessee or his parent for two years, the gains being invested in the purchase of new property within one year.	Do. Do. Do.
IV. *Treatment of Capital Losses :* 1. Capital losses could be set off only against capital gains.	No change is proposed in this respect.
2. Capital losses of any year, which could not wholly be wiped off by capital gains of that year, could be carried forward for a period of *six years* for set off against capital gains of the later years. To permit of such carry forward, the capital loss sustained in any "previous year" must exceed Rs. 15,000, in the case of *non-company assessees*.	It is proposed that capital losses of any year, which cannot wholly be wiped off by capital gains of that year, may be carried forward *indefinitely* for set off against future capital gains. To permit of such carry forward the capital loss sustained in any "previous year" must exceed Rs. 5,000, in the case of *non-company assessees*."

(The relevant clauses in the new Finance Bill are: 2, 4, 5 and 7.)

The second proposal of the Finance Minister relates to the rates of super tax on companies for the financial year 1957-58. The only change that has been made in the rates, which are otherwise the same as those for 1956-57, is in respect of the special super tax payable by companies on dividends in excess of 6 per cent. The following extract from the Finance Ministry's memorandum gives a clear idea of the rates of super tax for 1957-58:

"The effective basic rates of super tax applicable to companies for the financial year 1957-58 will be the same as are applicable for the current financial year 1956-57, namely.

	As.	p.
1. For companies which have made the prescribed arrangements for the declaration and payment in India of dividends and for deduction of super tax from dividends paid to shareholders not resident in India :		
(a) for companies referred to in section 23A (9) of the Income-tax Act (i.e., companies in which the public are substantially interested) with total income not exceeding Rs. 25,000	1	9
(b) other companies	2	9
2. Public companies not included in (1)—(e.g., foreign public companies) :		
(a) on income other than dividends from a subsidiary Indian company	5	9
(b) on dividends from a subsidiary Indian company	3	3
3. Private companies not included in (1)—(e.g., foreign private companies) :		
(a) income other than dividends from subsidiary Indian company	5	9
(b) on dividends from a subsidiary Indian company	3	3

"In addition to the basic super tax payable by a company, a special super tax was levied for the financial year 1956-57 on dividends distributed by it in excess of 6 per cent. of its paid-up capital. It is proposed to continue this special super tax on dividends in excess of 6 per cent. of the paid-up capital for the financial year 1957-58 with an alteration in the rates. The rates of special super tax applicable for the year 1956-57 and the proposed rates for the year 1957-58 are as under:

	Present rates per rupee As.	*Proposed rates per rupee* As.
(a) on the amount of dividends in excess of 6 per cent., but not more than 10 per cent. of the paid-up capital	2	2
(b) on the amount of dividends in excess of 10 per cent., but not more than 18 per cent. of the paid-up capital	3	4
(c) on the amount of dividends in excess of 18 per cent. of the paid-up capital	3	6

"The extra super tax at As. 2 in the rupee for certain companies on the face value of bonus shares issued by them which was levied during the financial year 1956-57, will be continued for the financial year 1957-58 also in respect of bonus shares issued during the relevant previous year.

"Provision is also made for carrying forward to the financial year 1957-58, the quantum of bonus shares and excess dividends which could not be subjected to additional super tax during the financial year 1956-57 for want of adequate total income." (*Clause* 8.)

Control on Reserves

The third proposal is not actually a taxation measure, but a novel experiment seeking to exercise a large measure of control over the depreciation and other tax-free reserves of companies. "Such control," the Finance Minister pointed out in his speech, "becomes imperative when the effect of tax on dividends is to increase the resources of companies." The measure is to be given effect to by introducing two new sub-sections, 2B and 2C, to Section 10 of the principal Act. The relevant clauses in the new Bill are:

"(2B) Where for the purpose of computing under this section the profits or gains of a company for any previous year an allowance is made under clause (vi), clause (vi a), clause (vi b) or clause (vii) of sub-section (2), an amount equal to the sum of all the allowances so made shall be included in the total income of the previous year as 'profits and gains,' unless the company deposits with the Central Government before the 30th day of June of the year succeeding the previous year, such percentage, not exceeding twenty-five, as may, from time to time, be notified by the Central Government, of the accumulated profits and reserves of the company as at the end of the year preceding the previous year, to the extent to which such profits and reserves are not represented by the fixed assets of the Company, *plus* such percentage, not exceeding seventy-five, as may, from time to time, be notified by the Central Government, of the amount by which the sum of the following amounts, namely:

"(*a*) the total income of the company for the previous year, as reduced by the amount of income-tax and super tax payable in respect thereof and by the dividends, if any, declared during the previous year, and

"(*b*) the sum of the allowances made under the clauses aforesaid exceeds the sum of rupees one lakh.

"(2C) The Central Government may make rules providing for the manner in which the deposits referred to in sub-section (2B) may be made, the time when and the manner in which refunds of any such deposit shall be made whether with or without interest, and, in particular, the refund at any time of any such deposit or part thereof where the refund is claimed for carrying out any such purpose connected with the business of the company as is approved by the Central Government."

Explaining the main features of the proposal, the memorandum says:

"It is proposed that, in the case of companies, the depreciation allowances and development rebates allowed should be added as an item of income, unless the company concerned deposits with the Central Government before 30th June of the relevant assessment year a prescribed amount depending on its undistributed profits and reserves. The amount deposited will consist of two parts. The first part is a prescribed percentage of the amount by which the available profits of the year (i.e., profits before deduction of depreciation or development rebate less taxes payable less dividends declared) exceeds the sum of Rs. 1 lakh. The second part is a prescribed percentage of so much of the accumulated profits and reserves as are not represented by fixed assets in the business. The percentages referred to above will be prescribed by the Central Government and notified from year to year, but will not exceed 75 for the first part and 25 per cent. for the second part of the deposit. The deposit will carry inte-

RATIONALISATION IN KANPUR MILLS

ENQUIRY COMMITTEE SUBMITS INTERIM REPORT

THE Kanpur Textile Mills Rationalisation Enquiry Committee has just submitted its interim report to the Government of Uttar Pradesh. This Committee, it will be recalled, was set up by the Government last year with Mr. Bind Basni Prasad, a retired High Court Judge and member of the Labour Appellate Tribunal of India, as Chairman, to go into the question of introducing rationalisation in the cotton mills at Kanpur, in terms of the principles evolved and agreed upon at the Nainital Conference held in 1954. The appointment of this Committee was in terms of the 14-point agreement entered into between the workers and the Government following the 80-day labour strike in the Kanpur mills which resulted in a production loss of 13.17 million lbs. of cotton yarn, 45.07 million yards of cloth and 5.8 million yards of jute goods.

The full details of the recommendations contained in the interim report are not yet available. The Press version of the report reveals that the Bind Basni Prasad Committee seems to have approached the question of rationalisation in a very realistic manner. The Committee, for instance, has categorically urged an eventual reduction of 1,713 to 2,147 workers in the categories of weavers, ring piecers and ring doffers in seven units on the introduction of "full rationalisation." The variation in the number of workers rendered surplus, it is said, will be caused by one particular mill adopting one or the other system of working looms. The Committee has also suggested several ways of absorbing the labour rendered surplus on account of rationalisation. These include, among others, the setting off of vacancies, caused by death, resignation, retirement and abandonment, against labour thrown out of jobs and withholding of fresh recruitment in the above three categories till rationalisation is completed. Further, it has taken into account the net gains to employers on rationalisation and has suggested upward revision in wages.

The Enquiry Committee seems to have ably dealt with the issue of workload in cotton mills. In the considered opinion of the Committee, the notion that workload is in direct proportion to the number of machines to be minded by a worker is misconceived. For the workload depends not merely on the number of machines but also on the number of operations which a worker has to perform and on the patrol, supervision and other miscellaneous duties. If, therefore, with the allocation of more machines to a worker, the number of operations were reduced, the increase in workload involved in the abovementioned duties can be offset. The Committee has allowed 20 per cent. of the time for relaxation and personal needs, fixing the workload on the basis of 48 minutes working on one loom. This 20 per cent. consists of 6.25 per cent. for personal allowance which is equivalent to 30 minutes in an eight-hour shift.

On the question of wages, the Rationalisation Committee has recommended revised rates, the actual benefit of which to workers varies from mill to mill, because the basic wages now being paid by the various mills at Kanpur are not uniform. Roughly speaking, a two-loom weaver, covered within the basic monthly wage range of Rs. 41-Rs. 55, is expected to get an increase of Rs. 37 to Rs. 23. A worker already working on four looms in Kanpur is at present earning a monthly basic wage of about Rs. 64-Rs. 72. He is likely to gain about Rs. 6-Rs. 14 per month.

Another important recommendation made by the Committee relates to the third-shift working, transfer to similar jobs in the same factory and transfer to the same job from one factory to another without prejudice to the rights of the workman in regard to his continuity of service, provident fund, insurance, leave, statutory compensation and the like. Expansion of existing units in order to make them balanced and training within industry have also been suggested. The other recommendations relate to physical, operational and mechanical working conditions, guarantee against unemployment, substitute agency to keep a watch over the working of the rationalisation scheme, and scale of wages for clerks.

Incidentally, the Committee has urged a reduction in electricity charges at Kanpur. If the rates are lowered to the Bombay level, the advantages and disadvantages which the Kanpur mills have as compared to Bombay may, it is averred, balance each other. The handicaps facing the Kanpur mills to which the Committee has drawn attention include, besides higher electricity charges, reduced margin of profit in export cloth, higher insurance rates, higher price for Broach cotton, additional charges for carrying larger cotton stocks, additional railway freight, insurance and octroi on spare parts, mill-stores and machinery, commission paid to local cotton brokers, and personal wages to workers.

The Rationalisation Committee's report covers seven cotton mills of Kanpur with a total working strength of 37,717 as on 21st July 1955, that is, the agreed date for reckoning the labour strength. Of this number, 30,689 are permanent operatives, 5,947 substitute operatives and 1,081 clerks. Of the permanent operatives, weavers, ring piecers and ring doffers together account for 14,229. The total number of looms and ring frames in the seven mills is 8,153 and 866, respectively. About 29.13 per cent. of the loomage and 48.6 per cent. of the ring frames were already working on a rationalised basis on 21st July 1955. The plea for rationalisation put forward was on 95.1 per cent. of looms and 85.8 per cent. of ring frames. But the Committee has found that further rationalisation is possible only on 66.8 per cent. of looms and 41.4 per cent. of frames after the deficiencies in regard to them have been made good. It has, of course, made it clear that there can be no immediate extension of rationalisation or reduction in job requirements, owing to certain deficiencies in physical working conditions and defects in machines.

It is difficult to say how far and to what extent the aforesaid recommendations of the Rationalisational Committee will satisfy the millowners and labourers. It must, however, be stressed that the two parties should approach the problem of rationalisation in a spirit of accommodation. The introduction of rationalisation in the cotton mills of Kanpur, as also of other centres, is imperative, considering the need for catering more effectively to the needs of the home and export markets. Indeed, rationalisation holds the key to the production of quality textiles at a price which suits the pockets of the common man.

HIGHER TAXES ON ART SILK YARN

One of the important raw materials covered by the fresh taxation proposals which the Union Finance Minister announced on Friday last week, is art silk yarn. The import duty on foreign yarns has been raised, while a central excise duty is levied on indigenous yarn. Justifying the increase in import duty, the Finance Minister says:

"With the shortage in supplies of cotton cloth, the art silk industry has been doing quite well of late. There has been a substantial increase in production and, since these fabrics compete, to some extent, with fine and superfine cotton fabrics, they are in a position to bear higher taxation than they do at present."

The Finance Minister, however, is quite conscious of the somewhat fluctuating conditions prevailing in the art silk industry in the past. He has accordingly considered it desirable that, while the tariff rate should be pitched at a certain maximum level, the Government should fix the effective rates from time to time, according to current needs, by executive notification. The import tariff rate is fixed at Rs. 3 per lb. But the immediate effective rates vary from Re. 1-4 to Rs. 2 per lb., depending on the quality of the yarns. Thus, they work out to Re. 1-4 for yarns above 100 deniers, Re. 1-7 for 75 to 100 denier yarns and Rs. 2 for yarns below 75 deniers. As a result of the upward revision in import duties, the annual yield of revenue is estimated at Rs. 160 lakhs. Hitherto, imports of art silk yarn were subjected to an *ad valorem* duty of 36¼ per cent. or As. 7-3 per lb., whichever was higher.

Following higher import duties, a corresponding change has been effected on the excise side. A central excise duty is levied on art silk yarn produced in the country. The Finance Minister has justified the levy on the ground that, with the protection afforded by a high duty on imported yarn, the restrictions on imports and the increasing demand, the indigenous producers of yarn have been making "substantial" profits. Even here, while a ceiling rate of Re. 1-8 per lb. is fixed, the effective rates (per lb.) are As. 4 for yarns above 100 deniers, As. 6 for yarns of 75 to 100 deniers and As. 8 for yarns below 75 deniers. The effective rates, it is said, generally maintain the measure of protection enjoyed by the indigenous products against the imported products.

An excise duty of As. 2 per lb. is also levied on staple fibre and staple fibre yarn manufactured in India. The imports of these are subjected to a duty of As. 2 for fibre, in addition to 25 per cent. *ad valorem*, and Re. 1-4 for yarn.

EXPORTS OF HANDLOOM CLOTH

U. S. EXPERTS' VIEWS

WHILE the ability of the handloom sector of the cotton textile industry to meet, to any significant extent, the expansion in the clothing requirements of the country in the coming years is very highly doubtful, there is no denying the fact that it can play a useful role as an earner of foreign exchange. Exports of handloom fabrics are now fetching about Rs. 8-9 crores per annum, the quantum of exports being at the rate of 60 million yards. This earnings can be greatly improved, if energetic steps are taken, on the one hand, to manufacture quality fabrics at an economic cost and, on the other, to remove the handicaps in the way of export trade. Viewed thus, the initiative taken by the Government of India in requesting the U.S. Ford Foundation to send a team of experts to India for exploring the possibilities of augmenting exports of Indian handloom fabrics to the U.S. must be widely welcomed. It is gratifying that, in response to this request, the Ford Foundation has sent a three-member team, consisting of Mr. Boris Kroll, textile designer and manufacturer, Miss Bonnie Cashin, fashion designer, and Mr. Robert A. Hickerson, textile engineer and silk expert.

The team recently completed a two-month intensive tour of the important handloom weaving centres in India. It also had discussions with the senior officials of the Union Ministry of Commerce and Consumer Industries. The team has already submitted some of its main conclusions to the Government. These are said to take an optimistic view of the prospects for promoting exports of Indian handloom fabrics to the U.S. Incidentally, it will be interesting to note that, on an average, every 100 yards of fabrics shipped to the U.S. will earn for the country $30.

Large Export Potential

The U.S. handloom survey team is of the view that India has a large export potential for its handloom fabrics. Among these fabrics—considered by the team as the most beautiful in the world—are many varieties which are of special interest to the American market. They include cotton fabrics with dobbie attachments as in the Madras area, sheer cottons with woven patterns, inlay and isolated motifs, fabrics in distinctive plaids, checks and stripes, towellings, printed handloom cottons, and home furnishing fabrics. With regard to handloom silks, the team says that mulberry, spun and printed silks, tussars, Bangalore silk, fabrics with gold and silver borders and brocaded inlay patterns are liked by American consumers. There is also said to be a demand for other fabrics such as mixed and woollen fabrics and certain special products like patola and tie-and-dye fabrics.

In order to stimulate the offtake of the aforesaid varieties of Indian handloom products by the U.S., the handloom survey team has put forward five specific measures. First, standards of quality should be improved, starting with the dyeing of yarn and continuing through control of production, finishing and export packaging. Secondly, the standard of production quality and export inspection must be such as to make India's handloom fabrics fully comparable in quality standardisation with the output of the leading textile producing centres of the world. Thirdly, the raw materials used in the handloom fabrics and the dyes used to process the raw materials should be of the highest quality. Fourthly, the yarn used for weaving cloth must be not only calmed but also mercerised and gassed. Finally, the length of the fabrics must be not less than 40 yards and preferably 60 yards, with width standardised.

The team has also suggested an organisational set-up designed to achieve quality improvement and standardisation required for the American market, so that the required type of fabrics can be produced in India and marketed in the U.S. It has proposed the establishment of a Handloom Export Service Corporation as a Government agency for organising production as well as marketing for export. The proposed Corporation should, it is said, organise production for export in five centres, including Madras and Coimbatore, and, for marketing, open an agency in the U.S. This proposal is reported to have appealed to many handloom interests which feel that the task of promoting handloom exports will be competently undertaken only by those who have an intimate knowledge of the export trade.

GROWING FEAR OF SHORTAGE OF COTTON SUPPLIES

EUROPEAN COMMON MARKET WELCOMED

From A Special Correspondent

MANCHESTER, *27th November*

MANCHESTER LETTER

WHILE buyers of cotton yarn and cloth are keen to put down further contracts, even on current extended delivery terms, the fear that a shortage of raw material supplies may hamper the ability of spinners in Lancashire to provide the goods is steadily growing. Alarming reports are being circulated as to the quantity of cotton which is available for immediate use, while the interruptions in the flow of supplies from more than one source are sufficient to cause considerable forebodings.

Not only is the Middle East situation a constant threat to the delivery of an adequate volume of long-staple cotton but the recent dock strike in the United States has shown the vulnerability of our local industry in this respect. The emphasis on supplies has within the past season shifted so noticeably to American cotton that any prolonged interference with shipping would offer almost insuperable obstacles to Lancashire spinners.

It has been suggested that present stocks are only capable of meeting the requirements of the mills for a matter of weeks and that a system of rationing might have to be introduced if the threat to the flow of American supplies continued. Private importing of cotton for spot sales in Liverpool and Manchester has for various reasons not been the success which its sponsors had hoped for since the revival of futures trading in 1954. Had it not been for the supplies built up by the minority of large Anglo-American firms, practically no cotton would be available for immediate sale in this country.

Competitive Sales Success

Whatever measures are needed to deal with the existing difficulty, it is becoming increasingly clear that the American Administration's policy of selling on a competitive bid basis has been wholly justified. Much interest was taken in the last sale a fortnight ago when a further quantity of 422,522 bales was sold at increased prices. The fact that buyers were prepared to pay the higher rates was regarded as yet another success for the Department of Agriculture.

Total sales under the scheme have now reached 5,650,900 bales, whereas prior to its inception the authorities were talking in terms of disposing of up to 5,000,000 bales in this way. As a result the cotton situation in the United States is now more promising than at any time for the past five seasons. The assurance of much heavier exports means that consumption should exceed current output, thus reducing the season's carryover.

Even greater importance is attached to the likelihood of more vigorous control of cotton acreage next season under the provisions of the soil bank. Although the national acreage allotment for 1957 is slightly higher than for the current year, it is believed that a further substantial reduction in cotton acreage will be recorded. The funds for the soil bank programme provide for 215,000,000 dollars as cotton's share and this would be sufficient at the present rate of 15 cents per lb. to remove between 3,000,000 and 5,000,000 acres from cotton production next season.

Euromart Plan

An indication of the likely effect of the participation of textile industries in the proposed European Common Market has been given by Mr. William T. Winterbottom, newly elected President of the International Federation of Cotton and Allied Textile Industries. Mr. Winterbottom is a former President of the British Federation of Master Cotton Spinners' Associations, Ltd., Chairman of the Rayon Staple Spinners' and Doublers' Association, President of the Textile Institute and a member of the Cotton Board.

In a statement made in his new capacity, he declared that the establishment of the common market would stimulate competition and inevitably accelerate the process of increasing efficiency in the textile industries of all the countries in the plan. "What is being proposed must lead to the greatest single domestic market in the world," he added, "a market 50 per cent. as big again as the American domestic market. It would offer wonderful opportunities to the skills of textile traders and no one would shun such an attractive proposition because of extreme competition."

The International Federation, he contended, was particularly fitted to ensure that competition was fair and that certain trading practices which could endanger the common market were not allowed to develop.

Mr. Winterbottom pointed out that the present difficulties facing European textile interests had mainly been caused by increased competition from newly developing textile industries outside Europe. The European countries would be in a much better position to meet this competition if they were united in a common market.

In the long run, the future of the cotton and allied textile industries of the world could only be secured by an increase in consumption of textiles in general. Experience was proving that the application of modern techniques of market research and sales promotion allied to intensive efforts to improve style and design could stimulate demand and develop new outlets.

Output Comparisons

Much interest will be taken in the statistics issued over the next few months reflecting the current phase of activity in textile trading in Lancashire. For so long it has been a case of observing the contraction of the industry that a move in the other direction will be witnessed with considerable pleasure.

Even prior to the pronounced improvement in demand which has lately been noticeable there were signs that the ground was being prepared for a change of scene. The revival in cloth production in September, for example, was more marked than in the same period a year previously and output during the summer holiday months compared favourably with the 1955 level. The following table shows the comparative position, as to manpower and production over the past 12 months:

	Cloth production (weekly averages in 000 linear yards)		Manpower (in spinning, doubling and weaving)	
	1955	1954	1955	1954
October	49,300	58,170	257,810	287,070
November	48,690	57,920	257,690	287,690
December	43,350	50,170	256,080	286,460
	1956	1955	1956	1955
January	47,370	53,690	256,580	287,490
February	46,930	55,630	256,820	284,320
March	46,340	54,520	253,280	279,970
April	46,440	48,320	251,880	275,740
May	45,440	53,220	250,180	271,670
June	48,070	48,360	247,900	267,350
July	32,520	29,040	245,780	262,920
August	39,880	44,090	244,700	260,560
September	43,310	44,480	243,320	258,950

Considering the labour losses which have persisted for the past two years, the fall in output has not been as severe as might have been expected. It should be recalled, however, that weekly average production of cloth in 1954 was well in excess of 50,000,000 yards but manpower has shrunk by over 40,000.

Straws in the wind they may be, but the latest recruitment figures in spinning show a turn of the tide, however small. For the past eight weeks net gains aggregating over 1,100 have been recorded and the drift of labour has for the moment been halted.

Export Improvement

The fact that October this year contained a larger number of working days than is usual explains to some extent the rather more favourable export returns which have now been published by the Board of Trade. Earnings from cotton goods at £8,486,309 were, in fact, the highest in any month since August 1955.

In the 10 months to the end of October, shipments of cotton piecegoods amounted to 391,366,000 square yards, as compared with 468,151,000 square yards a year ago, the respective values being £50,552,005 and £59,764,872. Cotton yarn exports in the same period were 29,751,488 lbs., as against 29,158,752 lbs., earnings being £12,442,118 and £12,275,621.

October cloth exports at 43,046,000 square yards were the highest since November last year but the aggregate total for 1956 shows a decline of more than 150,000,000 yards in overseas trade compared with the situation two years previously. The most noticeable fall has been in shipments to Australia, which are 38,000,000 yards lower, while the British West African markets have suffered a drop of 30,000,000 yards. South Africa's takings are also 30,000,000 yards lower

BREEDING EXTRA LONG-STAPLE COTTON

REMARKABLE PROGRESS MADE IN INDIA

ALTHOUGH, as a result of the vigorous drive to increase cotton production undertaken after Partition, India is now self-sufficient in respect of its requirements of short and medium staple cotton, the textile mills of the country continue to depend upon foreign countries for the supply of long-stapled cotton required for the production of fine and superfine cloth the demand for which is steadily increasing. Apart from the disadvantage of dependence on outside sources for raw materials, this also involves the using up of a considerable amount of foreign exchange urgently required for other more pressing needs. In the 1955-56 season, for instance, Indian mills consumed over 6 lakh bales of imported cotton valued at about Rs. 50 to Rs. 60 crores. This underlines the necessity for growing such types of cotton in India itself.

The authorities, however, are not blind to this imperative need for efforts were directed early enough towards evolving better varieties, in many cotton-growing States. In the Punjab, for instance, the Indian Central Cotton Committee and the Punjab Government jointly financed the breeding of varieties of cotton with mean fibre length of one inch and above. The work under the scheme is carried on in the Cotton Research Station, Abohar. It is concerned with a hybridisation programme under which crosses between different varieties of cotton are carried out. Although experiments for evolving new varieties were in existence for only seven years, much progress has been made in producing new varieties. Similar work is being carried on in Surat, Madras, and Mysore with encouraging results. As a result of all this work, during the last few years, there has been some increase in the production of desirable varieties of raw cotton. This has led to a considerable reduction in the percentage of foreign cotton in the total mill consumption of raw cotton, as will be seen from the following table:

(In thousand bales of 392 lbs. each)

	Indian cotton		Foreign cotton		Total
	Consumption	% to total	Consumption	% to total	
1951-52 ..	2,987	73.4	1,084	26.6	4,071
1952-53 ..	3,611	81.0	849	19.0	4,460
1953-54 ..	3,889	84.4	719	15.6	4,608
1954-55 ..	4,138	86.8	631	13.2	4,769
1955-56 ..	4,359	87.8	604	12.2	4,963

The consumption of Indian cotton increased from 2.9 million bales in 1951-52 to 4.3 million bales in 1955-56 whereas that of foreign cotton actually declined from 1.08 million bales to 600,000 bales in the same period. While the percentage of Indian cotton to total consumption increased from 73.4 in 1951-52 to 87.8, that of foreign cotton declined from 26.6 to 12.2. There is, however, still a gap of 600,000 bales of fine quality cotton which are definitely not produced in the country. Judging from the progress of breeding work, there is every possibility of making good the deficiency by at least 50 per cent. by indigenous production, provided the strains now under different stages of testing prove successful. A paper read at the Seventh Conference on Cotton Growing Problems, held recently at Chandigarh, sums up the progress made in the breeding of long-staple cotton.

Improved Strains

The paper notes that a notable achievement in regard to the isolation of superior long-staple strains of 1.1/16" and above has been recorded at Surat under the scheme for inter-specific hybridisation. Under this scheme, Asiatic types have been crossed with exotic varieties with a view to combining in the derivatives the desirable characteristics of both. The two outstanding varieties evolved and released for general cultivation as answering, to some extent, the requirements of mills for spinning fine yarns are 170-Co.2 and 134-Co.2M. A study of these cottons, from a technological point of view, revealed that though it possessed the desired staple length, it lacked in yarn strength as compared with East African cottons. Hence these cottons are being used only for yarns of lower counts than what their imported counterparts are used for. The extension of the area under such cottons has been remarkable, particularly in Gujerat, and today, without much propaganda, they are being cultivated over an area of 260,000 acres and are becoming increasingly popular. This region is expected to produce about 125,000 bales of longer-staple cotton.

Another improved strain, developed in Madras, has been M.C.U.2 which is a derivative from a hybrid between Cambodia, Uganda and Sea Island cottons and is suitable for cultivation in the summer season extending from March to August in the southern districts of Madras and the coastal districts of South Arcot. Mill tests have shown this variety to be suitable for spinning 36-38 counts. The area under this type of cotton, which was 4,000 acres in 1954-55, is gradually extending. In addition to the breeding of extra long-staple Cambodia cotton in Madras, attempts are also being made to investigate the possibility of acclimatising and economically growing the Sea Island cottons of the West Indies. Conditions conducive to the successful cultivation of the "Andrews" variety are also being studied to enable the cultivators to take to it readily. Experiments have indicated that, given proper manuring and plant protection, such types of cotton could give a highly remunerative yield. In 1954-55, "Andrew" produced 1,600 lbs. of *kapas* per acre when all the treatments were scientifically done. Experiments are being continued in the west coast for confirmation of the results already obtained.

Experiments for acclimatising Egyptian and Sea Island cottons have been in progress for some time now in Mysore. Two strains, Giza 12 and Giza 7, proved suitable under Mysore conditions, but the per-acre yield has been low. Work is in progress, however, to study the requirements for obtaining higher yields. If these experiments prove successful, there is a fair chance of increasing the area under Egyptian cotton in Mysore State to meet the requirements of mills for quality cottons of staple 1.1/16" to 1⅛".

Breeding in Punjab

As pointed out earlier, another area suitable for cultivating extra long-staple cotton is the Punjab, which, with the perennial irrigation facilities from the Bhakra Nangal Project, is certain to emerge as a leading producer of long-staple cotton. Attempts made so far in breeding superior strains are reported to have resulted in the evolution of a number of varieties of which LL-56 is definitely the best. Many of these strains are now in advanced stages of testing in the cultivators' field and will soon be released for general cultivation.

It would appear from the progress so far made that the prospect for evolving extra long-staple cottons of 1.1/16" to 1⅛" are promising. There is no reason why, with a little more effort, the imports of this type of cotton should not be replaced by indigenous production within a few years.

A word about the marketing of long-staple cotton. The best way of encouraging cultivators to grow long-staple cotton is to give them a price inducement and also to see that such cotton finds a ready market. This aspect needs to be emphasised since the experience of producers of long-staple cotton has been none too happy and we have referred to this in a previous issue. The Government's import policy leaves considerable room for stiff foreign competition and mills are inclined to carry on with imported styles rather than experiment with local growths. It is, therefore, necessary that the Government should take appropriate measures for ensuring a market which will greatly speed up the progress of cultivation of long-stapled varieties of cotton.

ALL-INDIA FIRST ESTIMATE OF COTTON

The first all-India estimates of cotton for the 1956-57 season, released by the Ministry of Food and Agriculture, places the area under the crop at 14.6 million acres, as compared with the adjusted first estimate of 13.1 million acres for the 1955-56 season, representing an increase of over 11 per cent. This estimate does not cover the entire area sown to cotton during the season. Past experience has shown that the area at the first estimate stage forms roughly 65 per cent. of the area under the crop finally reported. It relates generally to the period up to the end of July 1956. The condition of the crop till then was reported to be satisfactory, though in parts of Bombay, the crop was adversely affected by heavy and continuous rains and pest and insect infestations.

The overall increase in area during the current season has been shared by almost all the cotton-growing States and is particularly marked in Bombay, Saurashtra, Madhya Bharat, Punjab, Rajasthan and Madhya Pradesh. The increase in area has been attributed to favourable weather conditions at the sowing time and to developmental schemes undertaken under the Cotton Extension Schemes. The increase in acreage in these regions has, however, been offset to a small extent by a fall in Bhopal, Bihar, Andhra and Tripura.

Among the different varieties of cotton, the increase in area has occurred mostly in Americans, Dholleras, Jarilla (including Virnar), Bengals, and Southerns. A considerable decrease in acreage has, however, been reported in Oomras. Staple length-wise, major increases have been shared by medium and long-staple varieties, whereas, acreage under short-staple cotton registered a slight decline. The following table gives details relating to area in terms of trade description and staple length along with that of the first estimate of the previous season:

(In thousand acres)

	1956-57 (First Estimate)	1955-56 (Adjusted First Estimate)
Trade description:		
Bengals	865	745
Americans	2,473	1,953
Jarilla (including Virnar) ..	2,925	2,610
Verum	323	294
H. 420 (including Malini M5 A) ..	432	466
Oomras	2,089	2,326
Hyderabad Gaorani	1,140	1,044
Malvi	1,316	1,234
Broach-Vijay	1,046	1,013
Surti-Suyog	482	482
Dholleras	958	566
Southerns	499	388
Comillas	54	54
Total ..	14,602	13,175
Staple lengths:		
Long staple	4,520	3,954
Medium staple	6,855	5,919
Short staple	3,227	3,302
Total ..	14,602	13,175

ROADS IN BOMBAY SUGAR FACTORY AREAS

CANE CESS FUND MUST BE UTILISED FOR THEIR DEVELOPMENT

IT was only two weeks ago that we reviewed in these columns the trends in sugar industry in the Bombay-Deccan region. Referring to the series of stresses and strains to which the industry has been subjected, we drew attention to the utter disregard of the Government of Bombay for improving roads in factory areas. Anyone who cares to visit these areas will fully appreciate the force of this contention. The roads are in the most deplorable condition. The work of improving and repairing them has been sadly neglected both by the State Government and by the District Local Boards. This neglect is very regrettable, because the sugar factories have been contributing to the exchequer every year a huge amount of revenue by way of sugarcane cess. The cess is paid on all cane which enters the premises of the factory, irrespective of whether it is purchased by them or grown by them on land that they own. The contribution has been steadily increasing year after year. During the last crushing season (1955-56), the sugar mills paid a total cess of about Rs. 87.00 lakhs, as against Rs. 74.30 lakhs in the previous season and Rs. 53.85 lakhs in the season preceding it. In addition to cane cess, the sugar factories have been paying several lakhs of rupees to the District Local Boards by way of local fund cess on irrigation water, factory water and land cess.

Not a single rupee out of the aforesaid amounts is being spent on the improvement, construction and development of roads in sugar factory areas. On the contrary, the factories, it is alleged, are frequently approached by villagers through the revenue officers, and sometimes direct by the officials, with requests for contribution of funds or materials for the development of roads in factory areas. The Deccan Sugar Factories Association has already brought this to the notice of the Government. In the course of a communication addressed recently to the Secretary, Revenue Department, the Association observed: "When revenue officers like *mamlatdars* personally approach the factory management for such contributions, the member-factories find themselves placed in a very difficult and awkward situation, since a refusal to contribute, however justified such refusal may be, invariably brings the displeasure of these official dignitaries with whom the factory personnel have to deal almost every day in the course of routine work." The Association accordingly requested the Government to issue instructions to the revenue officers not to approach the member-factories for further contributions in money or materials for the purpose of road development. It also urged the Government that the improvement, construction and development of roads in factory areas and of approach roads to the factories should be carried out from the amounts recovered by the sugar mills by way of cane cess and local fund cess.

There is considerable force in the contention of the Association. It is no doubt gratifying that the Government of Bombay has issued instructions to the District Local Boards at Ahmednagar, Nasik, Poona, North Satara and Sholapur, in which the sugar factories are mostly situated, to use one-third of the net proceeds of the local fund cess towards improvements of communications in the irrigated tracts of their respective districts covering the sugar factories. But the amount of one-third of the net proceeds is too small to meet the enormous needs of improvements of roads in the irrigated areas, including those where the sugar factories are situated. It is, therefore, essential that this amount should be supplemented by allotments from the Sugarcane Cess Fund.

The Government of Bombay, however, says that "under Section 11 of the Bombay Sugarcane Cess Act, 1948, it is not permissible to utilise the amounts in Sugarcane Cess Fund for objects other than those mentioned therein." This excuse is, to say the least, a lame one. A mere lacuna in the Act need not stand in the way of the Fund's proceeds being utilised for more useful purposes. When the Government can amend legislative enactments to suit its convenience, there is no reason why it should not amend the Act in such a way as to permit the Fund to be utilised for development of roads in sugar factory areas.

Although this suggestion has been put forward by the sugar millowners on more than one occasion, it is unfortunate that the Government of Bombay has not so far responded to it. Considering the urgent necessity of good road communications in the rural area where the sugar mills are situated, the Government will do well to implement the suggestion without delay. Otherwise, the sugar mills will be considerably handicapped as a result of lack of adequate and regular flow of cane supplies from the growing areas.

Improvement of rural roads is of the utmost importance in the present context when the sugar industry has launched upon a scheme for augmenting the rated capacity (on the basis of an average crushing season of 120 days and a recovery of 10 per cent.) by as much as 228,000 tons, that is, from 157,800 tons in 1955-56 to 385,800 tons in 1960-61. On this basis and taking the average number of crushing days at 150 days, and the average of sugar in cane at 11.70 per cent., the actual annual rate of sugar output at the end of five years may be estimated at 560,000 tons. Assuming that the average recovery of sugar in cane is 11.70 per cent., the aggregate quantity of cane that will be crushed by the mills works out to 4.78 million tons, an increase of 3.04 million tons over the quantum crushed in 1955-56. If the whole of this increased supply of cane is to be transported smoothly without any deterioration in quality on the way, the roads in factory areas must be improved and developed.

SUGAR STATISTICS

With the release of the official figures relating to sugar production, despatches and stocks during the last fortnight of the 1955-56 season—that is, the fortnight ended 30th October 1956—the final assessment of the sugar supply position in this season as compared with 1954-55 is as follows:

(In thousand tons)

	1955-56	1954-55
Opening stocks	561*	68
Production	1,860	1,590
Imports	55†	600
Total supplies ..	2,476	2,258
Despatches of indigenous sugar	1,748	1,217
Imported sugar consumed	171	480
Total estimated consumption of sugar ..	1,919	1,697
Per capita consumption (in lbs.)	11.22	10.03
Closing stocks (as on 31st October)	557	561
Of which		
Indigenous sugar	553	441
Imported sugar	4	120

* Including 120,000 tons of imported sugar.
† Contracted for during 1954-55.

Out of the closing stocks of 542,183 tons with the sugar mills as on 31st October 1956, Uttar Pradesh alone accounted for over 30 per cent.—283,832 tons, to be precise. The mills in Bihar and Bombay held 105,239 tons and 52,303 tons, respectively. The closing stocks of sugar—in tons—with mills in other States were: Hyderabad 21,998; Andhra 20,819; Mysore 15,111; Madras 12,441; Madhya Bharat 7,769; Punjab 6,568; Travancore-Cochin 4,045; Rajasthan 3,759; P.E.P.S.U. 3,040; West Bengal 2,561; Bhopal 1,868; Orissa 768; Ajmer 62.

Most of the sugar factories in West Uttar Pradesh and Bombay are reported to have begun crushing operations. The production and despatches of sugar up to 15th November 1956 in the current season amounted to 42,000 tons and 63,000 tons, as against 34,000 tons and 64,000 tons, respectively, in the corresponding period of the last year. The stocks with the factories as on 15th November 1956 stood at 503,000 tons, as compared with 381,000 tons last year.

SUGAR IN MYSORE

The Union Government has granted permission for the setting up of five co-operative sugar mills in Mysore State. The work on three units has already started. These are located at Kampli in Bellary district, Pandavapura in Mandhya district and Sankeswar in Bombay Karnatak. The State Government has not yet decided on the location of the remaining two mills. There are, it is said, demands from many areas for the establishment of a sugar factory. The Government is considering the demands and will allow the factories to be set up at places where the necessary share capital can be raised by the people.

The capital outlay on a sugar factory is estimated at Rs. 60-65 lakhs. The cane growers and the State Government will each contribute Rs. 10 lakhs as share capital. The Central Government will give Rs. 40 lakhs.

SUGAR IN ENLARGED BOMBAY STATE

The size of the sugar industry in the Bombay State remains practically unchanged, despite the creation of a bigger bilingual Bombay State. There has been an addition of only one factory—the Bhavnagar Sugar Mills Ltd., Saurashtra—to the list of 15 units already existing. The aggregate annual rated capacity of the industry now stands at 236,925 tons (white sugar), as against 229,905 tons before. This estimate is based on three assumptions. First, the sugar mills are together capable of crushing 13,500 tons of cane every day (13,150 tons before). Secondly, the average duration of the crushing season is 150 days. Thirdly, the average recovery per cent. of sugar in cane is 11.70 (1955-56).

With regard to sugarcane, the total area sown to cane cultivation in the enlarged Bombay State is 220,000 acres (on the basis of final estimates for 1955-56), a rise of 22,000 acres as compared with the erstwhile Bombay State. The total yield of cane amounts to 5,520,000 tons, the figure for the former State being 5,116,000 tons.

RAISING COAL OUTPUT

PROBLEMS FACING PRIVATE SECTOR

AS was stated in our issue of 24th November 1956, the private sector of the coal industry has decided to go ahead with the implementation of the programme to attain the target of additional production fixed for it under the second Five-year Plan, following the discussions the colliery owners had with the Coal Controller. Though some of the collieries are, as was pointed out then, apprehensive about the possibility of achieving the target of 10 million tons per annum, due to excessive restrictions, the industry as a whole would appear to be optimistic of achieving even a substantially larger target. In fact, the collieries in the private sector had already submitted plans to the Government for raising the annual output by as much as 30 million tons, as against 10 millions allotted under the Plan.

The colliery owners' plans for raising the output by 30 million tons did not obviously find favour with the Government, as that would mean an upward revision of the target of 60 million tons set for the industry as a whole, even if the public sector were to give up its idea of raising its share of coal production from the present level of 4.5 million tons. Secondly, the lack of adequate transport facilities, on which the progress of the coal industry depends, seems to have been another reason for the Government's action in fixing the target for the private sector at 10 million tons, as against 30 million tons asked for. The private sector, however, feels that, if for any reason, the public sector is not able to attain its target of additional output of 12 million tons, or the total additional requirements of the country exceed 22 million tons estimated under the Plan in 1960-61, the private collieries should be allowed to make good the shortfall. It is not that the public sector will not be able to attain the additional production of 12 million tons, but the private sector is of the view that it will be able to produce the same additional quantity at about one-third the cost which the public sector will be spending for hitting the target. It is explained by some that the larger capital investment by the public sector is due to its having to open new mines, whereas the private collieries propose only to develop their existing mines. We do not know to what extent this explanation holds good. It is for the private sector in the coal industry to answer this contention.

No Easy Task

The readiness of the private sector to reach a bigger target does not necessarily mean that the task before the private collieries in achieving even the target allotted is an easy one and that all the talks of handicaps confronting the industry mentioned in these columns from time to time were either incorrect or exaggeration. Far from it. The point that we wish to make here is that, given a favourable climate and adequate transport facilities, the private sector could achieve a higher target of production than the one now allotted to it and at a far cheaper capital cost than could be arranged by the public sector.

The main difficulties to be overcome by the industry are three: (1) the difficulty in getting the necessary finances, (2) the inadequacy of transport facilities, and (3) the shortage of cement and sand. As regards finances, the industry's internal resources are, as is well known, very much limited. So also its capacity to raise additional capital. In recent years, the coal industry's profit margin has been much lower than that of all the industries taken together. Thus, according to a recent study of capital issues in the private sector by the Reserve Bank of India, the ratio of profit after tax to the net worth (paid-up capital *plus* reserves) of the coal industry for the four years 1950-53 was 6.6 per cent., as compared with 7.3 per cent. for all industries. This means that the scope for a higher return on investments in industries other than coal is better than in the coal industry. That being so, how will the collieries be in a position to attract fresh capital? It is, therefore, rightly contended that the industry will find it pretty difficult to raise fresh capital for financing its expansion. Some of the old and established companies owning large mines may not find it as difficult as the others to raise the additional finances necessary. But these are not many.

The second problem is one of transport. As it is, it is stated that about 10 per cent. of the raisings lie accumulated at pit-heads for want of adequate transport. In order to mobilise the available wagons and increase loadings, the railways have recently suggested to the collieries a scheme involving a change in the coal pilot working. This scheme will facilitate a reduction in the idle wagons hours and thereby release wagons as quickly as possible after loading and unloading. It is pointed out in colliery circles that a considerable part of a wagon's time is wasted at railway stations and yards and the railway authorities, on their part, should also see that the idle wagon hours are reduced on their lines and yards.

The shortage of cement required by collieries for safety purposes and construction work is said to be a serious handicap to the coal industry. According to one estimate, the collieries received in 1955 hardly 23 per cent. of the quantity applied for. In the first quarter of the current year, the quantity supplied is said to be less than 1.5 per cent. of the demand.

The problem of supplying sand for stowing is by no means a small one. In fact, it bids fair to become more acute. For, with the construction of the Mython and Panchet dams of the Damodar Valley Corporation, it is feared the supplies of sand to the Dishergarh group of collieries, which produce high grade coal, will be seriously affected.

KOTA COALFIELD

The U.P. Government is reported to have asked the Central Government for transport facilities to exploit the Kota coalfield in Mirzapur District of the U.P. The Kota coalfield is one of those in which detailed geological investigations are proposed to be undertaken by the Geological Survey and the Bureau of Mines, Government of India, for purposes of qualitative and quantitative assessment. A preliminary survey of this coalfield has already been made by the Geological Survey. According to experts, it is estimated to contain a coal reserve of 2,000,000 tons and, worked as a second class one with a daily output of 100 tons, it would last for over 30 years with a recovery of about 65 per cent. of the reserve.

One of the handicaps in the development of the Kota coalfield is its situation far away from the rail head. The Central Government proposes to connect the Pipri-Gharham road by railway. If this proposal materialises, then the nearest rail head will be Pipri, about 20 miles from the coalfield. The U.P. Government is pressing the Government of India to implement this proposal as early as possible, so that the Kota coalfield might be exploited, thus making U.P. less dependent for its supply of coal on Bihar.

AMALGAMATION OF SMALL COAL MINES

The Government of India is considering the question of bringing forward legislation to compel small colliery owners to amalgamate their undertakings in order to enable them to function as an integrated economic unit. This was disclosed by Mr. Satish Chandra, Deputy Minister for Production, Government of India, in the course of the debate in the Lok Sabha on a non-official resolution moved by a Communist member on 30th November. The Government's proposal is in accordance with the recommendations of the Amalgamation Committee set up by the Government in November 1955 under the chairmanship of Mr. Balwantrai Mehta, M.P. The report of the Committee is yet to be published.

Speaking on the demand for nationalisation, the Deputy Minister ruled out complete nationalisation of collieries on the ground that it was not a practical proposition. He reiterated the Government's policy of running new coal mines itself and offering encouragement to existing private collieries to increase their production.

The resolution was rejected by the House.

Two Netherland firms of The Hague have founded a company for the study and planning of pipeline projects in Western Europe. The object of the company is to advise on projects concerning the laying and running of pipelines for the transport of petroleum and petroleum products in Western Europe and for making studies of and preparations for such projects. The Bechtel Corporation, an American undertaking of constructors and contractors, has already been commissioned by the company to investigate the technical and economic potentialities of constructing a trans-European pipeline system.

Power for Progress

THE SECOND FIVE YEAR PLAN ensures continuance of the pace, set by the First Plan, for developing the tremendous hydro-eletric power potential in the country.

As representatives of leading French manufacturers, we have already been privileged to supply various mechanical and electrical machinery of power stations for various projects.

The latest order was received for the KOYNA HYDRO ELECTRIC PROJECT TO SUPPLY 4 PELTON TYPE NEYRPIC TURBINES, each rated at 87,000 BHP at 300 RpM under an effective head of 1560 feet, one house turbine of 2,250 BHP, high pressure sphérical valves and other accessories.

Neyrpic Pelton Turbine runner 105,000 BHP at 428 RpM under a net head of 2428 feet.

TEA PRICES RISE SHARPLY

EXPORT DUTY STEPPED UP

THE Government of India has decided to levy export duty at As. 8 per lb. on tea during the current month, thus raising it from As. 6 per lb. levied for the month of November. In fixing the duty at As. 8 per lb., the Government has made a departure, to the relief of the industry, from the practice of levying the export duty strictly according to the slab system of export duty, as modified in the last budget. Under this system, the export duty for the price range from Rs. 2-8 to Rs. 4 per lb. is As. 6 per lb. and from Rs. 4 to Rs. 4-12 As. 10 per lb. If the price exceeds Rs. 4-12 per lb., the export duty will be As. 12. The normal duty leviable for the current month is As. 10 per lb., if not As. 12 per lb., on account of the further sharp rise in tea prices during November.

It will be recalled that an export duty of As. 10 per lb. was leviable for November itself, but the Government, in deference to the representations of the industry and trade, did not raise it from As. 6 per lb. levied for October last. It agreed to forgo a small return to the Treasury, thereby providing the much needed relief to the common tea producer. A section of the trade expressed the hope that the export duty would be retained at As. 6 per lb. in the coming months, so that the export of Indian common tea could be broadened. To this section, the Government's decision to raise the duty to As. 8 must have come as a disappointment. The Government's action in stepping up the duty by only As. 2 and not by As. 4 or As. 6, according to its schedule, is an indication of its desire to mop up only a part of the gain in prices during November, leaving the other part to be retained by the industry.

What is again noteworthy in the Government's announcement is the absence of any indication of the "world" price which it has fixed for the purpose of levying the export duty. It is not known whether the Government has taken the weighted average of the London auction prices as the "world" price, or has taken into account the prices in the Calcutta and Cochin export auctions, as has been urged by the industry. The Government's action in not announcing the price or sticking to the slab system leaves the industry and trade guessing what the export duty for the next month will be.

Gap Narrowed

During the month of November, tea prices in all the principal auction centres displayed a hardening trend. A feature of the sales during the past few weeks is the sharp rise in prices of cheaper teas, on account of the increased demand for these varieties, thus narrowing the gap between the high quality teas and plain teas. In London, the official price of Indian plain tea rose from 3*s.* 9½*d.* per lb. at the end of October to a high of 5*s.* 8½*d.* per lb. in the third week of November. It was generally expected that the price would go up further in the final auction of the month. This expectation did not materialise; on the contrary, there was a slight recession in the auction held on 28th November, Indian common tea fetching 5*s.* 4*d.* per lb. This easier trend is attributed to the smaller demand for clean plain broken pekoes and low medium brokens. Moreover, Continental buyers were less active than in the previous weeks. Nevertheless, the latest price represents a sharp rise over the October-end price, as well as that (3*s.* 9*d.*) at the end of November 1955.

In Calcutta, too, the export sales during November witnessed very strong and excited general demand, resulting in a hardening of prices all round, as is borne out by the following table:

	Sale 23	Sale 22	Sale 21	Sale 19
	26-11-1956	19-11-1956	12-11-1956	29-10-1956
	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	2 6 0 to 2 7 0	2 6 0	2 4 0 to 2 5 0	2 1 0
Plain B.P.	2 5 0 to 2 6 0	2 2 0 to 2 3 0	2 0 0 to 2 1 0	1 13 0 to 1 13 6
Medium Assam B.P. ..	2 6 0 to 2 8 0	2 6 0 to 2 7 0	2 4 0 to 2 5 0	2 1 0 to 2 2 0
Best C.T.C. Assam B.P.	3 0 0 to 3 2 0	3 2 0	3 2 0 to 3 4 0	3 0 0

It will be noted here also that the common and plain broken pekoes recorded a sharper rise than the high quality teas, thus narrowing the price gap between the two, consequent on the good demand for the lower quality teas.

Following the rise in auction prices, the increase in retail prices of teas in Britain is almost a certainty. In fact, the Tea Trade Committee announced a few days ago that "there is little doubt that, with the higher prices now obtaining in world markets, there will have to be an increase in the retail prices of some teas." One of the leading blenders of London, Messrs. J. Lyons & Co., has already announced that its teas, at present costing 6*s.* 4*d.* per lb. and upwards, will go up by 4*d.* per lb. shortly, but the cheaper blends will remain unchanged.

The Committee, however, described the rumours that tea would be rationed as entirely unfounded; for, according to it, the stock situation in Britain does not warrant such a step. It described the stock position as good. Supplies landed and afloat are placed at the equivalent of 16 weeks' consumption, a level said to be normal for this time of the year. The Committee added: "Furthermore, 22 ships are loading with tea at this moment, 13 in Calcutta, 5 in Colombo and 4 in Cochin. More tea is known to be coming from Chittagong, East Africa and other sources. Tea is moving satisfactorily from the plantations to the ports." On 16th November, tea stocks in warehouses in Britain were estimated at 96.25 million lbs. and stocks entered for customs, but not yet in warehouses, amounted to 14 million lbs. In addition, a large quantity, estimated at 52.5 million lbs., was afloat.

Additional Supplies

The diversion of ships via the Cape and the consequent pressure on spot supplies was the main cause for the sharp rise in prices, particularly those of plain varieties. It will be a few weeks before additional supplies mentioned above become available in Britain and, when the stock position improves, prices will tend to recede, unless there is a perceptible expansion in demand.

The following table shows the latest crop position of the main producing countries, as compared with that in the previous two years:

(In million lbs.)

	1956	1955	1954
North-east India—April-October	486.6	459.0	450.5
South India—January-September	91.2	96.2	95.3
Pakistan—April-October	45.1	41.1	45.8
Ceylon—January-October	301.1	318.6	301.3
Indonesia—January-August	59.6	63.7	66.4
Total ..	983.6	978.6	959.3

The strong demand for tea from foreign countries in the recent export auctions in Calcutta is not without its own problem. The tea gardens are said to be running short of export quotas and, as a result, there has been a scramble for export quota rights, in order to avail of the present favourable prices in export markets. The price of export quota rights touched last week a high of As. 8 per lb., having gone up from As. 3-4 in the preceding week and As. 2 at the end of September. It is felt in market circles that the quota releases are not enough, the releases so far announced by the Government being no more than 50 per cent. of the best crop basis of estates. These are equivalent to 346 million lbs. The North Indian tea crop so far amounts to 486.6 million lbs. and for the whole year it is estimated at 540 million lbs. The South Indian crop which now stands at 91.2 million lbs. is expected to be 125 million lbs. for the whole year. As against these, trade circles estimate the internal consumption at about 200 million lbs., thus leaving a surplus of 465 million lbs. for export out of the 1956 crop, as against which the Government has so far released 346 million lbs. The Government would appear to be unwilling to release a larger quota, in order to ensure that domestic supplies are not depleted. It, however, remains to be seen whether the estimated crop for the year will be realised in view of the crop regulation scheme which was brought into force last month. The Government can, therefore, be expected to announce its decision on further releases only after the November crop figure is available.

UNAUTHORISED TEA PLANTINGS

The Tea Board announced on 30th November 1956 with the approval of Government of India, that no immunity against prosecution will be available in respect of any unauthorised plantings carried out after 31st March 1957. Any person found to have planted tea on land not planted with tea after that date without a valid permit from the Board will be liable to be prosecuted under the law, the Board stated.

E. PAKISTAN'S JUTE INDUSTRY

EXPANSION IN ACREAGE AND SALES PLANNED

THE closure of the Suez Canal has hit Pakistan's economy hard, but the full impact of it is expected to be felt only after a few months. An idea of the possible damage to the country can be gauged from the fact that about 70 per cent. of its imports and 40 per cent. of its exports pass through the Suez Canal. The jute industry, which is an expanding source of dollar earnings, is one of the victims of this development. Large quantities of jute and jute goods, which Western countries have contracted to buy, await shipment, due to lack of shipping space. No doubt, the buyers have given assurances to lift the goods purchased, but the main worry of shippers is the delay in the movement of goods and the consequent financial difficulties. Meanwhile, there has also been a rise in price of raw jute.

This unforeseen development has not, however, deterred Pakistan from going ahead with its plan to exploit its potentialities for increasing its foreign exchange earnings through the export of raw jute. The first step in this direction is to increase the jute acreage during the next season so as to yield 500,000 bales over and above the present production of six million bales. A recommendation to this effect was made to the East Pakistan Government by the Jute Advisory Board at its meeting held last week. The Board based its recommendation on the belief that the world demand for jute and jute goods next year will increase to seven million bales. It may be noted, in this connection, that the second official estimate of jute crop for the season 1956-57 is 5.5 to 6 million bales. This, along with about 200,000 bales brought forward from the previous season, is expected to be enough for meeting the world demand for raw jute from Pakistan, after satisfying the internal requirements. At present, Pakistan's domestic annual consumption of raw jute is of the order of 1 million bales. With the contemplated increase in capacity from 6,000 looms to 9,000 looms during the next financial year, the consumption is likely to go up to two million bales and even more, if the mills work more than one shift per day.

Acreage and Output

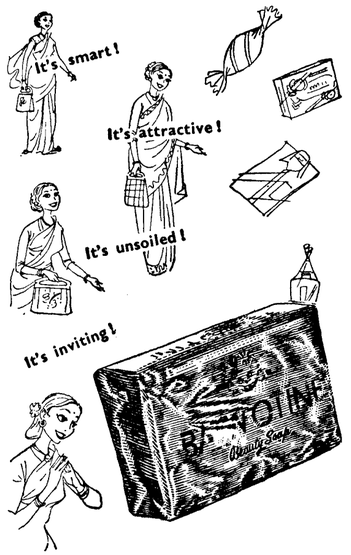
It will be interesting to note here that the acreage under jute and output have, during the last seven years, not shown a steady trend, as will be borne out by the following table:

(Area in million acres; production in million bales)

Year	*Area*	*Production*
1948-49	1.88	5.48
1949-50	1.56	3.33
1950-51	1.25	4.45
1951-52	1.78	6.33
1952-53	1.91	6.82
1953-54	0.97	3.61
1954-55	1.24	4.66
1955-56	1.20	5.59

With the increasing uses of substitutes, such as sisal, hemp and other fibres, Pakistan has begun to pay greater attention to technological research (in addition to increasing the output of jute). The chief aim of the research will be to improve its fibre strength and reduce its cost of production. As a result of the efforts of the Pakistan Central Jute Committee, a jute research institute has just been built at a cost of Rs. 25 lakhs. The Institute will be fully equipped to deal with all aspects of agricultural and technological problems, as also various mill processes. The technological research wing of the Institute is to undertake applied research, with particular emphasis on research which will reveal new and extended use of jute.

The East Pakistan Government is also contemplating sending out a team of officials and representatives of the raw jute and jute goods industry to Eastern countries, such as Indonesia, Burma, China, Australia and Japan to explore the possibility of building up markets for Pakistani jute and jute goods in those countries. Another plan, still under the consideration of the Government, is to purchase jute from the border areas during the next season, with a view to preventing its smuggling to India. The Plan, which is being prepared by the provincial jute department, is estimated to cost the Government about Rs. 1 crore.



Of course... it's wrapped in

TRAYOPHANE

The new name for TRAYONS TRANSPARENT FILM

- Trayophane makes your products look *smart, elegant!*
- The vivid, brilliant colours of Trayophane make your sale *easy!*
- Its perfect transparency means greater *visibility!*
- And Trayophane is *cheap* too! A sheet 30" × 20" costs less than six pice! It's available in rolls and sheets.

PROGRESS OF ELECTRICAL GOODS INDUSTRY REVIEWED

WIDE GAP EXISTS IN SEVERAL LINES OF PRODUCTION

A COMPREHENSIVE review of the progress of the electrical goods industry was given by Mr. M. M. Shah, Union Minister for Heavy Industries, in the course of his address at the recent meeting of the Development Council for Heavy Electrical Industries, held in New Delhi. In the course of his review, Mr. Shah pointed out that, despite the immense progress that had been made by the industry, there was still great scope for improvement and expansion. He urged the representatives of the industry to bear in mind that the future of the industry was linked up with the progress of industrialisation in general and that of electrical energy supply, in particular. In this connection, he reminded them that the total installed capacity of power plants in the country, which was about 3.4 million kw. in March 1956, would go up shortly to 7 million kw. and even to about 8 to 9 million kw. by the end of the second Five-year Plan period.

Electrical goods manufacturing industry has made rapid progress in recent years. This will be clear from a perusal of figures relating to production of two important electrical goods, namely, transformers and motors. Between 1951 and 1955, the output of transformers increased from 194,000 k.v.a. to 564,700 k.v.a. and that of motors from 143,000 h.p. to 252,000 h.p.; production is now running at an annual rate of 854,000 k.v.a. and 340,000 h.p., respectively. The present targets for transformers and motors, to be reached before 1961, are 1.36 million k.v.a. and 600,000 h.p., respectively. It would appear that the authorities now feel that these targets should now be revised upwards to 1.5 million k.v.a. for transformers and 800,000 to one million h.p. for motors; this would imply an increase in capacity to 2 million k.v.a. and 1.25 million h.p., respectively.

Imports

For the plant and machinery required for power projects at present, according to Mr. Shah, the country is largely dependent on imports. Only a few items of medium and light electrical equipment such as transformers, small motors, conductors, wires and lamps are being manufactured in the country. Even here, the full needs are not met from indigenous sources. The annual imports of all categories of electrical equipment during the last two years or so were of the order of Rs. 30 crores per year, out of which heavy electrical equipment alone was of the order of Rs. 18 to Rs. 20 crores per year. On the basis of the long-term plan for electrical power development, the demand for heavy electrical power equipment will increase substantially.

It has, therefore, been decided that manufacturing capacity for heavy electrical equipment should be created in the country, and accordingly, the Government is setting up in the public sector a Heavy Electrical Equipment Plant in collaboration with the Associated Electrical Industries Ltd. of England, at a total capital cost of Rs. 25 crores when fully completed. The factory is to be located near Bhopal and is likely to go into production in 1960. Detailed plans of this factory have been drawn up and, according to the tentative project, the factory after completion will have the capacity for production of different items of electrical equipment with an aggregate annual turnover of about Rs. 8 crores. The revised programme of the factory envisages production of heavy electrical equipment to the extent of Rs. 20 to Rs. 25 crores per annum on a two-shift basis. The setting up of the Heavy Electrical Equipment Plant in the public sector, it is stated, does not exhaust the scope for progress in this field. In this connection, Mr. Shah observed: "In the light of increased activity envisaged during the second and the third Five-year Plans towards power generation and utilisation, I feel there is easily scope for at least one more unit of the size of the present H.E.P. Factory and it will be necessary to plan for this from now itself."

Although the production of motors and transformers has thus expanded considerably, India is still not producing larger ratings and certain special types in these lines of manufacture. India's programme for manufacture of machinery for the cement, sugar, tea and jute industries will call for motors of larger ratings while its chemical plants, fertiliser plants and refineries will need special purpose motors. There is also scope, Mr. Shah said, for the manufacture of fractional horse-power motors, flame-proof motors, variable speed motors, geared motors and motors with special operating characteristics, such as those required for sugar and textile mills and for operating heavy cranes. Similarly, India will require transformers of larger ratings which are now wholly imported. Further, the demand for special transformers, such as welding transformers, mining type transformers and instrument transformers is growing; their production falls far short of the demand for them. Mr. Shah felt that "it may be worthwhile for the well-established firms to consider concentrating more on the manufacture of transformers of larger ratings and for the new units that may be coming up to concentrate, in the initial stages, on the manufacture of transformers of the smaller ratings." Further, ancillary industries, such as valves, thermometers, protective equipment, breathers and gauges, should be developed, for the country is more or less exclusively dependent upon imports at present.

Cable Industry

Much significant progress has been made by the cable industry over the Five-year Plan period; the value of output has gone up from Rs. 4 crores to Rs. 11 crores. Nevertheless, substantial quantities of various types of cables and wires are being imported. During 1955, four units with an installed capacity of 10,370 tons produced about 8,000 tons of A.C.S.R. and all-aluminium conductors. During 1956 (January-September) five units with a capacity of 13,370 tons are estimated to have produced 10,000 tons of the A.C.S.R. and all-aluminium conductors. With greater emphasis on rural electrification and the use of A.C.S.R. and all-aluminium conductors, the demand for these articles is likely to increase further. Based on the present production and import, India's present estimated demand is of the order of 10,000 tons to 12,000 tons per year, which is estimated to go up to 20,000 tons per year by 1960-61. According to Mr. Shah, it is necessary to make sure that India's future requirements are met from indigenous production through careful planning. Units manufacturing these conductors should also plan for the manufacture of accessories required for these conductors because at present India is importing large quantities of such equipment. Manufacture of special types of accessories, such as bimetal clamps, armour rods and dampers should also be taken up.

The present level of production of V.I.R. and P.V.C. cables is of the order of 90 million yards and the import is of the order of 36 million yards per annum, which clearly shows that the gap has to be bridged even now. These cables being essential and being in the nature of consumer goods, it is necessary to have sufficient competition in order to make sure that these are made available in large quantities and good quality. Other lines of manufacture, for which there is good scope for progress, are paper-insulated power cables, winding wires and enamelled copper and paper-covered winding wires.

Switchgears

The pace of development in the sphere of switchgear and control gear manufacture, according to Mr. Shah, is "rather slow"; the bulk of the country's requirements are met through imports valued at about Rs. 7 crores. Only recently, increasing interest is being shown in this field. It is necessary that the developmental aspect of this industry should be carefully studied in order that the industry may be established on a proper footing. Switchgears of various types are required in very large numbers for the electrification schemes as well as for industrial development. The demand for the various types of switchgears for 1961 is likely to be of the order of Rs. 4 to 5 crores in respect of switchgears of the rating coming within the field of activity of the electrical goods industries. As regards the manufacture of motor control gear and domestic and industrial types of metal clad switches, the progress has been far from satisfactory. Much development work is required in this field and the Development Council should study the developmental aspects of this industry. "As most of you are aware," Mr. Shah said, "import policy for motor starters had to be liberalised, because indigenous production could not meet the demand, with the result that the prices of certain brands of starters increased by nearly 50 to 60 per cent." He added: "A similar state of affairs exists in the case of metal clad switches where there is a price increase of nearly 30 to 40 per cent. in recent months. It is very necessary, in the interest of the country's progress, that a proper and speedy development of these industries should be undertaken."

Insulating Materials

Mr. Shah urged the Council to bear in mind the development of ancillary industries, such as those manufacturing insulating materials and stampings and laminations. Most of the raw materials needed for the manufacture of insulating materials, such as mica and steatite, are available in India. Mr. Shah said: "I can assure you that the Goverment will give all assistance in this connection. Our paper mills should explore possibilities of manufacturing various types of insulating paper." As regards laminations and stampings, Mr. Shah said that, with the increase in production of transformers, motors and other electrical goods, the demand for them would increase considerably. He felt that, in order that there might be sufficient competition in regard to quality and price of these articles, it was necessary to have a few more units manufacturing these items. He added: "By establishing new units for this purpose, we can also take advantage of the latest techniques developed in other countries. Special mention may be made of the use of cold-rolled silicon steel sheets for the manufacture of transformers."

In conclusion, Mr. Shah stressed the importance of augmenting facilities for technical training and of quality and standards. He urged the industry to "come forward to train artisans, apprentices, operators, supervisors, foremen, linesmen, wiremen, overseers, sub-overseers and all categories of technical personnel in their factories." Emphasising the need for standardisation, Mr. Shah said that it made economical methods of production possible. He pointed out that the Indian Standards Institution had formulated standard specifications for various electrical goods and hoped that, when they were finalised, the industry would not hesitate to adopt them. Finally, he urged the industry to review periodically the prices of products and suggest steps to be taken "in order that the finished commodities are reasonably priced." It is to be hoped that the Council and the interests concerned will not ignore Mr. Shah's advice in regard to quality and prices. Since many sections of the industry enjoy tariff protection, it is necessary that they should see that the interests of consumers are amply safeguarded.

ROURKELA STEEL PROJECT

The Government of India has found it more advantageous, according to reports from New Delhi, to dispense with the earlier arrangement under which the W. German firm, Krupps-Demag, was to participate in the capital structure of Hindustan Steel Ltd. which owns the Rourkela steel factory. Under the original agreement, the W. German firm was to be offered shares in the steel works upto a maximum of Rs. 10 crores. This arrangement was made, in order to enable the Government to pay for the plant and machinery supplied by the Krupps-Demag in instalments rather than by immediate payments. It would, however, appear that this arrangement did not turn out to be in India's favour. This was because the firm felt compelled to quote very high prices for goods it supplied under conditions of deferred payment, thanks to the high interest rates in W. Germany, as compared with the very low rates of interest prevailing in India. This would have resulted in India paying as much as 12 per cent. simple interest, as against 4 per cent. in this country. But, when the Government of India asked for quotations under conditions of immediate payment, the prices, it is stated, were promptly reduced by Krupps-Demag and other W. German firms. These have now been accepted by the Government of India and orders placed for various equipment. Since there is no question of deferred payments, the participation of the W. German firm in the capital of the Rourkela steel works has been dispensed with. Thus, the one-million ton Rourkela steel factory will be entirely owned by the Government.

Orders for practically the entire equipment for the steel works have been placed with various German firms, costing over Rs. 84 crores, as a result of negotiations conducted recently in W. Germany by the Indian steel mission, headed by Mr. S. Boothalingam, Secretary, Union Ministry of Iron and Steel. The mission found that it was not possible to get equipment elsewhere for the plant, except the U.S. where the prices are higher than in W. Germany. The cost of the Rourkela plant is now estimated to be 30 per cent. more than the revised estimated expenditure of Rs. 128 crores.

EXPORT OF POWER FROM YUGOSLAVIA

The Committee on Co-ordination, established by the Electric Power Committee of the United Nations Economic Commission for Europe, has noted with satisfaction that a *syndicat d'etudes* will be formed to carry forward the Yugoslav power export scheme, known as Yougelexport. The decision to form the new organisation was taken on 7th November by the representatives of the Electric Power Industries from Austria, the Federal Republic of Germany, Italy and Yugoslavia. The aim of the new body will be to formulate, according to the principles laid down by the Committee on Co-ordination, some propositions for the realisation of the projects contained in a study made in the E.C.E. in 1955 on the possibilities of exporting electric energy from Yugoslavia. Steps will be taken to open contacts and enter negotiations with banking institutions and national enterprises, as well as with international organisations which might participate in carrying out the project, and to prepare the text of the corresponding contracts. The new organisation will maintain relations with the Committee on Co-ordination, with the aim of keeping the Committee informed of its work and of securing the Committee's help in carrying out its tasks and with presenting to the Committee, within a year at the most, its conclusions as well as concrete propositions for the execution of the prescribed projects for the first step in the programme of investment. Each signatory has agreed to appoint one or two representatives to meet within a month to draw up the statutes of the *syndicat d'etudes*.

Earlier studies of the "Yougelexport" project demonstrated the possibility of building on Yugoslav territory four central hydro-electric stations the production of which would be exported to Italy and the Federal Republic of Germany over a network of power lines of 380 k.v. Austria's interest in the project is mainly in a seasonal exchange of energy with Yugoslavia and as a transmitter of energy to the Federal Republic of Germany. Total exportable energy is around 4,300 million kilowatt hours. The cost of the entire project has been estimated at about $377 million.

USE OF WAGONS

The railway authorities have been urged by the Federation of Indian Chambers of Commerce and Industry not to reduce the conveniences enjoyed by consignors and consignees of goods in the former's effort at improving the utilisation of wagons. The Federation, in a communication to the Ministry of Railways, points out that it understands that a wagon generally remains idle for about 16 to 17 hours out of every 24 hours in the yard. If this time could be reduced even by 25 per cent., it would result in a substantial increase in wagon capacity. It suggests that, in fixing loading and unloading time, the authorities should take into consideration the fact that in some centres, a wagon is compelled to remain idle for sometime in the yard even after loading and unloading operations are completed. The adequacy of free time allowed to users, it says, cannot be considered without reference to the congestion in goods sheds which occurs quite frequently on account of insufficient storage facilities. Any reduction in free time, it is stated, would only increase the inconvenience already caused to users through lack of proper facilities for loading and unloading. If the reduction in loading and unloading time is to be made effective, according to the Federation, the railways should undertake the responsibility of giving timely intimation to the users about the arrival and despatch of wagons. In this connection, it cites the experience of tea gardens; since they are situated far away from rail-heads, it normally takes between four and six hours for intimation to reach the gardens. The Federation, therefore, feels that it is inappropriate to lay down a uniform free time for all categories of goods.

EAST EUROPEAN RESOURCES OF URANIUM

The search for uranium in several countries continues unabated, thanks to the importance of this commodity in the production of atomic energy. In some cases, these searches have not been without profitable results. But the main sources, with the exception of Albania, are found to lie in Eastern Europe where uranium mining is being carried out under Russian influence, for the benefit of the U.S.S.R. It is believed that East Germany has supplied Russia with one-third of its uranium needs. Another leading supplier, Czechoslovakia, has important deposits north-west and south-west of Prague and near both the German and the Polish frontiers. Sizable uranium deposits have also been discovered in Bulgaria and Rumania. The Yablonitsa mines, north-east of Sofia, are believed to have a daily output of some 1,100 tons of ore, which are shipped to the Soviet Union. In Rumania also, uranium is extracted in no less than five centres in a belt running parallel to the Hungarian frontier.

An interesting development in Eastern Europe is that the uranium miners in Hungary have demanded that Russia should buy the uranium they supply at world prices. Uranium discoveries in Hungary relate only to the post-war period. Such discoveries are reported to have been made in various parts of the country, particularly in the mining area near the Yugoslav frontier. Besides, the granite in hills south-west of Budapest was also found to be very rich in uranium. If Russia concedes the Hungarian miners' demand for higher prices for uranium, it may be compelled to accord similar treatment to other countries in Eastern Europe also.

