

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCIV. No. 2391 BOMBAY, 5th JANUARY 1957 PRICE: Rs. 1/8

IMPORTS CUT TO CONSERVE EXCHANGE

So much has been said and written in the past two months on the problem of balance of payments facing India that it can be confidently claimed that the public is aware of its magnitude and of the need for taking prompt measures to prevent further deterioration. The sharp cuts effected by the Government in the import quotas for a wide range of goods and the tightening of restrictions on imports in the first half of 1957 do not, therefore, require any elaborate justification. These measures have become inevitable. The alternative to them is to deplete the already slender foreign exchange reserves to a dangerously low level and expose the rupee to the risk of heavy devaluation. If the calendar year is taken into account, it is seen that imports in 1956 were of the order of Rs. 800 crores, while exports were no more than Rs. 596 crores, so that there was a trade deficit of Rs. 204 crores, as against Rs. 48 crores in 1955 and Rs. 46 crores in 1954. The figures relating to the fiscal year 1956-57 reveal an even more disquieting picture. According to data compiled by the Balance of Payments Division of the Reserve Bank's Research Department, the actual performance of India during the first half of the year under review—that is, April-September 1956—shows imports running at the annual rate of Rs. 953 crores and exports at Rs. 576 crores. In the six months under reference, total imports were Rs. 476.8 crores and exports Rs. 288.3 crores. The overall balance of payments showed a deficit of Rs. 129.5 crores, or an annual rate of Rs. 259 crores. Surely, with its foreign exchange reserves standing at no more than Rs. 530 crores at the end of 1956, India cannot afford to import on the same scale as in the past year.

Indeed, having regard to the critical balance of payments position as noted above, it cannot be said that the cut effected in the import programme for the first half of 1957 is adequate since the estimated saving as a result of the cut is only Rs. 30 crores for the half-year or Rs. 60 crores for the whole year. This is equal to only about 7½ per cent. of the imports in 1956. Viewed in this light it will be appreciated that it will not be quite appropriate to describe the cut as drastic. It may be that, in the case of certain items, the reduction is substantial enough to merit that description. But, looked at from the angle of the overall picture of the balance of payments, the authorities seem to have applied the axe rather lightly. Even after making allowance for a possible increase in exports, it looks as though the revised import programme will mean a deficit of Rs. 150 crores in the current calendar year. Can the country afford a deficit of even that order? We have our own doubts. Much, however, will depend upon the outcome of the Government's efforts to get foreign assistance. The fact that the authorities have thought it fit to expect a saving of only Rs. 30 crores for six months suggests that they are optimistic on this score. Nevertheless, it will be prudent for the people of this country to be prepared for further restrictions in imports as the year advances. These cuts cannot be avoided, if the attempts to get foreign assistance do not yield the expected results or if exports fail to rise to the anticipated levels.

There are two reasons why the Government has not cut the import programme more sharply than it has done. First, it does not favour a curtailment in the size of the development programme as projects included in the second Plan. Secondly, there was not much scope left for economising in the imports of consumer goods, because they had already been greatly restricted. Some have contended that, in recent years, the Government has been more liberal than was necessary in allowing imports of consumer goods. It is true that the very stringent restrictions placed in 1952-53 on the import of these goods were relaxed later on. But this was due to the demand generated by the general rise in economic activity and to the sound policy of permitting marginal imports, so that there may be healthy competition to indigenous manufactures and a check on their prices. The fact that prices of goods subjected to the latest import cuts have gone up by 5 to 30 per cent. overnight, as it were, is proof enough to show that imports of consumer goods hitherto were by no means excessive. If, therefore, any substantial saving is to be made in imports, it can be done only through a slashing in those of plant and machinery, steel, vehicles and industrial raw materials. As, however, this will retard the pace of economic development, the Government is reluctant to resort to this course.

A careful study of the list of goods the import of which has been chosen for a cut in varying degree shows that the authorities are justified in their claim that they have followed a judicious policy, with due regard to the developmental needs of the country. They are not unaware of the difficulties which some of the importers will have to undergo as a result of the new policy, but these cannot be helped in the present circumstances. They have, however, tried to minimise the hardships of the traders affected by relaxing the conditions relating to entitlement to quotas. On the whole, they have endeavoured to be as helpful as they could afford in the existing state of affairs. The exporting countries, too, have no reason to grumble about India's latest action. It is really surprising that a section of the British Press should feel annoyed over it. Not long ago, British economic commentators were critical, needlessly, of course, of India's rapid withdrawal of sterling balances. For some of them now to complain that India has placed drastic restrictions on imports tantamounts to contradicting themselves. The withdrawal of sterling balances was well within the agreement reached with Britain. The present restrictions on imports is an act of self-denial by India in order to ensure its solvency. It will not be out of place to mention here that India can claim with legitimate pride that, in framing its foreign trade policy, it has discharged its international obligations more scrupulously than most of the free countries of the world. The same is true of its obligations as a member of the Commonwealth and the sterling area alike. In any case, Britain should be the last country to complain about India's import policy.

A feature of the import restrictions announced this week is that, in the case of a large variety of consumer goods affected, there is a fair amount of indigenous productive capacity. In some cases—toiletries, for instance—there is actually a surplus capacity and the domestic manufacturers have been producing high quality goods. In the case of others, it cannot be beyond the wit of manufacturers to expand their capacity and step up their production. For all domestic manufacturers of consumer goods, the latest development offers an excellent opportunity to establish themselves firmly in the home market. They should strive hard to raise the quality of their products and eschew the temptation to profiteer, so natural in times of scarcity. Their aim should be to price their products reasonably, so that they can build up an expanding market for them. The Government, for its part, should render all possible assistance and provide appropriate incentives to indigenous manufacturers to raise their production. It should not mind giving liberal exemptions even from the recently introduced measure of compulsory deposits to those manufacturers who are in need of finance for expanding their activity.

There is a limit up to which restrictions on imports can be relied upon for bridging the gap in the balance of payments, especially if the pace of economic development is not to be slowed down. After all, such restrictions constitute a negative solution when applied by a country already living on austerity standards. The more positive solution lies in promoting exports. The first requisite for successful export promotion is increased production and a soundly based domestic market. It is here the Government's economic policy has not been sufficiently far-sighted and realistic. This is a subject fit enough for a separate article. Suffice it to say that the Government has not done all it can in the sphere of export promotion. While it has been quite conscious of the need for more exports, it has been pursuing a socio-economic policy not quite conducive to the fulfilment of this need. The outcome of this defective policy is not merely the necessity to curtail imports and the consequent rise in internal price levels but also loss of revenue by way of customs duties. It is obvious now that the extra revenue which the Finance Minister hoped to raise by stepping up the import duties on 30th November 1956 will not be as much as he calculated.

Since public memory is proverbially short and the public sector is being boosted with a fanfare, it will be pertinent to state here that the heavy imports in 1956 were partly the result of the policy mistakes made by the Government in the seven years ended 1955. Several instances can be quoted to substantiate this contention. But, for considerations of space, we shall confine ourselves only to three examples. First, the cotton textile policy was so defective that it gave no incentive to the manufacturers of textile machinery to expand, with the result that textile mills have had to depend on foreign sources for supply of machinery to a considerable extent. Secondly, if between 1948 and 1951 the Government had given permission to the steel units in the private sector to expand, it would not have been necessary for the country to import such large quantities of steel as is being done now. It was the dog-in-the-manger policy of the Government based purely on ideological

considerations, that stood in the way of the steel industry's growth. It may be noted here that, of the increase of Rs. 204 crores in imports during 1956, steel alone has accounted for as much as Rs. 90 crores. Thirdly, automobile vehicles have been responsible for an increase of about Rs. 17 crores in the enhanced imports. This dip into the foreign exchange resources could have been avoided had the Government followed a sensible policy in regard to road development, road transport and taxation of motor vehicles. The most important point to be borne in mind, in this connection, is that, if the Government had actively encouraged the aforesaid three key industries during the period between 1948 and 1955, India's dependence on foreign countries for the supply of machinery would not be as great as it is now. This unhappy experience of the past should serve as a warning to the future.

CO-OPERATIVE FARMING

A MAJOR economic trend in India is the greatly increased interest, both official and non-official, in the cause of Co-operation. Co-operators all the world over are an enthusiastic lot, with something of a religious fervour in their movement. That Indian co-operators, several of whom have attained success in their life by participating in free enterprise, should for ever be thinking in terms of conquering new pastures is understandable. Fortified by official blessings, they have attempted to extend their sphere of activity from consumer goods distribution to marketing and banking. They have, of late, been displaying considerable interest in co-operative industrialisation and farming.

The latest phase of co-operative development, namely, interest in co-operative farming, is by no means a sudden or abrupt departure, for such farming has always exercised a certain fascination for genuine co-operators. In any case, the Gvoernment itself sets great store by co-operative farming in its second Five-year Plan. The main task during the Plan, according to the Planning Commission, is "to take such steps as will provide sound foundations for the development of co-operative farming, so that, over a period of 10 years or so, a substantial proportion of agricultural lands is cultivated on co-operative lines." To this end, the Commission has suggested that special assistance should be given to co-operative farming societies. Such assistance, it is stated, should include technical advice and subsidy for managerial expenses and preferential treatment in the grant of credit from the co-operative or Government agencies, in the supply of seeds, fertilisers and materials, and in the grant of lease of lands reclaimed by the Government.

As regards the forms which co-operative farming could take, the Commission has, in broad terms, suggested three alternatives. In the first place, the ownership of land may be retained by individuals, but the land may be managed as one unit, the owners being compensated through some form of ownership dividend. Secondly, the land may be leased to the co-operative society for a period, the owners being paid agreed rents or rents prescribed by law. Thirdly, ownership may be transferred to the co-operative society but shares representing the value of land may be given to individuals. The Commission does not envisage any rigidity for these forms, any of which, it says, could be used by itself or in combination with other forms.

There can certainly be nothing wrong, in principle, to the application of co-operation to any sphere of human activity, much less to agriculture. But the question is whether, in the Indian context, it can succeed. A related question is whether the experience of other countries suggests that the experiment in co-operative farming has been a marked success, and, even if it has been a success, whether it could be adopted in this country. The Planning Commission itself has recognised that the "practical achievements" in this field are "meagre" in India. Obviously, it must have had before it some tentative results of the working of about a thousand co-operative farming societies that have been formed in this country. Referring to the working of these societies, the Commission says: "A few of these societies have been successful, but many of them have experienced practical difficulties for which they have not always been able to secure the necessary guidance." This appears to be a gross understatement, in the light of the results of the survey of the work of these societies by the Indian Co-operative Union now made public.

Before we set out some of the notable observations of the Union, it is necessary to record here that, although there are about a thousand co-operative farming societies, there are only a few societies in which the farmers have voluntarily pooled their land resources. This is a very important consideration, for the real test of co-operation is whether it induces farmers to pool their land and whether, in such a situation, co-operative farming succeeds. Many of the co-operative farming societies in India have been established on Government land, with Government capital for the resettlement of refugees or landless workers. In other words, capital and land have been found for the landless labour in co-operative farming societies. This, in essence, means that the workers have got something in return for nothing. It may not be very much wide of the mark to describe the members of these societies as mere wage-earners. But the more important point is that, even in these societies, where members could be normally expected to feel grateful for the generous assistance they have received, there is nothing to suggest that co-operative farming has made significant headway. Is there any reason to think that Co-operation will succeed in a situation in which farmers have surrendered their land to a co-operative society?

To revert to the report of the Indian Co-operative Union. There is considerable evidence, according to the Union, about the "impracticability" of joint farming in regard to co-operative farming societies started in India. Except in a few cases, it is stated, it has been found necessary to revert to individual farming everywhere. The Union cites several instances in support of its view about the "impracticability" of co-operative farming. It refers to a survey of 13 societies (in which farmers had pooled their land) conducted by the Planning Commission. In ten of these societies, most or all members did not actually engage themselves in farming. They were, in fact, a kind of joint-stock estate farm run by a group of absentee landlords with the help of hired labour and established only to secure the concessions given by the Government to co-operative farms. It next cites the experience in Bombay which showed that collective cultivation was not always practicable on resettlement co-operatives. Only a few of the co-operative societies maintained their joint farming character. Even among such societies, some "had already succumbed to the innate urge for individual possession and they remained joint-farming societies in name and had reverted to individual cultivation."

Finally, the Union cites its own experience in its refugee resettlement societies. The first two or three crops were raised on a co-operative basis, the next two on a group basis and all the rest on an individual basis. The continuance of joint cultivation, it is stated, became "nearly impossible, because of factionalism among the members and the executive committee, disputes about the relative intensity of work put in by different members, mistrust regarding the use of funds by the executive and so on." It would appear that, although land was initially allotted for joint cultivation, there had been consistent pressure for individual allotment of land and complete individualisation of farms.

Why is co-operative farming so dismal a failure? The Union answers this question by a reference to the psychology of the farmers. It rightly points out that the sense of property is so deeply rooted in the psychology of the Indian peasant and his attachment to land is so strong—because the social prestige attached to land is so high—that any proposal which deprives the farmer of independent rights of cultivation arouses his "deep and instinctive hostility." It adds: "The very fact that, at every succession of joint family, holdings are sub-divided among descendants is enough proof of this truth. How then can one expect that, when members of a joint family, which is a natural co-operative, seldom keep the holding together, a large number of unrelated families would pool them?" The importance of this consideration was recognised by Mr. D. G. Karve, an enthusiastic co-operator himself, in the course of his presidential address at the recent annual conference of the Indian Society of Agricultural Economics, held at Cuttack. Although Mr. Karve is generally sympathetic to joint cultivation, he averred that, "in the comparatively hard and trying conditions of Indian farming, the incentive of direct personal responsibility for the product is so essential that any weakening of this, not counter-balanced by appreciable advantage on the technological and organisational sides, is likely to prove injurious to the objective of greater production."

He, therefore, said that one might advocate the adoption of joint cultivation only where it was likely to yield better economic results.

Mr. Karve has done well to emphasise a pragmatic approach to joint farming. The importance of such an approach will become clear when it is realised that, even in totalitarian countries, the authorities are beginning to have some second thoughts on joint cultivation, whether it takes the form of co-operative farms or State-owned farms. Thus, the U.N. Economic Commission for Europe, in the course of its latest review of the economic developments in the Continent, points out that, in Eastern Europe, the authorities are engaged in modifying the structure of agricultural co-operatives. In each country, the tendency has been towards a more flexible arrangement. The measures which have been taken in various countries fall under three main heads: Changes in the types and membership condition of co-operative farms; changes in methods of planning in agriculture and changes in policies of agricultural credit. On the whole, it looks as though there is a distinct tendency towards a softening of the original rigour of co-operative or collective organisation of agriculture.

In Poland, a lively public discussion has developed on the aims and methods of agricultural policy, in general, and co operative farming, in particular. In his recent address to the Polish Communist Party, Mr. Gomulka attempted a frank appraisal of the achievements of co-operative farming. He declared that co-operative farming in his country presented a "sad picture." He pointed out that, despite several advantages which the co-operative farms possessed, they had not been able to show better results than proprietor-owned farms. These advantages included preferential treatment in respect of allocation of fertilisers and quota deliveries to the State and land tax, assistance from State machine stations and financial aid from the State. And yet, co-operative farms, he said, showed "smaller results and greater costs of production." If co-operative farming cannot show significant results even in a country where authoritarian rule is possible, is there any reason to think that in a country like India, which has chosen the democratic path, it will be possible for co-operative farming to achieve notable progress?

An aspect of co-operative farming, which has apparently received less notice than it deserves, is that a rapid expansion of such farming in a country like India, with a large surplus agricultural population, may conceivably give rise to—at least in the short run—considerable unemployment. Mr. Karve made a passing reference to this aspect by affirming that "joint farming, in the initial stages, would make more conspicuous unemployment." In Russia the problem is different, for the pressure of population on land is relatively less in that country. From this point of view, it is significant that Japan, which has a large population and a relatively smaller *per capita* availability of land, has not taken to joint cultivation. Despite the small land-holdings (about 5 acres per family) Japan has been able to achieve remarkable progress in its agriculture through adoption of modern farming practices. The only country with a large surplus population on land that has taken to co-operative farming is China. But China has taken to this experiment only recently and no satisfactory solution for the problem of surplus labour has yet been found in that country. Thus, the Indian delegation, which visited China recently, found that surplus labour had been temporarily employed on soil conservation and other work. It, however, doubted whether China could continue for long to provide such opportunities for employment for its labour. Such problems are bound to be met with in India if co-operative farming were pushed ahead at a rapid pace.

Small wonder, then, that the Indian Co-operative Union has sounded a note of warning against "unthinking enthusiasm for agricultural co-operativisation." It has rightly suggested that, "in a democracy, only such co-operativisation is legitimate as would be willingly accepted by the people and help them raise themselves as free individuals." The basic dilemma in co-operative farming, as the Union points out, is that, where the management is democratically elected, discipline is poor and efficiency suffers, and, where the management is authoritative, the co-operatives lose their co-operative character, overhead expenditure increases and disgruntled members go slow. It should thus be clear that co-operative farming is no efficient alternative to peasant proprietorship.

STOCK EXCHANGES IN SULLEN MOOD

BUSINESS MEN APPRECIATE GOVERNMENT ASSISTANCE TO INDUSTRIES

THURSDAY, 5 P.M.

THE share markets have received the New Year—A.D. 1957—in a sullen mood. Although more than a month has passed since the "soak-the-rich" tax proposals were announced by the Finance Minister, the markets have not regained confidence in the future. To a very large extent, the share markets still reflect the investors' mind, notwithstanding the heavy reduction in the number of large-scale investors and the nationalisation of life insurance. The mood of these markets is, therefore, a reliable indication of the reactions of a vast majority of investors. In some of his provocative speeches last month, the Finance Minister vigorously denied that his tax proposals would retard capital formation and check the flow of investments to industries. In other words, he meant that it was wrong to say that investors' confidence would be affected. He is only partly correct, in that capital formation has attained a broad meaning in modern economics. To the extent his proposals are designed to transfer the investible resources from the private sector to the public sector, they do not affect capital formation, assuming that the State is able to utilise these resources judiciously in order to achieve maximum production within the minimum time. This is a big assumption. But to the extent his proposals curb the enthusiasm of the private sector to produce more and make it difficult for it to raise enough resources, they will check progress and the rate of capital formation.

MARKET GOSSIP

Today, the greatest incentive to the private sector is the fear that, if it does not keep itself alive by taking to economic activity as much as possible, its end will only be hastened. Fear, however, is no substitute for enthusiasm born of freedom, cheerfulness, spontaneity and encouragement. It looks as though ere long even this fear will fail to have an effect on private enterprise, if some of the taxation proposals that are in the air are adopted, if the Finance Minister continues to deride the private sector as he did throughout the last month of last year and if the State ceases to have respect for the sanctity of private property. Fear will then yield place to disgust and spendthriftness. Wisdom demands that the Government should cry a halt to such of those policies, actions and observations as are calculated to reduce this country to a nation of spendthrifts.

* * * *

While capital formation may go on largely through the activity of the public sector, the fact remains that there has been heavy depreciation in equity values following the recent doings of the Government in the name of socialism. This itself is sufficient to make investors fight shy of putting their savings in equities. Accordingly, the task of raising fresh capital by industries will become more and more difficult for a long time to come, unless the Government suitably modifies its fiscal policy and displays a friendlier attitude towards private enterprise. As Gilt-edged securities also have sustained sizable capital depreciation in recent months, investors may not prefer to have them also in their portfolio. Since, however, banks are now offering nearly 4 per cent. for short-term deposits, it will not be surprising if they are inclined to lodge their savings with these institutions and hope for the best or wait till the situation clears itself. There is thus every possibility of bank deposits going up.

Apart from the fact that the new tax proposals and the fear of still more taxes in the current year have upset the confidence of investors, there are also other reasons for the continued slump in shares. Quite a number of speculators have suffered heavy losses and it is feared that one or two parties may fail to pay the differences in the current settlement. For more than three months, bulls have been paying out while the bears have been receiving differences. This has disheartened the former and encouraged the latter to take an aggressive attitude. Just as a bull phase feeds on itself for some time so does a bear cycle. When life insurance was in the hands of private enterprise, it used to provide a corrective to this trend by extending support to good scrips when they fell to tempting levels. Under the State sector, it has ceased to operate in that fashion. It is, therefore, not easy to say as to when equities will recover, though several of them are now standing at levels at which the yield is fairly attractive.

Another factor that is sustaining the downward trend of share markets is the stringency of the money market. Difficulty in getting credit and the rise in interest rates have reduced the holding capacity of the bulls. Many financiers, who used to spare their funds for carrying forward bull positions, have diverted their resources to other sources where rates of interest are high and risks are relatively less. The introduction of the compulsory deposit system, coupled with the expansion of industries, seems to have greatly reduced the chances of some of the industrial and business magnates dabbling in shares. It would thus appear that, for a fairly long time to come, the share markets will be entirely at the mercy of small and medium-scale investors who are slow to act and timid by nature.

* * * *

There is, of course, another side to the coin. And it is that, as development proceeds, more savings will be created and with that share values also will rise. Although the Finance Minister has repeatedly stated that deficit financing cannot be practised, he has also been saying that the Plan outlay, which has been increased by Rs. 500 crores, cannot be reduced. There is an element of exaggeration in both the statements. Neither the entire Plan is going to be implemented—that is physically beyond the capacity of the country—nor can deficit financing be avoided completely. A certain amount of inflation is inevitable and, despite all the controls and taxes that may be imposed, it is bound to reflect itself in equity values, assuming, of course, that the Government will not resort to any confiscation of private property either overtly or covertly. Consequently, those who stick to their investments for a fairly long period can hope to see an appreciation in the value of their investments once again. And in that hope it will not be injudicious to make selective buying of good shares.

It will be quite pertinent to mention in this context that the Government itself expects properties and investments in shares to appreciate in value as a result of the implementation of the second Plan. The introduction of Capital Gains Tax itself is based on that assumption. In order to make this point clear, we may recall the Finance Minister's justification for introducing this tax. "For a developing economy like ours," he said, "it is necessary to take early action, as the implementation of the programmes is certain to create conditions in which assets of all kinds will appreciate and it is only fair that the exchequer should get a proportion of these incomes when realised in the form of capital gains."

* * * *

Then, again, while it is true that Mr. Krishnamachari has said enough during the past four weeks to frighten investors, there is also the fact that he has promised to administer the scheme of compulsory deposits in a liberal manner, provided the business community co-operated, which it is ready to do. His threat to introduce fresh taxes in season and out of season was probably made only as a retort to some of his critics. It may also have a political significance. It must not be forgotten that, all said and done, Mr. Krishnamachari is a realist. He knows the limitations of the public sector. In his heart of hearts, he must be convinced that a vigorous private sector is necessary to carry out the bulk of the task of economic development. He cannot deny that the success of the first Five-year Plan, on which the Congress Party seeks to cash in in the forthcoming general elections, is mainly due to the efforts of the private sector. He will soon realise, if he has not already done so, that there is always a last straw on the camel's back and that he and his Party will need the camel of private sector to carry them through safely in the 1962 elections. It will not, therefore, be overoptimism to hope that the Budget in February will be a "lame duck," to use his expression. If it is argued, as most people do, that more than the new tax proposals, it was his bellicose attitude towards the private sector that was responsible for the landslide in equity values, then there is reason to hope that things will improve in the not distant future. He cannot afford to stick to that attitude for long.

* * * *

The latest crop reports can be regarded as a source of comfort to share markets. They reveal that the production of cotton, foodgrains, oilseeds and jute may be much better than was expected earlier. The chances of commodity prices going down to more reasonable levels are, therefore, brighter. The crisis in West Asia has calmed down following the exit of Anglo-French-Israeli forces from the Egyptian soil. Work in connection with the clearing of the Suez Canal has begun and is going on briskly. These events also point to the possibility of a downward trend in world commodity prices at an early date. A slight reversal of the trend of interest rates in Britain and on the Continent is also not unlikely. The real significance of these developments to share markets in India must be clearly understood. In recent months, we have witnessed a severe drop in the value of equities, while the general price level of commodities was rising. This was due to the Government's policy. Fears of inflation—and deterioration in the world political situation drove it to adopt a policy inimical to equities. If commodity prices decline and the international political situation improves, this policy is likely to be relaxed to some extent. Restrictions on credit, for instance, may be slowed down and the rate of deficit financing may be increased. Similarly, if the chances of getting foreign aid improve, the Government may be less inclined to impose fresh tax burdens.

* * * *

The considerable restraint with which business men and industrialists express their opinions and the constructive outlook which they display in making their suggestions to the Government are certainly a notable trend in this country's affairs. It is noteworthy that these representatives of the relatively more substantial private sector, which really stands to lose through the recent changes in the Government's industrial and fiscal policy, far from entertaining any hostility or opposition to the Government, are prepared to make their contribution to the country's welfare. Their attitude is one of responsible co-operation which they seem to exhibit in a spirit of true detachment—that is, irrespective of whether it evokes a sympathetic response or not. If this attitude induces the Government to take less doctrinaire and more practical decisions, it may still make a significant difference to the country's economic future.

An evidence of this constructive attitude is be found in the speeches of the chairmen of the three leading companies, which held their annual meetings, during the closing days of last year—Mr. J. R. D. Tata of the T.E.L.Co., Mr. Ramaswami Mudaliar of the India Steamship and Lala Shri Ram of the Delhi Cloth and General Mills. Mr. Tata, referring to the Government's decision to submit the controversy between his company and the Railway Board, to the Tariff Commission, paid a well-deserved tribute to the Government's sense of justice and fairplay. He said: "In these days, when Government has almost unlimited powers with which to enforce its will, it is gratifying and reassuring to note that, in an industry in which Government is itself a competitor as well as the sole customer, it decided to refer a dispute about costs and prices to an impartial statutory inquiry and abided fully by the resulting recommendations, even though they went, to some extent, against its views." This inquiry has certainly cleared the air, so that the Company, as Mr. Tata himself hoped, should be able to look forward to a period of close and fruitful co-operation between itself and the authorities in the further development of the locomotive industry.

* * * *

The attitude of the shipping industry to the Government's economic policy was expressed by Mr. Ramaswami Mudaliar in no less felicitous terms. On behalf of the Company, he gratefully acknowledged the assistance given to it for expanding its fleet. He recalled the observation made by Mr. Lal Bahadur Shastri, ex-Minister for Railways, to the effect that it was not the Government's intention that shipping in the public sector should run in competition on routes in which existing private shipping companies have established themselves. He added: "I trust the categorical statement of the Hon'ble Minister will continue to be the basic policy in the expansion of shipping in the public sector." After referring briefly to the fact that the achievements of the Indian shipping industry were by no means "inconsiderable," that it had established itself against heavy odds, he expressed his confidence that the development of national shipping in the private sector would continue to be encouraged by the Government.

* * * *

Lala Shri Ram, after suggesting the dropping of the practice of frequently raising the controversy over the public *versus* the private sector, went on to a dispassionate examination of the problems of the textile industry, especially of its role in the country's export trade. He pointed out how, in the last three years, production of cloth had expanded while exports had gradually declined. He attributed this divergent trend in the production and export spheres to the increase in domestic demand for cloth which makes it more profitable for mills to sell on the home market than to sell for export and to the Government's policy in limiting the expansion of the weaving side of the mill industry. He, however, welcomed the Government's decision to license the installation of 14,600 automatic looms and to revise upwards the cloth target from 18 yards to 18.5 yards *per capita*. But he felt that the target should be raised at least to 20 yards. He rightly warned that the country could not afford to risk a shortage of cloth.

Although Lala Shri Ram felt that the fear that the increase in mill capacity would adversely affect the handloom industry was unwarranted, he suggested that the Government could, after fixing annual targets for cloth requirements, allow the handloom industry a progressively rising proportion of the target in succeeding years, provided the handloom industry could undertake the production effort. He even suggested that, if mills were found, at any stage, to restrict the output by handlooms, the Government could resort to scaling of a small percentage of mill looms. As regards exports, he made the suggestion that the interest of the country would be served better by making all mills share in the task of promoting exports than under the present arrangement whereby only those mills installing the new automatic looms had obligations for cloth exports. Amplifying this suggestion, he said the Government could insist upon all composite mills to export a certain minimum percentage of their cloth output. These suggestions seem to break much unconventional ground in addition to their being in full conformity with the Government's textile policy. But, in trying to fall in line with the Government's thinking, he seems to have ignored considerations of practicability. The point is that, basically, the Government's textile policy is full of muddles and any proposal which seeks to effect a compromise with it, however cleverly designed it may be, cannot be free from that defect and will only constitute a hotchpotch solution.

EXPORT-IMPORT BANK'S LOAN TO U.K.

The Export-Import Bank of the United States has agreed to lend the U.K. Government $500 million to help finance purchases of American oil, coal, tobacco, wheat, steel and other commodities. The credit has been established against Britain's holdings of U.S. dollar securities. According to the Agreement, drawings may be made at any time during the 12 months following the date of the Agreement—21st December 1956. The loans will be repayable in nine semi-annual instalments, beginning three years after each disbursement, thereby making a total repayment time of seven and a half years. The interest charge is fixed at 4⅛ per cent. which compares favourably with 5½ per cent. or even higher charges customarily made by the Export-Import Bank for unsecured loans.

It is expected that substantial drawings will be made by Britain against the line of credit for payments in order to maintain the reserves and strengthen the confidence in sterling.

It will be recalled that, 11 days prior to this Agreement, the I.M.F. had sanctioned a loan of $1.300 million to Britain of which $561,470,000 was made available immediately.

EQUITIES RULE WEAK

NEW YEAR BRINGS FURTHER FALL IN PRICES

(From Our Own Correspondent)

BOMBAY, *3rd January*

THE turn of the year 1956 did not bring any cheer to the share market. On the other hand, equities which closed the past year on a depressed note developed fresh weakness during the first two sessions of the New Year. Official trading for 1957 opened yesterday (after a respite of ten days on account of Christmas and New Year holidays) on a subdued note, with no signs of any fresh support forthcoming even at attractively low levels. With all eyes turned to Laxmibai Nagar (Indore), the venue of the 62nd session of the Indian National Congress, which commences its deliberations today, operators preferred to await the resolutions of the Congress on the economic policy to be followed by the party if returned to power again. Meanwhile, rumours about payment difficulties in the current settlement caused a further landslide in prices.

During the closing week of the past year, equities displayed a nervous tone on reports of heavy offerings in Indian Irons in Calcutta. Fears of levy of heavier excise duties, following the passing of the Bill seeking to vest powers in Government for raising excise duties up to a maximum of 50 per cent. by executive notification during the period when Parliament is not in session, threats of higher taxation and reports of accumulation of cloth with mills and lower prices fetched abroad for Indian cloth accentuated the downward trend.

In the steel section, Tata Ordinaries steadied up from Rs. 176-12 on 13th December 1956 to Rs. 178-8 before winding up at Rs. 173-8 on 22nd December, the last day of business for 1956. There was a further recession during the last two days, the closing today being done at Rs. 171. After an initial hardening from Rs. 30-8 to Rs. 30-12, Indian Irons slided back to Rs. 28-15 *ex-div.* on 18th December, at which level some support on the news that the Company had been granted a loan of $20 million by the World Bank, was forthcoming lifting the shares up to Rs. 29-8½ on the 21st December. The recovery was short-lived and the shares gave way to Rs. 28 today. The World Bank loan to the Company will carry interest at the rate of 5 per cent. and is repayable in 7½ years from 15th April 1960.

Textiles were the worst sufferers, the recession being more marked during the last two days. Bombay Dyeings, after moving up from Rs. 592-8 on 13th December to Rs. 600, retreated to Rs. 581-4 on 22nd December. Opening the New Year lower at Rs. 563-12, the shares fell further to Rs. 555-10 today. Centurys were marked down from Rs. 521 to Rs. 502-8. Kohinoors were on offer and dropped from Rs. 328 to Rs. 317-8. Central Indias lost Rs. 3 to Rs. 126. Finlays dipped from Rs. 316 to Rs. 304-12 and Gokaks from Rs. 233-8 to Rs. 221. A loss of As. 3 was noted in Indu Ordinaries at Rs. 11-6½. Indore Malwas were, however, better by Rs. 3-12 at Rs. 139-6. Khataus shed Rs. 5 to Rs. 222-8. New City Mills declined from Rs. 155-10 to Rs. 147-8 and New Great Easterns from Rs. 247 to Rs. 245. Podar Mills were done Rs. 5-10 lower at Rs. 165. Shree Niwas receded from Rs. 202-8 to Rs. 192-8, Simplex from Rs. 186 to Rs. 182 and Standards from Rs. 447-8 to Rs. 442-8. Svadeshis shed Rs. 4 to Rs. 228-8 and Tata Mills Rs. 2 to Rs. 48. Vishnu Mills reacted from Rs. 158-12 to Rs. 140.

Bank shares displayed an easy trend, with the threat of competition from the new State-owned financial institution which (the Finance Minister on 24th December announced), the Government proposed to start to advance short-term loans to industries. Barodas suffered a loss of Rs. 3-8 to Rs. 99. Centrals were lower by Re. 1-8 at Rs. 51-8 and their new shares by As. 8 at Rs. 55-4. Bank of Indias gave way from Rs. 141 to Rs. 137-8 and Union Banks from Rs. 7-8 to Rs. 7-1½. United Commercials shed Re. 1 to Rs. 53-8.

Moderate losses were common in electricity shares, which lacked support. After an initial rise from Rs. 93-2 to Rs. 94-11 on investment buying, Ahmedabad Electrics gave way to Rs. 92-8. Bombay Suburbans, after being done at Rs. 107-8 *ex-div.*, as against Rs. 111-4 *cum-div.* on 13th December, closed at Rs. 108-2. Surats receded from Rs. 113-2 to Rs. 109-6. Tata Hydros fell sharply from Rs. 126-8 to Rs. 120. Tata Powers, after an initial advance from Rs. 1,230 to Rs. 1,245, gave way to Rs. 1,225. Andhra Valleys finished at Rs. 1,207-8, after being done at Rs. 1,210.

Insurance shares were far from lively in the face of a general depression. New Indias were steady at Rs. 43-8 and Indian Mercantiles at Rs. 41. Some business passed in Orientals today Rs. 15 higher at Rs. 3,655 on reports that the Company would not be wound up, but would be converted into an investment company.

The miscellaneous section followed the general trend with all-round recession. Sugar shares were very depressed during the period before the holidays on fears of an increase in excise duty. During the last two days, however, they ruled steady. Belapurs, after being depressed from Rs. 248-8 to Rs. 241, finished today at Rs. 242. Phaltans dropped Rs. 4-8 to Rs. 143-8 and Walchandnagars Rs. 11-14 to Rs. 260-10. Cements also were weak earlier for the same reason, but towards the close the selling pressure abated. Associated Cements, after reacting from Rs. 133-8 to Rs. 130-8, recovered to Rs. 132. Digvijays shed on balance Rs. 2-4 to Rs. 151-8. Jaipur Udyogs were quiet at Rs. 11-12 and Orissa Cements at Rs. 13. Among engineering and mining shares, Alcocks were conspicuous with a heavy marking down from Rs. 287-8 to Rs. 263-12. Tata Locomotives received some support earlier in the period under review and rose from Rs. 164-8 to Rs. 167, but lost ground to Rs. 162-8 at the close. Larsen and Toubros were quiet at Rs. 15-12, while Premier Constructions closed with a loss of Rs. 5 at Rs. 185-8. Shivrajpurs declined from Rs. 90 to Rs. 86, while Indian Coppers were steady with a gain of As. 3½ at Rs. 3-10½. B.B. Petrols were also steady at Rs. 2-13½.

Shipping shares attracted good support earlier, but later on the general weakness of the market caused a minor setback. Scindias gathered strength from Rs. 18-5 to Rs. 19 before closing at Rs. 18-7½. Great Eastern Shippings moved up from Rs. 17 to Rs. 17-6, but reacted to Rs. 17 at the close. Their right shares were done As. 7 lower at Rs. 4-14. In the automobile group, Hindustan Motors were depressed at Rs. 7-10, while Premier Automobiles finished at Rs. 103, after gaining from Rs. 101-8 to Rs. 106.

In the miscellaneous group, Bombay Burmahs were firm before the holidays on good support and rose from Rs. 650 to Rs. 690-10 on optimistic expectations of settlement in regard to capital reconstruction. While the negotiations failed, two arbitrators were appointed to give an award. The arbitrators whose award was announced on 21st December, fixed the compensation at 10,000 shares of Rs. 125 each for the abolition of the special rights of founder shares. The scheme now awaits the sanction of the High Court and the consent of the Government. Subsequently, the shares dropped to Rs. 656-4 at the close. National Rayons, after an initial improvement from Rs. 245-4 to Rs. 249, lost ground to close at Rs. 238-12. British India Corporations changed hands As. 14 lower at Rs. 8-7. Hindustan Levers, which have been officially listed on the Stock Exchange, were done at Rs. 18-10. Killick Industries shed Re. 1 to Rs. 165. Tata Chemicals were done As. 6 lower at Rs. 16-10. Tata Oils were quiet at Rs. 44-12. Wimcos were put through Rs. 4-6 lower at Rs. 165-10.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *2nd January*

Although the period under review covers almost three weeks, the number of sessions held on the Calcutta Stock Exchange was limited in view of the season's holidays. All the same, values declined gradually, and it appeared as though buyers were enjoying a longer holiday! The Finance Minister's several statements left no doubt that industry need expect no relief in taxation, but that taxes would be increased progressively in order to bridge the gap between the Plan's expenses and internal resources and to keep down deficit financing to the minimum. The draft of the Congress Party's election manifesto gives a clear picture of the socialistic pattern of society as envisaged by the Party which is bound to be returned to power for another term. These factors kept operators and investors athinking. With high taxation and statutory provisions for increased labour amenities the question is being asked whether companies would be able to declare as satisfactory dividends as in the past.

However, the period under review was not free from favourable developments. The import policy for the half-year to June next, which reduces quotas of several consumer goods produced within the country and thereby envisages a saving of Rs. 30 crores worth of foreign exchange for utilisation in productive channels, was welcomed. The grant of a loan of $20 million by the World Bank to the Indian Iron and Steel Company, Ltd., the improved prospects for greater assistance from the U.S. as a result of the recent visit of Prime Minister Nehru, and the Finance Minister's declaration putting at rest fears of an increase in the Bank rate should have normally resulted in some enthusiasm, but the fear of lower dividends was too strong.

Jute shares were for a time better, but as the increase in the prices of jute goods restricted business with overseas countries, shares declined. Nationals opened at Rs. 20-14 and by closing had declined to as low as Rs. 18-10. From Rs. 53-8, Ganges gained to Rs. 56, but closed at Rs. 54-8. Howrahs were unchanged at Rs. 20, while Fort Glosters met with business at Rs. 310, as against Rs. 363 previously. At Rs. 120, Indias lacked interest, but Belvederes, after being lower at Rs. 113-8, were pushed up to Rs. 117. New Centrals hovered between Rs. 13-1 and Rs. 13-8. Deltas regained to Rs. 128 from Rs. 121-8 and Megnas to Rs. 69 from Rs. 68.

Although in common with the rest of the market coals were shown sparse interest, Burrakurs continued to command attention. The quotation was throughout maintained above Rs. 21, while from Rs. 6-12 Central Indias fell to Rs. 6-3. At Rs. 57-4, Khatras Jherriahs were better as were Western Bengals at Rs. 6.

Among textiles, while Kesorams were pushed down to Rs. 14-14 from Rs. 16-3, Dunbars were lifted to Rs. 210 from Rs. 205.

Indian Coppers, in the mining section, after recovering to Rs. 3-12, closed at Rs. 3-10. On the other hand, Burma Mines were steady at Rs. 3.

Selected counters in the engineering section were in better form. Richardson and Cruddas opened at Rs. 22-9 and, after receding to Rs. 21-8, rose to Rs. 24 on interested buying. Kumardhubis at Rs. 8-15 were better by a few annas, but Indian Galvanisings fell to Rs. 18-11 from Rs. 20-8. Guest Keen Williams, a new entrant, came to business at Rs. 23-6 and subsequently on interested buying rose to Rs. 23-10. On the other hand, Texmacos eased to Rs. 19-11 from Rs. 20-9. Jessop & Cos. were at one time lower at Rs. 29-4, but closed better at Rs. 30-4. Burn & Cos. were a shade lower at Rs. 316-8.

Indian Cables highlighted the attention of operators in the miscellaneous industrials section on publication of a highly encouraging statement by the Chairman in regard to the working of the Company during 1955-56. The counter rose to quote as high a rate as Rs. 33 from Rs. 28-13. At Rs. 26, Champaran Sugars scored an impressive gain of Rs. 5. Dunlop Rubbers, after being easier at Rs. 25-10, recovered to Rs. 25-12. Orient Papers were at one time done higher at Rs. 32-7. Niccos were taken down to Rs. 22-14, but soon recovered to Rs. 25-12. National Rollings were quiet at Rs. 9-9 as were Martin Burns at Rs. 22-8.

Although there was a decline in the number of transactions in the tea section, the immediate prospects for the tea industry attracted a good portion of the funds in the market. A distinct feature was the gain in Naga Hills to Rs. 41 from Rs. 32-2 previously. Banarhats were higher at Rs. 327, as against Rs. 305 earlier. Hantaparas lost to Rs. 182 from Rs. 213, and Methonis to Rs. 20 from Rs. 21-8.

* * * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *2nd January*

The Madras Stock Exchange depicted a distinctly bearish trend during the three-week period under review. The recent pronouncements of the Union Finance Minister that he would not hesitate to come out with fresh tax proposals any number of times in a year both in season and out of season acted as a great damper on the market. Operators were apprehensive about the possibilities of introduction of taxes such as those on wealth, expenditure and gift. They were also apprehensive about the threat of possible increase in wages for labour, leading to a rise in the production cost of various industries. All these factors induced large offers of equities at substantially reduced rates. Even reports of efforts being made to arrive at an amicable settlement of the dispute over the Plantation Award failed to have an effect on the market.

Textiles came in for heavy selling and suffered sizable losses. Bangalore Woollens moved down by Rs. 20 to Rs. 542-8. Dhanalakshmis fell by Rs. 17 to Rs. 370. Metturs dropped Rs. 12-8 to Rs. 422-8. Buckinghams receded by Rs. 10-8 to Rs. 175-8. Radhakrishnas and Vasantas declined by Rs. 10 each to Rs. 335 and Rs. 330, respectively. Coimbatore Cottons slipped by Rs. 6-4 to Rs. 378, Saradas shed Rs. 4 to Rs. 126, Janardhanas Rs. 3-4 to Rs. 101 and Rajalakshmis Rs. 3 to Rs. 86. Rayalaseemas lost Rs. 2 to Rs. 86. Pankajas were lower by a like amount at Rs. 78. Virudhunagars eased by a rupee to Rs. 37.

In the plantation section, rubber shares were neglected in the absence of buyers. Travancore Rubbers climbed down by Rs. 3-6 to Rs. 20-4. Rajagiris dropped As. 6 to Rs. 23-2 *cum-div.* Cochin Malabars and Pullangodes decreased by As. 4 each to Rs. 9-3 and Rs. 2-9, respectively. Thirumbadis lost 18 pies to Rs. 2-1-6. Among tea shares, Chandramalais gave way from Rs. 4-13 to Rs. 4-6-6. Nilgiris weakened by As. 4 to Rs. 8-14. Devons were on offer As. 2 lower at Rs. 17-6. Chembras lost an anna to Rs. 3-11. Blue Mountains were done at Rs. 5-3-3 *ex-div.*, as against Rs. 5-4 *cum-div.* (15 per cent.). Deals in coffee shares were put through at reduced values. Consolidated Coffees dropped As. 12 to Rs. 20-2 *cum-div.* Coffee Lands declined by As. 2 to Rs. 26-6 *cum-div.* Mysore Coffees shed a similar amount to Rs. 2-8.

Among miscellaneous industrials, Rallis encountered selling pressure and fell by Rs. 2-8 to Rs. 39. Indian Steel Rollings were marked down by Re. 1-12 to Rs. 12. Aluminium Industries were on offer Re. 1-6 lower at Rs. 20-2. Mysore Papers retreated by Re. 1-2 to Rs. 16-4. India Cements receded by As. 7 to Rs. 28-11. Travancore Rayons were dull at Rs. 13-15, as against Rs. 14-6 three weeks ago. Andhra Cement 'B's and Singarenis lost As. 6 each to Rs. 15-2 and Rs. 11-4, respectively. Spencers shed As. 5 to Rs. 16-3. F.A.C.Ts eased by As. 3 to Rs. 6-6.

The U.S. Department of Commerce reports that world natural rubber production in October 1956 was 155,000 tons, as against 172,500 tons in October 1955. World output in the first ten months of 1956 aggregated 1.5 million tons, 2.6 per cent. less than the production in the comparable period of 1955. Consumption of natural rubber during the period was 1.5 million tons, 17,500 tons higher than in the same period of 1955. Synthetic rubber production for October is estimated at 100,000 tons, slightly higher than last year, and consumption at 102,500 tons, 97,300 tons higher than last year.

NEWS IN BRIEF

INDIA imported 1.8 million tons of foodgrains during 1956.

The Railway Board has ordered the survey of the 120-mile stretch between Chinna Salem and Chinglepet for laying railway tracts.

During 1955-56, the Development Wing of the Ministry of Commerce and Industry sanctioned 89 industrial schemes involving foreign collaboration.

The Government of India has decided that the export duty on tea during January should remain at the same level as in December last, namely, eight annas per pound.

An Agreement for providing assistance upto $20 million towards the capital cost of the Kundah project has been signed in New Delhi by the Governments of India and Canada.

The Union Ministry of Natural Resources has taken Kerala as a whole for geological survey of gold, lignite, and non-ferrous metals. It is also considering the proposal to offer the services of geological experts for conducting a preliminary survey of the coastal areas of Kerala for prospecting oil.

The Government of India has decided to license freely the export of woollen yarn other than hand-knitted wool to all permissible destinations excluding the Portuguese possessions in India, up to the end of December 1957. The Government has also decided to license freely the export of sisal floor coverings such as mattings and carpets.

Air India International will buy three jet aircrafts manufactured by the Boeing Corporation of the U.S. and will arrange for American private financing—as loan—to pay for them. The total cost of the airliners is estimated at about $18 million. Negotiations for American financing have reached an advanced stage and the General Manager of the Company is going to New York to finalise the arrangements. It is reported that some leading banks are joining together to put up the bulk of the required amount, with the World Bank lending the remainder.

The U.S. Agricultural Department has authorised India to buy for rupees an additional $22.1 million worth of U.S. wheat or wheat flour. The authorisation is an amendment to the original Public Law 480 Authorisation which permitted India to buy $56.3 million worth of wheat or flour and is part of the agreement between the two countries providing for purchase of U.S. surplus commodities over a three-year period. This authorisation completed the purchase of commodities in the first year. According to the Department of Agriculture, sales contracts can be made until 31st August 1957, with deliveries to India not later than 30th September 1957.

The packing charges for cement for the current quarter have been fixed by the Government of India at Rs. 13-1 per ton. These charges are applicable to cement packed, in new bags only. Cement packed in old bags will be a matter for settlement between the buyer and the seller subject to the above maximum. There will, however, be no change in the equalised f.o.r. destination price of Rs. 102-8 per ton announced in the Cement Control Order of 26th June 1956, on account of the quarterly revision in the rate of packing charges for cement. Such changes in the rate of packing charges will apply only for the supply of loose cement.

A team of eight Indian technicians left for the United States recently on a six-month in-plant training course under the Technical Co-operation Programme. Five of the team are railway workshop foremen who will study modern techniques of welding, locomotive repair, track circuits and centralised control on the U.S. railroad networks. Two are for aircraft engineering and telecommunications and one will study the latest type of fertiliser equipment and accessories. The project, jointly sponsored by the Union Labour Ministry and the Technical Co-operation Mission, is designed to provide advanced training to improve plant performance in productivity and technology of the various industrial projects under the second Five-year Plan.

From Abroad

The Council of States, the Upper House of the Swiss Federal Parliament, has approved an agreement under which the Swiss Government will extend a loan of 200 million Swiss francs (£17 million) to the World Bank.

The flow of oil from the U.S. to Western Europe increased to 421,000 barrels daily during the week ended 19th December 1956, a gain of 34,000 barrels daily over the preceding week. Since 1st November, 20,734,000 barrels of U.S. oil have been moved by tankers to Western Europe.

The United States Atomic Energy Commission has reported that it now requires about $2,000 million a year to operate its vast and far-flung programme. Capital investments in plants, property and other equipment have grown from $1,200 million in 1947 to nearly $7,000 million at present.

The Japanese Plant Export Association is considering plans to export to Pakistan two fertiliser plants valued at 38,000 million yen. One plant, with a daily capacity of 100 tons of urea and ammonium nitrate, is destined for West Pakistan and the other, with a 50-ton daily capacity, for East Pakistan.

Austria joined the multilateral foreign currency arbitrage system of ten European Payments Union countries on the 2nd inst. This will enable Austria to take advantage of direct foreign currency traffic among the countries concerned and to make use of differences in currency exchange rates on various markets.

Peko Mines, producers of copper in the Northern Territory, Australia, have proved the presence of ore reserves for 20 years' operations at the present rate of 200 tons of copper ore daily. At a proposed higher rate of 400 tons a day, the total reserves would be sufficient for about ten years. Early in 1957, a daily output of 300 tons is expected.

Orders for steel in the United States are in excess of production, even though the steel mills recently established a record of 102.4 per cent. of capacity. Demand is strong for virtually all categories of steel, particularly plates and structurals. Production is expected to exceed 115 million tons, despite the 34-day strike last summer. This is 2 million tons below the all-time record set in 1955.

The introduction of an oil allocation scheme for Western Europe will be examined shortly by the Governments concerned on the basis of a study just completed by a special group of O.E.E.C. experts. Meanwhile, the O.E.E.C. Oil Committee has decided on urgent action to assure priority supplies for Sweden, Greece and Turkey which are especially affected by the diminution of shipments from West Asia. The O.E.E.C. Emergency Group of big oil companies (O.P.E.G.) has been given instructions to this end.

According to Dr. Marcus Nadler, consulting economist of the Hanover Bank of the United States, the present boom in the U.S. economy will end sometime in 1957 or in the first half of 1958. This will be brought about by reduced availability of credit and capital, excess of productive capacity over effective demand, and desire of many individuals to reduce their outstanding indebtedness. Any decline that might take place in the future is not likely to go far, nor last long, as the U.S. economy is basically sound.

West German steel output is estimated to have reached a record of 23 million metric tons and is expected to touch 25 million tons in 1957. This makes West Germany the third biggest steel producer in the world, behind the United States and the Soviet Union but ahead of Britain. Britain's estimated output in 1956 is between 20 and 21 million tons. It hopes to produce 23 million tons in the current year. The U.S. produced 115 million tons last year and hopes to reach 125 million tons in 1957. Russia produced 55 million tons in 1956.

The Chinese Government is increasingly favouring British technical aid as well as expanded mutual trade. But it insists that such aid and trade will be flatly refused, if any political strings are attached to it. The first delivery of imported British tractors made recently was greatly welcomed in China. The tractors would appear to have met all requirements and won a reputation for cheapness. Chinese planners hold that there will be an increasing market for British tractors, although the Government is committed to the policy of encouraging expansion of local manufacture.

PERSONAL

PRIME Minister Mr. Nehru returned to India on Friday 28th December 1956, after his epoch-making visit to the U.S. and Canada.

Mr. H. N. Huksar, Indian Ambassador in Ankara, arrived in Bombay from Genoa last Thursday.

Mr. L. T. Madnani has been appointed new Railway Adviser to the High Commissioner for India in the United Kingdom in place of Mr. R. H. DaCosta.

Mr. B. P. Singh Roy has been renominated as Chairman of the reconstituted Coal Transport Advisory Committee set up by the Union Production Ministry.

Mr. Morarji R. Desai, Minister for Heavy Industries and Commerce and Consumer Industries, will henceforth be designated as Minister for Commerce and Industry.

Mr. P. C. Mukerjee, formerly Member (Engineering), Railway Board, has succeeded Mr. G. Pande as Chairman, Railway Board, on the latter's relinquishing charge of his post on 31st December 1956.

Mr. J. K. Srivastava, Chairman, Board of Directors, New Victoria Mills Company, Ltd., Kanpur, has been elected President of the Upper India Chamber of Commerce, Kanpur, for the year 1957.

Mr. Anandilal Poddar, a prominent businessman of the city of Calcutta and Chairman of the Sone Valley Portland Cement Company, Ltd., has joined the Board of Directors of the Calcutta Tramways Company, Ltd. Mr. Poddar is the first Indian to join the Board of this Company.

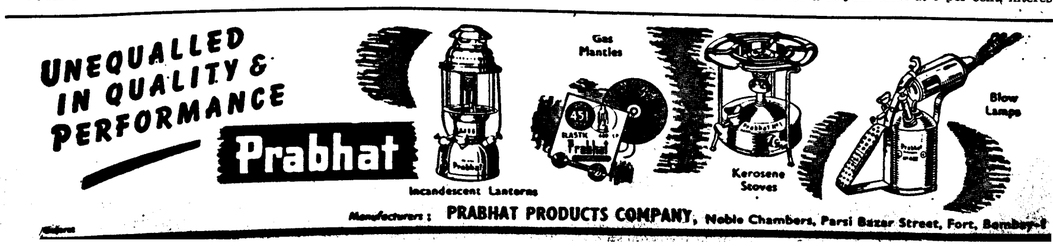
Mr. William Gibson-Parker, Deputy Director of the Radio and Visual Services Division of the United Nations, has been named Director of the Information Service at the European Office of the United Nations in Geneva. He will take up his new duties on 2nd January 1957, succeeding Mr. Jerzy Szapiro, who has retired from U.N. Service.

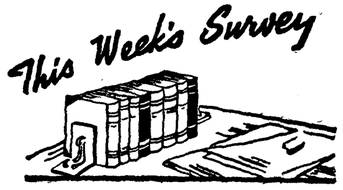
Professor Mahendra Nath Borah, Vice-Principal and Professor of Agronomy at the Assam Agricultural College, is conducting research in Britain aimed at gaining the most advanced knowledge on the growing of potatoes in Assam. He is in the United Kingdom as the holder of a two-year fellowship under the Technical Co-operation Scheme of the Colombo Plan.

The report of the Foreign Affairs Committee of the U.S. House of Representatives has recommended a slowing down of U.S. foreign aid. Less money spent so as to "meet the realities of 1957" would, it is said, do more to further U.S. aims than the present multi-million dollar programme. The report has suggested that U.S. economic aid should be almost entirely in loans, not gifts, as lender-borrower relations are better than those between giver and receiver. It has also suggested easing of the U.S. embargo on shipments of strategic goods to the Soviet bloc, as Britain and other allies of the United States have urged.

The Federal Maritime Board of the U.S. has ordered 40 more cargo vessels to be released from the U.S. "moth-ball" fleet. The ships will be divided against 28 shipping lines for the transport of Government foreign aid and surplus agricultural commodities. The Maritime Administration Office places the total number of vessels released from the "moth-ball" fleet since early August at 112. It may be mentioned here that the Department of Agriculture and the International Corporation Agency had urged putting the Government-owned vessels back into service in order to move Government foreign aid and surplus farm products. The charter rate will be $127.282 a year for Liberty ships and $185,138 for Victory ships.

Japan has received two World Bank loans aggregating $24.3 million for building a steel strip mill near Tokyo and for land reclamation projects. One of the loans, of the value of $20 million, is made to the Japan Development Bank, a State agency which will re-lend the proceeds of the loan to the privately owned Kawasaki Steel Corporation for the construction of the strip mill. The second loan on similar terms is equivalent to $4.3 million in various currencies and is for land reclamation projects and for increasing imports of dairy cattle. The First National City Bank of New York is participating in the loan, without the World Bank's guarantee, to the extent of $1.25 million. It is for a 15-year term at 5 per cent. interest.





LABOUR PROBLEMS

INDUSTRIAL peace is a subject of common interest to both the Government and the private employers, considering that it is vital to the implementation of the industrial programmes in the country, whether they have been undertaken in the public or the private sector. Now that the country is in the first rung of the second Five-year Plan, it was perhaps wise on the part of the Government of India to have convened a conference of State Labour Ministers which was held at New Delhi last week, to consider important labour matters. It is, however, unfortunate that the information on what transpired at the conference is somewhat meagre. The essential approach of the Government towards labour problems, outlined by the Union Minister for Labour, Mr. Khandubhai Desai, at the conference, was, however, on the lines that have been indicated in the second Five-year Plan. As is well known, the Plan emphasises social security for workers, improved amenities, appropriate share in the wealth produced and participation of labour in management.

Mr. Desai, in the course of his speech, dealt at some length on certain specific issues, namely, health insurance scheme, provident fund, wage boards, labour courts and participation of workers in management. Much progress has already been made in the direction of extending the benefits of health insurance to industrial workers, of whom more than a million are now brought under the scheme. The Government has also decided to make available the benefits under the scheme to the families of insured workers. A substantial part of the additional expenditure involved in the extension of the scheme to workers' families, it is stated, will be borne by the Corporation, though there may be a slight increase in the contribution made by the States. In any case, such extension has made the scheme more popular among the workers.

Like the State insurance scheme, the provident fund scheme has been gradually extended to cover an increasingly large section of industrial workers. The Government has also enacted legislation, extending the scheme to the employees working in commercial firms and other establishments which are not industrial establishments. Mr. Desai urged the conference to consider the proposal for increasing the contribution by workers as well as employers from 6¼ per cent. to 8-1/3 per cent. He pointed out that, if this increase were effected, the Government would have at its disposal money to the extent of 16-2/3 per cent. of the wage bill for financing schemes for national development. The consensus of opinion in the conference, it is stated, was that this increase should be effected. But it is not clear whether the decision was actually taken.

Defending the Government's decision to constitute wage boards in various industries, Mr. Desai pleaded for a rationalisation of wage-structure. He said: "We have some sort of wage structure which is today prevailing in the country as a result of collective agreement, arbitration or the award of industrial tribunals." He added that the Planning Commission had recommended that wage boards should be constituted, so that a wage structure could be evolved which would be "rational, practical and realistic." The conference is reported to have agreed to the proposals made by the Government of India for setting up wage boards for a few selected industries of national importance. Such boards, it is stated, are likely to be set up for textiles, iron and steel, jute, plantations and engineering industries. Referring to the kind of approach that was needed in order to solve the problem of evolving a satisfactory wage structure, Mr. Desai said: "It must be a rational and national approach but that cannot be there, unless all the partners in industry are made to sit together and evolve a structure which, while giving some purchasing power to the worker, consistent with the rise in the national income, would leave enough for the expansion of industry, leave enough for financing the other projects in the country; at the same time, it should create a situation whereby the workers are satisfied that their share of the national income is assured to them." Stated in such broad terms, the approach is certainly unexceptionable. But difficulties are bound to arise when it is to be implemented. It is a difficult enough task to evolve a wage structure even for a single industry, what with the presence of a large number of units with different capacities for profitable working. But the situation will be more difficult when it is sought to evolve a wage structure for all industries, all over the country. It remains to be seen how the Government proposes to carry out its policy designed to bring about a nation-wide wage structure, based on equity and capacity of the industry to support the structure.

An issue, connected with the actual working of labour legislation, which figured in the discussions was the setting up of labour courts to deal with all matters arising out of labour legislation. The conference recommended that the permanent labour courts to be set up in pursuance of the recent amendment of the Industrial Disputes Act should be empowered to hear all cases under the various labour laws. Explaining the nature of the change which he had in view, Mr. Desai said: "Today some of our cases go to the sessions court, district courts and magistrates and first class magistrates. Now all those persons whom we will be recruiting for the labour courts may be recruited in such a way that they can deal with the cases which today go to the various miscellaneous courts." The change proposed has the advantage of simplifying the work of implementing labour laws. But it will certainly mark a great departure from existing practice. It is not clear whether High Courts have been consulted on this subject. It is, however, recognised that some further legislation may have to be undertaken, in order to give effect to the proposed change in the jurisdiction of labour courts.

Finally, the conference, after discussing the question of giving a practical shape to the principle of associating workers with management, agreed that a special conference of Labour Ministers should be convened at an early date to examine the report that would shortly be submitted by the tripartite study team which recently visited several European countries and chalk out details for implementing the scheme. The allied question of educating the workers both in the fundamentals of labour problems and labour legislation and in the principles of sound trade unionism was discussed. It was agreed that a committee of experts should be set up to work out the details of the education programme.

The Government, as is well known, attaches considerable importance to participation of workers in management. Explaining the significance of this movement, Mr. Desai said: "Now, in order that an industrial democracy may become a reality, we have to see that the workers feel the sense of participation in the management and also that they are not only wage earners, but are part and parcel of the industrial production and they are as important in stature and status as management itself. I have no doubt that, given the proper will on our part and proper understanding on the part of employers and trade union organisations, we can make our industrial democracy a real success and an example even for others to follow." There is no doubt that any scheme which associates workers with the management at different levels of the organisation of each industrial unit will promote the cause of industrial production as well as industrial peace. Some enlightened employers, Tatas and the Aluminium Corporation, for instance, have already given a commendable lead in associating workers with management. These notable experiments deserve to be more widely emulated by the other employers and even by the Government. The conference of Labour Ministers, which is expected to be convened shortly to consider this question, will therefore do well to examine the working of these experiments, in addition to reviewing the report of the Indian delegation on the subject of participation of workers in management.

EMPLOYMENT AND ECONOMIC GROWTH

Presiding over the thirty-ninth annual conference of the Indian Economic Association held at Cuttack recently, Dr. S K. Muranjan, the noted Indian economist and a member of the Tariff Commission, made some pertinent observations on India's current economic policy. He emphasised that the fundamental contrast in planning for an underdeveloped economy was not between consumption-goods and investment sectors but between the sector of primitive or traditional techniques and the sector of advancing or modern techniques. Warning against an undue emphasis on employment to the detriment of economic growth, Dr. Muranjan observed: "Those who place employment before growth will assuredly live to find that they have achieved neither employment nor growth."

This expert advice, coming at a time when official policy in this country is tending more and more, under political pressure, to encourage outmoded methods of production, without fully grasping the deleterious consequences it produces on economic development, is particularly welcome. Rapid economic growth, the greatest need of all underdeveloped countries, requires a large amount of investible resources which can be obtained only from the rapidly expanding sector of advancing techniques. This is not to deny that the central planning authority is under constant pressure for immediate and maximum relief of unemployment, but this should not be an excuse for misplaced emphasis and ill-conceived economic policy which is sure to result in a distortion in the structure of production which will prejudice balanced growth. For, though lack of planning may not lead the country anywhere, planning, unless carefully devised, may lead to dangerous consequences. Dr. Muranjan rightly observed that the "kindest" thing one could do to the sector of primitive or traditional techniques would be not to relax, whether by subsidies or by discriminatory taxation, the pressure on them for improvement. And it needs no knowledge of economics to say what should be done with those which cannot be improved.

The excuse for tolerating, or rather encouraging, outmoded techniques of production in this country is that it provides employment. It would be to the good of the country if policy-makers realised that employment is required, not for its own sake but for the income it produces, which in turn will stimulate effective demand and economic activity. And there is a direct correlation between income and productivity and no amount of policy manipulations can divorce the one from the other. Taking a peep into the future, Dr. Muranjan pertinently observed that, if this basic fact was not realised "the next generation would accuse us that, despite clear indications of atomic power, etc., we lacked the imagination to assign a greater role to scientific knowledge." This view, with which we like to associate ourselves fully, will find an able supporter in Prof. Dr. Reinhard Kamitz, the Austrian Finance Minister, who recently observed: "Resistance to technological advancement is futile; specialisation and expansion in industry are inevitable. We have to keep in step with evolution elsewhere, for example, in the U.S.A. and in the Soviet Union. Otherwise, we shall lose our power to compete in world markets and deprive ourselves of our basis of employment and well-being."

Commenting on the implementation of the Plan, Dr. Muranjan said that it was the good fortune of humanity that even a planning authority could not enforce a plan according to a military time schedule and a movement schedule. This left a good deal of scope for the initiative, enterprise and enthusiasm of individuals. He tactfully ended his speech on a note of fine sentiment by remarking that politicians and economists might do well to gather courage from the fact that faith could and did move mountains—particularly when the faith was the faith of a people.

FINANCE COMMISSION'S INTERIM REPORT

The interim report of the Finance Commission (Chairman: Mr. K. Santhanam) for the financial year 1957-58, accepted in full by the Government of India, does not contain any significant recommendations which mark a departure from those made by its predecessor—the Neogy Commission—four years ago. This is only to be expected, for, owing to the reorganisation of States and other factors affecting the revenue position of the States, the Commission has not been able to get sufficient material at its disposal even to make a tentative assessment of the assistance that may be required by the States. In formulating the interim recommendations, the Commission has, therefore, sought to maintain the existing position for the various States as far as possible. Thus, in the case of States not affected by reorganisation, it has continued the percentage shares of income-tax and excise duties as recommended by the first Commission, subject to the small readjustment necessitated by the inclusion of the State of Jammu and Kashmir. As regards the States affected by the Reorganisation Act and the Bihar and West Bengal (Transfer of Territories) Act, 1956, the Commission has adopted the readjusted percentages in relation to income-tax and excise duties as embodied in those Acts read with the order issued by the President under the latter Act.

Similarly, in respect of grants-in-aid under the substantive part of Article 275 (1) to States in which certain former Part 'C' States have been merged, the Santhanam Commission has, to some extent, taken into account the assistance received by these States in the past from Central revenues to meet their revenue deficits. It has also treated, for the time being and without prejudice to the final recommendations, the existing grants for the expansion of primary education as general grants. Otherwise, it has continued the existing grants with the modifications made by the aforesaid two Acts.

Since the interim report of the Santhanam Commission does not thus contain any significant change in the existing position, the share of the net proceeds of taxes on income other than corporation tax to be distributed among the various States by the Centre during the ensuing financial year (1957-58) will remain practically unchanged at 55 per cent. This share is exclusive of the proceeds attributable to Union Territories—estimated at 1 per cent.—or to taxes payable on Union emoluments. The same principle will be followed in respect of the distribution of the net proceeds of Estate Duty. Likewise, the States' share in the net proceeds of Union excise duties on matches, tobacco and vegetable products is left unaltered at 40 per cent. There is also no marked change in the grants-in-aid in lieu of a share of the export duty on jute and jute products prescribed under Article 273 of the Constitution, as well as grants given under the substantive part of clause (1) of Article 275. The Commission, however, has not considered it necessary to make any interim recommendations in regard to the rates of interest and terms of repayment of loans made to State Governments by the Centre during the period 15th August 1947—31st March 1956.

The following table gives the shares which the different States will actually get in the net proceeds of income-tax, Estate Duty and excise, as also grants-in-aid during 1957-58:

States	Income-tax and Estate Duty (percentage)	Union excises (percentage)	Grants-in-aid (In lakhs of Rs.)	
			Under the substantive part of clause (1) of Article 275 of the Constitution*	In lieu of a share of the export duty on jute and jute products
Andhra	8.01	8.92	24	..
Assam	2.23	2.58	100	75.00
Bihar	9.31	11.04	80	72.31
Bombay	18.91	13.59	130	..
Kerala	3.60	3.86	41	..
Madhya Pradesh ..	5.09	6.17	251	..
Madras	7.05	8.54	5	..
Mysore	5.93	5.45	46	..
Orissa	3.46	4.17	107	15.00
Punjab	3.98	4.60	163	..
Rajasthan	3.47	4.34	115	..
Uttar Pradesh ..	15.50	18.00	..	..
W. Bengal	11.48	7.49	83	152.69
Jammu and Kashmir..	1.01	1.25	175	..
Total ..	100.00	100.00	1,320	315.00

* These grants-in-aid are paid out of the Consolidated Fund of India, in order to enable the States to meet the costs of development for promoting the welfare of scheduled tribes.

The interim recommendations of the Finance Commission will enable the Central Government to make provisional payments which will help the States to frame their budgets for the coming year. These payments will be readjusted against the final payments that will be made in accordance with the final report of the Commission. The Commission has made it clear, in this connection, that interim report should not be considered as in any way committing the Commission in regard to the principles of distribution of revenue or assistance by way of grants-in-aid. For it is still engaged in a reassessment of the financial position of the Central and State Governments, and it is only on such a reassessment that final decisions can be taken.

West Bengal of all the States is expected to benefit greatly from the interim report of the Finance Commission. It is reported that an additional Rs. 30 lakhs will accrue to this State in 1957-58. The State's share of the income-tax divisible pool has been raised from 11.25 per cent. to 11.48 per cent., which alone, it is said, will yield Rs. 13 lakhs. The balance will result from the increases in excise duties from 7.16 per cent. to 7.49 per cent., in grants-in-aid in lieu of a share of export duty on jute and jute products from Rs. 150 lakhs to Rs. 152.69 lakhs, and in the allocation for the welfare of scheduled tribes from Rs. 80 lakhs to Rs. 83 lakhs. The State Government would appear to feel that the interim recommendations partially reflect the principles advocated by it in its memorandum, and pressed while giving evidence before the Commission, trat the Union excise duties should be distributed also on the basis of consumption and not on population alone and that adequate weightage be given to contribution or derivation in the distribution of income-tax proceeds.

CENTRAL EXCISES

The Central Government is now vested with powers to raise, by notification, existing excise duties subject to a maximum of 50 per cent. of the present rates and to increase correspondingly, where excise duties are so raised, the import duties on foreign goods. The powers are incorporated in the Central Excises and Salt (Second Amendment) Act, 1956, which was passed by Parliament a fortnight ago. This measure is justified on the ground that, in the present price situation, in may be necessary both for encouraging exports and for mopping up excessive profits to make quick changes in excise duties. According to Mr. T. T. Krishnamachari, Union Minister for Finance, the measure more or less fulfils the need for some elasticity in taxation, particularly in the context of economic conditions as they exist today.

Two considerations have weighed with the Government in the assumption of powers to alter the rates of excise and import duties. First, the prices of a number of essential commodities, including some articles of indigenous manufacture, as well as some articles of import, have recorded a rise, which, in many cases, are

IMPORTS TO BE SUBSTANTIALLY CUT

INDUSTRIAL PRODUCTION RISES BY ONE-TENTH

By A Special Correspondent

NEW DELHI, 31*st December*, 1956

DELHI LETTER

WITH the announcement of the import policy for the six months beginning from 1st January 1957 and the drastic curtailment of quotas for as many as 509 items, the Government of India seems to be bent upon straining every nerve to save as much foreign exchange as possible for financing imports of essential machinery and mill work. As a matter of fact, inquiries made in official circles reveal that every possible care is being taken by several departments to see that only the unavoidable minimum of foreign exchange is spent on their several programmes.

At the customary Press conference preceding the announcement of the import policy, the Secretary for the Commerce and Consumer Industries, Mr. Ranganathan, announced that the coming half-year's import policy had been framed in the context of a drastic depletion of the country's sterling balances. The overall expectation of saving in sterling balances during the six months following the reduction in import quotas for "relatively less essential" items, is placed at Rs. 30 crores.

Quite apart from restricting imports, other measures are also being taken simultaneously to step up exports of Indian goods and raw materials which are calculated to earn more foreign exchange. Among such important items may be mentioned oilseeds, vegetable oil, jute, tea, cotton and iron ores which are in great demand in overseas markets. But, at the same time, it is clear that the Government would not embark upon large-scale exports of these commodities, unless it is sure that internal prices do not go up beyond reasonable levels. The policy of the Government is one of cautious balancing of the situation with minimum of disadvantage to all concerned. How far it would succeed in its efforts could not be stated safely at this stage.

The rather quick depletion of sterling balances, though officially stated to be not "alarming," is one of the main factors which guided the Government to this austerity import programme. The latest position is that, whereas sterling balances in January 1956 stood at Rs. 742 crores and came down to Rs. 539 crores in November last, on 21st December 1956, they stood at Rs. 536 crores. In other words, in the course of about 12 months the sterling balances had shown a sharp decline of Rs. 206 crores. This sharp fall is due mainly to imports of machinery. And the Government's efforts are now to be directed to cut down imports of all "less essential" consumer goods as also of machinery which could be improvised by local talents.

Effects

Officials in charge of the Ministries concerned spoke rather frankly when they pointed out that it was not the intention of the Government to put any blanket ban on the importation of machinery at all. It was pointed out, on the other hand, that the Government would import more steel, the raw material for machine building industry and encourage local industrialists to build up their own machinery for expansion of existing plants and for improvisation of new items. It was also pointed out that, during the Second World War, when it was difficult to obtain essential machinery from abroad, Indian industrialists were not idle. They were able to switch on to something indigenous by improvising new machines and tools. They could do so now, too, in the interest of the nation. On the one hand, this policy would help the Government in saving valuable foreign exchange and, on the other, give a fillip to the growth of indigenous machine-making industries.

Another need of the hour is export promotion. The total exports of India in 1954 stood at a value of Rs. 562 crores. They went up to a little over Rs. 600 crores in 1955 but, in 1956, up to the end of November, for which period alone figures are available, they stood at Rs. 547 crores. This clearly means that "India has to strain more to see that we export more of our goods to foreign countries." From the remarks made by the official spokesman, it is clear that the Government is fully alive to this need. A fresh export drive is in the offing.

The pace at which imports have been rising is striking. Thus, total imports in 1954 amounted to Rs. 618 crores. They went up to Rs. 648 crores during 1955, and still further in 1956; up to the end of November 1956, the total imports were no less than Rs. 736 crores. The main items responsible for the rise in imports were machinery and millwork, iron and steel, staple fibre and yarn and dry fruits.

While the Government is anxious to save foreign exchange, it is equally anxious to see that the industrial economy of India does not suffer in any way. A clear implication of the new policy is that the Government will welcome and encourage greater indigenous production, relying on the machinery already installed or which can be obtained with a minimum expenditure of foreign exchange. As regards the distinction between soft currency and hard currency areas so far as imports are concerned, it is felt in official circles that this distinction has practically lost its significance in the present-day context. The discrimination between "hard" and "soft" currency areas has been further reduced by giving importers the facility to utilise 50 per cent. of their licences on hard currency should they so choose. Official spokesmen point out that imports from sterling area have now become as difficult as those from the dollar area. Indeed, in some cases, importers have already represented to the Government that they find imports from dollar area countries much easier and cheaper.

Dollar Area

The result of the Government's import policy for the first half of 1957 is to give importers the option to import from wherever they find it profitable. The fact that imports from dollar area countries are becoming popular due to various factors is clear from the import statistics. While in 1954 imports from the dollar area were worth Rs. 91 crores, in 1955, they were Rs. 98 crores and, in the first nine months of 1956, they were running at the annual rate of Rs. 110.6 crores.

While efforts have been made to reduce imports of almost all items, it will be noticed that major cuts have been made over the range of items with an indigenous industry angle. This, the Government claims, has been made with a view to giving the indigenous industry ample scope to develop and rise to the occasion. Responsible officials hope that indigenous industry would willingly adjust itself to the new circumstances and maintain production to keep pace with the demand, without, of course, in any way entailing a deterioration in quality or increase in price.

The Government is quite conscious of the fact that the new policy would, doubtless, adversely affect a large sector of private trade; but, at the same time, it is pointed out that this sacrifice will have to be made by the private sector in the interest of the successful implementation of the second Five-year Plan. An assurance has, however, been given to the industry and trade in the country that, should they willingly co-operate with the Government, the latter would always be careful to strike a judicious balance between the various priorities.

Reaction to the new import policy in business circles in Delhi is rather cautious. While they are all anxious to help the Government in implementing the second Plan successfully, by undergoing even a voluntary cut in their import requirements, concern is nonetheless being expressed over the manner in which drastic cuts have been made on as many as 509 items. For instance, the cut in imports of solubilised vat dyes by 50 per cent., they point out, would adversely affect the manufacture of dyes. But they still hope that the Government would keep an open mind on the subject and make suitable changes in its policy in the light of experience and the unavoidably urgent needs of the country.

Industrial Output

One of the main factors which induced the Government to launch on a cut in the import programme of many items is the all-round increase in industrial production last year, apart from the desire to check the further fall of sterling balances. According to the latest official statistics available, industrial production has shown an all-round increase during 1956 and in

CHRISTMAS IN STOCK MARKETS

COSTS CONTINUE TO RISE

From Our Own Correspondent

LONDON, 28*th December*, 1956

LONDON LETTER

CHRISTMAS and the year-end are normally a difficult time in which to judge market trends. Investors are thinking more about the season of the year and the tax inspectors' demands which open the New Year rather than about buying and selling. But this season has been an exception though for a few days before Christmas it ran true to form. The reason, of course, is that the markets had sunk to depression levels as a result of Suez, petrol rationing and all that might follow, and they were ripe for an improvement at the first sign of encouragement. By mid December, relief that the danger of war had been averted and that the Canal might soon be cleared had caused rises for a substantial section of the market of about 10 per cent. and the market as a whole was not far off this increase from its November low. Then came a quiet period with a further recovery, as the investors who had decided to buy at the bottom and then taken their profits were replaced by others anxious to cash in on any rise there might be left. As a result, the Christmas Eve show in Throgmorton Street was really glittering—and gilt-edged made as good a showing as equities. The wise ones said that there would be an aftermath within a week but events have shown otherwise. Not only was there no relapse but a further rise in those equities in which business was done. But it must be remembered that the volume of turnover is extremely low.

However, now that clearance work in the Suez Canal actually appears to have begun, the strengthening is likely to continue. Besides, a number of borrowers are waiting to come into the market and that has set a good psychological undertone. There are also other factors—shipping and tanker shares are being sought after, so are those of any other company which might benefit out of semi-defensive expenditure. Then there is the announcement of the new orders being placed for the Nuclear Power Stations and the companies concerned with this are bound to be favourites. It is, moreover, being appreciated for the programme is much too small for the realities of the country's future requirements of power and that the programme is likely to be boosted before long.

But back of all this is there not a feeling that the country is likely to go through a new inflationary period? Capital investment all round in industry is due for a spurt and that spurt has only to begin in one sector—it might well be the Nuclear programme—for it to accelerate the development everywhere else. But, at the same time, the resources to support investment are likely to be inadequate: the oil shortage will have seen to that. A pointer was given in mid-December by the 6 per cent. increase in steel prices. Industry is paying more for its transport and for its fuel, now it will pay more for its steel. Costs generally are bound to rise and, in spite of the Chancellor's prophecy that the cost of living would only be fractionally affected, it would be surprising if before long there was not a spiral in which wages took their appropriate place. Even if it is assumed that every possible restraint were put on price increases, the very logic of a demand for investment, coupled with a shortage of resources, is going to be a boom point for the markets.

In view of all this, it is difficult to understand the Government's decision to reduce the deposit payable on the hire purchase of a motor car from 50 per cent. to 20 per cent. Petrol rationing reduces the usage of motor cars and increased sales are unlikely at the present time regardless of the terms of purchase. Perhaps, the gesture is intended as a sop to the car industry for whatever good they may get out of it, but, even assuming it has some success in boosting demand, it is boosting it in the wrong place; the country's investment resources are required very much elsewhere than in the domestic car market. Naturally, if the lower deposit rate is retained when petrol rationing comes to an end, then the market for cars will receive a new boost to add to the general investment demand. Not good economic sense may be but grist to the market's mill.—*All Rights Reserved.*

FINANCE MINISTER'S CHARGES AGAINST BANKING SYSTEM

NEITHER CORRECT, NOR WISE

By Dr. S. G. Panandikar

THE public is greatly puzzled by the recent public utterances of Mr. T. T. Krishnamachari, Finance Minister, Government of India, about bankers in this country, including the top officials of the Reserve Bank of India and the State Bank of India. In the second week of December 1956, he stated in Calcutta that the bankers, as well as the officials of the Reserve Bank, were unable to give him a single constructive suggestion for dealing with the prevailing stringency in the money market in India. About a fortnight later, in a speech at Madras he charged the bankers in the private sector, as well as the officials of the Reserve Bank and the State Bank of India, with possessing a clerical mentality, being completely ignorant of the character of India's economy, desiring autonomy for exploiting the people, and being moribund. Again, a few days after, he stated at Madras that the old Imperial Bank, even after becoming the State Bank of India, still remained imperial in its dealings and that the Reserve Bank was too reserved to take kindly to progressive dealings.

These charges, if taken at their face value, would mean that the entire banking system of the country, including the Central Banking authority, is really incompetent and that, as banking is the basis of all modern economic activities, the success of the second Five-year Plan and, therefore, the rapid economic development of the country are in jeopardy. The writer wishes to state that, although Mr. Krishnamachari's object in making the charges is good, namely, to goad and galvanise the bankers into still more efficient and progressive action, so as to ensure the success of the second Five-year Plan, the charges are not true and are likely to produce a result opposite to what is desired by him. The writer's authority for saying this is threefold. First, as Secretary of the Indian Banks' Association for the last nine years and more, he has had unrivalled opportunities of keeping himself in close touch with the doings not only of bankers in the private sector, but also of the officials of the Reserve Bank, the State Bank, and the latter's predecessor, the former Imperial Bank. Secondly, as an economist of 40 years' standing, who has made a deep study of the banking systems of India and advanced countries of the West, he is in a position to judge the quality of the work which is being done by bankers in this country. Finally, he can take a fairly detached view of the matter, having been a member of the Indian Educational Service for over 30 years and having retired as the Principal of a Government Commerce College.

Efficiency

The writer is emphatically of the opinion that the vast majority of bankers in the private sector and the officials of the Reserve Bank and the State Bank of India are honest, efficient, progressive, patriotic and imbued with a spirit of service to the public and a zeal to do their best for the success of the Five-year Plans and for the rapid economic development of the country. The bankers in the private sector, however, have constantly to bear in mind that they have to manage credit institutions, which depend entirely upon the confidence of the public, and that they have to deal with other people's money, the deposits being from 10 to 20 times the paid-up capital and reserves of banks. As such, however progressive they may desire to be in their hearts, they have to hasten slowly and have to combine sound banking with wise banking.

Sound banking may be defined as protecting and promoting the interests of depositors, the shareholders and the institutions generally by making caution, efficiency and integrity the basis of banking practices. Wise banking consists of the operation of the banking system in a spirit of service, in the wider economic interests of the country as a whole, but without neglecting the interests of the individual banking institutions. If bankers were to try to hasten the pace of wise banking unduly, without paying adequate attention to the needs of sound banking, they would endanger the solidity and even the solvency of the banking system of the country, thereby exposing the economic structure of the country to grave risks. That they have succeeded in combining sound banking with wise banking satisfactorily is seen from the facts that they rapidly overcame the severe setback which banking received from the serious political and economic dislocation that was caused by the partitioning of the country that, since then, the deposits and branches of banks have gone on increasing, that the banks played their proper part in making the first Five-year Plan a success and are endeavouring to do so with regard to the second Five-year Plan and that there has been no important banking failure in recent years. The total deposits of Scheduled and non-Scheduled banks which were Rs. 954 crores at the end of 1952 are now nearly Rs. 1,150 crores.

Reserve Bank's Role

The authorities of the Reserve Bank also appreciate fully the need for combining sound banking with wise banking and the dangers of endeavouring to force the pace of the banking system unduly. The Reserve Bank has played a vital part in making the Indian banking system sounder today than it was a few years ago by its system of periodic inspections of banks and of giving them advice, guidance and help, based on the inspections. Finally, the bankers have given several constructive suggestions to the Finance Minister for dealing with the present stringency in the money market.

It is universally acknowledged that Mr. Krishnamachari is an able administrator, possessing a dynamic personality. He made a great success of the Commerce and Industry Ministry and is imbued with a desire to make the Finance Ministry now under his charge equally successful. As a patriot, he has set his heart on making a complete success of the second Five-year Plan within five years. It seems that he wishes to galvanise all those who have anything to do with the success of the Plan into quicker action for the realisation of his objective. With the same object, he severely criticised the industrialists and business men of the country when he was in charge of the Commerce and Industry Ministry. Such criticism did little harm at that time. But, if he pursues the same policy towards the bankers and even towards the authorities of the central banking institution of the country, the nation runs the risk of shaking the confidence of the public in its banking system. The great need today for the success of the second Five-year Plan is to bring about a further, rapid and substantial increase in banking deposits by developing the saving and banking habit among the people of the country. This need will not be fulfilled if the Finance Minister's utterances produce the effect of shaking the confidence of the public in the banking system. His utterances of the kind mentioned above are, therefore, likely to produce a result opposite of that intended by him. In all humility, therefore, the writer appeals to him to bring the shortcomings of the bankers, such as he may feel to be in existence, to their notice in private conferences. He has already held a few such conferences and has promised to hold more. The bankers are always willing to take his advice and to act according to it, after mentioning their practical difficulties to him. He would render a great service to the cause which he has at heart, by refraining from condemning the bankers in public.

BANKING COMPANIES BILL PASSED

FINANCE MINISTER FIRMLY REJECTS PLEA FOR REFERENCE TO SELECT COMMITTEE

THE Banking Companies Amendment Bill, 1956, vesting in the hands of the Government enormous powers for controlling the operations and management of banks, was passed by Parliament as hastily as it was introduced by the Finance Minister at the fag end of its winter session. Barely two weeks after its dramatic introduction, the Lok Sabha adopted the measure on 21st December last after discussing it for no more than five hours. Within 24 hours after it was passed by the Lower House, it was pressed for consideration in the Rajya Sabha, where also the debate ended in a record time of 2½ hours. The Bill now awaits the assent of the President before it becomes law. This is only a formality, for we have not seen the President using his powers to make any alteration in any of the legislations adopted by Parliament.

A measure of such vital importance would normally have given rise to a heated debate in both Houses, if only the Government had allowed some reasonable time to pass after its introduction in Parliament, so that members would have studied the implications of its far-reaching provisions. In the meantime, it would have also provided an opportunity to the parties affected, namely, the banking companies, to express their views on this important measure. The Government was, however, in such a hurry to carry through the Bill that the debate proved to be a tame affair. Except for the strong protest from Mr. Tulsidas Kilachand (Independent) in the Lok Sabha and from Mr. S. P. Jain (Congress) in the Rajya Sabha, there was no serious opposition to the measure. A few Congress members made a feeble protest against the pressure tactics of the Government, but the Finance Minister just ignored it. It is a significant commentary on the nature of the measure that all the leftist members in the Opposition joined hands with the Government. The Finance Minister's anxiety to have the Bill enacted in the last session itself was reflected in his firm refusal to accede to the well-reasoned request of not only such Independents like Mr. Tulsidas Kilachand but even quite a few Congress members to refer the Bill to a Select Committee.

Finance Minister's Defence

The Finance Minister's speech on the necessity for enacting the Bill was least convincing. He admitted that the general position of the banking system in India continued to be sound and there had been considerable progress in the matter of securing better standards of operation. But he contended that there were some companies the affairs of which were not wholly satisfactory and that the Reserve Bank should be enabled to deal with them effectively and to eliminate the possibility of serious defects occurring in their working. In drafting the Bill, the Government had also in mind the observations of the Gajendragadkar Commission. The Finance Minister went on to add that the Bill would enable the Reserve Bank to issue directives in the national interest, a power which it did not possess now.

Referring to the appointment of observers, the Minister disclosed that the Reserve Bank had already deputed its officers as observers in the case of ten banks. This step was taken without any powers to do so, with a view to checking the exploitation of a banking company by a particular individual or groups of individuals. Only in two cases, the banks co-operated and in the case of others the Reserve Bank had its way under the power it possessed to withdraw licence. The sending of observers brought about a marked improvement in the financial position in "many" cases. At any rate, there was a check on further deterioration. The Minister, however, added that these checks depended entirely on the consent of a bank or the use of powers which ought not to be used. Further, as these steps involved delay, the Government found the necessity to vest more powers in the hands of the Reserve Bank. Hence the provision of the Bill for deputing the officers of the Bank to attend the Board meeting of any banking company.

The Bill seeks to apply the existing restrictions on exercise of voting rights of individual shareholders to banks which were hitherto exempt from such restrictions, namely, those established before 15th January 1937; and to empower the Reserve Bank to direct the election of fresh directors on the basis of the restricted voting rights. There are 45 Scheduled and 247 non-Scheduled banks incorporated prior to 15th January 1937. These will now come under the same category as the others in so far as restriction on voting rights are concerned. Speaking on the provision, the Minister said that he did not want to name any banks, but there were some in which there was concentration of voting rights in the hands of a few. It was, therefore, only right that there should be some kind of control over the misuse of these rights.

Justifying the need for passing the Bill forthwith, Mr. Krishnamachari observed that seven or eight months would have elapsed before the new Parliament took up consideration of the Bill. During this period, he feared, the field would be clearly open for those banks, the actions of which the Government sought to restrict by the Bill, to take such precautions as they wanted to defeat the purpose the Government had in view. It would have been a "grave error", if the Bill was not enacted in this session.

Reference to Select Committee

The first member to suggest that the Bill should be referred to a Select Committee which would report on the first day of the next session was Mr. A. M. Thomas, a Congress member from Kerala. In view of the fact that the Bill sought to clothe the Reserve Bank with sweeping powers, the member said, a Select Committee could examine whether such powers were necessary. He added that the Finance Minister also could place before the Committee the relevant information justifying such powers, as the Minister might not be in a position to place that information before the House, as they were dealing with banks. Mr. Thomas contended that there was no urgency to rush the Bill as the existing powers vested in the Reserve Bank and the Government under the Indian Companies Act were sufficient to prevent abuses by banks. He pointed out that the appointment of observers was "the best way to destroy a bank." Public confidence in a bank would be shaken and deposits would not be forthcoming if the public came to know that an observer had been appointed for a particular bank.

Mr. Tulsidas Kilachand, an Independent member from Bombay, supporting the plea of Mr. Thomas to refer the Bill to a Select Committee, said that nothing would be lost if it was not passed in this session. If any of the banks misbehaved till the legislation was passed, the Government and the Reserve Bank had enough powers to "wring its neck." The Company Law was applicable as much to banks as to any other joint-stock company and it enbled the Reserve Bank to inspect banks and obtain any information it wanted. He quoted extensively from the Reserve Bank's annual report on "Trend and Progress of Banking in India" during 1955 to show how, under the existing powers, the Reserve Bank had been able to secure the co-operation of banks and effect a substantial measure of improvement in the banking system during the last five years. He asked as to why the Government and the Reserve Bank should ask for more powers when they were not exercising the existing powers. He said that the provisions in regard to appointment of top executives and the restriction of their remuneration would destroy the managerial class and deprive banks of the benefit of managerial skill at a time when there was a dearth of trained Indian personnel to manage the national banks.

Mr. C. P. Mathen (Congress-Kerala) said that it was impossible to visualise now the repercussions of the Bill on banking. As the Bill sought to give drastic powers to the Reserve Bank, he wanted the Bill to be considered in detail by a Select Committee. Another Congress member from Bihar, while supporting the Bill, said that it should not be rushed through at the fag end of the session. He added that the Government should utilise the existing powers properly before asking for more powers. During the clause-by-clause discussion, many other members pointed out that the powers sought by the Government were "Draconian." Mr. N. C. Chatterjee and Mr. U. M. Trivedi pointed out that rather than take such powers, the Government could as well nationalise the banks. Mr. Kilachand said that, if observers were present at Directors' meetings, it would be difficult for the latter to discuss the affairs of their clients. Mr. B. Ramachandra Reddi remarked that it would be wrong to look into the secret working of a bank.

Reply to Debate

Replying to the debate, the Finance Minister turned down the request for referring the Bill to a Select Committee, as that would mean that, for some months, the Bill could not be passed and a fresh Bill would have to be brought before the new Parliament. In the meantime, he said, the field would be clearly open for those banks whose actions the Government sought to restrict to take such precautions as would defeat the purpose in view. Referring to Mr. Kilachand's argument that the Government had already enough powers under the Indian Companies Act to deal with the situation, Mr. Krishnamachari said:

"I am not quite sure in my mind that the Companies Act gives me powers to check abuses which are not between the management and the shareholders. That is the defect which I think the Companies Act still has. I have no time to come to the House to amend that Act. In any event, I cannot come with an amendment until I have worked it for at least a whole year.

"Under the Indian Companies Act, the Government had unnecessarily burdened itself with powers such as the sanctioning of the appointment of a manager on a salary of Rs. 430. It is completely meaningless. That is not our intention. But when big things change hands and some people try to get hold of companies, we are completely powerless. We can go upto a point. But we cannot stop the misuse of the privileges of a person who temporarily acquires control of shares. I cannot say now as to how it (the Companies Act) is to be amended.

"As far as Company Law is concerned, the emphasis primarily is to protect the interests of the shareholders and, therefore, the same thing cannot be applied in the same way to the banks. Our intention originally was to protect the interests of the depositors under the Banking Companies Act, but now we want to use the powers as a tool for the purpose of controlling the economy of the country which is something much bigger. It is, therefore, no use saying 'You have already an Act, why don't you use it?'"

Appointment of Observers

Commenting on the members' observations on the drastic nature of the power for keeping observers at Directors' meetings, Mr. Krishnamachari observed:

"It is precisely because Government does not want the banks to work in secret that it proposes to clothe the Reserve Bank with these powers. We have known the instance of a very big bank in which the chief executive and the board of directors were at variance. It may be in one particular case the chief executive is wrong and in another the board of directors is wrong. So the mere fact that we will have some kind of power over the appointment of a chief executive in future does not make it unnecessary for us to know what is being done at board meetings. The argument advanced by members does not seem to arise from an appreciation of the position."

The Finance Minister accepted the amendments moved by Mr. Tulsidas Kilachand in respect of the provisions under which the Reserve Bank may by "general or special order" call upon every chief executive of a bank to furnish particulars of the extent and value of his holding of shares direct or indirect—clause 12(4).

ROLE OF WORLD BANK

AN ASSESSMENT OF ITS CONTRIBUTION TO ECONOMIC PROGRESS

By Roy Harrod

NUFFIELD READER IN INTERNATIONAL ECONOMICS.

WAR-TIME planning and the Bretton Woods Conference gave birth to two international institutions, the International Monetary Fund and the International Bank for Reconstruction and Development. Of these, the latter has been the more active. Its duty has been to re-stimulate the process of international lending. It is prepared to support projects that would not be considered by private enterprise at all, or that would not be considered in the prevailing atmosphere. On the other hand, it has been at special pains to make sure that its projects are sound from an economic and a banking point of view.

The Bank has been bound to adopt this policy, for it has to raise a substantial proportion of its finance from the hard-faced investors of the world bourses. It must both be sound, and be seen to be sound. Thus it has to steer a middle course between doing no more than private enterprise would gladly undertake—in which case it would achieve nothing—and doing so much as to alarm that private enterprise on which it partly depends for its funds.

It has gained a good reputation. When it supports a project, it always makes a careful preliminary survey of the *general* economic situation of the borrowing country, the relation of the project to its best line of future development and to its capacity to make repayment in due course.

To date it has been responsible for some £1,000 million of investment in the course of about a decade. This is a substantial sum, although it looks small beside the overseas investment of England in the decade before 1914, having regard to the changed value of money and the increase in the whole scale of economic operations since that time. But England had the advantage of age-old traditions and connections, and of the political security afforded by the British Empire in a large region. The Bank has had to start from scratch, and its build-up has been remarkable.

I.F.C.

We now have to consider it in conjunction with the International Finance Corporation, recently established. The need for the latter was pressed under two heads—(i) the inhibiting influence of the need for a guarantee, under the Bank's articles, by the Government of the borrowing country, which might make private firms reluctant to use this source of finance for fear of possible interference by their own Governments, and (ii) the inability of the Bank to introduce any equity element into the terms of its investments.

From the Commonwealth point of view, it is inevitable that one is drawn into considering the Bank in relation to the alternative of borrowing direct from London. It may be said at once that, however highly one may regard London as a source of finance, there is no harm in having a little competition. Furthermore, it is desirable on general grounds that borrowers, no less than lenders, should support the Bank. It is doing a significant job in the world scene, and there is every reason to suppose that its operations will increase in scale; this job, if well done, can raise productivity and thereby redound to the economic advantage of all members of the world community. How skilful the Bank will be in its handling, compared with its more experienced competitors, can be judged only in the working. It should be given every chance.

Place of London

On the other hand, we need not deny that it is desirable for members of the Commonwealth to consider first the direct use of London. The flow of investment is an important link, and it is accordingly desirable to encourage the greatest possible flow of investment. There is no contradiction in holding that the Bank should be continuously borne in mind as a valuable source of finance, but that, other things being equal, the preference should be given to London.

The crucial question is how much London can afford to do. This is sometimes put in wrong terms. On more than one occasion, prominent spokesmen have warned that Britain will not be able to do its full job overseas in investment until it has established a more favourable balance of payments on current account. This is to put the cart before the horse. If a larger number of investment projects in the Commonwealth receive support in London and require the import of capital goods from Britain, Britain's external balance on current account will get more favourable *as a consequence*.

But there *is* a real question of what Britain can afford, and that turns on the capacity of her manufacturing industry to produce a surplus of capital goods for export on investment account. In the last two years, she has been manifestly incapable of doing this on any scale. Her economy has been overloaded; all her manufacturing capacity has been required to produce goods for her domestic investment programme, for defence, for a flow of exports only slightly more than sufficient to pay for her imports, and to give consumers at home, curbed though they have been by taxation yielding a budget surplus, by credit restrictions, etc., their bare modicum. But the situation is already changing. The danger lying ahead is not that Britain will have insufficient manufacturing capacity to produce goods for export on investment account, but that there will be insufficient advanced planning and encouragement of investment projects overseas to keep her domestic manufacturing capacity fully employed.

In the last decade, the International Bank has lent £1,000 million (dollar equivalent) round the world. In the decade ahead, the United Kingdom should certainly be able to produce more than £1,000 million's worth of plant and equipment available for export on investment account.

Balance of Payments

It is important that the effect of International Bank lending on the world balance of payments, notably the dollar balance, should be understood. Before and during the war, the idea gained ground that the United States should lend more overseas to even out her balance of payments with the rest of the world. But direct productive investment will not affect the overall balance if it increases the outflow of capital goods in like measure. Furthermore, there may be the question—and there is such a question in the case of the International Bank—of repayment.

When the project for the Bank was under discussion, the minds of some moved in the following way. They envisaged (rightly) that dollar loans made by the Bank would not be tied, and that the proceeds would be used to buy capital goods in third-party countries. Thus one would get a triangular balancing. The Bank would provide finance, mostly derived from the United States, which would be used to buy capital goods in third-party countries. Thus, the lending by the Bank would itself be a factor tending to redress a too favourable balance of payments of the United States on current account. Things have not worked out in this way. Perhaps, the idea was never very sensible. Incidentally, the question of repayment was ignored.

On the whole, the aim of the Bank has been to stand ready to supply to borrowers the currencies they have required, thus allowing them to seek out the best available sources of supply of the capital goods that they require. These currencies it acquires by asking members to pay in their subscriptions, by raising loans in markets other than the United States, and by selling obligations from its portfolio in markets other than the United States. If its lending always followed this exact pattern, it would have no effect on the world dollar imbalance at all. The net effect would be the same as if each country had separately provided the exact amount of finance that was required to meet all the expenditures of the borrowing countries on the goods that the said country had to supply.

It is true that the lending of the Bank has not followed this exact pattern. Sometimes the third-party currencies were just not available to it, and it bought them in the market in exchange for the dollars that it had at its disposal. This procedure did increase the flow of dollars to the outside world *temporarily*; but not when one reckons in repayment. The Bank laid down the perfectly proper rule that, when it provided non-dollar currencies out of its own resources of non-dollar currencies, then the repayment would be due in the currency provided. But, when it provided those currencies by selling its own dollars in the market in order to acquire them, then the repayment would be required to be in dollars.

When, on the occasion of its having to provide third-party currencies, it had to decide which bag to take them out of, namely, out of its own resources of those currencies, or by selling its own resources of dollars to acquire them, it has had regard to the power of the country to repay. If it seemed that the country would have difficulty in repaying in dollars, then it would be careful to make the third-party currencies available out of its own resources; but, when, as notably in the case of the Latin American countries, it seemed that repayment in dollars would be no great problem, it found any third-party currencies they might require out of its dollar resources, and marked up against them the obligation to repay in dollars.

Dollar Imbalance

Sometimes it has paid out dollars to countries in excess of the dollar requirements of the investment project, leaving them to dispose of the excess dollars. To the extent that it has done this, it has tended to rectify the world dollar imbalance, but again only temporarily. For the obligation to repay in dollars was chalked up against the country.

Thus it has made a small contribution to the world dollar shortage in two ways, first by sometimes giving its clients more dollars than they actually needed, and secondly by selling its own dollars in the market in order to acquire the third-party currencies that its borrowers needed. But both these contributions have been quite small in relation to its total of lending. And, as the years have proceeded, it has made—quite properly—increasing efforts to acquire the third-party currencies directly, viz., by encouraging nations to pay up their subscriptions and by selling its assets, in one form or another, in their markets.

Thus the target of the Bank is to acquire in the first instance a bag full of currencies constituted in the proportions that will correspond to the varying needs of the borrowing countries. To the extent that it fulfils this aim, which is an absolutely reasonable one, it will entirely fail to make any contribution to curing the dollar imbalance.

A Mistaken Idea

This is by no means a criticism of the Bank. The original idea that it might serve in an important manner to correct the world dollar imbalance was a mistaken one. That has to be done by other methods. It is important to stress this point, however, as there may still be misconceptions that, by resorting to finance by the International Bank, one is doing something that is contributing to ease the world dollar problem. That is not so.

The function of the Bank is different and is, indeed, of the first importance. It is to mobilise resources, not only of money but also of technical know-how, and of wise economic planning, to aid countries to proceed to a more speedy development of their potentialities. The Bank has come into being at an opportune moment, for there is a new-found desire by many underdeveloped countries in the world to go ahead more rapidly.—By arrangement with *New Commonwealth*.

MODERNISATION OF COTTON MILLS

N.I.D.C.'S TERMS FOR LOANS REASONABLE

IT is gratifying to find that the Government of India has attached great importance to the problem of rehabilitating the equipment and machinery in the cotton mills. Mr. Manubhai Shah, Union Minister for Heavy Industries, has already had discussions with several millowners with a view to assessing the magnitude of this problem. Last week, Mr. Shah held a conference at Madras with the leading textile interests of the State and discussed matters relating to modernisation of textile machinery and improvement of production, as well as the possibility of expanding the manufacture of textile machinery in the country. At this conference, the Minister is reported to have explained the scheme of financial assistance for modernisation of equipment and machinery and indicated that a sum of about Rs. 20 crores was likely to be available during the second Plan period for the textile and jute industries. He is also said to have urged the millowners "to come forward speedily to avail themselves of the facility." This sum, however, seems inadequate, considering that cost of machinery is high and the replacements to be made are large.

The Government's move to assist the cotton mills in the task of rehabilitation has come not a day too soon. Even at the commencement of the first Plan (1950-51), the bulk of the mill machinery had outlived its period of efficient and economical service. It will be recalled that the Working Party for the Cotton Textile Industry had recommended as early as in 1950 that high priority should be accorded to rehabilitation and modernisation of cotton mills. Although more than six years have elapsed since the recommendation was made, the progress actually achieved has not been appreciable; only a few leading mills have modernised their plants. It was only two years ago that the Government of India set up a survey unit for getting factual data relating to the rehabilitation requirements of mills and investigating the working of those units which are uneconomic and, therefore, are either already closed or facing closure. So far, this unit has been able to complete surveys in respect of about 25 mills only. The National Industrial Development Corporation (N.I.D.C.) has been assigned the task of assisting financially the rehabilitation programmes for which the investigations conducted by the aforesaid unit provide the necessary data. A simultaneous investigation is also in progress regarding the rate at which replacements of machinery are required, in order to help in planning the development programme of the textile machinery industry; this investigation has been completed in the case of 75 mills.

Very Costly One

The process of rehabilitation and renovation of cotton mill machinery and equipment is a very costly one. The reserves available with many mills are not adequate for this purpose. The heavy load of taxation—Central and State—and the high wage bill have been absorbing a large part of the current profits. To take, for instance, the rehabilitation scheme of the Central India Spinning, Weaving and Manufacturing Company, Ltd., the details of which were outlined by its Chairman, Mr. A. D. Shroff, at the recent annual meeting of the Company. The scheme envisages complete renovation of two units at a cost of as much as Rs. 170 lakhs. In place of these two units which together account for 51,032 spindles and 1,282 looms, there will be a new unit equipped with about 50,000 spindles and 700 looms; the new unit is expected to start operations by the middle of 1958. Once the first stage of this renovation scheme is completed, the Directors of the Company propose to consider further renovation of mill No. 3 as the second part of the reorganisation programme.

If the above instance is taken as the basis, it will be seen that the rehabilitation programme of the cotton mill industry as a whole involves a financial outlay which is beyond the capacity of the industry to bear. In view of this and the stringency of the money market, the National Industrial Development Corporation has, indeed, done well to offer assistance to cotton mills on terms which appear to be quite reasonable. According to Mr. Shroff, the terms of the loan, when granted to mills, will be substantially as follows:

(a) Simple interest at 4½ per cent. per annum;
(b) repayment in 15 equal annual instalments, the first instalment being payable one year after the machinery has been installed and put into operation;
(c) no payment of dividend on ordinary shares or allocations to reserves out of profits until the annual instalments in repayment of the loan, together with accrued interest, have been fully provided for;
(d) hypothecation to the Corporation of the new plant and machinery installed and the other fixed assets of the Company as guarantee for repayment;
(e) likely appointment of a director nominated by the Corporation on the board of the Company.

While the grant of financial assistance on reasonable terms is most welcome, it is imperative that the workers employed in cotton mills extend their full support and co-operation to the management in the task of implementing the scheme of renovation successfully. For, in this process, there may arise the problem of surplus labour in the case of some mills. The preliminary estimates quoted by Mr. Shroff indicate that, in the case of Central India, approximately 1,300 workers will be rendered surplus once the new unit commences work. Incidentally, the Central India is one of the oldest and biggest cotton mills in India. Since its inception in 1877, it has gradually grown ito a huge complex spread over five different units equipped with 115,188 spindles, 2,062 looms and with finishing and waste plants, and employing roughly 9,000 workers in all. It is certainly encouraging to hear from Mr. Shroff that "the workers appear to have reconciled themselves to the need to accept rationalised operations in the new unit." It is to be hoped that this spirit will permeate the entire rank and file of mill labour throughout India.

HIGHER WAGES FOR AHMEDABAD MILL LABOUR

The dispute arising from the Ahmedabad mill workers' demand for a rise in basic wages in rationalised occupations has ended with the award of Mr. M. R. Meher, the umpire appointed by the Ahmedabad Textile Labour and Millowners' Associations. Under the award, which is given with retrospective effect from 1st October last, all those who are working four looms in the weaving section will get a rise of about 35 per cent. in basic wages and workers running more than 200 spindles in the spinning section will get a rise of 8-10 per cent. The implementation of the award, to which both the parties are bound, will mean that a worker manning four looms, instead of the normal two, will get about 87½ per cent. of his basic wages, in addition to his normal wages. According to an agreement signed in 1952, the worker was receiving only 52½ per cent. of his basic wage as additional compensation for working four looms. The wage rise to workers in the ring frame department for working more than the normal 200 spindles varies from 8 to 10 per cent. for every slab of 20 additional spindles.

DEVELOPMENT OF HANDLOOMS

"PRICE FACTOR SHOULD NOT BE FORGOTTEN"

SOME of the pronouncements which Mr. Morarji Desai has made since he assumed charge as the Union Minister for Commerce and Industries two months ago reflect a welcome change in the official textile policy at least in so far as the handloom sector is concerned. Addressing the eighth meeting of the All-India Handloom Board at New Delhi on 13th December 1956, Mr. Desai categorically declared that, in the development of handloom industry, the price factor should not be forgotten and steps must be taken to ensure production of quality goods. He minced no words when he said that handloom products must compare favourably with mill textiles, if they were to be marketed easily.

These remarks are realistic and reassuring. We have ourselves emphasised ere now that the employment consideration underlying the Government's policy towards the handlooms should not be stretched so far as to overlook completely the no less significant consideration, namely, the price the consumer is called upon to pay. The output of handlooms has all along been, and will continue to be, uneconomic, so long as the looms are not modernised. The reservation of markets for this output exposes the country to the great risk of price spirals in the case of such an essential item of consumption as cloth. The only effective solution to the problem of handloom industry lies in the mechanisation of operations through introduction of powerlooms. This is the basic problem of the handloom industry which, it is deplorable, has not been recognised by some of the State Governments. These Governments will do well to ponder the statement of Mr. Morarji Desai that "big factories and machinery are essential to increase the wealth of the country, in general; it will be unreal to ignore machines and other technical contrivances in the present age." He also clearly emphasised that necessary measures should be undertaken not only to maintain but also to increase production by adopting new techniques.

Perfectly Justified

Apart from their refusal to introduce powerlooms in the handloom sector, several State Governments have not taken effective steps to ensure a speedy implementation of the handloom development schemes. Out of the Rs. 4.78 crores sanctioned by the Centre in the current financial year, the States have not spent more than Rs. 61 lakhs. This is due to the fact that the Governments have not cared to devise ways and means of overcoming the administrative difficulties facing them. Mr. V. Nanjappa, Textile Commissioner and Chairman of the Handloom Board, was, therefore, perfectly justified in appealing to the States to set up the necessary machinery and complete the formalities in time for them to switch over to the new procedure of securing the requirements of working capital for the handloom industry from the Reserve Bank of India. Under this procedure, it will be recalled, the Reserve Bank will give loans at 2 per cent., the margin for apex and central banks being fixed at 3 per cent. The weavers' co-operative societies will, however, be charged only 3 per cent. The difference of 2 per cent. will be subsidised by the Central Government.

In the course of his speech, Mr. Nanjappa referred to two recent decisions of the Government of India. First, loans will be advanced to the State Governments for investment in the shares of the apex societies. The quantum of these loans will normally be between 33⅓ and 51 per cent. Secondly, loans will be given to the States to participate in the share capital of co-operative spinning mills, subject to a maximum of 51 per cent. of the subscribed share capital of the mills. Incidentally, Mr. Nanjappa revealed that 780,156 handlooms had been registered up to the end of October 1956.

At the meeting of the Handloom Board, some members complained that there was delay in making finance available to the industry for production and marketing of fabrics. Others wanted a provision for "slack season finance," in order to enable societies to hold stocks while maintaining production. The Minister for Commerce and Industries gave the assurance that the suggestion would be sympathetically considered. Replying to the points raised by members, Mr. Nanjappa observed that the Government had already liberalised the conditions for the provision of working capital to weavers' societies by raising the level of advance to Rs. 300 per loom and to apex societies from 5 to 10 times their paid-up share capital.

RAW COTTON POSITION IN U.K.

A NEW SCHOLARSHIP SCHEME TO ATTRACT YOUNG MEN TO INDUSTRY

By Our Special Correspondent

MANCHESTER, *21st December*, 1956

MANCHESTER LETTER

HOPES that the cycle of boom and slump in Lancashire textiles had been halted after the war were dashed five years ago and the subsequent ups and downs have brought the whole problem back into focus. The situation is now more keenly felt than before in view of the gradual elimination of firms and the sharp contraction in the number of available workpeople.

Such thoughts must have been in the mind of Mr. John Lindley, President of the Manchester Cotton Association, when he addressed the annual meeting and commented on trade conditions. "Some means must be found in the near future of stabilising the cotton industry at a level which will permit continuous operation through short-term boom and slump periods," he said.

"In the past, boldness has been lacking from some of the re-equipment schemes because they have been carried through under clouds of pessimistic speculation about the future. School-leavers have been deterred from entering an industry which could not offer them a guarantee of continuous employment. Trades unions have been understandably cautious in their approach to some of the problems facing the industry."

Passing Similarity

As Mr. Lindley pointed out, there is a passing similarity between Lancashire's problem as a manufacturing area and the difficulties facing American cotton growers who are beset by the perennial task of coping with a raw material surplus. Both have basic obstacles to further progress and short-term palliatives will not cure their ills which may well recur all too frequently.

"Operating a cotton industry calls for large-scale capital investment, long-term planning and a highly trained labour force," said Mr. Lindley. "Unfortunately it must operate under circumstances of violent short-term trade fluctuations. Each depression brings about the closing of mills and the dismissal of skilled operatives and each revival finds the industry undermanned to cope with the demand. Soon prices are forced up to uncompetitive levels and the industry slumps back into depression."

Recent economic and political upheavals have made their impression on the business life of Britain and nowhere more so than in the Lancashire textile industry, where trading conditions have so drastically altered. One aspect of the situation which is receiving the careful attention of all those concerned is the impact of various events on the raw cotton supply position.

Stocks had been built up to some extent during the months while the Middle East disturbances have been taking place but the interference with the flow of supplies, together with the improvement in demand and consumption has applied a brake to the accumulation of the raw material. The following table shows the quantity of cotton imported and visible supply in Liverpool, Manchester and at sea:

(In bales)

Week ended	Cotton at sea	Arrivals in Great Britain	Forwardings to spinners	Visible supply
Aug. 6	39,813	19,860	25,689	168,000
,, 13	54,315	16,658	18,337	185,000

,, 10	116,737	33,240	29,611	246,000
,, 17	126,577	23,937	27,581	252,000

Arrivals during the past four months have kept up well and so far this season amount to 550,000 bales, as against 1,580,700 bales in the whole of the 1955-56 season. It is interesting to note that imports of United States cotton in four months have already exceeded arrivals from the same source in the whole of last season by over 75,000 bales.

On the other hand, forwardings of raw cotton to spinners so far this season have amounted to 565,000 bales which is lower than the quantity despatched to the mills during the same period a year ago. Supplies of American cotton forwarded this year have already reached 247,000 bales, as against only 80,000 bales a year ago and 218,000 bales in the whole of last season.

The amount of Sudan cotton taken by spinners has declined, being 76,000 bales against more than 100,000 bales this time last year. A fall has also occurred in the amount of Nigerian cotton forwarded, the quantity being 30,000 bales, as against 60,000 bales. Only small amounts of Syrian, Pakistan, Indian and Russian cotton have lately been absorbed in Lancashire mills, amounting to less than 15,000 bales since the beginning of the season, whereas forwardings of these growths in the same period of 1955 exceeded 100,000 bales.

New Scholarship Plan

An important move towards attracting more highly trained technologists and managerial workers to the cotton industry is to be made early in the New Year.

Sir Raymond Streat, Chairman of the Cotton Board, has announced that, in January, the industry would be starting a big new campaign to tell schools about many new scholarships the industry would be offering to boys who would be prepared to study science and technology with a view to becoming key men in the industry. He said: "This is only one of many signs and tokens known to me in my position that cotton industry leaders have sure confidence in the future of Lancashire's traditional industry."

He felt there was still a world-wide trade in yarn and cloth in which Lancashire could share according to its efficiency. He added: "The cotton world will offer many chances of promotion if only because it is not, for the moment, quite so much in the popular stream as some other industries. The cotton industry will go on if we pass from big defence expenditures to small expenditures, if we pass from coal power to atomic power."

A Cotton Board spokesman said in Manchester that the scholarships were being sponsored by cotton firms and trade organisations. Negotiations with some were still going on. Most of the scholarships would be tenable at the Manchester College of Science and Technology.

Fewer Lack Work

The improved state of trade in Lancashire cotton and rayon mills is now being reflected in unemployment totals. The figure in November was the lowest since the end of 1954 and the percentage in relation to the number of those out of work throughout the region has declined sharply, as the following table shows:

	Spinning	Weaving	Finishing	Total cotton and rayon	Total N.W. region
1955					
June	8,213	3,482	794	12,489	41,440
September	8,200	4,894	298	13,392	42,908
December	1,716	1,966	206	3,488	34,449
1956					
March	1,443	1,459	540	3,442	39,651
June	2,368	2,198	355	4,921	35,962
July	2,468	1,421	316	4,203	35,722
August	2,616	2,592	515	5,723	42,091
September	2,254	2,307	567	5,128	42,127
October	1,541	1,359	509	3,409	40,212
November	1,179	1,013	357	2,549	40,517

As the movement towards over-full order books gathers strength there should be a further improvement in the out-of-work position. Operatives are being sought by firms which only a few months ago were forced to let machinery stand idle. Any former cotton operatives who want employment are quickly engaged but the experience of recent years has sapped the confidence of many prospective applicants who are understandably reluctant to pledge their future to an industry which is still subject to such violent swings of fortune.

Arguments Over Research

The use of synthetic fibres in the Lancashire textile industry has made a considerable difference to its operation and there can now be few mills which are solely devoted to processing cotton. Technical advances, particularly in recent years, have enabled many Lancashire firms to take advantage of the opportunities presented by the synthetics to offer customers goods which possess properties formerly unobtainable in fabrics made from the natural fibres.

One of the cases where direct opposition between cotton trade interests and those of

CULTIVATION OF COTTON IN RUSSIA

PHENOMENAL RISE IN YIELD RECORDED

BEHIND the remarkable development of the Soviet industry in the post-war years lies an equally significant improvement in some lines of Soviet agriculture under collective and State farming. This is particularly evident in the case of cotton, the production of which, in the post-war years, has increased by about 40 per cent. It was only 3.8 million bales (of 478 lbs.) in 1938-39 but stands at the high figure of 5.3 million bales in 1955-56. Production of communist countries as a whole increased from 6.1 million bales in 1938-39 to 8.95 million bales in 1955-56. As compared with this, the total free world output of cotton increased from 23.3 million bales in 1938-39 to 30.5 million bales in 1955-56.

Though most of the countries of the communist world shared in the increase, the rise has been more marked in the case of Soviet Russia both in yield per acre and total output. It may be noted that it is not in respect of the volume of output that the improvement has been most remarkable, though even that is good enough, but in the yield per acre which has risen by leaps and bounds, far exceeding the highest level reached by any of the free world countries. The yield per acre in the U.S.S.R. which stood at about 292 lbs. in 1938-39, increased to 554 lbs. in 1954-55, although in 1955-56 it is estimated to have been slightly lower at 497 lbs. As against this, the yield in the United States was 212 lbs. in 1938-39 and 417 lbs. in 1955-56, while that in Egypt was 478 lbs. in 1938-39 and 391 lbs. in 1955-56. This remarkable improvement in yield per acre in the U.S.S.R. was the result of conscious efforts in developing new high-yielding varieties, as also improvement in the methods of cultivation.

Under the sixth Five-year Plan, according to Mr. B. Straumal, of the Central Plant Breeding Station of the U.S.S.R., the output of cotton in the Soviet Union in 1960 will have risen by 156 per cent. as compared with 1955. This is to be achieved by raising cotton yields and by extending the area under cotton. Progressive methods of soil cultivation, sowing, inter-tillage and mechanised harvesting, etc., are to be introduced to achieve the target. Soviet cotton farming, according to him, requires in the cotton varieties such qualities as early opening of the bolls, early ripening, capacity of the leaves to fall off naturally, and other properties which are necessary for machine harvesting. Cotton breeding in the U.S.S.R. is strictly divided according to districts and most of the cotton-growing districts have breeding stations. The chief method in adopting cotton varieties is hybridisation with subsequent training of hybrids and directed selection. By this method Soviet plant breeders crossed geographically distant forms of Peruvian cotton with fine fibred cotton of the *Gossipium barbadense* species. The hybrids were trained in shortened daylight and the earliest ripening forms were selected. A number of new varieties like S-6001, S-6002, 5010-V, etc., were developed which combine the advantages of early ripening, high yield and good technological fibre qualities. The method of hybridisation with foreign pollen has been broadly applied lately and the result has been the evolution of varieties like S-4507, S-4517 and K-1916 which have big boll, high yield and good fibre length.

Next to plant breeding, seed growing is of major importance and this was successfully conducted in Soviet Russia. The task of multiplying new varieties and improving them in the process of seed cultivation is being done by a system of "elite" seed-growing sections, distributed in collective and State farms. Experiments in plant breeding are going on and Soviet scientists aim at giving their country, within the shortest time possible, new varieties of cotton, high-yielding and with good quality fibre and adapted to harvesting by machines.

The twofold objectives of cotton experiments in the U.S.S.R. are increase in yield and reduction in the cost of cultivation. The former is sought to be achieved by evolving new and better varieties of cotton and the latter by devising more economical methods of cultivation, which at the same time will also increase the yield. The modern agro-technical method of sowing cotton in square hills with narrower space between rows and cultivating it in two directions is broadly applied in the cotton fields of Central Asia and the Caucasus.

The designers of the State design office for cotton, the staff of the Uzbek, Tashkent and Chirchik agricultural machine works and of machine tractor stations have worked hard to adapt the existing tractors, drills, cultivators and other machines for work in narrow inter-rows and the farms are beginning to get new tractor and machine models designed to meet the requirements of progressive agro-technique.

A new double row pneumatic shaft harvester will be tested shortly. Other original designs being tried are harvesting units performing several individual operations in one journey; picking raw cotton from open bolls, cotton harvesting and uprooting stubble. These machines, which have been designed in several models, are meant for clearing fields after the main harvesting has been done by other machines. A mobile machine for picking up cotton heaps after machine harvesting, having a capacity of three to five tons per hour, is being prepared for testing. Drying and sorting plants are being provided in cotton delivery stations and cotton ginneries. The new, highly efficient, gleaning machine combined with a cotton harvester will help to solve the problem of rapidly harvesting the whole cotton crop. Designers are also working strenuously on the mechanisation of loading and unloading operations connected with cotton harvesting and the transportation of cotton without containers. A cotton loader will be tested shortly. It is designed for mounting on a Universal tractor and driven mechanically by a system of hydraulic devices. A set of gripping and lifting devices and an adjustable device make this machine useful in all kinds of loading and unloading operations, including building work and hay stacking. Special transporting devices and machines for the transportation of cotton to the delivery station without containers are also being designed.

In the course of the sixth Five-year Plan, designers propose to provide a wide range of mechanisation for other work connected with cotton plantations and requiring much labour. Agricultural experts and designers are studying jointly the new methods of cotton cultivation and working out agro-technical requirements for the new machines. In this work they also make use of the achievements of foreign science and technique. They are working in close co-operation with collective farm cotton growers, agricultural machine operators, State farm workers and workers of the research establishments so as to raise mechanisation in the cultivation of cotton to a new and still higher level in the course of this sixth five-year period and by doing so to reduce two or three times the amount of labour spent on the production of one ton of raw cotton.

COMMERCE

ANNUAL NUMBER 1956

On Sale Now

This Number contains a comprehensive review of important developments in the sphere of Finance, Industry and Commerce during 1956, besides 48 feature articles by leading economists, administrators and eminent business men on subjects of topical importance. The main subjects treated in the Number include role of free enterprise, foreign aid, banking and finance, trade, life insurance, company law, taxation, industrial relations and oil industry. The Number is invaluable to all business men as well as teachers and students of economics.

FINANCIAL CONTROL IN INDIA

ROLE OF AUDIT IN ACHIEVING EFFICIENCY IN USE OF PUBLIC FUNDS

By Prof. V. G. Ramakrishna Aiyar

AT the present time when the ordinary layman hears so much but knows so little about the question of control of public expenditure, it is well to indicate the principles and practices underlying this problem. We may distinguish three degrees of control of public expenditure. The first is accountability control which requires machinery to ensure that public funds are spent in authorised ways. Secondly, there is efficiency control, the aim of which is to ensure that no more is spent on particular forms of expenditure than are required for the purpose in view. Thirdly, there is what might be called economic control, the aim of which is that aggregate spending by the Government is consistent with the desired distribution of resources between public and private uses. Today a large part of the national product is utilised by the Government, and it falls outside the scrutiny of the market mechanism and, therefore, the first two degrees of control, viz., accountability control and efficiency control assume a greater importance than in other circumstances. They afford further instructive examples in the management of public finances which should be considered carefully by administrators concerned with the Technical Assistance Programmes for whom the problem of standards of accountability is of the utmost importance.

In the financial administration and procedure that obtains today so far as Parliament is concerned, accountability control is closely connected with the work of the Public Accounts Committee. Once adequate accounting arrangements are established, it is for the Legislature to be satisfied that these accounts recorded the past intentions of the sovereign body. There are two questions that call for attention in this connection: (1) the extent to which the change in the nature and scope of Government expenditure requires new procedures of the Committee and (2) the relation of the Committee to the nationalised industries. Those of us who are familiar with the history of the control in England during 1939-50 from the epitome of the *Reports of the Committee of Public Accounts* (1952) can recall that the investigations of the Committee range from the abuse of the privilege of duty-free supplies of rum to the Royal Navy to the problem of the intentions of the Civil Aviation Act regarding the timings of subsidies to Airways Corporations.

Efficiency

Accountability deals with the scrutiny of events in the past. Efficiency is concerned with the present and the future. Some criteria of efficiency have to be evolved and somebody must apply them. This scrutiny has been the function of the Estimates Committee. Even in England, rich in its experience of Parliamentary traditions, the function of the Estimates Committee has not been altogether popular. The British convention today is that estimates of expenditure are the concern of the Government in power and given majority rule, the Government must decide on the criteria. The British Estimates Committee has frequently come into conflict with successive Governments and some harsh things have been said of the proposals for a National Expenditure Committee. Moreover, in so far as the application of criteria is concerned, the Estimates Committees have been frowned upon by the Treasury which considers that any cross-check of estimates is a reflection on its efficiency. Nevertheless, the *raison d'etre* of the Estimates Committee cannot be ignored in spite of the impact of modern macro-economics on public finance as a factor influencing the form and level of public expenditure. In many spheres of Government activity, it would be wrong to encourage the view that there is an executive monopoly of expenditure in regard to the assessment of efficiency to which politicians must give way. An Estimates Committee can do a great deal of useful preliminary work which may help to confine discussion to the important issues. There is remarkably little serious thought given so far to these institutional aspects of public finance; yet it is sorely needed if we are to be able to make correct assumptions about the place of Government activity in the national economy.

Indian financial system, procedure and control have been largely modelled on their counterpart prevailing in Britain on account of the British rule in India till 1947. It is, therefore, desirable and necessary to study the British financial system as to how far changes have been introduced in their system during the last one or two decades and in what manner the Indian system has failed to adapt itself to the changing conditions in recent years. Till the beginning of the present century, the Government in the U.K. were largely guided by the principle that both taxation and public expenditure should be kept as low as possible and that "money should be left to fructify in the pockets of the taxpayer." In the early years of the present century, these ideas began to give way to more progressive ones with the embarking of the Government on a number of social reforms. In consequence, the Treasury became less and less concerned with the prevention of public expenditure and more and more concerned with ensuring the most prudent and economical spending on approved projects. The control was exercised through the scrutiny of Estimates, the Budget and the need for Treasury approval for new services.

New ideas about the responsibility of the Treasury as the custodian of the economic welfare of the State are traceable after 1920. In other words, the "Treasury staff began to think of expenditure rather less in terms of prospect of the spending of so much public money and rather more in terms of the employment of the resources; that given the wider views as to the proper objects of Government expenditure, the Treasury came to be regarded by Ministers and Cabinets as having a dual task, first of keeping watch upon the total share of the national resources devoted to public expenditure and, secondly, of shifting the projects submitted to them and only approving those which would give best value for the money." Since 1920 financial officers regarded somewhat in the nature of outposts of the Treasury, were appointed—with the consent of the Prime Minister—to each Ministry to work under the Permanent Secretary of the department. In other words, it became the accepted practice of the British Government that the permanent secretary should also be the accounting officer, so that the responsibility for policies could be entrusted under one man.

According to Sir Warren Fisher, a Permanent Secretary to the Treasury, "the economy was not something to be imposed on other departments by a Treasury acting as the 'single-handed' champion of solvency keeping ceaseless vigil on the buccaneering proclivities of the permanent heads of departments, but rather that the heads of departments should work together as a team in the pursuit of economy in every branch and every detail of the public service." This reform has inculcated a greater sense of financial responsibility in departments. Departments began to recognise that, although it was the duty of the Treasury staff to criticise, such criticism was useful and necessary in the making of plans, and it might even be wise on occasions to consult the Treasury informally before there was any need to seek formal Treasury sanction.

Economic Stability

It was during the war and post-war period that the Treasury adopted a number of measures to achieve economic stability such as restriction of internal spending in order to control inflation, using the budget as a means to hold the balance between income and expenditure, regulation of public spending in such a way as to offset fluctuations in private investment, adjustment of the balance of payments position, regulation of the import programme and maintenance of a high level of employment. The coordinating work on these programmes is now entrusted to the Central Economic Planning staff. The Treasury has two main functions: (1) the prudent house-keeping or the art of the saving of candle-ends and (2) the general coordination in the economic field.

In addition, the Treasury has a separate section specialising establishment matters and the section reviews at intervals the organisation of all departments in which knowledge of those who work in the departments is blended with the experience of those from outside. The traditional doctrine of Treasury authority for every new post or every variation in establishment has now been superseded by widely delegated powers to departments enabling them to deploy their staff at their own discretion provided that an authorised total figure is not exceeded; and this authorised total may have the qualities of a moving target, in that the departments the work of which is increasing or declining may be asked to work within a larger or smaller total 6 or 12 months ahead. These increased delegated powers are balanced by visits of staff inspectors whose duty it is, not so much to look for particular matters on which they can suggest improvements, as to report whether each department has in force a satisfactory system for controlling its staff numbers and keeping its organisation in good order.