ELECTRIC POWER STATISTICS

The United Nations Economic Commission for Europe (E.C.E.) has published its first annual bulletin of electric power statistics for Europe. The bulletin, entitled *Annual Bulletin of Electric Energy Statistics for Europe*, has been compiled at the request of the E.C.E. Electric Power Committee's Working Party on Electric Power Statistics. The current issue contains final data for the years 1938 and for 1950 to 1954, as well as provisional data for 1955. The data given are for Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, Eastern Germany, Finland, France, Greece, Hungary, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Rumania, Sweden, Switzerland, Turkey, Union of Soviet Socialist Republics, United Kingdom, United States of America, Western Germany and Yugoslavia. The tables in the publication provide figures for maximum net capacity in continuous operation (situation at 31st December of each year); fuel consumed in electricity generation; international exchanges of electric energy during 1955; imports of electric energy during 1938 and 1951-55; exports of electric energy during 1938 and 1951-55; production, international exchanges and gross consumption of electric energy and average efficiency of thermal plants; and consumption of electric energy. One of the aims of the bulletin is to give all-European coverage to statistics already published regularly for a limited number of countries, and, at the same time, to broaden the scope of the information published. The definitions adopted by the Working Party, which are those used in the bulletin, are based as far as possible on definitions in current use, and in particular on those adopted by the International Union of Producers and Distributors of Electric Energy (U.N.I.P.E.D.E.).

BOMBAY ELECTRICITY BOARD

During the year 1955-56, the Bombay Electricity Board, according to the Board's second Administration Report, generated 372 million units in its own stations, as against 203 million units in the previous year. It also purchased 99 million units in 1955-56, as compared with 81 million units. The Board's revenue and expenditure aggregated Rs. 260 lakhs and Rs. 187 lakhs, as compared with Rs. 156 lakhs and Rs. 114 lakhs, respectively, in 1954-55. The total installed transformer capacity of 11 k.v. and below was 38,011 k.v.a. and of above 11 k.v. was 247,708 k.v.a. which reflects an increase of 7,527 and 24,508 k.v.a., respectively, over the previous year. The total number of consumers served as at the end of 1955-56 was 28,186, as against 23,240 in the previous year, an increase of 4,946 during the year, while the total load connected on the system was 128,008 kw. at the end of the year, which reflects an increase of 27,496 kw.

RIVER VALLEY PROJECTS

The Government of India has decided to set up a National Construction Corporation for the execution of river valley projects in the country. It has been decided, in consultation with the States concerned, that the Corporation should undertake the construction of the Chambal Project canals as its first job. The Corporation will be set up under the Indian Companies Act and would have a nominal capital of Rs. 2 crores subscribed by the Centre and the participating States. In the beginning, the Corporation will take up only two or three projects in order to have time to develop the organisation and extend its activities. The articles and memorandum of association are expected to be finalised shortly.

The Railway Board has invited tenders for 100 broad-gauge diesel locomotives from selected firms of international repute on a global basis. These locomotives will be used on sections where additional line capacity is required and where electrification will not be completed in time to cater for the additional traffic.

The Railway Board has accepted all the recommendations, except two which are still under consideration, of the delegation which toured Europe to find out how "Thomas Steel" can be utilised on Indian railways. "Thomas Steel" is not manufactured in India.

A scheme to manufacture X-ray equipment worth about Rs. 50 lakhs annually at the Bharat Electronics Ltd., Bangalore, is under consideration.

NEW PRODUCTS AND PROCESSES

New Pigment for Plastic Colouring

MOST inorganic red pigments have a number of disadvantages when they are used to colour plastics. A new organic red pigment which has been specially developed for use in colouring plastics and in particular polyvinyl chloride is, however, said to possess a number of important advantages over such inorganic compounds. The new pigment, called "Irgalite Red HGL," is said to have outstanding fastness to light and heat, even when it is used in the low concentration required to produce tint transparencies. Indeed, the pigment, which has been developed by the Geigy Company as the result of several years of research and development work, is said to give pigmentations of exceptional fastness to light and heat when used to produce both transparent and opaque tint shades. Like other colouring materials, its shade and properties are affected in some degree by the use of different plastics, plasticisers and stabiliser systems, but it is claimed the variations in pigmentation produced in this way are extremely slight. The chemical constitution of Irgalite Red HGL makes it unsuitable for use in rubber compounds.

Magnesium-Thorium Alloy

Magnesium-thorium alloy is now being made in pilot plant quantities for use in aircraft development work. The advantages of this magnesium alloy lie in the fact that it retains the light weight and corrosion resistance of other magnesium alloys, and yet withstands higher temperatures. Metal sheets manufactured with the magnesium-thorium alloy can, for example, withstand temperatures of 600 degrees Fahrenheit for long working periods. It will resist temperatures of the order of 800 degrees Fahrenheit for shorter periods of time. It is claimed that the material can be fabricated and machined as easily as other magnesium alloys. On the other hand, because of its thorium content, its use must be licensed by the U.S. Atomic Energy Commission.

Rust Preventive Jute

Specially impregnated jute made up in the form of hessian is now being made available as the result of research carried out by the British Jute Trade Research Association. The impregnated jute will, it is claimed, give protection to bright steel parts against corrosion and rusting under all humid and acidic atmospheric conditions likely to be encountered in transit and storage. The jute, which is impregnated with sodium benzoate corrosion inhibitor, can be dust-proofed to make it suitable for use with high-speed wrapping machines. Only a single wrapping is, it is claimed, necessary for the adequate protection of steel even under extreme conditions. The impregnated jute is also effective in preventing the rusting of steel parts enclosed in jute bags.

New Heat Spraying Process

A process for carrying out spray painting and other types of spraying without the use of compressed air has been developed by Dede Products Corporation, Amherst, Ohio, U.S.A. The operation of the process depends on the use of a heating system which is incorporated in the spraying unit. This heats the materials to be sprayed to temperatures of the order of 175 degrees Fahrenheit. They are then put under a pressure of about 500 to 600 lbs. per square inch and when they are released from the nozzle of the spray gun they atomise. Forces sufficient to carry the atomised paints, or other spraying materials to the surface of the work which is to be coated are said to be developed by this process.

Non-Eradicable Ink

A new ink that cannot be removed from paper, even though it is made invisible by eradication or water-damage, has been introduced in the United States by the W. A. Sheaffer Pen Company. The new writing fluid, called Sheaffer's Skrip with RC-35, contains a luminescent substance. The luminescent substance grips the paper fibre even when all other elements of the ink are removed to make the writing disappear. When exposed to ultraviolet light, the luminescent substance glows, showing the writing at full strength. The company believes that the new permanent ink will provide greater protection for bank cheques and business records. In addition, it will make it possible to restore records that have been water-damaged by floods or fire-fighting equipment.

Uranium From Lignite Ores

A process for obtaining uranium metal from uranium-bearing lignite ores is to be tested experimentally by the U.S. Atomic Energy Commission. The importance of these experiments lies in the relative abundance of lignite ores containing low percentages of uranium in some areas of the world. The process will, it is understood, involve several stages including solvent extraction, leaching and filtration or the use of some other separation method. The experiments are to be carried out at the Grand Junction, Colorado Laboratory of the Atomic Energy Commission.

Aviation Safety

The Civil Aeronautics Administration of the United States reports the development of two devices that will aid in making airplanes more conspicuous, and therefore less likely to collide in daytime. One development is a powerful flashing light that extends the distance a plane can be seen by 25 per cent. A new fluorescent paint is another development. The new paint makes a plane stand out prominently against any background, whether against the sky from below or against the green and brown of earth from above.

TAXATION OF CAPITAL GAINS

CASE FOR AND AGAINST NEW TAX REVIEWED

THE re-imposition of the tax on capital gains was the first of the new tax proposals announced by the Union Finance Minister, Mr. T. T. Krishnamachari, in the Lok Sabha on Friday, 30th November 1956. It is, therefore, likely that the old controversy about the wisdom of imposing a capital gains tax will be revived in the next few weeks, thanks to the fact that authoritative opinion has been sharply divided on the subject. In this context, it will be worthwhile examining the recent history of this proposal which, after remaining in the statute book for a brief space of two years after its introduction in 1947, was abolished in 1949.

The tax was first introduced in the 1947 budget by the then Finance Minister, Mr. Liaquat Ali Khan, and abolished in the 1949 budget by the Union Finance Minister, Dr. John Matthai. Although the relevant provision in the Income-tax Act, Section 12B, remains intact, it applies only to capital gains which arose during the period 1st April 1946 to 31st March 1948. Under this section, the limit for exemption from tax in respect of capital gains is Rs. 15,000. The amount of capital gain, according to this section, is to be computed after making certain deductions from the full value of the sales of an asset. These deductions are: (1) expenditure solely in connection with sale, exchange or transfer of assets; (2) the actual cost to the assessee of the capital asset, including any expenditure of a capital nature involved and borne by him in making any additions or alterations thereto. Some exemptions have also been provided. Thus, the tax is not payable by an assessee "in respect of any profits or gains arising from the sale, exchange or transfer of a capital asset, being properly the income of which is chargeable under Section 9 and which has been possessed by the assessee or a parent of his for not less than seven years before the date on which the sale, exchange or transfer took place." Further, the section provides that a transaction shall not be treated as a sale, exchange or transfer where such transaction takes place "by reason of the compulsory acquisition thereof under any law for the time being in force relating to the compulsory acquisition of property for public purposes or any distribution of capital assets on the total or partial partition of a Hindu undivided family or on the dissolution of a firm or other association of persons or on the liquidation of a company, or under a deed of gift, bequest, will or transfer on irrevocable trust."

Some Concessions

Under the new tax proposal—it will apply to capital gains made on or after 1st April 1956—these exemptions are sought to be withdrawn, while the limit at which the tax will be applied is being reduced from Rs. 15,000 to Rs. 5,000. It has, however, been provided that no capital gains tax would be chargeable if the total, including the capital gains, does not exceed Rs. 10,000. After announcing these changes, in the existing section relating to the capital gains tax, Mr. Krishnamachari said:

"I am also considering some concession for small people making gains by the sale of small and medium-sized houses. Under the existing law, capital gains are to be taxed on the basis of slab rates. This, however, bears no relation to the other income of the person making the gains. It is now proposed that the rate of tax to be charged on capital gains should be the income-tax rate applicable to the other taxable income of the assessee increased by one-third of the capital gains he makes in the relevant year. In the case of companies, the rates of tax will be the usual income-tax rate. Another important change is that the assessee has the option to have his gains worked out either on the basis of original cost or on the basis of its value on 1st January 1954."

There is no doubt that capital gains tax is a very controversial measure. It has been assailed on the ground that it is a serious disincentive to investment and free marketing of property. This was the main reason which led to its abolition in 1949. Referring to this tax, Dr. John Matthai observed that the earlier expectations of a large income from this source had not materialised. He averred that its effect on investment had been markedly adverse and it had hampered the free movement of stocks and shares without which it was hardly possible to maintain a high level of industrial development. In these circumstances, the Finance Minister was convinced that the retention of the tax was ill-advised.

The Taxation Enquiry Commission, which examined the subject, reached very nearly the same conclusion as the one reached by Dr. John Matthai when he was Finance Minister. The Commission agreed that capital gains represented an addition to income and, therefore, to the taxpayer's ability to pay. These gains, the Commission said, also constitute one of the factors making for inequalities of wealth, especially in a developing economy with its increasing measure of industrialisation and urbanisation. Nevertheless, it felt that the reasons given by the Government for the abolition of the tax in 1949 still held good. The Commission also felt that, if the tax were reintroduced, there was a "danger of tax avoidance being stimulated by attempts to pass off as capital gains what may otherwise have been treated as a part of taxable income." Further, it averred that, "with the imposition of estate duty, the tax system now contains a direct means for diminishing the inequality of wealth." The Commission said that it was not, therefore, recommending the re-imposition of the tax on capital gains. At the same time, it warned that, if the country entered an era of "continuously rising prices and profits and of capital values," capital gains may become an "eminently suitable" subject for taxation.

Dr. Kaldor's Report

If the Government, in the face of the opinions expressed by the former Finance Minister, Dr. John Matthai, and the Taxation Enquiry Commission on the taxation of capital gains, has thought it fit to subject these gains to tax, it is presumably due to the strong advocacy of the case for such tax by Dr. Nicholas Kaldor. In his report, Dr. Kaldor has argued that the only impartial concept of income is that which treats all realised gains equally, meaning thereby that income should include capital gains. He does not agree with the Taxation Enquiry Commission's view that there is a danger of "tax avoidance" in capital gains tax. The Commission's view, he holds, "overlooks the fact that the complete exemption of capital gains must necessarily afford a much stronger stimulus to tax avoidance than the reduction of liability arising out of differential treatment." He also feels that the arguments by which Dr. John Matthai defended the Government's decision in 1949 are not adequate to justify the abandonment of the experiment. The three arguments used by the then Finance Minister, as stated already, are: (1) the revenue from this source is small; (2) the tax has a bad psychological effect on investment and (3) the tax hinders free movement of shares. Referring to these arguments, Dr. Kaldor says that one cannot argue that the tax has only a negligible yield and at the same time say it will have important repercussions on the economy. Emphasising the need for early re-imposition of the tax, he says:

"In my opinion it would be a great mistake to treat the question of the taxation of capital gains mainly on short-term revenue considerations, and to put the tax off and on according as the immediate revenue expected in the light of the prospective economic situation was small or large. Quite apart from the fact that the basic and most important reason for the tax lies in the field of equity, and not just revenue, the revenue potential of a capital gains tax can only be gauged on a long-term basis. It is common knowledge that, in general, realised capital gains reflect accrued capital gains with a time-lag of a number of years. This time-lag, moreover, is by no means uniform so that it is more correct to regard the average yield of the tax over a period of, say, five years as reflecting the average rate of accrual of capital gains of a five-year period which elapsed 10-15 years previously. Hence the full yield potential of the tax should only become apparent after it had been in operation for 10-20 years. It seems to me, therefore, that the tax ought to be reintroduced as soon as possible, and quite irrespective of the immediate prospects of rising or falling prices, or of the immediate expectation of the yield. But apart from this, in view of the greatly accelerated rate of capital expenditure under the second Five-year Plan. I do not think that the Board's view expressed in December 1953 that 'the general tendency seems to be for profits and prices falling rather than rising' could be supported in the present circumstances."

Exemptions

After recommending the tax on capital gains, Dr. Kaldor suggests that some of the exemptions from the scope of the tax under Section 12B of the Income-tax Act should be withdrawn. He refers, in particular, to exemptions accorded to transfers of property as a result of compulsory acquisition by public authorities or partition of a joint family, or liquidation or gift deeds. He suggests that all capital gains should be brought within the tax net. He argues that, if transfers by way of gifts, bequests, etc., were exempted, a considerable part of capital gains would escape from taxation and the taxpayer "will be given an unhealthy incentive so to manipulate his asset holdings as to make net unrealised gains as large as possible, since all unrealised gains are wiped out for tax purposes when the property passes hands on decease." These exemptions, he says, might cut the potential long-term yield of the tax by two-thirds or three-quarters. The Union Finance Minister's decision to withdraw these exemptions from the scope of the tax is thus in line with Dr. Kaldor's suggestions. Referring to the other exemptions contemplated in Section 12B, Dr. Kaldor says:

"The provisions of Section 12B exempt agricultural land, personal effects including jewellery, as well as the stock in trade, etc., of a business, profession or vocation. The last exemption is certainly correct since the capital gains on stock-in-trade get automatically taxed as ordinary profits as and when the stock is realised. Exemption of agricultural land will, perhaps, be retained so long as the existing constitutional provisions concerning agricultural income remain unmodified. The exemption of jewellery, however, was presumably introduced mainly on administrative considerations. Jewellery, etc., above a certain value represent a form of investment, and ought certainly to be brought within the scope of the tax. If a personal expenditure tax and an annual tax on net wealth were introduced as suggested in this report, coupled with an automatic reporting system suggested in Chapter 6, the revenue would be capable of checking transactions in jewellery in almost the same way as transactions in other forms of property."

An interesting discussion on the yield from the tax on capital gains forms part of Dr. Kaldor's report on this subject. He says that it can be safely assumed that the value of privately-owned property increases at least as fast as the national income measured at current prices. If the rate of progress envisaged in the second Plan were attained, the total value of property should rise by at least 3.5 per cent. per year. He estimates the total privately-owned property in India (in estates of over Rs. 1 lakh and excluding agricultural land) at Rs. 3,500-4,500 crores. Of this property, about Rs. 1,000 crores takes the form of ordinary share capital, while another Rs. 1,000 crores may be assumed to represent the value of urban property and of other property with an inherent tendency to capital appreciation (such as business goodwill). On this assumption, he estimates the annual accrual of capital gains at Rs. 60-100 crores. And on the basis of the schedule of rates he suggests (40 per cent.), he estimates, the long-term yield from the tax at Rs. 25-40 crores.

Ordinary Shares

As regards ordinary shares, Dr. Kaldor says that it is from this source will come over a longer period the greater part of capital gains. He estimates the long-term rate of appreciation of share capital in India at 10 per cent. per annum. Explaining the basis of this estimate, he says:

"My reasons for this are that the expansion in production in the organised private sector of the economy can be assumed to proceed at a rate of 10 per cent. per annum for many years to come. This was the rate of growth attained for the last five or six years, and there is no reason why it should not be maintained for the next 10-20 years. It is true that the expansion of industrial production has not carried with it during the last five years an equivalent percentage increase in company profits. I think, however, that this was due to special circumstances. It is much more likely that in the future, over longer periods, the rise in company profits will be fully proportionate to the rise in production; the rise in dividends to the rise in profits; and the rise in share values to the rise in dividends. During the last five years, according to the figures given by the Taxation Enquiry Commission, the rise in industrial production of over 40 per cent. coincided with a fall in profit margins (on gross sales) from around 17 to around 10 per cent. If these figures are correct, they can only be interpreted in terms of a changeover from 'inflationary' to 'normal' conditions, which coincided with the expansion in production since the war. There is no reason to suppose, however, that this tendency will continue."

Profit margins, according to Dr. Kaldor, are unlikely to fall below 10 per cent. per annum, over longer periods. If anything, the rise in expenditure contemplated in the second Plan should cause a revival of inflationary tendencies and a renewed rise of profit margins. If profit margins were maintained (let alone increased), the rise in profits would be as great as, or greater than, the rise in production. In this connection, he cites the fact that the net ploughed-back profits of companies (after taxation and depreciation) aggregates Rs. 70 crores per year. This amount, according to Dr. Kaldor, might be regarded as the minimum amount by which the market valuation of companies should increase annually over a period of years.

We don't know...

We don't know whether worries turn Black Hair into Grey Hair or not, but we do know that whatever may be the cause of Greying of Hair, Loma surely turns them back to Dark Hair.

A copy a minute!

Save time and money by using the Agfa Copyrapid Process to get photo-copies of anything from typed or handwritten letters and documents to intricate drawings, maps and plans.

Copyrapid Process is an Agfa Invention and Agfa Copyrapid papers will give you Flash copies—a copy a minute—yet they can be handled in average room light; no dark-room is necessary for taking bright, clean, sharp copies. So simple is the process that even an office boy can do all your copying. Another advantage is that you yourself can photo-copy confidential documents without help from a member of your staff.

MUCH FASTER THAN COPY TYPING and dead accurate too!

Whatever photo-copying machine you use, insist on world-famous Agfa Copyrapid papers. Various types of Positive Papers are available to suit individual requirements, including TRANSPARENT positives which can be used as master positives for blueprinting.

Their 'safe' sensitivity enables you to use them in average room light with real convenience.

Agfa-Copyrapid paper Saves time and money!

MR. T. T. KRISHNAMACHARI'S FIRST SUPPLEMENTARY BUDGET

FRESH TAXES TO THE TUNE OF RS. 16 CRORES IMPOSED

THE first budget to be presented by Mr. T. T. Krishnamachari, after he became the Union Finance Minister on 1st September 1956, is of a supplementary nature. The budget, introduced in the Lok Sabha on Friday, 30th November 1956, in the form of two Finance Bills, contains a series of income-tax, customs and excise proposals. They include levy of a tax on capital gains; increase in super-tax on dividends; control over depreciation and other tax-free reserves of companies; enhancement of import duties on wines and spirits, motor cycles and scooters, clocks and watches, coal-tar dyes and certain types of machinery, and art silk yarn; upward revision in excise duty on art silk yarn, more expensive types of motor cars; levy of excise on staple fibre and yarn; and rise in stamp duties on bills of exchange. The cumulative effect of these proposals on the Government's revenue is expected to be an increase of the order of about Rs. 16 crores per annum.

Making his second "gift"—his first gift consisted of a steep increase in excise duty on cloth three months earlier—the Finance Minister stated that the measures had to be judged not only from the point of view of their immediate yield but also in the light of the requirements by way of financial resources for the implementation of the Plan. He also warned that the extent of deficit financing had from now on to be progressively reduced, if prices were to be prevented from going up further and creating fresh difficulties through increased pressure for higher wages and enhanced costs all round. Indeed, the Minister declared that the Plan was a challenge which must be met with all the resources and ingenuity at our command.

The following is the full text of Mr. Krishnamachari's statement made while introducing the Finance Bills:

"Ordinarily, a speech is not necessary on the occasion of introducing a Bill. As the titles, however, indicate, these two Bills are Finance Bills; and although they have been presented in the form of two separate Bills, they represent a set of connected proposals. I would, therefore, crave leave of the House to make a statement.

"Sir, the economic situation was reviewed in detail in September last in connection with the debate on the Plan. My main conclusion then was that, while there were yet no signs of a general inflationary situation, there were vital points in the economy which were under pressure. That broadly is a correct characterisation of the present situation, although the strain on the economy may well increase in the coming months because of the gathering tempo of the Plan and of the international situation.

Monetary Management

"The index of wholesale prices remained more or less steady for about eight weeks since early September, but there has been a rise of some ten points in the last two weeks. It is too early to say whether prices are about to resume an upward trend or whether they will keep around the level they have maintained over the last two or three months. The outcome depends partly on the crops and partly on international developments. It is clear, however, that the price situation will have to be watched closely and every effort made to ensure that the pressure of demand on available supplies does not go too far. Money supply in the hands of the public is now Rs. 147 crores more than what it was twelve months ago and the level of bank credit outstanding is higher by Rs. 163 crores, as compared to the level about this time last year. During the current slack season, money supply declined much more than in the previous slack season, but the major contractionist factor has been the large import surpluses we have been having of late. The demand for funds has continued unabated and the resources of the banking system are fully strained. Government are anxious to ensure that the legitimate needs of trade and industry do not suffer on account of the present tightness in the money market. It is necessary, at the same time, in view of the price trends mentioned above, that credit creation by the banking system is kept within reasonable limits. These are matters of day-to-day monetary management and I need hardly dilate on them at any length.

"There is, however, an aspect of the economic situation to which special attention is necessary—I mean the foreign exchange situation. Since the end of March 1956, the foreign exchange reserves held by the Reserve Bank have declined from Rs. 746 crores to Rs. 543 crores—a fall of over Rs. 200 crores. Although this decline has taken place as a result of the large imports required for the Plan, it is obvious that this rate of drawal cannot be sustained for any length of time. We are now fairly close to the minimum level of reserves we ought to maintain, and I must tell the House and the public at large that a most determined effort to conserve and augment our foreign exchange resources is now called for. This consideration must, in my judgment, be given higher priority than the consideration regarding internal prices, although the latter is important. The requirements of foreign exchange for the second Five-year Plan are proving even larger than were estimated, and it would be necessary not only to economise on imports and to increase our exports but also, in addition, to take active steps to secure the necessary quantum of supplemental resources from abroad.

"This brings me to the international situation which has taken a turn for the worse in the last few months. The House is aware of these developments and I need hardly dilate on them. What started as action to keep the Suez Canal open has resulted in closing it completely. On the most optimistic estimates, it will take anything between three to six months for the Canal to be opened again. The work of clearing up the Canal has not yet started, and, on the whole, I should think we would be wise in assuming that it will take almost a year before normal traffic on the Canal is resumed. Even before the outbreak of hostilities in that area, a shortage of shipping was developing and this has now been accentuated. The shortage of shipping is, of course, not confined to the areas or routes affected; it has and will become more and more a global shortage. We are taking measures to ensure that the available shipping space is utilised for bringing in our priority imports. A certain lengthening of shipping schedules is, of course, unavoidable, and freight rates and insurance charges have already gone up. If, as may be hoped, the closure of the Canal is not too prolonged, we expect to be able to face the temporary difficulties I have mentioned above without any serious dislocation to our Plan. But, of course, it would hardly be proper at this stage either to take an optimistic or a pessimistic view of the future in this matter. All I should like to say is that, for the next few months, we shall have to exercise the fullest vigil not only in regard to our internal situation but also in respect of developments abroad.

More Immediate Problem

"I come now to the more immediate problem in hand, namely, taxation. Taxation policy at this stage has to be determined in the light of two main considerations—(a) the requirements of the Plan, and (b) the general economic situation. As regards the former, the position needs only to be briefly stated. The Plan requires mobilisation of financial resources on a scale not attempted hitherto. The Planning Commission has put forward a target of Rs. 850 crores by way of additional taxation over the five-year period. The outlay required for carrying through the development programmes incorporated in the Plan will, it is now estimated, require Rs. 400 to Rs. 500 crores more than the total of Rs. 4,800 crores envisaged in the Plan document. This is partly because some of the financial provisions in the Plan were inadequate; partly, the higher estimate reflects the increased cost on account of higher domestic or external prices. The domestic effort for raising resources will, in consequence, have to be larger.

"The general economic situation has also altered somewhat since the Plan was formulated. Prices have registered an almost continuous upward trend—the index is now 430—and the danger of inflationary pressures getting the upper hand has to be safeguarded by taking steps to mop up a part of the purchasing power now with the public. This is evidenced by the fact that the demand for food, for cloth, for steel and for cement has been rising rapidly. In a sense, the creation of new demands all along the line is of the very essence of developmental planning. An underdeveloped economy suffers from insufficient demand, insufficient investment opportunities and insufficient production. The vicious circle has to be broken at various points, that is, by a simultaneous expansion of demand and of production. There is danger of inflation when demands grow more rapidly than supplies. One part of the economic policy for the Plan period is to increase production in the short run, especially of articles of general consumption like food and cloth; the other part is an appropriate tax policy aimed at regulating the flow of purchasing power so as to ensure that development proceeds under conditions of economic stability.

"In the last session of Parliament, the excise duty on cloth was raised with a view to checking a situation of developing scarcity and consequent windfall profits for the producers or traders. The time has now come for some increase in direct taxation which will, on the one hand, restrain non-priority spending and, on the other, afford some corrective to inequalities of income and wealth. This is the twofold objective behind the proposals now being made.

The Tax System

"The Indian tax system has got into a settled groove. It does not bring into the public exchequer even a constant proportion of national income. If a development programme of the dimensions we have in hand is to be carried through successfully, the tax system has to be made more elastic. It is hardly possible to do this by stepping up any further the rates of direct taxation, which has now reached a stage when a straightforward increase in the rates would yield poor results. It is necessary now to increase the coverage of taxation by reaching a class of incomes which has hitherto been kept out of the purview of the income taxation—I mean capital gains. Capital gains are an important factor in aggravating economic inequalities, and there is no justification for regarding capital gains as a species of income not liable to taxation. This is a lacuna in the tax system of most countries, a lacuna, one dare say, they will have to rectify in due course. For a developing economy like ours, it is necessary to take early action, as the implementation of our programmes is certain to create conditions in which assets of all kinds will appreciate. It is only fair that the exchequer should get a proportion of these incomes when realised in the form of capital gains.

"The problem of raising resources for investment has to be looked at both from the point of view of the public sector and of the private sector. Just as an increase in public saving is necessary for financing the investment in the public sector, an increase in corporate saving is required for meeting the needs of the private sector. Personal saving is undoubtedly important, but the large-scale investment that is needed for the private sector can hardly be found by individuals. There is a trend in the industrially advanced countries of Western Europe towards greater reliance on corporate savings. The main source of capital for private enterprise in those countries is savings effected by industry itself, supplemented by funds obtained from other institutions in the field of industrial finance. We have increasingly to look to these institutional sources for finding funds for the development of industry. Suggestions have been made on the floor of the House from time to time for dividend limitation, imposition of Excess Profits Tax and the like. These are devices which have been tried in the past but with no great success. In the last budget, a tax on dividends was introduced and a further tightening in the same direction is now called for. This is a better course of action than limitation of dividends by law to a prescribed maximum. It is administratively simpler and it leaves discretion regarding dividend policy to the company or corporation concerned subject to the tax liability it has to meet.

Ploughing Back of Profits

"The ploughing back of profits which it is sought to encourage will enable companies to build up larger reserves. It is important that these reserves are used in pursuance of the investment policies laid down in the Plan. It would, of course, be wrong to impede in any way the utilisation of these reserves for the legitimate purposes of expansion or modernisation for the unit or for the industry concerned. Every facility should, in fact, be given to encourage such use and to direct the balance of reserves for the time being unutilised towards channels in which investment is called for, in order to promote the pattern of development envisaged in the Plan.

"I have mentioned earlier the rapid drawing down of our sterling reserves in the last few years. Although this drawing down is a reflection of the genuine increasing needs of the economy for our development programmes and it would be wrong to take an alarmist view of the situation, it is necessary, at the same time, to make the utmost effort to conserve and develop our foreign exchange resources. One plank in this programme has to be export promotion, but this is a theme on which I do not propose to dwell in the present context. The other plank is restraint in the matter of imports. The proposals that I am now making are intended to facilitate this latter process. A tighter policy on imports will reduce available supplies and tend to push up prices to the maximum that the consumer will pay. In these circumstances, if there is a large difference between the landed price of the article and the price which the consumer is prepared to pay, the profits will go entirely to the trader. The import duties now proposed will serve to mop up a portion of these unmerited profits. I should stress here that the articles in question are of a luxury character and the raising of import duties does not in any way impinge on the consumption of the mass of the people.

"I now come to my detailed proposals. I am circulating to hon'ble members two memoranda explaining the provisions of the Bills, but I may briefly refer to them here. Dealing first with direct taxation, my first proposal is to impose a tax on capital gains made on or after the 1st April 1956. As hon'ble members are aware, a tax on capital gains forms part of our existing Income-tax Act, but it was in operation only for a short period, that is, in respect of capital gains which arose during the period 1st April 1946 to 31st March 1948. In the present Bill, I have somewhat altered the existing provisions.

Capital Gains Tax

"The definition of 'capital gains' remains unchanged, but some of the existing exemptions are proposed to be withdrawn. These are capital gains arising on transfers of property on compulsory acquisition, capital gains arising on distribution of assets on dissolution of partnerships or on liquidation of companies, capital gains arising on the sale of residential property possessed by the taxpayer for seven years, etc. Such gains will now be subjected to tax.

"Under the existing law, capital gains up to Rs. 15,000 are not subject to tax in the case of individuals. This limit is proposed to be reduced to Rs. 5,000, but an additional concession is proposed to be given to persons in the lower income groups in that no capital gains tax would be chargeable, if the total income, including the capital gains, does not exceed Rs. 10,000. I am also considering some concession for small people making gains by the sale of small and medium-sized houses. Under the existing law, capital gains are to be taxed on the basis of slab rates. This, however, bears no relation to the other income of the person making the gains. It is now proposed that the rate of tax to be charged on capital gains should be the income-tax rate applicable to the other taxable income of the assessee increased by one-third of the capital gains he makes in the relevant year. In the case of companies, the rates of tax will be the usual income-tax rate.

"Another important change is that the assessee has the option to have his gains worked out either on the basis of original cost or on the basis of its value on the 1st January 1954.

Super-tax

"My second proposal is to increase the rates of super-tax payable by companies which declare dividends in excess of 6 per cent. of paid-up capital. For the current financial year, such super-tax is two annas and three annas in the rupee in respect of dividends declared between six per cent. and ten per cent., and above ten per cent., respectively. I propose that, for the financial year 1957-58, the rates of super-tax should be two annas per rupee for dividends between six per cent. and ten per cent., four annas per rupee on dividends between ten per cent. and eighteen per cent. and six annas per rupee on dividends in excess of eighteen per cent.

Control Over Reserves

"My third proposal is not a direct taxation measure, but relates to a proper control over the depreciation and other reserves of companies. Such control becomes imperative when the effect of tax on dividends is to increase the resources of the company. At present, large deductions are made in the computation of profits and gains of a business by way of development rebates and depreciation allowances. These deductions are related to buildings, plant, machinery and other assets used in the business and are permitted on a consideration of possible wear and tear which these assets may suffer by their use in the business and of the need to enable the undertaking to build up adequate funds internally for rehabilitation of its assets from time to time. In the interests of the industrial development of the country, it is necessary that these tax-free reserves are utilised for purposes conducive thereto and not frittered away in other ways.

"Once we accept the policy of discouraging the distribution of profits, it is essential simultaneously to ensure that the retained profits are put to uses which promote industrial development in accordance with the Plan. I propose, therefore, that, in the case of companies, depreciation allowances and development rebates due will be added back in the computation of the income, unless a certain amount is deposited with the Government or with the Reserve Bank of India, as Government might determine before the 30th June of the relevant assessment year. The amount to be deposited will be partly a certain percentage of the excess of the available current profits after payment of taxes and of distribution of dividends over one lakh of rupees and partly a certain percentage of the past accumulated profits and reserves which are not represented by fixed assets in the business. The Bill provides that the percentages will be subject to the ceiling of 75 per cent. as regards the current profits and 25 per cent. as regards the past accumulated profits and reserves. It is, however, my present intention to fix the former at 50 per cent. of the current profits only. The deposits will carry interest and will ultimately be refundable wholly or in part on request by the assessee, if the Government is satisfied that the amount refunded will be used by the company in its business for purposes approved by Government in the furtherance of the objectives of the Plan. It is proposed to constitute a Board of Referees to advise Government on this matter. While it is our intention that a large part of these deposits has to be utilised for the development of industries envisaged in the Plan, such residue as is left over from year to year will cumulatively add to the resources of the Plan.

Section 23A Companies

"My last proposal relates to Section 23A companies. At the present moment, a Section 23A non-investment company, which has failed to make the minimum of 60 per cent. distribution of dividends to its shareholders, is required to pay an additional super-tax on the whole of its undistributed profits at the rate of four annas in the rupee, while an investment company in a similar situation pays eight annas in the rupee. In view of the proposed increase in the rates of super-tax on dividends, it is felt that the rate of four annas for a non-investment company will be low and it is, therefore, proposed to raise the rate of additional super-tax for such cases from four annas to six annas. However, it is necessary to give some encouragement to industrial companies to retain their profits for expansion and development. I propose, therefore, to reduce the minimum distribution for a Section 23A industrial company from 60 per cent. to 50 per cent. The procedure for exempting companies from the operation of the provision in industrial concerns which fall within the scope of Section 23A in deserving cases will be continued.

Customs Duties

"Coming now to customs duties, suitable increases in the import duties are proposed on certain selected articles. These fall broadly into three groups.

"These are, first, a number of articles ordinarily used by the more well-to-do sections of the population. Notable among these are wines and spirits where the duties are being raised approximately from 25 to 50 per cent. so as to produce about Rs. 70 lakhs annually. Another Rs. 50 lakhs are expected from the increased duties on motor cycles and scooters and clocks and watches.

"The second group of articles comprises items like coal-tar dyes and certain types of machinery where, on the one hand, the existing duties are low and, on the other indigenous manufacture has made fair progress. The increases proposed are to be effected partly by changes in the Bill and partly by withdrawal of concessions at present given by executive notification. While these will have a negligible effect on costs of consumer goods, they are expected to produce an annual yield of about Rs. 180 lakhs.

"Lastly, I propose an increase in the import duty on artificial silk yarn. With the shortage in supplies of cotton cloth, the art silk industry has been doing quite well of late. There has been a substantial increase in production of art silk fabrics and, since these fabrics compete, to some extent, with fine and superfine cotton fabrics, they are in a position to bear higher taxation than they do at present. However, having regard to the somewhat fluctuating conditions which have prevailed in the art silk industry in the past, I consider it desirable that, while the tariff rate should be pitched at a certain maximum level, Government should fix the effective rates from time to time, according to current needs, by executive notification. The import tariff rate I have proposed is Rs. 3 per lb., but the immediate effective rates will vary from Re. 1-4 to Rs. 2 per lb. according to deniers. I expect an annual yield of Rs. 160 lakhs from these duties.

Excise Duty

"I am suggesting a corresponding change in the excise side by proposing the imposition of a central excise duty on indigenous art silk yarn. With the protection afforded by a high duty on imported art silk yarn, the restrictions on imports, and increasing demand, the indigenous producers of art silk yarn have been making substantial profits. The excise duty I have proposed is again a ceiling rate of Re. 1-8 per lb. which is being brought down by executive notification to 4 annas per lb. and 8 annas per lb., according to deniers. These effective rates generally maintain the measure of protection enjoyed by the indigenous products against the imported product. The annual yield I expect from these rates is Rs. 70 lakhs.

"A low excise duty of 2 annas per lb. is being provided by notification for staple fibre and staple fibre yarn.

"I have also proposed an excise duty of Rs. 3,000 each on the more expensive types of motor cars made in India. This duty will not fall on trucks or on small cars and is expected to yield about Rs. 80 lakhs in a year. To the extent it discourages the production of big cars, we will have diverted valuable foreign exchange to objects of greater utility.

"It is somewhat difficult to make an estimate of the actual yield of customs duties. On the basis of current imports, the yield should be about Rs. 9 crores per year. As, however, there is likely to be a substantial reduction in the quantum of imports, the actual extra revenue may well be about Rs. 6 crores in a full year.

"Thus the cumulative financial effect of my income-tax, customs and excise proposals would be about Rs. 16 crores per year.

"I propose also to increase substantially the stamp duties on bills of exchange. As the House is aware, there are certain slab rates prescribed in the Stamp Act which go up to 15 annas per Rs. 1,000 in the case of bills payable not more than a year after they are drawn. By a notification issued in 1940, these slab rates were substituted by a flat rate of two annas per Rs. 1,000. It is now proposed to increase the statutory rate to Rs. 10 per Rs. 1,000 for such bills with proportionate reduction for bills of shorter duration. These are intended to be ceiling rates and it is my present intention to operate on the basis of half these rates. This increase of duty is, it will be appreciated, a fiscal measure with a monetary intent. The additional revenue resulting from the increase will accrue to State Governments. There is thus no effect on Central revenues.

"Proposals regarding customs and central excise duties will take effect immediately. Those relating to direct taxation are in respect of current profits and gains but can be assessed only in the next financial year. Changes in stamp duties will come into force when the law is passed.

"This brings me to the end of my proposals for the day. These measures have to be judged not only from the point of view of their immediate yield but also in the light of the requirements by way of financial resources for the period of the Plan. The budgets of the Central and State Governments this year show a deficit of over Rs. 400 crores for financing a plan outlay of about Rs. 800 crores. The extent of deficit financing has from now on to be progressively reduced, if prices are to be prevented from going up further and creating fresh difficulties through increased pressures for higher wages and increased costs all round. The full yield of some of the measures mentioned above will accrue only gradually; but this only means that the earlier the task is begun the better it is from the point of view of the overall stepping up of investment which we propose not only during the second Plan period but for several Plan periods to come.

"In conclusion, I should like once again to emphasise the need to step up as much as we can the rate of savings in the economy in order to match it with the investments we are undertaking. This is no easy task. I should also stress that, while an underdeveloped economy has to depend, in some measure, on resources from abroad, the amount of such assistance itself depends upon the efforts we make domestically to keep down inflationary pressures and to mobilise the savings of the community for the Plan. We have put all our hopes on the Plan and we must do our best by it. It is suggested in some quarters that we ought to revise our Plan in view of the increase in outlays required to which I made a reference earlier, particularly in view of the unfavourable turn in the international situation. I think suggestions of this kind are defeatist in themselves and are quite unjustified. We are only in the first year of the Plan and, although the tasks we have taken upon ourselves are large and difficult, I see no reason to be pessimistic of our capacity to implement the Plan. Nor is there anything in the international situation which, at this stage, suggests a revision of the Plan. I am convinced that they do wrong who express scepticism at a time when the country ought to be thinking of nothing else but going ahead with the greatest determination. The Plan is a challenge and it is a challenge which must be met with all the resources and ingenuity at our command."

TERMINAL TAX BILL

The Terminal Tax Bill, which was passed by the Lok Sabha recently, is intended to impose a levy on railway passengers who visit places of pilgrimage or *mela*. The proceeds of the tax will go to local bodies concerned after collection expenses have been deducted. The revenue from such proceeds will be spent on providing various amenities for visitors to these centres. The maximum tax will be Re. 1-8 for passengers travelling air-conditioned coaches or first class, Re. 1 for second class and As. 8 for third class. These rates will be doubled in the case of return tickets. No terminal tax will be levied in a "free zone," defined as an area within a 40-mile radius of the place of fair, *mela* or pilgrimage. Exemption from the tax is provided to children under three years, police officers travelling on railway warrants, free pass holders, troops and persons travelling on military warrants.

In the course of the debate on the Bill, some members said that the rate of levy on third class passengers was heavy and should be reduced. But Mr. Alagesan, the Union Deputy Minister for Transport, who piloted the Bill, said that it was not possible to reduce the ceiling inasmuch as the State Governments had spent a great deal more on providing amenities than they had earned through the levy of special tolls and taxes. A point was raised about the desirability of levying a similar levy on passengers who travelled by road to certain places of pilgrimage. Mr. Alagesan said that the Centre would shortly write to the State Governments to impose a "parallel" terminal tax on those travelling by road.

THE GREAT EASTERN SHIPPING COMPANY LIMITED

MR. A. H. BHIWANDIWALLA'S SPEECH AT EIGHTH ANNUAL MEETING

IMPORTANCE OF TRAMPING BUSINESS IN SHIPPING INDUSTRY STRESSED

THE Eighth Annual General Meeting of the Great Eastern Shipping Company, Ltd., was held in Bombay on 6th December 1956. Addressing the shareholders on the occasion, Mr. A. H. Bhiwandiwalla, Chairman of the Company, pointed out that both tramps and liners had their own respective roles to play in the development of shipping. They were like two wings, each equally indispensable to the life and growth of India's shipping industry. The following is the full text of Mr. Bhiwandiwalla's speech:

"GENTLEMEN,

"It is my annual pleasure to welcome you at this meeting and speak to you on the shipping industry, in general, and the working of your Company, in particular.

"The Directors' report and accounts of the Company have been in your hands for sometime now and, with your permission, I shall take them as read. The results, as you know, are satisfactory. The report and accounts contain a mass of statistics on the working of the Company, and I do not propose to inflict them on you here again.

"The good results derive largely from our tramping activity and the expansion of our agency business. The year under report also saw the epoch-making acquisition by the Company of the first-ever tanker purchased by Indians. Another noteworthy feature of the Company's activities is its contractual commitment to carry 70,000 tons of rice from Burma to India on Government account. After the end of the financial year and in less than six months, the Company's ships have carried almost the entire 70,000 tons of rice.

Tramping Activity

"Your Company has taken active interest in tramping right from its commencement. The adventurous and enterprising spirit with which shipowners have been imbued from the dawn of history attains its high-water mark in tramping. Your Company had to face competition of an international character from well-established foreign shipowners; this is an implicit challenge in tramping business. Owing to ignorance and apathy on the part of Indian shipowners, as well as the Government in this country, about the importance of tramping business and its requirements, we had to face not only lack of co-operation but actual hostility and obstruction, in the form of numerous restrictions that were placed on our 'freedom of the high seas.' *The position has improved with the Government's recognition of the role of tramping in the country's economic life.* I am, however, sorry to say that the majority of Indian shipowners interested in the liner trade have not yet, to say the least, appreciated its significance. Liners and tramps are like two wings, each equally indispensable to the life and growth of India's shipping industry.

"In view of this prevalent bias against tramp shipping, the Government has been influenced and swayed by the liner interests and prejudices, and conditions for the creation and growth of the tramp fleet in this country have not been established. It is hoped that the Government will consider the matter dispassionately and allow the same freedom of operation to tramp-owners in this country as is enjoyed by successful tramp-owners in other maritime countries.

"There is a lot of confusion and far from clear thinking about the economics of shipping in this country. In normal peace times and in the absence of emergencies, the maximum operational efficiency and the optimum utilisation of tonnage should guide and govern the employment of ships. There is nothing sacrosanct about the carriage of India's exports or imports in Indian ships. What matters is the rapid growth and development of Indian tonnage plying on the high seas. This can only be brought about, if the Government does not interfere with the employment of vessels and permits tramp operators to follow considerations of operational efficiency and gainful employment which will assist the rapid expansion of the merchant fleet. If some of the Indian ships do not carry part of India's imports or exports, the country will no doubt have to pay the freight charges in foreign currencies. But the Indian ships, which are more gainfully employed in other trades, will earn more foreign exchange than will be paid to foreign ships for carrying part of India's imports and exports. It is the net difference in foreign exchange that matters. The astonishingly rapid progress made by Norwegian and Greek shipowners in recent years would not have been possible, if the Governments of those countries had imposed the restrictions which are fettering the Indian tramp operators at present.

Government Restrictions

"The Government restrictions on letting out Indian ships on time-charter to foreigners have acted as a restrictive influence on expansion of Indian tonnage and foreign exchange earnings without doing an iota of good to the country. If an Indian shipping company wants to expand rapidly it must make sure of gainful employment of at least some of her ships for a period of time. Time-chartering out of ships provides this sort of employment for an assured period and makes the shipowner immune from the risks of fluctuations in the freight market. With such a hedge he can afford to take the risks of the freight market by building and/or purchasing more ships at the prevailing high level of prices in the place of those chartered out. Moreover, *tramp operators have to judge the freight market* and, at times, to cushion off the risks of a fall in the market by letting out some of their vessels on a time basis. The only difference between letting out a ship on a time basis and fixing her for a voyage is the difference between the wholesale selling of freight and the retailing of freight. Whilst the Government has no objection to the retailing of freight, it has prohibited wholesale selling of freight to the great detriment of the shipping industry. May I earnestly appeal to those in authority to examine this question dispassionately and exempt at least tramp operators from the restriction on letting out of their vessels on a time basis?

"We ploughed a lonely furrow and persevered when the sun was not shining so brightly on the tramp trades. We carried wheat in bulk from West Australia to India at 55 shillings per ton, as compared with today's rate of 140 shillings. Our shipowner friends then said: 'tramps are a dying breed.' What do we find today? Tramps are flourishing at present more than liners. The post-war development of shipping proves that countries which stuck to liner services only have increased their tonnage at a slower pace than the countries engaged in tramping. My appeal, therefore, to all concerned is not to pass a hasty judgment on the comparative usefulness and importance of tramps and liners. Both tramps as well as liners have their respective roles to play in the development of shipping and tramps are far from being either a dying or a useless breed.

Permanent Nucleus

"I am pleased to inform you that from occasional tramping we have advanced a stage further and have formed a permanent nucleus of ships for our tramp activities. Our present tramp fleet consisting of the s.s. *Jag Vijay*, m.v. *Jag Laadki* and s.s. *Jag Shanti* will be considerably strengthened by the addition, in February 1957, of the largest cargo ship on the Indian registry, viz., the m.v. *Jag Laxmi*, of 12,080 tons deadweight, which will be completed and delivered to us by a Japanese shipyard. The earnings from tramping have contributed a good deal to the satisfactory results achieved during the year under report.

"Let me, however, utter a word of caution. Tramping is very susceptible to trade cycles. Booms and depressions alternate much more intensively in this line of shipping. It is, therefore, most important that a tramp operator should consolidate and strengthen his position in good days, in order that he comes out unscathed in bad days which inevitably follow in their wake. It is hoped that the Government will create a suitable climate in which tramping as well as liners can flourish side by side and accelerate the development of Indian shipping. May I reiterate that I have nothing against my friends in the liner trades and it is my conviction that both liners and tramps must understand each other and live together.

Agency Business

"With the securing of the agency of the Hellenic Lines Ltd. of Piræus and New York, your Company's agency business has grown considerably. During the calendar year 1956 we shall have handled more than 100 ships as agents at Indian ports. The vessels of the Hellenic Lines with their sailings from Indian ports to the U.S.A. ports, the vessels of the Yamashita Line and a number of other tramp operators have brought considerable revenue to the Company and have added to the earnings for the year under report. The growing tendency on the part of foreign shipowners to entrust their agencies in India to nationals of this country is a welcome development. Your Company, being a shipowner itself, is ideally placed to look after the interests of foreign shipowners at Indian ports, and render first-class service. This has not only meant better business and full satisfaction to these principals but also ensured improved revenue and better returns to you. This agency business has also enabled your Company to establish valuable contacts and cement mutually remunerative business relationships, besides providing valuable experience in new trades and lines.

Tanker "Jag Jyoti"

"The 12th of April 1956 will rank as a memorable and eventful date in the history of Indian shipping, because it was on this day that the first-ever Indian-owned tanker was acquired by your Company. The Transport Minister's recognition of this pioneering will have heartened and thrilled you. The tanker has been chartered out to the Standard-Vacuum Oil Company for carriage of refined products on the coast. The teething troubles have been overcome and your Company is gaining very valuable experience in this new line.

"In fact, your Company wanted to purchase a second tanker. Instead, the Government has acquired a tanker for their Shipping Corporation. With the acquisition of these two tankers, I am glad to say, the country has just made a beginning in this vital branch of shipping. With increasing industrialisation and mechanisation of agriculture and the rise in the standards of living, the demand for oil is bound to grow up considerably. The country will, therefore, need a sizable fleet of tankers for the carriage of crude oil from oil-producing countries to India and distribution of refined products on the coast. A good beginning in the carriage of crude oil to India can be made by the building and acquisition of two super-tankers of 36,000 tons deadweight each. Although it is announced that the Government proposes to acquire and operate further tankers in the public sector, I, for one, cannot believe that it is the Government's unalterable intention to exclude private enterprise from the task of nation-building in this important field. I, therefore, request the Government to dispel the doubts and declare categorically that it will change its policy towards acquisition of tankers or super-tankers by Indian shipping companies. The building up of a tanker fleet will require considerable fu[illegible] and I hope that the Transport Minister will be successful in his endeavours to secure additional allocation of finance for shipping.

Carriage of Rice From Burma to India

"With the rise in the international freight market, the Burma-India Conference which was catering to this trade and which included some foreign shipping companies, folded up its tent and declared its inability to cover this berth except at fantastic freight rates. It was the same Conference which had prevented, in the past, young Indian companies like ours from participating in this trade monopolised by their members on the pretext that the berth was adequately covered by their members and, therefore, they could not allow outsiders to participate in this trade. When the members of the Conference declined to lift this vital movement of rice from Burma to India, your Company approached the Government and assured them of our willingness to co-operate in the essential movement of rice from Burma to India at reasonable freight rates. Subsequently, I am glad to say, Indian shipping companies undertook to lift 3 lakh tons of rice from Burma to India in six months at freight rates which were 20 to 25 per cent. lower than those indicated by the members of the Conference. Your Company has almost fulfilled its commitment for the carriage of 70,000 tons of rice ahead of others and has thus established its claim to a 25 per cent. share in this trade.

Coastal Trade

"It will please you to learn that the fulfilment of your Company's commitment to carry Burma rice did not adversely affect the liftings on the coast. Unlike others, your Company chartered outside tonnage and ensured that the carriage of coastal cargoes in the Company's vessels was not adversely affected. In fact, our coastal liftings amount to a quantity which could only have been lifted by the engagement of all our owned vessels in the unremunerative coastal trade. It is a creditable achievement especially because your Company, like other companies, could well have diverted some of its coastal tonnage to the Burma-India rice trade without bothering to charter additional tonnage at the present high charter rates. In view of the uneconomic freight rates on the coast, any diversion from the coast brings in some sorely needed relief. However, your Company resisted this common temptation and has continued to maintain its coastal liftings.

"The uneconomic coastal freight structure can be evidenced from, among other things, the extremely slow growth in coastal tonnage as compared with overseas tonnage. In fact, no one can afford to buy, for coastal operation, ships at today's very high level of prices and high costs of operation and run them at low and uneconomic freight rates. The Government's persistent refusal to permit a commensurate rise in the coastal freight rates has administered a setback to the cause of Indian shipping. If the Government had conceded economic freight rates in time, shipping companies would have acquired additional tonnage for coastal operation at reasonable prices at the most opportune time. It is no use now crying over spilt milk and let us hope that the Rail-Sea Co-ordination Committee which has examined this question thoroughly will recommend to the Government the necessary increase in the coastal freight rates, so as to bring them to an economic level.

Problem Urgent

"The inadequacy of the coastal tonnage in relation to the cargo offering for coastal movement will be greatly aggravated with the progressive execution of the second Five-year Plan and enormous increase in the quantum of cargo that is expected to be moved by coastal vessels. We feel sure that the rising tempo of various schemes and projects under the second Five-year Plan will bring about a transport bottleneck in the country. The railway and road transport will not be able to handle all the increased traffic and the coastal movement by sea may be expected to increase progressively from 3 million tons to about 5 million tons per annum. Meanwhile, a number of old coastal vessels may have to be scrapped. The problem of replacement and expansion of coastal tonnage, therefore, assumes great urgency and importance.

"Your Company was among the first to be seized of this problem. The freight rates on the coast, even allowing for any increase that may be recommended by the Rail-Sea Co-ordination Committee and accepted by the Government, cannot bear the extremely high cost of new or second-hand tonnage. This is because, in the ultimate analysis, the coastal freight structure is bound to be influenced by the railway tariff. The railways carry an overwhelmingly large proportion of the country's internal traffic and the coastal freight rates, therefore, cannot be far out of step with the railway rates. The shipyards of the world are fully booked and delivery of new ships cannot be expected under three or four years. Second-hand tonnage is extremely scarce and the very few ships that are offered are quoted at fantastic prices.

U.S. Assistance

"My colleague on the Board, Mr. Vasant J. Sheth, toured the U.K., the U.S.A., Europe and Japan to see if any way could be found out of the prevailing tonnage crisis. He found that the only country which could assist India is the U.S.A. with her mothball fleet and her generous tradition of assistance to underdeveloped countries. On his return to India, the Company decided to pursue the matter earnestly and deputed the Company's former General Manager, Dr. Sen, to the U.S.A. For four months Dr. Sen persisted in his skilful advocacy of India's dire need for ships, which could only be met by the release of Liberty ships from the mothball fleet of the U.S.A. The Government of India and the Indian Ambassador in America, Mr. G. L. Mehta, lent their weighty support and made their good offices available to Dr. Sen. After protracted negotiations and conferences with various executive departments of the U.S. Government, Dr. Sen felt confident of their support of enactment of suitable legislation for the release of Liberties from the mothball fleet to India. However, because of the impending elections in that country, it was too late to introduce the necessary legislation. Now that the Administration has emerged successful in the elections, I have every hope that the necessary legislation will be passed shortly and that at least 12 Liberties will be released to our country.

Liberty Ships

"These second-hand Liberty ships which, though ageing, have been kept in good condition, are urgently required to augment our coastal tonnage in the transitory period and to avert a transport crisis. By releasing them now the U.S. Government would have helped us before these ships run out their useful life and become obsolete in their stables. With the progress of the second Five-year Plan there is bound to be a very severe tonnage crisis on the coast. These ships will just help us tide over the crisis in our transport system and, thereby, assure the success of our second Five-year Plan. If the U.S. Government requires an undertaking that these ships would only be used for our coastal trade and not for competition with the U.S. liners, this may be given on a Government-to-Government level. It cannot be regarded as an unreasonable demand, in view of the U.S. Government's legitimate concern to safeguard their own interests. What is most important is that we must get going and save ourselves from being engulfed in a transport crisis. It is also clear that these ships could be utilised for the coastal trade only if they are released at the usual prices and not at the international level of prices. The coastal trade with its low freight rate structure will not be able to bear the incidence of the high international price level of ships.

"In the conditions as they exist in the world today, we are sure that it is only the U.S. Government which can assist a young country endeavouring to build and consolidate a democracy on foundations of unregimented economic planning and well-being. Other powers are in no position to assist our country in this direction. Our Prime Minister is visiting the United States and perhaps during his visit the release of U.S. Liberties could be arranged. If the Government desires to pursue this vital matter, we are prepared to send our representative to the States in order that he may be available on the spot for necessary consultations.

"Your Company took the initiative and have put in considerable efforts for the release of Liberties from the mothball fleet of the U.S.A. Out of 12 Liberties proposed to be released to our country, we can legitimately claim an allotment of six Liberties for our coastal fleet. Three or four Liberties will serve as timely replacements for the three or four coastal time-charters which will be expiring shortly and the remaining two or three Liberties will be a welcome addition to our coastal fleet. Your Company is prepared to finance up to 50 per cent. of the cost of these ships from its own resources.

Port Facilities and Dock Labour

"The progressive implementation of the second Five-year Plan would not only bring about an increase in the coastal movement by sea but will also increase the foreign imports of capital goods, machinery and raw materials into the country. The present port facilities in the country are woefully inadequate. Congestion at ports and delays to ships which are common even at present are on the increase. It will, therefore, be an impossible task to handle the enormously increased coastal and overseas traffic at the ports without a speedy and commensurate improvement and expansion of port facilities. Otherwise, I am afraid, we shall not only be unable to handle the increased traffic but would also pay heavily for the limited traffic in terms of increased transport costs and waste of national tonnage, as a result of dislocation and congestion at the ports. The Government would, therefore, be well advised to accord topmost priority to the improvement and expansion of port facilities.

"The introduction of the piece-rates in Bombay has had a salutary effect on the output and earnings of dock labour. It is essential that the piece-rate system should be extended to all the ports. It is hoped that increasing co-operation between employers and dock labour will improve the turnround of ships and will enable them to carry more efficiently the increased overseas and coastal traffic.

Fleet Expansion

"Your Company started its operation in 1948 with one Liberty ship which was acquired for about Rs. 22 lakhs. At present, the Company owns eight ships worth Rs. 3.25 crores at cost and much more at market value. The three new ships which are on order will cost a further sum of Rs. 3.75 crores. By the time this young Company of yours is eleven years only, we shall have invested as much as seven crores of rupees in the shipping industry and become owners of 11 vessels—a steady accretion of one vessel each year.

"I have taken into account only the committed expansion programme of the Company. The allotment of Liberties from the U.S. mothball fleet and part of the expansion programme submitted by us to the Government in pursuance of the second Five-year Plan, have not been taken into account. We are still awaiting the Government's decision on our expansion Plan submitted to them in February 1956.

Capital Structure

"The initial paid-up capital of the Company in 1948 was a modest figure of Rs. 20 lakhs. Since then, your Company issued bonus shares twice, issued new equity shares of Rs. 20 lakhs and preference shares of Rs. 25 lakhs. The paid-up capital of your Company thus stood on 30th June 1956 at Rs. 85 lakhs, out of which Rs. 60 lakhs was equity share capital and Rs. 25 lakhs preference share capital. With the present issue of Rs. 60 lakhs in equity shares, your total subscribed capital will rise to Rs. 1.45 crores and subscribed equity capital to Rs. 1.20 crores. Your Directors took the decision to increase the capital not only because your Company was undercapitalised in relation to the cost of the fleet but also because they wish to maintain a healthy ratio between the risk-bearing capital and loan liability of the Company to the Government.

Prospects

"Our tramps are doing very well. The m.v. *Jag Laxmi*, which is expected to be delivered in February 1957, will operate for four months in the current year. The earnings from the operation of the tanker, agency business, Burma-India rice trade and four months' trading of the m.v. *Jag Laxmi* will also be reflected in the current year's results. Subject to unforeseen circumstances, therefore, I visualise a bright future for your Company in the current year.

"In the five months ended 30th November 1956, the gross freight earnings have been Rs. 144 lakhs, as compared with Rs. 96 lakhs for the corresponding period during the year under report. If the remaining seven months maintain the promise of the first five months of the year, the gross freight earnings should reach the target of Rs. 3 crores, as compared with Rs. 2.11 crores for the year under report. On this assumption and in the absence of any unexpected setbacks or deterioration in trading conditions, it may be possible to maintain the dividend on the increased capital.

Government Assistance

"I have time and again criticised the policies and actions of the Government which in my opinion, are retarding the development of shipping. By and large, however, the Government is endeavouring its level best to develop Indian shipping by grant of generous loans and many other measures of assistance. The Transport Minister, the Transport Secretary, officials of the Transport Ministry, the Director-General of Shipping and his staff have all continued to assist and promote the cause of Indian shipping. Your Company owes a deep debt of gratitude to them all. It is a rare experience that Government departments go out of their way and take the initiative in conveying useful information and providing valuable guidance to companies even on the telephone. With such assistance from the Government, I am sure, your Company will march forward to new milestones of progress and play its rightful part in what our

(*Continued on page 1105*)

Notices

ANGLO-INDIA JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting, being Seventy-ninth Ordinary General Meeting of the Members of the Company, will be held at the Registered Office at 31, Netaji Subhas Road, Calcutta, on Friday the 28th day of December 1956, at 12 o'clock noon, for the following purposes:—

1. To consider and to adopt the Profit and Loss Account for the half-year ended 31st March 1956, and the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of those who retire by rotation at the meeting and in this connection to consider and, if thought fit, to pass the following resolution of which special notice of intention to propose it as a special resolution in accordance with Sections 190 and 261 of the Companies Act, 1956, has been received by the Company. It is stated in the special notice that Mr. K. P. Goenka, a director of the Company who retires by rotation of directors at this Annual General Meeting, is a director and member of Duncan Brothers and Company, Limited, the Managing Agents of the Company and therefore an "Officer" and "associate of the managing agents" within the meaning of the Act who may only be appointed by Special Resolution as a director whose period of office is liable to determination by retirement of directors by rotation.

   "That Mr. K. P. Goenka, be and is hereby appointed a Director of the Company whose period of office is liable to determination of directors by rotation."
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification, the following resolution which will be proposed as a Special Resolution:—

   (i) That the requirements of Articles 85, 86, 90, 125, 177, 181 and 182 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September 1956.

   (ii) That the Articles of Association of the Company be altered in manner following:—

   (a) That Articles 85 and 86 shall be deleted and the following new Article 85 substituted therefor:—

   "85. In addition to any other meetings, General meetings of the Company shall be held within such intervals as are specified by Section 166 (1) of the Companies Act, 1956, and subject to the provisions of Section 166 (2) of that Act at such times and places as may be determined by the Board. Such general meetings shall be styled Annual General Meetings and shall be specified as such in the notices convening the meetings."

   (b) That Article 90 be deleted and the following new Article substituted therefor:—

   "90. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and to fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary Meeting shall be deemed special business."

   (c) That in Article 125—Line 1, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor:—

   (d) That Article 177 shall be deleted and the following new Article substituted therefor:—

   "177. At every Annual General Meeting the Board shall lay before the Company a Profit and Loss Account made up to the 31st March immediately preceding and a Balance Sheet as at that date and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company but save as aforesaid the Board shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient."

   (e) That in Article 181—Line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

   (f) That in Article 182—Lines 1, and 3, the words "Second Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" where it appears shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 24th October to 6th November 1956, both days inclusive.

By Order of the Board,
DUNCAN BROTHERS & CO., LTD.,
Managing Agents.

CALCUTTA, 26*th November* 1956.

Note: (*a*) Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or, if no such instructions have been received, to the registered address of all shareholders whose names appear on the Company's Register at the date of declaration. No application is necessary for payment of dividend.

(*b*) A member of the Company who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual General Meeting of the Belapur Company, Limited, will be held on Friday the 28th day of December, 1956, at 4.00 p.m. (S.T.), at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1956.
2. To declare a Dividend.
3. To elect a director in place of Sir Joseph Kay, K.B.E., who is the Managing Director of W. H. Brady & Co., Ltd., the Managing Agents of the Company, has attained the age of 72 years and who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following, of which special notice has been received by the Company and is hereby given, as a special resolution:

   "That Sir Joseph Kay, K.B.E. who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by section 280 of the Companies Act 1956 shall not apply to him."

   The reasons which make this resolution necessary are set out in the first paragraph of the statement of material facts annexed to this notice which paragraph shall be deemed to be incorporated in this notice.
4. To elect a director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation but offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and if thought fit to pass the following as an ordinary resolution:

   "RESOLVED that W. H. Brady & Co., Ltd., be and are hereby re-appointed Managing Agents of the Company for the period of 10 years from 15th January, 1957, at the remuneration and upon the terms and conditions contained in the draft agreement between the Company and W. H. Brady & Co., Ltd., submitted to this meeting and for the purpose of identification initialled by Sir Joseph Kay, a director, and that the directors be and are hereby authorised to cause the said draft agreement to be engrossed in duplicate and executed on behalf of the Company."
7. To consider and if thought fit to pass the following as an ordinary resolution:

   "RESOLVED that the registers, books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act 1956 and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 of the Act, be kept open for inspection by the persons entitled thereto to the extent in the manner and on payment of the fees if any specified in the aforesaid provisions, at the registered office of the Company, between the hours of 11 a.m. and 1.00 p.m. on all working days except when the registers and books are closed under the provisions of the said Act or the Articles of Association of the Company Provided however that the register required to be maintained under section 307 of the Act shall be open for inspection by members or holders of debentures of the Company if any as aforesaid between the hours abovementioned during the period prescribed by section 307(5) (a)."

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
W. H. BRADY & CO., LTD.,
JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, 30*th November*, 1956.

Notes.—The transfer books of the Company will be closed from the 30th day of November 1956 to the 29th day of December 1956, both days inclusive.

The dividend when declared will be made payable through the Bank of India, Ltd., Fort, Bombay, on and after the 11th day of January 1957. The dividend warrants will be posted to those shareholders whose names stand on the Company's register on the 29th day of December 1956.

ANNEXURE

Statement of material facts and reasons in respect of items of special business in the accompanying notice dated 30th November 1956

Item No. 3. Sir Joseph Kay, K.B.E., has been associated with the Company since 1924 and it is considered desirable that this association should be maintained by his re-election as a director. Sir Joseph, who is aged 72 years, is the managing director of W. H. Brady & Co., Ltd., and, as such, an associate of the managing agents. According to sections 261 and 281 of the Companies Act 1956, he can only be re-elected as a director by a special resolution.

Item No. 6. The present agreement dated the 30th September 1925 between the Company and W. H. Brady & Co., Ltd., under which W. H. Brady & Co., Ltd., acts as the Company's managing agents, will be deemed to expire on the 14th January 1957, under the provisions of the Indian Companies Act 1913 and the Companies Act 1956.

The Directors are of opinion that W. H. Brady & Co., Ltd., have served the Company well and recommend that they be re-appointed as managing agents for a period of 10 years from the 15th January, 1957, at the remuneration prescribed in the draft agreement referred to in this item, namely:—

"2. (I) The remuneration of the Managing Agents shall be as follows:

(a) A commission at the rate of 10 per cent. per annum on the annual net profits of the Company computed in the manner prescribed by Section 349 of the Companies Act, 1956 PROVIDED that if in any financial year the Company shall have no profits or its profits shall be inadequate to pay the commission aforesaid the remuneration of the Managing Agents for that financial year shall be the sum of Rs. 50,000. The aforesaid commission in respect of any financial year shall be paid to the Managing Agents upon the accounts of the Company for such financial year being audited and laid before the Company in general meeting. The Company shall in the meanwhile pay to the Managing Agents on account of the minimum remuneration of Rs. 50,000 a sum of Rs. 4,000 on the last day of each of the first eleven months of such financial year and a sum of Rs. 6,000 in the last month of such financial year.

(b) Such additional remuneration as shall be sanctioned by a special resolution of the Company and approved by the Central Government.

(II) The remuneration of the Managing Agents for any financial year shall be paid on the day following the day upon which the accounts of the Company for that financial year are laid before the Company in general meeting.

(III) In addition to the remuneration before provided for the Managing Agents shall be entitled to be reimbursed in respect of all expenses incurred by them on behalf of the Company and sanctioned by the Board of Directors of the Company or by the Company in general meeting such reimbursement to be made as shall be provided in the resolution granting such sanction."

Application has been made to the Central Government for approval of such re-appointment of W. H. Brady & Co., Ltd., as the Managing Agents on the terms and conditions of the draft agreement mentioned in item No. 6 of the above notice and the Central Government's approval was accorded thereto by the Government of India, Ministry of Finance letter No. 41/435/CL/56 dated the 20th October 1956. An abstract of the draft agreement between the Company and W. H. Brady & Co., Ltd., has been sent to each member as required by the Companies Act 1956. A copy of the aforesaid draft managing agency agreement is also available for inspection at the registered office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, during usual business hours on working days.

Item No. 7. The Companies Act 1956 entitles the Company to impose reasonable restrictions upon the availability of its registers, books and documents for inspection; the draft special resolution set forth under this item of business specifies such reasonable restrictions which are desirable in the interests of the Company's business.

Following is the nature and extent of the interest if any of the Managing Agents and of each of the Company's Directors in these items of special business:—

Name	*Interest*
W. H. Brady & Co., Ltd.	Managing Agents and Member of the Company.

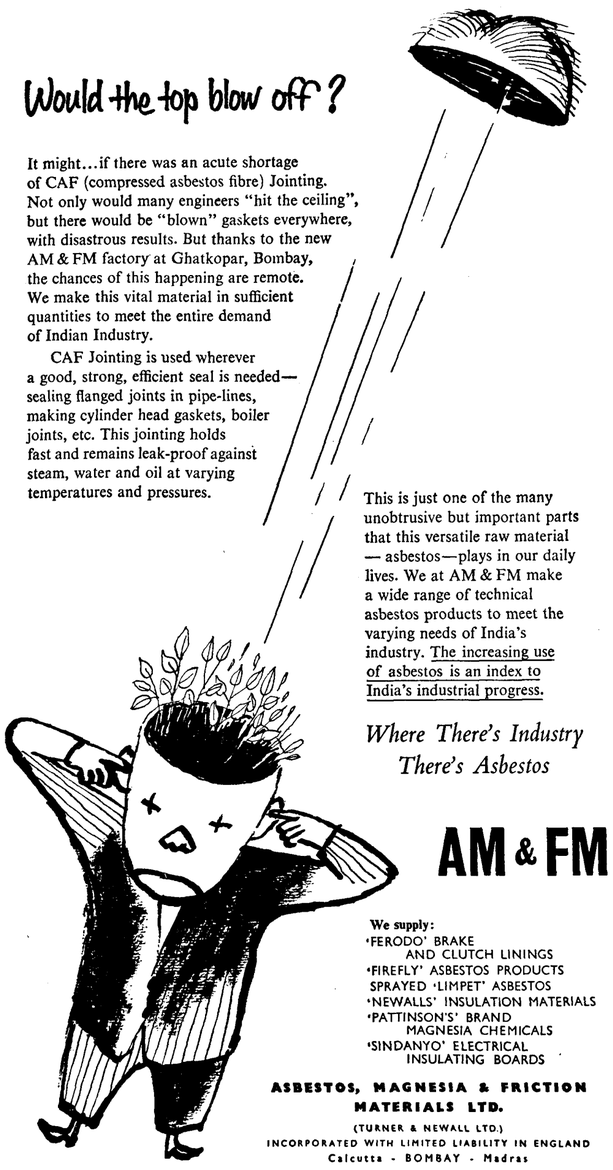
Would the top blow off?

It might...if there was an acute shortage of CAF (compressed asbestos fibre) Jointing. Not only would many engineers "hit the ceiling", but there would be "blown" gaskets everywhere, with disastrous results. But thanks to the new AM & FM factory at Ghatkopar, Bombay, the chances of this happening are remote. We make this vital material in sufficient quantities to meet the entire demand of Indian Industry.

CAF Jointing is used wherever a good, strong, efficient seal is needed—sealing flanged joints in pipe-lines, making cylinder head gaskets, boiler joints, etc. This jointing holds fast and remains leak-proof against steam, water and oil at varying temperatures and pressures.



This is just one of the many unobtrusive but important parts that this versatile raw material — asbestos—plays in our daily lives. We at AM & FM make a wide range of technical asbestos products to meet the varying needs of India's industry. The increasing use of asbestos is an index to India's industrial progress.

ELECTRIC BRASS LAMP HOLDERS

QUESTION OF TARIFF PROTECTION

THE scope for the expansion of the electric lamp holders industry in the country is very wide, because of the large increase—more than double the present level by 1960-61—envisaged in the production of electric energy in the second Plan period. Another factor that adds to the importance of the industry is the fact that it is one which can be developed on a small-scale basis. Among others, these two striking features are likely to influence the Tariff Commission in its enquiry into the industry's claim for continuance of tariff protection. The Commission's investigation began with a speech by Mr. K. R. Damle, I.C.S., Chairman, on 26th November 1956. It will be recalled that the Commission held its first enquiry into this case in 1950, following which protection was granted to the industry up to 31st December 1953 by converting the revenue duties of 36 per cent. *ad valorem* standard, and 24 per cent. *ad valorem* preferential on articles of British manufacture, into protective duties. This was followed by a second enquiry in 1954 which led to an extension of protection to the industry up to 31st December 1956 at the enhanced rates of 60 per cent. *ad valorem* standard, and 50 per cent. *ad valorem* preferential. This protection has been further extended till the end of the year 1957 by the Government in consultation with the Commission.

Such, in brief, is the history of tariff protection to this important industry. The scope of the present enquiry covers all types of brass lamp holders, except miniature types adopted for use in automobiles, and Goliath and Ediswan types of lamp holders, both of which come under a separate category.

Reviewing the industry's progress, the Chairman pointed out that certain ancillary recommendations made by the Commission in its report in 1954 had not been implemented fully; and he called upon the representatives of the industry and the Government to enlighten the Commission on the reasons for such non-implementation. This would, obviously, facilitate the Commission in its appraisal whether or not the industry has, if so, to what extent, fulfilled its obligations stemming from the enjoyment of protection.

At present, there are 15 units in the industry with an aggregate capacity of about 4.7 million pieces, on a single-shift basis, as against 14 units and 3.9 million pieces respectively, at the time of the last enquiry. The figures quoted by Mr. Damle, in the course of his address, indicate that the increase in production during the last few years has been very impressive, the output having more than doubled since the last enquiry. It is also clear from the figures produced below that despite the expansion in domestic production, the imports have continued to be substantial, such having been no less than 350,000 pieces in 1955.

(Figures in lakhs of pieces)

Year	Production	Imports	Total
1952	8.59	6.28	14.87
1953	15.73	1.76	17.49
1954	23.83	8.96	32.79
1955	34.58	3.51	38.09
1956 (Jan.-Sept.)	28.49	N.A.	—

N.A.=Not available.

During the last four years, the average production and imports have been of the order of 2.58 million pieces per annum. The large imports, as well as the estimated demand for the future, suggest that the domestic production of brass holders is inadequate. In 1954, the Commission had estimated the demand for electric lamp holders at 1.4 million pieces per annum, and expected it to increase by 5 per cent. per year during the following two years. The Development Wing of the Ministry of Heavy Industries had estimated the current demand at 2.5 million pieces. On the other hand, the Lamp Holders Manufacturers' Association of India has estimated the demand for both brass and bakelite lamp holders together at 2.2 million pieces. It is evident from these figures, as also from the actual figures of sales, obtained by the Commission from the manufacturers (3.3 million pieces in 1955 and 2.8 million pieces in January-September 1956), that there are no reliable estimates of the domestic demand. Two things, however, are clear: (1) the present production is very inadequate, and (2) as Mr. Damle pointed out, the demand for products will increase fast in the years ahead consequent on the plans for power and industrial development.

A brief reference was made by Mr. Damle to another important aspect of the industry, namely, supply and price of raw materials. A noteworthy feature of the industry is that almost all the principal raw materials, that is, brass sheets, brass tubes, wires and rods and porcelain insulators, except brass tubes, can be adequately produced in India. It is said that a firm in Calcutta has already completed its blueprints for the erection of a tube reducing mill and has approached the Government for licences for the import of machinery. The capacity for the porcelain components is not being fully utilised, owing mainly to the fact that the lamp holders, in the absence of any standard specifications, are being made in numerous designs and sizes. Consequently, the orders received for individual sizes are too small to permit economic manufacture.

The Chairman of the Tariff Commission expressed satisfaction at the improvement in the quality of domestic product. There are, however, certain complaints which show that it is possible and also necessary to improve the quality further. It is pointed out by one of the largest consumers that the porcelain portion inside lamp holders is porous and that the pins fixing the lamp to the holder are not flexible. It is further complained that the indigenous product is generally inferior to the imported product due to the inferior quality of the material used. Moreover, in many cases, the thickness of the material used is also found to be insufficient to thread the holders properly, with the result that the lamp holders fall off due to wind or other causes. This exposes the bare line contacts, involving risk of electric shock.

The import and export policies of the Government, referred to by Mr. Damle, have also been very favourable to the growth of the industry. On the one hand, the present import policy placed severe restrictions on the import of brass lamp holders. As a result, no imports have been noticed at the port of Bombay for the past several months. On the other hand, the export of the electric brass lamp holders is licensed freely by the Government, in order to facilitate development of export markets. It may be recalled that, in its previous report, the Commission had recommended that it would be desirable for the larger units to make efforts to develop export markets for their products. A survey by the Brass Lampholders Manufacturers' Association in the Middle Eastern and Far Eastern markets, however, revealed that the consumers there preferred bakelite holders to brass lamp holders because of their comparative cheapness, though they were less durable. So far, no appreciable success has attended the export drive.

The International Association for the Exchange of Students for Technical Experience is offering practical training to one Indian each with Messrs. Ab Addo and Messrs. Ab Original Odhner in Sweden. The subject of training is mechanical engineering, including production of accounting and calculating machines. The duration of training will be about nine months. The Swedish firms offering training facilities will pay Rs. 450 to Rs. 500 per month. All other expenses, including travelling expenses, will have to be borne by the candidates themselves.

FLUX-FREE ! CORROSION-FREE !!

Welding light metals (aluminium, magnesium and their alloys) is speedy and sure with Argonarc Welding Equipment. Because no flux is used, there is no corrosion. The weld is stronger, production time is cut, and electrode wastage is reduced to a minimum.

Argonarc Welding is equally well applied to stainless steel and copper sheets. There is little or no distortion, because the source of heat—the tungsten arc—is small and concentrated.

G.A.T.T. FAVOURS NEW APPROACH TO TRADE IN PRIMARY COMMODITIES

ESTABLISHMENT OF O.T.C. NO NEARER

THE Eleventh Session of the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.) at Geneva which lasted for five weeks, from 11th October to 19th November 1956, to be precise, took some notable decisions. These relate to the problems of trade in primary commodities, disposal of surplus agricultural produce and the introduction of new Brazilian Tariffs. The most important item, on which no progress was made, is the establishment of the Organisation for Trade Co-operation (O.T.C.).

One of the noteworthy features of the conference, as the Chairman, Sir Claude Corea, pointed out in the course of his concluding remarks, was the general agreement on the real importance of G.A.T.T. in world affairs. It was also felt that, in order to bring home the value of G.A.T.T. to the authorities and people concerned, there should be a concerted effort to put it in proper light and perspective before the national authorities and the general public alike. Further, it was generally recognised that, despite the commendable achievements of the Agreement so far, a better machinery on a permanent basis was indispensable. Appropriately enough, some concern was expressed at the absence of any progress so far on the establishment of O.T.C., and at the dependence, for such establishment, on the course which a particular Contracting Party would follow next year. Sir Corea remarked in this connection:

"It is a matter for serious reflection for it gives encouragement to those who see in the lack of organisational status an element of instability and a stimulus to those who would prefer to return to a world of unilateral action in the field of international trade."

The Chairman, however, found one favourable factor, that is, the acceptance by the parties to the G.A.T.T. of the rules laid down by it. This added to the strength of the Agreement, because they felt that the application of these rules was of fundamental advantage to them both as individual nations and as members of the international trading community.

Discriminatory Import Restrictions

Consultations on the discriminatory aspects of import restrictions have taken place among the parties concerned to their mutual advantage. The five Governments which consulted with the Contracting Parties were Australia, Ceylon, New Zealand, the Federation of Rhodesia and Nyasaland and the U.K. Discussions centred on the financial and other circumstances in which the discriminatory restrictions were being maintained, and on their impact on the commercial and economic interests of other countries.

The Contracting Parties appointed a Consultation Committee to conduct the consultations during June-October 1957 with parties who were still imposing import restrictions for balance-of-payments reasons under the terms of Article XII4(*b*). On the subject of O.E.E.C. trade liberalisation, the Contracting Parties agreed that the appropriate course for countries having particular problems in this connection would be, in the first instance, to take recourse to procedures providing for bilateral consultations under Article XXII.

A notable decision, which Sir Corea termed as an "ingenious solution," related to the new Brazilian Tariff (*vide* page 953 of *Commerce* dated 17th November) which, according to the Chairman, presented the greatest challenge to the conference. The working party, which examined the effects which the introduction of the new tariff would have on Brazil's obligations under the G.A.T.T. and the interests of other parties, recommended to the Contracting Parties that the introduction of new tariff be approved. The Contracting Parties, by a decision, granted Brazil a waiver from the provisions of Article II, paragraph 1, so as to permit the Brazilian Government to put into force its new customs tariff immediately after its enactment by the Brazilian Congress. The duration of this waiver, however, is limited to the time required for the completion of tariff negotiations to replace the present Brazilian schedule of tariff concessions annexed to the G.A.T.T. and for the entry into force of the resultant concessions. Moreover, pending the entry into force of the results of the negotiations, the other Contracting Parties would be free to suspend concessions initially negotiated with Brazil. The decision of the Contracting Parties also contains the procedural and legal provisions which are required to establish a new G.A.T.T. schedule of concessions for Brazil and to ensure that the status of Brazil *vis-a-vis* the general Agreement will continue on a durable basis.

Common Market

On the proposals for a closer economic integration in Europe, the Contracting Parties heard the statements from the representatives of Belgium, on behalf of the six European countries having discussions at Brussels with a view to drawing up a treaty to establish a Common Market, and from the representative of the O.E.E.C., who revealed that a working party of the O.E.E.C. was studying the possibility of establishing a free trade area which would include the six countries comprising the Common Market and other interested O.E.E.C. member-countries. It was further stated that, early in 1957, the Council would decide on the basis of the working party's report whether to go ahead with the plans for a free trade area. They noted also, besides these statements, the assurance given by the six countries that the treaty establishing the Common Market would be submitted to the Contracting Parties after its signature and before it is submitted to their respective Parliaments for ratification. They instructed the Intersessional Committee to follow developments and to report to the next Session.

The Contracting Parties have also decided that Nicaragua, which asked for release from certain G.A.T.T. obligations in order to join a customs union of Central American States when it is formed, is entitled to claim the benefits of Article XXIV relating to the formation of free trade areas, and decided to review this decision if they find that the establishment of a free trade area is unlikely to come into being within ten years of the entry into force of the Treaty. Nicaragua has undertaken to report annually on the progress of reduction of tariffs and other restrictions within the free trade area. In regard to the Franco-Tunisia Customs Union, which became effective on 1st January 1956, the Contracting Parties asked the Intersessional Committee to review the arrangements in detail and report to the Twelfth Session.

Complaints

Some notable progress was also made by the Eleventh Session of G.A.T.T. in the field of 'complaints.' Regarding the complaint against the discriminatory aspects of Brazilian internal taxes against certain U.K. and French exports, assurances were given by the Brazilian delegation that the new excise law to be enacted by its Government would eliminate the discriminatory aspects of the present laws in force. The Contracting Parties also took note of the statement of the French representative that exceptional expenditures that were being incurred by the French Government warranted the keeping in force of the French special compensation tax, which discriminated against the imports of certain products from countries other than the French Union and the O.E.E.C. countries. In regard to French stamp tax, which was increased from 2 to 3 per cent. and was found by the Parties as being contrary to the provisions of Articles II and VIII of the Agreement, the representative of France reported that his Government had recognised that the increase was contrary to the provisions of the agreement and that the draft Finance Act for 1957, submitted to Parliament provided for the reduction of the rate to its original level. As regards French internal tax on automobiles, against which a complaint was made by the U.S., the French delegation did not accept the contention of the U.S. that it was contrary to certain G.A.T.T. principles. The two Governments, however, agreed to continue bilateral discussions, and, if no solution could be found, to refer the complaint to the Intersessional Committee.

Another complaint that came up for consideration was the one against the maintenance of quantitative import restrictions by the U.S. Government on dairy products. Since the restrictions had not been relaxed so far, the Contracting Parties authorised the Netherlands, the complainant, to limit its imports of wheat flour from the U.S. to a maximum of 60,000 tons during 1957.

Under the head "Releases under Article XVIII," it is noteworthy that Ceylon obtained releases which will enable it to regulate the import of a short list of products where she is establishing local production of similar goods. The Contracting Parties also examined the request of the Swiss Government for an opportunity to acceed provisionally to the Agreement, and agreed to request the Swiss Government to enter into tariff negotiations with a view to provisional accession. They decided to hold these negotiations in 1957.

Alternative Approach

Notable in the field of commodity problems was the decision not to proceed further with discussions relating to the draft special agreement on commodity arrangements. Instead, the members hit upon an alternative approach to the problem. They decided to deal with the difficulties arising in connection with international trade in commodities under the terms of the relevant provisions of the Agreement on the basis of a report to be submitted by the Chairman of the Interim Co-ordinating Committee for International Commodity Arrangements. They further decided that, in the course of balance-of-payments consultations, they would take account of problems relating to international commodity trade along with other difficulties which may be contributory to the disequilibrium of the balance of payments. They also decided to make arrangements for an inter-governmental meeting to contribute to the solution of commodity trade problems. It is to be seen as to how far this arrangement will be effective in solving the problems connected with international trade in primary commodities, on a satisfactory solution of which depends the economic stability and development of the underdeveloped areas.

On the question of disposal of surpluses, the parties noted in a resolution that it was the intention of individual Contracting Parties to liquidate agricultural surpluses in such a way as to avoid or provoke disturbances on the world market, and considered that any Contracting Party making arrangements for disposal of surplus agricultural products should consult with the principal suppliers of those products so as to achieve an early liquidation of stocks. In the course of discussions on this subject, concern was expressed over the existence of large surpluses and policies for their disposal. It was emphasised that the consultations procedure would contribute to the more orderly liquidation of stocks. It was also argued that expansion of consumption would be more desirable than restriction on production. But it may be stated here that a satisfactory and permanent solution to this problem consists both in orderly expansion of consumption and regulation of production when the surpluses become excessive. In this connection, the Soil Bank programme of the U.S. Government is a step in the right direction.

(*Concluded from page* 1099)

Prime Minister aptly called 'the mighty adventure of building a new India.'

"The news about the resignation of Shri Lal Bahadur Shastry as Transport Minister has been received with great regret by all and especially those who have first-hand knowledge of his sincerity and devotion to the cause of Indian shipping. It is hoped that his qualities will be utilised in some responsible capacity for the good of the country.

"You will, gentlemen, undoubtedly wish me to extend a cordial welcome to Shri P. R. Subramanian, Senior Deputy Director-General of Shipping, who has recently joined the Board of your Company as a Government Director. Mr. Subramanian is an able officer with long experience of shipping problems. His association will, therefore, be of great benefit to your Company.

"Gentlemen, I am sure you will join me in expressing our well-deserved appreciation and thanks to the staff, both afloat and ashore, for their devotion to duty and the way in which they have shouldered increasing responsibilities as a result of the rapid expansion in the activities of the Company.

"I thank you, gentlemen, for giving me a patient hearing.

"May I now move that the report and the accounts for the year ended 30th June 1956 be and are hereby adopted?"

Note.—This does not purport to be a record of the proceedings of the Annual General Meeting.

INDIAN CABLE'S ASTOUNDING PROGRESS

DIVIDEND LEVEL STEPPED UP

THE year ended 31st March 1956 has turned out to be yet another outstanding one in the history of the Indian Cable Company Ltd. (Chairman: Mr. S. N. Mukerjee, Calcutta). The Company's efficient sales policy, coupled with the increased production, has contributed substantially to a rise in earnings which far outweigh the results achieved in the previous year, which were by themselves a record. The gross profit, which had shot up from Rs. 35.47 lakhs for 1953-54 to Rs. 90.10 lakhs for 1954-55, has jumped up further to Rs. 139.13 lakhs for the year under discussion. Thus the upward trend in earnings witnessed in 1954-55 after the reversal suffered in 1953-54, has been well maintained, nay, bettered. This is, indeed, a remarkable achievement of which the Company can rightly feel proud.

The net profit, too, has not lagged behind; at Rs. 53.59 lakhs it is Rs. 9.38 lakhs above the level attained in 1954-55. It is noteworthy that this increase, substantial as it is, has occurred only after the management has raised the provision for depreciation from Rs. 10.90 lakhs to Rs. 14.47 lakhs and that for taxation from Rs. 33.02 lakhs to Rs. 68.00 lakhs.

The higher profit has had its welcome reflection in the distribution to the participating preference shareholders and the ordinary shareholders. The return to them has been stepped up to 15 per cent. (made up of a dividend of 12½ per cent. and a bonus of 2½ per cent.) from 12½ per cent. (made up of a dividend of 10 per cent. and a bonus of 2½ per cent.) for the previous year. The latter return itself was higher than that for 1953-54, amounting to 10 per cent. (dividend of 7½ per cent. and bonus of 2½ per cent.), at which level it had remained stationary for three years previous to that. It will be noted from this recital of the recent record of the Company that the rate of dividend proper has been enhanced for the third year in succession. This is a significant pointer to the future, in that it reflects the Directors' confidence that they can repeat the higher dividend without much difficulty in the coming years as well.

The increased distribution to the shareholders for the year under review has been made only after raising the allocation to the reserves from Rs. 11.76 lakhs to Rs. 25.66 lakhs. The contribution to the reserves is made up of Rs. 10.00 lakhs set aside to basic stock reserve, in view of the wide fluctuation in world prices of copper during the year under review, and the fact that the closing stock of copper was considerably higher than in the previous year, Rs. 5.00 lakhs to reserve for replacement of fixed assets, Rs. 7.16 lakhs to reserve for retiring gratuities and Rs. 3.50 lakhs for doubtful debts.

The following table will help the reader to make a comparative study of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	614.55	499.03	331.90

Carry forward	32.04	28.93	19.70	15.94

N.A.=Not available.

The improved results of the Company for the year under review have more than justified the hope expressed by the Chairman in the last annual statement that the "prospects for the future are good." They are due, according to the Chairman, "mainly to an increase in sales of more than 23 per cent." Reviewing the working of the Company during the year, the Chairman, Mr. S. N. Mukerjee, in his usual statement accompanying the Directors' Report for the year, says:

"The greatest problem of the year was caused by wide fluctuation in the price of copper. Whereas the average L.M.E. settlement rate for April 1955 was £328 per ton, a record peak of £438 per ton was reached in March 1956. There were no serious shortages of raw materials during the year, but considerable difficulties were experienced with supplies of coal, and the congestion in the docks and restrictions of rail movement created many difficulties in maintaining a continuous flow of raw material to the factory."

The Company's drive for increasing its business to still greater levels has brought about some changes of far-reaching importance in its organisational set-up. Commenting on these, the Chairman observes:

"An outstanding change in the activities of your Company is the taking over, on the 1st January 1956, from British Insulated Callender's Cables Ltd., the entire selling and engineering organisation built up by them and their predecessors in India over the past 50 years. This comprises 12 sales offices which form a network whose activities closely cover the whole of this vast country. From the same date, your Company was appointed on a commission basis as representatives for British Insulated Callender's Cables Ltd. in India.

"The setting up of our own sales organisation necessitated the termination of our former agency agreement with Messrs. Gillanders Arbuthnot & Co., Ltd., who have acted as our selling agents since the early days of this Company and for whose services in the past we have every reason to be grateful. In expressing my appreciation of their services, I am pleased to add that satisfactory arrangements have been made whereby they continue to act as our distributors, thus ensuring continuation of the connections which they have built up over many years with customers for our products."

Alongside the efforts to augment its sales, the Company's schemes for expansion of its capacity are making headway which, when completed, would firmly establish it as one of the largest industrial units that the country can boast of. The progress made thus far is reflected in a considerable appreciation in the value of its fixed assets from Rs. 98.55 lakhs in the previous year to Rs. 127.88 lakhs at the end of the year of review. Speaking about the expansionist programme, the Chairman says:

"We have good reason to be satisfied with the progress of the ambitious scheme for expansion on which your Company embarked a few years back.

"The rod rolling mill, P.V.C. insulated cable plant and the first phase of the expansion for rubber insulated cables and wires have been completed and are in full production at economic levels with satisfactory forward bookings. The second phase of the expansion of the rubber cable factory is in progress, but some of the new plant has not yet been shipped and it is likely to be the second half of 1957 before full production is available from this project. The second and final phase of the expansion of the production of paper insulated wires and strips for transformer windings has been completed.

"The plant for the manufacture of fully synthetic enamelled copper wires with a vinyl acetyl base and complying with British Standard Specification 1844:1952 is now fully installed and such enamelled copper wires were first produced at Tatanagar in August 1956. It is expected that the plant will be in full operation during the first half of 1957 with a size range of 0.092" to 0.0048" diameter copper wires. A special plant has been installed, and is in operation, at Tatanagar for the manufacture of the fully synthetic enamel itself.

In the new factory for the production of paper insulated power cables for up to 11 k.v. working pressure, about 80 per cent. of the plant has been installed. It is expected to commence production of these cables about the middle of 1957."

The latest balance-sheet of the Company shows that its financial position is very sound. It has a paid-up capital of Rs. 165.77 lakhs divided into 128,775 six per cent. cumulative participating preference shares of Rs. 10 each and the balance in ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 169.04 lakhs. The 5½ per cent. debenture capital stands at Rs. 101.37 lakhs. The provision for taxation amounts to Rs. 111.79 lakhs. The current liabilities are of the order of Rs. 214.79 lakhs. The gross block of the value of Rs. 199.39 lakhs (including an addition of Rs. 43.86 lakhs during the year) stands depreciated at Rs. 127.88 lakhs. The current assets stand at the impressive level of Rs. 634.88 lakhs in which miscellaneous stores account for Rs. 13.48 lakhs, raw materials and work-in-progress Rs. 158.67 lakhs, finished goods Rs. 46.19 lakhs and book debts considered good Rs. 284.83 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 32 *cum-div.* On an *ex-div.* basis, and taking the total dividend for the year at 15 per cent., the yield works out to 4.9 per cent. per annum.

About the outlook for the Company, the Chairman in the concluding lines of his statement observes that "the results for the current year to date are good and we have a satisfactory order book for all our products."

SIXTYONE YEARS STRONG IN SERVICE

R. L. Tuli - Offtg. General Manager

AMALGAMATED ELECTRIC'S RESULTS BETTER

A substantial improvement in electricity generated, coupled with a fair rise in sales of energy, has led to a small rise in the earnings of the Amalgamated Electricity Company, Ltd. (Managing Agents: The Consolidated Electric Agencies Private Ltd., Bombay), for the year ended 31st March 1956. The gross profit, which had risen from Rs. 13.90 lakhs for 1953-54 to Rs. 16.15 lakhs for 1954-55, has made a small advance to Rs. 16.98 lakhs for the year under review. Although this increase is by no means great or substantial, what is of special significance is the steady upward trend in earnings witnessed over the past few years. Depreciation, including equated contribution for arrears of depreciation, takes up Rs. 5.24 lakhs, as against Rs. 4.70 lakhs provided a year ago. The net profit, after this essential provision but before taxation, stands slightly higher at Rs. 10.57 lakhs, as against Rs. 10.29 lakhs in the previous year. The dividend to ordinary shareholders remains unchanged at the usual rate of 7½ per cent., a level which the Company had been maintaining over a number of years. It must, however, be noted that the dividend for the year under review, as well as for the previous year, is on a capital enhanced by the additional issue of shares during the latter year. Thus, the paid-up capital which stood at Rs. 106.92 lakhs for 1953-54 was increased to Rs. 116.96 lakhs by the fresh issue of 5,877 5½ per cent. (free of income-tax) cumulative preference shares of Rs. 100 each and 41,664 ordinary shares of Rs. 10 each. The Directors have transferred a sum of Rs. 1.40 lakhs to the various reserves, as against Rs. 46,456 made in the previous year. After paying dividend on the two sets of cumulative preference and ordinary shares, a balance of Rs. 15.13 lakhs (subject to provision for taxation) is left over to be carried forward.

The following comparative table will give an idea of the Company's working during the preceding three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale of energy	57.07	53.08	46.52	43.78
Other income	2.88	2.56	2.31	2.23
Generating expenses	30.03	27.88	23.78	22.67
Other expenses	12.94	11.60	11.00	10.42
Gross profit	16.98	16.15	14.05	12.92
Managing Agents' commission	1.17	1.16	1.00	0.94
Depreciation	5.24	4.70	4.08	3.49
Taxation	..	..	0.01	1.52
Net profit	10.57	10.29	8.96	6.97
Intangible and other assets written off	0.60	0.41	0.26	0.11
Transfer to reserves	1.40	0.46	0.53	0.49
Dividends—				
6½% cumulative preference	1.33	1.33	0.70	0.64
5% cumulative preference	1.02	1.02	1.01	0.91
Ordinary	5.44 (7½%)	5.44 (7½%)	4.60 (7½%)	4.19 (7½%)
Carry forward*	15.13	14.35	12.71	10.84

* Subject to income-tax.

It will be seen from the above table that the Company's sale proceeds have been progressively increasing year after year. The number of units of electricity generated by the Company during the year under review aggregated 33.21 million, as compared with 28.98 million in 1954-55 and 24.01 million in 1953-54. The number of consumers served has also increased from 40,140 in 1953-54 to 51,006.

A notable feature disclosed by the table is the large size of the undistributed profit. This is apparently due to the absence of provision for taxation. It is seen from the statement of accounts that the assessment for the years 1951-52 to 1956-57 is yet to be made and that for the years 1948-49 to 1950-51, the assessment is under appeal.

The Company supplies electricity in the municipal areas of Ajmer, Belgaum, Bhiwandi, Bhusawal, Bulsar, Chalisgaon, Dohad, Jalgaon, Malegaon and other villages adjoined as per amendment to the licenses.

The Company's balance-sheet as at 31st March 1956 shows the paid-up capital at Rs. 116.96 lakhs, consisting of 24,150 5½ per cent. (free of income-tax) cumulative preference shares of Rs. 100 each, 20,314 five per cent. (free of income-tax) cumulative preference shares of Rs. 100 each and 725,000 ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 28.94 lakhs. The gross block stands at Rs. 177.19 lakhs against which there is a depreciation fund at Rs. 32.67 lakhs. The current assets at Rs 35.20 lakhs are just enough to cover the current liabilities amounting to Rs. 33.81 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 11-2 *cum-div.* On an *ex-div.* basis, and taking the year's dividend at 7½ per cent., the yield works out to 7 per cent. per annum.

AHMEDABAD ADVANCE MILLS

Speaking at the annual general meeting of the shareholders of the Ahmedabad Advance Mills Ltd. last week, the Chairman, Mr. A. D. Shroff, expressed satisfaction at the financial results of the Company for the year ended 30th June 1956, the profit, before charging depreciation and taxation, having touched a high of Rs. 24.17 lakhs which, by the way, was the highest recorded by the Company in the post-war period. The causes which contributed to this successful achievement, the Chairman observed, were remunerative cloth sales and purchases of cotton at favourable rates. Another factor which was not the less important was the programme of renovation and rehabilitation on which the Company had actively embarked over the past few years. The last mentioned cause contributed in no small measure to the successful working of the Company. The large-scale renovation programme, started as early as in 1951, included, among other items, the establishment of entirely new dyeing, bleaching and finishing sections. This resulted in effecting considerable economies in operation costs, in addition to paving the way for the manufacture of improved and superior varieties of cloth which had now earned a reputation of their own.

There were many things still to be done before the mills could be put on a firm competitive footing, Mr. Shroff went on to add. Most urgent of all was the need to make further additions to the mills' processing capacity so as to produce a larger variety of processed goods. The Chairman also indicated that, in the not distant future, they would also have to proceed with the replacement of the old spinning frames left over and of the spinning preparatory and create such working conditions in weaving as would enable the working of four looms to a weaver. These changes would lead to a further saving in operation costs.

The heavy capital expenditure thus far was financed, to a great extent, from internal resources and short-term loans, supplemented by the Rs. 30 lakhs obtained from the last issue of new ordinary shares at a premium. It had, therefore, become imperative to strengthen the financial resources of the Company and, with this object, the Directors had recently decided to issue debentures of a value of Rs. 30 lakhs.

Mr. Shroff disclosed that the suggestion so often made by the shareholders to reduce the selling expenses had been implemented by reducing the selling agents' commission on internal sales of cloth from 1 to ¾ per cent. from 1st January 1956. In return, they had been given a firm agreement for a period of three years. The Company had also opened retail selling shops at Bombay and Ahmedabad. The opening of more of such shops in other parts of the country was under contemplation.

Notice

THE EAST INDIAN COAL COMPANY LIMITED

(Incorporated in England with Limited Liability.)

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fourth Annual General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Saturday the 29th December 1956, at 11 a.m., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and pass the Accounts for the year ended 30th April 1956.
2. To declare a Dividend.
3. To re-elect two Directors.
4. To fix the Auditors' remuneration.

The Share Transfer Books of the Company will be closed from the 20th to the 29th December 1956, both days inclusive.

Dated this 30th day of November 1956.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents and Secretaries.

A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a Member of the Company.

QUESTION HOUR IN PARLIAMENT

Capital Markets Abroad

AN appraisal of conditions in the European capital markets has been submitted to the Government by a senior officer of the Finance Ministry deputed for the purpose. Its contents are confidential and it will not be in the public interest to disclose the details. The Government has at present no intention to seek any foreign loans except, perhaps, the Durgapur steel (British) plant type of assistance. The senior officer visited Holland, Belgium, Switzerland, Germany and France to study conditions in the money markets there. There may be plenty of goodwill in areas from where no money may be forthcoming. In other areas, there may be no goodwill, but money may be forthcoming. Goodwill and money do not always go together. I am sure hon'ble members have plenty of goodwill for me, but, if I go round with the begging bowl, probably I will come back empty. We certainly need some finances, but the best way of getting them is certainly not by expressing the view that we need them. At the present moment, we have no intention of floating any loan except in the manner in which we have been able to finance the steel plant at Durgapur. I must repudiate the insinuation that we have sent anyone with a begging bowl. The officer went there to study things and I think it is very necessary that the Finance Minister should know about the state of capital in the rest of the world. I think it is derogatory on our part to ask the diplomatic missions in Delhi to inquire whether we can get assistance from their countries.

* * * *

State Finance Corporations

For the purposes of income-tax, the State Financial Corporations are treated as companies within the meaning of the Indian Income-tax Act, 1922 (XI of 1922) and are liable to income-tax and super-tax on their income, profits and gains *vide* section 43 of the State Financial Corporations Act, 1951. The amounts paid by State Governments under the guarantee given in pursuance of section 6 of the State Financial Corporations Act, 1951, are not treated as income, profits and gains of the Financial Corporations. These are, therefore, not taken into consideration for calculating income-tax.

* * * *

Taxation Reforms

The Government, in its march for additional resources, has to examine every avenue that is expected to produce results and, from that point of view, the Taxation Inquiry Commission's proposals and the Kaldor report are under continual examination. These taxation matters are best dealt with in connection with the budget proposals.

—*T. T. Krishnamachari*

Income-tax Arrears

A sum of Rs. 23.9 crores out of the total amount of income-tax arrears of Rs. 182.2 crores for the years 1950-51 to 1954-55 is considered irrecoverable. Another Rs. 11 crores are due from persons who have left India and have no assets in this country from which recovery of tax is possible. Normal recovery action is pending in the case of the balance amount. The Central Board of Revenue has made arrangements with State Governments for the appointment of special revenue officers exclusively for income-tax collection work. This arrangement is already in vogue in 10 important cities and four States, and it is now proposed to extend the scheme to other important places.

—*M. C. Shah*

Textile Machinery

Manufacturers of textile machinery have been asked to increase their production, so as to reduce the country's dependence on imports.

—*Morarji Desai*

Mill Cloth

The production of mill cloth during the 10 months of the current year had been of the order of 4,371 million yards. There had been no report of scarcity of cloth in any centre on the eve of *Dusserah* and *Diwalli* or any fundamental increase in the price of cloth.

—*Nityanand Kanungo*

Cement Factories

Thirty-three new applications for setting up of cement factories in various parts of India have already been sanctioned and three other applications are pending. In addition, all the existing factories are also expected to double or treble their production, so that, by the end of the Second Five-year Plan, the total cement production will reach the set target of 16 million tons per annum.

—*M. M. Shah*

Suez Crisis and Trade

Diversion of shipping via the Cape of Good Hope will cost India 6 per cent. more so far as exports are concerned and 5½ per cent. more on imports. So far, however, the import of machinery for the various projects under the Plan has not been perceptibly affected. A revision of the second Plan targets will be necessary only if the closure of the Suez Canal is unduly prolonged.

* * * *

Cloth Prices

On the whole, there has been a fall of about 2 per cent. in the prices of cloth since the recent imposition of additional excise duty on cloth.

* * * *

Egyptian Cotton

Egyptian cotton prices have risen by nearly Rs. 200 over the levels prevailing immediately before the nationalisation of the Suez Canal. Import licences are being issued freely for import of cottons of staple length 1-3/16 inch and above from soft currency areas.

* * * *

Handlooms

Nearly 1.1 million—almost half the total number—handloom weavers have come under the co-operatives. The Government has recently encouraged starting of co-operative mills for producing yarn, and starting of co-operative mills get priority over other mills.

* * * *

Cement from Pakistan

Cement is being purchased from Pakistan by the State Trading Corporation. Deliveries are expected to be completed between December 1956 and August 1957. Payment will be made by means of letters of credit.

* * * *

Economic Research

The Government proposes to finance research by the National Council of Applied Economic Research in specific subjects. No grant-in-aid has been asked for by the Council or given by the Government.

* * * *

Synthetic Rubber

The plan to set up a synthetic rubber plant with an annual capacity of 20,000 tons is intended to fill the gap between India's requirements of rubber and its production capacity of natural rubber. If schemes are put up to plant rubber in Assam and the North-Eastern regions of India, the Government will consider them.

* * * *

Shoes for Russia

Export of Rs. 1.18 crores worth of shoes to the Soviet Union will be completed by the end of February. A major portion of the supplies will be made through the National Small Industries Corporation which will execute the orders through co-operative societies, small shoe-making establishments as well as individual shoe-makers. The Government has given a loan of Rs. 25 lakhs to the Corporation to help organise production. As Agra produced the lion's share of shoes in the country, naturally, it may have got the lion's share of the trade. There is no intention to discriminate in favour of Agra, however, to the exclusion of anyone, else regionally or otherwise.

—*D. P. Karmarkar*

Synthetic Petrol

A scheme costing approximately Rs. 20 crores for the manufacture of synthetic petrol in the country is now being examined by the Planning Commission. The inclusion of the scheme in the Second Five-year Plan will depend on the availability of foreign exchange. Preliminary investigations show that the manufacture of synthetic petrol in India will be an economic proposition, since the cost of production of the raw material—coal—in the country is very low. It is true that the scheme for the production of synthetic petrol is given low priority, because more oil has been discovered in Assam and there is a possibility of finding oil elsewhere. However, the Government wants synthetic petrol also to be produced, as the setting up of a synthetic oil plant leads to the development of various chemical industries in the country.

* * * *

Oil Refinery

A private firm has renewed its earlier offer to install an oil refinery at Bhavnagar in collaboration with a French firm, but it has been decided to defer further consideration until fuller details about the new refinery to treat Assam crude oil are available.

* * * *

Shipbuilding Yard

A proposal for a British shipping mission to visit India is now under consideraton. The proposal flows from the U.K. Government's offer of assistance in the establishment of a second shipbuilding yard in India. It has been suggested that the mission, after visiting various sites and studying the data available, may prepare a preliminary project report, together with estimates of the capital costs, construction costs of various types of ships and so on.

—*Satish Chandra*

* * * *

Oil Drilling

Some negotiations are now going on with a French firm for the purpose of obtaining experts in desert drilling for oil in the Jaisalmer area in Rajasthan. The Canadians have conducted an aeromagnetic survey of the area for oil. In addition, a good deal of exploration work has been done by Indian experts themselves. The intention now is to obtain the services of some drilling experts. The French firm has a great deal of experience in desert drilling in the Sahara. In fact, it has done some "sensational" work there successfully.

—*K. D. Malaviya*

Oil Tanker

India expects to have possession of the oil tanker, which it recently purchased, by January next. The Government had satisfied itself about its worthiness before purchase. In fact, soon after the deal was concluded, the firm from whom India had purchased the tanker, had offered to buy it back at a price of £200,000 more than what India had paid for it. This was because the prices had gone up meanwhile. India has placed orders for two ships in West German shipyards, and one ship in Italy. All these are expected to be delivered in 1961. While the Government will only be too happy to buy ships earlier, it has been impossible to find any country willing to deliver ships before the end of the second Plan period (1960). Out of the Rs. 20 crores available to the Ministry of Transport to buy ships in the public sector, the Government has already made commitments to the tune of Rs. 19 crores.

LABOUR STRIKE TELLS ON CENTRAL INDIA MILLS

DUNCAN BROTHERS CUT DIVIDEND

Central India Spinning, Weaving and Manufacturing Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Tata Industries Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit for the year, after transferring Rs. 5,00,000 (*nil*) from rehabilitation of buildings and machinery fund, and providing Rs. 6,00,000 (*nil*) for depreciation, amounted to Rs. 37,631 (Rs. 39,632). Adding thereto the balance brought forward from the previous year's accounts of Rs. 3,703 (Rs. 14,071), the amount available for disposal is Rs. 41,334 (Rs. 53,703). From this sum the directors have transferred to reserve fund Rs. 28,119 (Rs. 50,000 to dividend equalisation fund) leaving a balance of Rs. 13,215 (Rs. 3,703) to be carried forward.

The directors regret to report the unsatisfactory working of the Company during the year under review. This was mainly due to the prolonged strike enforced on the Mills and the inevitable dislocation caused by the implementation of the scheme of large-scale renovation and reorganisation of the Mills.

In view of the exceptional circumstances accounting for the poor results, the directors have recommended a dividend of 5 (5) per cent. tax-free on the preference shares, for the year ended 30th June 1956, to be paid out of the dividend equalisation fund, if declared by the shareholders. The directors regret they have not been able to recommend any dividend on the ordinary shares (Rs. 3 per ordinary share, out of dividend equalisation fund) for the year ended 30th June 1956. The managing agents have kindly agreed to forgo their minimum commission of Rs. 50,000, to which they are entitled.

During the year the Mills were involved in a prolonged strike lasting from 27th January to 23rd April 1956. The main reason for the strike was the hostile attitude of a certain section of workers led by irresponsible labour leadership who were not willing to accept the agreements entered into by the Company with the recognised union for the closure of Mill No. 1 for renovation purposes, involving the transfer of a large section of workers to third shift operation. As a result of the refusal of workers to work in the third shift and the adoption of a continued hostile attitude by them, it was found impossible to continue the working of the Mills. Accordingly, the Mills were closed down from 11th February 1956 after putting up the necessary legal notices. After protracted negotiations between responsible labour leaders, Government and local management, the Mills were reopened from 23rd April after a closure of about 90 days. The loss in production, as a result of this closure was about 1 million pounds of yarn and 13 million yards of cloth. As shareholders will appreciate, it is impossible for any operational unit to resume normal working immediately after a long period of closure involving labour trouble and consequently, apart from the direct loss in production mentioned above, the Mills after resumption of operations continued to work on a depleted basis for some time, which resulted in a further loss of production, until normal operations were restored.

After carefully considering the various alternative schemes, the directors have now sanctioned a rehabilitation and renovation programme, involving an expenditure of about Rs. 1,70,00,000. The main items of new plant and machinery proposed to be installed are ring frames, looms, winding and warping units and high-speed sizing machines. The programme involves the amalgamation of Mill Nos. 1 and 2 into one composite spinning and weaving unit to take advantage of resultant economies.

At various stages the implementation of the above scheme had to be deliberately slowed down with a view to studying the various political and economic implications arising out of the proposed reorganisation of the States. The launching of the scheme was further delayed by the considerable opposition offered by unrecognised unions at the commencement of implementation, which ultimately resulted in the total closure of the Mills from 11th February to 23rd April 1956.

In the year under report, new plant and equipment valued at about Rs. 3,04,000 was installed, the main items being kiers, a washing machine, a doubling and plaiting machine, stamping machines, a 3-bowl padding mangle and additions to the package dyeing plant.

During the year, owing to unseasonal rains, the outturn of Indian cotton crop fell far below original estimates, whereas its consumption by mills increased. This created scarcity conditions resulting in many varieties touching ceilings. As a result of the continual rise of the Jarilla hedge contract in the Bombay market, a crisis was created resulting in the prolonged suspension of *futures* trading from 23rd December 1955 to 18th June 1956. The company's Mills were, however, able to cover their requirements without difficulty and at fairly competitive prices, largely by local purchases at Nagpur and at the ginning and pressing factories.

The 1956-57 Central Budget raised the excise duty on cloth from 1st March 1956 by 6 pies per square yard on all categories of cloth, except coarse *dhotis* and *saris*. From 1st September 1956 the duty was again increased very substantially, particularly on medium cloths in which category it was doubled. The total excise duty on cloth now works out to 4 annas on superfine, 3 annas on fine, 2 annas on medium and 1½ annas on coarse cloth (other than *dhotis* and *saris*), all on a square yard basis. The handloom cess of 3 pies per square yard on all categories of cloth remains unaltered. The export duty of 10 per cent. *ad valorem* on coarse varieties of cloth which was reduced to 6¼ per cent. on 1st March 1955 was altogether abolished from 15th May 1956.

Under an agreement between the Madhya Pradesh Millowners' Association, Nagpur and the Madhya Pradesh National Textile Workers' Federation, the basis of calculating dearness allowance was increased by roughly 9 per cent. over the then prevailing rate with retrospective effect from 1st July 1955. The increase has added an extra burden of about Rs. 5,00,000 to the Company's annual wage bill.

The installed capacity of the Mills has been temporarily reduced from 1,15,188 spindles to 67,228 spindles and from 2,062 looms to 1,620 looms as the scheme of renovation and reorganisation is being implemented.

Accounts in brief are as under:—

Duncan Brothers and Co., Ltd.

The directors of the above Company (Chairman: Mr. R. H. Duguid, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

As the accounts relate to a period which ended before the introduction of the Companies Act, 1956, they have been prepared in accordance with the Companies Act, 1913. This fact has been commented upon by the auditors in their report.

The revenue profit for the year amounts to Rs. 43,51,864 (Rs. 48,24,539) to which is added registration fees Rs. 693 (Rs. 89), doubtful debt recovered Rs. 21,168 (*nil*), surplus on sale of investments Rs. 5,48,129 (*nil*) and balance brought forward from 1954 Rs. 4,28,060 (Rs. 3,34,600) making a total of Rs. 53,49,914 (Rs. 51,59,228). From this sum the directors have made the following appropriations:—To provision for taxation Rs. 24,50,000 (Rs. 22,00,000), transfer to general reserve Rs. 5,00,000 (Rs. 7,50,000), transfer to investment reserve Rs. 5,00,000 (Rs. 5,00,000) and transfer to contingency reserve Rs. 2,50,000 (Rs. 21,168 for doubtful debts) leaving a sum of Rs. 16,49,914 (Rs. 16,88,060). This amount the directors recommend should be distributed as under:—

In payment of a dividend on 45,000 tax-free cumulative preference shares at the rate of 4 (4) per cent. for the year ended 31st December 1955 without any deduction for income-tax paid by the Company, declared payable by the directors on 31st January 1956 Rs. 1,80,000 (Rs. 1,80,000) in payment of interim dividend on 90,000 ordinary shares at the rate of 5 (5) per cent. for the year ended 31st December 1955 without any deduction for income-tax paid by the Company, declared payable by the directors on 27th March 1956 Rs. 4,50,000 (Rs. 4,50,000) in payment of final dividend on 90,000 ordinary shares at the rate of 6 (7) per cent. for the year ended 31st December, 1955 without any deduction for income-tax paid by the Company Rs. 5,40,000 (Rs. 6,30,000) and in carrying forward Rs. 4,79,914 (Rs. 4,28,060).

The Company's profits continued at a high level during the year under review, but consequent upon the enactment of the Companies Act, 1956, some diminution in the measure of the Company's prosperity must be anticipated.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,35,00,000	Block ...	17,81,146
Reserves ...	80,80,000	Stores, etc. ...	3,03,366

Vellore Electric Corporation Ltd.

The directors of the above Company (Managing Agents: Messrs. Chandrie & Co. Private Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March 1956.

This year, the Company been fortunate in having the supply without any cut owing to abundant rain in the catchment area. The directors have during the year paid particular attention to major rural extensions. The demand for extending electricity from other villages in the area of supply continues to be on the increase. The directors availed of the balance of the loan of Rs. 3 lakhs from the Madras Industrial Investment Corporation Ltd., and the villages of Shenbakkam, Virupakshipuram, Kangeyanallore, Nallampattarai, Sathoor, Labbaipettai, Kalar, Nandiyalam and Pudupet were electrified. By extending the lines to the above villages the Company connected up 215 agricultural consumers. It has also added 577 consumers of other classes to the system during the year and thus bringing up the total number of consumers in the area to 9,050. Besides the street lights connected up during the period is 238.

In Vellore and Ranipet area, 12,928 miles of h.t. lines and 31.0 miles of l.t. lines were added to the system and eleven additional distribution substations were constructed and commissioned during the year. The directors have addressed the Government of Madras to permit us to take a further loan of Rs. 5 lakhs from the Madras Industrial Investment Corporation Ltd., and the Government of Madras has permitted us to take a loan of Rs. 3 lakhs only. The Madras Industrial Investment Corporation Ltd., have sanctioned Rs. 1 lakh and the balance of Rs. 2 lakhs will be availed of after certain formalities are complied with. The following statistics will show the progress made during the year:—

	1954-55	1955-56
Total units purchased in kwhs.	93,53,852	1,23,16,508
Total units sold in kwhs.	87,02,076	1,06,03,388
Cost of units purchased	3,10,948	3,67,441
Gross revenue	8,18,934	9,79,084
No. of consumers connected	8,258	9.050
Maximum demand in kws.:—		
Vellore	1,290	1,380
Ranipet	920	1,150

Amendments to Electricity (Supply) Act: The Parliament has introduced an Amending Bill which, if it becomes law, will reduce the return from the industry to a large extent in future years. The Association of Electrical Undertakings, Southern India, in conjunction with Federation of Electricity Undertakings, Bombay, have given evidence before the Select Committee in October 1956 detailing their difficulties and the directors are watching as to how the Act will take shape.

The year's working has resulted in a profit of Rs. 67,831 (Rs. 78,252) after providing for reserve for depreciation as per Electricity (Supply) Act Rs. 87,727 (Rs. 72,552), reserve for taxes Rs. 70,000 (Rs. 50,000) and for contingent reserve ¼ per cent. Rs. 6,043 (Rs. 5,030). After adding profit brought forward from previous year after payment of dividend for 1954-55 Rs. 47,500 Rs. 79,131 (Rs. 61,188) refund from income-tax Rs. 33,222 (*nil*) and tax deducted from dividends on preference shares Rs. 1,964 (*nil*) there is a total amount of Rs. 1,92,568 (Rs. 1,29,020). From this is deducted the interim dividend declared for 1954-56 Rs. 23,750 (*nil*) leaving a balance of Rs. 1,68,818 (Rs. 1,26,631). The profit made during the year, viz., Rs. 78,252 falls short of the reasonable return as per the Electricity (Supply) Act, 1948 by about Rs. 13,750. Out of the balance of Rs. 1,68,818 the directors now recommend the payment of a final dividend of 3 (6) per cent. less tax on preference shares and 5 (10) per cent. free of tax on ordinary shares for the year ended 31st March 1956 which will absorb Rs. 23,750 (Rs. 47,500) leaving a balance of Rs. 1,45,068 (Rs. 79,131).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,25,000	Block ...	17,26,225
Reserves ...	2,48,795	Stores, tools and motor cars ...	2,79,067

Liabilities ...	15,56,752	Debts and advances ...	2,15,328
Profit and loss account ...	1,68,818	Investments	63.453
		Cash ...	2,76,237
Rs.	25,69,365	Rs.	25,69,365

West Coast Electric Supply Corporation Ltd.

The directors of the above Company (Managing Agents: Messrs. Chandrie & Co. (Private) Ltd., Madras) submit the audited accounts of the Corporation for the year ended 31st March 1956.

During the year under review there was no power cut and this enabled the company to carry out its development programmes. However, in the next accounting year, contrary to expectations the monsoon conditions proved unfavourable in April and May 1956 when restrictions on consumption of power were imposed by the Government Electricity Department. Dearth of transmission line materials, poles, transformers, etc., is proving a great handicap to the licensees in executing their programmes.

The Government Electricity Department informed all the licensees of an increased surcharge of 30 per cent. in addition to the 10 per cent. already levied by them. This came into effect from 1st August 1956. With a view to recup this additional payment to the Government on the purchase of energy in bulk, the company had to increase its tariffs to all the h.t. consumers in the Calicut and Cannanore-Tellicherry areas. In the case of Cannanore-Tellicherry area, the tariff for l.t. consumers also had to be slighty increased. The Association of Electrical Undertakings, Southern India, have made representations to the Government against this excessive increase.

Out of the loan of Rs. 2.89 lakhs granted by the Government of Madras, a sum of Rs. 1 lakh was drawn in the year 1954-55 and the balance of Rs. 1.89 lakhs was availed in 1955-56. The amount was utilised for specific rural electrification in Calicut and Cannanore-Tellicherry Licence areas. The extension works to Chevvayur, Kakkodi, Beypore and Naduvattam villages and supply to Farook College and surrounding areas under the Calicut Licence were completed. In the Cannanore-Tellicherry Licence areas electricity supply was extended to the villages of Kallayi, Kotiyeri, Olavilam and Kadirur and the extension of power supply to Kuthuparamba and neighbouring areas is under progress.

Further, the Government of Madras has given their consent to the representation made by the licensees to allow them to retain the penal surcharges levied and collected by the licensees, during the period of restriction as a simple loan at an interest rate of 5½ per cent. The amount thus made available for our company is Rs. 88,058 which has been utilised for extensions and general improvement to the system.

Calicut Licence: During the year 560 new consumers were connected up and 479 street lights were added to the distribution system. The Corporation extended its h.t. and l.t. mains by 3.75 miles and 10.70 miles respectively and added 4 additional substations.

Cannanore-Tellicherry Licence: 423 new consumers of all classes and 275 additional street lights were added to the system during the financial year. The Corporation extended its h.t. and l.t. lines by 3.67 miles and 13.084 miles respectively.

Mahe Licence: As mentioned in the directors' last report supply was switched on 12th October 1955 and since then the Corporation has connected up 60 domestic consumers and 108 street lights. The length of h.t. and l.t. lines in the area is 0.416 and 4.95 miles respectively. The directors expect the Central Government to issue the Mahe Electric Licence shortly. As the area is still undeveloped, inevitably the working shows a loss in the beginning.

With the inauguration of new Kerala State from 1st November 1956 the licence areas of this company, viz. Calicut and Cannanore-Tellicherry licences, have fallen in the new Kerala State and Mahe continues to be part of Pondicherry State.

The net profit of the Company after providing for depreciation on assets Rs. 1,51,891 (Rs. 1,49,632), taxes on income Rs. 1,46,000 (Rs. 1,15,000), contingency reserve Rs. 15,166 (Rs. 13,027), writing off of intangibles Rs. 9,497 (Rs. 8,563) and charities and donations Rs. 800 (Rs. 200) is Rs. 1,97,318 (Rs. 1,63,874). After adding the balance brought forward as per last year's report Rs. 1,35,594 (Rs. 87,936) and excess provision for income-tax Rs. 32,482 (Rs. 7,085) there is a total of Rs. 3,65,394 (Rs. 2,59,780). After deducting from this transfers in respect of prior years to tariff and dividend control reserve Rs. 15,546 (Rs. 6,791) reserve for rebate to consumers Rs. 2,727 (Rs. 6,791) and appropriations to be made as per Electricity (Supply) Act for the year 1955-56, tariff and dividend control reserve Rs. 13,927 (Rs. 885) and reserve for rebate to consumers Rs. 13,927 (*nil*) leaving a balance of Rs. 3,19,266 (Rs. 2,45,316). The interim dividend paid for the year absorbs Rs. 54,861 (Rs. 54,861) and the amount to be transferred to general reserve absorbs Rs. 1,00,000 (Rs. 1,00,000) leaving a balance available of Rs. 1,64,405 (Rs. 90,455). The directors now recommend the payment of a final dividend of 2½ per cent. less tax on preference shares and 5 (5) per cent. tax free on ordinary shares for the year both of which will absorb Rs. 54,861 (Rs. 54,861) and the balance may be carried forward to next year's account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,50,000	Block ...	28,37,880
Reserves ...	3,07,724	Stores, tools and motor vehicles ...	6,16,725
Provision for taxation ...	1,83,923	Other assets ...	1,53,413
Liabilities ...	23,56,060	Debts and advances ...	4,07,439
Profit and loss account ...	3,47,121	Investments	81,083
		Cash ...	3,48,288
Rs.	44,44,828	Rs.	44,44,828

Ellore Electric Supply Corporation Ltd.

The directors of the above Company (Managing Agents: Messrs. Chandrie and Co. (Private) Ltd., Madras) submit the audited accounts of the Company for the year ended 31st March 1956.

During the year under report the Company has given 273 new service connections to consumers and has put up 188 street lights. As the Muchkund hydro-electric power became available, the Government has raised the power limit from 600 kv. to 750 kv. at the first point of supply. With this supply, the Company is in a position to meet the present consumers demands.

The Company has during the year under review earned Rs. 36,423 as against the reasonable return of Rs. 27,040 (reasonable return is the return on the capital allowed by the Electricity Supply Act, 1948 which is available to shareholders). The following comparative table clearly shows the progress of the Company:—

Particulars.				1954-55	1955-56
Total units purchased	..	..	..	21,73,595	23,90,315
Cost of units purchased	..	..	Rs.	1,85,181	2,19,505
Units sold for:—					
1. Street lighting	..	..	..	88,588	1,00,455
2. Domestic purposes	..	..	..	7,67,420	8,25,783
3. Industrial	..	..	..	10,06,665	11,08,882
Gross revenue	..	..	Rs.	3,75,464	4,64,140
Maximum demand	..	..	kw.	608	620

The net profit of the Company after providing for depreciation Rs. 29,553 (Rs. 25,813), taxes on income Rs. 35,000 (Rs. 20,000) and contingent reserve Rs. 3,696 (Rs. 20,000) is Rs. 36,423 (Rs. 26,048 after adjustment). After adding the balance brought forward from last year of Rs. 3,033 (Rs. 4,442) and income-tax provided in excess last year (1954-55) Rs. 1,654 (*nil*) making a total of Rs. 41,109 (Rs. 30,490). From this is deducted appropriation as per Electricity Supply Act towards tariff and dividend control reserve Rs. 4,878 (Rs. 602) and towards proportionate rebate to consumers Rs. 4,879 (Rs. 603) leaving a balance of Rs. 31,352 (Rs. 29,285). The interim dividend paid for 1955-56 absorbed Rs. 11,250 (*nil*), leaving an available balance of Rs. 20,102 (Rs. 29,285). Out of this balance the directors recommend the payment of final dividend of As. 10 (As. 14) or 6¼ (8¾) per cent. per share making a total dividend of Re. 1 (As. 14) or 10 (8¾) per cent. for the year free of income-tax. This will absorb Rs. 18,750 (Rs. 26,250) leaving a balance of Rs. 1,352 (Rs. 3,033).

Electricity (Supply) Act Amendment Bill.—At present the Parliament is considering the Electricity (Supply) Act Amendment Bill, 1956. If this Bill becomes law in the present form, it reduces in net effect the amount available for dividends to shareholders and as a consequence, dividends to shareholders may have to be reduced.

The managing agents through the Federation of Electric Undertakings of India, Bombay and the Association of Electrical Undertakings, Southern India has made suitable representations to the Select Committee of Parliament and it remains to be seen what Parliament will do.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	4,98,106
Reserves ...	52,463	Stores, tools and motor cars ...	73,400
Provision for taxation ...	35,000	Debts, deposits and advances ...	83,913
Liabilities ...	3,68,917	Investments	18,095
Profit and loss account ...	29,859	Cash ...	1,12,725
Rs.	7,86,239	Rs.	7,86,239

Central Provinces Railways Co., Ltd.

The directors of the above Company (Agents: Messrs. Killick Industries, Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1956.

Company's contract.—In terms of the Company's contract, Government had the option to terminate this Company's contract on the 31st March 1957, by giving one year's prior notice of their intention to do so. As no such notice had been served before 31st March 1956, the contract will accordingly run for a further period of 10 years as from 1st April 1957.

The following table shows the statistics of traffic for the past three years:—

	1953-54	1954-55	1955-56*
Number of passengers ...	1,953,942	1,942,066	1,937,733
Gross earnings (in rupees) ...	9,47,407	8,97,797	8,61,822
Merchandise (in tons) ...	1,29,559	1,45,686	1,21,095
Gross earnings (in rupees) ...	7,20,783	2,77,378	4,46,397

* The figures for 1955-56 in respect of the number of passengers carried during September, 1956, and tonnage carried during August and September, 1956, will require adjustment as the audited figures have not been received.

Coaching Traffic.—Although the number of passengers carried were about the same as last year, the revenue from this source shows a decline of about Rs. 36,000.

Goods Traffic.—Although the merchandise carried has declined by some 23,000 tons, the receipts show an increase of about Rs. 1,69,000. Discounting the write-back of Rs. 2,51,283 carried out during the year 1954-55 for the previous two years, the earnings are down by some Rs. 82,000.

After payment of Government's share of surplus profits, amounting to Rs. 1,23,201 as against Rs. 73,222 in 1955, and making provision for taxation amounting to Rs. 2,43,557 (Rs. 2,23,887) which represents an increase of Rs. 19,670 when compared with last year's accounts, the available net profit for the year is Rs. 3,18,159 (Rs. 2,93,111). Adding to this the sum of Rs. 2,604 (Rs. 784) brought forward from last year's accounts makes Rs. 3,20,763 (Rs. 2,93,895) available for distribution. The directors declared an ad-interim dividend at the rate of 4 (3¼) per cent. per annum, less income-tax, which absorbed Rs. 1,38,652 (Rs. 1,21,304) leaving a balance of Rs. 1,82,111 (Rs. 1,72,591) available for disposal, which they recommend should be applied as follows:—

To dividend for the second half-year ended 30th September 1956, at the rate of 5 (4½) per cent. per annum [making 4½ (4-3/16) per cent. for the year] payable less income-tax Rs. 1,73,313 (Rs. 1,68,980), transfer to general reserve Rs. 2,000 (*nil*), bonus to staff Rs. 1,000 (Rs. 1,000) and balance to be carried forward Rs. 5,798 (Rs. 2,611).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	94,00,000	Block ...	95,57,350
Reserves ..	56,000	Debts and advances ...	3,54,266
Provision for taxation	1,04,327	Investments	500
Liabilities ...	3,59,487	Cash ...	13,496
Profit and loss account ...	5,798		
Rs.	99,25,612	Rs.	99,25,612

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY MEETINGS AND DIVIDENDS

BARADIGHI TEA CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 24th November to 14th December 1956. both days inclusive.

DESSAI AND PARBUTTIA TEA CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: Rs. 10 per share. Transfer books remain closed from 24th November to 14th December 1956, both days inclusive.

RYDAK TEA SYNDICATE, LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 24th November to 14th December 1956, both days inclusive.

SELIMBONG TEA CO., LTD. Annual General Meeting, Calcutta, 14th December 1956. Dividend: *Nil*. Transfer books remain closed from 21st November to 14th December 1956, both days inclusive.

AMLUCKIE TEA CO., LTD. Annual General Meeting, Calcutta, 15th December 1956. Dividend: Rs. 19 per share. Transfer books remain closed from 1st to 15th December 1956, both days inclusive.

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 18th December 1956. Transfer books remain closed from 5th to 18th December 1956, both days inclusive.

CENTRAL PROVINCES RAILWAYS CO., LTD. Annual General Meeting, Bombay, 19th December 1956. Dividend: Rs. 4-8 per share (includes interim dividend of Rs. 2 per share). Transfer books remain closed from 3rd to 19th December 1956, both days inclusive.

TITAGHUR PAPER MILLS CO., LTD. Annual General Meeting, Calcutta, 19th December 1956. Dividend: Re. 1-2 per share, on A and B ordinary shares and As. 2 per share, on preferred ordinary shares. Transfer books remain closed from 5th to 19th December 1956, both days inclusive.

MOZUFFERPORE ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 21st December 1956. Dividend: *Nil*. Transfer books will remain closed from 14th to 21st December 1956. both days inclusive.

KINGSLEY GOLAGHAT ASSAM TEA CO., LTD. Annual General Meeting, Calcutta, 22nd December 1956. Transfer books will remain closed from 10th to 22nd December 1956, both days inclusive.

MCLEOD AND CO., LTD. Annual General Meeting, Calcutta, 24th December 1956. Transfer books will remain closed from 10th to 24th December 1956, both days inclusive.

DYER MEAKIN BREWERIES LTD. Annual General Meeting, Solan Brewery, Simla Hills, 24th December 1956. Transfer books will remain closed from 9th to 24th December 1956, both days inclusive.

AMALGAMATED COFFEE ESTATES LTD. Annual General Meeting, Coimbatore, 26th December 1956. Dividend: *Nil*. Transfer books will remain closed from 17th December 1956 to 15th January 1957, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 26th December 1956. Dividend: Rs. 5 per share. Transfer books will remain closed from 20th to 26th December 1956, both days inclusive.

BENGAL LUXMI COTTON MILLS LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Rs. 4 per share. Transfer books will remain closed from 14th to 28th December 1956, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 28th December 1956. Dividend: Nil. Transfer books remain closed from 30th November to 28th December 1956, both days inclusive

ANGLO-INDIA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Rs. 3-8 per share. Transfer books will remain closed from 14th to 28th December 1956, both days inclusive.

NATIONAL ROLLING AND STEEL ROPES LTD. Annual General Meeting, Calcutta, 29th December 1956. Transfer books of the company will remain closed from 15th to 29th December 1956, both days inclusive.

NATIONAL INSULATED CABLE CO. OF INDIA LTD. Annual General Meeting, Calcutta, 29th December 1956. Transfer books will remain closed from 15th to 29th December 1956, both days inclusive.

BLUE MOUNTAIN ESTATES LTD. Dividend of As. 4-4/5 per ordinary share (15 per cent.) for the year ended 30th June, 1956.

WATERFALL ESTATES LTD. Dividend: As. 4-4/5 per ordinary share (15 per cent.) for the year ended 30th June 1956.

KOTHARI TEXTILES LTD. Dividend of Re. 1 per ordinary share, for the year ended 30th June 1956.

CANNANORE SPG. & WVG. MILLS LTD. Interim dividend of Rs. 7-8 per ordinary share, for the year ending 31st March 1957.

COMPANY REGISTRATIONS

BHIKUSA YAMASA KSHATRIYA PRIVATE LTD. (First Director: Mr. Vishwanathsa N. Kshatriya.) Business: Manufacture of bidis. Authorised capital: Rs. 10,00,000. Private company. Address: Sinnar, Dist. Nasik.

CHANDAN CORPORATION PRIVATE LTD. (First Director: Mr. K. C. Shah.) Business: Coal mining. Authorised capital: Rs. 5,00,000. Private company. Address: 19, Hamam Street, Bombay.

CENTRAL SALES TAX BILL

F.I.C.C.I.'S VIEWS

A REFERENCE to the Central Sales Tax Bill, 1956, introduced in the Lok Sabha on 21st November, was made in our issue dated 24th November. The Bill is now being considered by Parliament and several members have urged its reference to a Select Committee. As the Bill has aroused considerable interest among business men, the views of the Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.), contained in its communication to the Union Ministry of Finance, are given below:

The business community has been put to various kinds of difficulties on account of the stand taken by the State Governments and their sales tax laws which resulted in multiple taxation of the same transaction. Additional burdens were also thrown on the consuming public as a result thereof. The judgment of the Supreme Court in the *State of Bombay* vs. *The United Motors of India Limited* that the delivery State had the power to tax inter-State transactions under Article 286 of the Constitution made the position extremely difficult. It was the signal for several consumer States levying sales tax on dealers in other States selling goods to traders or consumers in their own States. It was at this juncture that the Taxation Enquiry Commission took up the matter for consideration in 1953. Since then and, in fact, for a long time previously also, there has been much discussion on the desirability of achieving some degree of uniformity in the levy and administration of sales tax, particularly on inter-State transactions. Several conferences at various levels—ministerial and official—were convened, but nothing was of any avail. The decision of the Supreme Court in the United Motors case was, however, happily reversed by the Supreme Court in the *Bengal Immunity Co., Ltd.* vs. *State of Bihar* in 1955. After that case, the position was that the State Governments could not levy tax on inter-State transactions under their respective State tax laws. But to validate the levies that had already been made by the various States, the Sales Tax Laws (Validation) Act was passed.

The Taxation Enquiry Commission, which considered the question before the decision in the Bengal Immunity case was delivered, recommended, *inter alia*, that inter-State trade should be the responsibility of the Union when the sales tax law of one State impinged administratively on the dealers and physically on the consumers of another State and that necessary amendments be made in the Constitution with a view to including taxation of sale and purchase of goods in the course of inter-State trade in the Central list. In order to give effect to the recommendations of the Commission, the Constitution (Sixth Amendment) Act which gave the necessary powers to levy sales tax on inter-State transactions to the Union and Parliament was passed. The other recommendations of the Commission have been incorporated in this Bill with certain modifications.

No New Conceptual Approach

Faced as the country was with the problem of bringing about uniformity in sales tax levy on inter-State transactions and removing the confusion and chaos that prevailed in inter-State trade, the trading community had expected that things would be set right as a result of the Union assuming the regulation and control of sales tax on inter-State transactions. But this Bill does not reveal a new conceptual approach—a way of seeing the problems in their totality. Even according to the statement of objects appended to the Bill, the Bill seeks to provide for the legislation authorised by the Constitution as amended with a view to raising additional revenues by levying tax on inter-State transactions which are at present immune from tax under their respective sales tax laws. If the Bill is passed as it is, certain problems and difficulties confronting the trading community will still persist. Double or multiple taxation of the same commodity will still remain when goods move from State to State. The interests of distributing centres are not safeguarded. The ultimate objective of Central regulation of the levy of sales tax on inter-State transactions, namely, the smooth flow of inter-State trade, will not be accomplished. In effect, what the Bill does is only to increase the incidence of sales tax through the levy of a new Central tax on inter-State transactions.

The Federation has a fundamental objection against the levy of sales tax on inter-State transactions whether by the Union or by the States. Such a levy is against the spirit of the provision in Article 286 of the Constitution. When that Article was incorporated, the idea was that import and export trade and inter-State trade would not be subject to sales tax of any kind, though, in exceptional cases, Parliament may provide for the taxation of inter-State sales tax in the case of certain specified transactions. The levy of sales tax on inter-State transactions, whether between registered dealers or between registered and unregistered dealers or consumers in another, will not be conducive to the development of a coherent national economic policy and will be detrimental to the free flow of inter-State trade or commerce. Therefore, there should be no sales tax on inter-State trade at all. In the case of transactions between a registered dealer in one State and an unregistered dealer or consumer in another, there might be some justification for levying a tax in order to prevent the avoidance of sales tax, but, in transactions between a registered dealer in one State and a registered dealer in another which constitute inter-State transactions in the real sense, there is no reason to levy a sales tax. There is no possibility of avoidance of tax on such transactions and, indeed, the States were not in the beginning levying tax on such transactions.

Import-Export Transactions

Clauses 3, 4 and 5 define when a sale or purchase of goods takes place in the course of inter-State trade or commerce or outside the State or in the course of import or export of goods, respectively. States are prohibited from levying tax on such transactions, as it is prohibited under Article 286 of the Constitution. This Bill does not directly deal with the levy of sales tax on import and export transactions. The Taxation Enquiry Commission has stated that the present position obtaining in regard to tax on export and import trade is satisfactory and that is what clause 5 provides. Only the final transaction, that is, the export sale and the import purchase, are exempt from tax. But the Federation is of the opinion that the transaction preceding the last stage of export sale and the one following the first import purchase are also transactions in the course of import and export and should be exempt from tax. That is to say, the purchase for the purpose of export and the first sale after import should be exempt from sales tax. Clause 5 defining import and export sale should be amended accordingly.

Clause 8 provides for the rates of tax on sales in the course of inter-State trade or commerce. It is one per cent. on sales between registered dealers in all cases whether it is specified or declared goods or non-specified goods. The Taxation Enquiry Commission had recommended quarter of an anna in the rupee for specified goods considered important in inter-State trade and one per cent. in regard to all other goods on sales between registered dealers. The proposal of the Commission has been modified in the Bill and a uniform rate of 1 per cent. is now sought to be levied in respect of all articles. However, as regards inter-State trade between a registered dealer in one State and an unregistered dealer or consumer in another, the same rates as are levied by the State (from where the goods are despatched) on sales or purchases of similar goods within its territory will be leviable.

A Vital Departure

The Taxation Enquiry Commission also recommended that, where there is a levy by the Union on inter-State trade in respect of specified goods, there should be no purchase tax by the State on the specified goods on which the Central tax on inter-State trade has already been levied at the rate of quarter of an anna in the rupee. In the Bill, it is one per cent., as already stated. This is what the Commission said in this connection:

"For the goods specified as of special importance in inter-State trade as distinguished from all other goods which figure in inter-State trade, the point of levy of tax will be only one, that is, the point at which such goods (raw materials, etc.,) are taxed by the State in which they are produced. As we proceed to mention below, it will be a condition in respect of such goods that *no other sales tax shall be levied on them either by the exporting State or the importing State.*"

The Bill, however, does not provide that, in respect of sales tax on specified goods in inter-State trade, there shall be no purchase or sales tax by any State. This is a vital departure from the recommendation of the Taxation Enquiry Commission. Where the Centre has levied inter-State sales tax on declared goods, in respect of such goods there should be no sales tax or purchase tax either by the exporting or the importing State. To this effect, specific provision should be made in the Bill. Otherwise, as the Commission itself has observed, there will be double or multiple taxation of the same goods which are considered important in inter-State trade.

The Federation points out that the Bill, in levying tax on inter-State trade, does not take into account the position of certain distributing centres like Delhi, Bombay and Calcutta. It does not provide that, if sales tax has been paid once by a dealer of an importing State, it will not be charged again, if the same commodity is exported from that State and is purchased by another dealer in another State. Thus, where goods are purchased by a dealer in Delhi from Bombay, the Central tax will be levied by the Bombay State. When the goods are again despatched from Delhi, say, to Uttar Pradesh or Kashmir, the Union will again be entitled to levy the Central tax. There will thus be double or multiple taxation of the same commodity which will jeopardise the interest of a distributing centre like Delhi. The importance of Delhi in inter-State trade has been stated also in the Financial Memorandum to the Bill. It should, therefore, be clearly specified that, where once Central tax has been paid, there should not again be another tax either by the Centre or by the State on behalf of the Union.

Goods of Importance

Clause 14 declares what goods shall be deemed of special importance in inter-State trade or commerce. Six items of goods were recommended by the Taxation Enquiry Commission to be adopted as specified goods important in the course of inter-State trade. They are coal, iron and steel, cotton, hides and skins, jute, and oil and oilseeds. These, by and large, have been adopted in clause 14 of the Bill. The Commission recommended that on no account should this list be expanded. The Commission, instead of demarcating goods as those which are essential to the life of the community and other goods, has instead categorised articles as those of importance in inter-State trade and other articles. This is because it considered that it was not advisable for Parliament to interfere in the purely internal aspect relatable to the interests of consumers of a particular State and that there was no reason why the State should not determine the range and rates of sales tax, the incidence of which rests on its resident consumers.

However, it is important to realise that there are many articles the price level of which must be a matter of concern to the Central Government and for the maintenance of which they cannot avoid responsibility. It was only in 1952 that Parliament enacted the Essential Goods (Declaration and Regulation of Tax on Sale or Purchase) Act, which declared that certain goods were essential for the life of the community. It also provided that no law made after that Act shall be made by any State imposing or authorising the imposition of a tax on the sale or purchase of any of those goods unless it was reserved for the consideration of the President and had received his assent. Nothing has happened since then that warrants the repeal of that Act as clause 16 of the Bill seeks to do. It is necessary to take power for Parliament to regulate the tax policy in regard to such articles as are considered essential for the life of the community, in addition to those articles which are considered important in inter-State trade. At least some of the articles mentioned in the 1952 Act must be included in the list stated in clause 14. Parliament should also have the power to add to or delete from the list any article important or essential for the life of the community. This is necessary for evolving a sound fiscal policy and it should not be considered as interference between the State and its resident consumers. Clause 14 should, therefore, be amended suitably.