In fact, the trend has now definitely changed from that of meticulous control of detail in favour of greater delegation to departments, combined with the use of methods which enables the Treasury to satisfy itself that the standards of prudent housekeeping are being observed. The Treasury has been able to achieve the latter objective by calling a halt when the departmental authorities show signs of getting out of hand. It is a sort of relationship in which the Treasury clerk is a layman dealing with experts who know more of their business than he can hope to acquire. But by sheer practice in weighing up facts and testing evidence and judging men, it is his business to form a layman's judgment on whether any case presented for more expenditure, however admirable from a particular point of view, is out of scale with what can be allowed on a commonsense judgment of things.

Financial Control in India

India has adopted cabinet government on the British model. In successive constitutional reforms, institutional and administrative, checks have been set on the British pattern. For example, expenditure calling for additional funds has to emanate from the President, that is to say, virtually from the President's ministers. Again, a Select Committee on Public Accounts was set up immediately after the Montagu-Chelmsford Reforms. It was accompanied by a Standing Finance Committee corresponding to the British Estimates Committee. But these committees at first functioned with much less independence than their counterparts in Britain.

One of the earliest acts in India after the attainment of Independence (February 1950) was to establish machinery whereby the chairman of the select committees was appointed by the Speaker, thus making it possible to appoint members of the opposition as chairmen and thus giving an opportunity for free criticism of governmental policy. A new Estimates Committee has also been provided for, similar to the British Committee on the Estimates. A day is usually reserved for parliamentary discussion of the reports of the Public Accounts Committee; the reports of the Estimates Committee will also be debated and commented upon in the Press. The Indian Public Accounts Committee works in close co-operation with a strong department of audit, the composition of which also follows the British system. The accounts department is separate from the audit section; as a result, the confusion which exists in many countries, because the same body authorises and audits expenditure, has been avoided in India. Moreover, the Central accounts and audit department functions not only for the Union Government, but is also responsible for supervising and auditing all State accounts. Municipal and local finances are outside the purview of the Central Government, and are under the States, which endeavour to see that local accounting and auditing are performed with reasonable efficiency.

As in Britain, so also in India, the Finance Ministry occupies a dominant position. Like the British Treasury, the Indian Ministry of Finance maintains continuous control over departmental expenditure. There is also a trend to increase the efficiency check on expenditure at the administrative level through the establishment of 'organisation and method' departmental officers on modern British lines.

In the 1930s, India set up an economic advisory department which functioned in the Ministry of Commerce and had a statistical unit attached to it. But economic questions are coming to be more and more the concern of the Ministry of Finance and the Cabinet Secretary associated with it. The Indian Ministry of Finance has been reorganised so as to pay more direct attention to economic questions. One section is responsible for all revenue matters, another, entitled "expenditure" (parallel to British supply), is concerned with departmental estimating and outlay; the remaining departments—internal finance, external finance and the budget division—are closely associated with economic affairs.

Control—Internal and External

Financial control in India is of a twofold character: internal and external. The internal or Treasury control is exercised primarily by the Finance Department, which is charged with the duty of seeing that economy is observed by the administrative departments. In practice, this control is limited by several factors. One of these is the personality of the Finance Minister. In Britain, the Chancellor of the Exchequer is regarded as next in importance only to the Prime Minister and is always a leading member of the party in power. When he says "no" to a proposal, it is final. This is not the case here. Finance Ministers in the States and at the Centre have not been members of the party enjoying a majority in the legislature. The authority of the Finance Department is not final, and its control is not as strict as that of the British Treasury. Finance does not constitute a whole-time charge for a Minister in the States and he is also placed in charge of spending departments like police, jails, law, courts, education, etc. As such, the Finance Minister becomes a party to the expenditure which he is ultimately to sanction as the head of the Finance Department. No Finance Department can dictate or veto policy. Ultimately, administrative considerations must prevail. If the Government, for instance, decides on a policy of prohibition, the Finance Department has to accept it in spite of the resulting loss of revenue. External control over public finance is exercised by (1) the legislature, (2) the committees of the legislature, and (3) the Audit Department. The main function of the legislature in connection with finance is to vote supply which includes voting of expenditure as well as provision of funds by taxation or otherwise to meet the expenditure.

As far as control over expenditure is concerned, the provision in the new Constitution is satisfactory. Many items of expenditure previously classed as non-votable (about 80 per cent. of the total expenditure) will now be votable, such as defence, salaries and pensions of superior civil services, external affairs, etc. The items now classed as non-votable are also non-votable in Britain and other advanced countries such as debt charges, salaries and pensions of High Court judges, allowances and emoluments of the heads of the States, etc. In another respect also, there is an improvement over the Government of India Act of 1935. A vote once passed by the legislature is final in the sense that it cannot be modified by the executive. There can be no restoration by the executive of grants rejected or reduced by the legislature. Sections 162 and 163 of the Government of India Act of 1935 provided that the executive authority of the Federal Government or a State extended to borrowing upon the security of the revenues of the Federation or the State; these provisions have been reproduced in the Constitution. In view of the growing magnitude of the annual loan operations, it seems necessary that the specific sanction of the legislature regarding the purpose and the amount of each loan should be obtained before the loan is raised. If the loan is being raised to meet a revenue deficit or any other unproductive purpose, the legislature and particularly the money market will take due notice of the fact. It will also enable the audit to see whether the loan has actually been spent for the purpose for which it was raised, and whether the amount spent is not greater than that sanctioned by the legislature.

Standing Committees

The main committees of the legislature concerned with financial control are the Standing Finance Committee and the Public Accounts Committee. The function of the Standing Finance Committee is to advise the Government on new proposals for expenditure before they are included in the estimates. The main committee of the legislature concerned with financial control is the Public Accounts Committee. Public Accounts Committees have been in existence at the Centre and in the States ever since the inauguration of the Montagu-Chelmsford Reforms. They have done useful work in improving financial administration. As far as their membership and functions are concerned, they have been generally modelled on the lines of the British Public Accounts Committee. Secretaries to the Governments, heads of departments and other spending officers are called before it to give evidence. This exercises a wholesome influence on the spending of public money. The Auditor-General (or the Accountant-General) in the case of a State) usually attends the meetings of the Committee to assist it in its deliberations and proceedings.

The Auditor-General is rightly given the same position of independence as a judge of the Supreme Court. This is a very necessary provision. The Auditor-General of India exercises powers and functions for both the Centre and the States. As audit and accounts was a provincial subject, provinces were free, even under the Government of India Act of 1935, to make their own arrangements though they did not prefer to do so on grounds of economy and efficiency. In the new Constitution, the provision relating to the States have been separated from those relating to the Centre.

Irregularities

Financial transactions of Governments mostly consist of (i) receipts of revenue, (ii) expenditure and (iii) purchase and issue of stores and stock. As far as the audit of expenditure is concerned, the functions of the Auditor-General are sufficiently comprehensive and are practically the same as those of the Comptroller and Auditor-General in Britain under the Exchequer and Audit Departments Act. There is, however, one important difference. In Britain, the Comptroller and Auditor-General combines in his own person two offices which were formerly separate. In his capacity as Comptroller of Exchequer Issues, he controls the issue of public money; in his capacity as Auditor-General, he is auditor of public accounts. This is not so in India and the separation of Accounts from Audit gives scope for financial irregularities. For instance, during the last war, large sums were issued from the treasuries in Bengal on the authority of the Bengal Government; these payments were found to be irregular and about Rs. 19 crores had to be written off. The English practice is commendable. Another point in relation to the powers of the Auditor-General is that though he is free to decide the scope of audit in relation to expenditure, his budget is controlled by the Finance Department. As far as audit of receipts is concerned, the position is very satisfactory. In Britain, the Comptroller and Auditor-General is required by law to audit all accounts of revenue and to report on them to Parliament. In India, the Auditor-General cannot of his own accord undertake the audit of the receipts of any department. He can do so only with the approval of, and to the extent desired by the executive.

Trends in India

The powers of sanction and control over expenditure have become important at present and will be much more so in the coming years. In a modern developing economy of a country like India, the budgeted expenditure on various development schemes is becoming colossal, and with it the powers of the persons who exercise the control over sanction of enlarged expenditure becomes greater. In the pre-war period, prior to 1939, the budgeted expenditure of the Central Government stood at about Rs. 86.61 crores and out of this, defence absorbed about Rs. 47.35 crores, leaving Rs. 39.26 crores for civil expenditure. The function of the pre-war Central Government was mainly that of a Police State with law and order, while since Independence, the ideal has changed into that of Welfare State. Further, Government have assumed the responsibility of directing the activities of various ministries and State Governments to the attainment of optimum economic activity.

Regulation of this huge quantum of expenditure towards the implementation of the second Plan will mean considerable powers to the Finance Ministry. Some powerful ministers have already begun to chafe at the growing authority of the Ministry of Finance and it is mainly against the constant and irksome interference of the Finance Ministry that other ministries have begun to plead for greater decentralisation over the control of expenditure.

Attempts are being made to decentralise the power over sanction and control of expenditure from the hands of the Finance Minister as much as possible. It will be recalled that this attempt led to a veritable crisis in July 1954 when the then Finance Minister, Mr. C. D. Deshmukh, threatened to resign from the Cabinet over the Chanda Report which had suggested decentralisation in regard to sanction and control over expenditure. The Appleby Report which was recently discussed in the Lok Sabha on the pattern of decentralisation of financial control and audit has brought the issue to the fore, namely, that the present system of too many checks and counter-checks sapped administrative initiative and delayed action.

Audit

On the question of audit, it may be desirable that there should be one organisation that should draw up programmes and priorities and another that should evaluate achievements and examine failures. In fact, the Prime Minister Mr. Nehru has recently made the same suggestion by saying that what we need is not so much financial audit as achievement audit. In the context of vital changes in the national economy, the more important thing to measure is the change effected and not the money spent. It may be said that financial audit comes to the same thing since such audit is of spending on a particular project estimated to cost a particular sum of money. But there is an essential difference; in financial audit we are thinking of the money and in the last resort we are satisfied even if the thing planned is not done, so long as the money is not wasted.

In achievement audit, on the other hand, we look at the concrete changes effected and blame will normally attach to the executor for not having completed a planned task, even though he may plausibly defend himself by saying that he might in that case have incurred more expenditure than originally planned. In other words, the accent is on results and not on penny-pinching. From this point of view, the best auditor would be the technical man and to that extent, the financial auditor who merely concerns himself with the technicalities of orthodox spending has only a minor role to perform. The function of the Auditor-General should not be considered so over-ridingly important as to make actual achievement impossible by fear of what he may have to say on how it was done. In this connection, one cannot ignore the serious difficulty of sanction from the Finance Ministry every time something is to be done. Of late, it is said there have been many instances of how technical men have been thwarted by financial officials who do not have the technical knowledge to evaluate the need for expenditure. It is to avoid such frustrating check on expenditure that has made Mr. Appleby to suggest extensive delegation of powers to the men on the spot.

On the other hand, protagonists of the present system maintain that the Indian audit system has been criticised by Mr. Appleby without sufficient knowledge. In the appraisal of the function of the Comptroller and Auditor-General of India, he treads a somewhat unfamiliar and controversial ground when he says that the function of audit is a strictly negative one. It is, of course, true that the Government audit is a financial audit and audit criticism is limited to financial criticism based on the accounts. But no one can deny that it is the duty of audit to bring to notice the wastefulness in public administration and infructuous expenditure. One has only to glance through the pages of Audit Reports on Appropriation Accounts to have an idea of the innumerable cases of misappropriation of public funds and infructuous expenditure. The maintenance of a high standard of public morality and sound financial administration has been the constant endeavour of audit. The fundamental object of the Audit Department is to secure value for the taxpayer's money by seeing that expenditure is not irregularly and wastefully incurred and Parliament has, therefore, attached great importance to the role of Comptroller and Auditor-General of India and accorded to him the status of an independent constitutional authority.

If the work of enforcing economy is to be done with efficiency, it cannot be left to those whose reputation and power depend upon spending; it must be given to another authority whose power and reputation will depend upon his efficiency in economising public resources. Hence the need for a division of functions and thus out of the three agencies of financial control, audit functions in a dual role both on behalf of the Executive (Finance Ministry/Department) and on behalf of the Legislature/Parliament. As a matter of fact, the present system of Indian audit has done much to point out cases of leakage of public funds and to pinpoint irregular practices. The role of audit has been the positive one of suggesting and helping to take corrective action in the light of past experience and not merely a negative or pedestrian one of watching the mere application of rules and orders, and it has been remarkably useful both in the matter of acting as financial adviser to the Government and in its helpful suggestions and assistance in the field of budgetary and financial control in India.

PROSPECTS FOR TEA IN 1957

DECLINE IN PRICES LIKELY

CONSUMERS of tea in the U.K. have had the most unwelcome New Year "gift" in the shape of an increase in the cost of their cup of tea. Following the recent increase announced by a London tea dealer, several firms stepped up the retail prices of tea on 29th December 1956. The increases ranged from 4*d.* to 8*d.* per lb., making the average retail price about 6*s.* 3*d.* per lb. According to a tea dealer, this step was inevitable and the Suez crisis has accelerated the matter, because many countries which were short of tea had to come to London to get their supplies. The wholesale price of tea in London is also now much higher than it was at this time last year. The average price of tea sold at the London auction two weeks ago was 6*s.* 1*d.* per lb., as compared with an average of 4*s.* 5*d.* per lb. realised in the corresponding week of 1955. The new prices have already been made applicable to the trade, but will operate for the public when shopkeepers' present stocks are exhausted, probably in about a fortnight's time.

The upward trend in prices of tea at auctions in both London and India, noted for the last three months, has been mainly influenced by the situation in the Middle East and the interruption in the "rhythm" of supplies to the U.K., resulting in a sharp fall in stocks. U.K. stocks as on 14th December last amounted to only 83.1 million lbs., as against 123.1 million lbs. a year ago. The rising trend gathered further momentum, following the sharp fall in the North-east Indian crop for the month of November 1956, when the output amounted to 47.2 million lbs., as against 87.0 million lbs. in the previous month and 62.1 million lbs. in November 1955. This brings the total output for the period April-November 1956 to 533.8 million lbs. which represents an increase of only 12.7 million lbs. over the crop for the corresponding period of 1955. It may also be noted that, with the fall in production during November, the lead has been reduced by 14.9 million lbs. from 27.6 million lbs. at the end of October, which, as readers are aware, is attributed to the crop regulation scheme brought into effect by the North-east Indian tea producers during the month.

Easier Trend Expected

The sharp rise in tea prices has no doubt brought about a welcome change in the fortunes of producers of plain tea in India, who had been having a very thin time this season, but such violent price movements are being viewed with concern by producers and distributors alike, for the higher the price goes up the further will it fall when the excitement which has been responsible for the rise dies down. In fact, Sir Eric Miller, Chairman of Harrisons and Crosfield, Ltd., London, expects an easier price situation to develop in the new year when shipments diverted via the Cape of Good Hope arrive in the U.K. Addressing the shareholders of the Company at their annual general meeting held about four weeks ago, Sir Eric referred to the statistical position of tea which did not justify the continuance of the present high level of prices. According to him, the 1956 production in Ceylon may be some 10 million lbs. below 1955 and the South Indian and Indonesian crops will total 10 million lbs. less than 1955. "On the other hand," he added, "the probable increases in North India and Pakistan indicate that 1956 world production may be only 10 million lbs. less than in 1955." Even this level of production is considered by Sir Eric as running ahead of normal absorption and yet new tea areas are being opened in several countries which were formerly content to rely on imports from India, Ceylon or Indonesia, but now aim at self-sufficiency for most of their own domestic requirements.

Crop advices from the important producing countries received after Sir Eric's analysis of the situation show a slightly different picture. They reveal that the shortfall in world production in 1956, as compared with that in 1955 is smaller than that envisaged by him. For the latest reports from Ceylon indicate a substantial increase in production during November, such having gone up from 27.7 million lbs. in October to 38.5 million lbs. (the output for November 1955 being 30 million lbs.). The total production of Ceylon for the first 11 months of the year accordingly amounts to 339.6 million lbs., as compared with 348.7 million lbs. in the corresponding period of 1955, the shortfall having been reduced from 17.5 million lbs. at the end of October to 9.1 million lbs. It will thus be seen that the effect of the decline in production in North-east India during November on the world total has been offset to a larger extent than that expected by Sir Eric Miller. The latest crop figures of major producing countries are shown below:

(In million lbs.)

		1956	1955	1954
North-east India,	Apr.-Nov. ..	533.8	521.1	502.5
South India,	Jan.-Oct. ..	103.8	119.4	108.4
Pakistan,	Apr.-Nov. ..	51.4	48.9	51.7
Ceylon,	Jan.-Nov. ..	339.6	348.7	333.2
Indonesia,	Jan.-Sept. ..	67.3	70.9	75.6
	Total ..	1,095.9	1,109.0	1,071.4

Referring to consumption of tea in the U.K., Sir Eric pointed out that it had been fully maintained; in fact, it had been in excess of 1955 with an average weekly consumption of 9.75 million lbs. for the first 10 months of 1956, as compared with 9.28 million lbs. (weekly) for the same period in 1955. The U.S., which is second to the U.K. as an importer of tea, has, according to him, barely maintained its average imports of recent years, despite a substantial increase in population and energetic merchandising campaign which cost about $2 million in 1955. Sir Eric did not see the prospect of any marked increase in consumption in other important markets, such as Australia, Canada or South Africa.

Outlook

Speaking on the outlook for tea producers in India, in particular, and more specifically producers of plain teas, the Chairman of Harrisons and Crosfield pointed out that the future depended on encouraging tea drinking more widely. To quote him:

"There is never likely to be too much quality tea available, but the future for producers of plain teas is dependent on the wholesome habit of tea-drinking being more widely encouraged. This is happening in India itself where consumption over the past few years has shown a continuing increase, capable of further expansion in the future. From a health point of view, tea-drinking has the merit that the water for the brew has to be boiled. A prerequisite for greatly increased consumption is that sound tea shall be made available at prices within the reach of the masses."

Sir Eric Miller, however, warned that marked progress in this direction could not be relied upon, so long as producers were mulcted in exorbitant export duties, ever-rising wage demands and crippling taxation. It is these factors which are responsible, according to him, for a number of responsible *entrepreneurs* seeking in recent years lands suitable for tea growing in the heart of Africa. He added that these *entrepreneurs* were prepared to invest upwards of £250 per acre in new planting there, in striking contrast to the fact that shares in good Indian tea companies could now be purchased at less than the value of their current cash resources with their estates thrown in for nothing, *quod est absurdum*, as Euclid would have said most emphatically.

Sir Eric also drew attention to the possibilities of India gradually losing its markets abroad for plain tea. Already, India has yielded considerable ground to its competitors in world markets. Supplies from Africa are steadily rising. Tea production in this country has gone up from less than 35 million lbs. in 1946 to more than 60 million lbs. in 1956 and shows every prospect of continual expansion in the future and, what is more important, at an average production cost substantially below that of India.

This aspect of the outlook for Indian tea deserves serious attention of the Government of India. It should re-examine its policy in regard to exports and export duty from the long-term point of view of protecting India's export markets for tea. It should not sleep over this matter, as it did in the case of the jute industry. It is common knowledge now that, in its anxiety to gather as much revenue as possible by keeping the export duties at very high levels, the Government of India actually provided a protective umbrella to jute industries in other parts of the world, especially in Pakistan and Japan, and to industries producing substitutes for jute goods. When the Government realised its mistake, it was too late and much irreparable damage had been done to Indian jute mills. The tea producers also should pay more attention to producing quality teas which alone can keep up the reputation of Indian tea abroad and the country's position as the leading supplier to world markets.

MORE JUTE IN 1956-57

LARGER AREA TO BE BROUGHT UNDER CULTIVATION

THE prospect of an increase in the supply of raw jute to mills in India is indicated by the latest official crop estimate for the year 1956-57. The all-India final estimate of jute for the year places the current year's area and production at 1,883,000 acres and 4,221,000 bales (of 400 lbs. each), as against the partially revised estimate of 1,739,000 acres and 4,197,000 bales for 1955-56. The corresponding final estimates for 1955-56 were 1,581,000 acres and 4,137,000 bales. The latest estimate for 1956-57 represents an increase of 144,000 acres, or 8.3 per cent., in area and 24,000 bales, or 0.6 per cent., in production over last year's revised estimate.

The overall increase in acreage during the current year has been reported mainly by Bihar and to a smaller extent by Tripura, due generally to favourable climatic conditions at sowing time. The increase in acreage in Bihar and Tripura has, however, been offset to some extent by a decline mainly in West Bengal and to a lesser extent in Assam, Orissa and U.P. The rise in production in Bihar and Tripura is due partly to an increase in acreage and partly to efforts made for growing high quality jute under jute development scheme. The decline in West Bengal, Assam and Orissa is attributed mainly to unfavourable weather conditions during the growing period of the crop.

The estimates of production for 1955-56 and 1956-57 in respect of Assam (excluding hill districts), West Bengal (excluding Darjeeling district) and U.P. are based on the results of random sample crop cutting surveys. The latest estimates in respect of Bihar and West Bengal relate to the new set-up of the States after their reorganisation on 1st November last.

With the improvement in acreage during the current year, the area under jute has been considerably enlarged during the last three years, having gone up from 1,196,000 acres in 1953-54, to which level it had declined from a high of 1,951,000 acres in 1951-52. The output of jute, which had also fallen successively from 4,678,000 bales in 1951-52 to 2,928,000 bales in 1954-55, has moved up substantially during the last two years.

An unsatisfactory feature of this progress is that the increase in acreage during the current year has not been accompanied by a correspondingly encouraging rise in production, with the result that the yield per acre has considerably dwindled to 2.24 bales from 2.62 bales in 1955-56; it is the lowest for many years, as will be seen from the following comparative table for the last nine years:

	Area (000 acres)	*Crop* (000 bales)	*Yield* (bales per acre)
1948-49	834	2,055	2.47
1949-50	1,163	3,089	2.66
1950-51	1,454	3,301	2.27
1951-52	1,951	4,678	2.40
1952-53	1,817	4,605	2.53
1953-54	1,196	3,129	2.62
1954-55	1,243	2,928	2.36
1955-56	1,581	4,137	2.62
1956-57	1,883	4,221	2.24

It will be noted in this connection that the production target for jute in the second Five-year Plan was recently raised from 5 million bales originally fixed to 5.54 million bales, along with other agricultural commodities. The subject of reaching this revised target came up for discussion at a meeting of the representatives of the Commerce, Community Development, Finance and Agriculture Ministries and the Chairman of the Indian Jute Mills Association, held in New Delhi on 30th December, 1956. In order to achieve the object in view, it was decided to increase the acreage under jute cultivation in the States of Assam and West Bengal. A concerted drive will be made to enlist the co-operation and assistance of the Community Projects and N.E.S. workers also in these jute-growing States.

It was also emphasised at the meeting that free or cheaper supply of seeds, fertilisers and agricultural equipments would also be necessary. It was decided to undertake "top-dressing" of jute with ammonium sulphate and the entire area under jute cultivation would be fertilised by the end of the second Plan period. The problems of the State Governments and the Plan for production will be discussed further at a conference of Secretaries of State Agriculture Departments and Development Commissioners to be held on the 12th inst. in New Delhi. It is to be hoped that the Conference will discuss and decide upon practical measures for bringing about a substantial increase in the yield per acre.

NATIONAL BANK OF INDIA LIMITED

Incorporated in the United Kingdom (Established 1863)
The Liability of Members is Limited
BANKERS TO THE GOVERNMENT IN KENYA, UGANDA, ZANZIBAR AND ADEN

Subscribed Capital £4,562,500

"...and a bonus of goodwill to the management —for installing the

'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

'Tushar' WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

PROMOTION OF TOURISM

ESTIMATES COMMITTEE'S SUGGESTIONS

A SIGNIFICANT development in the post-war era is the increased interest in tourism not only in the industrially advanced countries of the world but even in the relatively under-developed countries. Indeed, the latter group of countries has a special interest in tourism, in that it is a welcome source of invisible income. Although it is only in recent years that the authorities in this country have taken a lively interest in the development of tourist industry it is noteworthy that a modest beginning towards building up this industry has been made. Obviously, much more remains to be done before the industry can make a significant contribution to India's foreign exchange earnings. But the progress which has been made so far justifies the hope that tourism will become an increasingly important source of income to this country. After all, the presence of a large number of historical and cultural centres in this country, not to mention the places of great scenic beauty, is a factor that facilitates the task of promoting tourism.

In recent years, there has been a steady increase in the number of tourists who visit India. It has more than doubled in the last five years. Thus, from 20,000 in 1951, it moved up to 25,448 in 1952, to 28,060 in 1953 and still further to 39,333 in 1954. In 1955, as many as 43,645 tourists from abroad visited India. The country is estimated to have earned Rs. 10.1 crores in 1955 by way of income from tourist traffic; at this level, it constitutes about one per cent. of the country's export earnings. The tentative estimates framed by the Union Ministry of Transport place the earnings from tourists in the period of the second Five-year Plan at Rs. 60 crores.

Sargent Committee

Public interest in tourism was first stimulated by the report of a committee (Chairman: Sir John Sargent) set up by the Government of India in 1945. The Committee was unanimously of the opinion that it was in the interest of India to encourage and develop tourist traffic by all possible means. It was, however, only in 1948 that the first step was taken by the Government of India towards the promotion of tourism; an *ad hoc* tourist traffic committee, consisting of the representatives of the Ministries concerned and of tourist, transport and hotel industries, was set up. In 1949, the Government implemented one of the major recommendations of the Sargent Committee, namely, the setting up of a separate tourist branch in the Ministry of Transport. This was followed by the establishment of regional tourist offices in Bombay, Calcutta, Delhi and Madras and overseas offices in New York, San Francisco, London, Paris and Colombo.

Realising the importance of tourism, the second Five-year Plan provides for a total expenditure of Rs. 4.22 crores to be spent on upgrading tourist facilities in the country—Rs. 1.86 crores by the Centre, Rs. 1.51 crores by the States and Rs. 85 lakhs to be paid out of Central funds for promotion of tourism in Jammu and Kashmir. Under the first Five-year Plan, it may be recalled, no specific provision was made for promotion of tourism. The Government of India, however, incurred an expenditure of over Rs. 52 lakhs towards the development and promotion of tourist traffic. Besides establishing the overseas and internal tourist offices, to which a reference has been made at the outset, the Government published a large variety of tourist publicity material and developed valuable contacts with the international bodies interested in promotion of tourism.

Publicity

On many aspects of the tourist industry, such as publicity and hoteliering, the Estimates Committee, in the course of its report on the Ministry of Transport, has made some very important recommendations. Regarding publicity material, the Committee observes that the standard of such material is "generally quite high." Nevertheless, it says that there is scope for improvement. In particular, it has emphasised the need for using types that will not cause any strain to the eyes and for cutting out from such material information about centres which foreign tourists are not likely to visit. It commends to the Government's attention the suggestion made in the U.N. Fellowship Study of the Working of Official Travel Organisations of six European countries. The report of this study stressed that since each country is trying to do its best to "sell" its tourist attractions and is bringing out "shoals of printed publicity material," a good part of the tourist literature produced goes waste. It would, therefore, appear that the more intelligent travel organisations are limiting expenditure on publications and are spending comparatively more on reaching the public at large through advertising, feature articles in newspapers and magazines of general interest and the radio and film. Again, the human interest is being emphasised more than the architecture of cathedrals and the scenic beauties of the countryside. The tourist is looked upon as a human being "interested in meeting people, eating good food and amusing himself with various forms of entertainment." The Committee stresses that these trends should be fostered in respect of tourist literature published by the Government of India.

For the benefit of foreign tourists, the Government has brought out publications giving the road routes to Bombay, Calcutta, Madras and Delhi. Six road maps are now under production by the Survey Department, Dehra Dun. The Committee appreciates the importance of road maps and their easy availability to tourists. But it suggests that the issue of road maps should be entrusted entirely to the Survey Department. It welcomes the fact that the Government has produced 18 documentaries so far, dealing with Kashmir and other centres of interest and 23 more films are under production. It suggests that the documentaries should be widely exhibited in colleges and schools all over the country so as to encourage student tourism.

Hotel Industry

The Committee rightly stresses that "there is no other single factor of such a vital importance for the development of tourist traffic as suitable arrangement for boarding and lodging." It recognises that these facilities have recently been expanded but observes that "the position still remains far from satisfactory." There are about 107 Western style hotels and nine circuit houses in India which have been approved for foreign tourists and included in the Hotel Guide published by the Ministry of Transport. The work of classification of these hotels has been taken in hand. It is stressed that the committee which has been entrusted with this work should be requested to submit its report within a specified period of, say, six months. It has suggested that the Government should consider "sympathetically" and take "early" decisions on the points raised by the representative of the hotels industry at the meeting of the Central Tourist Traffic Advisory Committee, held in June 1956. These points are:

(i) The hotel industry should be recognised as an industry within the meaning of section 2 of the Industrial Finance Corporation Act, 1948. (ii) The hotel industry should be granted concessions such as exemptions from various Acts like the Rent Control Act, Bombay Police Act, etc., and Prohibition Act. (iii) Profits of new hotels and restaurants should be exempt from income-tax for the first five years. (iv) Hotels should be allowed to get loans from foreign countries without the levy of income-tax on the amount paid as interest on foreign loans. (v) Land for building hotels should be allotted on good sites and at reasonable rates. There should be no discrimination between hotels in this respect. (vi) Classification of hotels should be done in co-operation with the Hotel Federation.

The Committee has suggested that the Government should use its good offices to see that the hotel industry gets loans to a reasonable extent from the banks, the State Insurance Corporation, and/or the Industrial Finance Corporation. It adds that while it has no objection to the grant of loans to the hotel industry on easy terms, subject to the availability of funds, it is "definitely of the opinion that the hotel industry is pre-eminently suitable for the private sector and that the public sector should not encroach upon this sphere." Finally, it hopes that business men will be encouraged to build more hotels for tourists in the low and middle income groups.

Customs

The question of simplification of formalities to be observed by foreigners has been under the active consideration of the Government of India for some time past. A special committee, consisting of the Transport Ministry as convenor, and representatives of the Home Ministry (Security Branch), Finance (C.B.R.), External Affairs and Communications (D.G.C.A.), was appointed early last year to examine not only rules regarding registration, customs, currency restrictions, income-tax clearance, etc., but also facilities available at ports of entry for foreigners. The special committee, after visiting the major ports of entry, made a number of recommendations which have been almost entirely accepted and implemented by the Government.

The position now is that all passengers arriving by air are required to fill in only one form, namely, the disembarkation card containing all the information required for purposes of registration. On the basis of this card and the entries in the passport, the registration authorities fill in and issue registration certificates. For passengers arriving by sea, the Master of the vessel ensures that a copy of the passenger manifest, which also contains all the particulars required for registration, is furnished to the registration authorities. The latter issue registration certificates on the basis of the particulars contained in the manifest. Thus, the individual passengers coming by sea do not have to fill in even the disembarkation card.

All foreigners have the option of registering themselves either at the port of entry or at leisure within seven days of their arrival. Further, the hotel arrival reports are furnished not by the foreigner but by the hoteliers on the basis of the particulars entered in the hotel register. A foreigner is able to make his departure report either from the district in which he is staying or at the port of departure. All passengers leaving India by air fill in only one form, namely, the embarkation card. Necessary amendments to the Foreigners' Registration Rules to this effect have been made. The revised procedure came into force with effect from the 1st May 1956.

As regards customs formalities, baggage declaration for the passengers is now oral. The limit for jewellery for personal use has been raised from Rs. 2,000 to Rs. 5,000 and discretion has been given to customs officials on the spot at the ports of entry to permit jewellery upto Rs. 10,000. These two modifications have come into force with effect from the 15th July 1955, and have been greatly welcomed both by the general public and by travel, trade and airline companies. A person can bring in goods for personal use for himself or his family worth Rs. 1,000 duty-free.

To facilitate the speedy clearance of foreigners, the departmental committee had suggested that there will be three batches of registration officers at each port registration office to deal with (i) Indians and Commonwealth citizens, (ii) tourists and (iii) non-tourists, separately. Steps to introduce this system are being taken. Receptionists knowing foreign languages have been appointed at the important points, viz., Bombay, Calcutta, Delhi and Madras.

Home Tourism

An important aspect of the problem of the tourist industry is the encouragement of "home tourism" or "internal tourism." This has a definite economic and cultural significance. Its economic significance stems from the fact that it could serve as a valuable adjunct to foreign tourist traffic and thus lead to balanced development of the tourist industry. Its cultural significance arises from the consideration that, in India, which is a vast country of different languages and ethnic groups, it is of the utmost importance that the spirit of national unity should be deliberately fostered through encouragement to travel by all classes of people in different regions. The Committee, in an earlier report (twenty-fifth report), recognised that "frequent inter-mixing of the people of different areas is very necessary." In its report under review, the Committee has accepted the principle that the development of home tourism should be primarily the responsibility of State Governments. But this arrangement may not be conducive to the development of a national tourist policy. The Committee has, however, urged that the Government of India should continue to act as a central co-ordinating agency in the matter of all aspects of tourism. In the next few years, the task of integrating the country should receive top priority. From this point of view, the Central and State Governments should give more attention than they have done hitherto to the promotion of "home" tourism.

Germany's merchant shipping fleet reached a total of 3.51 million g.r.t. at the end of 1956, an increase of 500,000 tons over the year. It is estimated that German shipping would be able to maintain this rate of increase in the next few years.

The Yamashita Shipping Company of Japan has announced that it will reopen, with effect from February 1957, its north Pacific route, suspended since the war.

THE
CHARTERED BANK
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000.
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East

ECONOMIC TRENDS IN UNITED STATES

NEW PEAK LEVELS IN BUSINESS EXPECTED IN 1957

By Our Special Correspondent

NEW YORK, 16*th December*

AT the threshold of 1957, no downturn is in sight for business, industry and financial activity in the United States. Indications are for shortages in many lines which can lead only to greater stimulus. Even the most conservative men in banking and industry predict at this point that early gains will be made in the new year, that the upward momentum is strong and that this will result in raising the level of business to new peaks in the first half of the year.

Some of the elements behind such forecasts are further plant and industrial equipment expansion, higher Government expenditures, the inventory situation, increased farm exports, more automobile sales, better farm implement sales, higher consumer credit and rising costs. Projected outlays in the capital goods industry are such that the momentum will carry through for at least six to nine months, since orders cannot be changed overnight and production schedules have been set.

Expenditure

Government expenditures are expected to be considerably larger in 1957 than in 1956. State and local Government spending is increasing at the rate of $3,000 million annually, owing to demands of the road-building programme, new schools and public building. Defence spending on the national level is likely to rise as well. The road-building programme, half financed by the States and half by the Federal Government, is a wide-range project and will take years to complete. Financial markets will benefit by a steady stream of new issues, many of them no doubt tax-exempt.

In the industrial realm, it means high activity for a long time to come, particularly in the steel industry. A pinch has developed in steel plates. Strong demand for shipbuilding is at the bottom of it. Because of the Suez Canal crisis it is not likely to abate for a long time to come, since it takes about three years to build a freighter in the United States and between five and six years in European yards. The rise in inventories which has taken place in recent weeks and months is regarded as a natural, if related to the backlog of orders and compared with sales. In the retail field, Christmas and New Year holiday sales are expected to show new highs when final figures are completed.

The automobile industry is expected to do better in 1957 than in 1956. The new models are very attractive and carry many improvements. All auto makers joined hands this year in a grandiose show held at the Coliseum in New York. More than 100 of new models and trucks were exhibited and demonstrated by an array of pretty girls. There was also a stage show with a chorus of about 50 girls, singers and dancers which helped sell the new wares to the tune of a very good orchestra and supported by attractive lighting and flower arrangements.

Farm equipment which had a bad time last year because of lower farm income is showing signs of improvement. The Suez crisis helped to lift the prices of commodities and the weather and acreage restriction are also of help. The improvement is also expected to affect the textile industries, although this still remains to be seen.

Tight Money

There is evidence that less emphasis will be placed on tight money by the Federal Reserve system and the U.S. Treasury. The matter has now become a major political issue. Congressman Wright Patman is chairman of a Washington committee which now holds hearings. The general objective is to find whether or not tight money has hurt any important segment of society. If it has, Mr. Patman has promised legislation. In my and many other people's opinion, it will be extremely difficult to prove statistically that anybody has been hurt drastically. From my own experience, I can say this, however—that money is extremely difficult to obtain for long-range projects. It includes shipbuilding, housing and/or mortgages. Liquidity of the financial institutions has shrunk, their holdings of Government securities have been reduced from about 50 per cent. at the end of the war to approximately 18 to 20 per cent. at this time. The great demand for credit and loans of all descriptions has been the motivating factor in this development. Consumer credit (hire-purchase) while quite high has reached the point where payments by the public to the banks and finance companies equal new contracts. The situation, therefore, is in balance, at the present time, and very little new money would be required to finance new expansion.

Rise in Costs

The rise in costs has been fairly constant and promises to be so in 1957. It is chiefly occasioned by rising wages and fringe benefits and by higher prices for more efficient machinery in order to boost productivity. Such conditions are bound to obtain in the future. The inflationary aspect in all this cannot be overlooked. Indeed, there is still creeping inflation in the U.S. It has been checked skilfully by monetary management, but it remains a factor to be reckoned with in the future months to come. Prices have risen in recent months in various lines and more increases are scheduled to take place in the future. Virtually every wage increase in recent years has been followed by an increase in prices. Whether this is sound economic thinking is yet to be determined by history. A quarter of a century ago, lower rather than higher prices were held to be one of the greatest incentives for larger markets. Today, it is higher prices—on credit.

The outlook for foreign trade is excellent. Farm exports in this fiscal year, ending 30th June, 1957, are expected to be considerably ahead of the preceding fiscal year, perhaps by as much as between 16 and 20 per cent.—despite two factors. They are the shortage of shipping which has been created by the closing of the Suez Canal and by the scarcity of oil as a result of the blowing up of pumping stations in Syria. The combination of all these factors is gradually becoming a world-wide problem which will carry well into 1957. Tramp freight rates are now higher than they were even during the Korean war. There is increased demand for coal exports from the United States to ease the fuel shortage in Europe and to prevent a serious curtailment of production.

Britain

Britain has already taken vigorous steps which augur well for the outlook for 1957. Imports of the United Kingdom were reduced greatly by the diversion of shipping around the Cape. Exports to the dollar area were the highest ever recorded in recent months and indications are that the United States has now overtaken Australia as the largest single export market for British goods.

Also, the U.K. economic position was strengthened by action taken in Washington. Whitehall made two agreements with the International Monetary Fund which will bolster London's gold and dollar reserves by $1,300 million and will bring the *de facto* level to more than $3,000 million. Fears that the Suez crisis and the shipping shortage will seriously curtail British and European economic activity, thus, are receding, although petroleum still remains a bottleneck.

These developments prompt American thinking to be optimistic, too—with some exceptions. Shell Petroleum Company, along with others, announced a series of further price boosts. The increase, since closing of the Suez Canal, now amounts to 14.3 per cent. and the whole raw material market as it affects the world and the United States is a double-edged sword. Latin America, for example, is benefiting substantially by the Suez crisis. New interest has been aroused in strategically located rich oil lands in such countries as Peru and Venezuela. Companies are switching operations into this area which look quite promising for 1957. By the same token, the Arab countries are likely to be hurt by lesser production and smaller royalties which are an important factor in supporting their Governments. Because of the international pressure, it is estimated that Peruvian oil properties, alone, will have produced more than 15 million barrels in 1956. This figure could be increased substantially if capacity drilling is in effect.

On the other hand, world tin prices eased sharply and market opinion about the future trend are divided, despite the interruption of Middle East shipping. Increased supplies are expected in 1957 as a result of contracts with smelters in Texas which established fabulous industrial facilities with Government help when Far East shipping was cut off by Japanese invasion in the last war.

Sugar

Another international raw material which is being watched closely here as possibly indicative of a future trend is the world sugar price. It is still a good many points above the International Sugar Agreement's ceiling and the market here waits for word whether export quotas will be raised for the remaining weeks of the crop year. There is a very strong demand for sugar and consumer demand has been going up steadily. West Germany has not yet come into the world market for the one half million tons that were indicated it wants. If orders finally come through, prices should turn up. Japan is still buying and both Chile and Iran have been inviting tenders on this side. A revised estimate of European beet sugar production in the year 1956-57 is more than 600,000 tons lower than last season. The drop in French output is the largest, but production in Czechoslovakia and Germany also will be much lower, the experts maintain.

The prospects for the wool market are generally regarded as good. There is a good deal of Japanese buying. Bidding, as reported by the Melbourne Woolbrokers' Association in Australia, suggested a general and extensive future demand, helped also by Southern and Central European inquiries.

There should be a good market for jute. Scottish markets have been very strong. Spinners and manufacturers at Dundee and the entire district are reported well booked and only forward delivery can be given at this point. It should help Indian suppliers directly and indirectly.

Cotton

On the basis of the latest official crop estimate, the total domestic U.S. supply of all cotton may approximate 27.9 million bales. If consumption and exports for the current season were in line with present estimates, the New York Cotton Exchange says, "a carryover on 31st July next, of 12.4 million bales, would be in prospect." Reported entries of cotton in the U.S. Government's 1956 loan stock continued to decrease.

The political situation in the U.S. is in flux. President Eisenhower, as a lifetime soldier and ex-general, has developed great political talent. There is great expectation in this country that the visit of Prime Minister Nehru of India will prove to be fruitful in the long run. In fact, the stand taken by the Indian Government during the recent Middle Eastern crisis in support of Mr. Eisenhower's policy of non-intervention and Washington pressure to withdraw Anglo-French forces from the international waterway area was received very warmly in this country. Both Messrs. Nehru and Eisenhower are regarded as, essentially, sincere men who want to do the best, in their opinion, for their own countries and the world.

Quite apart of the official statements, the meeting of minds of such leaders, it is felt here, may have a profound influence on the immediate future of the world at large. President Eisenhower's stature is undisputed at this time. As stated in previous despatches, the fact that he is a Republican President, working with a Democratic Congress, means very little. It is a question of semantics. The President has never antagonised any of his opponents wilfully. His loyalty to people, to his own country and to world peace cannot be questioned and this is the common meeting ground of Mr. Nehru, the great leader of the Indian people, and the President of the United States, even though there have been differences of opinion before which are understandable in the concept of human relations.

Loans

There is real pressure on the United States this time. The British Government has asked for a postponement of its interest payments on its loans to Washington. Fuel deficiencies to keep European industries going will have to be made up in the American hemisphere. All of this will be a strain on the U.S., some in the form of greater exports, some in grants and outright losses for the time being. The present time is, indeed, mindful of the Yalta Conference.

While Washington was not informed of Anglo-French action in time to prevent it, there are strong influences which suggest that

(*Continued on page* 41)

This story begins in 1888...

The world still awaits the adventure of Wireless . . . it's the age of the horse-drawn carriage. And people who talk of flying aren't airmen as yet; they're poets.

Calcutta is India's capital, and at one of its busy wharves, there's a picturesque mailboat from England, self-conscious in its new power of Steam. Look away for a moment to something else that is new. There! In those crates . . . the first few cakes of a new soap: *Sunlight*. The crates say: 'Made in England by Lever Brothers.'

Bobbing away on porters' heads, the cakes go off to some obscure bazaar of old Calcutta and from there . . . on to journey's end: the homes for which Levers have made the soap.

That's how it was one summer day of 1888. Lever Brothers (then, a three-year old British enterprise) thought the world of *Sunlight*. Soon, thousands of bazaars were stocking 'the tablet that foamed'—and families became converts for good.

Little by little, the motor car arrived (the model with the turkey-croak hooter); then the telephone began to jangle in Indian homes. And in those homes, time wasn't standing still either. People were asking for new and varied products to meet their changing needs. So, Levers—developing in step with them—produced for the home such things as *Lifebuoy* . . . *Vim* . . . and *Lux Toilet Soap*. This is becoming a story of familiar names, isn't it?

In 1922, Levers started making soaps in Calcutta—encouraged as they were by the increasing demand for their products. In 1934, a second factory went up in Bombay.

In 1926 came Dalda Vanaspati from Holland. And, with it, there started a revolution in India's nutrition—the use of a hardened vegetable oil for cooking. To manufacture *Dalda* in India, a new Lever Company was born in 1932: 'HVM'—the Hindustan Vanaspati Manufacturing Company Limited.

And still the Indian home called for newer and 'different' products. And so there came to India *Pears Soap*, *Erasmic* and *Gibbs* products, *Himalaya Bouquet* toiletries, *Rexona Soap*—familiar members of the Lever family. Marketing of these products led to the formation of yet another Lever Company in 1935: 'UTL'—United Traders Limited.

Now, you can't separate the tale of these products from the tale unfolding *within* Levers. The people in their factories and offices were changing, for one thing. Foreign experts were joined by the young men of India and today over four-fifths of Levers' executives are Indians.

Meanwhile, Levers were buying all the raw materials that India could offer. These purchases grew as manufacture expanded—till, in 1955, about 88 per cent of the oils and fats that Levers needed was supplied by India's fields and coconut groves.

An international partnership—that's what soon grew up in Levers. Foreign technical and marketing experience linked up with the talents and resources of India. Result? The Indian housewife today is supplied with products that are among the world's best.

Today, we are sixty-nine years from the crate of soap that, almost unnoticed, started Levers in India. Today, a new chapter in our story has opened with the association of Indian and foreign capital in Levers. Indian and British Directors work together on the Board, too. Here's a joint venture that serves the nation and advances with it.

Yes, the future arrives with each tick of the clock. And Levers face that future with a new name: 'HINDUSTAN LEVER LIMITED.' So the stories of HVM and UTL end, in a sense—because they've merged with 'Lever Brothers' to form Hindustan Lever.

But the Lever story goes on. For India's story goes on, and Levers have grown with India's needs and progress. As it has done for sixty-nine years, Hindustan Lever will continue to serve the Indian home.

HINDUSTAN LEVER SERVES THE HOME

TATA LOCOMOTIVE AND ENGINEERING COMPANY, LIMITED

MR. J. R. D. TATA GRATIFIED AT TARIFF COMMISSION'S RECOMMENDATIONS

HEAVY PROGRAMME OF CAPITAL EXPENDITURE ENVISAGED

SPEAKING on the occasion of the Annual General Meeting of the Tata Locomotive and Engineering Company, Ltd., held in Bombay on 28th December 1956, Mr. J. R. D. Tata, Chairman, expressed the Company's gratitude to the Tariff Commission for the impartial and constructive approach to the problems placed before it and for the sound and practical recommendations it had made. The Commission's inquiry served, among other things, to set at rest, once and for all, doubts about the Company's progress and efficiency.

The following is the full text of Mr. Tata's speech:

"LADIES AND GENTLEMEN,

"It has been a matter of satisfaction to my colleagues and to me that after the long period which it has taken the Company to surmount the manifold problems which beset its development and the more recent uncertainties in respect of the prices for locomotives and boilers, we have been able to present to you this year a report and accounts which, I am sure, will have met with your approval.

"I wish, at this stage, to thank the shareholders for their continued confidence and support notwithstanding the disappointingly long period they have had to wait before they could earn a return on their investment. While we live in uncertain and changing times, during which it pays to be cautious, I believe that the shareholders may henceforth view the future with some measure of confidence. One of the most encouraging elements in the situation, from the shareholders' point of view, is the fact that the Company has been able throughout to make full provision for depreciation, so that there is no burden of arrears of depreciation to come in the way of a fair and steady return on the shareholders' investment. At the same time, it is necessary to be realistic in any assessment of dividend potentialities in the immediate future. For instance, in comparing the financial results now before you with those of the previous years, and in basing on them any estimate of future earnings, shareholders should remember that the report and accounts for 1955-56 include the whole of the profits and some of the overheads of the locomotive division in respect of two years. They should also keep in view the fact that the Company faces a heavy programme of capital expenditure in the next few years and that, because of the nature of its business and operations, it will require an exceptionally large amount of working capital. Both these factors will necessitate conservation of resources.

Reference to Tariff Commission

"The most important development since we met last year has been the final settlement of the disagreement which had arisen between the Railway Board and the Company on locomotive and boiler costs and prices, to which I devoted a large part of my speech last year. As you were then informed, the matter was, by agreement between the Railway Board and the Company, referred to the Tariff Commission.

"In view of the importance to us of this inquiry and the Commission's findings, I think you would wish me to amplify here the brief references made in the Directors' report to the principal findings and recommendations of the Tariff Commission.

"With the assistance of an expert adviser, the Commission made a thorough and detailed investigation of the operations of your Company's locomotive division. We are grateful to them for their impartial and constructive approach to the problems placed before them and for the sound and practical recommendations they have made. The inquiry has served a valuable purpose not merely in bringing about a settlement between the Railway Board and the Company in the matter of prices for locomotives and boilers but also in clarifying a number of points about which considerable misunderstanding had prevailed in the past in some quarters and in setting at rest, once and for all, doubts about the Company's progress and efficiency.

"In these days, when the Government has almost unlimited powers with which to enforce its will, it is gratifying and reassuring to note that, in an industry in which the Government is itself a competitor as well as the sole customer, it decided to refer a dispute about costs and prices to an impartial statutory inquiry and abided fully by the resulting recommendations even though they went, to some extent, against its views.

"We have all along been anxious to serve the Government and the country well in regard to the supply of locomotives to the Indian railways and we deplored, no less than the Railway Board did, the causes, mostly beyond our control, which delayed the full fruition of the project and resulted in relatively high costs. This detailed inquiry has largely cleared the air between the Railway Board and ourselves and we look forward to a period of close and fruitful co-operation in the further development of the locomotive industry.

Commission's Findings

"Coming specifically to the findings and recommendations of the Tariff Commission, the Commission have supported the view I expressed in my speech last year that there was no sound or fair basis for comparison between the cost of production at Tatanagar and the prices of imported locomotives. The Commission, therefore, examined Telco's operations and costs of manufacture with reference to those at Chittaranjan. On this footing, they have come to the conclusion that, by and large, and making proper allowance for all relevant factors, Telco's costs do not compare unfavourably. The inquiry has, however, revealed that labour efficiency in our Works is lower and labour costs are higher than they are at Chittaranjan. The Tariff Commission has, therefore, suggested that there is need to re-deploy excess labour and to reduce the level of incentives paid to some of the workers. We were aware of our shortcomings in this respect which were largely due to historical reasons, and we hope that our workers and the union will co-operate with us in removing the causes for the unfavourable comparison which has been drawn between their productivity and that of their brother workers at Chittaranjan.

"The report has fully established that the manufacture of locomotives and boilers has at no time suffered from the concurrent undertaking of other lines of production about which doubts had been expressed in the past. In fact, the inquiry has shown that such additional activities have been helpful in absorbing a substantial portion of factory overheads which otherwise would have been an additional burden on locomotive costs.

Prices of Locomotives and Boilers

"The Tariff Commission have recommended and the Government have accepted certain prices for locomotives and boilers not only in respect of the previous two periods on which the Railway Board and the Company failed to reach agreement but also for the subsequent two years ending 31st March 1958. These prices have been fixed after making allowance for a rise in output and productivity as well as for the cost-reducing advantages of long-run orders for locomotives to be placed on the Company. The prices, which are on a sliding scale, will secure to the Railway Board a progressive reduction in the cost of the locomotives purchased from us while enabling the Company to make a reasonable profit. Prices for deliveries after March 1958 will be fixed after another cost investigation at the appropriate time.

"Before I leave the subject, I may say that, barring unforeseen circumstances or delays in the delivery of equipment and materials over which we have no control, we are confident of achieving the targets of production and costs set before us by the Tariff Commission. The expansion of the locomotive division to a capacity of a hundred complete locomotives per year, to which a reference was made in my last year's report, is well under way and is now expected to be completed a few months ahead of schedule. It will play an important part in reducing costs.

"The steel foundry, which will also reduce costs and end our dependence on imported steel castings, has made excellent progress during the last year and is expected to start production towards the middle of 1957. In fact, the melting furnaces have already started producing steel ingots. I regard the establishment of this steel foundry as an important landmark in the development of the Company's overall activities. Steel castings form an increasingly important proportion of heavy engineering products and the existence of a modern and highly equipped steel foundry in India, capable of turning out large and intricate castings of the highest quality, will render valuable service to the Indian heavy engineering industry.

"Dieselisation" of Railroad System

"India is today one of the few countries left in the world still dependent mainly on steam for its rail traction. In most parts of the world, steam locomotives have given way to diesel locomotives with either electric or hydraulic transmission. It seems inevitable that a similar changeover will, in due course, take place in India, although the process may be spread over many years. With the versatility built into our plant and the human skills and experience we have developed over the years, our Company will be especially well fitted to play an important role in the 'dieselisation' of the country's railroad system and I hope, when the time comes, we shall be given an opportunity to do so.

"The automobile division has continued to make satisfactory progress. The output of Tata-Mercedes-Benz truck and bus chassis has shown a steady increase. The target rate of 6,000 units per year has been attained, and in fact exceeded since the close of the year under review. The demand for Tata-Mercedes-Benz vehicles continues to outstrip supply. In view of this and of the growing need for additional road transport under successive Five-year Plans, we are, at the instance of the Government and in consultation with Messrs. Daimler-Benz, framing a scheme for increasing further the capacity of the auto division.

"We are continuing, year by year, to install the most modern equipment and machinery, including highly specialised machine tools, as part of our phased programme of manufacture. A start has been made with the construction of the engine shop. As stated in the report, the capacity of the alloy iron foundry which is expected to come into operation early in 1958, has been substantially increased in view of the growing demand for the Company's trucks and our plans for further expansion. We have so far fully lived up to the promises we made to the Government in respect of the content of indigenous manufacture in our five-year phased programme, and I have no doubt we shall adhere to that programme in the future.

Automobile Division

"The gratifying progress the automobile division has made is in no small measure due to the continued assistance we are receiving from our partners, Messrs. Daimler-Benz, to whom I take this opportunity of expressing our thanks and appreciation. Our thanks are due also to the Government of India for the realistic and far-sighted policies they have adopted towards the automobile industry. The progress made by the industry, in general, and by our automobile division, in particular, provides, to my mind, a remarkable example of what can be achieved with the help of well conceived and consistently applied policies.

"Government have rightly left this industry to free enterprise. They have set phased targets for indigenous production, controlled imports and granted both assistance and adequate freedom of action to individual manufacturers to exercise independent judgment and initiative in their respective fields while retaining a valuable element of competition within the industry. I earnestly hope the Government will adhere in future to these policies which are best calculated to promote the rapid development of the industry, to conserve foreign exchange, to supply a vital transport need of the country and to protect the user from unduly high prices.

"Now that the initial technical and staff problems concerned with the establishment of the automobile and locomotive industries have largely been solved with the assistance of our partners, Messrs. Daimler-Benz, and our technical consultants, Messrs. Krauss-Maffei and Messrs. Henricot, we anticipate no serious technical difficulty in the further development of our activities. Our main problems in the coming years will lie in the procurement of adequate finance and in the development of technical and managerial personnel.

Further Capital to be Issued

"Between the existing programmes and the expansion schemes already launched and under contemplation, the Company will require, within the next five years, considerable additional funds for capital expenditure and working capital. While a major portion of the requirements will be found from allocations to depreciation and other reserves and, in respect of working capital, from borrowings, some addition to the Company's share capital seems inevitable in due course. Proposals in this regard will be considered by your Directors during the coming year.

"As regards the development of technical and managerial skills, the growth of our business and its value to the community will depend largely on the reputation we establish for our products over the years. This reputation will itself depend on the skill and integrity of the many individual engineers and craftsmen engaged in the manufacture of our products. The importance, not only to ourselves but to the industrial development of our country as a whole, of the creation of such men cannot be overemphasised. If lasting success is to be achieved in India's industrialisation, resources must be developed in men, as well as in raw materials and equipment. No effort should, therefore, be spared in inculcating in our workers, engineers and industrial administrators the sense of responsibility, the integrity of purpose and the dedication to, and pride in, high standards of quality and precision which create the traditions and reputation of a country's industrial products throughout the world. This is one of the most important and difficult tasks facing any country attempting to force the pace of its industrialisation and we have, from the start, attached a great deal of importance to this task in our own organisation. We have achieved a fair measure of success and we shall continue our efforts.

Relations With Labour

"The Company's relations with labour continues to be reasonably satisfactory. I have already referred to the Tariff Commission's finding that, in certain sections of the locomotive shops, there is an excess of labour and efficiency is low. As our workers have, by now, acquired the skills and experience required for their particular jobs, the need for additional men to maintain output no longer exists. Fortunately, our expansion in various directions provides opportunities for deploying excess labour were it exists. I hope that in their own interests as well as those of the country our workers will appreciate the importance of achieving an improvement in productivity.

"An efficient and well led organisation requires amongst the many elements that make for contentment, adequate housing and town services. Although the provision of such housing and services is a particularly heavy burden on new and growing industries, it cannot be evaded and we have consistently provided, alongside our programme of works development, a housing programme to keep pace with the requirements of our employees. We have already spent approximately rupees two crores on our township. We shall need to add further to the township during the next five years.

"In conclusion, it is my privilege once again to express my thanks and those of my colleagues to all members of our staff, from the General Manager downwards, for the year's excellent work. Their initiative and the hard work they have put in have been principally responsible for the Company's progress reflected in the report and accounts before you."

Note.—This is not a report of the proceedings at the above Annual Meeting.

STRUCTURAL ENGINEERING WORKS LTD.

MR. A. D. SHROFF'S PLEA FOR DIFFERENTIAL TAX TREATMENT OF MEDIUM-SCALE UNITS

THE Annual General Meeting of the shareholders of the Structural Engineering Works Ltd. was held in Bombay on 31st December 1956. Speaking on the occasion, Mr. A. D. Shroff, Chairman of the Company, said that there were good and sound reasons which justified a differential treatment of a number of smaller medium-scale industries, in respect of taxation, different from those companies which had been essentially formed to avoid large payment of direct taxes. The following is the full text of Mr. Shroff's speech:

"The Directors' report and audited accounts for the year ended 30th June 1956 have been in your hands for some time and I am sure you will find the results satisfactory.

"As pointed out in the Directors' report, both the works at Sewri and Mulund continued to be fully occupied. As a matter of fact, the demand for structural fabrication capacity in the country has been insistent and your Directors are seriously considering increasing the capacity from 350 to 750 tons per month. The Mulund Works are busily occupied with the completion of the Vaitarna-*cum*-Tansa Pipeline Scheme. I am glad to inform you that the Company has been able to secure by direct and independent negotiations with the Bombay Municipality the work relating to the fabrication and laying of pipes for the third stage for about 15½ miles. It is a matter of considerable gratification that the authorities concerned have been fully satisfied with the type and quality of work executed on this pipeline scheme. Besides, the Company is negotiating with other municipal authorities in the country for substantial contracts of a similar nature, some of which are likely to fructify before the end of this official year.

Completed Thirteen Years

"The Company has now completed its thirteenth year and it would not be inappropriate if I refer to some of the salient features in its operations during this period. I am confident that the shareholders of this Company will look with pride upon the success of this Company as an achievement of free enterprise in the medium-scale industry. It must, however, be put on record that this achievement is very largely, if not entirely, due to the enterprise, pioneering spirit and faith of Mr. N. B. Bhagat, the founder of this Company. Starting with very modest means and with the assistance of the late Mr. M. C. Ghia and the Investment Corporation of India, he embarked on this industry in 1943 when, being unknown to the investing public, he could not gather sufficient capital. But his faith in the ultimate success of the Company and the persistence with which he fought the difficulties in the initial stage have fortunately brought this Company to its present stage of strength and prosperity. Perhaps, it may not be generally known that in undertaking the Tansa Pipeline Project, he mortgaged his personal properties to raise additional finance supplementary to banking facilities to cope with the increasing funds required for the execution of the contract. Men of Mr. Bhagat's courage and faith in the industrial development of the country are contributing towards raising the status of India as an industrial country.

"Your Directors are recommending the payment of a dividend of Rs. 15 per ordinary share, which is fully justified by the results of the last year. As a matter of fact, some shareholders have complained that the dividend recommended is disproportionately low and I have full sympathy with them, realising that since the inception of the Company the average dividend distributed to shareholders only comes to 4.61 per cent. I, however, want the shareholders to appreciate that in view of the number of projects, both expansion and new, the Directors are compelled to plough back a substantial amount of the profits to enable the Company successfully to implement them. It is the general experience of all industries in recent months that the availability of funds, both in the shape of new capital and working capital from banks, is definitely diminishing and I shall be very unhappy, if, for lack of finances, this Company is precluded from completing the various projects under the consideration of your Directors.

Penal Tax on Dividends

"From other platforms I have earnestly pleaded with the Finance Minister for examination of the position of companies like these, which come under the mischief of Section 23A of the Indian Income-tax Act. There are good and sound reasons rooted in the historical background of a number of smaller medium-scale industries which justify a differential treatment from those companies which have been essentially formed to avoid large payment of direct taxes. Similarly, the history of this Company confirms my plea that the penal super-tax on dividends is both illogical and unscientific, as it completely ignores the average return earned by shareholders over a period of years.

"I am glad to say that our relations with our workers have been very happy and satisfactory throughout the year.

"I wish to take this opportunity of expressing our gratitude to all those who have rendered such devoted and loyal services to achieve the results of the last year and I am sure the shareholders will join me in paying this tribute to our entire staff."

DELHI CLOTH & GENERAL MILLS CO., LTD.

SIR SHRI RAM'S SPEECH AT ANNUAL GENERAL MEETING

GOVERNMENT'S TEXTILE POLICY ANALYSED

SPEAKING to the shareholders of the Delhi Cloth and General Mills Company, Ltd., at their Annual General Meeting held on 18th December 1956, Sir Shri Ram, Chairman of the Company, stated that the profits continued to be satisfactory. The Company also continued their policy of steady expansion and modernisation, the investment on these during the year being of the order of two and a half crores of rupees. During the year, the new textile mill at Hissar went into fuller production. The silk unit at Delhi went into production too and capacity was expanded in the *vanaspati*, caustic soda and sugar plants. Proceeding, Sir Shri Ram said:

"As constituents of a nation determined to raise its living standards, each one of us has a duty to perform *vis-a-vis* the Plan. And it is in this spirit of constructive co-operation that I will draw your attention to a few aspects. And I would, in all humility, suggest to brother industrialists that they might give up raising the question of the private sector *versus* the public sector, in season and out of season, as instead of doing any good, probably it does harm. Enough room has been left for the private sector, I believe, even in the second Plan.

"For reasons well known, the gap in foreign exchange resources anticipated in the course of the second Plan period has further widened. Under the circumstances, even greater responsibility devolves upon the cotton textile industry, one of the more important foreign exchange earners.

Meeting of all Concerned

"I believe that the export of cotton textiles can be raised to 1,000 million yards, and perhaps even higher. For solving the various problems involved in achieving an expansion of our export trade in textiles, I would suggest a meeting of all the interests concerned—the Ministries of Commerce, Industry, Finance, Railways and Labour and the representatives of industrialists and leaders of labour.

"While the production of mill-made cloth has gone up year after year, as may be seen from the figures I give below, it is regrettable that the exports have been declining, and have consistently fallen short of the first Plan target of 1,000 million yards. This state of affairs must cause concern to the industry as much as to the Government.

(In million yards)

	Production of Mill-made cloth	*Exports of Mill-made cloth*
1953-54	4,964	740
1954-55	5,034	761
1955-56	5,101	680

"In other words, on the basis of current indications, in 1956-57 India will export only about 127 out of every 1,000 yards of mill cloth produced, as compared to 151 yards in 1954-55.

Exports by D.C.M.

"While on the subject, I am glad to say that the D.C.M. have not only maintained the volume of their exports but even increased it substantially, very often at profit considerably lower than could have been earned by the sale of the same cloth in India.

	Value of D.C.M. Exports (Lakh Rs.)	*Index* (1953=100)
1953	76	100
1954	156	205
1955	184	242
1956 (approx.) ...	220	289

"Why are exports declining when it is crucial to ensure that exports expand to substantially higher levels? The answers are simple enough. On the one hand, demand in the home market has shot up tremendously, making it more profitable for mills to sell in the home market. On the other hand, the Government policy of not allowing the expansion of the mill industry on the weaving side has prevented the supply of mill cloth from expanding in proportion to the growth of internal demand and has tended to exert a general, upward pressure on prices. The statistics given below bring out the nature of the impact of the higher home demand.

(In million yards)

	1954-55	1956-57*	*Change*
Production of mill cloth ...	5,034	5,350	+316
Exports of mill cloth ...	761	670	— 89
Stocks (with mills) of mill cloth	460 (approx.)	Less than 200	—260

*Estimated on the basis of current trends.

"In other words, in spite of the limitation on weaving capacity inside mills, the country absorbed in these years nearly *twice* as much extra mill-made cloth as it produced, and secured this excess over the rise in production from two sources—stocks and exports. In 1956-57 alone, as compared to 1955-56, the rise in the demand for mill cloth will be of the order of 475 million yards, almost double the growth —250 million yards—in 1955-56 over the preceding year. May I point out that since stocks have been already reduced drastically, future increases in home demand may affect the level of exports even more decisively?

"Attention must be directed to the resolution of this paradox of the imperative need for more cloth exports, on the one hand, and the continuing diversion of exports, on the other, to the home market pressed for ever-larger supplies.

'Per Capita' Consumption

"The gravity of the situation has now been recognised by the Government, who have already announced an upward revision of the cloth target to 18.5 yards *per capita* and also promised a further review of this figure. The Government, as you know, have also decided to license the installation of 14,600 automatic looms whose output will be channelised more or less fully into export. I welcome these measures. However, with all humility, I would like to point out that the marginal raising of the *per capita* target by half a yard over its original level of 18 yards is not enough. The target must be raised to at least 20 yards in 1960-61, for reasons now adduced often enough, and all arrangements for attaining the target, inclusive of sanctioning of new weaving capacity for the home market, about 30,000 looms, both plain and automatic, must be taken in hand well in time. The country cannot afford to risk shortage of cloth, next in importance only to foodgrains in the average consumer's budget. And equally, we cannot risk the loss of our export markets.

"The fear that the increase in mill capacity will adversely affect the handloom industry is, in my opinion, unwarranted. Anyway, to the extent to which it is necessary in the opinion of the Government to augment handloom production, it can be done by fixing annual targets of total cloth requirements, and allowing to the handloom industry a progressively rising proportion of the target in each succeeding year, provided the handloom industry can undertake the necessary productive effort. I will even suggest that if production inside mills is found at any stage to be restrictive of output on handlooms, resort can be had to sealing of a small percentage of mill looms. But in working out our policies in the matter of cloth production, we cannot avoid the compelling consequence of reduced exports so long as output of mill cloth does not expand more or less in proportion to the growth in home demand, the magnitude of which I indicated earlier.

Automatic Looms

"I am sure that the policy of the Government to allow installation of automatic looms, earmarked for export, will afford some relief, but it is obvious that this relief will take a long time to materialise. In fact, I apprehend that about 18 months will lapse between now and the time when the output of these new looms becomes fully available for export. The granting of these licences, I think, is hedged in with too many restrictions, and in view of the much higher capital cost of automatic looms and other required equipment, the level of returns on the investment appears to be unsatisfactory. More so, when viewed in conjunction with the fact that the export price realisation will be definitely on the lower side. It is possible that this will affect adversely the total implementation of this policy in the time desired. I may also point out that time lags are already in evidence in the obtaining of machinery from abroad, a factor of particular importance in the case of automatic looms.

"Moreover, under this policy the obligation to maintain the previous level of export rests only on those mills which are sanctioned looms under this new scheme. There is no such obligation on other mills. In the result, it is possible that to a large extent, the effect on the volume of exports will be only substitutive and not additive, as is to be desired in the interest of the country.

"While this policy to increase the production of mill cloth is being worked out, it is necessary to maintain and add to the exports. In my opinion, the interest of the country will be served better if the task of exporting cloth is distributed more equitably among all composite mills by insisting on the export of a certain minimum percentage of output of cloth. In the first instance, the percentage might be fixed lower, but as soon as possible it should be revised upward, as is required in the overall interest of the exchange position of the country, of course keeping in mind the broad considerations affecting the international trade in textiles. The provision of transferability of quota from mill to mill will generally meet the particular difficulties of any individual producer, without affecting the desired volume of exports in a period of rising and more profitable home demand. The time has come when our export performance must not merely be the sum total of the efforts of a few units but the reflection of an industry-wide effort in the national cause of earning the needed foreign exchange.

Increase in Cloth Prices

"A general impression appears to have arisen that the increase in the prices of cotton cloth during the last one year or so is due to the expansion of the margins of mill profit. I would like to point out that at the same time that profit margins have widened the industry has been faced with the general problem of costs rising in almost every major aspect of its operation. Thus, in the course of the last season cotton prices rose by 20 to 40 per cent. for different varieties. Labour costs have risen, dearness allowance rates having gone up by 10 to 25 per cent. in different centres in October 1956, as compared to May 1955. And the quantum of the increase may be judged from the fact that the dearness allowance payable to a worker in our textile units in Delhi rose from Rs. 48-14 in May 1955 to Rs. 62-12 in December 1956. Likewise, coal rates have increased by nearly 25 per cent.; and railway freight charges were revised upward in the last budget by 6¼ per cent.

"The upward price trend in the cloth market during 1955-56 is thus a reflection, for the most part, of cost increases, and not of unduly extended profit margins for the producer.

Minister's Assurance

"I welcome the assurance given by the Finance Minister that in the administration of the recently enacted provisions regarding the compulsory deposit of varying proportions of current and accumulated reserves with the Government no hardship will be caused in the current operations of companies. Speaking as the Chairman of the Board of Directors of a company where almost every Board meeting deals with some sanctions for capital expenditure, I know that fixed capital expenditure in any established concern will be a more or less current flow in time. In administering the new regulations about deposits, care will have to be taken to see that delays do not obstruct the even flow of investment. I am confident that in the actual operation of the scheme by the Finance Ministry, this aspect will receive due attention.

"Before I conclude, ladies and gentlemen, let me express my appreciation of the efforts of all my colleagues, big or small. I convey my thanks to them."

Note:—This does not purport to be a record of the proceedings of the annual general meeting.

Escape? Impossible!

Liquids, steam and gases cannot escape from stuffing boxes, glands and cocks if they are sealed with Turner's "Firefly" asbestos packing. Use it and your worries about leakages are over.

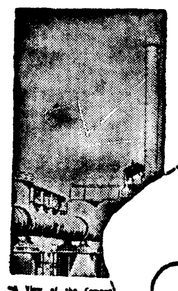
By arrangement with Turner Brothers Asbestos Co. Ltd., England, we make "Firefly" Packings. We spin asbestos fibre into yarns, and then plait these yarns into packings which provide the perfect seal, unaffected by the temperatures and pressures normally encountered in industry.

Turner's "Firefly" Packings are just one of the many technical asbestos products that we at AM & FM make to meet the needs of India's industry. The increasing use of Asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

We supply:
'FERODO' BRAKE AND CLUTCH LININGS
'FIREFLY' ASBESTOS PRODUCTS
SPRAYED 'LIMPET' ASBESTOS
'NEWALLS' INSULATION MATERIALS
'PATTINSON'S' BRAND MAGNESIA CHEMICALS
'SINDANYO' ELECTRICAL INSULATING BOARDS

AM & FM
ASBESTOS, MAGNESIA & FRICTION MATERIALS LTD.
(TURNER & NEWALL LTD.)
INCORPORATED WITH LIMITED LIABILITY IN ENGLAND
Calcutta — BOMBAY — Madras



Dalmia Products of Proved worth...

REFRACTORIES
For all industrial purposes Firebricks, mortars, insulating bricks in all heat ranges and shapes.

STONEWARE PIPES
for drainage purposes—perfectly salt glazed, acid-resistant and tested to standard specifications.

R. C. C. SPUN PIPES
for irrigation, culverts, water supply and drainage—of all classes and sizes.

PORCELAIN SANITARY WARES
Indian and European closets, wash-basins, urinals etc. Also insulators, Acid-resistant tiles &c.

POSTLAND CEMENT for general construction.

NEW PUBLICATIONS

Co-operative Banking in India. By G. M. Laud. Published by Co-operators Book Depot, 9, Bakehouse Lane, Bomay 1. Price : Rs. 27-8. Pages: 718.

AT a time when the Government has accepted Co-operative Movement as the chief instrument for bringing about the betterment in the living standards of the people, and when the Movement itself is on the threshold of rapid expansion, especially in the field of credit and banking, any treatise on co-operative banking which dispassionately assesses the record of the Movement and appraises the further role the Movement has to fulfil in the context of the changed conditions and needs, will certainly be welcomed. The publication under review is of this kind. It is not only exhaustive and comprehensive in the treatment of the subject but also bears the impress of a well-informed and sympathetic critic.

This 718-page publication discusses the subject in nine chapters. The topics include the Genesis of the Co-operative Banking Movement, Structure of Co-operative Banking, Farm Credit, Village Banks, Financing Agencies, Peoples' Banks, Industrial Banks and Mortgage Banks. Starting with the definition of co-operative banking, the author provides an illuminating discussion of the difference between co-operative banking and joint-stock banking, of the important features of co-operative credit, and its structure. Dealing in this connection with the history of State aid to Co-operation, the author expresses the view that State aid is no more disliked by co-operatives; the discussion is confined only to the extent to which such aid should be accepted.

In the chapter devoted to "Indian Structure" is provided a stimulating and detailed review of the growth of co-operative banking in India in the face of numerous obstacles and the role that is being played by the Reserve Bank of India and the reorganisation proposals made in the All-India Rural Credit Survey. A significant feature of this growth was that, throughout its long history, the spontaneous effort of co-operators was backed by the Government policy to encourage the Movement. "Independent India," the author observes quite rightly, "has inherited a banking system which was considered suitable as an instrument for ensuring a dynamic development of co-operative effort, so that the entire business life of the country could be organised on co-operative lines through democratic planning." After a further interesting analysis of the limitations under which the Movement had to function during the 50 years of its existence, the author comes to the conclusion that, though viewed in relation to the total requirements of the nation in the field in which it worked the record can be termed "failure," nevertheless, it should be underlined that, in spite of the limitations, the contribution made by co-operative credit to national prosperity and economic activity is not such as to entitle it to be condemned wholesale.

In the chapter on "Farm Credit," the author dwells at length on the essentials of a good agricultural credit system and on the requisites and role of supervised credit. The example set by Latin American countries in the field of supervised credit is also discussed, followed by an examination of the various sources of capital available to the agricultural industry. And, after further consideration of the nature and role of various farm credit agencies in the U.S., the author draws two conclusions. First, for agriculturists, particularly, and rural areas in general, credit through co-operatives is more suitable than that through any other agency. Secondly, such credit develops into a dynamic force for development when it is supervised. He points out that, during the last hundred years, agricultural credit has received a far more favourable treatment from the Governments of different countries than any other branch of co-operative credit. "This fact underlines," the author says, "the recognition of the fact that usual sources of credit are ill-adapted to the requirements of agricultural co-operation and these have to be supplemented by the State which must simultaneously take measures for strengthening the co-operative credit organisation and creating conditions for their successful operation." He next examines the evolution of co-operative credit system in India, the problems faced by it and the solution suggested by the Committee of Direction.

A pertinent suggestion put forward by the author in the chapter on "Mortgage Banks" is that the fact that a separate organisation is called for for the provision of land mortgage credit should not preclude the establishment of close co-ordination between the agencies providing the two types of credit, namely, short-term and long-term. The fears expressed by him about the impact of the agrarian legislation on the structure of credit, particularly long-term credit, are legitimate. Among other important chapters, the one devoted to Industrial Banks is of special interest. The various methods of organisation of credit for small and medium industries in certain important countries such as Germany, Japan, the U.K. and the U.S.A. are considered.

The three distinct features presented by the growth of co-operative credit in different parts of the world, according to the author, are: (1) its pace of expansion was conditioned by factors such as quality of leadership and socio-economic conditions; (2) co-operative credit cannot expand after a certain stage without similar progress in the co-operative effort in the fields of marketing and processing; and (3) though, like other instruments of development, co-operation is entitled to support from the State, "its health will not be robust if it fails to build up its strength from within by carving out appropriate policies."

Looking ahead, the author sums up the crucial role co-operative banking has to play in future as follows:

"The task of co-operative credit in the foreseeable future is, therefore, to provide adequate credit facilities to (1) half the cultivating families whose average annual income is more than Rs. 400 and in whose case the cost element varies from 60 per cent. to 70 per cent., (2) less than half the artisans engaged in cottage, village and small-scale industries, and (3) traders, skilled persons, the middle class and wage earners in urban areas. It demands a favourable climate, adequate resources in men and money, a network of strong and efficient institutions, supported by equally strong and efficient federal organisations and assisted at the top by Government and assured at the bottom of the loyalty of their members, and sound methods which, while assuring the proper use of adequate credit, will keep the depositors' and lenders' funds fully safe. The gap between the present performance and the requirements is wide, inasmuch as the ratio of contribution of co-operative credit to the national needs is hardly 3 per cent., but it also underlines the magnitude of the problem which requires to be tackled if co-operative credit has to achieve the objectives which it has accepted recently."

The author, however, poses three fundamental issues in this connection and the ideas expressed by him are worthy of special attention. The issues are:

(1) Whether the co-operative development in rural areas can be promoted without placing a simultaneous emphasis on its counterpart in the urban sector, (2) what should be the price which co-operation has to pay in return for the powerful support of the State, so that "rural-minded credit" is promoted, and (3) what is the ultimate objective to which State-sponsored rural co-operation has to be wedded.

He stresses the fact that co-operative banking in India is at its cross roads and the test before it is to overcome, with the State as its partner in the rural sector, the handicaps under which it has been operating so far. He is also convinced that co-operation will prove sufficiently adaptable and dynamic and can be relied upon to play its new role in the changed conditions.

The author, who is a journalist of repute, has brought to bear on the subject an objective and dispassionate mind. The publication really fills a void in the literature on co-operative banking and, as such, should prove useful to all those interested in Indian economy, in general, and Co-operation, in particular. It will also serve as a valuable text book to students specialising in Co-operation.

Change in Asia—The Colombo Plan 1956. Published by the Colombo Plan Information Unit, Colombo.

This attractively got-up pictorial brochure about the Colombo Plan follows the pattern of an earlier publication entitled "Change in Asia 1955." It records, in concrete terms, the new awakening that has taken place in South and South-East Asia and highlights the progress of development plans undertaken by the countries of the region with the help and guidance of other developed countries which have taken an enlightened interest in the prosperity of this part of the world.

After a brief reference to the rich cultural heritage of the region and the long period of economic stagnation through which it passed, the brochure points out that the Colombo Plan is an attempt, in a modest way, to help the national Governments of the region to give shape and content to the new hopes and aspirations of their people for a richer and more varied life. The Plan, which has been in operation for more than five years now, has a membership of 21 countries spread over the four continents of Asia, Europe, America and Australia, including both Commonwealth and non-Commonwealth countries. It is an excellent example of global partnership in co-operative economic development.

Although the economies of the countries of the region passed through many vicissitudes, substantial economic progress has been made during the past few years. The brochure gives a brief account of the progress made in individual countries of the region. The endeavours of the countries in tackling various problems like food self-sufficiency and industrialisation, power and transport development, public health and education are highlighted.

The publication draws attention to the fact that this endeavour of a community of nations to raise themselves from century-old poverty and stagnation is being assisted by friendly foreign nations. This indeed constitutes the international character of the Colombo Plan and the section, entitled "The New Partnership" recounts the assistance given by different countries. The brochure points out how countries like Ceylon, India and Pakistan which are principally receivers of aid have also come forward with assistance to their neighbours along with industrialised nations like Canada, Japan, the U.K. and the U.S., which are primarily donors.

Banking Almanac 1956-57. Published by Insurance and Banking Publications, Post Box 676, New Delhi. Price : Rs. 11-4 (post free).

The latest edition (2nd edition) of the above publication is a welcome improvement over the first one in that the various sections have been revised as well as enlarged. A large number of institutions has been added to the list of banks. The section "Foreign Banks in India" has been re-named "International Banks" and the list of such banks is larger than in the first edition. In the section "Bank Branches," the addresses (wherever available) of branches of banks have been provided. The "General Information" section contains two new features, namely, the monthly average prices (in Bombay) of Government of India securities from March 1955 to March 1956, and the new decimal currency conversion tables. The use of the ready reckoners for conversion of decimal coinage has been also explained. The Negotiable Instruments Act and the Bankers Book Evidence Act have been added to the section "Bank Legislation."

Indian Farming—November 1956. Special Rice Number. Issued by the Indian Council of Agricultural Research, New Delhi. Price : As. 12.

Although rice has been the staple food of a large majority of people in this vast sub-continent and rice-farming their chief occupation since time immemorial, the average per-acre yield of paddy in India, as is well known, is one of the lowest in the world. It is, however, gratifying to note that the Government of India's efforts in augmenting rice production through the Grow-More-Food campaign and other measures have resulted in an increase in the per-acre yield of rice in several regions. Nevertheless, there is great need to disseminate scientific information about cultivation of rice among farmers. From this point of view, the special rice number of *Indian Farming* deserves to be welcomed. It carries several interesting articles by those who have conducted research in the cultivation of rice. The subjects treated in this number include use of fertilisers in cultivation of rice, control of pests and diseases and storage of rice.

New Topics
included in
The Times of India
DIRECTORY & YEAR BOOK
(incl. WHO'S WHO)
1956-57

THIS peerless reference book presents authoritative, comprehensive information about India, and Political, Administrative, Financial, Commercial, Agricultural, and Social Organisational activity in the country. Biographical notes and photographs of Indians of distinction are given in the WHO'S WHO section.

The new topics dealt with in the 1956-57 Directory include :

1 The S. R. C. Report and a summary of the draft States Reorganisation Bill
2 Brief statistical notes on the new States where available
3 Maps of new State formations, and an all-India map showing the reorganised States
4 A detailed summary of the Second Five-Year Plan.

INDIA STEAMSHIP COMPANY, LIMITED

SIR A. RAMASWAMI MUDALIAR REVIEWS COMPANY'S ALL-ROUND PROGRESS

FLEET TO BE EXPANDED BY 50 PER CENT BEFORE 1960

THE Twenty-eighth Ordinary General Meeting of the Shareholders of the India Steamship Company, Ltd., was held on Wednesday, 12th December 1956, at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, presided.

The proxies received for the meeting were placed on the table and the notice of the meeting was read by the Assistant Secretary. The Chairman delivered his speech and thereafter asked the shareholders whether they had any questions to put with reference to the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March 1956.

In answer to a question regarding the sale of the Company's vessel, the *Indian Importer*, the Chairman said that, as the vessel was built in 1929 and was due for special survey shortly, the Directors decided to sell this vessel. No loss was incurred by the sale.

Another shareholder wanted to have a statement of the tonnage carried by the vessels of the Company. This information was supplied and further reports will show both the tonnage and freight earnings.

Certain items in the balance-sheet were referred to by one of the shareholders, who wanted information about these items which were furnished. The increase in the salaries and wages was referred to and this was explained as due to the increase in the number of the vessels of the Company, as also to the revision of the salaries and wages of the staff and more amenities which had to be provided after negotiation with the unions concerned.

The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st March 1956 were adopted. The dividend of 5 per cent. tax-free on preference shares and an interim dividend of As. 8 per share and a final dividend of a further As. 8 per share on the ordinary shares were approved.

The meeting adopted the resolution that Sir A. Ramaswami Mudaliar do continue as a Director of the Company and that the age limit under section 280 of the Companies Act shall not apply to him.

Directors

It was also resolved that both Sir A. Ramaswami Mudaliar and Sir Bijoy Prosad Singh Roy, who are Directors and members of the Managing Agency Company, do continue as Directors of the India Steamship Company, Ltd.

It was further resolved that the Maharajadhiraja Sir Udaychand Mehtab Bahadur of Burdwan, Mr. S. C. Roy and Mr. R. K. Mitra, I.C.S., be elected Directors of the Company.

Messrs. G. Basu & Co. and Messrs. Singhi & Co., Chartered Accountants, were appointed Auditors for the current year and their remuneration fixed.

The vote of thanks to the chair and to the Managing Agents for their excellent management of the Company were adopted unanimously.

Chairman's Speech

The following is the text of the Chairman's speech:—

"GENTLEMEN,

"The audited accounts and Directors' report for the period ended 31st March 1956, have been in your possession for some time. With your permission I shall take them as read.

"The Directors' report shows that the freight earned during the year is Rs. 5,26,11,831 as against Rs. 4,01,00,132 earned in the previous year. The increase in freight is partly accounted for by the new ships which were added to the fleet by your Company and partly by the slightly less time taken in the turnround of the ships. The delay in ports, however, has not materially decreased, a fact to which I shall make reference later. It must, therefore, be a matter of satisfaction to you that, in spite of these handicaps, the Company made a profit of Rs. 80,22,918 before providing for depreciation and a net profit of Rs. 38,72,859 after providing the full amount of depreciation of Rs. 41,50,059.

Delay in Ports

"I referred in my speech last year to the report of the Vasist Committee which dealt with conditions of dock labour in the various ports in India and made certain recommendations to improve the position of dock labour and promote the better turnround of ships in these ports. These recommendations were accepted by the Government of India and most of them have since been implemented. In the port of Bombay, the piece-rate system has been introduced and is stated to be working fairly satisfactorily. This system has yet to be introduced in the ports of Calcutta and Madras. To the difficulty of getting a satisfactory outturn of work from dock labour in these ports has been added the further difficulty of finding berths for ships both for import and for export. The capacity of these ports to handle freight and to berth ships is limited. The plans of the Government to increase industrialisation, both in the public and in the private sector, and to force the pace of progress in other directions has necessarily resulted in a greater volume of traffic which has to be handled at these ports and in a large number of ships entering these ports for which the ports are not adequately equipped. It is a matter of some satisfaction that the Government has become aware of this aspect of the question and that the Transport Department, through its Secretary and other officers and through the Chairmen of the various Port Trusts, is taking active steps to improve the capacity of these ports. Mechanical equipment, adequate railway sidings, mobile and electric crane facilities for mechanical handling of certain types of cargo and more berths in all the ports are urgently required and I trust that these will be provided for at a very early date.

Dock Labour

"Labour at the ports, both dock labour and port labour, have no doubt to be kept in a contented state and shipping companies have expressed their willingness more than once to make any reasonable contribution for the satisfaction of the legitimate demands of labour. It must, however, be regretfully pointed out that certain sections of labour are prone to put forward what should be considered as unreasonable demands and frequently their alarms and excursions to which the shipping companies are subjected have a detrimental effect on the international trade and commerce of the country. I do trust that labour leaders and those administrators in charge of labour, both in the States and at the Centre, will devote equal attention to securing the legitimate rights of labour and enforcing their patent obligations.

"At the last meeting I referred to the fact that the two ships which had been ordered in 1954 were on commission and were added to your fleet and that two more ships of the same class were under construction. These ships have now been delivered, one in March 1956 and the other in June. The *Indian Importer*, a second-hand ship of 1929, has been sold and the loan which was taken from the Government for the purchase of the coastal vessel, the *Indian Commerce*, has been fully paid-up. There are, therefore, twelve ships including the *Indian Commerce* in the Company's fleet. Your Directors aim at having a fleet of eighteen ships before 1960, all operating on the India-U.K.-Continent route, and orders have been placed for the construction of six more ships which will be delivered at the rate of two per year during the next three years.

"The Company has also placed an order with the Hindustan Shipyard Ltd. for a vessel of 5,500 tons which may be utilised either in the coastal trade or in the trade overseas.

"The assistance which the Government of India has readily given by way of loan has enabled the Directors to plan this programme and, in a period where the shipbuilding yards in foreign countries are fully booked, to take advantage of the offer of the German shipbuilding yard of Howaldtswerke, to order these ships.

Soviet Trade

"Since March 1956, your Company has also undertaken at the instance of the Government, to put two of your ships regularly on the India-Black Sea route to enable exports to and imports from the Soviet Union and, in particular, to afford shipping facilities for the large quantity of plant, machinery and material required for the Bhilai steel plant. This undertaking has naturally reduced the number of ships available for the India-U.K.-Continent trade.

"I should like to repeat that the Directors have kept the financial commitments of your Company, in regard to the loans taken from the Government, closely under review and are confident that there will be no difficulty in meeting these commitments, provided, of course, there are no serious upsetting developments beyond our control.

"The loans granted by the Government for the construction of ships overseas require exchange facilities for payment of instalments to the shipbuilding yards as they become due. I should like, however, to point out that ships of Indian companies engaged in overseas trade earn and save enough foreign exchange to meet the requirements for transmission of the instalments due to the shipbuilding yards abroad. It is needless to add that this is a continuous source of foreign exchange earning and that, therefore, the sooner the tonnage of the Indian companies expand the greater will be the foreign exchange earned by them. These invisible earnings are a considerable factor for every maritime country in dealing with the exchange problem.

Public and Private Sectors

"The industrial policy statement of the Government of India declares that sea transport belongs to the second category of industries which will be developed both by private enterprise and by the State, so as to accelerate progress. The need for Indian shipping to operate on various routes on which at present there are no Indian ships operating is unquestionable. The two Shipping Corporations that have been recently promoted in the public sector have, therefore, a free field in which they can operate without in any way jeopardising the interests of the shipping companies in the private sector. I am glad, therefore, to bring to your attention that the Hon'ble Minister for Transport has stated at the last annual meeting of the Indian National Steamship Owners' Association, as follows:

> "'I may state it very clearly that it is not our intention that shipping in the public sector should run in competition on routes in which existing private shipping companies have established themselves.'

"I trust this categorical statement of the Hon'ble Minister will continue to be a basic policy in the expansion of shipping in the public sector.

"I feel bound to refer to the serious problem which has emerged during the last few weeks, owing to the fact that the route through the Suez Canal is not now available and will not be available for some considerable period. It will be inappropriate for me on this occasion to deal with the political and other aspects of the crisis which resulted in the closure of the Suez Canal. The Company has had, however, to face a series of problems of readjustment of the sailing schedules of your fleet, problems of insurance and of obtaining bunkers and water at new ports of call, consequent on the diversion of your ships to the longer route via Africa. These problems, I am glad to state, are being satisfactorily dealt with by your Company.

"The policy of your Directors in providing a speed of 17 to 20 knots in the new ships has not only contributed considerably to increased freight earnings but also enabled the Company to keep its sailing schedules fairly in line with the requirements, a factor which is of so vital importance at a time like the present when the Company's vessels have to take a longer route on account of international developments.

"The events which have led to the Suez Canal problem, the conferences that have been convened from time to time, to consider the issue, and the position that certain maritime countries have taken with reference to the Suez Canal, all emphasise the need for building up the country's fleet as rapidly as possible. Our status and our dignity as a maritime country seem to require possession of a sufficiently large mercantile fleet, despite our position in the international trade of the world, if we desire to have a tangible share in the settlement of these grave problems.

"I feel certain that the expanding policy which your Directors have adopted will be appreciated whereby there will be at least eighteen ships on the India-U.K.-Continent trade apart from the two ships earmarked for the Black Sea trade by the end of 1960.

Government Loans

"I have referred to the loans that have been sanctioned by the Government enabling us to launch on the expansion of your fleet. We are grateful to the Government for the assistance given so far and we trust that this assistance will continue in the same measure for a further and quicker expansion of the fleet of Indian companies. It is further hoped that some of the terms and conditions of these loans may be liberalised to a reasonable extent. I must take this opportunity of stating that the achievements of the Indian mercantile marine have been by no means inconsiderable. National shipping has established itself in the overseas trade, against heavy odds, by maintaining a high standard of efficiency and service and has in no small measure assisted the development of India's national overseas trade.

"In the matter of training Indian personnel as well, for key positions in the mercantile marine, the Indian companies have done their best and in the coming years the dearth of technical personnel, I am sure, would not be so seriously felt in this industry. In these circumstances, I have no doubt that the development of national shipping in the private sector will continue to be encouraged by the Government and any suggestions which would adversely affect such development will not be looked upon with favour by the authorities.

Earnings and Dividend

"The earnings of the Company have been noted in the Directors' report. I have had during the last two years the not very pleasant duty of informing the shareholders that the Directors were unable to declare dividends on ordinary shares. It is, therefore, some relief and consolation to me that this year we are able to announce the payment of an interim dividend of As. 8 per share and are now proposing to pay a further final dividend of As. 8 per share on ordinary shares.

"I should like to take this opportunity of thanking the shippers both here and abroad for the very generous support that they have given to your Company. Thanks to the fast ships which form our fleet and to the courteous and prompt service which is forthcoming at all ports, the India Steamship Company holds a very high position in the esteem of shippers in different parts of the world. Our shippers have recognised this by their patronage.

"I cannot conclude this speech without reference to the resignation of Sri Lal Bahadur Shastri, Minister-in-charge of Railways and Transport. I do not wish to make any comments on the constitutional propriety which necessitated such resignation or on the parliamentary traditions which it is stated to have helped in building up. I can only refer to the deep regret which is felt almost universally in India at this resignation. The contribution which Sri Shastri has made to the cause of Indian shipping, his earnest and enthusiastic support in expanding the Indian fleet and his deep understanding of the problems of Indian shipping companies have been widely recognised. The personal characteristics of Sri Shastri, his modesty, unassuming manners and his desire to avoid publicity have been appreciated widely. I have no doubt that he will shortly be called upon to fill again high and important posts in the Cabinet of the Government of India. I should like to extend to him on your behalf our good wishes.

New Director

"It gives me great pleasure to inform you that the Board has been strengthened by the addition of another Director, Mr. R. K. Mitra, I.C.S., Chairman of the Commissioners for the Port of Calcutta. His knowledge of port working and its conditions has been of great help to the Board.

Tribute to Staff

"The Company has been well served by all its officers afloat and ashore of all ranks and by its Agents and brokers. On your behalf and on behalf of the Directors I wish to convey our thanks to all of them for their good and enthusiastic work throughout the year.

"It only remains for me now to thank you, gentlemen, for your attendance at this meeting and to join you in the hope that the Company will prosper in the years to come, thanks to the good and enthusiastic work of our staff.

"I shall be glad to answer any questions which shareholders may wish to ask regarding the accounts."

PROFIT OF DELHI CLOTH MILLS LOWER

DIVIDEND, HOWEVER, RAISED

AFTER two years of successive rise, the earnings of the Delhi Cloth and General Mills Company, Ltd. (Managing Agents: Messrs. Bharat Ram Charat Ram & Co., Private Ltd., New Delhi), suffered a shrinkage in the year ended 30th June 1955. This downward trend persisted in the following year also, that is, the year ended 30th June 1956. Thus, the gross profit which had reached a record level of Rs. 324.39 lakhs in 1953-54, slipped down to Rs. 263.96 lakhs in 1954-55 and still further to Rs. 253.28 lakhs in 1955-56. Nevertheless, it is substantially higher than the profit for 1952-53 amounting to Rs. 243.78 lakhs and constitutes the third highest profit earned in the history of the Company. The net profit, however, has risen by Rs. 18.16 lakhs, that is, from Rs. 76.41 lakhs to Rs. 94.57 lakhs, on account of a smaller provision for taxation. But the allocation to the reserves has been increased from Rs. 45 lakhs to Rs. 57.20 lakhs under various heads, namely, debenture redemption fund Rs. 10 lakhs, deferred taxation reserve Rs. 20 lakhs, development reserve Rs. 21 lakhs, provision for bad and doubtful debts Rs. 2.75 lakhs, general reserve Rs. 2 lakhs and provision for contingencies Rs. 1.45 lakhs.

The distribution to ordinary shareholders has been stepped up slightly to 10 per cent. from 9 per cent. paid for the previous two years. The following comparative table brings out the salient features of the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale proceeds	2,361.13	1,886.51	1,942.41	1,868.65

	(10%)	(9%)	(9%)	(7%)†
Carry forward	1.29	0.83	1.69	1.32

* Includes provision for contingencies.
† On the increased capital of Rs. 339.35 lakhs.

The gross sale proceeds for the year under review amount to Rs. 23.61 crores, having risen from Rs. 18.86 crores for the previous year. Of these, cloth, yarn, tents, garments, etc. account for a rise from Rs. 13.46 crores to Rs. 15.54 crores, sugar and sugar products from Rs. 1.97 crores to Rs. 2.73 crores and chemicals and *vanaspati* products from Rs. 3.44 crores to Rs. 5.04 crores. While sale proceeds have thus gone up, manufacturing, trading, establishment and other expenses have also risen sharply, thereby contributing to the decline in profits.

The recession in profit for the year under review is due, according to the Directors, to the very heavy increase in various items of expenditure and particularly in the excise duty recently levied which is having an adverse effect. Besides, as anticipated in the previous year, the profits of the cotton mill in Lyallpur, West Pakistan, have considerably gone down and the Directors report that they are still on the downward trend. The working results of the textile mills in India continued to be satisfactory. The Hissar textile mill started working during the year. The installation of the silk factory has been completed and its work started during the year. Another gratifying feature is that the Company's exports of cotton textiles are steadily increasing.

In the sugar section, the working of the Daurala Sugar Works has not been very satisfactory due to the go-slow tactics adopted by the workers. The expansion of the Mawana sugar factory could not be completed till long after the factory had started. Hence the full benefit of increased production will show results only in the coming season. The working of the chemical works, however, has been satisfactory. Expansion in the capacity of the caustic soda plant from 11 to 20 tons a day was completed recently. Although the *vanaspati* factory's capacity has been increased to 75 tons per day, the results are considered very uncertain, due to severe competition and wide fluctuations in the prices of oil. The working of the garment factory was found to be unremunerative and it was, therefore, decided to close down this business.

The Company's paid-up capital at Rs. 408.64 lakhs is made up of 1,353,449 ordinary shares of Rs. 25 each, 40,225 ordinary shares of Rs. 2-8 each and the balance in four categories of cumulative preference shares of Rs. 25 each of which only Rs. 10 per share has been called up on the fourth cumulative preference shares. Calls paid in advance amount to Rs. 2.01 lakhs. The reserves and surplus aggregate Rs. 308.11 lakhs. Unsecured loans including provident fund, pension, marriage and other trust funds amount to Rs. 181.38 lakhs. There is a debenture liability of Rs. 100 lakhs on account of 5¼ per cent. mortgage debentures of Rs. 1,000 each. Loans and advances from banks stand at Rs. 368.83 lakhs. The current liabilities including the provision for taxation at Rs. 111.09 lakhs amount to Rs. 281.23 lakhs. The gross block of the value of Rs. 1,116.22 lakhs including an addition of Rs. 241.08 lakhs during the year, has been written down to Rs. 534.55 lakhs. The current assets amount to Rs. 1,115.64 lakhs and more than adequately cover the current liabilities and provision for taxation.

The Rs. 25 paid-up ordinary shares of the Company are being nominally quoted at Rs. 35-12 *ex-div.* On the basis of the dividend for 1955-56, the yield works out to 7 per cent. per annum.

KOTHARI TEXTILES MAINTAIN DIVIDEND

Frequent labour troubles of one kind or another, delay in the arrival of certain essential parts for working the additional spindles and looms, slackness in the yarn market during some portions of the year and a cut in the essential power supply, albeit for a short time, all these have put the clock back in the progress of the Kothari Textiles, Ltd. (Managing Agents: Messrs. Kothari and Sons, Madras), during the year ended 30th June 1956. The upward trend in profit, witnessed in the previous two years, therefore, staged a reversal. The gross profit for the previous year at Rs. 18.12 lakhs, which was the highest since 1943-44, declined by Rs. 5.08 lakhs to Rs. 13.04 lakhs during the year under review.

The net profit, after making a substantially lower provision for depreciation at Rs. 5.99 lakhs as against Rs. 14.50 lakhs, amounts to Rs. 6.25 lakhs, as against Rs. 3.26 lakhs made in the previous year. No provision for taxation has been made for the fifth year in succession. The dividend on ordinary shares has been maintained at 10 per cent., to which level it had been stepped up in the previous year from 5 per cent. paid for the two years preceding that.

The following comparative table clearly brings out the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale proceeds	84.94	88.43	67.19	} N.A.

	(10%)	(10%)	(5%)	(5%)
Carry forward	0.42	0.29	0.20	0.04

For reasons already mentioned, the Company was not able to run all the additional 12,000 spindles and 100 automatic looms; it was only some time about March 1956 that they were able to run a major portion of such spindles and about 40 looms out of the 100. The Directors hope to bring the full plant into commission soon and they anticipate that the next year's results would reflect the working for the full 42,000 spindles and 300 automatic looms for at least six months.

During the year under review, there was a switch-over in the Company's policy towards meeting the large internal demands, in preference to its usual practice of exporting a major portion of its production. The heavy fluctuations in the price of cotton during most part of the year rendered absolute the necessity to buy Indian as well as Egyptian cotton at enhanced prices. Were it not for some of these adverse trends, the Company would have shown far more encouraging results. It is, however, heartening to hear the Chairman, Mr. D. C. Kothari, state in his speech at the annual general meeting that "because our cloth is popular, we have not had much of accumulation of cloth in our mills."

The total installed capacity of the mills is 300 automatic looms and 43,000 spindles and doubling spindles. Out of this, almost all the spindles and 260 looms are working and the balance of 40 looms is expected to go into production shortly. Orders have been placed for the machinery in respect of the additional 24,000 spindles mentioned in the last report. The Company proposes to install these spindles in a separate mill to be put up in Coimbatore district and it is expected the new mill will come into production by the end of 1957.

The latest balance-sheet of the Company shows its paid-up capital at Rs. 46.85 lakhs divided into 120,000 tax-free cumulative preference shares of Rs. 10 each, 48,422 tax-free cumulative preference 'B' shares of Rs. 10 each and 408,507 ordinary shares of Rs. 10 each, of which some preference as well as ordinary shares have not been fully called up. As against this, the reserves and surplus aggregate Rs. 19.67 lakhs. Calls in advance amount to Rs. 3,515. There is no provision for taxation, while the current liabilities total Rs. 48.29 lakhs. The gross block of the value of Rs. 93.32 lakhs, including additions during the year to the tune of Rs. 14.44 lakhs, has been written down to Rs. 60.83 lakhs. The current assets amounting to Rs. 54.01 lakhs cover the current liabilities by a comfortable margin.

Under the Government of India's policy of increasing the loomage for additional exports, the Company has also applied for the allotment of a few looms and Government's orders are awaited. The mill is being designed to undertake the manufacture of finer varieties of cloth, such as mulls, voiles, etc., in the event of the additional looms being granted. The mulls and voiles will be bleached and mercerised and dyed and also possibly printed. The Directors do not anticipate much difficulty in marketing these varieties of cloth in their own areas and near about. Further, they feel that in the years to come, productivity would show a steady increase as capacity will increase on account of the additional machinery coming into production.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 16-12 *cum-div.* On an *ex-div.* basis, the yield works out to 6.3 per cent. per annum.

PREMIER AUTOMOBILE RETURNS TO DIVIDEND LIST

Investors in the ordinary shares of the Premier Automobiles Ltd. (Managing Agents: Messrs. Aero-Auto Private Ltd., Bombay) will be pleased at the prospect of receiving a modest dividend of 6 per cent. per annum after years of anxious waiting, from the profits for the year ended 30th June 1956. For a company which suffered a net loss of Rs. 13.84 lakhs as recently as in 1953-54, to earn some profit, declare a dividend and also carry forward some surplus, is something which rekindles a fair degree of optimism for the future. The Company has earned a gross profit of Rs. 78.76 lakhs for the year under review as against Rs. 61.23 lakhs for the previous year. The Managing Agents' remuneration takes up Rs. 7.17 lakhs, while depreciation is provided with Rs. 23.88 lakhs. The amounts set apart for these purposes in the previous year were Rs. 3.92 lakhs and Rs. 30 lakhs, respectively. After the aforesaid provisions, the net profit stands at Rs. 47.71 lakhs which compares quite favourably with Rs. 27.31 lakhs for 1954-55. Another gratifying feature is that the Company has transferred a sizable sum of Rs. 34.50 lakhs to the reserves, of which general reserve receives Rs. 10 lakhs, development reserve Rs. 10 lakhs and deferred taxation reserve Rs. 14.50 lakhs. In the past year, it may be noted here, the Company was able to set aside only Rs. 8 lakhs and that too for deferred taxation. The dividend at 6 per cent. takes up Rs. 13.02 lakhs, leaving a balance of Rs. 6.05 lakhs to be carried forward as against Rs. 5.87 lakhs brought in.

Following an increase in the demand for vehicles, the Company's sale of cars, trucks and spare parts has been going up. Thus, the year's proceeds on this account at Rs. 14.29 crores is a welcome improvement on that of the previous year at Rs. 12.37 crores. Commenting on the Company's working, the Directors in their report state that the manufacture of front chassis frames, leaf springs, fuel tanks, radiators, complete exhaust system, rear cushion seats and various other small items of Fiat 1100 cars is already in progress. A partial shipment of the machinery required for the manufacture of engines and other components has already arrived and, in the next few months, the Company expects to produce the Fiat engine.

Negotiations for an agreement with Rockwell Spring and Axle Company for the manufacture of Timken axles, which were in progress, are now complete and the agreement with them has been finalised. The Company has received the necessary drawings and technical information and the manufacture of axles is expected to begin in a short period. The Directors further state that the Company has now reached production of petrol engines which is sufficient for its estimated production of Chrysler group cars and petrol trucks. The Company is also producing transmission and chassis frames and plans are afoot to increase production to meet their requirements. To meet all these schemes of expansion, additional capital is required and the Company has received the necessary consent of the Government of India for issue of more capital.

Against reserves and surplus aggregating Rs. 43.20 lakhs, the Company's paid-up capital stands at Rs. 220.14 lakhs divided into 217,061 "A" ordinary shares of Rs. 100 each. Secured loans from the Industrial Finance Corporation of India and banks and other unsecured loans together total Rs. 298.95 lakhs. The current liabilities, including provision for taxation at Rs. 7.02 lakhs, amount to Rs. 138.37 lakhs. The gross block at Rs. 306.59 lakhs, of which additions during the year were Rs. 20.36 lakhs, stands at the depreciated value of Rs. 157.54 lakhs. The current assets aggregate Rs. 545.11 lakhs and cover the current liabilities and provision for taxation by a wide margin.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 103-8 *cum-div.* On an *ex-div.* basis, the yield works out to 6.1 per cent. per annum.

Points From The Chair

Competition in Teas

"AVAILABLE statistics show that the rate of world production is actually ahead of the rate of world consumption and that, in 1955, there was, in fact, a somewhat large surplus production. Let us not forget that today other countries are entering the field where India, Ceylon and Indonesia have hitherto been virtually the sole producers of tea. In a short time, we shall find a number of other countries like East Africa, Nyasaland, South America, New Guinea, Australia, Russia and Iran making weighty additions to the world output. We have seen in recent months East African teas being sold in London auction at 1s. 10d. per pound. It is also reported that East African teas make a good blend with Assam teas. This is a dangerous position because it costs about a shilling for India as c.i.f. charges to London, leaving a margin of only 10d. per lb. which is ridiculously lower than even the cost of production. The prosperity of the tea industry in India depends entirely on foreign trade and export markets."

D. C. KOTHARI,
Waterfall Estates Ltd.

Impact of Excise Duty

"Certain adverse circumstances created by recent taxation, particularly the excessive enhancement in Excise Duty, have materially affected the Company in particular and the textile industry in general, and the Directors share the feeling, unequivocally expressed by others at the helm of this industry, that the industry is and will continue to be seriously affected, and this will naturally act as a brake on the further improvement of the working of the Company. The increase in Excise Duty is so staggering and of far reaching effect that we have thought it advisable to share the burden with our constituents by allowing them substantial rebates, as has been done by a number of other mills, with the dual object of accommodating them in their hour of need and also of liquidating stocks which would otherwise accumulate heavily. This is most likely to affect very adversely the Company's earnings during the next year."

D. P. MEHTA,
Sholapur Spg. and Wvg. Co., Ltd.

Automatic Looms

"I am sure that the policy of the Government to allow installation of automatic looms, earmarked for export, will afford some relief, but it is obvious that this relief will take a long time to materialise. In fact, I apprehend that about 18 months will lapse between now and the time when the output of these new looms becomes fully available for export. The granting of these licences, I think, is hedged in with too many restrictions, and, in view of the much higher capital cost of automatic looms and other required equipment, the level of returns on the investment appears to be unsatisfactory. More so, when viewed in conjunction with the fact that the export price realisation will be definitely on the lower side. It is possible that this will affect adversely the total implementation of this policy in the time desired. I may also point out that timelags are already in evidence in the obtaining of machinery from abroad, a factor of particular importance in the case of automatic looms. Moreover, under this policy the obligation to maintain the previous level of export rests only on those mills which are sanctioned looms under this new scheme. There is no such obligation on other mills. In the result, it is possible that, to a large extent, the effect on the volume of exports will be only substitutive and not additive, as is to be desired in the interest of the country."

LALA SHRI RAM,
Delhi Cloth and General Mills Co., Ltd.

Locomotive Manufacture

"The report (of the Tariff Commission) has fully established that the manufacture of locomotives and boilers has at no time suffered from the concurrent undertaking of other lines of production about which doubts had been expressed in the past. In fact, the inquiry has shown that such additional activities have been helpful in absorbing a substantial portion of factory overheads which otherwise would have been an additional burden on locomotive costs. The Tariff Commission have recommended and Government have accepted certain prices for locomotives and boilers not only in respect of the previous two periods on which the Railway Board and the Company failed to reach agreement but also for the subsequent two years ending 31st March, 1958. These prices have been fixed after making allowance for a rise in output and productivity as well as for the cost-reducing advantages of long-run orders for locomotives to be placed on the Company. The prices, which are on a sliding scale, will secure to the Railway Board a progressive reduction in the cost of the locomotives purchased from us while enabling the Company to make a reasonable profit. Prices for deliveries after March 1958 will be fixed after another cost investigation at the appropriate time. Before I leave the subject, I may say that, barring unforeseen circumstances or delays in the delivery of equipment and materials over which we have no control, we are confident of achieving the targets of production and costs set before us by the Tariff Commission."

J. R. D. TATA,
Tata Locomotive and Engineering Co., Ltd.

ANNUAL MEETING OF BELAPUR CO., LTD.

SIR JOSEPH KAY CALLS FOR GROWING BETTER QUALITY SUGARCANE

ADDRESSING the shareholders of the Belapur Company, Ltd., at their Thirty-seventh Annual General Meeting held in Bombay on 28th December 1956, Sir Joseph Kay, K.B.E., Chairman of the Company, said that signs were not wanting that the sugar industry was spreading and developing. He added that increased activity was called for in the growing of sugarcane having better and better sugar content, for "sugar is made in the ground." As usual, the meeting was well attended.

Welcoming the shareholders, Sir Joseph Kay prefaced his address by drawing their attention to the salient features of the Company's working results for the year ended 30th September 1956. He said that the year had been a successful one; the cane crop was good and the factory also worked satisfactorily. The quantity of cane crushed was a record one at 162,386 tons, as against 159,628 tons in 1954-55. The average yield per acre was also a record at 55.78 tons, as compared with 55.58 tons obtained in the previous year. The quantity of sugar produced, at 20,057 tons, was the highest on record, having risen from 19,286 tons in the previous year. The recovery of sugar had gone up from 12.08 per cent. to 12.32 per cent.

Dividend Maintained

All these efforts, Sir Joseph observed, resulted in a net profit of Rs. 33.34 lakhs, as compared with Rs. 34.69 lakhs earned in 1954-55. The Directors had transferred to the general reserve Rs. 8 lakhs, as against Rs. 7 lakhs in the previous year, and to the gratuity reserve Rs. 2 lakhs, same as in the previous year. A sum of Rs. 5 lakhs had been set aside to the reserve for housing, while in the previous year the provision for housing scheme was as much as Rs. 10 lakhs. The dividend had been maintained at 16 per cent. per annum on the increased capital, raised by the issue of bonus shares, in the ratio of one share for every two, the same being entitled for dividend from 1st April 1956. The distribution of dividend absorbed Rs. 18.80 lakhs, leaving the balance to be carried forward. Sir Joseph hoped that the shareholders would consider the results satisfactory. He disclosed that the stocks of sugar in godowns at the end of the year amounted to 30 per cent. of the year's production. The distribution was controlled by the Government during the year. The final release order of the balance of about 2,600 tons of the stocks was received only last week. He also referred to the re-appointment of Messrs. W. H. Brady & Co., Ltd., as Managing Agents of the Company for a period of 10 years with effect from 15th January 1957 at the remuneration prescribed in the draft agreement.

Good Year for Sugar Industry

Surveying the developments of the year in the sugar industry in general, Sir Joseph observed:

"The Indian sugar year, which recently closed, was a good one in nearly every direction, the total quantity of sugar produced by the Indian Union showing an increase of 17 per cent. over the previous year, at 18.59 lakh tons, whilst in the State of Bombay 2.08 lakh tons were produced, being an increase of 16.5 per cent.

"Cane crushed in all-India was 186.53 lakh tons, in Bombay State 18.07 lakh tons, the recovery being 9.93 per cent. and 11.51 per cent., respectively. The duration of crushing, that is, the number of working days, was 145 for all-India and 153 for Bombay.

"The sugar supply position is represented by an opening stock of 5.61 lakh tons (including 1.20 lakh tons of imported sugar), 18.50 lakh tons produced in the country and imports of 0.55 lakh tons. The estimated total consumption was 19.50 lakh tons, thus leaving a closing stock of 5.57 lakh tons, of which 5.53 lakh tons was indigenous sugar and 0.04 lakh tons imported sugar. The rise in sugar production was brought about by several factors, namely,

"1. Fairly large diversion of cane supplies from *gur* to sugar manufacture, consequent upon the low prices for *gur* which prevailed.

"2. Expectation of continued adoption of the new price formula for linking the price of cane to the price of sugar. All mills in the Bombay Deccan paid to private cultivators Rs. 44 per ton, as against Rs. 43 in the previous season.

"3. Improvement in the quality of cane supplied to the mills and the consequent slightly higher recovery of sugar.

"The trend of prices was slightly upwards, except towards the close of the season.

"During the year, the Union Railway Minister imposed a 6¼ per cent. surcharge on freight—a charge which imposes a levy of about eight pies per maund of sugar.

Expansion of Capacity

"Under the expansion scheme, action has been taken to increase the installed capacity of the sugar industry from 15.0 lakh tons in 1953 to 25.0 lakh tons in 1960-61 and, of the additional capacity, 2.5 lakh tons will go into production during 1956-57. The Government has so far granted licences for the expansion of 57 existing units and for the establishment of 55 new factories, including 34 co-operative units, and 3 units to be installed by shifting the idle plants available in the country.

"That briefly is a review of the year's events in the sugar world in India and indicates that signs are not wanting that the industry is spreading and developing, but increased activity is called for in the growing of cane having better and better sugar content, for 'sugar is made in the ground.'

"I now move 'that the Directors' report and statement of accounts for the year which ended on the 30th September 1956, be and is hereby adopted.'"

Further Capitalisation

One of the shareholders complimented the Company on the excellent working results of the Company and its sound financial position. He asked the Chairman whether the Board of Directors could consider further capitalisation of reserves, in view of the latest amendment to the Indian Income-tax Act. He added that the dividend on the capital thus increased could be proportionately reduced. In reply, the Chairman said that they had just finished the work in connection with the recent capitalisation of reserves and the Board, therefore, required some time to think of the suggestion.

The shareholders then passed unanimously the resolution "that Sir Joseph Kay, K.B.E., who retires by rotation be and is hereby appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him." They also approved of the re-appointment of Messrs. W. H. Brady & Co., Ltd., as Managing Agents of the Company for a period of ten years with effect from 15th January 1957. The other resolutions and items on the agenda were also passed.

BUDGE-BUDGE JUTE SUFFERS LOSS

RAJAGIRI RUBBER PAYS HIGHER DIVIDEND

Budge-Budge Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April 1956.

After providing Rs. 70,000 (Rs. 65,000) for depreciation, the half-year's results show a loss of Rs. 2,46,556 (profit of Rs. 4,88,707). A total of Rs. 4,51,694 (*nil*) has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 30th April, 1956. A similar provision in respect of raw jute stock and work-in-progress amounting to Rs. 1,72,315 made during the previous half-year has been written back to the credit of profit and loss account. After making these adjustments and bringing in the balance of Rs. 2,271 (Rs. 1,61,163) from the previous half-year, there is a balance of Rs. 5,23,664 (credit of Rs. 3,72,663) at the debit of profit and loss account, against which the directors have transferred Rs. 5,25,000 (*nil*) from general reserve. The directors have also transferred Rs. 31,500 (Rs. 1,25,000) from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares for the half-year at Rs. 3-8 (Rs. 3-8) per share, and they recommend that this preference dividend be paid. This together with the transfers above referred to would leave a credit balance of Rs. 1,336 (Rs. 3,72,663 from which the directors paid preference dividend at Rs. 3-8 per share and ordinary dividend at Rs. 5 per share leaving Rs. 1,61,163 to be carried forward) in profit and loss account to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January 1956. From the 9th January, however, 2½ per cent. of the total looms were unsealed, and a further 5 per cent. from the 20th February 1956.

Trading during the period was again difficult owing to the high price of raw jute in relation to the market for manufactured goods, where prices fell to uneconomic levels due partly to the increased production consequent upon the unsealing of looms, coupled with the fact that the offtake did not come up to expectations. It is hoped, however, that the adjustment in production which has since been effected by re-sealing 7½ per cent. of the total looms will restore the industry to more profitable working conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	44,94,117
Reserves ...	21,81,426	Stock of cloth, bags and raw material ...	52,64,544

		Cash ...	11,077
Rs.	1,10,45,899	Rs.	1,10,45,899

Rajagiri Rubber and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey) submit the audited accounts of the Company for the year ended 30th June 1956.

Rubber crop: The total estimated crops for the year under report were 5,25,000 lbs. rubber from Rajagiri and 7,50,000 lbs. from Shaliacary (total 12,75,000 lbs.) to be produced at an average cost of 65.86 cents per pound. The actual crops harvested were 13,69,972 (12,61,500) lbs., viz., 5,57,800 (5,24,300) lbs. on Rajagiri and 8,12,172 (7,37,200) lbs. on Shaliacary at an average estate cost of 65.52 (58 29) cents per lb. The average sale price realised was 148.50 cents as compared to 135.83 cents for the previous year.

The net profit for the year after allowing for depreciation and after providing a sum of Rs. 3,65,000 (Rs. 3,35,000) for taxation amounted to Rs. 5,05,582 (Rs. 5,08,403) and the directors recommend this amount be disposed of as under:—

Payment of a dividend of 25 (20) per cent. on equity shares Rs. 3,37,500 (Rs. 2,70,000), transfer to rehabilitation fund (making Rs. 3,50,000) Rs. 50,000 (Rs. 50,000), to dividend equalisation fund (making Rs. 2,60,000) Rs. 1,10,000 (Rs. 1,00,000), and carry forward to next year Rs. 8,082 (Rs. 7,461).

Estimate for 1956-57: A total crop of 13.50,000 lbs. of rubber—5,50,000 lbs. from Rajagiri and 8,00,000 lbs. from Shaliacary—is estimated to be harvested during 1956-57 season at an average cost of 69.00 cents per pound. The capital expenditure for the year is estimated at Rs. 1,44,519.

Depreciation: In view of the fixed assets being charged to depreciation at the rates prescribed under the Indian Income-tax Act on the written down book value of the assets instead of the usual method of being charged on the original cost of the assets, a difference in the amount has been necessitated.

General: The estates have been regularly visited and are reported to be in excellent condition.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	36,10,000	Block ...	38,43,388

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th April 1956.

After providing Rs. 26,000 (Rs. 25,000) for depreciation, the half-year's results show a profit of Rs. 1,90,678 (Rs. 6,10,230). Provision for taxation absorbs Rs. 1,35,000 (Rs. 2,50,000) and, in addition, a total of Rs. 1,50,553 (*nil*) has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 30th April 1956. After making these provisions and bringing in the balance of Rs. 70,554 (Rs. 1,88,126) from the previous half-year, there is a balance of Rs. 24,321 (credit of Rs. 5,02,588) at the debit of the profit and loss account. The directors have transferred Rs. 1,75,000 (*nil*) from dividend equalisation reserve and recommend the payment of dividends as follows:—

On preference shares at Rs. 3-8 (Rs. 2-8) per share Rs. 17,500 (Rs. 17,500) and on ordinary shares at As. 6 (Re. 1) per share Rs. 1,31,250 (Rs. 3,50,000) thus absorbing Rs. 1,48,750 and leaving Rs. 1,929 (Rs. 1,35,088) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January 1956. From the 9th January, however, 2½ per cent. of the total looms were unsealed, and a further 5 per cent. from the 20th February 1956.

Trading during the period was again difficult owing to the high price of raw jute in relation to the market for manufactured goods, where prices fell to uneconomic levels due partly to the increased production consequent upon the unsealing of looms, coupled with the fact that the offtake did not come up to expectations. It is hoped, however, that the adjustment in production which has since been effected by re-sealing 7½ per cent. of the total looms will restore the industry to more profitable working conditions.

Consolidated Coffee Estates (1943) Ltd.

The directors of the above Company (Managing Director: Mr. R. C. Paterson, Pollibetta) submitted the audited accounts of the Company for the year ended 30th June 1956.

The net profit for the year is Rs. 20,12,928 (Rs. 16,04,069). Adding the balance brought forward of Rs. 2,42,884 (Rs. 4,24,565) there is a total of Rs. 22,55,812 (Rs. 20,28,634). After deducting a dividend of 6 per cent. on preference shares Rs. 1,12,500 (Rs. 1,12,500), transfer to reserve for debenture redemption fund Rs. 1,00,000 (Rs. 1,00,000) and to general reserve Rs. 5,00,000 (Rs. 5,00,000) there was left a balance of Rs. 15,43,312 (Rs. 13,16,134). Out of this amount the directors have paid a dividend of 20 (22½) per cent. free of Indian income-tax on the ordinary shares absorbing Rs. 14,31,000 (Rs. 10,73,250) leaving a balance of Rs. 1,12,312 (Rs. 2,42,884) to be carried forward.

Acreage:—In order to distinguish between immature and mature coffee more distinctly the board of directors define immature arabica coffee as under five years planted and immature robusta as under eight years planted. After making adjustments to conform to this definition the acreage of the company is as under:—

	Mature	*Immature*	*Total*
Arabica coffee ...	3,845	411	4,256
Robusta coffee ...	2,084	487	2,571
Total coffee	5,929	898	6,827
Oranges			93
Cardamoms			160
Rice land			584
Plantain and other fruit crop			45
Total cultivated area			7,709
Reserve land			2,669
Total ...			10,378

The slight increase in total acreage is due to the purchase of land during the year.

The total planted area under ragi comes to 140 acres and unplanted and grazing area 172 acres. The decrease in acreage is due to the sale of land.

CROPS—1955-56

	Estimated	*Actual*
	Tons	Tons
Coffee—Arabica	1,100	1,270
„ Robusta	775	826
Total coffee	1,875	2,096
Pepper	50	77
	Mds.	Mds.
Cardamoms	200	418

SEASON 1956-57—CROP ESTIMATES

	Arabica Tons	*Robusta* Tons	*Total* Tons
Estimated on blossom ...	1,200	800	2,000
Revised estimate	1,300	700	2,000
Pepper			50
Cardamoms			240 maunds

The crop has been valued on the basis of Rs. 2-6 a point and it is anticipated that the final payment may be slightly in excess of this figure.

The directors have pleasure in reporting that the coffee crop of 2,096 tons for the year under report is the highest since the inception of the Company. The revised estimates for the year 1956-57 in respect of arabica are about the same as for the previous year, while those for robusta are less by 100 tons.

Fruit Juice Factory:—The Factory was closed as from the 1st January 1956, in view of the difficulties in marketing the products.

Taxation:—As Coorg is now part of the Mysore State, provision is made in the accounts for agricultural income-tax at the rate in the Mysore Agricultural Income-tax Act. The Company has been assessed to Central Income-tax for 25 per cent. of the income from coffee in respect of the seasons 1948-49, 1949-50, 1950-51 and 1951-52. The question whether any portion of the income from coffee is liable to Central Income-tax is before the Madras High Court. Pending a decision on this question an estimated sum of Rs. 6,75,000 representing tax, if any, due from 1949 to 1956 has been noted in the balance sheet as a contingent liability not accepted.

Kushalnagar Works:—During the year under review the Works cured 2,603 tons of coffee as against 2,304 tons for the previous year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,30,000	Block ...	91,51,845

		Cash ...	15,80,902
Rs.	1,89,26,104	Rs.	1,89,26,104

Coffee Lands & Industries (Mysore) Ltd.

The directors of the above Company (Secretaries: The Consolidated Coffee Estates (1943) Ltd., Pollibetta) submitted the audited accounts of the Company for the year ended 30th June 1956.

The net profit for the year is Rs. 11,68,162 (Rs. 5,38,445). Adding the balance brought forward of Rs. 1,21,059 (Rs. 1,58,644) there is a total of Rs. 12,89,221 (Rs. 6,97,089). After deducting a dividend of 5 per cent. on preference shares Rs. 52,030 (Rs. 52,030), and transfer to dividend equalisation fund Rs. 50,000 (*nil*), debenture redemption fund Rs. 50,000 (Rs. 50,000) and general reserve Rs. 5,00,000 (Rs. 1,50,000) there was left a balance of Rs. 6,37,191 (Rs. 4,45,059). Out of this the directors paid a dividend of 25 (18) per cent. free of income-tax on ordinary shares absorbing Rs. 4,50,000 (Rs. 3,24,000) and carried forward the balance of Rs. 1,87,191 (Rs. 1,21,059).

In order to distinguish between immature and mature coffee more distinctly, the board of directors define immature arabica coffee as under 5 years planted and immature robusta as under 8 years planted. After making adjustments to conform to this definitions the acreage of the company is as under:—

	Mature	*Immature*	*Total*
Arabica coffee ...	2,160	125	2,285
Robusta coffee ...	302	111	413
Total coffee	2,462	236	2,698
Organges	9	—	9
Cardamoms	17	—	17
Wetlands and ragi-lands	82	—	82
Reserve land			900
Total			3,706

CROPS—1955-56

	Estimated	*Actuals*
Arabica coffee (tons) ...	610	712 11 3 17
Robusta coffee (tons) ...	75	82 18 2 20
	685	795 10 2 9
Cardamoms		43 maunds

The crop has been valued on the basis of Rs. 2-6 per point. It is anticipated that the final pool dividend may be in excess of this amount.

SEASON 1956-57—CROP ESTIMATE

Arabica coffee	670 tons
Robusta coffee	75 tons
Total coffee ...	745 tons
Cardamoms	19 maunds

The directors have pleasure in reporting that the crop of the year has been the highest since the inception of the company.

Taxation:—Provision has been made in the accounts for Mysore Agricultural Income-tax in respect of the year's working. The company has been assessed to Central Income-tax for 25 per cent. of the income from coffee in respect of the seasons 1949-50, 1950-51 and 1951-52. The question whether any portion of the income from coffee is liable to Central Income-tax before the Madras High Court. Pending a decision on this question, a sum of Rs. 3,07,000 representing tax if any due from 1950 to 1956 has been noted in the balance sheet as a contingent liability not accepted.

Hunsur Works:—2,907 tons of coffee were cured during the season compared with 2,178 tons in the previous season.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,40,600	Block ...	29,01,097
Debentures	3,00,001	Stock-in-trade	19,76,623
Reserves ...	21,50,000	Stores, spare parts and loose tools	4,33,041
Provision for taxation ...	7,19,795	Debts, deposits and advances ...	13,00,645
Liabilities ...	11,67,785	Investments	57,185
Profit and loss account ...	1,87,191	Cash ...	6,96,780
Rs.	73,65,372	Rs.	73,65,372

National Iron and Steel Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: Nursing and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March, 1956.

The net profit for the year amounts to Rs. 6,87,033 (Rs. 5,89,495) after providing Rs. 5,12,534 (Rs. 4,31,831) for depreciation, Rs. 1,32,337 (Rs. 1,40,499) for managing agents commission and Rs. 4,81,000 (*nil*) for income-tax for the year 1955-56. The balance to the credit of the profit and loss appropriation account after making profit and loss adjustments, together with this year's profit is Rs. 8,40,940 (Rs. 7,86,680) which the directors disposed of as follows:—

A sum of Rs. 3,12,250 (Rs. 1,24,900) in payment of a dividend at As. 10 (As. 4) per share free of income-tax and Rs. 5,28,690 (Rs. 1,53,906) was carried over to the next year.

The working results of the year under review have been better than that of the previous years and the directors hope that the working will be still better with the expansion and modernising schemes of the works taken in hand.