Clause 15 provides that the tax payable by any State dealer under the law of any State in respect of any sale or purchase of declared goods made by him inside the State shall not exceed two per cent. of the sale price and that such tax shall not be levied at more than one stage in a State. The Commission had recommended that the rate of tax on intra-State transactions of declared goods shall not exceed quarter of an anna in the rupee, that is, about 1¼ per cent. In the Bill, it is provided that it shall not exceed 2 per cent. As already Stated, it should be clearly specified that, where a Central tax on inter-State trade in declared goods has been levied, no State shall levy any other tax in respect of such goods even on intra-State transactions.

Other Important Matters

While considering the Bill, the Federation refers to two or three other important matters arising out of the levy of sales tax generally either by the Centre or by the States. The first is with reference to the merging of sales tax with other levies like excise. It may be considered whether sales tax on some goods cannot be merged with other levies like excise and the sales tax portion of it distributed among the States in the proportions they may be entitled to. In fact, a proposal to levy sales tax on cotton textiles in the form of an additional excise duty was under consideration. This will be administratively a more convenient form of taxation and will also remove many of the hardships which traders and the public are subject to by the present levy of sales tax. Other commodities which may be considered in this connection are cotton, hides and skins, coal, iron and steel, cement, *vanaspati*, etc.

Another important matter concerns the sales Tax Laws Validation Act recently passed by Parliament. As already stated, the decision of the Supreme Court in the United Motors' case was the signal for a number of consumer States levying tax on dealers resident in other States and this gave rise to a lot of difficulties to traders generally. The Bengal Immunity case reversed the decision in the United Motors' case and, as a result, the levy of such taxes by consumer States was nullified. In order, however, to validate the levies which had already been made by States, the Sales Tax Laws Validation Act was passed. That Act was primarily intended to legalise only levies and collections already made. But several State Governments, for the first time, began to issue notices to outside State dealers calling upon them to register and submit returns in respect of such inter-State transactions. This action by some States has apparently been taken on a wrong understanding of the provisions of the Act. The Federation has received a number of complaints from the trading community that notices calling upon them to submit returns have been served even after this Act was passed. Since this is a Central legislation, the Centre should see to it that its intentions are clarified and the requisite action must be taken so that avoidable hardships are not caused to the traders by the States.

There is then the question of the levy of sales tax on supplies made to the Directorate-General of Supplies and Disposals. The States levy the tax and the tenderer or person selling goods to the Directorate-General is not reimbursed the amount of tax paid by him by the Directorate-General. It is contended by the Directorate-General that such transactions are not liable to sales tax. The supplier, on the other hand, would have already paid the tax to the State Government. The Federation has been informed that many lakhs of rupees have been paid by the traders by way of sales tax on supplies made to the Directorate-General which they are not able to recover. Considerable hardship is thus caused to the supplier and this is a matter which must receive the immediate attention of the Central Government.

* * * *

Note.—Since the above article was set, the Lok Sabha has adopted the Central Sales Tax Bill without referring it to a Select Committee but with a minor amendment.—ED.

RESERVE BANK SUPPORTS GILT-EDGED

(From Our Own Correspondent)

BOMBAY, *5th December*

The pull on the short-term money market continued unrelieved during the week under review also. While the supply position remained tight, the demand for bank credit was unabated; if anything, it was on an increased scale. Consequently, banks had to resort to borrowings from the Reserve Bank. Apart from the usual seasonal demand for funds, another factor, which is expected to make the stringency more acute in coming months, is the Finance Minister's latest proposal seeking to compel joint-stock companies to deposit a stipulated portion of their reserves and depreciation funds with the Reserve Bank. Though the object of the Finance Minister behind the measure is a laudable one, such action will unnecessarily lead to a strain on the money market. If companies do not have the cash resources to deposit the required amount, they will have to borrow from banks. Similarly, those companies which have been placing their surplus reserves with the market by way of either call deposit or short-term usance deposit will have less to spare.

Interest rates during the week remained generally unchanged. Inter-bank call money was placed at 3½ per cent. and house money at call fetched 3½ per cent. to 3¾ per cent. Banks were keen borrowers in short-term money; deposits for one and two months were offered 3½ to 3⅝ per cent. and those for four to six months 3¾ per cent.

The Reserve Bank's statement for the week ended 30th November 1956 shows a further small fall of Rs. 1.07 crores in notes in circulation. Notes held in the Banking Department have gone up by Rs. 4.02 crores. The resultant change, namely, a rise of Rs. 2.95 crores in total notes issued is covered by a corresponding increase in rupee coin. In the Banking Department, a decline of Rs. 4.71 crores is noted in deposits of the Central Government, while those of other Governments are up by Rs. 3.22 crores. Deposits of banks show only a fractional fall of Rs. 97 lakhs. On the assets side, balances held abroad have gone down by Rs. 5.33 crores. Loans and advances to Governments have risen by Rs. 1.16 crores, but other loans and advances have dropped by Rs. 2.64 crores, of which advances to Scheduled banks against usance bills account for Rs. 2 crores. Fresh advances to banks against these bills during the week amount to Rs. 5.20 crores, while repayments of maturing bills have been of the order of Rs. 7.20 crores.

The Scheduled banks' statement for the week ended 23rd November 1956 discloses a drop of Rs. 3.48 crores in demand deposits. Time deposits have gone up by only Rs. 33 lakhs. Minor variations are seen in inter-bank borrowings and borrowings from the Reserve Bank. There has been a decline of Rs. 1.12 lakhs in borrowings from the State Bank of India. A further decline of Rs. 5.10 crores is noted in advances, while inland bills purchased and discounted have gone up by Rs. 4.44 crores and foreign bills by Rs. 1.80 crores. Cash balances have shrunk by Rs. 1.40 crores.

The notable development of the week in the Gilt-edged market was the Reserve Bank's entry on Friday last as a purchaser of 3 per cent. 1986 Conversion Loan and of some State loans which had gone down considerably in recent weeks. This was in addition to the support the bank had been extending for some weeks past to short-dated securities of Central Government loans maturing within 1962. This step on the part of the monetary authorities arrested the recession and helped the securities to stabilise at the lower levels. The undertone at the close was steady, though hardly any noteworthy activity was seen. Earlier in the week, prices had drifted down in the absence of any support from any quarter.

3 per cent. 1986 Conversion Loan receded by As. 5 to Rs. 72-15, but closed steady at Rs. 73, the level at which the Reserve Bank decided to support it. The price was later on raised to Rs. 73-1. 3 per cent. 1970-75 had buyers at Rs. 86-15. The Reserve Bank has offered to buy this issue at Rs. 86-14, as a switch against 3½ per cent. 1974 at Rs. 98-8. 3 per cent. 1966-68 had some small business at Rs. 92-6. 3 per cent. 1964 attracted buyers at Rs. 94-6. 3 per cent. 1963-65 changed hands at Rs. 94-5 *ex-voucher*, as against Rs. 94-6 *cum-voucher* a week ago. 3½ per cent. 1962 was unchanged at Rs. 97-14. 3½ per cent. 1961 was placed at Rs. 99-5 *ex-voucher*, as against Rs. 99-6 before payment of interest. 3½ per cent. 1964 was on offer at Rs. 98-5, while 3½ per cent. 1965 was wanted at Rs. 98-7. 3¾ per cent. 1967 had sellers at Rs. 98-6.

Among the State loans, the Reserve Bank was a purchaser of 4 per cent. 1968 issues of Madras, U.P. and Mysore at Rs. 97-14, Andhra and Orissa at Rs. 97-12. Following this support, Madras loan ruled steady at Rs. 98, U.P. at Rs. 97-15, to which levels the Bank raised its purchase price later in the week, Mysore was held at Rs. 97-14. Andhra was As. 2 higher at Rs. 97-14, following the rise in the Bank's support price to Rs. 97-13, and Orissa was maintained at Rs. 97 12. Bombay and West Bengal issues also were steady.

In the foreign exchange section, the rupee ruled steady in terms of the U.S. dollar; banks' selling rate of ready dollar was maintained at Rs. 481½ per $100, while their buying rate fell from Rs. 477¼ to Rs. 477. In terms of the Canadian dollar, the rupee displayed some strength, banks' selling rate declining from Rs. 502½ to Rs. 500⅜ per $100 and their buying rate from Rs. 496¼ to Rs. 494¾ per $100. The steadiness of the rupee is in consonance with the strength of sterling abroad. In New York, spot sterling gained from $2.78-3/16-2.78-5/16 to $2.78-5/16-2.78-7/16. Forward sterling (three months), however, weakened from $2.75¼-2.75⅜ to $2.75¼-2.75⅜ and transferable sterling from 274.90-275.05 cents to 274.45-274.55 cents.

BULLION FEATURELESS

(From Our Own Correspondent)

BOMBAY, *5th December*

The bullion market was listless during the week. The undertone remained quietly steady, with the fluctuations confined to a narrow groove. The offtake in both the metals was poor, but towards the close demand in gold picked up, giving the market some steadiness. The general impression that the supplementary budget would give rise to an increased demand for bullion also aided sentiment. There was, however, some rumours in the market that the value of the rupee was likely to be raised in terms of sterling. These rumours affected gold to some extent yesterday, but, as they were later on regarded as baseless, the yellow metal regained its strength.

Forward silver (19th December settlement) gained from Rs. 175 to Rs. 175-9 early in the week, but the waning ready demand and increased arrivals of Tibetan coins caused a setback to Rs. 174-2 yesterday. Today, however, it recovered partially to close at Rs. 174-8. Business in January settlement began yesterday at Rs. 175-1 and, after moving between Rs. 174-15 and Rs. 175-6, closed today at Rs. 175-5.

Ready silver (.996 Mint) was quoted at a discount of As. 12 under forward (December settlement). Thus, after being marked down from Rs. 174-4 to Rs. 173-6, the ready metal moved up to close at Rs. 173-12.

The floating stocks of silver are placed at 1,600 bars. The daily average offtake was 12 bars.

Gold for forward delivery (18th December settlement) hardened from Rs. 105-7 to Rs. 106, before suffering a setback to Rs. 105. Later, however, it recovered the earlier loss and closed at Rs. 105-7. Official business in the next settlement commenced yesterday at Rs. 105-6 and the closing today was done at Rs. 105-11.

Ready gold shaded off from Rs. 105-3 to Rs. 104-14, but regained to Rs. 105-8 at the close. The ready metal, which stood at a discount of As. 4 till Saturday last, slowly gained strength and commanded a premium of an anna today. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 3,000 tolas. The daily offtake increased from 2,500 tolas earlier in the week to 4,000 tolas today.

In New York, silver stood unchanged at 91⅜c. In London also, the white metal held its own at 81⅜d. for spot delivery and at 80⅜d. for forward. Gold, however, improved from 250s. 8⅜d. to 251s.

The following comparative table shows the trend of market during the week under review:

	5-12-56	Highest	Lowest	28-11-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *2nd December*

During the week under review, the hides and skins market ruled steady. New arrivals of cow and buff were not as considerable as those in the previous week. Goats and sheep, however, were available in plenty. The slightly eased situations in West Asia has encouraged hope in the market which is suffering because exports have been apprehensive. The main purchasers were the local tanners.

The latest available quotations are: wet salted cow 1st grade Rs. 380, 2nd grade Rs. 260 to Rs. 280 and 3rd grade Rs. 140 to Rs. 180 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. per rupee; Goat 1st grade Rs. 325 and 2nd grade Rs. 300 to Rs. 325 per 100 pieces; sheep skins 1st grade Rs. 325 and 2nd grade Rs. 200 to Rs. 250 per 100 pieces.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *3rd December*

The kip market continues to rule firm and sellers are reserved. Prices of cow hides, cow calf and buff calf have advanced by half anna to one anna per lb., and shippers are active. Demand for F.A.Q. types has improved and higher prices in the overseas market have been established. Top marks have also sold well. Enquiries for inferior fifth cow hides are small and the market is quiet.

Superior marks cow calf and buff calf are in good request and prices have advanced in this section. The buff hides market is steady.

Importers in the U.K. and the Continent are keen to buy best tannages in goat skins and prices have registered an advanced. Demand for sheep skins is brisk and, as sellers quote "impossible" prices, business has been patchy.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *5th Decembe*

The bearish trend noted in the cotton future market for the past few weeks gathered fresh momentum during the week under review. This may appear a little intriguing in view of the fact that the Government announced an export quota for 50,000 bales of Bengal *deshi* and 150,000 bales of other exportable varieties of ¾" and below. But the trend of the market is not altogether unexplainable if one takes into account a number of bearish factors which were really responsible for the landslide in values. They were: (1) the simultaneous decision of the Government to raise the export duty on Bengal *Deshi* from Rs. 50 to Rs. 100 per bale and the *status quo* in respect of the export duty on other varieties, (2) the Finance Minister's new tax proposals, (3) the heavy arrivals in the up-country centres, (4) the favourable weather reports, and (5) weak advices from the oilseeds market. The combined effect of all these factors more than offset the modest recovery witnessed immediately after the export quota announcement, with the result that the market suffered a distinct setback.

M.G. Jarilla (March 1957) opened the week at Rs. 639, as against the previous week's closing of Rs. 640-8 and improved, on expectation of an export quota, to Rs. 646-8 the next day. The pressure of selling induced by the new tax proposals, coupled with reports of fine weather took the contract down to Rs. 635 on the 1st inst. The export quota announced late on the 1st inst. helped a modest recovery and the contract advanced to Rs. 641-8 on the 3rd inst. The continued heavy arrivals in upcountry centres and an upward revision of the crop ideas, following reports of good weather, precipitated heavy selling and the contract declined to Rs. 630 yesterday. Opening at Rs. 630 today, the contract moved, on buying support forthcoming at low levels, to Rs. 635, closing at Rs. 633.

M.G. Vijay followed more or less the same course. Opening the week lower at Rs. 745, the contract improved to Rs. 753 the next day on bull support, before easing, under the impact of the new tax proposals, to Rs. 740 on the 1st inst. The export quota announcement induced a recovery to Rs. 748, but it again fell to Rs. 733 yesterday. After opening at Rs. 732-8, today it improved to Rs. 736½ before closing at Rs. 734.

The following is the trend of prices of the two contracts for the week:

(In rupees per candy of 784 lbs.)

	5-12-56	*High*	*Low*	28-11-56
Jarilla (March) ...	633	646½	629	640⅛
Vijay (April) ...	734	753	731	746

In contrast to the futures section, the spot market was more or less steady. There was good demand for popular varieties, especially Khandesh quality. Enquiries from upcountry and Southern mills were noted for ready lots of Berar, Vijay and Laxmi. In the export section, following the quota announcement, prices of all exportable styles registered appreciable gains. Shippers were interested in Bengal *deshi* and 'Oomras.' Japan is reported to have enquired for Jarilla ¾". In the foreign section, Bombay and Ahmedabad mills showed interest in American cotton and some quantity of Middling El Pasa staple 1¼" was purchased by Ahmedabad mills at Rs. 1,701 for December-January shipment. Importers and shippers were awaiting the receipt of licences against applications submitted by them for import of American cotton. Delivery contracts ruled steady. The latest available spot rates—in rupees per candy of 784 lbs.—are given below, the figures in brackets being last week's closing quotations:

Bengal *Deshi* 745 (740); Berar Jarilla 750 (760); Khandesh 760 (780); Vijay (old crop) 920 (920); Oomra *deshi* 765 (760); *Moglai* 730 (745). *Delivery Contracts*: Khandesh 197/3 December 115 (108); Berar 87 (85); Moglai 44 (40) ON Jarilla; 320F 82 (78), 216F 102 (98), Vijay 13/16 February-March 104 (100) ON Vijay.

The firm trend noted in the Karachi market last week gained further momentum on good trade support and bullish speculative interest. Good spinner demand prompted by the encouraging trend in domestic consumption and active export enquiries further helped sentiment. N.T.R.G. January which had closed at Rs. 83-5 put on, over the week, Rs. 2-4 to Rs. 85-9 while the March position advanced to Rs. 84-12, as against last week's closing of Rs. 82-13. The spot section also was active and improvement in values was recorded in most varieties. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, prevailing at Karachi, are given below:

Sind *Deshi* 91; Punjab *Deshi* 85; 4F Punjab Roller 86-8; S.G. 90-8; L.S.S. Punjab R.G. 89-8; S.G. 92-8; N.T.R.G. 91-4; S.G. 95-12; 289F Punjab R.G. 92-4; S.G. 101-4.

The Alexandria cotton market depicted a firm trend during the week under review, due mainly to good overseas demand. Shippers have not reinstated offers but it is hoped that they would do so soon. Many contracted shipments for India have been held up owing to the blockade of traffic through the Canal. The Government and exporters are known to be working on a feasible scheme for expediating shipments. No details have been received of activity in the spot section. Meanwhile it is reported that the Government has decided to insure raw and ginned cotton and cottonseeds, whether stored in the country or under export contract. The law in this connection is reported to have been drafted by the Finance Ministry, whereby every holder of cotton or seed stocks will pay a monthly premium of 3 *piastres* per cantar of cotton and 2.5 *piastres per ardeb* of seeds to insure such stocks. An equal contribution will be made by the State and the total premium will be applied to indemnify owners of cotton and seeds whose holdings were damaged in the course of military operations. The following are the latest available rates—in tallaris per lb.—from Alexandria, the

figures in brackets being last week's closing quotations:

Karnak: January 111.60 (108.60); March 109.65 (105.75). *Ashmouni*: December 78.20 (76.70); February 78.35 (76.80); April 78.70 (76.80).

The auctions of new crop Uganda have been characterised by active bidding and the Lint Marketing Board has been receiving attractive prices. The prices (converted to Rs. per candy c.i.f. Bombay) received at the auction held on 27th November were: B.P. 52 1,725; Busoga 1,570; Bukhedi 1,510; Jinja 1,385. The high prices being received are understood to be due to active short-covering by shorts against their early shipping commitments. At the auctions held on 29th November, bidding was active, but the price trend showed a decline. This was attributed to the fact that West Germany and the Continent having covered their requirements, India was the only country evincing interest in East African cotton.

The Sudan Gezira Board has disposed of its entire stocks of the 1955-56 season cotton. For the first time since many years all crops, whether Gezira Board, Government or private estate have been entirely sold out three to four months ahead of the coming of the new crop.

Active conditions prevailed in the Liverpool market during the week under review and values recorded fair advances. Good demand was in evidence for both ready and shipment cotton. Purchases of U.S. cotton for shipment up to March 1957 were reported. The C.C.C. prices are slowly advancing due partly to the addition of the carry-over charge but mainly to lack of competition from other comparable growths. Mexican cotton is reported to have been marketed and shipping difficulties through the Suez Canal has prevented Middle Eastern and African cotton from competing with U.S. styles. Pakistan cotton is finding good demand from China and the Far East, and so the field is left entirely for U.S. cotton, the price of which has advanced.

Both the American type contracts advanced on mill fixations and local short-covering, though further rise was prevented by hedge selling. A limited volume of continental buying was also noted. The Egyptian contract was easy, while the Sudan contract improved on trade support. The latest available rates—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: December-January 26.85; March-April 26.75; May-June 26.40; July-August 26.06. *American Cotton Mixed Growth Contract*: December-January 27.70; March-April 27.35; May-June 26.85; July-August 26.50. *Egyptian Karnak Cotton*: January-February 60; March-April 60. *Sudan Cotton*: January-February 61.30.

The New York market ruled generally easy during the week with liquidation and hedge selling meeting with only limited demand. The declining trend in loan entries was an unsettling influence and uncertainty about Government's cotton programme prompted selling in distant months which, as a result, declined while the nearby December advanced. According to some reports, those sections of the trade which proposed a compensatory payments plan for cotton farmers will make a drive for such legislation when the Congress convenes in January. Such a plan will permit cotton to seek its own market level with farmers receiving Government payments on the difference between the market price and some determined parity price.

For the week ended the 21st of November the total purchases in the 14 spot cotton markets were 540,500 bales as against 477,200 bales last week. Domestic mills were described as being less active. Except in the case of Far Western growths which have steady demand at prices above loan level, activity was slow. Many growers were also said to be holding back cotton from the market. Exports for the week ended the 22nd November were 90,508 bales making an aggregate of 1,721,740 bales for the season thus far. In the same period last season, exports aggregated only 484,873 bales. It is reported that the Secretary of Agriculture, Mr. Benson, stated at a Press conference that the Administration want to sell Government-owned cotton stocks for unrestricted use at the support level plus reasonable carrying charges. According to present regulations such stocks can be sold for unrestricted use only at 105 per cent. of the current support price plus reasonable carrying charges or the domestic market price whichever is higher.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	4-12-56	27-11-56	20-11-56
Spot	34.40	34.45	34.55
December	34.91	34.35	34.46
March	33.98	34.16	34.25
May	33.86	34.17	34.31

RAYON YARNS TAXED MORE

(From Our Own Correspondent)

BOMBAY, *5th December*

The most outstanding event of the week under review in so far as the yarn market is concerned is the fresh tax imposts on art silk yarn, staple fibre and staple fibre yarn announced by the Union Finance Minister on the 30th November. The import duty on art silk yarn has been raised from 36¼ per cent. *ad valorem* or As. 7¼ per lb. whichever was higher to Rs. 3 per lb., although the immediate effective rates vary, being Re. 1-4 for yarns above 100 deniers, Re. 1-7 for 75 to 100 deniers and Rs. 2 for yarns below 75 deniers. Correspondingly, an excise duty has been levied on yarn produced in the country, the ceiling rate being Re. 1-8 per lb. and the effective rates for the aforesaid categories of yarns being As. 4, As. 6 and As. 8, respectively. An excise duty of As. 2 per lb. will be levied on indigenous staple fibre and staple fibre yarn, the ceiling and effective rate being Re. 1-8 and As. 2, respectively. The imports of fibre are subjected to an *ad valorem* duty of 25 per cent. plus As. 2 per lb. and those of yarn bear only a duty of Re. 1-4 per lb.

Immediately after the fresh tax imposts were announced, holders of art silk and staple fibre yarns put up their prices. Operators were busy extending their commitments on fears of reduced imports of foreign yarns in the coming weeks as a result of enhanced duties. In fact, buying support was so good as to overlook reports of large sales of yarn at 3d. to 4d. higher made by Japanese interests recently. The aforesaid imposts have evoked wide protest at the hands of traders. The imposts, it is said, will cause considerable harm to the industry and trade. Attention is drawn to the keen competition which the Indian art silk fabrics are already facing in overseas markets. To quote the President of the Yarn Merchants Association and Exchange, Bombay: "In view of the specific tariff rates, there will hardly be any incentive for the importers to secure any job lots of different types of yarns from foreign manufacturers which they were able to obtain till now."

Rayon yarns registered handsome gains during the week under review. Snia rayon yarn (120 dull cones) for February delivery firmed up by Rs. 17 to Rs. 800. December position rallied Rs. 13 to Rs. 778. Spot 120 Japan advanced by As. 3-6 to Rs. 4-2-6. 150 Italy spurted by As. 2-6 to Rs. 3-14. 120 Italy strengthened by As. 2 to Rs. 4-2. 150 Japan gathered an anna and a half to Rs. 4-7. Among indigenous yarns, National Rayons 150 Bt. cones 1st Grade rose by As. 2 to Rs. 3-7. 120 Bt. cones 1st grade was higher by 21 pies at Rs. 3-10-6.

Staple fibre yarn (40 x 2) for February delivery hardened by Rs. 18 to Rs. 648. December contract improved from Rs. 621 to Rs. 638. Spot 40 x 2 Citys rallied As. 3 to Rs. 3-8-6. New Greats recorded a rise of As. 2-6 to Rs. 3-6-6. Kohinoors and Centurys gained As. 2-3 each to Rs. 3-11 and Rs. 3-8, respectively. Among foreign yarns (80×2), K'Suns rose by an anna to Rs. 6-10. Paramounts gathered half an anna to Rs. 5-14. Fujis were better by a like amount at Rs. 6.

The cotton yarn section ruled dull. Transactions put through were limited and prices moved narrowly, the general tendency being downwards. Sixty counts Raghuvamshis came in for selling and dropped As. 8 to Rs. 58. Finlays receded by As. 6 to Rs. 60-2. Moderns, however, elicited special enquiries and picked up a rupee to Rs. 63-8. Forty counts Minaxis fell by As. 9 to Rs. 28-7. Goksks declined by As. 4 to Rs. 28-8. Ten counts were quiet, Moderns and Podars both being quoted at Rs. 15-8. Among 20s, Maduras were done at Rs. 20-4. Moderns gained As. 2 to Rs. 19-10. Thirty counts Maduras were dull at Rs. 24-4. Eighty counts Moderns were on request, their quotation rising by a rupee to Rs. 77.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	5-12-1956	28-11-1956	21-11-1956
Art Silk yarn (per case of 200 lbs.)-	Rs. a.	Rs. a.	Rs. a.

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *5th December*

The oilseeds market, in sharp contrast to the firm trend witnessed last week, registered an easy trend during the week under review. Although the market started promisingly on 29th November on bear-covering, it was unable to hold the levels on realising pressure. Recovery during two following sessions, following hopes of export quotas was again met with realising pressure at higher levels. The factors which led to affect the sentiment of the operators adversely were the apprehensions regarding the change in export policy, heavy flow of new groundnut crop at the terminal centres followed by fresh offerings from upcountry traders. The fears that buying orders from overseas might subside gave momentum to the downward trend in groundnut. Castorseed, too, received a setback after its earlier recovery. Linseed and cottonseed declined in sympathy with groundnut. The undertone of the market remained easy at the close today.

Groundnut February contract opened cheerfully at Rs. 149-6 on 29th November last, and after declining slightly at the close on the same day, reached the peak level of the week on the following day at Rs. 152-0. On short covering, it, however, declined sharply the same day to Rs. 147-10. Subsequently, it improved to Rs. 150 on 3rd inst. on expectations of export possibilities before declining further to Rs. 145-2 at the close today. It lost thereby Rs. 3-12 over the week. In the spot, too, Bold F.A.Q. shed Rs. 2-12 at Rs. 29, and December-January declined by Re. 1-1 to Rs. 28-13. Groundnut oil ex-mill was down by As. 8 to Rs. 18-12 and railway receipt by As. 4 to Rs. 18-10.

Castorseed May 1957 contract touched the peak level of Rs. 174-12 on 30th November after opening the week at Rs. 173-8. It, however, sharply declined to Rs. 167-8 on the same day. It declined further to Rs. 163-8 on 3rd inst. after fluctuating between Rs. 169-8 and Rs. 172. The last two sessions of the week saw further decline to Rs. 155-0 today, though it finished the week slightly higher at Rs. 157-8. Over the week, it lost no less than Rs. 14-12. In the spot section, however, the decline was not so sharp. Ready Madras lost As. 8 at Rs. 37-0 and Kanpur was quoted As. 8 less at Rs. 35-12. Oil B.S.S. and oil commercial shed Re. 1-8 at Rs. 23-6 and Rs. 22-6 respectively.

Linseed futures contract, after commencing the week at Rs. 30-4, fluctuated during the first four days of the week between Rs. 30-4 and Rs. 29-8. On account of offerings by shippers, it declined to Rs. 28-4 today before closing the week's trading at Rs. 28-14. In the spot section, Bold ready lost Re. 1-4 at Rs. 34-12 and February-March eased by As. 10 to Rs. 31. Linseed oil ready was quoted Re. 1 less at Rs. 19-6.

Cottonseed February contract moved in sympathy with castors and groundnut. Having opened at Rs. 85-8, it moved up to Rs. 90 on the following day, but declined to Rs. 87-4 at the close the same day. It, however, improved to Rs. 89 on the 3rd inst. It opened today at Rs. 85-4 and closed higher at Rs. 86-4.

Among the other seeds, *kardi* Bold ready lost As. 4 at Rs. 21 and *niger*, Madras, was done As. 4 less at Rs. 30.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	5-12-1956	28-11-1956	21-11-1956
Groundnute—	Rs. a.	Rs. a.	Rs. a.
February 1957	145 2	148 14	144 10

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, *5th December*

There was a further rise in sugar prices during the week under review. Buying from all sides was well sustained. Ex-mill quotations ruled firm. Even the proximity of the normal monthly release of sugar for sale in the free market and reports of sugar mills crushing in full swing failed to have any effect on the market. The increased arrivals of indigenous sugar—19,300 bags, as against 14,900 bags in the previous week—met with good support at higher prices.

In the spot section, indigenous sugar small and medium grains advanced by a rupee each to Rs. 89- and Rs. 90-Rs. 93 per bag, respectively. British refined sugar rose by a like amount to Rs. 92 per 2 cwts. Large grain sugar was fully maintained at Rs. 94-Rs. 102, same as last week.

Magsar delivery contract for 'C' grade sugar moved up from Rs. 90-6 to touch its new high of Rs. 90-10. It was fully firm at this rate, thanks to paucity of spot stocks of tenderable variety. The contract is due to be squared up on the 17th inst. A new forward delivery contract—*fagan*—for C.28 grade sugar (new crop) which was opened this week was quoted at Rs. 92-4. The forwarding charges for this delivery are higher, due to fears of an increase in excise duty on sugar and expectations of better demand if the rumours of exports are to prove correct.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, *5th December*

Despite continuous firmness in Sarawak pepper at Singapore, where the market was reported to be under the full control of one or two Chinese speculators, Malabar black ruled easy under pressure of arrivals of new crop and paucity of inquiries from New York. New arrivals now average 250 candies per day with prospects of expansion and improvement in the quality. It is generally believed that by the second week of the month, arrivals both at Cochin and Alleppey will be more than 500 candies. If sizable demand does not develop from overseas by that time, it will be hard to absorb the supply in view of the fact that now inland enquiry, particularly from Calcutta, is on the wane.

Sarawak black at Singapore improved to Str.$.94, establishing a new high for the year, under pressure of buying by the Chinese rubber interests. Lampong, however, is reported neglected as Europe is interested in Sarawak only.

New York is reported buyer for December at $0.26. It has refused so far to pay anything higher; all offers from India for December shipment above this price are reported to have been turned down repeatedly. The recent speech of the British Chancellor of the Exchequer has given currency to rumours of imminent devaluation of sterling but knowledgeable sources indicate that it may take some time and that the British Government will try its level best to maintain the present cross rate.

The future of the market depends upon the buying policy of America as chances of immediate Russian buyings are reported receding since Singapore rubber interest is reported to have sold big parcels of Sarawak black to Russia through the U.K.

December shipment was done at $0.26¾. There are sellers for Jan.-Feb.-March at $0.26¾ but without response.

In the delivery section, December delivery, after receding to Rs. 615, improved to Rs. 620 owing to short covering and some trade buying following news of hardening prices of Sarawak black at Singapore. Today's nominal quotations are: Ready delivery Rs. 94 per Bengal maund; December delivery Rs. 616-21 per candy of 5¼ cwts. and February delivery Rs. 617-22 per candy of 5¼ cwts.

STRONG DEMAND FOR TEAS PERSISTS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *29th November*

In sale No. 31 held on Tuesday, 27th November, approximately 1,400,000 lbs. were offered and met a very strong general demand for all types, except high-growns which were easier, following a decline in quality. Mediums and good medium brokens, as well as whole leaf grades, came to a very strong market and were As. 2 to As. 3 dearer and sometimes more. There was a general decline in the quality of Nilgiri high-grown offerings and buyers were discriminating in their purchases, consequently brokens in this category were fully As. 4 easier, but whole leaf descriptions were well supported and were irregularly steady. The few packages of tippy teas on offer met a good market and sold at about last rates. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	2 0 0
Low-medium B.O.P.	2 7 6
Medium B.O.P.	2 10 6
Good B.O.P.	2 14 0
Well made black leaf O.P.	2 12 6

London Market—Sale of 26th November 1956.—Very strong. Generally 3d. to 6d. up.

Sale of 27th November 1956.—Bottom dearer. Others unchanged.

Colombo Market—Sale of 26th November 1956.—Black leaf and useful liquoring sorts firm to dearer. Thin stalky fannings rather lower.

Sale of 27th November 1956.—Market lower, following quality. High-grown brokens declined 20 to 40 cents, mediums down 20 cents, low-grown U.K. types down 5 to 10 cents. All leaf grades much dearer. Gulf types firm.

Calcutta Market—Export.—Increased strong demand, particularly at the bottom, and for most fannings grades. Better teas slightly easier.

Internal.—24,200 dust. Good general demand. Opened half to 1½ annas dearer, but closed one anna to As. 2 below last. Best C.T.C. and flavoury Darjeelings fully firm. Internal leaf, although irregular, was firm to dearer.

Export Quota.—There has been considerable activity in the export quota market during the past week and business has been effected at 90 pies.

Forthcoming Auctions.—Sale No. 32 will be held on Tuesday, 18th December, and dust sale 'X' on 4th December.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Dust Sale X.*—415,000 lbs. Strong general demand, particularly for lowest and medium sorts. Market has advanced irregularly As. 2, except for best which are about steady."

JUTES RULE STEADY

(From Our Own Correspondent)

CALCUTTA, *4th December*

Conditions in the jute market were fully steady during the week under review. The mid-week fall in prices on fears of reimposition of export duties on jute goods was short-lived, and by the week-end prices had fully recovered. It had been known for some time that the Finance Minister had been contemplating ways and means to stem the rise in the prices of commodities. When Mr. Krishnamachari expressed concern at the signs of prices hardening, rumours that he would use the opportunity of the recent uptrend in prices of jute goods to reimpose the export duties circulated freely. However, these rumours were unfounded, as the Finance Minister's proposals for additional revenue subsequently revealed. It is true prices of jute goods have advanced since the blocking of the Suez Canal, but then raw jute prices have also gone up. Prices of jute goods that prevail at present can at best be said to be only economic. Imposition of export duties would price the Indian goods out of world markets. It is only in recent weeks that export business has been of such proportions as to reduce stocks. Foreign consumers are naturally buying more in order to have an adequate quantity in stock, so that delays in shipping may not be felt.

The announcement by Mr. Lal Bahadur Sastri that he had been able to persuade the dock workers to withdraw the strike notice was greeted with satisfaction by the trade. At the present time, when increased enquiries are being received, stoppage of work in Calcutta port would hit hard the jute industry and trade. This announcement retarded sentiment for a time, as buyers slowed down their activity. However, the trade's anxiety about the strike fever continues. For it is distressing that the jute industry is being threatened with a general strike. The lockout in three mills in the Shamnagar area, namely, Megna, Waverly and Alexandria, continues and accounts for output loss which is acutely felt, in view of the present higher demand. The demands which are now precipitating an industry-wide strike are, among others, the appointment of a tripartite commission to enquire into rationalisation, banning of the operation of two looms and two frames, instead of one machine by a worker, and introduction of a bonus scheme.

On Tuesday last, ready B. twills was steady at Rs. 120-4 and hessian 40" 10 oz. at Rs. 46-8. Good business for export was done at these rates. As a result, B. twills gained to Rs. 120-8 on the next day, while hessian 40" 10 oz., although lower at Rs. 46-4, was fully steady. At this stage, a definite easing tendency set in on rumours of the reimposition of export duties. Bears used this opportunity to depress prices. B. twills declined to Rs. 119-4 and hessian 40" 10 oz. to Rs. 45-13. However, speculators were keen buyers, and by Friday the rates for the two constructions gained to Rs. 119-14 and Rs. 46-1, respectively. On Saturday, prices recorded improvements as the rumours of export duties were unfounded. However, profit-taking reduced the gains. Thus, B. twills closed at Rs. 120 and ready 40" 10 oz. hessian at Rs. 46-2. Bearish activity in *fatka* was a feature during yesterday, and prices moved down further, B. twills being quoted at Rs. 120 and 40" 10 oz. hessian at Rs. 45-15.

Raw jute prices were unchanged. Mills were interested in small quantities, and business was subsequently put through. Arrivals were declining. However, mills were not prepared to push up prices, since they felt that there was enough jute in the country. Indian northern bottoms were offered at Rs. 31-8, and local daissee bottoms at Rs. 32-8. Strong conditions continued to prevail in the Pakistani markets, and the strike by about 20,000 jute workers in Narayanganj was an additional factor to harden prices. It is reported from Dacca that attempts are being made to increase jute output in the next season by 500,000 bales to 6½ million bales. This decision is said to follow the Government's anxiety to meet the increased demand for jute all the world over. However, it is a pity that the authorities in Pakistan have not yet thought of removing the obstacles which stand in the way of India increasing its purchases from Pakistan. It is time the high export duties are revised. The Government in Dacca is desirous of sending out missions to neighbouring countries like Indonesia, Burma, China, Australia and Japan to find out how far Pakistan can increase its exports of raw jute and jute goods to these countries. Without sending any such mission, Pakistan can increase its exports of raw jute to India, if only fair prices are quoted, the E.P.C. forms are passed by the State Bank of Pakistan more quickly, and the discriminating export duties are removed.

TEA PRICES A SHADE LOWER

(From Our Own Correspondent)

CALCUTTA, *4th December*

Strong demand continued to be in evidence during the export sale held yesterday. There was, indeed, a squeeze for export quota rights at advancing prices.

The keen export demand during recent weeks has made several tea gardens bid for export quota rights. Export releases have so far amounted to about 332 million lbs., or 50 per cent. of total output. The combined North and South Indian production for this year is estimated at 665 million lbs. In view of the keen export demand at hardening rates, the trade anticipates a further release. It is known that New Delhi, although eager to increase exports, desires to prevent any shortage for internal consumption.

Tea prices for internal consumption, in common with other commodity prices, have been rising, and the Government is desirous of avoiding any further advance. Internal needs for tea are estimated by the trade at not more than 200 million lbs. It, therefore, anticipates that the Government would release at least 100 million lbs. more for export from the 1956 crop. This anticipation was another cause for the rush in export quota right bids.

With the onset of the busy season and the tightness in the money market, tea gardens are anxious to make arrangements for credit to finance the new crop. Usually, banks advance money to estates against production from the beginning of the year. As estates commence sales, bank advances are gradually cleared. However, advances to gardens have become less attractive propositions to banks, in view of the bill market scheme not applying to these. And tightness in the money market offers banks several other more profitable avenues of investment. The Reserve Bank would have to consider this subject and include advances to the tea industry in the bill market scheme or explore other ways of helping the tea industry.

The fear is entertained that the working of tea estates on a profitable basis would be affected by the Finance Minister's proposals for new taxes introduced in the Lok Sabha on 30th November. The greater control which he is now attempting over depreciation and other reserves of companies would particularly affect tea estates. His intention to increase the rates of super tax payable by companies declaring dividends in excess of 6 per cent. of paid-up capitals is also of particular import to the tea companies.

Yesterday's export sales opened under very steady conditions. As the sales progressed, demand strengthened, but prices were easier. Prices for the better C.T.Cs rose above valuations, while those for the better Assams of orthodox manufacture and non-wither Dooars declined by As. 3. Broken grades were held firm, but medium, low medium and plain fannings gave way by As. 2 to As. 3. B.P.Ss declined by half to one anna and B.O.Ps by an anna to As. 2. Whole leaf grades also remained quiet. Among Darjeelings, the ordinary lots eased, but there was a good demand for a few selected lots. The quotations were: best C.T.C. Assam B.P. Rs. 3 to Rs. 3-2, medium Assam B.P. Rs. 2-7, plain B.P. Rs. 2-5, and clean black pekoe Rs. 2-6.

Export quota rights changed hands at As. 7, and after declining to As. 6, recovered to As. 6¼ with buyers over.

Dusts offered during the internal sales held on Wednesday last amounted to 24,291 chests. Prices were higher at the opening of the sales, but dropped during progress. Thus, non-wither Dooars closed As. 2 lower after being higher by an anna, but commons and medium Assams rose by an anna to As. 1½. The strongest feature was provided by the very best C.T.C. Assams remaining firm throughout the sales. Other C.T.C. lots eased towards the close. Among Darjeelings, the few flavoury lots received the keen attention of bidders, but other offerings in this category tended easy. The quotations were: best Assam C.T.C. Rs. 2-12, medium Assam C.T.C. Rs. 2-7 to Rs. 2-8, medium Assam grainy dust Rs. 2-1-6, and medium Dooars Rs. 2.

Leaf grades offered were 1,445 chests. Demand was good, specially for the few lots of green tea on offer.

LINSEED WELL MAINTAINED

(Messrs. A. Bradley & Co.)

CALCUTTA, *3rd December*

Linseed prices were well maintained during the week, although trading was on a rather small scale. Arrivals were very poor, and sellers were rather reserved, except at more attractive rates. Buyers were disinclined to pay higher prices, owing to a decline in the price of linseed oilcake and less keen enquiries for oil. In the oil section, buyers were holding out for slightly lower prices, following a small decline in U.K. prices.

The latest available quotations are: November-December Rs. 26-8 and April-May Rs. 22-8 per maund.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *3rd December*

Quiet conditions prevailed in the foodgrains market during the week under review. Heavy sales by fair price shops constituted the main depressing factor. Imports are coming to the country as scheduled and India received 923,991 tons of wheat and rice upto the first week of November this year. Recent developments in West Asia have not retarded the flow of foodgrain imports, as the supplying countries mostly lie to the east. The U.P. Government is faced with a new problem, as smuggling of wheat sold in the flood-hit areas of East U.P. is taking place to Bihar and it is now reported to have asked the Centre immediately to impose zonal-basis restrictions on the movement of foodgrains.

Wheat at Hapur eased slightly by As. 2 per maund to Rs. 15-12 for *dara* quality and to Rs. 16-12 for farm quality. Local arrivals continued to be small, at 50 maunds daily, and stocks remained unchanged at 64 *khaties*. Rice also ruled quiet, due to increased pressure of new crop into the market. Gram was stagnant at Rs. 13 per maund for local quality and at Rs. 13-4 for Punjab produce. Local stocks were still heavy at 94 *khaties*. *Bajra* was on keen request during the week, due to good seasonal demand and prices improved in the face of poor arrivals. Maize, however, eased slightly, due to better supply position. The latest available quotations are: *Bajra* Rs. 14-4; maize Rs. 12-10; *jowar* Rs. 13; *guwar* Rs. 11.

Pulses rules steady on good offtake in the wake of fast dwindling stocks. Peas average green was quoted at Rs. 14-4 and white quality at Rs. 16 per maund. Stocks of peas were lower at 24 *khaties*. The heavy offtake of *arhar*—at 11 *khaties*—during the week mostly in the form of pulses resulted in an improvement of ready prices to Rs. 13-10 per maund and stock was put at 40 *khaties*. Other pulses also advanced in sympathy with peas and *arhar* and on poor local stocks. *Urd* was done at Rs. 18-8 to Rs. 20-8, *moong* at Rs. 16-4, and masoor at Rs. 18-8.

After recording good gains in the earlier part of the week on continued bull support from the Punjab, pulses futures declined to be quoted near the opening level of the week on profit-taking sales. The latest quotations as on Monday were:—Peas: *mangsir* Rs. 13-6-6, *jeth* Rs. 10-8-6, *farm mangsir* Rs. 12-12-3 and *jeth* Rs. 10-15-6; *arhar mangsir* Rs. 13-4-6 and *jeth* Rs. 11-5; *urd maha* Rs. 18-10.

SUGAR RISES SLIGHTLY

(From Our Own Correspondent)

HAPUR, *3rd December*

Good consuming demand from all deficit areas accounted for steady conditions in the sugar market during the week and there was a slight improvement in the mill delivery prices. Most of the factories in U.P. and Bihar have begun crushing operations for the new season. The production of new sugar from the beginning of the new season upto 15th November amounted to 42,000 tons, as against 34,000 tons during the corresponding period last year, and stocks with factories on this date was put at 503,000 tons, as compared with 381,000 tons last year.

The week-end mill delivery prices of sugar were: Jaswant Rs. 28-5; Simbhauli Rs. 28-8; Mawana Rs. 27-12; Daurala Rs. 29-4; Amroha Rs. 27-12; Bijnore Rs. 27-12; Mansoorpur Rs. 29-4 to Rs. 30; Rampur Rs. 31-8; retail Rs. 30-10 per maund.

The *khandsari* market continued dull and depressed. Prices ranged between Rs. 22 and Rs. 26 per maund.

Rail-loading restrictions and increased daily arrivals—at an average of 8,000 maunds here—resulted in a fall of Re. 1-8 in ready *gur* prices to Rs. 11-12 for best quality. Arrivals are likely to increase and traders are very much perturbed by time-to-time loading restrictions in Moradabad Division as against free loading facilities in Delhi Division. After an early improvement to Rs. 10-13-10½, as against the week's opening of Rs. 10-8-9, *fagun* delivery declined to Rs. 10-11-3 on Monday, due to depressed conditions in ready prices.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex.. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. † Less income-tax. (z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments: (i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (e) For seven months ended 31st March 1954. † New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

ROUND THE EXCHANGES

(*Concluded from page 1076*)

lands declined by As. 10 to Rs. 18-10. Among rubber shares, Rajagiris were neglected at Rs. 23 *cum-div.*, as against Rs. 24, despite announcement of a higher dividend of 25 per cent. for the year ended June 1956, as against 20 per cent. for the previous year. Anandams and Vaikundams were taken down by As. 10 each to Rs. 21-10 and Rs. 33-8, respectively. Teekoys fell by As. 8 to Rs. 11-11. Nenmenys lost a like amount to Rs. 20-4. Kailas shed As. 5 to Rs. 5-11. Among coffee shares, Amalgamateds dropped As. 10 to Rs. 11-4. Cochin Malabars slipped by As. 6 to Rs. 9-4. Mysore Coffees were on sale As. 4 lower at Rs. 2-12. Coffee Lands and Consolidateds were done at Rs. 26-4 *cum-div.* and Rs. 20-1 *cum-div.*, respectively. The dividends of the two Companies for the year ended June 1956 are 25 per cent. and 20 per cent., the corresponding figures for the previous

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIII. No. 2389 BOMBAY, 15th DECEMBER 1956 PRICE Rs. 1/8

GOVERNMENT UNIMPRESSED

THE modest speech of Mr. O. T. Jenkins, the retiring President of the Associated Chambers of Commerce, Calcutta, at the annual meeting of the Chambers held on Monday the 10th inst., was in refreshing contrast to the Marathon and rambling delivery of the Finance Minister, Mr. T. T. Krishnamachari, who addressed this largest gathering of foreign business men in India as their honoured guest for well over an hour. Mr. Jenkins gave expression to all the thoughts uppermost in the minds of business men on the main economic problems facing the country gently and yet clearly. He, as well as his colleagues who spoke after him, placed the most charitable interpretation possible on the Government's economic policy. They seemed to try to understand and appreciate the difficulties of those who are in the seats of power in a country of 360 million people, impatient to have a higher standard of living and liable to fall a victim to the alluring propaganda of the leftists. They reaffirmed, as all Indian business men have done, their wholehearted co-operation to the Government in the implementation of the second Plan. They earnestly hoped that the Government of India, for its part, would find it possible to accept as vital the role which private enterprise and organised industry and commerce have to play in the fulfilment of the Plan's targets and that it would take all practical steps to assist these sectors of the economy in their appointed tasks. But they appear to have failed to evoke a similar sympathetic response from the Government. The Finance Minister's speech, long as it was, contained nothing to show that the Government understands and appreciates the difficulties of private enterprise or of its value. Excepting for some gesture of minor concessions, as, for instance, in regard to taxation of perquisites, his oration was full of sermons of which business men have already had enough and more.

Mr. Jenkins made three important points in his speech. First, personal taxation in India was too high, so high indeed that it was confiscatory. Unless the high tax pressure was eased, he averred, the same outward movement of productive people that was happening in Britain would happen here, if it was not happening already. The truth of this statement will be obvious only to those who appreciate the value of the "carrot theory," referred to in these columns a fortnight ago. Unfortunately, such people in India are in a minority devoid of political power and Mr. Krishnamachari is one of those who left this group years ago to join the Company of those political leaders who command the support of the ignorant masses and who believe that it is the spirit of social service and not profit-motive that should be the source of inspiration for hard work. The Finance Minister clearly stated that private property was not sacrosanct to him. By saying this, he has completely identified himself with the Prime Minister and the basic philosophy of the Congress Party. But, if this philosophy is carried to its logical conclusion in actual practice, there will be no difference between communism as is being practised in Russia and its satellites and democracy of the type the Congress Party has in mind. The redeeming feature of the present situation is that it is not being done so, at any rate not as fast as many Congress men wish.

Unlike in Britain, where "productive people" have other lands to which they can move, such people in India have no other outlet. To this extent, Mr. Jenkins was not correct, but only literally. While Indian talent has perforce to stay in India, it cannot be expected to do its best for the economic advancement of the country, if it is not adequately rewarded. The success of the Plan depends on an all-out effort by everyone in India. But such an effort cannot be had, as Mr. Jenkins rightly observed, merely by appealing to spiritual values. Sustained and imaginative effort at the daily job, to quote him, could only be achieved in a democratic country, if ordinary men were given the hope of an immediate and discernible improvement in their lot and if those hopes were regularly fulfilled. Since the Government does not subscribe to this theory, the Plan is not likely to succeed. Every addition to the restrictions on the private sector means an increase in the number of impediments to the progress of the Plan.

It may be possible for the Government to coerce the nationals of this country into action through legislative sanction. Since they have no alternative but to obey, there will, of course, be some progress. But India cannot hope to get adequate foreign private capital by this means. On the contrary, adoption of such means will only tend to dry up the channels of foreign private capital. Some argue that the Government of India only takes powers but is quite reserved in exercising them. They, therefore, contend that foreign capital need not be frightened by our Government's fondness for drastic powers for control over private enterprise. This argument is not convincing, for foreign investors in the free world are very much influenced by the attitudes and the philosophies of the Governments of countries that seek their savings. The Ministers at the Centre do not fully realise the importance of this point. The new tax proposals, the control that is sought to be exercised by the State over the reserves of joint-stock companies and the latest amendment to the Banking Companies Act, under which bank managements are deprived of their fundamental rights, are certainly not calculated to engender confidence among foreign private investors.

The Finance Minister and the administration may, however, say that all this is gross exaggeration and, as proof, can point to the influx of some foreign capital that has been going on in recent years, despite similar criticisms of their policy in the past. But such flow as has been taking place is due mainly to political considerations. The Governments of free countries are interested in seeing that India stays in the democratic world and, therefore, persuade the big business combines, so much derided by some of our politicians as monopolies, oligopolies, etc., to take interest in India's Plans for economic development. It will be an unfortunate error of judgment, if this general goodwill towards India in the Western World has led the Government to assume that conditions in India are quite favourable to the flow of foreign private capital. It would appear that neither the magnitude nor the implications of this error is realised. For, to the extent foreign private capital does not come in, the dependence on foreign Government capital increases. And it is not always easy to get foreign Government capital without political pressure or strings. Even if such is freely made available, it is not so desirable as private capital, because it leads to extravagance, complacency and irresponsibility among the receiving Governments.

The second point made by the retiring President of the Associated Chambers of Commerce was the growing threat of bureaucracy in India. This danger is inherent in the extension of Government's control almost every sphere of activity and in its anxiety to do everything itself, instead of helping the people to go forward on their own initiative and enterprise. One of the reasons why the State wants more and more power to regulate the affairs of its citizens is to prevent concentration of wealth and economic power, which Mr. Jenkins described in one word as plutocracy. The Government has already enough powers and initiated several measures to prevent an increase in the number and power of plutocrats. He, therefore, meant that there was no need for more of them. Warning the people that they should think twice before replacing the leaders of the private sector with an entrenched bureaucracy, he pertinently recalled that Shakespeare thought of plutocrats and bureaucrats in the same terms and that Hamlet's list of things that made life not worth living bracketed the arrogance of the rich man with the insolence of the official. But this line of reasoning made no impression on Mr. Krishnamachari. After listening to Mr. Jenkins, he simply remarked that, in a planned economy, an increase in the number of bureaucrats was inescapable.

The third point made by Mr. Jenkins was that it would be a good thing if the controversy between the State sector and the private sector (which, really speaking, is the people's sector) ceased. He argued that this controversy was becoming too controversial for the health of the country. "One of the luxuries which can with great advantage be forgone by all of us," he observed, "is that of speaking one's mind in terms that are likely to reduce their confidence in one another and the world's confidence in them." It is true that silence is golden, but that is a rule which is seldom observed, not because people do not realise its value but because it is extremely difficult to observe. It requires the co-operation of both the parties concerned to stop this controversy, but the Government goes on passing more and more legislation seeking to restrain the scope and functions of the institutions belonging to free enterprise, as witness the latest amendments to the Banking Companies Act and the threat of Mr. Krishnamachari in Parliament on Wednesday last to deprive the judiciary of its powers to hear and decide the disputes between the Government and the people on matters relating to taxation. We have no doubt that, on second thoughts, Mr. Jenkins will agree with us that, in the present circumstances, the advice given by him is not practicable.

SALES TAX REFORM

THE administration of sales tax on inter-State trade and essential commodities has been the most intractable of fiscal issues facing the country. It has been a virtual nightmare for traders, a difficult administrative problem for the tax collecting authorities and a fertile field in which the ingenuity of a few unscrupulous merchants apparently continues to pay rich, though ignoble, dividends. The Central Sales Tax Bill passed by the Lok Sabha last week, goes some way towards bringing some order into a field in which considerable confusion has prevailed. The two principal features of the Bill are the centralisation of sales tax on inter-State trade, the rate being fixed at one per cent., and the imposition of certain restrictions on the States' powers to levy sales tax in the sphere of intra-State trade in respect of certain goods of "special importance to the community"—iron and steel, coal, cotton, hides and skins, jute and oilseeds—the rate on which is limited to a maximum of 2 per cent. of sale price in each State. The obvious virtues of this legislation are the replacement, in the sphere of inter-State trade, of a host of collecting authorities, represented by the State Governments, by a central authority and the prescription of a single rate of sales tax for inter-State trade and of a maximum rate for intra-State trade in respect of articles of special importance to the community. But the question is whether the new legislation will solve, even in the sphere of inter-State trade, all the problems which recent experience in the administration of this tax has brought to the surface.

Although it must be conceded that the Bill is broadly in conformity with the Taxation Enquiry Commission's Report, the fact remains that the Commission's Report was written at a time when the decision of the Supreme Court in the United Motors case, vindicating the right of the State to tax the goods delivered from across its borders, held the field. In other words, when the Commission submitted its report, it had no cognisance of the latest judgment of the Supreme Court in the Bengal Immunity case, in which the Court, reversing its earlier judgment, held that the States could not levy a tax on inter-State transactions. It is, of course, pure speculation to discuss what the Commission might have said if this judgment had come earlier. Be that as it may, it will be useful to recall here the relevant conclusions of the Commission, arrived at after an examination of all the issues involved. Briefly, they are as follows:

(1) In essence, the sales tax must continue to be a State tax.

(2) In broad terms, however, the sphere of power and responsibility of the State may be said to end, and that of the Union begin, when the sales tax of one State impinges, administratively, on the dealers, and, fiscally, on the consumers, of another State. Broadly, therefore, inter-State sales should be the concern of the Union; so should be specific intra-State sales as, for example, when a raw material produced in a State is sold to a manufacturer in that State and the finished goods in turn figure significantly in inter-State commerce.

(3) The Union's powers of levy and control in respect of inter-State and intra-State sales should be so exercised that (*a*) there is no available duplication in the actual administration of the tax and (*b*) there is as much incentive for co-ordination as possible between States from which goods are despatched and those in which they are delivered for consumption.

The legislation just adopted by the Lower House is in conformity with the aforesaid recommendations as well as with the Commission's suggestion for treating iron and steel, coal, hides and skins, cotton, jute and oilseeds as specified goods, fit for Central direction and control in respect of the levy of sales tax. No wonder, the Union Finance Minister, Mr. T. T. Krishnamachari, was inclined to regard the Report as his "bible."

In the course of the debate on the Bill in the Lok Sabha, only two important issues were raised. In the first place, the suggestion was made that foodgrains must be treated as an essential article. Although the Finance Minister saw a "great deal of validity" in this suggestion, he said he could not accept it, because both the Commission and the State Governments were opposed to the inclusion of foodgrains in any list of "specified" goods. Secondly, there was a demand for setting up an inter-State taxation council for purposes of co-ordinating the fiscal functions of the State Governments. The Minister said that the Council was not directly necessary at the present moment, but the Government had no intention of obstructing the formation of such a body, if it became necessary in future. Thus, the Bill was passed in the form in which it was introduced, the only slight amendment being the vesting of power in the Central Government to vary sales tax or exempt certain goods from taxation in regard to Centrally-administered areas.

The fact that the Bill thus closely follows the recommendations of the Taxation Enquiry Commission does not invalidate the objections, both fundamental and specific, which the Federation of Indian Chambers of Commerce and Industry has urged against it in the course of its communication to the Union Finance Ministry (*vide Commerce* dated 8th December). The Federation's fundamental objection against the Bill is that taxation of inter-State trade is not conducive to the development of "coherent national economic policy" and will also be detrimental to the free flow of inter-State trade or commerce. In other words, the Federation is in favour of the restoration of the original provisions in the Constitution which prohibited the taxation of inter-State trade and which were vindicated by the Supreme Court in the Bengal Immunity Company case. Its more specific objections are that, even after the Bill is passed, certain problems and difficulties confronting the business community will still persist, double or multiple taxation of the same commodity will still remain when goods move from State to State and the interests of distributing centres will not be safeguarded.

Presumably, the authorities are themselves not unaware of the fact that the taxation of inter-State sales is irksome as much to the collectors as to the assessees. The National Development Council, to the deliberations of which a reference has been made elsewhere in this issue, agreed that sales taxes levied on mill-made textiles, tobacco (including manufactured tobacco) and sugar should be replaced by a surcharge on the Central excise duties on these articles, the income derived therefrom being distributed among the States on the basis of consumption, subject to the present income from this source to the States being assured. The Associated Chambers of Commerce and Industry, while commending this approach, has called for a thoroughgoing rationalisation of the entire scheme of sales tax legislation through centralisation of the tax. The resolution adopted by this body, on this subject, states:

"This Association, whilst noting with gratification the decision of the National Development Council firstly to recommend to the Legislature the replacement of State sales tax on mill-made textiles, sugar and tobacco by a surcharge on Central excise duties and, secondly, similarly to recommend a uniform rate of State sales taxes on commodities such as radio sets and automobiles, nevertheless wishes to record its serious concern at the confusion which continues to prevail in the levy of sales tax on other commodities, at the difficulties arising from sales tax legislation which impede business activities and at the burdensome cost of collection reflected in the unproductive labour involved in its assessment. Inasmuch as all earlier efforts to simplify sales tax administration have hitherto proved infructuous and since the present confusion has been greatly aggravated by the changes in State boundaries effected under the States Reorganisation Act, the Associated Chambers of Commerce consider that this field of taxation should be rationalised by the introduction of a uniform Centrally-administered tax, even if this involves a further amendment of the Constitution."

Moving this resolution on sales tax, Mr. G. H. Clarke said that the importance of sales tax to commercial and industrial interests and the considerable difficulties and troubles it had caused might be indicated by the fact that, during the last ten years, sales tax, in one aspect or another, had featured no less than eight times as the subject of a resolution by the Associated Chambers of Commerce. He said that they feared that, with the enactment of the Central Sales Tax Bill, further burdens, similar to those experienced in the past, would be placed on the business community, particularly on those traders whose trading activities were carried on throughout the length and breadth of the country. He thought that, if the sales structure were to become still more complicated, there was the probability of further prolonged litigation to clarify doubtful points of interpretation. In view of the constant harassment and hardship experienced by traders and the fact that most efforts to simplify sales tax administration had hitherto proved "abortive," Mr. Clarke urged the Union Government to give serious consideration to the rationalisation of this field of taxation by the introduction of a uniform Centrally administered sales tax.

On the strength of the consideration that the wearer knows where the shoe pinches, it seems necessary to examine the whole subject of sales tax in the light of the criticisms that have been made by the Federation of Indian Chambers of Commerce and Industry and the Associated Chambers of Commerce. If experience shows time and again that a certain fiscal system hampers trade and industry, leads to endless litigation, and causes a great deal of confusion to both the authorities and the assessees, it is obviously imperative that some new thinking must be brought to bear on the subject. It must, however, be recognised that there are a few difficulties which cannot be easily overcome. All State Governments are zealous of their financial autonomy and sales tax is one of their main sources of revenue. None of them will agree to surrender this privilege to the Centre.

Then there is the important consideration of revenue, what with the large gap between anticipated resources and the contemplated outlay on the second Plan. The authorities in States are hopeful that sales tax may prove to be an expanding source of revenue. Indeed, Mr. M. C. Shah, the Union Minister for Revenue and Expenditure, in the course of the debate on the Bill in the Lok Sabha, stated that the States had to collect Rs. 110 crores through sales tax in the second Five-year Plan. It should thus be clear that the States set great store by sales tax so far as their part in financing the Plan is concerned. Any move towards rationalisation of sales tax structure—no such move is, of course, now contemplated by the authorities—must take this factor into account. At the same time, it must be emphasised that it will avail neither the Centre nor the States anything if the legislation for sales tax impedes free movement of goods, encourages evasion and causes innumerable difficulties to the authorities, the assessees and the consumers.

A device, which promises to avoid the pitfalls that seem inescapable in the levy of sales tax and also to assure a certain level of revenue is the replacement of sales tax by additional excise duty on the goods which are capable of being taxed in this way and the distribution of the revenues collected through the increase in excise duty among the States. This device, which has lately attracted considerable attention, is now only in its embryonic stage. If more thought were given to perfecting it—nobody will pretend that the task is easy, for there will still be problems of evolving an acceptable basis of distribution of the revenue from additional excise duty—it might pave the way towards at least a partial solution of the vexed problem of sales tax. Referring to this aspect of the problem, Mr. Krishnamachari said: "There are certain types of commodities, where, if the State recognises that single-type taxation is better, excise duties will perhaps be a better way of collecting the money due to the State. We have put forward a proposal in regard to certain commodities, but the States are again chary with regard to their powers, even though it may lead to augmentation of income." At the same time, he admitted that, in certain cases, excise duty would bring in less revenue than sales tax. Obviously, the whole subject of additional excise duty *versus* sales tax requires further examination by the Central and State Governments.

OUR NEXT ISSUE

The 1956 Annual Review Number of *Commerce* will be published in the first week of January 1957. The Number will be the biggest produced so far and is free to subscribers; but others also can have it at Rs. 7-8 each.

There will be no further regular issues of *Commerce* this year, in view of our preoccupation with the aforesaid Number and of the Christmas and New Year holidays. Our next regular issue will, therefore, be the one dated 5th January 1957.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year.

INVESTORS' CONFIDENCE RUDELY SHAKEN

COMPULSORY DEPOSITS—ELECTRICITY SCRIPS

THURSDAY, 5 P.M.

MARKET GOSSIP

THE share markets appear to be gradually sinking, for the Finance Minister has frightened the investors, and the speculators are mercilessly exploiting the situation by selling short. At the time Mr. T. T. Krishnamachari took over the portfolio of Finance, we remarked that he would hug the bears and hound out the bulls from the trading ring, in the same way as Sir Jeremy Raisman did in 1943 when the world was in the full grip of war and inflation had begun to raise its head in India with full vigour. This anticipation is proving correct, at least in respect of shares. Last week, he had a hit at the markets by introducing new tax proposals. The markets were just recovering from this blow on the realisation that the total incidence of the burden was only Rs. 16 crores per annum and on his statement at the Bombay airport that his budget in February would be a "lame duck." Many interpreted this remark that his February effort would be a tame affair and that he might not announce any major tax proposals till a new Government was formed in May or June after the General Elections. He has now contradicted this inference, by saying in Parliament yesterday thus:

"If I am here, I will offer no apologies to this House for coming back again and again in every session, if I can only devise some taxation measure, some measure to plug a loophole, some measure to raise more resources, something which will ultimately help the small man. I will offer no apologies for coming back to the House with, perhaps, new measures not only on 28th or 29th February, but twice, thrice, four times or five times a year, in season and out of season, for more revenues and for more power, in order to see that this Plan is fulfilled."

The fact that the House lustily cheered this announcement shows that it will give its full support to such proposals and will not mind being called for this purpose any number of times.

The foregoing statement is not the only one that has severely shaken the confidence of investors. At the meeting of the Associated Chambers of Commerce, Calcutta, the Finance Minister stated to the effect that the country must be ready for more taxes. Since he said that he could not ask the "have-nots" to make any sacrifice, it meant that the "haves" would be taxed further. He bluntly rejected the theory of profit-motive as an incentive for saving and investment and declared that the "haves" should willingly sacrifice and make the second Plan a success, if democracy were to be saved. In other words, he meant that the need for preserving democracy should itself be a sufficient incentive to the "haves," big and small alike, for making further effort.

He followed up his speech at Calcutta two days later in Parliament. In his reply to the debate on the two Finance Bills, he made the following points which have upset the share markets:

(1) Stringent measures should be taken to plug all loopholes through which taxes are being evaded.

(2) After the General Elections, the Constitution should be amended, in order to restore the old provision in the Government of India Act making revenue measures not subject to judicial review. This was necessary, as some of the Articles in the Constitution stood against the Finance Ministry being efficient collectors of tax.

(3) "Vested interests will fight me in the front, at the back and on the sides. But, if we are to carry out the present Plan, every section which can afford will have to sacrifice. So long as we have the people behind us and so long as we feel that we are conscientiously doing the best for them, I am not afraid of these vested interests."

(4) If a gifts tax was found necessary in order to plug a loophole, it would be introduced.

* * * *

In one of the memoranda explaining the provisions of the Finance Bills, it was clearly stated that the tax on bonus shares "levied during the financial year 1956-57 will be continued for the financial year 1957-58 also in respect of bonus shares issued during the relevant previous year." This assurance, in the face of a sharp increase in the tax on dividends, has induced many company managements, including those who were chary till now, to think of capitalising a part of their reserves as quickly as possible. The directors of the Century Mills have already decided to do so. The Board of Shivrajpur Syndicate, which had deferred the plan for issuing bonus shares as the lesser of the two evils, even though the Controller of Capital Issues had given the permission, has now decided to implement it. There are reports in market circles that both Bombay Dyeing and Bombay Burmah may also issue bonus shares. But, in view of the latest statement of the Finance Minister and the suggestion of a member of parliament belonging to the Congress Party that the tax on bonus shares also should be raised, there are serious doubts whether the earlier statement holds good. It is feared that this tax may be enhanced at the end of February, thereby upsetting the calculations of those companies that are now rushing through their plans for capitalising reserves before the end of the current financial year. It is this uncertainty that has brought about a sudden drop today in such scrips as Bombay Dyeing, Bombay Burmah and Century, even though they managed to remain relatively steady yesterday, despite the strong rumour that a sharp rise in the Bank rate was imminent today—a rumour that has failed to materialise.

* * * *

Both the Finance Bills have been adopted by the Lok Sabha, after rejecting the well-reasoned plea of Mr. Tulsidas Kilachand for referring to a Select Committee at least that Bill under which the direct taxes have been raised. The Finance Minister was, however, kind enough to alter the proposal relating to the Capital Gains Tax slightly, in order to confer a little advantage on the small middle class people and to exempt the banks from the provisions relating to compulsory deposits. Further, he gave an assurance that he would ensure that, as a result of these provisions, no hardship was caused to industrial companies having expansion plans. The value of this assurance will depend on the manner in which it is implemented. It remains to be seen to what extent he will succeed in toning up the administrative machinery for expeditious disposal of the applications for return of deposits.

* * * *

Several readers of this journal complained that they found it difficult to understand the complicated provisions of the Finance Bill relating to deposits to be made by the companies. In order to help them, we requested Mr. R. K. Dalal, a leading Chartered Accountant and a frequent contributor to *Commerce* on taxation matters, to elucidate these provisions. His explanation, supported by an illustration, is as follows:

The relevant provision in Finance (No. 3) Act 1956 comes into force on 1st April 1957. It says that, in the case of companies, where depreciation allowances and development rebates are made under clauses (vi), (via), (vib) or (vii) of sub-section (2), of section 10 of the Income-tax Act, an amount equal to the sum of all the allowances so made shall be included in the total income of the previous year as profits and gains, unless the company deposits with the Central Government before 30th June succeeding the previous year, 25 per cent. of accumulated profits and reserves of the company at the end of the year preceding the previous year to the extent such reserves are not represented by fixed assets, *plus* a percentage not exceeding 75 per cent. of the amount by which

total income of the company—*less* income-tax and super-tax payable in respect of such total income *less* dividends declared during the previous year *plus* sum of allowances made under aforesaid clauses exceeds Rs. one lakh.

It further says that the Central Government will make rules for: (1) the manner in which deposits to be made. (2) the time and the manner in which refunds be made with or without interest, and (3) in particular, refund claimed for carrying out any purposes connected with the business of the company as is approved by the Central Government.

Here is an illustration of how the above provision will work:

A company's share capital and reserves at the beginning of the year are as under:

	Rs.
Share capital	50,00,000
Reserves	1,00,00,000
Fixed assets ...	75,00,000

It will have to keep a deposit with the Central Government as under:

	Rs.	Rs.
Reserves		1,00,00,000
Less—Fixed assets ...	75,00,000	
Less—Share capital	50,00,000	25,00,000
25 per cent. of		75,00,000
Deposit to be made		=18.75,000

The total income, depreciation and development rebate, dividend declared and the deposit payable are as under:

	Rs.	Rs.
Total income		15,00,000
Less—Depreciation and Development Rebate		5,00,000
		10,00,000
Less—Income-tax		4,34,375
		5.65.625
Less—Dividend		2,50,000
		3,15,625
Add—Depreciation allowance and Development Rebate		5,00,000
		8.15.625
Less—Statutory allowance ...		1,00,000
75 per cent. of		7,15.625
Deposit ... ... =		5,36,719

	Rs.
Thus, deposits to be made In respect of:	
Reserves is... ...	18.75.000
Current profits is...	5,36,719
Making in all a total of	24.11.719

BALANCE OF PAYMENTS BATTLE

(From Our Own Correspondent)

LONDON, *8th December*

LONDON LETTER

THE Chancellor of the Exchequer was altogether too naive when he declared that November's gold loss of £100 million—one-eighth of the national stock—was not caused by any weakness in the country's international trading position. "Sterling" he said, "is particularly affected by movements in world confidence, because it is so widely held and used" .... "the trend will reverse itself as the position improves." He summarised the immediate problem as "short-term pressure on the pound rather than long-term defects in our trading position."

This is all very well but short-term pressure usually arises from an appreciation of long-term defects. The Government must be well aware that the extra cost of dollar oil imports, extra freights and hampered exports are not going to help the balance of payments. The Chancellor estimated that, over the year July 1956 to June 1957, the overseas current account would be in balance; as there is no known evidence that it has been strongly favourable in the five months since July, the Chancellor must be making very favourable estimates for the next seven months. But industrial costs are going to rise substantially—the increase of one-third in the price of petrol will mean higher fares, dearer transport. Production will be reduced (domestic trade is already very quiet) and costs will be higher on that account as well. That will not help exports.

Even assuming that the whole November loss was on capital account but making no allowance for a capital flight in the third quarter, it looks as if the loss on *trading* account for the second half of 1956 will be of the order of $400 million or a great deal more than the surplus in the first half-year. This is so even if to the reserves up till June is added back $60 million in respect of capital funds withdrawn. Thus, it is not easy to reconcile these figures with the thought that for the year ending June 1957 the country should be in overall balance.

Indeed, the Chancellor is not optimistic. He expects a battle and he has already declared his battle cry, "No devaluation." What are his resources? On the industrial front, he insists that to repel the attack on the pound production must be maintained, and, on the commercial front, that the volume of *world* trade must be increased. We do not know if these valuable allies will respond to the call. But it is on the financial front that the real drama will be apparent. Trinidad Oil has gone—absorbed in the first post-Suez attack. Now a waiver has been called for the $105 million of interest on the U.S. and Canadian loans due in December (Canada has already agreed to her $22 million share). This will still leave a capital repayment in December of $72 million and a loss to the European Payments Union of not less than $50 million in respect of the November settlement.