Fixed Capital Expenditure: At the time of starting the Belur Works, before applying to the Government for land under the Land Acquisition Act, the Company had to purchase some land from different parties in the names of the members of Nursing & Co. as benamdars of the Company and the amount in question was spent from 1934 to 1939. Later this very land was acquired and conveyed by the Government to the Company. Therefore it was not possible for Nursing & Co., or its members to make any conveyance of the same land in favour of the Company. It is recommended that to regularise this the amount should be debited to land development account or land acquisition expenses account.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,96,000	Block ...	37,52,077

Agra Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the company for the half-year ended 31st March, 1956.

The State Government has requested that a supply be afforded to meet a demand for irrigation purposes to an extent of 2,000 k.v.a. and this is to be met on an off peak load basis.

Satisfactory progress has been maintained as indicated in the following schedule:

Half-year ended	*Units sold*	*Revenue* Rs.
30th September, 1953 ...	12,152,915	14,79,566
31st March, 1954 ...	10,703,548	15,27,036
30th September, 1954 ...	12,960,709	15,62,370
31st March, 1955 ...	11,885,291	16,51,759
30th September 1955 ...	14,8?°,534	17,42,371
31st March, 1956 ...	14,238,204	18,03,229

After providing for all charges and placing Rs. 19,514 to statutory contingencies reserve, Rs. 51,500 to reserve for redemption of debentures, Rs. 1,45,903 to tariffs and dividends control reserve and Rs. 95,000 to general reserve, there remains a balance of Rs. 1,49,033 including Rs. 46,084 brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 per cent. per annum free of income-tax for the half-year Rs. 99,980 and carrying forward to next half-year Rs. 49,073.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,62,40,639

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March, 1956.

With the release of additional power by Hydel, enabling the Company to connect many additional consumers during the past year, considerable improvement in the revenue position is apparent, however, with the development herein referred to, extensions and strengthening of mains and services have to be made, with the result that a capital expenditure of Rs. 5 lakhs on such services is necessary and this matter is receiving attention.

The following schedule indicates the progress during the past three years.

Year ended	*Units sold*	*Revenue* Rs.
March 1954	7,418,260	14,34,080
March 1955	8,947,732	15,41,462
March 1956	10,430,517	19,02,317

After providing for all charges, placing Rs. 9,914 to statutory contingencies reserve, Rs. 79,931 to tariffs and dividends control reserve, Rs. 45,518 to general reserve and bringing forward Rs. 31,490 from the half-year ended 31st March 1955, and deducting Rs. 31,094 in respect of dividends paid for the half-year ended 30th September 1955, there remains a balance of Rs. 65,585 available for distribution and this the directors recommend be disposed of as follows:—

Payment of a dividend at the rate of 10 per cent. per annum free of income-tax for the half-year ended 31st March 1956 Rs. 24,875, an additional payment of As. 2 per share free of income-tax Rs. 6,219 and carrying forward to next year Rs. 34,492.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,98,750	Block ...	11,68,768
Reserves ...	6,73,215	Stores, tools and instruments ...	5,76,713

Profit and loss account ...	34,491	Investments	1,28,495
		Cash ...	3,42,635
Rs.	31,89,056	Rs.	31,89,056

Clevedon Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a profit of Rs. 3,72,407 (Rs. 8,26,784). On transfer of this sum to profit and loss account and after sundry adjustments there is a balance at credit of that account amounting to Rs. 4,61,178 (Rs. 1,51,884), of which the directors have transferred Rs. 1,10,000 (*nil*) to revenue reserve and Rs. 75,000 (Rs. 60,000) to buildings and machinery reserve. A special dividend of 25 per cent. for season 1954 was paid on 28th March 1956, while Rs. 1,20,000 have been provided against a dividend distribution at the rate of 30 per cent. payable at a later date, leaving Rs. 56,178 (Rs. 51,884 after paying a dividend of 10 per cent.) to be carried forward.

It is a matter of regret to the directors that they have been unable to recommend the payment of a dividend at this stage as the Company is in debt to the secretaries to the extent of some *Rs. 68,000. It would not therefore be in the Com*pany's interest to extend this indebtedness now but it is hoped that the remittance of profits from Pakistan for season 1954 in the near future will make payment of the dividend mentioned above possible.

The Indian Finance Act, 1956 has given retrospective exemption from taxation in India of agricultural income arising in Pakistan and taxable in that country and accordingly a sum of Rs. 4,50,000 has been credited to profit and loss account, being a reserve for taxation no longer required.

It will be observed that a sum of Rs. 2,01,080 representing loss on exchange resulting from the devaluation of Pakistani Currency (after adjustment of profits on a forward exchange contract and the unappropriated balance in the exchange suspense account) has been charged to profit and loss account.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus the fixed assets which had been written off up to 31st December 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Tea crop was 6,347 maunds as against 6,380 maunds in 1954. The average selling price was Re. (P) 1-14-9 per lb. as compared with Rs. (P) 2-4-0 per lb. in the previous year. Planted area is now 547.24 acres.

Estimates for 1956 provide for a crop of 6,000 maunds at an outlay of Rs. 5,90,470, including inland freight and sale charges.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	5,29,507

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 14th day of January 1957, at 11-50 o'clock in the forenoon, to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1 (*a*). (*As an Ordinary Resolution*)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie and Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1 (*b*). (*As an Ordinary Resolution*)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie and Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1 (c). (*As an Ordinary Resolution*)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie and Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(*a*) and 1(*b*) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(*b*)."

2. (*As a Special Resolution*)—"That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:

"Balmer Lawrie and Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. O. T. Jenkins, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(*a*) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000 per annum, and

(*b*) Such further sum, if any, as together with the said sum of Rs. 50,000 shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000 payable under (*a*) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000 each and a final monthly instalment of Rs. 6,000 payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (*a*) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000 the remuneration payable under (*a*) above shall abate and be repayable to the Company.

The further sum, if any, payable under (*b*) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 14th day of April One thousand nine hundred and twenty-five and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise), provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (*As an Ordinary Resolution*)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie and Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (*As a Special Resolution*)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie and Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie and Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie and Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie and Company Limited such rent and portion of the outgoings payable by Balmer Lawrie and Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (*As a Special Resolution*)—"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250 for each meeting attended by him."

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

CALCUTTA, 21*st December*, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

THE MYSORE SUGAR COMPANY LIMITED, BANGALORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-THIRD ORDINARY GENERAL MEETING of the Mysore Sugar Company, Limited, will be held at the Registered Office of the Company in Sri Jayachamaraja Wadiyar Road, Bangalore City, at 4 p.m., on Monday the 28th January 1957, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 30th June 1956.
2. To declare a Dividend.
3. To elect a Director in place of Sri V. T. Krishnamoorthy, who retires by rotation and, being eligible, offers himself for re-election.

Being a "Government Company," the appointment of Auditors is to be made by the Central Government, under Section 619 (2) of the Companies Act, 1956.

The Share Transfer Register of the Company will be closed from the 12th to the 31st January 1957 (both days inclusive).

By Order of the Board,
V. M. LINGIAH,
Secretary.

BANGALORE, 16*th December* 1956.

Note.—(1) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) The Dividend, when declared, will be made payable at the Bank of Mysore, Limited, Bangalore, on and after the 9th February 1957. The Dividend Warrants will be posted to those shareholders whose names stand on the Register on the 11th January 1957.

Notices

THE BENGAL FLOUR MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21 Netaji Subhas Road, Calcutta, on Monday the 14th day of January 1957, at 11-30 o'clock in the forenoon, to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1 (*a*) (*As an Ordinary Resolution*)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie and Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1 (*b*) (*As an Ordinary Resolution*)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie and Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1 (c) (*As an Ordinary Resolution*)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie and Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1 (*a*) and 1 (*b*) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(*b*)."

2. (*As a Special Resolution*)—"That Articles 3, 4 and 5 of the Articles of Association of the Company be deleted and the following new Article 3 substituted therefor:

"Balmer Lawrie and Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. A. T. Montgomery, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(*a*) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000 per annum, and

(*b*) Such further sum, if any, as together with the said sum of Rs. 50,000 shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000 payable under (*a*) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000 each and a final monthly instalment of Rs. 6,000 payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (*a*) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000 the remuneration payable under (*a*) above shall abate and be repayable to the Company.

The further sum, if any, payable under (b) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of January One thousand nine hundred and thirty-seven and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March, 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise), provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (*As an Ordinary Resolution*)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company, Balmer Lawrie and Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (*As a Special Resolution*)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 3 of the Articles of Association of the Company, Balmer Lawrie and Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie and Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie and Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie and Company Limited such rent and portion of the outgoings payable by Balmer Lawrie and Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (*As a Special Resolution*)—"That Article 42 of the Articles of Association of the Company be deleted and the following new Article 42 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250 for each meeting attended by him."

Notices

THE INDIAN GALVANIZING COMPANY (1926), LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 14th day of January 1957, at 12-10 o'clock in the afternoon, to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1. (*a*) (*As an Ordinary Resolution*).—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie and Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1. (*b*) (*As an Ordinary Resolution*).—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie and Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1. (c) (*As an Ordinary Resolution*).—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie and Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(*a*) and 1(*b*) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(*b*)."

2. (*As a Special Resolution*).—"That Articles 85, 86, 87, 88, 89, 90 and 91 of the Articles of Association of the Company be deleted and the following new Article 85 substituted therefor:

"Balmer Lawrie and Company Limited are the Managing Agents of the Company and they shall continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(*a*) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000 per annum, and

(*b*) Such further sum, if any, as together with the said sum of Rs. 50,000 shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provision of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000 payable under (*a*) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000 each and a final monthly instalment of Rs. 6,000 payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (*a*) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000 the remuneration payable under (*a*) above shall abate and be repayable to the Company.

The further sum, if any, payable under (*b*) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 8th day of December One thousand nine hundred and twenty-six and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise), provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (*As an Ordinary Resolution*).—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company, Balmer Lawrie and Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (*As a Special Resolution*).—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 85 of the Articles of Association of the Company, Balmer Lawrie and Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie and Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie and Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie and Company Limited such rent and portion of the outgoings payable by Balmer Lawrie and Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (*As a Special Resolution*).—"That Article 96 of the Articles of Association of the Company be deleted and the following new Article 96 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 250 for each meeting attended by him."

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

CALCUTTA, 21*st December* 1956.

Notes:—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the abovenamed Company will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday the 14th day of January 1957, at 12-30 o'clock in the afternoon, to consider and, if thought fit, to pass, with or without modification, the following resolutions, namely:—

1 (*a*). (*As an Ordinary Resolution*)—"That as from the first day of April One thousand nine hundred and fifty-six Balmer Lawrie and Company Limited, the Managing Agents of the Company, shall hold such office upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof, the terms of which said draft Agreement have been approved by the Central Government in conformity with the provisions of Section 329 of the Companies Act, 1956."

1 (*b*). (*As an Ordinary Resolution*)—"That as on and from the fifteenth day of January One thousand nine hundred and fifty-seven, subject to the approval of the Central Government under the provisions of Section 326 of the Companies Act, 1956, Balmer Lawrie and Company Limited be and are hereby re-appointed the Managing Agents of the Company for a fresh term of ten years upon the terms and subject to the conditions contained in the draft Agreement submitted to this Meeting and for the purposes of identification signed by the Chairman thereof; and that the Directors be and are hereby authorised to alter or vary the said terms to such extent and for such purposes only as may be necessary to embody or give effect to the requirements of the Central Government as a condition of granting its approval as aforesaid."

1 (c). (*As an Ordinary Resolution*)—"That the Directors be and are hereby authorised to enter into an Agreement in writing between the Company of the one part and Balmer Lawrie and Company Limited of the other part in the terms of the draft Agreement referred to in resolutions numbers 1(*a*) and 1(*b*) in the Notice convening this Meeting such Agreement to incorporate the alterations and variations (if any) referred to in the said resolution number 1(*b*)."

2. (*As a Special Resolution*)—"That Articles 106, 107, 108, 109, 110 and 111 of the Articles of Association of the Company be deleted and the following new Article 106 substituted therefor:

"Balmer Lawrie and Company Limited are the Managing Agents of the Company and they small continue and be the Managing Agents of the Company up to and including the fourteenth day of January One thousand nine hundred and sixty-seven upon the terms and subject to the conditions as to remuneration and otherwise as are embodied in an Agreement a draft whereof has, for the purpose of identification, been subscribed by Mr. H. G. Sinclair, Chairman of the Company, to be executed with all convenient despatch and the Board of Directors shall carry the said Agreement into effect. Subject to the provisions of Sections 198 and 348 of the Companies Act, 1956, the Managing Agents shall be entitled to receive from the Company by way of remuneration for their services in relation to such management, in respect of each financial year of the Company (as defined in Section 2 (17) of the Companies Act, 1956) commencing on or after the 1st day of April, 1956, or in respect of any part of such a financial year:

(*a*) A sum of, or, in respect of any period of less than a year, calculated at the rate of Rs. 50,000 per annum, and

(*b*) Such further sum, if any, as together with the said sum of Rs. 50,000 shall make up an amount equal to 10 per cent. of the net profits of the Company for such financial year or part thereof determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956.

The said sum of Rs. 50,000 payable under (*a*) above shall be paid by the Company by eleven monthly instalments of Rs. 4,000 each and a final monthly instalment of Rs. 6,000 payable on the last day of each month. In the event of the Company having no profits or its profits being inadequate in any financial year then to the extent that the amount paid to the Managing Agents under (*a*) above together with the remuneration paid to the Directors of the Company (other than fees for meetings of the Board attended by them) in respect of such year exceed Rs. 50,000 the remuneration payable under (*a*) above shall abate and be repayable to the Company.

The further sum, if any, payable under (*b*) above shall be paid by the Company immediately after the accounts of the Company for the respective financial year shall have been audited and laid before the Company in General Meeting.

In respect of the Company's financial year ending on the 31st day of December 1956, the Managing Agents shall, subject to the provisions of Sections 198 and 354 of the Companies Act, 1956, if applicable, receive remuneration calculated in the manner provided in the Agreement dated the 27th day of January One thousand nine hundred and twenty and made between the Company of the one part and the Managing Agents of the other part save that the Managing Agents shall only be entitled to receive the office allowance payable to them thereunder up to and including the 31st March 1956.

The remuneration payable under this Article shall not be regarded as in any manner or to any extent intended to reimburse the Managing Agents in respect of any expenses incurred or to be incurred by them on behalf of the Company and the Managing Agents, in addition to receiving such remuneration, shall be entitled to be reimbursed by the Company in respect of any expenses incurred by them on behalf of the Company and such proportion of expenses that may be incurred by them partly on behalf of the Company and partly on behalf of themselves and/or some other company, concern or person as the Directors of the Company shall determine to be or to have been incurred on behalf of the Company. Without prejudice to the generality of the foregoing, the Managing Agents shall be entitled to recover from the Company the remuneration (whether by way of salary, commission, bonus, gratuity, compensation, allowance or otherwise), provident and superannuation fund contributions and expenses payable to or in respect of all persons employed by them solely in connection with the Company's business and such proportion of the remuneration, contributions and expenses, if any, of any persons employed by the Managing Agents partly in connection with the Company's business and partly in connection with any other business as the Directors of the Company may from time to time likewise determine. Provided always that neither the Company nor the Managing Agents shall without the previous sanction of the Central Government (and then only subject to the provisions of Sections 198, 387 and 388 of the Companies Act, 1956) be entitled to appoint or employ any individual as a Manager of the Company within the meaning of the Companies Act, 1956."

3. (*As an Ordinary Resolution*)—"That pursuant to Clause 9 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie and Company Limited and any associate or associates of theirs (as defined in sub-section (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the Managing Agents, Secretaries and Treasurers, Manager, Agent, Secretary or Selling or Buying Agent of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company, provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

4. (*As a Special Resolution*)—"That pursuant to Clause 12 of the said draft Agreement referred to in Article 106 of the Articles of Association of the Company, Balmer Lawrie and Company Limited be and they are hereby authorised to provide the Company with suitable furnished office accommodation at the registered or principal office for the time being of Balmer Lawrie and Company Limited in Calcutta and also, if so required by the Company, at any other place or places in which Balmer Lawrie and Company Limited may be able to provide such accommodation and the Company shall pay to Balmer Lawrie and Company Limited such rent and portion of the outgoings payable by Balmer Lawrie and Company Limited as the Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided."

5. (*As a Special Resolution*)—"That Article 85 of the Articles of Association of the Company be deleted and the following new Article 85 be substituted therefor:

"Each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending meetings of the Board of Directors the sum of Rs. 150 for each meeting attended by him."

By Order of the Board,
BALMER LAWRIE & Co., LTD.,
D. MANSON,
Secretary,
Managing Agents.

CALCUTTA, 21*st December*, 1956.

Notes.—(1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

(2) A copy of the draft Agreement referred to in the proposed Resolutions and an explanatory statement are annexed to this Notice.

THE MYSORE SPINNING AND MANUFACTURING COMPANY, LTD.

NOTICE OF 88TH DIVIDEND

NOTICE IS HEREBY GIVEN THAT THE Directors by virtue of the power vested in them under the Articles of Association have determined to pay an Interim Dividend of Rs. 3 per Ordinary Share of Rs. 50 and a dividend of Rs. 1-2 per 4½ per cent. Cumulative Preference Share of Rs. 50 for the half-year ended 31st August 1956.

The Dividend will be payable at the State Bank of India, Bombay, on and from Monday the 4th February 1957 to those shareholders whose names stand on the Register of Members on the 25th January 1957.

The Transfer Books of the Company will remain closed from the 25th January 1957 to the 2nd February 1957 (both days inclusive).

THE ASSOCIATED CEMENT COMPANIES, LIMITED

NOTICE

THE TWENTIETH ANNUAL GENERAL Meeting of the Shareholders of THE ASSOCIATED CEMENT COMPANIES, LIMITED, will be held at the Registered Office of the Company, Cement House, 121, Queen's Road, Fort, Bombay, on Friday the 25th January 1957, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st July, 1956.
2. To sanction the declaration of a Dividend.
3. To elect a Director in the place of Sir Purshotamdas Thakurdas who retires by rotation and is eligible for re-election and who also vacates office under Section 261(4) of the Companies Act, 1956, by passing the following special resolution of which special notice, as required by Sections 261 and 281 of the said Act, has been received by the Company:—

"RESOLVED that Sir Purshotamdas Thakurdas who has attained the age of 77 years and who is a member of Cement Agencies (Private) Limited, Managing Agents of the Company and hence an associate of the Managing Agents, and who retires by rotation and also vacates office under Section 261(4) of the Companies Act, 1956, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

4. To elect a Director in the place of Mr. Ambalal Sarabhai who retires by rotation and is eligible for re-election, by passing the following resolution of which special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that Mr. Ambalal Sarabhai who has attained the age of 66 years and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

5. To elect a Director in the place of Mr. M. M. Amersey who retires by rotation and is eligible for re-election, by passing the following resolution of which special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that Mr. M. M. Amersey who has attained the age of 66 years and who retires by rotation be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

6. To elect a Director in the place of Mr. S. Moolgaokar who retires by rotation and is eligible for re-election, by passing the following resolution as a special resolution of which special notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that Mr. S. Moolgaokar who retires by rotation from his office as a Director of this Company and who is also a Director of Cement Agencies (Private) Limited, Managing Agents of the Company and hence an associate of the Managing Agents, be and is hereby re-elected a Director of the Company."

7. To elect a Director in the place of Mr. R. K. Garg who retires by rotation and is eligible for re-election.
8. To elect a Director in the place of Mr. K. G. Milne who retires by rotation and is eligible for re-election.
9. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
FOR THE ASSOCIATED CEMENT COMPANIES, LTD.,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, *7th December*, 1956.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

Note.—(*a*) The Transfer Books of the Company were closed from Friday the 9th November 1956 to Friday the 30th November, 1956, both days inclusive.

(*b*) The Dividend when sanctioned, will be made payable on and after Friday the 1st February 1957, to those Shareholders whose names stood on the Register on Friday the 30th November 1956.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To

THE SHAREHOLDERS OF
THE ASSOCIATED CEMENT COMPANIES, LTD.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to items, 3, 4, 5 and 6 mentioned in the accompanying Notice dated the 7th December 1956.

2. In respect of item No. 3, it is notified that Sir Purshotamdas Thakurdas who retires by rotation and is eligible for re-election has attained the age of 77 years and hence he cannot be elected a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. Furthermore, Sir Purshotamdas Thakurdas is a member and consequently an associate of Cement Agencies (Private) Limited, the Company's Managing Agents who have the right of appointing one Director on the Board of the Company (the Director so appointed being Mr. E. D. Sheppard). By virtue of Section 261(1) of the Companies Act, 1956, any associate of the Managing Agents can only be re-appointed by means of a special resolution of which special notice has been given. The Company has received such a special notice from some members notifying their intention to move the special resolution as set out in the said item in accordance with Sections 190 and 281 as well as Section 261 of the Companies Act, 1956. Sir Purshotamdas Thakurdas has been a Director on the Board of this Company since its incorporation in 1936. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

3. In respect of item No. 4, it is notified that Mr. Ambalal Sarabhai who retires by rotation and is eligible for re-election has attained the age of 66 years and hence he cannot be elected a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Mr. Ambalal Sarabhai has been a Director on the Board of this Company since its incorporation in 1936. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

4. In respect of Item No. 5, it is notified that Mr. M. M. Amersey who retires by rotation and is eligible for re-election has attained the age of 66 years and hence he cannot be elected a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said item. Mr. Amersey has been a Director on the Board of this Company since June 1947. He is a businessman of wide and varied experience and during the long period of his association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

5. In respect of item No. 6, Cement Agencies (Private) Limited, the Managing Agents of the Company, have the right to appoint one Director as a Special Director and the Director so appointed is Mr. E. D. Sheppard. By virtue of Section 261(1) of the Companies Act, 1956, any other Director of the Managing Agents can be re-appointed only by means of a special resolution of which special notice has been given. Such a special notice has been received from some members notifying their intention to move the resolution as set out in the said item.

By Order of the Board,
FOR THE ASSOCIATED CEMENT COMPANIES, LTD.,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, *7th December*, 1956.

THE BURRAKUR COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the abovenamed Company that an Annual General Meeting within the meaning of the Companies Act, 1956 (being the one hundred and eleventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 1st February 1957, at 10 a.m., for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the half-year ended 30th June 1956, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 18th January to 1st February 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,

SHREE GOPAL PAPER MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE next Ordinary General Meeting of the Shareholders of the Company will be held at its Registered Office at 5, India Exchange Place, Calcutta, on 19th January 1957, at 12-30 p.m. Your presence at the Meeting is requested. The following business will be transacted:—

AGENDA

(1) To receive the Directors' Report and pass the audited Accounts of the Company for the half-year ending 30th June 1956.

(2) To declare dividends.

(3) *Special business*:

(*a*) To pass the following Resolution with or without modification as a Special Resolution:

"RESOLVED—That pursuant to section 360 of the Companies Act, 1956, the Company hereby consents as from 1st April 1956, to the continuance of the existing arrangements with Messrs. Modern Agencies Ltd., for purchase and supply of stores, chemicals, etc., to the Company on a remuneration of 5 per cent. on all purchases and supplies made through and received from them, subject, of course, to section 361 of the Companies Act, 1956."

(*b*) To pass the following Resolution with or without modification as an Ordinary Resolution as required under section 293 (1) (*e*) of the Companies Act, 1956:—

"RESOLVED—That with effect from the date of commencement of the Companies Act, 1956, consent of the Company be and is hereby accorded to the Board of Directors of the Company to contribute and/or subscribe to any national, political, charitable, benevolent, public or general funds or trusts (not directly relating to the business of the Company or the welfare of its employees) from time to time such amounts as may be considered proper by them, in excess of the limits laid down in section 293 (1) (*e*) of the Companies Act, 1956."

(*c*) To pass the following Resolution with or without modification as an Ordinary Resolution as required under section 293 (1) (*d*) of the Companies Act, 1956:—

"RESOLVED—That sanction be and is hereby accorded to the Board of Directors of the Company borrowing (excluding temporary loans from time to time obtained by the Company from its bankers in ordinary course of business) in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes, as the Board may from time to time deem necessary for the purposes of the Company."

(4) To consider any other business that may be brought forward with the permission of the Chairman.

Note.—The Share Transfer Books of the Company will be closed from 10th January 1957 to 19th January 1957, both days inclusive.

NOTICE.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board,
KARAMCHAND THAPAR & BROS.
PRIVATE LTD.,
Managing Agents.

(5) **Cranes:**
27 Nos. BG Steam/Diesel operated self-propelling transportation travelling cranes.
4 Nos. MG 5 ton Steam/Diesel operated travelling cranes.
1 No. NG Steam/Diesel operated self-propelling transportation travelling crane general purpose.

H. D. SINGH,
Director, Railway Equipment,
Railway Board.

MANCHESTER LETTER

(*Concluded from page 13*)

man-made fibres has been encountered is in the sphere of research. The establishment of a Rayon Research Association in competition with the Shirley Institute was at the time felt to be at best an unfriendly gesture and subsequent events have not eased the situation. For two years talks have been in progress in an effort to find a formula agreeable to both sides to secure close co-operation and the most economical use of existing and future staff, equipment and buildings of the two bodies.

Mr. N. G. McCulloch, Chairman of the British Cotton Industry Research Association, outlined these negotiations at the annual meeting, and commented on the report issued last year by the Committee formed in an endeavour to bring the two sides into agreement. It found that overlapping existed in the programmes of the two research associations and warned that without improved co-ordination this was likely to grow. The suggestion was made that both bodies should examine their future programmes and report to their respective directors when possibilities of overlapping could be foreseen.

Subsequent talks have failed to secure the understanding which outside observers consider is so necessary if textile research is to continue unhindered by petty differences. Mr. McCulloch's comment was: "Difficulties have arisen and we have failed to achieve that happy atmosphere in which they could be resolved."

Not only is there disagreement between the two associations on finance but also on collaboration, which, according to Mr. McCulloch, "involves giving away knowledge." Although informal exchanges of information have taken place ever since the Rayon Research Association was first established, there is an underlying lack of mutual confidence which cannot be ignored.—*All Rights Reserved.*

LOWER VAGAVURRAI TEA ESTATE
(Including Upper Vagavurrai Division)

UPON INSTRUCTIONS FROM THE KANAN Devan Hills Produce Co., Ltd.,

FIGGIS (PRIVATE) LIMITED

will offer for sale by public auction (unless previously disposed of by private treaty) at the Joint Sale Room 4/147, Ballard Road, Cochin, on the 11th January 1957, at 11 o'clock in the forenoon, the above-named Tea Estate forming part of the area known as Kanan Devan Concession in the Kanan Devan Hills Pakuthy, Kerala State, with all buildings, plant and machinery.

The area of the land to be sold is 2,437.90 acres, approximately, to which will be added further land, mainly grass but including some jungle sholas, lying outside the estate boundary and containing 24,562.10 acres, approximately, provided such further land should be declared to be available at the time of auction.

The Tea Estate will be sold as a going concern as on and from the 1st December 1956. Certain assets will be excluded from the sale, either absolutely or subject to payment therefor at valuation or by agreement, as prescribed by the printed Notification, Particulars and Conditions of Sale whose terms will govern the transaction in all respects, notwithstanding anything in this notice inconsistent therewith.

Prints of the Notification, Particulars and Conditions of Sale may be obtained from Figgis Private Ltd., or Forbes, Ewart and Figgis Private Ltd., at Cochin or D6, Clive Buildings, Calcutta, or the General Manager, Kanan Devan Hills Produce Co., Ltd., Munnar, Kerala State.

FIGGIS (PRIVATE) LTD.

ECONOMIC TRENDS IN UNITED STATES

(*Concluded from page 22*)

the Western alliance against the Soviet bloc cannot be broken, regardless of what happened or may happen in the future. A united front must be presented. The same thing happened at Yalta when a united front emerged against Nazi Germany and Italy—at the risk of a lesser evil. It is strictly a question of human failure and a question of evaluation of values.

The two great bottlenecks which have to be coped with in 1957, as stated above, throughout the world, are the shortage of shipping space and the scarcity of fuel in the form of oil or coal. In the meantime, rapid progress is being made in the field of nuclear fission which will bring an almost unlimited supply of energy to any nation which has the price to pay for the installation.

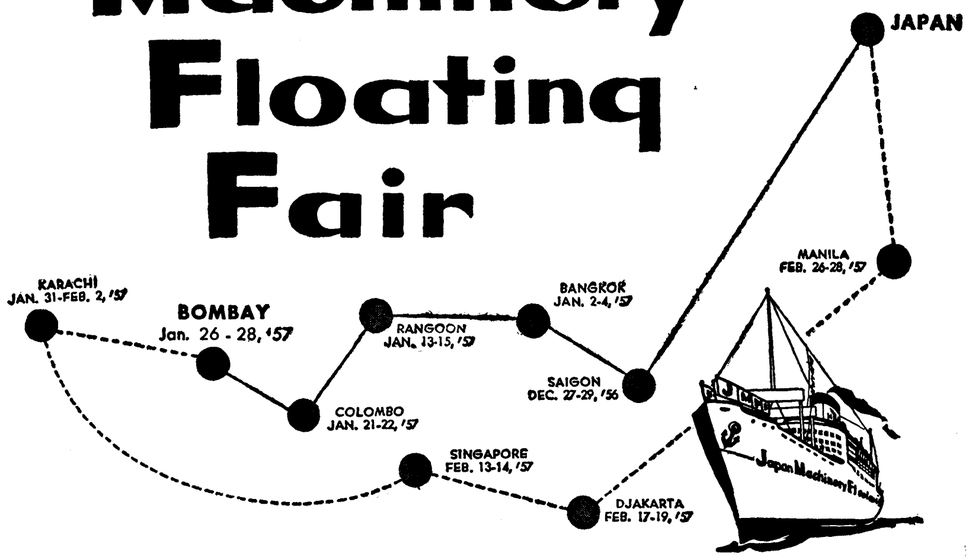
Hopeful Signs

Among the hopeful signs which predominate American thinking at the present time, are the revolts of Soviet satellites. It is no exaggeration to say that no event since the East Berlin and Polish uprisings against Soviet rule has stirred the imagination of the U.S. population so much as the uprising in Hungary even though Washington decided not to intervene. Thousands of refugees are being cared for here at this point and many more thousands are expected. There is a general feeling that the Soviet empire may be falling apart at the seams. An old American expression is "give them enough rope and they hang themselves." This may or may not be the case, but even looking at the currency picture, the Soviet bloc seems to be tumbling.

There have been vicissitudes in all eras of human history. The New Year 1957 is no exception in any way. Viewed from the United States, there is very little to worry about because of the inherent strength of the country, but in the world picture, there are weaknesses which will have to be overcome in the interest of both the East and the West.—*All Rights Reserved.*

INDUSTRIAL POWER OF JAPAN *Shown in*

Japan Machinery Floating Fair



A WHITE SHIP IS COMING.

On January 26, 1957, a trim white ship will enter Bombay harbor. She will be visiting in the capacity of a commercial envoy, for observers will note that painted boldly against her white hull are the words—"Japan Machinery Floating Fair"—an accurate description of her mission. From the time of its departure from Tokyo harbor on December 18, 1956 till it returns to Kobe, the Floating Fair will be two and a half months in Southeast Asian waters and will call at Saigon, Bangkok, Rangoon, Colombo, Bombay, Karachi, Singapore, Djakarta, and Manila.

This ship is the 8,814 deadweight ton Nissho Maru, of the Tokyo Sempaku. For this express purpose she underwent some alteration in a drydock, whereby five holds forward and aft were partitioned into 10 display rooms, each having an average floor space of 2,000 square feet. On display in these rooms are machines of every description built in Japan; precise models of various structural works, metal products, textiles, chemicals, and sundry goods, giving a general perspective of industrial activities in Japan.

REMARKABLE POSTWAR PROGRESS.

The rehabilitation of Japanese industry since the early postwar years has been most impressive. Her paper production has been trebled. Both Portland cement and chemical fertilizer production has been increased tenfold. Pneumatic tire and tube production has seen a twentyfold increase. And Japanese textiles, particularly cotton and chemical fiber fabrics, are now in a commanding position on the world markets.

The production of foodstuffs, drugs and sundry goods has likewise shown a remarkable recovery. In addition to showing a proportionate increase in export quantities, these items have played a decisive part in bringing the Japanese standard of living up to a level closely approximating that of prewar days and, in some instances, surpassing it.

INDUSTRIAL ACTIVITIES ARE WIDE.

The enormous breadth and depth of Japan's industrial activities defies adequate description. Perhaps an indication is given in that a Japanese shipyard recently completed a 85,000 ton supertanker, while an optical concern succeeded in producing a camera lens in the F/1.1 series, previously considered an impossibility.

In Central Japan, the 350,000 KW Sakuma dam and powerhouse—a construction project that required 9,580,000 50kg-bags of cement and 48,000 tons of steel—was completed and placed in operation in a little over three years. Four giant hydraulic-generators, each generating 93,000 KVA, are installed there.

MACHINERY EXPORTS ARE INCREASING.

Every year has seen an appreciable increase in Japanese machinery exports as is revealed by the following validated figures. Calendar year of 1953 - $160 million; 1954 - 300 million: 1955 - $650 million. Japan is now one of the world's heaviest exporters in machinery and about 1,000 different types of machines are shipped out. And their destinations are almost as widely varied, too. The Japan Machinery Floating Fair seeks to demonstrate the major role which that nation is now playing in these fields. And it is most appropriate that it has been planned to encompass Southeast Asia—a market to which Japan attaches great importance.

PRINCIPAL MACHINES ON BOARD

ELECTRIC MACHINERY	AGRICULTURAL MACHINERY	BICYCLES	MACHINES FOR COTTAGE INDUSTRY
COMMUNICATION MACHINERY	INTERNAL COMBUSTION ENGINES	TOOLS	
INDUSTRIAL MACHINERY	VESSELS	BEARINGS	METAL PRODUCTS
TEXTILE MACHINERY	ROLLING STOCK	SEWING MACHINES	TEXTILE PRODUCTS
MACHINE TOOLS	INDUSTRIAL VEHICLES	OPTICAL INSTRUMENTS	OTHER PRODUCTS
WOOD-WORKING MACHINERY	AUTOMOBILES	PRECISION MACHINES	

Admission Ticket: Free admission tickets are available at Consulate-General of Japan, "Megh Doot", 95-B, Marine Drive, Bombay 2, for anyone who desires to visit the Fair.

JAPAN MACHINERY EXPORTERS' ASSOCIATION

MONEY RATES HARDEN

(From Our Own Correspondent)

BOMBAY, *2nd January*

Unprecedented stringency was experienced in the short-term money market during the three weeks under review. In addition to the growing seasonal demand for bank credit, the year-end requirements of banks for window-dressing caused a scramble for funds in a market which was already bare of supplies, with the result that interest rates hardened further.

Inter-bank call money was nominally placed at 3½ per cent. and, in the absence of lenders, business done was small. There was keen bidding for house money at call which was done at 3⅝ to 3¾ per cent. Some business was reported done just before the year-end even at 4 to 4¼ per cent. for seven days' money. Short-term deposits were also in good demand. While the common rate was 3¾ to 3⅞ per cent. for one to six months, some banks were reported to have offered 4 per cent. for one month.

There was no worthwhile variation in notes in circulation during the last three weeks. The Reserve Bank's statement for the week ended 28th December 1956, as compared with that for the week ended 7th December, shows that notes in circulation have gone up by no more than Rs. 1.99 crores. Notes held in the Banking Department are lower by only Rs. 56 lakhs and the consequent rise in total notes issued, namely, Rs. 1.42 crores, is covered by a corresponding increase in rupee coin. There has been no change in foreign securities or rupee securities during this period. In the Banking Department, a rise of Rs. 4.88 crores is noted in deposits of the Central Government, but those of other Governments have declined by Rs. 6.04 crores. Deposits of banks have gone up by Rs. 6.63 crores, of which Rs. 5.77 crores were accounted for in the last week. On the assets side, balances held abroad have fallen by Rs. 8.40 crores. A sharp rise of Rs. 21.47 crores is disclosed by loans and advances other than to Governments, of which outstanding advances to Scheduled banks against usance bills accounts for Rs. 12.55 crores. The total amount advanced by the Reserve Bank against usance bills during the three weeks was Rs. 35.33 crores. This means that repayments of maturing bills were of the order of Rs. 23.28 crores. Investments show an increase of Rs. 1.63 crores. In the last week of December alone, net borrowings against usance bills amounted to Rs. 7.70 crores.

The consolidated statement of position of Scheduled banks for the week ended 21st December 1956 discloses a rise of Rs. 5.23 crores in demand deposits and of Rs. 80 lakhs in time deposits over the three weeks. Inter-bank borrowings have fallen by Rs. 2.11 crores. Borrowings from the Reserve Bank show an increase of Rs. 12.97 crores. A rise of Rs. 21.70 crores is disclosed by advances, while inland bills purchased and discounted show a fall of Rs. 6.42 crores. Foreign bills have, however, risen by Rs. 2.20 crores. Cash balances do not show any notable variation, but money at call and short notice is lower by Rs. 2.13 crores.

The Gilt-edged market continued to rule listless during the period under review. The underlying trend was, however, downward, the decline in prices being particularly marked in medium and long-dated issues. Besides the stringency in the money market, fears of a rise in Bank rate also contributed to the easy trend. There was no change in the official support policy.

3 per cent. 1986 Conversion Loan was nominally placed at Rs. 73. 3 per cent. 1970-75 was marked down by As. 3 to Rs. 86-13 and 3 per cent. 1966-68 by As. 2 to Rs. 92-4. 3 per cent. 1964 held its own at Rs. 94-6, while 3 per cent. 1963-65 and 3 per cent. 1959-61 were each As. 3 lower at Rs. 94-2 and Rs. 97-12, respectively. 3½ per cent. 1962 was unchanged at Rs. 97-14, but 3½ per cent. 1961 suffered a loss of As. 2 to Rs. 99-3. 3½ per cent. 1964 shed an anna to Rs. 98-3. 3½ per cent. 1965 was placed at Rs. 98-2 *ex*-voucher, as against Rs. 98-8 *cum*-voucher three weeks ago. 3½ per cent. 1967 held its ground at Rs. 98-6. Among the State loans, 4 per cent. Bombay 1963 and 1964 each dropped As. 6 to Rs. 100-4 and 1967 an anna to Rs. 99-11. 4 per cent. Bihar 1967 declined by As. 8 to Rs. 98 and 1968 by As. 5 to Rs. 97-11. 4 per cent. Mysore 1963 fell by As. 4 to Rs. 99-4, while 1968 gained an anna to Rs. 97-15.

In the foreign exchange section, the rupee ruled a shade easier in terms of the U.S. dollar, though towards the close it showed a partial recovery. After going up from Rs. 480¼ to Rs. 480½, banks' selling rate for ready dollars closed at Rs. 480¾ per $100 and their buying rate finished higher at Rs. 477, as against Rs. 476¾ per $100 earlier. Sterling was, however, erratic, but on balance showed a small loss. Thus, in New York, spot sterling moved down from $2.78⅜-2.78⅝ to $2.78⅛-2.78⅜ and three months' forward from $2.76⅞-2.77 to $2.76.1/16-2.76.3/16. Transferable sterling fluctuated between 274.95-275.10 cents and 274.55-274.70 cents before closing at 274.85-274.95 cents.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, *30th December* 1956

During the week under review, the hides and skins market depicted a firm trend. The main items of wet salted cow and buff were eagerly sought. New arrivals were considerable. The main purchasers were the local tanners.

The latest available quotations were: Wet salted cow 1st grade Rs. 360 to Rs. 370, 2nd grade Rs. 300 to Rs. 320 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 300 to Rs. 325 and 2nd grade Rs. 240 to Rs. 270 per 100 pieces; sheep skins 1st grade Rs. 260 and 2nd grade Rs. 200 per 100 pieces.

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, *2nd January*

Trading in the bullion market during the three weeks under review was colourless. The trend was, however, irregular, with fluctuations confined to a narrow range. On balance, silver disclosed a fractional rise, while gold was a shade lower.

Earlier in the period, the market ruled quiet, with prices displaying a slightly downward trend. The sentiment was affected by the large floating stocks in silver and the meagre offtake in the ready section, as reflected in the discount of As. 12 at which the ready metal was placed below the forward. Rumours of arrivals of unauthorised gold and a fall in demand also contributed to the downward trend. There was, however, a recovery from 20th December 1956 onwards on expectations that, while the arrival of Tibetan silver coins would decline considerably during the winter months, the demand for both silver and gold would pick up with the movement of crops. There was also a notable improvement in the offtake in both the metals. There was again a setback, albeit short-lived, on rumours that the sales tax on precious metals would be raised and on fears that import of gold from Arab countries would be permitted during the first half of 1957. As these expectations did not materialise, a recovery soon set in.

Silver for forward delivery (19th December settlement) receded from Rs. 173-8 to Rs. 172-14 before the settlement ran out. The January settlement was marked down from Rs. 174-6 to Rs. 173-13 before advancing to Rs. 175-8 on 21st December. After reacting to Rs. 173-10, it gained ground to Rs. 175-6 today. The closing was done at Rs. 175-0.

Ready silver (.996 Mint) finished at Rs. 174-6, after touching a low of Rs. 173-1. The discount of ready under forward narrowed down from As. 12 to As. 10.

The floating stocks of silver are estimated at 1,800 bars. The daily average offtake which was only 10 bars early in the period improved to 20 bars later on.

Gold for forward delivery (18th December) receded from Rs. 105-2 to Rs. 104-15 before the settlement ran out. The January settlement declined from Rs. 105-8 to Rs. 104-8 and, after staging a recovery to Rs. 105-7, slipped back to Rs. 103-10 on 28th December. Subsequently, however, it gained ground to close at Rs. 104-9.

Ready gold finished at Rs. 104-9, having declined from Rs. 105-7 on 12th December. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,500 tolas, while offtake was 3,000 tolas on an average.

In New York, silver was unchanged at 91⅛c. In London, however, spot silver was marked down from 80⅜d. to 79½d. and forward from 80¾d. to 79⅞d. Gold gained from 250s. 6d. to 250s. 8½d.

The following comparative table shows the trend of market during the week under review:

	2-1-1957	Highest	Lowest	12-12-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	104 9	105 10	103 8	105 7

METALS MOVE UP

(From Our Own Correspondent)

CALCUTTA, *1st January*

The fortnight under review evidenced fair recovery in the prices of base metals. Business passing was, however, limited. Earlier, the Government's announcement of its decision to permit forward trading in copper, zinc, lead and tin throughout the country was hailed as a step in the right direction. Hedging facilities, it was thought, would lead to expansion of business as well as to an automatic stockpiling on which consumers would lay their hands in the event of an emergency. During the period under review, tin was the strongest feature. The price rose to Rs. 588 from Rs. 566. At the closing level, the quotation was several points above the replacement cost. The British Government's announcement to release 2,500 tons of tin from its stockpile introduced weakness in the London quotation for a time, but when it was realised that six months' would elapse before selling could take place, a recovery set in.

From Rs. 70-4 electrolytic zinc rose to Rs. 71, but after falling to Rs. 69-8 again strengthened to close higher at Rs. 72. The supply position in the local market continued to be satisfactory, but there is no prospect of immediate arrivals. The American Government's decision to continue stockpiling in zinc in the new year also was another source of strength to the quotation. Lead was firm at Rs. 82, although earlier the price had sagged to Rs. 80. Electrolytic copper moved between Rs. 196 and Rs. 198.

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *2nd January*

The cotton futures market presented a distinctly bearish trend during the period under review. This is only to be expected in view of the presence of a multiplicity of bearish factors. These were: (1) the expectation of a large crop for the current season, (2) the slackness in the domestic textile trade and the consequent accumulation of stocks, (3) heavy arrivals of cotton in interior markets, (4) weak mill demand. The selling spree induced by these factors took both the contracts down to new low levels. Even rumours of the possibility of a fresh export quota failed to exert any appreciable influence.

M.G. Jarilla (March delivery), opening at Rs. 630 on 13th December 1956 as against the previous day's close of Rs. 644-12, began its downward drift consequent on selling pressure and reached a record low of Rs. 621-12 on the 28th. A slight improvement was in evidence thereafter due to rumours current in the market that an export quota of 200,000 to 250,000 bales would be released shortly. Speculative buying induced by the rumour helped a partial recovery of the contract to Rs. 630 today and it closed fractionally lower at Rs. 629-12.

M. G. Vijay (April delivery) opened at Rs. 741 on the 13th December, as compared with the previous day's closing of Rs. 745. After improving to Rs. 743-8, the contract slipped back to Rs. 722-4 on the 28th. The prospect of an export quota imparted strength to the market and the contract rose to Rs. 731-4 today and closed at the same rate.

The following table shows the trend of prices of the two contracts for the period:

(In rupees per candy of 784 lbs.)

	2-1-57	*High*	*Low*	12-12-56
Jarilla (March) ..	629¾	643	618	644¼
Vijay (April) ...	731¼	748	719	745

The East India Cotton Association has amended its by-law subject to the approval of the Forward Markets Commission so that tendering differences can be fixed on the basis of spot rates instead of on the basis of futures prices as at present. This step was taken in order to reduce the wide disparity between the spot and forward prices. However, the amended by-law will not apply to the current contracts but will be operative only in the future when new contracts are inaugurated.

Activity in the spot market remained at a low ebb. Spinner demand was very slack and the heavy arrivals of new crop depressed values. Inquiries from shippers for exportable varieties were few and prices of such styles declined. Inquiries for foreign styles were limited. Some business was reported in Egyptian Karnak and U.S. styles. The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 750; Berar Jarilla 720; Khandesh 760; Vijay 890; Oomra *Deshi* 750; Moglai 710. *Delivery Contracts:* Khandesh 197/3 December 135; Berar 91, Moglai 60 'ON' Jarilla; 320F, 70; 216F, 110; Vijay 13/16; February 105 'ON' Vijay.

A steady trend was depicted by the Karachi cotton market during the period under review. The steadiness was due to local mill support and moderate overseas inquiries. Domestic mill consumption in Pakistan is expected to set a new record this season and this also imparted strength to the market. N.T.R.G. January, which had closed at Rs. 86-11, after improving to Rs. 88-11 on 17th December, declined to Rs. 86-10, on selling pressure induced by the high rates. The March position put on, over the period, Re. 1-3 to Rs. 86-7 The spot section also ruled steady. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 93-4; Punjab *Deshi* 87-4; 4F Roller 91-8; S.G. 98; Punjab Roller 93; S.G. 98; 289F N.T. Roller 92-8; 299F N.T. Sind S.G. 97-8; 289F Punjab Roller 96-8; S.G. 105.

The firm trend noted in Alexandria cotton futures market gathered fresh momentum during the period under review also. The improvement in the international situation and the prospect of a speedy clearance of the Canal appears to have helped sentiment as it would facilitate shipments of Egyptian cotton. The strength of the spot section was an additional encouraging factor.

Export sales from the 1st of September 1956 till the end of November, aggregated 199,234 bales (of 730 lbs.), as compared with 434,051 bales in the same period last season. Actual shipments from 1st September 1956 till 5th December were 100,361 bales, as against 196,179 bales during the same period last season.

The latest available rates—in tallaris per lb.—from Alexandria are given below:

Karnak: January 119.75; March 120.30; May 119.75. *Ashmouni*: February 85.20; April 85.35; June 85.55.

Values in the Liverpool market registered some improvement, during the period. Modest gains were recorded by both the American type contracts though the near deliveries of American Cotton Mixed Growth Contract registered a decline. Mill inquiries for ready cotton were mainly in American and Sudan styles. Trading in shipment cotton remained quiet. Some interest was noted in Indian Oomras and purchases of the order of 500 bales for January-February shipment was reported.

It is reported that at an extraordinary general meeting of the Liverpool Cotton Association held on 20th December amendments were proposed to change the basis of the Sudan futures delivery contract from Sakellaridis to Lambert Seed. The latest available rates—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: December-January 26.80; March-April 26.60; May-June 26.25; July-August 25.85. *American Cotton*

Mixed Growth Contract: December-January 27.20; March-April 27.00; May-June 26.62; July-August 26.20. *Egyptian Karnak Cotton Contract*: January-February 60; March-April 60. *Sudan Cotton Contract*: January-February 61.30.

Prices in the New York market ruled generally easy, due mainly to hedge selling in nearby March and May. Trade buying was restricted, reflecting the listless condition in the textile market. Uncertainty over the 1957 price support levels acted as depressing influence in new crop dealings.

The C.C.C. sold a further quantity of 113,800 bales under the new export sales programme, raising the total sold thus far to 6,179,593 bales. The average price at average location accepted for basis Middling 1" cotton was 26.88 cents and the minimum price for basis Middling was 25.40 cents. The minimum price accepted was 15 points higher on account of carrying charges as previously announced. The U.S. Secretary of Agriculture has announced an increase in the Soil Bank payment for Upland cotton for the 1957 season from $24 per acre to $54.15 per acre. The unit rate of Soil Bank payment of 15 cents per lb. has not been changed. Farmers will be encouraged to designate the same lands to Soil Bank in 1958. Those who do so will be paid in 1958 an incentive rate of 110 per cent. of the regular rate. This is proposed because if farmers shift acres each year it will defeat the purpose of the Soil Bank Programme, of reducing production. The Soil Bank Programme does not apply to the American Egyptian cotton in 1957 since it is not in surplus supply.

The following are the latest available quotations from New York, as compared with those on the 11th and 4th December:

(In cents per lb.)

	31-12-56	11-12-56	4-12-56
Spot	34.65	34.65	34.40
December	—	34.37	34.91
March	34.19	33.98	33.98
May	34.16	33.88	33.86

RAYON YARN FIRM

(From Our Own Correspondent)

BOMBAY, *2nd January*

The most important event in the yarn market since our last report on 12th December last is the drastic cut in the import quota for art silk yarn for the half-year ended June 1957. Thus, the overall quota has been reduced from 25 to 15 per cent. The actual extent of the cut in the case of 120 deniers and 150 deniers comes to 5 per cent. and 2½ per cent., the revised quotas being 20 per cent. and 7½ per cent., respectively. The Government's announcement of the reduction in quota—made on Saturday last—immediately let loose a buying spree in the market which resulted in a sharp rise in prices. The rise would have been very much more marked but for unhelpful factors like continued stringency in the money market and reports of depressed conditions from consuming centres. Staple fibre yarns, however, depicted an easy note, thanks to expectation of enlarged arrivals of yarn and fibre in the coming months as a result of the continuance of the same import quotas as those prevailing in the second half of 1956. Cotton yarns also ruled easy, following bearish advices from the cotton market.

Another notable development in the yarn market since the last report has been the settlement, through the good offices of the Bombay Yarn Merchants Association and Exchange Ltd., of the controversy on the question as to who should bear the additional burden of excise duty and import duty on art silk yarn and staple fibre yarn. It has, for instance, been decided to take, for the purpose of settling the difference of the additional import duty, an average of the market rate as on 30th November 1956 and the rate as on the steamer's landing date and then to calculate the import duty on the average price on the old basis. The difference between the new specific duty and the import duty on average price thus calculated will be exchanged between the seller and the buyer. A sub-committee has been appointed to decide all questions of dispute. In the case of excise duty, the National Rayon Corporation Ltd. has agreed to consider favourably the question of forgoing the excise duty on November 1956 delivery goods and its final decision will be communicated in due course. Meanwhile, the Association has advised the members to settle their outstanding payments against the goods of the November 1956 delivery without charging at present the amount of excise duty until the final decision is arrived at. As soon as the final settlement is made, the Association will advise the members to that effect. With regard to the goods of December 1956 delivery, however, the National Rayon Corporation Ltd. has not agreed to forgo the excise duty, in spite of repeated requests, and, therefore, the excise duty shall be payable by the buyers to the sellers. With regard to import duty on staple fibre yarn, it has been decided that the difference between the import duty at the old rate on the invoice value and the present specific duty and, in addition, one anna per lb. should be given by the seller to the buyer.

During the three-week period under review, Snia rayon yarn (120 dull cones) for February delivery jumped up by Rs. 16 to Rs. 823. Spot 120 Japan advanced by 15 pies to Rs. 4-5. 150 Japan spurted by an anna to Rs. 4-8. 120 Italy was firm at Rs. 4-3, as also 150 Italy at Rs. 3-14-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade gathered three pies to Rs. 3-8-9. 120 Bt. cones 1st grade, however, receded by half an anna to Rs. 3-12-3.

Staple fibre yarns, as already stated, ruled easy. 40x2 February contract slipped by Rs. 5 to Rs. 648. Spot foreign yarns (80x2) were subjected to heavy selling pressure and moved downwards. Fujis fell by As. 7 to Rs. 5-12. Paramounts dropped As. 5-9 to Rs. 5-9-9. Among indigenous yarns (40x2), Centurys declined by 15 pies to Rs. 3-8-3. New Greats lost an anna to Rs. 3-6-9. Kohinoors shed a like amount to Rs. 3-9-6.

In the cotton yarn section, 40 counts came in for selling. Minaxis receded by As. 11 to Rs. 27-12. Gokaks retreated from Rs. 28-8 to Rs. 28. Deals in 20s were put through at lower rates, Gokaks easing by As. 6 to Rs. 19 and Maduras by As. 2 to Rs. 20. Among 60s, Raghuvanshis were neglected at Rs. 56-10, as against Rs. 57-4 three weeks ago. Moderns lost As. 4 to Rs. 63. Finlays, however, evoked special support and hardened by As. 12 to Rs. 61. Among 80s, Moderns improved by As. 8 to Rs. 77-3, while Finlays declined by As. 4 to Rs. 80. Thirty counts Maduras were quiet at Rs. 24-4. Centurys gained As. 2 to Rs. 22-10. Ten counts Moderns and Podars were unchanged at Rs. 15-10 and Rs. 15-8, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those three weeks before:

	2-1-1957	12-12-1956
Art silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.
120 Dull Cone Snia February	823 0	807 0
120 Japan (per lb.)	4 5	4 3½
150 Japan (per lb.)	4 8	4 7
120 Italy (per lb.)	4 3	4 3
150 Italy (per lb.)	3 14½	3 14½
Staple fibre yarn (per case of 200 lbs.)—		
40×2 February	648 0	653 0
40×2 New Great (per lb.)	3 6½	3 7½
40×2 Century (per lb.)	3 8½	3 9½
40×2 City (per lb.)	3 8	3 7½
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	15 8	15 8
20s Madura	20 0	20 2
30s Madura	24 4	24 4
40s Gokak	28 0	28 8
60s Finlay	61 0	60 4
80s Modern	77 8	77 0

OILSEEDS MOVE UP

(From Our Own Correspondent)

BOMBAY, *2nd January*

During the period between 15th December 1956 and today, the local oilseeds market displayed, on the whole, an upward trend. During the first three days of the period under review the market remained steady under the leadership of groundnut, following bear covering and keen support from spot houses. Subsequently, however, the constituents of the market reflected varying trends, though, towards the close of the period, prices rallied in the two chief sections, namely, groundnut and castorseed. After the first three days, the trend was influenced by realising pressure, heavy arrivals and heavy unloading by upcountry operators, as in the case of groundnut, and fears that export duty on castor oil might be stepped up, as in the case of castorseed. Since 24th December, however, both groundnut and castorseed displayed, on the whole, an upward trend, following rumours of special export quota for the U.S.S.R. which caused replacement buying from speculative houses, expectations of favourable export policy and normal traffic through the Suez, and bear covering. While linseed, on balance, declined slightly for want of support, cottonseed was sympathetically better.

Groundnut futures section opened on 15th December at Rs. 157-8 and touched the peak level of Rs. 161, on 18th. Subsequently, however, it receded on realising pressure to Rs. 152-4 on 22nd. For the aforesaid reasons, again, the section improved gradually and reached the highest level of the period of Rs. 161-4 today before closing at Rs. 160-6. It made, thus, a gain of Rs. 2-14, as compared with 15th December. In the spot section, Karad Bold hardened by As. 6 to Rs. 32-8 after witnessing similar fluctuations. Groundnut oil ex-mill, however, lost As. 12 at Rs. 18-8 as compared with the opening day.

Linseed May 1957 contract ruled steady during the first three days, having fluctuated between Rs. 30-2 and Rs. 29-14. Subsequently, owing to lack of support, it eased and moved between Rs. 29-4 and Rs. 29-14 till the end of December. Today, again, it reached the level of Rs. 29-14 before closing at Rs. 29-10. Over the period it thus lost As. 6. In the spot section, too, a similar trend was in evidence. Bold Ready shed Rs. 2-6 at Rs. 34. But linseed oil ready, improved slightly and was quoted today at Rs. 19-2.

In the castorseed section the futures contract opened the period at Rs. 158, but declined to Rs. 153-8 on 19th December. On 21st, again, it moved up to Rs. 160, and, though it reacted slightly during the following day, it resumed its upward trend for the reasons already given, and touched the level of Rs. 167 on 27th. On technical grounds it slided back to Rs. 162-4 on the following day, but moved up slowly to Rs. 171-8 today, before finishing at Rs. 168-12. The contract improved during the period by no less than Rs. 11-8. In the spot section, Bold Ready gathered As. 14, at Rs. 36-4. Oil B.S.S. too, rose by As. 4 to Rs. 23-6. Exports of castor oil during the first three weeks of December from Bombay amounted to 2,358 tons. It is expected that for 1956, the total exports would reach the 36,000-ton mark.

Cottonseed February contract, having opened the period at Rs. 89, reached the highest level on 18th December at Rs. 93-12, but subsequently fluctuated between Rs. 88 and Rs. 90-8 before closing today at Rs. 90.

Among the others kardiseed Bold ready lost Re. 1 at Rs. 21 and nigerseed Madras Rs. 1-12 at Rs. 29-4.

The Import-Export Controller of Rajkot announced on 1st January that export of castor oil, linseed oil and cottonseed oil will continue to be licensed freely without quantitative restrictions to all permissible destinations, excluding Portuguese territories, upto the end of June 1957.

The following table shows the prices of oilseeds and oils at close as compared with those on 12th and 5th December 1956:

	2-1-1957	12-12-1956	5-12-1956

SUGAR QUIET

(From Our Own Correspondent)

BOMBAY, *2nd January*

Since the last report dated 12th December 1956, the sugar market has been ruling quiet. In the absence of confirmation of reports regarding sugar exports to Pakistan, traders are not inclined to extend their commitments either way. The uncertainty over the release of current season's production and rumours of an upward revision in excise duty on sugar have also chilled the enthusiasm of operators. Consequently, turnover has been limited, with fluctuations in prices confined to a narrow range, the general tendency being downward.

Over the past three weeks, spot quotation for both medium and large grains has dropped Rs. 2 to Rs. 91—Rs. 92 and Rs. 94—Rs. 102, respectively. Small grain is unaltered at Rs. 91. British refined sugar, however, has advanced by Rs. 2 to Rs. 95 per 2 cwts., owing to paucity of stocks.

In the forward section, *Fagan* delivery contract for 'C' grade sugar which had at one time touched a high of Rs. 94 is quoted today at Rs. 92-8.

Arrivals of indigenous sugar into the sugar market during the week under review aggregated 27,600 bags.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER DRIFTS LOWER

(Messrs. Parekh & Co.)

BOMBAY, *2nd January*

Malabar black pepper during the fortnight continued to drift lower with restricted turnover and narrow trading owing to X'mas and New Year holidays. All the arrivals of new crop were not absorbed and, as such, were exerting pressure. As a result, sentiment remained subdued. Alleppey was seller at Rs. 650 while garbled at Cochin was traded at round about Rs. 95. Advice from New York was discouraging, partly owing to the holidays and partly because grinders were showing small interest. New York dealers are, however, reported to be marking time and are likely to start replacement and investment buying as soon as Malabar steadies up.

Sarawak and Lampong are reported firmly held as sellers are cautious owing to Sumatra riots. Short sellers are reported buying. There are rumours of some buying of Malabar pepper by Russia but the quantity involved is not so heavy as to lift up the prices.

The future of the market depends upon how New York shapes its buying policy during the first week of January when business is expected to be more regular after the long holidays. The holding power of Malabar growers and their resistance to lower prices will play an equally important part in arbitering the world pepper prices since Malabar pepper is cheaper than any other pepper.

In the A.S.T.A. section, January shipment was done at $0.24, while January-February-March changed hands from $0.24⅜ to $0.24½. April-May-June was quoted at $0.25.

In the delivery section prices were seesawing under bouts of selling and buying by local operators. Following are today's nominal quotations: Ready delivery Rs. 82 per Bengal maund; February Rs. 562-67 and March Rs. 568-73 per candy of 5¼ cwts.

TEA PRICES HARDEN FURTHER

(From Our Own Correspondent)

CALCUTTA, *1st January*

Fully steady conditions were in evidence during the export and internal consumption sales held on 17th and 19th December 1956, respectively, and a fair addition to prices for the superior teas on offer was recorded. By all accounts, the discontinuance of plucking as from the 20th November by the North-east Indian gardens has turned to the advantage of the tea industry. This timely step has meant a shortfall in production by about 30 million lbs. of tea of the poorer varieties.

The North Indian output up to the end of November amounted to 533.8 million lbs., as against 521.1 million lbs. for the corresponding period of 1955. Output in Ceylon up to the end of November was 9.1 million lbs. shorter, at 339.6 million lbs. World output of tea in 1956 is estimated to have fallen by 11 million lbs. It is this satisfactory statistical position coupled with the fully steady conditions in the Mincing Lane auctions, consequent on several consuming countries having gone to London to get their supplies to overcome their shortage, which was responsible for the upward trend in prices. It is interesting to note, in this connection, that as late as last week-end several firms in London announced an increase in the retail price of tea.

The trade has noted with satisfaction the New Delhi announcement fixing the export allotment for 1956-57 at 443.3 million lbs., representing 62 per cent. of the crop. The trade expects that the present price levels would be maintained in view of the close relation between supply and demand, and also in view of the increased demand for export. There is good demand from Egypt, the Egyptian Government having recently issued a licence for the immediate import of 2.2 million lbs. of Indian tea valued Rs. 80 lakhs. Russia and East European countries continue to act in the Calcutta market. The demand from Communist countries has been more significant during 1956 than in the past, and this factory together with the shortage of shipping space to London is likely to maintain the higher trend in London auctions also, although any shortage of tea is ruled out.

From what Prime Minister Nehru stated, it is clear that traffic through the Suez Canal will be resumed by the end of March. In the meantime, plenty of tea has been bought by consuming countries, which have built up stocks in view of the unsettled conditions. So, when normal traffic through the Canal is resumed there is the fear in local trade circles that depression might set in, notwithstanding the overall shortfall in world output. However, immediate prospects are good.

A total of 68,740 packages was catalogued in the export auctions held on 17th December. There was strong demand and fannings provided the strongest feature. Clean black teas rose by As. 3 and low mediums and clean commons advanced by As. 2. The best liquoring C.T.C. teas were shown keen attention. Among orange fannings and medium Assam B.O.Ps, the lower grades were higher by an anna to As. 2. Whole leaf grades met with keen demand and advanced by As. 3. The better Darjeelings gained by As. 2 to As. 4. The quotations were: Best C.T.C. Assam B.P. Rs. 3, clean black pekoe Rs. 2-7-6, medium Assam B.P. Rs. 2-7, and plain B.P. Rs. 2-5-6.

During the sale for domestic consumption held on 19th December 1956, 26,503 packages of dusts were on offer. Here also there was good general demand. Black leafy teas suitable for export were paid a premium of As. 2 to As. 3. Prices for Dooars, commons and orthodox Assams advanced by As. 1½. C.T.C. Assams possessing good liquors were steady, but the rest of the offerings gave way by an anna. Easier trends were recorded in the grainy teas and Darjeelings on offer. The rates were: best Assam C.T.C. Rs. 2-10 to Rs. 2-11, medium Assam C.T.C. Rs. 2-6, medium Assam grainy dust Rs. 2 to Rs. 2-0-6, and medium Dooars Re. 1-15.

Leaf offerings amounting to 2,613 packages were in good demand. Prices were fully firm, but the residue teas were As. 2 to As. 3 higher.

WIDE FLUCTUATIONS IN JUTE

(From Our Own Correspondent)

CALCUTTA, *1st January*

This review covers the period from 11th December to date. Prices for both raw jute and jute goods advanced during the period and on 18th December reached the highest levels. Since then, the trend was downwards. The period was highlighted by the considerable interest which mills evinced in raw jute. For some time past, mills had realised that getting supplies at economic prices from Pakistan was becoming difficult, and that they should improve their stock position by purchasing as much as possible of the indigenous fibre. Stocks of jute with mills at the beginning of the current jute season amounted to 829,000 bales and arrivals during the four months ended 30th November aggregated 2,557,000 bales, as against mills' consumption in the same period of 2,521,000 bales. It should be noted that, of the arrivals, a considerable portion had found its way to Cossipore stocks. In order, therefore, to improve the stock position before the worst part of the season commenced as regards fresh arrivals, mills began to purchase raw jute in greater quantities. Prices rose, and the uptrend was duly reflected in jute goods also.

With the active support of mills, stockists were able to realise higher prices. In one day, the quantity that changed hands to mills was as much as 300,000 maunds. Stockists were naturally reserved and fully exploited the buying fervour exhibited by mills. On 11th December, Assam upper bottoms had stood at Rs. 32-8. By the 18th, the price rose to Rs. 33-8. At Rs. 34-8, local daissee bottoms added one rupee. There was particularly greater demand for northern and Assam jutes. When mills found that their buying support was causing artificial shortages in the market, they withdrew. Prices reacted, and with restricted buying in the market local daissee bottoms sagged to Rs. 33 and upper Assam bottoms to Rs. 32.

Recent events have clearly demonstrated that India should become self-sufficient in raw jute, as otherwise Pakistan would continue to be in a position to mould Calcutta prices for jute goods and raw jute to its advantage. More area should be brought under jute, and the quality should improve. It is evident that the supply position in Pakistan is getting tight, and naturally that country has already decided to increase the jute area in the next season. From the present trend of the Calcutta market, it would appear that raw jute prices would remain steady for the rest of the season. This would, it is to be hoped, be sufficient incentive for growers to sow more area in the next season.

Shipping during December is believed to have been satisfactory as regards hessians. Between 1st and 20th December hessians shipped amounted to 25,500 tons, as against 26,700 tons for the same period in November. Sacking shipped was lower, at 19,400 tons, as against 27,400 tons. In view of this, the stock position as at the end of December, when announced, would not be encouraging from the market point of view. The rise in prices of goods earlier in the period under review puzzled overseas buyers. By 18th December, ready B. twills touched Rs. 124-12 and hessian 40" 10 oz. Rs. 48-8 from Rs. 121-10 and Rs. 46-4, respectively. Speculators were naturally active. For a time, however, the uptrend was arrested on rumours of the possibility of New Delhi levying an excise duty on jute goods. The reported increase in burlap stocks in the United States by 6 million yards to 268.4 million yards at the end of November was paid little attention, inasmuch as ready stocks were lower and it was actually the goods afloat that had increased not only to the extent of the overall increase in stocks but also to make good the decline in spot goods. The report that burlap consumption in America in November was lower by 6 million yards, at 80.5 million yards, did not influence prices, as for the year as a whole consumption figures were satisfactory.

The uptrend could not, however, be sustained, as it was realised that prices had reached levels that would be resisted by foreign buyers. At the same time, raw jute prices were losing the gains recorded earlier. These two factors were adequate to make jute goods move down. Ready B. twills declined to Rs. 119 before closing for the year at Rs. 121. Hessian 40" 10 oz. closed at Rs. 46-10.

KIPS RULE DULL

(From Our Own Correspondent)

MADRAS, 31*st December* 1956

Trading in kips with the U.K. during the second half of December was dull, as importers kept out of the market, with a view to bring down the Madras prices and averaging their earlier purchases at higher levels during November. Tanners, who were aware that the emergency level would not hold out, once the Suez Canal was reopened for traffic and the West Asian situation eased, were operating in the raw centres cautiously.

Arrivals into the market were moderate and offtake by shippers was halting. Prices declined by As. 2 per lb. It was not expected that shipment business during January would be brisk, because several steamers carrying large stocks of kips had arrived in U.K. ports during December. If Madras tanners and merchants do not refrain from making large offers to the U.K. during early January, they will unnecessarily aid further depression in prices.

Enquiries for tanned goat and sheep skins were small at last prices. Locally, prices ruled unchanged, and are likely to hold, provided Continental support continues. Arrivals of market qualities met with ready clearance at unchanged levels. Prices in the raw centres remained firm.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 31*st December* 1956

Quietly easy conditions prevailed in the foodgrain market during the past week. Despite suspension of sales of wheat at fair-price shops for some days due to non-arrivals of Government stocks, wheat not only failed to score gains but eased slightly to Rs. 15-12 per maund for the average quality and to Rs. 16-12 for farm quality. At Hapur, outside buying enquiry of wheat continued to be slack and local stock was put at 56 *khaties*, as against 94 *khaties* a year before.

The Union Food Minister has stated that the Suez crisis has not at all affected the Government's vital food import programme, except that it has created a mentality for hoarding in the country, which, in his opinion, will prove short-lived. During the first six months of 1957, India will import 1.5 million tons of wheat and 700,000 tons of rice. Sales in fair-price shops is being resumed, but the subsidised rate at 3 *seers* per rupee in rural areas has been lowered to 2 *seers* 12 *chhataks* per rupee as against 2 *seers* 8 *chhataks* a year before.

Rice was subdued due to increasing arrivals of new crop into the market and good crop reports from the South. The prices prevailing on Monday were: *Basmati* Rs. 23 to Rs. 25-8; *Ramajawayan* Rs. 20; *Raimunia* Rs. 21-12; coarse quality Rs. 15-8 per maund.

Among coarse grains, gram lost As. 8 per maund during the past two weeks, due to heavy local stocks put at 65 *khaties*, as against half the quantity last year. Other coarse grains also eased slightly, following adequate supply position and good future prospects of new crop due to rains in some of the producing areas. The week-end prices were: Gram: local Rs. 12-8 and *Punjabi* Rs. 13; barley Rs. 13; *bejhar* Rs. 12-12; maize Rs. 12-6; *bajra* Rs. 13-2; *jowar*: brown Rs. 12 and white Rs. 12-12; *guwar* Rs. 9-12 per maund.

Pulse drifted lower on slack outside demand, although local stocks had gone very much. Peas *dara* was quoted at Rs. 13 and white quality at Rs. 14-4. The local stock was unchanged at 17 *khaties*. *Arhar* remained unchanged at Rs. 13-4 per maund and local stock was put at 24 *khaties*. Other pulses eased slightly, due to better stocks and prevailing prices were: *Urd* Rs. 17-8 to Rs. 20-4; *moong* Rs. 14-8 to Rs. 16; *masoor* Rs. 18-12 per maund. Pulses futures also declined during the week, and the latest quotations as on Monday were:—Peas: *jeth* Rs. 9-10-9, farm *maha* Rs. 12-6-6 and *jeth* Rs. 10-4-3; *arhar*: *maha* Rs. 12-4 and *jeth* Rs. 10-10-3; *urd maha* Rs. 18-4.

SUGAR ADVANCES

(From Our Own Correspondent)

HAPUR, 31*st December* 1956

Mill delivery prices of sugar recorded gains during the fortnight under review, thanks to good buying enquiry from all consuming centres. The fairly easy supply position following the Government's release of a further quantity of 231,000 tons of sugar for sale in the free market out of 1955-56 production failed to have any effect on the market. For there were continued rumours that the Government would soon announce an export quota for sugar to West Asia and Pakistan. Rumours of a likely increase in excise duty on sugar also added to the bullish trend. Most of the mills in the country have started crushing for the season and cane supplies to the mills everywhere is reported adequate. The latest mill delivery prices were: Jaswant Rs. 28-8; Simbhauli Rs. 28-12; Mawana Rs. 28-6; Daurala Rs. 29-10; Amroha Rs. 28; Bijnore Rs. 28; Mansoorpur Rs. 28-8 to Rs. 30; Rampur Rs. 31-12; retail Rs. 31 per maund.

The *khandsari* market also advanced slightly in line with the crystal section. Production for new season has begun is most of the areas. The latest prevailing prices were Rs. 23 to Rs. 27 per maund.

Ready *gur* ruled steady and a further fall in prices was checked, owing to better loading facilities. Daily arrivals were at an average of 3,000 to 4,000 maunds and, as outside buying inquiry continued to be fairly good, there was, unlike in previous years, no stock building of *gur* here as yet. Demand was mostly from Rajasthan, Bihar, Bengal, and east U.P. Total arrivals of *gur* into the local market since the beginning of the season here were estimated at 275,000 maunds.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Re. 1-12 per share on 1 20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (e) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

SURVEY

(*Concluded from page 7*)

out of proportion to the cost of manufacture. Secondly, the Government feels it necessary to take steps, perhaps, to control imports in a manner in which it will not normally do, in view of the necessity to keep the economy on an even keel, but it is prepared to do so because of foreign exchange considerations. The Government, therefore, feels that every possible step has to be taken to ensure that matters do not get out of hand.

Moving the Bill for consideration in the Lok Sabha, Mr. Krishnamachari declared that the Bill was essentially a precautionary measure and that the main purpose was not to gather revenues, though, incidentally, it was so. He made it clear that the Bill was intended to operate only for a period of one year. In this connection, he assured the House that the measure would not be used in the case of cotton cloth or art silk yarn; it would not also be used in respect of other commodities, if their supply was co-terminus with the demand for them. In any case, it was not the Government's intention, Mr. Krishnamachari observed, to allow the multiplier effect to operate. Elucidating this point, he said: "If I raise the duty on commodity X by 50 per cent. and, then, if I say it is again increased by 50 per cent., it is not that, instead of being 150 per cent., it will be increased by 50 per cent. of 150 per cent., that is, it will become 225 per cent. and so on. It will not be so. It will only be an increase by 50 per cent. in the aggregate, and n

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare." William Blake

VOL. XCIV. No. 2392 BOMBAY, 12th JANUARY 1957 PRICE: Rs. 1/8

SERMON OR SOCIALISM?

IN less than two months from now, the Indian people will be going to the poll to elect a new Government. It will be the second General Elections after India became an independent Republic about seven years ago, on 26th January 1950 to be precise. It is a unique occasion in the history of the free world, because India is the greatest democracy in the world. Almost all the parties have published their election manifestos. The Congress has the largest backing of the people and is, therefore, in power. The others who are in the Opposition are the Praja Socialists, the Communists, and the Jan Sangh. Of these three, the first two have established connections all over India, while the third is not even known south of Hyderabad-Deccan. Unlike in the last elections, the splinter groups have practically ceased to exist, though there are rumblings in Bihar and the Punjab. It looks as though there will be fewer independents than in 1952, not a welcome development in the present Indian conditions. Excepting for a solitary instance in the Madras State, no new parties have made their appearance on the scene. The exception in Madras is provided by a group of individuals drawn from small holders of agricultural land and merchants of limited means. These people feel that the Congress Party is carrying its land reform and other economic policies so far as to affect the individual freedom adversely and to create a new class of unemployed. It is a courageous move, worthy of emulation by all those who believe in the philosophy of free enterprise, but it remains to be seen to what extent it will succeed.

From the economic angle, the election manifesto of the Congress Party is better than that of any other major parties. There is not much difference between the Congress and Socialist Party manifestos, the Congress having moved further towards the left. Only, the Socialists are more outspoken than the Congress in regard to such matters as nationalisation and taxation. Both, however, pay only lip sympathy to private enterprise, the Congress in a more subtle manner than the Socialists. The Communist Party has changed its mantle but not its spots. Under its regime, there can be no real democracy and no scope for free enterprise, though it may talk about these things. The Jan Sangh says that it is a firm believer in free enterprise and is of the view that the burden of taxation should be reduced so as to give more incentive. But, in the same breath, it talks of a ceiling of Rs. 2,000 to individual incomes. In trying to outdo the Congress in its socialistic and democratic objectives, these parties have drawn up their manifestos in a manner which is far from convincing. The Congress has stolen the thunder of the Socialists; the Communists, in view of their past actions and of their known allegiance to authoritarian rule, appear ridiculous when they swear by democracy and offer scope for private enterprise. The Jan Sangh does not count much and is alleged to be communal in its outlook. Thus, in the absence of any other realistic party, the Congress is the only party worthy of support and seems to be fully assured of a resounding victory in the forthcoming elections.

This does not mean that the election manifesto of the Congress Party is perfect in every respect. While it makes fascinating reading taken as a whole, parts of it are too idealistic to be practical. This is particularly so in regard to economic objectives. And failure to realise them will seriously affect the future of the Congress Party, as it will lead to disappointment and cynicism among the people. It would have, therefore, been better for both their party and the country as a whole, if the Congress leaders had borne in mind that, basically, the Indian people are no different from those elsewhere in the world, that they have all the weaknesses of a human being, and that centuries of preaching and sermonising by eminent sages, philosophers and politicians have not transformed them into a nation of angels. The vast majority of them is as materialistic in their outlook as people in other lands and need the same incentives for working hard and raising the wealth of the nation as their confreres do in the rest of the free world.

One of the complaints against the Congress Party's economic policy is that it is very vague and extremely flexible. It has not, for instance, defined its socialism. Such a definition is necessary, especially because it has repeatedly stated that the type of socialism it has in mind is different from that tried elsewhere in the world. Some attempt has been made by the Congress Party in its latest election manifesto to convey what it means by socialism, but this explanation does not throw any fresh light, as will be seen from the following relevant extract of the manifesto:

"Socialism does not merely signify changes in the economic relations of human beings. It involves fundamental changes in the social structure, in ways of thinking and in ways of living. Caste and class have no place in the socialist order that is envisaged by the Congress. It is important, therefore, that these new ways of thinking and of living should be encouraged, and old ideas about privilege on the basis of birth or caste or class or money, or the hierarchy of office, should be discarded. Men should be judged by their labour, their productive and creative efforts, and their services to society and humanity. The dignity of labour should be recognised, as well as the dignity of the individual in every grade of life.

"The socialist order is a way of life based on the people and not merely on the effort of Government. It is in the measure that the people develop their strength, their discipline, their capacity to work and their co-operative activities that socialism comes into being. Governments derive power from the people and reflect that power as well as the other urges of the people. In economic relations, there should be no exploitation and no monopolies, and disparities in income should be progressively lessened. A national minimum in the general standard of living should be aimed at, so that everyone has the necessaries of life and the opportunity for education, for maintaining his health and for productive work."

If the foregoing broad objectives constitute the socialism which the Congress has in mind, it is not something with which one can disagree; for they only emphasise the widely accepted moral and ethical codes for the conduct of modern man. But it is the means adopted to achieve the economic, as distinct from the social, ends that are important. And it is in this respect that the manifesto is vague. The actions of the Government in the last two years in the name of socialism have also been such as not to inspire confidence in the future.

When Mr. Nehru was asked to define socialism in more precise terms, he clearly stated: "I do not see why I should be asked to define socialism in precise, rigid terms, when it is something which should not be rigid." He declared that socialism could be of many varieties and the socialism of an agricultural country like India had to be somewhat different from the socialism in highly developed industrial communities. He then went on to add that a mere Welfare State was not a socialist State nor all socialist States were Welfare States. What he was aiming at was a socialist-*cum*-Welfare State, by which he meant that people should not be acquisitive-minded. In simple language, all this means that people should not go on amassing wealth; they should give up this tendency and develop a spirit of service and co-operation. There is nothing new in all this which sounds more like a sermon from a philosopher or a religious teacher than an economic policy propounded by the head of a State. As already stated, this kind of preaching has been going on for ages, without making any material change in the basic characteristics of man. It must, however, be said to the credit of Mr. Nehru that he is fully conscious of the difficulties in the way of reforming the society to the pattern described above. But he is determined to do it, with the courage of a man who is fully convinced that he is right. It remains to be seen whether he will succeed where others have failed.

The Congress has declared and Mr. Nehru has reiterated that the socialist structure of society should be achieved only through legitimate democratic and peaceful means, with the co-operation of the people. That makes the task more difficult than in totalitarian countries. Mr. Nehru has, therefore, warned the people not to expect socialism to be fully and firmly established overnight as it were. He reckons that it will take ten or twenty years, nay, even more, to reach the goal set before the country. This observation is in keeping with his repeated statement that the change in the structure of the society should be gradual, without evoking any violent opposition that would retard progress and needlessly dissipate people's energies. While this approach is commendable, it is open to question whether the manner in which many legislations of far-reaching significance are nowadays rushed through Parliament and State Legislatures packed with a docile majority of Congress men is in consonance with the spirit of the socialist society outlined above. In our view, the pressure tactics adopted by the party in power whenever such enactments are to be passed are inconsistent with it. They amount to coercion and not co-operation freely given by the interests affected.

On the subject of private enterprise, the Congress manifesto observes that "it is not intended to nationalise the existing private industries, except where such is considered necessary in terms of planning or where they occupy a strategic position in the economy of the country. Private industry will be encouraged but always in the context of the Plan." This statement, too, is rather vague, for the qualification is of such a general nature that the Government can take over any industry in the private sector at any

time it likes. It supports the widely held impression, both in India and abroad, that private enterprise is being just tolerated as though it is an evil to be discarded as early as possible and not as an essential feature of democracy. The persistent refusal of the Congress Party to recognise private enterprise as a fundamental requisite of democracy is the most disturbing part of its economic policy. It is amazing that a party consisting of many enlightened thinkers and liberal minds should be unable to see that in a country, where the State owns the means of production on an extensive scale and exercises detailed controls over the rest of the economic activity of its people, bureaucracy will flourish and democracy will languish. Such a state of affairs will soon end in State capitalism, which by no stretch of imagination can be called democracy, and ultimately in authoritarian rule. That is the lesson of history and it is hard to believe that history will not repeat itself in India, despite the assurances to the contrary by a democrat and thinker like Mr. Nehru. A little imagination is sufficient to show how vast would be the bureaucracy in India ten years hence, if all the major industries and a large portion of the trade that are now planned were to be in the hands of the public sector, and how easily political opposition could be killed. The fact that the vast majority of the Indian business community is even now afraid of opposing the party in power in the elections, though it is the main critic and sufferer of the latter's economic policy, is a significant pointer to the future.

BHARAT ELECTRONICS

ALTHOUGH the science of electronics, like many branches of modern engineering, commenced with a modest invention in the shape of radio valves in 1904, it has had an astonishingly rapid career, thanks to the impetus given by the Second World War. Electronics is now a major engineering industry and bids fair to become a key industry for a whole group of industries manufacturing a wide range of equipment used in nuclear research, electro-therapy, air-navigation, machine tool industry and defence industries. In India, the benefits of the science of electronics are, perhaps, less well understood than they should be. In any case, their development on commercial lines has been attempted only on a modest scale—and that, too, only recently. The Government-sponsored Bharat Electronics Ltd. is still the only significant effort in India in a field in which other countries are miles and miles ahead of this country.

There may be little use in raking up old issues. But it is difficult to avoid the impression that the course of the electronics industry might have been different if the Government, in 1948, had not held that manufacture of wireless apparatus (excluding radio receiving sets) should be the exclusive responsibility of the Government of India. This passion for possession of industries, nascent as well as unborn, has induced the Government to include, under the Industrial Policy Resolution, 1956, telephones and telephone cables, telegraph and wireless apparatus (excluding radio receiving sets) under the public sector. From the overall national point of view, there is perhaps no great loss, if the Government at least carries out expeditiously enough its self-imposed responsibility for the electronic industry. But actual events show that it is far from making the progress one would expect from it. After years of wearisome discussions, consultations and blue-printing, the Bharat Electronics has just begun to make a little headway, and the equipment it produces is reputed to be three times as costly as the imported counterpart.

Having decided, in 1948, that the manufacture of wireless equipment (excluding radio receiving sets) should be in the public sector, the Government soon set up an exploratory committee to advise it on the steps to be taken to establish an electronics industry. After examining the project reports received from certain foreign firms, the Committee delegated the detailed consideration of these reports to a technical sub-committee in 1950. The sub-committee recommended collaboration with the French firm, C.S.F. Two years elapsed before the Cabinet took a decision on the project. This was followed by the signing of an agreement, in December 1952, for obtaining collaboration and assistance of the C.S.F. for a period of 10 years. An additional two-year period elapsed before the Bharat Electronics (Private) Ltd. was set up in April 1954, with an authorised capital of Rs. 10 crores. It thus took as many as six years for the Government to give its "electronic" idea a concrete shape.

The objectives of the B.E.L. are as wide and varied as they possibly can be. The B.E.L. is expected to design, develop and progressively manufacture electronics equipment, such as transmitters, transreceivers, oscillators, amplifiers and radar x-ray machines, surgical and other appliances and instrument intended for electro and therapy treatment and to undertake the manufacture of specialised electronic components, including valves. The C.S.F., which is to aid the B.E.L. in its manufacturing programme, is to receive Rs. 53 lakhs over a period of 10 years, besides receiving royalties at a graded rate depending on production of equipment patented by the C.S.F. in France; actual payments made so far amount to Rs. 18 lakhs. An exhaustive report on the working of the B.E.L. by the Estimates Committee, which was recently published, reveals that the agreement with the C.S.F. is "working satisfactorily." Nevertheless, the Committee has emphasised that a "true opinion" can be expressed only when the manufacturing programme, in terms of the agreement, has been fulfilled. The revised manufacturing programme (excluding three or four radar sets that may be assembled) for 1956-57 and 1957-58 is as follows:

(In numbers and cost—Rs. in lakhs)

Receivers Universal R.U.—676 (Rs. 27); 400 Watts Transmitter E.T.—304 (Rs. 121); V.H.F.—20 and 10 Watts Transformers—300 (Rs. 15); H.F. 30 Watt Transreceiver—300 (Rs. 18); 50 K.W. S.W. Broadcast Transmitter—3 (Rs. 16); Rawin Transmitter 20,000 (Rs. 5); WSP—120 (Rs. 2.4); 50 Watt H.F. Transmitter—62 (Rs. 4); and miscellaneous equipment such as consoles—(Rs. 2)—Total (Rs. 210).

A rough index of the immense scope there is for the expansion of an industry manufacturing wireless components is furnished by the size of the imports of such components into India. During 1953-54, 1954-55 and 1955-56, imports of such equipment aggregated Rs. 83.94 lakhs, Rs. 96.51 lakhs and Rs. 1.61 crores; these figures show how imports have progressively increased. An assessment of the manufacturing programme of the B.E.L. against this background reveals certain disquieting features. In the first place, the B.E.L. does not manufacture valves, which, as the Estimates Committee points out, are "almost the core of electronics." The Committee has rightly emphasised that negotiations for the manufacture of valves in India should be expedited and production undertaken at an early date. Secondly, it is not clear whether any concerted attempt has been made to manufacture or to get manufactured a larger percentage of components required by the B.E.L. It would appear that, in the second year of production, purchases of raw materials and components will amount to Rs. 120 lakhs, of which imports will amount to Rs. 106 lakhs or about 90 per cent. of the purchase. Thirdly, the overall utilisation of machinery at present is stated to be only 11.17 per cent., out of a total of 77 machines installed so far. The Committee has pertinently stressed the need for "careful advance planning," in order to avoid a situation where machinery is allowed to lie idle for long periods.

Above all, the wireless equipment of the type manufactured by the B.E.L., according to the Estimates Committee, is available in India at "perhaps one-third or half the selling price charged by the B.E.L." The Committee regrets to observe that the prices charged by the B.E.L. should be "so exorbitant", especially in view of the fact that imports by the B.E.L. are permitted at a concessional customs duty of 2⅜ per cent. *ad valorem*, as compared with the normal duty of 31½ per cent. The audit report on Defence Services for 1956 has also referred to the fact that consumers are "reluctant" to pay the high prices charged by the B.E.L., inasmuch as "imported equipment, which will serve their limited purpose, could be obtained at much lower prices." No satisfactory explanation for the divergence in the manufacturing costs of the B.E.L. and those of imported equipment is available. It is perhaps, too much to attribute this wide gap entirely to the fact that foreign countries have an established industry with a much wider market at their command. The Committee, on its part, admits that the efficiency of skilled workers in India is only one-half and, in some cases, even one-third of the output of a French worker. But it is unable to "appreciate that this difference in productivity alone accounts for the enormous disparity between the prices of the equipment manufactured by the B.E.L., mostly with imported raw materials and components and of the imported equipment, since ordinarily labour charges account for only 40 per cent. of the expenditure." It has accordingly called for a review of manufacturing costs, purchase procedure, overheads and other aspects of production. It has urged a careful scrutiny of the reasons for the disparity in prices with the help, wherever necessary, of an experienced chartered or cost accountant and a representative of the Comptroller and Auditor-General. It is to be hoped that the authorities will lose no time in ordering such an inquiry.

Since the public sector is expected to expand very rapidly in the near future, it is of the utmost importance that an efficient system of costing should be implemented. Further, the system of costing adopted should, in fact, be more rigorous than what is allowed for the private sector, in view of the fact that the public sector works in a sheltered atmosphere, free from competition. It may be noted, in this connection, that the prices of equipment manufactured by the B.E.L. are fixed on the basis of actual cost of materials and labour and adjusted overheads—to arrive at overhead rates, the expenditure on the factory is estimated as to what it would be when the factory reaches full production—plus ten per cent. for profit. It may be worthwhile investigating how these terms compare with those allowed for certain controlled industrial enterprises in the private sector.

Be that as it may, the Committee has done well to highlight certain general issues relating to control over production costs in State undertakings. At present, the responsibility for laying down an efficient system of costing, it is stated, rests on the management of the State-sponsored industrial unit concerned, though it also falls within the jurisdiction of the statutory auditors and of the Comptroller and Auditor-General of India to review the system during the course of their audit. Moreover, in the Ministry of Finance, there is a cost accounts branch which investigates into production costs in industrial units as and when the necessity arises. After reviewing the position, as it obtains today, the Committee has made an important suggestion. It has urged the extension of the functions of the cost accounts branch of the Finance Ministry. It would appear that the branch has no statutory or other authority to lay down a system of accounts; nor is it required to investigate whether its reports, once they have been submitted, are being implemented. The Committee has suggested that the branch should be entrusted with the specific duties of laying down the system of costing to be followed in each undertaking in the public sector and of conducting systematic concurrent or periodic reviews in regard to the adequacy or otherwise of the cost accounts system. Perhaps, the adoption of this suggestion will infuse into State undertakings a higher sense of "cost awareness" than what apparently prevails today.

In the section dealing with the organisation of the B.E.L. also, the Committee has drawn attention to certain general issues. Since the B.E.L. should take cognisance of the entire needs of the industry in respect of electronics equipment and plan its production accordingly, the Committee has suggested the gradual replacement, to the extent possible, of the officials on the Board of Directors by non-officials, including industrialists, scientists, a chartered accountant, the Director of the Indian Institute of Science or of the Pilani Institute. Indeed, the Committee feels that, even if production by the B.E.L. were to be confined to the requirements of the Government departments only, the Board of Directors should not have an overwhelming majority of officials, since the presence of a large number of officials "invariably tends to bring to the organisation and its functions an official approach of a type which is generally found in most Government departments and to that extent defeats the very object of setting up a private limited company to work on business principles."

Answering a possible objection to its suggestion that it may be difficult to obtain the services of the right type of non-official who can take a genuine interest in the undertaking in which he has no financial stake, the Committee observes that it should be possible to find men who will undertake the work out of "patriotic motives." Here, the Committee is certainly not straining its optimism too far. Surely, if it is possible for officials to work out of patriotic motives, there is no reason why non-officials with similar motives cannot be found. In this connection, the Committee has reiterated the suggestion, made in an earlier report, that at least 25 per cent. of the share capital of State undertakings should be available for subscription by the public. Such a spread of share capital, as the Committee itself points out, would secure public interest and co-operation in the management of State enterprises. It would also enable the authorities to find suitable non-officials on the Board of Directors.

WILL GOVERNMENT PLEASE CLARIFY ITS POLICY ON BONUS SHARES?

CEILING ON INCOMES—COFFEE INDUSTRY—STERLING

THURSDAY, 5 P.M.

MARKET GOSSIP

THE depression in the share markets continues. Fears of serious settlement difficulties have led to distress selling. Encouraging results of banks for 1956 have been ignored. And so also the handsome dividend declared by the Bombay-Burmah Trading Corporation. On the basis of the dividend proposed and at its current market value, the bigger scrip of the Corporation offers a yield of 7 per cent. and the smaller scrip about 8 per cent. Yet, they have not evoked any fresh support. On the contrary, there has been some liquidation. Earlier in the week, the Life Insurance Corporation extended sizable support to steels and selected miscellaneous scrips. This, too, failed to impart any sustained strength to the market. The reassuring statement of an official Spokesman that the compulsory deposit scheme would be applied lightly and without causing any hardship to the companies affected, as well as his interpretation that the Capital Gains Tax would not impose any heavy burden on middle class investors, did not induce any change for the better. Apparently, the market has sunk to such low levels that it cannot lift itself without some positive encouragement from the Government. The Finance Minister could give some relief in the excise duties on cloth and relieve the stringency in the money market which is retarding the free movement of manufactured goods. But, in the present frame of the Government's mind, to ask for any such relief is to cry for the moon. Indeed, the share market ought to be grateful to him for remaining silent, after his continuous attack against private enterprise, in general, and the banking community, in particular, last month.

Since the beginning of this week, cotton mill shares have lost much more than the others. This is due to adverse reports about the profits of mills for 1956. It is stated that due to higher labour charges, heavier excise duty, fall in production in the last four months of the year, drop in internal offtake, and lower price realisation from September onwards, the profits of Bombay mills for the past year will be only about 80 per cent. of those for 1955. There may be some exceptions, of course, as, for instance, Bombay Dyeing. But, generally, the experience of the majority of mills is believed to conform to the aforesaid expectation. It is even wondered whether, with the higher taxes on dividends and the compulsory deposit system, some of them will be able to maintain the dividend for 1956 at the preceding year's level.

* * * *

Among textile shares, Centurys and Bombay Dyeings have suffered heavily. From Rs. 581-4 on 22nd December 1956, Bombay Dyeing has dropped to Rs. 543-12, a decline of Rs. 37-8. Similarly, Century has retreated from Rs. 515 to Rs. 481, that is, a loss of Rs. 34. Such a heavy fall in the case of two first class scrips has caused demoralisation among the operators. Many had bought these shares in the expectation of a bonus issue. In the case of Bombay Dyeing, the expectation was mere speculation, whereas in the case of Century it was based on the Directors' proposal made public in the first week of December. The Directors had, of course, made it clear that their decision was subject to the Government's consent. For the past fortnight, reports are circulating in the market that the Government will not allow issue of bonus shares for some time to come or that it will tighten the conditions of such issues in order to make sure that they do not adversely affect its compulsory deposit scheme. No confirmation of these reports are available, but the market is not inclined to regard "no news as good news." On the contrary, its interpretation of no news in this case is the reverse of it.

Here is a development on which the Government can afford to be helpful to investors, without in any way compromising its position in regard to the future. The Finance Minister has already announced, as part of his tax proposals on 30th November last, that there would be no change in the tax on bonus shares for the financial year 1957-58. If the Government has decided to alter the conditions under which bonus issues can be made, it will lose nothing by taking the public into confidence, instead of waiting to give its reply to each applicant individually. The bonus formula which was being followed till the presentation of the new tax proposals is now fairly well known to the public. There will, therefore, be no harm if the public is informed of any change in this formula or in the policy of the Government. As it is not the intention of the Government needlessly to hurt the interests of genuine investors and as professional speculators are exploiting the uncertainty on this point to their advantage, it will be well advised to issue a statement, clarifying the position. We have no doubt that company managements and thousands of investors will greatly appreciate prompt action by Government in this connection.

* * * *

The share markets were afraid that, at the Indore session of the Congress Party, there might be some fireworks against the private sector and that the election manifesto approved by the Working Committee might be tilted against this sector further. Fortunately, however, this fear has not materialised. The only change made in the manifesto relates to landless labour. This change is to the effect that suitable action should be taken to improve the economic position and status of landless labour. Attempts made by some members to get the party committed to a ceiling on incomes and to fix a time limit for bringing down the disparity between the highest and the lowest incomes did not succeed. Mr. Nehru was definitely opposed to any such specific commitment on the part of the Congress Party, as it was impracticable. The remarks made by Mr. Nehru on this question were quite realistic and we wish he had displayed the same sense of realism while commenting upon the capitalist society.

Mr. Nehru said that the Government was trying through legislation to prevent the accumulation of wealth in the hands of a few. What was important was not what a man might earn today but *generations of earnings piling up* and creating conditions where a person could earn without working. Unearned income, he remarked, was bad from the socialist point of view and, therefore, the sources of such income should *gradually* be dried up. The Congress Government, it may be noted here, has already initiated steps in this direction. There is already the Estates Duty, the rate of which is bound to be enhanced progressively. The tax on capital gains has just been introduced. It is far more severe than nine years ago when it was first imposed and suspended after being in operation for a short while. A tax on gifts is widely expected; it may come either next month or in May after the General Elections. Since Mr. Nehru refers only to earnings piled up over generations and favours the gradual drying up of sources of unearned income, an annual tax on total wealth does not seem likely, for it will be too drastic a measure.

To revert to Mr. Nehru's observations on ceiling on incomes. After referring to unearned incomes and piled up savings over generations, he characterised the demand that a man should not have more than a specified income a month as totally impracticable and that it could not be done. "You can say, of course," he added, "that every person above a certain income should be taxed 100 per cent. But you will not be able to enforce it and you will encourage all the wrong tendencies of deception, of hiding, of avoidance and all that." Proceeding, he said:

"Apart from this, the question of incentives is important. It is a fact that today we have to pay sometimes Rs. 5 lakhs a year for the services of a foreign expert but he saves us Rs. 50 lakhs or Rs. 100 lakhs in a huge river valley scheme. May be this is only for a short period till our men have learnt the job, but the point is that, in a dynamic society like this, it is very difficult to say what will happen if you take away the incentives to special effort. I have seen in every country I have been to, socialist, communist or other, that, the moment they took away these incentives, they suffered and they had to go back to providing the incentives.

"The real thing is that we should concentrate on providing a minimum standard for everybody. If you attain that automatically, you achieve the other things—20 or 25 or 30 times. (The ratio between the minimum and the maximum levels of income.) It may not come in regard to a few persons but so far as 99.9 per cent. of the population is concerned, it comes. Then, after achieving a minimum for everybody, you can take the next step. So I beg of you to consider these problems in a realistic way."

It will be seen that Mr. Nehru has a correct appreciation of the difficulties and the dangers involved in fixing a ceiling on incomes either directly or indirectly. It is also very refreshing to find that he has a better realisation now than in the past of the importance of incentives to encourage special effort. It is to be hoped that other Congress leaders, particularly the Finance Minister, Mr. T. T. Krishnamachari, will take note of this shift of emphasis in Mr. Nehru's thought and stop deriding profit-motive as something unworthy of a socialist State. It has become a fashion nowadays among most of the Congress men and top Government officials to advise the people to place service-motive before profit-motive, though they have never cared to explain as to how one could render social service, unless one had the wherewithal for it and well provided for one's old age and family against the rainy day. Nothing makes the ordinary man to work hard as the prospect of good material reward, if not immediately, at least in the near future. And 99 per cent. of the people are just ordinary men.

Mr. Nehru's views on capitalism are, however, out of date, based as they are on blind prejudice. He said: "In the olden days, capitalism was an advance (over feudalism), because it undoubtedly added greatly to the wealth of the world by exploiting machines and the like, apart from exploiting human beings. Capitalism did a great deal of good to the world. But society outgrew it or is outgrowing it and, therefore, it is out of date and we think it is injurious and we want a socialist structure basically." These conclusions will not bear detailed scrutiny. Capitalism in the later half of the twentieth century represents a great advance over its predecessor twenty years ago. Given an enlightened and competent Government, capitalism will provide the quickest road to economic progress and attainment of a real Welfare State, and that without endangering the prospects for democracy, a condition which socialism cannot always fulfil. It is not suggested that capitalism is free from defects, but these defects can be kept well under control, if the Government exercises a careful watch over it. In fact, it is one of the fundamental functions of a democratic Government.

The future of the South Indian plantation scrips continues to hang in the balance. Their recent past has been sufficiently discouraging even to the most courageous among investors. A scrip in an agro-industrial sector, like the plantation industry, is no doubt susceptible to changes in weather so that an investor has necessarily to take this uncertain factor into account. But the odds have unfortunately been heavily weighted against him, for it is not the risks of the weather alone that he has to brave but the more uncertain and, possibly, more hazardous risks in the man-made economic weather. The recent publication of the Madras Plantation Award which is now a subject of appeal in the Supreme Court, shook the industry to its roots—a shock from which it has not yet quite recovered. Although the award applies only to the Madras State, it should be clear that it will have its repercussions on plantations in other States also. The outcome of the appeal in the Supreme Court case is naturally enough awaited with more than ordinary interest. Nor is the award the only disturbing factor for the investor. There is the Plantation Enquiry Commission's report, with its numerous and involved recommendations, the precise effect of which on the fortunes of the industry cannot be determined until the Government takes its decisions on the report.

The interests which ought to know their job well have continued to hold that the Commission's report is based upon mis-statements of facts and also carries recommendations which are not calculated to help the plantation industry. A sober appraisal of some of its recommendations on coffee was made by Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates (1943) Ltd., in the course of his speech at the recent annual meeting of the Company, published elsewhere in this issue. Commenting on the final recommendations of the Commission, Mr. Paterson said that they constituted nothing more than the complete collectivisation of the coffee industry on a co-operative basis—co-operatives for the management of the smaller estates, co-operatives for the curing of coffee, co-operatives for the selling of estate supplies, co-operative warehouses, control over the sale of properties, all managed under the aegis of the Coffee Board. Mr. Paterson added: "Little thought would appear to have been given as to how the Coffee Board can undertake such a colossal programme." It is a pity that the lessons of the failure of the co-operative experiment in agriculture have been entirely lost on the authorities, and that they continue to prescribe larger doses of co-operativisation and regimentation. Whatever might be the efficacy of these prescriptions for other agricultural activities—they seem to have none—they are particularly unsuited for an export industry like the plantations. Surely, the Government will do well not to insist on the plantation industry experiments in organisation, the value of which has not yet been proved beyond doubt in other spheres of agriculture.

A criticism levelled against plantation companies by the Commission is that they have wasted their reserves on unremunerative assets such as buildings and not on actual land from which their revenue is derived. One would think that the accusation was absurd on the very face of it. For it tantamounts to saying that owners of estates do not know their own interests and would be willing to waste their money on things which do not yield revenue. In point of fact, the position, as Mr. Paterson said, is very different and far more reassuring. He said that houses were needed to accommodate the workers who cannot otherwise look after the property in the gardens—by the way, is it a sin to provide houses for workers in a socialist pattern of society?—that water-supply had to be provided for with a view to spraying *arabica* estates and that godowns and manure sheds were vitally necessary on the plantations. Expenditure on these items cannot, by any stretch of imagination, be called "unremunerative."

The Commission, in its anxiety to do a good turn to the industry by facilitating replanting, has devised a scheme by which the industry will finance its replantation programme. A special fund will be created with a compulsory contribution of Rs. 37-8 per acre per annum to be surrendered to the Coffee Board which will be refunded as and when replanting takes place. This is, perhaps, a variation of the "compulsory deposit" scheme, introduced along with the tax proposals on 30th November last. We do not know whether the Finance Minister took the cue from the Plantation Commission which had submitted its reports on tea and coffee well in advance of his now famous tax proposals. What is clear is that may be, Mr. Paterson rightly emphasised that the scheme lacked a sense of realism. He said: "The building up of a general compulsory replanting fund to be lodged with the Board, which will not be required for many years ahead, if at all, or if made available, could not be used seems to me to be quite unrealistic. According to the Enquiry Commission's recommendation, it would appear that (our) Company would have to contribute to this Fund some Rs. 2½ lakhs a year. The build-up of this over a few years would be quite fantastic."

Realising the immense contribution that the coffee industry could make to the country's export earnings, Mr. Paterson made a number of useful suggestions. He urged that exports should preferably be concentrated on high quality coffees. He called for active measures designed to maintain the country's export markets abroad. He suggested that, for the sake of maintaining the export market, it might be useful even to allow the importation of the less expensive coffees from Indonesia to meet the excess demand in the country. Since coffee is a valuable foreign exchange earner—and an earner of that much-sought-after currency, the dollar—the Government, it is to be hoped, will take such realistic measures as will increase the pace of the industry's progress as well as of its exports.

SHARES STILL EASY

SHARP FALL IN CENTURY

(From Our Own Correspondents)

BOMBAY, 10*th January*

DULL conditions were witnessed in the share market during the week under review. The undertone was easy and most of the scrips, under the leadership of textiles, lost further ground on renewed selling pressure induced by sheer lack of confidence rather than by any distressing factors. The market was completely devoid of any public support and there was persistent anxiety about the outcome of the clearing. The volume of business was extremely small.

The Indore session of the Indian National Congress passed off without any fresh jitters for the market. On the other hand, Mr. Nehru's opposition to fixing a ceiling on personal income and his stress on providing a minimum standard for everybody were significant, but this did not bring any cheer to the market, because of the feeling that, with the present high level of taxation, the ceiling on income had virtually been fixed.

The steel section was devoid of any feature and irregularly narrow movements were noted. Tata Steel Ordinaries looked up a bit in the new account on Monday, having risen from Rs. 171 to Rs. 173, but the higher level brought heavy realising pressure pushing back the shares to Rs. 168 on Tuesday. Abatement of selling pressure and short-covering lifted them up to Rs. 170 at the close. Indian Irons gained from Rs. 28 to Rs. 28-9 and, after a setback to Rs. 27-8½, recovered to close at Rs. 28.

Textiles ruled weak with an all-round drop in values. The outstanding feature of the section was the depression in Centurys, which touched a low of Rs. 479-8 today, as against last week's closing of Rs. 502-8. The closing was done at Rs. 481. Bombay Dyeings, after an early advance from Rs. 555-10 to Rs. 561-4, receded to Rs. 537-8. They recouped a good part of the loss today when they touched Rs. 550, but at the close there was renewed pressure pushing them back to Rs. 543-12. Kohinoors moved between Rs. 320 and Rs. 312, before finishing at Rs. 315-8, as against Rs. 317-8 a week ago. Central Indias shed Rs. 4 to Rs. 122. Despite the general weakness, Bradburys managed to gather Rs. 6-14 on balance at Rs. 217-8. Dawn Mills also gained Re. 1-12 to Rs. 163, following the decision of the Directors to issue bonus shares in the ratio of three shares for every four existing shares held. Finlays lost Rs. 3-12 to Rs. 301, Gokaks Rs. 3 to Rs. 218 and Indu Ordinaries As. 3 to Rs. 11-3½. Indore Malwas changed hands Rs. 3-2 lower at Rs. 136-4 and Khataus were done Rs. 5 lower at Rs. 217-8. Laxmis fell by Rs. 6-4 to Rs. 680, while Model Mills displayed a gain of Rs. 15 at Rs. 175. New City Mills dropped Rs. 6-4 to Rs. 141-4 and New Greats Rs. 5 to Rs. 240. New Kaiser-I-Hinds were maintained at Rs. 120, while Phœnix Mills were Rs. 10 down at Rs. 136-14. Shree Niwas gave way from Rs. 192-8 to Rs. 187-8, Simplex from Rs. 182 to Rs. 180 and Standards from Rs. 442-8 to Rs. 436-4. Svadeshis were marked down by Rs. 6 to Rs. 222-8 and Swans by Rs. 6-4 to Rs. 405. Tata Mills held ground at Rs. 48.

Bank shares attracted some attention following reports of good working results for the year 1956. Barodas picked up Re. 1 to Rs. 100. Centrals were a shade better at Rs. 52, while their new shares were dull at Rs. 54-12. Bank of Indias gained Re. 1-4 to Rs. 138-12, while their new shares lost Re. 1-8 to Rs. 138-8. Punjab Nationals were held at Rs. 51. United Commercials changed hands As. 12 higher at Rs. 54-4.

The insurance section was almost completely neglected. There was some small business in New Indias at Rs. 43-12, as against Rs. 43-8 a week ago. Vulcans were done As. 6 lower at Rs. 15-2.

Electricity shares attracted scattered support, while the general sentiment was on the quieter side. Ahmedabad Electrics drifted down by Re. 1-4 to Rs. 93-7. Amalgamated Electrics were unchanged at Rs. 10-10. Bombay Suburbans, however, crept up by Re. 1-4 to Rs. 109-6 and Surat Electrics by Re. 1-14 to Rs. 111-4. Tata Hydros fetched Rs. 3 more at Rs. 123. Tata Powers shed Rs. 3-12 to Rs. 1,221-4 and Andhra Valleys Re. 1-4 to Rs. 1,206-4.

In the sugar group, Belapurs were erratic, moving between Rs. 244 and Rs. 241, but closed at Rs. 242 with no change over the week. Phaltans gained Rs. 2 to Rs. 145-8, while Walchandnagars lost on balance Rs. 3-12 to Rs. 256-14. Kesar Sugars had business at Rs. 40. Cement shares were far from cheerful. Associated Cements reacted from Rs. 182 to Rs. 178 before gaining to Rs. 181. Digvijays were dull at Rs. 151. Ashoka Cements were done Re. 1 lower at Rs. 11, while Jaipur Udyogs were unchanged at Rs. 11-12 and Orissa at Rs. 13. In the engineering and mining group, Alcock Ashdowns failed to elicit support and sagged by Rs. 7-8 to Rs. 256-4. Tata Locomotives dipped to a low of Rs. 150 *ex-div.*, as against Rs. 162-8 *cum-div.* (div. Rs. 6) last week, but recovered to close at Rs. 153 *ex-div.* Texmacos lost As. 9 to Rs. 19-4. Premier Constructions fell from Rs. 185-8 to Rs. 177-8. Larsen and Toubros were held at Rs. 15-12, but Mahindra and Mahindras were As. 4 lower at Rs. 15 and Mukund Irons shed As. 10 to Rs. 13-12. Shivrajpurs receded by Rs. 2-8 to Rs. 83-8. Indian Coppers were a shade quiet at Rs. 3-10, as expectations of a higher interim dividend did not materialise. The Directors have decided to declare an *ad-interim* dividend of 6¾ per cent. for the year ended 31st December 1956. B.B. Petrols were lower by As. 2 at Rs. 2-11-3.

Shipping shares were quiet in tune with the general trend. Scindias hardened earlier in the week from Rs. 18-7½ to Rs. 18-12, but soon reacted to Rs. 17-12. Towards the close, however, they gained to Rs. 18-1. Great Easterns shed As. 4 on balance to Rs. 16-12. Automobiles were unattractive. Premier Automobiles gave way from Rs. 103 to Rs. 102. Hindustans were featureless at Rs. 7-9.

In the miscellaneous group, Bombay Burmahs were erratic. After advancing from Rs. 656-4 to Rs. 667-8, the old shares fell back to Rs. 637-8 on Tuesday. The announcement of a higher final dividend at 23 per cent. (as against a corresponding distribution of 21 per cent. for the previous year), making 32 per cent. in all for the year, as against 30 per cent., lifted the shares up to Rs. 661-4, but on profit-taking they closed lower at Rs. 656-4. The new shares were, however, down by Rs. 5-10 at Rs. 237-8. British India Corporations lost As. 5 to Rs. 8-2. National Rayons fell from Rs. 238-12 to Rs. 233-8. Gwalior Rayons, a new addition to the cash list this week, had business at Rs. 14. Hindustan Levers were maintained at Rs. 18-10. Tata Chemicals dropped As. 7½ to Rs. 16-2½, while Tata Oils gathered Re. 1 to Rs. 43-12. Wimcos were unchanged at Rs. 165-10.

* * * *

Calcutta Stock Exchange

CALCUTTA, 9*th January*

In the absence of any incentives, the volume of business put through on the Calcutta Stock Exchange during the week under review shrunk further and the prevailing depression and dullness took equity prices down. Although reports of industrial production for 1956 recorded a satisfactory all-round increase and several new units were permitted to come into being under the private sector by the Government and several existing units were able to expand with Government encouragement and support, the recent changes in Company taxation have rudely shaken the confidence of the investing public. Reports envisaging settlement difficulties on Dalal Street added force to the existing caution of buyers. In the existing lower levels, most of those who desired to sell postponed unloading in an attempt to avoid losses. Investors thought that recovery would not be before the general elections and the presentation of the Budget.

The fear that, in view of the Government's decision to claim a higher share from the profits of the joint-stock companies by increasing the super tax on the companies paying higher dividends, future dividends would not be as satisfactory as in the past, has come to stay as a standing factor restraining business on the Exchange. The Congress Party's election manifesto accepted by the Indore Congress gives a clear picture of the socialistic conditions envisaged in the next five years. Mr. Nehru, speaking in the Subjects Committee meeting on the demand for a ceiling in income and agreeing with the need to dry up sources of unearned income, desired incentives for special efforts even under a socialist system. This statement was noted with satisfaction. Pakistani threats against India over the Kashmir issue and the Indian anxiety over American arms aid to Pakistan, notwithstanding the American assurance to Prime Minister Nehru that these would not be allowed to be utilised in aggression, were further restraining factors, in view of the fear that a part of the resources for the Plan would have to be diverted for strengthening defence of the country.

In common with the general trend, engineering shares were shown sparse interest. The higher production figures of the Indian Iron and Steel Company, Ltd. for the three months to December last did not receive much attention, inasmuch as there was little prospect of a change in the Government's attitude towards any proposal for a higher distribution. The output of pig iron was higher at 188,546 tons, as against 174,447 tons in the previous quarter to September 1956, steel ingots at 141,450 tons, as against 133,325 tons, and semis for sale and finished steel at 114,703 tons, as against 133,325 tons. Indian Irons hovered around Rs. 28-5 up to Monday, but yesterday they sagged to Rs. 27-11. Guest Keens were fractionally lower at Rs. 23-2, but Texmacos, at Rs. 18-10, were lower by more than a point. At Rs. 28-4, Jessop & Cos. declined by As. 12, and earlier the quotation was as low as Rs. 27-14. Burn & Cos. were sought at Rs. 315, as against Rs. 316-8 previously.

Jute shares were in the doldrums, in view of the extreme improbability of better distribution to shareholders for the current accounting period. For prices of jute goods were falling, and the higher trend in the fibre market generated fears of uneconomic working for mills. Cheviots were put through at as low a rate as Rs. 142, as against Rs. 186 previously, while Chitavalsahs recorded a gain of As. 5 at Rs. 11-15. Nationals closed quiet at Rs. 18 after having realised earlier in the week Rs. 18-14. Ballys met with support at the lower rate of Rs. 154 and Anglo-Indias at Rs. 130. Champdanies hovered around Rs. 127-8.

In coals, Burrakurs were unchanged at Rs. 21-4, while Equitables at Rs. 24-12 were better by As. 4. Western Bengals were quiet at Rs. 5-15 and Raneegunges were pushed down to Rs. 9-12 from Rs. 10-13. New Beerbhooms eased to Rs. 14-7 from Rs. 16.

Although demand during tea auctions continued to be as strong as before, the general trend affected sentiment in tea shares also. Tezpores were put through at Rs. 20-14, as against Rs. 21-4 previously, and Dhekiakhats, at Rs. 20-4, lost As. 2. Hasimaras changed hands at Rs. 27-14, as against Rs. 30-12.

Indian Cables, among miscellaneous industrials, met with profit-taking after last week's rise, and were lower by Re. 1-2 at Rs. 31-14. From Rs. 19-11, Rohtas Industries declined to Rs. 19-1, while Aluminium Corporations remained unchanged at Rs. 10-10. On interested buying, Imperial Tobaccos recovered to Rs. 14-1 from Rs 13-14, but on poor support Indian Aluminiums fell back to Rs. 14-11 from Rs. 15-2 and B.I. Corporations to Rs. 8-5 from Rs. 8-11. Orient Papers were quiet at Rs. 31

* * * *

Madras Stock Exchange

MADRAS, 10*th January*

Although the distinctly bearish trend noted on the Madras Stock Exchange in the past three weeks abated somewhat during the week under review, the general tendency was none too encouraging. Apprehensions regarding the possibility of fresh taxes being imposed in the coming months continued to chill the enthusiasm of operators. Investment buying was at a low ebb. If, however, a few shares recorded some improvement in values, it was due to special support induced by optimism about the future of the companies concerned.

Several counters in the textile section were subjected to heavy selling and suffered a sharp break in prices. Palani Andavar 'A' and 'B's were marked down by Rs. 22 and Rs. 15 to Rs. 150 and Rs. 220, respectively. R.C. Ambikais fell by Rs. 18 to Rs. 267. Radhakrishnas dropped Rs. 10 to Rs. 325. Vasantas receded by Rs. 5 to Rs. 325, Lakshmis by Rs. 3 to Rs. 250 and Metturs by Rs. 2-8 to Rs. 420. Coimbatore Cottons shed Rs. 2 to Rs. 376. Malabar Spinnings eased by a like amount to Rs. 108. Buckinghams lost Re. 1-8 to Rs. 174. Pankajas were lower by a rupee at Rs. 77. Coimbatore Pioneers, however, elicited some enquiries and advanced by Rs. 2-8 to Rs. 290. Bangalore Woollens were favoured Re. 1-4 higher at Rs. 543-12.

In the planting section, tea shares were neglected. Coonoor Teas receded by As. 6 to Rs. 25-4. Kalasas and Nilgiris declined by As. 2 each to Rs. 13 and Rs. 8-12, respectively. Blue Mountains and Alageswars were lower by 18 pies each, the former at Rs. 5-5 and the latter at Rs. 3-1-6. Coorg Teas lost an anna to Rs. 11-3. Highlands, however, met with buying support and rose by As. 5 to Rs. 14-5 *cum-div.* (6¼ per cent. interim dividend for the year ended December 1956). Among rubber shares, Kailas eased by an anna to Rs. 5-12. Rajagiris were done at Rs. 20-14 *ex-div.*, as against Rs. 23-2 *cum-div.* Among coffee shares, Coffee Lands dropped As. 8 to Rs. 23-6. Amalgamateds were dull at Rs. 11-4, as also Consolidateds at Rs. 18-3, Mysores at Rs. 2-8 and Maduras at Rs. 3.

Activity in the miscellaneous section was greatly restricted. Textools came in for liquidation and climbed down by Rs. 7-8 to Rs. 265. Indian Aluminiums fell by a rupee to Rs. 14-8. Singarenis declined by As. 8 to Rs. 10-12. Indian Steel Rollings and Spencers shed As. 2 each to Rs. 11-14 and Rs. 16-1, respectively.

Dealings in sugar company shares were put through at reduced rates. Mysore Sugars declined by a rupee to Rs. 45 *cum-div.* Travancores shed As. 4 to Rs. 12-4. East India Distilleries lost a like amount to Rs. 28-4. Cauverys were quiet at Rs. 50, Deccans at Rs. 11-4, Indias at Rs. 16-6 and Jaypores at Rs. 13-12 *cum-div.* United Breweries, on the other hand, elicited attention of some operators and spurted by Rs. 2 to Rs. 187-8. Andhra Sugars registered a rise of As. 8 to Rs. 15-8.

The banking section ruled irregular. Bank of Mysores came in for selling and moved down by Rs. 2 to Rs. 249. Andhra Bank Rs. 70 paids receded by As. 8 to Rs. 85-8. Travancores eased by As. 4 to Rs. 16-14. Punjab Nationals were unchanged at Rs. 50. Indian Overseas were bought Rs. 7 higher at Rs. 152. Indian Bank Rs. 75 paids improved by Rs. 6 to Rs. 158 and fully paids were firm at Rs. 199, same as last week.

BOMBAY-BURMAH RAISES DIVIDEND

The Directors of the Bombay-Burmah Trading Corporation Ltd. have decided to recommend a final dividend of Rs. 28-12 per share of Rs. 125 each fully paid-up and Rs. 11-8 per share of Rs. 125 each (Rs. 50 paid-up) for the year ended 31st May 1956. This represents a distribution of 23 per cent., the corresponding payment for the previous year being 21 per cent. Together with the interim one of 9 per cent. (same as in the previous year), the total distribution for the year comes to 32 per cent., a rise of 2 per cent. over that for 1954-55. In addition to this, the Directors are reported to have kept out of the profit for the year a sum of Rs. 6.5 lakhs to be disbursed to the shareholders after the scheme of arrangement for capital reconstruction goes through. This will mean a distribution of about Rs. 7-10 per old share, making in all Rs. 47-10 per share.

INDIAN COPPER'S INTERIM

The Directors of the Indian Copper Corporation Ltd. have decided to pay an interim dividend of 6¾ per cent., free of income-tax, for the year ended 31st December 1956. This is on the increased capital of £1,371,300 raised by the capitalisation, in November last, of a sum of £457,100 and the issue of one unit of stock of 2s. each for every two units of stock of 2s. each held. The corresponding distribution for 1955 was 10 per cent. on the old capital of £914,200.

NEWS IN BRIEF

THE import duty on betel-nuts has been increased from As. 12½ to Re. 1-0-6 (standard) and from As. 12 to Re. 1 (preferential) with effect from the 1st inst.

Soviet Russia has agreed to purchase Indian tobacco, including the lower grades, at international market prices, provided the supply is made through purchasers' co-operatives.

The Central Government has contracted to buy 60 million marks worth of machinery and electrical equipment for the Rourkela steel mill from a Frankfurt firm, the General Electric Company.

The Government of India has decided to allow export of Indian cotton sewing thread and cotton thread other than sewing thread freely with a ceiling of 4,33,000 lbs. and 67,000 lbs., respectively, on first-come-first-served basis to all permissible destinations, except Tibet and Portuguese possessions in India, during the period January to June 1957.

A meeting of the State Governments will be convened by the Centre shortly to discuss the problems of introducing the metric system of weights and measures. The system is scheduled to be introduced from April 1958. It has also been decided to launch a national sample survey to ascertain the actual requirements of weights and measures under the new system.

The Union Government proposes to issue further licences, under the Industries (Development and Regulation) Act, 1951, for the manufacture of vegetable oils from oilcakes by the solvent-extraction process. The process involves extractions by pressure method of the residual oil left in the oilcake. It requires suitable solvents like petroleum, ether, normal hexane and heptane which are recoverable for re-use.

The Governor of Bihar has appointed a three-man committee to inquire into the conditions of employment in the tea plantations of Bihar. The Committee will advise the Government in revising the minimum wages fixed for the different classes of workers in the tea estates. Mr. C. B. Prasad, Assistant Commissioner of Labour in Jamshedpur, is the chairman and convenor of the Committee.

The Bihar Government proposes to spend Rs. 18 lakhs for intensive development of palm *gur* in the State during the second Plan period. There are about 15 million palm trees in Bihar and, if these trees are properly utilised, about 10 million maunds of palm *gur* can be produced in the State every year. The Bihar *Khadi* and Village Industries Board has already launched a drive for the expansion of the industry in the villages. The industry is expected to provide employment to one million people in the State.

The Rajasthan Government has decided to appoint a Finance Inquiry Committee with Mr. N. Madhav Rau, a former Dewan of Mysore, as Chairman. The Committee will review the trends of public expenditure in the State and resources available and examine the adequacy of the existing sources of revenue for meeting the progressively increasing expenditure with reference to the responsibilities of the State under the Constitution. It will also examine how far the existing taxation structure in Rajasthan is rational and equitable and suggest modifications in the light of the recommendations of the Taxation Inquiry Commission.

A party of 26 Russian engineers has arrived in India to undertake seismic and gravimetric surveys of new areas in Gurdaspur and Hoshiarpur districts of the Punjab. The seismic survey of oil-bearing tracts in Jaisalmer will be conducted in the near future by the French firm, Schlumberger, under a contract with the Government of India. Some parties of the Oil and Natural Gas Commission have already done preliminary work in this desert region. An aero-magnetic survey of the Gangetic alluvium has been completed by a team of Canadian experts whose report is likely to be available in a month. A Rumanian drill is being erected in Jwalamukhi. Five drills to be imported from the U.S.S.R. are expected to be installed during the second half of 1957.

In view of the increasing production of bicycles in India and in order to make the prices competitive in foreign markets, the Government of India has decided that the tube manufacturing industry should be developed in the country as early as possible. Two additional licences have been given for the purpose. The production of bicycles in India in 1956, exclusive of the small-scale sector, is estimated at over 616,000, as against 491,000 in 1955 and 373,000 in 1954. The bicycles industry, it will be recalled, had only two units in 1951 with a rated capacity of 120,000 bicycles and actual production of 101,000 bicycles per year. There are now 63 large and small factories. With the increase in home production, there has been a progressive decline in imports, though imports are allowed on a restricted basis.

The Government of India has sanctioned further financial assistance to the All-India *Khadi* and Village Industries Board for the development of the *khadi* industry. The Board will provide loans to registered institutions and societies for purchasing and stocking raw materials, such as cotton, wool and silk cocoons, implements, chemicals, dyes and other materials required for the production of *khadi*. The Board has been sanctioned Rs. 1.4 crores to be given as loans to registered institutions and societies recognised by it. On the recommendations of the Board, loans amounting to Rs. 1 crore have been sanctioned directly to six institutions. For subsidising half the cost of implements and accessories for the production of *khadi*, a further sum of Rs. 2 lakhs has been placed at the disposal of the Board for distribution through the *Khaddar Bhandars* and centres recognised by the Board.

From Abroad

A team of scientists at Britain's Atomic Energy Research Establishment is trying to develop a safe and economic nuclear-powered merchant ship.

Portland cement production in the U.K. during 1956 was over 12,750,000 tons, of which about 11,330,000 tons were delivered to the home market. These are new records for the eleventh consecutive year.

The Atlantic Passenger Lines Conference reports that sea travel across the North Atlantic was at a post-war record in 1956. The total number of passengers carried to and from the U.S. and Canada during the year was 1,023,460, as against 964,200 in 1955.

The shipping lines in the U.K.-Aden Conference and the Continental-Aden Rates Agreement have announced that the freight surcharge to Aden would go up from 20 to 40 per cent. In all, thirteen U.K. and twenty Continental lines are affected by this change.

The Ceylon Government is examining a proposal to levy a terminal tax of Rs. 2 on every passenger leaving Ceylon by air or sea. Revenue from this source will be used exclusively for the improvement of amenities at air and sea ports.

The three largest automobile manufacturers of the U.S.—General Motors, Ford and Chrysler—together produced 5,601,854 cars in 1956. General Motors reported passenger-car production of 3,062,428, Ford 1,669,165 and Chrysler 870,261.

The U.S. Farmers Home Administration made and insured a record total of $336,480,000 in loans last year. The U.S. Department of Agriculture says that the loans were used primarily for operation, improvement and purchase of family-type farms.

Four more diesel locomotives purchased by Iran from the General Motors Corporation in the U.S. through a U.S. Export-Import Bank loan have arrived in Iran. So far, 50 of the 70 locomotives ordered have arrived in Iran and others are expected shortly.

The Australian schilling has now been added to the currencies negotiable on the Amsterdam free market. The schilling has also been added to currencies in the multilateral payments traffic with Argentina, in which the Netherlands, Belgium, Denmark, France, Italy, Norway, Austria, Britain, Sweden and Switzerland are now participating.

British shipyards booked 2,000,000 gross tons of new merchantship orders in 1956. About 30 per cent. of this total was work for foreign accounts. The total order booked stood at 6,000,000 gross tons, which means that many shipyards were booked up with work into the 1960's. Over half the order book was tanker tonnage, and a third was cargo tonnage.

Ceylon has agreed to the establishment of a Czechoslovak trade mission in the Island, the first of its kind from a communist country to be set up there. The Czechoslovakian Chamber of Commerce proposes to hold an industrial exhibition at Colombo shortly to acquaint the business and industrial circles in Ceylon with present developments in Czechoslovakia.

The United States has offered to advance to the United Nations a loan of up to $5 million to help pay the initial costs of clearing the Suez Canal. The offer has been made in response to Mr. Hammarskjold's appeal for funds to be advanced to defray the expenses of the initial work in clearing the Canal. The terms and arrangements of the loan are yet to be worked out.

The Brazilian Government Trade Bureau has reported that Americans have increased their consumption of coffee by 12.6 per cent. since 1950. Nearly one person in every three drinks four or more cups of coffee daily. The average daily consumption of coffee by Americans over 10 years old is 2.68 cups, slightly higher than the 1955 rate, but 12.6 per cent. higher than in 1950.

The United States has concluded an agreement with Brazil, whereby it will supply the latter $138.7 million worth of agricultural products, mainly wheat, during the next three years under the term of the American Surplus Agricultural Produce Act. Brazil will pay in cruzeiros, the bulk of which it will retain as a long-term loan for development projects.

A development programme to reclaim vast tracts of land along the river Nile in North Africa is being considered as part of President Eisenhower's plan to maintain peace in West Asia. The plan envisages construction of a series of dams, irrigation networks and power plants. Egypt, Sudan, Ethiopia, Uganda and Tanganyika will be invited to join the proposed project.

PERSONAL

MR. S. C. ROY, a prominent business man, has been appointed Sheriff of Calcutta for 1957.

Mr. J. A. Balenchana, Consul for Spain, left Bombay last Friday for Ankara, Turkey, to take up his appointment as Counsellor of the Spanish Embassy in Turkey.

Dr. N. V. Rajkumar, Commissioner-designate for the Government of India in the British West Indies, including British Guiana, will concurrently be Consul-General for India in Surinam, with residence in Trinidad.

Herr Hans L. Merkle, President of the Cotton Weavers' Association of the Federal Republic of Germany, has been appointed Junior Vice-President of the International Federation of Cotton and Allied Textile Industries.

Mr. Justice Jiwan Lal Kapur, of the Punjab High Court, and Mr. Justice Gajendragadkar, of the Bombay High Court, have been appointed Judges of the Supreme Court. The appointments will take effect from their date of assuming office.

Mr. A. C. Bose, till recently Joint Secretary in the Ministry of Finance, has been appointed member of the Oil and Natural Gas Commission, *vice* Mr. C. S. Menon. Mr. Bose will also function as a Joint Secretary in the Ministry of Natural Resources and Scientific Research.

Sardar H. S. Malik, lately Indian Ambassador to France, has accepted the appointment as Special Director (India) to the Board of the Simon-Carves group of British engineering companies. Simon-Carves have important interests in India and maintain a permanent staff in this country. Simon-Carves group comprises twelve companies engaged in heavy engineering, chemical engineering and the manufacture of turbine gears. They are either direct contractors or sub-contractors in most of the major heavy engineering projects in which British industry participates.

Sir Malcolm Darling, Consultant under the Colombo Plan, has entered on his duties in the Planning Commission as from 3rd January. He will act as consultant to the Planning Commission for about three months and will review some of the recent developments in the field of co-operation with reference to programmes in the second Five-year Plan, and make recommendations for strengthening the organisation of co-operative departments in Indian States and for training programmes for co-operative personnel. Sir Malcolm is a former Indian Civilian, who played a leading part in the promotion of the Co-operative Movement in India during the days of the British regime.

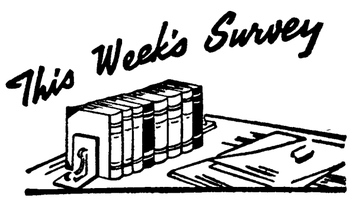
The Vice-Chancellor of West Germany, Herr Blucher, has made proposals for better facilities for long-term exports by Germany to the developing countries of Asia and Africa. The essence of Blucher's proposal is for the Frankfurt Export Credit Bank to operate a third credit fund which would take care of export credits for over five years. The two existing funds cover exports up to five years.

An inter-Governmental conference on world coconut economy opened at Colombo on the 8th inst. The Conference which will continue till the 18th inst., will, among other things, investigate the desirability of establishing a permanent study group on coconut products. The meeting is being held at the request of the 24-nation Committee on Commodity Problems of the Food and Agriculture Organisation of the United Nations and attended by fourteen countries.

Bills, cheques and similar items paid through the London Clearing House in 1956 reached a new peak of £160,889 million, according to the annual report of the Bankers' Clearing House. This is £8.276 million above the previous record of £152,613 million set in 1955. These figures do not represent the total amounts passed through the banking system and do not also include the banks' own internal clearings or cheques handled by local clearing arrangements.

The eighth session of the Transport and Communication Commission of the United Nations is being held at Washington from the 7th inst. The session is expected to last for about a fortnight. It has on its agenda subjects relating to international maritime consultative organisation, tonnage measurement of ships, oil pollution of seawater, road signs and road transport, and facilities for tourists. Mr. S. K. Ghosh, Deputy Secretary of the Union Ministry of Transport, is attending the session as the delegate of the Government of India.

A record business year in U.S. history has been forecast for 1957 by 14 leading American economists, polled by the National Industrial Conference Board. The economists, participating in a recent forum sponsored by the Board, indicated that they expected the gross national product—the total output of goods and services—to hit the $425,000-million mark. The consensus of the forum was that the elements of strength during 1957 will be rising income and higher personal consumption spending, as well as more Government spending at all levels.



PREMCHAND ROYCHAND AND SONS

IT is both interesting and instructive to trace the growth of great commercial and industrial houses, for they often embody some essential human quality which has made their enduring; also, their history reflects the changing economic vicissitudes through which the country has passed. One such house is the well-known Premchand Roychand and Sons Ltd., the centenary of which is being celebrated this year. As dealers in bullion and shares and as finance brokers, the firm has probably unrivalled experience, acquired over several decades of intimate contact with the financial markets, both Indian and international.

The founder of the firm, Mr. Premchand Roychand, was a man of indefatigable energy and great business acumen. Born in 1831, Mr. Premchand who acquired a working knowledge of English at the Elphinstone High School, was early inducted into business. It is not perhaps without significance that the first transaction with which he was so successfully connected involved a sale of shares; it was an auspicious beginning for a man who was later to become one of the founders of the Bombay Stock Exchange. Bullion, however, soon caught his fancy, thanks to the wealth that flowed into Bombay in the sixties of the last century when India became a leading exporter of cotton, the "white gold," following the civil war in that other main source of supply, namely, the U.S. Mr. Premchand Roychand amassed a large fortune. But he lost nearly all of it in a speculation connected with the famous "Back Bay Reclamation" scheme in Bombay. Undaunted by this failure, this financial Titan set to work again, became one of the founders of the Bombay Stock Exchange, and rose to great eminence as a share broker. It is, perhaps, characteristic of the best in Indian traditions that Mr. Premchand Roychand gave of his wealth as freely as he was able to earn it. During the heyday of his fortune, his gifts, it is computed, aggregated over Rs. 100 lakhs.

The traditions which Mr. Premchand Roychand left behind on his death in 1906 have been ably maintained and extended by his sons—the late Mr. Kikabhai and Mr. Maneklal—later by his grandson, Mr. Kishore, son of the latter. The services of Mr. Kikabhai, who died in 1953, are too recent to need special reference. Suffice it to say that, under his efficient direction and assisted by his able brother, the firm has expanded its activities in many directions and established valuable connections with various financial and commercial institutions. By far the most notable development under the ægis of the inheritors of the Premchand traditions is the establishment of the Industrial Investment Trust Ltd. with a paid-up capital of Rs. 100 lakhs. Established in 1933, the shares of the Trust have for long been regarded as one of the "blue chips" on the Bombay Stock Exchange. In this country, the role of investment trusts does not always receive the recognition they deserve. It is, therefore, worthy of special mention that the Industrial Investment Trust has continued to meet a genuine and felt need—the demand for a safe outlet for investible funds by a class of persons who are anxious to invest their money but are understandably unwilling to take risks.

In these days of socialism in India, with the role of middlemen at a discount and scorned at by the party in power, with the money market strictly controlled by the State, with exchange controls giving very little room for the operations of finance brokers, with business in the bullion market having shrunk to only a fraction of its size before the advent of independence owing to the embargo on the import and export of bullion on private account, there is not much scope for a firm of brokers in shares, bullion and money. The future of this house, therefore, lies in switching over its activities to industrial production. Mr. Maneklal and Mr. Kishore, the two living partners of the firm, seem to be fully alive to this need. Mr. Kishore has already made more than a modest beginning in the manufacture of rubber goods and chemicals. Further, both of them are taking an active part in the financing and development of new industries. Mr. Maneklal is an active director in a score of the most substantial joint-stock companies in Bombay. Mr. Kishore, too, is on the board of a number of companies.

FAMILY PLANNING

It is, indeed, heartening to note that, next to Japan, India is the country most conscious of the problem of population in the East. For no Government which aims at the levelling up of the standard of life of the people through conscious economic planning can afford to ignore this important issue. The planner may be able to quote a bewildering array of national income figures and production statistics to prove the success of planning, but the layman will not be convinced unless it is reflected in the kind of food he eats, the quality of house he lives in and the cloth he wears. No such progress may be noticed if population outstrips the pace of economic development. In India, population is growing at the rate of five million a year and the growth in a decade exceeded the entire population of the United Kingdom. Even to maintain the existing standard of life, the national economy will have to advance at a rate which is more than ordinarily possible.

It is common knowledge that the standard of living in India is one of the lowest in the world and a recent U.N. Survey revealed that India's population was the "hungriest" in the world. Food of the average Indian, in terms of calories, did not exceed 2,000, as against the normal requirement of 3,000 calories. The protein content of high biological value in the food is only 5 grams, against the normal requirement of 40 grams. In spite of all that is being done to improve the standard of living, the improvement is not likely to materialise if there is a simultaneous increase in the number of mouths to be fed. Population control by a reduction of the birth rate to the extent necessary to stabilise the population at a constant level, designed to suit the requirements of the national economy, is therefore considered to be the only solution. Success on this front depends on the widespread realisation by the people of the need for family limitation.

But the crux of the problem in India is the extension of family planning to the rural areas. Dr. J. C. Ghosh has, therefore, done well to emphasise the need for popularising family planning in the rural parts in his inaugural address to the third All-India Conference on Family Planning held recently at Calcutta. Dr. Ghosh rightly observed that, as the villages constituted the base of India's social and economic life, family planners must concentrate their major attention on these regions. Due to the spread of education and free access to the information on family planning, the size of the family in the urban areas is tending to fall below the general average. But the problem continues to be as acute as ever in the rural areas. An encouraging factor in the situation, according to Dr. Ghosh, is the general attitude of the womenfolk in rural areas towards family planning. Sample surveys recently carried out in different parts of the country indicated that a large majority of married women would welcome advice and help.

As regards the organisational set-up for popularising the move, Dr. Ghosh observed that the National Extension and Community Development Organisation, which would have a network covering the whole country by 1961, could be the nuclei around which a people's movement for better health and better living could be organised. Each community project is intended to have a health centre, with a complement of doctors, nurses and midwives. It would also have a staff for social education. Rural life has many facets and, if there is one agency for each facet and if their work is closely co-ordinated, there would be better prospects for changing the entire outlook on life of the rural folk which is a necessary pre-condition for the success of any socio-economic reform.

Dr. Ghosh said that it did not require too much optimism to believe that gradually all right-thinking men in India would begin to feel that voluntary parenthood was one of the most vital requirements of social welfare. But a very real limitation to the widespread adoption of contraceptives in the rural area, as he himself recognised, is the absence of an ideal contraceptive, acceptable to the rural folk. It must be harmless and cheap so that it could be supplied free as a welfare measure. Research in this direction is being undertaken by the Indian Council of Medical Research and the success of the drive to popularise family planning hinges, to a large extent, on the extent to which these experiments bear fruit.

CHANGES IN CO-OPERATIVE LAW

The reorientation of Co-operative agency on the lines recommended in the *All India Rural Credit Survey* implies far-reaching changes in the organisational structure and scope of Co-operative agencies. At the primary level, large-sized credit societies will replace small-sized societies, the liability of the members will be changed to one of limited form from one of unlimited, and paid workers will substitute for honorary workers. That is not all. The State will participate in the share capital of the societies—which, of course, is envisaged only as a transitory measure—and the working expenses of the societies will be shared by the State for a few years in the beginning. Moreover, the basis of co-operative credit will be anticipated crop, and the amount will be recovered as and when the crop is sold. There will be progressive organisation on co-operative lines of marketing and processing through appropriate institutions with the needed financial assistance from certain all-India and State organisations. The State will also participate in the share capital of the co-operative institutions at the District and State levels.

For the smooth and expeditious implementation of these and other proposals, what is obviously needed is bringing about necessary modifications in the Co-operative Law as it prevails in various States to suit the present requirements. This also means a uniform Co-operative Law for the whole country.

The Committee on Co-operative Law has been brought into existence to deal with these issues; and the views expressed by the Madras Bar Council in its reply to the questionnaire issued by the Committee should be of special interest. The Bar Council points out that it would be necessary for the successful working of the Central and State Co-operative banks to allow individuals, as different from societies, to become their members, in order to encourage people of well-to-do classes, of integrity and of knowledge useful to the institutions, to associate themselves actively with them. The Council feels that this provision, in addition to State participation in the share capital of co-operative institutions, should go a long way in this direction, and, suggests that maximum limit of such membership may be fixed at 20 per cent. of the total membership. Obviously, there is much force in this argument, for the politics that almost invariably surround the societies and banks usually keep away efficient and honest people from the institutions. Closely allied to this, it may be noted here, is the need for neutralising the political character of the institutions.

Another important suggestion of the Council relates to the question of audit of the credit societies. The Council strongly feels that the present system of entrusting the audit to the Co-operative Department is "vicious in principle and ineffective in many cases," inasmuch as it means "an audit by an agency with reference to its own work." The need for an independent and efficient audit cannot be overemphasised, especially when the State itself has decided to participate in the share capital of the institutions at various levels.

The Council also feels that the present position in regard to the settlement of disputes under section 51 of the Co-operative Societies Act is not satisfactory. The position is that all such disputes are either decided by the Registrar himself or any other officer deputed by him for the purpose. The decision taken by such person is final and cannot be called in question in any court. It can, however, be revised by the Registrar or the local Government. The final decision, which is called an award, can be executed by the Department itself. The Bar Council feels that this system also suffers from the same drawback as the audit system by the Department suffers. Apart from this, the association of the deciding officer with the politics and activities of the society vitiates impartial consideration of the dispute. Hence, the Council argues the award does not command the respect that is due to the decree of a court of law.

For this reason, the Bar Council rightly suggests that, while the departmental officer may investigate and prepare the ground, in cases of disputes, the actual decision itself on the materials so gathered may be left to the ordinary civil courts or specially established tribunals. The Council proceeds to suggest that, with a view to minimising the delay in the settlement of disputes—

...ch is ostensibly the idea in vesting the ...ers of decisions on disputes in the Depart...t—the decisions of the civil courts or tri...als may be made final. This arrangement, ...feel, not only avoids delays in resolving dis...s, but, at the same time, ensures impartial ...sions. The Bar Council also pleads that, if ...suggestion is not acceptable, at least the ...rd made by the departmenal officers may be ...e revisable by the District or Subordinate ...ge whose decision should be made final. The ...ncil also points out that the method of ...ution of the awards by the Department is ... defective, and the prices realised by depart...tal sales are not adequate. It pleads that ...ution for realisation of claims and awards ...east may be entrusted to civil courts which ...e much better record of performance in this ...re.

...The Council is not far from the truth when ...ays that spirit of co-operation is conspicuous ...ts absence in co-operative banks. It has also ...e well to emphasise the truth, as seen by it, ... co-operative institutions are more and more ...res of political squabbles. Indeed, this is the ...t difficult of the problems facing those who ... entrusted with the task of reorganising and ...igthening the Co-operative Movement.

HUMAN FACTOR IN INDUSTRY

The rapid pace at which the technical and ...omic revolution is taking place the world ... has brought to the fore two questions of ...standing importance. First, how can the life ...he community associate the changes accom...ying the revolution? Secondly, how can ...efits of industrial development be reconciled ...a personal needs? Impressive answers to ...e posers were given by Mr. N. S. Bhat, ...our Officer, B. and C. Mills, in the course of ...speech at a meeting of the Madras Institute ...Management held at Madras the other day. ...ming up the results of the Duke of Edin...gh Study Conference in Oxford some time ... Mr. Bhat rightly declared that the most ...ortant problem for the industry was that of ...ting satisfaction among all those who were ...erned with it at all levels. Some of the as...s of human satisfaction, according to him, ...ered organisation relationships at work, in...ling promotion and incentives, tradition and ...age, education and training, employment and ...urity, housing and travel, the impact of indus... on a community or *vice versa*, and social ...ies and ideas. Indeed, he remarked that the ...most important problem for the industry was ...hat of creating satisfaction among all those who were concerned with it at all levels. Proceeding, Mr. Bhat observed:

"... pay is not the only factor that contributes to satisfaction, although it is an important factor. There are many other equally important considerations that create satisfaction. A sense of belonging is man's basic psychological need, but this is normally possible only in works which are not too big. But, even in large establishments, where a general sense of purpose exists, one can notice a sense of belonging.... Unless the concept of work in its full significance is fully appreciated, all human problems present insurmountable difficulties. We have to see that conditions are provided, where men will work as far as possible with a will. We have to satisfy the self-interest of the employees to some extent, before we can expect them to give their best."

There is considerable force in these observations. Great responsibility, of course, lies on the employees who must realise that they work for the good not merely of the concerns in which they serve but of the community at large. Such realisation cannot be expected so long as the workers are ignorant about the importance of their concern to the national economy. Mr. Bhat did well to emphasise this aspect and to urge the advisibility of having a system or practice of keeping all employees fully informed of the Company's policies and the place it occupies in the country.

Mr. Bhat referred next to leadership in industry. Recalling the importance attached to this at the Oxford Conference, he pointed out that what industry in the modern world needed was trained leadership—leadership with vision, foresight and understanding based on sound knowledge and practical experience. Incidentally, Mr. Bhat emphasised—and rightly so—that the industries ought to consider it their obligation to finance, advise and provide the necessary talent by giving experienced men for lectures to workers, so that they may be kept well informed of the current developments in their proper perspective.

FREE TRADE AREA

The deliberations of the Ministerial Council of the Organisation for European Economic Co-operation (O.E.E.C.), which is scheduled to hold a "full" meeting at Paris next month, and the decisions taken thereat will naturally be awaited with considerable interest. The meeting is expected to discuss the report on the establishment of a European free trade area free of customs duties and other obstacles, drawn up by the Technical Committee of the O.E.E.C. countries after examining the scheme for three months. The report was adopted by the Committee at its meeting held at Paris recently. The Technical Committee is confident that the scheme is workable, notwithstanding all the British reservations on Commonwealth preference. It does not see any major difficulty in the working of a scheme for free trade in Europe with British participation. The Committee is also confident that a free trade area can co-exist with the projected but more limited European common market—the economic union of the six nations of the coal and steel pool.

The adoption of the above report marks the completion of the first essential step in the direction of setting up the European free trade area. The next five months are expected to witness negotiations on the details of the treaty envisaging the establishment of the area and, if there is no unexpected obstacle, the treaty may be ready for signature by July next. Of all the details of the treaty, three are considered to be of utmost significance. They relate to (1) the duration of the transitory period, during which the customs duties and quantitative import restrictions will be progressively eliminated; (2) escape clauses in the event of special difficulties such as the balance of payments crises; and (3) "harmonisation" of production conditions within the area which the French are likely to urge as they did in the negotiations for the six-nation common market. Another problem to be settled relates to agriculture. The U.K. wants agriculture to be excluded from the free trade area, while a few countries are anxious to include it.

Among these, the thorniest problem so far as the free trade area is concerned, according to some experts in Bonn (West Germany), is that of escape clauses which permit four devices—temporary delay in the gradual lowering of tariffs,

BUFFER STOCKS—DYES INDUSTRY—FOREIGN TRADE

By A Special Correspondent

NEW DELHI, *8th January*

THE annual session of the All-India National Congress, as usual, took the centre of national as well as international interest from Delhi to its venue this year in Lakshmibai Nagar, Indore. Almost the entire Cabinet of the Government of India had moved, with the result that, but for routine work, no major events took place at the capital, either from the political or from the economic interest. Now that the session has come to an end, the train of Ministers and other dignitaries has started moving back to the capital carrying with them the impressions of Indore.

DELHI LETTER

Soon after the return of Prime Minister Nehru from his 'successful' American tour, responsible Government officials were talking generally in terms of a hopeful change in the attitude of America towards India's second Plan. They were also not making it a secret that America would generously help India with much needed foreign exchange, either on a long-term loan basis or by outright grants, to help India cover up its big gap in foreign exchange. But the recent announcement of the American policy pertaining to the Middle East, appears to have set the gear on the reverse, and led to some second thoughts. This attitude is reflected in the speeches delivered by many responsible Congressmen at Indore, too.

Military Aid to Pakistan

The Prime Minister said at Indore that India could not afford to "close our eyes to weapons piling up in a neighbouring country." Although he had no doubts that the assurances given to him and to India by President Eisenhower that the military equipment to Pakistan would not be used against India were genuine, still "the basic thing was that highly priced new weapons were being piled up in an increasing measure on India's borders." He repeatedly told the gathering that India had no desire to divert its resources and funds from the second Five-year plan to defence. India wished to spend all its resources for the successful implementation of the second Plan. But, all the same, the Prime Minister did not make it a secret that, in the circumstances in which American military aid was being piled up in Pakistan, "we cannot remain unperturbed and we have to think of what may happen."

In other words, Mr. Nehru spoke plainly and said that, as nobody could be certain about what might happen in the future, "we are also compelled to have weapons," much against India's desire not to join in any race in piling weapons. This is being interpreted in responsible circles here as an indication of the Government's mind that, in the months to come, it is quite possible that the Government might be compelled to divert some of its funds for the purchase of essential weapons from abroad, with a view to balancing its powers and equipping itself adequately, so that it might not be caught by surprise in any eventuality; this would again mean, according to the spokesmen of the ministries concerned, that, in the next budget, a far greater sum might be allocated for defence purposes, so that the meagre financial resources available for the economic and industrial development of India might be depleted to the extent that money was diverted to defence services.

Foodgrains

Be that as it may, all the departments connected with the industrial growth of India are now terribly busy, thinking of ways and means of keeping the economy on an even keel. Large stocks of foodgrains are being moved to various centres throughout the length and breadth of the country with an eye on possible shortage, either real or artificial, and with a view to checking the consequent rise in prices. During the month of December last, according to offical figures, a total quantity of about 1.75 lakh tons of imported wheat and rice were moved to Central Depots and States and also to Defence Services from the ports of Bombay, Calcutta, Madras, Visakhapatnam and Quilon. Industries are being geared up and wherever possible Government would encourage working of three shifts with a view to increasing output.

The Government of India is also working on a plan for building up a buffer stock of two million tons of foodgrains before the commencement of the next lean period. This reserve would be built up by both the imported foodgrains and out of internally procured foodgrains. This buffer stock, according to official spokesmen, would enable the Government to maintain a stable price level of foodgrains so essential for the successful implementation of the second Plan.

It is also pointed out by the spokesmen of the Central Food Ministry that import of foodgrains for the purpose of building up buffer stock would not involve foreign exchange in the strictest sense of the term. Because with America the payment for foodgrains to be imported would be in rupee exchange on a long-term instalment basis running over a period of 30 to 40 years. A portion of this foodgrains deal with America would be in the form of grants and aids. The imports from Burma would be more or less on a barter basis, so that no real payment of money would be involved. According to present estimates, the Government intends importing five lakh tons of rice from Burma and two to three lakh tons of rice from America in the course of the current year.

Manufacture of Dyestuffs

On the industrial side, another important development is the discussions of the Government of India officials with private firms manufacturing dyestuffs in the country, as a result of which it has been decided that licences would be issued to the manufacturing firms to produce particular intermediates, using indigenous raw materials as far as possible. The issue of licences would be finally decided after the manufacturing firms had submitted their final proposals to the Government of India. Special emphasis has been laid on the manufacture of the intermediates required for the production of dyestuffs. Some of the more important intermediates will be produced by a central factory to be set up by the National Industrial Development Corporation, while other intermediates will be included in the manufacturing programmes of private firms producing dyestuffs at present.

As early as October last, the Government of India had decided that the N.I.D.C. should undertake the manufacture of primary intermediates. The Government had also asked firms in the private sector to indicate the kind of development they would be prepared to undertake for the production of subsidiary intermediates. Certain tentative proposals which have been received by the Government from the firms in the private sector in this respect are now being carefully scrutinised.

Targets

While the Government had fixed certain targets of production for dyes by 1965 on the basis of certain reports submitted to it by expert teams from abroad, the original targets laid down have been revised due to certain unavoidable factors such as capacity of the producers in the private sector and the inability of the Government to embark upon production of all the late intermediates, also for lack of technical experience and adequate finance. The revised targets of production of dyes by 1965 are:

	Tons per year
Azos	3,000
Basics	750
Naphthols	1,250
Fast bases	1,250
Vats	1,200 (Absolute)
Sulphur black	2,150 („)
Other sulphurs	225 („)

The Government of India is also anxious to see that the prices of these dyestuffs are kept at reasonable levels within the capacity of consumers to pay. On this aspect, the Government has written to manufacturing firms in the private sector and their detailed replies are being awaited. The Government is also considering favourably the conversion of import licences of private firms which used to import finished dyes

THE SECOND LINE HOLDS

From Our Own Correspondent

LONDON, *5th January*

EXACTLY a month ago, your correspondent commented on the dramatic fall in the sterling area gold and dollar reserves of £100 million and showed how the British Chancellor was planning to call up his second line of reserves. During December, the call up was put into action and the international monetary fund furnished £200 million or less than half the total which may be called upon. As a result, the United Kingdom has been able to meet all its liabilities and end up with the reserves some £60 million higher than at the end of November, and actually slightly higher than a year ago.

LONDON LETTER

In addition to the £200 million from the I.M.F., there has been about £2 million on American defence aid account and £142 million have, therefore, been absorbed during the month in the various drains to which sterling has been subject.

The payment of interest on the U.S. and Canadian loans absorbed £37 million, the repayment of capital on the same loans absorbed £26 million and minor similar payments took another £68 million. To this had to be added the payment to the European Payments Union of £18 million in respect of the November deficit, so there was a grand total of £86 million inevitably committed.

By subtracting this figure from the total gold drain of £142 million, we have £56 million to account for. This is the measure of the loss on trading account and from the continued outflow of capital which went on in the early part of December. It can be compared with the loss through similar reasons in November of £90 million. The strain on the pound and the drain on the reserves through this has now been stopped and the very publication of the end year figures has immediately had a strengthening effect on sterling. With January opening the favourable season for sterling on the commodity exchanges, an interesting situation has developed. The stars are all in favourable conjunction. The bears of sterling can drag the rate down no longer and indeed the crossing on Friday of this week of the $2.79 line on the exchanges has sounded a warning to which the bears may heed. If they do and decide to cover, then a great deal of the November and December gold losses may be made good as these volatile funds flow back to London.

January may also witness the acceptance by the American authorities of the appeal for a waiver of the interest on the U.S. loan paid in December. In this event, the gold and dollar reserves will benefit to the extent of £37½ million.

Besides Mr. MacMillan still has £265 million, in reserve in the International Monetary Fund, though he would obviously be most loth to use them. But it is clear that the inevitable speculative burst set off against sterling by Suez has run its course and the future prospects for sterling must be more soberly reviewed only in the light of the extra dollar cost of oil and freight for the next half-year and the damage which has been done, and is being done, to home production and exports as a result of fuel difficulties. It is perhaps not generally appreciated that ever since the mid-year the trend of production has lagged behind that of 1955 and by October the production index stood at 135 (1948 equals 100) compared with 139 a year before, i.e., a drop of 3 per cent. There was no further worsening in November.

The other aspect of Britain's external position which has been important over the past few months, and is likely to continue, has been the running down of sterling balances. There is no need to make further reference to the running down of India's balances but the process has been paralleled in a number of other countries, particularly in the Far and Middle East whether from need to utilise their funds, or more significantly from a desire to get out of an unpopular currency. To that extent the liquidation of sterling balances has the same practical significance as bear sales in general and there may now follow a certain amount of replenishment of balances.—*All Rights Reserved.*

WORLD BANK LOANS IN 1956 REACH A RECORD TOTAL

ABOUT 45 PER CENT. GRANTED IN LAST QUARTER

PERHAPS the last of the loans granted by the International Bank for Reconstruction and Development (World Bank) during 1956 was the one granted to the Indian Iron and Steel Company Ltd. This loan is for the equivalent of $20 million in various currencies and meant for financing the additional rolling capacity of the Company, in order to enable it to increase its output of semi-finished and finished steel to 800,000 tons per annum. The I.I.S.Co. is India's second largest steel producer and the output of its plant accounts for about a third of the country's present steel production.

The agreement for the loan was signed on 19th December 1956 by Mr. G. L. Mehta, Indian Ambassador in Washington, on behalf of the Government of India, by Mr. Biren Mookerjee, on behalf of the Company, and by Mr. Eugene R. Black, President of the World Bank, on behalf of the Bank.

The loan is for a term of eleven years and bears interest at the rate of 5 per cent., including the usual commission of 1 per cent. charged by the Bank. Amortisation of the loan will begin on 15th April 1960. The loan is guaranteed by the Government of India and will be secured by a first mortgage and charge on the Company's assets under a trust deed, with Messrs. Baring Brothers & Co., Ltd., of London as trustees. The First National City Bank of New York, the Irving Trust Company and the Philadelphia National Bank are participating in the loan, without the World Bank's guarantee, to the tune of $1.03 million, representing the first maturity falling due in April 1960.

The latest loan to the I.I.S.Co. is the second one granted to the Company and the third one made available for increasing iron and steel production in India. The previous loan to the Company was to the tune of $31.5 million; this was made in December 1952. The other steel loan was for $75 million made to the Tata Iron and Steel Co., Ltd., in June 1956. All the three loans are assisting the implementation of expansion schemes which will enable the two joint-stock companies in the private sector to produce 2.3 million tons of finished steel annually. In addition, the Government of India is building, as readers are aware, three plants which will have a total production of 2.2 million tons annually. The combined output of the two aforesaid companies and the Government plants, together with that of the Mysore Iron and Steel Works Ltd., represents the target for steel production to be achieved by 1961 under the second Five-year Plan.

Object of the Loan

The first World Bank loan to the I.I.S.Co. was given to help the Company increase its annual production of iron from about 640,000 tons to 1.4 million tons and double the output of finished and semi-finished steel from about 350,000 tons to 700,000 tons. The Company is now approaching a position where it will be able to expand the production of semi-finished and finished steel to 800,000 tons per annum, besides producing 280,000 tons of iron for foundry requirements. The new expansion programme will be carried out concurrently with the one now under way. The first expansion programme is scheduled for completion in November 1958 and the latest one by December 1959. The total cost of the new project is estimated at about $31 million. The World Bank loan will cover most of the foreign exchange costs. The remaining cost will be met by the Company from its own resources which include the recent issue of ordinary capital to the extent of about Rs. 7 crores, inclusive of the premium.

The loan granted to the I.I.S.Co. brings the total number of the Bank's loans during December 1956 to four and that during the last quarter of the year to ten. In fact, the last three months of 1956 has been the most active period of the year, in the sense that as many as ten out of the total of twenty-four loans for the year were granted during this period, the amount involved being $223.66 million, or 44 per cent. of the aggregate, at $507.4 million. The amount of individual loans varies from $1.60 million in the case of Nicaragua to $74.63 million to Italy. The rate of interest charged by the World Bank on the loans granted during the last quarter is 5 per cent. per annum in the case of six loans and 4¾ per cent. per annum in that of the other four. The period of loans varies from 10 years to 25 years, as will be seen from the following comparative table giving the terms of the loans granted during the three months ended 31st December 1956:

Borrower	Purpose	Amount (in million U.S. $)	Period (in years)	Rate of interest %*
Cassa per il Mezzogiorno, Italy.	Agricultural and industrial development of S. Italy.	74.63	20	5
Port Authority, Thailand.	Port development ..	3.40	15	4¾
U.T.E., Uruguay ..	Electric power ..	25.50	25	5
Fomento and Eudesa, Chile.	Do. ..	15.00	20	5
Nicaragua	Do. ..	1.60	15	4¾
Comm.onwealth of Australia.	Purchase of aircraft.	9.23	10	4¾
Do. ..	Agriculture, transport, industry and mining.	50.00	15	4¾
Agricultural Land Development Machinery Public Corporation, Japan.	Land reclamation ..	4.30	15	5
Japan Development Bank, Japan.	Steel production ..	20.00	15	5
Indian Iron & Steel Co., Ltd., India.	Do. ..	20.00	11	5

* Including the usual commission of 1 per cent.

It will be seen from the above table that the bulk of the loans is for industrial and power development purposes.

As already indicated, the total amount of loans granted by the World Bank during the year ended 31st December 1956 was $507.4 million, the largest sum granted by the Bank in any calendar year so far. This was also the first time that the total amount of loans has exceeded the $500-million mark in any fiscal or calendar year. The number of loans granted was 24 and the number of countries that received them was 17. These operations brought a net income of $33 million, also a record. The additions to the special reserve derived from the 1 per cent. commission charged on the disbursed and outstanding loans held by the Bank amounted to $15.5 million, the highest sum earned from this source so far.

A purpose-wise analysis of the loans made during the year shows that as much as $223.30 million, that is, nearly 44 per cent. of the total, was given for electrical power development, which is most essential for rapid industrial progress, and about $163 million was lent for the expansion and modernisation of industry. A sum of over $71 million was granted for development of ports, roads, rail and air transport, and $49 million for agricultural development, including irrigation and forestry. Of the loans given during the year, Europe received $145.62 million, Latin America $72.4 million, Asia and the Near

BURDEN OF DEBT IN RURAL AREAS HIGH

IN A MAJORITY OF FAMILIES NO MARGIN FOR SAVINGS

THAT the level of debt and proportion of indebted families is higher among cultivators than among non-cultivators, that the districts characterised by low monetised subsistence economies reveal, to a great extent, the lowest levels of debt per indebted family and *vice versa*, that the burden of debt is heavier on cultivators with smaller holdings than on those with larger holdings and that the contribution of the rural areas to financial investment is meagre, are some of the notable conclusions highlighted in Volume 1, *Survey Report* (Part I) of the All-India Rural Credit Survey, published last week by the Reserve Bank of India.

The present report follows the publication of the second and third volumes of the Survey, namely, the *General Report* and the *Technical Report*, dealing, respectively, with the recommendations of the Committee of Direction, and the statistical statements prepared from the data collected during the eight months, beginning with August 1951, by the Committee. It embodies the Committee's analysis and interpretation of the enormous volume of data collected on the "demand" side and the conclusions it has arrived at. The data were collected through a General Schedule from as many as 127,343 families scattered over 600 villages which were selected at the rate of eight villages from each of the 75 districts spread all over the country. That apart, detailed information regarding the farm business operations, credit requirements, etc., of a sample of 15 cultivating families from each selected village was obtained in an intensive enquiry.

The discussions in the report are mainly based on data presented district-wise. Regional and all-India data are also given for some of the important items. The data, moreover, are generally presented separately for cultivators and non-cultivators as also for all rural families together. The data for cultivating families are further classified as for deciles or strata. The cultivating families in each village are arranged in descending order of the size of their holding and grouped into ten deciles with roughly equal numbers in each decile. Separate data of averages for the first decile, the first three deciles, the middle four deciles, and the last three deciles, referred to as the 'big', the 'large', the 'medium' and the 'small' cultivators, respectively, are ordinarily presented in the case of the General Schedule items. Data collected in the intensive enquiry are, however, presented separately for cultivators of the first five and the last five deciles, referred to as the upper and the lower strata cultivators, respectively.

Level of Debt per Family

The conclusions arrived at by the Committee on the basis of the aforesaid data, the limited representative character of which is acknowledged by the Committee, reveal the various aspects of the demand side of rural credit. A significant conclusion is that, at the time of the Survey, the level of debt per rural family for all districts together was as high as Rs. 283. This level was regarded as being unusually high, for, during the year covered by the Survey, there was a large increase in the debt level for various reasons, such as fall in agricultural prices and failure of crops. The increase during the year was estimated at no less than 69 per cent. for cultivators, 61 per cent. for non-cultivators, and 68 per cent. for all families. Another important conclusion is that about 63 per cent. of the rural families were found to be in debt. But the level of debt and the proportion of indebted families were Rs. 364 and 69 per cent., respectively, in the case of cultivators, as against Rs. 129 and 52 per cent., respectively, in the case of non-cultivators. Though the level of outstanding debt, as well as the proportion of indebted families, showed considerable variation from district to district, in almost all of them, however, the level of debt was higher among cultivators of the upper deciles as compared with those of lower deciles. The burden of debt, as shown by the pattern of its distribution in relation to cultivated holdings among the different classes of cultivators, however, was much higher on cultivators with smaller holdings as compared to cultivators with larger holdings. But, in most cases, the level of debt, though high in absolute terms, was, in average terms, moderate in relation to the value of assets for all classes of cultivators. For instance, for the country as a whole, outstanding debt was only 5.1 per cent. of the value of total assets for the upper strata cultivators and 8.7 per cent. for the lower strata cultivators.

Trend of Indebtedness

An attempt has also been made in the report to analyse the trend of indebtedness since 1929-30, on the basis of the Survey data and those collected by the Provincial Banking Enquiry Committees and earlier enquiries. The study discloses that a persistent regional pattern has been in evidence for the last two decades in the levels of debt per family. Thus, while the three eastern States, namely, West Bengal, Assam and Orissa, held a low position in the burden of debt per family in both 1929-30 and 1951-52, the States of the Punjab and Bombay were seen to be high-debt States in both the periods. In Madras and U.P., on the other hand, the increase in debt in monetary terms during the period 1929-30 to 1951-52 was significantly large. In the Survey year, however, the real burden of debt was substantially lower than in 1929-30, because of the large depreciation in the value of money. During the Second World War, in particular, not only was there no marked increase in the money burden of debt, but there was actually a reduction in the real burden of past debt, as a result of the changed value of money.

The Survey further reveals that, for all districts together, about 59 per cent. of the cultivating families borrowed during the year covered by the Survey. The proportion of such borrowing families among the different classes of cultivators was much the same. But the proportion of borrowing families was found to be somewhat lower among non-cultivators. While the average amount borrowed per family during the year was Rs. 210 in the case of cultivators, it was Rs. 66 in the case of non-cultivators. The borrowings of the big and large cultivators were, however, substantially higher than those of the medium and small cultivators. The amount so borrowed varied between Rs. 528 for the 'big' cultivator and Rs. 111 for the 'small' cultivator.

Yet another significant feature disclosed by the data is that, of the total borrowings during the year of the Survey by rural families, about half was for family expenditure, slightly more than a quarter for capital expenditure on farm and the balance for current expenditure on farm, non-farm business expenditure and other expenditure. As between cultivators and non-cultivators, however, the emphasis on the purposes varied. Thus, whereas among non-cultivators family expenditure accounted for nearly 70 per cent., non-farm business expenditure for a fifth, and other expenditures for the balance of the total borrowings, among cultivators family expenditure accounted for nearly 47 per cent. and capital expenditure on farm for 32 per cent. of the total borrowings.

Repayments Small in Size

As regards repayments, the report reveals that, during the Survey year, they were generally small in size as compared with the level of borrowings in the case of both cultivators and non-cultivators. To a certain extent, this was attributable to the large increase in debt during the year of the Survey. Further, it was also likely that repayments might have fallen short of the amounts cultivators might have been expected to repay during the year. But a comparison of the average repayment per repaying family and the average borrowings per borrowing family shows that the former was not particularly low as compared with the latter; and where there was a shortfall it was due largely to a relatively small percentage of borrowing families making any repayments at all during the year.

The family expenditure, the chief purpose for which both cultivating and non-cultivating families resorted to borrowing, covered expenditure in respect of construction and repairs of residential and other houses, purchase of durable consumer goods, and special occasions of expenditure, such as death, marriage, currencies, etc. It did not, however, include expenditure on current consumption, entertainment, travel, etc. Thus, while the total family expenditure for a cultivating family amounted to Rs. 361, it was Rs. 148 in the case of a non-cultivating family. The difference in expenditure between the 'big' cultivator and the 'small' cultivator under this head, moreover, was as wide as between Rs. 1,026 and Rs. 191.

It is interesting to note that a large part of the finance for family expenditure came from owned resources comprising current income and past savings. About a fourth of the recorded expenditure on this account was financed through borrowings during the period covered by the Survey. Further, borrowings as a source of finance were found to be relatively more important for the items on which the expenditure per reporting family was high.

Meagre Financial Investments

A noteworthy feature of the report is the light it throws on the saving capacity of the rural families. It shows that investments in shares of co-operative societies and banks, additions to deposits in co-operative societies, postal savings, investments in National Savings Certificates, etc., were provided by a meagre 3.5 per cent. of the rural families. The data collected in the intensive enquiry show that, in the large majority of cases, there was no margin for savings. Capital expenditure on non-farm business was reported by only 4 per cent. of the rural families. The average expenditure per reporting family was high, being Rs. 501 in the case of non-cultivators, and Rs. 409 in the case of cultivators. In the case of 'big' cultivators, the average expenditure per reporting family was Rs. 1,343.

Among the different items of capital expenditure on farms, purchase of land and purchase of livestock were the most important items. It is significant, hower, that only 3 per cent. of the families, a large proportion of which belonged to the upper deciles, reported purchase of land. Expenditure on this item by non-cultivators was very small in almost all the districts. Of the expenditure reported, about 38 per cent. was financed through borrowings. On the other hand, expenditure on purchase of livestock was reported by 25 per cent. of the cultivating families while among non-cultivators, only 3 per cent. reported. Moreover, 45 per cent. of the expenditure on this item was financed by borrowings.

The largest proportion of cultivating families, however, is found to have incurred capital expenditure on items such as purchase of implements, machinery and transport equipment, etc. A striking feature is that, in the case of all items, concentration of expenditure in the upper deciles is marked, while the contribution of small cultivators was very small in the case of most items. "Other" capital expenditure in agriculture was mostly financed out of owned resources, the contribution of borrowings being 30 per cent.

Capital Formation

Another important section of the report relates to capital formation. The broad figures of capital formation amounted to Rs. 420 crores, made up of Rs. 250 crores on items of capital expenditure in agriculture, excluding purchase of land and livestock, and Rs. 170 crores on expenditure on construction and repairs of residential and other buildings. Capital formation by non-cultivators was generally much lower. Further, the regional data reveal that the regions with highly monetised economies and commercialised agriculture came out generally prominent in capital formation, while those with low monetised subsistence economies displayed poor performance.

It is noteworthy, however, that, from the data collected, it was not possible to arrive at net savings by rural families. Nevertheless, the report has made an estimate of the gross savings and indicates the four main directions of their utilisation, each of which accounted for 20 per cent. of the gross savings. The directions are: capital expenditure in agriculture, excluding land and livestock purchase, repayment of old debts, construction and repairs of residential houses and other buildings and lending of funds.

The data is also deficient in many respects for estimating the surplus or deficit in the agricultural economy. However, some broad indications of the results of the economic activity during the year under review are given. In the first place, cultivators and all rural families taken together showed a slight net investment, largely due to the net investment of Rs. 380 per family by the big cultivators. Secondly, the performance of the medium and small cultivators and non-cultivators, especially the latter two, was found to be almost universally poor.

Gross Produce

The intensive enquiry regarding the farm business operation is a notable aspect of the Survey. It shows, among other things, that for all districts together, the average value of gross produce of crops and fodder was of the order of about Rs. 752 per family. The farm expenditure averaged Rs. 495 per family. While the cash expenditure on farm amounted to Rs. 282 or 57 per cent. per family, cash receipts through sale of crops, fodder, etc., amounted to Rs. 470 per family. Sale of crops and fodder formed 66 per cent. of the cash receipts in the case of upper strata of families and 34 per cent. in the case of lower strata. But the latter obtained about 45 per cent. of their cash receipts from cash wages. The intensive enquiry on credit requirements revealed that, for the upper strata, they amounted to Rs. 1,288 per family and for the lower strata Rs. 825.

Among other important features of the report, mention must be made of the analysis of the shifts in income and flow of funds between the urban and the rural sector, and between cultivators and non-cultivators. The study of the capital transactions showed that the flow of funds on capital account was, to a large extent, from the urban to the rural areas. It was also found that nearly one-half to two-thirds of the total funds borrowed during the year by the rural sector must have been derived from the urban sector. This fact shows, it must be stated, that the rural sector will continue to depend on the urban sector for finance for many years to come, despite the increased participation of the State, the Reserve Bank and the State Bank of India in the financing of rural credit, envisaged in the Plan.

The report under review has 17 chapters and covers 1,067 pages. It is very neatly brought out, as in the case of the other two volumes, and is priced at Rs. 9 only. The data and the conclusions given in the report indicate the amount of work the whole Survey and its processing involved, and it is no wonder that the Governor of the Reserve Bank of India hailed it as a "monumental work." Copies of the report can be had from the Accountant, Department of Research and Statistics, Reserve Bank of India, P.B. No. 1036, Bombay. Copies will be also available from the branches of the Reserve Bank of India at Calcutta, Madras, Delhi, Bangalore and Kanpur.

BANK RESULTS ENCOURAGING

Bank of India Ltd.

If the preliminary results of working of banks for 1956 released so far provide any indication, the performance of banks during the past year should be far more encouraging than in 1955 and their profits should established fresh record levels, despite the credit squeeze during the latter half of the year and the higher interest rates offered by them for deposits. The working of the Bank of India Ltd. has resulted in a profit, after making the usual provisions for contingencies and subject to audit, of Rs. 92.03 lakhs. This represents an increase of Rs. 7.12 lakhs over the previous year, thus not only maintaining the upward trend for the third year in succession but establishing a new record in the history of the Bank.

The Directors have set aside Rs. 28 lakhs as provision for taxation, for which purpose a sum of Rs. 25 lakhs had been provided a year ago. After a lapse of nine years, the reserve fund has been strengthened (out of the profits) with the addition of Rs. 8 lakhs. No allocation has been made to the Bank's landed property account, which had received Rs. 3 lakhs last year. The final dividend is being maintained at 10 per cent., to which level it had been stepped up last year from 8 per cent. paid for the preceding three years, bringing the total distribution for the year to 16 per cent., free of income-tax. This dividend for the year absorbs Rs. 45 lakhs, leaving a balance of Rs. 29.30 lakhs to be carried forward, including a surplus of Rs. 13.27 lakhs brought in from 1955. The amount to be carried forward is subject to payment of bonus to staff, for which a sum of Rs. 12.75 lakhs was utilised last year.

During the year under review, the Bank raised its capital from Rs. 2.50 crores to Rs. 3 crores by capitalising Rs. 50 lakhs out of its reserves and issuing bonus shares in the ratio of one share for every five in commemoration of the Bank's golden jubilee. The bonus shares will be entitled to dividend from the current year onwards only. With the addition of Rs. 8 lakhs from the past year's profit, the reserves of the Bank now stand at Rs. 3.10 crores.

Deena Bank

Another bank to announce an impressive rise in its earnings for the year ended 31st December 1956 is the Devkaran Nanjee Banking Co., Ltd. The net profit of the Bank amounts to Rs. 14.87 lakhs, an increase of Rs. 3.75 lakhs, or over 25 per cent., above that for 1955. The Bank has thus maintained the upward trend in its profit for the fourth year in succession, such having gone up from Rs. 5.34 lakhs in 1952. The Directors have placed a sum of Rs. 3 lakhs to the reserve fund, raising it from Rs. 2.40 lakhs set aside last year and have maintained the allocation to the investment reserve at Rs. 50,000. The provision for taxation has also been raised from Rs. 5.60 lakhs to Rs. 8 lakhs and the dividend is being raised from 5 per cent. to 6 per cent. per annum, by proposing a final distribution of 3½ per cent. This is the second year in succession for which the dividend is being stepped up, the Directors having raised it last year from 4 per cent., the rate for 1954 and 1953. The dividend absorbs Rs. 3 lakhs, leaving a surplus of Rs. 2.13 lakhs to be carried forward, as against Rs. 1.76 lakhs brought in.

State Bank of Saurashtra

The State Bank of Saurashtra, a bank of recent origin, having been established in 1950, has well maintained its progress, with a further rise in its earnings. Its profit for the year ended 31st December 1956 (after meeting all working expenses, depreciation, etc., and subject to audit) amounts to Rs. 22.55 lakhs, as compared with Rs. 19.26 lakhs for the previous year and Rs. 18.99 lakhs for 1954, and constitutes a record for the Bank, notwithstanding the increased overhead charges and higher interest rates on deposits.

REHABILITATION OF COTTON MILLS IN BOMBAY

COMMISSION TO ASSESS THE COST SET UP

THE Government of Bombay has constituted a commission, with Mr. S. T. Desai, Judge, High Court, as the Chairman, to determine how the figures for the rehabilitation of the cotton textile mills in Greater Bombay should be adjusted for assessing the quantum of bonus for workers for the years 1956 and 1957. The Commission consists of Messrs. Pratap Bhogilal and T. P. Bharat, representing the Millowners' Association, Bombay, and Messrs. G. D. Ambekar and A. S. Parasuram, representing the *Rashtriya* Mill *Mazdoor Sangh*. Mr. K. R. Gadgil, Technical Inspector (Textiles), Bombay, has been appointed Secretary to the Commission. The appointment of this Commission is in pursuance of an application made by the aforesaid *Sangh* following its disagreement with the Millowners' Association over the composition of the Commission to be appointed to inquire into the question of rehabilitation in the cotton mills of Bombay.

It will be recalled that, in its award on bonus for mill workers given some time in 1947, the Industrial Court had estimated the cost of rehabilitation of the Bombay cotton mills at Rs. 72 crores. The estimate was later confirmed by the Labour Appellate Tribunal also. The workers, however, considered this figure as not reasonable. In their opinion, the rehabilitation requirements were very much less than Rs. 72 crores. They even urged for an inquiry into the conditions of machinery and plant in each mill. On their part, the millowners pointed out that the figure of Rs. 72 crores was an underestimate, inasmuch as it did not take into account the increase in the prices of textile machinery in recent years. The issue came up for consideration before the Appellate Tribunal which reiterated the view that the original estimate of Rs. 72 crores was quite reasonable. It also turned down the plea for a further investigation of each mill.

Workers' Demand Conceded

Subsequently, negotiations were held between the representatives of millowners and workers over the question of bonus and a five-year bonus agreement was arrived at. During the negotiations, the workers again put forward their plea for the setting up of a special body for assessing the approximate cost of rehabilitating the cotton mills. This plea was accepted by the millowners. The agreement provided that the claim of the employees for bonus for the years 1956 and 1957 would be calculated in the same manner and subject to the same conditions as were specified in clauses 3 and 4 of the agreement in respect of the bonus for the years 1952 (where applicable), 1953, 1954 and 1955, save and except that development rebate would be excluded entirely from all calculations for the years 1956 and 1957. The agreement further stipulated that, in adopting the bonus calculation formula of the Labour Appellate Tribunal, the figures for rehabilitation for 1956 and 1957 would be subject to such adjustment as might be determined by a commission to be appointed for the purpose. The Industrial Court, which gave its award on 13th March 1956 in the matter of bonus for the years 1954-57 in terms of the above agreement, conceded the workers' demand for the setting up of a rehabilitation inquiry commission.

Discussions were held between the Millowners' Association and the *Rashtriya* Mill *Mazdoor Sangh* regarding the composition of the Commission. The discussions, however, did not lead to any agreement. Thereafter, the *Sangh* submitted an application to the Government of Bombay urging the latter to take the initiative and set up the Commission. It is in pursuance of this application that the State Government has, as stated at the outset, appointed the Commission, with Mr. S. T. Desai as Chairman.

The Commission has been asked to submit its report within six months. It will inquire into the question of the cost of rehabilitating the cotton textile mills in Greater Bombay (except the Prakash Cotton Mills) to which the bonus award of the Industrial Court applies or has been made applicable. In examining the question, the Commission will approach the issue relating to the assessment of rehabilitation, replacement and modernisation of machinery for the mills individually, as well as for the whole industry. It will also take into consideration the increased cost of machinery, if any, by taking the average prices of machinery ruling during the calendar years 1952 to 1956. Further, it will work out and include, in its report, its estimate of the cost of rehabilitation of machinery for 15 years from the beginning of the bonus year 1956 and, in the case of buildings, for a period of the average estimated life thereof. The Commission will, besides, work out and include, in its report, the cost of requirement of rehabilitation of machinery on the basis of the rehabilitation requirement up to the end of the bonus year 1961.

All the provisions of the Commissions of Inquiry Act 1952 have been made applicable to this Commission.

INDUSTRIAL CO-OPERATIVES OF WEAVERS

Two industrial co-operatives of weavers, one using handlooms and the other using powerlooms, are being set up in Trivandrum with Central Government assistance. A factory, known as the Lakshmi Textiles Ltd., Trivandrum, will be converted partly into an industrial co-operative of handloom weavers and partly into a co-operative of powerloom weavers.

The handloom industrial co-operative will have a membership of 200 weavers working on 159 handlooms. The Government of India has sanctioned to the Kerala State Government an interest-free loan of Rs. 2,08,100 to be utilised for assisting this co-operative. The amount will be spent on providing share capital of weavers and working capital for the handlooms. A part of the loan will also be used for the purchase of land, buildings, equipment and accessories, which originally belonged to the factory. The co-operative is expected to produce 24,000 yards of cloth per month on the basis of a production of six yards a day per loom working 25 days in a month.

The powerloom industrial co-operative will have 25 weaver members and 26 powerlooms. The Centre has sanctioned a loan of Rs. 94,125 to the Kerala Government to assist the society. The amount will be spent for providing weavers' share capital, working capital for looms and purchase of land, buildings and equipment. The average monthly production of the society will be about 19,500 yards of cloth.

"TEXTILE INDUSTRY IN SOUTH INDIA"

The seventh issue of *Textile Industry in South India* (published by Messrs. Dalal & Co., Post Box No. 149, Madras. Price: Rs. 5) maintains its reputation for reviewing in a useful manner the developments in the field of textiles in India generally and in South India in particular. The review pertaining to South India is quite comprehensive, in that it contains references not merely to production and export but to questions like rationalisation, allocation of profit, labour, shareholders' interests and Government's textile policy as well. The review also deals with the problems connected with handlooms and staple fibre, silk and rayon. The utility of the publication is further enhanced by the incorporation of detailed particulars regarding the financial position of as many as 75 cotton mills. If the publishers have not given detailed particulars about other mills, they are not to be blamed, because several mills have refrained from furnishing the details called for despite repeated requests and reminders. The publishers have, however, sought to give information gathered from other sources.

Surveying the developments in cotton textiles, the publishers emphasise the urgent need for making available to the masses more and better goods at cheaper cost. They also stress that the industry should take immediate step to avoid room for complaint from overseas buyers by supplying goods as per sample given, packings perfectly done and goods shipped in time. Commenting on the future of industry, the publishers point out that revision in basic wages for mill labour and heavy bonus payments have made a considerable inroad into the earnings of mills in 1956. Nevertheless, they feel that dividends are likely to be maintained, if not stepped up, by most of the mills, despite the recent increase in tax on dividends. In conclusion, they observe: "By the expansions made by most of the units in the South in the post-war period, mainly out of their own resources, the earning capacity of such units has gone up. Some of the mills have further expansion programmes and are bound to issue fresh capital to the shareholders to meet the cost of such expansions. The financial position of practically all the units is good and, given normal trading conditions, dividend distribution should continue to be generous. The mill industry will continue to enjoy a predominant place in the industrial set-up of this country and, with the demand for cloth rising, the outlook for the industry should be considered good."

RATIONALISATION OF COTTON MILLS

A warning that the Indian cotton textile industry would lose heavily in the international markets, if it were to rely exclusively and increasingly upon the domestic market, was given by Dr. P. S. Lokanathan, Director-General, National Council of Applied Economic Research, while speaking at a symposium on the uses of economic analysis in policy-making in industry at Ahmedabad the other day. This warning is both timely and pertinent. Indian textiles are already facing strong competition in South and South-East Asia not only from Japan but also from European countries; the competition is likely to be more severe in future. Dr. Lokanathan did well, therefore, to stress the need for continuous economic research as contradistinguished from purely technological research for the textile industry as a whole by the industry itself. To quote him: "Both internationally and domestically, the changing complex of factors call for constant adoption of production patterns. Internally, the large-scale developmental works will create a demand which will be subject to the impact of high incomes, new ideas, etc."

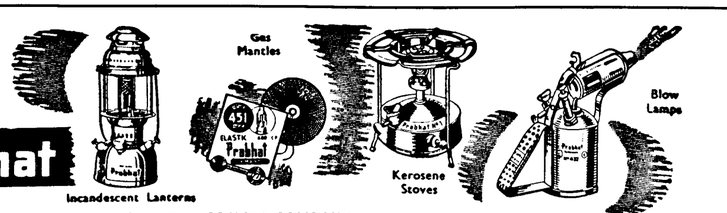
In the considered opinion of Dr. Lokanathan, there is the imperative necessity of evolving an industrial leadership of the highest quality for helping the progress of adjustment between innovation in techniques of production and the consequent unemployment, on the one hand, and the handloom industry, on the other. He referred, in particular, to the displacement of surplus labour as a result of the introduction of modern techniques and equipment in mills and declared that the textile industry itself should plan schemes for the absorption of surplus labour. He, however, hastened to add that the burden of solving the unemployment problem should not fall exclusively on the mills. The mills, according to him, had a right to expect of the Government the granting of special licences and financial aids in its attempts to find new employment avenues.

AUTOMATIC LOOMS

It will be recalled that, on 12th December 1956, the Government of India announced the allotment of 10,512 automatic looms, out of the 18,000 looms (as against 14,600 looms fixed in the textile policy of June 1956) proposed to be installed for the production of 350 million yards of cloth for export. The Government has since issued condition letters to the concerned mills which number 107. The bulk of the 10,512 looms allotted—7,536, to be precise—is accounted for by Bombay and Madras, their individual share being 3,840 and 3,696 looms, respectively. The number of looms allotted to other States is as follows:

West Bengal 960; Madhya Pradesh 576; Delhi 336; Mysore 288; Uttar Pradesh 240; Andhra 240; Kerala 144; Punjab 96; Rajasthan 48; others 48.

The last date for submitting applications for registration of handlooms has been extended up to the end of next month, since the registration has not been completed in several States. Announcing the extension of the date, the Government of India has reiterated the importance of such registration, in order to enable the Central and State Governments to estimate properly and to concert and extend necessary measures of assistance to the handloom industry. To the extent looms are not registered, the quantum of assistance will, it is said, fall short of distribution. It is also pointed out that lack of statistical data regarding handlooms will render difficult the task of assessing the requirements of yarn supplies and the needs for improved technical aid and equipment.



FINANCIAL RESULTS OF COTTON MILLS

REPORT ON RUSSIAN TEXTILE INDUSTRY

From a Special Correspondent

MANCHESTER, *31st December, 1956*

THE financial results of companies engaged in the cotton and rayon industries in Lancashire have, during the past year, reflected the adverse trading conditions which have been experienced throughout most of this period. Only in the final months of 1956 have prospects brightened, far too late to have any effect on the reports issued even at the year-end.

MANCHESTER LETTER

In such uncertain times, when buyers have been reluctant to operate at all freely, profit margins have tended to fall and earnings by individual mills have for the most part shown an equally declining tendency. Considering the state of trade, however, the results now tabulated are not as depressing as might have been expected in view of the severe setbacks encountered by certain concerns. The average profit among spinning mills is admittedly lower than at any time since 1947 but credit balances have been well maintained and a reasonable dividend has been paid out in the majority of instances.

According to our annual analysis, the average profit announced by 52 spinning mills during 1956 was £19,861 per company, as compared with an average of £27,745 for 60 companies in 1955 and £31,226 for 67 concerns in 1954. The average dividend paid by 55 spinning mills last year was 15.75 per cent., as against 23.42 per cent. for 62 companies in 1955.

The average profit of 20 concerns which combine spinning and weaving was £35,500 per company last year, as compared with £57,999 in 1955 and the average dividend paid by 22 such companies was 11.86 per cent., as against 13.39 per cent. For the whole of these 72 firms the average profit was £24,205 in 1956, as against £35,894 for 80 concerns in 1955. The dividend for 77 companies was 14.65 per cent. on average as compared with 17.52 per cent. in 1955.

Substantial Reserves

These companies now have an aggregate credit balance aggregating £11,563,487, an average of £150,175. A year ago, 84 firms had credit balances amounting to £13,120,710, an average of £156,199. While the general trend continues to indicate the difficulties through which the trade has passed, it must not be forgotten that substantial amounts have been placed to reserve, while, in many cases, plant and machinery have not only been maintained in excellent working order but have been modernised and re-equipped where necessary.

A year ago, a feature of the trading results announced, during 1955, was the slightly higher average profits earned by those engaged solely in the weaving branch of the industry. Subsequent events have reacted to the detriment of such firms and the latest accounts show a less encouraging picture. An analysis of 24 weaving concerns shows average profits of £28,090 per company last year, as compared with £52,962 in 1955, while dividends averaged 9.61 per cent., as against 15.24 per cent. Credit balances amounted on average to £91,382 per company as compared with £98,906 a year previously.

Combines' Earnings Down

Nor have the large amalgamations of spinning and weaving units escaped the general adversity which has been so prevalent in the mill towns. Total earnings of 14 of the leading groups and their subsidiaries announced last year amounted to £3,148,656, as against £4,665,012 in 1955. The average profit was £224,904 per company, as against £333,215. The dividend distributed averaged 13.23 per cent., as against 14.99 per cent. Some indication of the strength of these combines can be gauged from the fact that their aggregate credit balances amount to £6,689,266, as compared with £6,333,172 a year ago.

Few cotton companies took steps during the year to reconstruct their capital, either by way of bonus issues or repayments to shareholders. There were three cases of scrip bonuses, involving a total of £334,401, which compares with seven such distributions in 1955 involving £776,975. One capital repayment was made of £123,036 against a repayment of £77,500 in the previous year.

A Pleasant Surprise

Still on the subject of company finance—neither the market nor the stock exchanges have yet quite recovered from their surprise at the encouraging results announced just before Christmas by the Lancashire Cotton Corporation. When so many textile firms have been struggling against the conditions encountered and falling profits have been the rule, merely to maintain earning capacity can be regarded as a considerable virtue. The Corporation actually raised its trading profit by more than £125,000 during a period which barely included any of the trade's current recovery.

Even more startling to observers was the decision of the Directors to raise the dividend by 5 per cent. to a total distribution of 17½ per cent. The resultant rise, not only in the value of the company's stock, but in numerous other textile issues as well, was readily understandable. The fact that the Corporation had ploughed back profits, using them to purchase modern plant and machinery for many years, was given as the reason for now deciding to increase the return to ordinary stockholders.

In his survey of the past, present and future, Mr. Roger Lee, the Chairman, deals with many of the complications which have perplexed textile traders in recent months. Raw cotton prices, he declares, now appear to have reached levels at which buyers have a greater degree of confidence and order books generally had lengthened and were satisfactory. The company has continued its policy of constantly improving machinery with the installation of the most modern large package ring frames incorporating all the latest labour-saving devices.

More evidence to support the case of those who contend that trade in textile goods made from synthetic fibres is steadily encroaching on cotton's territory is contained in the latest quarterly review published by the Cotton Board. "There is little doubt that the massive increase in international trade in rayon piecegoods—principally Japanese—in the last few years has contributed towards the shrinkage of world trade in cotton cloth," says this survey.

During the first nine months of 1956 total world trade in rayon fabrics increased by about 12 per cent., as compared with the previous year. Japan made by far the greatest contribution to this increase, but several European countries also shared in the expansion despite the fact that Britain, France and Germany lost ground. Japanese shipments of rayon cloth, at 281,000,000 square yards, exceeded cotton cloth shipments for the second quarter in succession.

In contrast to this pronounced activity in the man-made fibres branch, the review points to a further sharp, and probably more seasonal, decline in world trade in cotton piecegoods in the third quarter of last year. Indian and German exports, in particular, were well below the level of the second quarter and more moderate decreases in the volume of exports from the United Kingdom, the United States, France and the Netherlands took place.

In the first nine months of 1956, total world trade in cotton cloth declined by about 5 per cent., as compared with the previous year, suggesting that the total for the twelve months will not be appreciably greater than that for the depression years of 1952 and 1953. Japanese exports, however, improved by about 13 per cent. over the 1955 level.

Soviet Textile Rivalry

A forecast that Russian mills could soon become a "formidable competitor" in world textile markets is given in the report of the British Weavers' Amalgamation delegation which visited the Soviet Union in the autumn. The delegation of eight was led by Mr. Harold Bradley, President, and Mr. Lewis Wright, General Secretary, and included three women.

Their report, issued in Manchester, says Russia aims to become self-sufficient in textiles and there is very little chance of its providing an export market for Lancashire cloth. "At the moment the production is mostly basic materials of low quality, mass-produced. As the economy strengthens more mills will be built and better-class fabrics produced and their consumption encouraged." said the report. It added: "It seemed to us that Lancashire need not waste its time wondering about exporting cotton textiles to the U.S.S.R. but spend it in building up and gaining a reputation for original attractive designs to anticipate what the U.S.S.R. may yet try to do to us."

Some of the mills visited by the delegation were housed in old buildings but others were modern, with lofty and well-lighted weaving sheds and automatic ventilation which provided a "clean and fresh" atmosphere.

The delegation reached the conclusion that the standard of life of the Russian workers was much lower than that in Britain and the report comments: "Our wage for the average weaver is about £7 15s. and it buys much more than £20 would in the U.S.S.R."—*All Rights Reserved.*

REVISION OF HEDGE CONTRACT

MOVE TO RECTIFY THE DEFECTS

THE wide disparity between the spot and futures rates of cotton in recent months has caused much concern to cotton traders and has induced many of them to discuss its causes, with a view to devising appropriate measures for remedying the defect. The anxiety of the traders is understandable, for the forward and spot sections are complementary to each other and the smooth working of the market requires that the two operate in close unison and maintain a reasonable degree of equilibrium. If there is a large difference between the spot and forward rates, the usefulness of the futures contract as a hedge medium will be considerably limited. The spot premium for the basic quality of the contract is an indicator of the relation of the forward and ready sections and the magnitude of the premium is a measure of the degree of divergence between the two. By the very nature of the hedge contract, ready cotton would most often command some premium. So the existence of a premium should not be taken as proof of a basic malady in trade. But, if the tendency, over a period of time, is persistently for greater and greater premiums or *vice versa*, it clearly indicates the presence of a basic defect in the contract and calls for corrective measures.

Such a tendency, it is widely maintained, has been in evidence in the Bombay cotton market during its working for a period of about seven months under the two-contract system inaugurated in June last. It may be observed that the two-contract system itself was introduced, with a view to avoiding wide disparities between spot and forward quotations and to bring hedge trading and hedging facilities to the desired standards of usefulness. Under a single-contract system so many varieties are tenderable against one and the same contract, varieties not only vastly different from each other in grades and staple length, but also very much different in fibre characteristics and spinning performance. There were occasions, it was pointed out, when varieties having a premium value of about Rs. 400 over the lowest variety were tenderable against the contract. This meant that there was no relation between the contract price and the actual spot rates. In such circumstances, a single contract could not provide adequate hedge protection. The adoption of the two hedge contracts system, it was thought, would make almost all varieties grown in India tenderable against the contracts and would also reduce the wide divergence between spot and futures rates.

Main Defect

But this expectation has failed to materialise to the desired extent, as the spot and futures rates continue to show considerable disparity. A majority of traders is inclined to attribute this to the technical defect of the hedge contract, which, it is maintained, in addition to being bearishly biased, is also incapable of preventing a spread between the two rates. Particular reference is made to by-law 55 of the E.I.C.A. relating to the fixation of tendering differences. It is held that it is the presence of this by-law that prevents the automatic functioning of the corrective mechanism. There is a close relationship between the working of the corrective mechanism and the method of fixing tendering differences. If the tendering differences are fixed in such a manner as to give the benefit of any prevailing spot premium (or discount) to the holder of unliquidated contract who receives the tender, the corrective mechanism would automatically start functioning between the two sections and restore equilibrium. But the by-law 55 of the E.I.C.A. lays down that fixation of tendering differences should be on the basis of hedge contract rates and not on that of the spot rates. Under the provisions of the rule, it is contended, the benefit of the premium is passed on to the holder of unliquidated contract only when the basic quality is tendered; in the case of tender of all other tenderable varieties, the sellers enjoy the benefit of the spot premium. Therefore the corrective mechanism can be sufficiently effective only when the quantity of the basic quality accounts for a large percentage of the total volume of tenderable cotton. Since this is not the case, the mechanism works in favour of the sellers.

It is also pointed out that, in the case of failure to tender or rejection of tender, the benefit of the spot premium should pass on to the holder of the contract, for which, it is pointed out, the invoicing back should be on the basis of spot rates. But the present futures contracts provides that it should be on the basis of the forward rates. This is naturally more favourable to sellers as the spot rate is usually higher and at present considerably higher than the forward rate.

Amendment

Market circles are strongly convinced that the only method of setting right this basic defect is a suitable amendment to the said by-laws. The Board of the E.I.C.A., accordingly, met on 14th December 1956 to consider the matter. The Board discussed the various issues regarding the revision of the by-law, but could not arrive at an agreement. It was, however, anxious to patch up all existing loopholes and so it convened a special meeting on 17th December and, after detailed consideration of the pros and cons of the case, reached the conclusion that it was necessary to amend the by-laws 55 and 55A. The proposed amendment to the by-law 55 provides that the tendering differences to be fixed shall be on the basis of spot prices, instead of on the basis of the hedge contract prices as at present, that is, exactly on the same lines as the system was before the last amendment. It also decided that by-law 61 relating to the invoicing back should remain unaltered for the time being. The above change, which is subject to the approval of the Forward Markets Commission, shall apply only to contracts in May 1957 delivery period in respect of Fine Jarilla 25/32" contract and for June 1957 delivery period in respect of Fine Vijay 27/32" contract. Accordingly, the current *vaidas* will not be affected by the proposed changes. This is only as it should be, since it is not desirable to vary the terms of contracts in which dealings have been going on for some months now.

While the amendment has been generally welcomed in market circles, as it was demanded by a wide section of the trade, considerable misgivings have been expressed regarding the advisability of maintaining the *status quo* in respect of the provisions (by-law 61) regarding invoicing back in case of failure to tender or rejection of tender. But there is on this question considerable differences of opinion, especially between the trade and the mill interests. According to some trade circles, the amendment to by-law 55 is a step in the right direction, as the fixation of tendering differences on the basis of spot rates would help to bridge the gap between the latter and the forward rates. But they are in favour of keeping the provisions regarding the invoicing back of cotton as such, their reason being that it would provide a necessary check to any undue benefits the seller may derive from the bullish implications of the proposed change in by-law 55. But mill interests contend that any amendment to by-law 55 should necessarily be followed by a similar amendment to by-law 61. They argue that invoicing back in case of rejection of tender or of failure to tender should also be on the basis of the spot rate. This is especially important, they maintain, in view of the fact that it affects genuine buyers like mills, many of whom purchase large quantities of cotton through forward delivery contracts. It is argued that, if the invoicing back of tenders is to be on the basis of the relevant hedge contract rate and not on the basis of the spot rate, it would amount to the seller being let off, lightly in the event of rejection of docket cotton. All these points of view, it is expected, would be considered by the Forward Markets Commission when it takes up the question of approval of the amendments proposed by the E.I.C.A. shortly. The Commission has already notified the proposed changes in the *Gazette of India Extraordinary* dated the 29th inst. and invited the views of the persons concerned. The question is receiving the active consideration of the Commission at the time of writing.

Another proposal of the Board is that, consequent upon the amendment to by-law 55, the by-law 55A providing for the weightage of 6¼ per cent. be removed. It also proposed to introduce separate standard boxes for black leafy and

HIRAKUD DAM IS A GREAT ACHIEVEMENT

ITS ENGINEERING FEATURES AND ECONOMIC IMPORTANCE EXPLAINED

By M. S. Thirumale Iyengar
CHIEF ENGINEER, HIRAKUD DAM PROJECT

FROM time immemorial all rivers, big and small, have been intimately bound up with the life of the people in the valleys for various reasons, the most important of which is the river's hydraulic potential. The Mahanadi—a great river—is no exception to this law. During the last century, when mechanisation and engineering techology had not attained their present levels, a diversion weir and canals were constructed across the river at the head of the delta, to carry waters by gravity to areas near and far from the weir itself, so as to make life possible in villages and to assist in agricultural development. The Mahanadi canals in the Cuttack District form monuments to the pioneering spirit of celebrated engineers of the last century and they have given a high degree of agricultural richness to the lands commanded by them.

The irrigation developments continued unceasingly, but it was realised early that the agricultural interests suffered periodically both from drought conditions and flood ravages. It was realised that the creation of a large reserve of water for agricultural purposes which would at the same time mitigate the flood menace, would remove the difficulties and distress caused by lack of water or too much of it.

The construction of the great Hirakud reservoir is the culmination of the hopes and aspirations of the Orissa people in the Mahanadi valley for liberation from periodical droughts and floods and it took nearly a hundred years of consideration to arrive at a firm decision.

The Mahanadi has a delta as big as England and a catchment area 10,000 square miles larger than that of the Tennessee in the U.S.A. The mean annual run-off is 74 million acre feet, which is five times that of the Colorado at the site of the highest dam in the world—the Boulder Dam. The engineers, who have studied the valley in detail and who have surveyed the catchment, have shown that there are three key-points for the integrated development of the valley. Three reservoirs were proposed—one at Hirakud, the second one at Tikkerpara, a hundred miles below Hirakud and the third one at Naraj, which is almost at the apex of the delta above Cuttack. The scheme for dividing off the river envisages that these three reservoirs should control four power stations, providing 5,000 million kilowatt hours per annum, and safeguard agricultural interests of nearly 2½ million acres of land while completely protecting the deltaic areas down to the coast from floods in the river. In making this forecast of benefits, no account has been taken of the possibilities of developing the major tributaries of the Mahanadi like the 'Ib' and 'Tel' for power and irrigation potential. Out of these tremendous possibilities, the Hirakud reservoir envisaged as the first big one has become a *fait accompli*.

Longest Dam

The Hirakud Dam is situated near Sambalpur in Orissa at Long. 83° 53' and Lat. 21° 32'. The structure is essentially an earthen barrier, 16 miles long, and is perhaps the largest dam in the world. It has created a reservoir of 6.60 million acre feet of water or 288,000 million cubic feet of water which is thrice the capacity of the Mettur reservoir in the South and twice that of the Tungabhadra in the Deccan. The water spreads over 288 sq. miles—a colossal expanse that submerges 283 villages (249 Orissa and 34 Madhya Pradesh), displacing 20,000 families from their homes for the benefit directly of a large proportion of the State's population and indirectly of the nation. The location of the dam, which would appear from its topographical characteristics suitable for a large structure, was not without certain drawbacks. The river was very wide here and the barrier had to be made very long. But it was inevitable, as, by locating it here only, we could get a vast extent of land commanded for irrigation benefits.

Main Dam

The main dam is three miles long, spanning two hills between which the Mahanadi flowed in four channels—two on either side of an island formation. This island is the Hirakud island from which the dam has derived its name. On either side of these main hills, there is a number of hill ranges, gaps in which had to be blocked to hold up the waters. There are five gaps on the left totalling to six miles length and one on the right seven miles long so blocked up. Including the hill sections, the length is 20 miles from end to end with a roadway at 642 contour, which is the top level of the dam.

Characteristics

A brief summary of the characteristics are given below. These are at the dam.

Normal storage level—+630 (above sea-level).
Catchment area—32,200 sq. miles.
Mean annual run-off—74 million acre feet.
Reservoir total capacity—6.6 million acre feet.
Reserve useful capacity—4.72 million acre feet.
Average head on the turbines—87 feet
Installed capacity at the dam—1,23,000 kw.
Annual energy production—750 million kw. hours.

Taken alone, the figure of 750 million kilowatt hours does not properly reflect the actual importance of the dam. It is necessary to add to the production from the power station at the foot of the dam the additional energy provided for at the power station 16 miles lower down which is now under construction and which will produce annually 450 million kilowatt hours. The useful volume of the storage will allow a large flow of 13,000 cusecs to be sustained during the summer. All this flow will, of course, go to irrigate a vast extent of land in the Puri and Cuttack districts of the Mahanadi delta. 1.6 million acres of land will be cropped with this water annually. The summer flow at Hirakud, before the reservoir came into existence, used to dwindle down to as low as 150 cusecs. In future, the minimum flow in the river below Hirakud will be of the order of 13,000 cusecs. All this water, as already mentioned, will be at the disposal of the agricultural interests in the delta where the spectre of famine due to drought conditions will vanish for ever.

In order to obtain the maximum possible benefit from the regulation of the river and to increase the value of the Hirakud reservoir, work is now afoot for developing the additional energy at a power station, 16 miles below the main dam. The tail-race from the main dam turbines is taken along a lined canal for 16 miles and water dropped about 75 feet into the river running close by.

The technical arrangements of the dam will now be described. The length of the dam precluded the adoption of either the mass concrete or the mass rubble stone-masonry type of dam. Except for the spillways and power dam section, the type of structure put in is an earth dam of compacted alluvium.

An earth dam was adopted by reason of the prohibitive cost of concrete or masonry structure in this valley with such an open profile and also of the economy resulting from the use of material freely available with reasonable proximity of the works. Such a type of structure has been adopted for centuries in this country though of small heights. Here we were confronted with putting up an earth section 200 feet high at the lowest point. Such high structures which had been proved in service in other countries had not been built in India in the past. For the main dam a sort of a zoned section was adopted—the central core made impervious by using earth with a permeability coefficient of less than 1 foot per year and cased front and rear, with stable material having a permeability coefficient of about 10 feet per year. A cut-off trench near the upstream toe of the impervious core was provided for the full length of the earth dam. An injected cement grout curtain was made along the whole length of this trench to prevent the passage of subterranean water. The total earthwork involved in the main dam itself was 44 crore cubic feet with 147.3 lakh c.ft. of filter material and 166.8 lakh c.ft. of rip-rap. The front slopes have been protected with 4 feet thick rip-rap over a sand and single filter. 163.7 lakh c.ft. of stone have been used for the rock toe and pitching in rear. In the dykes, the total quantity of earth is 20 crores c.ft. and stone pitching rock toe 208 lakh c.ft.

Use of Modern Instruments

It is obvious that this enormous quantity of earthwork could not be done by manual labour in a reasonable time. Extensive use of earth digging and hauling equipment made it possible to place all the earth in about four years' time. A vast array and number of machines roamed about roaring like monsters, some hauling earth dug and loaded by huge shovels, some loaded by loaders that cut the earth and delivered the same into the waiting dumpers. Draglines, scraper-loaders all worked incessantly to supply the earth for the main dam. Dozers spread the same and sheep-foot rollers compacted the layers. In this process of raising the huge earth dam layer by layer it was not enough if we ensured only the machines working without breakdowns. The most important feature in this field of operations is the non-stop tests of soil used both in the borrow areas and after placement on the dam. The optimum moisture permeability and the compaction factor requirement governed the construction layer after layer. The considerable difference of level existing between the full reservoir level of +630 and the top of dam at +642, ensures a sufficient degree of security and safety.

LINKING SUGARCANE PRICE TO QUALITY

GOVERNMENT'S DECISION ANNOUNCED

AT long last, the Government of India has finally decided to introduce a system for linking the price of sugarcane to its quality, instead of to weight alone as at present. This was disclosed by Mr. T. C. Puri, Joint Secretary to the Union Ministry of Agriculture and President of the Indian Central Sugarcane Committee (I.C.S.C.), in the course of his address at the twenty-second meeting of the Committee held at Dalmianagar on 28th December last. This decision is a sequel to the unanimous recommendation made by the Joint Committee of the Development Council for Sugar Industry and the I.C.S.C. Before applying the system to the whole of India, the Government will, however, try, as suggested by the Committee, the system on an experimental basis in ten factories situated in different regions so as to gain experience of the working details without making any actual payment on quality basis during the trial period. Arrangements in this direction, according to Mr. Puri, are already in progress. Under the scheme, the total price payable by the sugar factory will be divided *inter se*, between the growers on the basis of quality. The growers or groups of growers who supply cane with higher sugar-content will be entitled to a premium, while others will get a proportionately lower price.

The Central Government's decision to link the cane prices to quality, though very much belated, deserves to be welcomed. The present system of paying for cane on the basis of weight only is defective in several respects. It does not, as Mr. Puri pertinently remarked, provide any incentive to the cultivators to grow better varieties of sugarcane with higher sugar-content or to harvest the cane when it is fully matured and deliver the cane to the factory as soon as possible. It is this factor which has largely been responsible for the rigid cost structure of the sugar industry. Surely, the adoption of the method of linking cane to quality will go a long way towards creating conditions most conducive to the growing of varieties with higher percentage of sugar-content which, to quote Mr. Puri, "is the only way in which our cost of production of sugar can go down."

Simultaneously with the scheme for linking cane price to quality, energetic steps must be taken by our research stations to make available adequate quantities of seed of better quality cane—disease-resistant and with higher sucrose-content and adequate yield per acre. Mr. Puri did well to stress this aspect, as also to urge the necessity for pre-harvest spraying of standing cane crop with sodium salt. Such spraying, it is claimed, can augment recovery by 0.4 to 0.8 unit and the cost is comparatively small as compared with the gain in sugar recovery.

Intensive Manuring

The need for intensifying cane development is of special significance in the present context when the sugar industry has launched upon a large expansion scheme. The scheme, the estimated outlay on which is as much as Rs. 51 crores, envisages a rise of over 20 per cent. in the production of sugar, from 1.86 million tons in 1955-56 to 2.25 million tons by 1960-61, with the target of rated capacity being fixed at 2.50 million tons. If this large expansion scheme is to be implemented successfully, it is imperative that the per-acre yield of high sucrose-content cane is augmented. Emphasising this aspect, Mr. Puri revealed that the target for intensive manuring of sugarcane was fixed at 1.5 million acres during 1956-57, as against 808,000 acres actually covered in the previous season out of a target of 1.0 million acres. Of the target of 1.5 million acres, 1.38 million acres had been covered by the end of September 1956, using more than 2.15 million maunds of fertilisers. Mr. Puri described the progress as being "very satisfactory" and hoped that, by 1960-61, the entire cane crop in the country would be covered under the campaign, in order to achieve the production target of 78 million tons of cane. The total cost of cane development schemes (barring those of the Punjab and Mysore States) is estimated at Rs. 10.45 crores, of which the share of the Central Government is Rs. 2.65 crores. The target of 78 million tons fixed for cane production under the second Plan represents a rise of 20 million tons, as compared with the actual output of about 58 million tons in 1955-56. The target fixed in the first Plan, it may be noted, was 63 million tons.

In his speech, Mr. Puri drew attention to the problem of disposing of the excess of sugarcane in some areas, particularly in West Uttar Pradesh and the Punjab. He recalled the special steps taken by the Government to induce the sugar factories in the U.P. to commence crushing earlier than usual in the current season. According to him, 16 factories had started crushing by 4th November 1956, as against only one factory a year before. Up to 12th November, for which the special concession was allowed, the factories crushed a total of 3,466,000 maunds of cane with an average recovery of 7.8 per cent. Thanks to the crushing of immature cane thus, the loss of sugar amounted to about 79,212 maunds, on the basis of the normal recovery of 10 per cent. Surely, it is not, as Mr. Puri rightly stated, in the national interest, and least of all that of the cane growers, that this situation should continue. Steps must be taken to avoid recurrence of such a situation in the next season.

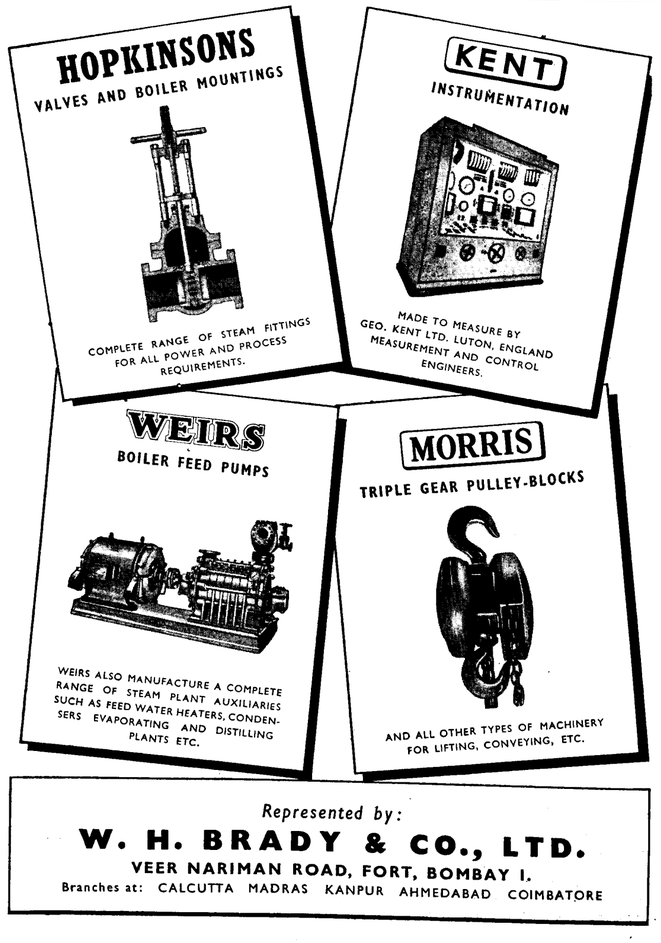
"Gur" Industry

Mr. Puri made a special reference to the decentralised sector of the sugar economy, namely, manufacture of *gur*. Emphasising the important role played by the *gur* industry, he said:

"In spite of the increase made in the production of white sugar, the consumption of sugarcane for this purpose is limited to only about 30 per cent. of the total output and the bulk of the production, amounting to 50 to 55 per cent., continues to be used for the manufacture of *gur* on a cottage industry scale. The present methods of manufacture permit of considerable improvements. To the extent these improvements can be effected, the return to the growers will be higher. With this end in view, the Indian Central Sugarcane Committee sanctioned research schemes in various aspects of *gur* industry in some of the important *gur* producing States on 50:50 basis of pay and allowances of the staff."

Despite the important role played by the *gur* industry, the State Governments have not given adequate attention to the needs of the industry. Regretting this tendency, Mr. Puri observed that only a very few schemes had been received so far, perhaps, for the reason that the State Governments were not inclined to pay the matching grants. He urged the Governments to reconsider the matter and to take advantage of the financial allotment made by the Centre in this regard. He stressed here the need for providing the necessary incentive at all stages for the proper implementation of the schemes so as to achieve the targets fixed.

At the end of its session, the Central Sugarcane Committee sanctioned a five-year scheme for improvement of transport facilities in the sugar factory areas of Bihar. The scheme involves an expenditure of Rs. 50 lakhs as subsidy for the construction of roads and Rs. 50 lakhs as loans for the laying of tramway lines. The Committee also sanctioned a scheme for soil survey and classification of soil in cane tracts in Madras for a period of five years and a scheme for cane development in the Andaman and Nicobar Islands and in the North-East Frontier Agency area under the Second Plan. Besides these schemes, the Committee took four notable decisions. First, the State research stations should properly repeat the trials for increasing the sugar-content in the standing cane crop and carefully scrutinise the data. Secondly, the Governments of Andhra, Madras and Mysore should start investigation and collection of necessary data relating to improvement in acre-yields of cane obtained by change of seed material. Thirdly, an *ad-hoc* expert sub-committee of the I.C.S.C. should give top priority to comparatively backward States like West Bengal, Assam and Madhya Pradesh and visit them at an early date to set their pattern of future cane research and development work. Fourthly, conferences of cane development and research workers should be held annually, with a view to raising the standard of scientific work connected with sugarcane.



AMALGAMATION OF SMALL COLLIERIES

RECOMMENDATIONS OF BALWANTRAI MEHTA COMMITTEE

THE Government is now said to be actively studying the recommendations of the Collieries Amalgamation Committee. This Committee was appointed in November 1955, under the chairmanship of Mr. Balwantrai Mehta, M.P., to examine the position of small collieries in Raniganj and Jharia and to make proposals for their amalgamation. It was expected to submit its report in about two months after taking into account the area, the current output and the capacity of the collieries, as also the geological, geographical and other aspects. The Committee's report is said to have been forwarded to the Government after a year of its appointment, but the full text of the report and the Government's decision thereon are yet to be published. The summary of the recommendations available go to show that the Committee is not unanimous in its decision, because as many as five out of the thirteen members constituting it have submitted notes of dissent on various points.

The Committee has recommended that any colliery in Jharia or Raniganj which is not producing about 10,000 tons per month at the time of implementation of the scheme of amalgamation or has an area of less than 100 acres should be amalgamated with one or more collieries, or part or parts thereof. It has, however, suggested that any colliery may be excluded from the amalgamation scheme, if, due to special circumstances, its amalgamation is not advisable or expedient or in public interest. It has also recommended that any colliery producing more than 6,000 tons of coal per month, but less than 10,000 tons, may be excluded from the scheme, if it is capable of producing 10,000 tons per month within a period of one year and if demand and transport are available for its output.

Seamwise fragmentation of collieries should, the Committee states, be permitted only in special cases in the interests of the country. Cases of such fragmentation, wherever occurring, should be examined and, if they are against the interests of safety and conservation, they should be rectified.

Statutory Commission

In order to carry out the scheme of amalgamation, in cases where such amalgamation is not voluntarily agreed upon, the Balwantrai Committee has suggested the appointment of a statutory body, called the Collieries Amalgamation Commission, in consultation with the West Bengal and Bihar State Governments. The Commission, which will consist of a chairman of the rank of a High Court Judge and two members, one being a senior mining engineer and the other a senior accounts expert, will be entrusted with the task of drawing up a scheme of amalgamation of collieries and adjustment of boundaries, hearing objections and giving decisions regarding the same.

All schemes of voluntary amalgamation and adjustment of boundaries will, nevertheless, be notified to the Commission which will take all necessary steps for the implementation of such schemes, including valuation of collieries. Till such time the statutory Commission is appointed, the Government should, says the Committee, appoint a committee of three technical experts, to examine the proposals of voluntary amalgamation, modify them wherever necessary, and give its decision on them within one month from the date of receipt of the schemes.

The Amalgamation Committee has recommended that composite legislation should be undertaken to effect amalgamation and adjustment of boundaries and for the apointment of the Collieries Amalgamation Commission. Powers of amalgamation of mining leases will have to be taken by an amendment of sections 5 and 7 of the Mines and Minerals (Development and Regulation) Act and the mineral concession rules also will require amendment. In order that difficulties in the way of amalgamation and adjustment of boundaries may be removed, the Committee hopes that the Governments of West Bengal and Bihar will take steps to take over the rights of all intermediaries.

The Committee has also prescribed a detailed procedure for determining the share of each colliery in the amalgamated unit and for fixing the compensation to be paid to a colliery owner who is unwilling to join the amalgamated group, in which case the colliery concerned will be compulsorily absorbed. The share of each colliery is to be decided by mutual agreement between the parties or according to the value of each colliery determined by the Commission on the following basis:

Assets of the colliery, consisting of mining rights, initial capital expenditure, stores and stocks of coal, *less* liabilities consisting of loans and encumberances on property *plus* a surcharge equal to two to four times the net average annual profit according to the income-tax returns over a period of ten years from 1945.

It is left to the Commission to consider whether, in addition to these, any surcharge should be added in respect of coal reserves in working seams.

The compensation in the case of compulsory absorption is also to be decided on the above basis. The compensation shall be payable in five equal annual instalments.

Financial Assistance

The Commission has further recommended the grant of financial assistance to amalgamated units, in order that they may function efficiently. The financial assistance is to be given by the three Government-sponsored organisations which advanced funds to industrial undertakings or by a new corporation to be formed. The latter may be financed by levying a cess on despatches of coal.

As regards the form of organisation to run the amalgamated collieries, the Committee says that it may be left to be decided by the parties concerned, but, in case they fail to come to an agreement, the statutory Commission may decide it. The Committee is, however, in favour of public limited companies.

The Committee has also paid attention to the effects of amalgamation on labour and says:

"There is no likelihood of any appreciable change in the overall employment of labour due to amalgamation. Only in the category of clerical and some other staff, some workers may be rendered surplus. Certain adjustments in the employment pattern will be necessary. We endorse the proposal, which is separately under consideration, for the creation of a pool for surplus colliery workers. The process of rationalisation and mechanisation after amalgamation should be gradual and only after arrangements for the absorption of surplus hands are made. If the surplus hands are not absorbed, they should be maintained till natural elimination or absorption elsewhere takes place; each maintenance will be on such terms and conditions as are provided in the Industrial Disputes Act. Adjustments should be made in consultation with representatives of labour and without adversely affecting the emoluments of the workers or increasing their workloads."

The Committee has fixed 31st July 1958 as the date of implementation of the amalgamation and adjustment of boundaries.

In making the recommendations, the Committee has taken note of the country's growing needs of coal, which it estimates will be more than 200 million tons in the next decade or so. If the industry is to play its part in supplying these needs, the Committee observes, it should be reorganised in the immediate future. Such reorganisation is not possible, it feels, if so many small units of production are allowed to continue. They have, therefore, to be brought under unified control by amalgamating, reorganising and modernising them, so that the existing resources can be fully exploited. The Committee has also stressed the need for a proper evaluation of the country's coal reserves. Amalgamation of collieries will, it says, enable the central washeries to draw coal of fairly uniform washability characteristics from large units. Wastage of coal in thin seams and selected mining may be avoided by extensive stowing and washing. Certain responsibilities have also been evolved on the Coal Board for supply of sand, water, etc. In order to minimise the locking of coal underground due to the existence of railway lines, roads, rivers, etc., the Committee has suggested that boundaries should be readjusted in such a way that these features from the boundaries wherever necessary.

Notes of Dissent

The five members of the Committee who have added notes of dissent to the report are the three representatives of the coal industry: Mr. R. Maulik (Indian Mining Association), Mr. J. N. Mukherjee (Indian Mining Federation) and Mr. B. L. Agarwalla (Indian Colliery Owners' Association), the West Bengal Government nominee, Mr. B. N. Bannerjee, and the Bihar Government nominee, Mr. C. Bhattacharya. In a joint note, the representatives of the industry say that amalgamation should not be based on production, as it is circumscribed by factors like demand and availability of transport which are extraneous to the inherent capacity of the colliery. They suggest that collieries fulfilling the conditions of areas and reserves should generally be excluded from the scheme of amalgamation and, instead of implementing the Committee's recommendations all at once, the Commission should start by amalgamating collieries having very small areas. They also feel that a person with knowledge and experience of the commercial side of the industry should be included in the Commission.

The West Bengal Government representative, in his note, agrees with the representatives of the industry that any scheme of amalgamation based on output as the main guiding factor will be unreal. He and the Bihar Government nominee feel that the respective State Governments should be associated with the process of amalgamation at every stage and represented on the proposed statutory Commission. While the former suggests that in extreme cases where colliery owners are unwilling to be amalgamated the State Government should have the option of stepping in to take over and run such units, the latter is of the opinion that the Bihar Government should have the first option to take over and run all the amalgamated units on its own behalf.

MALAYAN RUBBER INDUSTRY

INCREASE IN PRICE RAISES WAGE BILL—OUTLOOK PROMISING

THE political developments in Sumatra, the largest rubber-producing area in Indonesia and the biggest overseas supplier of first grade sheet for re-export through Malaya, have been the dominating factor in the Singapore rubber market during the last fifteen or twenty days. Though the prices at the time of writing are a shade lower than at the close of 1956, the January First Grade having buyers at $M1.13¼ per lb., as against $M1.15 per lb., the undertone remains firm on the prospect of a squeeze on nearby shipments. It is feared that, if the bloodless coup in Sumatra develops into a civil war and a squeeze on nearby shipments results, the upward trend in prices will be aggravated, because operators, who sell forward in anticipation of supplies, will be forced to scramble for the available material in the spot section to cover their commitments.

In the event of a civil war in Sumatra, the trade of Indonesia with Malaya will no doubt be affected and the flow of rubber exports will be cut down drastically. This will offset the substantial improvement in the trade between the two countries built up during the past year, particularly after the Suez crisis. The total trade of Malaya with Indonesia in the first ten months of 1956 amounted to $M1,160.8 million, a rise of over $M40 million over that in the corresponding period of 1955, of which Sumatra accounted for $M722.1 million, owing to the large rubber trade. As, however, such factors as the latest developments in Indonesia are only temporary, the sharp rise in price will be followed by a severe reaction when the situation improves. The wide fluctuations are, therefore, looked upon with disconcert by rubber producers, as they affect the normal trade in natural rubber which, despite the competition from synthetic rubber, has a fairly promising outlook.

Rise in Wages

The sharp rise in price following the Suez crisis has already had an adverse effect on the Malayan rubber producers, namely an increase in their wage bill. The wages of tappers and field workers in the Malayan rubber industry are fixed every quarter on the basis of the average market price in the previous quarter. The wages paid in the last quarter of 1956 were based on the price-zone 80 cents to $1. As the average price for the last quarter, at $1.02, fell within the zone $1 to $1.20, a rise in wages for the first three months of 1957 has been announced. Under this system, tappers' wages will be raised from $3.30 daily to $3.65 and those of field workers from $2.90 to $3.25 per day. More than 320,000 workers will thus be benefited by an average increase of 33 cents per day, and this will cost the industry $M8 million (about £933,000).

The year 1956 has been a satisfactory one for the Malayan rubber industry. The production in the first eleven months of the year amounted to 566,907 tons, a fall of only one per cent. from that in the corresponding period of 1955. Exports have also been encouraging. In the first eleven months, shipments to the U.K. remained almost the same as in the corresponding period of the previous year, being slightly over 23 per cent. of the total exports, actual shipments being 212,406 tons. Exports to the U.S. amounted to 146,634 tons, or 16 per cent. of the whole, as against 18 per cent. in 1955. In the same period, Russia bought directly from Malaya 12,791 tons, as against *nil* in the previous year and shipments to China amounted to 8,452 tons, as against *nil*. Japan purchased 60,718 tons in the first ten months, as compared with 58,895 tons in the same period of 1955.

World Consumption

The world consumption of natural and synthetic rubber during 1956 is placed at an annual rate of 3 million tons. In the U.S. alone, the total consumption of new rubber by the rubber manufacturing industry during the past year is estimated at 1,435,000 long tons, the second highest figure on record, as compared with 1,529,699 tons used in 1955. Prospects for 1957 are, according to the spokesmen of the rubber manufacturing industry, better than for 1956, with consumption estimated at 1,510,000 long tons. The proportion of synthetic rubber consumed by the manufacturers is, however, said to have gone up from 58.50 per cent. in 1955 to 60.9 per cent. in 1956. By 1960, the consumption of synthetic is expected in some circles to rise to or even exceed 62 per cent.

The rubber producers are, however, more optimistic about the outlook for natural rubber. For, according to Sir Eric Miller, Chairman of Harrisons and Crosfield Ltd., although the production of new cars in the U.S. was severely curtailed in 1956, there had been no diminution in the number of vehicles, particularly trucks, running and requiring tyre replacements. The unsold stocks of automobiles which stood at a high of 900,000 early in 1956 are said to have been sold out completely, thus greatly assisting the sale of 1957 models, for which there seefns to be a keen and increasing demand. Moreover, stocks of tyres in the U.S. are also said to be on the high side, but the varying sizes in use today has necessitated much larger stocks to be carried. The introduction of the 14" tyre which is being fitted to all 1957 models is said to contain a higher proportion of natural rubber than the 15" tyre.

Sir Eric Miller is of the view that so long as natural rubber is available in ample quantities, European manufacturers outside the Iron Curtain countries will be inclined to use synthetic on only a moderate scale, as imports from the U.S. and Canada have to be paid for in dollars. Any substantial expansion in production of natural rubber can only be gradual. At the same time, the world cannot afford to be short of rubber, so that some increase in synthetic production is inevitable. Nevertheless, rubber goods manufacturers will have to depend on natural rubber to a substantial extent for several years to come.

TEA PRODUCTION IN SOUTH INDIA

The output of tea in South India during November 1956 amounted to 12.42 million lbs., as against 12.60 million lbs. in October 1956. As compared with the corresponding month of 1955, when production aggregated 10.93 million lbs., the latest monthly output shows an increase of 1.49 million lbs. This brings the total output for the first 11 months of 1956 to 116.22 million lbs., as compared with 121.29 million lbs. in the corresponding period of 1955 and 117.80 million lbs. in that of 1954. With the increase in November output in South India, the aggregate world crop as at the end of November is 1,108.32 million lbs., which represents a decline of 2.61 million lbs. from that (1,110.93 million lbs.) at the close of November 1955 and an increase of 27.62 million lbs. over the total (1,090.70 million lbs.) at the end of November 1954. The figures of world total, however, include the Indonesian production only up to September.

RUBBER OUTPUT

The production of rubber in India during November 1956 amounted to 2,800 tons, as compared with 2,326 tons in the previous month and 2,680 tons in the corresponding month of 1955. The total output in the first 11 months of the year aggregated 20,530 tons, as against 19,695 tons in the corresponding period of 1955. The consumption by manufacturers during the month under review shows a much sharper rise, at 2,547 tons, as against 1,837 tons in November 1955, bringing the total consumption for the 11 months to 26,349 tons, the corresponding figure for 1955 being 24,822 tons. The stocks with estates and dealers at the end of November last amounted to 7,833 tons, as compared with 7,388 tons a year before.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Bombay, one of the more than five hundred offices waiting to take care of your savings throughout India.

FORWARD TRADING IN NON-FERROUS METALS

BOMBAY ASSOCIATION RECEIVES RECOGNITION

AS in many countries of the world, so also in India, forward trading in non-ferrous metals has been traditionally confined to copper, lead, zinc and tin. The Forward Markets Commission, after examining the question of regulating futures trading in these non-ferrous metals, has recommended that the Bombay Metal Exchange Ltd., Bombay, be granted recognition for conducting futures trading. It has further recommended that the recognition to the Exchange should be conditional upon its carrying out such modifications in its by-laws and articles as have been suggested by the Commission. The Government of India has decided to accept the recommendations of the Commission and give effect to them for a period of three years in the first instance. Recognition to the Bombay Metal Exchange Ltd., the Government has announced, will be granted as soon as it has carried out the suggested modifications in its articles and by-laws. The Government, however, proposes to review the position at the end of one year from the date of the grant of recognition, in the light of the working of the forward market and other relevant developments.

Copper, lead, zinc and tin are, as is well known, of increasing industrial importance. Copper possesses high electrical and thermal conductivity, fair degree of strength and excellent corrosion resistance. Those characteristics have enabled copper to find extensive use in the electrical and other industries. The chief users of the metal and its products are: electrical and cable industry, brass rolling industry, defence and railways and utensils industry. The present overall demand for copper in India is about 25,000-30,000 tons per year. Consumption by electrical cable and wire industry accounts for 12,000 tons, by the utensils industry for about 8,000 to 10,000 tons and by defence, railways and other industrial purposes for about 5,000 to 7,000 tons. The annual demand is expected to rise to about 35,000 tons by 1960-61.

Copper

The production of copper ingots in 1954 and 1955 was 7,161 tons and 7,192 tons respectively; world output of copper was 2.7 million tons in 1955. Domestic production satisfies about 28 per cent. of the total demand for copper in India. There is only one unit manufacturing virgin copper from ore, the Indian Copper Corporation. The extraction of copper from the ore is done entirely by the fire refining process at present. As there is no production of electrolytic copper in India, supplies of this variety required by the electrical and other consumer industries have to be entirely imported. From time to time, proposals, the Commission states, have been mooted for putting up an electrolytic smelter in the country, but the absence of suitable raw material has been the main difficulty. The Commission adds: "The prospects for the production of electrolytic copper in the country in the immediate future are, therefore, not bright."

Zinc possesses high resistance to atmospheric corrosion. This quality has enabled zinc to find extensive application in spraying, die casting, zinc plating and allied uses in textile and paint industries. World production of zinc in 1955 was 2.8 million tons. The present overall demand for zinc in this country is estimated at about 30,000 tons per year. It is chiefly consumed by the iron and steel industry for the production of galvanised sheets. The demand for copper is expected to increase considerably with the industrial expansion of the country. The production of virgin zinc is not undertaken on a commercial scale as there are no large deposits of high-grade ores in India. Imports of all forms of zinc amounted to 44,400 tons in 1954-55, as against 29,800 tons in 1953-54. Zinc is usually imported either in the wrought or unwrought form. In the wrought form, it includes rods, sheets, strips, tubes and pipes, while in the unwrought form it includes virgin zinc in the shape of ingots, slabs and scrap. The former forms 10 per cent. of the imports and the latter 90 per cent.

Lead and Its Alloys

The chief users of lead and its alloys are the pigments, telephones, electrical and chemical industries. The important uses of lead are in the manufacture of accumulators, and as a component in solders, type metals and bearing metals. The present overall demand for lead in India is estimated at 15,000 tons. Domestic production meets about 14 per cent. of the total demand in the country. In 1955, production amounted to 2,375 tons, as against 1,789 tons in 1954; world production in 1955 was 2.9 million tons. In 1954-55, India imported about 10,000 tons, as against 7,400 tons in the previous year. Lead is imported in wrought as well as unwrought form, the former (about 12 per cent. of total imports) comprising sheets, pipes and tubes and the latter comprising ore, pig lead and other sorts.

The chief property of tin, namely, good resistance to corrosion under many conditions, has enabled the metal to find extensive uses in the manufacture of tin-plates and alloys such as solder, type-metal, white-metal, gun-metal and bronze. It has also a large variety of uses in chemical industries. World output of tin in 1955 was 1.7 million tons. The present overall demand for tin in the country is estimated at about 4,000 tons. The production of tin in India is negligible. All the demand is met entirely from imports which aggregated 3,000 tons in 1953-54 and 4,000 tons in 1954-55. Unwrought tin constitutes about 98 per cent. of total imports and consists of blocks, ingots, bars and slabs, and wrought tin includes foils and other sorts.

Futures Market

The Commission, after examining the case for forward trading in copper, zinc, tin and lead, has come to the conclusion that these metals "fulfil the conditions requisite for being traded in futures market." Explaining this view, it says:

"The metals in their various forms are homogeneous in character and the varieties in which they are marketed are standardised and graded before sale. They are capable of being stored for long periods and the quality does not undergo any deterioration. The demand for these metals springs from fabricating, rolling drawing and manufacturing industries located all over the country and is large and steady. Although indigenous production is relatively small, sufficient imports are usually obtained from abroad to provide adequate supplies of the metals for the country's requirements. There is an adequate volume of stocks at Bombay more or less throughout the year. The futures market enables all participants in the metal industry—producers, smelters and refiners, consumers, manufacturers, scrap merchants, stockists and merchants and others—to effect whatever "covering" transactions their business calls for; and quickly adjust their metal position. They can buy or sell when they wish, for early or forward delivery.

"The futures market also facilitates the fixation of daily prices arrived at as a result of the free inter-play of international factors of demand and supply. Commodities like copper, zinc, lead, and tin are produced in various parts of the world under varying conditions and India has to depend largely upon its imports from those countries. The need for an acceptable price basis for standard copper, zinc, lead and tin is felt by (a) fabricators who usually buy or sell according to the price trends on the futures market, (b) scrap merchants who buy scrap and residues on the basis of the metal market prices, and (c) manufacturers who have to price their products automatically on the basis of the changes in prices in the market. The purchases and sales of these metals and their manufactures throughout the country are effected on the basis of the price for standard metals quoted on the futures market. The provision of a definite and agreed price basis, objectively and impartially registered is, therefore, a distinct necessity to facilitate business at all stages in the non-ferrous industry."

As regards the question whether the futures market can function successfully in respect of copper, zinc, lead and tin as these are commodities which are largely imported, the Commission observes:

"The utilisation of a futures market for the purpose of minimising losses arising from price fluctuations in the handling of a commodity is an accepted procedure in the importation of a number of key international raw materials such as copper, zinc, lead, tin, rubber, etc. Both in the U.K. and the U.S.A., futures markets have been established for handling commodities which are not produced locally and which are largely imported. It was at one time apprehended that frequent Government interference in the marketing of strategic raw materials might put an end to futures trading in these commodities because of the additional risk that it created. In actual fact, however, it led to a revival of futures trading in the U.K. and the U.S.A. The increase in the risks of trading has given rise to a comparative increase in the demand for hedging facilities."

The Commission has, therefore, come to three main conclusions. In the first place, there is need for the establishment of a futures market in copper, zinc, lead and tin in this country. Secondly, such a market can function efficiently on the lines of similar futures markets which are operating in the U.K. and the U.S.A. in respect of imported commodities. Thirdly, regulation of such a market is of prime importance as it is more susceptible to fluctuations.

Suitable Centre

Further, the Commission has expressed the view that Bombay City is a suitable centre for the location of a futures market in non-ferrous metals and also that the Bombay Metal Exchange should be recognised for the regulation of forward contracts in copper, zinc, lead and tin. The Association is the successor to the Metal Traders Association Ltd., Bombay, and the Metal Exchange Association Ltd., Bombay. The members of these Associations, it is stated, have experience in forward trading for about 20 years. The Association has at present a total membership of 180, of whom 99 are ordinary members with voting rights and 81 are associate members with no voting rights. The Association has framed by-laws for conducting forward trading in copper, zinc, lead and tin. It provides for a basic contract in respect of these metals. The unit of trading is 50 cwts. for copper, zinc and lead and 10 bars weighing 9 cwts. for tin. At a time trading is conducted in two futures contracts beginning just after the full moon day and lasting for about two months. Standard contract forms are prescribed. Delivery is to be effected within the prescribed limits of Greater Bombay.

The Association has made provision for a trading ring and a clearing house, but it has no regular ring as yet. Clearing is done on a monthly basis. However, special clearings are effected when prices vary by Rs. 5 or more per cwt. for copper, zinc and lead and by Rs. 5 per quarter for tin, as compared with the last clearing rate. The Board of Directors have power under the articles of association to deal with emergency situations. On such occasions, they have power to introduce special clearing, to call from the members the details of outstanding sales and purchases, to fix maximum and minimum prices and to settle outstanding contracts at rates fixed by the Board. The articles also provide for the levy of margins.

The Commission, in its report, feels confident that, although the Bombay Metal Exchange Ltd. is "a new association, it would be able to carry out its duties because of the considerable previous experience of the associations which have amalgamated to form the Exchange." Accordingly, it has recommended that recognition of the Association should be for a period of three years and for the whole of India. The recognition of the Association, the Commission has suggested, should be conditional on its previously carrying out the modifications in its articles of association and by-laws. These recommendations, as stated at the outset, have been accepted by the Government. The stage has, therefore, been set for discussions between the Metal Exchange and the Commission in regard to the details of the changes and modifications in the former's articles and by-laws.

POWER SUPPLY LIBERALISED

The first set of the Tata Thermal Power Station, which was commissioned from 15th December last and which has been undergoing trials at present, is expected to come into commercial operation in a short time. Bearing this fact in mind, the Government of Bombay has decided to liberalise the supply of electric power from the Bombay power system and has agreed to the following concessions from 26th January 1957:

(a) Removal of the staggering of mills and industries; (b) industrial loads can be raised without permission from 3.75 kw. to 7.5 kw., inclusive of the existing loads, if any; (c) domestic loads can be raised from 2 kw. to 5 kw., inclusive of existing loads, if any; (d) the restriction on electric supply for lights and fans at the rate of 1 kw. for 1,000 c.ft. of constructed floor area will not be enforced; (e) there will be no restriction on neon signs; and (f) the parties to whom industrial loads have been

NEW PRODUCTS AND PROCESSES

New Technique for Oil Exploration

NEW techniques that make the drilling for oil at an angle as accurate as straight down into the bowels of the earth, are being effectively harnessed to develop the oil resources in the tidelands of California. Drilling on the slant has been practised for several years, but the new techniques make it more economical as well. The key to the new techniques is an up to 10,000-foot drilling pipe that is as flexible as rubber, bending and curving to go around corners. This device employs what is known as the whipstock, a length of steel shaped like a trough. The whipstock comes in lengths of about nine feet, with a two-and-a-half to three degree angle built into it. Whenever the driller wishes to introduce a slant into his vertical hole, he attaches a whipstock, which permits the bit to move in a slanting direction. For every 100 feet drilled, the whipstock permits a deviation of two-and-a-half to three feet from the vertical. The angle of the whipstock can be varied, according to the extent of slant desired. Then when the oil deposit is reached, drilling can be continued straight down to tap it. This technique can be applied up to drilling distances of about 10,000 feet. Using a whipstock, the direction of drilling can be very accurately controlled, according to oil industry experts. This is not true of other methods previously used for slanted drilling: the speed of the bit can be varied, or the pressure of pump delivery. Or a nuckle joint may be set between the drill pipe and bit, and set at an angle. Such methods are considered not to give comparable accuracy, however. As a result, the whipstock, by making possible controlled direction, tends to save costs by eliminating inaccurate holes. The new technique can also be used on land, to avoid difficult terrain. Its use in offshore oil drilling in California is very important, since up to the present time, tidelands deposits have been tapped by slantwise drilling from the shore. This avoids the necessity of establishing platforms in the water.

Penicillin Treatment Without Injections

In the U.S.S.R. Antibiotics Research Institute systematic experimental work is done to find new methods to prolong the time of retention of penicillin in the body. Ordinary benzyl-penicillin is very quickly excreted from the body. Therefore, in certain cases it is necessary to make injections every three hours, which is very inconvenient both for the patients and the medical personnel. Recently the Institute obtained new drugs which have the property of being retained in the body for a long time. This relieves the patients from injections. The above-mentioned drug is the phenoxymethyl penicillin. It is acid-resistant and is not destroyed by gastric juice. If a dose of 200,000 units of this drug is administered three times a day, the therapeutic concentration of penicillin is retained for eight hours. The original Soviet drug "Ekmo" has the same properties and is retained in the body upto 18 hours when taken internally. This makes it possible to administer it twice a day. There is definite clinical and experimental evidence that this type of penicillin is highly effective in surgical complications, lung, throat and other diseases. These new drugs are planned for production by Soviet medical industry in 1957.

Rubber Moulds for Casting Concrete

Progress has recently been made in the development of processes for using rubber moulds for casting concrete surfaces. In this method of concrete casting the shuttering used in the casting process is lined with textured rubber sheet. This enables a final finish to be imparted to the concrete without the need for any further treatment. It also enables a large variety of different surface finishes to be applied to concrete buildings, pillars and other structures in what is virtually one operation. The use of the rubber lining to the shuttering is said to create no especial problems in concreting, although in some cases (but not all cases) a lubricant should be used. Since mineral oils tend to affect the patterned rubber forms, castor oil has most frequently been used as the lubricant in the past, but experiments with limewash and other forms of lubrication are now being carried out at the Wexham Springs section of the Cement and Concrete Association of the U.K.

Japanese Uranium Treatment Process

A new Japanese process for manufacturing uranium from the ore has recently been developed. This "evaporation" process for the extraction and refining of uranium from poor quality uranium ore has been developed by scientists working at the research centre of the Japanese Ministry of International Trade and Industry. The process involves heating the pulverised ore to temperatures of between 700 degrees and 800 degrees Centrigrade in a furnace through which a mixture of chlorine and carbon monoxide gases is subsequently blown. The metallic uranium is then extracted from the uranium chloride thus produced by means of electrolytic techniques. The resulting uranium metal is said to be of high purity and costs about 2,000 yen (about £2) per kilogram to produce.

Expansive Trailer

An American company manufacturing truck-trailers has announced that it is producing a mobile trailer which at the touch of a button can be expanded to more than five times its normal size. The trailer, made of aluminium, is similar in its outward appearance to any other truck-trailer when being hauled on the highway. The button control transforms the 150 square feet of the interior by extending the sides and dropping folded doors into place in about five minutes. The resulting space of 780 square feet can be used for sleeping barracks, housing exhibits, communications centre or shop.

RADIO AND ELECTRICALS MANUFACTURING COMPANY, LIMITED

MR. K. NARAYANASWAMY REVIEWS PROGRESS

ADDRESSING the shareholders of the Radio and Electricals Manufacturing Company, Ltd., at their Tenth Annual General Meeting held in Bangalore on 14th December 1956, Mr. K. Narayanaswamy, I.A.S., Chairman, referred to the Company's plans to specialise in the manufacture of radio components and to undertake the production of water meters. He added that, thanks to the support from the State and Central Governments, the shareholders could look forward to the future with confidence.

The following is the full text of Mr. Narayanaswamy's speech:

"LADIES AND GENTLEMEN,

"It gives me great pleasure to welcome you to this, the tenth ordinary general meeting of the shareholders of the Radio and Electricals Manufacturing Company, Limited.

"As notified by the Company in the local newspapers, Mr. T. Shamanna, I.A.S., handed over charge to me in the middle of the year and the Board of Directors have already placed on record their appreciation of the services rendered by Mr. T. Shamanna, as Chairman and Managing Director of your Company. The benefit of his long experience in the working of this concern continues to be available to us, as he is continuing as a Government Director on the Board of Directors.

Maiden Dividend

"The Directors' report and audited accounts for the year ended 31st March 1956 have been before you for some time and, with your permission, I propose to take them as read. I am happy that it has at last been possible to recommend payment of some return to the shareholders, in addition to paying bonus to employees. The shareholders have doubtless shown remarkable patience all these years ever since 1946, and I have every hope that this patience will be rewarded suitably in the coming years also. I wish, however, to mention that the credit for securing this change in the fortunes of the Company goes, on the one hand, to the band of the old Directors commencing with Rajamantrapravina Diwan Bahadur K. Matthan and other distinguished Directors who have piloted the administration of this concern undeterred by the setback met with at the commencement and, on the other, to the unwavering support, rare type of foresight and appreciation of difficulties as well as generous financial aid extended to this Company by the State Government at the time. It is seen from the accounts placed in your hands that a net profit of Rs. 1,67,920 has been realised after completing adjustment of losses sustained in the initial stages and must be considered satisfactory for this reason.

"Production figures of electricity meters of the current year continue to display the same trend of improvement in the turnout of meters as in the past years. Unlike radio receivers, production of these meters in the country has kept up a steady upward trend starting with 34 356 meters in 1952 and now running at an annual production rate of 260,000 meters. This is not surprising when it is remembered that the generation of electric power in the country has climbed up from 6,575 million kw.h. to 11,000 million kw.h. under the impact of the first Five-year Plan.

Measure of Economic Activity

"Ever since power-driven machinery was pressed into service in aid of manual labour, generation and consumption of electricity have verily become the measure of economic activity in a country. Man-hour output has increased at incredible rates in every country that has placed more and more of electric power in the hands of workers, as a supplement to their own muscular effort. When it is remembered that eight hours' labour of an adult can hardly turn out useful work of a ½ kilowatt-hour, it is no wonder that productivity levels and living standards based thereon have soared to enviable heights in countries like America which have been able to place 20 units or more of electric power (equal to 40 human slaves) behind the elbow of each worker. Producers of electrical machinery like this concern must, therefore, do everything possible in their own humble spheres for the success of the Government of India's plans to step up the production and consumption of electric energy from 11,000 million kw.h. to 22,000 million kw.h. in the second Five-year period.

"Latterly, production and sales of domestic radio receivers have also shown signs of improvement in the country after the decline experienced in the years 1952, 1953 and 1954 and your Directors have, therefore, decided that the Company should specialise in the manufacture of radio components, for which there is not much competition at present. The Company has already entered into technical collaboration agreements with reputed U.K. firms for the manufacture of band switches, capacitors, etc. These agreements are being examined by the Government of India and as soon as their approval is received, manufacture of radio component parts on a substantial scale will be commenced in your Company.

"As regards the new line of water meters, indigenous sources for regular supply of the required cast brass parts are being explored and production will commence as soon as sources for a steady supply of the Company's requirements are located.

Promising Future

"On the whole, it can generally be said that operations in all the three existing sections, viz., radio, electricity meters and plastics are progressing satisfactorily and the members can look forward to the future with confidence, thanks to the steady encouragement and support being received from the State as well as the Central Governments.

"I wish to acknowledge with thanks the valuable advice, co-operation and support received from my esteemed colleagues on the Board, on the one hand, and from all employees including officers and staff, on the other. I am glad to inform you that labour-management relationships continue to run on a smooth and co-operative basis.

"With these introductory remarks, I now move that 'the balance-sheet and the profit and loss account for the year ended 31st March 1956 as certified by the auditors together with the Directors' report be received and adopted.'"

SCOPE FOR GENERAL INSURANCE

NEED FOR EDUCATING PEOPLE IN ITS ADVANTAGES

NOW that the Government has decided to let general insurance remain in the private sector, it is the special responsibility of general insurers to see that the scope for this variety of insurance is gradually extended to wider and wider sections of people. This will increase the chances of, if not altogether ensure, the continued retention of general insurance in the private sector, or at least will be a strong argument in favour of such retention. The extension of general insurance is partly bound up with the progress of industrialisation and partly with the wider diffusion of insurance consciousness. The Government's second Five-year Plan is calculated to accelerate the pace of industrialisation which, when it takes place, will certainly enable the general insurers to cast their net far and wide. But insurance consciousness—that is, public awareness of importance of general insurance—is something that has to be deliberately fostered in this country. This is a task which general insurers will do well to face at an early date.

In the sphere of life insurance, the Life Insurance Corporation of India has an advantage in the matter of publicity which general insurers do not possess. Since the Corporation has no competition to encounter, it can concentrate its attention on publicity designed merely to bring home to the public the advantages of life insurance. In the past, each private life insurer was compelled by the facts of the competitive situation to emphasise the special features or advantages he could offer to the prospect, though a modest experiment in joint publicity in the cause of life insurance was made. Perhaps, general insurers will do well to undertake a country-wide publicity campaign through advertisements, posters, pamphlets, films and exhibitions to spread the gospel of general insurance in the country. Such publicity is particularly necessary in this country where general insurance is much less widespread than life insurance. This is in contrast with conditions in economically advanced countries where people attach as much importance to general insurance as to life insurance. Indeed, in the U.S., according to a study made by the National Education Association in 1946, more families have the protection of property insurance than of life insurance.

"Why" of General Insurance

Why do people fail to appreciate the significance or benefits of general insurance? An interesting article on the value of general insurance, which appears in the *Monthly Letter* of the Royal Bank of Canada, says that there are four principal reasons for people's disregard of general insurance protection—the "it won't happen to me" feeling, ignorance of the fact that they are exposed to risk, unawareness of the fact that the protection they need is readily available, and, finally, procrastination. The author rightly holds that "more might be done to remedy this stage of affairs by the insurance companies." Thus, they could tell, through the organs of public information and education, what catastrophes may be averted or remedied. The author emphasises that this education should be carried on in non-technical language. The author himself gives the "what" and "why" of general insurance in a language that must appeal to every lay reader. He says:

"General insurance is our protection against catastrophe. It is the shock absorber of industry and the individual. The farmer with his crop ripening in his fields rests easy because it is insured against hail; the furrier with thousands of dollars worth of furs in his loft knows that his insurance protects him against financial ruin by fire or theft; the home owner who carries adequate insurance need not fear financial disaster by fire, burglary, or public liability . . . .

"Insurance lifts a great load from the minds of the people who are protected by it. It removes the dread that some accident will throw a heavy or fatal financial load on their shoulders. It encourages those who embark upon pioneer ventures by giving them, as it were, elbow-room in their investment operations. The principle behind insurance protection is that what are uncertainties to the individual can be made certainties for the group. Take fire insurance as an example. It cannot be known whether a particular property will be burned down, but there is reasonable certainty based upon statistical experience, that about the same proportion of all similar property exposed to fire will be burned in a year. By the collection of data on the frequency and magnitude of losses in the past, we can construct a measure of the frequency with which such losses will occur in the future. Thus, we apply the principles of probability to economic risks. We base our insurance needs on statistical measures of risk, instead of on casual or inspired estimates and guesses.

Emphasising the value of prudence in business, the author says that a successful business operation, big or small, requires judgment about the risks to be accepted and those to be protected against. He adds: "Tranquil living, in business or personal life, depends to a bigger extent than we realise upon making the correct decision about what risks we shall bear and what risks we shall transfer to specialists in risk bearing." At the same time, one should avoid over-insurance, for there is "no point in carrying insurance that is out of line with the actual value of the property covered." Thus, a large fire policy should be large enough to cover ordinary additions to inventory or, if on home furnishings, the expected additions to furniture and wardrobe, so that the insurance cover need not be charged every time the policyholder buys something.

Wide Range of Risks

A feature of the gradual evolution of general insurance through several decades of its history is that it is now able to offer protection against many hazards. Apart from the well-known fire and marine insurance, general insurance is concerned with the provision of cover against a wide range of risks. Referring to the wide and growing scope of general insurance, the author says:

"Nearly every form of personal or commercial risk that can be put on a mathematical basis can now be insured against. Within the past fifty years, man-made hazards have been added to those brought about by natural causes; falling aircraft, motor vehicles, operation of atomic power installations, and so forth. The property owner can be protected from financial loss due to accidents to visitors. The business man may insure against dishonesty of his employees, defalcations of people to whom he has extended credit, and losses due to raised or forged cheques. Promoters of outdoor events may insure against loss due to rain. The automobile insurance policy protects the owner against fire, theft, collision damage, liability for bodily injury or death, and liability for damage to the property of others. What insurance to carry, and the amount of insurance and the value of the premium measured against other wants and needs; these are individual matters to be calculated against the possible effects of not being insured."

Fire Insurance

The oldest type of general insurance, as is well-known, is marine insurance. Fire insurance also has a long and interesting history. Organised fire insurance commenced its career after the great fire of London in 1666 and by 1720, there were private companies specialising in the business. Today, nearly every article that enters into commerce has, at many stages of its progress from its source to its final use, been covered by fire insurance policies. Sickness insurance as well as insurance against theft, burglary, robbery, larceny and mysterious disappearance, covering property at home or abroad, are comparatively recent developments. Casualty insurance is also a recent development as compared with marine and fire insurance. It started with the growth of railways in England where the first "casualty" company was formed in 1849. The growing use of automobiles has widened the scope for casualty insurance. Explaining the impact of the use of automobiles on general insurance, the author observes:

"Automobile claims frequently run into large sums. Many people think of "damage" as being the scratches or breakages caused by collision with another car, but it can be much more. If your driving is responsible for the overturning of a truck laden with expensive goods that are destroyed, the resulting legal judgment might embarrass you. If your car were to skid when driving in to a service station, strike a pump and set fire to the escaping gasoline, it does not require much imagination to picture the station and cars and adjoining property falling prey to the flames. The damage for which your car could be held responsible might exceed your ability to pay, even allowing for stinted living over many years.

"These are the sorts of thing that justify insurance; the crippling, disastrous accidents that occur so often. Obviously, the insurance against damage your car may cause to persons or property is the most important. Damage to your car itself is limited to its value, but the cost of claims to which you may be subjected because of accidents is almost unlimited. Judgments entered against you might easily wipe out not only your car but other property you own, and your earnings might be attached."

Legal Liability

Casualty insurance has received a great fillip from the principle in the British law that a person is held liable for the consequence of his acts and omissions if, through failure to exercise reasonable care, another person suffers accident or damage to his person or property. The author thus brings out the relevance of this principle to general insurance.

"This is a state of affairs that should be closely attended to by home owners and business people. Any person who is injured on your premises is free to bring action against you. He may be a guest, a customer, a meter reader, a delivery man, or a messenger. The claim may be big or small, resulting from a big or little fault. If you don't clear the snow off your house steps, and somebody slips and falls, you may get a claim for injuries. If your dog or cat causes injury, you may have to pay the bill. If one of your children runs into another with his bicycle, you may be held financially responsible. If a tool breaks away from you or flies out of your hand, if the tree you are trimming strikes a passer-by, if an icicle falls from your roof on a caller, judgment may be given against you in a suit for damages. Even small demands may be troublesome and expensive, while damages given in serious accidents can be enormous. The obligations assumed by the liability insurance company usually include the furnishing to the insured of certain services, the payment of certain costs, and the payment for damages assessed upon the insured because of negligence."

Since the prevention of loss is closely associated with insurance, general insurance companies co-operate with fire departments and safety associations in urging the removal of fire hazards and the inspection of fire protection measures available for the public. The steam boiler companies have succeeded admirably in their effort to prevent by inspection service every boiler explosion that could possibly be prevented. There is, however, a great deal more that could be done by general insurance companies in the direction of educating the public in the value of general insurance. Such education has two aspects—to make people prevent accidents which can be avoided through the exercise of care and use of precautionary measures and to tell the people the facilities that are available for protecting themselves against the perils beyond their control. This is a kind of education that is sadly lacking in this country.

INDIAN MEDICAL ASSOCIATION

The Working Committee of the Indian Medical Association has suggested to the Government of India that a representative of the Association should be included in the Central Board of the Life Insurance Corporation, in order to enable the latter to get the Association's opinion on the medical aspects of insurance. A resolution to this effect was passed by the Committee which recently concluded its two-day session at Trivandrum. The Committee expressed its concern over the loss of employment to a large number of doctors, specially trained in insurance work, as a result of nationalisation. In view of the hardship caused to such doctors, it requested the Government to retain all active and regular insurance medical examiners and to distribute the work in such a manner that all doctors get a fairly equal number of cases.

The Committee also considered the working of the Employees' State Insurance Scheme. It appreciated the decision of the State Insurance Corporation to extend medical service to the families of insured workers, but was of the opinion that the members of the families would not derive the desired benefit unless diagnotic facilities and specialists' services were provided for them.

INSURANCE EMPLOYEES

The validity of the new pay-scales for employees, introduced by the Life Insurance Corporation of India, has been challenged by a few employees in a petition before the Bombay High Court. The Court has admitted the petition and issued a rule returnable on 13th February. The petitioners have contended that, under Section 11(1) of the Life Insurance Corporation Act, the Corporation was bound to continue to give effect to the remuneration and other terms and conditions of employees existing prior to 1st September 1956, the date of the inauguration of the Corporation. They have also contended that there were awards and settlements between the employees and the life insurance companies prior to nationalisation and those awards and settlements were binding on the Corporation under the provisions of the Industrial Disputes Act.