With the gold and dollar reserves then below the £650-million mark ($1,300 million), Mr. Macmillan can still call on the U.S. securities held by the State to the tune of over £300 million. More than £10 million of these securities have already been sold and swept away in recent weeks to keep the pound at par. Lastly, Mr. Macmillan will call up his International Monetary Fund battalions of £465 million. (This he has already done and they have moved into action.—ED.)

Well, there are all the forces, all the reserves, and as the second line is mobilised, one might say of them, as Wellington said of one tattered regiment—"I don't know whether they will scare the enemy or not, but by God, they frighten me!" Still Wellington won his Waterloo with those troops and Mr. Macmillan may yet win his. But the battle will be a grim one and the appreciation of this has even quietened the Opposition's criticism.—*All Rights Reserved.*

It will be seen that, in order to get depreciation allowance and development rebate of Rs. 5,00,000, the company taken for illustration will have to deposit with the Central Government a sum of Rs. 24,11,719.

* * * *

The authorities are probably inclined to regard investors as an ungrateful lot who will never be content with what they are given. But nothing can be further from the truth. Actually, they are a sedate and realistic group of men, who show their keen sense of appreciation, almost as soon as they are given something that they can be grateful for. This can be seen in the behaviour of electricity shares in recent weeks. When it became known that the Government would be able to take the Bill to amend the Electricity Supply Act, which assures a somewhat better deal to the investors, to its legislative conclusion in this session of Parliament, the electricity scrips began to look up. Some notable gains have been recorded. If they have not been spectacular, it is due to the general weakness of the market induced by the Government's unhelpful fiscal policy. But the point is that the scrips have responded gracefully to the Government's decision—half-hearted and halting as it was—to accept the industry's case for a slightly higher return on capital.

Incidentally, since the standard rate of the return on capital base employed in the industry has been linked to the Bank rate—two per cent. above the Bank rate—a rise in the Bank rate, should it take place at all, would not adversely affect the electricity companies and would thus have an effect

NERVOUS SELLING IN SHARES

SHIVRAJPURS MARKED UP

(From Our Own Correspondent)

BOMBAY, *13th December*

THE moderate recovery noted in the share market towards the close of last week proved shortlived, as a reactionary trend came to prevail during the week under review. The downward movement gathered momentum at the close and panicky selling pressure was witnessed today, bringing equity values to fresh low levels for some months past.

The Finance Minister's speech at the Associated Chambers' annual meeting at Calcutta on Monday this week failed to impress the market. His assurance of liberal administration of controls on companies was unconvincing. On the other hand, his defence of the taxation proposals and his statement that capital gains tax had come to stay depressed the sentiment. Further, his speech in the Lok Sabha yesterday in reply to the debate on the Finance Bills, indicated that the country must be prepared for more taxation and that the present tax measures were only the beginning. This statement, together with the heavy *budla* charges in the last settlement and rumours of payment difficulties, brought heavy unloading today.

In the steel section, Tata Ordinaries crept down from Rs. 183-4 to Rs. 178-12 yesterday, before declining further to Rs. 176-12 today. Indian Irons, after an initial rise from Rs. 31-11 to Rs. 32-2, retreated to Rs. 30-8 at the close.

Textile shares were marked down on a wide front. Bombay Dyeings advanced early in the week from Rs. 598-2 to Rs. 612-8, but the subsequent landslide more than wiped out the gain, the closing today being done at Rs. 592-8. Centurys were well favoured following the announcement of the proposal to issue bonus shares in the ratio of three shares for two and the shares jumped from Rs. 536-8 to Rs. 549-8, but in the subsequent reaction they slipped back to a low of Rs. 521. Kohinoors came down by Rs. 8 to Rs. 328. Central Indias receded by Rs. 3 to Rs. 129 and Colabas by Rs. 7-8 to Rs. 90. Finlays changed hands Rs. 4 lower at Rs. 316 and Gokaks Rs. 2-8 down at Rs. 233-8. Indu Ordinaries shed As. 5 to Rs. 11-9½ and Indore Malwas Rs. 5 to Rs. 135-10, while Khataus showed a small rise of Re. 1-4 at Rs. 227-8. Mysore Spinnings had transactions Rs. 3-12 lower at Rs. 106-4. New Greats fell by Rs. 3 to Rs. 247, while New City Mills held their own at Rs. 155-10. New Kaiser-I-Hinds hardened by Rs. 5 to Rs. 125, but Shree Niwas, in line with the general trend, were placed Rs. 3-12 lower at Rs. 202-8. Simplex were slightly erratic, moving between Rs. 189 and Rs. 186, before closing at the latter level. Standards receded from Rs. 463-2 to Rs. 447-8. Svadeshis moved down by Rs. 9-8 to Rs. 232-8 and Tata Mills by Re. 1-4 to Rs. 50.

Bank shares were quiet and the trend was slightly downward. Centrals (New) receded by Re. 1-12 to Rs. 55-12, but their old shares were maintained at Rs. 53. Bank of Indias were fractionally lower at Rs. 141. United Commercials were quiet at Rs. 54-8. Barodas were done at Rs. 102-8.

Very little activity was noted in insurance shares. New Indias changed hands As. 4 higher at Rs. 43-4. Orientals had business at Rs. 3,640, as against Rs. 3,650 quoted earlier.

Electricity shares were a shade quiet, in tune with the general reactionary trend, although the outlook for electric companies appear to be better consequent on the favourable changes in the Electricity Bill. Ahmedabad Electrics were in favour and picked up As. 15 to Rs. 93-2. Bombay Suburbans rose from Rs. 110-15 to Rs. 111-4, while Surats were marked down by Re. 1-4 to Rs. 113-2. Tata Hydros were steady at Rs. 126-8. Tata Powers receded by Rs. 12-8 to Rs. 1,230 and Andhra Valleys by Rs. 7-8 to Rs. 1,205.

Sugar shares depicted an easy tone. Belapurs retreated to Rs. 248-8, after an early advance from Rs. 251 to Rs. 253. Phaltans fell by Rs. 7 to Rs. 149 and Walchandnagars by Rs. 3-2 to Rs. 271-14. Bhopals were, however, unchanged at Rs. 16-12. In the cement group, Associated Cements declined to Rs. 183-8, after moving up from Rs. 188 to Rs. 189. The Company has maintained the dividend at Rs. 10 per share for the year ended 31st July 1956. Digvijays, after gaining from Rs. 154 to Rs. 156-4, reacted to Rs. 153-12. Orissa Cements showed a rise of As. 2 at Rs. 13-4. Jaipur Udyogs were dull at Rs. 12. Among the engineering shares, Alcocks maintained the previous week's recession with a further decline of Rs. 13-12 to Rs. 287-8. Tata Locomotives were keenly bid early in the week and the shares rallied from Rs. 167 to Rs. 174. Later on, they succumbed to the general selling pressure and retreated to Rs. 164-8 at the close. Premier Constructions dropped Rs. 6-8 to Rs. 190-8. In the mining group, Shivrajpurs provided the highlight with a sharp jump from Rs. 83 to Rs. 92, before closing at Rs. 90, on rumours that the Company might reconsider the issue of bonus shares, the sanction for which had been given by the Government last year, but the proposal was shelved on account of the levy of tax on bonus shares. Indian Coppers declined by As. 2¼ to Rs. 3-7½ and B.B. Petrols by a like amount to Rs. 2-14.

Shipping and automobile shares provided no exception to the general easy trend. Scindias were marked down by As. 7½ to Rs. 18-5 and Great Easterns from Rs. 18-12 *cum-div.* to Rs. 17 *ex-div.* Premier Automobiles dipped from Rs. 108 to Rs. 101-8 and Hindustan Motors from Rs. 8-11 to Rs. 8-6.

In the miscellaneous group, Bombay Burmahs were somewhat brisk earlier in the week on optimism regarding favourable settlement in respect of capital reorganisation and rallied from Rs. 657-8 to Rs. 672-8. This optimism was based on reports that the extraordinary general meeting, which was scheduled to be held on the 10th inst. to consider certain special resolutions, was postponed to 3rd January 1957 in view of the current negotiations on capital reconstruction. Subsequently, however, the shares receded to Rs. 650 at the close. British India Corporations were quiet at Rs. 9-5. National Rayons weakened from Rs. 253-12 to Rs. 245-4. Tata Chemicals were lowered, by As. 13 to Rs. 17, Tata Oils by Rs. 2-4 to Rs. 45 and Wimcos by Rs. 3-12 to Rs. 170.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *12th December*

Extremely quiet conditions were in evidence on the Calcutta Stock Exchange during the week under review. In the circumstances, the daily lists of transactions were far from impressive. Earlier in the week, a small recovery, albeit the restricted turnover, was in evidence following the Finance Minister's statement in the Lok Sabha that depreciation funds deposited in the Reserve Bank under the new Finance Bill would readily be available for the genuine expansion of the companies concerned. This recovery was, however, short-lived following the introduction in the Lok Sabha of the Banking Companies Amendment Bill which aims to give the Reserve Bank wide powers in the working of banks.

The Stock Exchange had only a short session on Friday and remained closed on Monday owing to the death of a member.

In the jute section, a very poor volume of business was reported. Nationals were as low as Rs. 21. Deltas were pushed down further from Rs. 151 to Rs. 128. At Rs. 129-8, Kamarhatties were lower by ten points. Alliances were marked down to Rs. 104.

In an otherwise quiet coal section, Burrakurs rose to Rs. 22 from Rs. 20-4, on good support from interested quarters. South Karanpuras were fractionally better at Rs. 10-4, while Bengals receded to Rs. 452 and Equitables to Rs. 26-4. Central Indias were unchanged at Rs. 6-13.

In the engineering section, Indian Irons, after recovering from Rs. 30-3 to Rs. 31-3 sagged to close at Rs. 30-9. Mr. T. Leslie Martin's address from the chair to the annual meeting of the shareholders of the Indian Iron and Steel Co., Ltd., revealing the satisfactory working of the year, failed to set in a recovery, in view of his reference in the speech to the Directors' failure to get the Government to agree to an increased distribution on the ordinary share capital. However, long-term investors noted the hope expressed by the Government that ultimately the shareholders would have their full share of the increased profits. Of course, this would only be after several years which would be necessary for the completion of the expansion now in progress and planned and for the repayment of loans to the Government and the World Bank. Texmacos registered a small recovery to Rs. 21-5, while Jessop & Cos. receded to Rs. 30-15 from Rs. 31-4. Kumardhubis were quiet at Rs. 8-15, as were Burn & Cos. at Rs. 328. Braithwaites at Rs. 26-7 were lower by one point.

A few features were recorded in the miscellaneous industrials section. Orient Papers, induced by rumours of a bonus issue, rose from Rs. 32-14 to Rs. 34-9. National Insulated Cables, popularly known as Niccos, were steady at Rs. 26-9, while India Steamships weakened to Rs. 9-8. Angelo Bros. gave way to Rs. 20-12 from Rs. 22-5, while Indian Coppers were slightly better at Rs. 3-10 after the recent drop. Rohtas Industries attracted attention at slightly fractionally higher level at Rs. 19-11.

In contrast to the general trend, a better note was displayed in the tea section. This was due to the possibility of Government granting a further increase in the export quota, on account of the excellent crop reports both from North and South Indian gardens.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *11th December*

The week under review witnessed a slightly better tone on the Madras Stock Exchange. The panicky selling which followed the announcement of the supplementary Budget proposals abated and the sharp fall in textiles and plantings attracted some professional support. There was, however, no broadening of activity on any noteworthy scale, and the undertone remained hesitant; as operators were not inclined to go long, nor were they disposed to depress prices further. The volume of business was moderate.

Textile shares, which bore the brunt of the pressure last week, in view of the fact that they were most affected by the latest tax proposals, came in for bear covering and professional support. Bangalore Woollens, which were hammered down from Rs. 560 to Rs. 540 early in the week, rallied quickly on revival of buying to Rs. 562-8 at the close. Buckinghams gained Re. 1 to Rs. 186. Balasubramanias (Rs. 40 paid-up) were marked up by Re. 1 to Rs. 75, and Rs. 70 paid-ups by Rs. 4-8 to Rs. 134-8. Cambodias rose by As. 14 to Rs. 15-6, Coimbatore Spinnings by Rs. 3 to Rs. 91 and Janardhanas by Rs. 7-4 to Rs. 104-4. Lakshmis (Rs. 50 paid up) gradually picked up Rs. 15 to Rs. 255 and Loyal Textiles were done Rs. 3-12 higher at Rs. 54-8, the rise representing the dividend of Rs. 3-12 per share declared for the year ended 30th June 1956. Maduras were bid Re. 1 better at Rs. 48. Metturs changed hands Rs. 5 higher at Rs. 435. Pankajas gained Re. 1-8 to Rs. 80, while Radhakrishnas provided a notable exception with a further drop of Rs. 7-8 to Rs. 345. Rajalakshmis hardened by Rs. 10 to Rs. 185 and Ranga Vilas by Rs. 5 to Rs. 88.

Moderate enquiries for select scrips were noted in the planting section. Buyers were, however, hesitant, awaiting the result of planters' appeal to the Supreme Court against the Tribunal's award. Consequently, several counters disclosed further small losses over the week. Balmadies were lower by As. 2 at Rs. 3-8 and Be Be Rubbers by As. 4 at Rs. 4-3, while Blue Mountains were a shade better at Rs. 5-4. Chembra Peaks gained As. 2 to Rs. 3-12, Cochin Malabars As. 3 to Rs. 9-7, Coffee Lands As. 4 to Rs. 26-8 and Consolidated Coffees As. 13 to Rs. 20-14. Coorg Teas were on offer and declined by As. 9 to Rs. 10-14. Devasholas shed As. 2 to Rs. 24, Haileyburias Re. 1-8 to Rs. 22-8 and Highland Produce As. 2 to Rs. 13-10. Kalasa Teas were taken As. 4 down at Rs. 5-15, and Kalpettas Re. 1 lower at Rs. 24. Karikodes were done at Rs. 14, as against Rs. 14-5 a week ago. Kil Kotagiris were steady at Rs. 6-3½. Malankaras Rubbers declined by As. 12 to Rs. 29, Mercaras by As. 3½ to Rs. 8-6½ and Midlands by As. 7 to Rs. 18-3. Mysore Coffees were marked down by As. 2 to Rs. 2-10. Neelamalais lost As. 4½ to Rs. 5-11½, following the pruning of the dividend for the year ended 30th June 1956 from 17½ per cent. to 7½ per cent. Nelliampathys gathered As. 5 to Rs. 3-1, while Nilgiri Teas receded by As. 12 to Rs. 9-2 and Nonsuch Teas by Re. 1 to Rs. 23. Peermade Teas were done at Rs. 27-8 *ex-div.* (interim div. Re. 1), as against Rs. 27 *cum-div.* Periakaramalais lost As. 6 to Rs. 7-8 and Pullangode Rubbers an anna to Rs. 2-13. Rajagiri Rubbers put on As. 6 to Rs. 23-6, while Stanes Amalgamated fell by Re. 1 to Rs. 23.

Business in the miscellaneous section was small and price movements were narrow. Aluminium Industries were placed As. 8 lower at Rs. 18-12. Ashok Leylands were done at Rs. 5-4 *ex-right*, as against Rs. 5-6 *cum-right* a week ago. F.A.C.Ts gathered As. 4 to Rs. 6-9, while India Cements fell by As. 4 to Rs. 28-4. Mettur Chemicals were fully steady, gaining As. 2 to Rs. 10. Standard Motors were well maintained at Rs. 11-6, while Textools declined by Rs. 4-8 to Rs. 270-8 and Travancore Cements by As. 4 to Rs. 10-8. In the sugar group, Deccans were a shade quiet at Rs. 12-2. E.I.Ds ruled steady, gaining As. 8 to Rs. 28-8. Travancore Sugars changed hands As. 3 higher at Rs. 14, while United Breweries were offered As. 7 lower at Rs. 205.

Notices

BURN AND COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has sanctioned payment of the dividend on 6 per cent. and 7 per cent. Preference Shares of the Company for the half-year ending 31st December 1956. Payment will be made on or after the 10th January 1957, to those shareholders whose names appear on the Company's Registers on the 31st December 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
S. N. MUKERJEE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, *15th December*, 1956.

THE EQUITABLE COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE payment of Interest for the period from 1st July to 31st December 1956 on the 5½ per cent. Registered Debenture Stock 1963/68 of the Company will be made to those shareholders whose names appear on the Company's Register on the 31st December 1956 or in accordance with their instructions.

For THE EQUITABLE COAL CO., LTD.,

2, FAIRLIE PLACE,
CALCUTTA, *11th December*, 1956.

NEWS IN BRIEF

THE production programme for the Integral Coach Factory has been revised to 40 in the first year, 120 in the second year, 240 in the third year, and 350 in the fourth year and thereafter.

The recommendation of the Rural Credit Survey Committee that State partnership in the share of capital of co-operative banks at the apex and Central level should not fall below 51 per cent. has been accepted by the Central and State Governments.

Details are being worked out for setting up a newsprint factory in Nizamabad district by the Central Government in conjunction with the Government of Andhra. The project, costing about Rs. 6 crores, will be run by the National Industries Development Corporation.

A bill for acquiring lessees' rights over unworked coal-bearing lands is proposed to be introduced in the current session of Parliament. Negotiations are being carried on with some of the principal holders of mining leases in respect of the areas proposed to be acquired.

India is planning to purchase $100 million worth of cotton spinning machinery from Japan over the next five years. Negotiations with six Japanese firms are now in progress. One point of difficulty is understood to be the 10-year deferred payment terms requested by India which the Japanese firms are unwilling to accept.

Co-operative apex banks have been established in Himachal Pradesh and Delhi. These banks charge interest at the rate of six per cent. from individuals. The Government and the Reserve Bank are taking steps to reduce the discrepancy in the rates of interest of primary societies and apex banks as far as possible.

Out of the 2,600 wagons for which orders are placed by the Government of India with certain Polish firms, 2,100 were delivered in time while the balance had been delivered in November 1956, that is, delayed by one month only. The causes of the delay are still under investigation and appropriate action in terms of the contract will be taken after inquiry.

The Union Government proposes to set up two aluminium plants, each capable of producing 10,000 tons of aluminium annually. One of these plants will be near Mettur Dam in Madras and the other at Rihand in Uttar Pradesh. The Indian Aluminium Company is also setting up a Rs. 14-crore aluminium plant at Hirakud (Orissa) to produce initially 10,000 tons annually.

Grants aggregating about Rs. 4.05 crores have so far been given by India to Nepal and a provision of Rs. 1.45 crores for a further grant is made in the current year's budget. India has agreed to provide Nepal financial assistance to the extent of Rs. 10 crores for implementing its Five-year Plan with a total outlay of about Rs. 33 crores. In addition to financial aid, technical help is also given to Nepal by India.

Twenty-four participants from Asian countries are receiving training under the auspices of the International Labour Organisation. This training relates to co-operation for the development of employment opportunities by organising handicraft, cottage and small-scale industries. Of these 24 trainees, 10 being to India, 4 to Pakistan, 3 to China, 2 each to Burma and Indonesia, 1 each to Malaya, Thailand and Japan.

The Government of India has accepted the Tariff Commission's recommendation that the isonicotinic acid hydrazide (isoniasix) (INH) industry need not be protected by higher tariff. But the Government is of the view that the industry deserves to be assisted in reducing its cost of production. For this purpose, the Government has decided that the import duty on gamma picoline, which is an essential raw material for this industry, should be remitted in full in the case of imports from preferential sources and reduced to 10 per cent. *ad valorem* for imports from non-preferential sources.

The Neyveli Lignite Corporation Limited, a company owned by the Government of India, took over the management of the multi-purpose Neyveli Lignite Project in Madras State on the 6th inst. The Company will have a Board of nine Directors, of whom six have been appointed at present. These are: The Secretary, Ministry of Production (Chairman); Mr. V. Narayanan, Joint Secretary, Ministry of Finance; Dr. A. Nagaraja Rao, Chief Industrial Adviser, Ministry of Heavy Industries; Mr. T. M. S. Mani, till recently Chief Executive Officer of the Project (Managing Director); Mr. T. A. Varghese, Finance Secretary, Government of Madras; and Mr. T. K. Palaniapan, Director of Industries, Government of Madras.

The Government of India has, on the recommendation of the Forward Markets Commission, decided to permit forward trading in copper, zinc, lead and tin throughout the country for a period of three years in the first instance. The Government has also accepted the recommendation of the Commission to grant recognition to the Bombay Metal Exchange Limited, Bombay, for conducting futures trading in these metals, as soon as the Exchange carries out modifications in its articles of association and by-laws to the satisfaction of the Commission. The Government will review the position after one year from the date of the grant of recognition in the light of the working of the forward market and other developments.

An American firm—Messrs. Singmaster and Breyer of New York—has been given the contract for the installation and commissioning of the proposed D.D.T. plant at Alwaye in Kerala State. The factory is expected to cost about Rs. 80 lakhs and will have a capacity of 1,400 tons of D.D.T. per year. It is expected to go into production by the middle of 1958. The total value of the contract is $737,100, of which the rupee expenditure may be of the equivalent of $150,000. The firm has guaranteed to put up the complete plant and bring it to full production within a period of 18 to 23 months. There is a provision for bonus for every day that the firm shows full production before 18 months and penalty for each day that the production is delayed after 23 months. The factory will be managed by the Hindustan Insecticides (Private) Ltd. under the Ministry of Production. Work on the project has already begun.

• • • •

From Abroad

Japan's sterling reserves are now below £27 million. The Japanese Finance Ministry lowered on the 6th inst. the bank forward buying rate for sterling by one per cent., in order to discourage a flood of forward selling contracts from traders.

While no definite new releases of Government-owned ships from the U.S. reserve or "mothball" fleet have as yet been announced, it is reported that the Federal Maritime Board and the Maritime Administration are considering applications from about 50 steamship companies for more than 200 vessels.

A research centre, to be known as the Princeton Panel, has been established at the Princeton University in the U.S. to teach the principles of American economy. The centre will invite leading scholars and researchers to study how American capitalism serves social and moral, as well as economic values.

A banking consortium, to be known as *Consafrique*, has been registered in Luxemburg with the object of promoting the development of natural resources in Africa. The Hambros Bank of Luxemburg has taken 20 per cent. share in the organisation. The other participants are French, German and Belgian financial interests.

Freight rates in the Trans-Atlantic coal trade—the barometer of world tramp shipping freight rates—may fall back from their current peak levels within a short time. The withdrawal of the French from the Trans-Atlantic coal market has persuaded other charterers to hold back business in the hope of some reaction in rates. A number of vessels available for December shipment of U.S. coal are finding cargoes scarce and this may lead to a fall in rates.

The World Bank has made a loan of $50 million to Australia for financing imports of equipments for the development of agriculture, forestry, road and rail transport, industry and mining. The loan will be used to pay for equipment purchased from the dollar area by farmers, private business, and Commonwealth and State Government agencies. The loan is for a term of 15 years and bears interest of 4¾ per cent., including the one per cent. commission charged by the Bank.

The Agriculture Department of the U.S. has announced conclusion of an agreement with Pakistan, under which Pakistan will buy $25.6 million worth of surplus farm products. Pakistan will buy 220,000 metric tons of wheat worth $13.7 million and 50,000 metric tons of rice worth $69 million with $5 million set aside to cover the estimated costs of ocean transportation. With this agreement, Pakistan has now agreed to purchase surplus U.S. commodities valued at more than $120 million. Purchase authorisations for wheat and rice will be announced later.

PERSONAL

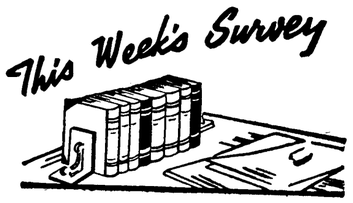
MR. Sri Prakasa, till recently Governor of Madras, was sworn-in as Governor of Bombay this week.

Mr. P. Govindan Nair, Joint Secretary, Ministry of Finance, has been appointed Minister (Economic) in the Embassy of India, Washington.

Mr. Carter Burgess, till recently U.S. Assistant Secretary of Defence, has been appointed T.W.A. President. This Presidency had remained unfilled since Mr. Ralph Damon's death early this year.

Mr. Jagjivan Ram, Union Minister for Communications, has taken over the Ministry of Railways and Transport, following acceptance by the President of the resignation of Mr. Lal Bahadur Shastri.

Prof. C. N. Vakil of Bombay University has been offered the post of Director of the U.N.E.S.C.O. Research Centre on the social implications of industrialisation in Southern Asia. The Centre was opened at Calcutta last week.



NATIONAL DEVELOPMENT COUNCIL

THE National Development Council provides a valuable forum in which the representatives of the Central and State Governments can take stock of the country's economic and social problems, in general, and the progress of the development programmes, in particular. The need for frequent consultations, as Mr. Nehru, in his address to the Council pointed out, is particularly urgent in a country, like India, which is governed by a federal constitution. The reorganisation of the States, as he recognised, has facilitated such consultations, in the sense that the Council is a more compact body than it was, thanks to the reduction in the number of federating units. Special importance attaches to the meeting of the Council this year, in view of the fact that it is being held in a year which witnesses the commencement of the second Five-year Plan.

Mr. Nehru, in his opening address, returned to his favourite theme—and the country's most urgent problem—of increased agricultural production. After citing the examples of Poland and Hungary, which, he said, had suffered through neglect of agriculture and exaggerated emphasis on heavy industries, he warned that India could not afford to ignore agriculture which was the pivot of the country's economy. He observed that production, especially agricultural production, should be increased. Referring to the second Plan, he said that, because of external and internal causes, the original outlay of Rs. 4,800 crores might have to be revised upwards by Rs. 400 or Rs. 500 crores. He conceded that, if the problem of raising the resources implied in the original target was difficult, it was going to be far more difficult to raise larger resources contemplated in the revised outlay. At the same time, he warned that there should be no overstrain on the economy and that inflation should be held in check. He said: "We cannot allow inflation to run away with us. That is quite certain. I want you to realise its consequences. It is a situation which has to be faced with vigour and without the least hesitation. We cannot be doubtful when things tend to run away."

Perhaps, it is as a result of Mr. Nehru's warning against inflation that the Council decided to agree that the amounts of deficit financing, which would be undertaken, would have to be lower than the level contemplated in the Plan. But it is not clear whether any precise anti-inflationary measures were discussed. The Council, however, agreed that the target for additional taxation for the Plan period should be increased. It would appear that, mainly on account of reorganisation and a measure of delay in financial sanctions, the actual outlay on development in the States in 1956-57 was likely to fall short of the outlay, originally envisaged, by about Rs. 400 crores. The Council agreed that the Central and State Governments should undertake measures of additional taxation so as to make possible a total outlay on the Plan during 1957-58 of the order of Rs. 900 crores. To those who know that, in many spheres, India's taxable capacity has practically been reached, it will appear somewhat strange that higher tax levels should continue to be advocated even before higher income levels have been established. Further, a high level of taxation may itself turn out to be an inflationary force through its restraining effect on savings and incentive for expansion in the private sector. Such an effect could be a grievous blow to the country's economy in the context of the continuing foreign exchange difficulties and the consequent need, recognised by the Council itself, for increasing exports and reducing imports.

The Council agreed that sales tax at a uniform rate should be levied on commodities such as automobiles and radio sets. It also agreed that sales taxes levied on mill-made textiles, tobacco including manufactured tobacco and sugar should be replaced by a surcharge on the Central excise duties on these articles, the income derived therefrom being distributed among States on the basis of consumption, subject to the present income derived by the States being assured. It was decided to refer the question of sharing and distribution of income to the Finance Commission. The Council agreed to defer to the next meeting the consideration of the proposal to include foodgrains, fertilisers, edible oils, etc., in the list of goods which will be declared under the Central Sales Tax Bill as goods of special importance in inter-State trade and, therefore, within the legislative competence of Parliament for laying down restrictions on the levy of sales tax on these commodities by the States.

Several Chief Ministers of States referred to the revised targets of agricultural production and the measures which were being adopted to ensure their fulfilment. The Union Minister for Food and Agriculture, Mr. A. P. Jain, explained the steps taken to arrest the upward trend in the prices of foodgrains, including the opening of 18,000 fair-price shops and the arrangements for adequate imports. Reviewing the crop position, the Food Minister said that, although the food supply position was well under control, it needed close watching and the fullest co-operation between the Central and State Governments. The Union Home Minister, Mr. G. B. Pant, reviewed the work done by the Committee on Plan Projects which was set up by the Council at its last session in connection with steps to achieve economy and efficiency in the implementation of the second Plan. The Committee, it is stated, has decided to organise investigating teams for national extension and community projects, building and construction, irrigation and power and social welfare projects.

A proposal for special investigation into the reorganisation of district administration was the subject of some discussion. The Council agreed that the investigation should be carried out under the auspices of the Committee on Plan Projects and the team constituted for the field study of National Extension and Community Projects should also study problems connected with the reorganisation of district administrations on the basis of the general conclusions outlined in the Plan. It may be mentioned here that the Plan recommended that village *panchayats* should be organically linked with popular organisations at a higher level and that, by stages to be determined in advance, democratic bodies should take over the entire general administration and development of district or sub-division, rather perhaps than such functions as law and order, administration of justice and certain functions pertaining to revenue administration. The Plan also recommended the immediate reorganisation of the machinery for associating the people with development work and the setting up of broad-based District Development Councils and Development Committees. Obviously, the whole scheme is intended to harness popular support for the Plan and to associate the people with the implementation of development programmes.

DEHRA DUN INSTITUTE

The Forest Research Institute at Dehra Dun, the golden jubilee of which was celebrated last week, may well lay claim to distinguished national service in the cause of India's forest wealth. Although Indians have always recognised the importance of forests—in the epics, the destruction of forests and trees is regarded as the most heinous of sins—it is to the early British administrators that the country owes its beginings of a scientific forest policy. Lord Dalhousie, in his Memorandum dated 3rd August 1855, stressed the exploitation of forests without destroying or damaging them. About 23 years later, the Imperial Forest School was set up, at Dehra Dun, for training forest rangers. A research wing was added to it in 1906. Having thus started its career about 50 years ago, with no more than 18 technical personnel, the Institute has now grown to be the best of its kind in Asia, with a complement of 370 technical personnel.

Besides carrying on research, the Institute runs three colleges—the Indian Forest College for officers, the Northern Forest Rangers' College, both at Dehra Dun, and the Southern Forest Rangers' College at Coimbatore. A notable feature of the Institute, which could well entitle it to a claim on assistance from the U.N.'s specialised institutions, is that it offers technical training facilities to candidates from many Asian and South-East Asian countries. Realising the importance of this Institute to India's forest economy, the Planning Commission has allotted Rs. 85 lakhs under the second Plan for the Institute's research activities, as against Rs. 8 lakhs in the first Plan. The future programme of work of the Institute, according to its President, Mr. K. L. Aggarwal, has been so framed as to be integrated with the second Five-year Plan with a view to rendering increasing assistance to wood-based industries. A beginning has been made in the direction of opening regional research stations by the decision to set up two such stations—one at Bangalore and the other at Coimbatore.

All agricultural research is a slow-yielding business, in the sense that there is considerable time-lag between the commencement of research and the reaping of its fruits. This is particularly true of research in forestry, for forests cannot be made to order nor significant results obtained from snap experiments. In his inaugural speech at the Golden Jubilee celebrations of the Institute, the Union President, Dr. Rajendra Prasad, did well, therefore, to stress the importance of a "far-sighted" policy in forest research. The Institute has kept this policy steadily in view. Already, it has established a creditable record of work. The results of its research have been found useful in several new industries such as paper, match, plywood, tea chests, textile accessories and bamboo boards.

Besides major research in such spheres as timber and timber engineering, research in minor forest produce is receiving considerable attention. Research in this sphere, it is stated, has facilitated the manufacture of sandalwood oil, rosin and turpentine, santonin and eucalyptus oil. Among drugs, methods of cultivating Rauwolfa (*sarpagandha*), which has recently attracted world-wide attention as a remedy for high blood pressure, are being developed. Minor forest produce range from *katha*, used for chewing with *pan*, to canes for furniture, medicinal plants, bamboos for cheap house construction, matting and baskets, barks and fruits of forest trees for tanning, tender leaves for making *bidis*, essential oils for perfumery and shellac for gramophone records. The importance of minor produce to national economy will be evident from the fact that it not only forms the raw material for many industries, large-scale and small-scale alike, but its exports earn foreign exchange to the tune of over Rs. 45 crores a year. In the context of the growing awareness of the utility of forests to industrial expansion and soil conservation and of the need for stepping up the country's foreign exchange earnings, there is wide scope for useful work by the Institute in the educational as well as the research spheres of its activities.

METRIC WEIGHTS AND MEASURES

Less than 16 months from now—on 1st April 1958, to be precise—the metric system of weights and measures will be introduced in India. A decision to this effect was taken by the Standing Metric Committee at its meeting held on Sunday last, soon after the Lok Sabha passed the Standards of Weights and Measures Bill 1956 as reported by a joint select committee. The Bill provides for a phased programme for fully establishing standards of weights and measures based on the metric system within a period of 10 years. It lays down metre, kilogram, second and ampere as the primary units of length, mass, time and electric current, respectively. It also fixes the rates of conversion between the existing units and the metric units. Accordingly, one inch is equal to 2.54 centimetres and one maund is equal to 37.32 kilograms.

With the enforcement of a uniform system of weights and measures throughout the country, a long-felt need will be met. The chaotic diversity of weights and measures has already done, and is still continuing to do, considerable harm by hampering trade. Surely, the adoption of the metric system as envisaged in the Bill, together with the decimalisation of coinage, will greatly facilitate commercial transactions not merely within the country but with the rest of the world as well. It may be noted here that the system is in vogue in as many as 70 countries, besides being recognised in all the countries of the world, excepting Communist China. It is gratifying to note that the Bill proposes international terms for various units of mass and measures which can be used quite easily. What is more, in view of their simplicity, the terms can be pronounced in any language. This is of some importance, considering that it is, as Mr. Nityanand Kanungo, Minister for Consumer Industries, said, impossible to find any set of terms in any language which will be acceptable to the majority of people in the country.

Nevertheless, it is imperative that the Government should take earnest measures for popularising the system among the illiterate masses, particularly in the villages. The suggestion for appointing a Propaganda Committee for the purpose, put forward by Mr. Jogeswar Singh, a Congress member from Manipur, is certainly quite pertinent. Reassuring is the statement of Mr. Kanungo that the Government is aware of the magnitude of the publicity problem for the legislation; the passing of the Bill by Parliament will give the green signal to the Government to make arrangements for publicity.

The maximum period provided in the Bill for the complete adoption of the metric system is, as already stated, 10 years. This period, we are afraid, is a bit too long and may, as several members of the Lok Sabha rightly pointed out, lead to some lethargy and retard the pace of introduction of the system. Mr. Kanungo did well to realise the force of this contention and assured the House that the Government would make earnest efforts to reduce the period for the implementation of the Bill. Much, of course, will depend on the progress made in the direction of meeting the vast requirements of weights and measures in the metric system, estimated at roughly 6 million pieces. The Mint and Ordnance factories, it is stated, will have to be utilised for manufacturing the units. Much will also depend on the extent to which the States will surmount difficulties such as lack of trained personnel—inspectors, supervisors, highly trained technicians and a large body of administrators—not to speak of the problem of finance.

It is to consider all these matters that the Standing Metric Committee has asked the Government of India to convene a conference of the States' representatives. Unless the aforesaid difficulties are satisfactorily solved, the programme cannot be implemented quickly and thoroughly. The Government's move to introduce teaching of the new metric system in schools from the primary stage—the Union Education Ministry is already preparing a handbook to serve as a guide to teachers and textbook writers in this connection—is a step in the right direction. The earlier it is carried out the better.

SCIENTIFIC RESEARCH

Modern economic development calls for a wide diffusion of the scientific temper of mind. A high spirit of endeavour in all fields of scientific activity is the need of the hour in the interests of rapid progress of the country. The new industrial policy envisages the rapid development of all the major industries and the setting up of many new industries. Industrial development implies the existence of trained personnel as well as of men who are capable of designing and supervising complicated industrial plant and machinery. Indeed, every major industrial concern should have attached to it a strong design and development section. Every group of allied industries should be served by an institute for the design and fabrication of plants which are required for manufacturing the products in which that group specialises. This aspect of the problem of India's industrialisation was rightly stressed by Dr. J. C. Ghosh, member of the Planning Commission, in his presidential address at the first meeting of the panel of scientists, set up by the Planning Commission, which met in New Delhi this week.

In any planned economy, team work of men representing several scientific disciplines often helps to tackle problems which otherwise appear insurmountable. Stressing the need for keymen to extend and also apply modern knowledge to practical ends, Dr. Ghosh revealed that, in the second Five-year Plan, the funds which might become available for research activities of all kinds may be of the order of Rs. 50 crores. To be scientifically strong, a sound industrial base, providing the special skill and experience for the development of new instruments and methods, is of the utmost importance. Reliance on instruments purchased abroad creates an attitude of being less resourceful than would have been the case if the investigator were himself concerned with their design and construction. Hence, every national laboratory and university laboratory, Dr. Ghosh urged, should be provided with special facilities for instrument design and construction. In this connection, Dr. Ghosh commended the successful efforts of the Meteorological Department in designing and manufacturing their own instruments to other institutions.

It is often possible, Dr. Ghosh said, to operate successfully an industry which is based on the results of research elsewhere, without repeating the pioneer research that gave it birth. As an example of this type of industrial development, he cited the rayon industry in India. Again, the import of technical know-how from other countries, as in the case of the penicillin factory near Poona and the Canadian atomic reactor near Bombay, he said, was quite desirable. But continuous improvements through painstaking research form the keynote of industrial success in this competitive world. Dr. Ghosh was, therefore, right when he said that "research is the elixir of life which even renews, for an industry, its youth and vigour."

Dr. Ghosh deplored that the progress in engineering research had not kept pace with progress in scientific research and stressed that the former, therefore, needed special encouragement. The establishment of dependable firms of consulting engineers, as he pointed out, deserves increasing attention, so that the country could rely on its own knowledge in preference to borrowed knowledge. In this connection, he commended the work of the Design and Development Branch of the Railway Board which did not depend upon foreign consultants. There is no gainsaying the fact that heavy industries, particularly machine-making industries, can become firmly established in the country, only if sufficient engineering talent devotes itself to design and developmental research.

WORLD BANK LOANS TO INDIA

When Mr. Eugene R. Black, President of the World Bank, made certain observations on the Government of India's economic policy in his letter to the Finance Minister, Mr. T. T. Krishnamachari, two months ago, there was a spate of criticism in this country. Many, including the more responsible, charged Mr. Black of being uncharitable and unsympathetic towards India. Some even questioned the very motive behind his observations. The latest letter—dated 15th November 1956—which Mr. Black has written to Mr. Krishnamachari, however, amply shows how wrong and unjustified were those criticisms and that Mr. Black is sincerely interested in the speedy economic development of India.

Mr. Black's letter of 15th November contains the list of four projects which the World Bank has selected for early consideration and an outline of the programme proposed for financing them. The first project relates to the second expansion programme of the Indian Iron and Steel Company. The Bank has invited the representatives of the Company to visit Washington for negotiating a loan of $20 million. The second is the railway investment programme for which the Bank will send a survey mission to India early next month to examine the operations of the railways; the visit is being made under arrangements with the Bank's consultants on railways, namely, Messrs. Coverdale and Colpitts. Thirdly, the Bank contemplates to make a survey of the development plans in all fields of surface transportation and a mission will be in India in the spring of 1957. The fourth project pertains to the Koyna and Rihand hydro-electric projects, the two new projects of the Damodar Valley Corporation, and the expansion of the Trombay steam plant. The proposed outline of the programme of financing these projects is as follows:

Two World Bank engineers are now in Bombay making a field study of the Koyna Hydro-electric project. When their report is completed, the Bank will inform the Indian Government about its views on the project. The Bank has also made arrangements for two of its engineers to go to New Delhi for discussions with the representatives of the Government and of the D.V.C. on the implementation of the recommendations contained in the Bank's report on the D.V.C. dated 22nd August 1956. The Bank has received from Mr. B. K. Nehru a preliminary report on the Rihand hydro-electric project, in which he has requested the Bank to study the two new projects of the Damodar Valley Corpora-

PROGRAMME EVALUATION BOARD TO BE FORMED

STRESS ON DEFICIT FINANCING LESSENED

By A Special Correspondent

NEW DELHI, 11*th December*

IT is welcome news that the Government of India has decided to set up a Programme Evaluation Board for directing the work of the Programme Evaluation Organisation. It is gathered that Dr. V. K. R. V. Rao, one of India's leading economists, has been appointed Chairman of the Board. Dr. Rao is a person noted for his clear thinking. His appointment is an indication of the Government's earnestness to increase the tempo not only of industrial activity but also of every important developmental aspect of the second Five-year Plan. Dr. Rao, apart from being a leading economist, has also acquired varied experience during his carrier. Even as early as in 1943, he was appointed Adviser to the Central Food Ministry. He has considerable inside knowledge of the working of not only the governmental machinery but also the agricultural situation in the country. As a member of the Taxation Enquiry Committee, he has gained further knowledge of India's finances and taxation problems. In these circumstances, it is expected that he will be able to make his impress felt on the working of the Planning Commission, which is now beginning to become rather unwieldy.

DELHI LETTER

It is felt in official circles that, with the progress of land reform, co-operation, village and small industries and with the rapid pace of urban and industrial development, it is of utmost importance that social and economic changes should be analysed objectively and the effects of economic development on different sections of the community should be studied at first hand. The main task of this newly formed Board is to achieve this object and to advise the Planning Commission on what lines developments should be attempted.

The appointment of the Board and its personnel is largely the result of the latest trend of discussions and decisions at the National Development Council which met in Delhi this week-end. The Council is now a compact body as a result of the reduction in the number of States. The discussions were more pertinent to the subject and every Chief Minister appeared to be anxious to implement the plans and programmes not only in his State but in other States as well. In other words, the outlook and approach were more on an all-India basis than on a regional basis, which was one of the usual features of previous meetings of the Council.

During the discussions, the Prime Minister, who inaugurated them, dominated the scene as usual. The detailed governmental responsibility has made the Prime Minister more realistic in his approach to the economic problems. He has no particular 'isms'; and his anxiety to speed up the work of developing India was evident in every word that he uttered. But, at the same time, he was cautious and even conservative, on the financial aspects of the Plan. He told the Council that, because of certain causes, both external and internal, the financial outlay of the second Plan had to be revised considerably in the upward direction, involving an additional financial commitment of nearly Rs. 500 crores more, thus stepping up the net outlay on the Plan from Rs. 4,800 crores to Rs. 5,300 crores. At the same time, the Prime Minister realised that there was a certain limit beyond which national strain could not be increased. On the whole, the Prime Minister appeared to toe the line of conservatives, when he suggested that some of the schemes other than "major activities" might inevitably have to be crowded out by circumstances or design, "in order to avoid too great a strain on the national economy." As regards filling up the two big gaps, namely, the bigger resources gap and the larger foreign exchange gap, he suggested that the solution to those problems could be found not by any jugglery of figures but only by careful consideration of each and every item, big or small, "whether it is absolutely necessary or not, whether it involves the slightest degree of waste, whether we can postpone it or not, keeping in view always that the main features of the Plan must go through." While admitting that these were highly complicated issues, the Prime Minister hoped that a probable solution could be found only by increasing agricultural production. "We shall have to work with our sweat and blood to increase our agricultural production and if we do not, we just do not get on with the Plan."

Dealing with factors adversely affecting the Plan, the Prime Minister drew pointed attention to the closure of the Suez Canal and its possible repercussions on world prices. There was the danger of inflation and this had to be fought only by increased farm production. He agreed with the Finance Minister that deficit financing should be restricted to the minimum level, if they wanted to avoid inflation. In other words, he suggested that, provided there was no shortage of farm commodities to meet all the internal demands, deficit financing could be attempted to some extent. On the whole, it appears that, after the two-day deliberations of the National Development Council, two major decisions have been taken. One is to raise the target for additional taxation and the other to lower the level of deficit financing contemplated earlier. It is gathered from official sources that the increase proposed by additional taxation during the next year would be of the order of Rs. 100 crores. Of this the Centre would raise Rs. 50 crores, leaving the balance to be raised by the States.

As regards deficit financing, the limit for which was previously fixed at Rs. 1,200 crores, the Council came to the conclusion that such large-scale deficit financing would be injurious to the economy. In its view, the safe limit for deficit financing would be Rs. 250 crores per year for the first three years of the Plan. This amount could, perhaps, be enhanced in the succeeding years. This, in effect, means a reversal of the earlier stand that, in the earlier years, deficit financing could be attempted on as large a scale as Rs. 400 crores per annum and that it could taper off later as the Plan progresses.

Although the overall size of the second Plan is generally raised to about Rs. 5,300 crores now, nobody was inclined to believe that, in the Plan period, more than Rs. 4,800 crores could be spent. On the other hand, there is an admission that there is likely to be a shortfall in the Plan outlay in the current year. As a matter of fact, while reviewing the progress of the development plan for 1956-57, the Council found that, mainly on account of the reorganisation of States and due to a measure of delay in financial sanctions, the actual outlay was likely to fall short by about Rs. 400 crores in the States.

The Government is anxious to take the people into complete confidence and keep them fully posted with up-to-date developments in regard to the progress of the Plan. For this purpose, it is now suggested that the Planning Commission should bring out quarterly reviews and monthly progress reports of major projects, instead of the annual reports as hithertofore. Further, by doing so, the Government hopes to maintain a certain amount of flexibility with regard to the execution of the Plan. In the case of those development projects which are likely to show results rather quickly and show a greater absorbability of Government funds, then it is certain that such plans will be given greater priority in execution. This policy is implied, though the National Development Council itself did not devise a system of priorities for regulating the working of the Plan.

"...and a bonus of goodwill to the management —for installing the

'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

MADRAS PLANTATION TRIBUNAL'S AWARD

MAIN FEATURES OUTLINED

THE award of the Special Industrial Tribunal for Plantations, Coimbatore, in the dispute between the workers and managements of 228 plantation estates in the State of Madras has roused considerable public interest not only in that State but throughout India. The award, which covers 98 closely printed pages of the State *Gazette* in six point types, is dated 15th September 1956 and was published in the *Gazette* on 24th October 1956. Against this award the managements of the estates filed a petition in the Supreme Court of India for special leave to appeal under Article 136 of the Constitution. The Court granted the leave on 19th November 1956 and also ordered stay of the implementation of the award pending disposal of the appeal.

Since the award was published and the stay granted, we have had a number of enquiries from readers interested in the plantation industry—including shareholders in planting companies in Madras and elsewhere—for precise information regarding the nature of the award and the effect it would have had on the industry if it were implemented. As the matter is *sub judice*, it would not be proper for us to comment on the various features of the award, but we would like to give readers a factual summary of the award and a brief note of the reasons given by the Tribunal in support thereof. For reasons of space, it is not possible for us to give as many details as we would have liked, though we shall try not to omit important aspects of the award.

Reference of Dispute to Tribunal

It was as early as 24th March 1952 that the Government of Madras referred this dispute to the Industrial Tribunal for adjudication. Since then and up to the time of the award, there had been three changes in the Tribunal. On 25th March 1952, that is, the day after the reference of the dispute to the Tribunal, the State *Gazette* carried an order of the Madras Government fixing the daily wages of the labour employed on plantations as follows: Grade I, Re. 1-5-0; Grade II, Re. 1-0-0; and child, Re. 0-10-6. Meanwhile, in January 1954, the Government had directed the then Industrial Tribunal to make an award on the issue of "payment of an interim wage increase," and this award was given on the 16th May 1954 in the following terms:

Grade I—increase from Re. 1-5-0 to Rs. 1-9-0; Grade II—increase from Re. 1-0-0 to Re. 1-1-0; and child—increase from Re. 0-10-6 to Re. 0-11-0.

The Special Industrial Tribunal who was appointed on the 18th January 1955 and who has given the award now had the following main issues to deal with:

Issues in respect of the staff: (1) Fixation of scales of pay for all grades; (2) revision of dearness allowance and merging of a part of it with basic salary; (3) provident fund; (4) payment of travelling allowance to staff.

Issues in respect of workers: (1) Fixation of wages for field workers, *kole maistries*, factory workers and pluckers; (2) way expenses; (3) supply of two *cumblies* every year to every worker; (4) supply of jute cloth to the pluckers; (5) confirmation of artisan workers such as carpenters, smiths, etc., and classifying them as workers in the factory check-roll; (6) holidays with wages and leave facilities; (7) work for six days in a week or fixation of minimum wages for the week; (8) supply of one-quarter lb. of manufactured tea per week to the workers; (9) terms of employment of the *maistries*.

Issues in respect of both workers and staff: (1) Gratuity; (2) payment of an interim wage increase.

The question whether retrospective effect should be given to the new rates of wages and new scales of pay, if any, and if so, from which date retrospective effect should be given in respect of the same, was framed later as an additional issue.

The vast majority of the managements under reference were members of the South India Estate Labour Relations Organisation (and later the United Planters' Association of Southern India) who represented them, and the vast majority of the workers and staff were members of various unions which were also represented.

Wage Increases to Labour

The Tribunal elaborately details the contentions of the staff and workers in respect of the various issues, the contentions of the managements and the rejoinders of the former, and records the various evidence tendered in this connection. The issue regarding basic wage to workers is the first one taken up by the Tribunal. In this, the Tribunal deals with the profit position of the 42 companies representing the major part of the 228 estates under reference. After giving anxious consideration to the requirements of the worker and the paramount interests of the industry, the Tribunal fixes "a rate which is reasonable, namely, 12 annas above the rate of Re. 1 which the lowest-paid worker in the plantation is now receiving." The lowest paid worker (second grade) is already getting Re. 1-1-0 under the interim award. Therefore, the fixation of Re. 1-12-0 for this grade of worker represents an increase of 11 annas over the present wage. The first grade worker is awarded an increase of wage from Re. 1-7-0 to Rs. 2-4-0, or 13 annas. In making this award, the Tribunal refers to the monthly minimum wage of a worker in the sugar mills in the Bombay State, namely, Rs. 52, whether male or female. If the male worker in the sugar mills and his wife are both earning, they get a minimum monthly wage of Rs. 104. The monthly earnings of the plantation worker and his wife also comes to Rs. 104 on this calculation; the Tribunal considers that this is a "fair wage."

Estate Staff Salary Scales

The award next deals with some of the issues relating to estate staff. It says that it is common knowledge that the members of the staff are of middle-class families and the standard of living of this class is higher than the working class. It goes on to deal with the results of the various family income and expenditure surveys and the evidence of various witnesses examined in this connection. In 1948, the employers and the staff union had agreed on a set of scales of pay for estate staff. Staff were classified under junior, senior and selection grades. The scale of pay of the lowest grade junior staff is shown as Rs. 30-35-3-50 and the scale for the highest selection grade staff is shown as Rs. 250-20-350. Counsel for the employers is stated to have argued that the term "wage" in the Industrial Dispute Act should include all remuneration capable of being expressed in terms of money, and this would include (*a*) all allowances, (*b*) value of house accommodation, (*c*) value of supply of water, (*d*) value of medical attendance, (*e*) value of any other amenity, (*f*) concessional supply of articles, and (*g*) travelling concessions. He further argued that on the basis of this definition, the total emoluments of the juniormost permanent estate staff comes to Rs. 100-15-0 made up of basic pay Rs. 35, D.A. Rs. 30-15-0 and servant allowance Rs. 35. Counsel for the staff is stated to have argued that the amenities provided to staff are no concessions at all from the point of view of conditions obtaining in plantations and that for the purpose of total emoluments only the basic pay and D.A. should be taken into consideration and nothing else. The award states that, for various reasons mentioned and in the peculiar circumstances obtaining in plantation estates, the value of amenities provided to workers and staff should not be added to the basic wage or pay or the D.A. to find out the total emoluments. After considering the evidence and hearing the arguments, the Tribunal holds that the servant allowance, being a peculiar compensatory allowance in the plantations, should not be taken into consideration for assessing the total emoluments of a staff member.

The Tribunal, after dealing exhaustively with various awards and after recording the evidence before it, comes to the conclusion that the starting pay of the staff should be such as to provide for 2.25 consumption units at the rate of Rs. 31-1-3 for one consumption unit. This amounts to Rs. 69-14-10. This would be the minimum, without providing for any allowance such as hill allowance or education allowance or the cost of warm clothing and without taking 160 the cost of living index as the base. The Tribunal adds Rs. 5-1-2 to this figure as a minimum necessary allowance for meeting various expenditure, excluding hill allowance or education allowance. Then a further sum of Rs. 10 is added, making the total Rs. 85, for meeting, to some extent, at least, the requirements of (1) education of children, (2) essential expenses such as special clothing, etc. Thus, the Tribunal fixes Rs. 85 as the starting fair wage of the lowest grade junior staff.

From this point, the Tribunal fixes three new scales of pay, namely, Rs. 85 rising to Rs. 235 in the case of the junior grade staff, Rs. 110 rising to Rs. 310 in the case of the senior grade staff, and Rs. 260 rising to Rs. 475 for selection grades. The manner in which staff should be fitted into the new scales, having regard to the length of their service, is also laid down by the Tribunal.

Dearness Allowance

The Tribunal has also revised the scale of dearness allowance to staff. The rates awarded are on the following slab basis:

For the first Rs. 100 of pay, D.A. Rs. 70, thereafter in the slab between Rs. 100 and Rs. 150, 65 per cent. of basic pay, thereafter in the slab between Rs. 150 and Rs. 200, 60 per cent. of basic pay, and thereafter in the slab over Rs. 200, 30 per cent. of basic pay.

In awarding the increased rates, the Tribunal observes that the D.A. now paid by the employers has been pegged at 260 points in the cost of living index, with the result that there is no scope for increase.

Retrospective Effect

The next issue taken up by the Tribunal is whether the scales of pay and allowances should be given retrospective effect and, if so, from what date. Reference is made to the case between Cooper Connel and Clifford, Ltd., Bombay, and their workmen (1950—II, L.L.J. 248) in which the Bombay High Court held that, though an award comes into operation after a declaration by the Provincial Government to that effect, the benefits conferred by the award may well relate to any period prior to the award. Other instances of case law also are quoted. Taking all the facts and principles into consideration, the Tribunal opines that it is just and equitable to grant retrospective effect to the new scales of pay and D.A. and also to the new rates of wages awarded to the workers from a date prior to passing this award. These are therefore awarded with retrospective effect from the date of reference to the dispute to the Tribunal, namely, the 24th March 1952. The payments of difference between the old and new scales of pay and the old and new scales of D.A., respectively, to the staff shall be paid within a week from the date when the award comes into operation; and, in the case of workers, within two weeks after the date when the award comes into operation.

Retirement Age

The Tribunal has fixed retirement age of staff at 55 years, subject to the right of the management to continue the services of any of the members of the staff beyond that limit. (At present, the normal retirement age is 55, but, in special circumstances, staff may be continued in service up to 58). The retirement age of workers is fixed at 60.

Provident Fund

The Tribunal records that from figures available it is seen that only a very small number of estate staff is not covered by any provident fund scheme. Contributions to the existing funds range between 6¼ per cent. and 15 per cent. The Tribunal has awarded that, where there is no provident fund scheme in force, the managements shall introduce a scheme to take effect from 1st April 1952. Both the employers' and the employees' contributions should take effect from the 1st April 1952 whatever be the date when the provident fund scheme will be introduced after the passing of the award, but such estates shall introduce the scheme within one month from the date of publication of the award. In respect of those estates where a provident fund scheme has been introduced before this award but after the 1st April 1952 the employees and managements shall contribute such sums which they would have contributed if the same scheme had commenced in their estates from the 1st April 1952. An employee shall be at liberty to contribute up to a maximum of 10 per cent. of his basic pay per month and the employer shall make an equal contribution.

Pre-Provident Fund Service Compensation

Dealing with the case of employees who have put in long years of service prior to the introduction of the provident fund scheme in the estates under reference, the Tribunal has directed managements to pay compensation on the following basis: (1) For every completed year of service by the employee, prior to 1st April 1952, compensation shall be paid at the rate of half of the monthly basic pay. That basic pay shall be the one which he would have normally drawn on the 31st March 1952. (2) So far as the period after 1st April 1952 is concerned, both the employer and the employee shall contribute such

(Continued on page 1179)

BANKING COMPANIES (AMENDMENT) BILL

STRICTER CONTROL OVER MANAGEMENT OF BANKS ENVISAGED

WITHIN a space of a week, the Union Finance Minister introduced two quick measures to control, on a wider scale, the two important sections of the private sector. Under the first one, introduced on 30th November, the Government sought powers to levy penal taxes on dividends of joint-stock companies and capital gains, as also to control effectively the resources of companies. The second measure, introduced in the Lok Sabha on the 7th inst., seeks to tighten up the control on the management of banking companies further, through an amendment of the Banking Companies Act, 1949. It is to be wondered whether, after these measures become law, the management of companies and banks will have any freedom worth the name even to run their day-to-day administration.

The Banking Companies (Amendment) Bill seeks to vest more powers in the Reserve Bank, with a view to preventing certain undesirable tendencies in the administration of banks. It may be noted that the Reserve Bank of India already enjoys very wide powers to control the management of banks under the Banking Companies Act, 1949. Apparently, the Government thinks that this Act is inadequate to enforce its philosophy of socialist pattern of society. Thus, the statement of objects and reasons of the Bill says that experience has shown that the existing provisions in the Banking Companies Act, 1949, are not adequate to prevent certain undesirable tendencies in the administration of banking companies, which might "affect the soundness of the companies or not be in the public interest or in the interests of the depositors."

Objects

The Bill under reference seeks to amend the Act so as to strengthen the control over banking companies in the following directions:

(1) to check the payment of excessive remuneration to bank employees on a consideration of all relevant factors;

(2) to make the existing restrictions on exercise of voting rights in the hands of individual shareholders applicable to banks, which are now exempt from such restrictions, namely, those established before 15th January 1937, and to empower the Reserve Bank to direct the election of fresh directors on the basis of the restricted voting rights;

(3) to prohibit appointment as director of one who is a director of other companies which together can exercise voting rights in excess of 20 per cent. of voting rights in a banking company;

(4) to enable the Reserve Bank to obtain statements and information over a wider range than hitherto for the performance of the functions under the Banking Companies Act;

(5) to enable the Reserve Bank to give directions to banking companies in relation to matters of policy or administration affecting the public interest and to make failure to observe such directions liable to specified penalties;

(6) to render appointments of managing directors, managers or the chief executive officers by whatever name called of banking companies and the terms of their appointments subject to the prior approval of the Reserve Bank;

(7) to enable the Reserve Bank to depute an observer or observers for the purpose of observing and reporting on the conduct of affairs of a banking company; and

(8) to include the chairman, director, auditor, liquidator and other employees of banking companies, within the definition of "public servants" for the purpose of Chapter IX of the Indian Penal Code and the Prevention of Corruption Act, 1947, so that action can be taken in cases where illegal gratifications are taken by them.

Under section 10(1)(*b*) of the existing Act, a banking company is prohibited from employing a person whose remuneration or part of whose remuneration takes the form of commission or of a share in the profits of the company. The proposed amending Bill adds a proviso that such remuneration does not cover the bonus paid by a bank in pursuance of a settlement or award arrived at or made under any law relating to industrial disputes or in accordance with any scheme framed by the bank concerned or in accordance with the usual practice in banking business.

Again, at present, the Act prohibits payment of remuneration to an employee, which is, according to the normal standards prevailing in banking business, on a scale disproportionate to the resources of the bank concerned. This provision is somewhat vague, in that it gives a certain amount of discretion to banks in the matter of fixing the remuneration of their employees. It has been deliberately kept vague, so that bank managements may have freedom to attract suitable talents by offering a good salary. The present Bill seeks to modify this provision in such a way as to leave this discretion to the sole judgment of the Reserve Bank; it will be for the Reserve Bank to say whether a particular remuneration to a particular person is excessive or not. It is, however, provided in the Bill that the Reserve Bank will, in forming its opinion about the remuneration of an employee, take into consideration all relevant factors, namely, (1) the financial condition and history of the banking company, its size and area of operation, its resources, the volume of its business and the trend of its earning capacity; (2) the number of its branches or offices; (3) the qualifications, age and experience of the person concerned; (4) the remuneration paid to other persons employed by the banking company or to any person occupying a similar position in any other banking company similarly situated; and (5) the interest of its depositors. This modification is unwarranted, as under the existing Act itself the Reserve Bank has got ample powers to decide any question relating to remuneration whether it is excessive or not within the meaning of the relevant provision and its decision is final.

Voting Rights

Section 12 of the Act lays down certain regulations regarding the paid-up, subscribed and authorised capital of banking companies and the voting rights of shareholders. These regulations, in respect of both capital and voting rights, are not applicable to a bank incorporated before 15th January 1937. This section is now sought to be so amended as to extend the restrictions on voting rights of individual shareholders even to those banks that were incorporated before 15th January 1937. Accordingly, a new sub-section has been amended to section 12, under which the chairman, managing director or chief executive officer of a banking company will have to furnish to the Reserve Bank through the banking company statements containing full particulars of the extent and value of his holding of shares, whether directly or indirectly, in the banking company. He should also furnish particulars of any change in the extent of such holding or any variation in the rights attaching thereto and such other information relating to those shares which the Reserve Bank requires.

A new section (section 12A) has been introduced in the Bill which empowers the Reserve Bank to direct a banking company to call a general meeting of its shareholders for the election of fresh directors on the basis of the restricted voting rights. Every new director so elected will hold office till the date up to which his predecessor would have held office if the election had not been held. Any election held in accordance with the provisions of this section cannot be questioned in a court of law.

Both the provisions constitute a retrograde step, as they deprive the shareholders of their legitimate rights and virtually hand over to the Government-owned Reserve Bank the benefits of ownership of a commercial bank without paying any consideration for it.

No Common Directors

Section 16 of the Act prohibits a banking company from having a director who is a director of any other banking company. The new section 16 substituted in the present Bill provides, in addition to the above, that no banking company can appoint as director one who is a director of other companies which among themselves are entitled to exercise voting rights in excess of 20 per cent. of the total voting rights of all the shareholders of the banking company. Any director who comes within the purview of this provision is required, within a specified period after the commencement of the Amendment Act, either to resign his office as director of the banking company or to choose such number of companies, which together do not have voting rights in excess of 20 per cent. of the total voting rights of the banking company in which he wishes to continue as a director and resign his directorship in other companies.

This provision is a sequel to the earlier amendments which restrict the voting rights of individual shareholders. It seeks to prevent this objective being defeated by a person or a group of persons getting control over a bank through a number of business concerns under their control.

Sub-section (2) of section 27 of the Act gives powers to the Reserve Bank to call for any statement or information relating to the business of a banking company and also call for information every half-year regarding the classification of advances and investments in respect of industry, commerce and agriculture. This sub-section is sought to be amended so as to give power to the Reserve Bank to obtain statements and information over a wider range than hitherto. Thus, in addition to the statements and information relating to the affairs of the banking company, the Reserve Bank can also ask for statements and information on any business or affairs with which a banking company is concerned, which the Reserve Bank considers necessary or expedient for the purposes of this Act. This is too drastic a provision which undermines one of the basic objectives of commercial banking, namely, a banker shall not give away the secrets of his clients to anyone. The next proposal also is subject to this criticism.

Directions to Banks

Section 35 of the Act confers wide powers on the Reserve Bank regarding inspection of banks. It is now proposed to confer further powers on the Reserve Bank through a new section, namely 35A, to give such directions to banking companies as it thinks fit for the proper administration of banks, if it is satisfied that it is in the national interest to do so or that the affairs of the banks concerned are being conducted in a manner detrimental to the interests of the depositors or prejudicial to the interests of the banks. The banks are bound to comply with the directions of the Reserve Bank given under this section.

Another new provision (section 35B) sought to be introduced in the Bill requires that all appointments or reappointments of managing directors, directors not liable to retire by rotation, managers or chief executive officers should be approved by the Reserve Bank and such appointments will not have effect, unless they are made with the previous approval of the Bank. This amendment brings banking companies in line with other joint-stock companies.

Observers

The powers and functions of the Reserve Bank under section 36 of the Act are sought to be enlarged through an amendment of that section. Under the proposed amendment, the Reserve Bank can depute an observer or observers

U.K.'S GOLD RESERVES DECLINE

IMPACT OF SUEZ FIASCO—I.M.F. GRANTS CREDIT

THE precipitous fall in the U.K.'s—sterling areas, to be precise—gold and dollar reserves during November by no less than $279 million following the pressure on sterling, and a deficit of as much as £24 million ($31 million) with the European Payments Union, are some of the first tangible effects of the Anglo-French adventure in the Middle East which have succeeded in awakening the British authorities from their complacent mood and in forcing them to recant. Indeed, as the *Financial Times* put it, even the statements of the Chancellor of the Exchequer delivered hardly a month ago smacked of complacency and disregard of the gravity of the situation. It is gratifying to note, however, that the bitter truth has been understood by those concerned and that certain steps—the effect of which is yet to be seen—have been announced to remedy the situation without giving way to further deterioration.

In the course of a review of the economic situation of the U.K. in the House of Commons last week, the Chancellor of the Exchequer analysed the causes for the present economic crisis and announced a series of steps and certain taxation proposals to meet what may be termed as a grave situation. In essence, the situation is that, during November alone, the gold and dollar reserves of the U.K. have declined by $279 million to $1,965 million, as against a fall of $57 million—which would have been $230 million had it not been for the sale of the Trinidad Oil Company—in the third quarter of this year. The magnitude of the fall will be better realised when viewed in the context of the rise in the reserves during the first half of the year by an amount of $265 million, and of the fall of only $227 million experienced during the whole of the last quarter of 1955.

According to the Chancellor, the steep fall in the reserves and the deficit with the E.P.U. started after the date of the nationalisation of the Suez Canal, and they had not been caused by any weakness in the trading position of the U.K. Indeed, he claimed that the U.K.'s trading position "has been, and continues to be, essentially sound." The Chancellor, however, felt that the closure of the Suez Canal and of the Iraq Petroleum Company pipelines must adversely affect the balance of payments, especially if these interruptions were prolonged. Nevertheless, he was optimistic enough to forecast that, over the year ended 30th June 1957, his country's external current trading position would be roughly in balance.

Pressure on Sterling

Mr. Macmillan stated that the pressure on sterling following the political events in the past four months had been almost entirely responsible for the losses in reserves. He reminded the House that sterling was particularly affected by movements in world confidence, because it financed half the world's trade and payments. He conceded that it was wrong to minimise the seriousness of the losses the reserves had suffered. Nevertheless, it would be equally wrong, he said, not to view them against the proper background. He wanted three factors to be borne in mind. These, in his own words, are as follows:

"(1) Since the losses have arisen primarily from the international situation, they should not be permanent; the trend will reverse itself as the position improves. (2) For some time now there has been a consistent reduction in the total sterling balances, especially those held by non-sterling area countries. Normally, when the reserves rise, liabilities rise as well. But, in fact, in the first half of this year the reserves rose by £95,000,000, and the liabilities fell by £22,000,000. Thus our capital position had been strengthened when the Suez Canal crisis broke. (3) If we take the necessary steps, as we intend to do, to keep our trading position strong, the surplus that we may earn as traders must, in due course, reflect itself in our improved capital position as financiers. I have no doubt that the rest of the sterling area will face the difficulties in the same spirit."

The immediate problem that faced the U.K., Mr. Macmillan pointed out, was, therefore, "the short-term pressure on the pound sterling rather than the long-term defects in the country's trading position." To repel the attack on the pound sterling both internal and external actions were required. With this end in view, the Chancellor of the Exchequer indicated the broad lines of economic policy his Government proposed to follow. In the first place, the policy would be directed towards maintaining the rate for the pound sterling at its present parity. A categorical assurance was given by Mr. Macmillan to the effect that the British Government "will maintain the rate for the pound sterling at its present parity." This needed fortification of the reserves and strengthening of the internal economy. Secondly, it would also be aimed at maintaining the industrial production. The third broad line of policy would be the maintenance and stepping up of the volume of world trade.

Approach to I.M.F.

The measures proposed to be taken by Mr. Macmillan externally are as follows:

(1) An immediate approach to be made to the I.M.F. to draw on a part of the resources held by it. According to the latest report, the I.M.F. has advanced $1,300 million to the U.K. to help tide over the crisis. Of this, an amount of $561,470,000 is intended to add to the monetary reserves to meet payment requirements; and the balance would be made available to the U.K. at any time during the next 12 months at the request of the U.K.

(2) The U.K. Government owned U.S. dollar securities to the value of between $750 million and $1,000 million. The Government would be prepared to use the industrial and commercial securities as collateral for borrowing to fortify the reserves. To this end support was already available from the U.S. interests concerned. Of the small proportion of U.S. Government securities to the tune of $60 million, the Chancellor disclosed that, already those worth $30 million had been sold and credited to the reserves, and the other half also could be sold as and when needed.

(3) Britain has sought a waiver of interest payments, due this month, on the American and Canadian loans; these payments amount to $143 million and $38 million, respectively. The possibility of this request being granted by the U.S. and Canadian Governments is rated high.

Explaining the exact position in this respect, Mr. Macmillan stated:

"We have received a reply from the U.S. Treasury informing us that, since there have been changes in the conditions envisaged at the time the agreement was signed, it will present the matter to its Congress, with a definite recommendation that appropriate modification of the present language be made to carry out the spirit of the original intention. The conditions of the Canadian agreement do not call for a waiver unless the interest payment under the U.S. agreement is waived. We have informed the Canadian Government that, on the assumption that a waiver of interest is granted by the U.S.A., we are also formally claiming a waiver of interest on the Canadian loan."

If Britain's request to the U.S. materialises, the U.K. Government would be paying at the end of this month only the principal under the two loans amounting to $(U.S.)56,200,000 and $(Canadian)15,500,000.

Internal Demand to be Checked

The internal measures would be chiefly directed at increasing the external income and at keeping, at the same time, the internal demand under check. The measures that have been proposed to this end are: First, the control over bank and other forms of credit, which had met with considerable success already, would be firmly maintained, and strengthened if need be. Secondly, there would be no relaxation in the critical scrutiny of applications by the Capital Issues Committee. And thirdly, an increase of one shilling a gallon has been made in the customs duty on petrol and other light hydro-carbon oils and on derv, that is, heavy oil used as fuel in road vehicles. The duty has thus become 3*s.* 6*d.* a gallon. This measure is designed to supplement the rationing of oil and to offset the loss in revenue when petrol rationing comes into effect. The Chancellor did not find it necessary to make any further additions to taxation. He was confident that the national accounts would still show a very large surplus above the line, and that the deficit below the line would fall short of the original estimate by more than £150 million. "Taking the figures above the line and below the line together," he said, "the overall outturn of the Budget would be better, not worse, than I forecast last April."

A notable feature of the Chancellor's speech was his decision not to introduce an interim budget. He, however, conveyed to the House some considerations relevant to the preparation of the 1957 budget. In the field of direct taxation, he emphatically declared that the Government would not hesitate to raise the income-tax rates, if needed, when the time came, though, owing to the complicated form in which the tax was being levied now, it would not be possible to make an increase without serious difficulties. He reminded the House that it was the traditional tax upon which the country relied in times of difficulty for many years, and also stressed the fact that, during the last four years, it had been possible to reduce the tax by one shilling on the standard rate.

Defence Expenditure

It is yet to be seen what measure of relief will be brought about by these policies. But measures in one direction appear to be particularly capable of mitigating the gravity of the situation. It is a thorough reappraisal of the Government's expenditure, defence policy and energy policy. Though the Chancellor expressed the view that the recent events had re-emphasised the need for a wide review of these policies, commentators, such as the *Financial Times*, hold the view that such views amount to little more than phrases which have been used too often before to create new confidence. And this is really the time, as the *Financial Times* feels, that the simple "though not a comforting truth" should be let out. To quote this paper further:

"It is not a comforting truth, but it is at least a simple one. International influence depends upon economic strength. Economic strength can only be obtained by investing a high proportion of the national wealth in new factories and equipment and by giving big rewards to people who create wealth. To do that we must stop pretending that we can afford £1,500 million on defence forces which we cannot then use. We must also be sure that we do not try to maintain luxury standards of Government expenditure on an inadequate income. We must put the economic strength of the country first—whatever consequences may follow from that. If we do that we shall not have to see our Chancellors, Conservative or Socialist, tinkering like unskilled mechanics on an engine that is rusting through."