MOTOR INSURANCE

The New York State Insurance Department, according to the *Review* has approved a standard automobile liability policy designed to meet the minimum requirements of the new law. It provides for at least $10,000 insurance for injury or death of one person in one accident, $20,000 for injury or death to two or more persons in one accident and $5,000 for property damage. An Assigned Risk Plan administered by the insurance companies and supervised by the department will be open to any motorist who cannot obtain insurance through the ordinary channels.

DECCAN SUGAR AND ABKHARI COMPANY, LIMITED

MR. C. R. SRINIVASAN'S SPEECH AT THE SIXTIETH ANNUAL MEETING

PROGRESS OF DEVELOPMENT PLANS OUTLINED

THE Sixtieth Annual General Meeting of the Deccan Sugar and Abkhari Company, Ltd., was held at Madras on 28th December 1956. Speaking on the occasion, Mr. C. R. Srinivasan, Chairman of the Company, told the shareholders that only the formal order from the Government conveying its approval of the Company's expansion plan of its Pugalur factory at a cost of Rs. 8.5 lakhs was to be received. He also disclosed that the Directors favoured a more cautious approach in respect of the development of the Samalkot factory and drew up a two-phase plan, the total cost of which would amount to Rs. 29 lakhs.

The following is the full text of Mr. Srinivasan's speech:

"The Directors' report and the accounts for the year ended 31st May 1956 have been before you for the statutory period and, with your permission, I will take them as read. I trust that the shareholders will agree with me that the picture they paint of the Company's affairs is quite heartening. You will recall that in the Chairman's speech last year reference was made to the Board's plans for development and naturally you will be anxious to know what progress has been made in these directions. The first emphasis was laid on expansion at Pugalur, this holding out better prospects for the Company. We have reason to believe that the Government has approved our scheme to expand the boiling house capacity, but formal orders have still to reach us. Much preliminary work on the factory expansion has already been done, the requisite machinery now on order is coming through and it is expected that all that is necessary will be completed by October 1957. The total cost will, it is expected, be round about Rs. 8½ lakhs.

Two-phase Plan

"As regards Samalkot, your Board favoured a more cautious approach because, owing to its geographical position, the difficulty of moving sugar from it to the markets and the lower price realisable, to all of which reference was made last year, profit returns on new plant will be relatively less than at Pugalur. Your Directors, accordingly, drew up a two-phase plan. The first phase provides for the installation of certain new units which are essential, if the efficiency of the factory is to be recovered and maintained. The total cost of this phase amounts to Rs. 14 lakhs. Orders for the plant required have been placed, the main item being a new crushing mill, and it is expected that the installation will be completed in time for the 1957-58 season. The second phase is a more ambitious plan to extend the crushing capacity of the factory to 1,000 tons a day. For this, of course, the Government's permission has to be sought and also, since the cost will be a further Rs. 15 lakhs, additional finance will be required.

"This brings me to the question of the issue of additional capital referred to in last year's speech. Our application to the Government of India for approval of the issue of 398,400 new ordinary shares of Rs. 5 each, that is, on a one-for-one basis to ordinary shareholders at par, is still pending, but I expect it is only a question of time and the Government's approval will be communicated in due course. With the imposition of taxation on dividends and periodic revision of its scale, there is little advantage to shareholders in keeping the share capital of the Company at the present low figure. The new issue lies within the authorised capital of the Company, but it will be necessary to call an extraordinary general meeting for the purpose of converting 398,400 unclassified shares into ordinary shares before the issue can be made. As soon as permission is received, notices will be issued convening such an extraordinary general meeting and the issue will be made thereafter.

Dividend Raised

"Under the agreement with the Industrial Finance Corporation it was necessary to seek their permission to raise the dividend to 15 per cent. We are glad that this has been readily forthcoming and you will also notice that, in spite of a dividend at this rate, we are able to place satisfactory amounts to the reserve. You will appreciate that, having regard to the capital cost of the various improvement and expansion plans, details of which have already been furnished, these appropriations to reserve are very necessary. Shareholders will be happy to know that their interests have been well looked after by the special appropriation of Rs. 2½ lakhs to the dividend equalisation reserve.

"During the year under review the Company underwrote for the usual consideration the issue of 2,000 ordinary shares of Rs. 100 each in the Cauvery Sugars and Chemicals, Ltd. and, of this amount, we were called upon to take 1,453 shares. It may be mentioned that among the reasons which weighed with your Directors to underwrite the issue to this extent were good prospects that lay before the Cauvery Sugars and Chemicals, Ltd. as a long-term investment and also the desirability of having a selling agreement between your Company and Cauvery Sugars and Chemicals, Ltd. to protect mutual interests against a price war in markets which they will both cover.

Prospects for Current Year

"Reviewing the prospects for the current year, the 1956 special season started on 5th October at the Pugalur factory, the crush being 53,797 tons of cane and the recovery 9.31 per cent., as compared with 59,320 tons giving a recovery of 9.71 per cent. in the 1955 special season.

"The slight fall in quantity and quality of cane in the 1956 special season is attributed to lower yields per acre and the existence of scale disease in the area. The main season at Pugalur started on 24th November. An area of 3,456 acres has been registered which, after allowing for a small decline in yield, should give a crop of 130,000 tons, as compared with 127,696 tons crushed in the main season last year. It is as yet too early to say what the recovery will be, but the indication is that we can expect about 0.2 per cent. lower than last year. Your Board has already taken active steps in co-operation with the Government of Madras to check the spread of scale disease.

"In Samalkot, the season started on the 28th November. Registration has been made for 86,500 tons cane and, if the factory is not compelled to accept more, the recovery can be expected to be better than that of 9.48 per cent. recorded last year. During the 1955-56 season, although only 85,000 tons cane were registered for crushing, pressure was brought to bear by cane growers and the Government of Andhra and in the event 103,088 tons were crushed.

Auditors' Remuneration

"Before concluding, there is one other point to which I should like to refer. For some years past, the auditors of the Company have received remuneration of Rs. 3,000 per annum in respect of their statutory audit and have, in addition, received a fee of Rs. 4,000 per annum, plus out-of-pocket expenses, for carrying out internal audit of the accounts of the Company's two factories. In view of the provisions of the Companies Act 1956, the auditors are of the opinion that the factory audit should form part of their statutory audit and have, accordingly, requested that the remuneration to be voted to them should be Rs. 7,000 per annum, plus out-of-pocket expenses, and the resolution has been framed to this effect. The total amount payable to the auditors will, therefore, be exactly the same as has been paid in the previous years.

"I must not conclude my remarks without expressing my appreciation of the honour accorded to me by my colleagues on the Board by electing me as their Chairman. At the same time, I wish to pay tribute to the successful conduct of the Company's affairs by past Chairmen who were the senior Directors of the Managing Agents."

The report and accounts for the year ended 31st May 1956 were unanimously adopted and a final dividend on the ordinary share capital of the Company at the rate of 10 per cent. (making 15 per cent. for the year), free of income-tax, was declared, payable on 29th December 1956. The retiring Directors, Messrs. C. R. Srinivasan and V. Ramakrishna, were re-elected and the remuneration of the Auditors, Messrs. Lovelock and Lewes, was fixed.

The sugarcane growers of Gangavathi taluk under the Tungabhadra Project Ayacut (Mysore State) have decided to set up a sugar factory on co-operative basis. This decision was taken at the first conference of cane growers of the region held at Gangavathi the other day. Some of the promoters of the proposed factory have already formed themselves into a committee, with the Additional Collector for Tungabhadra Project Development as the President, and has contributed a total of Rs. 20,000 as the share capital with which to register the co-operative society. It is proposed to raise, by instalments, a share capital of Rs. 10 lakhs from among the cane growers before the end of this year. Pending the setting up of the factory, the Project Development authorities have decided to get four power-crushers for sugarcane and hire them out to the cultivators on cheap terms. They have also decided to organise a co-operative marketing society for *jaggery*.

The Government of Madras proposes to take over full control over import, export and sale of molasses in the State. The Prohibition Act is accordingly to be amended. Under the amendments now being considered, nobody can import, export or sell molasses without a permit issued by the Government.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?

At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?

Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

THE NEW LEGISLATION GOVERNING MOTOR VEHICLES

SALIENT FEATURES ANALYSED

By B. V. Vagh, B.E. (Civil), M.I.E. (Ind.)

THE Motor Vehicles Amendment Bill of 1955 was introduced in the Lok Sabha on 22nd November 1955 and the motion to refer it to a joint committee of the two Houses was adopted by the Lok Sabha on 11th August and by the Rajya Sabha on 30th August. The Joint Committee's report was presented on 20th November and the Bill as amended by the Joint Committee has now been passed by the Lok and Rajya Sabhas. There were four minutes of dissent and several amendments based on them were moved but were negatived.

The Motor Vehicles Act of 1939, particularly Chapter IV thereof, was the result of unregulated conditions of motor traffic in the country during the 'thirties and its competition with the railways. The Act aimed at improving these conditions and regulating motor transport, so as to ensure better standards of driving and road safety and preventing unhealthy competition both amongst the various operating units of road transport and with the railways. However, certain defects in the Act came to light during the period 1940 to 1945 and an amending Bill was introduced in the then Central Legislative Assembly in 1946. It reached the stage of report by a Select Committee but further progress on it was halted by constitutional changes leading to independence and the development in many States of nationalised passenger motor services. The first Five-year Plan, with its estimated increase of about 35 per cent. in the country's overall production over the 1950-51 level, showed the extent to which our transport capacity was short of requirements and brought forth the following observation from the Study Group of the Ministry of Transport in 1955:

"Although the transport facilities available in the country up to the outbreak of World War II were inadequate for the economy of the country, we were not so conscious of the inadequacy as we are today."

The emergence of the second Plan, with its estimated increase in the country's overall production of over 110 per cent. over the 1950-51 level, open the eyes of the country further and the need to reorient our old transport policy of putting all our eggs in the railway basket has not only been realised but recognised. Therefore, the passing of the new Amendment Bill in the first year of our second Plan is most opportune and not a day too soon.

Main Changes

A number of changes have been made in the old Act. They can be summarised under the following heads:

(i) The classification of vehicles will hereafter be based on their types of construction instead of on their uses.

(ii) Conductors of passenger vehicles will be licensed.

(iii) Tribunals will be set up to determine and award damages in cases of accidents. Formerly, this work was done by civil courts and resulted in delays.

(iv) Heavier penalties have been laid down in regard to offences relating to motor vehicles.

(v) Restrictions on road transport in regard to permits, their periods and operation have been relaxed and an incentive has been provided to form viable units of operators.

(vi) An Inter-State Transport Commission will be formed to "develop, co-ordinate and regulate" inter-State long-distance road traffic, particularly in goods.

(vii) There will be uniformity in the law relating to the nationalisation of road transport services.

Of these, (i) to (iv) are safety measures, while (v) to (vii) relate to the operation and development of road transport. There will be no two opinions on safety measures which are essential for the proper functioning of any service. It is necessary to examine (v) to (vii) and assess their effect on the economy of the country.

Operation

Motor transport consists of the following categories:—

(*a*) Personal transport, that is, cars and taxis.

(*b*) Public passenger vehicles.

(*c*) Public carriers carrying goods for hire or reward.

(*d*) Private carriers carrying goods on own account.

Of these (*b*), (*c*) and (*d*) are more important from the point of view of a country's economy than (*a*). The extent to which they will develop will depend on a number of factors, e.g., vehicle cost, taxation, road facilities, cost of operation, facilities for getting permits, periods of permits, and scope for expansion. Of these, the first three are outside the scope of the M.V. legislation. In regard to the others, the law has been extremely harsh so far. Operators' permits were for a period of three to five years only; permits were valid only in the regions in which they were issued; there were mileage restrictions on vehicles; small vehicles of the type of delivery vans required permits; private carriers were subject to the same restrictions as public carriers and, lastly, permissible laden weights and axle-loads were too small to effect economies in operation costs. The result of all this has been a virtual stagnation in our transport system. On the other hand, the country's needs are growing. For financial reasons, development of passenger transport by the railways has been restricted and, in goods transport, the railways will be able to carry only about 162 million tons per annum by 1960-61 against an estimated traffic of about 200 million tons and it has been estimated that, after making allowance for what coastal shipping and inland water transport can carry, there will be a gap of from 30 to 35 million tons of traffic in our transport capacity.

Big Advance

It was inevitable for the Joint Committee to take account of all these factors in considering the M.V. Amendment Bill and it must be said to its credit that it has effected many improvements in it. As a result, the new legislation is a big advance on the old Act and there is no doubt that it will start a new era in road transport. Main items registering this advance in factors influencing the operation of vehicles are as follows:

(1) Light motor vehicles of the type of delivery vans plying on own account, trailers on two wheels attached to motor cars and weighing not more than 1,700 lbs., and transport vehicles owned by automobile manufacturers and used solely for purposes approved by Government are exempt from permits.

(2) A private carrier's permit will be valid throughout a State.

(3) Temporary permits which used to be issued to facilitate nationalisation at any time will be discontinued.

(4) The period of permits for public carriers which used to be from three to five years has been fixed at five years. Also variations in the conditions of permits by Transport Authorities will require at least a month's notice.

(5) Other things being equal, preference will be given to co-operatives and old permit-holders in respect of permits for both passenger and goods vehicles.

(6) The limit of laden weight of a medium vehicle has been raised from 14,500 to 18,000 lbs.

(7) There will be no distance limit anywhere on the operation of motor vehicles.

(8) Inter-State traffic will be placed under a Central Inter-State Transport Commission.

(9) No scheme of nationalisation will be introduced, unless it is first published in a *Gazette* to invite objections to it, if any.

(10) Nationalisation of goods transport on Inter-State roads will require approval of the Government of India.

(11) States have been directed to issue instructions for giving permits to displaced operators for alternative routes in the case of nationalisation.

(12) Compensation will be paid to operators for the cancellation of their permits or for the modification of their routes or areas, but not for refusal to renew them nor for the assets.

Implications of Changes

(i) Private Carriers

Nos. (1) and (2) are a definite encouragement to private carriers plying on own account and there is no doubt that, when the proposed Inter-State Commission is set up [item (viii)], it will extend the validity of private carrier permits to inter-State regions also. These three measures should go a long way in creating confidence in industrial and commercial circles to own their own road transport and run it anywhere they like without let or hindrance. Private carriers play a great role in the economy of other countries. Thus, in 1949 they formed about 80 per cent. of the trucks in the U.S.A. and, in 1951, they were about 87 per cent. of the trucks in the U.K. against our figure of about 22 per cent. in 1954. The big distances which separate our factories from consuming centres and the possibility of having to make return trips of vehicles empty are likely to be the main deterrents in this development, but, perhaps, also there is another reason, that is, that, due to conditions operating in our country so far, we have been too railway-minded. There is a case for investigating this problem, for, as our economy expands, it will not be possible for the country to expect the same measure of service from the railways as before and, therefore, the use of their own road transport is bound to prove more economical to trade and industries than waiting for railway wagons. Moreover, the condition of our roads has been improving, heavier vehicle loads are permissible and multiple-unit trucks are possible. All these will reduce the cost of operation.

(ii) Permits

Items (3) to (5) relate to permits. Here, unfortunately, the advance is limited. The discontinuation of temporary permits was inevitable in any case, since, by no standard, this unfair expedient to facilitate nationalisation could be justified. The old period of three to five years for permits has been retained for passenger vehicles, while that for public carriers has been fixed at five years. Preference to old permit-holders was already there in the old Act. It was proposed to be deleted in the amending Bill to facilitate nationalisation but the Joint Committee retained it. Thus, it is an improvement on the amending Bill but not on the old Act.

The argument generally put forward against raising the period of a permit is that whatever the period, an operator is bound to recoup his original investment within that time. Hence, there is no loss to him if the period is not raised; on the other hand, the shorter the period the earlier can a particular service be nationalised. This argument is economically unsound, since the point at issue is neither an operator nor a State, both of whom are just a means to an end and no more, but the cost of transportation to the consumer. Vehicle costs today are six to seven times their pre-war level. Therefore, if they are recouped in the same period as before, it means that the incidence per ton-mile on account of depreciation and interest on investment will be about four times as much as before, taking into account the extra carrying capacity of modern vehicles. This will raise the cost of operation materially.

In regard to the advantage to a State from the point of view of nationalisation by issuing permits for short periods, such advantage can be derived only at the cost of the consumer. If, as has been acknowledged on all hands, the object of the amended legislation is to develop road transport, not, mind you, for obliging an operator but solely for the requirements of the second Plan, then it goes without saying that every single measure to cheapen the cost of economic development should be taken. From this point of view, the provision in the Amendment Bill regarding the period of permits cannot be said to be satisfactory.

Then, there is the question of credit for buying new vehicles. Excluding replacements, the number of trucks required for passenger and goods traffic by the end of the second Plan has been estimated at about 240,000, the investment on which at an average of Rs. 25,000 per truck works out to about Rs. 600 crores. A great deal of this amount will have to be by way of loans. It is not likely that banks and financiers can give such large credit for a business which can be expected to run only for five years. This point also has to be considered in fixing the period of permits. Another point, in this connection, is that every line of business requires a few years initially to find its feet. It is only after this period is over and business has settled down that a business man will have time to think of improvements and will try and bring down his costs to get more business. From the point of view of cheapening the cost, this is very important. This advantage is lost by restricting the period of permits.

Preference to co-operatives (item (5)) in the matter of permits is an important advance, which should go a long way towards improving the quality of service. Over 95 per cent. of our operators own from one to five vehicles each, the majority owning only one. This state of things is not conducive to efficiency and in many cases also leads to malpractices. Modern business requires operating and managerial skill which is possible only in reasonably large undertakings with good financial backing. Therefore, our transport services need to be reorganised and, if this can be done through co-operatives, it is so much the better for all. Moreover, co-operatives can raise finance relatively cheaply through co-operative banks. This will save a good deal of interest which individuals operators have at present to pay to private financiers. It is hoped that our operators will realise these advantages and quickly form co-operatives, with as large a number of vehicles as possible and employ skilled technicians, accountants and managers to look after business and provide efficient service to the public.

(iii) Laden Weights

The increase in the permissible laden weight of a medium vehicle from 14,500 lbs. to 18,000 lbs., as per No. (6) above, is undoubtedly welcome, but it is not in keeping with either the laden weights of vehicles manufactured in the country or with the standard laid down by the Indian Roads Congress. The former range from about 18,500 to 27,000 lbs. and the latter is 27,000 lbs. Hence, the permissible weight is less than the minimum of vehicles plying in the country. It is true that States have the power to raise this limit wherever they find it feasible, but the point is that an Act like this is not amended often. Further, it should be borne in mind that the condition of our roads and bridges has been improving steadily and that, by the end of the third Plan, the Nagpur Road Plan will be completed. Hence, instead of fixing the limit at the minimum and giving powers to States to raise it here and there, it would have been better to fix it at the maximum and to give powers to States to lower it wherever necessary. The advantage of this suggestion would have been that States would have had to concentrate on weak bridges and get them strengthened under pressure of public opinion.

Another defect of the modification is the omission of the axle-load from the definition of a vehicle. If a vehicle is defined only by its laden weight, as in the amended Act, then any combination of it like an articulated vehicle on three axles and a truck-trailer combination on four will automatically come under a higher class of vehicles on account of its higher weight and be subject to the restrictions of that class. But, in practice, a combination vehicle of the types mentioned does not transmit to a road surface more load than that of a truck on two axles, in spite of its heavier laden weight, because this load is distributed on three or four axles. Hence, from the point of view of load carried, it comes in the same class as a normal truck and not in a higher class. From the point of view of cheapening the cost of transportation without exceeding the carrying capacities of roads and bridges, these combinations are useful and are employed on a large scale in other countries. There is no doubt that, with increasing traffic, we also will have to employ them and it is absolutely essential to provide for their use, without imposing on them restrictions of a higher class of vehicles. For this purpose, the axle-load has to be specified in the definition of a vehicle, as was done in the old Act and as is done in other countries.

(iv) Long-distance Traffic

From the point of view of developing road transport, items (7) and (8) are the most important and should go a long way towards meeting the criticism levelled by the public against the old Act during the past 15 years. No. (7) removes the distance limit which was sought to be imposed in the amending Bill and No. (8) creates a Central Inter-State Transport Commission to "develop, co-ordinate and regulate" inter-State road transport instead of a number of Inter-State Authorities proposed originally. Both these provisions, if enforced in the right spirit, will make long-distance road traffic possible both in passenger and goods and thus relieve the railways of some of the strain to which they have been subjected at present, quite unnecessarily but due solely to their own uncompromising attitude. Both the Joint Committee and the Ministry of Transport deserve to be congratulated on these changes.

(v) Nationalisation

The necessity of publishing in a *Gazette* every scheme of nationalisation, to invite objections, as per item (9), gives an opportunity to operators to represent their point of view. Also, the discontinuance of temporary permits, as per item (3), should create in them some measure of confidence. The provision in item (10) that schemes of nationalisation of goods transport on inter-State roads should require prior approval of the Government of India is a step in the right direction.

A direction has been given to States to issue instructions to grant permits for alternative routes in the case of nationalisation (item (11)), but a great deal will depend on how this provision is used. With increasing demand for transport, there is no reason why States should think of taking over present routes, instead of starting services in areas where there are no services at present and thus opening new lines. Secondly, if they must take over existing routes, it should be compulsory for them to offer to displaced operators alternative routes to develop new services. There is no great point, first, in losing the benefit of the experience of old operators and, secondly, in throwing them out of employment when the employment capacity of our country is limited and when one of the objects of the second Plan is to create new avenues of employment. It is hoped that States will be considerate and even generous in this respect.

It is unfortunate that there is no provision in the amended legislation for the compulsory acquisition of assets when a route is nationalised. The argument on which this omission is sought to be justified, namely, that by the end of his permit period an operator will have recouped his original investment and, therefore, there is no need to acquire his assets, overlooks several points. In the first place, there is no knowing that only those routes will be nationalised for which the period of permits expires. In fact, there is provision for taking over routes at any stage of the period of permits and/or to restrict or modify their areas or lengths. Therefore, the argument about an operator recouping his investment fully will not apply to all cases. Secondly, at the time of nationalisation, the entire fleet of an operator may not be of the same age. Therefore, the investment on newer vehicles will have been partially recouped. Thirdly, in many cases the assets do not comprise vehicles only. There are offices, workshops and machinery. Investment on them cannot be recouped in the same period as in the case of vehicles. Lastly, in point of fact, the assets at the time of nationalisation will have some market value which, in equity, must be paid for.

Policy Inconsistent

The most important point is that this omission will make it obligatory on operators to recoup their entire investment in as short a period as possible just as a safety measure. This they can do only by increasing their cost of operation, which fact is not conducive to the development of road transport which, we have been told, is the object of the legislation. In this respect, the policy of Government does not seem to be consistent and it is difficult to understand why, if the assets of air services can be compulsorily acquired, those of road services should not, particularly when the people concerned in the latter are mostly small men with limited means whose investment has been mostly by way of loans at high rates of interest. In this case, the basis laid down in the U.K. Act of 1947 and endorsed by the Select Committee of Parliament on the Road Transport Corporation Bill of 1949 is sound and should have been accepted.

In regard to compensation, it is payable, on an *ad hoc* basis, only in the case of cancellations of permits or when the routes or areas to which the permits apply are modified but not to non-renewals (item 12). This, again, is not an equitable provision, since the earnings of all vehicles on all routes can never be the same and, therefore, they cannot be assessed on an *ad-hoc* basis of so much per vehicle per mensem, as has been provided. A more equitable basis will be to decide them in each individual case on the basis of actual earnings, say, in a period of three years before nationalisation. The contention that some operators do not keep proper books of account cannot apply, since States have ample powers under the Act to compel operators to do so. Also, the fact that they do not keep proper accounts does not prevent the Income-tax Department from assessing them. If the lack of proper books does not prevent Government from collecting its own dues, it is not easy to see how it can prevent it from paying the operators' dues.

It has been said that compensation for the non-renewal of a permit cannot be paid, since the permit, being for a fixed period, carries no obligation to renew it. This is a legal quibble, which completely and somewhat indecorously overlooks the fact that the grant of a permit opens an avenue of employment and, therefore, by discontinuing it you are depriving a man of the means of his livelihood. You cannot expect him to have earned enough in five years to last him for ten. Therefore, the moment his permit is not renewed, he is literally thrown on the street and it is the duty of the State to provide him sufficient means, based on his previous earnings, to enable him to start a new line. If it is the policy of States gradually to nationalise passenger services irrespective of the fact whether it is in the interest of the development of transport or not, nobody can prevent them from doing so, but let it be done on principles of equity and justice. It is a reasonable expectation that, in a Welfare State, the welfare of operators is not ignored.

Conclusion

It will be seen from the foregoing detailed examination under each individual item that, although there is considerable room for improvement under many heads, the Government has made a serious effort to tackle some problems in a genuine endeavour to liberalise the conditions of operation of road transport. However, here a great deal of spade-work is necessary to create a proper psychological background for that development. A number of measures will be required for this purpose and it may be useful to invite attention to some of them. They are as follows:

It is good that, in future, the chairmen of Transport Authorities will be persons of judicial experience but for a number of years, Transport Authorities in the country have been brought up in an atmosphere of restrictions on road transport. This has to be changed by issuing instructions that, hereafter, the policy should be to develop road transport by all possible means and that the primary duty of Transport Authorities will be to show results under this head. In 1953-54, there were 39,669 passenger and 100,628 goods and miscellaneous vehicles in the country. By 1960-61, their *extra* requirements are estimated at about 60,000 and 180,000, respectively. Therefore, one and a half times the present number of *extra* passenger vehicles and one and three-quarter times the present number of *extra* goods vehicles will be required. It should be the duty of Transport Authorities in various States to see how this number can be reached within the provisions laid down in the new Act. This step is absolutely essential.

There should be a small establishment at the Central Ministry of Transport to study the credit requirements of operators and to take steps to provide the necessary machinery to make available these facilities. The same establishment should prepare model rules for fostering the spirit of co-operation in the road transport industry and to see that co-operatives to form viable units of operators are both formed and are run.

The production of automobiles should be transferred to the Central Transport Ministry whose duty should be to see that the number of vehicles required for the implementation of the second Plan are produced.

Sufficient powers should be given to the proposed Inter-State Transport Commission to implement their scheme and to devise ways and means, including periods of permit, to ensure that Inter-State transport is developed expeditiously on a scale which may be necessary to relieve the strain on the railways.

To build up a system of National Highways on a scale commensurate with the requirements of inter-State road transport.

As part of the export drive, the Federal Government of Australia has decided to sponsor a trade mission to India and Ceylon next March. It has already appointed a Trade Commission at New Delhi. The Government believes that there are good prospects for increasing Australia's present exports of more than £A20 million a year to India and Ceylon. India's second Plan, it is felt, is likely to create demand for many types of secondary products and raw materials which Australia can supply.

LIGHT ON NEW COMPANY LAW

SOME DOUBTS AND CONTRADICTIONS

By F. R. Ginwalla, B.A., LL.B.
CITY CIVIL COURT, BOMBAY

A COURT of law does not speculate upon the reasons which influenced the Legislature but it always sees that, as far as possible, the obvious intention of the Legislature is not defeated by a construction which it puts upon a statute and always leans in favour of that construction which gives effect to the legislature's intention rather than that which leads to difficulties.[1] On the other hand, if the Legislature fails to carry out its objects by giving proper expression to it by using adequate language for the purpose, the Court cannot violate the canons of construction merely for the purpose of assisting the Legislature for a supposed object which it might have.[2] It is also a well recognised principle of law that, before the Court can accuse the Legislature of being guilty of serious blemishes in the drafting of a statute, it is the duty of the Court to see whether a fair and reasonable interpretation can be put upon the language used by the Legislature, bearing in mind the object which the Legislature had in placing a particular piece of legislation on the statute book.[3]

The question of the interpretation of the Companies Act of 1956 is not free from difficulty. Lord Halsbury has opined that the worst person to construe a statute is the person who is responsible for its drafting (*Hilder* vs. *Dexter* (1902) 71 L.J. Ch. 781 at p. 783: (1902) A.C. 474). The new Companies Act partakes of the character of both public law and private law, of substantive law and of adjective law. It imposes many duties on companies, their directors and officers, auditors and others. Many provisions of the Act are penal in character and non-observance of these entails penalties. It is, therefore, necessary for the Courts to see that a strict construction is adopted.

The Government goes along in the light of its experience and continually improves on the present Act by issuing suitable Press notes. Those who are in charge of the administration of the Act have the opportunity to see its defects and deficiencies in its day-to-day working. But the general public only becomes aware of the defects and the deficiencies in the Act when the judicial pronouncements made from time to time are published in the Press. Just as a machine needs adjusting, so does the new Companies Act. In this context, I shall briefly invite attention to some of the provisions of this Act which seem to suffer from want of lucidity, or from conflict with the other provisions of the Act, or need adjustment in the light of judicial pronouncements.

Publication of Name

Section 147 (corresponding with sections 73 and 74 of the Act of 1913) provides for the publication of its name by a company. Clause (c) of sub-section (1) requires a company to mention its name in legible characters in all its business letters, billheads, letter paper, notices, advertisements and other official publications. It is usual for all business or manufacturing concerns to advertise their goods or products by their trade names without mentioning the name of their companies. Technically speaking, such an advertisement to push sales may fall under clause (c) of sub-section (1) and, if a company fails to mention its name in such an advertisement, it becomes liable for an offence punishable with fine under sub-section (3). Obviously, this does not seem to be the intention of Parliament. Having regard to the words "other official publications" occurring in clause (c) of sub-section (1), such an advertisement does not seem to fall within the category of official publications. But this clause seems to suffer from want of lucidity and an advertisement of a purely unofficial nature which does not state the name of the company may amount to an offence under sub-section (3) of section 147.

It is open to doubt as to whether the expression used in the various sections, namely, "a private company which is a subsidiary of a public company," means a private company which is a subsidiary of an Indian public company or whether the expression includes a private company which is a subsidiary of "a body corporate" which includes by reason of the definition in section 2(7) a company incorporated outside India. The definitions in section 3 which define the expressions "company," "existing company," "private company" and "public company" all go to show that these expressions can mean only companies formed and registered under the Act of 1956 or the previous companies laws of India. They will not include a company incorporated outside India. It is, therefore, clear that the expression "a private company which is a subsidiary of a public company" covers a private company incorporated in India which is a subsidiary of a public company which is also incorporated in India and not a public corporation incorporated outside India. If this argument is presumed to be correct, a private company which is subsidiary of a public foreign corporation incorporated outside India will not be affected by the various sections of the new Act, in which reference is made to "a private company which is a subsidiary of a public company." If in this last quoted expression the words "or a foreign corporation" had been added, then a private company incorporated in India which is a subsidiary of a foreign corporation would have been governed by the various provisions of the Act on the same footing as of a public company.

Section 599 imposes a civil disability on a foreign company if it fails to comply with the provisions of Part XI of the Act. This is entirely a new section and has no parallel in the English Act. This section also suffers from want of lucidity and must await judicial interpretation. It raises a question whether the compliance of the provisions of Part XI of the Act by a foreign company is a condition precedent to bringing any suit, claiming any set-off, making any counter-claim or instituting any legal proceeding in respect of any contract, dealing or transaction. Legal opinion is divided. One view is that compliance with the provisions of Part XI is a condition precedent. The other is that it is not. But, having regard to the language of the section, the former view, however strict and unreasonable it may be, seems to be proper.

Technical Director

The Bombay High Court, in a recent case of *Ramaben* vs. *Jyoti Ltd.* and others,[4] considered the provisions of sections 198, 309, 310, 311 and 348. I shall briefly mention the facts and questions of law involved in this case, with a view to showing what important role the case-law plays in giving shape to the provisions of a new statute. The facts in that case were as follows:

The plaintiff was a shareholder of the first defendant company. The second defendants, a partnership firm, were the managing agents of the first defendant company by virtue of an agreement executed in April 1951. The third defendant was one of the two partners of the second defendant firm. The third defendant was also a director of the first defendant company and he was also a technical adviser, being qualified as an engineer, on a salary of Rs. 3,000 per month. His appointment as a technical adviser of the first defendant company was made on 1st January 1944. His appointment as a director of the first defendant company was made in April 1944. The questions involved in the case came up for consideration before the High Court under section 90 of the Code of Civil Procedure.

The main question was whether the third defendant was entitled to payment of Rs. 3,000 per month over and above the remuneration paid to him as an ordinary director of the first defendant company. It was held that the third defendant may receive remuneration as a director of the first defendant company and may also get additional remuneration in a capacity other than that of a director, and that the remuneration payable to directors under section 309 is confined to the remuneration paid to them in their capacity as directors and that the section does not extend to the remuneration paid to the directors in any other capacity. However, as regards managing agents, the Court held that the remuneration to be paid to the managing agents must not exceed the remuneration laid down in section 348, whether the remuneration is in respect of the managing agents' services as managing agents or in any other capacity. It was further held that any payment made to a partner in the managing agency firm for technical services should be treated as payment to the managing agency firm and that, in order to give full effect to the clear and emphatic language used in section 348, a managing agent should not be paid more than 10 per cent. of the net profits either in his capacity as managing agent or in any other capacity.

Their Lordships arrived at the foregoing conclusions after giving full consideration to the relevant provisions of the Act. As we have already observed, a court cannot help if the Act is not couched in clear and precise language. That is, however, a matter for Parliament. The concern of the Court is to take the law as it finds it and do the best it can.[5]

Section 348 contains the words "or in any other capacity." These words mean that the 10 per cent. remuneration mentioned therein is not confined to the services of the managing agents as such but also otherwise. Let us consider what would be the effect on section 348 if the aforesaid words are dropped from it. The section with the aforesaid words deleted would be capable of two different interpretations. The first interpretation is that the absence of the aforesaid words from section 348 would make no difference to the meaning of that section. This interpretation is based upon the assumption that Parliament used the words "or in any other capacity" advisedly by way of abundant precaution. The second interpretation is that it would make a substantial difference to the meaning of section 348. It is in this sense that the 10 per cent. remuneration mentioned in section 348 would then be limited and confined to the services rendered by the managing agents as such and not otherwise. If the second interpretation is presumed to be correct, the result is that the absence of the said words in section 309 dealing with the remuneration payable to directors, and in section 198 dealing with the overall remuneration payable to managing agents, director, manager, etc., produces an effect which is contrary to or inconsistent with the judgment of the Bombay High Court in *Ramaben* vs. *Jyoti Ltd.* The net result in such a case is that, whenever an amount is paid by a company to a person who happens to be a director of the company, then the payment is controlled by section 198 as well as by section 309, whether such payment is made to the person for his services as a director of the company or otherwise. This is also true in regard to section 198.

Charitable and Other Funds

Section 291 deals with the general powers of the board of directors, while section 293 imposes certain restrictions on the powers of the board of directors of a public company and a private company which is a subsidiary of such a public company. The powers specified in section 293 can only be exercised by the directors with the consent of such companies in general meetings. Section 291 and section 293 must be read together. Clause (e) of sub-section (1) of section 293 provides that the board of directors of such companies subject to the approval of such companies obtained in the general meeting of such companies, may contribute, after the commencement of the Act, to charitable and other funds not directly relating to the business of the company or the welfare of its employees, any amounts the aggregate of which will not in any financial year, exceed Rs. 25,000 or 5 per cent. of its average net profits as determined in accordance with section 349 and section 350 during the three financial years immediately preceding, whichever is greater.

With regard to the foregoing clause (e) of sub-section (1) of this section, a question may well be asked whether the board of directors of such companies can contribute to funds other than charitable funds, as, for instance, funds for helping any national cause, encouraging sports, or for preserving ancient monuments or for constructing works of general public utility, etc. The language of this clause suffers from want of lucidity and therefore, an answer to this question must await judicial pronouncement. The expression "charitable and other funds" occurring in clause (e) of sub-section (1) of this section does not seem to be free from doubt. It is not clear whether the words "other funds" occurring in the foregoing expression mean the funds which are analogous to charitable funds. It is also not clear whether the words "charitable" and "other funds" should be read disjunctively. The popular meanings of the words "charity," "charitable," and "charitable objects" do not coincide with their legal or technical meanings. The legal significance is narrower than popular. (1948 A.C. 31 H.L. p. 41). References to charity in any legislative Act should be construed in their legal technical sense, unless a contrary intention appears from the context.

It must be observed that it is a clearly established principle of the law of charity that a purpose is not charitable, unless it is directed to the public benefit. The element of public benefit is the necessary condition of legal charity.[1] But every object of public utility is not necessarily a good charitable object. In England, the charitable objects should also be of a public nature and they should not be of a nature which the Courts consider as uncertain. There is no indication in the present Act to show what are charitable purposes for the purpose of the Act. The Act is also silent as to what are charitable or other funds within the meaning of clause (e) of sub-section (1). If Parliament, while enacting this section had enacted clause (e) of sub-section (1) as a sub-section commencing with the words "Notwithstanding anything contained in the Act or in the memorandum or the articles, the directors may" or with some other suitable expression, then, perhaps there may not have been any difficulty in answering this question in the affirmative and there would not have been any need for amending the memorandum and the articles.

Another Interpretation

There is also another way of looking at the foregoing question. Section 9 states that the Act shall have effect notwithstanding anything to the contrary contained in the memorandum or articles of a company, etc. It is, therefore, necessary to consider whether clause (e) of sub-section (1) of section 293 read with section 9 would authorise the board of directors of a public company or a private company which is a subsidiary of such a public company to contribute to charitable and other funds, even though there may not be specific powers in the memorandum authorising the board of directors to do so. If this is the correct way of looking at section 293, Parliament could have used appropriate language to make it clear that notwithstanding anything to the contrary contained in the memorandum or articles the board of directors of a public company or a private company which is a subsidiary of such a public company may contribute to charitable or other funds to the extent of the limit specified in clause (e) of sub-section (1) or with the consent obtained of such companies at the general meeting may contribute an amount exceeding that limit.

In the context of the foregoing discussion on section 293, it may be noted that the Gandhi National Memorial Fund Donations (Companies) Act of 1948 was enacted to enable the companies precluded from making donations to charitable or public funds by their memorandum or articles, to make donations to the Gandhi Memorial Fund. Section 2 of that Act had overriding effect upon the provisions of the Companies Act of 1913. Companies were permitted to make donations to the Gandhi Memorial Fund by passing a special resolution if they were unable to do so under the memorandum or the articles.

The new Act is much in advance of other countries in the field of Company Law legislation. It has removed the defects which existed in the retiring Act and thus rendered a considerable portion of case-law under that Act as merely of academic importance only. Under Regulation 13(2) of the new Act, each member is entitled to at least 14 days' notice specifying the time or times and place of payment of amount called on his shares. Regulation 13 has modified the provisions of the corresponding Regulation 12 contained in Table A of the old Act. In view of the modified provisions of Regulation 13 of the new Act, it seems that the judgment of the Bombay High Court in *East and West Insurance Co.* vs. *Mrs. Kamla*,[2] has now academic importance only. The foregoing case is cited by way of illustration only.

CONSOLIDATED COFFEE ESTATES (1943) LTD.

MR. R. C. PATERSON'S REPLY TO ENQUIRY COMMISSION'S ACCUSATIONS

PLEA FOR AN ACTIVE EXPORT POLICY

A WELL-REASONED reply to some of the aspersions made by the Plantation Enquiry Commission in its report on coffee against the coffee industry was given by Mr. R. C. Paterson, Chairman of the Consolidated Coffee Estates (1943) Ltd., in the course of his address to the Company's shareholders at their Thirteenth Annual General Meeting held at Pollibetta, Coorg, on 29th December 1956. He proved from the experience of the Company that the findings of the Commission have been based on an inadequate appreciation of the industry's position. He also made some suggestions to the Coffee Board for the establishment of a better export market for Indian coffee.

The following is the full text of Mr. Paterson's speech:

"GENTLEMEN,

"On behalf of the Board of Directors I welcome you here today on the occasion of the thirteenth annual general meeting of the Company. The Directors' report and accounts for the year under review have been in your hands for the requisite period and, with your permission, I propose to take them as read. At the end of my speech I will do my best to answer any questions which you may wish to put.

"The year has been a most successful one and it constitutes a record not only for the coffee crop harvested, which, for the first time since the inception of the Company, has passed the 2,000-ton mark, but it is also a record in regard to the gross profits earned. The *arabica* crop is approximately 100 tons less than that of the previous year; but the *robusta* crop of 826 tons is a new record for the Company, the previous highest being 804 tons harvested in the year 1952-53.

Marketing Policy

"In a previous speech I commented on the methods which control the marketing of our coffees. The Coffee Board has more or less followed a policy laid down some years ago giving priority to local market needs both in quantity and quality and exporting the surplus. As our top quality coffees in the form of *arabica* plantation command a premium up to nearly 100 per cent. in the world markets over the price realised at internal auctions, in a large measure we are dependent on the export market for the quantum of profits we can earn. This year the record crop harvested by your Company has synchronised with a record all-India crop and this will have allowed the Coffee Board to export some 8,000 tons. Not only, therefore, has the Company earned a larger point award due to the increase in crop but the value of the Pool point has also been enhanced to Rs. 2-6 in the accounts, as against a valuation of Rs. 2-2 a year ago. Payments declared to date are Rs. 2-5 and final realisations are anticipated to be in the neighbourhood of Rs. 2-9 per point. If this estimation is realised, then the carry forward, being profit on previous season's stock into the new account, will be approximately the same as that brought forward in the accounts under review.

"Cardamoms have proved a satisfactory source of revenue. Not only was the harvest an improvement on the previous year's, being the highest since the inception of the Company, but prices have ruled high.

Pepper Crop

"Pepper produced an average crop and we have now sold most of the balance stock in hand at prices slightly above valuation. Pepper prices are but a shadow of what they were a few years ago and during the year under review we have seen a gradually declining market. At one time bids were not much more than Rs. 100 per cwt. It is, however, a commodity in which we are actively interested and we are continuing an expansion programme.

"Revenue from oranges has more than doubled. Climatic conditions favoured an improved crop, but the increase income has been mainly due to better prices obtained at the sales. This again has been possible due to the larger fruits which were harvested during the year as opposed to the under-sized fruits which formed the bulk of our crop in the previous year.

"Our paddy crop harvested was a good one. Our entire production, as in the previous year, was retained as a strategic reserve for issue to our labour in case of need. This year this reserve has been fully used. Shortage of paddy was noticeable in Coorg even as early as October and was further accentuated by the delay in the ripening of the current crop, due to continued rain from the north-east monsoon. Our existing stock has, therefore, now been disposed of by a weekly ration to our labour at low prices.

"Our accounts this year are presented to you in a different form so as to comply with the regulations of the new Companies Act, and in so far as has been possible we have shown in the left-hand column the comparative figures for the previous year. The profit and loss account is shown on a company basis and the more exact division our former accounts presented between planting and other interests has disappeared.

Larger Provision for Taxation

"You will notice that a very considerable increase in provision for taxation has been necessary. Now that Coorg is part of Mysore State, reservation has been made for agricultural income-tax at Mysore rates. Not only is the standard rate for companies As. 5 in the rupee, as against As. 4 in Coorg, but total depreciation allowances are also less. No special depreciation allowance is now granted as was the case under the Coorg rules.

"Provision for Indian income-tax is also much higher due to the incidence of the bonus issue tax and dividend tax in regard to the business portion of the Company's profits.

"Under normal conditions, one might have looked upon the results we have achieved with some satisfaction and with confidence for the future, but it is to be regretted that, although we have largely succeeded in gearing our estates to a higher economy, our future is today more uncertain than ever before and our very success may recoil on our heads.

"No settlement has yet been reached regarding the structure of the basic price. The present system of marketing, if anything, exaggerates fluctuations in coffee prices. We are always faced with the possibility of interference in the price structure as well as increase in excise duties or reintroduction of export tax, on the one hand, and increasing production costs, on the other. We do not, therefore, know how we will stand from one day to the next.

"Two items of vital importance to the future of the coffee industry have recently been brought pertinently to our notice. You will no doubt have heard of the recent Madras Tribunal Award, which not only granted an astronomical increase in rates of pay to subordinate staff but awarded an increase in wages to labour by as much as 70 per cent. with retrospective effect for four years. Although coffee estates in Coorg are not directly affected by this award, its indirect impact is immense. At present, the case is before the Supreme Court, but it is absurd to think that Coorg will be uninfluenced by the final outcome.

Enquiry Commission's Report

"In November, the report of the Enquiry Commission on Coffee was placed on the table of the Lok Sabha in Delhi. This report has taken some two years to compile. It is only recently that a full copy of the report with the dissenting minute has reached us. The report covers some 400 pages and it will take a very considerable time to digest its full implications.

"Its final recommendations, however, are obvious and are nothing more than the complete collectivisation of the coffee industry on a co-operative basis—co-operatives for the management of the smaller estates, co-operatives for the curing of coffee, co-operatives for the selling of estate supplies, co-operative warehouses, control even over the sale of properties, all managed under the ægis of the Coffee Board. Little thought would appear to have been given as to how the Coffee Board can undertake such a colossal programme. The report has castigated all the larger interests—the planters, the curers —in special measure, the merchants, the traders in fertilisers and even the Coffee Board itself. Some of the suggested opportunities for malpractice are so far-fetched as to be absurd. One cannot fail but gain the impression that the Commission has taken every opportunity, every scrap of evidence, whether responsible or otherwise, to show the larger institutions in the worst possible light.

Company's Position

"This is not the place for me to defend general accusations against the industry as a whole, but in the light of the aspersions made, it would be my duty to give you a picture of how our Company stands in relation to the claims made in the Enquiry Commission's report. It has been stated that coffee companies have been profligate in their financial policy and have trittered away their resources in large dividends which have been concealed from their real worth by bonus issues. From such perusal of the report that has been possible in the short time available it would appear that, although the Company has been classified as Indian, our estates only have been so categorised, while our curing works have been included in the annexures as non-Indian. This I may say would appear to be only one of other errors in the statistics contained in the report.

"Our position as at the closing of the books is that 96.3 per cent. of the ordinary capital is owned by Indians. There are today 1,952 shareholders on our ordinary share register, the largest individual interest being 22,500 shares. The average is 366 per shareholder. In acreage for coffee, this works out to about 3½ acres per head. If ever there was a co-operative undertaking in the real sense of the word it is your Company. The Directors are two-thirds Indian and one-third European. The covenanted staff comprise eight Europeans, of which three only are Senior Managers, and 13 Indians, of which four are Senior Managers.

"Since the Company was formed in 1943 the division of our profits has been as under:—

	Rs.
Total gross profits	2,08,56,995
Allocation to reserves	84,73,821
Ordinary dividend	74,19,952

"Preference dividend, taxation and carry forward account for the balance.

Dividend Policy

"I do not think that by any standard it can be claimed that our dividend policy has been other than most conservative. It is true that in the last few years a more liberal dividend has been possible than was the case in the early days of the Company's career, but surely it is not wrong to earn profits nor is it wrong for shareholders to have an increasing participation in the prosperity once the Company has reached a sound financial position. There is certainly no point in the Company amassing reserves for which no useful purpose is to be assigned. As our rebuilding programme for labour lines and the equipment of our estates with machinery and plant to deal with the higher crops now coming in and still anticipated reaches completion, the necessity to place vast sums to reserve from current profits will no longer arise.

"The Enquiry Commission has suggested in its report that the reserves of companies whether capitalised or not have been largely invested in unremunerative assets, such as buildings, and not in the actual land from which the source of revenue is derived. Although this statement is correct in so far as the accounts of the Company disclose, I would beg to dispute the conclusion. Unless we have suitable lines for our labour we cannot house sufficient labour to look after our properties. Unless we incur considerable capital expenditure in water-supply points throughout our *arabica* estates for spraying our coffee, the bushes will become diseased and die. Unless money is spent in expanding our drying grounds and pulper-houses, on roads and bridges, godowns and manure sheds, we cannot deal with the crops which are being harvested, let alone what we hope to harvest. It is, I claim, not possible to say that this is an earning asset or that a sterile asset merely because it is an investment in bricks and mortar.

"It is true that our balance-sheet shows that a major portion of our reserves has been invested in fixed assets of this nature, but that does not mean that we have neglected the land which is the fountain from which all else flows. On the contrary, we have given it our closest attention and this alone is the explanation for the most substantial increase in crops which has been possible during the past few years. This year we have harvested in all a crop of 2,096 tons. Our average per acre *robusta* and *arabica* combined is 6 cwts. for the four years ended June 1956, as against 4.1 cwts. for the previous four years and 3.7 cwts. for the four years ended June 1948.

New Clearings

"Although our balance-sheet figures do not disclose large accretions in land development, it does not mean that we have been idle in this matter. Since the formation of the Company total new clearings have been as under:

	Acres
Arabica	804
Robusta	717
Total ...	1,521

"These new clearings represent replanting of old abandoned coffee areas and the opening up of virgin jungle. Prior to 1951 it was the policy of the Company to make new clearings largely from revenue as the question of income-tax did not arise.

"I would in this matter emphasise a point I raised in my speech a year ago. Under no circumstances can total expenditure on new clearings until maturity be considered as capital when even in its second year *arabica* will bear fruit. In any estate balance-sheet, therefore, good new coffee clearings will always tend to be under-valued in the books. This is not due to any design, but is the obvious result of a rational system of accounts. If we were to revalue these most valuable assets to their real worth as young mature coffee the assets side of our balance-sheet under land would show a vastly different picture.

"The Enquiry Commission has stated that, in regard to non-Indian companies 75 per cent. of the area under coffee is in urgent need of replanting within the next 10 years and 38 per cent. in regard to Indian-owned properties. The Commission has further recommended that a complete replanting programme be introduced on an industry-wide basis and to finance this a special fund be created with a compulsory contribution of Rs. 37-8 per acre per annum to be surrendered to the Board, which will be refunded as and when replanting takes place.

Company's Policies

"It is a great shock to be informed that so much of our area under coffee will be worthless within the next 10 years, unless something is done about it, and in refuting this suggestion I cannot do better than explain to you as briefly as I can the basic policies which your Company follows. From our total acreage we have 2,669 acres shown as reserve land. This comprises all sorts of land, sheet rock, areas covered by roads, labour colonies, pulper-houses and barbecues, virgin jungle and old abandoned coffee and rubber areas. Out of this, we estimate that possibly a thousand acres is land suitable and available for planting with coffee. The problem of planting new clearings is controlled basically by the availability of labour and many other conditions, but, broadly speaking, as a company we do not think it wise to have much more than 10 per cent. of our total acreage or more than 10 per cent. of the acreage of any one estate as immature coffee. In fact, we estimate that 10 per cent. immature coffee is about as much as an estate can cope with without the introduction of pioneer methods. Our new clearing policy is controlled by these factors and our development policy will be pursued according to that plan.

"We have in addition 6,827 acres of mature and immature coffee, which is again divided into *arabica* and *robusta*. Our *robusta* coffee is situated almost entirely in South Coorg and was planted after the First World War when *arabica* in this area was destroyed by borer and disease. By no stretch of imagination can any of our *robusta* be called old and debilitated. In fact, of the total of 2,084 acres, 1,500 acres have been planted subsequent to 1936. It can, therefore, truthfully be claimed that none of our *robusta* will need replanting for many years to come.

"In regard to our *arabica*, the position is as follows: Out of 4,256 acres, 804 acres represent new clearings or replantings made by the present Company since 1943. Although most of our *arabica* estates are well over 70 years old, there can, in fact, be relatively few of the original trees in existence, or, if they are, they must be virile good cropping plants. Estates are regulated by a more or less standard practice and this, as far as I know, is adopted by all responsible planters to a lesser or greater degree.

"(1) Where coffee areas are really bad, the area is abandoned and complete replanting undertaken.

"(2) Irregular areas or patches are regenerated by removal of diseased and poor cropping trees and replaced with young coffee.

"(3) Continuous supplying up of all coffee areas with young bushes to replace non-yielding plants and those removed due to borer, disease, etc.

"Processes (2) and (3) are carried out as normal routine work on the estate. Process (1) is as for new clearings and is controlled by the availability of labour and other conditions.

"It is difficult to present statistics on an acreage basis to show what we have done, but a record of the total supplies planted by our *arabica* estates will supply the answer. The standard rate for planting *arabica* coffee is 1,200 bushes per acre.

Total number of supplies planted from 1943 to 1956	3,885,696
Less number of supplies required for 804 acres at 1,200 plants per acre	964,800
Number of supplies planted in old coffee of 3,452 acres	2,920,896

"This is the equivalent of 846 plants per acre. This means that slightly over two-thirds of our mature acreage has, in fact, been replanted by us with new bushes in the past 13 years.

Replanting of Old Areas

"If we take into account what the previous owners did in the way of pest control and also the 246 acres of immature coffee that was handed over by them in 1943, I would venture to suggest that far from 38 per cent. of our coffee being old and in urgent need of replanting over the next 10 years, most of our coffee is virile and responding well to the more intensive treatment it has received. I would also question the Commission's sweeping conclusion that 40 years' old coffee is past its peak and should be uprooted and replanted. Certainly that is not our general experience. With proper attention even 40 years' old coffee can produce more than satisfactory crops.

"It may be agreed that the ideal is to own young coffee, but that is a very different question to the destruction of profitable old coffee. Many think that we are in our infancy in regard to knowledge of the coffee plant and I am firmly convinced that the problem is not one that can at all be dealt with on mass-production lines. The building up of a general compulsory replanting fund to be lodged with the Board, which will not be required for many years ahead if at all, or if made available could not be used, seems to me to be quite unrealistic. According to the Enquiry Commission's recommendation, it would appear that your Company would have to contribute to this Fund some Rs. 2½ lakhs a year. The build up of this over a few years would be quite fantastic. It represents further an initial expenditure on something like 250-300 acres per year, if not more, an acreage which under no stretch of ordinary circumstances would be possible for the Company to undertake even if a replanting programme on such a scale was necessary. The freezing of funds in this manner would almost have the equivalent effect of expropriation.

"All that the industry requires is that, in calculating a minimum basic price for coffee according to production costs, some allowance is made for this sort of work.

Curing Works

"The Enquiry Commission, in dealing with curing establishments, has adversely commented on the position within the industry of the larger curers, and it has been suggested that the organisation of the Coffee Board, marketing system and control has enabled these curers to establish monopoly interests. It is unfortunate that the Commission should not have appreciated the record of the past or realised what a vital part in the life of the industry the curing works have played, particularly the old-established curing works on the west coast. I would go so far as to say that, were it not for their financial support given largely without adequate security during the years of slump between the two wars, the industry might well have suffered irreparable damage. Certainly many estates which today are most flourishing concerns would have been abandoned areas of desolation.

"The reason why the curing of coffee would appear to be vested in the hands of a few curers is not because the Coffee Board set up has created 'monopoly conditions' but for no other reason than that it is in those firms that the planter has his faith and trust. So long as the planter is allowed freedom to send his coffee for curing to the works of his choice, so long will the larger share tend to go to those firms, who by their traditions and example have shown themselves most worthy of receiving it.

"Our Company's curing works at Kushalnagar is a new venture and was not opened for business until the 1948-49 season. During that year, the quantity of outside coffee cured was 34 tons. In respect of the year just ended, of the total 2,603 tons, 1,326 tons represents coffee from outside planters.

"The fact that in so few years we have been able to attract such substantial outside support is proof positive of the esteem in which our works is held by Coorg planters. If our works was not operating to full capacity, opportunity would not be lacking for attracting additional custom.

Malpractices in Curing

"The Enquiry Commission in its report has laid great stress on alleged opportunities available to curers for malpractices. From such perusal as has been possible I have come to the conclusion that the Commission has failed to grasp in detail how a normal curing works operates, since many of their conclusions would appear to be based on wrong premises.

"The Enquiry Commission has also recommended that owners of coffee estates should not be owners of curing works as the temptation for malpractice is apparently enhanced. Undoubtedly, in any business, there must always be opportunities for malpractice; some of them real, most of them theoretical or largely imaginary. If any, the opportunities themselves are inherent in the business. A change of ownership of our works to a co-operative society or some other organisation would not remove the opportunity for alleged malpractice. It is well known that there has always keen rivalry among curers in canvassing for the planters' coffee crop and the whole of the curing industry is based upon active and very alive competition. If a curing works even contemplated the malpractices, which are apparently available to them according to the report, it would not be long before such works would be out of business.

"The marketing of coffee has followed the same pattern as for previous years. I do not think it is appreciated by the general public what very large benefits the consumer in India is actually receiving from the industry. He is at present offered best quality coffees as much as he requires at less than half the world price. At export auctions this year, Plantation A has fetched up to Rs. 380 per cwt. and identical coffee is sold at the internal auctions at about Rs. 220 a cwt. or released to the co-operative stores and propaganda units at approximately Rs. 180 exclusive of excise.

Subsidising Internal Prices

"The principle that exports should subsidise the local market was introduced some years ago and has been generally accepted by the industry. With the larger crops that are to be envisaged in the future, it would appear that greater reliance will have to be placed on the export market and, as a precaution, it seems reasonable to suggest that the export should largely, if possible, be concentrated on the high quality coffees. It is only by giving the export markets the type of coffee that they want that a sound export demand for Indian coffees can be built up. Even in the worst days of the slump before the war high grade coffees always found a ready market, but many estates during those days were unable even to obtain bids for their *robusta* or lower grade cherry. If there was a slump in world prices, such conditions might well be seen again. It is, therefore, of vital interest to the industry that the Coffee Board should encourage the consumption of the non-export, but none the less palatable grades in India itself which will allow for the establishment of permanent markets in Europe or elsewhere for our premium coffees. I would further recommend that, in order to keep our export markets, it would be in the interests of all to fulfil any excess demand in India by allowing the importation of the less expensive coffees from Indonesia. An active export policy will not only establish a sound market for our total products but will be of the greatest assistance

(*Continued on page 107*)

VALUE OF AGRICULTURAL RESEARCH

PRACTICAL APPLICATION OF RESULTS ESSENTIAL

THE attainment of the targets fixed for the agricultural sector in the second Plan hinges, in a large measure, on the extent to which our research institutions succeed in evolving new techniques to solve the problems faced by the agriculturist in regard to yield per acre, marketing and storage. A distinguishing feature of these problems, the most important of which pertain to the fields of agronomy, fertiliser use, pest control, animal husbandry and the like, is that they differ in character and degree from region to region. Appropriate solutions to these issues, therefore, lie not only in the study and research on them on a regional basis, so as to be responsive to the peculiarities of various regions in the country, but also in the systematic application of the results, so obtained, in practice, and in disseminating the knowledge to the farmers far and near. The factors, therefore, that ultimately lead to the realisation of the aims of research, are, in the first place, the research findings should have practical value, and, secondly, there should be effective co-ordination between the organisations engaged in research, on the one hand, and those intended for extension work, on the other. The emphasis laid on the research aspect of the question can be seen from the fact that the Planning Commission has earmarked no less than Rs. 14.15 crores for agricultural research during the second Plan period. Moreover, the Indian Council of Agricultural Research (I.C.A.R.), the Central Commodity Committees, and a number of institutions such as the Central Potato Research Institute, Central Rice Research Institute and others have already been engaged in the investigation of individual problems. The Council itself has sponsored a number of investigations, such as breeding of rust-resisting wheat and manurial experiments on the fields of cultivators with a view to preparing manurial schedules suitable for different agro-climatic regions of the country. Similarly, the Central Potato Research Institute has drawn up 68 research projects to be carried out during the second Plan period, the lines of investigation taken up being as varied as soil mapping, rapid soil tests, testing and certification of insecticides, storage pests, appraisal of losses due to plant diseases, and use of atomic energy for solving agricultural research problems. To take another example, the Indian Central Cotton Committee has 72 research schemes under its investigation, and four regional institutes are proposed to be set up.

Lag in Application

But it looks as though requisite attention has not been paid to the practical application of the results of research and the Planning Commission itself observes, in the second Plan, "there has been a lag in the application of the results of research and research workers have not drawn their problems sufficiently from the daily experience and the needs of the farmer." Not long ago (on 22nd November) Mr. Randhwa, Vice-Chairman, Indian Council of Agricultural Research, and Additional Secretary, Union Ministry of Agriculture, drew the attention of all concerned to this lacuna and other problems in the field of agricultural research in the course of his presidential address to the twenty-seventh meeting of the Advisory Board of the I.C.A.R. He cited two notable instances, where the valuable findings of research have not been put into practice through dissemination, to show the wide gulf that separates research and extension. One was the finding that paddy straw washed with water and reinforced with lime would become a palatable and nutritious food for cattle, and the other was the breeding of a new type of wheat which would be resistant to all the three rusts. The latter result is, according to Mr. Randhwa, one of the major achievements of the Indian Agricultural Research Institute. If the hill areas are saturated with rust-resistant wheat, Mr. Randhwa says, the incidence of rust in wheat in the plains would decrease, resulting in a very large increase in the production of wheat. Despite all this awareness, it is regrettable to note that the State Governments have not shown enough keenness in making use of these findings. They have taken no steps to multiply rust-resistant wheat seed according to their requirements and the speaker has done well to call upon the States to demonstrate greater enthusiasm in making wide use of the research findings, a number of which are of great practical value, and, if properly applied on a large-scale, have the potentialities of effecting sizable increases in food production.

The agencies which can best promote the application of the results of research are, according to the speaker, extension organisations. There is, therefore, an urgent need for closer liaison between the research workers, on the one hand, and the staff of the N.E.S.—from Development Commissioners down to the village level workers—on the other. This suggestion, if carried out, must really prove very effective, especially the recommendations made by the Board and once again stressed by the speaker, namely, that the results of research on various problems of agriculture carried out in all the institutes should be compiled subject-wise, crop-wise and State-wise and published in the form of booklets and widely circulated among the extension staff as well as agricultural colleges and staff of the agricultural departments.

A reference was made to a notable development in this field by Dr. Punjabrao S. Deshmukh, Union Minister for Agriculture, in the course of his welcome address at the annual general meeting of the I.C.A.R. held at Delhi on 29th December last. In order to secure greater co-ordination between the I.C.A.R. and the various Commodity Committees, a change in procedure was adopted by holding a combined meeting of the Boards of Research and Extension to which, apart from the Directors of the Central Research Institutes, the Directors of the Commodity Research Institutes and Secretaries of the Commodity Committees, were also invited. At the meeting of the enlarged Board, a list was also drawn up of those research schemes which had been completed and the results of which could be passed on to the extension workers for general adoption.

The Vice-Chairman of the I.C.A.R. is also of the view that deficiencies in our knowledge of correct agronomic practices, despite the extensive research that has already been carried out, constitute another serious handicap to the progress of agriculture. The suggestion advanced by Dr. A. B. Stewart in this regard, that an attempt should be made to translate the results of agronomic experiments conducted on Government farms into cultivators' practices is, according to Mr. Randhwa, worthy of trial, and notable advancements in this direction are the fertiliser trials, already referred to, on the cultivators' fields, in order to prepare manurial schedules to guide the farmers in selecting suitable fertilisers of their fields, and, secondly, the plan, drawn up by the I.C.A.R., of model agronomic experiments to be conducted in 34 centres, selected on the basis of soil-climate complex, with special reference to the requirements of river valley and irrigation projects.

Value of Organic Manures

There is much force in the view expressed by the Vice-President of the I.C.A.R. that it is very much desirable if the chemical fertilisers are used in conjunction with organic manures. It is necessary, according to him, that the practice of green manuring should be popularised, and that the prejudice against the use of human organic waste as manure should be conquered. It is, indeed, high time that it is realised that such prejudice is irrational and that, unless the valuable nitrogen contained in the human organic waste—no less than one kilogram per annum per person—is made use of, the requirements of the country for fertilisers cannot be met adequately. A notable suggestion advanced by Mr. Randhwa for the effective utilisation of this waste is the implementation of a large-scale programme of trench latrines in villages in the N.E.S. and project areas. Three schemes initiated by the Union Ministry of Agriculture for better utilisation of manurial resources to which reference was made by Dr. P. S. Deshmukh are worthy of mention in this connection. They aim at increasing the farmyard manure, better utilisation of night soil compost in village *panchayat* areas, and popularisation of green manurial practices. It is also expected, according to the Union Minister for Agriculture, that, by the end of the second Plan, about 2.5 lakh selected farmers will receive training in improved methods of compost making and popularising of green manuring practices.

Referring to animal husbandry, Mr. Randhwa has called for a co-ordinated effort in research and implementation of its results. He has pointed out, rightly, that great strenuous labour and patience are required in this field both in the execution of research and in the implementation of the results so obtained. What is important, according to him, therefore, is that the research programmes should be realistic enough to provide answers for the existing problems and also techniques for the implementation of development programmes in this field. The research already carried out in this field, though directed chiefly towards acquiring a better understanding of animal epizootics and developing efficient methods for combating them, has been making satisfactory progress. Examples of remarkable achievements in the field, of which, Mr. Randhwa says, we may well be proud, are the improvements effected in the methods of immunisation against our livestock's foremost enemy, namely, rinderpest, culminating in the production of goat tissue vaccine, and the development of an efficient vaccine for immunising poultry against Ranikhet disease which had once threatened the existence of the poultry industry in the country. Though a number of other vaccines for countering diseases such as fowl pox, fowl spirochaetosis, etc., which are as deadly as Ranikhet, have become known, there are still many other diseases deserving immediate attention of the research workers.

Animal Breeding

In the field of animal breeding, a noteworthy step, which should provide definite answers to many puzzling questions, is the comparative study of selective breeding and cross-breeding or grading up of cattle with better breeds of foreign or indigenous origin for the improvement of nondescript and unproductive breeds of cattle. But a more puzzling problem—that of surplus cattle—remains. India's bovine wealth is 203 million, out of the total population of 800 million in the world. Of these, the high class breeds form a very small proportion. When co-operative farming and mechanisation of agriculture gather pace, the already surplus number of bullocks—to the tune of nearly 10 million pairs—will further increase. It is, therefore, emphasised that India should face this problem in a realistic manner, so that the competition between man and animal for the limited food resources is restricted to the minimum.

Among the more significant developments taken note of by Dr. Punjabrao S. Deshmukh in his address to the I.C.A.R. is the one relating to the scheme for the establishment of regional research stations and sub-stations on cotton, millets and oilseeds. The scheme has already been drawn up and the value of the scheme lies in that it will not only facilitate dealing with agricultural problems on a regional basis but will also ensure efficiency and economy in expenditure. Research on cross-commodity problems would be carried out on a regional basis. For the purpose of intensification of horticultural research, again, the country has been divided into five agro-climatic regions. A main fruit research station with one or more substations would be developed in each region. The problems of basic research pertaining to each region would be dealt with at these stations.

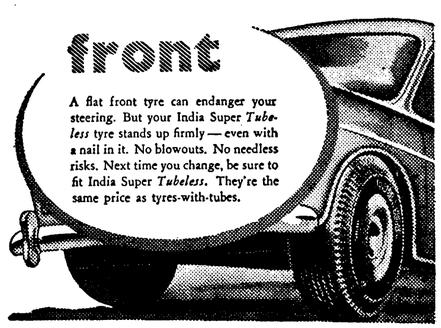
Complex Problems

The problems facing the research workers in the agricultural and allied fields are thus complex in nature and also numerous. But the success which attends the endeavours of the planners in solving these problems depends on the availability of qualified technical personnel. Among the steps already taken, mention should be made of the arrangements for organising special training seminars, in anatomy and in bacteriology, at Calcutta and Izatnagar. On the administrative side, on the other hand, the suggestion advanced by Dr. Deshmukh in the course of his address to the State Agricultural Ministers deserves special mention. He suggested that, in order to ensure maximum co-ordination between and competent supervision over research and education, responsibility for these technical fields may have to be assigned to a Joint Director of Agriculture. He is also of the view that the Posts of Directors of Agriculture and Veterinary Services should be invariably filled by technical officers and not administrative personnel.

It is to be hoped that intensive and steadfast research conducted in all these fields will not go waste and that better co-ordination will be established between the workers in the laboratory and the workers in the field to attain the social and economic objectives that motivate such research.

for safety's sake fit INDIA SUPER tubeless on the front

2 DOUBLE BEND



A flat front tyre can endanger your steering. But your India Super *Tubeless* tyre stands up firmly — even with a nail in it. No blowouts. No needless risks. Next time you change, be sure to fit India Super *Tubeless*. They're the same price as tyres-with-tubes.

THE STORY OF LAC

The story of lac makes stimulating reading. The lac insect, the larva, which is not more than about 1/50th of an inch long as it emerges from the mother cell, belongs to the group of scale-insects and mealy bugs. This insect begins to secrete a viscous liquid called lac, when it settles down on the shoots of the host tree. This secretion hardens on exposure to the air and forms a protective covering for the insect. A female insect gives rise to about 300 larvæ, about a third of which are generally male. The production of lac by male insects is negligible.

There are two distinct strains of lac insects, which are known by the host tree on which they thrive. They are called *kusmi* and *rangeeni* varieties. There are four lac crops annually, which are named after the Hindi months in which they are harvested, namely, *Baisakhi*, *Katki*, *Aghani* and *Jethwi*.

The value of lac lies in its use as a dye, and as a resin possessing unique properties. At the beginning of the nineteenth century lac dye assumed great significance when the Western world realised its importance as an alternative to cochineal. With the production of shellac—a refined form of lac resin—the importance of lac rose considerably, because of its use as a multi-purpose resin. Lac is thus used in one form or another at present in a variety of industries, such as gramophone records, electrical goods, varnishes, hats, sealing wax, adhesives, printing ink, ammunition, insulation cloth, micanite, laminated boards, oilcloth, abrasive papers, etc.

Lac is thus like silk, an outstanding gift of nature. India, till recently, held the monopoly position in the production of lac, contributing no less than 90 per cent. of the total production. Every year India produces 1,150,000 maunds of crude lac. More than 90 per cent. of it is exported to a large number of countries, including the U.K., the U.S.A., Russia, China, Japan, Germany, etc., adding as much as Rs. 10 crores annually to the foreign exchange resources of the country.

Lac insect has its enemies, chiefly in squirrels and parasitic wasps. It is estimated that 30 to 40 per cent. of damage to lac crops is caused by these pests. Several methods have been devised to control these pests, and more is being done.

The Indian Lac Research Institute at Ranchi, Bihar, is engaged in research to step up production and find ways and means of putting lac to greater use. The emergence of synthetic lac now poses a challenge to the Indian industry.

A noteworthy event connected with lac was the exhibition held in Bombay during the first week of this month. The interesting story of lac was portrayed through pictures, and models from the beginning to the end. It is to be hoped that the industry will be given the assistance that is its due, because of the pivotal role it plays in the country's economy.

ECONOMIC TRENDS IN SWITZERLAND

1956 was, economically speaking, one of the best years Switzerland ever experienced. Production, income and consumption hit new highs. As for employment, there were more jobs open than there were unemployed persons to fill them, and there was an increased demand for workers from abroad. Also in 1956, Swiss imports increased tremendously, while exports maintained a level which experts term "satisfactory." The foreign trade leaves Switzerland in the red, with a passive balance of about twice that for 1955.

Prosperity, with its advantages, as well as its disadvantages, is still continuing. Most Swiss firms reached the ceiling of their production capacity in 1956, and rare are the industrial sectors for consumer goods where this was not the case. Swiss capital-goods industries continued on a high level and the fact that there has been little expansion here is attributed to the observation that the turnover had reached a maximum at the beginning of the year. Manufacturers of consumer goods, particularly the textile industry, were able to make up for relative lost time and only the shortage of labour is accountable for the fact that the equilibrium was not completely re-established.

Swiss imports have risen sharply as a result of the increase of the buying power of the population. The turnover of Swiss retailers for the current year was up by about 7 per cent.

The surplus demand for labour and goods, and the insufficient supply of both, have naturally had repercussions on wages and prices. Wage demands of the workers applied for a larger share in the profits due to the period of prosperity, as the rise in the cost of living has already been compensated for. The Government and the country's economic circles have organised consultative conferences between labour and management to study the situation and prevent spiralling prices and wages. The cost of living has gone up by 2 per cent. this year, after having remained stable during the three preceding years.

" Where now the city stands,
there was once naught but the city's site. " OVID

Bombay

February 18, 1665. Only a small island of mud-flats and fishing villages, was what Humphry Cooke took over from the Portugese, as part of the marriage portion of the Infanta Catherine of Portugal for her husband, King Charles II of England. During the centuries that have passed there has risen in that place a modern city of steel and concrete—a mighty industrial centre. Thousands of tons of STEEL have gone into the making of this city.

A.C.C.'S TRADING PROFIT DOWN THANKS TO HIGHER PRODUCTION COSTS

RESERVES ENHANCED—DIVIDEND REPEATED

AN appreciable rise in production costs as a result of increases in labour charges, price of coal, royalty, freights, etc., has adversely affected the profit margin of the Associated Cement Companies Ltd. (Managing Agents: Cement Agencies (Private) Ltd., Bombay) for the year ended 31st July 1956. These increases in cost of production are something over which the Company has no control. By this, it is not suggested that the Directors did not make any attempt to improve the efficiency of the manufacturing units. They aver that the rise in costs neutralised, to a considerable extent, the results of their efforts at enhancing the efficiency of production. The gross profit, which had successively staged a progressive rise in the past two years, has fallen by Rs. 41.67 lakhs to Rs. 546.76 lakhs as compared with that for the previous year. That this has happened in spite of an increase in despatches from 28.22 lakh to 29.62 lakh tons and in sale proceeds from Rs. 21.23 crores to Rs. 22.13 crores is a striking commentary on the extent of rise in production costs. The income from other sources also was better by roughly Rs. 16 lakhs at Rs. 52.80 lakhs. In all, the Company earned Rs. 22.66 crores, as against Rs. 21.59 crores, an increase of over Rs. 1.07 crores. But it spent Rs. 32.13 lakhs more on employees and Rs. 134.62 lakhs more on other costs and charges. In other words, while the income rose by only Rs. 107 lakhs, expenditure advanced by as much as Rs. 166.75 lakhs.

Unlike the trading profit, the net profit at Rs. 253.38 lakhs is Rs. 23 lakhs better than that for 1954-55. This 10 per cent. improvement in net profit is largely the result of a drop of Rs. 82.29 lakhs in the provision for taxation and of Rs. 8.81 lakhs in Managing Agents' commission. The provision for depreciation has, however, been substantially enhanced, from Rs. 106.89 lakhs to Rs. 133.64 lakhs.

In appropriating the profits, the Directors have continued to lay stress on building up the reserves. At Rs. 128.88 lakhs, the sum transferred to reserves is more than 50 per cent. of the net profit and exceeds the previous year's figure by a little over Rs. 24 lakhs. Thus, the entire increase in the net profit (and something more) has been utilised to strengthen the Company's reserves. The dividend to shareholders is kept unaltered at the modest level of 10 per cent.

Results at a Glance

The following table shows the Company's progress at a glance:

	For the year ended 31st July			
	1956	1955	1954	1953
Sale proceeds of cement ..	2,213.47	2,123.05	1,712.73	1,515.61
Other income	52.80	36.08	49.71	58.21
Stocks	65.63	54.38	37.08	32.15
Expenses	1,716.32	1,586.12	1,343.23	1,199.42
Gross profit	546.76	588.43	424.12	368.93
Managing Agents' commission..	42.75	51.56	32.96	28.51
Provision for—				
Depreciation	133.64	106.89	85.66	73.84
Taxation	116.09	199.28	134.00	119.60
Net profit	253.38	230.70	171.50	146.98
Transfer to reserves ..	128.88	104.82	60.00	50.00
Dividend	127.18 (10%)	127.18 (10%)	108.11 (8.5%)*	100.37 (9.5%)
Carry forward	2.94	5.63	6.93	3.70

*On the increased capital of Rs. 12.68 crores, raised by the capitalisation of Rs. 2.11 crores from the reserves.

A breakdown analysis of the transfers to reserves shows that, while the reserve for plant reinstatement and reserve for gratuities have been maintained at Rs. 55 lakhs and Rs. 15 lakhs respectively, the development reserve has received Rs. 12 lakhs more at Rs. 32 lakhs and that for deferred taxation Rs. 4.69 lakhs more at Rs. 19.51 lakhs. The general reserve, which had received nothing last year, has now been credited with Rs. 7.37 lakhs.

The management of the Company deserves to be complimented for giving all the important information pertaining to the Company's working in a manner that can be easily followed and understood. Specially commendable are the charts showing the position of the A.C.C. in the cement industry of India and Pakistan, the disposition of expenditure and appropriation of profit, and the comparative trend of cement price with that of wholesale prices. It is seen from these charts that, in India, the A.C.C. accounts for about 56 per cent. of total cement production and for a little less than half of that in Pakistan. Of the money earned by the Company in 1955-56, 40.30 per cent. went away by way of raw materials, 18.65 per cent. by way of freight, and 18.60 per cent. to employees. Of the balance, administrative charges constituted 4.62 per cent., taxes 6.65 per cent. and reserves 5.57 per cent. The share of shareholders was no more than 5.61 per cent. It will be seen from this comparison that, contrary to popular belief, the investors, that is, those who put up the capital for establishing industries, are the smallest beneficiaries of industrialisation. The price chart discloses that, while the index number of wholesale prices went up during 1955-56, that of cement price was actually lower till 30th June 1956 and went up to some extent after that date when State trading in the commodity was enforced.

Expansion Schemes

Referring to the Company's various schemes of expansion already put into execution and still under execution, the Directors observe:

"The construction of the new cement works at Sindri was completed during the year, and the first unit with an annual capacity of one lakh tons per year was commissioned in September 1955. The second similar unit was put into commission in December 1955, raising the capacity of the Sindri Cement Factory to 2 lakh tons per year. In view of the increased quantities of calcium carbonate sludge which are expected to be available from the Government Fertiliser Factory from the beginning of 1958, it has been decided to install at Sindri a third similar unit with a capacity of one lakh tons of cement per year.

"Though the installation of plant and machinery required for increasing the capacity of the Bhupendra Cement Factory from 3 lakh tons to 4 lakh tons per year had been completed, it was not possible to obtain appreciable additional production from the extended plant due to the delay in supply of electric power from the Bhakra-Nangal Project which was received only in the middle of August 1956.

"The construction of the new Refractory Plant at Katni was completed by the end of March 1956, and the plant was put into operation. The output of this plant will be gradually stepped up so as to bring it up to its rated capacity. Satisfactory progress was maintained on the installation of additional plant at Kistna Cement Works for raising its capacity from 0.9 lakh tons to 2.55 lakh tons per year. This additional plant is expected to go into production in the beginning of 1957. Work on the extension of the Chaibasa Cement Factory has been progressing satisfactorily and the increased capacity of 3 lakh tons per year from this factory is expected to be obtained by the end of 1957. Work has also commenced on the construction of two new cement factories at Mancherial and Porbandar, which will be equipped with dry process plants. A start has also been made on the modernisation and extension of the Kymore Cement Works which is planned to have a capacity of 5.75 lakh tons of cement per year.

"The installation of a new power plant at Dwarka Works was completed during the year. This plant comprises a 6,200-kw. turbo-generator set and two pulverised coal-fired boilers which are operating satisfactorily. A beginning has been made with the implementation of the Company's plans for supply of bulk cement to the consumers at their sites of construction by the installation of a bulk cement depot at Okhla in New Delhi, which went into commission in April 1956."

The Directors have decided to take up 5,075 ordinary shares of Rs. 100 each at par in Asbestos Cement (Private) Ltd., to which it is entitled from out of the 35,000 additional ordinary shares which the latter Company has offered for subscription. Besides, arrangements have been made for the acquisition of a further 18,000 shares out of the entitlement of another shareholder. Consideration for such acquisition has been fixed at Rs. 40 per share.

New Issue

As readers are already aware, the Company recently increased its capital by the issue of new shares of Rs. 100 each at a premium of Rs. 20 per share. The number of shares so issued is 635,928. Out of the issue price of Rs. 120, the Directors have called up Rs. 60 (Rs. 50 by way of capital and Rs. 10 by way of premium). It is stated that almost the entire amount called has been received by the Company.

Under the State Trading scheme in cement introduced by the Government of India with effect from 1st July 1956, the Company has been allowed a fixed price per ton ex-works at Rs. 54-8 per ton exclusive of packing charges and excise duty. The production of the Company is being marketed by the State Trading Corporation of India (Private) Ltd., through the Cement Marketing Company of India (Private) Ltd. which has been appointed selling agent for the purpose of marketing cement at a remuneration of Re. 1-8 per ton.

As for the financial position of the Company, a broad idea can be had from the following synopsis of its balance-sheet as at 31st July 1956:

Liabilities	Rs.	Assets	Rs.
Capital	12,71,70,508	Gross block	27,75,38,613
Reserves and surplus	... 8,48,86,306	*Less*—Depreciation	... 9,84,43,675
Welfare and endowment fund	... 1,07,112	Net block	17,90,94,938
Reserve for taxation	... 2,03,60,791	Machinery, rolling stock, etc., in transit	... 15,85,095
Liabilities	10,12,03,596	Unallocated capital expenditure	34,99,957
		Stores, spares, etc.	... 8,14,92,459
		Works-in-progress	... 67,82,295
		Stocks	... 23,66,356
		Debts, deposits and advances	... 3,24,55,151
		Investments	78,86,299
		Cash	... 1,85,65,763
	Rs. 33,37,28,313		Rs. 33,37,28,313

The salient features of the Company's financial position are: (*a*) The paid-up capital is well below the block account, (*b*) the reserves and surplus are equal to nearly 70 per cent. of the capital, (*c*) the bulk of the reserves is represented by fixed assets, (*d*) the current liabilities, heavy as they are, are well covered by floating assets, (*e*) of the gross block shown in the summary, additions made during the year 1955-56 alone represent Rs. 3.35 crores (the deductions were only Rs. 50 lakhs), and (*f*) the stores and book debts are large, reflecting as they do the rapid expansion that is going on in the Company's business.

The Company belongs to a rising industry. It has a big programme for expansion. Accordingly, the prospects for it are promising. It is, however, hard to say whether the Company's dividend will increase in the coming years at a rate in proportion to the growth in its activity. That depends on many imponderables, such as the cost of production, and the Government's industrial, labour and fiscal policies. As readers are aware, the Company's affairs are closely regulated by the Government. Nevertheless, it can be said, with reasonable degree of confidence, that it should be possible for the Company to maintain the dividend at the modest rate of 10 per cent. per annum even on the increased capital.

Currently, the shares of the Company (Rs. 100 fully paid-up) are being quoted at Rs. 183 *cum-div*. On an *ex-div*. basis, the yield works out to 5.8 per cent. per annum.

321 NEW COMPANIES REGISTERED

During the first five months of the current financial year, 321 new companies, with a total authorised capital of Rs. 64.05 crores, have been formed, as against 578 companies with an authorised capital of Rs. 52.30 crores during the corresponding period of the preceding year. Of the 321 new companies registered upto the end of August 1956, 31 were public companies, as against 79 public companies registered in the first five months of the year 1955-56. This information is contained in the monthly *Blue Book on Joint Stock Companies in India* for August 1956 (priced at Rs. 6 and available from the Manager of Publications, Delhi).

New registrations during August 1956 numbered 84, which is double the figure recorded in the first month of the current fiscal year. Of the 84 new registrations, nine were public companies, the remaining 75 being private companies.

The industry-wise break-down of the new registrations for the period April-August 1956, shows that agricultural and allied activities accounted for 11 companies, with an authorised capital of Rs. 3.31 crores, mining and quarrying for seven companies with an authorised capital of Rs. 2.08 crores, processing and manufacture (foodstuffs, etc.) for 26 companies with an authorised capital of Rs. 17.81 crores, processing and manufacture (metals and chemicals) for 58 companies with an authorised capital of Rs. 4.83 crores, processing and manufacture (others) for 34 companies with an authorised capital of Rs. 13.44 crores, construction and utilities for six companies with an authorised capital of Rs. 36 lakhs, commerce (trade and finance) for 126 companies with an authorised capital of Rs. 8.41 crores, transport, communication and storage for 21 companies with an authorised capital of Rs. 84 lakhs, community and business services for seven companies with an authorised capital of Rs. 27 lakhs, personal and other services for 25 companies with an authorised capital of Rs. 95 lakhs.

With three more big and giant flotations formed during August 1956, the total number of such companies having an authorised capital of Rs. 50 lakhs and above comes to 11.

A notable flotation of the month is the Heavy Electricals Private Ltd., registered in the State of Bhopal with an authorised capital of Rs. 30 crores. The sponsor of this company is the Ministry of Production of the Central Government. This is the biggest Government company to be formed so far during the current fiscal year, the other two Government companies having a very large capital base being the State Trading Corporation of India (Private) Ltd. and Western Shipping Corporation (Private) Ltd. with authorised capital of Rs. 1 crore and Rs. 10 crores, respectively.

During the month of August 1956, as many as 112 companies were reported to have ceased functioning in the various States. Of these, 64 cases occurred in the State of Uttar Pradesh.

The total amount of capital raised by new companies formed during the current fiscal year is Rs. 10.28 crores, as against an increase of Rs. 17.81 crores made by other established companies registered in the earlier years.

SULEKHA WORKS, LTD.

The working results of Sulekha Works Ltd., manufacturers of the famous Sulekha inks (Managing Agents: Messrs. Maitra Brothers & Co. Private Ltd., Calcutta), for the year ended 31st December 1955, show that the Company is steadily progressing year after year. The Company's sale proceeds, which were only Rs. 3.07 lakhs for the year 1951, have progressively increased in the following years to reach a high of Rs. 15.35 lakhs in 1955. The increase in turnover by five times in the course of only four years should, therefore, be considered satisfactory. The profit, too, has steadily expanded, from Rs. 25,367 for 1951 to Rs. 1,14,439 for 1955. In consonance with the upward trend, dividend also has been stepped up from 5 per cent. to 8 per cent. The Directors have been following a judicious policy in regard to ploughing back a part of the profit. They have built up a reserve fund of Rs. 1.10 lakhs which is less than the paid-up capital (at Rs. 1.13 lakhs) by about Rs. 3,000. This excludes the undistributed surplus amounting to Rs. 13,200. The Company's net block is shown at Rs. 3.11 lakhs. The current liabilities amount to Rs. 6 28 lakhs while current assets aggregate Rs. 5.67 lakhs.

The Company is engaged in the manufacture of high quality inks and, in order to keep pace with modern improvements, it is having its own research department. It has acquired recently a plot of land at Sodepur, where it hopes to start a second factory at an estimated cost of Rs. 10 lakhs. The expense for this will be met partly by raising money by releasing further shares in the market and partly by Government loan. With the starting of the second factory, it will be easy for the Company not only to meet the rapidly increasing demand for its existing products, but also to embark on new ventures in the stationery line in which, it claims, it has already specialised to a considerable extent.

SINGARENI COLLIERIES

The Government of India had suggested to the former Hyderabad Government and is now reported to have suggested to the Andhra Pradesh Government that it should be taken as a senior partner in the Singareni collieries and its capital structure enlarged. The suggestion was made when the former Hyderabad Government recently approached the Centre for a loan of Rs. 2 crores for increasing the production of the Singareni collieries by another one and a half million tons.

Points From The Chair

Export Markets for Coffee

"EVEN in the worst days of the slump before the war, high grade coffees always found a ready market, but many estates during those days were unable even to obtain bids for their *robusta* or lower grade cherry. If there was a slump in world prices, such conditions might well be seen again. It is, therefore, of vital interest to the industry that the Coffee Board should encourage the consumption of the non-export but nonetheless palatable grades in India itself, which will allow for the establishment of permanent markets in Europe or elsewhere for our premium coffees. I would further recommend that, in order to keep our export markets, it would be in the interests of all to fulfil any excess demand in India by allowing the importation of the less expensive coffees from Indonesia. An active export policy will not only establish a sound market for our total products but will be of the greatest assistance not only to the country as a whole but also to the Indian consumer. The difference in foreign exchange between a thousand tons of Plantation A exported and a thousand tons of *robusta* is the equivalent of over Rs. 30 lakhs gain or loss. Indian coffee can, therefore, if given a chance, provide real financial help towards the second Five-year Plan. On the other hand, the additional premium gained by exporting our high quality coffees, might well allow for a further substantial subsidy in the internal release prices."

R. C. PATERSON,
Consolidated Coffee Estates (1943) Ltd.

Tax on Confectionery

"Most serious is the imposition by the Madras State Government of an additional sales tax of one anna in the rupee on sugar, equivalent to no less than Rs. 60 a ton—a tax which, I must emphasise, is not incurred by our competitors with factories outside Madras State. Recent Press reports, however, raise the hope that the existing tax inequalities in respect of sugar may shortly be ironed out by the introduction of a single Central Government tax. A second major cost increase which will be felt almost immediately is due to the rise in import duty (from 33⅓ per cent. to 50 per cent.) on glucose, which is essential for making the highest quality confectionery. Indigenous glucose of acceptable standards is now available, though the shortage caused by import restrictions has resulted in prices rising higher even than that of the imported product. Negotiations are going on through the Confectionery Manufacturers' Association with the Government Food Development Wing, whereby it is hoped the glucose manufacturers will be persuaded that a more co-operative attitude will be to their long-term advantage."

C. R. SHINIVASAN,
Parrys Confectionery Ltd.

Outlook for Bicycles

"It might be helpful to you, before concluding, if I give you my impressions of what the future holds in store for the cycle industry of this country and for your Company in particular. While it cannot be denied that the seller's market has come to an end rather more abruptly than many of us expected, I cannot regard this as grounds for despondency or pessimism. Many of the factors that have contributed to this difficult situation are of a transitory nature only and it would be wrong in my view to attach too much importance to them as pointers to the future. While the pattern in the near future may well require the establishment in certain of our markets of an assembly or manufacturing plant in order to overcome restrictions placed on imports by Governments with nationalist aspirations and an eye to their balance of payments, I have no doubt that the vast sales potential of the many countries in the world where development, both political and economical, is in its infancy will, if exploited with forcefulness and vigour, more than compensate for the loss to us of these markets."

GEORGE WILSON,
Raleigh Industries Ltd.

Indian Shipping Tonnage

"The loans granted by the Government for the construction of ships overseas require exchange facilities for payment of instalments to the shipbuilding yards as they become due. I should like, however, to point out that ships of Indian companies engaged in overseas trade earn and save enough foreign exchange to meet the requirements for transmission of the instalments due to the shipbuilding yards abroad. It is needless to add that this is a continuous source of foreign exchange earning and that, therefore, the greater will be the foreign exchange earned by them. These of the Indian companies expand, the greater will be invisible earnings are a considerable factor for every maritime country in dealing with the exchange problem."

SIR A. RAMASWAMI MUDALIAR,
India Steamship Co., Ltd.

Import of Scrap Aluminium

"The Tariff Commission agreed that there was a case for imposition of duty on scrap and accordingly made a recommendation to the Government. The Government also accepted the recommendation and imposed a duty of 25 per cent. *ad valorem* from 3rd December 1955. But unfortunately the duty has again been withdrawn suddenly with effect from 14th July 1956, without any consultation with the industry. As a consequence, once again more and more scrap will be imported instead of virgin metal and the foreign prices of scrap will naturally rise. The door has also opened for import of virgin metal in the guise of scrap to avoid duty and for import of scrap whose purity is doubtful being unguaranteed. The earlier these defects are remedied, the better for the industry as a whole."

LAKSHMIPAT SINGHANIA,
Aluminium Corporation of India Ltd.

COMPANY MEETINGS AND DIVIDENDS

BERAR MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th January 1957. Dividend: *Nil*. Transfer books will remain closed from 7th to 19th January 1957, both days inclusive.

INDIAN VEGETABLE PRODUCTS LTD. Annual General Meeting, Bombay, 15th January, 1957. Dividend: Rs. 10 per share, free of tax, payable on and after 17th January 1957. Transfer books remain closed from 29th December 1956 to 16th January 1957, both days inclusive.

KALPETTA ESTATES LTD. Annual General Meeting, Kozhikode, 16th January 1957. Dividend: Rs. 2 per share. Transfer books remained closed from 3rd to 16th January 1957, both days inclusive.

BHAGWATI PRESSING CO., LTD. Annual General Meeting, Calcutta, 17th January 1957. Transfer books remain closed from 10th to 17th January 1957, both days inclusive.

BABABUDIN COFFEE AND PRODUCE CO., LTD. Annual General Meeting, Bangalore, 19th January 1957. Dividend: Re. 1-4 per share. Transfer books will remain closed from 13th to 19th January 1957, both days inclusive.

PREMIER AUTOMOBILES LTD. Annual General Meeting, Bombay, 21st January 1957. Dividend: Rs. 6 per 'A' ordinary share, free of income-tax, payable on and after 4th March 1957. Transfer books remain closed from 21st December 1956 to 18th January 1957, both days inclusive.

SINGELL TEA CO., LTD. Annual General Meeting, Calcutta, 22nd January 1957. Transfer books remain closed from 7th to 22nd January 1957, both days inclusive.

KHARDAH CO., LTD. Annual General Meeting, Calcutta, 24th January, 1957. Dividend: Rs. 5 per share. Transfer books will remain closed from 10th to 24th January 1957, both days inclusive.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Annual General Meeting, Madras, 24th January. 1957. Dividend: As. 6 per share. Transfer books will remain closed from 18th to 24th January 1957, both days inclusive.

ASSOCIATED CEMENT COMPANIES LTD. Annual General Meeting, Bombay, 25th January 1957. Dividend Rs. 10 per share, payable on and after 1st February 1957.

RANEEGUNGE COAL ASSOCIATION LTD. Annual General Meeting, Calcutta, 25th January 1957. Dividend: As. 6 per share. Transfer books remain closed from 10th to 25th January 1957, both days inclusive.

MYSORE SUGAR CO., LTD. Annual General Meeting, Bangalore City, 28th January 1957. Transfer books remain closed from 12th to 31st January 1957, both days inclusive.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 31st January 1957. Transfer books will remain closed from 24th January to 6th February 1957, both days inclusive.

KATRAS JHERRIAH COAL CO., LTD. Dividend of Rs. 3 per share for the year ending 31st January 1957. Transfer books will remain closed from 7th to 14th January 1957, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 1st February 1957. Dividend: As. 5-1/5 (6¼ per cent. per annum) for the half-year ended 30th June 1956. Transfer books will remain closed from 18th January to 1st February 1957, both days inclusive.

JEYPORE SUGAR CO., LTD. Dividend of As. 9-3/5 per ordinary share, for the year ended 30th June 1956. Transfer books remain closed from 3rd to 10th January 1957, both days inclusive.

HAILEYBURIA TEA ESTATES LTD. Interim dividend of Re. 1 per ordinary share, for the year ended 31st December 1956. Transfer books remain closed from 3rd to 10th January 1957, both days inclusive.

TWYFORD TEA CO., LTD. Interim dividend of Re. 1 per ordinary share, for the year ended 31st December 1956. Transfer books remain closed from 3rd to 9th January 1957, both days inclusive.

EMERALD VALLEY ESTATES LTD. Interim dividend of As. 5 per ordinary share, for the year ended 31st December, 1956. Transfer books remain closed from 3rd to 9th January 1957, both days inclusive.

CHRESTIEN MICA INDUSTRIES LTD. Interim dividend of As. 10 per ordinary share and As. 6 per deferred share, for the period ending 31st December 1955. Transfer books remain closed from 7th to 12th January 1957, both days inclusive.

BRITANNIA BISCUIT CO., LTD. Interim dividend of 3 per cent. on ordinary shares, for the year ending 31st March 1957. Transfer books remain closed from 4th to 11th January 1957, both days inclusive.

MYSORE SPINNING AND MANUFACTURING CO., LTD. Interim dividend of Rs. 3 per ordinary share, for the half-year ended 31st August 1956, payable on and from 4th February 1957. Transfer books will remain closed from 25th January to 2nd February 1957, both days inclusive.

COMPANY REGISTRATIONS

EASTERN INSULATION CO., PRIVATE LTD. (First Director: Lt.-Col. W. P. Horsburgh). Business: Mechanical and electrical engineers. Authorised capital: Rs. 5,00,000. Private company. Address: Hague Building, Sprott Road, Ballard Estate, Bombay.

EAGLE VACUUM BOTTLE MANUFACTURING CO., PRIVATE LTD. (Managing Director: Mr. Abdulla Soomar.) Business: Manufacture of glass and glassware. Authorised capital: Rs. 5,00,000. Private company. Address: 144-46, Sheriff Devji Street, Bombay 3.

RAJA CONSTRUCTION CORPORATION PRIVATE LTD. (First Director: Raja Mahant Digvijai Das). Business: Construction of buildings. Authorised capital: Rs. 5,00,000. Private company. Address: 25, Vasundhara Building, Peddar Road, Bombay 26.

PROFITS OF NEELAMALAI TEA LOWER

KALPETTA ESTATES CUT DIVIDEND

Neelamalai Tea and Coffee Estates Ltd.

THE directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co. (India) Ltd., Madras) submit the audited accounts of the Company for the year ended 30th June 1956.

During the year, the Company acquired Wooligooly Estate, in Coorg, the purchase price being Rs. 12 lakhs. This is considered a first class property fully worth the amount paid. The Company's Katary, Bhawani and Sutton Estates have been surveyed recently and the resurvey figures are being adopted.

Tea—Crop and Cost of Production:—The tea crop harvested during the season, together with the costs, is given below:—

	Estimates 1955-56	Crop harvested 1955-56	Yield per acre 1955-56	Crop secured 1954-55
	Lbs.	Lbs.	Lbs.	Lbs.
Katary and Bhawani	8,25,000	7,89,600	753	7,92,000
Sutton	4,75,000	4,01,810	861	4,73,197
Total ..	13,00,000	11,91,410	786	12,65,197

There has been a short-fall of 73,787 lbs. compared to last season, mainly on Sutton Estate. This was owing to the extremely dry conditions that prevailed during the beginning of the year. The total f.o.b. cost per lb. was as follows:— Estates' cost of production Re. 1-4-4, excise duty, export duty, cess, etc. As. 4-6 and bonus paid to workers As. 1-8.

During the year conciliation proceedings in respect of the disputes relating to bonus to Estate workers for the seasons 1952-54 were held and the Company had to pay an additional bonus of about Rs. 60,000 as 8¼ per cent. on the wages earned by the workers during the season 1954 in settlement of their claim for additional bonus. This, together with the other statutory liabilities under the Plantation Labour Act, has considerably put up the cost of production.

Tea Sales:—The average price realised was Rs. 2-4-10 per lb. against Rs. 2-7-4 per lb. realised last season. During the greater part of the year tea prices at Cochin remained at low levels and with a view to secure more favourable prices for the Company's teas, the directors shipped part of the production for sale in the London auctions. The directors feel that adoption of this procedure would lead to better results in the long run. They also inform that tea prices have since improved and it is hoped the results for the season 1956-57 would be more encouraging.

Coffee—Crop and Cost of Production:—

	Estimates, 1955-56	Secured, 1955-56	Secured, 1954-55
	Cwts.	Cwts.	Cwts.
Katary	25.00	35.53	16.30
Sutton	100.00	171.80	19.29
Total ..	125.00	207.33	35.59

The cost of production was Rs. 315-13-11 per cwt. against Rs. 580-8 during the last season. The entire crop was delivered to the Pool and was valued at Rs. 170 per cwt.

Although the coffee crop on Katary and Sutton has been considerably larger than last year, it is by no means economical and the directors are carrying out their programme of replanting the unremunerative coffee in tea. The directors inform shareholders that the Tea Board has sanctioned new planting permits as shown below and it is expected that the entire unremunerative coffee area will be replaced in tea within the next two or three years as follows:—Katary 30.00 acres, Bhawani 22.56 acres and Sutton 24.25 acres.

With regard to the assessment of coffee profits to income-tax, a decision has been given in favour of the growers in a test case, but the Income-tax Department has appealed against this decision and the position remains unchanged.

Plantation Tribunal Award:—The shareholders will have received the circular issued by the Company regarding the implications of the Award. If the terms of the Award are to be fully implemented from March 1952, the arrears of liability for this Company would be Rs. 17 lakhs and the annual wage bill will be put up by about Rs. 3½ lakhs.

The profit for the year under review amounted to Rs. 4,98,629 (Rs. 13,30,329). Adding the balance brought forward from previous year of Rs. 46,715 (Rs. 88,338) there is a total of Rs. 5,45,344 (Rs. 14,18,666). Out of this, the directors propose to transfer to reserve for taxation Rs. 1,50,000 (Rs. 5,02,225) and pay 5 per cent. dividend on preference shares Rs. 90,000 (Rs. 90,000) leaving a balance of Rs. 3,05,344 (Rs. 8,26,441). This amount, the directors recommend be disposed of as under:—

Payment of 7½ (17½) per cent. dividend on ordinary shares amounting to Rs. 2,70,000 (Rs. 6,30,000) and carry forward Rs. 35,344 (Rs. 46,715 after providing Rs. 1,49,726 for depreciation).

Owing to the lower prices realised for tea and the additional expenditure the Company had to bear during the year, it has not been possible to declare a higher dividend this season.

Estimates for the Season 1956-57:—

	Tea	Cost of production Per lb.	Coffee	Cost of production Per cwt.
	Lbs.		Cwts.	Rs.
Katary and Bhawani ..	8,25,000	128.08	25.00	161.60
Sutton	4,75,000	129.22	80.00	174.04
Woolligooly	..	..	3,800.00	79.98
Total ..	13,00,000	128.51	3,905.00	82.58

Capital Expenses:—An amount of Rs. 74,740 has been expended during the season towards maintenance of immature clearings and opening of new cart roads in the clearings. About 2.25 acres were also opened in tea on Katary during the year. Labour quarters, staff quarters, etc., were constructed during the season at a cost of Rs. 82,625.

Plantation Labour Act:—The Government of Madras enacted the rules in connection with this Act and enforced them from the 1st January 1956. This has imposed certain additional obligations on employers and implementation of these rules has considerably put up the cost of production.

Plantation Inquiry Commission:—The Commission's report on the tea industry has been released. Several of the recommendations made by the Commission are of a far reaching nature, one of them being the creation of a replanting fund, to which all Estate owners will have to contribute at Rs. 50 per acre per annum. This fund, it is said, would be used for the specific purpose of financing replanting programmes.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	54,00,000	Block ...	65,46,614
Reserves ...	19,24,400	Stock-in-trade	10,92,818
Provision for taxation ..	6,59,742	Stores, tools, etc. ...	1,78,824
Liabilities ...	7,36,865	Debts, deposits and advances ...	5,49,460
Profit and loss account ...	35,344	Investments	1,45,939
		Cash ...	2,43,698
Rs.	87,56,351	Rs.	87,56,351

Kalpetta Estates, Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Kozhikode) submit the audited accounts of the Company for the year ended 30th April 1956.

Rubber crop secured during the year was 3,18,700 (3,00,000) lbs. at a cost of 77.78 (64.31) cts. against an estimate of 3,00,000 lbs. at 76.84 cts. per lb. The average selling price was 148.06 cts. per lb. as against 133.35 cts. the previous year.

Tea crop harvested during the year 2,63,489 (2,22,001) lbs. at a cost of 122.94 (136.24) cts. against an estimate of 2,00,000 lbs. at 147.09 cts. The average selling price has been 133.31 cts. only as against 254.56 cts. the previous year.

Cardamoms: The crop secured during the year 6,087 lbs. against an estimate of 6,000 lbs., average price realised being Rs. 8.4 per lb. as against Rs. 6.7 the previous year.

The coffee crop secured amounted to 4,800 lbs. against an estimated crop of 4,480 lbs.

Estimates for 1956-57 provide for a rubber crop of 3,25,000 lbs. to cost 73.27 cts., tea crop of 2,25,000 lbs. to cost 132.99 cts., cardamom crop of 7,000 lbs. to cost Rs. 5.23 and coffee crop of 80 cwts. to cost Rs. 516.7.

The net profit for the year after allowing for depreciation, managing agents' commission, Central income-tax and agricultural income-tax works out to Rs. 1,40,440 (Rs. 1,87,727) to which is to be added the sum of Rs. 17,844 (Rs. 16,748) brought forward from last season, totalling Rs. 1,58,284 (Rs. 2,04,475). From this is adjusted the sum of Rs. 3,425 being the expenses for renewal of one of the leases of Chulika Estate, leaving a balance of Rs. 1,54,859 (Rs. 1,72,844) which sum the directors recommend be disposed of as under:—

To pay a dividend of 20 (27½) per cent. for the year 1955-56 Rs. 80,000 (Rs. 1,10,000), to transfer to staff pension and gratuity reserve Rs. 5,000 (Rs. 5,000), to transfer to development reserve Rs. 65,000 (Rs. 40,000) and to carry forward to next year Rs. 4,859 (Rs. 17,844).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,00,000	Block ...	16,12,584
Reserves ...	10,92,899	Stock-in-trade	1,81,392
Provision for taxation ...	1,35,115	Stores, spares and nurseries	73,521
Liabilities ...	3,29,784	Works-in-progress ...	1,638
Profit and loss account ...	4,859	Debts, deposits and advances ...	45,843
		Investments	22,991
		Cash ...	24,688
Rs.	19,62,657	Rs.	19,62,657

Bababudin Coffee and Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas and Co. (Mysore) Private Ltd., Bangalore) submit the audited accounts of the Company for the year ended 30th June 1956.

The acreage of the estate is as follows:—Coffee in bearing 538.75 acres, cardamom in bearing 11.25 acres and cardamom new clearing 17.00 acres. The area of uncultivated land is 749 acres.

The crop particulars are as follows:—

	Estimated for the year 1955-56	Harvested during 1955-56	Harvested during 1954-55
	Cwts.	Cwts.	Cwts.
Arabica ...	2,800	2,575	658
Robusta ...	800	601	503
Total ...	3,600	3,176	1,161

The coffee crop was delivered to the Coffee Pool and dividends were received at regular intervals.

Coffee Valuation: For the purpose of accounting, the valuation of the crop is estimated at Rs. 2-4 per point, against Rs. 2-5-11 realised last season.

Taxation: The Government have reopened the assessment of income-tax on a portion of the profits on coffee as business income. In a test case, the decision has been in favour of the growers. But the Income-tax Department has preferred an appeal and the final result is eagerly awaited. Meanwhile, the tax demanded is shown as "contingent liability" in the balance-sheet. Provision has been made in the accounts for the payment of agricultural income-tax at compounded rates.

The net profit for the season after providing for depreciation, remuneration to managing agents and for taxation is Rs. 1,41,130 (Rs. 25,403). This, together with balance brought forward from previous season of Rs. 9,453 is Rs. 1,50,583 (Rs. 32,049). After paying the dividend of Rs. 18,000 (Rs. 18,000) on preference shares, the balance amount available for disposal is Rs. 1,32,583 (Rs. 23,453), which the directors propose to appropriate as follows:—

To Dividend on ordinary share capital for the season 1955-56 at 25 (15) per cent. Rs. 50,000 (Rs. 30,000), transfer to rehabilitation and development reserve Rs. 75,000 (*nil*), transfer to staff gratuity and pension reserve Rs. 5,000 (*nil*) and surplus carried over to next season Rs. 2,583 (Rs. 9,453).

Estimates for season 1956-57 provide for a coffee crop of 2,800 cwts. at Rs. 111 per cwt. and cardamom crop of 80 lbs. at Rs. 4-6 per lb.

As usual, provision has been made for intensive cultivation works. The property is maintained in excellent condition.

Plantation Labour Act: During the season, the Plantation Labour Act has been enforced and Mysore Government have now published the relevant Rules. There will be an immediate rise in production costs as well as in capital expenditure.

Plantation Enquiry Commission: The Commission's report on coffee industry is now before the Government. One of the recommendations made is creation of a replanting fund to which contributions should be made by the growers. Besides this, some far reaching suggestions about marketing and distribution of coffee have also been made.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	5,33,561
Reserves ..	3,50,748	Stock-in-trade	3,38,046
Provision for taxation ...	20,142	Stores spares, etc. ...	56,884
Liabilities ...	1,19,693	Debts and advances ...	9,379
Profit and loss account ...	2,583	Cash ...	55,296
Rs.	9,93,166	Rs.	9,93,166

Raneegunge Coal Association Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias and Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st March 1956.

Coal raisings, despatches and stocks.

	Half-year ended 31-3-55	Half-year ended 30-9-55	Half-year ended 31-3-56
	Tons	Tons	Tons
Raisings	1,71,520	1,62,989	1,86,769
Despatches	1,58,269	1,88,821	1,93,103
Stocks	53,207	27,375	21,041

Raisings over the half-year increased considerably due to higher output for the period October-December so as to fulfil the target set by the Coal Board. The directors are pleased to report that the target for 1955 was fully raised. Despatches were quite satisfactory and were somewhat higher thereby making it possible to decrease the stocks.

Coke manufacture: The Company manufactured during the half-year under review 3,256 (3,336) tons of hard coke, 2,583 (3,408) tons were despatched and 976 (176) tons remained in stock.

Development and prospects: Future development of the Company's Collieries is progressing well. Coal will be raised from Kustore South pits by the end of 1956 and application has been made to the Coal Board for re-opening Alkusa South pits, so that in the event of increased output being sanctioned by the Government the Company will be able to meet Government's full requirements and raise monthly output to the required target.

The Company's profit for the half-year ended 31st March 1956, after inclusion of Rs. 16,846 (Rs. 47,209) brought forward is Rs. 3,84,294 (Rs. 1,88,000). And after making provision for taxation Rs. 1,71,125 (Rs. 45,000), there remains a balance of Rs. 2,13,169 (Rs. 1,43,001). From this balance the directors have placed to machinery replacement and development reserve Rs. 1,00,000 (Rs. 50,000) and recommend the payment of a dividend at As. 6 (As. 4) per share absorbing Rs. 89,981 (Rs. 59,988) leaving a balance to be carried forward of Rs. 23,188 (Rs. 33,013).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,99,500	Block ...	36,99,424
Reserves ...	20,17,105	Stock of coal	2,79,321
Provision for taxation ...	4,76,125	Stores ...	5,16,708
Liabilities ...	14,33,139	Debts and advances ...	17,85,706
Profit and loss account ...	23,188	Investments	8,138
		Cash ...	59,740
Rs.	63,49,057	Rs.	63,49,057

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias and Co., Private Ltd., Calcutta) submitted the audited accounts of the company for the half-year ended 31st March 1956.

After transferring Rs. 2,50,000 (*nil*) from general reserve, there is a balance of Rs. 2,14,690 (Rs. 5,02,028 after placing Rs. 1,40,000 to taxation and other allocations to general reserve, etc.) at the credit of profit and loss account from which the directors paid dividend on 10,000 preference shares at 7 per cent. per annum free of income-tax Rs. 35,000 (Rs. 35,000), dividend on 6,00,000 ordinary shares at 5 (7½) per cent. per annum free of income-tax Rs. 1,50,000 (Rs. 2,25,000) and carried forward to next period Rs. 29,690 (Rs. 2,42,027).

In accordance with the provisions of the Indian Jute Mills Association's working time agreement, the Mills worked for 48 hours per week throughout the period under review. 12½ per cent. of the looms were sealed up to 7th January 1956; 2½ per cent. of the looms were unsealed as from 9th January, 1956, and a further 5 per cent. were unsealed from the 20th February 1956.

Owing to the continuing disparity between the prices of raw materials and finished goods, trading conditions remained difficult throughout the period.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	49,89,880
Debentures ...	12,00,000	Stocks ...	84,36,582
Reserves ...	47,00,000	Stores and spare gear	8,38,634

Liabilities ...	62,95,880	Debts, deposits and advances ...	48,91,771
Profit and loss account ...	29,690	Investments	4,05,204
		Cash ...	1,79,958
Rs.	1,98,89,372	Rs.	1,98,89,372

Dejoo Valley Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 2,75,071 (Rs. 4,75,760) to which was added profit on farming Rs. 924 (Rs. 1,877), profit on sale of motor vehicle Rs. 3,206 (Rs. 5,454 on sale of machinery) and balance of profit brought forward from 1954 Rs. 6,542 (Rs. 16,624) making a total of Rs. 2,85,743 (Rs. 5,00,493 including Rs. 778 being adjustment). After deducting provision for taxation Rs. 90,441 (Rs. 1,85,906), adjustment Rs. 4,449 (*nil*), unserviceable stores written off Rs. 260 (Rs. 84), bonus to labourers, 1953-54 Rs. 47,885 and depreciation on fixed assets Rs. 39,564 (Rs. 30,673) there was a balance of Rs. 1,03,144 (Rs. 2,63,542 after excluding loss on sale of stores Rs. 289). The directors have transferred to buildings and machinery reserve Rs. 25,000 (Rs. 1,55,000) leaving an available balance of Rs. 78,144 (Rs. 78,542 after placing Rs. 50,000 to general reserve). Out of this the directors paid a dividend at the rate of 30 (60) per cent. for the year ended 31st December 1955, on 12,000 ordinary shares of Rs. 10 each, absorbing Rs. 36,000 (Rs. 72,000), leaving to be carried forward Rs. 42,144 (Rs. 6,542).

Tea Crop.—The saleable crop weighed out at 4,486 (3,480) maunds against an estimate of 4,300 maunds, and was disposed of at an average price of As. 38.23. (As. 53.53) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 4,600 maunds at a total revenue expenditure of Rs. 5,82,686.

Results.—The results may be regarded as satisfactory considering the general recession in tea prices during the period under review.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,20,000	Block ...	4,26,723
Reserves ...	4,25,426	Stock of tea ...	3,67,291
Provision for taxation ...	2,86,000	Stores ...	1,09,003
Liabilities ...	2,46,755	Other assets	1,731
Profit and loss account ...	42,144	Debts, deposits and advances ...	40,921
		Investments	1,206
		Cash ...	1,73,450
Rs.	11,20,325	Rs.	11,20,325

Rajahbhat Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The season's working resulted in a profit, before providing for depreciation, of Rs. 1,42,684 to which was added adjustment account Rs. 10,793, balance of profit brought forward from 1954 Rs. 34,441 and amount transferred from general reserve Rs. 1,25,000, making a total of Rs. 3,12,918. After deducting depreciation on fixed assets Rs. 57,926 and bonus to garden labour and staff for 1953-54 Rs. 1,66,465, there was left a balance of Rs. 88,527. Out of this, the directors paid a dividend of 12½ per cent. for the year ended 31st December 1955, on 60,000 ordinary shares of Rs. 10 each, absorbing Rs. 75,000 leaving to be carried forward Rs. 13,527.

Tea Crop.—The saleable crop weighed out at 9,135 (11,267) maunds against an estimate of 12,000 maunds, and was disposed of at an average price of As. 29.49 (As. 41.49) per lb.

Estimate 1956.—The estimate for season 1956 provides for a saleable crop of 11,370 maunds at a total revenue expenditure of Rs. 13,36,792.

Results.—The garden suffered from a labour strike in August-September 1955, which resulted in an estimated loss of nearly 3,500 maunds crop. This drop in crop and the lower prices realised for the teas during the period under review have adversely affected the results.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	6,96,747
Reserves ...	10,26,374	Stock of tea	6,51,160
Provision for taxation ...	4,56,295	Stores ...	2,12,592
Liabilities ...	6,60,602	Other assets	13,167
Profit and loss account ...	13,527	Debts, deposits and advances ...	1,81,762
		Investments	2,264
		Cash ...	9,99,106
Rs.	27,56,798	Rs.	27,56,798

Bombay Safe Deposit Co., Ltd.

The directors of the above Company (Agents: Messrs. Forbes Forbes Campbell and Co., Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th September 1956.

The results for the year show a profit of Rs. 68,982 (Rs. 74,397). After providing for bonus to staff Rs. 4,300 (Rs. 4,100), staff gratuity fund Rs. 2,500 (Rs. 2,500) and taxation Rs. 32,000 (Rs. 26,500) the profit was reduced to Rs. 30,182 (Rs. 41,297). Adding the net carry forward from 1955 of Rs. 157 (Rs. 760), there was a total of Rs. 30,339 (Rs. 42,057). Including the sums transferred from the repairs and renewals fund Rs. 2,000 (*nil*), and reserve fund Rs. 4,000 (*nil*), there was an available sum of Rs. 36,339 (Rs. 38,557 after transferring Rs. 1,500 to depreciation fund and Rs. 2,000 to repairs and renewals fund). From this amount the directors paid a dividend of Rs. 30 (Rs. 32) per share, free of income-tax, which absorbed Rs. 36,000 (Rs. 38,400) and carried forward a sum of Rs. 339 (Rs. 157).

The deposit was well patronised during the year under review, and income slightly increased. Unfortunately, however, expenses increased substantially, mainly under the heads of salaries and wages and repairs and renewals. In the latter connection, it was necessary to rewire and repaint the safe deposit and also carry out essential repairs to the air-conditioning plant. All these expenses amounted to Rs. 8,267. As it is considered reasonable for these expenses to be spread over a number of years, the directors have decided to transfer a sum of Rs. 2,000 from the repairs and renewals fund and Rs. 4,000 from the reserve fund to the profit and loss appropriation account. It will be the intention of the directors gradually to build up the reserve fund again in future years, results permitting.

The directors are of the opinion that the safe deposit, air-conditioning plant and furniture and fittings have been adequately written down in past years and thus no further depreciation has been set aside for this year.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,40,000	Block ...	1,45,458
Reserves ...	71,000	Investments	2,71,335
Provision for taxation ...	28,482	Loans and advances ...	14,714
Liabilities ...	1,43,641	Cash ...	51,955
Profit and loss account ...	339		
Rs.	4,83,462	Rs.	4,83,462

Indian Vegetable Products Ltd.

The directors of the above Company (Managing Agents: Messrs. Forbes Forbes Campbell and Co., Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1956.

The results for the year show a profit of Rs. 7,34,824 (Rs. 2,95,695). After providing for bonus to staff Rs. 52,000 (*nil*), depreciation Rs. 68,315 (Rs. 75,000), staff gratuity Rs. 53,468 (*nil*) and taxation Rs. 2,90,000 (Rs. 20,000), the profit is reduced to Rs. 2,71,041 (Rs. 2,00,695). Adding the carry forward from 1955 of Rs. 4,034 (debit of Rs. 1,12,975), there is a total of Rs. 2,75,075 (Rs. 87,720). From this amount the directors transferred to the reserve fund a sum of Rs. 55,000 (*nil*) making available a sum of Rs. 2,20,075 (Rs. 1,09,909 including Rs. 22,189 being transfer from dividend equalisation fund). From this the directors recommend the declaration of a dividend of Rs. 10 (Rs. 5) per share, free of income-tax, which will absorb Rs. 2,11,750 (Rs. 1,05,875) leaving a balance to be carried forward of Rs. 8,325 (Rs. 4,034).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,17,500	Block ...	4,83,552
Reserves ...	4,50,169	Stock-in-trade	7,21,218

		Cash ...	16,20,595
Rs.	41,83,436	Rs.	41,83,436

Sholapoor Spinning and Weaving Co., Ltd.

The directors of the above Company (Agents: Messrs. Morarka and Co., Bombay) submitted the audited accounts of the Company for the year ended 31st March 1956.

During the year the Company made a modest profit of Rs. 7,85,907 (loss of Rs. 23,04,638) (subject to depreciation). It will be recalled that a hope had been expressed at the last annual general meeting that the working of the Company during the period under review was likely to show an improvement. The directors are glad to state that this expectation has come true and there is every hope of progress continuing to be on the upgrade, provided of course that unfavourable conditions do not crop up to cause a set-back in the near future. Steps are being taken for the modernisation programme of the mills to be implemented, which, when completed is likely to bring about considerable saving in production costs.

The directors have reason to express their sense of appreciation and gratitude for the concession granted by the Government in respect of the payment of instalments for the loan advanced to the Company. The Government have kindly agreed to accept the monthly instalments at a reduced rate in order to enable the Company to launch its programme for renovation, modernisation and rehabilitation of the old machinery. This concession has enabled the Company to pay the instalments regularly during the last few months. The effect of renovation of the machinery is already discernible in the working as well as a fall in the cost of production, but when the entire programme is completed the effect is bound to be more pronounced in the coming years and to the advantage of all concerned.

The Board has sold one out of two boilers ordered out by the Company at a price 7½ per cent. lower than cost, but debit for this has not been made in the account for the year ended 31st March 1956. The debit is expected to be about Rs. 65,000 when the transaction is completed.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,98,000	Block ...	1,08,41,804
Reserves ...	1,60,55,917	Stock-in-trade	81,30,606

		Other assets	1,564
		Debts, deposits and advances ...	27,12,715
		Investments	29,34,148
		Cash ...	1,65,905
		Profit and loss account ...	1,65,20,797
Rs.	4,34,46,789	Rs.	4,34,46,789

Sri Palamalai Ranganathar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. S. K. Rangaswamy Naidu & Co., Periyanaickenpalayam) submitted the audited accounts of the Company for the year ended 31st March 1956.

The Company's working during the year was better than the previous year. After meeting all working expenses including interest and providing Rs. 10,223 for depreciation on the fixed assets, the Company made a net profit of Rs. 1,65,628 during the year. Out of this, the directors paid as donations Rs. 3,350 and paid a tax-free dividend of 6 per cent. for one year on the amounts paid-up as on 31st March 1955 and a tax-free dividend of 6 per cent. per annum on the amounts paid between 1st April 1955 and 31st March 1956 from the dates of payments of the respective amounts till 31st March 1956. This absorbed Rs. 19,492 and the balance of profits for the year was Rs. 1,42,786. The balance to the debit of profit and loss account after payment of dividend for the year ended 31st March 1955 is Rs. 3,92,483. After setting off the balance of profits for the year ended 31st March 1956, i.e., Rs. 1,42,786 against this debit balance, there will be a balance of Rs. 2,49,697 to the debit of profit and loss account which the directors have set off against the general reserve leaving a balance of Rs. 45,153 to the credit of the general reserve account as at 31st March 1956.

Since the profits of the Company have been very low in some years and have incurred losses in some years, the directors have not deemed it necessary to write off sufficient depreciation since 1952. A sum of Rs. 10,223-7-0 has been written off this year and the debit balance of the profit and loss account has been set off against general reserve. The deficiency in depreciation provision will be made good from future profits.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,45,200	Block ...	10,14,464
Reserves* ...	80,153	Stock-in-trade	5,16,008
Provision for taxes ...	8,479	Stores and spares ...	53,754
Liabilities ...	13,25,104	Debts, deposits and advances ...	1,15,808
		Investments	50,025
		Cash ..	8,777
Rs.	17,58,936	Rs.	17,58,936

*Reserves are shown after adjustment of the debit balance in the profit and loss account amounting to Rs. 2,49,697 and includes Rs 35,000 being reserve for machinery replacement.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

HIRAKUND DAM IS A GREAT ACHIEVEMENT

(*Concluded from page 71*)

The flood water spillways comprise two sections, totalling 2,125 feet with 64 bed level sluices of size 20′-4″×12′-0″ each and surmounted by 34 radial crest gates of size 51′-0″×20′-0″. This structure is of concrete poured continuously on a three-shift working, with the aid of complete mechanised units comprising crushing, mixing and batching, hauling and delivering machines. In the belly of the structures is a huge gallery of size 11′-0″×23′-0″ which provides the facility for sluice-gate operation. It is the largest spillway and gallery in the world, with a total evacuation capacity of one and a half million cusecs through the sluices and over the crest at full reservoir level. The dissipation of the energy of the jets from the sluices and from over the crest is ensured by means of a specially designed bucket after intensive tests and studies on a reduced scale model at the Poona Research Station.

Power Section

The right end of the main dam is the power section. This is 928 feet long tied on to the hill. The construction material used on this is rubble stone in cement mortar. 1,49,70,000 c.ft. of stone masonry in cement mortar have gone into this and elsewhere. It was originally designed as a concrete structure. Rubble stone masonry was substituted in the dam and the transitions in the interest of economy, resulting in a saving of about Rs. 60 lakhs. In this masonry structure are embedded five pipe lines of 25 feet diameter each and two of 23 feet diameter each. The details of this part of the dam are of a standard type. The quality of cement mortar used in this structure was throughout under control and the research station staff were carrying out tests continuously and regulating the use even as they were exercising the measure of control for concrete quality.

The power house at the foot of the masonry dam constitutes a separate building whose foundations are independent of those of the dam itself. It is all concrete pumped into place. It is equipped with four units—two of 37,500 kw. each and two of 24,000 kw. each. Provision has been made for three more units to be installed at a later stage. A few bulk head gates of size 41′-4″×24′-6″ each for the penstock entrances and six drafts tube gates of size 25′-6″×18′-1″ each were manufactured in the project workshops at site.

Employment Potential

An idea of the vast labour employment potential that this project possessed could be had from the fact that at the time of peak constructions year after year during the last three years, the strength of labour employed was well over 30,000. There have been all sorts of troubles and travails in the early stages of construction which affected progress as well as costs. It took some time to shape and adapt men, materials and machines to the best advantage for obtaining speed of construction through maximum possible efficiency. Rapid progress was registered after the monsoon of 1953 and kept up practically without a break till May 1956.

This magnificent undertaking has been completed with several thousand workers drawn from all parts of India, from the Himalayas to Cape Comorin. There was in general a *camaraderie* and harmonious relationship between the people of the various States and, what is most important, every worker was conscious of the contribution he or she was making to the national cause. We have had a band of Indian engineers, possessing initiative and resourcefulness, who worked like a team and who have done a magnificent job creditable to themselves and the Indian engineering profession in the country. Mechanised operations, foundation grouting and various other construction techniques that are ordinarily believed to be the job of foreign technical experts and technicians have all been successfully tackled by our Indian engineers with great confidence and courage. This huge construction at Hirakud has trained and turned out experts in the line who can be trusted to carry out successfully such and other difficult jobs elsewhere with confidence and ease. The good work done has not been confined to civil and mechanical sides; on the electrical side, too, we have Indian engineers and technicians who tackled the job normally believed to be difficult and foreign in the field of operation.

Food Production

We are in an era of great technological activities all over the world. While a few nations are engaged in the manufacture of atomic weapons that can destroy people and civilisations, other countries, specially in the Far East, Middle East and Europe, have set themselves the task of improving living standards and for this purpose have been advancing and utilising technology, particularly in the engineering field, to build industries, dams, power plants, canals, etc., that are all for the good of humanity. India is one such country working for peace and prosperity. In our land, we have had, so far, after independence, many small and medium and some major schemes of development in various fields completed which have laid the foundation for the intensive development of the whole country during the second Plan period. We have laid the foundations for achieving great things, particularly in the field of irrigation and power production. While, on the one hand, food production is being stepped up with the increased facilities for irrigation, on the other, heavy industries are being started to consume the power as it is produced. In this pattern of things, we have now the biggest multi-purpose project in India—the Hirakud Dam and reservoir with its main power plant and canal systems completed. The intensive cultivation of 2¼ million acres of land in the course of the next five to ten years and the utilisation of 200,000 kw. of power in the next five years is now a certainty. One can confidently look forward to an era of steel, aluminium, ferro-manganese industry, with the satellite industries around them, that will make Orissa industrially great and prosperous and economically sound in the domestic sphere within the next five to ten years. In less than a decade from now, Orissa will shine in India's firmament as a big bright jewel—its glory never to fade.

ENGINEERING

(*Concluded from page 76*)

already sanctioned by Government with the condition that they can go on to the system from the date of working of the Trombay set will be allowed to do so from that date.

All these concessions, including that of staggering, are subject to the condition that Government will reimpose them if in the future the power position were to require their re-imposition. All those who wish to avail of these concessions may apply directly to the supply companies concerned.

ELECTRICITY FOR BOMBAY-POONA REGION

The Bombay-Poona region has the distinction of producing 18 per cent. of the industrial goods in India and employing nearly one-sixth of the 2.5 million industrial workers. The region's large contribution to national economy is made possible by the fact that it has been one of the largest producers of electricity. The Tata Hydro-electric system, interconnected with the Central Railway and Bombay Government plant at Chola, supplies nearly one-fifth of the electricity consumed in India. Nevertheless, there has, in recent years, been a great increase in the demand for power. Tata's thermal station at Trombay, which went into production last month, is designed to meet the growing demand for electricity in the Bombay-Poona region.

The Tata electric system has a total installed capacity, at its three hydro-electric stations, of about 274 megawatts, while the Government thermal station at Chola have a capacity of about 118 megawatts, making a total of 392 megawatts. To meet the continuously growing demand, the Government of Bombay has undertaken a large hydro-electric project at Koyna which will ultimately add a further 240 megawatts to the grid. The Tata thermal power station at Trombay is the biggest single unit in India and contributes 50,000 kilowatts and when the second set goes on steam in April-May 1957, the output of electricity will be 100,000 kilowatts. In view of the continued growth in the demand, Tatas have undertaken, with the approval of the Bombay Electricity Board and the Government, to install a third unit at Trombay, to be brought into commission towards the end of 1959.

Co-operation, both international and national, was had in full measure in the construction of the Trombay plant. The project is partly financed by the World Bank. Messrs. Ebasco Services of New York, U.S., have helped in designing and supervising the construction. The main plant was supplied by many countries—steam generators and turbo sets from Germany, high pressure piping, electrical cables and some switchgear from the U.K., feed pumps from Switzerland, auxillary transformers from France and station steel, central control board and automatic controls from the U.S. The Trombay plant will initially use fuels from the Stanvac Refinery—hot pitch and refinery gas. The boilers are, however, designed for conversion to pulverised coal burning. With boilers suitable for using oil, gas or coal or any combination of these fuels, it is expected that fuel supplies will be secured and one or more of the fuels can be selected as will be most economical for the operation of the station at the time.

Mr. J. R. D. Tata, speaking on the occasion of the inauguration of the plant by the Bombay State's Chief Minister, Mr. Chavan, pointed out that the relative degree of material progress in any part of the world could be measured by the use made of electricity. The consumption of electricity per head in India was 30 units, as against 2,200 in the U.S., 1,100 in the U.K. and 300 in Japan. Referring to the contribution to electricity supply made by the Tata hydro-electric companies, which owned the Trombay plant, he said he could claim, without appearing immodest, that they had made available to the industries and people of Bombay an uninterrupted supply of power at the lowest rates in the country. Although he did not wish to enter the lists on the controversial issue of free enterprise *versus* State enterprise, he hoped he could, without offending anyone's susceptibility, say that today Trombay provided one more example of what could be achieved by free enterprise given an opportunity and reasonable measure of encouragement by the Government and the public.

WORLD BANK LOANS IN 1956 REACH A RECORD TOTAL

(*Concluded from page 65*)

East $150.15 million, Africa $80 million and Australia $59.23 million. A notable feature of the Bank's operations during the year was the sharp rise in the volume of lending in Asia, where eight loans were made for an aggregate sum of over $150 million, of which loans to India alone accounted for $95 million, namely, $75 million to T.I.S.Co. and $20 million to I.I.S.Co. No loan was given to any country in the Middle East proper. At one time, however, a loan for financing the Aswan Dam was in contemplation, but it was contingent upon grants being forthcoming from the U.S. and the U.K. Governments. This did not materialise.

Another feature of the operations was that direct participation by private institutional investors in the World Bank's loans during the year were considerably lower, having sharply dropped from a record high of $31.1 million in 1955 to $6.8 million. This is attributed to tight money conditions during the year, as well as to the necessity on the part of commercial banks to devote available funds to meeting the credit requirements of their domestic customers.

Britain has agreed to a request by the Egyptian National Bank for the transfer of 20 million sterling this year from its blocked sterling balances. But Egypt will not be able to draw the money for the present. Under the agreement, since the Second World War, Britain is due to release annually 20 million sterling from Egypt's sterling balances. This is the money credited to the Egyptian Government in payment for services to British troops in Egypt during the War. Recently, Egypt requested that the 20 million sterling should be released—as provided under the agreement—from its number two account where the balances are held to its number one account from which the money can usually be drawn. But, recently, following the nationalisation of the Suez Canal Company, the number one account came under the close control of the Bank of England and Egypt has not been permitted to take sterling out of Britain.

Notice

SOUTH BEHAR SUGAR MILLS LIMITED

BIHTA, DT. PATNA

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Ordinary General Meeting of the Company will be held at the Registered Office of the Company at Bihta on Thursday the 31st January 1957, at 2 p.m., for the following purposes:—

(1) To receive and adopt the Directors' Report and pass the audited Accounts for year ended 31st October 1955.

(2) To elect Directors in place of those retiring.

(3) To elect Auditors for the ensuing year and to fix their remuneration.

(4) To transact any other business that may be brought forward in accordance with the Articles of Association.

The Share Transfer Register of the Company will be closed from 11th January 1957 to 31st January 1957, both days inclusive.

By Order of the Board,

V. VENKATESWARAN,
Secretary.

ARRAH, *7th January* 1957.

Note: A member of the Company entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, *9th January*

Conditions in the short-term money market continued to remain stringent during the week under review also. There was no relaxation in the pressure of demand for funds, nor was there any significant addition to the resources of banks. In the absence of lenders, the volume of business in the inter-bank section was small. Banks had to resort to borrowings from the Reserve Bank on a larger scale. There was no change in money rates. Inter-bank call money rate was kept at 3½ per cent. among all sections of banks. House money at call was done at 3¾ per cent. Some banks offered to pay even 4 per cent. Short-term deposits were bid at 3¾ to 3⅞ per cent. for one to six months.

A rise of Rs. 15.46 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 4th January 1957. Notes held in the Banking Department were lower by Rs. 1.59 crores, with the result that total notes issued shows an increase of Rs. 13.87 crores. This is covered by a rise of Rs. 14.91 crores in rupee securities and a drop of Rs. 1.04 crores in rupee coin. In the Banking Department, deposits of the Central Government show a fall of Rs. 2.90 crores and those of other Governments an increase of Rs. 5.92 crores. There has been a decline of Rs. 9.76 crores in deposits of banks. Balances held abroad are lower by Rs. 1.54 crores. Loans and advances to Governments do not show any worthwhile variation, while other loans and advances have dropped by Rs. 6.07 crores, of which outstanding advances to Scheduled banks against usance bills accounts for Rs. 4.37 crores.

The Scheduled banks' statement for the week ended 28th December 1956 shows a sharp rise of Rs. 7.45 crores in demand deposits, while time deposits are almost unchanged. Minor variations are noted in inter-bank borrowings. Borrowings from the Reserve Bank have gone up to the tune of Rs. 11.42 crores, of which those against usance bills account for Rs. 7.70 crores. Borrowings from the State Bank stand reduced by Rs. 1.57 crores. There has been a further rise in advances to the extent of Rs. 4.15 crores. Inland bills purchased and discounted have also gone up by Rs. 1.72 crores, while foreign bills are down by Rs. 1.22 crores. Cash balances have been strengthened by Rs. 4.92 crores and balances with other banks in current account by Rs. 2.08 crores, but money at call and short notice has declined by Rs. 2.25 crores.

The Gilt-edged market remained sluggish during the week under review. The extreme stringency in the money market was the main factor which restrained support to the market. There were, on the other hand, sellers in most of the Central and State loans, except in a few cases which had buyers. There was, however, no change in prices in most cases for want of transactions. 3 per cent. 1986 Conversion Loan had business towards the close ¼ anna higher at Rs. 73¾. 3 per cent. 1970-75 had small business an anna higher at Rs. 86-14. 3 per cent. 1966-68 was neglected at Rs. 92-4, 3 per cent. 1964 at Rs. 94-6 and 3 per cent. 1963-65 at Rs. 94-2. 3 per cent. 1959-61 shaded off by an anna to Rs. 97-11. 3½ per cent. 1962 was steady at Rs. 97-14, due to proximity of voucher. 3½ per cent. 1961 gathered an anna to Rs. 99-4. 3½ per cent. 1964 was stagnant at Rs. 98-3 and 3½ per cent. 1965 at Rs. 98-2. 3¼ per cent. 1967 attracted buyers an anna higher at Rs. 98-7 due to proximity of interest payment.

Reflecting the strength of sterling abroad, the rupee gained some ground in terms of foreign currencies during the week. Bank's selling rate for ready U.S. dollars declined from Rs. 480¼ to Rs. 479¼ per $100 and their buying rate from Rs. 477 to Rs. 476 per $100. Banks were sellers of ready Canadian dollars at Rs. 499 per $100, as against Rs. 502 per $100 and buyers at Rs. 493 per $100 (Rs. 496¼ per $100 a week ago). Sterling rallied considerably, the spot rate in New York rising from $2.78½-2.78⅝ to $2.79.3/16-2.79.5/16, the highest rate touched since 24th July last. Three months' forward gained from $2.76.1/16-2.76.3/16 to $2.77⅛-2.77¼ and transferable sterling from 274.85-274.95 cents to 275.20-275.30 cents per £.

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, *8th January*

Base metals displayed a steady trend during the week under review. Consumers were interested in buying their day-to-day requirements only. The supply position in tin continued to be tight, and the price, after an early recession to Rs. 572, recovered to close at Rs. 588. There was fair demand, and the rate in Calcutta was above the replacement cost by several points. Fresh arrivals are not expected until the end of the current month. There was Government enquiry for a fair quantity and this imparted additional strength to the market. In contrast, electrolytic copper closed quiet at Rs. 196, as against the opening rate of Rs. 199. Consumers were reported to be carrying fair stocks, and were disinclined to enter into further commitments, in view of the uncertain future. The announcement by the Mufulira and the Roan Antelope copper mines, from which Great Britain gets its major supplies of Rhodesian copper, of a reduction in their selling price of electrolytic copper to £270 a ton from £280 cautioned local stockists. Electrolytic zinc regained to Rs. 72 from Rs. 69-8. The price is expected to strengthen further in the coming weeks, in view of American requirements for stockpiling. Virgin lead was firm at Rs. 82. Government inquiries boosted up sentiment, although stock were believed to be heavy.

SILVER RALLIES

(From Our Own Correspondent)

BOMBAY, *9th January*

The highlight of the week's trading in the bullion market was the sharp rise in silver, the forward position (current settlement) recording a gain of Rs. 3 and ready as much as Rs. 3-10 per 100 tolas over the week. Gold, on the other hand, was featureless, but the undertone was steady.

The rally in the white metal was attributed to strong speculative support, on encouraging offtake in the ready section *vis-a-vis* the arrivals and a decline in arrivals of Tibetan coins. The severe winter in the North led to expectations that the import of coins from Kalimpong would dwindle considerably during the coming weeks. This, together with the prospect of an enlarged seasonal demand, induced support from the "longs," while the "shorts" were forced to cover their sales. In gold, the increase in floating stocks and rumours about large influx of smuggled metal restrained the bulls, but the good demand in the ready section and the strength of silver checked any decline in prices and kept the undertone steady.

*Forward silver (18th January settlement), after an early quietness reflected in a dip from Rs. 175 to Rs. 174-13, advanced rapidly to touch a high of Rs. 178-2 today, the highest level touched since 4th May last. The closing rate was Rs. 178. Business in the next settlement (16th February) commenced on the 3rd inst., the official starting rate being fixed at Rs. 175-12. This settlement also hardened to Rs. 178-11 before closing at Rs. 178-9.

Ready silver (.996 mint) rose from Rs. 174-6 to Rs. 178-2 and closed at Rs. 178. The discount of ready under the current settlement narrowed down from As. 10 to nil today, reflecting the strength of the ready section. The floating stocks of silver are estimated at 1,800 bars. The daily average offtake was about 15 bars.

Gold for forward delivery (17th January settlement) dropped early in the week from Rs. 104-9 to Rs. 103-15, but soon recovered to touch Rs. 104-12 at the close. Trading in February settlement began on the 3rd inst. with the official starting rate at Rs. 104-7½. The closing rate for this settlement today was Rs. 105-3.

Ready gold finished at Rs. 104-12, after an early reaction from Rs. 104-9 to Rs. 103-13. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 3,600 tolas, and the offtake was also of the same order.

In New York, silver was unchanged at 91⅛c. In London, however, silver staged a recovery, spot metal gaining from 79½d. to 80½d. and forward from 79⅝d. to 80¼d. Gold receded from 250s. 8½d. to 249s. 11¾d., reflecting the strength of sterling.

The following comparative table shows the trend of market during the week under review:

	9-1-1957	Highest	Lowest	2-1-57
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	104 11	104 12	103 13	104 9

EXPORT DEMAND FOR TEA STRONG

(From Our Own Correspondent)

CALCUTTA, *8th January*

Demand during yesterday's export sales was very strong, but while certain teas recorded gains, others were supported at declining levels. Offerings amounted to 72,900 chests. Keen competition was offered to Assams and Dooars, the prices of which were raised by an anna to As. 2. Orange fannings and B.O.Ps fell by As. 2 and other teas by an anna. However, there was good demand for the cheapest broken teas. C.T.C. types also met with good demand, but at prices lower by As. 2, while well-twisted and clean whole leaf grades realised an anna to As. 2 above brokers' valuations. Prices for the stylish B.P.Ss were maintained at last rates. On better support, Darjeelings were fully steady. The quotations were: best C.T.C. Assam B.P. Rs. 2-12, medium Assam B.P. Rs. 2-5 to Rs. 2-6, plain B.P. Rs. 2-4, and clean black pekoe Rs. 2-6.

Conditions akin to buoyancy prevailed in export quota rights. From the previous rate of 39 pies the right improved to 48 pies per lb. Towards the close buyers were offering 42 pies only.

Dusts offered during the internal sales held on Thursday last aggregated 18,562 chests. A good general demand pushed up prices. Clean black leafy teas fit for export received the keen attention of buyers, with the leafy teas from Assams and Dooars improving by As. 2 to As. 3 in keen competition. Assams of orthodox manufacture rose by half to one anna, and Dooars and commons by an anna to As. 2. The market was not devoid of weak spots which were provided by C.T.C. Assams falling by about As. 2. The quotations were: best Assam C.T.C. Rs. 2-9, medium Assam C.T.C. Rs. 2-5 to Rs. 2-6, medium Assam grainy dust Rs. 2-1 to Rs. 2-1-6, and medium Dooars Rs. 2 to Rs. 2-0-6.

Leaf grades on offer amounted to 3,300 chests. Opening at easier rates, residue teas gained as the sale progressed. Prices of clean leaf teas were occasionally sold higher by As. 2.

COTTON FUTURES CHEERFUL

(From Our Own Correspondent)

BOMBAY, *9th January*

The cotton futures market put on a cheerful appearance during the week under review. Both the contracts which had touched their lowest levels in the past two weeks ruled distinctly firm, with prices showing a markedly upward trend. The firmness was due to the buying spree induced by factors like brighter prospects of a further export quota, less arrivals in upcountry markets and the consequent high prices, and short covering. The other helpful factors were the strength of the spot market and encouraging advices from the oilseeds market.

M. G. Vijay (March delivery) opened the week at Rs. 630, fractionally higher than the previous closing, and advanced to Rs. 637 on the same day on reports that an export quota announcement was imminent. After having wound up the session a shade lower, the contract took a respite the following day on stray profit-taking operations. It again improved to Rs. 646 on the 4th inst., due to speculative buying. Opening today at Rs. 647, it gained further bull support and touched Rs. 650 before closing at Rs. 644½.

M. G. Vijay (April delivery) followed more or less the pattern of trading in Jarilla. Opening at Rs. 732, as against the previous day's closing at Rs. 731½, the contract received good buying support, pushing it up to Rs. 738½ on the same day. After a brief bearish spell the next day, the contract again improved to Rs. 742 on the 7th inst. Opening today at Rs. 644, it improved to Rs. 747 before closing at Rs. 741½.

The following table shows the trend of prices for the week:

(In rupees per candy of 784 lbs.)

	9-1-57	High	Low	2-1-57
Jarilla (March) ...	644½	650	627½	629½
Vijay (April) ...	741½	747	729	731½

The spot market also ruled firm, thanks to revival of mill interest. Although trading on the opening day was featureless, brisk activity was reported in subsequent sessions. Mill demand was evident for all popular varieties. Inquiries were noted particularly for Vijay, Khandesh and Berar. In the export section, there was sustained buying in anticipation of export quota and the basis of all exportable styles went up. Activity was dull in the foreign section, due to the delay in the announcement of import policy regarding sterling area cotton. The latest available rates—in rupees per candy of 784 lbs.—from the Sewri market are given below:

Bengal *Deshi* 740; Berar Jarilla 740; Khandesh 780; Vijay 870; Oomra *Deshi* 760; Moglai 740. *Delivery contracts*: Khandesh 197/3 135, Berar 113 and Moglai 65 'ON' Jarilla; 320 F 90, Vijay 13/16 February 122 'ON' Vijay.

An easy trend was depicted by the Karachi cotton market during the week under review. Overseas demand was slack and local mill inquiries were also small. N.T.R.G. January which had closed at Rs. 86-10 declined to Rs. 85-9 while the March delivery shed over the week Rs. 1-4 to Rs. 85-3. The spot section was also quiet. The latest available quotation—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 89; Punjab *Deshi* 87; 4F Punjab Roller 89-12; S.G. 94-12; L.S.S. Punjab Roller 91-12; S G. 96-12; N.T.R.G. 92-12; S.G. 97-12; 289 F. Punjab 12G 95-12; S.G. 104-12.

The Alexandria futures market ruled easy during the week and values of both long and medium-staple contracts registered some decline. This was mainly due to profit-taking sales induced by the prevailing high prices. Karnak January which had closed at 119.75 tallaris declined to 115.75 tallaris while *Ashmouni* February came down from 85.20 to 81.90 tallaris. Most other delivery months of both the contracts registered a fall. Meanwhile, the supply position continues to be tight and the offerings of better quality varieties are reported to be limited. The latest available rates—in tallaris per lb.—from Alexandria are given below:

Karnak: January 115.75; March 115.45; May 115 00. *Ashmouni*: February 81.90; April 81.90; June 81.09.

Trading in the Liverpool market was featureless throughout the week. Traders were inclined to follow a policy of wait and watch as the trend of prices in the coming months will be considerably affected by the export policy of the U.S. Department of Agriculture which will be shortly made known. The present expectation is that the U.S. export programme will continue into the 1957-58 season also. Hence traders are hesitant to make fresh commitments until something definite is known about U.S. policy. Trading in the American and American type futures contract was limited. Inquiries for ready cotton were negligible while Sudan and U.S. styles received moderate attention. Some interest was noted in Indian Jarilla and Dhollera but the high prices of such styles made U.S. growths more attractive. Trading in Sudan was limited while the Egyptian contract was neglected. The latest available quotations—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: March-April 26.42; May-June 25.95; July-Aug. 25.55; Oct.-November 25.27. *American Cotton Mixed Growth Contract*: March-April 26.75; May-June 26.30; July-August 25.85; October-November 25.50. *Egyptian Karnak Cotton Contract*: January-February 60, March-April 60. *Sudan Cotton Contract*: January-February 61.30.

Values in the New York futures market registered sizable improvements attributed mainly to commission house buying of new crop based on Soil Bank considerations. The limited amount of

hedge selling and liquidation earlier was absorbed by trade buying and short covering. Spot cotton ruled steady. While fluctuations have generally been limited in recent weeks, new crop contracts have moved on a comparatively wider range. This has been explained as due to the many uncertain factors like the impact of the Soil Bank programme next season, the level of price support and probable Government action concerning the replacement of set aside stocks.

It is reported that the U.S. Department of Agriculture has predicted that world exports of cotton will aggregate about 14,500,000 bales (of 500 lbs.) during the marketing year ending the 31st of July this year. World exports last season were 12,750,000 bales and the largest exports of 14,800,000 bales were in 1928-29. Exports in the current season will therefore be close to the record figure.

The following are the latest available quotations from New York, as compared with those on the 31st and 11th December:

(In cents per lb.)

	8-1-57	31-12-56	11-12-56
Spot	34.65	34.65	34.65
December	—	—	34.37
March	34.32	34.19	33.98
May	34.31	34.16	33.88

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *9th January*

Dull conditions prevailed in the yarn market during the week under review. Continued stringency in the money market and reports of depressing conditions in consuming centres together acted as a great damper. Operators were naturally not much inclined to extend their commitments either way. Turnover, therefore, was restricted and values moved narrowly. Over the week, staple fibre yarn and cotton yarn tended to look down, while forward rayon yarn recorded a slight improvement, following some support induced by expectation of reduced arrivals of foreign yarn as a result of the cut in imports.

Staple fibre yarn (40×2) for February delivery encountered selling and declined by Rs. 6 to Rs. 642. Spot Kohinoors receded by an anna to Rs. 3-8-6. Citys lost six pies to Rs. 3-7-6. New Greats and Centurys eased by three pies each to Rs. 3-6-6 and Rs. 3-8, respectively. Among foreign yarns (80×2), Paramounts were quiet at Rs. 5-9-9, as also Fujis at Rs. 5-12.

In the cotton yarn section, forty counts staged a retreat. Moderns dropped As. 4 to Rs. 28-12. Gokaks fell by a like amount to Rs. 27-12. Minaxis lost As. 2 to Rs. 27-10. Thirty counts Maduras gave way from Rs. 24-4 to Rs. 24 and Centurys from Rs. 22-10 to Rs. 22-8. Among 20s, Maduras were neglected at Rs. 19-8, as against Rs. 20. Moderns eased by As. 2 to Rs. 19-8. Ten counts Moderns were quiet at Rs. 15-10 and Podars at Rs. 15-8. Sixty counts, however, elicited some support. Finlays rising by As. 10 to Rs. 61-10 and Raghuvamshis by As. 6 to Rs. 57. Among 80s, Finlays hardened by a rupee to Rs. 81. Moderns were dull at Rs. 77-8.

Snia rayon yarn (120 dull cones) for February delivery improved by Rs. 5 to Rs. 828. Spot 120 Japan gathered an anna to Rs. 4-6. 150 Japan was quiet at Rs. 4-8, as also 120 Italy at Rs. 4-3 and 150 Italy at Rs. 3-14-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade eased by three pies to Rs. 3-8-6 for want of support. 120 Bt. cones 1st grade, however, was a shade higher at Rs. 3-12-6.

Imports of art silk yarn into Bombay port in the month of December 1956 aggregated 2.23 million lbs., bringing the total imports for the whole of 1956 to 43.99 million lbs. This quantity represents a rise of 8.30 million lbs., as compared with the previous year. The total imports of staple fibre yarn during 1956 amounted to 567,779 lbs., as against 83,966 lbs. The quantity of staple fibre imported was substantially higher at 24.99 million lbs., as against 5.83 million lbs.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	9-1-1957	2-1-1957
	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—		
120 Dull Cone Snia February	828 0	823 0
120 Japan (per lb.)	4 6	4 5
150 Japan (per lb.)	4 8	4 8
120 Italy (per lb.)	4 3	4 3
150 Italy (per lb.)	3 14½	3 14½
Staple fibre yarn (per case of 200 lbs.)—		
40 ×2 February	642 0	648 0
40 ×2 New Great (per lb.)	3 6½	3 6½
40 ×2 Century (per lb.)	3 8	3 8½
40 ×2 City (per lb.)	3 7½	3 8
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	15 8	15 8
20s Madura	19 8	20 0
30s Madura	24 0	24 4
40s Gokak	27 12	28 0
60s Finlay	61 10	61 0
80s Modern	77 8	77 8

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *9th January*

During the week under review, the oilseeds market displayed, on balance, a slightly easy tendency. The market opened in buoyant conditions under the leadership of groundnuts following the persistent buying by crushers and active buying in pot castor by export houses. On the following day, however, the groundnut section reacted, as a result of offerings from terminal markets, heavy arrivals of new crop, and negligible support from crushers. This trend was further intensified during the rest of the week owing to the persistent weakness of groundnut oil. The castor section, on the other hand, opened easy on the second day, but recovered partially later on speculative support. This recovery was only short-lived, owing to profit-taking at higher levels induced by lack of support and unhelpful overseas advices. While linseed remained easy in sympathy with others, cotton seed displayed a better tone in sympathy with the cotton market.

Groundnut February contract opened the week cheerfully at Rs. 161-4 and touched the peak of the week at Rs. 162-12 before finishing at Rs. 162-8 the same day. On the next day, it moved between Rs. 161 and Rs. 159-12, but subsequently declined to touch Rs. 155-12 on the 8th inst. Today, however, it slightly improved to Rs. 158-8, before finishing at Rs. 158. Over the week, it lost Rs. 2. In the spot section, Bold F.A.Q. shed As. 6 to close at Rs. 32-2 and Coramandel As. 8 at Rs. 32-12. Groundnut oil ex-mill was quoted today at Rs. 18, that is, As. 8 less than a week ago.

Linseed futures section fluctuated narrowly during the week between Rs. 29-14, the peak level on the second day of the week, and Rs. 29-8, the lowest level for the week touched on the 8th inst., before recovering to Rs. 29-12 today. It, however, closed a shade lower at Rs. 29-9, losing over the week only As. 1. In the spot section, Bold ready moved down by As. 4 to Rs. 32-8, while linseed oil ready was quoted at Rs. 18-14, that is, As. 4 less than at the close of the previous week.

Castorseed May contract commenced the week at Rs. 170 and spurted to Rs. 173 the same day. On profit-taking, it moved back to Rs. 167-12 but recovered at the close to Rs. 172-8. On the second day it fluctuated between Rs. 170 and Rs. 172. On the third day also, namely, the 5th inst., the quotation moved between Rs. 172-8 and Rs. 169-4. Subsequently, however, the downward trend began and it touched the lowest level for the week on the 8th inst. at Rs. 166. Today, again, it recovered to Rs. 170, before closing at Rs. 169. As compared with the last week, however, the contract was nominally higher by As. 4. Spot section also reflected, on balance, a slight improvement, as compared with last week, Bold rose by Re. 1-6 to Rs. 37-10, while Kanpur put on Re. 1-4 at Rs. 36-4. Oil B.S.S., however, shed As. 2 to finish at Rs. 23-4.

Cottonseed February contract which opened at Rs. 90 on the 3rd inst. ruled active during the first four days of the week. Later, however, it reacted, but recovered today, following the firm trend in the cotton market. It closed today at Rs. 82-8, gaining, thereby, Rs. 2-8 over the week.

Among the other seeds, kardiseed Bold ready lost As. 4 and February-March and nigerseed Madras maintained their former levels at Rs. 20-8 and Rs. 29-4 respectively.

The Government of India has decided to treat castorseed cake meal as castorseed cake which is classified as "other oilcakes" for the purpose of export outside India.

The following table shows the prices of oilseeds and oils at close as compared with those on 2nd January, and 12th December 1956:

	9-1-1957	2-1-1957	12-12-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
February 1957	158 0	160 6	152 12
Khandesh Quality Ready (per cwt.)	32 12	33 4	32 4
Dec.-Jan.	32 2	32 8	30 6

Ready	18 2	19 2	19 14

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, *9th January*

The sugar market depicted a bearish trend during the week under review. Arrivals of indigenous sugar into the market were considerable, being as much as 42,600 bags, as against 27,600 bags in the previous week. There was, besides, a fall of As. 8 per maund in the ex-mill quotations for Bombay-Deccan sugar. Selling, therefore, ensued and prices staged a retreat. Even reports that the deal for exporting 20,000 tons of sugar to Pakistan would be finalised before the week was out failed to have any effect on the market.

In the spot market, small grain indigenous sugar dropped Rs. 3 to Rs. 88 per bag. Medium grain receded from Rs. 91-Rs. 92 to Rs. 89-Rs. 91. Large grain was quoted at Rs. 95-Rs.102. British refined sugar was done at Rs. 95 per 2 cwts., same as last week.

In the forward section, *Fagan* delivery contract for 'C' grade sugar fell by Re. 1-8 to Rs. 91. Today, however, it was quoted higher at Rs. 91-12.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

BLACK PEPPER IMPROVES

(Messrs. Parekh and Co.)

BOMBAY, *9th January*

After being subjected to continuous decline for the last three or four months, Malabar black pepper during the week showed some improvement, following revival of demand from the U.S.A. where spot price improved from $0.25 to $0.27 in the opening of the market after the holidays. New York purchased various parcels at prices ranging from $0.24 to $0.25½ for shipment per named steamers during January. One of the prominent dealers in the U.S.A. evinced interest in forward and bought some parcels for Jan.-Feb.-March shipments in equal monthly lots at $0.24½.

Alleppey, after going down to Rs. 537½, improved to Rs. 587½ and garbled at Cochin from Rs. 92½ to Rs. 101½ under pressure of buying by exporters. Sellers to Russia who were marking time for picking up at a favourable price had to come out to cover. Most of the arrivals, however heavy, were taken up. Total Russian purchases to date are estimated at about 2,000 tons for shipments during Jan.-Feb.-March. Out of this quantity, about 700 tons are to be lifted during this month. The first Russian steamer *V Kuibyshev* is reported to have sailed and is expected sometime in February. On return voyage, it is likely to take cargo of tobacco and pepper, among other Indian produce. China is likely to buy some parcels of pepper for shipment by the same steamer, as it is likely to touch Chinese ports *en route* to Russia.

The shipment of Malabar pepper during December is estimated at about 1,300 tons. If the present tempo of overseas orders continues, it will be no wonder that the shipments during January to March may prove to be round about 5,000 tons, including purchases by Russia and China. Most of the marketmen, therefore, are now bullish and they consider a price of Rs. 550 a bottom.

Internally, Malabar pepper being cheaper than red chillies, trade is expecting good investment buying locally by the end of January, when pressure of arrivals from Alleppey areas will lessen. Crop report from Tellicherry area is not favourable. Pressure of arrivals from the area, therefore, will not be so heavy even during the peak season as to have any adverse effect on the market.

Sarawak, Lampong and Muntok are firmly held at Singapore and, as such, most of the demand from Europe is likely to be diverted to India. Analyst in the market, therefore, expects slow but sustained rise in the prices of Malabar until the arrival of new crop of Sarawak, since timely support from Russia, the U.S. and Europe came in to cushion the impact of peak arrivals during December and January, which are averaging about 700 candies daily, in Alleppey and Cochin centres.

Pepper price being low, dealers are afraid to go short and hence the market at the moment is more sensitive and susceptible to any bullish factors rather than the bear ones. At the time of writing, however, the market is quiet in sympathy with Alleppey where growers are reported to be willing to give some concession in the price to create interest in foreign buyers who, after sizable buying during the week, are waiting for a new development. Alleppey is quoted at Rs. 570, and garbled at Rs. 99.

In the A.S.T.A. section, January, after selling up to $0.24, was done at $0.25½ with small sellers. Feb-March and April-May-June were quoted at $0.25⅞ and $0.26¼, respectively, with more buyers and few sellers.

In the delivery section, prices for February delivery improved to Rs. 585 to react to Rs. 574 with broadening of interest by outsiders. Local demand which remained dull in declining market is reported to be slowly improving.

Today's nominal quotations are: Ready delivery Rs. 84 per Bengal maund; February Rs. 574-Rs. 579 and March Rs. 582-Rs. 587 per candy of 5¼ cwts.

LOW QUALITY TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *4th January*

Dust Sale 'A' held on 3rd January 1957 contained approximately 7¼ lakhs pounds. Prices were firm for lower types of dusts and good coloury mediums, but other types were As. 2 to As. 3 lower. Best liquoring high-grown teas met with much less demand and a fairly heavy weight of this type was withdrawn. Black leaf Middle East types were also neglected. The market can be described as very irregular.

London Market: *Sale of 31st December* 1956:—Good demand at prices generally 1*d.* to 2*d.* lower.

Sale of 1st January 1957.—Active; unchanged.

Colombo Market: *Sale of 31st December* 1956:—Strong demand. High-growns irregular, following quality. Medium B.O.Ps. about 10 cents dearer. Low-growns firm. All fannings generally lower.

Calcutta Market: *Export*.—Reduced demand Prices generally As. 2 lower.

Internal.—18,500 packages. Met a good general demand and were an anna to As. 2 dearer for all types, except C.T.Cs which were weakest feature at As. 2 easier. Middle East types strongest feature at As. 2 to As. 3 dearer. Internal leaf. Fairly good. General demand strengthened as sale progressed. Clean leaf sometimes As. 2 dearer, rest firm to dearer.

Export Quota.—Export quota market has been rather quiet with prices being steadily marked down to 36 pies. At the time of writing, however, the market has strengthened and business has been done at 45 pies.

Forthcoming Auctions.—Dust Sale 'B' will be held on Tuesday, 15th January 1957.

As we go to press Messrs. Forbes, Ewart and Figgis (Private) Ltd. wires:

"*Sale* 1.—3.25 million lbs. Market opened quietly and strengthened towards the middle, but eased again later. Fair general demand, but prices irregularly As. 4 lower for low medium and medium sorts with fannings often neglected. Better liquoring sorts sometimes As. 8 below valuation. Best feature whole leaf irregularly As. 2 easier."

RAW JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, *8th January*

A feature of the trading in jute markets, ever since the reopening for the new year on Wednesday last, was that fibre prices were held extremely steady at higher levels, while prices of jute goods gradually fell following the disinclination of overseas buyers to support the higher prices and the natural desire of speculators to book profits in good time. The strength of the fibre was a direct result of higher prices in Pakistan and the expectation in the local bazar that the higher prices would be maintained in the coming months of the current season. For, with steady conditions in East Bengal and the extreme improbability to get fibre from across the border at economic prices, those who had stocked the indigenous jute feel that their holding would be amply rewarded before the end of the current season. A portion of the jute crop is believed to remain still with those cultivators, who, by virtue of fortunate circumstances during recent years, have been able to stock their output for some time. Another strong reason for the maintenance of higher prices in raw jute, despite the display of limited interest by mills, was reports from Dacca which announced Government's decision for the formation of a jute marketing board and a jute marketing corporation.

The full control of the export trade in raw jute in East Pakistan is aimed at through the Board. Exporters will have to make offers to foreign buyers through the Board only and the Board's agents in all consuming centres will keep it in touch with market conditions in their respective areas. Foreign buyers within the country will not be allowed to purchase jute at the minimum prices for holding on to sell at higher prices subsequently. This would mean that foreign buyers in Pakistan could buy jute for immediate export only. The chief function of the other body, that is, the Jute Marketing Corporation, will be the buying of jute in the country as and when offers are made to it. However, in order to stop the alleged smuggling across the border, the Corporation will have the monopoly of purchasing jute in border areas. As to from which date these two bodies will come into being is not yet known. Market circles here interpret that these bodies are a first step towards State trading in jute. Full State trading is not contemplated now, as cultivators can sell their products both to private traders and to the Government. No doubt, this would lead to the withdrawal of a good portion of private capital now invested in the jute trade.

During the week, prices of jute goods fell in distinct contrast to the rise noted towards the end of December, when prices had moved to such higher levels as to keep away foreign buying. Foreign consumers had in recent months added heavily to their stocks as a precaution in the event of an unsettled conditions being continued. Now that the Suez Canal is being cleared, and the fear of an international emergency has receded at least for the time being, foreign buyers can afford to buy jute goods nebulously and in a limited way. In fact, this was the main factor which contributed to this week's decline in goods prices.

Ready B. twills opened steady at Rs. 120-4 and 40" 10 oz. hessian at Rs. 46-5 on Wednesday last. This steadiness was due to keen inquiries for export and to covering demand in the bazaar. Prices, however, soon declined for reasons already detailed, B. twills sagging to Rs. 119-8 on Thursday and hessian 40" 10 oz. to Rs. 45-10. Sentiment in hessian was affected as a result of the increase in A/B group hessian following the Bemis Bros. grading list finding the names of more mills for the current year. Bear-selling was a feature during the week-end, and the rates of B. twills and hessian 40" 10 oz. closed at Rs. 118-8 and Rs. 44-12, respectively. Yesterday, a fair addition to prices was recorded. Inquiries from overseas buyers were keen and, in fact, there was a marked shortage for ready goods. Ready B. twills advanced to Rs. 119-4 and 40" 10 oz. hessian to Rs. 45-6.

The factors for the maintenance of raw jute prices have already been discussed. Sellers were very reserved, albeit the limited purchases made by mills. Indian northern bottoms were fully steady at Rs. 32, and mills' counter-offers for Rs. 31-8 failed to attract the response of sellers. From Rs. 32-8 local daissee bottoms January-February delivery recovered to Rs. 33-8.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *6th January*

The hides and skins market ruled steady during the week under review. Fresh arrivals of wet salted cow was comparatively smaller than those in the preceding week. The village tanners made heavy purchases of inferior quality cow. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360 and 2nd grade Rs. 280 to Rs. 300 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat skin 1st grade Rs. 320 and 2nd grade Rs. 300 per 100 pieces; sheep white Rs. 250 to Rs. 260 and black Rs. 200 to Rs. 215 per 100 pieces.

HIDES CLEARANCE VERY GOOD

(From Our Own Correspondent)

MADRAS, *7th January*

There has been very good clearance of tanned cow hides in the local market by shippers—Indian and European. Prices rule firm, though shipment business with the U.K. is difficult, as importers are not willing to operate at asking levels. Market for cow calf and buff calf is a shade weak and that for buff hides unchanged.

Arrivals of market quality goat and sheep skins find ready clearance at unchanged levels, though prime goat skins are a shade easy.

Demand for prime and semi-prime sheep skins has been brisk, and sellers are trying to put up their prices in vain.

Shipments during December 1956 were: To the U.K.: 3,975 bales cow hides, 292 cow calf, 122 buffs, 207 buff calf, 962 goat, 876 sheep and 1 dry goat skins; to the Continent: 1 cow, 5 buff calf, 544 goat, 104 sheep; to U.S. ports: 25 cow calf, 181 buffs, 60 buff calf and 195 goat; to Japan: 2 goat and 168 bales sheep.

WHEAT FIRM

(From Our Own Correspondent)

HAPUR, *7th January*

Divergent trends prevailed in the foodgrains markets during the week. While wheat prices firmed up, prices of some coarse grains recorded an easy trend. The Union Government is still reported to be anxious to build up a buffer stock of two million tons of foodgrains before the commencement of the next lean period. The Union Deputy Food Minister has indicated that instructions have been issued by the Union Government to all the surplus States—Andhra Pradesh, West Bengal, Madhya Pradesh and some parts of Madras—to be ready for the purpose of procurement in case prices go down to an uneconomic level. The Minister has also said that it is proposed to import 500,000 tons of rice from Burma and 200,000-300,000 tons from the U.S. Steamers have already started moving.

Wheat recorded an improvement of As. 4 per maund during the week, due to good consumer demand in the open market, as sales through fair-price shops were very irregular, following non-arrivals of Government's stocks. Outside buying enquiry at higher rates was slack and the week's offtake at 3 *khaties* was for local requirements. Stocks here are now put at 55 *khaties*. Average quality wheat was quoted at Rs. 16-4 and farm quality at Rs. 17 per maund. Sales of wheat, however, continue through fair-price shops in rural areas and, as demand from those centres is satisfied there, a further rise in wheat prices has been checked.

Rice continued to rule depressed, as pressure of arrivals of new crop into the market was still being felt. The area under rice cultivation has gone up by three million acres to 79.3 million acres in the current year 1956-57. The increase in acreage is reported to be mainly in the States of Orissa, Andhra, Bihar and Uttar Pradesh. The crop harvested in many parts of the country is also reported to be good. This improved outlook is already reflected in rice prices in various parts of the country which have recorded a decline in recent weeks. The prices prevailing here now are: *Basmati* Rs. 23 to Rs. 25-8; *mainpuri* Rs. 18-12; *ramajwayan* Rs. 20; *raimunia* Rs. 22; coarse quality Rs. 15-4 per maund.

Gram was in good demand during the week and stocks ran down to 60 *khaties*. Prices of grain were mostly unchanged, while those of other coarse grains eased slightly, as some rains during the week had brightened the coming crop prospects. Maize was in good demand during the week, due to diversion of demand from wheat, following non-availability of wheat from fair-price shops. Prices of maize also recorded gains. The prevailing prices as on Monday were: Gram local Rs. 13 and *Punjabi* Rs. 13-6; barley Rs. 12-12; *bejhar* Rs. 12-6; maize Rs. 12-12; *bajra* Rs. 13-8; *jowar* Rs. 11-8 to Rs. 12-12; *guwar* Rs. 10-4 per maund.

Despite poor loading facilities to needy areas of Assam, pulses recorded a hardening trend during the week. Peas *dara* improved by As. 8 to Rs. 13-8 and white quality was transacted at Rs. 14-12 per maund. Stocks were put at 13 *khaties*. *Arhar's* stock position continued to be unchanged at 24 *khaties*, while prices registered slight gains to Rs. 13-4 per maund. Prices of other pulses also ruled steady during the week, prevailing prices on Monday being *urd* Rs. 17 to Rs. 20-12, *moong* Rs. 15-8 and *masoor* Rs. 18-4.

Pulses futures moved quietly steady. The week-end quotations were: Peas: *jeth* Rs. 10-1-3, farm *maha* Rs. 12-12 and *jeth* Rs. 10-7-9; *arhar*: *maha* Rs. 12-3-6 and *jeth* Rs. 10-13; *urd maha* Rs. 18-6.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *7th January*

Despite export prospects of about 20,000 tons to Pakistan, sugar prices ruled quiet during the week under review. Turnover of sugar during the week was small, as booking by railways to certain consuming centres was restricted. The latest prevailing mill delivery prices of sugar are: Jaswant Rs. 28-6; Simbhauli Rs. 28-10; Mawana Rs. 28-4; Daurala Rs. 29-8; Amroha Rs. 27-14; Bijnore Rs. 27-14; Mansoorpur Rs. 28-8 to Rs. 30; Rampur Rs. 31-10; retail Rs. 30-10 per maund. Production of sugar in the factories up to 15th December 1956 in the current season amounted to 265,000 tons, as against 191,000 tons in the corresponding period last year. Stocks on this date stood at 574,000 tons, as against 415,000 tons last year.

The *khandsari* market also ruled quiet, as demand was meagre. Arrivals of new quality had begun in the market and inferior grade was quoted at Rs. 20 to Rs. 23 per maund and superior at Rs. 24 to Rs. 27 per maund.

After remaining steady in the early part of the week, *gur* ready prices declined later. Arrivals during the week were small, the average being 3,000 maunds daily, due partly to cloudy weather and partly to fall in prices. All the arrivals, however, were lifted under previous commitments and outside buying enquiry was slack. The total arrivals from the beginning of the season were estimated at about 300,000 maunds and unlike previous years, there has been as yet no stocking building. Loading is, however, restricted to some of the consuming areas. The latest prices as on Monday were Rs. 9-14 to Rs. 10-2 per maund.

Forward *gur* prices also ruled quietly easy in line with those in the ready section. *Gur fagun* opened at Rs. 10-6 last week-end and was today quoted at Rs. 10-2-9. It touched the highest during the week at Rs. 10-7-4½ and lowest at Rs. 10-1-9.

LINSEED RECEDES

(Messrs. A. Bradley and Co.)

CALCUTTA, *7th January*

Quieter conditions were observed in the linseed market during the week, owing to lack of buying support, and prices were appreciably lower. Sellers were also reserved and turnover was small, whilst arrivals to this centre were still scarce. The oil section was dull. Lower offerings from buyers had little response from sellers, who were pausing in expectation of better prices.

The latest available quotations are: January Rs. 24-14 and April-May Rs. 22 per maund.

The United States will permit the sale of surplus farm products to Poland for dollars at world market prices. This is the first step taken by Washington towards easing its restriction on trade with an East European country. According to Mr. Sinclair Weeks, U.S. Secretary of Commerce, this is the only exception to the general policy prohibiting the export of surplus farm products, which are subsidised by the Government, to Soviet bloc nations. The U.S. is studying the ways in which it may expand its economic relations generally with Poland.

British aircraft constructors claim that the British aircraft industry's policy and technical excellence in recent years have been vindicated by its achievements during 1956 when it registered a record export trade. This is the result of orders placed during the last year or two, while the contracts signed during 1956 give cause for quiet optimism for the future. Viscount orders during the year numbered more than 100. Some 23 Britannias were sold and 14 Comet 4's ordered by an American operator. Sea Hawks were ordered by the Netherlands, Gnats by India and Finland, Pembrokes by Denmark, Herons by several countries, Hunter training-planes by the Netherlands, and over 200 aircraft of varying types by the Federal Republic of Germany.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. • Including bonus. (k) Investments.
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

MARKET GOSSIP

(*Concluded from page 59*)

2.78-5/16 on 7th December last, and three months' forward being quoted at $2.77-5/8—2.77-3/4, as compared with the low of $2.75—2.75-1/8 a month ago. These are the highest levels touched by the pound since 24th July last. The recovery was induced by the publication of the latest position of the sterling area's dollar and gold reserves held by the U.K. These reserves rose by $168 million during December and stood at $2,133 million at the end of the month. They also compare favourably with $2,120 million a year before.

The rise in gold and dollar reserves is due to a number of special factors, of which the drawing of $561 million from the I.M.F. was the main one. In fact, British reserves would have suffered a decline of $393 million during December alone but for the emergency withdrawal of $561 million from the I.M.F. The fall over the year would have been of the order of $725 million but for the assistance from the I.M.F. and $177 million realised by the sale of the Trinidad Oil Company to America. Thus, these two factors actually contributed to a net addition of $13 million over the year to the reserves.

The pressure on sterling, exerted since the end of July, reached the climax with the developments in Egypt and Hungary in November. This pressure is said to have very little to do with the actual state of Britain's economic affairs; it was not due to the fact that the country was spending abroad more than it earned from sale of goods and services. It was due mainly to speculative pressure and the inclination on the part of people to "play for safety and keep their money in U.S. dollars or Swiss francs," in view of the continued rise in the cost of production in Britain and the consequent fall in the internal buying power of the period, as well as of

VOL. XCIV. No. 2393 BOMBAY, 19th JANUARY 1957 PRICE: Rs. 1/8

AN APPEAL TO FREE ENTERPRISE

MUCH useful work has been done by the Forum of Free Enterprise during the past six months of its existence—it formally came into being on 18th July 1956. It has done considerable publicity for educating the public in the value of enlightened free enterprise as a preserver of the democratic way of life. Its task has not been easy for several reasons. The business community, in general, has been under continuous attack by the party in power as well as by the leftist parties in the Opposition. Its faults have been exaggerated and the whole community has been condemned by many politicians for the wrongs of a few. Even now the people are led to believe by the highest in the land that free enterprise has to be tolerated only for practical considerations and not on grounds of democratic principles. The tragedy of it all is that a section of the business community itself is meekly succumbing to this propaganda. Whether it is doing so out of fear or with some ulterior motives is not so pertinent a question as the fact that it is trying to persuade itself to believe that there is really nothing wrong with the economic philosophy, policies and actions of the powers-that-be. It even views the activities of the Forum with disfavour, apparently because it is afraid that they will rouse the ire of the authorities further and bring more restrictions on free enterprise. This is shortsightedness, of course, but there are many business men who do not seem to realise it yet.

The greatest handicap of the Forum in carrying conviction to the people about its cause is the serious setback to the prestige of private enterprise during the war and post-war years brought about by the dishonourable acts of some. Profiteering, blackmarketing, tax evasion, defrauding of shareholders and lack of concern for workers—these bad qualities are generally attributed to the business community and the public easily believes the politician when he says that it is necessary to place stringent restrictions on the activities of this community and that the State itself should enter the sphere of industry and trade. At the very outset, the Forum clearly stated in its manifesto that "free enterprise must have clean hands." Admitting there were black sheep within the fold of free enterprise, the Forum gave the assurance that it would constantly "endeavour to develop and foster healthy traditions within free enterprise." True to this undertaking, it has now evolved a commendable code of conduct for free enterprise and has given countrywide publicity to it. All those who belong to this system should, in their own interest, scrupulously adhere to this code both in letter and spirit. They should realise that they are living in an age of great conflict between communist and democratic doctrines and that India is on the crossroads. It is for them to set the country on the right road by exemplary behaviour. If they fail to play their part well, India will be lost to the free world.

There should be no great difficulty for any business man except the avaricious type to follow the code of conduct advocated by the Forum. What does it demand of him? Honesty, hard work, courtesy and social sense. Surely, these are the basic qualities expected of a decent human being. The authors of the code do not say that business men should not make profit. They only say that the profit-margin should be reasonable and not excessive and that its realisation should be by fair means. They should aim at making available to consumers high quality products at a reasonable cost. They should eschew adulteration and not fall a victim to the temptation of cheating the customer. Honest and efficient service to the consumer should be their primary objective.

All employers should treat their employees with dignity and take pride in paying them well. It is false economy to save at the expense of workers or to keep the employees in a state of discontentment over their remuneration or treatment. The course advocated by the Forum in regard to employer-employee relations is undoubtedly the right one. The days of free enterprise will be numbered if it does not take care to see that the workers participating in the system themselves fully realise the value of it. It will be no exaggeration to say that, by and large, barring a few exceptions, the vast majority of employers has not yet recognised the importance of this point. This is evident from the innumerable industrial disputes that are adjudicated by the Government year in and year out. The employers should take the initiative in sponsoring labour reforms, instead of leaving it to the Government. It would be sheer bankruptcy of talent and thought to say that they are unable to get the co-operation of their workmen and that the latter are being misled by outsiders. If they get to the root of the problem and are prepared for a slight increase in the cost, which, incidentally, is an allowable item of expenditure for purposes of taxation, they will not find it difficult to solve the problem. In this respect, they should so conduct themselves as to make the Finance Minister exclaim that he is losing revenue, because the private sector is paying its workers on a liberal scale. It is needless to add that, if the workers are with the employers, no Government will find it easy to nationalise any undertaking.

If one recalls the early history behind the comprehensive revision of the Company Law, one will readily appreciate the Forum's stress on the need for sound management of joint-stock companies. All company managements should try to maintain happy relations with their shareholders. They should try to understand the point of view of the dissenting shareholders and accommodate them where their demands are fair and consistent with the larger interests of the country and the company alike. They should encourage formation of healthy voluntary bodies for protecting the rights of investors. It is obvious that, unless there is a large body of investors, they will not be able to raise capital whenever they need. There can be no expansion in the number of investors, unless the joint-stock companies give a fair deal to shareholders and follow a sound policy in regard to appropriation of profits. Again, the tendency to concentrate shareholdings in the hands of a few persons should yield place to wider distribution. Wherever possible, managements should encourage the employees to invest a part of their savings in the shares of companies in which they work. This would serve the triple purpose of diversification of shareholdings, ensuring harmonious relations with workers and providing a constitutional basis for employees' participation in management.

Nepotism in the upper hierarchy of company managements is a fairly widespread evil in this country. While it is human nature to help one's kinsfolk, it should not be allowed to stand in the way of recognising talent or impair efficiency. Men of ability and character should be given appropriate opportunities for shining in their service and going up in life. In other words, to promising young men, service in the private sector should be as attractive as, if not more than, that in the public sector.

The system of free enterprise is not confined only to corporate commercial activity. It also includes a large body of persons self-employed in a variety of professions, such as salesmen, brokers, auditors, accountants, writers, lawyers, teachers, doctors, engineers, architects and artists. All these are part and parcel of free enterprise. The self-employeds cannot hope to retain their freedom for long if the corporate private sector ceases to exist; nor can the latter do without the former. So inter-dependent are both that, if one misbehaves, the other is hurt. It is not untrue to say that this section of the population too is not free from malpractices that are attributed to the business community. The Forum is fully alive to this situation. Hence its appeal to those who practice a profession to discharge their duties truly and faithfully and to subordinate considerations of personal gain to the larger objective of service.

The saying that it is easy to preach but difficult to practise is trite, but it is very true, as human beings are generally susceptible to temptation. Nevertheless, preaching has its value, as some at least are bound to be moved by it. The Forum has, therefore, done well in framing a code of conduct designed to ensure the growth of an enlightened free enterprise. It has no authority to enforce the code. No one is aware of it more than the Forum. The hope that the good sense of the public in a democracy will ensure the acceptance by the society of the social responsibility implied in the code as the norm of life is the inducement to the Forum for launching this educational campaign. Its fructification will accordingly depend on the extent to which free enterprise adheres to the code in its day-to-day activity. But an essential condition for the success of the code of conduct is the creation of a climate that will not engender corruption. This requires the adoption of sound economic policies by the Government. If inflation is allowed to persist, if taxes are levied at confiscatory levels, if too many controls and restrictions are imposed on the people, and if the State refuses to recognise the legitimacy of profit motive and disregards the sanctity of private property, no amount of preaching and appeals for good conduct can check the evil of malpractices. Nothing corrupts the people more than a debased currency.

HIRAKUD

MR. Nehru, who never fails to communicate his emotional thrill to people whenever he sees the triumph of the human spirit over nature, was naturally in a happy mood last week, when he was at Hirakud. Declaring open the vast man-made lake, with its channel system, at the project site, Mr. Nehru returned to his favourite theme of the battle for economic prosperity. He said that Indians had waged a marathon battle for freedom and urged his listeners to wage a similar battle for economic progress. There is no doubt that Hirakud represents a significant stage in the continuing fight for such prosperity. To Orissa, it marks, as Dr. Harekrushna Mahtab, the Chief Minister, said, a "new age." For the State, which has so long been condemned to live in poverty and face recurrent famines and floods, can now look forward to a new era of agricultural and industrial progress, besides being saved from the ravages of periodical floods.

The Hirakud Dam, which is to store about 6.60 million acre feet of water that will irrigate an area of over two million acres in both *kharif* and *rabi* seasons and help develop 200,000 kilowatts of power, is a modern *akshayapatra*, that is, a perennial source of great wealth to the nation. The magnitude of the Dam will become evident, when it is compared with other dams of its kind. Among the various storage reservoirs in the country, the first large one was the Krishnarajasagar in Mysore, with a million acre-feet capacity, completed in 1931. The next was Mettur, with 2.2 million acre-feet, built in 1934. The Tungabhadra reservoir, finished in 1954, has 3.0 million acre-feet capacity. It will thus be seen that, from the point of view of storage capacity, the Hirakud is more than twice as large as the Tungabhadra. It will remain the largest dam in India till the Bhakra and the Nagarjunasagar schemes are completed. Its storage capacity, extending over an area of 288 square miles, is more than twice the combined capacity of all the four dams of the Damodar Valley project. Hirakud is "big," in every sense of the word, both physically and in technical excellence.

It is not surprising that many administrators in the past should have repeatedly considered the question of harnessing the Mahanadi (which means great river), across which the Hirakud Dam is now built. Orissa has been a land of floods and famines. In the Great Famine of 1865-66, over a million people are reported to have perished in this region. In the following year, there were floods which again took their heavy toll of life and property. Indeed, since 1868, Orissa has witnessed no less than 40 floods. Although Orissa's administrators did, on several occasions, think in terms of taming the turbulent Mahanadi, it was only in 1948 that the Central Water and Power Commission (then known as the Central Waterways Irrigation and Navigation Commission) took up this project in right earnest. Although work was started in 1948, no significant progress had been made till 1952. In the last three years, however, there was a rapid increase in the pace of construction which facilitated the completion of the project.

A problem which held up work in the initial stages was that of rehabilitation of the people of the region that would be submerged by the dam. The 288-square-mile reservoir has been formed by the 16-mile long bund (3 miles of the Dam and 13 miles of dykes) across the Mahanadi, submerging 249 villages and a vast area of forests. The rehabilitation of the families uprooted from their homes and their landed property presented a difficult problem at the time, although the number of people (about a lakh) involved, in relation to the size of the land, was not very large. But the Hirakud Land Organisation, which tackled this issue, proved equal to the task. Another feature of this aspect of the construction of the Dam is that it has not affected adversely the mineral wealth of the State; the Geological Survey carried out earlier revealed no mineral deposits in the now-submerged land. Orissa has not, therefore, lost anything—it has, of course, gained a great deal—through the submergence of land under the Hirakud waters.

It is, however, the more recent advances in technical knowledge that have made possible the construction of the huge Hirakud Dam. A few years ago, the Dam would have been given up as an engineering impossibility. This is because the flat topography of the country necessitated earthen construction for the Dam and the knowledge of such construction was then somewhat meagre. But now the Hirakud Dam, as it has turned out, is reported to be the longest dam in the world; among other earth dams in the world, it ranks within the first ten. If a masonry dam had been attempted—as it would have been attempted in earlier times—the cost would have been prohibitive. Thus, on its technical side, the Dam is claimed to represent a notable achievement. Further, its impressive battery of sluices is reported to be the best and the largest of its kind in the world. Only the Aswan Dam (not to be confused with the proposed Aswan High Dam which has led to a lot of international complications) has a larger number of sluices, but they are much smaller in size. Again, it is noteworthy that, from the beginning, the construction operations were planned in favour of comparatively intensive mechanised techniques, without sacrificing altogether employment considerations. In other words, the comparative costs of labour-intensive and capital-intensive techniques were carefully weighed before arriving at firm decisions; at its peak construction period, the Hirakud project employed no less than 30,000 workers. The employment of mechanical devices was facilitated by timely, generous American assistance. The U.S. Technical Co-operation Mission arranged for the supply of various types of earth-moving equipment like power shovels, dump trucks, road scrapers, cranes and stone crushers. The value of such assistance to Hirakud is estimated at $3 million. Under the Colombo Plan, the authorities received the assistance of two technicians specialised in maintenance of earth-moving machinery.

Generous and well-deserved tributes have been paid to the devoted band of engineers who have built the Hirakud. Since the Dam broke much new ground in engineering technology, the engineers and scientists had to undertake considerable research work. The Research Station was gradually expanded, the two main sections of the Station being the Soil Mechanics Section and the Building Materials and Chemicals Section. A vital responsibility which devolved on the Soil Section was the control of quality in the construction of the earth dam and dykes. The Building Materials Section had similarly to tackle the quality control of concrete and masonry section. The importance of this Research Station will be evident from the fact that its facilities have been made available, on payment basis, to agencies outside the project. The Station has also rendered assistance to the Rourkela and Bhilai steel factories. It is to be hoped that the techniques and methods developed and tested in the Station will be found useful to projects that may be undertaken in future. Indeed, Hirakud has been a valuable training ground for Indian engineers.

The chief beneficiaries of the Hirakud are the region's agricultural and industrial sectors. The Dam will irrigate, as stated at the outset, some two million acres in both *rabi* and *kharif* seasons. The canal system consists of three main canals, the Bargarh canal, the Sason canal and the Sambalpur canal. A great deal of preparatory work has already been completed for the utilisation of the Hirakud waters. This is particularly important in such projects. Since these projects are large consumers of capital—the capital cost of one cusec of water in Hirakud works out to Rs. 32,500—any delay in the utilisation of waters means a wastage of capital resources. With this end in view, the authorities rightly devoted considerable attention to the excavation of water-courses, which is normally undertaken by the farmers themselves. This work involves the construction of 2,000 miles of field channels, 30,000 one-foot stone pitched falls, 1,660 pipe siphons and 1,300 road crossings. In the main canal and branches, 180 structures, out of a total of 212, have been completed and the work on the rest is in progress, the corresponding figures for the tributaries being 150 structures and 280 structures, respectively. The entire canal system is expected to be completed by September 1959. The annual increase in the yield of foodgrains, resulting from the cultivation of additional land, it is computed, will be of the order of 500,000 tons which will help save Rs. 10 crores on imported food. Orissa's contribution to India's food output will increase further when the waters of the other three great rivers—the Brahmani, the Baitarni and the Salandi—are also harnessed for agricultural purposes; schemes for development of these rivers are already on the anvil.

Orissa's industrial sector benefits no less than its agricultural sector from the Hirakud project. Although Orissa is rich in forest and mineral wealth and there is scope for developing steel, cement, paper and other industries, the State has remained industrially backward because of want of power. This deficiency is bound to be made up by the Hirakud project. The completion of the first and the second stages of the Hirakud Dam project will give an installed capacity of 232,500 kw. and a firm capacity of 180,000 kw. At present, a total connected load of 13,000 kw. exists in self-generating concerns and 7,800 kw. in public electric supply companies. With the programme of development envisaged in the second Five-year Plan, the present demand of 1,200 kw. from small and medium industries is expected to rise to 9,000 kw. and the demand of 3,600 kw. from heavy industries will go up to 120,000 kw. Many industries, notably, the Government-owned Rourkela steel plant, and the aluminium, cement and paper industries proposed by the private sector will be able to get their power requirements from the Hirakud power stations. The total load for industries, it is computed, will go up to 128,000 kw. by the end of the second Plan and still further to 259,000 kw. by the end of the third Plan.

The authorities will do well to examine the transport needs of Orissa without delay, for industrial expansion of the State will greatly depend on availability of transport and port facilities. In 1951, a French mission investigated the possibility of navigation on the Mahanadi and of a deep sea port for Orissa. It recommended the progressive development of navigation on the river. There are also possibilities of linking the Mahanadi with the Ganga, the Rihand and the Sone. For the development of a port, the French mission recommended the Mahanadi mouth. It is time the authorities examined these recommendations and initiated measures designed to improve transport facilities in the State—sea, inland water, rail and road facilities—and thereby paved the way for the fuller utilisation of the Hirakud.

Finally, the Hirakud project, which is one of the largest of its kind, is also financially, one of the costliest. The project has so far absorbed a total expenditure of Rs. 70.8 crores. Although some initial mistakes were made, Mr. Gulzarilal Nanda, the Union Minister for Irrigation and Power, claimed that the project represented a "good example of speedy as well as economic construction." Perhaps, the credit for this deserves to be shared by the Government as well as the many private contractors who worked on the project. The importance of the role played by contractors in Hirakud will be evident from the fact that, in 1956, for instance, they employed no less than 26,689 workers, as against 16,805 workers by the Government. Further, out of the estimated expenditure of Rs. 70.78 crores, private firms and contractors were responsible for Rs. 37 crores, or over 50 per cent. of the total outlay. Experience gained by the authorities in Hirakud in the sphere of financial administration, should be carefully sifted with a view to arriving at decisions relating to the best methods of combining governmental and private initiative.

A study of the methods employed in Hirakud in the matter of allocating work between the Government departments and private contractors will reveal that work can be turned out, both expeditiously and economically, if there is close co-operation between the two sectors and the Government exercises careful control and scrutiny at every stage of the work. The few failures, which occurred in the earlier stages of the Hirakud project are attributed to inadequate classification of contractors which resulted in some of them taking up works beyond their resources and capacity. When these defects were remedied, work proceeded speedily and smoothly. The Rates and Costs Committee for Projects (Chairman: Mr. P. C. Agarwal), which was appointed in 1954, has already exhaustively examined the problems of cost control. Its recommendations, along with the positive lessons learnt in Hirakud, Tungabhadra and other projects—and possibly, the negative lessons learnt in Bhakra-Nangal—should be carefully evaluated and applied to all pending and future projects in the interests of their expeditious and economical execution.

TECHNICAL RALLY IN SHARE MARKETS

TAX POLICY—COTTON MISSION—ORISSA'S FUTURE

THURSDAY, 5 P.M.

THERE has been a smart rally in the share market this week. Almost all counters have staged a rise. The gain is substantial in those scrips which had suffered heavily. But not all the ground lost after the taxation proposals of 30th November 1956 has been regained. The recovery is due mainly to technical considerations.

MARKET GOSSIP

The bears who reigned supreme for well-nigh six weeks decided to book a part of their profit this week. There has, of course, been some selective buying by investors but it has not been of an order to say that confidence has returned. It is possible that the upward trend will continue for a little while more as a corrective to the earlier precipitous fall, provided no fresh bearish developments follow. The climate is still cloudy and the immediate future in regard to the Government's economic policies is not clear. Some casual remarks made by the Finance Minister at Madras early this week have given a ray of hope that he will be less harsh on private enterprise and investors than his provocative observations in December last led one to believe. They have, however, been received by the operators with great reservation, as there is no certainty that he will not change his mind again.

• • • •

In view of the keen interest taken by the share market in the Finance Minister's remarks at Madras, it will be useful to analyse them briefly. The gathering which he addressed consisted mainly of the middle class. The main subject matter was the development plan for the Madras State. The occasion apparently related to the forthcoming elections. The meeting was presided over by Dr. C. P. Ramaswami Aiyar, a distinguished public worker, who had stressed, in his opening remarks, the importance of free enterprise for maintaining a competitive economy. Referring to the State's entry into the sphere of industries and trade, he recalled his experiments in Travancore and Madras, when he was in charge of their administration, some of which succeeded but others failed due to lack of incentive and competitive spirit. He cautioned that the aspect of competitive enterprise and efficiency—one of the prime incentives to human action—should not be lost sight of by the present rulers. He paid a handsome tribute to Mr. T. T. Krishnamachari as a person of courage and learning, with an aptitude for independent thinking.

It is not surprising that, in such a pleasant atmosphere and under the presidentship of an august personality, Mr. Krishnamachari chose to speak in soft, conciliatory and restrained language. He expressed his sympathy for the middle class and salaried people and said that he could not ask either of them to pay more taxes. Since he had already stated on several occasions that he could not tax the people below these ranks any more, it is obvious that the new taxes that are likely to follow in the coming 12 to 14 months will fall on the rich.

• • • •

The Finance Minister complained that the oft-quoted saying that he might bring in new measures "not only on 28th or 29th February, but twice, thrice, four times or five times a year, in season and out of season, for more revenues and for more power, in order to see that the Plan is fulfilled" (statement in Parliament on Wednesday, 12th December 1956) had been torn out of the context and misinterpreted. What he then meant was that there was no sanctity in presenting tax proposals only at the end of February and, if the country's situation required it, there would be more than one Finance Bill. He made it clear that, while he was not one of those who stuck to the idea that there should be only one Finance Bill every year, he had no intention of bringing in five or six Finance Bills a year. He added that, in a year, there were only three sessions of Parliament and that, even if he wanted to introduce more than one Finance Bill, Parliament would get fed up with him.

This reassuring clarification, which incidentally is in keeping with our reading of his mind in these columns a fortnight ago, is welcome. But what we do not understand is as to why he did not come forward with it earlier. Why did he wait for exactly a month? He knew that a section of speculators was making capital out of it and upsetting the confidence of investors. It could not be that he had no opportunity to do so, for, after his said statement in Parliament, he spoke in public on a good number of occasions. And almost every one of these speeches tended to unnerve the investor and gave jitters to the private sector. Anyway, it is to be hoped that, at least in future, the Finance Minister will choose his expressions with care and refrain from making statements in a manner that is likely to be misunderstood or misinterpreted.

• • • •

In his speech at Madras, Mr. Krishnamachari made another significant statement. Explaining the taxation policy, he said that, normally, when they were undertaking a plan they had to reconstruct the taxation structure and build up their resources. They did all that was necessary during the first two years, because, if they were going to do something which would give them increased revenue, it would not be good doing it in the fourth or the fifth year of the Plan, as it would not be bringing any money to the Plan. If any reconstruction was made to bring more money either by more efficient collection or extending the range of taxation, it had to be done early in the Plan period. He expressed the hope that, whoever was the Finance Minister, he would put a stop—unless circumstances demanded otherwise—to any large-scale revision of the tax structure after 28th February 1958, and thereafter allow the country to settle down and work out the Plan.

This observation, read in conjunction with some of his earlier statements on this subject, means that the budgets for 1957-58 and 1958-59 will contain additional tax burdens. Assuming that the one coming at the end of next month will be a "lame duck"—a big assumption—the budget that will follow in the summer after the elections and the one in February 1958 will be heavy ones for the investor. Yet the share markets have not been upset at all by this particular statement. On the contrary, it has recorded a modest rise in equity values since then. One explanation for this curious behaviour is that the other parts of the Finance Minister's speech at Madras were conciliatory and that, after the 1958-59 budget, the investor would be left in peace for at least three years to come. All this is wishful thinking. And the real explanation for the recovery of the market is that a correction was overdue and, with the fortnightly settlement falling due tomorrow and with bears seeing substantial gains, they decided to book them, instead of merely leaving them on paper.

• • • •

To revert to the Finance Minister's statement on tax policy, Mr. Krishnamachari's approach is somewhat different from that of his predecessor, Mr. C. D. Deshmukh. The latter favoured substantial doses of deficit financing in the first two or three years of the Plan, which would taper off in the subsequent years, and relatively lighter doses of taxation in the beginning to be followed by heavier doses later. Apparently, Mr. Deshmukh wanted to create additional taxable capacity first by proceeding with development through deficit financing on a fairly large scale to cover the gap in the resources and then impose more taxes. That is, first pump in money into the system, leave it to multiply for a while and then collect the harvest. There is, of course, a lot of sense in this approach, especially because it would not kill the incentive to greater effort in the initial years of the Plan as Mr. Krishnamachari's tactics have tended to do. But it could not work, as the supply of food, raw materials and consumer goods failed to keep pace with the rise in the demand and prices rose, upsetting all calculations.

Evidently, it is because of this unexpected development that Mr. Krishnamachari decided to follow the policy of more taxation and less deficit financing. It is, however, not surprising that this change in tactics also is not yielding the desired results. For what is standing in the way of the smooth progress of the Plan is not the absence of rupee resources but that of adequate supply of raw materials, food, trained manpower and foreign exchange. It is noteworthy that, despite the restraints on bank credit and higher interest rates and the tight control exercised by the authorities on money supply as a whole, commodity prices have been tending to go up and foodgrain prices are standing at uncomfortably high levels. In the closing days of December and early this month, these prices showed signs of going down. But this expectation has not materialised. Prices of cotton and oilseeds have gone up, owing to the feeling that the earlier optimistic crop estimates might not fully materialise due to unfavourable weather in some parts of the country. The declining trend in rice prices has been arrested, while wheat and coarse grains are fully steady to firm. Since cotton prices had gone down to unduly low levels, the rise in them during the past few days is not something to cause any anxiety. But the spurt in the prices of oilseeds and the continued high level of wheat and other food prices are somewhat disturbing, as they will, if they persist, limit the pace of development expenditure.

• • • •

The British cotton textile delegation, under the leadership of Sir Cuthbert Clegg, has been in this country for a week now. It has already met the leaders of the Indian Cotton mill industry at Bombay and Ahmedabad and had discussions with them. The delegation is very keen that India should agree to a voluntary restriction on the quantum of its mill cloth reaching the British market and is believed to have ably put forth its case. Although no indication of the trend of discussions that took place between the Indian and Lancashire millowners is available, there are reasons to surmise that India will, once again, show some concession to the U.K. cotton industry, as it has done twice in the recent past. It is true that India has an extremely strong case for not obliging Lancashire this time and could have flatly turned down the latter's request. But it has not done so. Instead, its millowners are understood to have discussed with the Lancashire delegation the basis on which their exports to Britain could be limited. There was no need for such exploratory talks if their intention was not to accommodate Lancashire's plea.

It would appear that, in order to keep Indo-British economic relations on a friendly level, India may make a gesture by agreeing to cut its exports of cloth by 10 to 15 million yards, provided Britain can give an assurance that it will not allow any other country to take advantage of this sacrifice on its part. It is, of course, quite premature to be categorical on this point. But India values economic co-operation with Britain to such an extent that it would not be surprising if it were to relent. The Indian Government and the cotton mill industry are quite conscious of the political pull which Lancashire millowners have on the Conservative and the Labour parties alike. For reasons of expediency, they may not wish to cause any embarrassment to the British Government by giving an absolutely negative reply to Lancashire. Much, however, will depend upon Mr. Morarji Desai, India's new Commerce and Industry Minister.

• • • •

Many industrial establishments have, for long, been inclined to write Orissa off as a sort of "no-man's land," as a region unworthy of their attention. By and large, they were justified in this attitude, for Orissa, which represents a region of low incomes and periodical floods and famines, has provided little attraction to the trader or the industrial *entrepreneur*. But this attitude deserves to change with the commissioning of the Hirakud project. The area served by the project is likely to experience considerable prosperity very soon. The increase in agricultural production alone, it is computed, will yield the farmers an additional income of Rs. 10 crores. This means so much addition to the purchasing power of the people. But a far more notable factor is the great fillip which the project is bound to give to industrialisation.

Elsewhere in this issue—*vide* the previous page—we have drawn attention to the increase in power which will become available from the Hirakud hydro-electric stations. The completion of the first and second stages of the project will give an installed capacity of 232,500 kw. and a firm capacity of about 180,000 kw. An impressive expansion in the demand for power—from a meagre 4,800 kw. at present to 129,000 kw. at the end of the second Plan—is forecast for this region. At present, Orissa gets its power supply mainly from the Hirakud project and the Machkhund scheme, a joint Andhra-Orissa scheme on the Machkhund in which the latter's share is 34,425 kw. Realising that the growing demand for power will need additional power stations, the authorities are already planning a hydro-electric project on the Baitarni. The power, now generated, is being made available to industrial consumers at a special promotional tariff.

Many industrial units, both in the public and private sectors, are expected to benefit from the power made available to them at very reasonable rates. The State-sponsored Rourkela plant will absorb 40,000 kw. by 1961; it will go up to 50,000 kw. by 1965-66. The Indian Aluminium Co., Ltd., which is installing an aluminium smelter plant, capable of producing 10,000 tons per year, will require an additional 25,000 kw. by 1960. The Tata Iron and Steel Co., Ltd., has decided to set up a ferro-manganese plant at Joda, in Kenonjhra district, with a production capacity of 30,000-40,000 tons. The power requirement of this plant, which is estimated at 12,000 kw. in 1960-61, is expected to rise to 24,000 kw. by 1966. The Kalinga Tubes Ltd. at Chowdhwar, manufacturing galvanised tubes and fittings, with an annual production of 30,000 tons, are expanding their plant to manufacture tubular poles and to handle galvanised tubes and fittings of up to 6" diameter. The Company's present demand of 450 kw. will go up to 2,000 kw. by 1961. The Jeypore Mining Syndicate has finalised its plans to quarry 3,000 tons per month of manganese ore from four mines in the Rayaghada area. The Syndicate also is setting up a ferro-manganese plant, with an annual capacity of 15,000 tons. It will go into full production by 1960 when it will need about 7,000 kw. The few collieries in Orissa, such as the Talcher and Rampur collieries, are also expected to use power.

• • • •

Orissa, as is well known, abounds in raw materials necessary for the development of the paper industry. Realising the importance of this factor, and the advent of power, the Orient Paper Mills Ltd. which has a factory with a daily capacity of 100 tons at Bajajnagar, has chalked out plans for doubling the capacity of the factory and also for establishing a caustic soda plant with a 10-ton daily capacity, to be doubled by 1961. The management also intends setting up a rayon factory with a 12-ton production capacity per day. Their power requirements will go up to 7,000 kw. by 1960-61 and to 14,000 kw. by 1966 and 21,000 kw. by 1971. The Titaghur Paper Mills Co., Ltd., as we indicated in an earlier issue (vide *Commerce*, 1st December 1956), has plans for setting up a Rs. 2½-crore new paper mill in Orissa, with an initial annual production of 12,000 tons.

There is, at present only one cement factory in Orissa, namely, the Orissa Cements Ltd. with a production capacity of 500 tons per day. It proposes to add another unit of 600 tons per day which will go into production by 1958. It has also a workshop and a spun pipe factory and is considering the installation of a refractory plant capable of producing 18,000 tons of finished material per annum. The management is also considering the possibility of establishing two slag cement mills and a wagon manufacturing factory, though these proposals may take concrete shape only in the third and fourth Plan periods. The Company's present demand for 2,640 kw. is expected to rise to 5,000 kw. by 1961 and to 8,500 kw. by 1966. The Orissa Textile Mills Limited, with 50,000 spindles and 864 looms, proposes to extend its installations; its demand for power will move up from 2,000 kw. in 1960-61 to 4,000 kw. by 1966.

The total aggregate demand for power in the State from all consumers is expected to go up to 134,000, 268,000 and 498,000 kw. at the end of the second, third and fourth Plans, respectively. Industrial demands form 96 to 97 per cent. of the total demand for power. This, it is claimed, is the highest ratio for any State in India. The anticipated development programme for the industry in the second Plan period, it is computed, will mean an investment of Rs. 150 crores. The additional direct employment likely to accrue from industrial expansion in the State will be about 50,000 in the second Plan period, while the indirect employment will be many times this figure. The Hirakud project is thus expected to pave the way for the industrial prosperity of the entire region and to add to the wealth of the country substantially. Such, in brief outline, is the progress which Orissa expects to make in the next few years.

EQUITIES RECOVER

SMART RISE ALL ROUND

(From Our Own Correspondent)

BOMBAY, *17th January*

TRADING on the Stock Exchange during the week under review indicated that equities are slowly overcoming the effects of the supplementary Budget presented by the Finance Minister at the end of November last and regaining the confidence which marked the pre-Budget deals. For the first time after the Budget was presented the market struck a cheerful note this week and almost the entire list recorded a handsome gain. Barring a setback late on Tuesday and on Wednesday, the trend was steeply upward. The undertone at the close was very firm.

The main inspiration for the optimistic note was the fact that the settlement difficulties had been successfully overcome, although there was one case of default, the effect of which was negligible. The second factor was the note of moderation struck by the Finance Minister in his more recent speeches and his assurance that he had no intention of bringing Finance Bills in season and out of season. His statement in Madras that there would be no major changes in the taxation structure after February 1958 was also noted with satisfaction, though the possibility of much damage being done in the next Budget after the elections was not ruled out.

Yesterday's dip was, however, due to fears of a rise in Bank rate. The presence of the Finance Minister in the City and his reported talks with the Reserve Bank Governor were connected with the prospect of an increase in Bank rate and the bears seized the opportunity to hammer the market down, which had turned against them in the previous four days. They were, however, soon outwitted by bulls who, in the absence of any announcement regarding Bank rate, pulled the market again in their favour and there was an all-round sharp jump in prices today.

In the steel section, Tata Ordinaries employed, early in the week, good investment support, which coupled with renewed speculative buying and heavy bear-covering lifted the shares to a high of Rs. 176-4. After a recession to Rs. 173-12, they rallied again to close at Rs. 176. Indian Irons gained from Rs. 28 to Rs. 29. The reaction which followed brought them down to Rs. 28-8, but at the close they recovered to Rs. 28-12.

Textiles made an impressive performance, the gains being substantial in many cases. Besides the factors mentioned above, the expectations of a cut in excise duty on cloth also fanned the bullish enthusiasm. Bombay Dyeings advanced from Rs. 543-12 to Rs. 571-14 and after a decline to Rs. 558-12 yesterday gained strength to Rs. 566 at the close today. In refreshing contrast to the sharp drop suffered last week, there was smart rally in Centurys this week, gaining from Rs. 481 to Rs. 500-12, but the closing was lowered at Rs. 495. Kohinoors gathered Rs. 13-8 to Rs. 329, the highest level touched being Rs. 332. Central Indias rose by Rs. 3-8 to Rs. 125-8, Bradburys by Rs. 12-8 to Rs. 230, Dawns by Rs. 13-12 to Rs. 178-12 and Finlays by Rs. 12 to Rs. 313. Gokaks were done Rs. 7 higher at Rs. 225. Indu Ordinaries closed at Rs. 11-0½, *ex-div.*, as against Rs. 11-3½ *cum-div.* a week ago. Indore Malwas were bid Rs. 5 higher at Rs. 141-4. Khataus advanced by Rs. 6-9 to Rs. 224-1, Mysore Spinnings by Re. 1-4 to Rs. 102-8, New City Mills by Rs. 3-12 to Rs. 145 and New Greats by a rupee to Rs. 241. New Kaiser-I-Hinds were done at Rs. 112-8 *ex-div.*, as against Rs. 120 *cum-div.* last week. Phoenix changed hands Rs. 8-2 higher at Rs. 145. Shree Niwas gathered Rs. 8-12 to Rs. 196-4 and Simplex Rs. 4-8 to Rs. 184-8. Standards recovered by Rs. 8-12 to Rs. 445, Svadeshis by Rs. 10-8 to Rs. 233, Swans by Rs. 13-12 to Rs. 418-12 and Tata Mills by Rs. 2-8 to Rs. 50-8.

Bank shares came into the limelight with an all-round sharp rise, following the publication of encouraging results and increase in dividends by many banks for 1956. Barodas rose briskly by Rs. 4 to Rs. 104, Central Banks by Rs. 4 to Rs. 56 and their New shares by Rs. 5-8 to Rs. 60-4. Bank of Indias picked up Rs. 3-4 to Rs. 142 and Punjab Nationals Rs. 5 to Rs. 56. The sharpest rise was noted in United Commercials, which had raised the dividend from 5½ per cent. to 7 per cent. The shares, after being lifted up from Rs. 54-4 to Rs. 61-8, closed at Rs. 59-8.

Business in insurance shares was scanty, but was done at fractionally higher rates. New Indias were put through As. 4 higher at Rs. 44 and Vulcans As. 6 better at Rs. 15-8.

A steady tone prevailed in the electricity section which enjoyed fair support. Ahmedabad Electrics staged a rise of Re. 1-15 to Rs. 95-6. Bombay Surburbans were unchanged at Rs. 109-6. Surats picked up no more than As. 10 to Rs. 111-14. Tata Hydros fetched Re. 1 more at Rs. 124 and their New shares gained Rs. 2-4 to Rs. 117-12. Tata Powers moved up by Rs. 6-4 to Rs. 1,237-8 and their New shares by Rs. 25 to Rs. 1,200. Andhra Valleys rose by Rs. 13-12 to Rs. 1,220.

Sugar shares displayed a firm tone, Belapurs fetching Rs. 233-4 *ex-div.*, as against Rs. 242 *cum-div.* (div. Rs. 16) last week. Bhopals were up by As. 8 at Rs. 16-14 and Phaltans by Rs. 2 at Rs. 147-8. Walchandnagars appreciated from Rs. 256-14 to Rs. 266-4. The rise in cement shares was comparatively less marked, Associated Cements gaining over the week no more than Rs. 2-8 to Rs. 183-8, after touching Rs. 185-12. Digvijays moved up by Rs. 2 to Rs. 153. Jaipur Udyogs rose by As. 4 to Rs. 12 and Orissa Cements by an anna to Rs. 13-1, while Andhra Cements shed As. 5 to Rs. 15-6. In the engineering and mining group, Alcock Ashdowns staged a smart rise of Rs. 17-8 to Rs. 273-12. Tata Locomotives were bid from Rs. 153 to Rs. 160 before a reaction to Rs. 157 at the close. Premier Constructions gained Rs. 7-8 to Rs. 185 and Texmacos As. 12 to Rs. 20. Larsen and Toubros were steady at Rs. 16, while Mahindra and Mahindras provided an exception with a drop of As. 12 to Rs. 14-4. Shivrajpurs shot up by Rs. 4-8 to Rs. 88. Indian Coppers ruled steady at Rs. 3-11½, a rise of As. 1½ over the week. B.B. Petrols gained As. 1-9 to Rs. 2-13.

Shipping shares came to favour, Scindias staging a rise from Rs. 18-1 to Rs. 18-12 on reports that the terms of the Managing Agency were being revised, which would prove more favourable to the shareholders. The closing was, however, a shade lower at Rs. 18-8½. Great Easterns were keenly bid to record a rise of Re. 1-9 to Rs. 18-5. Automobile shares also firmed up in consonance with the general trend. Premier Automobiles advanced by Rs. 3-8 to Rs. 105-8 and Hindustan Motors by As. 8 to Rs. 8-1.

In the miscellaneous section, Bombay Burmahs gave a good lead to the general buoyancy, the old shares appreciating from Rs. 656-4 to Rs. 698-12. The closing was done at Rs. 695. The new shares rallied from Rs. 237-8 to Rs. 262-8. National Rayons finished with a gain of Rs. 8-12 at Rs. 242-4, the week's highest level being Rs. 245. British India Corporations rose by As. 6 to Rs. 8-8, Gwalior Rayons moved up by As. 10 to Rs. 14-10 and Hindustan Levers by As. 5 to Rs. 18-15. Tata Chemicals changed hands As. 5½ higher at Rs. 16-8 and Tata Oils were in demand to jump by Rs. 2-4 to Rs. 46. Wimcos were lifted up from Rs. 165-10 to Rs. 170.

* * * *

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *16th January*

For the first time since the announcement of new taxes, conditions on the Calcutta Stock Exchange were cheerful during the week under review. More interest was being shown on speculative stocks and fair-sized investment support was available from the Life Insurance Corporation for shares of first-class equities. Advices from Dalal Street was also encouraging. During recent months, buying on behalf of the Life Insurance Corporation had been conspicuous by its absence, while during the pre-nationalisation days the strength and support the life insurance companies used to give to the market in periods of lethargic conditions acted as a powerful factor to arrest the dullness. The Finance Minister's statement in Madras on Sunday last that industry in general co-operated with the Government and worked for achieving the targets set in the Plan also created a favourable background in the light of Mr. Krishnamachari's views on taxes for the Plan after he had converted into a "full socialist."

The decline in the stocks of jute goods with mills as at the end of the last month invited buying interest in jute shares, although investment support was slow in view of the higher prices for raw jute. The announcement of an interim dividend of 6¾ per cent. on the increased capital by the Indian Copper Corporation was received in the market with considerable satisfaction, although it had been well anticipated and the scrip had remained fully steady in a dull market earlier.

With more interest being shown in jutes, Nationals recovered to Rs. 18-14 from Rs. 18-4. Fort Glosters were put through at Rs. 313, as against Rs. 313 previously, while Deltas moved down to Rs. 124 from Rs. 127 and New Centrals to Rs. 13-4 from Rs. 13-7. Anglo-Indias were a particularly interesting feature yesterday with an improvement to Rs. 136, while Baranagores moved down to Rs. 96 from Rs. 102.

Among cotton textiles, the outstanding feature was the impressive recovery in Elgin Mills to Rs. 28-14 from Rs. 24-8 on interested buying, while Bowreahs recorded the other extreme of the trend by sagging to Rs. 123 from Rs. 145 previously. Kesorams received some attention at the unchanged rate of Rs. 14-8.

Burrakurs, among coals, continued to depict strength and, at Rs. 21-2, there was scarcity of sellers. The uptrend in this scrip during recent weeks was mainly speculative, as also due to attempts at cornering. However, it is stated that the Managing Agents, Messrs. Bird & Co., and their supporters hold more than 50 per cent. of the ordinary shares. The marketable number of ordinary shares being concentrated in a few hands, the advisability of removing the counter from the clearing list of the Calcutta Exchange is being envisaged. The working results of the Company for the half-year to June last, just published, record a fall in profits by Rs. 4·46 lakhs to Rs. 7.43 lakhs, although the dividend has been maintained at 3¾ per cent., at which rate and at the current quoted rate for the scrip the annual return works out to about 3 per cent. Kalpaharis received fair support to rise to Rs. 22-2 from Rs. 20-13. Bengals were higher by a few points at Rs. 445-8. Equitables were fractionally better at Rs. 25-2.

Indian Coppers, among minings, were highlighted by the steadiness and the scrip was difficult to obtain at Rs. 3-11. Among paper mills, Orients, at Rs. 31-14, gained by one point, while Titaghurs, after being held at Rs. 36-3 for most part of the week, scored to Rs. 36-8 yesterday. India Steamships, at Rs. 9-9, were higher by As. 5 and, among sugars, Sree Krishna Gyanodayas were taken to Rs. 11-9 from Rs. 11-2. Champarans improved to Rs. 23-1 from Rs. 22-14.

Engineerings also shared in the general improvement. Guest Keens recovered to Rs. 23-6 from Rs. 22-14 and Indian Irons to Rs. 28-13 from Rs. 27-11. Texmacos came in for more enquiries, following which the counter regained to Rs. 20 from Rs. 19-2. In a similar way, Richardson and Cruddas gained ground to Rs. 22-3.

More shares changed hands in the miscellaneous section, Imperial Tobaccos had buyers at Rs. 14-6, as against Rs. 13-15 earlier, with National Carbons remaining unchanged at Rs. 26-2. Dunlop Rubbers, on fair attention, were better at Rs. 26-1, but Metal Boxes fell to Rs. 25-13 from Rs. 26-10 and Martin Burns to Rs. 22-5 from Rs. 22-7.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *15th January*

The small rally on the Madras Stock Exchange which was in evidence in the previous week proved to be short-lived and the market lacked support during the week under review which was a short one on account of the *Pongal* holidays. The Stock Exchange remained closed on the 12th, 14th and 15th inst. This resulted in a low turnover with prices fluctuating within narrow limits. All sections, except banking, were dull and sellers were found either at current rates or at slightly lower levels.

Several counters in the textile section were dull as the shares ruled quiet, and in the absence of buyers, quotations were talked down. Coimbatore Cotton and Coimbatore Pioneers were marked down by Rs. 2 and Re. 1 to Rs. 374 and Rs. 289, respectively. R. C. Ambikais fell by Rs. 5 to Rs. 262; so also Lakshmis by Rs. 4 to Rs. 246, Vasantas shed Rs. 5 to Rs. 320. Buckinghams were unchanged at Rs. 174, as also Malabar Spinnings at Rs. 108 and Mettur Industries at Rs. 420. Palani Andavars 'A' and 'B' remained quiet at Rs. 150 and Rs. 220, respectively. Pankajas were maintained at Rs. 77 and Radhakrishnas Rs. 325. Bangalore Woollens lost Re. 1-4 to Rs. 542-8.

In the planting section, tea shares were marked down on reports that the demand for tea at auctions had shrunk. Balanoors receded by As. 4 to Rs. 18-12. Blue Mountains declined by As. 3 to Rs. 5-2 and Malabar Agriculturals by As. 4 to Rs. 11-10. Most of the other shares remained quiet. Talayar and Nilgiri Teas, however, met with buying support and rose by As. 2 each to Rs. 11-6 and Rs. 8-14, respectively. Among rubber shares, Kailas eased by As. 3 to Rs. 5-9 and Midlands by As. 4 to Rs. 17-2. Nilambburs were done As. 8 lower at Rs. 16. Among coffee shares, Coffee Lands dropped As. 6 to Rs. 23 and Consolidateds As. 1 to Rs. 18-2. Amalgamateds were dull at Rs. 11-4, as also Mysores at Rs. 2-8.

In sympathy with the general trend, activity in the miscellaneous section was also restricted. Aluminium Industries fell by As. 3 to Rs. 19-14. F.A.C.Ts shed As. 2½ to Rs. 6-5 and Indian Aluminium As. 7 to Rs. 14-1. There was no change in the case of Singarenis, Spencers and Textools and the shares remained inactive at Rs. 10-12, Rs. 16-1 and Rs. 265, respectively.

Dealings in sugar shares were done at lower rates. Mysore Sugars declined by As. 4 to Rs. 44-12 *cum-div.* Travancores lost As. 8 to Rs. 11-12, Deccans fell by As. 2 to Rs. 11-2, as also E.I.Ds to Rs. 28-2. United Breweries shed Rs. 5-8 to Rs. 182. Cauverys were quiet at Rs. 50, Indias at Rs. 16-6 and Andras at Rs. 15-8.

The banking section alone ruled somewhat steady following the announcement of excellent working results for 1956. Indian Overseas were talked Rs. 8 higher at Rs. 160. Pandyans put on As. 8 to Rs. 40 and Punjab Nationals gathered Re. 1-8 to Rs. 51-8. Indian Banks (Rs. 75 paids) remained firm at Rs. 158 and Fully Paids at Rs. 199. Travancores eased by an anna to Rs. 16-13.

TUNGABHADRA PROJECT

Of the eight generators of electricity which are expected to be installed as part of the hydro-electric scheme in the Tungabhadra Project, the first generator with a capacity of 9,000 kw. has been commissioned with effect from 8th January 1957. All the generators will have a capacity of 9,000 kw. each. Since one of them will be reserved as a "stand-by," the total capacity will be 63,000 kw. The second generator, according to Mr. A. R. Venkataraman, Secretary of the Tungabhadra Board, would be ready in February 1957, and two more by April 1957. Power from the Tungabhadra hydro-electric station will be shared between Andhra and Mysore in the ratio of 4 and 1.

As regards the canal waters, the water in the high level canal will be distributed between the Andhra and Mysore States in the ratio of 65 and 35 respectively, the ratio for the water of the low level canal being five to four. The high level canal scheme is expected to be completed within eight years; if the tempo of work were increased, it could be completed even within six years.

NEWS IN BRIEF

ACCORDING to a re-survey conducted by the Geological Survey of India, the Raniganj coalfields in Bihar contain a reserve of nearly 13,000 million tons, nearly twice the amount estimated in 1928. At the present rate of consumption, the reserves are expected to last a few centuries.

The Government of India has decided not to permit any further exports of semi-manufactures of copper. But export of semi-manufactures of brass and aluminium will be licensed freely till the end of June and tinplate containers till the end of December 1957.

The Governments of India and Italy are actively considering a proposal for bilateral agreements envisaging Italian help in India's programme of expansion of shipping during the second Plan period. It is proposed that Italian shipyards should build ships for India. The Italian Government is also likely to assist India in the field of heavy industries.

The Kerala Government will soon sponsor and promote several industrial enterprises in the State. A new ceramic factory, Kerala Ceramics, will go into production immediately at Kundara. Two spinning mills, one at Trivandrum and another in Malabar, will shortly be established and an application for import of machinery will be made to the Government of India.

The Union Government has, on the advice of the Forward Markets Commission, granted recognition to the Indian Pepper and Spice Trade Association, Cochin, for conducting forward trading in garbled Malabar black pepper for a period of three years. The establishment of forward markets in coconut oil at Alleppey and Cochin is also under consideration.

The production of coking coals of selected A and B grades in 1957 will be pegged to the overall ceilings of 7.90 million tons, as against 7.70 million tons, in 1956. The overall ceiling of production in respect of grade I and II coking coals has been fixed at 4.4 million tons and 3.70 million tons, respectively, in 1957, as against the pegging limit of 4.20 million tons and 3.10 million tons in 1956.

The Railway Board has decided to set up a fuel economy training centre at Dhanbad in Bihar. The decision has been taken in pursuance of the recommendation of the Railway Fuel Economy Enquiry Committee which had suggested that a Central Training Institute should be set up for giving intensive training to loco and fuel inspectors in the maintenance and operation of locomotives. The railways are the largest consumers of coal in the country, accounting for about 33 per cent. of the total production. Their annual coal bills aggregate about Rs. 39 crores.

India is the largest buyer of chemicals from the United Kingdom, Mr. T. C. Fawcett, Chairman of the Chemical and Allied Trade Section of the Chamber of Commerce, observed in his annual report that India's purchases rose from £13,800,000 in 1955 to £15,400,000 in 1956, while those of Australia, which had hitherto been the largest customer, fell from £16,200,000 to £14,700,000. This decline, Mr. Fawcett said, resulted from import restrictions imposed by the Australian Government.

The Rubber Board has decided to request the Government of Kerala to re-examine the wage structure of the rubber estate workers for the assessment of fair wages, taking into account the production, manufacture and consumption of rubber. The Board has also decided to request the authorities to fix the quota of rubber imports for 1957 in the light of increased consumption and lesser production figures estimated for the year. It has also been decided to divide the import quota to be allowed for 1957 between the first and the second half of the year in the ratio of 65 : 35 and allocate the quantity amongst the manufacturers on a *pro rata* basis of their consumption during 1956.

The Ministry of Finance's Department of Revenue has already notified the procedure for the export of articles under rebate of duty on the excisable goods used in their manufacture. It has been specified in the procedure that the Central Board of Revenue shall declare, from time to time, to which article this procedure shall apply. To begin with, the procedure has been made applicable, with immediate effect, to (1) ready made apparel, (ii) tents and (iii) sugar products, including biscuits and preserved fruits. Manufacturers of these articles wishing to export them are advised to contact the Collector of Central Excise in whose jurisdiction their factory is situated, in order to avail themselves of the benefit of the procedure, subject to observance by them of the formalities required under Rule 791-1 of the Central Excise Rules 1944.

The engineering survey of the 76-mile Bhavnagar-Tarapore broad-gauge rail-link has begun and is expected to be completed by the middle of February. The traffic survey of the proposed rail-link, which will be the first direct broad-gauge connection for the Saurashtra area with the rest of the country, was completed two years ago. Estimated to cost about Rs. 3.3 crores, the rail link will reduce the travelling time between Bombay and Bhavnagar by about 12 hours. The direct advantage to Saurashtra from the rail link will be an estimated 50 per cent. reduction in the cost of large quantities of coal imported from Bihar by the rail-*cum*-sea route at present. Similarly, it is estimated, that, with the opening of the new line, Bengal, Bihar and Uttar Pradesh will save about Rs. 70 lakhs every year by the resulting decrease in the price of salt which they import from Saurashtra.

* * * *

From Abroad

The Norwegian Government has decided to advance $1 million towards the cost of clearing the Suez Canal.

The 4½ per cent. $100 million World Bank bonds (due on 1st January 1977), offered recently, has been oversubscribed and the books have been closed.

The U.S. Bureau of Mines has forecast domestic market demand for crude oil during January at 8.15 million barrels, an increase of 425,000 barrels a day over that of December.

The Portuguese Government will construct a shipyard at Mormagao, the main port of Goa, at a cost of £150,000. The yard will be large enough to provide repair facilities to all ore-carrying vessels using the port. Small vessels will also be built at the yard.

Malayan tin exports to the continent of Europe last year were of the order of 12,909 tons which represents a substantial increase of 39.8 per cent. However, exports to Britain fell by 32.6 per cent. to 1,983 tons and that to the U.S. by 5 per cent. to 41,084 tons. Total exports for the year were 73,276 tons.

The shortest distance separating North America from Asia is between Little and Big Diomede islands. According to Pan American Airways, on Little Diomede, the picture of Abraham Lincoln adorns the school-house, while on Big Diomede, just three miles away, the school-house contains the picture of Karl Marx.

The city of Oberhausen, headquarters of the German Babcock and Wilcox group of companies, plans to build an atomic reactor to provide heat for industry and housing at an estimated cost of £1.5 million. This is independent of the "six-city project" for medium-sized power reactor to provide electricity for the regional power grid.

The naval architects of the Mitsubishi Heavy Industries Ltd. of Japan have begun drawing the basic designs for two atomic-powered oil tankers, one of which will be a 30,000-ton deadweight submarine. Plans for the atom-powered submarine tanker, a spokesman of the Company said, called for construction of a vessel 540 feet long, with a beam of 69 feet and a submerged speed of 22 knots.

An aggregate of 126 dry cargo vessels have been released from the U.S. Reserve Fleet to date. The release of a further 104 cargo vessels is being sought at present. The U.S. authorities impose as a condition for their release that the vessels be chartered for Europe. Of the 126 vessels released, 32 are already in service and most of the remainder will be in operation within a few months. The capacity of these vessels is between 9,000 and 10,000 tons and they are being used mostly for the transport of coal and wheat to Europe.

A shipowner of Norway, Mr. Sigval Bergesen, has announced that his firm is prepared to invest one million kroner (£50,000) in the building of a Norwegian atom ship. A condition for the investment is that a syndicate with a capital of £24-£5 million should be formed for building the ship on a commercial basis and at a time when atomic scientists co-operating with shipping interests have succeeded in finding the right type of reactor. The firm would also insist on the ship being built at a Norwegian shipyard.

Over 20,000 persons are expected to attend the exhibits and sessions of the 1957 Nuclear Congress designed to promote the use of atomic energy for peaceful purposes, scheduled to be held in Philadelphia in March. It will bring together about 3,000 engineers, scientists and industrial leaders. Participants will be able to study more than 200 technical papers based on original material. Dr. Walter G. Whitman, President of the American Institute of Chemical Engineers and Secretary-General of the United Nations 1955 Atoms-for-Peace Conference at Geneva, will be General Chairman of the Congress.

The 17-nation organisation for European Economic Co-operation has announced that Europe's oil supplies were less than 75 per cent. of its needs and would soon be inadequate to maintain normal economic activity. A resolution by O.E.E.C's Executive Committee drew the attention of the United States delegate to the situation which will shortly result in Europe if the production allowed in Texas is not raised to the level permitting the transport to Europe of an increased volume of crude oil and petroleum products. The statement said that only a further increase in supplies from the United States might alleviate a situation which causes anxiety.

A new social insurance law for Cyprus—the first State-sponsored insurance scheme in that colony—came into force on 7th January. It provides benefits for marriage, maternity, unemployment, sickness, old age, widowhood and death. The scheme is based upon that in force in Britain, with workers, employers, and the State each bearing a part of the cost. At the outset, the worker's contribution will be just over 1*s.* per week, women paying slightly less. Benefits for sickness, unemployment, widowhood, and old age will be £1 4*s.* per week, with additional allowances for dependents. The maternity grant will be £5 and the marriage grant £10. Already 50,000 workers, including 12,000 civil servants, have been enrolled under the scheme. Eventually, it is expected that 100,000 will register.

Sweden, which is very much short of fuel oils, is to receive emergency supplies under a decision taken by the Oil Committee of the Organisation for European Economic Co-operation. The O.P.E.G., the emergency group of oil companies, has been asked to examine Sweden's case at once and to advise what measures should be taken. The Oil Committee feels that, with the improvement in the shipping position, supplies to Greece will return to normal. Turkey's case will be studied when more statistics are available.

The U.S. has offered $20 million for constructing and putting into operation of an Asian atomic energy centre at Manila. Announcing this, Mr. Walter Robertson, U.S. Assistant Secretary of State, told a meeting of the Colombo Plan Consultative Committee at Wellington, New Zealand, that the U.S. contribution was conditioned on working out mutually satisfactory arrangements with other countries participating in the project. The amount would come from President Eisenhower's $100 million fund for Asian economic development.

PERSONAL

MR. Justice Jivan Lal Kapur of the Punjab High Court was sworn-in as a Judge of the Supreme Court of India on 14th January.

Mr. Purshotamdas Thakurdas, who was on the Central Board of the Reserve Bank ever since its inception, declined to be re-nominated to the Board, due to the Finance Minister's unilateral and unprovoked strictures on the Bank.

Mr. Chester Bowles, a former U.S. Ambassador to India, arrived in New Delhi on 9th January on a four-week visit to India. During his stay here, he will visit Community Project areas and development works in Uttar Pradesh and Punjab.

Mr. Babulal Bubna, a prominent millowner, left for Rangoon on the 14th inst. at the invitation of the Burmese Government to study the present position of the cotton textile industry in Burma and to suggest measures for its development.

Dr. Shanti Swarup Gupta, lately First Secretary to the Indian High Commission in Canada, Ottawa, has been appointed Consul General of India in Saigon. He will hold the rank of Counsellor. Dr. Gupta will take up his new assignment shortly.

Mr. K. G. Ambegaokar, a Deputy Governor of the Reserve Bank of India, has been appointed Governor of the Bank until further notice, *vice* Mr. B. Rama Rau, who has resigned, following the Finance Minister's recent adverse criticisms about the working of the Bank.

Mr. Kasturbhai Lalbhai, Ahmedabad, Mr. B. M. Birla, Calcutta, Lala Shri Ram, New Delhi and Mr. C. R. Srinivasan, Madras, have been nominated by the Central Government to be the Directors of the Central Board of the Reserve Bank of India with effect from 15th January 1957.

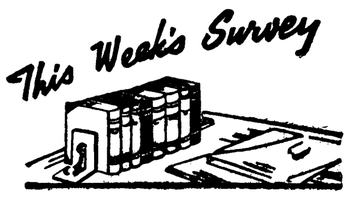
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *23rd January*

The Reparation Problem

While in India there is apparently an inclination towards economic, industrial and political peace, the best talents of the country being now placidly concentrated on the constitutional reforms recommended by the Round Table Conference, there is a sibilating buzz of despondent anticipation in financial circles in other parts of the world, indicative of a spirit of unrest,—and the animation, to which desperation is closely allied, is chiefly due to the threatened debt repudiation by Germany as a defaulting nation. Following an unconfirmed Paris report that the reparations conference is likely to be postponed for five months, it is now stated that Italy and Britain are ready to grant Germany a longer moratorium without consulting the United States. France, however, is understood to have definitely refused to renounce any of her "sacred rights" in regard to reparations until the United States promises similar action. It is generally believed in London that when the Lausanne Conference meets a proposal will be put forward for the extension of the United States' moratorium to 15th December, when the next payment by the Allies to America falls due. But this plan, even at the best, can, if adopted, merely postpone the apparently inevitable, and unless the nations agree to forgo reparation payments, once and for all, it seems to us that the war-weary world is destined indefinitely to still stumble along on crutches; blindly, painfully, hopelessly. In the meanwhile, either as the result of good luck or of good judgment, Great Britain is the first country in the world to throw off the shackles of trade depression. And the sharp rise that has taken place in sterling in New York has been reflected in an encouraging manner by an appreciable rally on the Paris Stock Exchange.



T. I. S. CO.'S PETITION

MUCH interest attaches to the permission granted by the Bombay High Court to the Tata Iron and Steel Company, Ltd., to alter its memorandum so as to enable the management to contribute to the funds of political parties which, in the Company's opinion, would serve the industry in the country in general, and the steel industry, in particular. The issues which the Court had to consider were whether the Company's request was contrary to public policy and national welfare, and whether it meant a diversion of funds for purposes that did not bring an adequate reward to the shareholder. In granting the requested permission to the Company, Mr. Justice Tendolkar repeatedly referred to these larger issues in a way that merits special notice.

In support of its petition, the management pointed out that it could, under its memorandum of association, subscribe to any charitable or public object and any institution, society or club which may be for the benefit of the Company or its employees. But it felt that the two objects—that is, (1) the public and charitable objects and (2) welfare of the Company's employees—should be separated and that the former should be sufficiently enlarged to take into account modern conditions. It drew attention to the fact that the industrial policy of the Government under present conditions was of vital importance to most industries, and particularly to the key industry of steel. In a socialist pattern of society, such as was contemplated in the country today, the future of a chief basic industry, like the steel industry, depended on the Government's industrial policy. At present, the Company was carrying out a major expansion programme at a cost of Rs. 75 crores, and any further expansion of the Company's activities would depend on the approval of the Government. It was, therefore, considered in the interests of the Company that it should be able to contribute to the funds of political parties which would serve generally the interests of industry and those of the steel industry, in particular. The prosperity of the Company and its shareholders, it was stated, was bound up with the policy of the party in power. The Company was vitally interested in supporting such government as would enable the steel industry to continue in the private sector and to expand and prosper. A resolution to this effect, it was pointed out, had been passed at the last annual meeting of the Company; the Government of India, which had granted a loan of Rs. 10 crores to the Company, had not opposed the resolution.

The Company's petition was, however, opposed by a shareholder on the ground that the proposed alteration was contrary to public good and good government and adversely affected and prejudiced the interests of the shareholders and the Company. He further contended that the interests of the iron and steel industry were fully protected by the Government statement on industrial policy and the second Five-year Plan. There was, therefore, no need for the Company to contribute money to political institutions. Further, the proposed contribution to a political fund was an expense which brought no return to the Company and did not contribute to its economic or efficient operation.

His Lordship rejected the contention that the proposed amendment was against the interests of the shareholders. The shareholders were the best judges of their interests and they had passed a special resolution sanctioning the alteration without dissent. As regards the argument that it was an expense which brought no return, His Lordship observed that an expense need not bring in tangible returns. Power to contribute to worthy causes would add to the prestige of the Company and might help in saving advertising expense. His Lordship recalled that companies, recently formed, contained a clause in their memorandum of association permitting them to contribute to political objects. If the T.I.S.Co. was not granted permission for alteration of its memorandum, it would be placed in a disadvantageous position.

Discussing the larger issues of public policy, His Lordship conceded that the power of making contributions to political parties was obviously capable of being used to corrupt political life in the country. Serious forms of lobbying, His Lordship said, amounted to corrupt practices. But there was a difference between supporting a candidate or a party with whose policy the company was in substantial agreement and of supporting a party or candidate who would, for a consideration in the shape of contribution from the company, support the policy of the company, irrespective of the view of the party or the candidate concerned. His Lordship added that, if there was the remotest suggestion to the party or the candidate to act contrary to its or his own views for a price, that would amount to political corruption and would be against public policy; in such a case even a single shareholder could approach the court and obtain an injunction restraining the company from making any contribution. And, if the contribution had already been made, the shareholder could compel the directors of the company to refund to the company the amount contributed.

The T.I.S.Co., His Lordship pointed out, had undertaken to show in their profit and loss accounts the amount of donations and contributions made to every political party, directly or indirectly, every year. Giving publicity to the amount of donations to political parties, His Lordship said, was a wholesome safeguard against the tendency to corrupt political life in the country. His Lordship was not, however, prepared to hold that donating to political parties had a tendency to corrupt political life. As regards the argument that, if political parties depended on financing by large companies, it might induce the parties to water down their policy in regard to labour and other welfare legislation, the parties might be tempted or induced to disregard the Directive Principles of State Policy, His Lordship said parties with overwhelming popular backing might resist the inducement of accepting large contributions to their funds. The attempt to guard against such danger was admittedly for Parliament to make, and Parliament had to collect data on the effect of contributions on political parties.

In the result, His Lordship confirmed the proposed alteration but added the word "useful" before the words "institution, objects or purposes."

The T.I.S.Co.'s move has attracted considerable public attention, because it is the first of its kind, made by a company of its size, standing and reputation. That the T.I.S.Co. has been compelled to arm itself with powers to support political causes shows how inextricably bound are economics and politics. Till recently, no such need was felt, because industrialists supported certain political causes purely out of patriotic motives, irrespective of the gain or loss such support involved. Since the attainment of independence, they have apparently been convinced that they must be discriminating in their support, that it is only that political party which will help keep alive their economic functions that deserves their assistance. This is an inevitable trend in a democracy. And it is noteworthy that the Government has not opposed the move. This suggests that, in principle, it is not actually opposed to industrialists wanting to support a party of their choice. As things stand today, there is not, perhaps, a political party which will wholeheartedly support the system of free enterprise on which rests the future of independent farmers and industrialists. It remains to be seen whether such a party will come into existence or those engaged in free enterprise will be compelled to continue their support to the Congress as the least "red" of India's political parties. Mr. Justice Tendolkar pointed out that the industrial policy resolution of the Government did not prohibit expansion of private-owned units and, if the party that subscribed to this policy remained in power, it might allow the expansion of the Company and thereby enable it to carry on more efficiently. It is, however, open to doubt whether the party in power will always and in all cases interpret the resolution in favour of private enterprise. There is nothing in the resolution which prevents the Government from engaging in any activity it likes, even if it turns counter to the interests of private enterprise.

FOREIGN TRAVEL ALLOWANCE

A welcome trend in recent years is the impressive increase in the income which this country derives through the incoming tourist traffic. It is computed that such income in 1955 was of the order of Rs. 10.1 crores, thanks to the large number of tourists who visited India in that year; the number is placed at 43,648, as against 39,333 for the previous year and 20,000 for 1951. This increase is particularly significant, considering that India has only recently developed an interest in tourism. Further, there is an inherent difficulty in improving the tourist industry, for the industry does not consist of just one unit, or one variety of industrial units. To improve the industry requires the co-operation of all the interests concerned—Government, transport authorities, catering industry and travel organisations. Although the Government has done much to improve tourism, it has also been responsible for giving the industry a few jolts. Speaking at a recent Press conference in Calcutta, Mr. M. S. Oberoi, President of the Federation of Hotel and Restaurant Associations of India, expressed concern over the Union Government's "encroachment" on the hotel industry—he was referring to the Government's acquisition of the Asoka Hotel and the Janpath Hotel in Delhi—its prohibition policy, import restrictions and the recent withdrawal of the basic travel allowance. All these, he feared, would combine to affect adversely the incoming flow of tourists to India.

That is only about the tourists who visit this country from abroad. Then, there is the outward tourist traffic, that is, people from India going abroad for pleasure. In this respect, the Government has placed severe restrictions on the foreign exchange allowance even for going to non-dollar areas which was fairly liberal until the end of last year. It will be recalled that, unlike visitors to the dollar area, in respect of whom the allowance was determined on the merits of each case, those proceeding to the non-dollar area were being given a basic allowance of £750 per adult and £375 per minor. This allowance was available for a period of two years. It may be recalled that on 1st January 1955 the basic allowance was raised to these levels from £600 per adult and £300 per minor. This concession has been withdrawn with effect from 1st January 1957, as part of the Government's policy designed to conserve foreign exchange. In other words, the restrictions on journeys to non-American account area for pleasure or personal convenience have been brought to the same level as on those to American account area. The abolition of the basic quota, instead of a reduction, is considered as too drastic.

The immediate impact of the new restriction is likely to be felt by the air services. Mr. S. K. Kooka, Traffic Manager, Air-India International, feared that the Corporation might have to cancel its seventh frequency to London, scheduled to start in March next, if the Government of India did not revise its decision about travel restrictions. He expressed the view that, while the £750 allowance hitherto was "overmuch," taking away everything made things "too difficult." Clearly, if the outward flight of airways is restricted, it will also adversely affect the inward traffic. Further, the restriction will tell on the fortunes of the internal air services also, since it is bound to restrict air travel all round; the Indian Airlines carries considerable number of foreign tourists on its domestic routes. Foreign airlines do not expect to be hit hard, for they are likely to have some traffic as a result of the travel of foreign technicians and administrators who may visit India in connection with the implementation of the second Five-year Plan.

The restriction on travel allowances is particularly unfortunate, when it is viewed against the size of the foreign exchange it is expected to save for the country. It has been computed that it will result in saving of no more than Rs. 1 to Rs. 1½ crores. Are such omnibus restrictions necessary in the interests of saving so small an amount by way of foreign exchange? The Government can, if it still considers some restriction necessary, cut the £750 allowance to a lower figure, say, to £600 per adult, the limit until 1st January 1955, or even £500, instead of withdrawing the allowance altogether. Further, there are other ways of reducing the expenditure of foreign exchange. It has been rightly pointed out that there is scope for reducing the number of Government-sponsored delegation abroad and also for reducing the number of delegates in each delegation.

Again, all sections of the tourist industry could be asked to co-operate with the Government in seeing that their foreign exchange expenditure is cut to a reasonable minimum. For instance, the hotel industry, it is stated, has decided to restrict the employment of foreign artistes for cabarets and orchestras; big hotels in Calcutta and Bombay spend about Rs. 20 lakhs a year on this item. The industry will increasingly employ Indian artistes. It is also willing to reduce its imports of foreign crockery. The Government should take up the matter with the Indian crockery industry and see that the industry produces quality goods that will help replace imports. In view of these considerations, as also the difficulties which Indians and foreigners will have to face as a result of the imposition of restrictions on travel allowance, the Government will be well advised to reconsider its decision.

SMALL-SCALE INDUSTRIES

The Government has assigned an important role to the small-scale industries in the country's economic programme. While, during the first Plan, an amount of Rs. 5.2 crores had been spent on the development of small-scale industries, the amount earmarked for them in the second Plan is no less than Rs. 55 crores. The question is how best this programme could be implemented. This is a more important and difficult task than drawing up the programme. For, here, we come to grips with the realities as they obtain in the field, in the organisational structure, and in the outlook and nature of the men the authorities have to deal with.

The occasion to take stock of the situation was provided by the eighth meeting of the Small-scale Industries Board held at Madras on 11th and 12th of this month. In the course of his inaugural address to the meeting, Mr. Bhaktavatsalam, Minister for Industries, Madras State, emphasised quite pertinently the need for adopting modern techniques and new lines of production in small-scale industries. He has endorsed, in this connection, the view, expressed by the Ford Foundation experts, that resistance to modernisation stems from baseless fears of technological unemployment and that perpetuation of inefficient, outdated methods has more drastically reduced employment than any modernisation could have done. Indeed, the Plan itself warns against regarding the sector of small industries as a static part of the economy and stresses that it should be viewed as a progressive and efficient decentralised sector, which is closely integrated with agriculture, on the one hand, and large-scale industry, on the other. The problem, therefore, lies, as Mr. Bhaktavatsalam has observed, in ensuring that the change-over from the outmoded equipment to up-to-date machinery is phased in such a manner as not to worsen the unemployment problem.

This brings us to the important needs of small-scale industries to bring about the smooth change-over. These are, in a nutshell, training and technical advice regarding the adoption of improved tools, machines and new techniques, the supply of raw materials and power and adequate finance at reasonable rates. The progress achieved in some of these directions was reviewed by Mr. S. Ranganathan, Secretary, Union Ministry of Commerce and Consumer Industries, and Chairman of the Small-scale Industries Board, in the course of his address to the meeting. In pursuance of the programme of Industrial Extension Service adopted by the Government, five Major Institutes, and seven Branch Institutes, in addition to the Regional Institutes at Delhi, Bombay, Calcutta and Madras have been opened in different parts of the country for providing technical assistance to small-scale industries. The Government has also approved the starting of 48 Extension Centres during the current year. Moreover, encouraged by the performance of these institutes which have been able to render useful technical advice and service to over 15,000 small industrial units, scattered in different parts of the country, the Government has decided to raise the status of the Branch Institutes at Bangalore, Indore, Cuttack, Gauhati and Agra to Major Institutes during the next financial year. The Board has also decided to start one Major Institute each in Rajasthan and Jammu and Kashmir, ensuring, thereby, that, by the end of the year, there is one Major Institute in every State of India.

A notable development is the new line of activity which the Institutes have taken in hand, that is, the provision of Business Management Service to small industrial units. The evening classes started by the Delhi Institute are found to hold much promise for imparting instruction to small industrialists in proper Business Management methods, and similar classes are proposed to be organised at the Regional Institutes in Bombay, Calcutta and Madras. The programme of supplying machinery on hire-purchase basis undertaken by the National Small Industries Corporation has also got under way. So far the Corporation has delivered machinery valued at Rs. 6,69,000 to small industrialists, and machinery worth Rs. 4,85,000 is expected to be delivered during this month. Further, the value of orders placed by the Corporation for machinery amount to Rs. 53,28,000. A further advance in this field is the decision to start four subsidiary corporations, one each at Delhi, Madras, Bombay and Calcutta, to dispose of applications for hire-purchase of machinery expeditiously. These are also expected to look after the marketing service activities of the region.

Among other developments worthy of mention on the credit side, attention should be drawn to the progress made in the direction of implementing Mr. Weddel's recommendations about Government's purchases from small-scale industries. The Government, after accepting the recommendations, has finalised a new procedure according to which the Government's purchases are divided into four groups. These are so arranged as to help the development of small-scale industries to the maximum extent practicable.

One thing, however, stands out prominently on the debit side. Not much progress has been made in the most crucial part of the programme, that is, field staff, and Mr. Ranganathan has done well to draw the pointed attention of all concerned to this lacuna, in the course of his address. He stressed the need for adequately strengthening the supervisory and field staff of the State Departments of Industries. He has also rightly emphasised that the inadequacy of the field staff at the execution stage may defeat the whole programme. It is all the more regrettable that this deficiency should continue, despite the offer of the Centre to meet 50 per cent. of the expenditure on account of the additional staff appointed by the States. This deficiency should be immediately rectified, if the whole programme is not to end in failure and if the sacrifice that the taxpayer is making in order to encourage small industries is to be of any value.

E. C. A. F. E. REGION

The central problem of economic expansion of industrially backward nations is not merely the raising of adequate material and manpower resources necessary for development. A task of equal, or perhaps even greater, importance is the choice of appropriate economic policies. And in this the underdeveloped countries have not much to learn from the experience of the industrialised West. For the issues facing the former, such as the role to be assigned to private enterprise, the problem of sectoral balance, the technique of production to be adopted, the role of nationalised industries, the monetary and fiscal policies to be followed, etc., are in a sense peculiar and have no precedents in economic history. In the selection of policy, the Planning Authorities should, therefore, be guided not by *a priori* considerations but the realities of the economic situation obtaining in these countries and, above all, by the imperative need for rapid economic progress.

It is in the fitness of things, therefore, that the methods and policies of economic development should have figured prominently in the deliberations of the Working Group on Economic Development and Planning of the Economic Commission for Asia and the Far East recently held at Bangkok. Top economic experts from 20 E.C.A.F.E. countries participated in the deliberations and they examined the major questions which arise as underdeveloped countries formulate and implement development plans. The report of the Working Group rightly cautions that the objective a country sets for itself should be realistic and within its capacity, as, otherwise, the result can only be "waste, confusion and disillusionment."

A fundamental question facing the countries of the region, according to the report, is to take a decision on the extent to which the Government itself will participate in economic activity. The practical choice, of course, is not between absolute State control, on the one hand, and *laissez faire*, on the other. But, if the Government gives some definiteness to its policy, it would go a long way towards restoring the confidence of *entrepreneurs*. This would also serve to remove the fears of foreign investors. The report suggests that arrangements connected with investment on a Government-to-Government basis might create confidence in the foreign investor.

The report also examines certain criteria against which the functioning of nationalised industries should be judged. It considers that, in the interest of efficiency, the products of public enterprises should be exposed to the market mechanism. When broader considerations of national policy will not permit such exposure, nationalised undertakings must be subjected to close financial scrutiny and auditing. It also emphasises the need for giving the management of public enterprises freedom to show initiative and rightly observes that "no enterprise can be run without taking calculated risks and some decisions are bound to go wrong in any venture." At the same time, there is also the need for some degree of parliamentary or legislative checks, but this does not mean, it hastens to point out, "nagging of management over minor details."

The part that monetary and fiscal policies play in the implementation of development plans was also studied. The experts are said to have come to the conclusion that instruments of monetary control such as changes in Bank rate and open market operations are not of such relevance to most countries of the E.C.A.F.E. region, though they feel that the technique of variable reserve requirements deserves careful consideration. They question the usefulness of the time-honoured division of central banks into two departments—issue department and banking department—and point out that Asian countries must take special care to see that their banking organisation is suited to their own conditions and requirements. Regarding the desirable level of interest rate, they are of the view that high rates of interest do more to discourage investment than they do to encourage savings. While pointing out that there is considerable scope for having more direct taxes, their report adds that there should be some way of channelling a part of the increase in agricultural incomes to the State exchequer through land taxes or agricultural income-tax.

The report further states that, as foreign trade accounts for a substantial part of the national income of many E.C.A.F.E. countries and as the latter have a tendency to run easily into balance of payments difficulties, some degree of State control over foreign trade is necessary. It might be useful for these countries to encourage industries which promote exports and cut down imports. It should be borne in mind, observes the report, that these industries will have to catch up with foreign techniques which are continually being improved. A suggestion in this connection is worthy of consideration. It recommends encouragement to the opening of branch factories by foreign firms or the launching of joint ventures by foreign and domestic capital, either private or governmental.

The study also lays emphasis on the need for promoting a proper climate for inspiring confidence and initiative in the people. The rapid increase in population adds urgency to the economic problems of the countries of Asia and the Far East. The importance of this is fully borne out by the experience of many countries of the E.C.A.F.E. region which find that because of the increase in population, economic improvement in recent years has not resulted in a significant increase in *per capita* income and consumption.

WORLD SUGAR AGREEMENT

The protocol amending the World Sugar Agreement of 1953 has been signed by 20 countries. The protocol seeks to re-allocate sugar export quotas among the member-countries and provides for a change in the system of altering price limits in accordance with the quantity of sugar available in world markets. The signing of the protocol is the first step in the process of ratification. Formal ratifications, it will be recalled, were due by the 1st inst., the member-countries being allowed to give, by that date, an undertaking to ratify the protocol. For the protocol to come into effect, 75 per cent. of the votes of exporting countries and 60 per cent. of the votes of importing countries are required. It is reported that, if the 20 cories which have signed the protocol ratify or undertake to ratify it, the addition of one more importing country will be needed for the protocol to take effect.

EXPORT OF MOLASSES

The Government of India has extended, up to the end of December next, the period of free licensing of molasses export to all permissible destinations, excluding the Portuguese possessions, against the unutilised portion of free quotas released previously. Licensing will be done till this date or until the ceiling is exhausted, whichever is earlier. The Government has, however, decided to continue the present ban on the export of *chitta* molasses to all countries, including East Pakistan, up to the end of June 1957.

BUOYANCY OF U.S. ECONOMY

IS IT TOO GOOD TO LAST?

REVIEWING the latest economic trends in the U.S., the January (1957) issue of the *Monthly Letter* of the First National City Bank of New York, observes as follows:

"The closing weeks of 1956 have brought new all-time peaks in most measures of overall business activity. The gains over the figures of a year ago, which were the highest on record up to that time, are not large in physical terms, but they are satisfying in view of the readjustment that some important industries have gone through. New highs in dollar measures of economic activity, such as gross national product and national income, are subject to the qualification that 1956 was a year of rising prices and living costs. Inflation of dollar values in itself adds nothing to real living standards and creates only an illusory prosperity. However, gains have also been made in real terms. The figures of recent weeks include new highs in industrial production, employment, and retail sales. Christmas business disappointed many merchants at the start, but final reports show that the season's sales as a whole made satisfactory gains over 1955.

"As a result of the record outpouring of goods and services, American consumers are enjoying the highest living standards in history. At the same time business and governmental bodies are adding substantially to national wealth and future productive capacity through capital investment and public works. Increases in personal consumption and in real saving—which is the source of future consumption gains—are the twin objectives of balanced economic growth. By either criterion, the country is prospering. It is also entering 1957 under good momentum. In the aggregate, demands on the economy are as large as can be satisfied, and in some key areas they exceed capacity.

The Year of 'Rising Readjustment'

"The year just ended was one of contrasts. Most of the comprehensive measures proclaim it a year of new records—$412 billion in goods and services produced, personal income totalling $325 billion, a peak of 67 million employed (nearly 70 million including the armed forces), and factory wages exceeding $2 per hour. Not all business and individuals, however, shared this prosperity in full. Laid-off auto workers, home builders, steel workers called out on strike, and business men whose profits were pinched by rising costs were among those for whom 1956 fell short of hopes.

"At this time a year ago, few observers would have believed that business could withstand a drop of one-fourth in automobile production, a 15 per cent. cut in the number of homes started, and a five-week steel strike without more serious repercussions. Adjustments were also needed or under way in agriculture and in the textile, farm machinery, and other industries.

"Yet the combined drag of these important sectors of the economy was more than offset without resorting to easy money or to Government stimulus. The strength of consumer demand for non-durable goods and services, the heavy backlog of local Government projects, and business investment needs kept the economy steady and headed upward. Not only was a general recession avoided, but gross national product—the nation's aggregate output of goods and services—rose quarter by quarter, and at the year's end had reached the record annual rate of about $422 billion, $20 billion or 5 per cent. greater than a year earlier. Perhaps, following this demonstration of the economy's ability to absorb substantial shifts in demand without interrupting overall progress, the expression 'rolling readjustment' needs to be laid aside, so far as 1956 is concerned, in favour of 'rising readjustment.'

The Capital Goods Boom

"The key to the resilience of the economy in 1956 was the capital goods boom. It is likewise the key to the 1957 outlook. During the past year and a half, rising costs and stiff competition have stimulated nearly every major industry to increase its capital outlays. Business men have shown increasing awareness of the need for expansion to serve growing markets, for modernisation as a means of saving labour and cutting costs, and for long-range planning of plant and equipment needs. In 1956, business outlays on new plant and equipment increased 22 per cent. over 1955, and, by the fourth quarter, they had reached the peak annual rate of $37.3 billion. In manufacturing alone, capital expenditures rose over 30 per cent.

"In 1957, according to a recent McGraw-Hill survey, business men expect to spend 11 per cent. more on plant and equipment than in 1956. Other surveys, both private and Government, support this finding. Since the current rate of capital outlays is roughly 8 per cent. greater than the average 1956 rate, business can achieve the goals anticipated in the McGraw-Hill survey with only a small increase over the current figure.

"It is doubtful that labour and materials could be found for a greater increase in capital spending in 1957. Necessarily business firms must tailor their plans to fit the cloth. During the greater part of 1956, they could not complete new facilities as rapidly as they had planned. Output and construction were bumping against the ceiling of capacity. Shortages of steel plates, structural shapes, and other critical items delayed deliveries by plants with orders well in excess of capacity, and difficulties in arranging financing limited what could be done. Doubtless they will continue to do so in 1957.

"Thus, a switch from rapid growth to a levelling off of capital outlays seems indicated. This need cause no dismay. A levelling off of the current rate would still produce a record-breaking investment total for 1957 and provide strong support for the economy. The same forces which are trimming the peak off the boom are also prolonging it by deferring demand to a later period. McGraw-Hill, in its survey, found that approximately $2.7 billion of 1956 investment plans had been carried over into 1957 for various reasons, and some 1957 plans already have been put off until 1958. They found little evidence of cancellation or abandonment.

"In other words, demand for capital goods has not subsided, but it is being spread out more evenly.

Flattening Out the Boom

"Such a flattening out is all to the good. It increases the possibility of a long, flat crest to the capital goods cycle, thus avoiding the dislocations which accompany a rapid contraction of demand. It also relieves some of the pressure on prices, which would otherwise accentuate the boom and bust pattern.

"Already price increases have exaggerated the upswing in plant and equipment and added to the demand for investment funds. As much as one-third of the 22 per cent. increase in capital outlays from 1955 to 1956 represented higher prices. Between the insistent demand and the push of higher labour and material costs, prices of producers' finished goods were about 8 per cent. higher in 1956 than in 1955, and construction costs on private non-residential projects were up roughly 5 per cent. In estimating their 1957 plant and equipment outlays, business men allowed for further price increases averaging 6 per cent.—more than half of the overall increase of 11 per cent. which they anticipated.

"The advance in prices would have been greater had it not been for the restraint exercised by the monetary authorities. By dampening money and credit expansion, the Federal Reserve Board has been endeavouring to hold the demand for investment goods more closely in line with capacity to produce them, and thereby restrain the bidding up of prices for the available supplies. Claims that the Board has set its face against economic growth and that the economy will be throttled by tight money, however, find no support in the foregoing evidence.

Characteristics of the 1957 Economy

"Many of the preceding comments on the capital goods outlook apply equally to the general business outlook. Overall employment and production are nearly as high as is economically feasible, limiting next year's gains largely to the growth in the labour force, industrial capacity, and productivity. Yet continuance, on the average of even the present rate of activity during 1957 would make this year the best on record.

"The development of a long and generally flat crest at a high level would not be unprecedented. The industrial production index remained virtually level for about two years in 1950-52 and for even longer in the middle twenties. In an economy pressed against the ceiling of capacity, overall stability can conceal major shifts in demand, such as the shift from consumer goods to defence production in the early fifties and from automobiles to capital goods in 1956. If contrary to current expectations, demand for plant and equipment should slacken in 1957, the steel, manpower, and long-term investment funds thus made available could be put to good use, though probably with a lag, in homebuilding or in schools, highways, and other public works.