The British Press has generally welcomed Mr. Macmillan's realisation of the seriousness of the situation, though a few of them did not endorse some of his proposals for meeting the crisis. The London *Times*, for instance, doubts the wisdom of asking for a waiver of the interest due to the U.S. and Canada.

SYNTHETIC FIBRES IN SOVIET UNION

SIXTH FIVE-YEAR PLAN ENVISAGES RAPID DEVELOPMENT

THE Soviet Union is one of those countries which have launched upon large-scale schemes for the expansion of synthetic fibre industry. The programme of development drawn up for this industry under the sixth Five-year Plan of Russia envisages a rapid, substantial increase in the production of synthetic fibres. The total output of these fibres will rise fivefold making it possible for the country to produce an additional quantity of about 2,000 million metres (0.914399 metre=1 yard) of high quality fabrics, or several thousand million knitted goods, as well as cord fabric for millions of automobiles and aircraft tyres, according to the review by Prof. Z. Rogovin, appearing in the latest issue of the *TASS Bulletin*.

The review reveals that the Soviet Union will be producing in the next few years a number of new synthetic fibres. Special mention is made of fibres known as Anid, Lavsan and Nitron. Anid, it is said, resembles nylon in its composition. The fibre melts at a temperature of 35-40°C. higher than the melting point of Kapron. This ensures certain advantages when using it to manufacture technical cord fabrics.

Lavsan belongs to the group of fibres like Terylene and Dacron. It possesses the high strength of Kapron and Anid, but excels the latter in heat resistance. The strength of Lavsan, for instance, is not affected by a relatively high temperature which cannot be said of Kapron and Anid. This fibre is not only capable of carrying relatively big loads but—this is most important—its dimensions are not changed in doing so. Resembling wool in appearance, Lavsan is not less elastic than wool. It is used in pure form or in combination with other fibres to produce fabrics, the articles made from which are not to change the form lent to them (accordion pleats, goffering, etc.) in the process of wear and even when washed. The raw material for the manufacture of Lavsan is obtained from petrol. The scientists are working on ways of simplifying and cheapening the technological process of production.

Nitron also resembles wool. This reasonably cheap fibre possesses high strength and is extremely stable to the action of light and atmospheric influences. At the same time, it is less elastic than Kapron and Lavsan and wears out sooner. Research workers are engaged in eliminating these shortcomings. A wide range of articles can be produced out of this fibre in pure form or mixed with wool.

Another important synthetic fibre the manufacturing method of which was recently elaborated by the Soviet scientists is the fibre called Anant. In some of its properties, particularly elasticity and resistance to set, Anant excels Kapron. Its technological flowsheet is also simpler.

Chlorin and Kapron

At present, the Soviet Union is producing two types of synthetic fibres—Chlorin and Kapron. Chlorin is the most resistant to the action of different chemical agents and does not swell in water. Like all other synthetic fibres, it is not subject to decay. A new interesting field for the application of this fibre has lately been found. Beautiful, strong carpets can be made of Chlorin mixed with other fibres. Thanks to the relatively low cost of Chlorin, these carpets are cheap.

Kapron and, in particular, the socks and stockings made of it are widely popular throughout Russia. At present, the output of Kapron has been considerably raised. The assortment of goods made both from the pure fibre as well as from mixtures with other materials has also increased. A considerable amount of this fibre is being used in small quantities (10-15 per cent.) in mixture with wool, cotton or artificial silk. This increases the resistance of the materials to wear and tear and, consequently, their life. A number of highly important articles are being made from Kapron fibre for technical purposes. In the new Five-year Plan period, its output will be still further developed.

Discussing the outlook for artificial and synthetic fibres, Prof. Rogovin declares that the time is long past when these fibres were regarded as inferior substitutes for the natural fibres. At that time, their production, he says, was justified by claims of cheapness and shortage of natural raw materials. Now, however, they form an independent type of textile material. In his opinion, synthetic fibres are more elastic and stronger than cotton, wool or silk. They offer good resistance to micro-organisms and decay. Equally important is their small specific gravity, which signifies that, from one and the same gravimetric quantity of yarn from synthetic fibre, a considerably larger volume of fabrics can be manufactured than from cotton, for example.

Use of Fabrics

The fabrics made from synthetic fibres, Prof. Rogovin claims, have found wide application in the tyre industry. According to him, they are used for carcass of tyres in the new types of automobiles and aircraft. Fishing nets and tackle, canvas and other articles are made from them. The capacity of these fibres to absorb only negligible quantities of moisture is of use in manufacturing insulation for electric machines and engines considerably superior in quality to those produced from natural silk. Their resistance to the action of concentrated acids, lyes and other chemical agents makes its use possible for filtering materials and protective overalls. The fabrics woven from the raw fibres are, it is claimed, strong and light and do not crease. Their low specific gravity and negligible heat-conductivity make it possible to use the fibre of the Nylon type, for instance, for making light and warm fur coats, capes, blankets and other articles not inferior in appearance or quality to articles made of pure fur.

The production and properties of artificial and synthetic fibres have many things in common. Artificial fibres are obtained by processing natural high-molecular compounds—celluloses and proteins. Synthetic fibres are the product of treatment of high-molecular compounds obtained by means of synthesis from the simplest, monomerous substances. By changing the composition of these substances and the order of their alternation in the synthesised molecule, fibres with different, previously determined properties can be obtained.

RATIONALISATION IN KANPUR MILLS

More details of the recommendations put forward by the Kanpur Textile Mills Rationalisation Enquiry Committee, a reference to which was made in these columns last week, are now available. They reveal that the Committee has prescribed the duties for ring piecers, doffers and weavers; these were so far undefined. Thus, the workload of a 3-4 looms' weaver is fixed at 96 operations per hour, one operation being equal to one shuttle change, including refilling, one-warp break in the body of cloth equal to 2.5 operations, one warp-break in fancy border equal to 3.3 operations and 2 shuttle changes for heading equal to one operation. This workload is fixed on the basis of one operation taking 17 seconds. For ring piecers, the Committee recommends that, subject to the suggestion as regards counts up to 16s for double side working a workload of 24 piecings for 100 spindle hours should be the maximum. If a "pneumafil" is fitted to any frame, the number of piecings may be increased by six per cent. For ring doffers, the Committee has related the workload to spindle doffers. Having regard to conditions prevailing in Kanpur, the maximum has been fixed at 3,000 spindle doffs and the rate of wage has been linked with spindle doffs. Further, option has been given to the doffers to go up to 3,500 spindle doffs to increase his wages, but he cannot be compelled to go above 3,000.

On the question of wages for weavers and ring piecers, the Committee recommends the basic wages as prevailing in Bombay, while, for ring doffers, it suggests the following wages for a working month of 26 days:

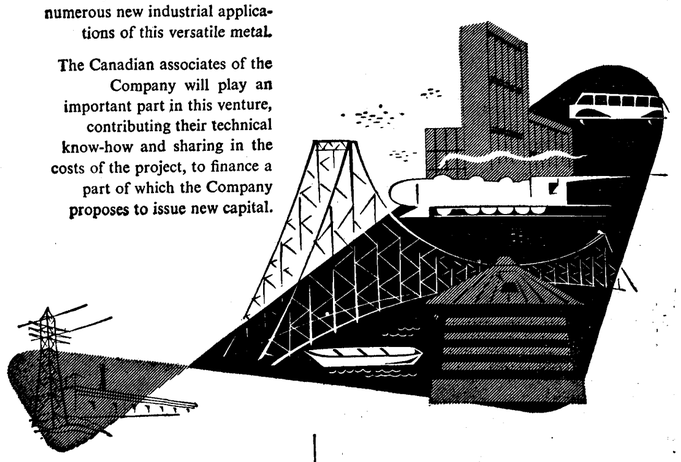
Up to 2,000 spindle doffs, Rs. 30; for every 100 doffs exceeding 2,000 but not exceeding 2,500, Rs. 7 extra; for every 100 doffs exceeding 2,500 but not exceeding 3,000, Rs. 11 extra; for every 100 doffs exceeding 3,000 but not exceeding 3,500, Re. 1 extra.

A ring piecer's wage depends on the number of spindles he minds. At present, the basic wage of a piecer minding single-side ranges from Rs. 31-5 to Rs. 36. When going on double sides, the increase in wages will vary from Rs. 12-9 to Rs. 23 per month depending upon his existing rate of wages and the number of spindles to be minded. The increase in wages to a ring piecer already working on double sides will vary from Rs. 4-7 to Rs. 11-11 per month. A ring doffer at other textile centres has the fixed wage not exceeding Rs. 30 p.m. As his basic wage is related to workload, he is likely to gain from *nil* to Rs. 10-10 per month, according to spindle doffs done by him. The scale of wages recommended by the Committee has an element of incentive.

At Hirakud in Orissa, Indian Aluminium Company is building a new 10,000 ton smelter. This will more than double the country's total production of aluminium and help meet the demand from numerous new industrial applications of this versatile metal.

The Canadian associates of the Company will play an important part in this venture, contributing their technical know-how and sharing in the costs of the project, to finance a part of which the Company proposes to issue new capital.

FASHIONING THE FUTURE



The Hirakud smelter will mark another milestone in the march of progress towards a new aluminium age.

FURTHER SHRINKAGE OF COTTON MILL INDUSTRY PREDICTED

EXTENSION OF DOUBLE-SHIFT WORKING

By Our Special Correspondent

MANCHESTER, *4th December*

A FURTHER period of shrinkage for the Lancashire textile industry, in which 295 mills have closed down during the past four and a half years, was forecast by Dr. F. C. Toy, speaking in Manchester at the headquarters of the Textile Institute.

MANCHESTER LETTER

Dr. Toy, who recently retired as Director of the British Cotton Industry Research Association, said there were those in the industry who hoped it would continue in its present form with some 2,000 firms making traditional cloths which they made equally well a century ago. "Those whose hopes are still pinned to a continuation or even expansion of things as they are now are likely to be sadly disillusioned," said Dr. Toy, who was delivering the Emsley lecture.

It was said that the Lancashire textile industry had spent more money, proportionally, on modernisation and re-equipment since the war than any other country in Europe. "It is a sad reflection that this achievement is offset by the melancholy fact that its rate of machine utilisation is by far the lowest in Europe."

Summarising the outlook for textiles, he divided firms into three classes—those who were outstandingly technically progressive; at the other extreme a few hundred firms still indifferent to science and technical change; and finally a large majority, interested to some extent, but not completely sold on the idea that they must make the maximum use of science.

It was to this middle group that Dr. Toy addressed his remarks, observing that what happened to them would determine the future size of the industry. "There is no place in the future for any lukewarm approach to science. It must be all or nothing," he declared. What was needed above all else was greater efficiency through productivity, more originality through research, and more scientific management to ensure both.

The first-class firms, providing the hard core of those ready to accept all that science could offer, represented up to one-third of the capacity of the industry, Dr. Toy added. Those who were indifferent to science could be counted out as far as the long-term future was concerned. Significantly, more than three-quarters of the firms known to have gone into voluntary liquidation in the past few years were disinterested in technological advances.

He believed the shape of things to come depended mainly on the rate at which the nucleus of first-class firms grew. The key to the future was to produce more and more products with some special merit not possessed by fabrics made abroad. The three aspects to be considered were price, quality and originality. There did not appear to be much future for Britain on price alone but there was now sufficient technical knowledge to maintain goods at the highest possible quality. The supreme need of all was more and more originality and this meant ever more research.

More Shift Work

Double-shift working has been extended in some sections of the plant of Horrockses, Crewdson & Co., Ltd., the Preston textile group, according to the annual report.

Mr. T. Marshall Brooks, Chairman, commenting on the fact that over £1,250,000 has been spent in recent years on the Company's modernisation programme, said that orders have been placed for additional machinery to be installed during the coming year. Double shifts are being used more particularly on the part of the plant employed on the finer and more expensive qualities. Throughout the entire organisation of the group every endeavour is being made to secure maximum economy of operation.

Considerable progress has been made in the group's factory in Northern Ireland. Mr. Brooks declared that the quality of material manufactured there compared favourably with fabric produced in the combine's mills in Lancashire.

Brighter Outlook

More hopeful prospects for the cotton and rayon spinning industry have been expressed in the annual report issued by the Directors of Combined English Mills (Spinners) Ltd., the Atherton textile group.

The Board declared: "Our order books are now bigger and more widely spread than they have been for more than two years. The immediate future appears brighter although it must be clearly emphasised that the problems facing the industry are by no means at an end. Shortage of labour, especially in key positions, is still serious and spinners are thus unable to take full advantage of this improved trade."

Problems concerning raw cotton supplies have been created by the recurrent crises in the Middle East. The Directors claim that their policy of maintaining adequate stocks to ensure the running of the mills has stood the Company in good stead.

Welcoming the "Buy Britain's cottons" campaign, the report refers to the seriousness of ever-increasing imports of made-up textiles from India and Hong Kong. "Every penny from the housewife's budget spent on towels, sheets, blouses, etc., from India and Hong Kong—whatever the merits or demerits of quality—means a penny less to be spent on United Kingdom spun, woven and finished materials."

Because of the absence of cotton stocks on the Liverpool cotton market, spinners have had to buy cotton on sample in advance of shipment—and to carry much larger stocks than would be the case "if the cotton market functioned normally," Major J. A. Barber-Lomax, Chairman, told the annual meeting of the Barber Textile Corporation, the Bolton mill group.

A complication, he said, was introduced by the disturbances in the Middle East. The Corporation had taken steps in good time, however, to secure adequate supplies of Sudan cotton to tide over delays to shipping likely to be caused by diversion via the Cape route.

Major Barber-Lomax said there had been a considerable revival in demand for yarn and fabrics and the Corporation's order books were now generally much better than a year ago.

Egypt's Sales Ban

Even a few years ago the embargo placed on all exports of Egyptian cotton to this country would have been a severe blow to Lancashire spinners. As it is, recent events, culminating in the withdrawal of facilities to secure these types of the raw material, will provide individual problems but they are not now as devastating as they would have been in the past.

For some time the quantity of Egyptian cotton absorbed in Britain has been relatively small and lately it has declined almost to vanishing point. So far this season the quantity imported from Egypt has only been 266 bales, whereas in the whole of last season arrivals aggregated 29,600 bales.

Purchases of substitute varieties have been going on for a long time, with supplies from the Sudan taking a major part of the business formerly secured by Egyptian growers. It is somewhat ironical that only a week or two before the Suez crisis developed a delegation from Egypt visited Liverpool and Manchester with the object of urging Lancashire consumers to use more of their locally-produced cotton fibre.

Economic factors still dominate the Middle East situation and much will depend on the outlets available for the major products of the Arab States. Egypt may well continue to sell its cotton to Iron Curtain countries, which have been substantial buyers over the past few seasons. Although isolated difficulties may arise in Lancashire, alternative sources should be well able to provide adequate supplies for the mills.
—*All Rights Reserved.*

Estimates prepared by the Commonwealth Economic Committee show that world wool consumption in the third quarter of 1956 declined by about 6 per cent., as compared with the previous three months, but the fall was largely seasonal—due to summer holidays—and, in fact, consumption was 8 per cent. higher than in the corresponding period of last year. The daily rate of consumption in July-September was somewhat higher than in April-June. In 11 countries which together absorb the larger part of the world's wool output, consumption in the first nine months of 1956 was 1,392 million lbs. (clean), as compared with 1,277 million lbs. in the corresponding period of last year, an increase of 115 million lbs. or about 9 per cent. With the exception of the United Kingdom, where consumption over the nine months showed a decline of about 1 per cent., all the principal using countries recorded increases in consumption, although Britain remained the world's largest user of wool. Comparing nine months of 1955 with the similar period this year, wool consumption in the U.S.A. increased from 315 to 345 million lbs. (clean); France from 177 to 199 million lbs.; West Germany from 121 to 131 million lbs.; Japan from 91 to 124 million lbs.; and Italy from 83 to 90 million lbs.

COTTON PRODUCTION IN EGYPT

SMALLER CROP EXPECTED THIS SEASON

THE importance of Egyptian cotton to the fine and superfine spinning section of the textile industry of the world is such that production prospects in that country are of direct interest to spinners the world over. For Egypt produces more than 50 per cent. of the world's supply of extra long-staple cotton (of staple length 1.3/8" and above) and 35 per cent. of the total outturn of long-staple cotton (of staple length 1.1/8" to 1.3/8"). In actual figures, of the total free world production of 2,880,000 bales (of 478 lbs. each) of long-staple cotton in the 1955-56 season, Egypt accounted for 989,000 bales. Its share of the total outturn of 1,084,000 bales of extra long-staple cotton during the same year was 552,000 bales. Domestic consumption in Egypt accounted for only 400,000 bales in 1955-56, which is less than 25 per cent. of the crop outturn, and hence any change in the size of production is likely to be immediately reflected in the amount available for export.

Egypt owes its premier position in the cotton world to the fact that Nature has endowed it with certain characteristics, like favourable climatic conditions and soil fertility. It has also a well organised irrigation system. But it must be borne in mind that the area that can be sown to cotton cannot be increased to any great extent, in view of the limitation on the cultivated area and the need for the production of foodgrains for the increasing population. For a rational use of the land area and to avoid overproduction, an estimate is made, at the beginning of each agricultural season, of the quantity likely to be disposed of during the marketing season and the volume of closing stocks. A basis is thus established for the size of the crop to be produced and the acreage allotment for cotton is made in accordance with this estimate.

In practice, Egypt is restricting the acreage and production of cotton to balance supply and demand and to avoid the unfavourable effects on price of overproduction. The Government fixed the maximum cotton acreage for the 1955-56 season at 33 per cent. of the total cultivable area. The total area sown to the crop was 1,885,000 acres, and the output of lint was 1,541,000 bales (of 478 lbs.) For the current season, the first official estimate places the area under cotton at 1,716,000 acres and the output is estimated at 1,530,000 bales. The variety-wise breakdown, of the 1956-57 crop is as follows:

Variety	Acreage (1,000 acres)		Production (1,000 bales of 478 lbs.)	
	1955-56	1956-57 First Estimate	1955-56	1956-57 First Estimate
Karnak	816	631	490	483
Menouf	55	163	62	160
Giza-30	339	346	290	304
Ashmouni	669	557	661	545
Others	6	19	33*	38*
Total ..	1,885	1,716	1,541	1,530

* Principally Scarto.

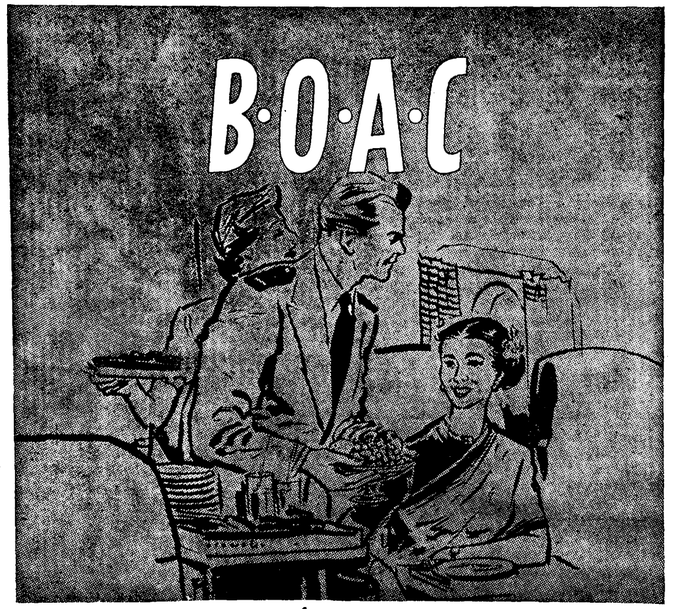
As will be seen from the table, despite the noticeable reduction in cotton acreage in Egypt, the first crop estimate places production at roughly last season's level. Ashmouni output is expected to be significantly less but this is likely to be offset by the expected increase in the extra long-staple production. The second official estimate, however, places the crop at about 1,490,000 bales only which is lower than the first estimate. This is due mainly to the fact that Karnak and Giza 30 crops suffered from Pink Boll-worm attacks in October. High temperatures in Upper Egypt caused shedding of bolls and floods in the Nile also affected the plants. No information is available so far of the extent of damage done.

Cotton Culture

A remarkable feature of cotton production in Egypt is the high yield per acre. It was 391 lbs. in the last season which was less than the yield of 468 lbs. and 510 lbs. obtained in the 1954-55 and 1953-54 seasons. Due to the scarcity of cultivable land, the Government's policy, as already stated, is designed to restrict the acreage for cotton and devise methods by which larger crop can be sown from a smaller area. Much attention has, therefore, been paid to the quality of seeds sown, the method of tending the plant, manuring and irrigation. The Government also aims at maintaining the purity of the existing varieties and its agricultural policy embodies provisions to achieve the object. Several measures have been adopted for this purpose. For example, special regions have been reserved for certain varieties for which these localities are specially suited. Thus, medium-staple cotton is grown in Upper Egypt, while long-staple is grown in the Delta.

Of late, the quality of Ashmouni had shown some deterioration and the Government was quick to take measures for restoring the standards of purity of this variety to their original levels. Investigations proved that the best and most effective way was the uprooting of off-types from the Ashmouni tracts throughout different phases of growth. A committee, known as the "Application of the General Expansion of Purified Sowing Seed Committee" was set up for this purpose. As a result of the measures taken, on the report of this Committee, Ashmouni is regaining its reputation in cotton markets. The success of these measures encouraged their application to other varieties, such as Dandara cotton in Upper Egypt, and Giza 30 in Lower Egypt. The same method has been applied to Karnak also.

The Government also supplies growers with certified seeds under official supervision. Long-staple seeds are tested not only for purity and germination, but also for spinning properties. Breeding and introduction of new varieties are another method for improving the quality of the crop. It has always been the policy of the Egyptian Government to keep aside a set of new types of cottons closely similar in characteristics to the commercial types as temporary substitutes in case anything happens which prevents the efficient production of the latter. Also, some varieties which are superior in quality and yield are always under trial and would be introduced on commercial lines only after having been tested under mill conditions by spinners. Such varieties include Giza 60 for Ashmouni, Giza 65 for Giza 30; Giza 51 for Menoufi and Giza 59 for Karnak. These varieties are under trial and experimentation and their spinning performance is reported to be satisfactory.



Majestic

FIRST CLASS SERVICE

Bombay to London

This is indeed the luxury way to fly to London! B.O.A.C. First Class "Majestic" services offer you swift, smooth travel by four-engined, fully pressurized *Constellation*. Spacious cabins with *fully-reclining* "Slumberette" seats; superb food and wines; really *personal* service. Also comfortable "Coronet" Tourist Class Services.

More electric POWER for Bombay

Today the Chief Minister of Bombay will open the Trombay Thermal Power Station.

This ceremony will mark the culmination of three years of intensive work upon the most modern power station in India. The first set, to go into commercial operation now, will generate 50,000 Kw. The second set, of a similar capacity, will come on load by next year bringing Trombay's contribution to 100,000 Kw.

Trombay is yet another Tata contribution to a higher standard of living through an expanding economy—it is but one example of the work of enlightened Free Enterprise.

SUGAR INDUSTRY AND POWER ALCOHOL MANUFACTURE

CONTROL OVER MOLASSES HAMPERS PROGRESS

THE substantial expansion in sugar production envisaged in the development programme included in the second Five-year Plan imparts urgency to the need for ensuring a more speedy and sustained growth of the power alcohol industry. The overall supplies of molasses in 1960-61 are expected to aggregate about 900,000 tons, inclusive of molasses from sugar factories and *khandsari* units. Since nearly 90 per cent. of the molasses is used in the manufacture of power (and industrial) alcohol, the sugar mills will naturally look to this source for providing an outlet for surplus molasses. It will be interesting to note that, for every ten tons of sugar produced, the sugar factories can get Rs. 27 by way of sale of the resultant molasses to the power alcohol distilleries on the basis of the officially depressed price of about Rs. 6-12 per ton. On this basis and taking the average yield of molasses at 40 per cent., the total revenue that will accrue to the sugar industry if the 90 per cent. of its molasses output is fully utilised for the manufacture of power alcohol will be Rs. 50 lakhs. This will be no less than Rs. 2 crores and even more, if a proper price is fixed by the State Governments for this commodity. This certainly is no small amount, considering the rigid cost structure of the sugar industry, thanks to heavy load of taxes, high prices of sugarcane and other raw materials, and enhanced transport charges.

Apart from assisting the sugar mills to dispose economically of the surplus molasses produced by them, the development of power alcohol industry is imperative in the present context of the high tempo of activity on the industrial front. The industrial uses of alcohol are almost unlimited. Alcohol, along with coal distillation products, can serve as a readily available raw material for starting an organic chemical industry. Some of the major schemes which are expected to require large quantities of alcohol are the D.D.T. project in Kerala State, the expansion of the D.D.T. factory at Delhi, the expansion of the plant for the manufacture of acetate variety rayon at Sirpur-Kapaznagar, and the schemes of the Imperial Chemical Industries and the National Carbon Company for the production of polyethylene. Mention may also be made of the two schemes relating to ethylene dichloride, expansion of drug, pharmaceutical and dyestuff industries, establishment of polystyrene industry, and synthetic rubber project.

Vexatious Controls

Despite the vital role that power alcohol industry plays in the country's economy thus, it is, indeed, regrettable that the conditions actually obtaining in the industry continue to be none too happy. This must be attributed, to a great extent, to all sorts of vexatious controls over disposal of molasses and alcohol exercised by the State Governments in pursuance of the object of making prohibition a success. The Bombay Molasses (Control) Act, 1956, for instance, vests in the Government full authority to control the price at which and the manner in which molasses is bought or sold generally for any industrial purposes. It also vests in the Government powers to regulate, by licences, permits or otherwise, the storage, supply, transport, distribution, disposal, acquisition, possession, use or consumption of molasses. All these restrictions make it impossible for the sugar factories to dispose of their stocks of molasses freely even though there is a good demand for it from other States. Consequently, huge stocks of molasses accumulate with the factories every season and their storage has been a standing problem to the mills ever since the Prohibition Act came into force. Even for destroying the excess stocks of molasses, the sugar mills have to take the permission of the Government. What is worse, such destroyal has to be done under an escort provided by the Government, the cost of which has to be borne by the factory itself! The controls are so worked as to compel the factories to provide molasses to the Government distillery at Nasik at the ridiculously cheap rate of As. 4 per maund.

The sugar factories in other States are also subjected to considerable hardship as a result of the official restrictions on molasses and alcohol. There is no uniformity in the objectives of controls exercised in the various States or in the price or distribution policies followed by them. The difference between the controlled and the free market prices is very wide, the average of the two prices being As. 4 and Rs. 2 per maund, respectively. How harmful such a difference is in effect is clearly described by the Indian sugar delegation that visited Australia and Indonesia last year thus: "The large difference ... gives rise to an attitude of indifference on the part of factories in the matter of exercising due care for proper storage of molasses and preservation of its quality. This affects the industrial value of the molasses. Due largely to varying distribution controls in the different States, large quantities of molasses remain unlifted at times with the factories at the end of the season. These deteriorate in quality and become a total loss."

Progress Very Halting

The aforesaid difficulties constitute one of the chief causes for the failure of the power alcohol industry to expand and develop. Although the first Five-year Plan envisaged the development of the industry on a fairly ambitious scale, the progress actually achieved was very poor. There was no addition at all to the rated capacity of the industry which stood unchanged throughout at 14.90 million gallons of power alcohol (and 2.9 million gallons of industrial alcohol), the number of distilleries being 19. In addition, there were 24 distilleries with an aggregate capacity of producing 9.3 million gallons of potable and industrial alcohol. The total capacity thus comes to 27.1 million gallons. The Plan, it may be noted, had provided for a rise in the capacity to 21.12 million gallons of power alcohol through the establishment of 12 new distilleries. The production of power alcohol no doubt steadily increased from 4.72 million gallons in 1950-51 to 11.40 million gallons in 1955. But the output falls considerably short of the target of 18.00 million gallons. It also falls short of the rated capacity by over 30 per cent.

The substantial gap between installed capacity and actual output is due to the shortage of raw material supplies, transport difficulties and inadequate offtake of the finished product. With the installation of additional sugar production capacity already licensed, the supply of molasses will considerably improve. The overall supplies of molasses in 1960-61, as already stated, are expected to be about 900,000 tons, inclusive of molasses from *khandsari* factories. The actual quantity likely to be available for alcohol production is, however, reckoned at about 800,000 tons, which, if entirely used for this purpose, will be more than sufficient to achieve the production target of 30 million gallons—18 million gallons power alcohol and 12 million gallons industrial alcohol—fixed in the second Five-year Plan. For achieving this target, the rated capacity required is estimated at 36 million gallons, a rise of 8.90 million gallons as compared with 1955-56. Already licences have been issued for augmenting the capacity by 6.90 million gallons through the establishment of four new units (together accounting for 2.94 million gallons) and expansion of the existing units (together accounting for 3.96 million gallons).

While the importance attached to the development of power alcohol industry is welcome, the actual progress will depend on the extent to which the several difficulties confronting the industry are removed in time. There is the need for ensuring regular and adequate supplies of molasses from the sugar factories to the power alcohol distilleries. There is also the need for a uniform regulation and fixation of reasonable prices for both molasses and power (and industrial) alcohol. Due attention must be paid to the problems relating to maintenance of quality and provision of adequate transport and suitable storage facilities. It will be recalled here that the Commerce and Industry Ministry constituted in October 1955 a special Committee to suggest ways and means of overcoming the difficulties and ensuring a steady growth of the industry. Although more than a year has elapsed since it was set up, the Committee, it would appear, has still not submitted its report. Now that the first year of the second Five-year Plan is drawing to a close, the Committee should submit its report soon and the Government should earnestly and expeditiously implement the recommendations made by it.

COAL INDUSTRY IN THE U.S.S.R.

OUTPUT TO BE RAISED 50 PER CENT

By Mikhail Maksimov

THE coal industry plays an important role in the development of the U.S.S.R. national economy. Its role is exceptionally great, despite the immense output of water power and enormous growth in the production of oil. Indeed, coke which is required for the production of pig iron comes from coal and more than two-thirds of electric energy which the country consumes comes from electric stations using coal as fuel. Some 85 per cent. of goods transported by rail is pulled by locomotives burning coal, and in the principal industrial areas coal makes up 70 to 90 per cent. of the total fuel used. Every passing year sees coal playing a greater part as raw material for the chemical industry.

In the Soviet Union the coal industry has taken great strides forward, its output rising from 29 million tons in 1913 to 391 million in 1955. Eighteen years ago, the Soviet Union produced less than a third as much coal as the United States, slightly more than half as much as Britain and 37 per cent. less than Western Germany, but today the ratio is greatly changed. In 1955, the U.S.S.R. produced 166 million tons more than Britain, 170 million tons more than Western Germany, and its output was only 13 per cent. less than that of the United States. Coal-production geography has changed in the U.S.S.R., as new coal basins have been opened up. Many of them were unknown before the revolution and others were in a wretched state. Today, the Kuznetsk, Moscow, Karaganda and Pechora basins each furnishes more coal than all of old Russia's coal industry.

In spite of this progress, however, the coal industry has not yet caught up with the rapidly developing national economy. The country is not getting enough coal; the increased output lags behind the country's increasing requirements, especially in the European part of the U.S.S.R. With the aim of ensuring a stable supply for the development of the key branches of the national economy, in particular, the iron and steel industry and the railways, the task has been set to increase coal output in 1956-60 by 50 per cent., bringing it up to 593 million tons by 1960. This means an average annual increase of 40 million tons.

Is the task feasible? Can the Soviet coal industry cope with it? Yes, it is quite practicable.

First of all, steps have been taken to relieve the coal situation in the European part of the U.S.S.R. Construction of new industrial enterprises has been highly restricted in that area, work is being done on a wide scale to supply cities with gas, large hydro-electric stations are going up on the Volga and the Dnieper, steam locomotives are to give way to oil-engine or electric locomotives, and oil output is increasing at a rapid rate.

The chief solution, however, is to increase coal production to the utmost, and the main burden will have to be borne by the miners of the Donets coal basin, the key fuel base of the economy of the European part of the U.S.S.R. They will have to boost coal output at a higher rate than the average for the country. As against a total increase of 52 per cent. in the five-year period for the country as a whole, the Donbas has been set the task of increasing production by 57 per cent. bringing it up to 212 million tons by 1960.

At the present time, 35 new coal mines are under construction in that basin, each designed to produce 500 to 800 tons in 24 hours. Rapid building methods are employed in their construction and they are to go into operation by the end of next year. In the course of one year scores of workings are to be sunk or driven below ground, and on the surface mine buildings with a volume of 500 million cubic metres are to be put up, and housing for miners with a total area of 150,000 square metres. In the other coal basins of the European part of the U.S.S.R. too, coal output is being considerably expanded.

In the current five-year period, a special role has been assigned the country's eastern areas, which have inexhaustible reserves of coal. In Siberia and the Far East, supplementing the known and now efficiently exploited Kuznetsk and Karaganda coal basins, are the

WORLD RUBBER PRICE MOVES UP

LARGER PURCHASES BY RUSSIA AND CHINA

THERE has been a sharp rise in prices of natural rubber in the world markets during the last few weeks. The upward trend gathered further momentum last week, with the increase of almost 5 cents per lb. in Singapore, owing to the large number of orders remaining to be executed and the limited shipping space available for fulfilling January orders. In the London Rubber Exchange, the spot price of No. 1 R.S.S. stands at 2*s.* 8¾*d.* per lb. at the time of writing, while the January delivery commands a slight premium to stand at 2*s.* 8¾*d.* per lb. The latest spot price compares favourably with 2*s.* 3¾*d.* touched in the middle of October last, to which level it had declined from 2*s.* 8*d.* per lb. in the first week of August.

The sustained rise during the past seven weeks has thus helped the natural rubber not only more than make good the recession since the first week of August last but nearly recover the lost ground in the first five months of the current year, when the spot quotation in London fell from a peak of 3*s.* 1¼*d.* to 1*s.* 10*d.* The main factor which has influenced the recent rise in the London market is the world political situation created by the war in Egypt, because nearly all the supplies to the U.K. are normally shipped through the Suez Canal. The other important factors which have been responsible for the rise are: (1) large-scale covering order by Russia in London, (2) increase in purchases by the U.K. and the U.S. and (3) the statement by the U.S. Government to the effect there will be no change in its stockpile policy. It must, however, be noted that rubber prices tended to harden even before the nationalisation of the Suez Canal on 26th July 1956, as witness the rise from a low of 1*s.* 10*d.* to 2*s.* 3*d.* per lb. on the eve of nationalisation. This was due to the fact that the prices had been unduly depressed during the earlier months of the year, consequent on exaggerated ideas about the cut in automobile production in the U.S. and the U.K. The market paid very little attention to the large purchases made by Russia and China. It must, however, be noted that these purchases were not continuous and it was difficult to foresee the extent of their buying.

In recent weeks, Russia is said to have been buying on fair scale in London and Amsterdam, particularly for early shipments. There has also been a larger volume of buying by the U.K. consumers and this has been mainly confined to stocks afloat. During the first nine months of the year, Russian purchases are said to be three times the quantity purchased during the whole of 1955. China also is reported to have already imported more than the previous year's total. Consumption in the U.K. is, however, about 20 per cent. below that in 1955, mainly due to the cut in tyre production. U.S. consumption also has declined, but the fall is said to be relatively small. In view of the larger purchases by Russia and China and the decline in consumption of the U.K. and the U.S., world consumption during the current year is not likely to show any change over the 1955 figure. One cannot, however, be sure on this point, because of the uncertainty about East Europe's requirements during the rest of the year.

Consumption Exceeds Output

During the first nine months of the year, world consumption of natural rubber aggregated 1,392,000 tons, including estimated imports into the U.S.S.R. of 84,500 tons and into China of 58,050 tons, while production fell short of consumption by 47,500 tons at 1,344,500 tons. As compared with the corresponding period of the previous year, production was lower by about 30,000 tons. This was due to a fall in output in Malaya on account of labour trouble and in Indonesia, mainly by small holders on account of the low price fetched at the beginning of the year. The Malayan production in the first ten months of the year, at 119,226 tons, is 1 per cent. lower than the comparable figure of 1955.

World stocks at the end of September amounted to 837,500 tons. The stock position in the U.K. is not clear (though the general view is that it is satisfactory), because stocks in warehouses contain a large quantity of rubber already purchased on behalf of the U.S.S.R. Many manufacturers and dealers, no doubt, started building up their stocks soon after the nationalisation of the Suez Canal. It is guessed that stocks with manufacturers now amount to six weeks' consumption and those in warehouses an additional two or three weeks' requirements. There will be no more additions to world stocks from the U.S. stockpile, as the American Government has decided, despite pressure from American consumers of rubber, not to make any change in its present policy regarding releases from stockpile. There may, however, be some increase in production in the last three months of the year, as is usually the case.

The outlook for natural rubber is considered satisfactory, unless some unforeseen circumstances intervene to change the position. For tyre manufacturers in the U.K. usually begin to accumulate stocks of rubber in December in anticipation of increase in sales of cars during the next spring, which will keep the demand for rubber high till March next. The U.S. demand is also expected to be higher. It is considered that the almost static price of synthetic rubber at 1*s.* 9*d.* f.o.b. per lb., will not seriously affect the consumption of natural rubber, despite the widening of the price concertina, as the changeover requires considerable readjustment and reorganisation.

There is, however, one uncertain factor in assessing the outlook for natural rubber, and that is the freight position. While some people are of the view that the full effects of the closing of the Canal will only be felt hereafter, another section believes that the freight position will ease once new shipping schedules are worked out, which will enable more rubber to be carried on each voyage.

Uncertain Factor

The recent rise in natural rubber price will result in a corresponding increase in the price of manufactured goods, particularly those of rubber tyres and tubes. In fact, one of the leading tyre manufacturers of the U.K., namely, Dunlop Rubber Co., Ltd., has already raised the price of all types of tyres by 10 per cent. with effect from the 5th inst. This follows the increase of 7½ per cent. announced by it on 1st July 1955. None of the other major manufacturing companies has notified any increase, but they are expected to follow suit.

(Concluded from next column)

ence in the Canadian market over those coming from the Netherlands, Belgium, France and West Germany. Of the total jute manufactures worth $13 million imported into Canada from all sources in 1955, Indian supplies accounted for $10.6 million. In 1954, India's share was of the order of $6.3 million out of the total $11 million. Analysis of imports from non-Indian sources tends to show that the Continental countries have so far been only marginal suppliers.

RAW JUTE TRADE IN EAST PAKISTAN

GOVERNMENT TO HANDLE BUSINESS

CLOSE on the heels of the recommendation of the Pakistan Jute Advisory Board to increase the acreage under jute so as to yield an additional output of 500,000 bales in the next season comes the decision of the East Pakistan Government to take two important measures seeking to bring about significant and far-reaching changes in the internal and external trade in raw jute. The first of these is to set up a jute marketing corporation to carry on open market operations during the 1957-58 season. The other is a recommendation to the Central Government for the establishment of a jute marketing or export control board which will act as a chief broking and clearing house for all sales of raw jute to foreign markets. The object of these measures is to curtail wild speculative operations and price manipulations, as also to check the racketeering in foreign exchange. Such measures are expected to give stability to the jute trade and to assure, at the same time, a fair price to consumers.

The Jute Marketing Corporation will have an authorised capital of Rs. 8 crores. The issued capital will, in the first instance, be Rs. 4 crores, contributed by the Government and private investors in equal proportions. Private investment will be limited to Rs. 500 in the case of individuals and Rs. 1,000 in the case of firms or co-operative societies. The Corporation will set up 200 buying agencies, in gradual stages, in all important jute marketing centres in the province. It is expected to handle about 500,000 to 1,000,000 bales of raw jute annually. The Corporation will be given monopoly in purchase of raw jute in the border regions, with a view to preventing smuggling across the border and ensuring sufficient business in the early stages. It is also likely that the Government will take steps for compulsory declaration of stocks by growers in the border regions. It is claimed that the work of the Corporation will not be motivated solely by profit-making. It will give to the producer a fair minimum price which will be decided on the basis of the export minimum price fixed by the Central Government at the beginning of every season.

The other body, the Jute Marketing or Export Control Board, will be composed of representatives of the Central and Provincial Governments and, if necessary, of the export trade. The object of this body is to ensure that all foreign exchange earnings on the export of jute are promptly repatriated to Pakistan. It is stated that some unscrupulous buyers and their agents abroad purchase and stock jute at the export minimum price and release the stocks only when the prices rise. The Board will have its agents in all principal jute consuming markets. Local shippers will be required to offer their saleable stocks of raw jute to the Board, which will obtain, through its agents abroad, the best offers. Thereafter, the actual transaction will be left to the normal trade channel. Similarly, offers from abroad for the purchase of jute will be referred to the Board through its agents and the Board will share the commission on the foreign transaction with existing agents of the shippers on a 50:50 basis.

STOCKS OF JUTE GOODS

A substantial drop in the stocks of jute goods with mills is noted at the end of November 1956. Thus, the downward trend has been maintained for the second month in succession. The total stocks aggregate 101,900 tons, as compared with 116,700 tons at the close of the previous month and 125,200 tons two months before. Although the latest month-end stocks are the lowest since March 1956, they are still well above those at the close of November 1955, as will be seen from the following comparative table:

(In tons)

	As on 30th Nov., 1956	As on 31st Oct., 1956	As on 30th Sept., 1956	As on 30th Nov., 1955
Hessians	24,600	30,800	29,400	27,900
Sackings	67,500	77,300	88,600	30,800
Others	9,800	8,600	7,200	4,300
Total ..	101,900	116,700	125,200	63,000

The fall in stocks during November is much steeper than that noted in the preceding month. The bulk of the decline is accounted for by sackings, but the fall in this category is less steep than in October. Hessian stocks, which had gone up by 1,400 tons at the end of the previous month, have been marked down by 6,200 tons at the close of November.

Statistics of Canadian imports indicate that Indian jute products enjoy some consumer prefer-

Road Sense

Our cities and villages are far apart....only 0.2 miles of road exist in every square mile, and the average of roads to each lakh of population is only 68 miles. Some Rs. 271 crores is being spent in the Second Five Year Plan to build a better road system—so that every village is within five miles of a national highway. The objective is to provide black top surfaces on all main arteries.

The Burmah-Shell Refinery is daily producing 600 tons of bitumen, besides special grades of bitumen that can be used cold. These grades permit road construction where heating bitumen is not possible.

Bitumen is distributed by Burmah-Shell in drums, and in Bombay by road vehicles which carry bitumen in bulk direct from the Refinery to the customer.

All this is part of the *road sense* which we have gained by being **in India's life and part of it.**

ACCIDENTS ON RAILWAYS

PARLIAMENT CRITICISES ADMINISTRATION

THE debate in both the Houses of Parliament on the recent railway accident at Ariyalur provided an opportunity for the members of Parliament to emphasise how greatly the public value safety of travel and how the authorities can never be too watchful on the "safety" front. Although some members spoke more in sorrow than in anger, it is plain that an attempt was made to malign the Administration in too sweeping a manner. The Union Minister for Railways, Mr. Lal Bahadur Shastri, was at some pains to defend the authorities against such unjust criticism. Obviously, Parliament was in no mood to listen to his sober defence, for it had become sorely exercised over the accident. Without in any way minimising the gravity of a few of the recent accidents or the importance of strictest possible measures on the "safety" front, we would urge the avoidance of unjust and exaggerated criticism which, whatever the intentions of the critics, can only do more harm than good.

Mr. Lal Bahadur Shastri admitted, in the course of his reply to the debate in the Lok Sabha, that the Government "should do the maximum in the matter of making travel safe." But the authorities had taken some measures already, in order to increase the safety factor in railway travel. These had been justified by the favourable experience of the railways. Thus, over the 1951-54 period, accidents had declined by 39 per cent., the comparable figures for the U.S. and the U.K. being 32 per cent. and 22 per cent., respectively.

Number of Accidents

Although the two more recent accidents have been the worst of their kind, it should not lead one to think that nothing has been done to prevent accidents. Actually, the number of accidents has successively declined—to take only class I Railways—from 16,090 in 1951-52 to 12,783 in 1952-53, 11,201 in 1953-54 and 10,431 in 1954-55. It must, however, be admitted that there has been a steady rise in the number of deaths (passengers, employees and others) due to accidents. It was 82 in 1951-52, 89 in 1952-53, 209 in 1953-54 and 219 in 1954-55. The figures for 1955-56 and 1956-57 when available will show a further rise. These deaths occurred as a result of causes including collisions between and derailment of trains, fires, failure of engines and rolling stock. The number of casualties during the four years as a result of other causes is far larger—4,006 in 1951-52, 4,566 in 1952-53, 4,378 in 1953-54 and 4,136 in 1954-55. The number of casualties per million passengers carried has, however, shown a modest decline. It was 3.16 in 1951-52, 3.11 in 1952-53, 3.19 in 1953-54 and 2.91 in 1954-55. The number of accidents per million train miles varies from region to region. It varies from 43.2 and 45.0 in the North-Eastern and Central Railways to 61.2 in the Western and 85.0 in the Southern Railways. Commenting on these figures, the Estimates Committee, in its thirty-third report (1955-56) on the Ministry of Railways, says that the "incidence of accidents occurring in the Southern and Western Railways is disproportionately high." The following table gives the principal causes of accidents in 1953-54 and 1954-55:

Causes of Accidents

(Class I Railways)

Causes	1953-54	1954-55
1. Collisions and derailments—		
Trains	1,168	1,103
Others	196	244
2. Failures of engines and rolling stock ..	5,216	4,781
3. Failure of permanent way	121	191
4. Fires	255	263
5. Other accidents	4,245	3 844
Total ..	11,201	10,431

It will be seen from the table above that the accidents caused by collisions, derailments and failures of engines and rolling stock account for nearly 60 per cent. of the total accidents. Since the causes of accidents have not been related to the number of lives lost or persons injured, it may be difficult to establish any causal connection between the nature of the cause of an accident and the gravity of the mishap. Perhaps, statistics, though very useful, cannot be a perfectly reliable guide to prevention of accidents. For an unexpected failure of a minor source may well cause an accident on the railways destructive of life and property. This, of course, does not mean that the authorities should relax their efforts on the "safety" front. In this connection, it may be useful to set down some of the suggestions made by the Estimates Committee.

(1) Adequate facilities for training and refresher courses should be provided for the employees of traffic, mechanical and civil engineering departments. (2) Night and surprise inspections must be conducted by officers and inspectors. (3) On sections of heavy traffic, high standard of interlocking should be provided and on all sections, where traffic is light, some sort of rudimentary interlocking must be made available. On the main trunk routes, no station should be left un-interlocked and the standard of interlocking at all stations, on a section, should be the same. Further, at large stations, track circuiting should be provided. (4) Complete lock and block should be planned for all double-line sections. (5) On single-line sections, where traffic is in excess of three trains each way, token instruments must be provided and where token instruments are installed the last stop signal should be interlocked with the token instrument. (6) If paper line-clear system is in force, a train signal register should be maintained. (7) No section of the double-line should be worked on paper line-clear system. (8) Standards of interlocking should be gradually raised. (9) Speedometers should be provided on all engines working trains carrying passengers. (10) Standard of lighting in yards and platforms should be improved. (11) Continuous night duty by assistant station masters should be avoided. (12) The area of a yard in which train examination is done as also the sick-line area should be provided with floodlighting. (13) On the metre-gauge pit lines should be provided at stations, where intensive train examination is done. (14) Supersonic crack detectors should be provided in all railway workshops. (15) A proper and well-defined technique in welding should be prescribed in all workshops and proper welding equipment should also be provided. Supervision of welding work should be effective and courses of training for welders should be introduced. (16) Arrangements for annealing should be provided in all workshops and an organisation should be set up to ensure annealing all welds. (17) Snatch test arrangements for draw-bars should be provided in all workshops and it should be ensured that every single draw-bar is given snatch test before it is brought into use on rolling stock. (18) At the time of periodical overhaul each wagon draw-bar should be annealed and given a snatch test. (19) The deficiency of gauge glass protectors on engines must be removed.

Increase in Load

It is not clear how many of these suggestions have been implemented by the authorities. It is quite likely that there may be nothing in these suggestions that is not already known to the men in charge of the Railway Administration. But, since accidents are often caused through failure to take the precautionary measures which everybody knows must be taken, it is necessary to make a conscious attempt at implementing them. Again, the opinion has been expressed that the large increase in the loads which the railways carry imposes a heavier strain on the railway track than was originally contemplated at the time of laying the track and that the failure to take this factor fully into account in decisions relating to frequency of repairs or replacements and adequacy of inspection of track has been responsible for an increase in accidents. The authorities will do well to examine thoroughly all the technical aspects of track maintenance. It is reassuring to learn that the Government has decided to appoint a high-level committee, consisting of representatives of the Railway and other Ministries, to suggest new formulæ for different areas for assessment of water discharge through bridges. This decision obviously stems from the experience in respect of the two recent accidents in which bridges were involved. There is no reason why a similar examination, at departmental expert level, should not be undertaken into the entire question of safety of the railway track.

Safety

The fact is that, in the context of the recent accidents and the very bitter—whether justifiable or not, is a different question—criticism of the railways in Parliament, in the Press and elsewhere, the authorities would be ill-advised if they did not immediately improve the technical and administrative machinery that is immediately concerned with safety of travel. Indeed, such measures deserve to be implemented without delay, even if it implies a certain re-allocation of the railway budget. Nor should the Administration fail to take or postpone taking such immediate and *ad hoc* decisions it thinks best in the interests of safety on the plea that things must await the receipt of the high-level Committee's findings or the report of the judicial inquiry into the Ariyalur accident.

There is, at least, one aspect of the whole problem which must be tackled immediately, though no speedy solution may be readily found. It is the improvement of discipline in the ranks of the employees. In the course of the recent discussions in Parliament, it was pointed out that standards of discipline had fallen. A similar view was expressed by a representative of the Railway Ministry in his evidence before the Estimates Committee. He said that the chief reason for all these accidents was that the "whole of human psychology has become casual and the real sense of responsibility is lacking." He added: "Unless we can improve substantially the standard of discipline—discipline of mind is also covered by this—we cannot hope to have any very substantial improvement in the matter of accidents." The authorities should take swift —and, if necessary, even stern—measures to improve the discipline among all classes of employees. In this task, the railway labour unions, we hope, will fully co-operate with the authorities.

INDIAN AIRLINES CORPORATION

A general improvement in the traffic operations is disclosed by the report on the working of the Indian Airlines Corporation during the year 1955-56 which was recently placed before the Lok Sabha by the Union Minister of Communications, Mr. Jagjivan Ram. During the year under review, the Corporation carried 500,363 passengers, as against 477,583 passengers in 1954-55. The cargo and mails carried increased from 50,256 tons and 4,659 tons, respectively, in 1954-55 to 53,856 tons and 4,997 tons in 1955-56. Between 1954-55 and 1955-56, the revenue aircraft miles flown increased from 17.95 million to 18.99 million, the capacity ton-miles from 46.44 million to 51.58 million, the revenue ton-miles sold from 32.39 million to 36.39 million and the overall load factor from 69.7 per cent. to 70.6 per cent. The fleet of the Corporation increased to 92 aircraft, including eight new Herons and three Skymasters.

"The Corporation having emerged as a compact business unit at the commencement of the year," the report declares, "it became possible to devote greater attention to the consolidation of the present and the building up of the future. Traffic has been steadily on the rise and there was an all-round improvement in the load factors achieved." "It is clear," the report continues, "that we have to adapt our equipment to the growing and specialised requirements of traffic in the country and beyond. We must also aim at achieving such economies as we can by standardising the equipment and eliminating a multiplicity of types. We are confident that, by progressively modernising our fleet, we shall be able to generate more traffic and at the same time effect economies by retiring some of the obsolete equipment."

The revenue of the Corporation increased from Rs. 6.92 crores in 1954-55 to Rs. 8.09 crores in 1955-56. The expenditure also moved up faster still, from Rs. 7.82 crores to Rs. 9.28 crores. To effect economy and achieve greater control over expenditure, the Corporation undertook the creation of an internal audit department and a central purchase organisation. These measures, it is stated, served to reduce the losses which amounted to Rs. 119.4 lakhs, inclusive of the unprovided depreciation of Rs. 60 lakhs, as against the loss of Rs. 161.85 lakhs estimated in the budget.

"The losses during the year," the report says, "exceed those of the year before by Rs. 29.25 lakhs but, in this connection, due allowance must be made for such additional contributory factors as the increase in the wage bill and the direct operating loss on feeder services." "It is also relevant to mention," the report points out, "that the Corporation's contribution to Government revenues during the year by way of excise duties and sales tax on aviation petrol was Rs. 86.55 lakhs and Rs. 9.79 lakhs, respectively." "It is too early," the report concludes, "to prophesy the results for the future, but it is unlikely that the gap between expenditure and revenue would be appreciably narrowed down, as much capital outlay would be necessary for our development programme, and it would inevitably take time to sell the capacity built up."

ELECTRONIC MULTI-TESTER

For testing A.C. meters and relays, engineering firms and utility companies are at present employing expensive rotating machinery. A portable electronic multi-tester which permits testing and calibration of watt-meters, watt-hour meters, power factor meters and relays at line frequencies of 40 to 60 cycles per second, has been developed by the Indian Institute of Science, Bangalore. The design, the details of which are available from the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1, is based on the principle of phantom loading, the test loads being stimulated by applying rated voltages to the potential coils and variable current loads to the current coils. A two stage phase shifting net-work provides smooth control of the phase angle between the current and the voltage vectors, particularly in the zero and the unit power factor regions. The equipment is likely to be of use to engineering colleges, meter and relay testing departments of electricity supply undertakings and in research laboratories. The equipment which can normally be operated on 220 volts, 50 cycles commercial supply can also be operated on 110 volts A.C. by providing a tap on the in-put transformer. The tester can be manufactured in any general purpose workshop having a small lathe, an engraving machine, a drilling machine and usual tools for sheet metal and soldering work. The essential components for its manufacture include valves, resistors, Capacitors, transformers of small rating, panel meters and wiring materials.

NEW PRODUCTS AND PROCESSES

Machine to Probe Secrets of Universe

A NEW atomic machine, which will serve both as an atom-smasher and an atom-maker and designed for probing into the fundamental secrets of the universe, is being built in New York at the Brookhaven National Laboratory. The laboratory is operated for the Atomic Energy Commission by Associated Universities, Incorporated, which is composed of nine leading universities on the U.S. east coast. The new machine, when it is completed in about three years, will break up atoms into their constituent parts while at the same time create a great variety of known and unknown atomic constituents including the fundamental particles of matter now observed only infrequently in the cosmic rays that bombard the earth from interstellar space. The machine, to be known as the alternating gradient synchrotron, will transform matter into energy and at the same time create matter out of energy. It will produce protons and neutrons as well as mesons which are believed to be the "cosmic cement" which holds the material universe together. In addition, the machine is expected to create matter in reverse, anti-protons and anti-neutrons, which constitute the fundamental building blocs of "anti-matter." The machine will also provide the most penetrating "atomic microscope" for looking into the infinitesimal world of the nuclei of atoms, where more than 99 per cent. of all the matter and energy of the universe is concentrated.

Heart "Horsepower" Measured

Scientists of the United States National Heart Institute have announced the development of an ingenious new method for measuring the "horsepower," or power output of the human heart. The method may enable doctors to find out whether patients are likely to have heart trouble long before any symptoms appear. And, if a person does have heart trouble, it should help doctors to decide how much work he can do without straining his heart. The Institute says the technique also will be of great value to physicians in judging the risk, for particular patients, of stressfull experiences such as surgical operations. The new method, which has proved successful in experiments with about 100 dogs, and will shortly be tried on human beings, determines cardiac output or horsepower by measuring the force with which the heart drives blood through the aorta and into the blood stream. The new technique is called a catheter tip method for the measurement of instantaneous aortic blood velocity. A thin plastic tube, or catheter, is inserted into a leg artery and pushed all the way up into the aorta. Two small tubes inside the catheter continuously register the difference in blood pressure between two points in the aorta during the pumping action of the heart. The pressure difference is recorded continuously and instantly on an electrical recorder. From this record, a physician can determine the heart's power at every instant in the cardiac cycle.

Simple Cleanliness Test

A search by the United States aircraft industry to find an accurate and economical method of determining the cleanliness of metal surfaces on jet planes ended by the discovery of a simple—and effective—solution: a single drop of water. Cleanliness tests of metal panels in jet planes are necessary in connection with bonding them together. Clean surfaces permit the full strength of the bonding material to be utilised. Formerly a time-consuming and expensive test of the metal panel bonds was required. The problem was to devise a cleanliness test that would be simple enough to be done quickly at many different points on each panel. Scientists knew that a drop of water on a clean surface will spread until it is almost flat. A drop on a dirty surface will retain its round shape because minute dirt particles dam up its outward movement. Using this knowledge, the researchers developed a device that releases a single droplet of distilled water and places it on the metal to be tested. A microscope is then placed over the droplet, and an optical instrument measures the angle of elevation of the droplet to within one degree. The higher the droplet stands, the dirtier the surface of the metal.

Atomic Test for Digestive Diseases

Atomic age medicine has given doctors a new test for digestive tract disorders and a new way to study the functioning of the stomach and intestines. The new test is expected to help in diagnosing cancer of the pancreas, chronic and acute inflammation of the pancreas, some diseases of the small intestine, and nutritional disorders following operations for duodenal and stomach ulcers. For the test, the patient eats a fat substance containing radio-active iodine, a peaceful product of atomic energy. Four to six hours later, blood samples are tested for radio-activity. In patients without gastro-intestinal disorders, radio-active levels are high. If the radio-activity is low, the test shows that there are certain abnormalities in intestinal function. The test was developed at the Duke University School of Medicine at Durham, North Carolina.

Camera Lens Adjusts Like Human Eye

A new camera for taking amateur moving pictures has a revolutionary new device which automatically adjusts the lens opening for the correct exposure under the prevailing light conditions. The light control mechanism operates on the same principle as the human eye, contracting in strong light and opening for weak light. The camera, made by the Bell and Howell Company of Chicago, Illinois, can follow the actions of people moving from areas of deep shade into strong, bright sunlight and back again to deep shade without any adjustment for the changing light by the operator. The mechanism that changes the size of the lens opening is activated by an electric eye or photo-electric cell. Impulses from this cell operate a small motor which operates on electrical power provided by six tiny mercury cell batteries.

There is no 'hit or miss' policy in the supply of Dunlop conveyor belts for your installation. Dunlop's world-wide experience and research are applied to the specific problems of Indian climate and conditions in the manufacture of conveyor belts at Sahaganj.

UNREST AMONG INSURANCE STAFF

DETAILS OF FREE LIFE POLICY SCHEME ANNOUNCED BY CORPORATION

THE agitation for higher pay-scale and better service conditions by the 21,000 employees of the Life Insurance Corporation of India, which had been gathering momentum in the last few weeks, culminated in a country-wide "token" strike on Monday, 5th December. This is a sorry exhibition of the present unhappy mood of the employees. For a "strike" method is hardly the correct way of making their voice heard by the authorities. Nor is it a good prelude to the bipartite consultations for which they are now agitating. It is also a misnomer to call a strike a "token" one, for a token is a symbol of affection, not of disaffection, nor of grievance.

Wiser counsels, it is to be hoped, will come to prevail among employees. If they exercise patience and moderation, it should be possible to find a solution that will be satisfactory to themselves and the authorities alike. Any talk of "prolonged" strike—a threat to this effect is said to have been made in certain centres—is mischievous in the extreme. Such a strike would lose for the employees the sympathy of the public, in general, and the policyholders, in particular. Arithmetically speaking, policyholders far outnumber the employees. And the unfortunate fact that they have no direct say in the running of the Corporation should not make the authorities, as well as the employees, to think that their interests could be ignored. All this is not to suggest that the employees have no right to represent or even agitate for better conditions. Only, since insurance is not an industry which can be stopped or started at will but a continuous service, a strike is peculiarly inappropriate method of agitation.

All disinterested persons will, perhaps, deplore the frequent raising of issues relating to the Corporation in Parliament. This does nobody any good and it is, in fact, bound to inflict a great deal of damage on the Corporation. Irrespective of the views one may hold on nationalisation of life insurance—this journal has repeatedly expressed the view that it was as wrong as it was unnecessary—one should grant that the nationalised Corporation should have a certain freedom to function in its own sphere. It is a pity that members of Parliament continue to evince a certain partisan interest in the affairs of the Corporation. It is undeniable that Parliament, as a sovereign body, has a right to enquire into the working of any nationalised institution. But, in the interests of these institutions, Parliament will perhaps do well to observe some voluntary restrictions on its own freedom, by refraining from interfering with the working of the Corporation at frequent intervals and by giving the Ministry concerned sufficient time to show results. It will be a good convention if the House decides to examine the working of the corporations belonging to the public sector once a year, leaving the corporations to function in peace during the interval.

The leader of the Communist group in the Lok Sabha, Mr. A. K. Gopalan, urged the Speaker recently to allot some time during the current session of the Lok Sabha for a discussion on various matters regarding the Life Insurance Corporation of India. He also asked whether the Government had received representations alleging "irregularities, nepotism and favouritism" in the matter of appointment of top officials and the selection of persons as divisional officers of the Life Insurance Corporation. The Finance Minister, Mr. T. T. Krishnamachari, replied that the Lall Committee was appointed to assist the Corporation in the selection of officers and fixing their grades. He said it would take another three months to complete its work. As the Corporation had to start functioning from 1st September, last, certain appointments had been made which were purely provisional. About 190 insurance companies had been integrated and, may be, some persons had been adversely affected. But he assured the House that the findings of the Committee would be examined and, if as a result of this examination, some cases had to be reviewed, that would be done. In reply to another question, Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, said that the Government had received some representations and letters from many members of Parliament. The Government had replied to these letters.

While questions relating to the staff of the Corporation thus continue to be raised in Parliament and the agitation by the employees seems to go on unabated, the authorities of the Corporation have announced a well-conceived scheme of "free" insurance for its employees. Under this scheme, the Corporation will provide free life insurance cover to all its permanent employees by means of a group life insurance policy. The benefit will be of the nature of a whole life limited payment policy (with profits) with premiums payable up to age 60 of the employee. The employee will, however, have an option, to be exercised before entry into the insurance scheme, to elect instead an endowment assurance policy (with profits) maturing at age 60 for a smaller initial sum assured and with smaller quinquennial increases. The premium for the group policy would be fully met by the Corporation, subject to the condition that the employee, on his part, takes out at his cost, and continues to maintain in full force by regular payment of premiums out of his pocket, an individual policy under the plan of insurance elected by him—whole life limited payment (with profits) plan with premiums payable up to age 60 or endowment assurance (with profits) maturing at age 60, as the case may be—for a sum assured equal to the "initial insurance cover" provided by the Corporation. He will, however, be given the option to pay the premiums on his individual policy by withdrawals from his provident fund. An existing employee will be exempted from taking out an additional insurance, provided he is already holding an insurance policy or policies under the whole life or endowment or any other scheme of assurance (excepting temporary insurance) acceptable to the Corporation, for an amount not less than the "initial insurance cover" under the plan of insurance elected by him and provided the maturity or premium-ceasing age is not less than 50. Premia under both the group insurance policy and the individual policies would be at a concessional rate representing a reduction of 10 per cent. below the standard prospectus rate. The details of the scheme are as follows:

All figures of insurance cover, not enclosed in brackets, refer to whole life limited payment policies, while the figures pertaining to endowment assurance policies are enclosed within brackets.

New Employees—Supervisory and Clerical Staff.—The "initial insurance cover" will be Rs. 3,000 (2,750). The insurance cover will thereafter be successively stepped up by Rs. 1,000 (750) at the end of every five years of service, till it reaches a maximum of Rs. 8,000 (6,500), so that the scheme would be as follows:

Completed number of years elapsed, reckoning from date of entry into insurance scheme	*Insurance cover (Sum assured)* Rs.
0— 4	3,000 (2,750)
5— 9	4,000 (3,500)
10—14	5,000 (4,250)
15—19	6,000 (5,000)
20—24	7,000 (5,750)
25 or over	8,000 (6,500)

New Employees—Subordinate Staff.—The "initial insurance cover" will be Rs. 1,500 (1,250). The insurance cover will thereafter be successively stepped up by Rs. 500 (500) at the end of every five years of service till it reaches a maximum of Rs. 2,500 (2,250), so that the scheme would be as follows:

Completed number of years elapsed, reckoning from date of entry into insurance scheme	*Insurance cover (sum assured)* Rs.
0—4	1,500 (1,250)
5—9	2,000 (1,750)
10 or over	2,500 (2,250)

Existing Employees—Supervisory and Clerical Staff.—Existing employees who have completed 18 years but not completed 45 years of age on 1st January 1957 would be given the benefit of the insurance scheme, subject to their being eligible for the benefit. The "initial insurance cover" will be as under:

Age completed as at 1st January, 1957	*Insurance cover* Rs.
29 or below	3,000 (2,750)
30 to 44	4,000 (3,500)

The insurance cover will be increased by Rs. 1,000 (750) at the end of each quinquennium from 1st January 1957 or date of entry into the insurance scheme, if later, till the total insurance cover amounts to Rs. 8,000 (6,500).

Existing employees, whose age last birthday on 1st January 1957 will be 45 or over but not more than 57, will not be given insurance cover but instead would be offered a deferred annuity policy with premium payable up to age 60. The concessional premium for deferred annuities represents a reduction of 5 per cent. below the prospectus rate.

Age and amount of deferred annuity per annum payable half-yearly from age 60 for life.—Age 45—Rs. 350; age 46—Rs. 320; age 47—Rs. 290; age 48—Rs. 260; age 49—Rs. 230; age 50—Rs. 200; age 51—Rs. 180; age 52—Rs. 160; age 53—Rs. 140; age 54—Rs. 120; age 55—Rs. 100; age 56—Rs. 80 and age 57—Rs. 60.

The employee will have the choice of taking a cash option at the end of the deferment period in lieu of the deferred annuity. No insurance cover or deferred annuity would be granted to employees aged over 57 years on 1st January 1957.

Existing Employees—Subordinate Staff.—Existing employees who have not completed 45 years of age on 1st January 1957 will be given an "initial insurance cover" of Rs. 1,500 (1,250). The insurance cover will thereafter be successively stepped up by Rs. 500 (500) at the end of every five years of service reckoning from the date of entry into the insurance scheme till it reaches a maximum of Rs. 2,500 (2,250), so that the scheme would be as follows where the employee is admitted into the insurance scheme on 1st January 1957.

Insurance cover available on	*Amount of insurance cover* Rs.
1-1-1957	1,500 (1,250)
1-1-1962	2,000 (1,750)
1-1-1967	2,500 (2,250)

Employees, whose age last birthday on 1st January 1957 will be 45 or over but not more than 57, will be issued a deferred annuity as under:

Age completed as at 1st January 1957 or date of entry into insurance scheme, if later	*Amount of deferred annuity per annum payable half-yearly from age 60 for life* Rs.
45—49	60
50—54	40
55—57	20

The employee will have the choice of taking a cash option at the end of the deferment period in lieu of the deferred annuity. No insurance cover or deferred annuity would be granted to employees aged over 57 years on 1st January 1957.

If an employee discontinues payment of premiums on his individual policy or policies, which he is required to take out and maintain in terms of section 1, or surrenders the same or executes an absolute assignment thereof (otherwise than as security for a loan) to a person other than a dependent the benefit under the group insurance policy will cease from the date of such discontinuance of premiums, surrender or absolute assignment, as the case may be.

The "free" insurance scheme, which will cost the Corporation about Rs. 30 lakhs a year, ought to commend itself to the employees. For it is both a welcome and substantial compensation for the loss of bonus and a few other benefits they were receiving in the past. The authorities recognised that, though a nationalised institution could not pay bonus, the employees had come to look upon bonus as part of their regular income and that it would mean some hardship if they were denied this benefit altogether. What the "free" insurance scheme now does is to restore this benefit to the employees in a form that offers them a security which no bonus can give.

Please sign that light bill, Mr. Accountant!

But have a look at it for a moment. How much electricity did you use last month? And how much did you use *before* you installed Fluorescent Lighting? Your bills are now about *one-third* of your previous bills, aren't they? How did this happen?
Your technical staff will tell you that Philips Fluorescent Lamps and Fittings provide more than *three times* as much light with the same consumption of electricity! And the light given by these lamps is even, glare-free. Working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have an average burning life of 7,500 hours.
Good judgement to switch to Philips Fluorescent Lamps and Fittings!

PHILIPS
'TL' Fluorescent Lamps and Fittings
make light work for you!

Expert service for you—Call in the Philips Lighting Service Bureau to examine your existing lighting installations. You will find that they are trained experts, happy to place their long experience in shop, factory and office lighting at your disposal—their services are free of charge.

INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, MR. T. LESLIE MARTIN'S SPEECH AT ANNUAL MEETING

NEW EXTENSION SCHEME SCHEDULED FOR COMPLETION IN SECOND HALF OF 1959

ADDRESSING the shareholders of the Indian Iron and Steel Company, Ltd., at their Annual General Meeting held at Calcutta on 30th November 1956, Mr. T. Leslie Martin, Chairman, reviewed the progress of the Company during the year ended 31st March 1956. He also referred to the two extension schemes and said that the 1953 programme was scheduled to be completed by the end of 1958. The 1955 extension programme, which was designed to raise annual output capacity to 800,000 tons of saleable steel, he added, was due to be completed, under normal circumstances, early in the latter half of 1959. Mr. Martin, however, cautioned that the completion of the schemes depended much on the international situation.

The following is the full text of Mr. Martin's speech:

"GENTLEMEN,

"In my address to you last year I stated that it was extremely unlikely that the production and trading results of that year would be repeated and that the large increase in the revenue, and consequent profits could only be regarded as a windfall. Happily, my prognostications have proved entirely wrong and very wide off the mark. From the report and accounts for the year 1955-56, which have been in your hands for some days, you will have seen that the results of the previous year have actually been exceeded. Today, I do not intend to make any forecast, but will confine my remarks, in the main, to facts and will explain to you, briefly, the factors that have contributed to this happy position.

Production

"The Company's total production of 706,986 tons of iron fell short of the figure of the previous year by less than 9,000 tons. The output, however, of your Burnpur blast furnaces, which provide the hot iron for steel making fell from 517,899 tons to 473,172 tons. This was due to the fact that No. 2 furnace was off production for periodical re-lining. The loss of production on this account, however, proved to be much less than had originally been envisaged as, by improved re-lining technique, the work was completed in a very much shorter period than on any previous occasion.

"With the change over of two of the steel melting furnaces from producer gas fuel to tar firing, we were able, and are now in a position, to utilise a greater proportion of steel scrap in our furnaces than was formerly the case. As an offset to the inevitable drop in the availability of iron for steel making resulting from the closure and re-lining of No. 2 blast furnace, an intensive drive for the procurement of steel scrap from local sources was launched and carried out with such success that it was possible to make good the anticipated deficit and even to surpass last year's production tonnage of ingot steel by some three thousand tons. A further benefit was received by reason of the fact that the rolling mills were able to produce a larger proportion of the output in the form of finished steel commanding a larger margin of profit than semi-finished steel such as billets, blooms and slabs.

"The production of iron from your Kulti blast furnace was 233,814 tons, as against 197,702 tons in 1954-55, since both furnaces were in full production throughout the year. In addition to the benefit of the consequent increased availability in the sale of pig iron, full advantage was taken of a larger allotment of iron, sanctioned by the Government, for use in the Kulti foundries. This enabled an increase in the production tonnage of spun pipes and general castings of some sixteen thousand tons which, again, had a marked effect on the satisfactory trading for the year under review.

Profit

"Taking these factors into account, an increase in profits of some Rs. 70,00,000 has been realised for the year. From this amount we are required, in accordance with the terms of the agreement entered into with the Government (to which reference is made in your Directors' report) to set aside Rs. 29,47,838 to a special fund to be utilised solely for the purpose of our expansion programme.

"As to the future, I can only say, in view of the excellent results for the year 1955-56, that, despite the many difficulties encountered, your Burnpur works have worked to full capacity and that until this capacity is augmented by the extensions now in progress, which will gradually come into operation, no appreciable increase in output can justifiably be looked for. Also, it must be remembered that it is not unlikely we may have to contend with increasing difficulties in the operation of the existing plant owing to the disorganisation caused by the expansion works in progress. I would, therefore, ask you to bear this in mind when forecasting possible results over the next year or so.

"In this connection, I should like to take the opportunity to pay tribute to the very efficient manner in which the task of the planning and co-ordination of the extensions works is being carried out by your Consulting Engineers, the International Construction Co., Ltd., and to the spirit of co-operation between them and the works management which has enabled all difficulties encountered to be smoothed over with the minimum of inconvenience to either side.

Finance

"So far as the financial figures for the year under review are concerned, there can, I think, be few points on which you will require further enlightenment. The accounts, as drawn up in conformity with the provisions of the new Companies Act 1956, give even fuller particulars than the previous very full disclosure it has always been the practice of your Board to make. There is, however, one item on which I might perhaps remark. You will notice that the accounts show the transfer of a sum of Rs. 7,00,000 to general development reserve. You may feel some doubt on the necessity for such transfer, having regard to the very large amounts set aside on the other extensions reserves. I would, therefore, like to explain that the sum in question represents the approximate reduction in the normal taxation liability for the year by reason of the development rebate allowed by the Government exempting from taxation 25 per cent. of the cost of the new plant and machinery installed. The consideration underlying this concession is that the saving in tax should be set aside for development purposes. We count to a large extent on the continuance of this rebate for financing both the 1953 and 1955 extensions and it is very desirable that this position should be recognised by the immediate institution of a general development reserve as a separate item of the reserves.

Dividends

"In view of the substantial increase in the amount of profits earned your Directors had naturally wished to mark the position by some increased distribution on the ordinary share capital. Every endeavour was, accordingly, made to obtain the approval of the Government to the admission of the shareholders to an increased participation in the profits, but as reported in the Board's circular letter of 1st October 1956, the Government have found themselves again unable to agree at this stage to an increase in the rate of dividend. Though the position is disappointing to us all and is one which your Directors greatly regret, as I advised you under similar circumstances last year, the orders of the Government cannot be ignored nor their legality challenged without serious detriment to the interest of the Company. It is incumbent on us, therefore, to accept the decision of the Government with good grace. To the extent that profits earned are retained in the business the finance of the expansion programme and the ultimate repayment of the loans that are being incurred is facilitated. Also, we may derive such consolation, as we may, for the present restriction of dividend from the assurance that has been given by the Government in their letter dated 22nd September 1956. It has been stated in that letter that the mobilisation of the available resources for the completion of the expansion programme is in the long term in the interests of the shareholders 'as ultimately they will have their full share of the increased profits.'

1953 Extensions

"You will, I trust, have a full appreciation of the progress made with the 1953 extensions programme from the descriptive booklet that has been issued as a supplement to the report of your Directors and will have noted that the programme is scheduled to be brought to completion by the end of 1958 in two stages.

Further Extensions

"Particulars of the further expansion to an annual output capacity of 800,000 tons of saleable steel, which at the request of the Government has been agreed to, have been given in the Board's circular letter of 5th November 1956. In my speech to you last year, I explained that no decision as to the undertaking of this further expansion could be arrived at until the revised sales retention prices of steel, to be operative as from 1st April 1955, had been notified by the Government and we had thereby been enabled to forecast with some reasonable degree of accuracy the future financial position of the Company. The revised retention prices were communicated to the Company in February 1956, and were fixed at a satisfactory level. The further expansion was, therefore, approved by your Board and the necessary financial negotiations for securing the finance to cover the cost put in hand. As you are aware, this programme provides mainly for an increase in the finishing mills capacity. It is scheduled for completion under normal conditions early in the second half of 1959.

"The outline of the general financial arrangements in this connection, which has been shown in the Board's circular letter, will be placed before you for formal consideration at the Extraordinary General Meeting to be held tomorrow. I will, therefore, not comment on this occasion other than to express our great appreciation of the full understanding and sympathetic consideration that has been shown by the Government in the fixation of the current sales retention prices of steel and at all stages of the subsequent negotiations, even though it did not prove possible for them to see eye to eye with your Board on the question of the price at which the proposed rights offer of additional ordinary share capital should be made.

International Situation

"All that I have said on your immediate and future prospects and the completion of both the extension schemes must be judged in the light of the rapid developments which are taking place in the entire international sphere. No one can tell what ultimate direction these may take, but it would seem that world-wide impact on almost every national activity may result, which could seriously upset the implementation of all important schemes dependent upon sea transport, foreign exchange, the manufacture and delivery of imported plant and machinery together with the thousand and one other national requirements for industrial or other developments.

"In conclusion, I should like on your behalf to express our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and by all the staff and workers whose able and willing combined efforts have made possible the very satisfactory results that have been achieved."

Note.—This does not purport to be a report of the proceedings of the Annual General Meeting, which will be sent to shareholders in due course.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN

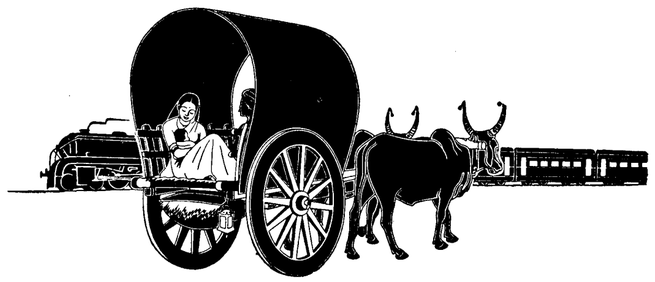
All over the world, all the time,
people are on the move. They may have to cross
continents or just take vegetables to the village markets
a mile away. They may fly by modern airliner, travel swiftly in
a railway train, or sway on a bullock cart. They all need transport.



Oil is playing an important part wherever man and machine are on the move.
Whether it is on the farm, where machinery helps produce good harvests, or
in throbbing factories, which turn out goods needed by the community;
whether it is in tea factories that produce tea for the millions at home
and abroad, or in hydro-electric projects bringing electricity to more and
more homes... in fact everywhere, oil is the prime mover —
limitless in performance and possibility. It is helping man and
machine to move ahead, to progress.
A constant supply of our petroleum products, so vital to
such endeavours, is fundamental to progress.

Can your car make a split-second stop ?

As a responsible motorist you know that it should be able to. An emergency may arise any moment...it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.
Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake Linings are made with asbestos because they have a tough job to do. In an emergency, their unfailing efficiency can prevent disaster.
There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM & FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

CONGESTION IN MAJOR PORTS

MORE FACILITIES FOR CLEARING AND MOVING GOODS URGED

AT the annual general meeting of the Associated Chambers of Commerce and Industry, held at Calcutta early this week, the following resolution on port and transport was adopted:

(1) Urgent efforts should be made to remove the present congestion at the major ports by the provision of additional mechanical equipment and the introduction of incentive schemes of labour. Since no improvement will be effective unless there are adequate facilities for clearing goods to internal destinations, the communications serving the ports should be concurrently expanded to cope with a greater volume of incoming traffic.

(2) To supplement the capacity of Bombay the development of Kandla and Bhavnagar should be hastened, while the strain on Madras should be relieved by a more extensive use of the minor ports. To that end, the minor ports themselves as also their internal communications should be improved to enable them to play their full part;

(3) Rail, road and inland waterway transport require even greater expansion than that already contemplated and require further a closer integration which will enable them effectively to supplement each other."

Moving the above resolution, Mr. A. J. C. Hoskyns-Abrahall, President of the Bombay Chamber of Commerce and Industry, stressed the vital importance of the subject matter of the resolution, and observed:

"During the next five years, India plans to bring into the the country through her ports enormous quantities of goods. The latest Plan figures for machinery and equipment, for instance, appear to be Rs. 1,500 crores' worth and for foodgrains 8½ million tons. As foreign exchange cannot be lightly spent by the Government of India, it may be assumed that the vast bulk of these imports represents goods that are of vital importance for the development of the country. It is unfortunate but clear that, with the real weight of imports yet to be felt, there is already serious congestion in the major ports, congestion which derives not only from conditions within the port areas themselves, but from factors whose influence spreads far outside them and which present problems the Port Authorities cannot be expected to have powers to solve alone. Nor, of course, are imports the whole of the problem. A growing volume of exports is vital to the Plan for the foreign exchange they will earn, and the congestion applies equally to them.

Record Tonnage

"The Bombay Port Authorities have been energetic in their attempts to meet the mounting needs of India's foreign trade. Last year, they handled a record tonnage, exceeding ten million, which, for instance, is nearly double the tonnage handled as recently as nine years ago. But they continue to be hard pressed and now they have at least 30,000 tons of iron and steel per month to be handled over the next twelve months and 150,000 tons of foodgrains per month for the first few months of next year together with all sorts of other imports. Briefly, what the Port has done is as follows:

"A piece-rate system introduced for dock labour has greatly increased the rate at which ships are unloaded; new mechanical equipment for handling cargoes has been quite extensively installed and more is on order. The stacking area has to some extent been increased and plans have been made for providing more deep-water berths and so on.

"But it is submitted that these measures are not enough, or not quick enough, to prevent the build-up of a grave crisis—assuming a free flow of international trade.

"In order to help meet the situation, it is to be hoped that the introduction of piece rates for all cargoes, a matter which is governed by a recent award, may be negotiated; iron and steel, for instance, have not so far been included. Better and more scientific stacking is a growing need, more efficient servicing and maintenance of mechanical equipment and training of personnel to man it are required, as, indeed, is a higher calibre of officer for supervising labour and handling labour problems. But above and beyond all this is the need for co-ordinating the various operations necessary for the passage of goods all the way from the holds of the ships to their upcountry destinations and this is beyond the Trustees of the Port of Bombay's powers. It can be done only at Government of India level.

"For the size of its trade, Bombay has possibly less open transit space than any other port in the world. Only Government can uproot the Services and other Government departments from the premises at present occupied by them on what should be a much lower priority and make them available for general traffic; only Government can sanction a scheme by which a main artery like Frere Road could for most of its length be embraced within the dock area and a new thoroughfare substituted further to the west. Only they could arrange for the diversion of foodgrain shipments intended for North India to the major port of Kandla and supply additional traction power for the railway to carry the cargoes away from that port. And only they can create proper road and rail links between the port of Bhavnagar, with its progressive development plans, and the industrial area of Ahmedabad—and so lessen the strain on Bombay.

"All these measures are essential ingredients in the mixture which has to be put into the pot before a final answer can be distilled.

Customs Procedure

"Yet another necessary ingredient is an acceleration of customs procedure, which could be brought about by improvements in detail, such as the extension of the validity of test reports on regularly imported items, and by such general measures as an increase in the staff strength and adjustment of hours of work. Clearly, for the general efficiency of any port, the hours of work for all those employed in it should be identical and, in the case of the customs, it is essential that they should follow the rule and work in at least two shifts. Customs laws and procedure should not act in restraint of the efficient operation of a port but should run parallel to it.

"Then, there are the railways and the roads as further elements in the crisis and be it noted that the expansion of the railways itself depends on the very imports that they are struggling to handle. The railways too have made a great effort in adding to their capacity and improving their operation, but again it is not enough. In Bombay, the Port Trust can each day offer 450 wagons, or sometimes more, to the railways. Most of this traffic is for the Western Railway. This railway, however, is continually offered more than its maximum daily capacity, which stands at the low level of 260 wagons, while the Central Railway with a capacity of 300 wagons is consistently offered less than that number. There are no doubt problems of freight and administration arising out of a redistribution of the traffic but surely there must be means of balancing the burden.

Roads

"The roads too could play a far greater part, if unnecessary restrictions on the issue of vehicle permits, periods of validity, weight of vehicles and length of hauls were removed. The situation in which the railways appeared to require protection from the competition of the roads disappeared long ago and every limitation which it has left behind, and in particular the Indian Motor Vehicles Act of 1939, should be radically revised, if not reversed. As for the roads themselves, the three national highways emanating from Bombay have a common route for the first twenty-three miles. Until the pressure on this route is abated, relief in the shape of road haulage must be severely limited. A plan does exist, however, for providing within the next five years a separate exit for one highway, and work is already being done on two express roads which will carry fast traffic to and from the heart of the city. This latter is a co-operative effort of the Central Government, the State Government and the City Municipal Corporation, a powerful combination which it is hoped will carry out the work with the urgency it demands.

"As the congestion builds up, it looks more and more as though the final answer will not be found without placing the operation of the major ports on an emergency footing, with the emergency appointment of a co-ordinator, or a co-ordinating committee, in each port with wide scope for liaison and wide powers to brush aside obstacles in the path of the smooth and quick movement of goods. It is not, perhaps, too much to say that the nation hangs breathless on the fate of the second Five-year Plan. It is certainly not too much to say that the Plan cannot succeed, unless an early solution is applied to the problem of congestion at ports."

EDUCATION FOR OUR CHILDREN

The Second Five Year Plan affirms that "by the end of the Second Plan, no village with a population of 500 or more should be without its own school". Thus India prepares to tackle its overbearing problem of illiteracy.

Of the sum of Rs. 330 crores allocated to Education in the Second Five Year Plan, no less than Rs. 82.6 crores have been assigned to the development of primary education.

Within ten years, it is expected, there will be free compulsory education for all children under 14 years of age.

In the spread of education to our numerous villages, paper will play an important part. In schools all over the country paper will provide the means for communication and instruction.

"planning begins on paper"

TITAGHUR

Makers of Quality Papers for over 74 years

TP 917

This story begins in 1888...

The world still awaits the adventure of Wireless . . . it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam. Look away for a moment to something else that is new. There! In those crates . . . the first few cakes of a new soap : *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there . . . on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed'—and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers—developing in step with them—produced for the home such things as *Lifebuoy* . . . *Vim* . . . and *Lux Toilet Soap*. This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta—encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition—the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM'—the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap*—familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL'—United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding *within* Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded—till, in 1955, about 88 per cent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership—that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense—because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

HINDUSTAN LEVER SERVES THE HOME

PROSPECTS FOR TRADE WITH BURMA

PRICES MUST BE COMPETITIVE

By Chinoobhai C. Javeri

THE Union of Burma has an area of 262,000 sq. miles and a population of nearly 18.5 million. She is not only our neighbour but has also long historic relations and many common economic, political, and cultural ties with us. Besides, we have been trading with each other from time immemorial. To the ancients in India, Burma was known as *Suvernabhumi*—the land of gold. Verily, nature has been bountiful to her. Her soil, while fertile, is equally rich in minerals and oils. Being essentially an agricultural country, her economy is dependent upon agriculture and rice is the main source of revenue and the mainstay of the country's foreign exchange-earner. However, the international demand for rice in the world markets has fallen, on account of the growing self-sufficiency in food of the importing countries. More and more land is, therefore, diverted for cultivation of other crops. Timber is the other important product, but the forests, being infested with insurgents, are not systematically tapped and developed. There is a vast scope for industrial expansion and the Government have several schemes under consideration for the economic and industrial development of the country. Incidentally, the planned economy of the two countries has so much in common by way of inspiration and objective.

Last year, Burma was in the grip of one of the worst economic crises. Huge stocks of undisposed rice literally went abegging for customers abroad. Since she was finding it difficult to sell her rice in the free markets of the world, she resorted to selling it to the communist countries on barter basis. Her trade with communist countries thus gained momentum. Today her economy is getting back to near stability and the disposal of rice has ceased to be an acute problem. But she cannot afford to rest on her oars and remain self-complacent, since the present position is unlikely to continue for a long time. The future might not hold out the same favourable conditions. The disposal of rice crop, after all, will continue to be her major preoccupation. Besides, she will need much more foreign exchange in future to put through her large development schemes. There is no royal road for achieving this goal save by gearing up her economy to higher and diversified production and rationalising imports.

Exports and Imports

During 1955, Indian exports to Burma amounted to Rs. 13,23,32,754, as compared with Rs. 16,37,31,339 in 1954. Similarly, Indian imports from Burma also fell. Thus, there has been a general fall in Indo-Burma trade. Imports of items under food and drink, fruits and dried fruits, and unmanufactured tobacco from India fell considerably during 1955, while imports of groundnut oil showed a significant rise. India's export of jute goods has been disappointing. Of late, Pakistan has entered the Burma market as India's competitor. Besides, the Burmese Government is constructing their own jute mills. India also did not fare well in regard to cotton textiles. These are the writings on the wall calling for greater effort and vigilance in our export trade with Burma.

The imports of Indian cycles and sewing machines which were finding a good market have lately dwindled, because of the competition from other countries. While there is still scope for increasing export of the traditional items, there are other non-traditional items such as electric fans, telephone equipments, engineering goods, sport goods, plasticware and machine tools which could be pushed. There is also a potential market for diesel engines, hurricane lanterns, metal furniture, chemicals, surgical instruments, etc.

The bulk of Burma's trade is with India, the U.K. and Japan. In 1952-53, India was Burma's best customer, whilst Japan ranked second, its share constituting 15 per cent. of Burma's overall exports. The relative position in subsequent years, however, shifted, with Japan taking the place of India as Burma's best customer. But, this year, India bought large quantities of rice and entered into a purchase agreement spreading over a period of five years. Recently, India and Burma also entered into a general trade agreement. Much of the success of the agreement will depend on how it operates in practice.

Among the traditional items, cotton textiles constitute the biggest item of our export to Burma. The most significant event which has affected India's export of cotton textiles to Burma has been the termination of the Indo-Burma Trade Agreement with effect from 1st October 1953. Under the new tariff, which then came into force, Indian goods ceased to receive preferential treatment. They were placed on the same footing with those of other countries. Upto the middle of 1954, India had been dominating the Burmese textile market. Since July that year, however, Japan has captured the market, practically displacing India. The following figures impressively illustrate how India's textile trade with Burma is losing ground:

Imports of Cotton Piecegoods Into Burma

(Quantity in million sq. yards)

Country of import	October to September				
	1950-51	1951-52	1952-53	1953-54	1954-55
India	127.35	35.75	96.31	51.87	17.87
U.K.	18.21	7.78	17.33	14.62	5.64
Japan	30.78	10.46	22.98	62.18	57.57
W. Germany ..	0.01	0.02	0.06	2.00	4.68
Others	0.20	0.64	1.28	3.24	3.35
Total ..	176.55	54.65	137.96	133.91	89.11

In the beginning of the year, Burma received aid from the U.S.A. in the form of raw cotton under P.L. 480. She entered into trade agreement with the U.K., Japan and West Germany and recently with India for the supply of cotton textiles to Burma in exchange for the American raw cotton. India's agreement is for $3,850,000. Japan's share in the deal was the largest.

Textiles

In addition to her receiving supplies of cotton textiles from these countries, Burma has issued licences to import substantial quantities of cloth from Russia under a barter agreement. Thus, in the next few months, Burma will receive large quantities of textiles. This will further help in bringing down local prices which have been prohibitive, owing to acute shortage of cloth.

In Burma, Indian cloth is known for its durability and buyers prefer it, but its drawback is the lack of attractive presentation. There is large demand for prints in the Burma market, but Indian prints are fast disappearing from this market, because Indian mills, due to their own difficulties, do not supply smaller quantities per design which Burma wants. Price is another factor. Due to high prices, cloth is not able to hold its own, as in the past. Now that there is a buyers' market and increasing competition, price is a decisive factor in selling our cloth abroad, though I do not belittle or lessen the importance of quality. Even our coarse and medium varieties which hitherto enjoyed an invulnerable position are losing ground in our natural markets. They are faced with serious competition from China and Pakistan which are becoming our formidable competitors. Our whole export trade in cloth is passing through a critical phase and the position is aggravated due to high internal prices. Conscious of this state of affairs, the Government increased the excise duty to bring down internal prices. But such measures are effective only temporarily, and there is a saturation point beyond which the excise duty cannot be raised. On the other hand, so long as there is shortage of cloth, the internal prices will continue to be high. It is only by stepping up production and rationalising the industry that the competitive position of our cloth in the international market can be increased. This will take time. In the meantime, special concessions and facilities may be granted to the trade and the industry for promoting exports as is being done in various countries.

The First Criterion

Cheapness is an important feature of our cloth. It is this characteristic of our cloth that induces buyers in Burma and elsewhere to turn to India for their requirements. Price is, therefore, the first criterion and the main deciding factor, though cheapness does not mean that the prices should not bear some relation to quality. But there cannot be one yardstick for measuring quality, since the standard differs from cloth to cloth. When the difference in price is small the more discriminating buyer looks to durability, appearance and quality of goods. In the final analysis, however, what is fundamentally important is that the cloth supplied should be in accordance with the sample and, if that rule is followed, the causes for complaints regarding quality will be minimised.

There are certain varieties of cloth which are exclusively imported by the Civil Supplies Board and India is largely interested in exporting them. These varieties include plain grey longcloth, shirtings and sheetings, bleached longcloth, dyed cambrics, dyed poplin, dyed twills, etc. These are our main items of export. Unless these varieties are regularly purchased by the Civil Supplies Board from India in sizable quantities, India's export of cloth to Burma will be considerably reduced. The Government should, therefore, investigate and find out the quantities of cloth so far bought by the Civil Supplies Board from various countries under tenders and the percentage of India's share in it. These findings will be helpful in dealing with this important question.

Indian cotton yarn had a big market in Burma, but it is slowly losing ground, on account of high prices, restrictive export policy and cumbersome procedure of the Government. On the other hand, competition is fast growing and shaking its fist at us. Pakistan has now become our formidable competitor. Besides, the tensile strength of our yarn is below the required standard. The standard for export should, therefore, be revised and raised in accordance with the requirement of the foreign markets. At present, we are not keen on exporting cotton yarn because of the shortage at home, but, if the market is once lost, it will be difficult to recapture it. We must not, therefore, allow ourselves to go out of the market completely.

The time is drawing near when India will need export markets for her industrial products and the neighbouring countries can be her best customers. But these countries cannot be expected to buy from India, unless India buys from them. There must be reciprocity. Moreover, prices of Indian products must be competitive and their quality standardised, whilst concerted and determined efforts should be made to cater to tastes and exact requirements, which calls for new thinking and a new approach in our export trade and policy.

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual General Meeting of the Belapur Company, Limited, will be held on Friday the 28th day of December, 1956, at 4·00 p.m. (S.T.), at the Registered Office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1956.
2. To declare a Dividend.
3. To elect a director in place of Sir Joseph Kay, K.B.E., who is the Managing Director of W. H. Brady & Co., Ltd., the Managing Agents of the Company, has attained the age of 72 years and who retires by rotation but who offers himself for re-election, and to consider and if thought fit to pass the following, of which special notice has been received by the Company and is hereby given, as a special resolution:

   "That Sir Joseph Kay, K.B.E., who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by section 280 of the Companies Act 1956 shall not apply to him."

   The reasons which make this resolution necessary are set out in the first paragraph of the statement of material facts annexed to this notice which paragraph shall be deemed to be incorporated in this notice.
4. To elect a director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation but offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.
6. To consider and if thought fit to pass the following as an ordinary resolution:

   "RESOLVED that W. H. Brady & Co., Ltd., be and are hereby re-appointed Managing Agents of the Company for the period of 10 years from 15th January, 1957, at the remuneration and upon the terms and conditions contained in the draft agreement between the Company and W. H. Brady & Co., Ltd., submitted to this meeting and for the purpose of identification initialled by Sir Joseph Kay, a director, and that the directors be and are hereby authorised to cause the said draft agreement to be engrossed in duplicate and executed on behalf of the Company."
7. To consider and if thought fit to pass the following as an ordinary resolution:

   "RESOLVED that the registers, books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act 1956 and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 353 to 360, 362 and 372 of the Act, be kept open for inspection by the persons entitled thereto to the extent in the manner and on payment of the fees if any specified in the aforesaid provisions, at the registered office of the Company, between the hours of 11 a.m. and 1.00 p.m. on all working days except when the registers and books are closed under the provisions of the said Act or the Articles of Association of the Company Provided however that the register required to be maintained under section 307 of the Act shall be open for inspection by members or holders of debentures of the Company if any as aforesaid between the hours abovementioned during the period prescribed by section 307(5) (a)."

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
W. H. BRADY & CO., LTD.,
JOSEPH KAY,
Managing Director,
Managing Agents.

BOMBAY, 30*th November*, 1956.

Notes.—The transfer books of the Company will be closed from the 30th day of November 1956 to the 29th day of December 1956, both days inclusive.

The dividend when declared will be made payable through the Bank of India, Ltd., Fort, Bombay, on and after the 11th day of January 1957. The dividend warrants will be posted to those shareholders whose names stand on the Company's register on the 29th day of December 1956.

ANNEXURE

Statement of material facts and reasons in respect of items of special business in the accompanying notice dated 30th November 1956

Item No. 3. Sir Joseph Kay, K.B.E., has been associated with the Company since 1924 and it is considered desirable that this association should be maintained by his re-election as a director. Sir Joseph, who is aged 72 years, is the managing director of W. H. Brady & Co., Ltd., and, as such, an associate of the managing agents. According to sections 261 and 281 of the Companies Act 1956, he can only be re-elected as a director by a special resolution.

Item No. 6. The present agreement dated the 30th September 1925 between the Company and W. H. Brady & Co., Ltd., under which W. H. Brady & Co., Ltd., acts as the Company's managing agents, will be deemed to expire on the 14th January 1957, under the provisions of the Indian Companies Act 1913 and the Companies Act 1956.

The Directors are of opinion that W. H. Brady & Co., Ltd., have served the Company well and recommend that they be re-appointed as managing agents for a period of 10 years from the 15th January, 1957, at the remuneration prescribed in the draft agreement referred to in this item, namely:—

"2. (I) The remuneration of the Managing Agents shall be as follows:

(*a*) A commission at the rate of 10 per cent. per annum on the annual net profits of the Company computed in the manner prescribed by Section 349 of the Companies Act, 1956 PROVIDED that if in any financial year the Company shall have no profits or its profits shall be inadequate to pay the commission aforesaid the remuneration of the Managing Agents for that financial year shall be the sum of Rs. 50,000. The aforesaid commission in respect of any financial year shall be paid to the Managing Agents upon the accounts of the Company for such financial year being audited and laid before the Company in general meeting. The Company shall in the meanwhile pay to the Managing Agents on account of the minimum remuneration of Rs. 50,000 a sum of Rs. 4,000 on the last day of each of the first eleven months of such financial year and a sum of Rs. 6,000 in the last month of such financial year.

(*b*) Such additional remuneration as shall be sanctioned by a special resolution of the Company and approved by the Central Government.

(II) The remuneration of the Managing Agents for any financial year shall be paid on the day following the day upon which the accounts of the Company for that financial year are laid before the Company in general meeting.

(III) In addition to the remuneration before provided for the Managing Agents shall be entitled to be reimbursed in respect of all expenses incurred by them on behalf of the Company and sanctioned by the Board of Directors of the Company or by the Company in general meeting such reimbursement to be made as shall be provided in the resolution granting such sanction."

Application has been made to the Central Government for approval of such re-appointment of W. H. Brady & Co., Ltd., as the Managing Agents on the terms and conditions of the draft agreement mentioned in item No. 6 of the above notice and the Central Government's approval was accorded thereto by the Government of India, Ministry of Finance letter No. 41/435/CL/56 dated the 20th October 1956. An abstract of the draft agreement between the Company and W. H. Brady & Co., Ltd., has been sent to each member as required by the Companies Act 1956. A copy of the aforesaid draft managing agency agreement is also available for inspection at the registered office of the Company, Brady House, 12-14, Veer Nariman Road, Bombay, during usual business hours on working days.

Item No. 7. The Companies Act 1956 entitles the Company to impose reasonable restrictions upon the availability of its registers, books and documents for inspection; the draft special resolution set forth under this item of business specifies such reasonable restrictions which are desirable in the interests of the Company's business.

Following is the nature and extent of the interest if any of the Managing Agents and of each of the Company's Directors in these items of special business:—

Name	*Interest*

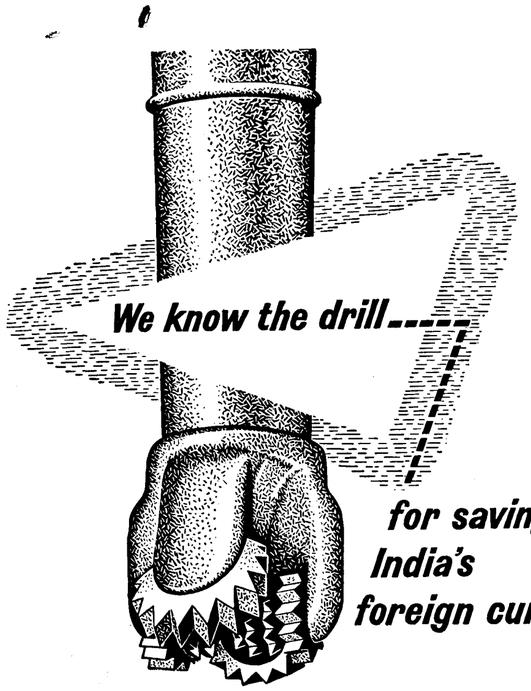
(INCORPORATED IN NEW SOUTH WALES WITH LIMITED LIABILITY)



for saving India's foreign currency

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

Carried any elephants lately?

WE transport some pretty fascinating stuff about the globe... take the case of the lovesick elephant that had an urgent date with a Zoo or someone in London. Then there was the ripe Gorgonzola, the film star wanted in a hurry, we were as keen to deliver it; you know how noisy a cheese can get! And of course, we're forever rushing merchandise from place to place — to make sure our customers get on the market before the other man does.

By the way, have *you* any cargo for any place? There are a thousand good reasons for sending it by Air-India International.

CARGO BY AIR is quick, convenient, saves money on transit insurance, gets you on the market first, brings you the goods *when* you want them, enables you to fulfil urgent contracts... we're out of breath, but you get the idea!

READY REFERENCER ON THE INDIAN COMPANIES ACT, 1956
BY JOHN & ROW, *ADVOCATES*, MADRAS.

Price Rs. 25/-

The following is an extract from Mr. Tennetti Viswanatham's letter, which will speak to the merits of the book as well as the authors of the same.

"The Ready Referencer published by John and Row is indeed a very valuable book. It is a clear analysis of the provisions of the new Act. It brings together the changes in their logical sequences so that the Directors and Managing Agents can immediately lay their finger on the required provisions whenever they are in doubt as to what is to be done or what the Law on the subject is. Besides, the Referencer is of even greater value to the Lawyer, as one can expect it to be, coming as it does from John and Row, who have been distinguished specialists on Company Law. Likewise the Bench should find it invaluable."

(Sd.) TENNETTI VISWANATHAM,
Chairman, Advisory Commission (Company Law Administration).

ECONOMIC DEVELOPMENTS IN EUROPE

IMPACT OF RECENT EVENTS ANALYSED

ALTHOUGH the impact of the recent events in the Middle East and Eastern Europe on the economies of Europe is increasingly being felt, it is rather early to assess clearly their full effects, especially those of the closure of the Suez Canal and the damage to oil pipelines. Nevertheless, the Secretariat of the Economic Commission for Europe has attempted a brief assessment of the position in its report to the latest quarterly *Economic Bulletin for Europe*. It observes that "even if more or less normal economic activity is resumed as quickly as possible, recent events in both Eastern Europe and the Middle East are bound to have important effects on the economies of Europe." According to the report, the economic repercussions of the developments in Eastern Europe are twofold. First, there are the direct losses, such as loss in human lives, drop in this standard of living, etc., arising from the insurrection. Secondly, far-reaching changes in the economic policies are under way both in Poland and Hungary.

The immediate results of the blocking of the Suez Canal are the severe shortage of tanker capacity, and the reduction in the supplies of oil to Western Europe, following both such shortage and the longer hauls from the Persian Gulf round the Cape or across the Atlantic. The countries which will be most severely hit consequent on the oil shortage are those most dependent on oil for their fuel requirements such as Sweden and Denmark. The countries which normally have a considerable export trade with the rest of Western Europe such as the U.K. and France, can minimise the adverse effects on their economies by restricting exports of petroleum products; but this could be disastrous to importing countries. A possibility of minimising these effects lies, according to the E.C.E. report, in the stepping up of imports of coal from the U.S. for which the availability of dry cargo reserve fleet in the U.S., which is more plentiful than tankers, may be helpful. Nevertheless, the shortage of fuel oil will entail a certain amount of reduction in industrial production. In this connection, the report suggests that the available oil supplies should be so distributed as to avert a fall in the production of those industries an adverse effect on which will give rise to chain reactions in the economy.

Dependence on U.S. for Fuel

Examining the effects of Western Europe's increased dependence on the U.S. for fuel on its balance of payments position, the E.C.E. report points out that any rapid growth of coal imports will add to Western Europe's difficulties. It also means that any substantial increase in defence outlays would still further restrict the resources available for civilian investment and consumption and make more difficult the task of maintaining internal and external economic stability.

Discussing, in a later part of the report, the impact of the sustained economic expansion witnessed since 1953 in Western Europe on its trade and payments, the report observes that though, in the early stages of the boom, the West European countries had been able to expand supplies of food, fuels and other materials adequately enough to keep their imports within limits, subsequently, however, imports from outside Western Europe have been rising faster than output and also exports to the outside world. This rise in imports is attributed by the report partly to the general pressure of demand on Western Europe's resources, and partly to the special factors such as the failure of coal production to expand and the consequent increase in imports of coal from America from 24 million tons last year to 40 million tons this year. Oil imports have also risen fast.

Coming to individual countries, the report points out that the rise in imports has been especially rapid in the case of three, namely, France, the Netherlands and Finland. At the same time, all the major industrial exporters, except France, have increased the volume of their exports this year, as compared with the same period of 1955, but such increases have not kept pace with the rise in imports. In the U.K. and Denmark, imports have not been so rapid, as a result of the policies adopted by the Governments which deliberately suppressed home demand. But the movement of labour from sectors of slack demand to those where it is strong is proceeding slowly in England; and the expansion in exports has been much slower this year than was witnessed in 1954 and 1955. From the experience of these two countries, the report draws the conclusion that a policy of restraint of home demand may not have a rapid effect on the growth of exports, unless either it is concentrated on those sectors of production for which export demand is already strong or it is accompanied by measures to stimulate investment in industries which can readily find export markets.

West German Exports

Commenting on the rapid growth of West German exports, as compared with those of British and French origin, in each main category of manufactured goods and towards each main market area, the E.C.E. report says that there is little likelihood of rapid changes in these trends. But on an examination of the recent changes in wages, productivity and export prices in the three countries, the report finds that such advantages in labour costs and export prices as Western Germany may have enjoyed in the past are now being reduced. The rapidly growing productivity in France during the past two years has prevented any significant rise in wage costs. In Britain concealed unemployment and underemployment seem to have caused labour costs to rise faster during recent months than before, since the rate of increase in earnings has not changed during the period under review. In Western Germany, there seems to have been a marked decline recently in the rates of growth of productivity, while wages have been rising considerably faster than in earlier years.

Turning to the recent changes in balance of payments of the West European countries, the E.C.E. report expresses the view that the reduction in reserves in recent months, in most cases, represented little more than a loss of some of the gains of last year. The drain on reserves has been serious, however, in the case of France, the Netherlands and Ireland, the position of the reserves of France being the worst. Though the grant of a stand-by credit of $263 million by the I.M.F. has reinforced the foreign exchange reserves of France to a certain extent, the E.C.E. doubts whether the situation can be improved to any significant extent, as the pressure of the demand on the resources continues and the prospect of any improvement in the competitiveness of French exports is not very bright.

In sharp contrast to the French position, which has been still further worsened by the Anglo-French intervention in Egypt, the E.C.E. Secretariat sees no prospect of any rapid change in the West German balance of payments surplus. On the contrary, it points out that the signs, recently appearing, of the slowing down of the growth of domestic demand may tend to increase the surplus still further. The E.C.E., however, feels that the risk of general deflation in the individual countries is unlikely, so long as Western Europe's overall balance of payments with the outside world remains satisfactory.

Prospects for Expansion

Referring to the future prospects for industrial expansion in Western Europe, the E.C.E. report observes:

"The present trends of demand for consumption and investment in most of the countries of Western Europe, and the continuing growth of exports, suggest that little change in the rate of overall expansion is to be expected in the near future, unless a further easing of investment demand in Western Germany or the beginning of a positive decline in investment in the United Kingdom brings about some further fall in the rate of growth of total output in those countries. Present indications suggest that such a fall may occur during 1957, unless either changing Government policies or other events affecting business men's expectations of future conditions provide a new stimulus. But, in addition, the possible effects of recent events in the Middle East now constitute an additional source of uncertainty about the future."

The E.C.E. report has also dealt with the policies adopted by the countries of this region designed to check price inflation. It points out that wages and prices in most countries have risen as fast, or even faster, during the last year than during the previous twelve months. On top of this comes the new danger stemming from the higher freight rates following the Middle East crisis. Its advice, in this connection, is that prompt steps should be taken to offset the effects of these higher rates on domestic prices.

A notable development in the field of agriculture is the general upward drift of farm prices. The report points out that, in many countries of Western Europe, Governments are faced with increasingly difficult problems in the field of agricultural policies. These difficulties primarily relate to (1) the maintenance or even raising of farm incomes in line with those in other sectors of the economy, and (2) demands of farm workers for higher wages following similar increases in other countries. The solutions to these issues, whether in the form of higher tariffs or greater subsidy bill, will, in the opinion of the E.C.E. Secretariat, tend to produce a new upward pressure on the price level and the consequent cumulative effects.

Excellent Harvest in Russia

Turning to Eastern Europe and the U.S.S.R., the report points out that an excellent grain harvest is indicated in the Soviet Union and Czechoslovakia, and about average results in Poland and East Germany. In Hungary and Bulgaria, however, the harvest was distinctly below average levels. Another notable feature in the field of agriculture is the startling rise in the production of milk in the Soviet Union, where deliveries by collective farms rose by 38 per cent. during the eleven months ended August 1956. The report attributes this sudden increase to the remarkable increase in milk yields in the Ukraine by 40 per cent. between 1954-55 and 1955-56, following the reduction in the inordinate increase in the number of cows. Such a reduction seems to have enabled the Soviet authorities to make a beginning of an adjustment of cow numbers to fodder availabilities so as to avoid under-feeding.

The report also notes a continuing drive for collectivisation in Hungary, Bulgaria and Czechoslovakia during the last summer. A tendency towards more flexibility in determining the structure of co-operative farms and the functioning of agricultural markets was also in evidence.

Plans for investment in 1956 laid down ambitious programmes of over-all volume of investment in all countries of Eastern Europe, except Bulgaria, according to the E.C.E. report. This is in sharp contrast to the relaxation of drive for investment witnessed in 1954 and 1955. But the level of actual investment during the first part of the year 1956, though higher as compared with the corresponding period of 1955, fell short of the rates planned for the year as a whole in many countries.

Eastern Europe is also faced with a fuel problem. The production of coal seems to have reached a ceiling, where no significant further increase can be achieved without considerable investment. Moreover, Polish coal mining occupies a pivotal place in the fuel problem of this region. The production of coal by this country affects not only Poland itself, but also East Germany and Hungary which are dependent on imports of fuel. The production in 1956 is expected to be 96 million tons, that is, one million tons less than the planned level.

Manpower Saturation

A notable feature in the sphere of employment in this region is that the overall manpower, with the exception of East Germany and Czechoslovakia, shows signs of over-saturation rather than of insufficient supply. The main causes for this situation, according to the report, are the tightening up of management and administration and the consequent release of workers from these branches, the large numbers of women seeking work to supplement the family income, irregularity in the supply of raw materials and the special problems of small towns which have been deprived of their small industries and handicrafts. The new policies of decentralisation of economic development and of encouragement to artisans and small enterprises which are designed to relieve the pressure of unemployment have not yet begun to show results.

Lastly, the E.C.E. report states that plans for foreign trade in the East European countries for 1956 foresaw considerable increases in total turnover. The data for actual trade, at current prices, show that, on the whole, considerable progress was made in the first half of 1956. In Czechoslovakia the turnover increased by as much as 20 per cent. as compared with the corresponding period last year. The report, however, states that the second half of the year cannot show an equal degree of fulfilment of plan targets. This is due to the recent bad harvests, and rise in home demand in some of these countries. The recent disturbances in Hungary and Poland also have had their effect on the normal flow of trade. These adverse factors, the report predicts, may be offset by an increase in Soviet orders for industrial products and by deliveries under recently granted Soviet loans.

PROBLEMS OF CHEMICAL INDUSTRIES

INCREASE IN PLANT-CAPACITIES WARRANTED

THE view that the scope for private initiative and enterprise was still great within the limited fields allotted to them by the new Industrial Policy Resolution, that the Resolution offered a new opportunity to private enterprise to justify its existence in a socialist State and that the future of private enterprise would depend upon its performance during the years ahead was expressed by Lala Charat Ram, in the course of his presidential address to the seventeenth annual general meeting of the Indian Chemical Manufacturers' Association. He counselled his colleagues to guard themselves against purely doctrinaire opposition to Government policies, just as they often recommended to the Government not to base its policies on purely doctrinaire approach. It is, however, doubtful whether a large section of business community will endorse these unqualified observations of Mr. Charat Ram. While such statements will doubtless be pleasing to the ears of the Government, they are nevertheless unrealistic. How can free enterprise function effectively and show quick results, if its operations are impeded by too many Government controls and if the scope for raising equity or loan capital from the money market is restricted by excessive taxation, State-ownership of life insurance and restrictions on the use of corporate savings? It is one thing to accept meekly and obediently the policy of the party in power and try to do one's best for the welfare of the people. It is another thing to speak frankly about the unwisdom of the Government resorting to measures the results of which are of dubious character. To do the latter does not necessarily mean disobedience to the Government or failure to do one's best for the country, or indulgence in doctrinairism. In fact, these critics make a more valuable contribution to the progress of the nation than those who shower praises on Government, even when realising that it is not in the right, just because political expediency favours such a course.

Position of Industry

The observations of Mr. Charat Ram on the position, problems and prospects of chemical industries, however, were non-controversial, quite pertinent and reflective of his practical experience of the industry. Reviewing the progress of the industry, he recalled that the various branches of the industry had exceeded their first Plan target of investment of Rs. 26 crores by a crore of rupees, in contrast to the shortfall of 10 per cent. in the total investments in industries in the public and private sectors. He, therefore, termed the performance of the chemical industries during the first Plan period as "reassuring" Products manufactured for the first time in India during this period were as diverse as, to cite a few examples, Calcium Carbide, Hydrogen Peroxide, Rare Earth Compounds, Titanium Dioxide, Ammonium Chloride, Benzene Hexa-Chloride, Penicillin, D.D.T., Sulphur Black, Azo Dyes, etc. The broadening of the base was also accompanied by an impressive general growth in output and installed capacity.

Looking ahead, Mr. Charat Ram rightly stressed that chemical industries had an important place in the efforts of the community to attain a balanced and diversified industrial growth within the framework of general economic planning. The magnitude of the challenge posed to the chemical industries was reflected, according to the speaker, in the investment outlay envisaged, namely, Rs. 125 crores, in the second Plan as against Rs. 26 crores in the first Plan. This would obviously mean a heavy strain on the available financial and technical resources, and would necessitate their expansion considerably. The effectiveness of the marketing policies would also have to be reassessed. Similarly, labour-management relations, too, would have to be reorganised to suit the changing needs.

Larger Effort Needed

Striking a note of warning against any complacency that might grow as a result of the achievements of the first Plan, Mr. Charat Ram pointed out that the present achievements constituted only a base for the much larger effort necessary, if the industrial structure was to be provided with an adequate supply of chemical products to draw on. Moreover, although the development proposals for the chemical industries would bring about a manifold increase in the capacity and output of different types of chemicals by 1960-61, he stressed that the targets already fixed were only tentative and, as they depended on the targets fixed for so many other fields, such as food production and textiles, it might be necessary to effect an upward revision of those envisaged for chemicals as and when similar changes were incorporated in the targets for other products. There can be no two opinions on this conclusion.

Mr. Charat Ram expressed his appreciation of the Government's decision to finalise the programme for the manufacture of intermediates by the N.I.D.C. only after taking into account the present or proposed schemes of individual dyestuffs manufacturers. He suggested, however, that, if some of the manufacturers desired to produce some of the primary intermediates proposed initially for the N.I.D.C's activity, they should be encouraged to go ahead.

Import Policy

The Government's import policy pertaining to chemicals also figured in Mr. Charat's speech. He thought the method of imposing import restrictions only after the manufacturing unit had accumulated substantial stocks was not a satisfactory one, as it retarded the growth of the industry. In putting forward this view, he was not oblivious of the necessity for safeguarding the interests of consumers. In order to ensure that the units protected through import controls were in a position to deliver the goods, he suggested that the Government should ascertain through complete inspection whether the plant was in good shape and had the requisite capacity. Once it satisfied itself on these points, the Government should not insist on accumulation of stocks as a condition for import control protection.

He then referred to the programmes for development of pharmaceutical industry and emphasised the need for a closer co-operation between the plans of the State and the industry. He deprecated, in this connection, the tendency on the part of the Government to formulate plans without taking into confidence the industry concerned. He said that such indifference was unfair to the industry which had struggled against heavy odds for many years to meet the growing demands of the country. He also drew the attention of the authorities to the unnecessary competition from the Government Medical Stores Depots, the vexatious excise regulations and the alarming rate of patent registrations by foreign manufacturers in India. He was sorry the Government had failed to give adequate attention to the recommendations of the Pharmaceuticals Enquiry Committee which had viewed the development of the existing branches of the industry in its proper perspective. He complained that Government, in its preoccupation with the development of antibiotics, sulpha drugs, anti-dysentery, and anti-T.B. drugs, was not paying adequate attention to the problems of the pharmaceutical industry in the non-State sector, which, too, has made considerable progress in various directions.

Special reference was made by Mr. Charat Ram to superphosphate industry, because of its importance to agriculture and as a base for large-scale production of sulphuric acid, so essential for almost all chemical industries. The speaker called for greater utilisation of superphosphates as fertilisers. He criticised the tendency to regard the nitrogenous fertilisers as a cure-all for all agricultural problems. He cited the instance of Western countries, where superphosphate and nitrogen were being used in agriculture in the ratio of 115:100, as against 30:100 in India. He advanced certain suggestions to increase the consumption of superphosphates. They included subsidies, as in the U.K., readjustment of railway freights on the same levels as for manures, and more liberal grants of taqavi loans for agriculturists.

Another important problem to which Mr. Charat Ram drew the attention of the authorities was that of ensuring economic plant capacities in the chemical industry. The chief features of

BELAPUR MAINTAINS DIVIDEND ON HIGHER CAPITAL

PRODUCTION AND PROFIT INCREASE

THE quick recovery from Rs. 244 to Rs. 252-8 in the market value of the shares of the Belapur Company, Ltd., on the Bombay Stock Exchange during the past few days, after its slump from Rs. 257-8 to Rs. 240 following the supplementary budget proposals, reflects the investors' gratification at the Directors' decision to maintain the dividend for the year ended 30th September 1956 at 32 per cent. per annum, and that too on a capital increased by the issue of a 50 per cent scrip bonus early this year. It is also a measure of their confidence in this "blue chip," despite the sharp increase in the dividend tax applicable to the Company.

The Directors' decision to recommend the above distribution was no doubt taken on the eve of the new tax proposals, but there need not be any regret on that account, as the higher quantum of distribution is amply justified by the impressive results for the year under review and the sound financial position of the Company. The gross profit for the year has staged a rise from Rs. 59.48 lakhs to Rs. 60.38 lakhs. Though the increase is negligible as compared with that noted in the previous year, it has helped the Company establish a fresh record in profit since 1947-48, when the profit reached a high of Rs. 66.43 lakhs. The net profit has, however, slipped back from the record high of Rs. 34.69 lakhs for 1954-55 to Rs. 33.34 lakhs. This is solely due to the increase in the tax burden; the provision for taxation has been stepped up from Rs. 14.50 lakhs to Rs. 17.75 lakhs. The transfer to the depreciation account has, on the other hand, been pruned from Rs. 4.19 lakhs to Rs. 3.16 lakhs. This allocation has not been utilised to write down the fixed assets, as in the previous years, but has been set aside to a newly created depreciation reserve. Out of the net profit, a handsome amount of Rs. 15 lakhs (as against Rs. 19 lakhs in the previous year) has been ploughed back, of which the general reserve gets Rs. 8 lakhs (Rs. 7 lakhs), reserve for housing Rs. 5 lakhs (Rs. 10 lakhs) and reserve for gratuity Rs. 2 lakhs (Rs. 2 lakhs)—the figures within brackets refer to the appropriations in the previous year. The dividend distribution requires Rs. 3.76 lakhs more at Rs. 18.80 lakhs, due to the remuneration on the capital represented by the issue of bonus shares for half the year from 1st April 1956.

Company's Progress

The following table shows at a glance the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sale proceeds of sugar (gross) ..	148.12	141.70	127.65	177.62
Closing stocks*	43.69	32.46	20.45	14.37
Crop, manufacturing and other expenses	73.72	71.63	64.94	68.57
Excise duty and sugarcane cess.	28.28	24.89	18.23	28.10
Gross profit	60.38	59.48	62.98	56.29
Managing Agents' remuneration	6.13	6.10	5.45	5.73
Provision for—				
Depreciation	3.16	4.19	3.80	4.76
Taxation	17.75	14.50	13.00	21.00
Net profit	33.34	34.69	30.74	24.79
Transfer to—				
Reserve fund	8.00	7.00	6.00	3.00
Other funds	7.00	12.00	10.00	7.00
Dividend	18.80* (32%)	15.04 (32%)	15.04 (32%)	15.04 (32%)
Carry forward	0.53	0.99	0.74	0.04

* Dividend of Rs. 16 per share on the old shares and Rs. 8 per share on the new bonus shares, ranking for dividend from 1st April, 1956.

The Company's performance in respect of production, field yields and recovery of sugar during the year was quite encouraging, as will be clear from the following extracts from the Directors' report:

"The year under review was very satisfactory from both the estate and the manufacturing sides, field yields and recovery being higher than last year. Some outside cane was purchased during this season and the quantity of finished sugar was also slightly higher than the previous year, which recorded the highest production of the factory.

"Sugar releases continued to be controlled by the Central Government and there was a balance of about 30 per cent. of the production still to be released for sale at the end of the financial year. The sugar market throughout the year ruled steady, but quiet, and the prices realised were more or less the same as in 1954-55.

"The overall efficiency of the factory was maintained at a high level which was partly reflected in the higher recovery. However, to improve further the quality of the sugar produced, your Directors have decided to install some additional machinery and orders will be placed on receipt of the requisite import licences. On the estate side, results continued to be satisfactory and the condition of the standing crop is good."

The higher production of sugar is duly reflected in the increase of Rs. 6.42 lakhs in sale proceeds of sugar and of Rs. 11.23 lakhs in the value of closing stocks.

The Company's latest balance-sheet reflects a very sound financial position. The paid-up capital of the Company was raised during the year by 50 per cent. to Rs. 70.50 lakhs, by the issue of bonus shares in the ratio of one share for every two shares, utilising for the purpose a sum of Rs. 23.50 lakhs from the general reserve. With this issue, the total amount capitalised so far during the 37 years of its history comes to Rs. 51.70 lakhs. Even after the capitalisation of such a large sum, the reserves and surplus of the Company, as at the end of the year under review, stand at Rs. 100.15 lakhs, of which general reserve alone accounts for Rs. 65.19 lakhs. The general reserve includes Rs. 40.19 lakhs being the "surplus provisions made in previous year" transferred during the year; of this surplus provision, a sum of Rs. 32.81 lakhs has come from the provision for taxation. The gross block of the value of Rs. 148.41 lakhs has been well written down to Rs. 39.49 lakhs. The investments, which are all in Gilt-edged securities, aggregate Rs. 22.62 lakhs. Current assets amount to Rs. 179.64 lakhs, of which stocks of sugar account for Rs. 43.69 lakhs, crop-in-progress for Rs. 40.71 lakhs and cash balances for Rs. 69.59 lakhs. The total liquid assets (cash balances and investments) amount to an impressive sum of Rs. 92.21 lakhs, as against current liabilities and provision for taxation amounting to no more than Rs. 71.11 lakhs. It will thus be seen that the financial position of the Company is very sound, reflecting the efficiency of management and the judicious policy adopted by the Directors in regard to the appropriation of profits. It is a pity that the fiscal policy of the present Government is such as to place a penalty on the wisdom and efficiency displayed by this Company's management.

The Rs. 50 fully paid-up shares of the Company are being currently quoted at Rs. 252-8 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.76 per cent. per annum, free of income-tax.

CENTURY MILL TO CAPITALISE RESERVE

The Directors of the Century Spinning and Manufacturing Company, Ltd., (Managing Agents: Messrs. Birla Brothers Ltd., Bombay), have decided to capitalise a sum of Rs. 1.64 crores out of the reserves and issue bonus shares in the ratio of three shares for every two shares held by the shareholders (and not in the proportion of one share for every three shares as was stated on page 1075 of our last issue). The decision, which is subject to the sanction of the Controller of Capital Issues, when implemented, will raise the paid-up capital of the Company from Rs. 1.09 crores to Rs. 2.73 crores. In order to facilitate this increase, as also similar increases in future, the authorised capital is to be expanded from the present level of Rs. 1.50 crores to Rs. 4 crores.

The total reserves of the Company as on 31st December 1955 amount to Rs. 2.64 crores and after capitalisation on the above basis, they will still leave a substantial balance of Rs. 1. crore in the reserve account. The Company had issued bonus shares on two previous occasions, once in November 1947 when a sum of Rs. 27.36 lakhs was capitalised and one share for every share held was issued as bonus, and again in October 1948, when a scrip-for-scrip bonus was issued by capitalising Rs. 54.71 lakhs. If and when the present proposal is sanctioned and carried out, the Company would have raised its paid-up capital ten times from Rs. 27.36 lakhs to Rs. 2.73 crores by capitalisation of reserves alone.

HINDUSTAN MOTORS' RESULTS

DISAPPOINTING

The results of the Hindustan Motors Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta), for the year ended 31st March 1956, are very disappointing. The improvement in sales and profit is small and very much below expectations. The depreciation account is still in large arrears, aggregating as much as Rs. 145 lakhs. In view of this, and of the fact that a few months ago, the Company raised its capital by issuing Rs. 5 crores in the form of 6 per cent. tax-free cumulative preference shares, the chances of ordinary shareholders getting a return at an early date are less bright than was assumed by many on the stock exchange. It is not, therefore, surprising that the Company's shares are now standing at a substantial discount of Re. 1-8, after going up to a premium of nearly a rupee in June last and of As. 9 in August 1956. The only consolation the shareholders can have is that their savings are being put to use for establishing a key industry, and that the absence of a return on their investment for several years now and for some more years in the future, represents their contribution to the economic progress of the country. Viewed from this angle, they will be glad to know that the Company has made commendable progress in the production of components and parts, thereby taking the industry forward near to self-sufficiency.

The Company's working during the year under review resulted in a gross profit of Rs. 47.32 lakhs, as against Rs. 35.64 lakhs for 1954-55. The net profit, after providing Rs. 37.36 lakhs for depreciation as against Rs. 34 lakhs in the previous year, amounts to Rs. 9.96 lakhs, an increase of Rs. 8.32 lakhs over the year. Of this, as much as Rs. 9 lakhs have been set apart for contingency reserve, the balance of net profit has been added to the sum brought in, so that the carry forward is about a lakh higher at Rs. 6.16 lakhs. The following comparative table shows the progress of the Company in the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sales	773.39	708.74*	298.68*	293.74*
Other income	17.20	8.36	2.04	0.72
Stocks	338.92	54.57	34.88	59.36
Manufacturing and other expenses	743.26	701.13	275.48	280.58
Gross profit	47.32	35.64	0.76	5.37
Provision for—				
Depreciation	37.36	34.00	..	3.00
Taxation	..	1.64	0.76	2.06
Net profit	9.96	1.00	..	0.31
To contingency reserve ..	9.00	1.00	..	..
Carry forward	6.16	5.19	4.55	3.79

* Net figures.

It will be observed from the table that sale proceeds have gone up further from Rs. 708.74 lakhs in 1954-55 to Rs. 773.39 lakhs in 1955-56. The gross profit at Rs. 47.32 lakhs is, however, equal to only about 6 per cent. of sales, as against only 5 per cent. in the previous year. The net profit is very small, in that it is not enough even to provide for depreciation in full. The Directors say, as already mentioned, that depreciation amounting to over Rs. 145 lakhs still remains to be provided for up to the end of March last.

Low Prices

The reason for this state of affairs is not far to seek. The manufacturing and other expenses at Rs. 743.26 lakhs are almost equal to the sales, amounting to Rs. 773.39 lakhs. The Directors' explanation for the lack of improvement in working results, in spite of the improvement in the physical turnover, is the low prices fixed by the Government for the Company's cars. The interim increase in the prices of Studebaker vehicles recently permitted by the Tariff Commission is expected to be helpful in the current year. Final prices for the same are under consideration by Government. The question of upgrading the price of the Landmaster car also is being considered by the Government and a decision is expected soon. Since the Directors signed and circulated their report to the shareholders, the Government has imposed an excise duty of Rs. 3,000 on all big cars such as the Studebaker. It remains to be seen whether this step will adversely affect the turnover in the current year.

The table above shows the closing stocks at the end of March last at the high figure of Rs. 338.92 lakhs, as against only Rs. 54.57 lakhs a year before. This is due partly to the increased indigenous production of components and spare parts and partly to the large quantity of raw materials remaining unused, the latter item alone being of the order of Rs. 234.68 lakhs.

Considerable progress has been made by the Company in its manufacturing programme, as will be seen from the following extract from the Directors' report:

"During the year under review, production of a number of components and parts required for Hindustan Landmaster cars was developed indigenously and imports thereof were stopped. Tooling for body panels is nearing completion and the manufacture thereof and related components will be taken in hand shortly. Consequently, the proportion of indigenously manufactured parts will go up considerably. Studebaker cars and trucks are also being progressively manufactured in your plant. The V8 engines which are being fitted on Studebaker cars and trucks are now substantially being manufactured in your factory. Necessary steps are being taken to manufacture chassis frames, axles, gear box, etc., of Studebaker vehicles and arrangements for purchasing equipments for the same are also being made."

The following synopsis of the Company's balance-sheet as on 31st March 1956 will give a broad picture of its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ..	4,96,13,250	Gross block ..	3,94,18,142
Forfeited shares ..	1,92,450	Less—Depreciation	1,31,88,541
Continuingency reserve..	10,00,000		
Liabilities ..	2,07,79,090	Net block ..	2,62,29,601
Undistributed surplus.	6,16,062	Stock	3,38,91,675
		Stores, tools, etc.	88,41,395
		Debts, deposits and advances ..	54,20,740
		Investments* ..	14,48,653
		Cash	18,68,788
	Rs. 7,22,00,852		Rs. 7,22,00,852

* Mainly in subsidiaries, the shares of which are not quoted

TITAGHUR'S PROFIT HIGHER

DISTRIBUTION ON SHARES RAISED

FAIRLY satisfactory results are disclosed by the accounts of the Titaghur Paper Mills Co., Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co. Private Ltd., Calcutta) for the six months ended 31st March 1956. Smooth labour relations at both the mills, a factor rather not quite common in these days of industrial unrest, strengthened by the Company's renovation programme raising the level of production to very near the installed capacity, have been responsible for the gratifying results. The production of saleable paper for the year ended 31st March 1956 was the highest in the history of the Company. It is true that deliveries of raw materials and coal during the half-year were subjected to periodical restrictions arising from a scarcity of wagons at loading points, but, fortunately, these did not have any adverse effect on the Company's production. The better working conditions have enabled the Directors to recommend a slightly higher dividend at 22½ per cent. as against 20 per cent. paid for the previous two half-years.

The gross profit advanced by Rs. 2.39 lakhs to Rs. 59.20 lakhs. Although this is Rs. 2.39 lakhs less than the profit for the corresponding period of the previous year at Rs. 61.59 lakhs, viewed in the context of a deficit of Rs. 3.19 lakhs suffered in the half-year ended 31st March 1954, it should be considered quite encouraging. After paying Managing Agents' commission and providing for depreciation and taxation, the net profit stands at Rs. 31.89 lakhs, as against Rs. 28.04 lakhs in the previous half-year.

The return to ordinary shareholders at Re. 1-2 per share, or 22½ per cent. per annum, is made up of a dividend of As. 14 and a bonus of As. 4 per share, as against a return of 20 per cent. per annum, made up of a dividend of As. 12 and a bonus of As. 4 per share for the previous two half-years.

The following comparative table brings out the progress of the Company during the past three half-years:

(In lakhs of rupees)

	For the half-year ended			
	31-3-56	30-9-55	31-3-55	30-9-54
Sale proceeds	323.51	321.35	269.01	220.62
Stocks	25.08	30.99	29.75	3.26
Other income	3.79	1.92	1.58	3.56
Manufacturing expenses ..	163.66	170.17	173.90	143.04
Other expenses	98.52	97.54	61.59	52.78
Gross profit	59.20	56.81	61.59	29.62
Managing Agents' commission.	4.08	3.94	4.25	2.14
Provision for—				
Depreciation	7.73	7.83	6.77	4.65
Taxation	15.50	17.00	17.00	9.00
Net profit	31.89	28.04	33.57	13.83
To general reserve	..	1.00	6.25	..
,, other reserves and funds ..	18.00	14.75	17.80	1.55
Dividends—				
Preference and preferred ordinary	1.02	1.02	1.02	1.02
Ordinary	12.60 (D. 17½ % + B. 5% p.a.)	11.20 (D. 15% + B. 5% p.a.)	11.20 (D. 15% + B. 5% p.a.)	8.40 (D. 15% p.a.)
Carry forward	1.23	0.96	0.89	3.59

A notable feature revealed by the table above is that, while production has reached its peak and has created a record for the Company, manufacturing expenses have gone down by as much as Rs. 6.51 lakhs. This might be due to operation economies arising from the installation of improved machinery. The rise in other expenses is less than Rs. 1 lakh and hence not much. The Company's commendable policy of providing for the rainy day has been well maintained for this half-year also. Thus, a sum of Rs. 18 lakhs, representing 56 per cent. of its net profit, has been ploughed back to the reserves, as against Rs. 15.75 lakhs set apart six months earlier.

The Company's financial position, as disclosed by its latest balance-sheet, is impressive. Its paid-up capital of Rs. 142.92 lakhs is divided into 11,500 eight per cent. first cumulative preference shares of Rs. 100 each, 15,000 4½ per cent. second cumulative preference shares of Rs. 100 each 175,000 preferred ordinary shares of Rs. 2-8 each and the balance in two categories of A and B ordinary shares of Rs. 10 each. This is supplemented by reserves and surplus aggregating Rs. 342.51 lakhs; this sum gives one an idea of the extent to which the wise policy of conservation of profits adopted by the Directors has benefited the Company. The provision for taxation stands at Rs. 18.83 lakhs, while the current liabilities are of the order of Rs. 119.29 lakhs. These are covered by a large margin of current assets aggregating Rs. 326.83 lakhs, of which investments in gilt-edged securities and shares of subsidiary companies account for Rs. 51.86 lakhs, finished stock and raw materials Rs. 162.61 lakhs, book debts considered good Rs. 72.25 lakhs and cash and other balances Rs. 18.38 lakhs. The gross block of the value of Rs. 594.12 lakhs, including an addition of Rs. 13.90 lakhs during the half-year under review, has been written down to a book value of Rs. 265.18 lakhs. Work in progress amounts to Rs. 31.54 lakhs.

Referring to the progress of the new mill project in Orissa, the Directors, in their report, observe thus:

"Towards the end of the half-year covered by this report, the Government of Orissa acquired and delivered to the Company the land for the railway siding and for the mill site. Later it was found that a minor technical error had rendered the acquisition proceedings invalid, but up to date the Government has not instituted fresh land acquisition proceedings. In the meantime, earthwork on the extensive siding embankment was begun, but the flooding resulting from the early and prolonged rains have restricted the progress which would otherwise have been made. The Orissa Government permitted the Company to operate the new bamboo areas during the half-year, pending the signing of the leases, which are now being prepared."

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 37 *ex-div.* On the basis of the latest dividend, the yield on the shares works out to 6 per cent. per annum, free of income-tax.

Points From The Chair

Pest Control and Insecticides

"IN the second Five-year Plan, considerable stress has been laid on the expansion of agricultural production in the country and for measures to improve the health of the nation, in both of which pest control materials and insecticides will play an important role in controlling, if not eradicating, the insects which destroy a considerable quantity of the country's food crops and sap the health and vitality of a large number of our population. Our experience has brought us to the conclusion that rather than depend upon half a dozen formulators for the offtake of our Benzene Hexachloride, we should equip ourselves with facilities to produce the ready-to-use formulations required for both malaria control and pest control either on our own or in collaboration with some well-known firm who would provide technical guidance and operative knowledge. In pursuance of this policy, we have concluded negotiations with the well-known British firm of Fisons Pest Control Ltd. for the preparation and sale of a wide range of insecticides and pesticide formulations. This firm has considerable knowledge in the technology of pest control materials, not only applicable to Europe but also to Asia and Africa. It is proposed jointly to promote a new company for this purpose to be known as Tata-Fisons Private Ltd., with an initial authorised capital of Rs. 25 lakhs on the basis of equal capital participation. This proposal has received the approval of the Government of India and steps are being taken to finalise the agreement and promote the Company."

J. R. D. TATA,
Tata Chemicals Ltd.

Output in Mines

"The view has been expressed that, when a mine closes, any gold-bearing ore left unmined in it as being uneconomic will be lost to the country for ever. That view should not be accepted unreservedly. An upward adjustment in the value of gold in terms of other commodities is already overdue; important scientific discoveries have been made and developed into engineering techniques during the last two decades, and undoubtedly such progress will continue. Bearing these two important points in mind, problems, which for economic and physical reasons now appear to be insurmountable, may well prove to be soluble. It is, of course, in the mutual interest of investors, the mining communities and of the nation as a whole that the potential value of mining areas be realised to the greatest economic extent. A general increase in the price obtainable for gold would, of course, properly restore profitability of gold mining but while the price of gold remains fixed at its present level the problem facing the industry hinges on rising working costs."

P. S. HAMMOND,
West Witwatersrand Areas Ltd.

World Speed Record

"The major item, of course, was the obtaining of the absolute World Air Speed Record for Great Britain, at a speed of 1,132 m.p.h. This represents a major achievement in British aviation, often said by prominent people in this country and elsewhere to be years behind the U.S.A. To hold the speed record for 9 months in this rapidly developing field—and we still hold it—shows that in this we are ahead of the U.S.A. As far as we know, they have been unable to exceed a speed of 1,015 m.p.h. while fulfilling the exacting flying conditions laid down by the international rules governing speed record attempts. . . . We have made considerable studies of possible developments of the aircraft, both for more advanced research and for military purposes, but up to the present date no orders have been given for any of this work. To us, this seems strange, as we are continually hearing about such things as the shortage of technical staff and the need to make maximum use of available facilities; yet the straightforward course of building on an already well-laid foundation is not taken, in spite of the time it would save and the technical uncertainties which it would remove."

R. T. OUTEN,
Fairey Aviation Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

DELHI CLOTH AND GENERAL MILLS CO., LTD. Annual General Meeting, Delhi, 18th December 1956. Dividend: Rs. 2-8 per ordinary share and As. 4 per share (on shares of Rs. 2-8 paid). Transfer books remain closed from 5th to 18th December 1956, both days inclusive.

BIRPARA TEA CO., LTD. Annual General Meeting, Calcutta, 22nd December 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 13th to 22nd December 1956, both days inclusive.

MCLEOD AND CO., LTD. Annual General Meeting, Calcutta, 24th December 1956. Dividend: Rs. 22-8 per ordinary share and Re. 1-12 per deferred ordinary share. Transfer books remain closed from 10th to 24th December 1956, both days inclusive.

GAIRKHATA TEA CO., LTD. Annual General Meeting, Calcutta, 26th December 1956. Dividend: *Nil.* Transfer books remain closed from 1st to 26th December 1956, both days inclusive.

BETJAN TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 1st to 27th December 1956, both days inclusive.

ANANDA-BAG TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Re. 1 per share. Transfer books remain closed from 1st to 27th December 1956, both days inclusive.

CHAMONG TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: *Nil.* Transfer books will remain closed from 20th to 27th December 1956, both days inclusive.

UNION COAL CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: *Nil.* Transfer books will remain closed from 20th to 27th December 1956, both days inclusive.

BOR PUKHURI TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 20th to 27th December 1956, both days inclusive.

DIMAKUSI TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Rs. 2 per share. Transfer books will remain closed from 20th to 28th December 1956, both days inclusive.

SEAJULI TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Re. 1-8 per share. Transfer books will remain closed from 20th to 27th December 1956, both days inclusive.

GOHPUR TEA CO., LTD. Annual General Meeting, Calcutta, 27th December 1956. Dividend: Rs. 3 per share. Transfer books will remain closed from 20th to 27th December 1956, both days inclusive.

BELAPUR CO., LTD. Annual General Meeting, Bombay, 28th December 1956. Dividend: Rs. 16 per old share and Rs. 8 per new bonus share. Transfer books remain closed from 30th November to 29th December 1956, both days inclusive.

DUFFLAGHUR TEA CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Rs. 4 per share (includes interim dividend of Re. 1 per share). Transfer books will remain closed from 21st to 28th December 1956, both days inclusive.

SOOM TEA CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Re. 1 per share (final). Transfer books will remain closed from 21st to 28th December 1956, both days inclusive.

EAST INDIA TEA CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 21st to 28th December 1956, both days inclusive.

JUTLIBARI TEA CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: *Nil.* Transfer books remain closed from 1st to 28th December 1956, both days inclusive.

LACKATOORAH TEA CO., LTD. Annual General Meeting, Calcutta, 28th December 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 1st to 28th December 1956, both days inclusive.

TENGPANI TEA CO., LTD. Annual General Meeting, Calcutta, 26th December 1956. Dividend: As. 12 per share. Transfer books remain closed from 1st to 26th December 1956, both days inclusive.

INDIAN PLASTICS LTD. Annual General Meeting, Bombay, 28th December 1956. Dividend: As. 4 per share. Transfer books will remain closed from 22nd December to 4th January 1956, both days inclusive.

HANTAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 29th December 1956. Dividend: Rs. 6 per share. Transfer books will remain closed from 19th to 29th December 1956, both days inclusive.

LEDO TEA CO., LTD. Annual General Meeting, Calcutta, 29th December 1956. Dividend: Re. 1 per share (being the interim dividend). Transfer books will remain closed from 19th to 29th December 1956, both days inclusive.

COMPANY REGISTRATIONS

EAGLE VACUUM BOTTLE MANUFACTURING CO., PRIVATE LTD. (Managing Director: Mr. Abdulla Soomar.) Business: Manufacture of glass and glassware. Authorised capital: Rs. 5,00,000. Private company. Address: 144-46, Sheriff Devji Street, Bombay 3.

CHUNILAL PRABHUDAS AND CO. (BOMBAY) PRIVATE LTD. (First Director: Mr. Chunilal Shah.) Business: Dealers in metal products. Authorised capital: Rs. 5,00,000. Private company. Address: 211/12, Himalaya House, Bombay.

RAJA CONSTRUCTION CORPORATION PRIVATE LTD. (First Director: Mr. Raja Mahant Digvijai Das.) Business: Construction of buildings. Authorised capital: Rs. 5,00,000. Private company. Address: 25, Vasundhara Building, Pedder Road, Bombay 26.

MCLEOD & COMPANY RAISES DIVIDEND

OVER-PRODUCTION AFFECTS ANGLO-INDIA JUTE

McLeod and Co., Ltd.

THE directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Trading.—The profit for the year shows a substantial improvement by comparison with that for 1954, due chiefly to improved results from the Engineering department and an increase in dividend income.