"It is also possible that the dollar volume of business may advance appreciably in 1957, despite relative stability in physical output, thus creating an illusion of prosperity through price increases. During 1956, the overall stability of prices which had prevailed since 1952 was upset as wholesale prices advanced 4 per cent. in the course of the year and consumer prices went up 2.8 per cent. between February and November. Pressure on prices will continue into 1957. Labour costs are already slated to rise. The U.S. Bureau of Labour Statistics reports that, in the current year, five million workers will get automatic wage increases—mostly 5 to 11 cents per hour—under contracts signed in 1955 or 1956. In addition, roughly 3.8 million workers will automatically receive raises geared to increases in consumer prices. A cost of living raise of 3 cents per hour for steel workers on 1st January is expected to set the stage for steel price increases which in turn will work their way through the economy.

In a Better Shape

"In other respects, the economy enters 1957 in much better shape than it started 1956. Automobile production and farm income appear to be on the upgrade once again. Automobile dealers and steel users successfully worked down the heavy stocks that they piled up in early 1956. The number of new homes started appears to have stabilised at a lower rate, at least for the present. Backlogs of orders for durable goods, at latest reports, were 17 per cent. higher than a year earlier. Retailers emerged from a record-breaking Christmas season with expectation of sizable year-to-year increases in the months ahead. Federal, State, and local government purchases of goods and services in 1957 are expected to be $4 billion to $6 billion higher than in 1956, according to Grover Ensley, Executive Director of the Joint Economic Committee of Congress. All told, the high level of activity and the atmosphere of confidence in nearly all lines promise to send 1957 off to a running start.

"The problems of prosperity—rising prices and wages, tight money, bottlenecks in labour and materials, rising inventories, and debt expansion—also persist into 1957. There are two ways of looking at these problems. One is that they emphasise the inflationary dangers and the need of restraint. The other is that they are the traditional symptoms of advanced stages of business upswings.

"Dating from the summer of 1954, the forward movement has now lasted two and a half years—with adjustments in particular lines, to be sure, but without a significant general reaction. By historical precedent, this is a fairly long upswing, but not exceptionally so.

"Booms generally contain the seeds of their own destruction. Investments in plant and equipment in specific lines may temporarily increase capacity more rapidly than consumption rises. When this happens in marked degree, competition intensifies, markets favouring sellers change to markets favouring buyers, profit margins narrow, and both the

TURN FOR THE BETTER

TRADE FIGURES ENCOURAGING

From Our Own Correspondent

LONDON, 12*th January*

LONDON LETTER

THE steady improvement of sterling this week has been principally due to the impression that Britain's fortunes economically have now begun to mend. The change of Premiership has had a material influence in developing the improvement which had already manifested itself and, now that the December trade figures are out, sterling is likely to improve even further. Naturally, these December figures are misleading, inasmuch as the fuel shortage has only had time to show itself in a drastic cut in imports without those consequential cuts in experts which are inevitable. Thus, December's imports (C.I.F.) were £308 million, as against £336 million the year before. But the true reduction is not quite as much as appears, since a year ago there was one additional working day, to allow for which would wipe out about half of the difference between the two figures. By the same token, the export figures, which for December 1956 record £254 million, the same as in December 1955, means a real improvement of some £10 million.

But it is the figures for the year as a whole which give the best picture. Here they are for 1956:—

(In million £'s)

Quarter	*Imports* (C.I.F.)	*Exports* (F.O.B.)	*Re-exports* (F.O.B.)
First	985	775	41
Second ...	992	816	39
Third	937	742	27
Fourth ...	982	840	39
	3,896	3,173	146

The corresponding figures for 1955 were:—

First	1,005	742	32
Second ...	899	651	25
Third	981	730	29
Fourth ...	1,011	784	33
	3,896	2,907	119

It will be seen that imports overall in 1956 showed no change over the total for the previous year, the drop in the last quarter having been countered in advance by higher figures in the first half-year. But when account is taken of a 2 per cent. rise in 1956 import prices, the *volume* of imports has been reduced by a corresponding percentage.

It is, on the other hand, encouraging to find that U.K. exports and re-exports in 1956 were nearly £300 million higher, an increase just under 10 per cent. But prices have had their effect here too and, if these are discounted by the average rise of 4 per cent. over the year, then the effective increase in the *volume* of exports is about 6 per cent.

In 1955, the adverse balance of payments on visible account—taking imports C.I.F. and exports F.O.B.—was some £870 million. In 1956, the deficit was about £576 million, that is, an improvement not far short of £300 million. This deficit is indeed rather less than the 1954 deficit of £600 million. In 1954, the overall balance of payments showed a surplus rather better than £200 million and a similar result is therefore *possible* for 1956, even allowing for the additional external costs of the Suez war.

But it is difficult to guess the extent to which invisible income will have suffered in the last quarter of 1956 and the country could well be gratified to find that some part of the first half-year's overall surplus of £140 million still remained when all the accounting for the year has been done.—*All Rights Reserved.*

FORUM OF FREE ENTERPRISE

CODE OF CONDUCT

This Code of Conduct for Free Enterprise has been prepared by the Forum of Free Enterprise and is now placed before industrialists, business men and those belonging to different professions and vocations in India in the belief that they will find it worthy of acceptance and of application in their daily activities. The Forum pledges itself to do all it can to create a widespread awareness in the ranks of Free Enterprise of the obligations that are contained in this Code. We feel that Free Enterprise, which has been tested and proved by time and experience of all democratic societies, should maintain its reputation by insisting on high standards of integrity which are dictated by social purpose. Honesty, hard work, courtesy and continuous initiative are the foundations on which the edifice of Free Enterprise rests.

PRODUCERS and distributors owe it to the consumers of their products that they shall always be of the highest quality and available at reasonable cost. They shall maintain fair measure and guard against adulteration. Customers are entitled to courtesy, promptness and good service, and every endeavour shall be made to see that they receive them.

EMPLOYERS owe it to labour to recognise that welfare is not conceived in terms of philanthropy, but as a social obligation. Men and women engaged in production shall do so with dignity, honour and a sense of security. Fair wages should be paid for work done. Working conditions shall be as pleasant as possible. Opportunities should be made available for the worker to gain technical skills and better his economic prospects and social status. Procedures should be instituted for the removal of legitimate grievances so that the employee is satisfied that he gets a fair deal. The employers should welcome the existence of stable and democratic trade unions. They should recognise that in the sphere of employee-management relations, as in other spheres, checks and balances are essential for the working out of rational and democratic solutions. They should accept the role of labour as one of creative co-operation and recognise the need for providing increasing opportunities for consultation of employees and their progressive association with Management to help in the promotion of increased productivity from which all will benefit.

MANAGEMENT owes it to those who invest in their enterprise that they receive a fair return on their investments commensurate with the risk they take. At the same time, reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research. The earning by the shareholder of a fair return or profit by the entrepreneur under competitive conditions and after payment of fair wages must be regarded as a legitimate reward for the risk and the work of promotion and development which the community urgently needs. Certain mal-practices have crept into the system of company management. They are to be condemned and should be removed. Hoarding, black-marketing and profiteering are anti-social and evil. Honest business practices can be promoted and encouraged by an honest and efficient administration in a democratic State.

PROFESSIONAL MEN—lawyers, teachers, doctors, auditors, or writers—owe it to those who avail themselves of their services to maintain the highest standards and traditions. They should discharge their duties truly and faithfully, and should always subordinate considerations of personal gain to the larger objective of service.

WE ALL owe it to the community that we accept our obligations as good citizens. We shall bear our share of taxation honestly. We condemn unequivocally any attempt at tax evasion. We shall actively participate in the promotion of social, cultural and civic improvements. Wealth or power shall not be a justification for vainglory or ostentatious display, but an opportunity for rendering service to the community.

MORE BUMPER BANK RESULTS

DIVIDENDS STEPPED UP

THE string of further bank results for the year ended 31st December 1956 released this week confirms the earlier impression that the past year must have been a highly favourable one for banks. Many of them have stepped up the dividends, after raising substantially the allocations to reserves and taxation.

United Commercial Bank

The United Commercial Bank Ltd. has earned a profit (subject to audit) of Rs. 56.24 lakhs, the highest earned so far in the history of the Bank. It also represents an increase of Rs. 19.55 lakhs, or more than 53 per cent. over the previous record of Rs. 36.69 lakhs earned in 1955. This is the third year in succession for which the Bank has maintained the uptrend in profit, such having gone up from Rs. 23.01 lakhs for 1953. Following the substantial increase in profit for the year under review, the Directors have stepped up the allocation to the reserve fund from Rs. 8.50 lakhs to as much as Rs. 20 lakhs and that to the reserve for taxation from Rs. 14 lakhs to Rs. 16 lakhs. They have also raised the distribution of bonus to staff from Rs. 4 lakhs to Rs. 6.50 lakhs. An increase in the dividend from Rs. 2-12 to a record level of Rs. 3-8 per share, that is, from 5½ per cent. to 7 per cent. per annum, free of income-tax, has also been recommended. This is also the third year in succession for which the distribution to the shareholders is being raised, having been successively stepped up from 4 per cent. paid for 1953. The proposed dividend for 1956 will absorb Rs. 14 lakhs (as against Rs. 11 lakhs for 1955), leaving to be carried forward Rs. 29,420 to the next account, as against Rs. 27,761 brought in.

Bank of Baroda

A rise of Rs. 10.25 lakhs to Rs. 39.90 lakhs is disclosed by the profit (subject to audit) of the Bank of Baroda Ltd. for the year 1956. The profit is a record one for the Bank exceeding the previous high of Rs. 31.98 lakhs earned in 1949 by no less than Rs. 7.92 lakhs. The Directors have set aside Rs. 15.75 lakhs towards provision for taxation, as against Rs. 9 lakhs provided last year, and have raised the allocation to bonus to staff from Rs. 8 lakhs to Rs. 8.75 lakhs. An *ad-interim* dividend of 6 per cent. was paid for the half-year ended 30th June 1956, raising it from 5 per cent. paid for the corresponding six months of 1955. The Directors have recommended a final distribution of 8 per cent. for the half-year ended 31st December 1956, as against 7 per cent. paid a year ago, making in all 14 per cent. for the year, as compared with 12 per cent. paid for 1955. The dividend absorbs in all Rs. 14 lakhs, leaving a surplus of Rs. 4.76 lakhs to be carried forward, as against Rs. 3.36 lakhs brought in.

Indian Overseas Bank

Yet another bank to announce impressive results for the past year and to raise the dividend sizably is the Indian Overseas Bank Ltd. The profit, after providing for contingencies and expenses and subject to audit, amounts to Rs. 28.65 lakhs, an increase of Rs. 12.09 lakhs over that for 1955, at Rs. 16.56 lakhs. What is more encouraging is the striking progress made by the Bank in its earnings in recent years, the profit having successively gone up from a mere Rs. 5.35 lakhs in 1949, a more than fivefold rise in seven years. As compared with last year, the Directors have nearly doubled the provision for taxation from Rs. 7.50 lakhs to Rs. 14 lakhs, raised the transfer to the reserve fund from Rs. 4 lakhs to Rs. 6 lakhs and the bonus to staff from Rs. 1.25 lakhs to Rs. 3.50 lakhs. The dividend is proposed to be stepped up to 10 per cent., free of income-tax, from 7½ per cent. paid for 1955, absorbing Rs. 4.91 lakhs, as against Rs. 3.68 lakhs in the previous year, leaving to be carried forward Rs. 2.52 lakhs, as against Rs. 2.28 lakhs.

Hind Bank

A fresh record profit of Rs. 12.11 lakhs has resulted from the working of the Hind Bank Ltd. during the year 1956. This exceeds the previous best of Rs. 10.86 lakhs for 1955. With the sum of Rs. 1.66 lakhs brought in, the amount available for appropriation is Rs. 13.77 lakhs, from which the Directors have transferred to the reserve fund Rs. 3.75 lakhs, raising this allocation from Rs. 2.50 lakhs made last year, and have made a provision of Rs. 4.50 lakhs (as against Rs. 4 lakhs a year ago) for taxation. Bonus to staff absorbs Rs. 90,000, as compared with Rs. 83,000 provided last year. The dividend is proposed to be maintained at Rs. 3 per share of Rs. 50 each, or 6 per cent. per annum, free of income-tax, to which level it had been raised last year from 3 per cent. paid for 1954 and 1953. The surplus left to be carried forward is Rs. 1.62 lakhs.

Bank of Maharashtra

The net profit of the Bank of Maharashtra Ltd. for the year 1956 (subject to audit) also is higher at Rs. 4,01,214, as compared with Rs. 3,46,103 for the previous year. This profit is arrived at after providing Rs. 60,000 for payment of bonus to staff and making other usual and necessary provisions. With a sum of Rs. 31,744 brought in from 1955, the amount available for appropriation is Rs. 4,32,958, from which the Directors have transferred to the reserve fund Rs. 1,25,000 (as against Rs. 1,00,000 a year ago) and to the provision for taxation Rs. 1,80,000 (Rs. 1,70,000). They have also recommended an increase in the distribution to the shareholders from 5 per cent. per annum, free of income-tax, to 6 per cent. per annum, which will absorb Rs. 96,000 (Rs. 80,000). All these appropriations leave a balance of Rs. 31,958 to be carried forward.

Andhra Bank

The results of the Andhra Bank Ltd. also are encouraging. The net profit has more than doubled from Rs. 4.28 lakhs to Rs. 9.43 lakhs, after payment of 1½ months' substantive salary as bonus to staff and making necessary provision for contingencies. The Directors had already declared an interim dividend of 3¾ per cent., raising it from 3 per cent. paid for the half-year ended 30th June 1955 and absorbing Rs. 1.30 lakhs (as against Rs. 89,000). The transfer to the reserve fund is being increased from Rs. 86,000 to Rs. 1.03 lakhs, leaving for final appropriation Rs. 7.23 lakhs, including Rs. 12,375 brought in from 1955.

INFLATION IN THE NETHERLANDS

Private enterprise in the Netherlands has agreed to co-operate with the Government in the latter's efforts to keep inflation under check. The Government's programme includes price controls and stabilisation programme drawn up by the Ministry of Economic affairs. Following the decision of the four employer associations to co-operate with the Government, the latter imposed price ceilings which will amount to reductions in the prices of certain food items and other consumer goods at the expense of the profit margins of manufacturers.

The two basic principles agreed to by the industry are (*a*) no prices will be raised without the approval of the Government, and (*b*) the justification for increasing prices will be rising costs of imported raw materials and not increases in wages. In other words, higher wages will be met by accepting lower profit per unit.

The co-operation of the trade unions will also be forthcoming under the tripartite anti-inflationary agreement reached earlier. Accordingly, the unions will not seek wage increases to compensate for rising prices resulting from increased price of raw materials. They will also contribute money to the expansion of old age pension programme. The Government also agreed to cut its expenditures.

The Dutch Government, a coalition of four parties, is one of the most progressive governments. The co-operation between the Government, labour and industry has been largely responsible for the success of the wage and price stabilisation programmes since the war.

GERMAN BANK RATE REDUCED

The Central Banking Council of the Federal Republic of Germany has reduced the discount rate from 5 per cent. to 4½ per cent. and the rate of advances on securities by a similar extent to 5½ per cent., with effect from 11th January 1957. This is the second cut in bank rate in the last five months, the previous reduction having been made in September 1956 from 5½ per cent. to 5 per cent. With the latest reduction, the discount rate has been restored to the level which had prevailed in May last, when it was suddenly raised to 5½ per cent. and brought in severe criticism from the Federal Chancellor, Dr. Adenauer.

During the last 18 months, the German bank rate has been changed five times. Thus, in August 1955, it was raised from 3 to 3½ per cent.; in March 1956 to 4½ per cent. and by a further 1 per cent. to 5½ per cent. in May last. After this, it was reduced to 5 per cent. in September last and again last week to 4½ per cent.

The Central Banking Council's latest decision has been prompted by the relative glut in the money market, which made the discount rate unrealistic, and by the slowing down of the boom in the capital goods and building trades, which are reflected in unemployment figures. Even the present rate of 4½ per cent. is considered by Dr. Erhard, Minister for Economics, as fairly high for a creditor country.

CO-OPERATION IN THE COMMONWEALTH

By Margaret Digby

THE Co-operative Movement began in Britain in the mid-nineteenth century, and was carried at a very early date to Canada and Australia by English and Scottish emigrants, often miners. They began by forming consumers' co-operatives, such as they had known at home, and some of these still exist. The greatest need for co-operative action in these new countries, however, was in the field of agriculture. The pioneer farmers of Canada, Australia and New Zealand were far from their markets; produce must pass through many hands before it could reach the consumer. It had to be cleaned, weighed, often processed and packed, and complicated arrangement had to be made for transporting it by land and sea. All this was beyond the capacity of the individual farmer; yet to leave it all to commercial companies could have been to reduce the farmer to economic weakness.

Producers Co-operatives

The first co-operative organisations in these countries were creameries, where milk, produced too far from a town to find a market in its liquid state, was transformed into butter or cheese which could be exported half across the world. Today almost the whole dairy industry of New Zealand and a large part of that of Canada and Australia is carried on co-operatively.

Canada is one of the four great wheat-exporting countries of the world. Co-operation among the grain growers of the prairies began with the discovery that, if two or more neighbouring farmers combined to fill a railway wagon with their wheat, they could get better terms from the railway. They went on to form larger groups, to register them as co-operatives and to build elevators alongside the railway at which grain could be stored, cleaned, conditioned and graded before shipment.

Today, well over half the wheat of the prairies is co-operatively handled. The same system has been applied to other commodities—fruit, wool, livestock, eggs. Not only the farmers, but the fishermen of Canada have their co-operatives.

Consumers' co-operation for domestic purposes has never made as much progress in the other Commonwealth countries as in Britain, but the supply of agricultural requirements has become of great importance, especially in Canada. Farms in these countries are large by European or Asian standards, and can be operated economically only with the use of tractors and other machines.

The supply of machinery and of the oil and lubricants needed to keep it running is of first importance to agriculture, and this has, to a large extent, been taken over by farmers' co-operatives which own their own oil wells, refineries, storage tanks and pumps. They also sell machinery and manufacture certain types in their own factories.

Financial Backing

For many years, there was little co-operative credit in these countries, perhaps because advances to new settlers were available from Government funds. In recent years, however, a vigorous co-operative thrift and credit movement has spread throughout Canada. It is entirely self-supporting, based on the savings of the members, from which loans are made for productive and provident purposes.

Co-operative insurance for life and property has existed for many years. A quite recent development has been in the co-operative use of land. Sometimes family groups, sometimes groups of young men breaking in new land for the first time have agreed to pool their holdings, stock and machinery and farm as a single unit. These experiments are all fairly new and may not be permanent, but they show a vigorous and imaginative use of the co-operative idea.

India was the first of the Asian countries to turn to co-operation as a solution for the problems of agriculture. They differed considerably from those of the newly-settled countries overseas. Holdings were too small, not too large, for the families which farmed them, and were often fragmented; methods had changed little for centuries; the cultivator was burdened with debt and often at the mercy of the merchant who bought his produce and advanced him money. It was this last problem which was first tackled by co-operative means.

The first idea of co-operation originated in Britain, but, in spreading to other European countries, it took on new forms. Germany, in particular, developed, during the second half of the nineteenth century, an admirable system of co-operative credit for the benefit of small peasant farmers. It was this which Indian administrators 60 years ago studied, approved and eventually transplanted to India.

The Indian co-operative movement is mainly, though not wholly, agricultural. It flourished especially in the Punjab, in Bombay and Madras. One form at least, the co-operative marketing of sugarcane, has had its most brilliant success in Uttar Pradesh, and there are few regions of either India or Pakistan which could not point to villages in which some co-operative organisation—a thrift and credit society, a dairy, a weavers' co-operative, a health society, a co-operative for the consolidation of fragmented holdings—has not altered for the better the life of the people. In the towns, there are the urban co-operative banks, the housing and building societies, as well as craftsmen's and consumers' societies with long records of useful work.

State Participation

There are still, however, many towns and villages in the sub-continent which co-operation has not yet reached, and classes of the population which have not been able to take full advantage of its benefits. The Government of India has recently adopted the recommendations of a Committee set up to inquire into the problems of rural credit and has embodied those recommendations in its second Five-year Plan.

They call for a larger participation of the State in co-operative enterprise through the provision of finance and of trained personnel. More attention than before will be paid to the marketing and processing of agricultural produce, and to the improvement of actual production either by the supply of fertilisers, insecticides or improved implements, or by the co-operative grouping of farms for the use of machinery and the planning of satisfactory crop rotation.

From the Indian sub-continent, co-operation spread more than 40 years ago to Ceylon. There, working in a smaller community, it was possible for the pioneers of co-operation to achieve remarkable results, not only in the basic thrift and credit organisation, but in the marketing and processing of coconuts, tobacco, fruit, vegetables and other island products, and in social enterprises such as the establishment of co-operative hospitals and health services.

During the Second World War, when Ceylon was for a time threatened with blockade, an island-wide system of consumer co-operatives was rapidly built up to undertake the rationing and distribution of food. Not all of this has stood, or was indeed meant to stand, the return of more normal trading conditions, but a network of town and village stores remains. More recently, co-operation has been adapted to the needs of settlers on the newly-cleared and irrigated jungle lands, as well as to the services of craftsmen and craftswomen in the traditional Ceylonese industries of weaving and basket-making.

Co-operation today is making rapid progress in the Commonwealth territories in Africa, South-East Asia and the West Indies. A substantial part of the cocoa crop of Nigeria and the Gold Coast (all of which is the product of African farms) is co-operatively marketed, and the same is true of the coffee of Tanganyika and the cotton and tobacco of Uganda. Some of the organisations concerned are strong federations under entirely African management. One has been in existence for 20 years or more. The official co-operative departments in all these territories are also almost wholly staffed by people of the country they serve.

In order to train the staffs of co-operative departments and societies, co-operative training colleges and institutes have been set up in India, Ceylon, Malaya and East and West Africa. In addition, every year a group of selected students, both official and non-official, spend a year at the Co-operative College in England, where they have an opportunity not only to study co-operative law and business, but to visit industrial and agricultural co-operatives and to mix with the coming generation of co-operative administrators in Britain. They in their turn have awakened among their fellow-students a keen interest in co-operation in the other Commonwealth countries.

The link between co-operatives throughout the Commonwealth is further strengthened by the membership of overseas co-operative unions in international co-operative organisations with their headquarters in London, and through participation in gatherings such as the Commonwealth Conference on Agricultural Co-operation held at Oxford six years ago.

U.S. AID TO INDIA

On 5th January this year, the U.S. completed the fifth year of its economic aid programme for India. To celebrate this occasion the U.S.I.S. in New Delhi has brought out a small booklet full of statistics and charts and capsule reports on Indian-U.S. projects. The booklet shows that there are 63 operational agreements between the U.S. and India. They range from locust control to railroad maintenance. The fields covered include agriculture, mining, industrial labour, health, community development and public administration projects.

Since January 1952, the United States has lent, or given to India, or committed itself to do so, a total of $326 million. This is in addition to the large food loan agreements and private foundation help that bring the grand total of gifts and loans to about one billion dollars. At the same time India's contribution to joint projects amounted to an equivalent of $775 million.

It is also interesting to note that direct U.S. aid to India's first Five-year Plan amounted to almost 8 per cent. of the total expenditure. The largest proportion of the contribution went to agriculture and commmunity development.

HONGKONG AND SHANGHAI BANK

The profit of the Hongkong and Shanghai Banking Corporation for the past year, after provision for taxation, amounts to H.K.$20.64 million (approximately £1.29 million), as compared with H.K.$20.58 million for 1955. The Directors had already declared an interim dividend of £2 per share, same for the previous year, and have now recommended a final dividend of £3 per share, also same as that for 1955. They have written off Bank premises H.K.$4 million (approximately £250,000), as in the previous year, leaving a balance of H.K.$11.04 million (approximately £690,000), to be carried forward, including H.K.$10.61 million brought in from 1955.

The Banking Companies (Amendment) Act 1956 has come into force with effect from 14th January 1957.

INTRODUCTION OF POWERLOOMS

OPPOSITION MEANINGLESS

THE Government of India has approved of schemes submitted by five States, namely, Bombay, Kerala, Rajasthan, Bihar and Madhya Pradesh for the installation of 6,055 powerlooms in the non-mill sector (that is, handloom sector) of the textile industry. This is the second batch of such schemes so far approved, since the Union Government decided to introduce 35,000 powerlooms during the current and the next financial year. The two previous schemes approved were those of the Punjab and Bombay Governments, under which the former envisaged the introduction of 500 looms and the latter of 600 looms in their respective territories. Under the newly approved scheme, Bombay State envisages the introduction of 2,500 powerlooms in the co-operative field. The scheme for Kerala is for the installation of 2,000 powerlooms and for the training of 20 instructors for six months. In Rajasthan, 800 powerlooms are to be installed in the co-operative sector and six instructors are to be trained. In Bihar, 300 powerlooms are to be established and in Madhya Pradesh 455 powerlooms will be installed. The schemes of some other States are also under consideration.

Financial assistance, in the form of loans and grants, is being provided to the State Governments on a liberal scale. Powerlooms are to be installed only in co-operatives. The Centre will give loans upto 87½ per cent. of the share capital of each weaver and provide loans to meet the cost of powerlooms, electric motors, etc., as well as for working capital. The Bombay Government has been sanctioned a loan of Rs. 23,30,000 and a grant of over Rs. 1,73,000 while the Kerala Government has been given a grant of Rs. 2,06,000 and a loan of Rs. 19,33,300. Rajasthan gets a loan of Rs. 7,17,000 and a small grant. Bihar has been given a grant of Rs. 46,000 and a loan of Rs. 3,13,500, while Madhya Pradesh has been sanctioned a loan of Rs. 4,31,500 and a grant of Rs. 28,000.

Fear of Unemployment Unfounded

The object of the powerloom scheme is to increase the productivity of the weavers and thereby their earnings. Since low productivity is the basic defect of the handloom industry, any measure designed to augment it must be widely welcomed. But vigorous opposition to this measure has been voiced by organised handloom interests in some States, especially Madras and Andhra. The spokesmen of handloom weavers contend that each powerloom would displace 20 handlooms. This view, presumably based on the Kanungo Committee's formula, not only exaggerates the productive capacity of powerlooms in small decentralised units but also ignores the important fact that the demand for cloth is sure to increase as the income of the people increases under the impact of the large volume of Plan outlay in the coming years. Opposition to the improvement of the technique of production, as this journal has always maintained, stems from the refusal of the self-appointed exponents of the handloom industry to see beyond their nose. The fear that mechanisation of handloom weaving will result in large-scale unemployment is unfounded, especially in view of the extremely cautious, if not halting, policy of the Government. It is common knowledge that the authorities have repeatedly stated that the introduction of powerlooms will be gradual and so phased as to ensure full employment for all the existing handloom weavers. It may be recalled that the output allocation for the powerlooms in the scheme for increased production of cloth under the second Plan is only 200 million yards, whereas the corresponding figure for the handlooms is 700 million yards. In other words, while the powerlooms in the handloom sector will produce only 200 million yards, the handlooms as they are now are to produce no less than 2,500 million yards. It will thus be seen that the apprehension of handloom interests is unwarranted.

There is a point of view, shared to some extent by the Government, that, with its outmoded forms of production, the handloom sector would not be able to hit the target of 2,500 million yards set for it in the second Plan. Exponents of old handlooms hold that it is possible to achieve the target. The divergence between the two views appears to arise from the fact that, whereas the Government estimates the total number of handlooms in the country at about 1.24 million, the weavers' spokesmen have placed them at 2.8 million. While the exact number is not known, the claim of the old handloom sector that it can achieve the target allotted without the aid of powerlooms, cannot be taken at its face value. For, even with the enormous amount of Government subsidies, annual production of handloom cloth is only at the rate of 1,500 to 1,600 million yards and it is extremely doubtful whether they can raise their production by about 1,000 million yards in the next four years and two months without resorting to better machinery like the powerlooms. Even if the changeover were to result in the displacement of some persons from behind the weaving looms, they would be easily absorbed in other ancillary operations such as processing and marketing. The opposition of the weavers' spokesmen is, therefore, ill-advised and the Madras and Andhra Governments would do well to take advantage of the liberal grants and loans offered by the Union Government for increasing the productivity of the handloom industry.

AID TO HANDLOOM WEAVERS

The Andhra State Handloom Weavers' Association had recently made representation to the State Government for the sanction of Rs. 10 lakhs to enable them to purchase the accumulated stocks of handloom cloth from the primary weavers' societies. While the question is under the active consideration of the Government, it is reported that the authorities are favourably impressed by the need for relieving the hardship of weavers. The Government is also examining to what extent the All-India Handloom Board could purchase these stocks from the primary societies in Andhra and would, after proper consideration, advise the Board to take appropriate measures.

The Government would also take steps to audit the accounts of the weavers' co-operative societies in Telengana. It may be observed in this connection that a special officer who had been deputed to study the affairs of these societies had reported to the Government that the accounts of these societies had not been audited for three years.

The Government of West Bengal has decided to exempt all handloom products from the purview of the sales tax, with immediate effect. It may be recalled that, of late, there had been a good deal of agitation among retail cloth and textile merchants all over the State demanding complete withdrawal of sales tax on handloom products. The exemption, it has been calculated, would entail a loss of Rs. 6 lakhs to the State exchequer.

Cloth production during December 1956, according to preliminary figures, amounted to 475 million yards, the highest monthly output since July 1956, when it aggregated 467 million yards. This raises the total production in 1956 to record figure of 5,277 million yards, an increase of 183 million yards over the output in the previous year.

WORLD CONSUMPTION OF WOOL

DEMAND KEEPS PACE WITH INCREASED PRODUCTION

THERE is reason to believe that world wool consumption during 1956 maintained one of the highest levels of recent years. Final figures will not be available for some time, but estimates upto the end of September prepared by the Commonwealth Economic Committee—and based on the returns of 11 countries which together absorb the greater proportion of the world's wool—show that their combined consumption up to that time was at a rate nearly 10 per cent. higher than in the corresponding period of the previous year. As some of the larger consuming countries are known to have increased their performance in subsequent months, it becomes a reasonable expectation that world wool consumption for 1956 may produce one of the highest aggregate totals of post-war years.

Up to a late stage of 1966, wool consumption in the U.S.A. was holding a level 9.4 per cent. greater than in the similar period of 1955, while that of France was up by 12 per cent., West Germany by 8 per cent., Japan by no less than 36 per cent. and Italy by 8.8 per cent. The figures for the United Kingdom showed little change on the previous year, though it comfortably maintained its position as the largest wool consumer in the world.

At the current rate, world wool consumption exceeds, by about one-third, the estimated average consumption of the immediate pre-war years, and this figure is interesting, in view of the increase in the world's production of wool during recent years. The Commonwealth Economic Committee has estimated world wool output for the 1955-56 season lately concluded—and from which 1956 demand for wool would substantially be met—at an all-time record level of 4,800 million lbs. (greasy basis), with an estimated clean equivalent of 2,724 million lbs. The most recent estimates of probable consumption during 1956 suggest that this vast supply will substantially be absorbed. All the available indications are that there is a state of close balance between supplies and demand.

Despite a succession of problems and difficulties for industry, of which wool and its related trades had their full share, the output of wool goods from the mills of Britain and Continental Europe—which together house approximately half the wool-using machinery of the world—has been maintained at a very satisfactory level. Figures available to the end of November suggest the virtual certainty that Britain's exports of wool tops for 1956 will exceed the previous record set in 1955.

The general direction of wool consumption indicates a changing trend in fashion from woollens to worsteds, and there have been occasions during 1956 when worsted spinning output in the U.K. has touched the highest rate since the war. Exports of wool cloth from all the principal supplying countries have been substantial while reflecting increasingly severe competition for the business available.

Recent political uncertainties created by the situation in West Asia produced a large amount of business in wool, tops and yarns in all the larger consuming countries and, in nearly all cases, the year 1957 will open with well-filled order books which promise a healthy rate of mill output for some months to come. The immediate outlook for the wool and allied trades is, therefore, viewed with confidence. Meanwhile, commercial hopes are centred in the gradual development of more settled international political conditions which are regarded as essential to continued stable business.

Wool, as one of the most universally used of world commodities, is ultimately dependent, to a large extent, on settled international conditions, if the maximum flow of trade between nations is to be encouraged. On such a flow the prosperity of the wool industry depends. Given such conditions, prospects for the coming year are viewed with optimism, as stocks of wool in most consuming countries are relatively low at the turn of the year and prospective demand for the products of the industry is regarded as good.

An increase of about 14 per cent. in shipping freight rates between Australia and Europe is under consideration. It is calculated in Yorkshire that such an increase would add something less than 1d. per lb. to the cost of freighting greasy wool from Australia to the U.K. and Continental European ports.

CHANGES IN FUTURES TRADING IN COTTON REVIEWED

PROMOTIONAL AID FOR TEXTILE GOODS

From Our Special Correspondent

MANCHESTER, *8th January*

IT used to be said of the Liverpool futures market that it successfully acted as a barometer, indicating the general level of activity in Lancashire cotton goods. Despite the many efforts which have been made in the past two and a half years since the market was resuscitated, such a statement is only partly true today.

MANCHESTER LETTER

Latest figures showing the contracts accepted for clearance during December represent the lowest daily average since the reopening of trading in futures in May 1954. This was in marked contrast to the situation in the two previous months when business broadened perceptibly and there was a sharp increase in the turnover at Liverpool.

Some observers regard this as an example of the way in which the minds of present-day operators in Lancashire work. Spinners are inclined to the belief that a well-filled order book presents a better insurance against risk than either the Liverpool or the New York futures markets can provide. So times change and values of the past lose their former importance.

Those responsible for organising the futures markets, however, have done a great deal to bring their mechanism up-to-date and the Liverpool Cotton Association has been particularly ready to adjust its contracts to meet modern needs. Since its revival there have been several shifts in policy, resulting in the establishment of a contract against which mixed American type cotton can be tendered, the provision of a long-staple Egyptian contract and the first-ever Sudan contract. Only this week, a revision in the basis for Sudan futures has brought a change of procedure, as Lambert cotton is now being used as the base compared with Sakel, which was the original choice.

U.S. Cotton Policy

One of the major handicaps which has complicated the efforts of raw cotton traders to achieve their objectives during recent years has been the prolonged era of uncertainty surrounding the intentions of the American Government with regard to its surplus stocks. Under the arrangement providing for competitive bids which operated during the second half of 1956 a large part of the accumulation of supplies was earmarked for overseas shipment. At the end of the year the amount so sold amounted to 6,231,053 bales and actual exports were 2,561,943 bales in the first five months of the season, as against only 664,573 bales in the same period a year previously.

British manufacturers, instead of trying to produce inferior goods to compete with Eastern products, will need all the traditional skill of their craftsmen to pass the standards demanded on the Continent, according to the Annual Report of the Europe Section of the Manchester Chamber of Commerce.

Many parts of Western Europe enjoy a better standard of living than is found in Britain while their industries have benefited from assistance in legislation or moderate taxation brought in to aid exporters.

The need for urgent action to stimulate trade with Europe has been brought into relief by the dislocation of inter-Continental trade caused by the Suez dispute, the report adds. "Long lines of communication are always a danger, especially in a world which is constantly changing both politically and economically."

Finishing Rates Up?

Higher charges for textile finishing because of increasing costs were forecast in the report to the annual meeting of the Finishing and Allied Trades Section of the Manchester Chamber of Commerce. These included "the seemingly perpetual rise" in the price of coal and increases in dyestuffs, chemicals, engineering materials and power supplies.

Japanese "pirating" of Lancashire textile designs has dwindled recently, according to the India Section of the Manchester Chamber of Commerce. Mr. Frank S. Winterbottom, the Chairman, reporting "very fierce" Japanese competition in cotton textiles in Ceylon, told the annual meeting: "A large number of well-established U.K. designs have been copied by Japanese printers but this form of unfair competition has been less pronounced in recent months."

Sales promotion of textile goods has been widely debated in recent years and many traders believe that the best way to achieve progress is to gain a larger share of the available surplus cash at the disposal of the customer. Competition between the distributor of textiles and other consumer goods is therefore tending to increase.

One of the methods adopted in carrying out this object is the wider use of market research and campaigns to promote selling of textiles. The authorities in America have for long been keen on this idea and have lately fired the enthusiasm of European textile producing countries. In this connection, the International Cotton Federation has lately stressed the urgent need for expanded research into consumer habits. Several Continental countries are planning campaigns of this kind, most of them with the technical assistance of the National Cotton Council of America.

So much is generally known, but it is not so widely recognised that part of this promotional drive is being financed by the United States Department of Agriculture from funds raised through the disposal of surplus cotton. Nine nations—France, Austria, Belgium, Germany Italy, the Netherlands, Spain, Sweden and Japan—are participating in programmes to stimulate the sale of textile goods in this way.

Financial aid is being obtained after American cotton is purchased and paid for in the currency of the consuming country. The funds are retained and made available for promotional activities on condition that the local textile industry provides an equal sum for such purposes. A long-term programme of at least three years' duration must be mapped out.

Britain has so far taken no part in this arrangement although there is no reason why a similar scheme should not be adopted in the future. The current programme under the "Buy Britain's Cottons" slogan has been financed by the various trade organisations of employers and unions, together with the Cotton Board.

Mills Working Hard

Revived demand and lengthening order books in the Lancashire cotton spinning trade were the features of the final quarter of 1956, according to the Annual Report of the Yarn Section of the Manchester Chamber of Commerce.

"Many mills are now working as near to capacity as the labour position will allow," Mr. Stephen A. Howarth, the Chairman, said. The better demand was mainly for the home market but export trade also participated in the trend. The industry, however, continued to encounter serious and still growing competition from imported cloth, yarn and made-up textiles.

Although trade with the main European markets was disappointing last year, a useful increase occurred in exports of yarn to the United States.

Rayon Price Rise

Dearer rates for continuous filament viscose and acetate rayon yarn were announced to operate from 7th January by Courtaulds Ltd. This move was not unexpected in the British textile industry and it is confidently predicted that other producers will now follow the lead given by this major group in the man-made fibres industry.

Even before recent transport and other charges went up it was felt that an advance in rayon yarn was inevitable. It is six years since quotations have been revised and the leading producers have been able to achieve this stability because they believe in working on very narrow profit margins.

Some of the smaller firms in this section of the trade have recently complained about the difficulty of keeping prices down. There is now no agreement on fixed selling rates but the minor producers have been reluctant to raise their quotations in the fear that they would lose business to the bigger firms.

No advance has occurred in the price of staple fibre or in yarns for industrial purposes, which include the vast turnover in tyre cord fabric which represents a large proportion of rayon yarn output. Weavers, like most other sections of the textile industry, are at present well sold and most have order books filled for at least three months ahead.

The new prices will only become effective for new contracts so that there has been no immediate rise in the cost of finished goods.—*All Rights Reserved.*

SALE OF U.S. SURPLUS COTTON

GREAT SUCCESS RECORDED—OUTLOOK FOR CURRENT SEASON

THE surplus cotton disposal policy of the U.S. Department of Agriculture has been a remarkable success, as is evidenced by the mounting volume of export sales that are being effected by the Commodity Credit Corporation. Exports till the end of December 1956 aggregated over six million bales, and present indications are that the trend is likely to be maintained during the rest of the season. A point that deserves special mention, in this connection, is that the C.C.C. was able to effect these sales without any serious disturbance to the world markets, as was feared by a number of countries when President Eisenhower gave his assent to the policy in May 1956. They had apprehended that the dumping of U.S. cotton abroad would bring about a breakdown of the normal trade of other exporting countries. But what has actually happened is that, even though the original export target has been exceeded, prices continue to rule firm—a development which proves that the opponents of the policy were false prophets. The U.S. had lost its export markets because its prices were too high and it is winning them back by becoming the cheapest seller. But it must be said to the credit of the C.C.C. that, though it has the legal sanction to cut its price to compete effectively with foreign countries, it has used the power with considerable restraint, lest it should undermine world market for cloth and cotton to an extent as to defeat its purpose.

Observers of the scene in the U.S. now feel that exports of American cotton may aggregate no less than seven million bales this season. This is, indeed, a startling turnround from views which were being expressed not very long ago. The sponsors of a two-price programme in America had earlier suggested tentatively a goal of five million bales for export. But the actual operation of the programme has shown that the earlier calculations were an underestimate. Certainly, the way was clear for a larger movement of American cotton from the U.S. through the depletion of stocks in many consuming areas. Further, the recent revival of buying fervour and the political disturbances in West Asia and the blocking of traffic through the Suez Canal changed the entire situation for the better in respect of U.S. cotton. In fact, the Suez crisis has had a profound effect on world cotton situation. It is estimated that about 1.5 million bales of cotton passed through the Suez Canal in 1955—in large part westward—and that it costs roughly half a cent to a cent per lb. more and takes a month longer for cotton to move from the East to West European destinations *via* the Cape route. This not only made the supply of sterling area cotton scarce in West European markets but also made U.S. growths, attractive to Continental buyers, pricewise.

Some Other Factors

There were also a few other factors which directly contributed to the increase in the U.S.'s cotton exports. These were an improvement in the textile outlook in some importing countries, greater confidence in the ruling level of cotton prices and the need for stock replenishments. Thus, cotton exports in August and September, that is, even before the Suez crisis, were easily the highest on record since the pre-war period. Exports in these two months alone aggregated 928,000 bales, as compared with the abnormally low exports of 177,000 bales in the corresponding period of 1955. Exports in October and November are believed to have been even larger than in September. A schedule of carrying charges to be applied to the C.C.C. export sales announced at the end of July became effective in November. The prospect of progressively higher prices, due to the addition of carrying charges, has been interpreted bullishly, which explains partly the heavy sales in October and November.

Evidently encouraged by the success of its policy, the U.S. Department of Agriculture announced recently that it has no intention of limiting its sales to the five-million-bale mark and that no "cut off point" has been set for such sales. The six million bales of the 1955 loan cotton were taken over by the Department of Agriculture on the 1st inst. and will be ready for sale after cataloguing. This means that it would not be available until mid-February. The Government-controlled stocks, according to the latest available figures, aggregated 10 million on 21st December, comprising six million bales of 1955 loan cotton, 3.4 million bales of 1956 loan cotton and 620,000 bales of C.C.C.-owned stock.

While the U.S. export sales thus continue successfully, there has been some speculation recently about its repercussions on exports of other countries. The latest monthly publication of the International Cotton Advisory Committee, Washington, makes some interesting observations in this connection. The basic factor here, observes the publication, is the aggregate level of free world exports which, in turn, depends upon several variables—the level of consumption and stock policy in net importing countries, and the net volume of trade with the communist countries.

Determinants of the Volume of Export

Assuming that there will be no setback in the general level of the world economy, it is reasonable enough, observes the Committee's publication, to expect a continuation of the present upward trend in cotton consumption. This is fundamental to the solution of the world cotton problem, for without an increase in consumption or the less palatable alternative of restricted production, changes in export policies of producing countries amount merely to a redistribution of the surplus stocks. With stocks in net importing countries generally at or near minimum levels, any expansion of consumption will inevitably lead to an increase in imports.

An important determinant of the level of trade this season will be the stock policy of the importing countries. The low level of stocks at the beginning of the current season, the greater confidence in cotton and the disturbed international situation are factors that will contribute to the re-building of depleted stocks. Demand from communist countries has also been active and this also points to the possibility of a greater volume of international trade this season.

Aggregate free world exports during the last season were of the order of 11.6 million bales and the above-mentioned factors indicate that exports during the current season will set a new post-war record. It is, however, true that, in view of the exceptionally heavy exports from the U.S., there may be some backing up of stocks in other net exporting countries. But it should be borne in mind that aggregate stocks in these latter countries were very low at the beginning of the season and domestic consumption in many of these countries has been showing a definite upward trend.

In addition to the rather obvious question of price relationship, the impact of heavy U.S. exports on the volume of trade of individual countries is likely to depend on many factors. The existence of bilateral trade agreements, for example, may be of importance to some countries in maintaining a satisfactory volume of exports. Trade missions from importing countries have been active in many producing countries like Brazil, India, Mexico, and Uganda, in negotiating such agreements.

Again, the possibility of substitution is likely to be of some relief in the present situation. Exports of extra-long and extra-short staples may be less affected by the U.S. policy than cottons in the medium-staple range. So also, cottons having particular characteristics may find it easier to maintain exports than the so called 'bread and butter' varieties.

There are, however, two factors, according to the Committee, that may be really important. Countries where harvesting takes place later in the season may find the export situation more problematic. Second, the decline in exports to normal destinations from certain countries may be offset by increased trade with the communist countries. In recent seasons, exports to the communist bloc have assumed much greater importance in the Middle East, particularly in Egypt.

MARKETING DIFFICULTIES OF LONG-STAPLE GROWERS

Growers of long-staple cotton have lately been experiencing considerable difficulty in marketing the crop at reasonable prices and we have referred, in a previous issue, to the experience of producers in Bombay State. Yet another instance of the heavy odds the cultivators have to face owing to lack of sufficient demand is provided by the experience of the cultivators and traders in the districts of Coimbatore, Salem, South Arcot, Madura, Ramnad and Tirunelveli. Large stocks have accumulated with traders and growers in these regions so much so that the Tirupur Cotton Merchants Association has found it necessary to address a communication to the Ministry of Commerce and Industry, drawing its attention to the large quantity of *kapas* and superior quality cotton, namely, Co-4, Mu-1 Mu-2, etc., left unsold with traders and agriculturists. The latter are all the more worried, because a good crop is expected in these regions in the current season. Due to seasonal and adequate rains during the last two years, both quality as well as yield have considerably improved.

Lack of demand, they have pointed out, has resulted in a heavy slump in the Southern markets. Mill buying has not been encouraging, as they are more and more attracted to foreign styles like Californian and other comparable varieties, the importation of which, it is pointed out, continues unrestricted. Further, owing to the recent restrictions on credit, banks, it is stated, are reluctant to continue credit facilities which they have been giving hitherto. In these circumstances, both growers and traders are convinced that, unless the Government adopts some helpful measures, the cultivation of superior styles of cotton would receive a setback. They have requested the Government to include the above mentioned varieties also in the export programme, if, for various reasons, it is not possible to restrict imports of equivalent varieties of foreign cotton.

EXTRA LONG-STAPLE COTTON

A scheme for exploring the possibilities of growing the famous Sea Island cotton as a rain-fed crop in the *modan* and *kumeri* lands of the West Coast districts of Madras State was put into operation by the Indian Central Cotton Committee as early as 1949. The experiments for acclimatisation of such cotton have proved successful and the variety *Andrews* has been found to be the most suitable one for cultivation in Malabar. In 1955-56, this variety recorded a per-acre yield as high as 1,614 lbs. of *kapas* at Pattambi in South Malabar. Small-scale spinning tests proved that this type of cotton was capable of spinning up to 70 counts. In respect of fibre properties, it was found to be superior to the imported Egyptian variety, namely, Karnak. It may be noted that Sea Island cotton is the world's finest cotton, having a staple length of 1⅜"-2" and is grown in the West Indies, which has got a virtual monopoly over this type of cotton.

In view of the fact that India has to depend on imports of long-staple cotton for its requirements to a large extent, an area of about 60,000 acres of *modan* lands in South Malabar is proposed to be gradually brought under this better quality cotton. When this is achieved, it is expected, the country would have a supply of about 40,000 bales of Sea Island cotton spinnable up to 70 counts and this would go a long way towards reducing the shortage of extra long-staple cotton in this country. Experiments have also proved that, given proper conditions of growth, manuring and protection against pests and diseases, the cultivation of this type of cotton could bring a net profit to the growers of about Rs. 500 per acre.

MILL CONSUMPTION OF COTTON

Indian mills consumed, in the first two months of the current (1956-57) season, that is, September-October 1956, about 852,127 bales of raw cotton (of 400 lbs. gross), comprising 747,901 bales of Indian and 104,226 bales of foreign cotton. This is slightly lower than the figure for the corresponding period of the previous season, when aggregate consumption amounted to 860,000 bales, of which Indian cotton accounted for 768,888 bales and foreign cotton for 91,122 bales. The major portion of this decline was accounted for by Indian cotton, while the consumption of foreign cotton actually increased. The variety-wise breakdown of foreign cotton consumed is given below:

	1st September to 31st October	
	1956	1955
Total Indian cotton	747,901	768,888
Total foreign cotton	104,226	91,112
Of which:		
Egyptians	24,995	28,970
Peruvians	774	813
Sudan-Egyptians	18,010	17,705
Sudan-Americans	798	676
East Africans	53,471	35,009
Russians	111	103
U.S. cotton	3,942	7,317
Mexican	174	2
Brazilians	776	94
Other foreign cotton ..	1,175	423
Grand total ..	825,127	860,000

As will be seen from the above table, East African cotton accounts for the largest share, Egyptians and Sudans occupying the second and third places. There has been a steep drop in the consumption of U.S. growths, while that of Brazilians registered a sharp rise.

The monthly average consumption of Indian cotton during the period works out to 373,950 bales and, if the trend continues, aggregate consumption during the 1956-57 season will probably amount to 4.5 million bales, as against the preliminary crop estimate of 5.4 million bales. This would leave a margin of about 900,000 bales, which shows that the supply position is none too tight.

CAPITAL GAINS TAX: OLD AND NEW

A CRITICAL SURVEY

By G. H. Gondalia, B.Com., F.C.A., F.S.A.A.

THE Capital Gains Tax was introduced for the first time by the Finance Act, 1947, and was made applicable to all capital gains made after 1st April 1946. The Government of India, however, after a short interlude of two years, considered it expedient to abolish this tax and, under the provisions of the Finance Act, 1949, capital gains made after 31st March 1948 were not to be subjected to this tax. Taking into consideration the reasons advanced by the then Finance Minister in support of the abolition of this tax, it was believed that the abolition was for good. The requirements of finance for the second Five-year Plan, however, together with the recommendation of Prof. N. Kaldor, seem to have influenced the Government in reintroducing this tax by Finance (No. III) Act, 1956, under which the tax is leviable on all capital gains earned after 1st April 1956. It now appears that, like the proverbial grandmother, the tax has come to stay and it is as well, therefore, that one bestirs oneself to study in detail the provisions of the new legislation.

While the definition of the term "capital asset" has remained the same as under the old Act, certain exemptions which were available under the old section have been removed, with the result that the net has been cast wider. Certain lacuna in the wording of the old section which were pointed out by the Courts have also been filled in. The rates at which the tax is to be levied under the new provisions have been altered considerably.

The Old Section

It would be convenient to deal briefly with the provisions of the old section 12(B) and then discuss the changes introduced therein by the Finance (No. 3) Act, 1956, by substituting the new section 12B. The broad scheme of the Capital Gains section (old) is as under:

Sub-section (1) of section 12(B) deals with cases to which capital gains tax is to be applied, namely, to any profits or gains arising from sale, exchange or transfer of a capital asset; the four provisos to this sub-section contain various exemptions:

Sub-section (2) deals with the manner in which the Capital Gain is to be computed, which broadly is that the full value of the consideration realised on sale or transfer, etc., is to be taken into account and the expenditure for sale and the cost of the capital asset and the subsequent additions thereto (except revenue additions allowable under sections 8, 9, 10 and 12) are to be deducted. The third proviso to this sub-section, however, gives the option to the assessee to adopt the market value as on 1st January 1939, if that is beneficial. Sub-section (3) of the old section further provides that, in certain cases, instead of the actual cost to the seller being set off, it shall be the cost of the previous owner which is to be set off against the selling price. The first proviso to sub-section (3) gives some further alternatives in case of assets which became the property of the assessee before 1st of April 1947 under a deed of gift or on the partition of a Hindu Undivided Family (H.U.F.), in which case a further option is given to adopt the market value of the capital asset on the date of the gift or on the date of the partition, if that is beneficial to the assessee. It is further provided, in case of assets which came to the assessee on partition of the H.U.F. after 1st April 1947, the cost allowable to him shall be the fair market value on the date of the partition (and no other option is given in this latter case). Sub-section (4) of the old section makes provision for giving certain reliefs in cases where the capital asset employed in a business, e.g., plant or machinery or building or house property used for assessee's own residence has been sold and the same is replaced by another similar property.

The New Section

In sub-section (1) of the new section 12(B), one notices the addition of the word "relinquishment," with the result that any profits or gains arising from "sale, exchange, relinquishment or transfer of the capital asset effected after 31st day of March 1956" shall now be subjected to the Capital Gains Tax. It appears that the Government has tried to fill in the loophole that was pointed out by the Bombay High Court in the cases of *Provident Investment Co., Ltd.*, vs. *C.I.T.* (1953) XXIV I.T.R., 33 and *C.I.T.* vs. *Asiatic Textiles Co., Ltd.*, (1955), XXVII I.T.R., 315. In these cases, it was held that, although there was a capital gain made by the assessee, the same was not covered by the wordings of the old section 12(B) (1), inasmuch as the only types of capital gains which were taxable under that section were those which were made by sale, exchange or transfer of a capital asset, and the relinquishment of managing agency cannot be termed either as sale, exchange or transfer of an asset. The addition of the word relinquishment is meant exactly to cover cases of the above type.

Cases, however, may arise where the cessation of managing agency may not be as a result of relinquishment, for example, the termination of the managing agency either by the removal of managing agents by the company, before the end of expiry of the agreement or by not renewing the managing agency contract after the expiry of the period. It is not possible to say that these two cases, can be regarded as cases of relinquishment, as the latter term can only mean voluntary surrender or giving up. It is submitted that the cases of the above two types would not be covered even by the extended wordings of the sub-section and, therefore, as the sub-section stands at present, no capital gains tax would be leviable on the consideration money which the managing agent might receive from the company on their compulsory removal or premature termination of the contract. Such an item would, however, now be liable to income-tax and super-tax under section 10(5A) of the Income-tax Act, like any other item of income.

Relinquishment

An interesting question now arises as to whether consideration money received on the "relinquishment" of managing agency would be taxable as ordinary income under the provisions of section 10(5A) or a capital gain under section 12(B) (1). By the introduction of section 10(5A) in the Finance Act, 1955, (Act XV of 1955), an item of receipt, which was always regarded as of a capital nature, has been sought to be treated as of a revenue nature; such an item would quite clearly be taxable as income under section 10(5A) (*a*) as "any compensation or other payment due to or received by a managing agent of an Indian compay at or in connection with the termination or modification of his managing agency agreement with the company." The item would also be covered by the wording of the new section (12B) (1) and would be liable to Capital Gains Tax. Obviously, both the taxes cannot be levied on the same item and it remains to be seen which of the two sections of the Income-tax Act should prevail. Under the well-recognised principles of interpretation of statutes, where there is a specific provision in a statute to cover a particular item, that provision will be applied to the exclusion of any general provision applicable to the same item. It would, therefore, appear that the item would be taxable under section 10(5A) as income [and not under section 12(B)] as capital gain. Of course, there may be other cases of 'relinquishment' which do not fall under section 10(5A) and to which therefore section 12(B)(1) might be applicable.

Transfer of Assets

Attached to the old sub-section (1) of section 12(B), there were four provisos covering certain cases of transfers of assets which were not to be regarded as sale, exchange or transfer for the purposes of Capital Gains Tax. These cases were:

1. Compulsory acquisition of property for public purposes;
2. Distribution on the partition, partial or total in a joint Hindu family;
3. Distribution on the dissolution of a firm or other association of persons;
4. Distribution on the liquidation of a company, voluntary or compulsory;
5. Distribution under a deed of gift, bequest or will;
6. Distribution resulting on transfer on irrevocable trust;
7. Transfer by a parent company to a cent per cent subsidiary resident Indian company; and lastly,
8. Transfer of house property held by the assessee or his parent for not less than seven years immediately prior to the sale.

Under the new sub-section (1) exemptions covered under items (1), (3), (4), (6) and (8) above, have been removed, with the result that capital gains made on the transfer of capital assets under compulsory acquisition or by way of distribution of assets on the dissolution of a firm or other association of persons or on the liquidation of the company or on irrevocable trust will now be liable to tax. Similarly, the exemption which was conferred under the old section in respect of certain house property held by the assessee or a parent of his for not less than seven years prior to the sale, has also been removed.

Sub-section (2) of the new section 12(B) is substantially the same as the old sub-section (2) with this difference that in cases where the assessee exercised the option of adopting market value as cost to be set off against the selling price, the relevant date on which the market value was to be ascertained was 1st January, 1939 under the old section, whereas, under the new sub-section, the relevant date, if the market value has to be adopted, is 1st January 1954.

A Lacuna

Some important changes have been effected in the provisions of sub-section (3), mostly to conform to the changes effected in sub-section (1). The scheme of the section is that, in those cases where certain transactions were not to be regarded as sale, exchange or transfer under the section, the cost which was to be set off in the hands of the second owner when he sold these assets was the cost to the previous owner. This is quite legitimate, because, the second owner not having paid any cost himself the only way in which he can set off the cost against his own selling price would be the cost to the previous owner and where it was not possible to ascertain such cost to the previous owner, the fair market value at the date on which the capital asset became the property of the previous owner was to be deemed to be the actual cost thereof. It will be noticed from what has been stated in the earlier paragraph that the exemption in respect of certain transactions has been removed under the new section, with the result that transactions referred to in the para above the preceding one are now regarded as sale, exchange or transfer and liable to Capital Gains Tax. With this change in the wording of sub-section (1) corresponding changes should have been made in the wordings of sub-section (iii) to delete from the said sub-section cases in respect of which exemption had been removed under the new sub-section (1). Thus, if the distribution of capital assets on dissolution of a firm or on liquidation of a company or transfer on irrevocable trust is to be regarded as sale, exchange or transfer under the provisions of new sub-section (1), the actual cost which should be set off when these assests are subsequently sold, should be the cost to the second owner thereof and not to the previous owner. The amended wording of sub-section (3) of the section, however, fails to make the necessary change with the result that, as the wording stands at present, the three types of cases referred to above might be subjected to double taxation. It is, therefore, suggested that, in sub-section (3) of section 12(B), the following wording should be removed: "or on the dissolution of a firm or other association of persons or on the liquidation of a company." Similarly, the "on transfer of irrevocable trust" also should be removed.

There are no other material changes in the provisos to sub-section (3), except that the date 1st April 1956 has been substituted for the date 1st April 1947 in cases where a further option was given to the assessee to adopt the market value on the date of the gift or on the partition of a H.U.F. which took place before 1st April 1947 (under the new section before 1st April 1956), and further where the market value was to be adopted in case of assets acquired on partition of H.U.F. which took place after 1st April 1947, the wordings "after 1st April 1956" have been substituted.

Gain on Capital Asset

One notices a material change in the provisions of the new sub-section (4) as compared with the old one. The old sub-section (4) provided for an exemption in cases where the capital gains arose from the sale, exchange or transfer of a capital asset, which was immediately prior to the sale being used by the assessee for the purpose of his business or for his residence and the assessee had within a period of one year before or after that date, purchased a new capital asset for the same purpose of the business, or as the case may be for the purpose of his own residence, the extent of the exemption being the amount of the cost of the new asset, if the capital gains was higher than the cost or the whole of the capital gains, if this figure was lower than the cost of the new asset. There was a further provision that, when this asset was

(*Continued on page* 155)

BIG RISE IN SUGAR PRODUCTION THIS SEASON EXPECTED

SEVERAL NEW FACTORIES TO BEGIN CRUSHING

AT the sixth meeting of the Development Council for Sugar Industry, held at Walchandnagar on the 11th and 12th inst., Mr. T. C. Puri, Joint Secretary of the Union Ministry of Agriculture and Chairman of the Council, gave some useful information in his review of the position and some of the problems of the sugar industry. He said that the total production of sugar in the 1955-56 season was 1,862,000 tons, a record in the history of the industry, exceeding as it did the target by over 50,000 tons. This peak production was due to an increase in the sugarcane crop. It will be recalled that, in order to cope with the increased supply of cane, the crushing season was prolonged in parts of the Punjab, U.P., and Bihar. In some cases, the season went even beyond June. In the current season, the cane supply promises to be bigger than in the past and, though productive capacity of the industry has expanded, as shall be shown presently, the crushing season will have to be at least as long as, if not longer than, the 1955-56 season.

In order to meet this situation, to some extent, an early start of crushing was planned. The idea was that the crushing should begin at least 15 days earlier than it does normally. As an inducement to factories, a concession of As. 5 per maund in the price of cane was offered for those factories which started crushing on 4th November. Of this concession, the cultivators' share was only one anna per maund, the balance being met by the State and Central Governments. The response came only from Uttar Pradesh, the Bihar Government having cold-shouldered the scheme. Sixteen factories in Western U.P. availed themselves of the offer and crushed more than 340,000 maunds of cane.

From an earlier revelation by Mr. Puri on the merits of this scheme, it was clear that it had a serious drawback, in that the recovery was smaller as the cane was not fully ripe. If such waste of wealth is to be avoided and if at the same time more sugarcane has to be crushed, it is necessary to grow varieties of cane with different periods of maturity. Some should become ripe for crushing earlier and some later. In other words, in States like U.P. and Bihar, where the crop is big and tends to become bigger still, there should be a judicious intermingling of early and late ripening varieties of cane. This requires special attention to development and introduction of such varieties. It is gratifying to note from Mr. Puri's speech that the authorities concerned are fully alive to the importance of this problem and are paying urgent attention to it. But mere awareness of the problem is not sufficient; what is more important is quick result.

Production Prospects

Backed by a bigger sugarcane crop and absence of competition from *gur* producers, as in the past season, as well as by an improvement in the capacity of the industry, production of sugar during the current (1956-57) season is expected to be much larger than the record output in the 1955-56 season. Mr. Puri placed it at 2,250,000 tons, an increase of 388,000 tons or about 20 per cent. This constitutes a very substantial increase and might create marketing problems were it to materialise. It is, therefore, essential to think of measures right from now onwards for stimulating domestic consumption. There is talk of exporting sugar to foreign countries as a solution to the problem. And Mr. Puri revealed that the Government had agreed to the industry's proposal to export up to 50,000 tons for the present. But the practicability of this proposal is still in great doubt, as Indian sugar suffers from high cost of production and as such is not competitive.

The second Plan provides for an increase in the industry's productive capacity to 2.5 million tons, to be reached by March 1961. As against this plan, licences have already been granted or recommended to cover this capacity. This increase in capacity will be attained through (*a*) substantial expansion in 69 existing factories, (*b*) utilisation of two old plants, and (*c*) establishment of 54 new factories, of which 39 will be cane growers' co-operatives. Mr. Puri revealed at the meeting of the Council that progress in implementation of this plan was satisfactory. Four new factories went into production last year and 14 are expected to commence operation during the current season. He disclosed that, on a review of the position, the Government came to the conclusion that the target should not be raised any further, pending examination of the consumption trends for some time. The high cost of machinery and the desirability of economising the use of foreign exchange were cited by Mr. Puri as additional grounds for this conclusion. But this decision would not, according to him, be allowed to stand in the way of expansion of existing uneconomic factories with a crushing capacity of less than 1,000 tons a day.

The Development Council, which went into this question, fixed the production target to be hit in the 1957-58 season at 2.16 million tons and estimated the production in the current season at 2.05 million tons. This latter figure falls short of Mr. Puri's estimate of 2.25 million tons by 200 000 tons. The difference between the two estimates is rather large and inexplicable. It remains to be seen which of the two estimates turns out to be correct. Similarly, there is a difference in the number of new factories expected to go into production. As already stated, Mr. Puri put this number at 14, whereas the Council says it will be 22. The latter has also estimated that 17 existing factories would complete their expansion plans and go into production with their expanded capacity in the current season. In all, the Council reckons that the additional capacity to commence production this season will be 350,000 tons and that the resultant increase in output of sugar will be of the order of 250,000 tons. Even on this basis, the Council's estimate of production in the current season is short by 62,000 tons. Another interesting information disclosed by the Council relates to the estimated capital expenditure in the next season. According to it, the sugar industry's investment during the 1957-58 season will be about Rs. 24 crores, of which Rs. 19 crores will be on the setting up of 22 new factories and Rs. 5 crores on the expansion of 17 existing factories.

Pre-harvest Spraying

One of the drawbacks of the Indian sugar industry is the low sucrose content of the cane. For several years now, continuous efforts are being made by scientists to improve the position in this respect. It is now claimed that, by spraying surgarcane before harvest with certain sodium and other salts, the maturity of cane can be accelerated in earlier months and that, by the same method, a rapid fall in sugar content during the hot months can be effectively resisted. Alluding to this development, Mr. Puri said:

"Some experiments conducted in Bihar have supported the (aforesaid) claim and it is said that the recovery can thus be raised to as much as 0.4 to 0.8 per cent. This matter came up for discussion at the last meeting of the Indian Central Sugarcane Committee and appeared to me of such great importance that I have included it as one of the items for discussion here also. It may be that the most favourable conditions for the complete success of this method do not exist all over India, but it seems to me that the matter is of such great importance that we should not waste any time in conducting fairly large-scale experiments even during the current year. I am making arrangements to have fairly extensive experiments in the areas of the nine factories where the scheme of payment according to quality is being tried and I would suggest that serious consideration be given to this item."

The Council concurred with Mr. Puri and approved of a scheme for country-wide experiments in pre-harvest spraying with a solution of sodium salt.

THE HIND BANK LTD.

WORKING RESULTS FOR 1956

The Profit of the Hind Bank Ltd. for the year 1956, subject to audit, including the amount brought forward (Rs. 1,66,000) from last year's accounts is Rs. 13,77,000. Out of this sum, the Directors have made the following appropriations:—

Provision for Taxes	..	Rs. 4,50,000
Transfer to Reserve Fund	..	Rs. 3,75,000
Bonus to Staff	.. ..	Rs. 90,000
Balance	.. .. ..	Rs. 4,62,000
		Rs. 13,77,000

Out of the above balance, the Directors propose to recommend to shareholders at the next General Meeting the payment of a Dividend at Rs. 3 per share, free of income-tax, which will absorb Rs. 3,00,000, leaving Rs. 1,62,000 to be carried forward to the next year's accounts.

The securities and investments of the Bank appear in the accounts on December 31, 1956, at/or below the market rate ruling on that date.

SUGAR CO-OPERATIVE IN U.P.

The inauguration of a pilot-plant project for the production of crystal sugar on 19th December last at Ghosi in the Azamgarh district of Uttar Pradesh opens a new chapter in the industrial history of this State. The project, the first of its kind to be set up, is on co-operative basis with the technical collaboration provided by the Planning Research and Action Institute of the State Government. The factory established under the project is at present crushing at the rate of 700 maunds of sugarcane per day, the estimated yield of crytal sugar being 7 per cent. The average recovery percentage of sugar in cane grown in Uttar Pradesh, it may be noted here, is 9.71.

In view of this substantially low recovery, one naturally wonders why the U.P. Government has taken up this project. The authorities justify the project on the ground that the return to the cultivator from sugarcane in the areas not covered by large-scale white sugar producing factories is extremely low. The low return, in turn, is attributed to the fact that most of the sugarcane grown in these areas is being converted into *gur* which, at the prevailing price, does not bring more than about As. 10 to As. 12 per maund of cane. This compares very unfavourably with the minimum price of Re. 1-7 per maund paid to cane delivered at the gates of sugar factories.

It is claimed by some experts that small-scale production of crystal sugar possesses two distinct advantages over *gur* manufacture or that of *khandsari*. First, it will enable the sugarcane growers to get a higher return by at least 33 per cent., the minimum that he will get per maund of cane being Re. 1 or more. Secondly, there is the possibility of such sugar competing successfully *vis-a-vis* mill-produced white sugar. It is contended that the margin of profit on small-scale manufacture of white sugar is comparatively high.

When the Planning Research and Action Institute of the U.P. Government drew up the organisational pattern of the project, it proposed to run the factory on a co-operative basis, associating the cane growers to the maximum extent possible. The Institute has taken up the initiative, because it was felt that, in the beginning, the villagers might hesitate to run such a costly project on their own. The Institute emphasises that, if the project is to meet with success, it is essential that the co-operative organisation which will own and operate the project should be a producers' organisation. Accordingly, a co-operative processing and marketing society, with the cane growers as members, will be formed in the area with its headquarters in a centrally located village.

SUGARCANE IN 1956-57

The all-India second estimate of sugarcane for 1956-57 puts the current year's area and production at 4,532,000 acres and 58,914,000 tons of cane, as against 3,945,000 acres and 50,455,000 tons in the adjusted corresponding estimate for 1955-56. This shows an increase of 587,000 acres or 14.9 per cent. in area and 8,459,000 tons or 16.8 per cent. in production over last year. The area under sugarcane at the second estimate stage during the current year is the highest on record.

The overall increase in acreage and production of cane during the current year has been reported by almost all the sugarcane-growing States, specially U.P., Bihar, Mysore, Hyderabad, Madhya Bharat and Bombay. It is attributed to timely rain, better irrigation facilities and favourable weather conditions both at the sowing and the growing period of the crop.

This estimate covers the period generally up to the middle of October 1956. Till then, the condition of the crop was reported to be, on the whole, satisfactory, except in parts of U.P. Bombay and Bihar. In U.P. the crop was slightly affected by water-logging in the flood-affected areas. Attack of red-rot, top-borers and pyrilla was also reported from certain parts of eastern U.P. districts. In parts of Bombay, the crop was slightly affected by floods, heavy rains and sporadic attack of smut, stemborer and top-shoot-borer. The estimate does not cover the entire area sown to sugarcane crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly 95 per cent. of the area of the crop finally reported.

SUGAR IN U.K.

After a lapse of 17 years, dealings in sugar futures were resumed in London on the 2nd inst. The resumption is the result of the new Sugar Act. Under this Act, private traders are now permitted to import raw sugar for domestic consumption; hitherto, imports were being done mainly by the Ministry of Agriculture. Since imports destined for re-export, either as raw sugar or as refined, are already free from direct control, there is no longer any price control of any kind on sugar imported into the U.K. Britain is, however, bound by the Commonwealth Sugar Agreement of 1951 to provide a market for 1.55 million tons of sugar a year from the Commonwealth.

SMALL COLLIERIES AND THEIR PROBLEMS

AMALGAMATION COMMITTEE'S REVIEW

THE full text of the Collieries Amalgamation Committee's report, which was released to the public by the Government of India only after our reference to the Committee's recommendations in our last issue, shows that the recommendations cover all small collieries in the State of West Bengal and Bihar and not those in the Raniganj and Jharia areas alone. Under the original terms of reference, the Committee was, no doubt, asked to study the position in the Raniganj and Jharia coalfields only, but, in February 1956, the terms of reference were extended so as to cover all small and irregularly shaped coalfields in the two States.

The question of amalgamation of a large number of small and irregularly shaped collieries in West Bengal and Bihar had long been engaging the attention of the Government. The question was, in fact, examined by the Indian Coalfields Committee in 1946 and, subsequently, by the Working Party for the Coal Industry in 1951. Both these Committees strongly recommended that such colliery units should be amalgamated in the interests of the country. The coal industry was consulted and it had also agreed that such amalgamation was desirable. It was, as a consequence of this, that the Committee on Amalgamation of Collieries was appointed in November 1955 to study the position of these small coalfields and work out definite proposals for their amalgamation. In this context, it is worthwhile recording the observations of the Committee on the position of small collieries and their problems.

In 1955, there were 734 collieries in West Bengal and Bihar, producing 30.6 million tons of coal, as compared with a high of 838 collieries in 1948 accounting for an output of 24.47 million tons. In 1940, there were 483 collieries producing 23.79 million tons. Thus, between 1940 and 1948, while the number of collieries increased there was hardly any notable expansion in production. During the period 1948-55, however, when there was a reduction in the number of collieries, their production increased considerably. The fall in the number of collieries was due to the restriction on the opening of new collieries and the ban on opening new mines producing coking coal, which led to a closure of collieries due to exhaustion of the coal seams. The Amalgamation Committee points out that there is likely to be a further reduction in the number of collieries on account of stricter control by the Coal Board on the opening of new mines.

Distribution According to Output

The following table shows the distribution of the collieries according to output in 1955, as compared with the position in 1945:

(In million tons)

Monthly production	In 1945		In 1955	
	No. of collieries	Total output	No. of collieries	Total output
Below 1,000 tons ..	428	1.68	309	1.3
Between 1,000 and 5,000 tons	242	6.60	276	7.5
Over 5,000 tons ..	96	15.60	149	21.8
	766*	23.88	734	30.6

*Out of 810, only 766 were in production.

Of the 734 collieries in production in 1955, 259 produced less than 600 tons per month each and their aggregate output was less than 0.8 million tons. 495 collieries produced less than 2,500 tons per month each, their aggregate production accounting for less than 5 million tons, out of a total of 30.6 million tons. These collieries produced generally grade II and grade III coals. It will thus be seen that the majority of collieries in West Bengal and Bihar are comparatively small ones and that they produce only a small portion of the total output in these areas. The two world wars gave a fillip to the growth of small collieries, as witnessed the rise in their number producing less than 1,000 tons per month from 137 in 1919 to 428 in 1945. Subsequently, however, there has been a decline, as shown in the table above. It should have been possible, the Committee says, to build up large colliery units on the foundations of the small ventures, but the small capitalists found it possible, with their limited resources, to acquire small areas with inferior seams and start small mines in the expectation of quick profits. There was little possibility of expanding the ventures, more so because of the inferior quality of the seams.

Another factor responsible for the growth of small collieries, according to the Committee, was the division of property among members of a family. Such divisions into separate mines would have, however, been possible only in the earlier stages of the workings; for once the mines were developed to the barriers, it would not be permissible to divide them as separate mines without separate barriers. The system of *salami* which prevailed in the past was yet another cause for the existence of small collieries. Under this system, it was profitable for persons who had taken large areas on lease to sub-lease small portions of them at a *salami* which was higher per acre when the property sub-leased was smaller. It is, however, pointed out by the Committee that, in such cases also, the fragmentation would have taken place mostly in the virgin areas or quarry areas. The Committee goes on to observe:

"While forces were at work creating the fragmentation of properties, there was no inducement or incentive to bring about a consolidation or unification of individual collieries. It may even happen that a number of small collieries in different areas of Jharia or even in contiguous areas are owned by a single proprietor or group of proprietors under the names of different companies. It appears to have been found to be more profitable to own small collieries, instead of undertaking large-scale mining enterprises. The coalfields of Karanpura, Ramgarh and other areas in Bihar are still in the early stages of development and most of the ventures there are small collieries. These facts account for the large number of small collieries in Bengal and Bihar."

Colliery Control Order

The Amalgamation Committee admits that the Colliery Control Order has benefited the small collieries to some extent. Thus, it says:

"The control of the prices and the distribution of coal has, no doubt, enabled the inferior grades of coal to get a market. The consumer would prefer to have the better grades of coal, but measures of control have made it imperative that lower grades of coal should be used by specific classes of consumers. But at the same time, classes like brick-making coal and soft coke have the lowest order of priority for movement by rail and a fairly large quantity of such coal moves by road to places as far as 200 miles from the coalfields.

"It is also a fact that in the system of allotment of wagons under the Colliery Control Order, the small colliery may in some cases get an advantage. To put it in other words, for the same owner, the existence of two small collieries side by side provides facilities for better transport than if the two were to be combined as one unit. This advantage is in indenting for wagons and in the soft coke quota where there is a small weightage for the small colliery.

"In the fixation of the prices of coal, the comparative price for inferior coal on the basis of its useful heat units is slightly higher. The small collieries generally produce inferior coal and enjoy, therefore, some advantage in this respect. It, therefore, appears that in getting orders, in movement facilities and in prices the small collieries have derived some benefit because of the Colliery Control Order."

Despite the preponderance in numbers, the small collieries accounted for only a small portion of the total output, as will be seen from the following table:

Collieries producing less than 1,000 *tons a month*

Year	Percentage of total No.	Percentage of total output
1919	49	6.3
1925	54	6.0
1935	54	8.4
1945	56	7.0
1955	40	4.0

The low percentage of output of the small collieries, despite their number, is due to the fact that many of them are ill-equipped and continue to work coal by manual process. In several areas of Raniganj and Jharia, small quantities of coal are still being quarried by primitive methods. Several of the small mines, the Committee says, are "anachronisms in times when coal mining is a process of skilful and scientific winning of coal without waste or risk."

In the case of collieries producing 1,000 to 2,500 tons per month, they work with small capital and small machinery and plant. Many of these machinery are old and not properly repaired and maintained. In these mines, the owners have in the past tried to acquire as much coal as was easily accessible and could be got at a cheap cost. They also do not have the machinery and capital to work deeper and work lower seams. The areas left behind being small, they are beyond the possibilities of economic recovery through new shafts. Thus, water-logged areas and virgin areas in the dip are sometimes left unworked in small mines and will be wasted as long as the mines continue to be small and unless they are joined together.

The number of small collieries, having a monthly output of less than 1,000 tons, had gone up from 132 in 1935 to 428 in 1945 and their total output also rose from 0.57 million tons, or 3.4 per cent. of the total output, to 1.68 million tons or 7 per cent. In 1955, however, the number of such collieries declined to 309, and their output to 1.28 million tons, or 4.2 per cent. of the total. Nevertheless, it is clear that, as compared with 1935, an overall increase in the output of small collieries has been possible only with a corresponding increase in the number of them. These collieries, the Committee says, do not have the means to increase their outputs to any large extent. The Committee dismisses the claim of individual collieries that, given wagon facilities, they can raise their output several times. Thus, it says:

"A careful examination of typical cases shows that these are rather exaggerated claims and that on an average the increase in the production possible is not likely to be more than 20 per cent. The reasons for this are clear. The capacity for production depends on the area of the leasehold, the nature of the seam, the equipment available, the technical know-how and the financial capacity. Small collieries, having small areas, with no finance or equipment, cannot increase their output very much."

The Committee finds that many of the small collieries have at their disposal very little technical knowledge. They do not provide housing and other amenities to labour, who is also not paid wages according to the standards prescribed and provident fund and other facilities are denied. As labour in these mines is not organised, collective bargaiing is not generally possible.

Structure of the Collieries

There were 495 collieries in 1955 producing less than 2,500 tons per month, of which only 263 replied to the Committee's questionnaire. The structural forms of these 263 collieries are as follows:

	No. of collieries
Public limited companies	34
Private limited companies	46
Partnership	90
Sole proprietor	55
Undivided family	46

Thus, there is a preponderance of the forms of ownership other than that of public limited companies. The Amalgamation Committee says that the opening of mines without proper planning, without proper technical skill and advice and without the capacity to undertake measures of safety, conservation and labour amenities is at once recognised as militating against the interest of the State, particularly in the context of our present national status. The existence of mines with small holdings, with bad workings, with either no machinery or old and inefficient machinery, with no facilities and amenities to labour, according to the Committee, is incompatible with the interest of a progressive State. Such mines, it concludes, surely constitute an anachronism in a Welfare State marching towards rapid industrialisation.

Plea for Retention of Small Collieries

The argument was adduced before the Committee that the small collieries produce inferior coal, which has demand, but which fails to get movement. It was further argued that their rationalisation by amalgamation or modernisation was unnecessary, because, if production was increased, there would be no possibility of selling that coal. This coal was not moved to distant parts of the country, because of the high freight rates, which made it uneconomical to the consumer. Besides, the collieries fulfilled a social duty by providing employment to a number of villagers. The reserves of coal were, it was stated, large and these coals could be produced with ease and production could be increased whenever required at the shortest notice by the employment of more labour. Consequently, the small collieries, it was argued, should be left alone to continue as at present.

Replying to these arguments, the Amalgamation Committee says:

"If there is demand for this coal, which is obvious, because soft coke is an ideal smokeless domestic fuel in place of which material like cowdung and wood and charcoal are used all over the country, the need is not to curtail the production or let the *status quo* to continue, but to take steps to ensure that soft coke is supplied at competitive prices to all households in India. What is required is a positive policy and not a passive acceptance of the limitations of railway transport. The re-

FURTHER FALL IN STOCKS OF JUTE GOODS

OUTPUT OF MILLS, HOWEVER, HIGHER

THE first two weeks of the current month witnessed a slight recession in the prices of jute goods from those which had prevailed in the closing weeks of December. This was attributed to reports that foreign buyers of jute goods were on the cautious side for two reasons. They had already bought heavily as a precautionary measure in anticipation of the worsening of the international situation. Secondly, the international situation has subsequently improved and the supply of jute goods would soon be restored to normal levels. Nevertheless, the undertone of the market was still steady, which is justified, to a large extent, by the latest statistics relating to stocks of jute goods with mills as at the end of December 1956.

The stocks of jute goods at the end of last month, at 96,000 tons, show a further shrinkage of 5,100 tons, as compared with those at the close of November, thus maintaining the downward trend for the third month in succession, having declined from a high of 125,200 tons at the end of September. The mounting level of stocks with mills in the earlier months of the year, it will be remembered, was the main factor which had led the mills to re-seal 7½ per cent. of the looms in two stages. This had, no doubt, the desired effect in reducing the production and stocks. During the last two months of 1956, however, the decline in stocks was due more to keen buying by overseas consumers than to any fall in production. In fact, as will be shown later, the output had gone up during these two months.

The following table shows the trend of stocks as at the close of the past three months, as compared with those as on 31st December 1955:

Jute Goods Stock

(In tons)

	As on 31st Dec., 1956	As on 30th Nov., 1956	As on 31st Oct., 1956	As on 31st Dec., 1955
Hessians	20,000	24,700	30,800	23,500
Sackings	65,100	67,100	77,300	34,400
Others	11,500	9,900	8,600	5,600
Total ..	96,600	101,700	116,700	63,500

The stocks as at the end of last month are, it may be noted, the lowest since March 1956 and the fall over the month is very much less than that witnessed in the previous month. The bulk of the decline in total stocks is accounted for by hessians which shows a fall of 4,700 tons, while that in sackings is of the order of only 2,000 tons, as against 6,100 tons and 10,200 tons, respectively, in November. The comparatively larger decline in hessians, in distinct contrast to the trend experienced in the previous month, shows that the demand for hessians must have been keener. In fact, there have been fears in the market that there might be a squeeze in hessians, despite the rising trend in output of this variety by mills, as the stocks of hessians at the end of December are the lowest for 1956, having successfully declined from 30,800 tons held at the end of October last, and representing a fall of more than 50 per cent. from a high of 40,600 tons held at the close of May 1956. It will be noted from the table above that stocks of sackings still constitute the bulk of the total. They have successively declined from a peak of 93,200 tons at the close of July last and stand at the lowest level since April 1956. The stocks of "other manufactures" have gone up by 1,600 tons as compared with 1,300 tons in November, thus maintaining the upward trend for the fifth month in succession.

Rise in Output

As already indicated, the decline in stocks has occurred, despite an increase in production. The total output for the month amounts to 84,900 tons, an increase of 1,100 tons over that for November and of 4,500 tons over that for October. With the rise in output during the last two months, the downward trend noted during the preceding five months has been reversed. It will be interesting to note here that, during the past two months, the re-sealing of the looms did not occasion a fall in production. It is also noteworthy that the pace of increase in output of hessian has slowed down and that the production of sacking has declined only slightly, notwithstanding the diversion of mills' attention in recent months to manufacture of more hessians than sackings. The fall in the output of sackings has been more than offset by the increase in "other manufactures." Although the rate of increase in total output of mills during December is much less than that in November, it is to be noted that it has taken place, despite a shorter working period. For the number of hours worked in December was 206, as against 209 in November.

Jute Goods Production

(In tons)

	December, 1956	November, 1956	October, 1956	December, 1955
Hessians	37,700	36,800	34,700	34,000
Sackings	41,300	41,800	40,500	56,600
Others	5,900	5,200	5,200	6,700
Total ..	84,900	83,800	80,400	97,300

STEPPING UP JUTE PRODUCTION

The use of improved strains of seeds, better cultural practices, line-sowing by seed drills and inter-culture by wheel hoes and judicious application of fertilisers were among the measures suggested for the promotion of jute production at a conference of the representatives of the main jute-growing States like West Bengal, Bihar and others, held in New Delhi on the 12th inst. The Conference was presided over by Dr. Panjabrao S. Deshmukh, Union Minister for Agriculture.

It will be recalled that the target for jute production under the second Five-year Plan was recently revised upwards from 5.0 to 5.54 million tons. The achievement of this higher target was discussed at a conference of the representatives of the Union Ministers of Commerce, Community Development, Finance and Agriculture and the Chairman of the Indian Jute Mills Association, held on 30th December last. It was decided at this conference that the acreage under jute cultivation in the States of West Bengal and Assam should be increased in order to achieve the target. The latest conference is in pursuance of the decision made at the earlier one.

Dr. Deshmukh referred to the success achieved in the drive for better cultivation of rice and top-dressing of sugarcane, which had yielded striking results. He was very anxious that the problem of increasing jute production should be tackled on a high priority basis. Emphasising the need for larger usage of chemicals, Dr. Deshmukh recalled the experience in China where the minimum quantity of chemicals used by a cultivator wanting to have a good jute crop was 150 lbs. of ammonium sulphate and 100 lbs. of superphosphate per acre.

The conference appointed a sub-committee to study the question of price-support policy, the maximum quantity of *mesta* that the country should produce and the areas where it could be most profitably grown. Stress was laid on the top-dressing of jute and it was decided that 50 per cent. of the area should be treated with fertilisers by the end of the second Plan period and that, in order to encourage the use of fertilisers, cultivators should be supplied with fertilisers as loans in kind. With a view to introducing improved cultural practices, it was decided to press into service 30,000 seed drills and the same number of wheel hoes. It was suggested that a two-week training course should be organised to train block development officers and village level workers in improved cultural practices and plant protection measures.

It was also pointed out that the 25-acre seed multiplication farms which are being set up under the second Plan in the jute-growing States should be utilised for the purpose of multiplying jute seeds. Also, selected growers in the N.E.S. blocks should be asked to multiply improved seeds of jute and for this purpose a list of such growers should be drawn up and, if necessary, a premium which will attract the cultivators to multiply improved seeds should be given.

MADRAS PLANTATION LABOUR AWARD

The possibilities of bringing about an out-of-court settlement between the employers and workers of plantations in the Madras State over the revision of wages, following the Industrial Tribunal's recent award, are being explored by Mr. M. Bhakthavatsalam, Minister for Industries and Labour. The Minister invited representatives of planters on Thursday last week and had talks with them. It is understood that the representatives of planters will furnish statistical details to the Minister to explain their viewpoint. The Minister will also hold talks with the representatives of labour in this connection.

TEA TRADE IN U.K.

The Monopolies Commission of the U.K. has held that there are no monopoly conditions or restrictive practices in the British tea trade. It is of the view that, in general, the tea trade in Britain is conducted on keenly competitive lines. The Commission is satisfied that the severe fluctuations in the price of tea, which have taken place since "decontrol," have not been due to the existence of monopoly conditions or restrictive practices in the trade. By "decontrol," the Commission means the end of Government bulk-buying of tea—the London tea auctions were reopened in April 1951—the removal of the Government subsidy in May 1952 and the end of rationing in September 1952.

CURRENT SEASON'S COFFEE CROP

LIKELY TO EXCEED 36,000 TONS

THE expectation that the 1956-57 coffee crop would establish a new peak is most likely to be realised, according to the latest crop position. What is more, the final crop is expected to be far beyond the earlier estimates. The Coffee Board, in its *Coffee News Letter* for January 1957, reports that picking of Arabica coffee for the current season, which started in November last, will practically be over by the end of the current month. Robusta picking, which commenced in December, will be completed in March next. The latest indications are that the pre-harvest estimate of current crop, at 36,000 tons, is likely to be bettered. The official revised crop estimate for 1955-56 was 33,410 tons, made up of 21,970 tons of Arabica and 11,440 tons of Robusta. This is the highest crop on record for India so far. Thus, the current crop will far exceed the record crop for 1955-56 and private estimates place it still higher at about 40,000 tons. The Coffee Board, however, says that one has to wait till next month to obtain a more accurate estimate.

The new season's coffee is said to have been arriving in the collecting depots and curing works over the past two months. The arrivals up to the end of December amounted to 4,333 tons, made up of 4,120 tons of Plantation, 183 tons of Arabica Cherry and 30 tons of Robusta, but it will take another six to eight weeks for sufficient quantities of this season's coffee to be cured and made ready for sale in the internal market. In the meanwhile, the internal requirements will be met out of the stock of 6,056 tons of last season's crop carried over from December 1956.

At the pool sales to be held this month at Coimbatore, Kozhikode and Mysore, the Coffee Board will offer 2,050 tons of coffee, made up of 850 tons of Plantation, 450 tons of Arabica Cherry and 750 tons of Robusta. The total quantity of coffee released in the internal market during the calendar year 1956 was just under 23,800 tons.

Export Sale

The first export sale of the new season's crop is to be held on the 22nd inst. at Mangalore and the quantity to be offered will be 591 tons of Plantation. On the same day, 279 tons of Arabica Cherry out of the 1955-56 season's crop will also be sold. Recently, a quantity of 275 tons of Arabica Cherry out of the 1955-56 season's crop was offered in the export sale and was accepted by the U.S.S.R. The total quantity released for export so far out of the 1955-56 season's crop amounts to 7,475 tons and, with the further quantity to be sold on the 22nd inst. the total will come to 7,754 tons, as against 7,800 tons recommended by the Marketing Committee out of the 1955-56 crop.

The Coffee Board's 15-year development plan, which envisages the raising of production by 9,700 tons at the end of the first five-year period, by 21,200 tons at the end of the second five-year and by 33,200 tons at the close of the third five-year period was brought into effect on 1st October 1956, with the opening of five regional offices at Chikmagalur, Mercara, Coimbatore, Batlagundu and Kozhikode. Under this plan, the Coffee Board offered the growers monetary assistance in the form of loans and accelerated pool payments. Despite the publicity that the scheme had for some months, the Coffee Board Chairman disclosed at the last meeting of the Board, held in November 1956, that the response from growers to the Board's scheme fell short of expectations. This is also evident from the fact that the last date for receipt of applications for loans was extended from 15th November to 15th December 1956. No information is available on the success of the Board's efforts to evoke better response to its scheme. The investigation of applications received from growers up to 15th December is, however, going on apace and the regional officers are expected to complete the investigations and submit their reports not later than 15th February 1957. The applications received after 15th December will be considered for grant of loans next year. Arrangements are also being finalised for making available to small coffee growers their requirements of fertilisers and pesticides from Government and other depots nearest to them.

STABLE BLEACHING POWDER

containing 33/37% available chlorine

'CAUVERY' brand STABLE BLEACHING POWDER is of special benefit to hand-loom weavers and hosiery manufacturers.

And to public bodies concerned with preventive hygiene and environmental sanitation, 'CAUVERY' STABLE BLEACHING POWDER offers, indeed, an ideal aid.

WORKING OF AIR CORPORATIONS

ESTIMATES COMMITTEE MAKES SEVERAL NOTABLE SUGGESTIONS

SEVERAL important issues relating to the working of the nationalised air transport industry, in general, and that of its international wing, represented by Air-India International, in particular, have been examined by the Estimates Committee in its forty-first report (1956-57) dealing with the Ministry of Communications. The Committee has made a number of useful suggestions designed to improve the working of the nationalised industry. These suggestions include the reorganisation of the set-up of the Air Corporations, the immediate setting up of an advisory committee and increased attention to passenger amenities.

In 1953, it may be recalled, the Government nationalised the air services in the country. And, in accordance with the Air Corporations Act, 1953, two air corporations, the Indian Airlines Corporation and Air-India International were set up, the former for the operation of the internal and the latter for the international air services. Air-India International, with which the Committee deals extensively in its report, consists of a Chairman (Mr. J. R. D. Tata) and eight other members, of whom six are officials. The Corporation employs 2,666, including 1,326 engineering, 391 operational, 466 traffic, 204 accounts, 127 administration and 152 stores personnel. The composition of the traffic carried by Air-India International during the four years ended 1955-56 is given below:

	Passengers (Number)	Cargo (In lbs.)	Mails (In lbs.)
1952-53	22,105	1,281,000	486,000
1953-54	30,556	1,925,000	478,000
1954-55	44,382	2,271,000	647,000
1955-56	62,100	2,772,000	976,000

During the period 1st August 1953 to 31st March 1954 and the year 1954-55, the Corporation's operating profit amounted to Rs. 18.30 lakhs and Rs. 33.65 lakhs, respectively. The operating profit for 1955-56 was only Rs. 6.54 lakhs, while that estimated for 1956-57 is Rs. 10.15 lakhs. In calculating these profits, no provision has been made for interest on capital advanced by the Government from time to time. This is in accordance with the Government's decision that no interest will be charged on capital for a period of five years commencing on 1st August 1953. Had interest been debited at 4 per cent. per annum, the incidence of the charge would have been Rs. 1.08 lakhs for 1953-54, Rs. 15.06 lakhs for 1954-55, Rs. 28.00 lakhs for 1955-56; for 1956-57, the incidence of the charge would be as high as Rs. 36.19 lakhs. Taking this factor and also the conditions of competition in the sphere of international air transport into account, the Committee feels that the "financial prospects of the Corporation are not entirely bright." The Corporation has, therefore, been advised not to "relax in its efforts to keep down unnecessary expenditure, to control costs and to attract traffic."

Passenger Amenities

Although the Committee has noted that the facilities offered by Air-India International for its passengers have been, by and large, comparable with those offered by other international airlines, it has drawn attention to the "complaints that the food served by A.I.I. has recently deteriorated." Accordingly, it has suggested that "suitable steps be taken to improve the quality of the food served and also to cater to the differing tastes of the various users of the Corporation's services." It has also stressed the need for providing resthouses for passengers. If this is not feasible, the authorities have been urged to examine the possibility of providing "slumberettes." The Committee has received a complaint that the customs procedure at the Indian airports is "particularly irritating to the foreign passengers." It has suggested that the Corporation should take up the matter with the Customs Department and examine "if the procedure and the method of dealing could be improved so as to cause less irksomeness and inconvenience to the passengers." Since this is a matter which is closely related to the promotion of the tourist industry, we hope that the authorities will particularly avoid causing more than the necessary minimum of disturbance to passengers.

Under the Air Corporations Act, 1953, the Central Government has authority to issue directions to both the Corporations, in case their performance is not satisfactory. Prior approval of the Central Government is necessary for undertaking capital expenditure involving more than Rs. 15 lakhs, for leasing any immovable property for a period extending five years and for disposing of property valued at more than Rs. 10 lakhs. The relations between the Government and A.I.I., the Committee learns, have been cordial; there has been no difference of opinion between them on any important issue. The Committee has, however, noted that the officials of the Government have a "predominant" representation in the Boards of both the Corporations. It adds: "The presence of a non-official chairman with vast experience of air transport industry is a redeeming feature in the A.I.I., which is absent in the other Corporation." The Committee has noticed an increasing tendency on the part of the Government to appoint Secretariat officials as members of State-owned Corporations. It has reiterated the recommendation made in connection with the working of the Bharat Electronics Ltd., namely, the need for "demarcating clearly the Secretariat functions of laying down policies and the executive functions of implementing them and also the necessity to avoid Secretariat officials with the execution of policies laid down by them, so as to enable them to retain the necessary objective outlook." Elaborating this point in relation to the work of the Directorate-General of Civil Aviation, the Committee observes:

"In this connection, the Committee would point out that besides being generally responsible for regulating civil aviation in the country, the D.G.C.A. is also responsible for providing landing and navigational facilities, licensing of pilots, investigation of accidents, etc. It is also observed that the healthy principles followed in keeping the Railway Inspectorate under the control of a Ministry other than the Railway Ministry, has not been followed in this case. In fact, under the present scheme, the D.G.C.A. prescribes the standards of training and qualifications for pilots, while, at the same time, he runs the training schools, examines the trainees and gives them certificates, makes comparative technical studies of different types of aircraft and advises on the type of aircraft to be purchased and the routes on which they are to be used while, at the same time, he serves as a member of the Board which has to take a decision on that advice; he becomes a party to the operation of air transport service, while, at the same time, he controls air transport on behalf of the Government; and, finally, when accidents occur, he conducts enquiries, makes recommendations, while, at the same time, he becomes a party to the implementation of those recommendations. The Committee consider this position as most unsatisfactory and recommend that immediate steps should be taken to rectify the anomalies and inconsistencies underlying such concentration of all these responsibilities in one department or officer."

There is considerable force in the foregoing remarks of the Committee.

Transport Council

The Air Transport Council has been constituted by the Government under the provisions of the Air Corporations Act. The functions of the Council are:

1. (a) To consider at the request of either of the Corporations matters such as the operation of scheduled air transport service, the routes on which such services should be operated, the frequency of such services, the passenger fares and freight rates to be charged, the measure of economy to be adopted in the provision of any services, in regard to overhaul and maintenance, etc. (b) To consider any matter of importance which may be referred to it by the D.G.C.A. or D.G.P.T., including rates for carriage of postal articles by air. 2. To investigate, at the request of the Central Government, any matter relating to fares and freight or other charges levied by either Corporation in respect of any service or facility provided by the Corporation and of the adequacy or efficiency of such services or facility. 3. To tender advice to the Central Government, if so required, in regard to financial and economic analysis, accounting, costing and statistical technique and financial reporting relating to air transport.

The Committee observes that the Council consists of 10 members, including the Chairman. Of these, except two non-officials, the others are either persons in service or retired persons. The Committee does not consider the non-official representation adequate and has recommended that, as a rule, such advisory councils should have a substantial non-official element in them. Since the time of the fixation of the Council in 1955, only one question—it relates to fares and freights—has been referred to it. The Committee has suggested that, as far as possible, the views of the Council may be obtained on all problems which are capable of being referred to it, and, with this object in view, its machinery may be tuned to work expeditiously. The Committee has stressed the need for setting up the Advisory Committee, contemplated by the Air Corporations Act, for purposes of advising the authorities on the provision of amenities to air travellers, proposals for opening of new air stations and related matters.

Single Corporation

Proceeding, the Committee has examined the case for setting up a common corporation for both internal and international air services. It recalls that, at the time the Bill for setting up two Corporations was discussed in Parliament, there was a "strong current of opinion in favour of a single corporation." The protagonists of a single corporation believed that it would save an expenditure of Rs. 6 lakhs per year, if the two Corporations were combined. They suggested that, if necessary, there could be two separate wings, one for external and the other for domestic services. The Government considered it inadvisable to risk a decline in the reputation or efficiency which Air-India International Ltd. had built up in the regions where it operated and thought it necessary that the "goodwill" so built up should be available to the Air-India International Corporation. On the other hand, the domestic services had to be integrated, consolidated, and rationalised. It was, therefore, considered that there should be two separate Corporations, one for international services and the other for the domestic services. The Minister for Communications, however, gave an assurance that, after integration had been completed and after both the Corporations were set up on a sound footing, the Government would consider whether the Corporations could be amalgamated into one.

Now that the integration of domestic air services has been completed, the Committee feels that it should be possible for the Government to review the question of the integration of the two Corporations in the near future. Although the Committee is aware that there are certain obvious advantages to be derived from having a common corporation—with two wings, if necessary, for the domestic and foreign air services—it emphasises that the diversity of the problems connected with the operation of internal and external air travel might cause some difficulties in integrating the services. It has, however, stressed that the question merits "very careful, and detailed examination from technical, operational, financial and commercial aspects." The Committee wishes to recommend that the Chairman of the Indian Airlines Corporation should also be a non-official with extensive business and air transport experience. It, however, sees no objection to the same person being made the Chairman of both the Corporations.

Private Operators

Since the Government's nationalisation measure covered only the scheduled air service operations, some private operators have been permitted to engage themselves in non-scheduled operations. There are at present nine independent operators. Of these, five have been permitted to operate in Assam area. They are: Air Survey Company of India Ltd., Airways (India) Ltd., His Highness the Maharaja of Darbhanga, Indamer Co., Ltd., and Air Taxies India. The other operators, who are permitted to operate on routes other than the Assam area are: Jamair Co., Ltd., Bharat Commerce and Industries Ltd., National Air Operators, and Mr. V. Sundaram. Recently, the Government has issued a licence to an independent air operator to operate a service to the Andamans.

Control over the operations of these non-scheduled operators is exercised by the D.G.C.A. by imposing suitable conditions, while issuing permits to them, so as to ensure that they do not come in the way of the desired growth of civil aviation in the country. The conditions are generally those which are applicable to the I.A.C. and the A.I.I. Corporations which also undertake non-scheduled operations. To safeguard the interests of the nationalised Corporations, executive orders are also issued from time to time, placing restrictions on non-scheduled operators. For example, instructions have been issued recently that, before operating a non-scheduled flight outside India, a non-scheduled operator should obtain a "no objection" certificate both from A.I.I. and the I.A.C.

At present, the Corporations are in a position to undertake just about 50 per cent. of the non-schedule traffic in the country and the balance is carried by independent operators. The Committee, therefore, feels that there is considerable scope and justification for the existence

(*Continued on page* 155)

NEW PRODUCTS AND PROCESSES

Metal Reaming

SHORT Brothers and Harland, aircraft manufacturers of Belfast, England, has developed a new machining technique which, it is claimed, could substantially reduce production and overhead costs in the engineering industry, if generally adopted. It is a new method of reaming—enlarging, to extremely accurate standards, holes pre-drilled in metal. At the same time it imparts a high standard of finish. Shorts state that the technique has already been applied successfully in the production of components for British airliners and for flight controls for other types of aircraft. With the new technique, a hole one inch in diameter and four inches deep can be reamed in just 24 seconds, compared with the 20 minutes taken by standard methods. By performing reaming operations 40 to 60 times faster than standard methods, the Short's technique is estimated to be able to save no less than 98 per cent. of a machine shop's annual overheads for reaming operations. Describing the system, Shorts states that it is a revival of the old-fashioned gun drill, used mainly for drilling gun barrels and other components having deep and extremely accurate bores. The tool now develop has a single tungsten carbide-tipped cutting edge, supported radially by two stabilising wear pads which ensure that the hole is reamed to consistently accurate dimensions. It represents a considerable advance on the older type of gun drill in that only a single reaming operation is necessary.

Separating Tantalum from Titanium

A novel method for separating tantalum from titanium which has been developed by three Russian scientists is described in a recent issue of the Russian technical journal *Zavodskaya Laboratoriya*. The new process depends on the use of organic solvents to separate out the tantalum. The method has the advantage over the conventional, precipitation with tannin, process normally used of being rapid in operation—complete separation of the tantalum from the titanium can be achieved within a few hours. At the same time it enables, it is claimed, the complete extraction of the tantalum to be achieved even when niobium is present. The solvents used in the process were fluoride compounds, to which cyclohexane had been added, in a solution of sulphuric acid.

Measuring Vibration

A vibration calibrator originally designed for the U.S. Armed Forces is now being made available to industry and research laboratories in the U.K. This unit, which is designed to calibrate vibration pick-ups, or to measure the vibration of non-magnetic metallic surfaces, can measure vibrations ranging in amplitude from 0.00002 to 0.020 inch and having frequencies of from 10 to 20,000 cycles per second. An accuracy rating of 5 per cent. is claimed.* The industrial applications of the instrument are expected to cover a wide variety of fields ranging from the motor and the aircraft industries to home appliances, to instrument manufacturers, testing laboratories and universities.

Sun's Magnetism

Research into the occurrence of small magnetic fields on the surface of the sun is now being carried out at the Cambridge University observatories, with the aid of a new recording instrument which has been specially built for the purpose. The operation of the instrument depends on a special photoelectric system. A considerable amount of magnetic structure occurring on the sun's surface has already been studied with the aid of the instrument, which is only the second of its kind to be constructed in the world. Comparatively large magnetic fields which cannot be located by means of ordinary visible light have been discovered.

Silicone Glass Laminates

Heating and air-conditioning ducts made of silicone and glass laminates are being used in place of stainless steel ducts in at least one U.S. military aircraft, the Douglas C-133. The laminates, which are made with glass cloth and silicone resins are said to have proved more resilient than comparable light metal sheet. Silicone laminate ducts have, for example, it is claimed, proved less liable to splitting when engine misfiring occurs and under other jarring conditions.

Sun-powered Radio

A portable radio which is powered by sunlight is now available commercially in the U.S. The radio has been developed by the Admiral Corporation and sells for about $150. During daylight hours the radio is operated by the light of the sun, which is collected by a bank of 32 light-sensitive silicon wafers. At night the radio is equipped to operate on six flashlight batteries. Ordinary flashlight batteries can be used because transistor crystal valves are used throughout the electrical circuits of the radio in place of conventional termionic valves.

Antibiotics for Fish

The Food and Drug Division of the Department of National Health and Welfare of Canada has given Canadian fishermen permission to use a derivative of the antibiotic aureomycin to preserve the quality of fish at sea. It is the Canadian Government's first authorisation of the use of antibiotics for food preservation, although last year the United States Government approved their use on poultry. The method used is to add tiny amounts of the drug to the ice in which fish are kept on board the fishing vessel and during shipment inland.

COMMERCE

ANNUAL NUMBER 1956

On Sale Now

This Number contains a comprehensive review of important developments in the sphere of Finance, Industry and Commerce during 1956, besides 48 feature articles by leading economists, administrators and eminent business men on subjects of topical importance. The main subjects treated in the Number include role of free enterprise, foreign aid, banking and finance, trade, life insurance, company law, taxation, industrial relations and oil industry. The Number is invaluable to all business men as well as teachers and students of economics.

GUARANTEED MINIMUM WEEKLY WAGE IN U.K.

HOW THE SYSTEM WORKS IN INDUSTRIES

A MAJOR development in the U.K., which has obviously been of immense benefit to labour, is the extension of the system of guaranteed minimum weekly wage to industrial workers. This system ensures that, if a worker turns up for his job and finds, through no fault of his own, there is nothing for him to do, he can still draw all or a large part of his normal wage. Before 1939, not many workers had a guaranteed weekly wage when there was no work for them. But now, some or all of the workers in coal-mining, agriculture, transport, steel, textiles, building, engineering, metal and chemical industries are covered by the system of guaranteed minimum wage. They are guaranteed either a full week's wage, or a fixed proportion of that wage or the rate for a certain number of hours.

Reviewing the working of the system of guaranteed minimum wage, Mr. John Walton, a member of the British T.U.C., points out that the fillip to making these arrangements for a guaranteed weekly wage was given when the essential work orders were withdrawn after the war. During the period of hostilities, these orders had limited the employers' right to terminate engagements and the workers' freedom to leave a job. They had also provided for workers on time rates to receive their normal wage for a normal work, provided they were available to do their own or another job. Workers on piece-rates were also guaranteed as a minimum the time-rate applicable to their work on any day they presented themselves only to find they were not needed.

Useful Features

Before the essential work orders were ended, Britain's Minister of Labour suggested that both sides of industry might examine them, with a view to retaining their most useful features. As a result, negotiations were started in many industries, leading to agreements which provided for guaranteed weekly wages. In the same way, in some industries covered by statutory machinery, provision for guaranteed payments was made.

While arrangements vary from industry to industry, these generally cover such features as the extent of the guarantee, the way the payment is reckoned, and the conditions under which it is paid. The guarantee can either be a minimum amount of employment for a fixed number of days, shifts or hours, or a proportion of the worker's time-rate of wages. In most industries, it ranges from two-thirds to four-fifths of the normal weekly hours or of the ordinary weekly wages.

Most arrangements are based on a plain time-rate, whether the worker is on piece-rates or time-rates. In engineering, for example, "workers are guaranteed four days' employment in any pay week such as will enable them to earn during such period the equivalent of their consolidated time-rate for 34 hours." Should a worker do part of a week on his normal job, it may then be that his earnings are above his guaranteed minimum; so the arrangement does not apply. If they are not, then the employer must find the balance. Where a worker is temporarily sent to a job other than his own, then generally he does not lose, even though the rate for that work may normally be lower.

Some Conditions

Most agreements about the guaranteed weekly wage say that a worker must always be available during normal working hours, and that he must be ready to do another job if it is offered to him. Some lay down that absence on one day means giving up all rights to any guaranteed wage for the week. Others provide for a proportionate reduction in the guarantee because of absence. In boot and shoe manufacturing, the guarantee of three-quarters of the weekly wage rate does not apply "in respect of all time lost by the operative on his own responsibility, through sickness or any other cause, and the week under the guarantee shall be reduced correspondingly."

Common features of most arrangements are that men and women have equal rights, and that there is no qualifying period of engagement. But some have penalties for habitual bad-timekeeping or absenteeism, and for absence from work without just cause during a fixed period previous to any claim for the operation of the guarantee. When there is a strike, most arrangements for guaranteed payments fall by the board, though there may need to be a period of notice. In some industries, such as pottery, the agreement is suspended even when work is stopped indirectly through a strike, dispute, or lockout. Shortages of fuel, power or raw materials and breakdown of plant or machinery are other circumstances which may entitle an employer to suspend a guarantee. As a rule, however, no limit is placed on continuing guaranteed payments during prolonged periods of short-time working extending over successive weeks, when none of these qualifications applies.

Period of Notice

Another feature of the essential work order connected with the guaranteed week and continued in a number of agreements is that of the period of notice to be given to end an agreement. In most industries this is seven days, though in building and civil engineering, the period is two hours, the notice to expire at the normal finishing time on Friday. A few agreements emphasise that nothing in the guaranteed week provision is to be taken as limiting the legal right of the employer or worker to end a contract of service.

One noteworthy agreement falling into this category of guaranteed payment arrangements relates to dock workers who, during the last war, enjoyed a guaranteed week for the first time. Under the dock workers scheme of 1947, dock workers reporting for work are paid attendance money, and, if they report for 11 turns in a week on both mornings and afternoons, then, according to age, there is a guaranteed minimum weekly payment negotiated within the industry.

INDUSTRIAL DISPUTES ACT

The Supreme Court held, last week, that the Industrial Disputes Act, 1947, was valid and not *ultra vires* of the Constitution. The judgment was delivered by Mr. Justice Bhagwati in a case filed by some textile mills in the Punjab, challenging the validity of the Act. Before they came in appeal, their case had been dismissed by the Punjab High Court. The main contention of the parties was that the entire Act was *ultra vires* of the Constitution and that its provisions were discriminatory, in that the State Government had been authorised to refer a dispute for adjudication to a tribunal or for a settlement to a conciliation board or for investigation to a court of inquiry. Referring to this argument, Mr. Justice Bhagwati said that these provisions were not discriminatory and that the appropriate Government was at liberty to refer the dispute to one or the other authorities, referred to under the Act, according to the exigencies of the situation. As regards the argument that the authority given to the Government to extend or curtail the period for which the award was to be in force was discriminatory, Mr. Justice Bhagwati said that the basic idea underlying all provisions of the Act was the settlement of industrial disputes and the promotion of industrial peace, so that production might not be interrupted and the community in general might be benefited. This was the end, His Lordship said, which had got to be kept in view by the appropriate Government when exercising the discretion which was vested in it in the matter of making the reference to one or other of the authorities under the Act and also in the matter of carrying out the various provisions contained in the other sections of the Act, including the curtailment or extension of the period of operation of the award of the industrial tribunal.

Yet another contention of the parties was that the industrial tribunals to which disputes were referred for adjudication were legislating in the guise of adjudication and that this amounted to delegation of the powers of legislation which the Central Legislature was not competent to do. In this connection, His Lordship observed that the powers vested in the industrial tribunals, wide though they might be, were guided by considerations of policy and could hardly be characterised as legislative powers. No doubt they laid down certain general principles to be observed in regard to the determination of bonus, reinstatement of dismissed or discharged employees and other allied topics, but they were enunciated mainly with the object of promoting peace while settling particular industrial disputes referred to them.

In the result, the Court held the Industrial Disputes Act valid and dismissed the appeals and petitions.

STATE GOVERNMENT EMPLOYEES

NEED FOR RAISING THEIR PAY SCALES

IN recent months, the employees of State Governments, in general, and the class of employees, known as non-gazetted officers, in particular, have protested vehemently against what they allege to be the low scales of salary and dearness allowance paid to them. In one State, at least, namely, Madras, where they appear to have a well-organised association of their own, they have threatened direct action. The Government of the State has, in turn, threatened to withdraw the recognition of the association. The demands of State Government employees include a general rise in pay scales and a higher dearness allowance, namely, the one followed by the Central Government for its employees.

Generally speaking, the pay scales as well as the dearness allowance of the State Government employees are lower than those of the Central Government. Nor is there any uniformity in the pay scales of the employees, for these scales differ from State to State. A further source of complication is the one arising from the reorganisation of States. In some cases, the salary scales of the employees in certain regions, which have been merged with the larger States, were lower than those of the States with which these regions were merged. Thus, salary scales in Kutch, for instance, were lower than those in Bombay with which the former was integrated. In some cases, the areas merged had higher pay scales than the States to which they were merged. For instance, the pay scales in the Karnatak districts of the Bombay State were higher than those in the Mysore State with which they were merged. Steps are being taken to rationalise pay scales in the new States. The Mysore Government has recently raised the scales of pay of the non-gazetted officers in the State.

No Uniformity

There is, however, no attempt at bringing about a uniformity in the pay scales of the employees in all States. Presumably, it is felt that the determination of the salary levels of these employees should be left to the States themselves. To a certain extent, this is the correct attitude, for the finances of the States differ widely, and it may be difficult to enforce uniformity. At the same time, it should be recognised that salary scales in States should not be allowed to differ markedly. Further, it is also not wise that they should be markedly lower than those of the Central Government employees. It must be remembered, in this connection, that the extension of the sphere of the activities of the Central Government has led to a large increase in the ranks of its employees who are posted in almost all the States. The presence of highly-paid Central Government employees in the State cannot go unnoticed by the less fortunate employees of the Government of the State, where the former work. This leads to some irritation, if not envy. Sooner or later, the authorities concerned will be compelled to review the whole position and take measures designed to bring about a certain measure of uniformity in the pay scales of the Central and State Government employees. After all, the work turned out by the State Government employees is no less onerous, nor any less important, than that of the Central Government servants. And there is, therefore, no reason why their emoluments should be allowed to diverge to any marked extent.

Centre's Attitude

The Central Government, on its part, seems to be aware of the difficulties of the employees of the State Governments. The Union Finance Minister, Mr. T. T. Krishnamachari, speaking recently to representatives of the Press in Madras, expressed his anxiety regarding the condition of the low-paid Government employees in the States and said that the minimum emolument should be raised in course of time to Rs. 100 per month. A 12-rupee increase in emoluments drawn by those getting less than Rs. 100, he said, will cost all the States about Rs. 32 crores. The Centre, he said, would be prepared to help in the endeavour. He added: "This is a human problem and will have to be tackled as such." Addressing the Madras Secretariat Association, he said that he was prepared for an increase of Rs. 12 in the salary of the employees of the State Government, getting less than Rs. 100 per month, if the State Government was also prepared to share a part of the

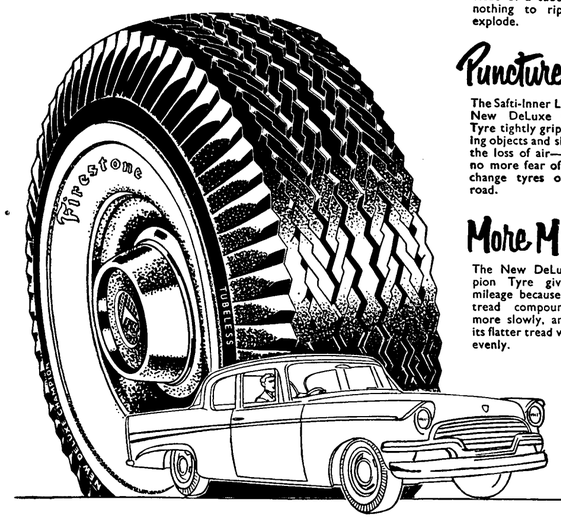
the tyre with BUILT-IN PEACE OF MIND



Blowout Safe
No longer any fear of dangerous blowouts—this tyre is fitted with an air-tight Safti-Inner Liner instead of a tube. There is nothing to rip, tear or explode.

Puncture Safe
The Safti-Inner Liner of the New DeLuxe Champion Tyre tightly grips puncturing objects and slows down the loss of air—so there's no more fear of having to change tyres on a busy road.

More Mileage
The New DeLuxe Champion Tyre gives longer mileage because the tough tread compound wears more slowly, and because its flatter tread wears more evenly.

Now from Firestone comes the modern safety tyre—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with *built-in peace of mind.*

READY REFERENCER ON THE INDIAN COMPANIES ACT, 1956
BY JOHN & ROW, *ADVOCATES*, MADRAS.

Price Rs. 25/-

The following is an extract from Mr. Tennetti Viswanatham's letter, which will speak to the merits of the book as well as the authors of the same.

"The Ready Referencer published by John and Row is indeed a very valuable book. It is a clear analysis of the provisions of the new Act. It brings together the changes in their logical sequences so that the Directors and Managing Agents can immediately lay their finger on the required provisions whenever they are in doubt as to what is to be done or what the Law on the subject is. Besides, the Referencer is of even greater value to the Lawyer, as one can expect it to be, coming as it does from John and Row, who have been distinguished specialists on Company Law. Likewise the Bench should find it invaluable."

Pattern of Electrical Consumption for Industrial Growth

By J. P. Garga, M.A. and R. P. Aiyer

THE growing emphasis on industrialisation and large-scale development of basic industries have tended to shift the pattern of power utilisation in the country. In 1950, industrial consumption of electrical energy was of the order of 62.7 per cent., which in 1955 reached a figure of 65.7 per cent. Towards the end of the second Five-year Plan, this percentage is expected to touch 72 per cent.

It would be an extremely useful study if total industrial consumption of electrical energy in 1960 was built up more reliably on the basis of expansion programme stipulated for *each* industry included in the second Five-year Plan. Of course, the pattern of consumption in each industry will have to be assumed to be the same as that in an existing industry, disregarding technological improvements in the new plants. In the case of industries that do not exist already, the quantum of electrical energy consumption will have to be based on data available from foreign sources.

It would also be useful to know inter-industry differentials in the consumption of electricity. These technological ratios would help the industrialists and the planners not only in spatial fixation of sources of demand and supply but also in forecasting such requirements for planning, beyond the second Five-year Plan period, with some exactitude.

Official information available for such a study is limited; for, what we have are:

(i) annual figures of industrial production and the interim index of industrial production based thereon, from 1946, and

(ii) consumption, as a fuel, of electricity, other than that produced by a unit for its internal use, industry-wise.

The source of data in each case is the statutory census of manufacturing industries, being carried out annually by the Directorate of Industrial Statistics. It is in this context that a brief study of the subject has been attempted.

In arriving at the technological ratios in view, the first approach has been to study whatever correlation could be found in an industry, between the total production and electricity consumption. In important positive cases, regression of the latter on the former has been studied and appropriate regression lines fitted with the method of least squares. The resulting equations indicate the relationship between a unit increase in production in that industry and the electrical energy required to achieve that production.

It may be appropriate to point out here that this method of approach would fail in Indian conditions if regression of electricity used by the Indian industry as a whole was studied over the entire field of production, that is, fitting a regression line on the basis of the interim index of industrial production for all the industries together. The reason of such failure is evident from the fact that the Government of India's interim index of industrial production is based only on 29 industries out of a total of 63. It appears more appropriate, therefore, that any relation between the consumption of electricity and industrial production be instead examined industry by industry. Another important point which should be kept in view prominently in such studies is that any attempt at dividing Indian industry between producer-goods industry and consumer-goods industry, etc., would be less scientific. A more appropriate consideration in making a distinction between one industry and another should, on the contrary, be the intensity of use to which electricity is put in different industrial processes. For instance, it may be (see below) that *industries like general engineering and "chemicals" which are considered basic industries, and produce goods generally of the former type, turn out to be less intensive users of electricity than those like "paper and paper board"* which are not of this type but are far more intensive users of electrical energy.

In this article, such regression lines have been fitted only to seven industries. For lack of suitable data in respect of the others, it has not been possible to add more. Even so, the resulting figures are valuable in studying the technological ratios in these industries for establishing, in each case, requirements of electricity for every unit increase in their respective production. During this study, it was noticed that, in certain industries, like "paints and varnishes" and "sugar," etc., no firm relationship between their production and consumption of electricity could be established.

The data on which regression equations for these industries have been based are reproduced in the table given below:

Table giving indices of electricity consumed and those of corresponding production in some industries

Name of industry		1946	1947	1948	1949	1950	1951	1952	1953

NEW PUBLICATIONS

Accumulation of Capital. By Joan Robinson. Published by Macmillan & Co., Ltd., London. Student Edition. Pages 440. Price: Rs. 10-8.

WHILE it is true that the theory of economics does not furnish a settled body of conclusions immediately applicable to a given set of problems, its usefulness as a guide to policy is indisputable. But even this was considerably limited by the excessive preoccupation of economic analysis, in the past hundred years, with the study of relative prices under the assumption of static overall conditions to the exclusion of the larger and more important macroeconomic problems of savings, investment and capital accumulation. The assumption of static overall condition is such a drastic departure from reality that it is difficult to submit anything evolved within it to empirical verification. It also ruled out the discussion of most of the dynamic problems which are really interesting. A welcome departure from this approach was Keynes' *General Theory* which broke away from static assumptions to discuss a real problem—the causes of unemployment. But his analysis was framed in terms of a short period in which the stock of capital and technique of production were given. It, therefore, left a huge area of long-run problems quite untouched.

The wheel of economic analysis has come full circle and the centre of interest has returned to the classical problems of the overall growth of the economy. A notable example of this change in emphasis in economic thinking is R. F. Harrod's *Towards a Dynamic Economics*. In order to discuss dynamic problems in a simple manner, Harrod dismisses the whole problem of relative prices and sets out an analysis of the overall development of an economy without paying attention to the theory of value.

Following the same method, the book under review analyses the problems of accumulation of capital in the long run. The method of approach is to proceed, step by step, from the most simple assumptions towards greater and greater complexity by the gradual removal of the assumptions. Book I contains a discussion of the concepts and categories required for the analysis of accumulation. Its general theme is that it is no use framing definitions more precise than the subject matter to which they apply. Book II, "Accumulation in the Long Run," is the central part of the work and the section entitled "Accumulation with one technique" contains the most important proposition; the rest of the book may be regarded as complications and qualifications surrounding this central core. Briefly, the proposition is that, *in an economy* with only one technique, and no consumption out of profits, and where the supply of labour adapts itself to demand, the future rate of accumulation is limited by the technical surplus available above subsistence wages for the workers employed. Within that limit, it is limited by the surplus above the level of real wages that the workers are willing to accept. Again, within that limit, accumulation is limited by the energy with which *entrepreneurs* carry it out. When the size of the labour force is independent of the *entrepreneur's* demand for workers, a minimum is set to the possible rate of accumulation by the rate of increase of the labour force. When accumulation fails to reach this rate, there is growth of long-period unemployment.

Technical progress is then introduced into the picture and its effect on accumulation studied. Here the author develops the concept of a *golden age*. When technical progress is neutral and proceeds steadily, without any change in the time pattern of production, with the competitive mechanism working freely, with population growing (if at all) at a steady rate and with accumulation of capital going on fast enough to supply productive capacity for all available labour, the rate of profit tends, according to the author, to be constant and the level of real wages tends to rise with output per man. There are then no internal contradictions in the system. Provided political events cause no disturbance and *entrepreneurs* have faith in the future and desire to accumulate profits at the same proportional rate as they have been doing over the past, there is no impediment to prevent them from continuing to do so. As long as they do, the system develops smoothly. Total annual output and the stock of capital (valued in terms of commodities) then grow together at a constant proportionate rate, compounded of the rate of increase of the labour force and the rate of increase of output per man. The economy is then said to be in a golden age.

The theory of accumulation in the long run, as developed by the author, may be stated thus: The rate of technical progress and the rate of increase of the labour force govern the rate of growth of output of an economy that can be permanently maintained at a constant rate of profit. The potential growth ratio (increase per annum of output as a percentage of annual output) is approximately equal to the percentage rate of growth of employment plus the percentage growth of output per head. When the potential growth ratio is being realised, the economy is in a golden age. The growth ratio represents the highest rate of accumulation of capital that can be permanently sustained at a constant rate of profit. An economy which is accumulating at a lower rate is experiencing a growth of unemployment. The conditions of a golden age require that the growth ratio be steady, technical progress be neutral, the proportion of annual replacement to the stock of capital be constant and a constant proportional rate of net investment yield a constant growth of stock of capital in use. The relation between the propensities to save and the technical conditions determines the rate of profit at which the natural rate of growth of the economy can be realised.

This scholarly study, meant primarily for advanced students of economics, is remarkably well written and its exposition is so lucid that even less advanced students can, if the arguments are closely followed, gain an understanding of the central issue discussed. The book, as most of the other works of the author, is an invaluable addition to economic literature.

Depreciation, Losses and Penalties under Income-tax Act, 1922. By Ramesh C. Sharma. Published by Practical Tax Publishers, Bagla Buildings, Nahar Shahadat Khan, Delhi 6. Pages 236. Price : Rs. 12-8.

Amongst the spate of books published on taxation, the book *Depreciation, Losses and Penalties* deserves special notice. It deals with three important aspects of income-tax assessment, namely, depreciation, losses and penalties. It is thus divided into three parts; each part gives a summary of provisions, case law thereon, and apt illustrations so that even a layman can follow the principles. The book within its 200 and odd pages compresses much useful information, not easily available in the normal textbooks on income-tax law. The book is, therefore, a welcome addition to the literature on the subject. We congratulate the author on having compressed so much valuable information into so little a compass.

Indian Company Law, 6th Edition. By M. J. Sethna. Published by Educational Publishers, 204, D. Naoroji Road, Fort, Bombay 1. Pages 591 (excluding appendices). Price : Rs. 25.

Professor M. J. Sethna of the Government Law College, Bombay, deserves to be congratulated on bringing out a revised and enlarged 6th Edition of his book, the *Indian Company Law*. It is indeed a new book, rather than a revised edition. It incorporates the decisions of the Bombay High Court and other High Courts in India and also English Courts. It is a comprehensive work dealing exhaustively with every aspect of the new law. An exhaustive appendix gives the text of the Companies Act, the Societies Registration Act, the Companies (Central Government's) General Rules and forms, the Companies Regulations, offences and penalties under the Companies Act, miscellaneous forms and the Banking Companies Act. The book is bound to be of use and benefit to the members of the Bar and others concerned with this branch of law.

The Companies Act, 1956. By R. H. Pandia. Published by N. M. Tripathi Private Ltd., Bombay 2. Pages 900. Price : Rs. 25.

After the passing of the Companies Act, 1956, Mr. R. H. Pandia started the formidable task of revising his well-known book, *The Hand Book of Company Law*, third edition. He has revised this edition with scrupulous care and skill. The commentaries contain a lucid and comprehensive exposition of the provisions of the new Act and the principles underlying the same. Mr. Pandia has also carefully analysed the numerous Indian and English decisions and has presented concisely their effect in a coherent form. The new Act, as is well known, is a complicated piece of legislation, abounding in provisos and exceptions, but Mr. Pandia has succeeded in explaining this difficult branch of law with remarkable ease.

Company Administration under the New Company Law. By Tanubhai D. Desai and Indulal H. Shah. Published by N. M. Tripathi Private Ltd., Bombay-2. Pages 155. Price Rs. 4-8, 10s.

The purpose of this book is to offer the business executives a shorter and a simpler account of the difficult subject of company administration in a comparatively lucid style. Although apologetically, the authors have stated that the book is a small contribution intended to serve as a guide to those who are concerned with the New Company Law, it bears traces of deep thought and profound study of the subject. Undoubtedly, the book gives an overall picture of the various provisions of the new Act. It will, therefore, serve as a guide to those who find themselves in difficulty in the welter of this complicated piece of legislation which has no parallel in the history of Indian enactments.

Economic Resources of India and Pakistan. By K. C. Ghosh. Published by K. P. Basu Publishing House, 42, Cornwallis Street, Calcutta. Pages 486. Price Rs. 20.

This is a revised and enlarged edition of an earlier publication by the same author which had already been reviewed in the columns of this journal. The data on economic resources in the India-Pakistan sub-continent are widely distributed in official reports and documents and in technical journals, many of which are not easily accessible. The present volume is something like a study of world economic products with special reference to India and Pakistan. The compilation which covers a wide range from geographical data to industrial and financial particulars will be found to be really handy for a busy person. The author has taken great pains to give as much information as can be compressed in a book of its dimensions.

Direction of International Trade, Series I, Vol. VII, No. 6. Annual issue. Joint publication of (1) Statistical Office of the U.N., (2) I.M.F., and (3) I.B.R.D.

This 328-page publication covers, as usual, a wide range of statistics connected with international trade. It has four chapters in all, which provide statistics pertaining to (1) reconciliation of the Director of International Trade Data with those of the world trade totals of International Financial Statistics, (ii) trade of principal monetary areas as reported by the reporting countries in each area, (iii) trade as reported by the trading partners of the area, and (iv) totals of D.I.T. trade data by reporting countries.

Indian Agricultural, Industrial and Trade Review, Annual 1955-56. Published by C. M. Ratnam for the Andhra Education Society, Sion Road, Bombay 22. Price : Rs. 10.

Though the aim of the publication under review is to raise funds for the construction of a building for the school managed by the Society, the Society has succeeded remarkably well in bringing out a very interesting and informative publication. Developments in the fields of agriculture, industry and trade have been reviewed by a galaxy of eminent men who have specialised in their respective fields.