Revenue from the Jute, Tea and Insurance departments was lower than for the previous twelve months and the Shipping department figures were again disappointing. The Agency department showed a loss for the year.

The profit for the year amounts to Rs. 31,89,815 (Rs. 24,38,923) to which must be added surplus on sales of investments Rs. 835 (Rs. 1,870), dividends forfeited Rs. 1,250 (Rs. 3,261) and balance brought forward from 1954 Rs. 1,87,834 (Rs. 1,07,086) making a total of Rs. 33,79,734 (Rs. 26,11,588 including E.P.T. post-war refunds amounting to Rs. 60,448). Out of this amount, the directors have made a provision for taxation amounting to Rs. 10,00,000 (Rs. 9,20,000) and have set aside to general reserve Rs. 3,50,000 (Rs. 3,13,754), to investment reserve Rs. 3,35,000 (*nil*) and to convertible notes redemption reserve Rs. 2,00,000 (Rs. 2,00,000) leaving a sum of Rs. 14,94,734 (Rs. 11,77,834). From this amount must be deducted the interim dividends for the year ended 31st December 1955, declared payable by the directors on 1st July 1955, on 10,000 5 per cent. cumulative first preference shares, subject to deduction of tax (gross) Rs. 25,000 (Rs. 25,000), on 40,000 5 per cent. cumulative second preference shares, without deduction of tax Rs. 1,00,000 (Rs. 1,00,000), the second interim dividends for the year ended 31st December 1955, declared payable by the directors on 3rd January 1956 on 10,000 5 per cent. cumulative first preference shares, subject to deduction of tax (gross) Rs. 25,000 (Rs. 25,000) and on 40,000 5 per cent. cumulative second preference shares, without deduction of tax Rs. 1,00,000 (Rs. 1,00,000) leaving a balance of Rs. 12,44,734 (Rs. 9,27,834). This amount the directors recommend should be distributed as follows:—

Dividend at 22½ (17) per cent. per annum on 40,000 ordinary shares or Rs. 22-8 (Rs. 17) per share for the year ended 31st December 1955 absorbing Rs. 9,00,000 (Rs. 6,80,000) and dividend at 17½ (12) per cent. per annum on 50,000 deferred ordinary shares or Re. 1-12 per share for the year ended 31st December 1955 absorbing Rs. 87,500 (Rs. 60,000) leaving to be carried forward Rs. 2,57,234 (Rs. 1,87,834).

As the period covered by these accounts ended prior to the commencement of the Companies Act, 1956, they have been prepared in accordance with the provisions of the Indian Companies Act, 1913.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	95,00,000	Goodwill ...	20,00,000
Reserves ...	80,86,900	Block ...	17,46,252
Provision for taxation ...	16,01,192	Stocks ...	9,34,478
Liabilities ...	1,82,16,385	Debts, deposits and advances ...	49,26,293
Profit and loss account ...	2,57,234	Investments	2,77,54,990
		Cash ...	2,99,698
Rs.	3,76,61,711	Rs.	3,76,61,711

Anglo-India Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

Adequate provision for taxation having already been made in the Company's accounts for the next preceding half-year, no further reserve is necessary. After providing Rs. 5,25,000 (Rs. 4,00,000) for depreciation, there is a credit balance on profit and loss account of Rs. 1,18,443 (Rs. 5,79,813). To this is added the transfer from contingencies reserve of Rs. 3,00,000 (*nil*) and the balance brought forward from the previous half-year of Rs. 1,23,973 (Rs. 1,47,643) making a total of Rs. 5,42,416 (Rs. 7,27,456). From this the directors recommend that the following dividends be paid without any deduction for income-tax paid by the Company:—

On preference shares at the rate of 7 per cent. per annum (Rs. 3-8 per share) Rs. 1,40,000 (Rs. 1,40,000) and on ordinary shares at the rate of 7 (10) per cent. per annum [Rs. 3-8 (Rs. 5) per share] Rs. 1,72,224 (Rs. 2,46,035) leaving to be carried forward a balance of Rs. 2,30,192 (Rs. 3,86,035 after transferring Rs. 2,00,000 to machinery replacement reserve).

As the Government of West Bengal insisted on settlement of the outstanding sales tax liability on account of supplies made to the Department of Industries and Supplies, Government of India, before 31st March 1956, the directors were obliged to pay the sum of Rs. 2,70,141 which has been charged as a separate item in the profit and loss account and an amount of Rs. 3,00,000 has been transferred from the contingencies reserve account to cover this debit. As mentioned in the last report attempts are however being continued to recover this payment from the Government of India.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills continued to work with 12½ per cent. of the looms sealed until 8th January 1956. This figure was reduced to 10 per cent. from 9th January 1956 and again to 5 per cent. with effect from 20th February 1956. The decision to unseal looms was taken by the Indian Jute Mills Association with the active encouragement of the Government of India and it was based on the assumption that there would be a marked increase in demand for jute goods, indications then being that Russia would come into the market with substantial orders. It is regretted, however, that the demand on the scale anticipated did not materialise and there has been a large measure of over-production during the current year which resulted in increased stocks and a sharp fall in goods prices, whilst the mills position was aggravated by a rise in the price of raw materials due to floods, transport difficulties and the greater demand due to increased production. At no time during the period under review was it possible to transact business simultaneously in raw jute and goods at a profit. With effect from 16th July, 2½ per cent. of the looms were resealed and a further 5 per cent. were resealed with effect from 17th September 1956, thus bringing the total number of looms sealed back to the position which had obtained at the beginning of the year. After the announcement of the proposal to seal 5 per cent. of the looms from the 17th of September, the directors are pleased to record that goods prices have markedly improved and that prospects are now more favourable.

The one encouraging feature of the goods market has been the increase in the internal consumption of jute goods, although the Indian demand absorbs only a small percentage of the total production of the Industry.

The rationalisation of the Company's group of mills is proceeding. As mentioned in the last report, after the closing of Jagatdal Mill, Upper Mill was worked on double shifts and this continued until the sealing of 5 per cent. looms on 17th September when, in accordance with the policy of supplying the maximum number of looms with yarn made on the new machinery, single shift working was resumed, the balance loom-hours being absorbed by Lower and Middle Mills.

The erection of new machinery and electrical equipment at Middle Mill is being carried out speedily and it is hoped that it will be completed shortly. Investigations are still in progress for finding a suitable new use for the building and facilities of Jagatdal Mill.

As will be seen from the notice convening the annual general meeting and the explanatory statement annexed thereto, the directors recommend the closing of the accounts annually instead of half-yearly as presently required by the Articles of Association. If this is approved by the Company, the next Annual General Meeting will be held to consider (*inter alia*) the accounts for the year ended 31st March 1957.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	89,20,700	Block ...	1,02,75,382
Reserves ...	69,00,000	Stocks ...	1,14,08,773

Liabilities ...	1,45,21,721	Debts, deposits and advances ...	38,25,576
Profit and loss account ...	2,30,192	Investments	41,23,695
		Cash ...	5,37,404
Rs.	3,12,93,992	Rs.	3,12,93,992

Hantapara Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The total profit for the year is Rs. 3,39,240 (Rs. 41,36,165). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 4,95,407 (Rs. 30,30,019), of which the directors have transferred Rs. 1,00,000 (Rs. 8,00,000) to revenue reserve. In January 1956 an agreement was entered into between the representatives of the Industry and employees on an industry-wise basis by which a bonus became payable to labourers for the years 1953 to 1956 inclusive. The joint payment for 1953-54 appears in the accounts but the exact formula for calculating the amounts due for 1955 and 1956 is at present under consideration and provision for the estimated amount for 1955 has also been made.

The Company's authorised capital was increased to Rs. 60,75,000 at an Extraordinary General Meeting held on 28th September, 1955. A resolution proposing the issue of 12,000 ordinary shares of Rs. 100 each credited as fully paid-up by way of a capital bonus to registered holders on 23rd May 1956, was duly approved by members at a General Meeting held on that day.

Dividend: The dividend on the preference shares was paid on 30th December 1955, leaving Rs. 3,91,407 (Rs. 16,06,019) now to be dealt with. It is proposed to pay a dividend of 6 (60) per cent. on the ordinary shares (equivalent to 9 per cent. on the old capital) and to carry forward Rs. 1,75,407 (Rs. 2,86,019).

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Crop: The outturns and average selling prices compared with those of the previous year are as under:—

Crop	1955 Maunds	1954 Maunds
Hantapara	19,982	21,809
Dumchipara	14,900	16,801

Average selling prices per lb.:—

	Rs. a. p.	Rs. a. p.
Hantapara	1 13 5	2 15 5
Dumchipara	1 12 5	2 12 3

Planted area remains at 2,427.06 acres, comprising 1,265.06 acres at Hantapara and 1,162 acres at Dumchipara. Estimates for 1956 provide for a total crop of 39,000 maunds at an outlay of Rs. 47,00,868 including inland freight and sale charges.

Baradighi Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The profit and loss account, after providing Rs. 1,35,418 (Rs. 1,35,122) for depreciation and Rs. 2,21,995 for labourers' bonus 1953-54, shows a balance of profit of Rs. 3,17,533 (Rs. 13,94,614) to which has to be added the balance brought forward from the previous year of Rs. 53,496 (Rs. 46,882) making a total of Rs. 3,71,029 (Rs. 14,41,496). Out of this amount there has been provided for taxation Rs. 89,000 (Rs. 3,92,000) and transferred to taxation equalisation reserve account Rs. 59,000 (Rs. 46,000) leaving an available balance of Rs. 2,23,029 (Rs. 4,43,496 after transfer of Rs. 5,00,000 to reserve account). From this the directors have paid a dividend at the rate of 30 (65) per cent. without any deduction for income-tax paid by the Company absorbing Rs. 1,80,000 (Rs. 3,90,000) leaving a balance of Rs. 43,029 (Rs. 53,496) to be carried forward to the next account. As the period covered by these accounts ended prior to the commencement of the Companies Act, 1956, they have been prepared in accordance with the provisions of the Indian Companies Act, 1913.

Share Capital: Reference was made in the directors' report for the year ended 31st December, 1954 that application had been submitted to the Government of India for permission to increase the capital of the Company to Rs. 12,00,000 and to make an issue of bonus shares to members at the rate of one new share for each share held. Although sanction to the proposals has now been accorded by the Government of India the directors having regard to the penal taxation provisions imposed by the Finance Act, 1956 in this respect have decided that it would not be in the interest of members to proceed meantime with the proposal to issue bonus shares.

Outturn and sales: The crop of leaf harvested from a mature plucking area of 1,002 (975.83) acres produced 18,263 (17,728) maunds of manufactured tea against an original estimate of 17,500 maunds. The following is a comparative statement of tea marketed and average prices realised for the past three years:—

		1955 Lbs.	1954 Lbs.	1953 Lbs.
Average sale price per lb.	Rs.	14,32,132 2-0-1	13,91,320 2-11-7	14,08,864 2-0-3

Costs: The average cost per lb. for 1955, exclusive of depreciation and labourers' bonus for 1953 and 1954, worked out as follows:—

At Estate Re. 1-0-7	*In Calcutta* Re. 0-8-4	*Total* Re. 1-8-11

Estimate: The total estimated crop for 1956 is 17,500 (17,215) maunds.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	19,96,571

Parkside (Neilgherry Hills) Estate Co., Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Matheson, Bosanquet and Co. Private Ltd., Belmont, Coonoor) submitted the audited accounts of the Company for the year ended 30th June 1956.

A crop of 561,930 lbs. Made Tea was secured against an estimate of 650,000 lbs. and compared with the crop of 592,150 lbs. for the previous season. The cost of production was 133.47 cents per lb. inclusive of 13.90 cents per lb. expended on manuring (estimate 11.69 cents per lb.) compared with 165.77 cents per lb. (inclusive of manuring 10.39 cents per lb.) for the previous season. Selling price secured this season averaged 256 cents per lb. as compared with 281 cents last season.

The profit for the year after providing for depreciation [Rs. 71,847 (Rs. 60,508)] is Rs. 5,61,145 (Rs. 5,74,387). After deducting provision for taxation Rs. 2,15,000 (Rs. 2,28,000) and balance expenses in connection with transfer of Company from Ceylon to India Rs. 9,082 (*nil*) there is a balance of Rs. 3,37,063 (Rs. 3,35,494). Adding to this the excess realised on 1953-54 stock and crop charges on tea over provided Rs. 3,223 (Rs. 3,471) there is an available balance of Rs. 3,40,286 (Rs. 3,38,965). From this the directors have paid 5 (10) per cent. interim dividend free of income-tax absorbing Rs. 67,680 (Rs. 1,35,360) and additional labour bonus for seasons 1952, 1953 and 1954 Rs. 26,984, leaving a sum of Rs. 2,45,622 (Rs. 2,03,605). With the balance brought forward from last year of Rs. 6,110 (Rs. 55,545) there is a total of Rs. 2,51,732 (Rs. 2,59,150). Out of this sum the directors have paid a final dividend at 10 (15) per cent. free of tax absorbing Rs. 1,55,360 (Rs. 2,03,040) and carried forward Rs. 1,16,372 (Rs. 6,110 after transfer of Rs. 50,000 to general reserve). In view of the very heavy expenditure which the Company may be called upon to face as a result of the Tribunal Award, the directors consider that a final dividend of only 10 per cent. should be declared although the actual working results for the past year justify a higher rate. The total capital expenditure incurred during the year amounted to Rs. 2,01,937 (Rs. 1,54,813).

Estimates for season 1956-57 provide for a tea crop of 6,25,000 lbs. made tea to cost 123.85 cents per lb. inclusive of 12.50 cents for manuring.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,53,600	Block ...	25,43,760
Reserves ...	15,32,030	Stock-in-trade	4,09,809
Provision for taxation ...	3,25,315	Stores and spare parts	85,656
Liabilities ...	3,47,921	Debts, deposits and advances ...	42,777
Profit and loss account ...	1,16,372	Cash ...	5,93,236
Rs.	36,75,238	Rs.	36,75,238

Grob Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Octavius Steel & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Crop.—The following table shows, the total crop made and the quantities sold for export and internal consumption:—

Gardens	Sold In Calcutta for Export. *Maunds.*	Sold In Calcutta for Internal Consumption. *Maunds.*	Total *Maunds.*
Doyang ...	5,313	1,950	7,263
Dessoie ...	4,893	581	5,474
Kanu	9,478	2,344	11,822
Total ...	19,684	4,875	24,559

The average price per lb. realised was Rs. 2 as compared with Rs. 2-15-7 per lb. obtained for the previous season's crop of 16,574 maunds. The Company's export quota for season 1955 was 15,161 (10,473).

The acreage of the gardens as registered with the Indian Tea Licensing Committee at 31st March 1956, was 1,909.84.

The revenue account shows a profit of Rs. 11,79,454 (Rs. 22,19,945) and after deducting from this pension to retired employees Rs. 3,627 (Rs. 1,060), gratuity Rs. 1,000 (*nil*), staff commission and bonus Rs. 96,859 (Rs. 1,52,826), managing agents' commission on profits Rs. 17,700 (Rs. 44,536), reserve for taxation Rs. 3,20,000 (Rs. 7,80,000), depreciation Rs. 1,21,171 (Rs. 91,808), bonus to labour, 1953-54 Rs. 2,87,729, law charges, etc. re-purchase of Doyang Tea Estate Rs. 25,234 (*nil*) leaving a balance of Rs. 3,06,134 (Rs. 11,38,018). Adding to this the interest on investments (net) Rs. 9,286 (Rs. 14,600), profit on sale of machinery Rs. 2,851 (*nil*) and excess provision for taxation—written back Rs. 30,000 (*nil*) there is a net profit for the year of Rs. 3,48,271 (Rs. 11,53,896). After adding to this the adjusted credit balance of Rs. 51,998 (Rs. 31,417) brought forward from the previous year, there is a credit balance of Rs. 4,00,269 (Rs. 11,85,313) on profit and loss account. The directors recommend that this balance be disposed of as follows:—

Pay a dividend of 25 (50) per cent. for season 1955 without any deduction for income-tax payable by the Company Rs. 2,75,681 (Rs. 5,51,362) place to reserve account Rs. 1,00,000 (Rs. 2,27,575) and carry forward Rs. 24,588 (Rs. 56,376 after placing Rs. 2,00,000 to building and machinery reserve account: Rs. 1,00,000 to contingency reserve account and Rs. 50,000 to hail insurance reserve).

In accordance with a tripartite agreement arrived at early this year the claim of labour for a bonus for the years 1953 to 1956 has to be satisfied. The bonus payable for the years 1953-54 and 1955 has been charged in the accounts now presented.

The estimates for season 1956 have been framed for a tea crop of 23,600 points at a total cost of Rs. 28,31,212 which excludes capital expenditure to the tune of Rs. 5,91,321.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,02,725	Block ...	27,20,160
Reserves ...	17,32,810	Stock of tea	17,81,716

Liabilities ...	17,39,076	Deposits and advances	4,39,667
Profit and loss account ...	24,588	Investments	4,02,087
		Cash ...	99,276
Rs.	57,05,163	Rs.	57,05,163

Indian Plastics Ltd.

The directors of the above Company (Chairman: Mr. L. N. Birla, Bombay) submit the audited accounts of the Company for the year ended 31st March 1956.

The profit and loss account after providing a sum of Rs. 2,00,000 (Rs. 1,60,000) for depreciation and including the carry-forward of the previous year shows a profit of Rs. 2,09,144 (Rs. 1,69,333), which the directors propose to appropriate as under:—

To pay dividend on 20,000 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) for the half-year ended 31st March 1955 Rs. 40,625 (Rs. 40,625), to pay dividend on 20,000 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) for the year ended 31st March 1956 Rs. 81,250, to pay dividend on 2,500 cumulative preference shares of Rs. 100 each at 5½ per cent. (less tax) from 1st July 1955 to 31st March 1956 Rs. 7,617, to pay dividend on 2,98,825 ordinary shares of Rs. 10 each at As. 4 (*nil*) per share Rs. 74,706 (*nil*) and to carry forward Rs. 4,945 (Rs. 6,833).

The production was slightly better all round during the current year. The *phenol formaldehyde moulding powders* manufactured by the Company are becoming popular and the directors have under consideration further expansion of this Department. They also intend manufacturing *urea formaldehyde moulding powders.*

The managing agents have, at the request of the directors as in the previous year forgone the office allowance and remuneration on profits payable to them for the year ended 31st March 1956.

The managing agents Messrs. Birla Brothers Private Ltd. (then Messrs. Birla Brothers Limited) resigned from the office of the managing agents as on 31st March 1956. The directors, while accepting the resignation of the managing agents, place on record their sincere appreciation for the valuable services and help rendered by them to the Company from time to time. Such help and assistance had been vital to the Company during the initial period.

The directors felt that the day to day affairs of the Company should be looked after by some managing agents who can efficiently manage the affairs of the Company and arrange to procure finances for Company, if necessary. They therefore approached Messrs. Birla Gwalior Private Ltd., with a request to act as managing agents of the Company. The necessary resolution for the appointment of Messrs. Birla Gwalior Private Ltd., as managing agents has been passed at the Extraordinary General Meeting held on 26th October 1956. Application to the Central Government for necessary approval has already been made and their sanction is awaited.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	52,43,375	Block ...	44,40,438

		Cash ...	64,514
Rs.	83,97,322	Rs.	83,97,322

Auckland Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

After providing Rs. 3,07,088 (Rs. 1,96,064) for depreciation, the profit and loss account showed a profit of Rs. 62,844 (Rs. 3,82,861) to which was added the amount brought forward from previous half-year Rs. 9,783 (Rs. 7,674) and transfer from general reserve Rs. 40,000 (*nil*), leaving an available balance of Rs. 1,12,627 (Rs. 3,15,535). The directors disposed of this amount as follows:—

In paying a dividend on the preference shares at the rate of 5½ per cent. per annum, without any deduction for income-tax paid by the Company Rs. 27,500, in paying a dividend on the redeemable preference shares at the rate of 4½ per cent. per annum, without any deduction for income-tax paid by the Company Rs. 33,750 (Rs. 33,750), in paying a dividend on the ordinary shares of Re. 1 (Rs. 6) per share, without any deduction for income-tax paid by the Company Rs. 40,000 (Rs. 2,40,000) and in carrying forward Rs. 11,377 (Rs. 14,285).

Stocks of jute have been valued at cost and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly with 12½ per cent. of the total looms sealed up to the week ended 7th January 1956. With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. were unsealed, leaving 5 per cent. of the total looms sealed.

Accounts in brief were as under:—

National Screw and Wire Products Ltd.

The directors of the above Company (Chairman: Mr. B. D. Agarwalla, Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The gross profit for the year amounts to Rs. 7,51,208, which after providing for depreciation and other expenses, leaves a net profit of Rs. 3,75,177. This sum together with the profit of Rs. 31,045 on account of adjustment for the year 1954 and the balance of Rs 1,91,445 brought forward from the previous year aggregate to Rs. 5,97,667, which the directors propose to recommend for the following appropriations:—

To provision for income-tax Rs. 2,00,000, to dividend at Re. 1-8 per share free of income-tax Rs. 1,50,000 and balance to be carried over to the next year Rs. 2,47,667.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,00,000	Block ...	5,58,749

COAL

(*Concluded from page 1140*)

rich deposits discovered in Krasnoyarsk Territory, Kemerovo, Kustanai and Pavlodar regions in southern Yakutia, the Trans-Baikal, Kolyma, Sakhalin and other places. Besides stepping up the development of coal production in the older eastern coal basins (Kuzbas, Karaganda and Cheremkhovo) large coal mines are being opened up in the Ekibastuz and Kushmurun coalfields in northern Kazakhstan, the Itat district in Kemerovo Region, the Bogotol, Nazarov and Irsha-Borodin districts in Krasnoyarsk Territory, and others.

In these districts thick coal seams are often found not far below the surface, which makes it possible to mine it open-face. This is five times as fast as underground mining and the cost of production is a third of the latter. It is expected that by 1960 roughly 122 million tons of coal will be produced by open-face mining. In the prospected sections large open-cast mines are being built, in which everything will be mechanised, from the removal of the overburden to the loading of the coal into freight cars. Soon, there will be despatched there huge excavators, now going into regular production, with 25 cubic-metre capacity bucket and 100 metre-long arm.

The coal from the open-face workings will be used as fuel for the large thermal electric stations of 600,000-900,000 kw. capacity and even of 1,200,000 kw. capacity each. They will produce cheap electricity, which together with the power to be furnished by the Siberian rivers will make it possible extensively to develop industries requiring heat and power.

In the next 10 to 15 years, it is planned to develop in the eastern areas one of the country's largest bases for the production of coal and electric power. By 1960 coal output there is to reach up to 280 million tons.

The Soviet coal industry possesses an enormous quantity of mining machinery, which makes the work of the miners easier and steeply raises labour productivity. 1,500 coal combines and over 4,000 cutting machines are used to dig coal underground, and more than 2,500 special machines to load coal and rock, and 10,000 electric locomotives to pull the heavy trains in the drives. Along with improving the tried and tested mechanical ways of underground and open-face mining, the coming year will see a considerable development of hydraulic mining and underground gasification. However, the decisive factor for successful work of the coal industry is people, qualified personnel. To operate and keep in good condition the great number of machines, highly qualified workers who understand machinery are needed, and such training is provided. In the first half of this year over 13,000 miners learned new underground trades. The underground miners are getting a six-hour day.

QUESTION HOUR IN PARLIAMENT

Free Trade Area

SUBJECT to certain safeguards, the proposed European free trade area will not affect India adversely. The Government of India has received a plan from the U.K. Government regarding the formation of the area. Full details of the plan are still being worked out.

* * * *

Decimal Coinage

As regards the steps taken by the Government to produce adequate stocks of new types of small coins under the decimal coinage system, the three mints of the Government of India are working at their full capacity on a 54-hour week and the combined output of the mints is approximately 80 million pieces of coins a month. It is not possible at this stage to estimate what the possible demand from the public may be for such coins and whether the quantities made available will be adequate to meet all the demands, but, in any case, no inconvenience to the public is likely to arise, in view of the fact that the existing coins will continue to be legal tender, along with the new decimal coins, for a period of at least three years from 1st April 1957.

—*T. T. Krishnamachari*

Aluminium Industries

The expert committee for the development of the aluminium industries has recommended that the site at Mettur in Salem district (Madras) is the first site where a 10,000-ton unit can be installed. Later, a similar unit can be installed at a suitable site at Rihand in Uttar Pradesh based on power from the Rihand Project.

—*Morarji Desai*

Tobacco Exports

Agreement has been reached between the State Trading Corporation of India and the Tobacco Monopoly in the Soviet Union for the sale of 2,000 tons of Indian tobacco to the U.S.S.R. Some accumulation of tobacco has been reported from Andhra State. Apart from setting up an Export Promotion Council for tobacco, sponsoring trade delegations and participating in exhibitions, the Government of India has concluded an agreement for the sale of 2,000 tons of tobacco to the Soviet Union. The Indian Vice-Consul at Antwerp has been successful in persuading the Tobacco Monopoly in Czechoslovakia to take 150 tons of Indian Tobacco as a trial order. If the trials are successful, larger orders may be expected in 1957 and 1958. In addition, the Export Promotion Council has aroused some interest in Indian tobacco in Egypt, and some business may be expected. Further, the Indian Leaf Tobacco Development Company has been encouraged to increase its purchases.

* * * *

Pakistan Cement

Supplies of cement from Pakistan are expected to be received from now on till August next year. Supplies had till now been delayed because of the withdrawal by Pakistan of certain railway freight concessions. As a result, the whole matter had to be renegotiated. It will not be in public interest to disclose details of the new deal, as it may render further negotiations in regard to purchase of cement from Pakistan or elsewhere difficult.

—*D. P. Karmarkar*

Machine-Designing Workshop

The Government is considering a proposal for establishing a machine-designing workshop in Delhi to design new types of machines and manufacture prototypes of these newly-designed machines. The West German Government has sent an informal offer of assistance for the purpose, but the size and nature of the assistance have yet to be discussed. Details of the project have not yet been finalised. The Government is considering the setting up of extension centres of this workshop in Ludhiana and Batla in the Punjab.

—*Nityanand Kanungo*

Electrical Equipment Factory

The technical consultants for the proposed heavy electrical equipment factory have recently submitted a detailed project report which is being examined by the Government. A State-owned private limited company has been registered and technical personnel are being selected for training in the U.K.

—*K. C. Reddy*

Second Shipyard

An offer has been received from a West German firm for building a second shipyard in India. But the matter is as yet in a preparatory stage.

* * * *

Ambar Charkas

The production of *khadi* or handloom cloth woven out of Ambar yarn is estimated at 3.94 million sq. yards in the current financial year. The All-India *Khadi* and Village Industries Board assumes that 35,000 Ambar Charkas will be engaged in commercial production during the first three months of 1957.

—*Satish Chandra*

Jute Mills

Efforts are being made by the West Bengal Government's conciliation machinery to arrive at a settlement with the workers and get the jute mills in the 24 Parganas district reopened. The lock-out of these mills is the result of stoppage of work by workers in various departments. Over 1,000 workers are affected. A large number of them are prepared to return to work, but the Communist Party is coming in their way.

* * * *

Two major and four minor workshops will be started shortly in Kerala State to provide employment to the educated unemployed. It is proposed to organise similar workshops in other States also in due course. Kerala State has been selected first for the starting of the workshops because the unemployment position is more acute there. A sum of Rs. 2,93,580 has been granted to the Government of Kerala to be utilised for the training of educated unemployed to be absorbed in the workshops.

—*Abid Ali*

Notices

THE INDIAN IRON AND STEEL COMPANY, LIMITED

AT THE ADJOURNED ANNUAL GENERAL Meeting of the Indian Iron and Steel Company, Ltd., held on Friday the 7th December 1956, the following resolution was passed:

"That a dividend of Re. 1 per share without deduction of Income-tax be declared in respect of each of the Company's 51,83,708 Ordinary shares of Rs. 10 each and that such dividend (other than that retained by the Company under the agreement dated 6th December, 1952, relative to the shares held on Investment Realisation Account) be paid on or after the 17th December, 1956, to Ordinary shareholders whose names appear on the Company's Register on the 30th day of November, 1956, or to their mandatees."

The Shareholders added a rider to the above resolution that they wish to place on record that they passed the dividend resolution under protest and without prejudice to their case to be put forward by a representative deputation of shareholders which will shortly present itself to Government in Delhi for the purpose of fully explaining their views.

UPON INSTRUCTIONS FROM THE KANAN Devan Hills Produce Co., Ltd.,

FIGGIS (PRIVATE) LIMITED

will offer for sale by public auction (unless previously disposed of by private treaty) at the Joint Sale Room 4/147, Ballard Road, Cochin, on the 11th January 1957, at 11 o'clock in the forenoon, the above-named Tea Estate forming part of the area known as Kanan Devan Concession in the Kanan Devan Hills Pakuthy, Kerala State, with all buildings, plant and machinery.

The area of the land to be sold is 2,437.90 acres, approximately, to which will be added further land, mainly grass but including some jungle sholas, lying outside the estate boundary and containing 24,562.10 acres, approximately, provided such further land should be declared to be available at the time of auction.

The Tea Estate will be sold as a going concern as on and from the 1st December 1956. Certain assets will be excluded from the sale, either absolutely or subject to payment therefor at valuation or by agreement, as prescribed by the printed Notification, Particulars and Conditions of Sale whose terms will govern the transaction in all respects, notwithstanding anything in this notice inconsistent therewith.

Prints of the Notification, Particulars and Conditions of Sale may be obtained from Figgis Private Ltd., or Forbes, Ewart and Figgis Private Ltd., at Cochin or D6, Clive Buildings, Calcutta, or the General Manager, Kanan Devan Hills Produce Co., Ltd., Munnar, Kerala State.

FIGGIS (PRIVATE) LTD.

Preference Share Transfer Books will be closed from 29th December 1956 to 31st December 1956, both days inclusive.

By Order of the Board,
ASPINWALL & CO. (TRAVANCORE) (PRIVATE) LTD.,
Secretaries.
PATHIRAPPALLY, 4*th December* 1956.

MONEY RATES RULE FIRM

(From Our Own Correspondent)

BOMBAY, 12*th December*

The short-term money market experienced yet another week of extreme stringency. With no fresh avenue of supply of funds in sight and with seasonal demand for bank credit on the increase, the already depleted floating funds had a pronounced effect on the market conditions and interest rates remained firm. The volume of business was very much restricted. There was no change in inter-bank call money rate at 3½ per cent. House money continued to fetch 3½ to 3¾ per cent. Short-term deposits were wanted at 3½ to 3¾ per cent. for one to two months and at 3¾ per cent. for three to six months.

The Reserve Bank's statement for the week ended 7th December 1956 shows that notes in circulation have gone up by Rs. 25.54 crores, the sharpest rise for a week noted in the last few months. Notes held in the Banking Department, however, have dropped by Rs. 17.50 crores, so that there is a rise of Rs. 8.04 crores in total notes issued. On the assets side, foreign securities have declined by Rs. 9.94 crores, while rupee securities have gone up by Rs. 19.87 crores. A fall of Rs. 1.89 crores is noted in rupee coin. In the Banking Department, deposits of Governments and banks do not show any notable variations, those of the Central Government recording an increase of Rs. 2.37 crores, other Government's deposits a decline of Rs. 1.90 crores and banks' deposits a rise of Rs. 39 lakhs. Balances held abroad have gone up by Rs. 11.71 crores, thus more than making good the fall in foreign securities noted above. Loans and advances to Governments have risen by Rs. 2.24 crores and other loans and advances by Rs. 3.74 crores. Fresh advances to Scheduled banks against usance bills are of the order of Rs. 12.47 crores, but repayments have also been on a large scale, having amounted to Rs. 11.16 crores.

The consolidated statement of position of Scheduled banks for the week ended 30th November 1956 shows an increase of Rs. 4.53 crores in demand deposits, while time deposits are almost unchanged. Inter-bank borrowings show very minor variations, while borrowings from the Reserve Bank have been reduced by Rs. 2.75 crores. Advances have gone up by Rs. 3.22 crores and foreign bills purchased and discounted by Rs. 1.38 crores, while inland bills are lower by Rs. 58 lakhs. Cash balances are unchanged, but money at call and short notice is down by Rs. 3.15 crores.

The Gilt-edged market ruled dull and activity continued to be on an attenuated scale. Most of the loans were on offer, but, in the absence of buyers, quotations were only nominal. Limited official support continued to be available and even this was confined only to the few counters mentioned in our last week's report. In the State loans section, the Reserve Bank's support was extended to 4 per cent. 1968 Madhya Pradesh and Madhya Bharat loans at Rs. 97-12. A fresh recession was noted in those State loans which did not enjoy official support.

3 per cent. 1986 Conversion continued to be on offer at Rs. 73, while 3 per cent. 1970-73 gained an anna to Rs. 87. 3 per cent. 1966-68 and 3 per cent. 1964 were unchanged at Rs. 92-8 and Rs. 94-6 respectively. 3½ per cent. 1962 held its own at Rs. 97-14 and 3½ per cent. 1961 at Rs. 99-5. 3½ per cent. 1964 shed an anna to Rs. 98-4, while 3½ per cent. 1965 gathered an anna to Rs. 98-8. 3½ per cent. 1967 was unchanged at Rs. 98-6. Among State loans, Bombay 4 per cent. 1967 was marked down by As. 2 to Rs. 99-12 and 1970 by As. 4 to Rs. 99-6. West Bengal 4 per cent. 1964 shed an anna to Rs. 99-15 and 1967 by As. 2 to Rs. 99-10. Madras 4 per cent. 1963 declined by As. 2 to Rs. 99-4 and 1964 by As. 4 to Rs. 99-2. Andhra 4 per cent. 1968 was lower by an anna at Rs. 97-13. Saurashtra 4 per cent. 1963 and 1964 each fell by As. 4 to Rs. 99-12, 1967 by a similar extent to Rs. 99-2 and 1968 by As. 6 to Rs. 99. Hyderabad 4 per cent. 1963 and 1967 declined by As. 2 each to Rs. 99-8 and Rs. 99-4, respectively, and 1968 by an anna to Rs. 99-2.

In the foreign exchange section, the rupee gained some strength in terms of the U.S. dollar, in sympathy with the trend of sterling abroad. Banks were sellers of U.S. dollars (ready) at Rs. 480¼ per $100, as against Rs. 481¼ a week ago and buyers at Rs. 476¾ per $100, as against Rs. 477 per $100. There was, however, a slight weakening of the rupee in terms of the Canadian dollar, banks' selling rate rising from Rs. 500¾ to Rs. 501 per $100 and their buying rate from Rs. 494¾ to Rs. 495¼ per $100. In New York, spot sterling hardened from $2.78.5/16-2.78.7/16 to $2.78¾-2.78¾ and three months' forward from $2.75¼-2.75⅜ to $2.76⅛-2.77. Transferable sterling picked up from 274.45-274.55 cents to 274.80-274.95 cents.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 9*th December*

During the week under review, the hides and skins market put on a cheerful appearance. The easing of the tension over the Suez Canal had an encouraging effect on the market. Fresh arrivals of both the important categories of cow and sheep were considerable, but demand was fairly keen. The main purchasers were the local tanners. The Madras dealers were interested in goat and sheep. The price level displayed a tendency to rise.

The latest available quotations are: Wet salted cow, 1st grade Rs. 380 to Rs. 370, 2nd grade Rs. 300 to Rs. 320 and 3rd grade Rs. 160 per score; wet salted buff, 1st grade 1 lb. 14 oz., and 2nd grade 2 lbs. per rupee; goat, 1st grade Rs. 300 to Rs. 335 and 2nd grade Rs. 240 to Rs. 270 per 100 pieces; sheep, 1st grade Rs. 260 to Rs. 350 and 2nd grade Rs. 200 to Rs. 250 per 100 pieces.

BULLION LETHARGIC

(From Our Own Correspondent)

BOMBAY, 12*th December*

Trading in the bullion market during the week under review was lethargic and the undertone remained quiet. Forward silver was marked down by a rupee over the week and gold by a few annas. The main dampening factor was the meagre offtake in the ready section. There were also rumours early in the week that advances by banks against bullion might be restricted, but these did not find any confirmation.

Forward silver (19th December settlement) gained strength early in the week from Rs. 174-8 to Rs. 175, but the discouraging advices from the ready section pulled it down to Rs. 173-5, before finishing at Rs. 173-8. The next settlement (18th January), after an initial rise from Rs. 175-5 to Rs. 175-12, receded to Rs. 174-3. The closing was done at Rs. 174-6.

Ready silver (.996 Mint) declined from Rs. 173-12 to Rs. 173-3, but recovered to close at Rs. 173-12.

The floating stocks of silver are reported to be 1,700 bars. The daily average offtake was 15 bars.

Gold for forward delivery (18th December settlement) softened from Rs. 105-7 to Rs. 104-11 before gaining ground to Rs. 105-2 at the close. The 17th January settlement closed As. 3 lower over the week at Rs. 105-8, after touching a low of Rs. 105.

Ready gold receded from Rs. 105-8 to Rs. 104-12, but moved up to close at Rs. 105-7.

The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake which remained at 2,000 to 3,000 tolas early in the week, was placed at 4,000 to 5,000 tolas per day towards the close.

In New York, silver was again unchanged at 91.3/8c. In London, however, spot silver dipped from 81.3/8d. to 80⅞d. and forward from 80⅝d. to 80¼d. Gold also ruled weak, receding from 251s. to 250s. 6d.

The following comparative table shows the trend of market during the week under review:

	12-12-56	Highest	Lowest	5-12-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

TIN ADVANCES

(From Our Own Correspondent)

CALCUTTA, 11*th December*

Fairly steady conditions were in evidence in the metal market during the week under review. Prices of base metals were firm at previous rates. Tin, however, recorded a steep rise and, after adding the gain, the price was higher than the replacement cost. Inquiries were satisfactory, and business was put through on both Government and private accounts. Consumers were happy to note that the strike of dock workers, scheduled to take place as from the beginning of this month, had been called off as a result of New Delhi's efforts. Stockists took note of the changed international situation as evidence by the Anglo-French willingness to withdraw troops from the Canal area. The publication in New Delhi of the latest communication from the World Bank President according the Bank's agreement to grant loans for a number of projects was received with considerable satisfaction in the market. These loans which would have to be negotiated after the proposed investigation by the Bank's officials would ease the country's foreign exchange problem and would speed up development.

From Rs. 540, tin rose to Rs. 570 at which the rate was Rs. 10 above the replacement cost. There was fair demand, and both consumers and importers were active. The forthcoming visit of the Singapore Prime Minister to London to demand freedom was cautiously noted. Brisk business was reported in electrolytic copper wire bars priced at Rs. 199 per cwt. Electrolytic zinc changed hands at Rs. 71, as against Rs. 70 early in the week. Fair demand was in evidence and the stock position remained easy. Lead was firm at Rs. 82 and a fair quantity changed hands.

LINSEED STEADY

(Messrs. A. Bradley & Co.)

CALCUTTA, 10*th December*

A slight reaction to last week's buoyant trend of the linseed market was observed earlier in the week and values displayed a small decline. But a general steadiness has since been in evidence, although trading is on a small scale only. Ready goods are very scarce and buyers and sellers alike have appeared cautious. In the oil section, buyers are more reserved, following a decline in overseas values. Local prices have been maintained by purchases for ready shipment by a noted Calcutta shipper.

The latest quotations are: November-December Rs. 26-2 and April-May Rs. 22-4 per maund.

COTTON FUTURES IMPROVE

(From Our Own Correspondent)

BOMBAY, 12*th December*

In contrast to the bearish trend noted for the past few weeks, the cotton futures market depicted a distinctly steady trend during the week under review and prices have begun to look up. The most important factor responsible for this recovery was the persistent report that the Government of India might release an *ad hoc* export quota of 50,000 bales for shipment to China. Another helpful factor was the firmness of other commodity markets. But further rise in cotton values was prevented by the considerable volume of profit-realising sales induced by the higher prices and reports of heavy arrivals of new crop in upcountry centres. The prospect of a good crop this season was another dampening influence. However, values registered, over the week, fair gains and the undertone at present is fully steady.

M.G. Jarilla (March 1957) opened the week at Rs. 633, the same as the previous week's closing rate. The prospect of an *ad hoc* quota for export to China and the firm trend in the prices of exportable varieties had a stimulating effect and the contract moved up to Rs. 639 the same day. Renewed buying from Akola interests and short covering pushed the contract further to Rs. 640 the next day, although it eased the following day on reports of heavy arrivals in upcountry centres. Encouraging advices from the oilseeds market and the abatement of selling pressure induced a recovery and the market picked up strength, bringing the contract to Rs. 644 yesterday. Opening today at Rs. 641, the contract moved up to Rs. 645, on buying support, before closing fractionally lower at Rs. 644½.

M.G. Vijay (April 1957) also followed a similar pattern. Having opened the week at Rs. 734, the contract improved on bull support to Rs. 741 the same day. The contract declined to Rs. 735 on the 8th inst. A recovery was evident thereafter, influenced by the firmness of other commodity markets, and the contract was quoted at Rs. 745 yesterday. Opening at Rs. 742 today, it moved up to Rs. 745 and closed steady at Rs. 745.

The following table shows the trend of prices of the two contracts for the week:

(In rupees per candy of 784 lbs.)

	12-12-56	High	Low	5-12-56
Jarilla (March) ...	644½	645	633	633
Vijay (April) ...	745	745	734	734

Prices of most varieties of cotton registered appreciable gains in the spot section. But mill demand was slack as a reduction in prices was expected due to the heavy arrivals. Nevertheless, values improved due to present and anticipated buying support. There were good overseas enquiries for exportable styles. Japan was interested in Dholleras, Jarilla and Bengal *Deshi* while enquiries from Hongkong were noted for Dhollera. Continental buyers showed interest in Bengal *Deshi* and Dholleras while Liverpool interests sought Oomras. Meanwhile the procedural details regarding the export of raw cotton have been notified by the Chief Controller of Exports. The main features of the notification are the following: (1) Out of the quantity released for export, namely, 50,000 bales of Bengal *Deshi* and 150,000 bales of ⅞" cotton and below, a small quantity has been reserved for allotment to co-operative societies. (2) The percentages for allocation among established exporters and registered dealers are 3.5 per cent. of Bengal *Deshi* and 10.76 per cent. of all varieties other than Coconada and Bengal *Deshi* for established exporters and 0.42 per cent. of Bengal *Deshi* and 1.27 per cent. of all varieties other than Coconada and Bengal *Deshi* for registered dealers. (3) The last date for submitting applications for export has been fixed as 31st December 1956. (4) Licences issued under the notice would be valid for shipment until 30th June 1957.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 755; Berar Jarilla 755; Khandesh 770; Vijay (old) 900; Oomra *Deshi* 765; Moglai 740. *Delivery Contracts*: Khandesh 197/3 December 135, Berar 105, Moglai 60 'ON' Jarilla; 320. F 93, 216, F 105, Vijay 13/16" February 112 'ON' Vijay

The Karachi market depicted a firm trend during the week under review. This was due to the heavy buying by traders against export business done in the two previous weeks, further demand for ready cotton on shipment account and active mill buying. However, further rise in prices was prevented by the selling pressure induced by rumours about the likelihood of India releasing about 50,000 bales of cotton for export to China. N.T.R.G. January which had closed at Rs. 85-9 last week, advanced to Rs. 86-11 while the March position put on, over the week, As. 8 to Rs. 85-4. The spot section also was active. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 91; Punjab *Deshi* 85; 4 F Punjab Roller 88-8; S.G. 92-8; L.S.S. Punjab Roller 91-8; S.G. 93-8; N.T. Roller 93-8; S.G. 97-8; 289 F Punjab Roller 95-8; S.G. 103-14.

The firm trend noted in the Alexandria cotton futures market last week continued during this week also, gathering further momentum from a smaller Government crop forecast for the season and brisk overseas demand. The second official crop estimate places the production of lint at 7,188,000 cantars, which is 195,000 cantars less than the first estimate and 250,000 cantars less than the 1955-56 crop. This imparted further strength to the market and both the Karnak and Ashmouni contracts firmed up. A section of the trade, however, believes that the main reason for the higher price is the fall in the value of the Egyptian pound in world markets since 1st November.

The latest available rates—in tallaris per lb.—from Alexandria are given below:

Karnak: January 115.00; March 113.15; May 112.85. *Ashmouni*: December 80.00; February 79.90; April 79.90.

Values recorded a slight fall in the Liverpool cotton market, due mainly to the arrival of 15,000 bales of American cotton and the prospect of another 34,000 bales. This is reported to have considerably eased the supply position for ready cotton. U.S. Memphis, Texas, Elpaso and Californian styles evoked attention. Shipment business was put through for a large volume of American cotton. The Government of India's announcement of an export quota induced a revival in Indian cotton and interest was noted particularly for Oomras.

Both American type contracts eased on hedge selling and local liquidation based on further reduction in the spot prices of U.S. type cotton. Although there was heavy buying of forward positions by a leading American spot house, it was offset by a considerable volume of hedge selling. The Egyptian contract was neglected, while Sudan firmed up further on good buying support. The latest available rates—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: December-January 26.50; March-April 26.52; May-June 26.20; July-August 25 80. *American Cotton Mixed Growth Contract*: December-January 27.35; March-April 26.90; May-June 26.50; July-August 26.05. *Egyptian Karnak Cotton Contract*: January-February 60; March-April 60. *Sudan Cotton Contract*: January-February 61.30.

The New York cotton futures market ruled steady during the week under review. Earlier prices sagged a little under commission house liquidation and New Orleans selling prompted by the continued uncertainty over the 1957 loan rate. But later it improved reflecting the strength of the spot section. The December report of the Crop Reporting Board of the Department of Agriculture placed the season's crop at 13,303,000 bales (of 500 lbs. gross). This sixth and final estimate of the season is 150,000 bales more than the November forecast of 13,153,000 bales. It compares with 14,721,000 bales produced last season and the ten-year (1945-54) average of 13.098,000 bales. The yield per acre is placed at 408 lbs. as against 403 lbs. of the November estimate and 417 lbs. of the previous season. The production of American Egyptian type cotton is estimated at 48,500 bales, as compared with 47,200 bales indicated a month ago and 42,900 bales produced last season and the ten-year (1945-54) average of 32,900 bales.

According to the Department of Agriculture, disappearance of cotton in the United States this season will exceed production for the first time since 1950-51. The Department has estimated that consumption by domestic mills will be about 9 million bales and exports about 6.5 million bales for the current season. Exports of cotton this season will probably be the largest of any season since 1933-34 when 7.5 million bales were exported. The export figure for the last season was only 2.2 million bales. The Commodity Credit Corporation sold a further quantity of 414,893 bales under the new export sales programme, making the total sold so far to 6,065,793 bales. The average price at average location for basis Middling one inch accepted was 26.66 cents and the minimum price at average location for basis Mid. 15/16" was unchanged at 25 25 cents. While the exact balance of C.C.C. owned stocks at present is not known, they are expected to be around only 400,000 bales. As on 23rd November, the stocks in the 1955 loan were 6,040,982 bales and those in the 1956 loan 2,688,805 bales. The unredeemed stocks in the 1955 loan will be taken over by the C.C.C. at the end of this year but are unlikely to be offered for sale before March next year since the preparation of the sales catalogue is expected to take that much time.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	11-12-56	4-12-56	27-11-56
Spot	34.65	34.40	34.45
December	34.37	34.91	34.35
March	33.98	33.98	34.16
May	33.88	33.86	34.17

YARN FIRM

(From Our Own Correspondent)

BOMBAY, 12*th December*

The yarn market continued to rule firm during the week under review. The firmness was aided by renewed fears of reduced arrivals of foreign rayon yarn, as a result of enhanced import duties, although a section of traders expect a downward revision in rates. The Bombay Yarn Merchants' Association and Exchange Ltd. has addressed a telegraphic communication to the Union Finance Minister (and also to the Minister for Commerce and Consumer Industries) urging the Government to cancel the ceilings fixed for imposing duties and to lower the rates. The imposition of such ceilings, it is pointed out, has created great uncertainty, leading to "erratic fluctuations" in prices, instead of stabilising them. While the Government's reaction to this plea is awaited with interest, there has arisen a sort of controversy between the indigenous producers of yarn—art silk and staple fibre—and the traders as to who should bear the additional burden of excise duty. Thanks to this controversy, a few parties have refused to take deliveries from the suppliers. The whole question is being considered by the Board of the Association.

During the week under review, the forward rayon yarn section recorded a further rise in prices. Snia rayon yarn (120 dull cones) for December delivery rallied Rs. 12 to Rs. 790. February position advanced by Rs. 7 to Rs. 807. In the spot section, 120 Japan evoked good buying enquiries and spurted by 15 pies to Rs. 4-3-9. 120 Italy rose by an anna to Rs. 4-3. 150 Italy gathered half an anna to Rs. 3-14-6. 150 Japan was fully maintained at Rs. 4-2. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade gained As. 2-3 to Rs. 3-12-9. 150 Bt. cones 1st grade was better by 18 pies at Rs. 3-8-6.

There was a further slight improvement in prices of staple fibre yarns. 40×2 December contract moved up from Rs. 638 to Rs. 645. February delivery hardened by Rs. 5 to Rs. 653. Among spot indigenous yarns (40×2), Centurys picked up an anna and a half to Rs. 3-9-6. New Greats strengthened by 15 pies to Rs. 3-7-9, Kohinoors and Citys were both done at Rs. 3-7-9. Among foreign yarns (80×2), Fujis put on As. 3 to Rs. 6-3. Paramounts increased by 18 pies to Rs. 5-15-6. K'Suns gained an anna to Rs. 6-11.

In the cotton yarn section, ten counts Moderns improved by As. 2 to Rs. 15-10. Podars were unchanged at Rs. 15-8. Twenty counts Moderns were throughout steady at Rs. 19-10, as also 30s counts Maduras at Rs. 24-4. Among 40s, Minaxis were done at Rs. 28-7 and Gokaks at Rs. 28-8, same as last week. Moderns, however, receded by As. 4 to Rs. 28-12 for want of support. Sixty counts came in for some selling. Raghuvamshis dropped As. 12 to Rs. 57-4. Moderns declined by As. 4 to Rs. 63-4. Among 80s, Moderns were steady at Rs. 77. Deals were put through in Mahendras at Rs. 74-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week and a fortnight before:

	12-12-1956	5-12-1956	28-11-1956
	Rs. a.	Rs. a.	Rs. a.

GROUNDNUT ACTIVE

(From Our Own Correspondent)

BOMBAY, 12*th December*

During the week under review the oilseeds market, barring the castorseed section, displayed an upward trend, though, at the close today, all the sections of the market witnessed a moderate decline on profit-taking at higher levels. The castorseed section however, registered during the first five sessions of the week wide fluctuations, though, on balance, it improved considerably over the opening position.

In the case of groundnut, almost throughout the week, several favourable factors had been at work. These were: persistent demand from crushers, poor inflow of new crop and prospects of export quota. To these forces was added the support from leading *vanaspati* producers who purchased no less than 1,000 tons of Bold groundnut January delivery and 2,000 tons of December-January delivery. In contrast to this, the castorseed section, though it opened on a promising note; witnessed wide fluctuations as a result of the offerings from professional operators and uncertainty regarding export policies for the ensuing year. The section, however, rallied on 11th instant, on bear covering and speculative support, after some early hesitancy, only to recede again today on profit-taking. Linseed was steady on support from shippers.

The groundnut February contract steadily rose for the aforesaid reasons from Rs. 144-4 at the commencement to Rs. 153-8 yesterday and subsequently, however, receded to Rs. 150-8, before finishing at Rs. 153-4. Today, again, though it started at Rs. 153-4 and went up by As. 4, it reacted to Rs. 151-8 and closed at Rs. 152-12. Over the week, thus, it made a handsome gain of Rs. 7-10. In the spot section, too, Bold F.A.Q. put on Rs. 2-4 at Rs. 31-4, while Coromandel rose by Re. 1-12 to Rs. 31-12. Groundnut oil ex-mill and railway receipt were higher by As. 2 at Rs. 18-14 and Rs 18-12, respectively.

Castorseed futures contract started the week cheerfully at Rs. 156 and reached the peak level of Rs. 160 the same day and registered a fall to Rs. 155 before closing at Rs. 158-8. On the 7th instant, again, though it commenced at Rs. 160 and went up by another rupee, it closed Rs. 5 lower. On the following day, however, it closed As. 12 higher though the peak for the day was Rs. 159-4. On 10th inst., again, it declined from Rs. 159 to Rs. 153. Yesterday it fluctuated between Rs. 160 and Rs. 153-12 before closing at Rs. 158-8. Today it opened at Rs. 159-8 but declined to Rs. 155-12 before closing the day's session at Rs. 156-8. The contract lost over the week Re. 1 only. In the spot section, ready Madras quality shed Re. 1-10 at Rs. 35-6 and Kanpur was lower by Re. 1-4 to Rs. 34-8. Oil B.S.S. however, was slightly higher at Rs. 23.

Linseed futures contract displayed a steady trend. Commencing at Rs. 28-12 it reached the peak of the week on 11th inst. after minor fluctuations. Today, however, it finished at Rs. 29-14 making thus, over the week, a gain of Re. 1. In the spot section, February-March rose by Re. 1 to Rs. 32 and Bold Ready by Re. 1-4 to Rs. 36. Linseed Oil ready was somewhat better at Rs. 19-14.

Cottonseed February contract, too, witnessed a similar trend. Moving within narrow limits, but gaining on balance, it moved up from Rs. 86-6 at the opening of the week to Rs. 90 yesterday, before finishing As. 4 lower.

Among other seeds, *kardi* seed Bold ready having remained steady at Rs. 21-8 for a major part of the week, rose yesterday to Rs. 21-12. To-day, however, it reacted to Rs. 20-12, shedding over the week As. 4. *Niger* seed Madras was done at Rs. 30.

Mr. R. Duraiswamy, member of the Forward Markets Commission inaugurated in Madras on 5th December, forward trading in groundnut and groundnut oil. The Union Government has granted recognition to the Madras Oilseeds Exchange Ltd. for this purpose.

Forward trading in groundnut and groundnut oil has been permitted already by the Union Government at four other centres, namely, Rajkot, Delhi, Bombay and Adoni. This is the first time that forward trading on an organised basis is being ushered in in Madras State. Trading has commenced in December 1956, January 1957 and February 1957 contracts in groundnut oil. The trading unit is 50 candies and the weight is 500 lbs. per candy. December delivery was done at Rs. 300 while January delivery was transacted at Rs. 293-4 as soon as the Exchange was opened. Inaugurating the trading, Mr. Duraiswamy said that the opening of this Exchange provided an opportunity for the commercial community in the State to participate in and conduct a commodity exchange which had been properly designed and organised. He hoped that the advent of regulated forward trading would prove beneficial to the groundnut economy of the State. The exchange has enrolled 42 members so far—26 under crushers panel and 16 under dealers panel.

The following table shows the prices of oilseeds and oils at close as compared with those at the end of the previous two weeks:

	12-12-1956	5-12-1956	28-11-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

Ready	19 14	19 6	21 6

SUGAR RISES FURTHER

(From Our Own Correspondent)

BOMBAY, 12*th December*

The firm trend noted in the sugar market during the last two weeks continues unabated. Buying support is well sustained, thanks to hopes of the Government allowing export of sugar. These hopes are based on reports that the negotiations for export initiated by the Indian Sugar Mills Association are likely to be concluded successfully at the meeting with the officials scheduled to be held on the 17th inst. It appears to be almost certain that about 50,000 tons of Indian sugar may be exported next month. Meanwhile, trade circles are anticipating a levy of a surcharge on excise duty on sugar and/or an increase in the rate of duty. It is, therefore, felt that there is no chance of the sugar market developing weakness in the near future. Reduced arrivals of indigenous sugar—12,100 bags, as against 19,300 bags last week—have also imparted strength to the market.

During the week under review, sugar prices registered a further improvement. Spot indigenous sugar small and medium grains advanced by a rupee each to Rs. 90 and Rs. 91-Rs. 94 per bag, respectively. Large grain was quoted at Rs. 95-Rs. 102, as against Rs. 94-Rs. 104. British refined sugar spurted from Rs. 92 to Rs. 93 per 2 cwts., owing to paucity of stocks.

Magsar delivery contract for 'C' grade sugar, after advancing by As. 10 to Rs. 91-6, is steady around Rs. 91-2 today. *Fagan* delivery is quoted at Rs. 92-12, as against Rs. 92-1 last week-end. At one time, it had even touched Rs. 93.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 11*th December*

Malabar black pepper, during the week under review, continued to drift lower under pressure of rather heavy arrivals of new crop. Nearly half of the new receipts remained unsold and had to be stored. Singapore prices being higher, there were some enquiries from Europe but these were not enough to lend support to the declining market.

New York buyers remained selective. They bought only nearby shipments at reduced limits. After small business at $0.26 for shipment, during the first half of December, they are now asking for $0.25½. At every small purchase they revise downwards their buying limit. If New York sticks to its present conservative buying policy, it is generally feared that Malabar will be forced down under accumulation of floating stock. In the beginning of the season, rather aggressive purchases either by the U.S. or by U.S.S.R. are required for holding the prices.

The present stringency in the money market, the Indian Government's policy designed to step up taxation, the recent heavy marking down in the prices of shares and stocks of plantations and the new curbs on the banks, are some of the factors that are working against a bull market. Local bankers and banks are chary of advancing loan on pepper which is another depressing factor.

The weak growers are likely to press on an unwilling market, if no loan facilities are available when they bring new pepper to the primary markets. Local merchants who witnessed very high prices for pepper some time ago are feeling that the present level is low and there is, therefore, bound to be some investment buying off and on. However, the prices cannot be maintained unless the burden of the accumulated stocks is relieved by sizable exports, particularly during the coming peak harvesting months. Inland enquiries, though helpful, may not check the downward trend.

Singapore is down to Str. $88, after touching Str.$94, owing to falling off of enquiries from Europe. At reduced prices, however, rubber interests are reported lending their support by making small purchases.

Alleppey came down to Rs. 600 while garbled at Cochin sagged down to Rs. 102½. Arrivals are now augmenting. New arrivals at Calicut have already started. In the A.S.T.A. section, December shipment was done at $0.25½, while January-February-March is offered at $0.25½. In the delivery section, December is quoted at Rs. 588. Following are today's nominal quotations.

Ready delivery Rs. 89 per Bengal maund; December delivery Rs. 588-93 and February delivery Rs. 593-98 per candy of 5½ cwts.

TEA DUSTS IN GOOD DEMAND

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 7*th December*

Dust sale 'X' which was held on Tuesday, 4th December, contained approximately 475,000 lbs. Lowest residual types and medium sorts attracted keen competition and prices for these advanced irregularly As. 2. A strong general demand characterised the auction throughout. Best liquoring dust were only about steady and generally sold at easier rates. The limited quantity of black leaf types sold well at about last rates.

Export Quota.—The market for export quota has fluctuated between 78 pies and 93 pies during the period under review and, at the time of writing, there are buyers up to 93 pies with business done in Calcutta at this figure.

Forthcoming Auctions.—Dust sale 'Y' will be held on Thursday, 20th December.

JUTE WELL MAINTAINED

(From Our Own Correspondent)

CALCUTTA, 11*th December*

During the week under review, prices of both jute goods and raw jute were well maintained. On jute goods, fair interest was shown by exporters as well as bazar dealers. The month of November proved to be an especially satisfactory shipping period. Shipment of hessian aggregated 49,951 tons which were higher by 13,652 tons as compared with October. Sacking exports were also higher by 3,583 tons at 46,759 tons. These figures included goods shipped to other ports in the country for internal consumption. They read all the more satisfactory, if it is remembered that, in October, goods shipped were considerably higher than in September. A fair quantity of the shipments effected in October and November must have gone into stock-piling in foreign countries to meet shortages for delays in shipping and to meet any emergency. During the week, the stock of jute goods with mills as at the end of November was also announced. The total decline amounted to 14,800 tons and, since, in view of the better shipping month, the market expected a bigger fall, a reaction in prices set in immediately the figures were announced.

Attempts were made during the week by the management of the mills remaining closed in Shamnagar on account of labour troubles to reopen, but these were not successful. It should be noted that the decline in stocks should be viewed against the background of the loss of production in the above mills. In the meantime, news of importance is that the recent representation made by the jute mill workers in this State to the Prime Minister during his recent visit to Calcutta has led the West Bengal Government to undertake an enquiry into the living conditions of jute mill workers in the State. Jute mills have already been given a questionnaire on the subject, and the State Government is expected to compile a report from the replies for submission to New Delhi. The authorities, however, should think twice before imposing any further burden on jute mills by way of increased remuneration to workers. It is known that the working results of mills have been far from satisfactory during the recent accounting periods. Labour costs have gone up, and last year's Tribunal award was the third time since 1947 when wages were increased. Prices of the raw material have progressively increased simultaneously. But there has not been a comparative rise in the prices of jute goods, nor has there been any significant rise in demand to increase production with a view to cutting down output costs.

The market opened on a weak note, induced by speculative selling. Ready B. twills were quiet at Rs. 120 and 40" 10 oz. hessian gave way from Rs. 45-15 to Rs. 45-10. On Wednesday, a two-way movement was in evidence. Earlier prices declined on bear selling. Lower levels attracted buyers and a smart recovery followed, with the result that B. twills improved to Rs. 120-12 and hessian 40" 10 oz. to Rs. 46. Moderate business from overseas countries followed and bazar dealers became active. There was heavy speculative support for sacking goods and, as a consequence, B. twills advanced to Rs. 121-12 on Thursday, and hessian 40" 10 oz. rose in sympathy to Rs. 46-5. On Friday, prices declined as a higher decline in stocks than actually announced on that day had been discounted for. B. twills were thus priced at Rs. 121-10 and 40" 10 oz. hessian at Rs. 46-2. Shipments so far during the current month have proceeded satisfactorily, and this knowledged in the market aided a better closing for the week-end. The recovery that set in took ready B. twills up to Rs. 122-2 and 40" 10 oz. hessian to Rs. 46-4. The higher trend continued yesterday and the quotations for the two constructions were fully steady at Rs. 122-4 and Rs. 46-5, respectively. The eight oz. hessian was priced at Rs. 37.

On balance, prices of raw jute rose by As. 8 per maund. Mills attempted to push down prices, but, as sellers were reserved, these efforts failed. Assam upper bottoms and local Daissee bottoms gained As. 8 each to Rs. 32 to Rs. 33, respectively. The latest quotations for the different constructions are given below:

	Middles	Bottoms
Pakistani:		
	Rs. a.	Rs. a.
Northern	40 0	37 0
District	40 8	37 8
Indian:		
Northern	34 8	32 0
Jungli	33 0	30 8
Orissa	36 0	33 8
Uttar Pradesh	33 0	30 8
Daissee mesta ...	32 0	29 8
Bimli f.a.q.	Rs. 29 0	
Pucca bales first marks ready	Rs. 197-8 per bale.	

GOOD DEMAND FOR EXPORT TEAS

(From Our Own Correspondent)

CALCUTTA, 11*th December*

Although demand during tea export sales held yesterday continued to be good, prices realised showed a two-way movement. This was because of the increase in the export duty according to the slab system. The duty was not revised for the month of November, although, during the month of October, prices realised in London auctions were higher. For the trade and industry had represented that, in view of the steep increase in cost of production of tea, some relief to the industry was necessary. Since this situation had not shown any change, the market anticipated that no revision would be made during this month in the duty. However, that expectation did not materialise.

In view of good export demand and increase in output of tea, traders have been unable to find any cause for New Delhi's apparent reluctance to increase the export quota.

Good general demand was in evidence during last week's internal sales. Dusts offered amounted to 23,068 packages, among which the clean black leafy teas from all districts suitable for export rose by As. 5. Prices of the large grainy C.T.C. Assams gained by As. 2 and there was fair demand for other lots in this category. On the other hand, Assams of orthodox manufacture, Dooars and commons recorded a fall by an anna. Among Darjeelings, the flavoury lots were sold well as usual, while the remainder of the offerings were in poor demand. The quotations were: Best Assam C.T.C. Rs. 2-13, medium Assam C.T.C. Rs. 2-8, medium Assam grainy Rs. 2-0-6, and medium Dooars Re. 1-15.

Leaf grades on offer aggregated 2,223 packages. The strongest features were residue teas, inasmuch as prices were firm. Clean leafy teas declined by As. 2, although demand was fair. Green teas were taken at previous rates.

Offerings during yesterday's export sales amounted to 60,656 packages. Good demand was in evidence throughout the duration of the auctions, albeit the opening on a weak note. C.T.C. teas were paid keen attention, but this was so in view of lower rates. Prices eased by As. 2, although some selected invoices were firm. Assams and Dooars possessing good cup quality were in preference and prices improved by an anna to two. The rise in prices was specially in evidence in the fannings grades. On the other hand, the plainer teas declined by an anna, and the higher priced B.O.Ps. and orange fannings by As. 2. Prices of stylish whole leaf grades rose by As. 2. Well-made B.P.Ss. were also in good demand, but prices were unchanged. Most Darjeelings on offer dropped by As. 2-As. 4. A similar decline was in evidence in the prices of tippy teas also. The quotations were: Best C.T.C. Assam B.P. Rs. 3, medium Assam B.P. Rs. 2-6, plain B.P. Rs. 2-4, and clean black pekoe Rs. 2-7.

A slight easing in the export quota rights was in evidence. With buyers over, the price gave way from 90 pies to 84 pies.

MODERATE CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 10*th December*

The volume of trading in kips with the U.K. was small. Importers were unable to follow the asking prices at origin, in view of their inability to obtain the equivalent advance on finished leather and were offering lower prices. This factor, coupled with the report that heavy shipments would be reaching London in a bunch shortly, acted as a damper to price increases demanded at origin, though this was necessitated by the rise in price at raw centres.

Arrivals of kips met with moderate clearance. There was fair demand for inferior grade cow hides for inland trade, though shippers did not evince interest. Market for buff calf and cow calf f.a.q. was moderately active, as arrivals were small. Premium marks were slow to move, as tanners were quoting unworkable prices.

In the December London tanned skins public sales, there was good attendance of Continental buyers and the prices of best tannages goat skins 8/9 and 11/12 lbs. realised 1s. to 2s. advance, while others recorded upto 1s. increase in October levels. Sheep auctions are due to commence this week. In view of the auctions, shipment business was small during the week.

Shipments during the month of November were: To the U.K. ports: 4,542 bales tanned cow hides, 400 bales cow calf, 100 buff hides, 277 buff calf, 993 goat skins, 742 sheep skins; to the Continent: 5 cow calf, 17 buff calf, 573 goat and 125 sheep; to Japan: 370 bales tanned sheep. There were no shipments to the U.S.A.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 10*th December*

Quietly easy conditions prevailed in the foodgrain market during the week under review, thanks to increasing sales of wheat through fair-price shops. The Central Government's food reserves have been further strained, due to increased demand from the flood-affected regions of Uttar Pradesh and West Bengal. In the U.P., the State Government is selling wheat in the flood-affected areas at a subsidised rate of 3 *seers* per rupee and the State Government has asked the Centre to release 48,000 tons of wheat for such sales during the current month.

Wheat at Hapur recorded a modest fall to Rs. 15-10 per maund for average quality and to Rs. 16-12 for farm quality. Local arrivals averaged 100 maunds daily and the week's offtake was good, aggregating 5 *khaties* mostly to Bihar. The local stock is now put at 59 *khaties*, as against 110 *khaties* in the corresponding week last year. Rice also eased slightly during the week, due to new crop arrivals. The prices as on Monday were:—*basmati* Rs. 23 to Rs. 27-8; *mainpuri* Rs. 19-8; *raimunia* Rs. 22-8; *ramajwayan* Rs. 21; and coarse quality Rs. 15-8 per maund.

Good demand for *gram*, coupled with steady Punjab and Madras advices, accounted for the firmness in gram prices. *Bajra* and maize prices, however, eased slightly, despite good seasonal consumers' demand, due to better supplies in the market. Beginning of arrivals of new crop from the producing areas resulted in a slight fall in *jowar* prices, while barley and *bejhar* prices were mostly unchanged. The week-end prices on Monday were:—*Gram* local Rs. 13-4; Punjab produce Rs. 13-10; maize Rs. 12-10; *bajra* Rs. 14; *jowar* Rs. 12-14; barley Rs. 13-4; *bejhar* Rs. 13 per maund.

Waning demand for peas at higher levels led to a fall of As. 4 per maund to Rs. 14 per maund for *dara* green quality and to Rs. 15-8 for white quality. The local stock is now put at 20 *khaties*, the corresponding figure last year being 37 *khaties*. *Arhar* prices also eased to Rs. 13-4 per maund, despite heavy offtake at 9 *khaties* during the week, reducing local stocks to 35 *khaties*. Prices of other pulses ruled quiet at almost unchanged price levels.

Pulses futures declined on bear pressure, influenced by fall in ready prices, but some gains were recorded towards the week-end on profit-taking purchases. The latest prices as on Monday were: Peas *jeth* Rs. 10; peas white *maha* Rs. 13-1-9; *jeth* Rs. 10-13-6; *arhar maha* Rs. 12-12; *jeth* Rs. 11; *urd maha* Rs. 18-15-3.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 10*th December*

Sugar prices ruled quiet during the week. Offtake was small at the prevailing prices. Factories in the U.P. and Bihar have fully begun their crushing season and, as *gur* prices have already fallen, it is estimated that production of indigenous sugar in the country during the current season will amount to 1.9 million tons. This quantity, along with the carryover of about 550,000 tons from the previous season, will push up the total supply to about 2.4 million tons. The domestic consumption, on the other hand, is expected to be around 1.95 million tons. The country is, therefore, expected to have a surplus and there are rumours that the Government is seriously considering the issue of allowing exports of sugar from the country.

The prevailing mill delivery prices of sugar per maund on Monday were:—Jaswant Rs. 28-4; Simbhauli Rs. 28-8; Mawana Rs. 28; Daurala Rs. 29-4; Amroha Rs. 27-12; Bijnore Rs. 27-12; Mansoorpur Rs. 28-8 to Rs. 30; Rampur Rs. 31-8; retail Rs. 30-10.

The *khandsari* market ruled listless and dull. Prices hovered around Rs. 22 to Rs. 26 per maund.

Although arrivals of new *gur* were very moderate, the average being 6,000 to 7,000 maunds daily, prices declined towards the week-end to be quoted at Rs. 11-4 per maund for best quality. Loading facilities were adequate, but outside buying enquiry at higher rates was slack. Old stocks have nearly been exhausted.

Future *gur* prices also declined during the week. Opening at Rs. 10-11-3, *fagun* delivery touched the highest at Rs. 10-13-3 and lowest at Rs. 10-4-6. It was quoted today at Rs. 10-7-3, due to profit realisations at the worst levels of the week.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.= Deferred shares. P.O.= Preferred Ordinary shares. Y.= Accounts published yearly. H.= Accounts published half-yearly. P.= Company has Preference shares. D.= Company has Debentures. N.= Nominal quotations. x.d.= Ex. Dividend. c.d.= Cum. Dividend. i.= Interim Dividend. I.= Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may show excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the board of directors. † Less income-tax. (k) Clive Mills have paid dividend at As. 10-4 on bonus shares, for the year 1955. * Including bonus.
(l) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 on ordinary shares of Rs. 100 less shares of Rs. 10 each.
X—Fort William Jute Co. has issued ordinary shares of Rs. 10 each. The Albion and Lothian Jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

SURVEY

(Concluded from page 1131)

tion. It intends to assign the study of all three projects to one group of its experts which can at the appropriate time make on-the-spot investigations of these projects. Mr. Narahari Rao has informed the Bank that Tata Hydro-Electric (Private) Limited intends to apply for a loan of about $9 million to finance the third thermal unit for the Trombay plant and that the Government has agreed to guarantee this loan. The Bank will give consideration to this project; at the moment, it is awaiting the technical report on the project.

The foregoing details of Mr. Black's letter serve to make it clear that the *World Bank* is prepared to give assistance only to specific projects. It is rather reluctant to grant India a consolidated general loan, as it has done in the past to some of the European countries and Australia, and recently to Italy, or to commit itself to any specific figure of loan for the second Five-year Plan. This re