Publications of this type play a special role in India today, when the nation has embarked on huge plans of development in various fields. The reader will get more than his money's worth. It has 44 articles and 4 statistical supplements, covering 409 pages of art paper. Printing and get-up are excellent.

Indian Oilseeds Journal. Edited and published by Dr. R. Sankaran, M.A., Ph.D. (London) D.I.C., Secretary, Indian Central Oilseeds Committee, Gandhi Bhavan, Hyderabad (Dn.). Price : Rs. 2, Foreign 12s. (Postage extra).

The publication under review is the first of the issues the Indian Central Oilseeds Committee, Hyderabad (Dn.), has undertaken to publish quarterly. India holds a pre-eminent position in the world in the production of oilseeds. During the second Plan period, the total production is proposed to be stepped up from 5.6 million tons in 1955-56 to 7.0 million tons in 1960-61. Oilseeds and oils are also large earners of foreign exchange for the country, the amount so obtained in 1954-55 being no less than Rs. 25 crores.

The importance of improving the quality and production of all kinds of oilseeds cannot, therefore, be exaggerated. In this connection, scientific research and the implementation of the results of research play a vital role. The journal under review serves a very useful purpose, in that it can give wide publicity to the results of research and other vital information connected with the commodity.

RAMTIRTH BRAHMI HAIR OIL

Hair and brain tonic

Ensures growth of healthy hair. Removes dandruff, protects scalp, increases memory and induces sound sleep. Useful to everyone in all seasons. Rs. 3/8 for big bottle and Rs. 2/- for small bottle.

AVAILABLE EVERYWHERE

AYURVEDIC MEDICINE
RAMTIRTH BRAHMI OIL SPECIAL NO. 1

RAMTIRTH YOGASHRAM
BOMBAY 14 (C. RLY.)

To be healthy and to keep fit, ask for our attractive ASANA CHART (MAP) showing YOGIC ASANAS, which will be sent on receipt of M.O. for Rs. 1/14/- including Postage. These ASANAS can easily be performed at home.

Yogic Classes are regularly conducted from 7-30 to 9-30 a.m. and evening from 6 to 7-30 p.m. at the above address. Lectures on every Sunday at 10 a.m.

FIVE-YEAR PLAN FOR PHARMACEUTICAL INDUSTRY

STRESS ON MANUFACTURE OF BASIC DRUGS

THE view that a fresh approach to planning for the development of the pharmaceutical industry in India was needed and that much stress should be laid on manufacture of basic drugs from more fundamental stages was expressed by Dr. A. Nagaraja Rao, Industrial Adviser, Government of India, in the course of his presidential address to the Special Five-year Plan Session of the Indian Pharmaceutical Congress held last week in Calcutta. The pharmaceutical industry, it will be noted, comprises, among others, the industries producing antibiotics such as penicillin, streptomycin, tetracyclin, etc., sulpha drugs, anti-T.B. drugs, antileprosy drugs, anti-dysentery drugs, anæsthetics and insecticides. A noteworthy feature of this industry is that, despite the start made in the production of certain drugs, chiefly, penicillin, certain sulpha drugs and others, their production falls far short of the needs of the country. The production of penicillin at Pimpri, for example, was estimated at 6.6 million mega units for 1955-56 while imports amounted to no less than 35.3 million mega units in 1955. The production of other antibiotics, namely, streptomycin, chloramphenicol and tetracyclin amounted in 1955 to 1,833 kgs. while the imports were no less than 23,430 kgs. In the case of other items, the position is no different. Whereas, to cite another example, production of sulpha drugs aggregated 37,900 kgs., imports were 459,200 kgs. in 1955. The second Plan notes that, with the advent of new synthetic drugs, dependence on imports has considerably increased. Thus, the total value of imports of drugs and medicines which stood at about Rs. 10 crores in 1950-51 rose to Rs. 13 crores in 1954-55, and for the nine months, April to December, of 1955-56, amounted to Rs. 10.41 crores.

Committee's Recommendations

A feature worthy of special mention, however, was the report (submitted in June 1954) of the Committee, appointed by the Ministry of Commerce and Industry in February 1953, to make a comprehensive inquiry into the working of the pharmaceutical industry with a view to suggesting steps to put the industry on a sound basis. Some of the notable recommendations made by the Committee related to the measures to be taken (*a*) to improve the existing conditions in the pharmaceutical industry, (*b*) to ensure the standardisation and control of drugs and pharmaceutical preparations, (*c*) to ensure supplies of essential raw materials to the industry, and (*d*) to promote the development of the manufacture of basic drugs in the country. The Committee proposed, in the first place, that each manufacturing concern should endeavour to produce as many fine chemicals and drugs starting from basic chemicals and/or intermediates as practicable for the time being. Secondly, a long-term programme for the production of coal-tar chemicals designed to meet the requirements of the coal-tar products of the industry should be drawn up. Thirdly, in order to overcome the defects in the operation of the drug control existing at present and to bring about uniformity in the standard of drugs manufactured, the administration of drugs control should be centralised. The Committee also recommended that a Development Council for the pharmaceutical industry should be constituted to ensure future development of the industry along desired lines.

The first step taken by the Government in pursuance of those recommendations was the constitution in 1955 of the Development Council. The Government has appointed the Drug Controller as an ex-officio Industrial Adviser (Pharmaceuticals and Drugs) in order to achieve better co-ordination in the working of the Drugs Act and the Industries (Development and Regulation) Act. It is also actively considering measures for centralising the administration of the Drugs Act and exercising Central control over the quantum of production. Moreover, considerable emphasis has been laid in the second Plan for manufacturing as many pharmaceuticals and drugs as possible, starting from basic chemicals and/or simple intermediates.

Targets for Second Plan

The programmes for many of the items for the second Plan have been so drawn up as to help, in large measure, towards the achievement of self-sufficiency in many items. The targets to be attained in 1960-61 by some of the important drugs are given below:

	Units	Targets for 1960-61
Penicillin	Million mega units	40
Streptomycin	Kgs.	18,000
Chloramphenicol	,,	10,000
Sulpha drugs	,,	450,000
Para-amino-salicylic acid	,,	113,300
Procaine hydrochloride	,,	50,000
D.D.T.	Tons	2,800

Despite these targets, the second Plan admits that there will be need for importing, in varying quantities, a number of essential drugs like vitamins, synthetic anti-malarials, antibiotics, and other raw materials and intermediates. The Plan also recognises that, in view of the rapid pace at which new developments are taking place and more effective and potent drugs are discovered and synthetised, it is difficult to envisage self-sufficiency in regard to all items. Apart from that, it is also not possible to produce at home most of the synthetic drugs, which have been recently put on the market, because they are complex in nature and require a variety of basic chemicals and a high degree of technical skill and know-how for their manufacture. This brings us to another important hurdle in the way of the progress of the industry, that is, the absence of a basic chemical industry to provide the required basic materials for the manufacture of synthetic drugs. Moreover, as the Plan further points out, the demand for these primary chemicals from the drug industry is too small to enable economic units to be set up for their production.

Keeping Abreast of Developments

Viewed against this background of the position and the problems of the pharmaceutical industry, the observations of Dr. Nagaraja Rao are quite pertinent. He suggested that the industry should work out arrangements with other developed countries, not only for deriving benefit from the extensive research going on in different parts of the world, but also to make rapid progress in all the possible fields even within the country on up-to-date lines. The attainment of any self-sufficiency in the absence of constant efforts to keep pace with the progress was not of any large significance. Dr. Rao also felt that the days when the industry could limit its activities to the processing of tablets, capsules, etc., and to formulation of different drugs based on imported raw materials were almost at an end. He stressed that the manufacture of basic drugs had to be undertaken as a part of the pharmaceutical programme. The Industrial Adviser to the Government also expressed the view that Indian technicians should, instead of repeating the work already done in other countries, acquire the know-how from whatever source available in the world and undertake production as soon as possible. Further, the research organisations should also work on the operational and other difficulties facing the industries and evolve more economical methods of manufacture of products.

The speaker gave the manufacturers a wholesome piece of advice on quality of pharmaceutical products. He pleaded strongly for qualitative improvement of the Indian products, because, in the field of drugs, it would be difficult to inspire confidence in the public and medical profession, so long as there were even a few manufacturers of doubtful reputation. In this connection, he suggested the establishment of a well-equipped testing and control organisation owned and managed by the industry itself in co-operation with the representatives of the medical profession for periodically checking up and certifying the quality of the products made by different manufacturers and circulating the names of the delinquents to all members of the medical profession. This method, if adopted, should go a long way towards facilitating a healthy growth of the industry.

Trained Personnel

Whether the future development of the industry will be rapid or otherwise will depend on the availability of trained engineer-technologists and pharmacists. The Russian Committee which visited India recently has estimated the requirements of well-trained engineer-technologists at 300 for the different manufacturing units to be established in accordance with their project reports. The Pharmaceutical Education Committee of the Indian Pharmaceutical Congress suggested, therefore, the setting up of regional pharmaceutical technologists training centres. The need for scientific pharmacy and pharmaceutical education of proper standard were stressed by Mr. S. P. Sen at the Committee. There was also a singular unanimity among the speakers at the Congress on the need for getting adequate number of qualified pharmacists.

The problems facing the pharmaceutical industry are thus by no means small. They arise from causes as diverse as the existence of ill-equipped and badly located units, inferior quality products, unreasonable prices, non-availability of basic chemicals, and technical know-how. It is to be hoped that the deliberations at the conference will prove specially useful in solving these problems and helping the progress of the industry so essential for improving the standard of health of the people.

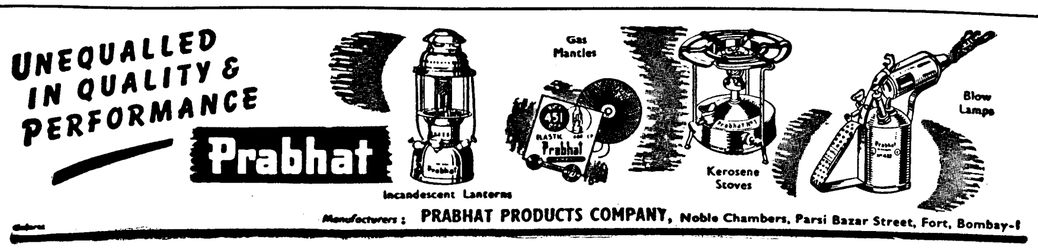
U.K. WORLD'S LARGEST RADIOISOTOPE EXPORTER

The United Kingdom maintained its position as the world's biggest exporter of radioisotopes in the year ended 30th September 1956, by exporting a record total of 8,617 consignments of radioisotopes, worth over £100,000, to 47 countries. Of these, 101 consignments were sent to India. These exports were part of a record total of 22,069 consignments produced during the same period—3,830 more than produced in the previous year. These facts have been revealed by the United Kingdom Atomic Energy Authority. The Federal Republic of Germany was Britain's best customer for radioisotopes, taking 1,266 consignments, followed by France with 1,051 and Sweden with 1,022.

Radioisotopes, of which there are a great number of types, varying greatly in strength, life, and cost, are used mainly in medicine, research, and industry. In British industry, they are being used in increasing numbers for such tasks as controlling production processes as well as for research. Universities are also regular users of isotopes for research purposes. The majority of those manufactured at the Harwell (Berkshire) research establishment and at the Radiochemical Centre, Amersham (Buckinghamshire), were supplied to hospitals for medical therapy and research. Harwell's rate of production and sale is still rising.

Details of these exports show that 42 consignments of isotopes were sent to India from Amersham and 59 from Harwell. Forty-three were sent to Japan from Amersham and 325 from Harwell. Australia imported 92 consignments of isotopes from Amersham and 72 from Harwell.

The Orissa Government will take over for State trading kendu leaf used for making bidis. The leaf is grown extensively in Sambalpur of Orissa, and in the neighbouring M.P., Chota-Nagpur and Junagadh. The decision was taken, according to an official spokesman, in order to augment the income of the State by increasing non-tax revenues.



WORLD INDUSTRIAL PRODUCTION

TREND UP IN FIRST HALF OF LAST YEAR

THE mines and factories of the world turned out a greater volume of products during the first half of 1956 than in any previous six-monthly period, according to the *Monthly Bulletin of Statistics* of the United Nations for October last. Consequently, the index of industrial production for this period stood at the record level of 114 (1953=100) which represented an increase of 5 per cent. over the corresponding half of 1955. The *Bulletin*, however, points out that the unprecedented rate of increase witnessed by the quarterly data for 1955 began to decline during the period under review and that the available data for the third quarter of 1956 pointed to a deceleration in the rate of increase of industrial production.

Among the North American countries, the output in the U.S. rose by slightly more than 4 per cent. in the first six months of 1956, as compared with the corresponding period of 1955. Increases were recorded in all industries, except transport equipment which registered a decline of 3.3 per cent., as compared with the level of the first half of 1955. Among other important industries, the production in which witnessed substantial improvement over that of the first half of 1955, mention must be made of chemical industry (8.7 per cent.), machinery (11 per cent.), foodstuffs (3 per cent.) and mines and oilwells (8 per cent.). During the same period, production in Canada increased by 8 per cent. over that of the corresponding period of 1955 and 11.5 per cent. over the same period of 1953. It is significant, however, that the rate of increase in the mining section was faster than that in the manufacturing sections, owing to increases in the production of crude petroleum and iron ore. The combined index of industrial production for Western Europe also displayed a similar trend. The index was 123 for the first quarter and 128 for the second quarter (1953=100), indicating that the output was one-fourth greater than in the first half of 1953, and 6 per cent. higher than in the first half of 1955. The increases between the corresponding periods of 1953 and 1954, and 1954 and 1955 were 9 per cent. and 10 per cent. respectively. This slowing down in the pace of expansion was due to a levelling off in production in certain countries of this region, in the wake of measures taken to keep inflationary forces under check.

The index for the U.K., for instance, showed only an increase of less than 1 per cent. during the first half of 1956, as compared with the corresponding period of 1955. The indices of production in the major components of food, textiles, chemicals and metals showed little or no change. On the other hand, figures indicate that slight decreases were recorded in most categories in the second quarter of 1956, as compared with the corresponding period a year before.

In France, however, the industrial production continued to rise until in the second quarter when it was nearly twice as high as in 1938 and 10.5 per cent. greater than in the first half of 1955. The industries in which the increases were very marked were durable goods and chemicals. In Western Germany also, the industrial production during the period under review rose by no less than 10 per cent. over that in the same half-year of the previous year. Though this increase was considerably less than the increase of 15 per cent. witnessed between 1954 and 1955, German production was, nevertheless, one of the main factors responsible for the high level of European output. While all the major industries registered substantial gains, electrical equipment and machinery industries appeared to have contributed most to the overall increases.

Italy was another European country to stage a rise. Its index number of industrial production rose by 8 per cent. above the first half of 1955. It is noteworthy that, in the first five months of the period under review, the mining index was marked up by no less than 30 per cent. over the corresponding period of the previous year. The index for manufacturing industries climbed up by 7 per cent. The largest gains were made in the metal producing and consuming industries together with chemicals.

Among the other countries of Western Europe, notable increases were also witnessed in the Netherlands, Belgium and Sweden. In Finland and Denmark, however, declines were registered, owing chiefly to labour unrest.

On the basis of the figures available for the first five months of the year, the *Bulletin* estimates an increase of 6 to 7 per cent. in India's industrial production in the first half of the year, as against the corresponding period of 1955. It is significant that the textile industry displayed considerably greater growth than in North America and most of the European countries. But the most marked rise in industrial production was found in Japan, where, during the period under review, the index climbed up 18 per cent. as compared with the first half of 1955. The three most important sectors of the industry that contributed most to this increase were chemicals, metallurgy and textiles.

USERS' LICENCES

Under the Central Government's import policy for January-June 1957, the concession of granting actual users' licences direct by the Licensing Authorities on the basis of licences for the preceding two consecutive periods has been withdrawn. Actual users will, therefore, have to obtain fresh certificates, irrespective of whether they have obtained licences in the past or not. Applications for such items only as are declared licensable to actual users in the new policy will be considered on their merits as per rules, subject to sufficient justification for import. No application for items which are not shown as licensable to actual users in the Policy Book will be entertained.

Industrial firms not borne on the registers of the Industrial Advisers (Engineering and Chemical Development Wings), Government of India, desiring to obtain such certificates, which are located in the Marathi and Gujarati speaking areas of the pre-reorganisation Bombay State are advised to approach the Director of Industries, Bombay, without any delay. Industrial firms in the Vidarbha and Marathwada regions should approach the Officer on Special Duty, Industries, Vidarbha and Marathwada, Nagpur, and those in the Saurashtra and Kutch regions the Deputy Director of Industries, Saurashtra, Rajkot. The Director of Industries, Bombay, and the Regional Officers at Nagpur and Rajkot or their subordinate officers will entertain the request for certificates only up to 28th February 1957. Intending applicants should not, however, confuse this date with the last date, namely, 30th April 1957, fixed by the Licensing Authority for necessary applications for actual users' licences but should, in their own interest, approach the Director of Industries or his Regional Officers at Nagpur and Rajkot, as the case may be, as early as possible, but in any case not later than 28th February 1957, to avoid delay and secure certificates in time.

UNIFORM STANDARDS

About 125 leaders of industry and important personalities in the field of standards in the Commonwealth will attend the third Commonwealth Standards Conference to be held in New Delhi, from 21st January to 3rd February 1957. The Conference will be inaugurated by Shri Morarji Desai, Minister for Commerce and Industries. This is the first time that India is playing host to this Conference. Its previous two sessions were held in London in 1946 and 1951. The Conference seeks to secure greater alignment of industrial standards and standardisation policies of Commonwealth countries in the interest of inter-Commonwealth relations and trade.

Delegates from Australia, Canada, India, New Zealand, Pakistan and the United Kingdom will attend the Conference. The United Nations' Economic Commission for Asia and the Far East will be represented by an observer. The technical discussions at the Conference will be held in four separate sessions. Each session will cover steel, electric cables, electric equipment of machine tools and safety requirements for domestic electrical appliances.

General questions of policy will be reviewed in separate sessions where problems of common interest like the metric and the inch-pound systems of measurement, certification marking, standards for consumer goods, general alignment of standards and terminology will be considered.

OILSEEDS RESEARCH STATIONS

The Indian Central Oilseeds Committee and the Indian Council of Agricultural Research will soon set up jointly 17 composite regional research stations for cotton, oilseeds, and millets in various States of India. The total cost is estimated at Rs. 75 lakhs. The location of the stations will be as under: Coimbatore, Sulekere (Mysore), Akola, Delhi, Surat, Daresugur (Tungabhadra region), Kanpur, Hissar (Punjab), Junagadh, Ludhiana, Hyderabad, Hoshangabad (M.P.), Mohal (Bombay), Bellary, Gwalior, Nandyal and Jaipur. Radio sets are also expected to be installed in five centres, namely, Tirupur (Coimbatore District), Cuddalore (South Arcot), Koilpatti (Tirunelveli), Vellore (North Arcot) and Virudhunagar (Ramanathapuram), for disseminating marketing information.

These proposals, among others, will come up for consideration before the tenth annual general meeting and the eighteenth ordinary meeting of the Indian Central Oilseeds Committee which will be held at Hyderabad on the 25th of this month.

RESULTS OF MYSORE SUGAR SATISFACTORY

DIVIDEND MAINTAINED

THE Directors of the Mysore Sugar Company, Ltd. (Chairman and Managing Director: Mr. S. Muninanjappa, B.A., B.L., I.A.S., Bangalore), have decided to maintain the dividend on the Company's shares at 20 per cent. for the year ended 30th June 1956. This is the seventeenth year in succession for which this level of distribution to shareholders has been kept unaltered. It may be mentioned here that the Company stepped up its dividend from 15 per cent. to the now accustomed level of 20 per cent. in 1939-40. Thereafter, for 12 years, that is, until 1951-52, it consisted of a dividend of 10 per cent. and a bonus of 10 per cent. In 1951-52, the bonus was consolidated with the dividend and, since then, the shareholders have been getting their 20 per cent. return wholly as dividend.

The steady return to shareholders for all these 17 years at 20 per cent. does not, however, connote a period of uniform profits or unqualified prosperity for the Company, as may appear on the face of it. On the contrary, it has been a period of ups and downs, true to the status of an agro industry. To go not too far back, the Company made a gross profit of Rs. 39.43 lakhs for 1952-53, only to be followed by a gross loss of Rs. 10.38 lakhs in the succeeding year. The course was again reversed in the next year, that is, 1954-55, when it earned a gross profit of Rs. 15.29 lakhs. This advanced by Rs. 4.52 lakhs to Rs. 19.81 lakhs for the year under review. If, despite such wide swings in the fortunes of the Company, the dividend performance has been steady with scarcely any variation, it is a tribute to the appropriation policy of the Directors. The net profit, after making a slightly higher provision for depreciation and Rs. 5 lakhs for taxation as against nothing at all in the previous year, stands at Rs. 9.12 lakhs. This is a fraction less than Rs. 10 lakhs made in the previous year. Although this profit is only a little over 50 per cent. of that for the year 1952-53 at Rs. 17.73 lakhs, viewed in the context of a net loss of Rs. 15.01 lakhs suffered in 1953-54, the performance for the year under review should be considered fairly satisfactory. No amount has been allocated to the reserves, while, in the previous year, a sum of Rs. 5.02 lakhs had been transferred to this account. Instead, the employees' gratuity fund has been credited with a sum of Rs. 5 lakhs, as against *nil* a year before.

The following comparative table brings out some of the salient features of the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Sale proceeds (sugar and distillery sections)	291.76			
Other income	19.31			
Closing stocks (sugar and distillery including crops-in-progress)	67.50	*N.A.*	*N.A.*	*N.A.*
Expenses	297.78			
Gross profit (+) or loss (—)	+19.82	+15.29	—10.38	+39.43
Depreciation	5.70	5.29	4.63	5.70
Taxation	5.00	..	..	16.00
Net profit (+) or loss (—)	+9.12	+10.00	—15.01	+17.73
Unclaimed dividends paid	0.03	..	..	..
To Employees' Gratuity Fund	5.00	..	..	..
Transfer to reserves	..	5.02	..	..
Dividend	4.36 (20%)	4.36 (20%)	4.36 (20%)	4.36 (20%)
Carry forward	2.03	2.90	2.28	21.65
Sugarcane crushed (in tons)	347,523	375,548	12,582	245,500
Sugar produced (in tons)	34,798	35,312	1,210	27,962
Recovery per cent.	10.14	9.4	*N.A.*	*N.A.*

N.A.—Not available.

The Company's sugar factory at Mandya is capable of crushing 1,500 tons of sugarcane per day. It has also a distillery attached to the factory. Cultivation is done by the Company on an area of 3,500 acres and, in order to meet its requirements in oilcakes, it has its own oil mill at Mandya. More than 10 per cent. of the shares of the Company are held by the Government of Mysore. Besides confectionery, it also manufactures country spirit for consumption in the State and for export.

Commenting on the working conditions experienced by the factory during the year under review, the Directors observe, in their latest report, thus:

"The year under report was a normal one and both production and sales were satisfactory. Crushing of sugarcane in the Company's Mandya factory began on 21st July 1955 and closed on 23rd April 1956. During this period of 279 working days, inclusive of days of trial crushing, a total quantity of 347,523 tons of sugarcane was purchased and crushed. The quantity of sugar produced was 34,798 tons, with a recovery of 10.14 per cent. As usual, the distillery continued to work satisfactorily."

The balance-sheet of the Company as on 30th June 1956 discloses a sound financial position. It has a paid-up capital of Rs. 21.79 lakhs in shares of Rs. 10 each. Against this, the reserves and surplus aggregate Rs. 88.88 lakhs. These include a general reserve of Rs. 62.50 lakhs, development reserve of Rs. 11 lakhs, dividend equalisation fund of Rs. 10 lakhs, stores depreciation fund of Rs. 2.50 lakhs and workmen's compensation fund of Rs. 24,818. The provision for taxation stands at Rs. 15.75 lakhs and other current liabilities total Rs. 97.17 lakhs. The gross block of Rs. 134.65 lakhs together with capital works-in-progress of the value of Rs. 4.76 lakhs, has been written down to Rs. 52.33 lakhs. Additions to the gross block during the year were of the order of Rs. 4.10 lakhs. The current assets, amounting to Rs. 171.26 lakhs, include stores and spare parts at Rs. 36.31 lakhs, stock-in-trade at Rs. 60.16 lakhs, crops-in-progress in Company farms at Rs. 6.66 lakhs, investments Rs. 22.83 lakhs and cash in hand Rs. 3.85 lakhs. It will be noted that the aggregate of current assets cover the current liabilities by a very wide margin.

In the context of the compulsory deposit scheme introduced by the Government of India along with other tax proposals on 30th November last, it will be interesting to note that the Company has no surplus liquid resources for meeting this requirement. Its cash balances are small. The major portion of investments is in respect of employees' provident and gratuity funds. Almost all its reserves are locked up partly in fixed assets and partly by way of working capital. It has not issued any bonus shares at all, though its position would have justified such a course. Now, if the compulsory deposit scheme were to be applied to this Company, it would have to borrow from banks. Here is an instance to show how this system of impounding reserves tantamounts to penalising prudence.

The Rs. 10 fully paid-up shares of the Company are being currently quoted on the Madras Stock Exchange at Rs. 44-12 *cum-div.* On an *ex-div.* basis, the year's dividend at 20 per cent. works out a yield of 4.7 per cent. per annum.

THACKERSEY GROUP

In view of the general weakness of textile shares, the decision of the Directors of the three Thackersey Mooljee group mills to capitalise a substantial part of the reserves of the respective mills and make an attractive bonus offer has failed to attract the attention of the market. In each case, the Directors have decided to issue two ordinary shares as bonus for every ordinary one held. In the case of the Hindoostan Spinning and Weaving Mills, this will mean the capitalisation of a sum of Rs. 24 lakhs, raising the paid-up ordinary capital to Rs. 36 lakhs. The Indian Manufacturing Company will have to capitalise Rs. 18 lakhs and bring the ordinary paid-up capital to Rs. 27 lakhs and the Western India Spinning and Manufacturing Company has to increase the paid-up ordinary capital from Rs. 12 lakhs to Rs. 36 lakhs by capitalising Rs. 24 lakhs. The proposals to issue bonus shares are, however, subject to sanction by the Controller of Capital Issues.

This is not the first occasion that the Companies propose to capitalise a part of their reserves. On a previous occasion, each of them issued 4½ per cent. taxable redeemable preference shares as capital bonus in the ratio of one share for every ordinary share held. Thus, in June 1949, the Hindoostan Mills and Western India capitalised a sum of Rs. 12 lakhs each. The Indian Manufacturing followed suit in March 1950 by capitalising Rs. 9 lakhs.

BLUE MOUNTAIN AND WATERFALLS

EARNINGS DECLINE

TWO of the Kothari group of plantation companies, namely, the Blue Mountain Estates Ltd., and the Waterfall Estates Ltd., Madras, disclose a fall in their earnings for the year ended 30th June 1956. The gross profit of Blue Mountain has fallen from Rs. 19.35 lakhs for 1954-55 to Rs. 15.65 lakhs and that of the Waterfall Estates from Rs. 14.23 lakhs to Rs. 13.33 lakhs. Both have reduced the dividend from 20 per cent. to 15 per cent.

The year in question was one in which the world tea market had acted in a manner unfavourable to the producers of both the medium and poorer quality teas and to the buyers of good tea, while the fall in the price of coffee, witnessed in the previous year, from the record prices for the year 1953-54 continued. The tea crop in the Waterfall Estate was slightly higher while that in the Blue Mountain Estate was appreciably lower. The output of the coffee crop was substantially higher in both the estates on account of the earnings of two new estates having been incorporated into the accounts for the year. On account of the heavy fluctuations in tea prices in the last year or two, the Waterfall Estates have given up their practice of selling teas on forward contract and have decided to sell them in the Cochin market on a ready basis. They hope that by this new policy they will be able to realise higher average prices in future. The Blue Mountain Estates have been concentrating on producing quality tea in accordance with the new market trends showing a bias for really fine teas. They feel that, even though this might result in a fall in the overall crop of the estates, the effect of this fall on earnings could be made up by the higher prices realised by finer teas.

In line with the gross profit, the net profit of both the companies has also staged a decline. The net profit of the Blue Mountain has fallen from Rs. 11.74 lakhs to about Rs. 9 lakhs and that of the Waterfall Estate from Rs. 7.40 lakhs to Rs. 6.71 lakhs. Blue Mountain has raised the provision for depreciation from Rs. 75,000 to Rs. 78,228 and lowered that for taxation from Rs. 5 lakhs to Rs. 4.40 lakhs. Likewise, Waterfall has raised the provision for depreciation from Rs. 45,000 to Rs. 68,330 and lowered the provision for taxation from Rs. 5 lakhs to Rs. 4.70 lakhs.

In view of the lower prices realised for tea during the period under review and the pendency of the award of the Special Industrial Tribunal for Plantations which has sanctioned substantial increases in wages to both workers and staff with retrospective effect from March 1952, both the Companies have thought it prudent not to recommend a higher dividend than 15 per cent. It may be recalled that a year before, both the Companies had raised the dividend to 20 per cent. from 12½ per cent. paid for 1953-54. Due to unavoidable circumstances, both the Companies have not been in a position to allocate anything to the reserves. It may be noted here that last year Blue Mountain had strengthened the reserves by Rs. 7 lakhs and Waterfall by Rs. 5 lakhs.

The tea crop of Blue Mountain went down from 1.29 million lbs. to 1.08 million lbs. This reverses the rising trend noted since 1951-52. The tea crop of Waterfall, however, maintained the upward trend which began in 1948-49, the harvest having risen from 1.11 million lbs. for 1954-55 to 1.12 million lbs., for 1955-56. This good and fairly increasing yield year after year speaks well of the good treatment and better manurial attention given to the estates by the management. The cost of production per lb. works out to Re. 1-9-2 for Blue Mountain and Re. 1-4-3 for Waterfall, having risen from Re. 1-4-9 and Re. 1-2-4, respectively, in 1954-55. The net price realised by the former, however, fell from Rs. 2-9-2 to Rs. 2-0-1, and that by the latter from Rs. 2-10-1 to Re. 1-14-4.

The coffee crop in both the Estates increased. The increase was from 4,267 cwts. to 11,102 cwts. in the case of Blue Mountain and from 47 cwts. to 6,995 cwts. in the case of Waterfall. These increases are due to the fact that, during the year under review, both the Companies had purchased two good coffee estates.

Estimates for 1956-57 are:

Blue Mountain Estate—Tea 1.13 million lbs. at an estimated all-in cost of Re. 1-4-5 per lb. and coffee 12,220 cwts. at a cost of approximately Rs. 109 per cwt.

Waterfall Estate—Tea 1.17 million lbs. at an estimated all-in cost of Re. 1-4-1 per lb. and coffee in Waterfalls 560 cwts. at a cost of Rs. 127 per cwt. The crop at Coovercolly Estate has been estimated at 8,000 cwts. at a cost of Rs. 104 per cwt.

The Directors of Waterfall report that, though the sanction of the Government has been received for the issue of bonus shares at the rate of one bonus share for every two ordinary shares held, they consider it advisable to await the final results of the Plantation Industry Award pending in the Supreme Court. Blue Mountain had also applied for sanction for the issue of bonus shares on the same terms. The sanction has been accorded but only at the rate of 0.4 bonus share for every share held. In this case also, the Directors have decided to await the final outcome of the Plantation Industry Award.

The financial position of both the Companies is indicated in the following synopses of their latest balance-sheets:

(As at 30th June, 1956)

	Blue Mountain	Waterfall
	Rs.	Rs.
Capital	37,50,000	26,00,000
Reserves and surplus	31,47,790	28,98,920
Provision for taxation	12,45,800	9,41,993
Current liabilities	8,09,927	11,32,325
	63,01,651	52,24,801
Gross block	6,41,995	4,51,488
Less—Depreciation		
	56,59,656	47,73,313
Net block	1,60,907	2,68,215
Stock-on-hand	1,01,370	2,01,293
Stores	20,12,834	12,71,181
Debts, deposits and advances	2,03,368	8,52,982
Investments	7,25,382	1,16,254
Cash		
Total	89,53,517	74,83 238

The Rs. 2 fully paid-up shares of Blue Mountain are being currently quoted at Rs. 5-3½ *ex-div.* and those of Waterfall at Rs. 5-4½ *ex-div.* On this basis, the latest dividends provide a yield of 5.7 per cent. and 5.6 per cent. per annum, respectively.

BARAREE COKE CURTAILS DIVIDEND

The working results of the Bararee Coke Company, Ltd. (Managing Agents: Messrs. Jardine Henderson, Ltd., Calcutta), for the half-year ended 31st March 1956, show a somewhat satisfactory state of affairs. However, this has been neutralised to some extent by certain other factors, not the least of which was the higher wages sanctioned to the colliery workers by the Industrial Tribunal. This has naturally affected the distribution to shareholders. Thus, the dividend for the half-year under review has been reduced to 6 per cent. from 7 per cent. paid for the previous half-year; the overall dividend for the whole year also stands reduced at 13 per cent. as against 14½ per cent. for the whole of 1954-55. This consisted of a dividend of 7 per cent. for the half-year ended 30th September 1954 and 7½ per cent. for the period ended 31st March 1955.

The gross profit stands lower at Rs. 2.90 lakhs, as against Rs. 3.10 lakhs for the half-year ended 30th September 1955 and Rs. 2.19 lakhs for the corresponding half-year ended 31st March 1955. The net profit, after providing for Managing Agents' remuneration, depreciation and taxation, stands slightly higher at Rs. 1.20 lakhs as against Rs. 1.12 lakhs and Rs. 78,084 for the previous two half-years respectively. A sum of Rs. 25,000 has been transferred to general reserve account, same as that in the previous half-year. The dividend at 6 per cent. absorbs Rs. 72,000, as against Rs. 84,000 at 7 per cent. in the previous half-year, leaving a balance of Rs. 45,399 to be carried forward, as against Rs. 22,707 brought in.

The Company's sale of coke and by-products fetched Rs. 19.96 lakhs, as against Rs. 20.09 lakhs and Rs. 18.46 lakhs in the two preceding half-years, respectively. Manufacture and despatches during the half-year under review were: Coke 34,200 and 32,203 tons, tar and pitch 1,390 and 1,347 tons, sulphate of ammonia 339 and 208 tons and benzol 5,483 and 7,547 gallons, respectively.

Commenting on the Company's working during the period under review, the Directors in their report state thus:

"Your Directors consider the results for the half-year under review to be satisfactory. Since then, however, the combination of a number of factors has brought about a less satisfactory situation. As a result of the Award of the All-India Industrial Tribunal (Colliery Disputes) the wages of colliery workers were substantially increased and a consequent increase in the price of coal of Rs. 3 per ton was passed on to consumers. It was expected that a similar increase would take place in the coke plants. To offset to some extent this increase, the prices of hard coke No. 1 were increased by Rs. 6-8 per ton. Unfortunately, no agreement has been reached with labour regarding the increase in wages and the Union has made representations to Government with a view to referring the matter to a Tribunal. In addition, there has been a substantial drop in the output of hard coke during this period and while your Directors have plans in hand for stepping up the production, they have thought it prudent meantime to conserve the resources of the Company and to reduce the dividend to 6 per cent., making 13 per cent. for the year."

The balance-sheet of the Company as at 31st March 1956 shows its paid-up capital at Rs. 12 lakhs in ordinary shares of Rs. 10 each. Against this, the reserves and surplus aggregate Rs. 9.23 lakhs. The provision for taxation stands at Rs. 56,138 and the current liabilities total Rs. 9.37 lakhs. The gross block of the value of Rs. 37.37 lakhs has been written down to Rs. 2.47 lakhs. The current assets aggregate Rs. 28.60 lakhs and more than adequately cover the current liabilities and provision for taxation.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 18 *cum-div.* On an *ex-div.* basis, and taking the dividend for the whole year ended 31st March 1956 at 13 per cent., the yield works out to 7.7 per cent. per annum.

Points From The Chair

Capital for Industries

"THERE is no doubt that, within two or three years, the production of cotton shall increase by another ten lakh bales and I wonder what will happen then. Why to export this valuable raw material and not its finished products, i.e., yarn and cloth, is a serious question which deserves the attention of the authorities. The setting up of more factories will provide more jobs to the workers, more money to the exchequer and, at the same time, it will increase the exports and reduce Japanese competition in cloth. There is, however, the question: where to find the funds for putting up such factories? The funds come mostly from the wage earners and middle class people who seek to have additional income by investing their hard-earned savings in manufacturing concerns, instead of putting them into the banks. At the same time, the investors expect that the return for their investment should be sufficiently tempting. While banks pay 4 per cent. on deposits, the investors cannot be attracted to take the risk of investing in industries, unless they hope to get at least double of this, because, during the first three years of the erection of the factory, they do not get any return at all. Unfortunately, the various Acts and actions, seasonal and unseasonal, have made the investors very nervous and capital for the industries is being diverted towards banks and securities. This proves that the money is there, but it is not forthcoming to the Industries due to lack of confidence, and insufficient inducement of high returns."

RAI BAHADUR G. M. MODI,
Modi Spinning and Weaving Mills Co., Ltd.

Production *versus* Strikes

"But there is another side of the account which we have come to call productivity. In my statement a year ago, I talked about industrial relations and I would now like to add a word which has a bearing on productivity. While we are making strenuous endeavours to increase productivity, we still indulge in strikes which have the opposite effect. It is true that they cause less loss of time than in days gone by and it may be that the time lost is not large in relation to time worked, but the effect of the loss cannot be measured in men-days lost by the strikers themselves nor by reference to the area to which they may seem to be confined. The actual individuals who strike may seem to lose only their own wages, but, indirectly, they lose much more, and many other people also suffer injury. Strikes affect the prosperity of the works in which the strikers are employed; they affect the activities of those who supply them with materials and services and those who buy their products. More widely and indirectly, the income of the whole country, which is what we have to live on, is lowered, and still more remotely, the strikers inflict damage on our goodwill in the markets of countries with whom we trade and in others with whom we hope to trade. In a word, the strikers lower the prosperity and prestige of their country, thereby causing a loss not only to themselves but to every one of their countrymen."

SIR WALTER BENTON JONES, BT.,
United Steel Cos., Ltd.

Inflation *vis-a-vis* Replacements

"My own personal view is that, if inflation, which has been with us now for so long, continues unchecked, this troublesome problem of ultimate replacement becomes more and more serious and the real remedy is to achieve stability. We all know the Government is very much concerned with this matter, and, if stability can be attained, then I feel that not only the shipping industry but all businesses throughout the country would be able to plan ahead on the basis of fixed prices, whether for ships, general equipment for factories and, indeed, most, if not all, of the requirements of trade, and depreciation allowances based on current values would then be adequate to provide ultimately for replacements. It is much, therefore, to be hoped that the efforts of our Government will put an end to this inflationary pressure, as, with the achievement of stability, we could, I think, regard the long-term future with confidence."

WALTER C. WARWICK,
Houlder Line Ltd.

Era of Easy Profits Passing

"The era of easy, and often too easy, profits is rapidly passing and this should call for higher efficiency and determined effort. Many firms have courageously pegged their selling prices for many months ahead. Provided prices in other directions can be held in check, these firms should reap their reward not only in adding a spur to their own efficiency but also in making a major contribution in halting inflation. Restrictive practices whether exercised by the workmen or by the employers are suicidal to both. The worker who denies the most economic use of the latest machinery is, in the long run and not a very long run, certainly working himself out of the very job that he imagines he is thereby retaining. Equally, the employer who refuses to re-equip his works will soon find himself out of business being unable to compete with his more venturesome competitors."

SIR A. HAROLD BIBBY,
Martins Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

BABABUDIN COFFEE AND PRODUCE CO., LTD. Annual General Meeting, Bangalore, 19th January 1957. Dividend: Re. 1-4 per share. Transfer books remain closed from 13th to 19th January 1957, both days inclusive.

PREMIER AUTOMOBILES LTD. Annual General Meeting, Bombay, 21st January 1957. Dividend: Rs. 6 per 'A' ordinary share, free of income-tax, payable on and after 4th March 1957. Transfer books remain closed from 21st December 1956 to 18th January 1957, both days inclusive.

SINGELL TEA CO., LTD. Annual General Meeting, Calcutta, 22nd January 1957. Transfer books remain closed from 7th to 22nd January 1957, both days inclusive.

KHARDAH CO., LTD. Annual General Meeting, Calcutta, 24th January, 1957. Dividend: Rs. 5 per share. Transfer books remain closed from 10th to 24th January 1957, both days inclusive.

NEELAMALAI TEA AND COFFEE ESTATES LTD. Annual General Meeting, Madras, 24th January, 1957. Dividend: As. 6 per share. Transfer books remain closed from 18th to 24th January 1957, both days inclusive.

ASSOCIATED CEMENT COMPANIES LTD. Annual General Meeting, Bombay, 25th January 1957. Dividend Rs. 10 per share, payable on and after 1st February 1957.

RANEEGUNGE COAL ASSOCIATION LTD. Annual General Meeting, Calcutta, 25th January 1957. Dividend: As. 6 per share. Transfer books remain closed from 10th to 25th January 1957, both days inclusive.

SIRPUR PAPER MILLS LTD. Annual General Meeting, Somajiguda, Hyderabad-Deccan, 28th January 1957. Dividend: As. 8 per share, payable on or after 1st March 1957. Transfer books remain closed from 15th to 28th January 1957, both days inclusive.

CENTRAL HYDRAULIC PRESS CO., LTD. Annual General Meeting, Calcutta, 28th January 1957. Dividend: Rs. 6 per share. Transfer books remain closed from 15th to 28th January 1957, both days inclusive.

MYSORE SUGAR CO., LTD. Annual General Meeting, Bangalore City, 28th January 1957. Dividend: Rs. 2 per share. Transfer books remain closed from 12th to 31st January 1957, both days inclusive.

KORNAFULI ASSOCIATION LTD. Annual General Meeting, Calcutta, 29th January 1957. Transfer books will remain closed from 22nd to 29th January 1957, both days inclusive.

NEW TERAI ASSOCIATION LTD. Annual General Meeting, Calcutta, 29th January 1957. Transfer books will remain closed from 22nd to 29th January 1957, both days inclusive.

FRASER AND CO., LTD. Annual General Meeting, Calcutta, 30th January 1957. Transfer books will remain closed from 22nd to 30th January 1957, both days inclusive.

TYROON TEA CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Transfer books will remain closed from 21st to 31st January 1957, both days inclusive.

SHANGRILA FOOD PRODUCTS LTD. Annual General Meeting, Bombay, 31st January 1957.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 31st January 1957. Dividend: Rs. 8 per share. Transfer books will remain closed from 24th January to 6th February 1957, both days inclusive.

BELVEDERE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Dividend: *Nil*. Transfer books remain closed from 18th to 31st January 1957, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Dividend: *Nil*. Transfer books remain closed from 18th to 31st January 1957, both days inclusive.

CHEVIOT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Dividend: *Nil*. Transfer books remain closed from 18th to 31st January 1957, both days inclusive.

DELTA JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Dividend: *Nil*. Transfer books remain closed from 18th to 31st January 1957, both days inclusive.

ORIENT JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st January 1957. Dividend: Re. 1 per share. Transfer books remain closed from 18th to 31st January 1957, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 1st February 1957. Dividend: As. 5-1/5 (6¼ per cent. per annum) for the half-year ended 30th June 1956. Transfer books remain closed from 18th January to 1st February 1957, both days inclusive.

A. V. THOMAS AND CO. (INDIA) LTD. Annual General Meeting, Madras, 1st February 1957. Dividend: *Nil*. Transfer books will remain closed from 25th January to 1st February 1957, both days inclusive.

VAIKUNDAM (TRAVANCORE) RUBBER CO., LTD. Interim dividend of Re. 1-8 per ordinary share, for the year ended 31st December 1956. Transfer books will remain closed from 22nd to 29th January 1957, both days inclusive.

ANDREW YULE GROUP JUTE COMPANIES SUFFER LOSS

ADVERSE CONDITIONS AFFECT SIRPUR PAPER

Belvedere Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1956.

After providing Rs. 77,000 (Rs. 43,000) for depreciation, the half-year's results show a loss of Rs. 2,18,867 (profit of Rs. 2,52,466). A total of Rs. 2,62,170 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of the estimated realisable value as at 30th June 1956. A similar provision in respect of raw jute stock and work-in-progress amounting to Rs. 77,558 made during the previous half-year has been written back to the credit of profit and loss account. After making these adjustments and bringing in the balance of Rs. 1,004 (Rs. 1,11,911) from the previous half-year there is a balance of Rs. 4,02,475 (credit of Rs. 2,27,928) at the debit of profit and loss account, against which the directors have transferred Rs. 4,05,000 (*nil*) from general reserve. The directors have also transferred Rs. 24,500 (*nil*) from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares for the half-year at Rs. 3-8 (Rs. 3-8) per share, and they recommend that this preference dividend be paid. This together with the transfers above referred to would leave a credit balance of Rs. 2,525 (Rs. 63,428 after paying ordinary dividend at Rs. 5 per share, absorbing Rs. 1,40,000) in profit and loss account to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January 1956. From the 9th January, however, 2½ per cent. of total looms were unsealed, and a further 5 per cent. from the 20th February 1956.

Trading during the period was again difficult owing to the high price of raw jute in relation to the market for manufactured goods, where prices fell to uneconomic levels due partly to the increased production consequent upon the unsealing of looms, coupled with the fact that the offtake did not come up to expectations. It is hoped, however, that the adjustment in production which has since been effected by re-sealing 7½ per cent. of the total looms will restore the industry to more profitable working conditions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st May 1956.

After providing Rs. 1,80,000 (Rs. 95,000) for depreciation, the half-year's results show a loss of Rs. 1,93,238 (profit of Rs. 1,25,860). A total of Rs. 2,55,518 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of estimated realisable value as at 31st May 1956. A similar provision in respect of raw jute stock and work-in-progress amounting to Rs. 78,836 made during the previous half-year has been written back to the credit of profit and loss account. After making these adjustments and bringing in the balance of Rs. 6,248 (Rs. 78,538) from tre previous half-year, there is a balance of Rs. 3,63,672 (credit of Rs. 1,81,452) at the debit of profit and loss account. The directors have transferred Rs. 4,00,000 (*nil*) from general reserve and recommend the payment of the dividend on the preference shares at Rs. 3-8 (Rs. 3-8) per share. This would leave a credit balance of Rs. 1,328 (Rs. 74,452 after paying ordinary dividend at Rs. 4 per share, absorbing Rs. 72,000) in profit and loss account to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January 1956. From the 9th January, however, 2½ per cent. of total looms were unsealed, and a further 5 per cent. from the 20th February 1956.

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st May 1956.

After providing Rs. 30,000 (Rs. 31,500) for depreciation, the half-year's results show a loss of Rs. 1,38,873 (profit of Rs. 2,55,596). A total of Rs. 3,08,225 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for, on the basis of estimated realisable value as at 31st May 1956. A similar provision in respect of jute contracted for amounting to Rs. 5,750 made during the previous half-year and excess provision for taxation of Rs. 38,000 have been written back to the credit of profit and loss account, After making these adjustments and bringing in the balance of Rs. 15,912 (Rs. 1,46,508) from the previous half-year, there is a balance of Rs. 3,87,436 credit of Rs. 2,47,104 at the debit of profit and loss account, against which the directors have transferred Rs. 3,90,000 (*nil*) from general reserve. The directors have also transferred Rs. 12,500 (*nil*) from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares for the half-year at Rs. 2-8 (Rs. 2-8) per share, and they recommend that this preference dividend be paid. This together with the transfers above referred to would leave a credit balance of Rs. 2,564 (Rs. 94,604 after paying ordinary dividend at Rs. 5 per share, absorbing Rs. 1,40,000) in profit and loss account to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January 1956. From the 9th January, however, 2½ per cent. of total looms were unsealed, and a further 5 per cent. from the 20th February 1956.

Trading during the period was again difficult owing to the high price of raw jute in relation to the market for manufactured goods, where prices fell to uneconomic levels due partly to the increased production consequent upon the unsealing of looms, coupled with the fact that the offtake did not come up to expectations. It is hoped, however, that the adjustment in production which has since been effected by re-sealing 7½ per cent. of the total looms will restore the industry to more profitable working conditions.

Sirpur Paper Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Private Ltd., Somajiguda, Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit and loss account, after providing for interest on loans, minimum remuneration payable to the managing agents and depreciation of Rs. 3 lakhs, and taking into consideration the credit balance of the previous year, shows a surplus of Rs. 15,32,970 which, it is recommended, be disposed of as under:—

To brokerage and underwriting commission on issue of shares Rs. 1,13,622, to dividend on 36,480 cumulative redeemable preference shares of Rs. 100 each fully paid up at 6 per cent. per annum, without any deduction of income-tax Rs. 2,08,773, to dividend on 21,85,524 ordinary shares of Rs. 10 each, fully paid up at As. 8 per share, without any deduction of income-tax Rs. 10,92,762, to reserve for contingencies Rs. 1,00,000 and to balance to be carried over Rs. 17,813.

During the year under report, the production of paper was about 14,200 tons as against 13,700 tons in the preceding year and 9,100 tons in the year before last.

It will be observed that despite an improvement in the production of paper, the corresponding results of the Company are not upto expectations. This is primarily due to higher cost of coal incurred by the Company when compared to that of the last year because of non-availability of adequate supplies from the Singareni Coalfields at Belampalli which necessitated getting coal supplies from distant areas involving higher freight and increased consumption due to its unsuitable quality. The increase in cost for this reason alone amounted to about Rs. 11 lakhs. During the current year, however, the position of coal supplies from Singareni Coalfields have considerably improved. Payment of bonus to workers for past years together with the increase in wages was another factor which affected the Company's profits during the year.

In the last year's report, the directors had mentioned that the Company had entered into an agreement with the Labour Union settling all outstanding disputes and had anticipated cordial relation with the labour for future. However, they regret to state that later on the workers adopted go-slow tactics for a considerable period which naturally affected adversely the production as well as the working results of the Company. The Labour Union raised new disputes which were eventually referred to an Industrial Tribunal by the State Government and are now pending before it for adjudication.

As stated in the last report, the Company was granted a development licence by the Government of India for increasing its capacity to 100 tons a day. The orders for most of the additional equipment required have already been placed and the directors are glad to report that the *soda recovery plant* has already been shipped. The shipments of other plants are scheduled to commence from early 1957. However, the shipment and arrival of machinery according to schedule mainly depend on the international situation. According to the present indications, most of the new plants should go into production by the end of 1957.

Accounts in brief are as under:—

Central Hydraulic Press Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

After transferring to taxation reserve the excess provision made in previous years, transferring to reserve for depreciation of investments Rs. 37,132 of the profit on investments sold in previous years and providing Rs. 30,000 (Rs. 35,000) for taxation, there is a balance at the credit of profit and loss account of Rs. 56,289 (Rs. 38,957) from which the directors recommend payment of a dividend of Rs. 6 (Rs. 5) per share, absorbing Rs. 30,000 (Rs. 25,000) and leaving a balance of Rs. 26,289 (Rs. 13,957) to be carried forward.

Shareholders were informed in 1953 that baling had ceased at the Press House with effect from 1st July 1953, and that the premises had been leased out to the West Bengal Government. The presses have remained idle since then, and as, in view of the continued poor outlook for the jute baling industry, there is little prospect of the recommencement of baling operations, the directors advise that they have opened negotiations for the sale of the pressses and ancillary plant.

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd. Calcutta) submit the audited accounts of the Company for the half-year ended 31st May 1956.

After providing Rs. 50,000 (Rs. 50,000) for depreciation, the half-year's results show a loss of Rs. 1,81,112 (profit of Rs. 1,22,596). A total of Rs. 2,45,116 has had to be provided against the anticipated loss on raw jute stock, work-in-progress and jute contracted for on the basis of the estimated realisable value as at 31st May 1956. After making this adjustment and bringing in the balance of Rs. 2,615 (Rs. 1,37,479) from the previous half-year there is a balance of Rs. 4,23,613 (Rs. 1,85,075) at the debit of profit and loss account against which the directors have transferred Rs. 4,25,000 (*nil*) from general reserve. The directors have also transferred Rs. 35,000 (*nil*) from dividend equalisation reserve, being the amount required to pay the dividend on the preference shares for the half-year at Rs. 3-8 (Rs. 3-8) per share, and they recommend that this preference dividend be paid. This together with the transfers above referred to would leave a credit balance of Rs. 1,387 (Rs. 54,375 after paying ordinary dividend at Rs. 6 per share, absorbing Rs. 95,700) in profit and loss account to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mill worked 48 hours per week with 12½ per cent. of the total looms sealed until 7th January, 1956. From the 9th January, however, 2½ per cent. of total looms were unsealed, and a further 5 per cent. from the 20th February, 1956.

Trading during the period was again difficult owing to the high price of raw jute in relation to the market for manufactured goods, where prices fell to uneconomic levels due partly to the increased production consequent upon the unsealing of looms, coupled with the fact that the offtake did not come up to expectations. It is hoped, however, that the adjustment in production which has since been effected by re-sealing 7½ per cent. of the total looms will restore the industry to more profitable working conditions.

Accounts in brief are as under:—

Teekoy Rubbers (India) Ltd.

The directors of the above Company (Managing Agents: East India Agencies Private Ltd., Palai) submitted the audited accounts of the Company for the year ended the 31st March 1956.

The area of the Company's Estate remains the same as in the previous year, viz., 1,178 acres seedling rubber, 276 acres budded rubber and 416 acres reserve land. The crop produced during the year was 4,40,760 lbs. rubber against 4,68,989 lbs. in the previous year. The decrease may be attributed to unfavourable weather conditions and to the loss of tapping days on account of statutory restrictions. The average price realised for the year was Rs. 149 per 100 lbs. and the estate expenditure Rs. 84 per 100 lbs. The corresponding figures for the previous season were Rs. 134 and Rs. 75 respectively.

Profit for the year, after meeting all charges and expenses, interest on debentures and depreciation, was Rs. 2,17,142 (Rs. 2,03,803), which together with the amount of Rs. 2,031 (Rs. 1,227) brought forward from the previous year, makes a total of Rs. 2,19,172 (Rs. 2,05,031). Out of this, the directors have paid the preference dividend. for the year ended 31st March 1956, amounting to Rs. 36,000 (Rs. 36,000) and reserved Rs. 84,700 (Rs. 77,000) for taxes. There was left a sum of Rs. 98,472 (Rs. 92,031), which was utilised as under:—

To dividend on ordinary shares at 9 (9) per cent. Rs. 90,000 (Rs. 90,000) and for carry forward Rs. 8,472 (Rs. 2,031).

The world price of rubber has recently been moving swiftly up and down under the impact of developments in the Middle East. The price in India remains fixed at Rs. 155-12-0 per 100 lbs. with effect from the 24th September, 1955. The estimated production of rubber in India for 1956 is 23,750 tons and consumption 30,000 tons.

Accounts in brief were as under:—

Patrakola Tea Co., Ltd.

The directors of the above Company (Agents: Messrs. Duncan Brothers and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

The accounts disclose a profit of Rs. 38,32,847 (Rs. 99,25,697). On transfer of this sum to profit and loss account and after sundry adjustments, there is a balance at credit of that account amounting to Rs. 42,57,130 (Rs. 25,43,721), of which the directors have transferred Rs. 17,00,000 (Rs. 6,00,000) to revenue reserve. The dividend on the preference shares up to 3rd August, 1955 and the special dividend of 30 per cent. on ordinary shares for season 1954 were paid on 16th August, 1955 and 28th March, 1956 respectively, while Rs. 12,60,000 (Rs. 10,80,000) have been provided against a dividend distribution at the rate of 35 (30) per cent. payable at a later date, leaving Rs. 1,74,719 (Rs. 1,91,721) to be carried forward.

A sum of Rs. 74,937, representing the Company's share of the bonus payable to labourers by Rampore and Jiajuri Tea Estates for the years 1953 and 1954, has been charged in the accounts.

The directors state that the State Bank of Pakistan have recently sanctioned an interim remittance to this country of Rs. 20,00,000 out of the Pakistani trading profits of the Company for Season 1954, and the amount has now been received.

The Indian Finance Act, 1956 has given retrospective exemption from taxation in India of agricultural income arising in Pakistan and taxable in that country and accordingly a sum of Rs. 45,25,000 has been credited to profit and loss account, being a reserve for taxation no longer required. It will be observed from the accounts that a sum of Rs. 20,08,744 representing a net loss on exchange resulting from the devaluation of Pakistani currency has been charged to profit and loss account.

The accounts of the Company have been prepared in accordance with the provisions of the Companies Act, 1956. Thus, the fixed assets which had been written off up to 31st December, 1954 have been brought back into account and a depreciation reserve account representing the present written down value of these assets has been opened.

Messrs. Duncan Brothers & Co., Ltd. have resigned their office as Managing Agents of the Company with effect from 31st March, 1956 and a new agreement appointing them Agents of the Company for a period of five years as from 1st April 1956 has been executed.

Crop.—The following are particulars of the quantities of tea made and the prices realised in Pakistani currency:—

	Crop	1955 Average selling price per lb.	Crop	1954 Average selling price per lb.
	Mds.	Rs. a. p.	Mds.	Rs. a. p.
Patrakola	14,834	2 2 6	16,274	2 8 1
Madabpore	9,070	2 1 2	8,250	2 7 10
Kurmah	13,135	2 0 10	13,510	2 8 7
Champaral	14,215	2 2 9	15,717	2 6 5
	50,254		53,751	

Estimates for 1956 provide for a total crop of 49,000 maunds at an outlay of Rs. 49,12,060, including inland freight and sale charges.

Accounts in brief were as under:—

General Investment and Trust Co., Ltd.

The directors of the above Company (Chairman: Mr. D. P. Dunderdale, Calcutta) submit the audited accounts of the Company for the period from 1st March 1956 to 31st August 1956.

In conformity with the Companies Act, 1956, the Company's accounts will henceforth be drawn up on an annual basis. It has been decided that the first annual closing of accounts will take effect from the period commencing on 1st March 1956, and these accounts will be considered therefore as interim accounts and will be incorporated in the accounts to be prepared for the year ending on 28th February 1957.

The profit and loss account after providing for all charges and including the sum of Rs. 9,746 (Rs. 9,201) brought forward from the previous half-year, leaves a balance available of Rs. 49,805 (Rs. 36,065 after transfer of Rs. 25,000 to general reserve, Rs. 25,000 to revaluation of investments reserve and after providing Rs. 20,000 for taxation), from which the following interim dividends have been paid:—

On the 1st cumulative preference shares at the rate of 2½ (2½) per cent., without any deduction for income-tax paid by the Company Rs. 3,000 (Rs. 5,000), on the 2nd cumulative preference shares at the rate of 3 (3) per cent. less tax Rs. 4,425 (Rs. 4,425) and on the ordinary shares at the rate of 2½ (3½) per cent. without any deduction for income-tax paid by the Company Rs. 12,500 (Rs. 18,750).

Accounts in brief are as under:—

PATTERN OF ELECTRICAL CONSUMPTION FOR INDUSTRIAL GROWTH.

(*Concluded from page 132*)

Regression equations fitted to the above data are given below:

1.	Chemicals	$y=0.75x+63.0$
2.	General engineering	$y=0.64x+58.5$
3.	Bicycles	$y=0.61x+60.7$
4.	Paper and paper board ..	$y=1.26x-24.66$
5.	Cement	$y=1.43x-11.5$
6.	Cotton textiles	$y=2.47x-131$
7.	Iron and steel	$y=2.79x-164.4$

A graphical representation of these lines, based on the equations given above, is given as part of the study. It is interesting to observe from these lines how the gradient of each line changes from less steep to more steep, indicating less intensive to a more intensive use of electricity in the various industrial processes.

It will be seen from the above that *for every 10 units of increase in the production of "chemicals," consumption of electricity would rise by 6.4 units only; in "general engineering," the increase would be to the tune of 7.5 units; and for "paper and paper board" it would be about 12 units.*

As should be expected, the proportionate increase is highest in the case of "iron and steel," where consumption of electricity would increase more than two and a half times for every unit increase in production. These ratios can help in fixing up consumption of electricity during the second Five-year Plan, and beyond, for individual industries. Aggregation of such requirements for all the industries would give the requirements of electrical energy in achieving the planned industrial production over the whole field. Any attempt in tackling this problem in a global way would be erroneous.—*All Rights Reserved.*

TRENDS IN NICKEL INDUSTRY

OUTPUT HIGH—PRICES RISE—DEMAND STRONG

THE year 1956 was one of the most eventful in the history of the nickel industry, Dr. John F. Thompson, Chairman of the Board of the International Nickel Company of Canada, Limited, said at Ontario on the 15th inst. Free world nickel production was at a new high. The year marked the beginning of the development in Manitoba by International Nickel of the world's second largest nickel production operation which will result in a substantial increase in nickel supplies by 1960. It also saw the United States Government arrange for the diversion to industry of substantially increased quantities of nickel originally scheduled for shipment to the Government stockpile. The following is an extract from Dr. Thompson's statement:

"Production of nickel by the free world set a new high record in 1956 at approximately 450,000,000 pounds. This compared with the previous high output of about 427,000,000 pounds in 1955 and 387,000,000 pounds in 1954. Output by Canadian producers again accounted for about 80 per cent. of the free world's supply. Deliveries of the metal in 1956 by International Nickel, world's largest nickel producer, were approximately 285,000,000 pounds. In addition, the Company made available nearly 6,000,000 pounds of metallic nickel by converting concentrates supplied by another producer.

"The following figures of deliveries of other producers are estimated from company or Government reports or other published statements:

"Estimated 1956 deliveries by other principal Canadian producers are: Falconbridge Nickel Mines Limited, 43,000,000 pounds, Sherritt Gordon Mines Limited. 19,000,000 pounds. Other free world deliveries included 31,000,000 pounds from the U.S. Government's plant at Nicaro, Cuba; 14,000,000 pounds from Hanna Nickel Smelting Company in Oregon, U.S.A.; 22,000,000 pounds produced by the French company, S.A. Le Nickel, from New Caledonian ores; and 26,000,000 pounds from all other sources, a major portion of which was refined in Japan from New Caledonian ores.

Distribution

"Distribution of the total free world nickel supply in 1956 approximated that of the previous year, with about 65 per cent. going to the United States and 35 per cent. to Canada, the United Kingdom and other countries of the free world. Heavy defence production continued to use a substantial part of the nickel distributed to the United States, far in excess of the percentage for other principal base metals.

"The very high level of industrial activity which was maintained in Europe and North America in 1956 was reflected in the sustained heavy demand for nickel and nickel alloys in every field of application. Increased amounts of the metal were employed for defence uses, and, although the quantity available for civilian applications was somewhat greater than in 1955, limitations in supply and continuation of deliveries to Government stockpile continued to retard the full development of established and potential markets.

"In the United Kingdom, there was a slackening in the general demand for consumer goods, especially in such industries as automotive, radio and television. However, the overall pulse of industry there was strong with the production of stainless steels and engineering alloy steels some ten per cent. above that of 1955. Many new industrial projects were initiated, especially in the petroleum and petrochemical industries.

"The Director of Defence Mobilisation of the U.S. Government in 1956 authorised the diversion to industry of 74,300,000 pounds of nickel originally scheduled for shipment to the Government stockpile. In addition, industry received a portion of a further 5,000,000 pounds authorised as extra diversion for the fourth quarter.

Prices

"In order to deal with higher costs and facilitate maximum production, the International Nickel Company of Canada increased its price of refined nickel by 9½ cents (U.S.) per pound effective 6th December 1956. Like increases were also made by the Company's United States subsidiary, namely, the International Nickel Company, Inc., and its United Kingdom subsidiary, namely, the Mond Nickel Company, Ltd. This brought the export price of electrolytic refined nickel, from the Company's Port Colborne, Ontario, refinery, to 74 cents (U.S.) per pound, from the lever of 64½ cents per pound which had prevailed since 24th November 1954. The price includes the 1½ cents United States import duty which is paid by the Company. Similar changes in price were also made for other forms of primary nickel and nickel oxide sinter. New Price schedules were also announced for nickel and nickel alloys in the form of mill and foundry products produced at the plants of the Company's United States and United Kingdom subsidiaries.

"Other United States prices included those for nickel diverted from the Government stockpile which were for nickel of Canadian origin about 98 cents per pound and for nickel of United States origin approximately $1.17 per pound. This nickel, which was sold at higher than market quotations, was high production-cost nickel contracted for at premium prices by the United States Government and which would not have been available either to the Government stockpile or to industry had it not been for the Government premium price arrangements.

"In addition, relatively small amounts of nickel originating mainly from Japan were sold in the United States market at about $2.00 to $2.50 per pound.

Applications

"As has been the situation for many years, the steel industries of the free world continued during 1956 to use the largest proportion of the primary nickel available to industry, principally in the production of stainless steels, engineering alloy steels and jet engine alloys.

"During the year the output of the *nickel-containing stainless steels* reached an all-time high. This record production was materially aided by the substantial use of stainless steel scrap. Producers in the United Kingdom, France and other countries followed the United States in initiating production of the lower nickel-containing types of stainless steels for use in transportation equipment and certain domestic and allied applications. The chromium-nickel grades continued to be employed in increasing quantities in practically all industries, ranging from consumer products to atomic energy and high speed aircraft.

"Output of the nickel-containing *engineering alloy steels* in 1956 was limited by the availability of nickel and production approximated that of 1955. Established applications, such as in automobiles, trucks, tractors, aircraft, military equipment, farm machinery, road-building equipment, and components for the atomic energy, electronics, railroad and petroleum industries were responsible for the major portion of the consumption of the engineering alloy steels. Most important new applications were those involving heat-treated alloy steel plates and shapes and increasing attention was given to new 'super' strength steels developed initially for aircraft landing gears.

"International Nickel's high nickel-chromium alloys, such as the *Nimonics* developed by the Company's affiliates in the United Kingdom, and the *Inconels*, developed by Inco's United States subsidiary, continued to play a leading role in the construction of aircraft turbo-prop and jet engines, and industrial gas turbines. *Monel* nickel-copper alloys continued to be employed throughout industry because of their resistance to corrosion and good mechanical properties. The *Inconel* nickel-chromium alloys were used where high strength and resistance to corrosion or heat are required, and *Incoloy* iron-nickel-chromium alloys where resistance to oxidation at moderately elevated temperatures is required.

"From the outset of the atomic energy programme, nickel and nickel-containing alloys, because of their resistance to corrosion, have had an established role in every phase of nuclear development. The tempo of United Kingdom atomic energy developments increased, as important industrial groups got into their stride, with projects for the building of power stations following the opening of the first European plant at Calder Hall, England. The advent of atomic energy in the electric power and marine fields promises new and expanded markets for many nickel products.

"While the quantity of nickel available for the *nickel-plating* industry during 1956 was somewhat greater than in 1955, the demand continued to exceed the supply, as was the case in other industries. Among the new developments in this field during the year was the application of 'levelling type' bright nickel deposits to critical items of textile mill equipment requiring hard, smooth corrosion-resisting surfaces. Electro-deposited nickel has continued to be a market of pre-eminent importance in Europe, despite the increasing challenge offered by aluminium and stainless steel.

"The copper-nickel-zinc alloys known as *nickel silvers* continued as the most popular base materials for silver-plated tableware.

"The demand for *cupro-nickel alloys* for heat exchanger tubes used in the marine, petroleum and power industries continued strong. The greater requirements for cupro-nickel alloys arise from feed water heaters and associated equipment to meet the trend of increased pressures and temperatures.

"In the field of *non-ferrous castings*, there were further applications of nickel-containing high-tensile aluminium bronze for propellers for large passenger and cargo ships as well as pleasure boats. This alloy is being used in increasing quantities in Europe as well as in the United States.

"The production of *Ni-Resist* corrosion-resisting nickel cast irons increased during the year. These alloys were broadly used in the chemical process and petroleum industries and in high-powered engine service to resist. corrosion, heat and wear. The output of *Ni-Hard* abrasion-resisting nickel-chromium cast irons also showed an increase over 1955. Leading applications for these cast irons were grinding balls and mill liners as used by the cement and mining industries.

"The use of *nickel in electronics* showed an increase in 1956. In television and radio receivers and high fidelity sound systems, nickel is used principally in tubes and in permanent magnets for speakers. Guided missiles make extensive use of vacuum tubes containing nickel elements, because of the ability of such tubes to operate at temperatures higher than transistors. They also require high quality nickel alloy resistors in their control and computing systems. The forthcoming International Geophysical Year programme will employ nickel in a wide variety of ways, in the control equipment of rockets and satellites, in telemetering devices, and in airborne mass spectrometers and other detecting devices.

"Consumption of *nickel as a catalyst* during 1956 by the chemical and allied industries showed an increase, with consumption about three times that of five years ago.

Inco's Expansion Plans

"Plans announced last month by International Nickel for its new nickel-producing operation in the Mystery-Moak Lakes area of Northern Manitoba and for progressive development of its facilities in the Sudbury District of Ontario constituted the greatest single expansion programme in the history of the nickel industry. The Manitoba project alone will result in an investment in that Province of some $175,000,000 over the next three to four years.

"The new Inco development in Manitoba is located about 400 air miles north of Winnipeg and will serve to open a new North American frontier. It climaxes 10 years of exploration by the Company in Manitoba at a total cost of some $10,000,000. The Thompson town development is being planned to accommodate an initial expected population of some 8,000 persons, inclusive of the expected working force of approximately 2,000.

"The project in Manitoba, together with the progress under way at the Sudbury District operations will lift Inco's regular annual nickel-producing capacity to 385,000,000 pounds.

"It is expected that the capacities of certain other nickel producers will also show an increase by 1960. Based on Inco's programme and these announced expansion plans of others, it is expected that total free world nickel-producing capacity in 1960 will approximate from 600,000,000 to 625,000,000 pounds. This projected capacity is exclusive of supplies from any new Cuban project and represents an increase of some 175,000,000 to 200,000,000 pounds above the total for 1955. It is evident that a huge demand must be provided in order to absorb this projected enlarged nickel-producing capacity. . . . "

THE BANK OF MAHARASHTRA LIMITED

The net profits of the Bank of Maharashtra, Ltd., for the year ended 31st December, 1956 (subject to audit) after providing Rs. 60,000 for payment of bonus to the staff and making other usual and necessary provisions, including Rs. 31,744-1-6, the balance of profit brought forward from the previous year, amounted to Rs. 4,32,958-8-0, which the Directors disposed of as follows:—

The following appropriations have been made:—

	Rs. a. p.
Transferred to Reserve Fund.	1,25,000 0 0
Provision for Taxation ..	1,80,000 0 0
Total ..	3,05,000 0 0

The balance of Rs. 1,27,958-8-0, the Directors propose to recommend to the shareholders to dispose of as follows:—

To pay Dividend at 6% p.a. free of income-tax..	96,000 0 0
To carry forward to next year's account ..	31,958 8 0
Total ..	4,32,958 8 0

DEVELOPMENT COUNCIL FOR MACHINE TOOLS

A Development Council has been set up by the Government of India to keep constant watch on the progress of the machine tool industry and recommend measures for its development. The setting up of a body of this nature was recommended by the Machine Tool Committee appointed by Government last year. Machine tools are the basic instruments of production of the engineering industry as a whole. Even though indigenous production has been on the increase, imports have been rising at a much faster pace. The Development Council will recommend targets for production and co-ordinate production programmes for machine tools. It will suggest norms of efficiency to eliminate waste, obtain maximum production and improve quality. Among other functions of the Council will be promotion of arrangements for better marketing and standardisation of the products of the industry. The Council will also promote labour welfare, measures for increasing the productivity of labour and the training of technical personnel. Mr. S. Moolgaokar of Tata Industries Private Ltd., Bombay, will be the Chairman of the Council.

Indian Airlines carry over 500,000 passengers every year

India's highway in the sky...
—and it belongs to you!

Servant of modern India, her national airline covers over 20 million miles a year, operates 132 flights each day

EMPLOYING over 9,000 trained personnel, flying over 20 million miles every year and operating 152 daily flights — Indian Airlines Corporation is the largest internal airline in the East . and it belongs to the people of India!

Indian Airlines Corporation is a mighty organisation, doing a mighty job — and it is proud of its role in transporting goods and mails, conquering vast distances, bringing the peoples of India ever closer together.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, 16*th January*

With the traditional busy season in full swing, the stringency in the short-term money market, which was already bare of funds, continued to be keenly felt for yet another week. There was, however, some supply of funds this week from the Insurance Corporation and a few other industrial houses, but it was too inadequate to relieve the stringency to any perceptible extent. The demand for funds was so keen that all available supplies were easily absorbed, with the result that there was scarcely any change in the conditions reported last week; interest rates were well maintained.

In the inter-bank call money section, business was very poor in the absence of any lenders. The rate was nominally quoted at 3¼ per cent. Some activity was noted in the house money which fetched 3⅜ to 3¾ per cent. with some banks offering even 4 per cent. Short-term deposits continued to be bid at 3¾ to 3⅞ per cent. for one to six months.

A further expansion in notes in circulation to the tune of Rs. 13.69 crores is disclosed by the Reserve Bank of India statement for the week ended 11th January 1957, bringing the aggregate rise for the last two weeks to Rs. 29.15 crores. Notes held in the Banking Department are also higher by Rs. 5.61 crores, with the result that the increase in total notes issued is of the order of Rs. 19.30 crores. As in the previous week, the increase in note issue is covered by a rise in rupee securities, which have gone up by Rs. 20 crores. Rupee coin is lower by Rs. 70 lakhs. A fractional decline is noted in the deposits of the Central Government. The deposits of other Governments have receded by as much as Rs. 8.89 crores, while those of banks have risen by Rs. 7.91 crores. Balances held abroad have dropped by Rs. 77 lakhs. Loans and advances to Governments show a rise of Rs. 85 lakhs. Other loans and advances are also up by Rs. 6.63 crores, following an increase of Rs. 8.04 crores in outstanding advances to Scheduled banks against usance bills. Total advances against usance bills during the week were of the order of Rs. 19.78 crores, while repayments of maturing bills were Rs. 11.74 crores.

The Scheduled banks' statement for the week ended 4th January 1957 discloses a fall of Rs. 4.87 crores in demand deposits of banks and of Rs. 1.56 crores in time deposits, the aggregate decline in deposits comparing with the increase of Rs. 7.46 crores in the closing week of December. There has also been a drop of Rs. 2.67 crores in inter-bank borrowings, and of Rs. 5.86 crores in borrowings from the Reserve Bank. Of the latter, those against usance bills account for a drop of Rs. 4.37 crores. Borrowings from the State Bank of India have, on the other hand, gone up by Rs. 2.10 crores. Advances have staged a sharp rise of Rs. 12.99 crores to stand at a peak level of Rs. 635.90 crores and inland bills purchased and discounted an increase of Rs. 1.61 crores. Foreign bills have, however, dropped by Rs. 1.36 crores. Cash balances have shrunk by Rs. 5.22 crores, balances with other banks by Rs. 1.30 crores and money at call and short notice by Rs. 1.72 crores.

Activity in the Gilt-edged market continued to be at a low ebb. The persistence of the acute stringency in the money market restrained buyers. Institutional support was also lacking. There was, however, some buying in 3 per cent. 1986 Conversion Loan, which pushed up the price by As. 3 to Rs. 73-3. Most of this buying represented short-covering by speculators who had sold forward for one month in expectation of a rise in the Bank rate. 3 per cent. 1970-75 gained an anna to Rs. 86-15, while 3 per cent. 1966-68 was unchanged at Rs. 92-4, 3 per cent. 1964 at Rs. 94-6 and 3 per cent. 1963-65 at Rs. 94-2. 3 per cent. 1959-61 shed an anna to Rs. 97-10. 3½ per cent. 1962 was neglected at Rs. 97-14 *ex*-voucher. 3½ per cent. 1961 was kept at Rs. 99-4, 3½ per cent. 1964 at Rs. 98-3 and 3½ per cent. 1965 at Rs. 98-2. 3½ per cent. 1967 was placed at Rs. 98-7 *ex*-voucher. State loans attracted sellers, but, in the absence of any transactions, prices were unchanged.

In the foreign exchange section, the rupee continued to display strength in terms of the U.S. dollar, following the firm trend in sterling abroad. Banks' selling rate for ready dollars was marked down from Rs. 479½ to Rs. 478½ per $100 and their buying rate from Rs. 476 to Rs. 475 per $100. In terms of the Canadian dollar, however, the rupee ruled a shade easier. Thus, banks were sellers of ready dollars at Rs. 499¼, as against Rs. 499 per $100 a week ago, and buyers at Rs. 493½, as against Rs. 493 per $100. In New York, sterling gained further ground, the spot rate rising from $2.79.3/16-2.79.5/16 to $2.79.13/16-2.79.15/16. Three months' forward gained from $2.77⅝-2.77⅞ to $2.78⅛-2.78¼ and transferable sterling from 275.20-275.30 cents to 276.50-276.60 cents per £.

STABLE CONDITIONS IN HIDES

(From Our Own Correspondent)

KANPUR, 13*th January*

Barring a slight decline in price of buff, the conditions of the local hides and skins market during the week under review remained unchanged from those noted in the previous week. The demand for buff in the face of liberal supplies, which were at hand was slightly smaller. Wet salted cow was readily disposed of. The Madras dealers were the main buyers of goat and sheep. For other categories of goods the ready buyers were the local tanners. The latest quotations are as follows:—

Wet salted cow 1st grade Rs. 340 to Rs. 360 and 2nd grade Rs. 300 to Rs. 330 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 320 and 2nd grade Rs. 300 per 100 pieces; sheep (with white wool) Rs. 300 to Rs. 315 and sheep (with black wool) Rs. 225 to Rs. 250 per 100 pieces.

SPECIAL CLEARING IN BULLION

(From Our Own Correspondent)

BOMBAY, 16*th January*

The sharp rise in silver noted in the previous week gained further momentum during the week under review on strong speculative buying which pushed up forward silver (February settlement) to a high of Rs. 182-2. Gold, which was featureless last week, also came to prominence, with the price of ready metal recording a gain of Rs. 3 over the week and forward by Rs. 2-11 per tola. The bullish trend in silver was so strong that the closing forward rate for January settlement stood yesterday at more than Rs. 5 over the last clearing rate and brought into operation special clearing in both silver and gold.

The strength of silver is attributed to expectations that the influx of Tibetan coins would stop shortly for two reasons. The heavy snowfall would hamper transport from Kalimpong. Secondly, the Chinese authorities are said to be issuing cheques on the Bank of China in payment of imports from India, instead of paying in Chinese silver dollars. The offtake in the ready section, which was rather at a low ebb this week, is also expected to expand with the movement of crop. Prospects of higher agricultural prices and increase in labour income resulting in a better demand also aided bullish sentiment.

The satisfactory offtake in gold, *vis-a-vis* the arrivals, together with reports of strict vigilance at ports and the rise in the price of gold in Pakistan, one of the main routes through which gold is smuggled into this country, induced speculative support to the yellow metal. The tense Indo-Pakistan relations over Kashmir is yet another factor for the strength of the yellow metal.

Forward silver (18th January settlement) rallied from Rs. 178 to Rs. 180-15 on Saturday last. After a short-lived reaction to Rs. 179-5 on profit-taking, the rate briskly advanced to Rs. 181-9 before closing at Rs. 181-1. The February settlement gained from Rs. 178-9 to Rs. 182-2, but finished a fraction lower at Rs. 181-15.

Ready silver (.996 mint) moved up from Rs. 178 to Rs. 181-11 before winding up at Rs. 181-8. The floating stocks of silver are placed at 1,500 bars. The daily average offtake during the week was 8 bars, as against arrivals averaging 12 bars.

Gold for forward delivery (17th January settlement) gained from Rs. 104-12 to Rs. 107-7, while the February settlement hardened from Rs. 105-3 to Rs. 107-14.

Ready gold was pushed up from Rs. 104-11 to Rs. 107-11. The floating stocks of gold are estimated at 35,000 tolas. The daily average arrivals were 2,600 tolas, while the offtake was slightly higher at 3,000 tolas.

In New York, silver was unchanged at 91⅜c. and London silver prices also were maintained at 80½*d.* for spot and at 80¼*d.* for forward. Gold dipped further from 249s. 11¾*d.* to 249s. 4½*d.*

The following comparative table shows the trend of market during the week under review:

	16-1-57	Highest	Lowest	9-1-1957

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 14*th January*

Sugar prices recorded fractional gains during the week, following the Government of India's decision, on the recommendation of the Sub-committee of the Development Council for sugar industry, to allow export of sugar upto 50,000 tons for the present. According to the Government, the prospects for this year of sugar production continued to be good and the production was expected to be above the last year's figure at 18.62 lakh tons. Sugar factories in west U.P. are crushing to their maximum capacity, as, due to fall in *gur* prices, they are attracting a large quantity of cane. Current mill delivery prices are: Jaswant Rs. 28-14, Simbhauli Rs. 28-12, Mawana Rs. 28-10, Daurala Rs. 29-12, Amroha Rs. 28-3, Bijnore Rs. 28-3, Mansoorpur Rs. 28-12 to Rs. 30, Rampur Rs. 31-8. The retail price Rs. 30-10 per maund. The *khandsari* market ruled quiet and dull during the week at unchanged price level of Rs. 23 to Rs. 27 per maund.

Ready *gur* prices, which had declined to the lowest level of Rs. 10-2 per maund during the earlier part of the week, registered a modest improvement in the week-end to be quoted at Rs. 10-4 for best quality today. Arrivals have gone down, due to continued rainy weather and were about 500 maunds today. Outside support is slack, as prices of *gur* in the markets in the South have gone down. Total arrivals from the beginning of the season are roughly put at 3 lakh maunds and there has been no stock building as yet here. In the futures, too, *gur* prices ruled quietly steady during the week; *fagun vaida* opened at Rs. 10-2-9 last Monday and after touching the highest at Rs. 10-6-9, closed at Rs. 10-5.

COTTON FUTURES BUOYANT

(From Our Own Correspondent)

BOMBAY, 16*th January*

The firm trend noted in the futures market last week gathered fresh momentum during the week and buoyant conditions prevailed throughout most part of the period under review. This turnround in sentiment, after a long period of bearish influence, may be attributed to the following factors: (1) the approach of the delivery date and the apprehension that cotton may not then be as cheap as it is now, (2) the psychological influence of changes in By-law 55 of the Hedge Contract although it is binding only on the next settlements, (3) reports of cold wave in certain leading cotton tracts and the consequent fear of deterioration of the quality of cotton. The buying spree induced by these factors resulted in a spurt in values. Both the contracts registered remarkable improvements and the market is steadily gaining strength, notwithstanding the dull textile situation, the comfortable statistical position, the stringent credit conditions and the absence of an export quota announcement.

M.G. Jarilla (March delivery) opened the week at Rs. 646¼, as against the previous closing of Rs. 644½ and improved, on sustained buying support, to Rs. 648. The contract continued to advance on further support and touched Rs. 657½ yesterday before closing fractionally lower at Rs. 657. Opening steady at Rs. 657 today, the contract advanced to Rs. 665 on speculative support and closed near the best levels of the day at Rs. 665.

M.G. Vijay (April delivery), after having opened at Rs. 743, as against the previous day's closing rate of Rs. 741½, rose to Rs. 746½ on bear covering and some call fixing by mills. The contract received fresh support which steadily took it up to Rs. 764 yesterday. Opening higher at Rs. 766 today, it met with heavy speculative buying, with the result that values shot up to Rs. 778 and closed firm at the same rate.

The following table shows the trend of prices during the week:

	16-1-57	*High*	*Low*	9-1-57
Jarilla (March) ...	665	665	644	644½
Vijay (April)	778	778	742	741½

The spot section also ruled firm and sentiment of the futures market appears to have spilled over to the former. Reports of cold wave in cotton tracts coupled with sustained mill inquiries, especially from the South, resulted in a rise in values. The basis of most varieties improved further. Very good inquiries were noted for Vijay and large volume of business was reported. Khandesh and Oomra were also in good demand. Export inquiries were noted for Jarilla C.P. I and II and Moglai. In the foreign section, mill interest was evident in American G.M. 1.5/32" and Egyptan Karnak. The latest available rates—in rupees per candy of 784 lbs.—from the spot market are given below:

Bengal *Deshi*: 740; Berar Jarilla 755; Khandesh 790; Vijay 905; Oomra *Deshi* 775; Moglai 715. *Delivery Contracts:* Khandesh 1325, Berar 107, Moglai 71 'ON' Jarilla, 320F 95, Vijay 13/16, February 119 'ON' Vijay.

The long-awaited import policy announcement has at last been made. The Joint Chief Controller of Imports notified on the 9th inst. that it has been decided to continue issuing licences for import of raw cotton stapling 1.3/16" and above from soft currency areas during the current licensing period, i.e., from January 1957 to 30th June 1957. Licensing will be done on a first-come-first-served basis within a limited ceiling. The cottons eligible for imports are therefore presumably unchanged and there has been no liberalising of the import policy regarding East Africans and lower Sudan Egyptians.

A firm trend was witnessed in the Karachi cotton market during the week. This was attributed to the sizable volume of export business to Liverpool and Hongkong. Another helpful factor was sustained domestic mill demand. It is reported that Pakistani mills have requested the Government to impose restrictions on exports of cotton and to reserve about one million bales for domestic consumption annually. N.T.R.G. January which had closed at Rs. 85-9 improved to Rs. 86-10 on the 14th inst. although, towards the close of the week, the market eased and the contract declined to Rs. 85-10. The March position improved from Rs. 85-3 at the beginning of the week to Rs. 86-6 on the 14th inst. and dipped slightly thereafter to close at Rs. 85-11. The spot section also ruled firm. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 93-8; Punjab *Deshi* 87; 4F Punjab Roller 91; S.G. 95; L.S.S. Punjab Roller 92; S.G. 97; N.T.R.G. 92; S.G. 97; 289F; Punjab Roller 96; S.G. 105-8.

In contrast to the easy trend noted last week, the Alexandria futures market depicted a bullish trend during the week. Values advanced sharply on coverage against previous sales. The spurt in price was also inspired by the high premiums ruling in the spot market. Exports sales from 1st September till 15th December 1956 aggregated 231,842 bales (of 730 lbs.) as against 510,068 bales during the corresponding period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: January 122.25 (115.75); March 119.05 (115.45); May 118.0 (115.00). *Ashmouni*: February 83.45 (81.90); April 83.55 (81.90); June 83.55 (81.09).

Values in the Liverpool futures market ruled steady during the week. Moderate demand was noted for ready cotton. U.S. growths continued to attract major attention. Interest was also noted in Turkish and East African styles. There were moderate inquiries for Indian Oomra, Dhollerah and Mathias and some turnover was reported. Reduced offers due to the limitation of export quota and the high premium on the quota value restricted business. While expecting a further quota allocation, users of Indian cotton, it is stated, are conserving their small stocks. Both the American and American type contracts registered some improvement, while the Egyptian and Sudan contracts remained steady. The Liverpool Cotton Association has approved the adoption of a new Sudan futures contract based on Lambert No. 6 quality. Trading in this contract started on the 3rd inst. for May-June and July-August delivery. The present contract based on Sakel seed remains in operation for January-February delivery. The latest available quotations—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: March-April 26.70; May-June 26.28; July-August 25.80; October-November 25.45. *American Cotton Mixed Growth Contract*: March-April 26.98; May-June 26.58; July-August 26.12; October-November 25.72. *Egyptian Karnak*: January-February 60; March-April 60. *Sudan Cotton Sakel Contract*: January-February 61.30. *Sudan Cotton Lambert Seed Contract*: May-June 45.50; July-August 44.5.

The New York cotton market ruled steady during the week. The steadiness was influenced partly by the loan entry figures for the week ended 4th January and improved, on sustained buying support, to Rs. 648. The contract continued to advance on further support and touched Rs. 657½ yesterday before closing fractionally lower at Rs. 657. Opening steady at Rs. 657 today, the contract advanced to Rs. 665 on speculative support and closed near the best levels of the day at Rs. 665.

M.G. Vijay (April delivery), after having opened at Rs. 743, as against the previous day's closing rate of Rs. 741½, rose to Rs. 746½ on bear covering and some call fixing by mills. The contract received fresh support which steadily took it up to Rs. 764 yesterday. Opening higher at Rs. 766 today, it met with heavy speculative buying, with the result that values shot up to Rs. 778 and closed firm at the same rate.

The following table shows the trend of prices during the week:

	16-1-57	*High*	*Low*	9-1-57
Jarilla (March) ...	665	665	644	644½
Vijay (April)	778	778	742	741½

The spot section also ruled firm and sentiment of the futures market appears to have spilled over to the former. Reports of cold wave in cotton tracts coupled with sustained mill inquiries, especially from the South, resulted in a rise in values. The basis of most varieties improved further. Very good inquiries were noted for Vijay and large volume of business was reported. Khandesh and Oomra were also in good demand. Export inquiries were noted for Jarilla C.P. I and II and Moglai. The March position improved from Rs. 85-3 at the beginning of the week to Rs. 86-6 on the 14th inst. and dipped slightly thereafter to close at Rs. 85-11. The spot section also ruled firm. The latest available rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 93-8; Punjab *Deshi* 87; 4F Punjab Roller 91; S.G. 95; L.S.S. Punjab Roller 92; S.G. 97; N.T.R.G. 92; S.G. 97; 289F; Punjab Roller 96; S.G. 105-8.

In contrast to the easy trend noted last week, the Alexandria futures market depicted a bullish trend during the week. Values advanced sharply on coverage against previous sales. The spurt in price was also inspired by the high premiums ruling in the spot market. Exports sales from 1st September till 15th December 1956 aggregated 231,842 bales (of 730 lbs.) as against 510,068 bales during the corresponding period of the previous season. The following are the latest available quotations—in tallaris per lb.—from Alexandria, the figures in brackets being last week's closing rates:

Karnak: January 122.25 (115.75); March 119.05 (115.45); May 118.0 (115.00). *Ashmouni*: February 83.45 (81.90); April 83.55 (81.90); June 83.55 (81.09).

Values in the Liverpool futures market ruled steady during the week. Moderate demand was noted for ready cotton. U.S. growths continued to attract major attention. Interest was also noted in Turkish and East African styles. There were moderate inquiries for Indian Oomra, Dhollerah and Mathias and some turnover was reported. Reduced

	15-1-57	8-1-57	31-12-56

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 16*th January*

The local oilseeds market, after fluctuating within narrow limits during the first three days under the influence of conflicting trends, ruled firm during the second half of the week under review.

Having witnessed persistent selling in all contracts on the opening day, the market recovered on the following day on speculative support from upcountry centres. Unfavourable weather conditions in North India also helped the market gain strength. In linseed, moreover, there was demand from shippers while cottonseed benefited from the firm trend of cotton futures. Castors and groundnut were on demand from speculators and crushers. Though on the 12th inst. the market once again displayed an easy tendency on profit-taking and due to lack of follow-up support, subsequently, it resumed its upward trend under the leadership of groundnut on buying orders from the up-country operators. The continuance of unfavourable weather in North India gave further fillip to the market while offerings remained scarce. The market closed today undertone of the market was firm at the close today.

A notable event of the week under review was the commencement, on the 10th inst., of May 1957 (forward) contracts in groundnut and cottonseed.

In the groundnut section, the February contracts opened the week at Rs. 159-12; and after remaining weak on the first day, touched a high of Rs. 163-8 on the following day, but declined to Rs. 161-4 at the close on 12th inst. On 14th it fluctuated between Rs. 161-2 and Rs. 163, but closed higher at Rs. 162-14. During the rest of the week it climbed up steadily for the reasons already given, and touched its highest of Rs. 166-12 today before finishing at Rs. 165-12. The new contract, namely, May 1957, also witnessed a similar trend. Commencing at Rs. 165, it fluctuated between Rs. 166-8 and Rs. 163-4 during the first three days of the week. From 14th, when it was quoted at Rs. 164-8 on opening, however, the trend was steadily upward, and today it reached the peak of Rs. 170, before finishing As. 8 lower. In the spot section, while Bold F.A.Q. put on no less than Rs. 1-6 at Rs. 33-8, Coromandel rose by Re. 1-2, to Rs. 33-14. Groundnut oil ex-mill was quoted As. 12 higher than a week ago.

Linseed May 1957 commenced the week at Rs. 29-14 and touched a high of Rs. 30-6 on the following day, though it finished at Rs. 31-1. Subsequently, it rose steadily, but with minor fluctuations, and reached today the highest for the week at Rs. 31-5, before closing at Rs. 31-3. During the week it gained Re. 1-10. In the spot, Bold ready put on Re. 1-4 at Rs. 34-12, while small Sutna was marked up by Re. 1-12 to Rs. 33-4. Linseed oil ready was quoted at Rs. 19-10, that is, As. 12 higher than a week ago.

Castorseed futures contract was quoted at the beginning of the week at Rs. 170-8, and touched a high of Rs. 175 on the following day before receding to Rs. 171 on the third day. On the fourth day, however, it recovered to Rs. 172-12 and further shot up to Rs. 176-4 on 15th inst. and Rs. 180 today, before finishing at Rs. 179. Over the week, it improved by as much as Rs. 10. In the spot section, Bold ready rose by As. 6 to Rs. 38 while Kanpur spurted by Re. 1-12 to Rs. 38. Oil B.S.S. was As. 12 higher at Rs. 24.

The cottonseed futures section was active throughout the week with minor fluctuations. Having opened at Rs. 92-8, the February contract rose to Rs. 98-8 on the following day, and, after fluctuating during the three days that followed between Rs. 96-8 and Rs. 98-12, it touched today Rs. 100, the highest reached so far, before finishing As. 8 lower. Over the week, it gained Rs. 7. The May contract, too, reflected the same trend. It opened the week at Rs. 94 and closed today at the highest level, Rs. 99-4.

Among the others, *kardiseed* Bold was As. 8 higher and *nigerseed* Madras Re. 1 more than a week ago.

During the year 1956, exports of oilseeds and oils from the port of Bombay were somewhat lower as compared to those of the previous year. Groundnut oil has suffered a sharp setback in export at 5,864 tons during the year under review, as against 74,964 tons in 1955. Castor oil exports were only slightly lower at 37,739 tons, as against 39,418 tons. It was earlier presumed that castor oil exports would break the all-time record during the past year but they have fallen short by a few thousand tons. All-India exports of castor oil in 1955 were estimated around 41,000 tons.

Exports of oil from Bombay during 1956, as compared to 1955, were as follows:

(In tons)

Oils	1956	1955
Groundnut	5,864	74,964
Linseed	19,785	30,697
Castor	37,739	39,418
Sesamum	76	3,837
Mustard and rapeseed	21	45
Niger	3,131	2,047
Kardi	3,792	14,486
Cottonseed	6,304	N.A.

N.A.=Not available.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	16-1-1957	9-1-1957	2-1-1957
	Rs. a.	Rs. a.	Rs. a.

YARN STEADY

(From Our Own Correspondent)

BOMBAY, 16*th January*

In refreshing contrast to the dull conditions which existed in the yarn market in the previous week, the week under review witnessed a steady trend. In the staple fibre section, although some fears are entertained that, due to lack of demand, prices might tend to go down, fluctuations have remained fairly narrow. In the case of cotton yarn, quotations have remained practically firm for all varieties and there has also been some improvement in some of the important varieties due to buying enquiries. There are also hopes that the market will improve due to increased demand from handloom weavers. The Bombay Yarn Merchants' Association and Exchange is likely to concentrate on forward trading in indigenous production of rayon yarn. This is due to New Delhi's curb on imports of rayon. A beginning will be made with trading in 150D.

Staple fibre yarn (40x2) for February delivery remained steady at Rs. 642. Spot Kohinoors receded by 3 pies to Rs. 3-8-3. Citys lost 9 pies to Rs. 3-6-9. New Greats eased by three pies to Rs. 3-6-3 and Centurys by six pies to Rs. 3-7-6.

In the cotton yarn section, among the forty counts, Minaxis lost As. 2 to Rs. 27-8. Moderns and Gokaks ruled steady at Rs. 28-12 and Rs. 27-12, respectively. Thirty counts Maduras remained quiet at Rs. 24. Among 20s, there was no change. Maduras and Moderns remained firm at Rs. 19-8 each and Gokaks at Rs. 19. Ten counts Moderns eased by As. 2 to Rs. 15-8 and Podars remained steady at Rs. 15-8. Sixty counts, however, witnessed some support, Finlays gaining by As. 6 to Rs. 62 and Moderns by Re. 1 to Rs. 64. Among 80s, Finlays hardened by a rupee to Rs. 82. Moderns were unchanged at Rs. 75.

Snia rayon yarn (120 dull cones) for February delivery declined by Rs. 5 to Rs. 823. Spot 120 Japan lost 3 pies to Rs. 4-5-9. 150 Japan was quiet at Rs. 4-8 as also 120 Italy at Rs. 4-3.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	16-1-1957	9-1-1957
Art silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.
120 Dull Cone Snia February	823 0	828 0
120 Japan (per lb.)	4 5½	4 6
150 Japan (per lb.)	4 8	4 8
120 Italy (per lb.)	4 3	4 3
150 Italy (per lb.)	3 14	3 14½
Staple fibre yarn (per case of 200 lbs.)—		
40 x 2 February	642 0	642 0
40 x 2 New Great (per lb.)	3 6½	3 6¾
40 x 2 Century (per lb.)	3 7½	3 8
40 x 2 City (per lb.)	3 6¾	3 7½
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	15 8	15 8
20s Madura	19 8	19 8
30s Madura	24 0	24 0
40s Gokak	27 12	27 12
60s Finlay	62 0	61 10
80s Modern	75 0	77 8

MIXED TREND IN SUGAR

(From Our Own Correspondent)

BOMBAY, 16*th January*

A feature of the Bombay sugar market during the week under review was the dull to quiet conditions in the spot section, in distinct contrast to the firm trend of ex-mill rates and the futures section. Better prospects of export of at least 50,000 tons of sugar by India and renewed rumours of an increase in excise duty imparted a bullish fervour to the futures section. The same reasons were also more or less responsible for the higher ex-mill rates. The quiet trend in the spot market reflected the heavier stock position and continued large arrivals in the face of poor offtake. It is estimated that stocks-on-hand are well over 90,000 bags, while the offtake is small. Arrivals of indigenous sugar during the week amounted to about 41,600 bags.

In the spot section, turnover was greatly restricted and trading was dull. There was hardly any change in the rate for small grain which stood at Rs. 88, but medium grain was quoted lower at Rs. 89 to Rs. 90, as against Rs. 90 to Rs. 91. Large grain also lost Rs. 2 to finish at Rs. 93 to Rs. 101 per bag. British refined was fully steady at Rs. 95 per bag owing to paucity of stocks.

In the futures section, *Fagan* delivery contract for 'C' grade sugar moved down from Rs. 92-12 to Rs. 91-10 early in the week, due to persistent short sales, but quickly recovered later to Rs. 92-12 for reasons already mentioned.

TEA PRICES IRREGULARLY LOWER

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, 11th *January*

Sale No. 1 was one of the largest sales held in Cochin and approximately 3¼ million pounds of tea were offered in this sale held on Tuesday, 8th January. As compared with the previous sale, quality was rather better. The selection in general was useful with a few flavoury highgrown teas. There has been a fair general demand, but prices were irregularly As. 4 lower for low medium and medium sorts and fannings grades among these types were often neglected.

After opening quietly, the market strengthened, but eased off towards the close, resulting in fairly heavy withdrawals towards the last part of the sale. Best liquoring teas met with a considerably easier market and sometimes sold As. 8 below valuations. The best feature of the sale were whole leaf grades which sold well, although at a drop of As. 2. The following are the quotations:—

	1957 Rs.	a.	p.
Plain B.P.	1	15	0
Low medium B.O.P.	2	2	6
Medium B.O.P.	2	4	6
Good B.O.P.	2	8	0
Well made black leaf O.P.	2	9	0

The combined average price of tea fetched in sale No. 1 was Rs. 2-6-9 per lb., as against Rs. 2-0-5 in the corresponding sale of 1956.

London Market: Sale of 7th January 1957:—Market unchanged.

Sale of 8th January 1957:—Unchanged.

Colombo Market: Sale of 7th January 1957:—Strong demand, particularly for useful liquoring sorts. Prices advanced 10 to 15 cents.

Sale of 8th January 1957:—Good demand at lower levels, following quality. Highgrown B.O.Ps. declined 20 to 40c., mediums down 10 to 15c. corresponding fannings dearer. Lowgrowns firm.

Calcutta Market: Export.—73,000 packages met a better general demand. Better liquoring one anna dearer. Ordinary fibrous sorts one anna lower.

Internal.—26,000 dust. Good general demand. Middle East strongest As. 2 dearer. Best C.T.C. As. 2 to As. 3 dearer. Other C.T.C. As. 2 easier. All orthodox dusts firm to one anna dearer. Leaf good demand, particularly fannings which were As. 2 dearer.

Export Quota:—After the announcement by the Government of India of a 12 per cent. release on the "basic crop basis," the market reacted sharply to 37 pies. A quick recovery was, however, made and at the time of writing, the quotation is 48 pies.

Forthcoming Auctions.—Sale No. 2 will be held on Tuesday, 22nd January 1957 and dust sale B on 15th January 1957.

The estimated crop for the month of December 1956 is 10.69 million lbs., as compared with 7.66 million lbs. (actual) for the corresponding month of 1955. This brings the total estimated crop for the year January-December 1956 to 126.93 million lbs., as compared with 128.95 million lbs. (actual).

Shipments of tea from Cochin from 1st January to 20th December 1956 amounted to 77.42 million lbs., as against 72.90 million lbs. in the corresponding period of 1955. Of these, those to the U.K. accounted for 43.65 million lbs, as compared with 42.46 million lbs. a year ago.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale B*:—650,000 lbs. Good general demand. Prices fully firm to dearer for everything, except best liquoring, which were occasionally easier."

JUTE RECOVERS

(From Our Own Correspondent)

CALCUTTA, 15th *January*

A fair recovery in the prices of jute goods was recorded during the week under review. Fibre prices registered a further increase. The satisfactory decline in the stocks of jute goods held by mills as at the end of December was a strong reason for the improvement in goods prices. The total stocks was 96,600 tons representing a fall of 5,100 tons, as compared with the November-end figures and equivalent to about five weeks' production. At 20,000 tons, hessian had fallen by as much as 4,700 tons. It had been earlier expected that sacking would register an increase, in view of the poor shipping effected for this construction in December. However, the announcement that the stock of sacking goods fell by 2,000 tons to 65,100 tons was hailed in the market which attributed the satisfactory statistical position to more internal buying during the month. On the other hand, miscellaneous goods increased to 11,500 from 9,900 tons. This is the time of the year when American demand for hessian falls; and burlap stocks in the United States are already high. Overseas demand for sacking goods continues to be low, and during December sacking shipped was 12,000 tons lower at 34,000 tons. The figures include coastal shipments and, as such, it should be presumed that purchases for consumption in Calcutta and upcountry centres were higher.

There were further signs during the week of a tightening of the supply position in raw jute. Demand by mills during the week was mostly for Murshidabad tossa and northern jute. It is feared that, with imports from Pakistan being ruled out in view of the uneconomic prices, stocks of indigenous jute, including *mesta* and *bimli*, would not be sufficient. A portion of the crop is still held with the more well-to-do cultivators for release at the peak of the tightness in supplies. However, in view of the fall in overseas demand following the slowing down of stockpiling in anticipation of the expected return of the Suez Canal for navgation, it is doubtful if jute goods would continue to be priced even at present levels, which bear a disproportionate relation to the present high fibre prices. For this reason, it is expected that the bazar stocks of raw jute will not at any time rise to an unmanageable proportion. Dealers, who had carried speculative stocks in the last two or three seasons and had suffered huge losses, could illafford an adventure of this type again. However, the position of cultivators is different. For they have the holding power, and even if they are unable to realise prices of their imagination, the question of loss does not arise.

In the background of an expected shortage in raw jute supplies, the steps suggested for increasing jute output by the conference on promotion of jute production, held in New Delhi on Saturday last under the presidentship of the Union Agriculture Minister, Dr. P. S. Deshmukh, were noted with considerable interest here. There can be no doubt about the imperative need for increasing the area under jute, if the second Plan's revised target of 5,540,000 bales by 1961 is to be achieved. Even with the realisation of this target, self-sufficiency would not have been achieved. The measures suggested by the conference, *inter alia*, are: use of improved seeds, line-sowing by seed drills, judicious application of fertilisers, top-dressing, supply of fertilisers to cultivators as loans in kind, and multiplication of improved seeds by selected growers in the National Extension Service Blocks.

Jute goods opened on Tuesday last on a weak note under bear pressure. Ready B. twills declined to Rs. 119-2 from Rs. 119-4, and Ready 40" 10 oz. hessian to Rs. 45 from Rs. 45-6. At the lower levels, business was done with overseas buyers, and this factor together with the announcement of a stock position, satisfactory from the market point of view, boosted speculative sentiment and B. twills rose to Rs. 119-6 and 40" 10 oz. hessian to Rs. 45-4 on Wednesday. Covering business soon followed and by Friday these two constructions, representative of the market, had gained to Rs. 120-4 and Rs. 45-14, respectively. Over the week-end, activity by bears pushed down 40" 10 oz. hessian to Rs. 45-9. B. twills were, however, maintained at Rs. 120-4. On bear pressure again yesterday, the rates declined further to Rs. 45-8 and Rs. 119-12, respectively.

Mills continued to buy raw jute. Sellers were reserved. Prices improved by As. 8 to Re. 1. Latest quotations for the different constructions Jan.-Feb. delivery are given below:

	Middles Rs. a.	*Bottoms* Rs. a.
Pakistani:		
Northern (Nominal) ...	42 8	39 8
District	43 0	40 0
Indian:		
Northern	35 8	33 0
Assam Upper	35 8	33 0

Daissee mesta	31 0	28 8
Bimli f.a.q.		28-8

Pucca bales 1st marks ready ... Rs. 200 per bale.

DEMAND FOR TEA SHRINKS

(From Our Own Correspondent)

CALCUTTA, 15th *January*

Contrary to expectations, general demand during yesterday's export sale, although good at opening, shrinked as the sale progressed, thus affecting prices of certain types of teas. This declining trend should be read against the background of a similar development in the sale held in Mincing Lane on 8th January when offerings consisting of Ceylonese and South Indian teas displayed an irregularly easier trend.

This is a clear sign that Great Britain, with hopes of early resumption of navigation through the Suez Canal, has slowed down purchases. While during the coming few weeks, thus, British demand for tea in the Calcutta and Cochin markets may not be as satisfactory as in the past, it is expected that Russia and the Middle East countries would continue to operate for fair quantities. World output of tea in 1956 would have equalled the 1955 figure, but the increased demand in 1956, both for export and internal consumption, has been reflected in higher prices. In India, the tea-drinking habit is believed to have grown in the past year, thanks to an improvement in the living standards and to the efforts of the Tea Board. Tea gardens expect that common teas, which form the bulk of the tea that remain to be marketed, would meet with enthusiastic buyers and that the price would be maintained at above Rs. 2 per pound. The general elections throughout the country should also cause an increase in tea consumption.

During yesterday's export sale, offerings amounted to 73,000 chests. While the prices of most of the offerings of mediums and commons gave way by an anna to As. 2, "price" teas realised slightly higher rates. There was fair demand for medium-priced C.T.C. teas, prices of which rose above valuations. However, the higher-priced C.T.Cs eased by an anna to As. 2. In keen competition, bright liquoring teas showing seasonal improvement realised higher prices. Tippy teas were steady. Whole leaf grades met with good demand and prices registered a small rise. However, stylish B.P.S's were quiet. Darjeelings met with support at declining prices. The quotations were: Best C.T.C. Assam Rs. 2-12 (nominal), clean black pekoe Rs. 2-6, medium Assam B.P. Rs. 2-4-6 to Rs. 2-5, and plain B.P. Rs.2-3.

With the weakening tendency in export demand, export quota rights were offered at 43 pies per lb., business being done at 42 pies and subsequently, at 41 pies also.

The weekly sale for domestic consumption was held on Wednesday last, when dust tea on offer amounted to 26,674 chests. The general demand was good. The strongest feature was the bright liquoring C.T.C. Assam teas, prices of which were pushed up by As. 2 to As. 3, but the ordinary liquoring teas eased by As. 2. Another strong feature was the black leafy teas, prices of which rose above brokers' valuations, in some instances, even by As. 2. All orthodox dusts met with good support and gained by 4 to 1 anna. The quotations were: Best Assam C.T.C. Rs. 2-9 to Rs. 2-11, medium Assam C.T.C. Rs. 2-5, medium Assam grainy dust Rs. 2-2, and medium Dooars Rs. 2-1.

Leaf teas offered aggregated 2,502 chests. Demand was strong. Prices rose by As. 2 with green leaf teas and fannings receiving special attention.

METALS RULE STEADY

(From Our Own Correspondent)

CALCUTTA, 15th *January*

There was fair activity in the base metals market during the week under review. It was noted that, although the import policy affecting base metals for the January-June 1957 period was the same as the previous half-year—and it cannot be otherwise as unrestricted imports of base metals would have to be continued in view of the meagre indigenous production—the export of semi-manufactures of copper, viz., sheets, circles, strips, plates, bars, rods, tubes, pipes, and bare wires would not be allowed until further notice. This restriction does not apply to the export of semi-manufactures of brass. During the week, the price of tin in Calcutta, at Rs. 553, continued to be several points higher than the replacement cost. Ready supplies were difficult to be located. Electrolytic copper, in consonance with overseas market trends and consequent on an improvement in the supply position, fell to Rs. 192 from Rs. 194-8. Demand was on a low ebb. Lead was maintained at Rs. 82-8 and electrolytic zinc at Rs. 72-10.

LINSEED ADVANCES

(Messrs. A. Bradley & Co.)

CALCUTTA, 14th *January*

Following better enquiries from buyers, prices have advanced somewhat and the undertone of the market is steady. Arrivals are poor and sellers are rather reserved; a fairly small turnover has been recorded. The oil section has been active, with shippers in the market for near positions owing to a good demand from U.K. buyers. The latest quotations are as follows:—January Rs. 25-12 and April-May Rs. 22-8 per maund.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 14th *January*

Steady to firm conditions prevailed in the foodgrain markets during the past week due to paucity of stocks and good enquiry. The Government of India is reported to have decided to expedite imports of foodgrains this year and in the year following. The 3.5 million tons of wheat to be imported under an agreement with the U.S., in three years are now proposed to be imported by the Government of India within two years and 1.5 million tons are expected to reach India by July 1957. Substantial additional quantities of wheat are likely to be purchased from Australia and other sources as well.

Wheat prices at Hapur recorded a steady trend. *Dara* wheat was quoted at Rs. 16-4 and farm quality at Rs. 17-4 per maund. Thanks to the revival of sales through fair-price shops, the prices are not going up. But the demand is increasing daily. The week's offtake at 3 *khaties* was mostly for local needs, barring a despatch of one wagon to Poona. Stocks of wheat are now put at 53 *khaties*.

Rice acreage during the 1956-57 crop year is reported to have gone up by nearly 3 million to 79.3 million, as compared with last year. It is expected that the adverse effects on the crop due to excessive rains in September and October last will be offset by this increase in acreage. This improved outlook is already reflected in rice prices which have declined during the last two months. Prevailing prices here are:—Basmati Rs. 22-8 to Rs. 26, Manipuri Rs. 19 and coarse quality Rs. 15-6 per maund.

Gram continued to be very much in demand. The week's offtake aggregated 12 *khaties*, reducing local stocks to 48 *khaties*. Prices appreciated by As. 3 per maund. Good rains during the week have very much brightened the prospects for the coming crop here and in the Punjab. Maize was in good request during the week from Gujerat, with an offtake of three wagons to Ahmedabad. Prices advanced by As. 6 per maund. Other coarse grains also recorded a hardening trend, in sympathy with maize and due to poor stocks positions. There are still about three months for the arrival of the new crop in the market. The latest prices on Monday were: Gram *desi* Rs. 13-4, Punjab Rs. 13-10, barley Rs. 13-4, *bejhar* Rs. 13, maize Rs. 13-4, *bajra* Rs. 13-12, *jowar* Rs. 12 to Rs. 13, *guwar* Rs. 10-12 per maund.

Despite good crop prospects due to the latest rains, prices of peas recorded gains during the week on account of dwindling stocks and good buying enquiry from outside States. *Arhar* prices, however, ruled quiet, as outside demand was dormant and local stocks are unchanged at 24 *khaties*. Prices of other pulses eased during the week, due to bettter supply position. Week-end prices on Monday were:—peas *dara* Rs. 13-4, white Rs. 14-10, *arhar* Rs. 13, *urd* Rs. 17-4 to Rs. 19-8, *moong* Rs. 14-12 and *masoor* Rs. 18-6 per maund.

Pulses futures moved both ways during the week. While peas farm futures advanced in line with ready prices, other futures ruled quiet. The latest quotations on Monday were:—Peas *jeth* Rs. 10-0-4½, peas farm *maha* Rs. 12-14, *jeth* Rs. 10-6-9, *arhar maha* Rs. 12-3, *jeth* Rs. 10-10-6, *urd maha* Rs. 18-6, as against Rs. 10-1-3, Rs. 12-11, Rs. 10-7-9, Rs. 12-3-6, Rs. 10-13 and Rs. 18-6, respectively, quoted a week ago.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. D.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

BUOYANCY OF U.S. ECONOMY

(*Concluded from page 116*)

incentive and the means to expand capital programmes are diminished. Meanwhile, debts rise and liquidity declines. Inventory accumulation eventually reaches a peak and no longer adds to total demand. Mistakes and miscalculations are made and maladjustments develop which require a period of digestion and correction.

"However, the attitude, 'Things are just too good to last,' is not an adequate basis for expecting a downturn. The stresses and strains which usually accumulate in a booming economy and eventually demand correction are not particularly severe as the new year opens. Inventories are high but not burdensome when related to unfilled orders and general business levels. Inventory liquidation would accelerate a decline but seems unlikely to trigger one. Speculative excesses and unsound credit practices are restrained by the tight money policy. Excess industrial

VOL. XCIV. No. 2394 BOMBAY, 26th JANUARY 1957 PRICE: Rs. 1/8

MR. MORARJI DESAI'S CRITICISMS

THE business community has always held Mr. Morarji Desai in high esteem, because of his high qualities. He has proved himself as an able administrator. On the few occasions in the past when he was associated with the economic policies of the Government, he had shown himself capable of carrying business men with him and that without much ado. He had, for instance, won the hearts of millowners, when he was the head of the Committee advising the Government on controls over the cotton textile industry, by supporting the realistic proposals made by them. It will be no exaggeration to say that business men understand him much better now than they did before. It is also equally true that he appreciates their difficulties better and knows them well. The most admirable quality of Mr. Desai is firmness of mind, that is, once he takes a decision, he does not waver but sticks to it. Many a business man, therefore, heaved a sigh of relief when he was made the chief of a portfolio that concerns them vitally, namely, the Ministry of Commerce and Industry. His humility of approach is another quality that greatly appeals to this much harassed section of Indian people today. Accordingly, it is natural if the business community is anxious to maintain the most friendly relations with the Government during his regime and do their best for the economic advancement of the country. And, for the same reasons, his observations at Ahmedabad last week, under the auspices of the Gujerat Chamber of Commerce, must have evoked their sincere attention. They also constitute a good subject for reflection on this eventful day when India celebrates the seventh anniversary of its emergence as a Republic.

Mr. Desai's remarks fall into two convenient parts, assurance and advice. He gave the heartening assurance that the Government was prepared to minimise the difficulties of the business community wherever they existed, to offer its co-operation to this community in exploring avenues of investments and setting up new industries and to examine any restriction which might be an impediment to the rapid growth of industries. In return, he expected the business community to have confidence in the *bona fides* of the Government, to be ready to make some sacrifices for evolving a socialist pattern of society and, above all, not to be hypercritical. These are legitimate expectations, provided the sacrifices demanded of them are reasonable and necessary—a point on which there is, however, wide difference of opinion between the tax collector and the taxpayer.

Implied in his call to the business community for wholehearted co-operation is the allegation that such has not been forthcoming. But there is no basis for this implication. We wish Mr. Desai had given a few instances of the business community's failure to co-operate with the Government. It is true that, here and there, there have been ill-advised demonstrations by traders against the rigorous features of sales tax and that some pieces of legislation have been challenged in the Supreme Court. But we do not think that Mr. Desai had these in mind. He must be aware that the vast majority of the business community has disassociated itself from such forms of protest against sales tax and has condemned them. He must also be aware that a large number of the references to the Supreme Court was not unjustified. It can be claimed that, despite all controls, some necessary and some unnecessary, heavy taxation and nationalisation of one sector or another every year, the business community has, by and large, been extending its fullest co-operation and support to the Government, as well as to the party in power. It is unnecessary for us to give proof of it to Mr. Desai, who, of all the Congress leaders, has enough of it. Indeed, the business community can legitimately claim that the boot is on the other leg. There are many things which the Government could have easily got done by the business community through mutual discussion, fervent appeal and evolution of healthy conventions, instead of forcing them on it with the weight of its mighty powers. In our humble opinion, the former methods are more in keeping with the co-operative socialist pattern to be achieved by peaceful means—the cherished goal of the Congress Party—than the latter. Not a session of Parliament or State Assemblies closes without placing on the Statute Book some new legislation or other which infringes the freedom of business men. Further, the days when the business community used to be consulted on legislations affecting it are practically gone. And even on the few occasions when it is consulted, the consultation is more a formality than one induced by the desire to benefit by its views and experience.

If the criticisms of the business community are construed as lack of co-operation on its part with the Government, then it is a different matter. Apparently, Mr. Desai takes criticisms in that light. He does not, of course, question the right to criticise, but he seems to resent criticism strongly. That is unfortunate. There can be no healthy democracy without fair, constructive criticisms. And it is not right to think that criticisms are to be offered only by those who are in the Opposition or to consider all those who criticise as political opponents. It is definitely wrong to regard healthy criticisms as non-co-operation. And we submit that the vast majority of criticisms emanating from the business community is both fair and constructive, offered not in the interest of safeguarding any narrow selfish ends but in that of achieving the goal of the Congress Party surely and steadily. It is surprising that an astute leader like Mr. Desai is surprised that, having accepted the basic ideals of a socialist society, business men should keep on criticising the steps taken by the Government to realise them. If this is an anomaly in the attitudes of business men, it is easily explained. The latter do not simply agree that the ways and means chosen by the Government to attain its ideals are the right ones. These men are afraid that they may not lead India to its cherished goals in the foreseeable future and that, even if they ultimately do, they may unleash certain undesirable tendencies such as bureaucracy, State capitalism and authoritarian rule, which are inimical to the democratic way of life and may even threaten the unity of the country.

It is the contention of the business community—and this journal agrees with it—that it was not necessary to nationalise life insurance in order to bring prosperity to the masses, the main ideal of a socialist order of society. Nor was it necessary to nationalise the Kolar Gold Mines or the Panna Diamond Mines. Equally unnecessary are the drastic powers of control, recently assumed by the Government in great haste after Mr. Desai joined the Union Cabinet, over the banks. If the managements of a few banks had misbehaved, as they appear to have done, it could not have been beyond the wit of the Government to induce them to mend their ways or to bring them to their senses. Application of moral pressure, if persuasion had failed, would have effectively served the purpose. For instance, the persons guilty of wrong deeds could have easily been subjected to political boycott or disciplinary action. Indeed, no business man with a record of such deeds can afford to defy the moral pressure of a constitutionally established popular Government and get away with it. Mr. Desai may contend as to why honest business men should be afraid of such powers. But those who argue thus forget two things. One, these extraordinary powers may be misused by those in authority, a risk much greater in a young, inexperienced and illiterate democracy than in a mature one with a high degree of literacy. Two, they will retard the flow of foreign capital from countries where an energetic and enlightened free enterprise is considered as a prerequisite of democracy. And it is only these countries that can spare capital for export on a large scale. If Mr. Desai has any doubts on this point, he will do well to ascertain, by a thorough independent enquiry, the real reasons why some of the capital markets in Western Europe and America are chary of lending to India.

Not all business men—and this is true of the Press too—criticise the Government for the sake of criticism, as Mr. Desai complained at Ahmedabad. Nor do they criticise all the actions and policies of the Government. It certainly gives no pleasure to criticise Mr. Nehru's Government which has many achievements to its credit, more especially because they have been secured under heavy odds. Yet, persons who happen to be placed in positions of responsibility to the public, would not be true to themselves, if they do not forcefully draw the attention of the Government to what they consider defects in its policies and actions. Several instances can be given to show that most of the criticisms from business men and the Press have been borne out by events. A study of the past volumes of this journal will more than repay in this connection. Suffice to recall the controversy over the Central Government's policy relating to steel and coal industries and the Bombay Government's policy (under Mr. Desai's regime) regarding expansion of power supply in the Bombay-Poona region. Again, if one were to view in retrospect the various criticisms of the Company Law, one would admit that there was a lot of force in many of them. Even official circles recognise that as many as half the number of provisions will either have to be amended or they will have to wink at the inability of companies to comply with them. Mr. Desai's own colleague in the Union Cabinet, the present Finance Minister, openly admitted

in the last session of Parliament that there were many stupid provisions in this law.

Two recent instances also may be given to prove the genuineness or the appropriateness of the criticisms of the Government's policy. It has all along been contended that the second Plan is overambitious and that either its size will have to be reduced or the period will have to be extended. The planners, excepting one, have consistently refuted this contention. But the latest events do not support them. Steps have already been taken to curtail imports of steel, cement and a few types of capital goods, and to postpone some of the projects included in the Plan. More steps of this nature will shortly follow. Surely, Mr. Desai must be aware of these better than we do. The other instance relates to the tax policy. Business men have been repeatedly pointing out that the system of compulsory deposits made applicable to all corporations, except banks, was conceived in a hurry, without taking into account the realities of the situation and that, if it were to be enforced without substantial modifications (as would retain it only in name), it would have serious repercussions on the economy of the country. Events would soon prove whether this criticism is one of those to which Mr. Desai takes objection.

As though to prove that his criticism of the Government's critics was right, Mr. Desai mentioned that, in spite of the atmosphere of doubts, apprehensions and criticisms, the national economy had continued to show progress. This remark is quite commonplace; it is a very misleading one, in that it does not prove that there are no disincentives to still greater progress. Anyway, anticipating this type of argument, we said in our issue of 8th December last, while commenting on the taxation proposals of 30th November, as follows:

"It cannot be denied that a heavy dose of taxation will have a psychologically bearish effect on prices of almost everything. Such an effect, however, will only be a passing phase. An enduring impression on prices can be brought about only through increased production. Mr. Krishnamachari is quite aware of this point. Yet he has taken steps that will only retard the pace of expansion in production at a time when the pace should be as fast as possible. It must be noted here that we do not say that production will be adversely affected. Nor do we say that production will not expand. No business man with any foresight will cease to work, just because taxation has become very heavy. It will not pay him to do so. Since he has to live, he will work and produce. Hence, although, during the past five or six years, the burden of taxation has gone up steeply, production, too, has been rising. It is this fact that has apparently engendered a feeling of cynical disregard among the powers-that-be for the business man's protests against higher taxation, increasing bureaucratic controls and growing extension of the public sector. But what is, unfortunately, overlooked or is not realised is that the growth in production would have been greater than what it has been had the incidence of taxation been less heavy and had there been fewer incursions and interferences by the Government. Considering the economic momentum which this country had received during the war years, the growth has been much less than what was possible and what would have materialised if the freedom of free enterprise had not been severely restricted. The pressures at various points in our economy, to which Mr. Krishnamachari refers in his budget speech, are mainly the outcome of sacrificing the pace of progress at the altar of some vague and outmoded ideologies."

It would be a pity if Mr. Desai were to dismiss this criticism also as one of those that are made by the financial Press just to fill out its columns or to remain popular with business men. We would only earnestly request him to think of the gains that would have accrued to the country if the Government had not delayed the expansion of the steel industry in the private sector and the growth of power in the Bombay-Poona region or of the loss the country would have continued to suffer had not the business men and the critical section of the Press persisted in harping upon the defects of these policies even at the risk of incurring the displeasure of those in authority. Mr. Desai and his colleagues in the Government, we dare say, will not misjudge the criticisms from these quarters if only they realise that there is no fundamental difference between the interests of the business community and those of the country as a whole.

INDO-PAKISTAN TRADE AGREEMENT

ALL sections of opinion will welcome the three-year Indo-Pakistan trade agreement, which is scheduled to come into effect from 1st February 1957. Much careful preparation preceded the conclusion of the agreement. And reports from New Delhi have continued to emphasise the generally helpful and constructive attitude which the Pakistani delegation brought to bear on trade negotiations. Nevertheless, it is to be feared that the continuing political tension between the two countries has prevented a fuller and better understanding on trade and commercial matters. This is deplorable.

If the last Indo-Pakistan agreement, which came into effect from 1st September 1955, had been preceded by a series of economic setbacks in Pakistan, culminating in the devaluation of the currency, the background to the present agreement has been marked by features that are no less difficult. The closure of the Suez Canal through which flows 70 per cent. of Pakistan's imports and 40 per cent. of all its exports has been a source of considerable anxiety to its planners. So far as India is concerned, the continuing imbalance of its trade with Pakistan as also the fact that the pressure on its foreign exchange reserves continues to be heavier than it ever was are factors that ought to make liberal and well-conceived trade agreements with other countries particularly attractive. Thus, it is in the interests of both countries that an effective trade agreement should be concluded. Few countries have such extensive land frontiers in common between them as India and Pakistan. In the absence of effective collaboration, it is plainly difficult to control and regulate the trade across the frontiers between the two countries. Further, the two countries ought to come closer at least in order to face common perils like floods. Past experience shows that floods, which are no respecters of frontiers, inflict severe damage with a tragic impartiality.

Nevertheless, the course of Indo-Pakistan economic relations, like that of true love, has never run smooth. Among recent efforts at concluding trade agreements, made by the two countries, mention must be made of the trade pact signed in August 1952. Negotiations which were conducted in March 1953 to extend the agreement beyond 30th September 1953, the date of expiry of the agreement, proved only partially successful, in that only a limited agreement covering jute and coal could be concluded. The next serious effort in this sphere was made in July 1955. Prolonged consultations were held. And a one-year trade pact came into force on 1st September 1955. An important feature of the agreement was that it exempted from all trade and exchange controls the border trade across the land customs frontiers between East Pakistan, on the one hand, and West Bengal, Assam and Tripura, on the other. This was intended to encourage free movement of goods of daily use across the common frontier. During the one-year period ended 31st August 1956 covered by the agreement, India's exports to Pakistan, it is estimated, aggregated Rs. 8.77 crores while its imports were Rs. 24.19 crores, thereby indicating an adverse balance to the tune of Rs. 15.42 crores.

Indeed, deficit—that is, a trade balance adverse to India—is the main feature of Indo-Pakistan trade. In 1954-55, such deficit aggregated Rs. 9.7 crores and in the following year, it was as high as Rs. 18.8 crores. The two other features are the small proportion of the Indo-Pakistan trade in India's total foreign trade and the large proportion of land frontier trade, as compared with seaborne trade. The trade between the two countries (India's exports to Pakistan and its imports from that country) aggregated only Rs. 28.9 crores in 1954-55 and Rs. 35.4 crores in 1955-56, as against India's total foreign trade of Rs. 1,216 crores and Rs. 1,234 crores, respectively. Surely, it should be possible for India and Pakistan, which are geographically adjacent to each other, to improve the volume of their trade.

Yet another feature that stands out prominently in Indo-Pakistan trade is its rather exclusive dependence on one or two commodities on either side. Thus, raw jute accounts for major portion of imports from Pakistan; its imports were valued at Rs. 13 crores and Rs. 19.3 crores in 1954-55 and 1955-56, respectively. Among India's exports, coal and coke are the most important; they accounted for a little over Rs. 2 crores in each of the years 1954-55 and 1955-56. The chief aim of any trade agreement ought to be to broaden the basis of the trade, so that an expanding volume of commercial transactions can take place. In other words, the aim must be to include as large a number of commodities as possible in the agreement, and to encourage their exports or imports, as the case may be.

Against this background, it is certainly gratifying to note that, under the agreement now concluded, the two Governments have undertaken to explore all possibilities for expansion of trade between the two countries on the basis of mutual advantage. Under this agreement, which was signed by the representatives of India and Pakistan on 15th January, 1957 and which, subject to ratification by their respective Governments, will come into effect on 1st February 1957, the two countries have agreed to facilitate import and export of commodities specified in two schedules attached to the agreement, to the extent permitted by their laws, regulations and procedures. The commodities available for export from India to Pakistan include coal, chemicals, drugs and medicines, millboard and strawboard, machinery and millwork, workshop equipment, electrical instruments, cinema films, sugar, tea for blending, coffee, betel leaves, *bidis* and *hooka* tobacco and *bidi* leaves. The items available for export from Pakistan to India include raw jute, hides and skins, fish, poultry and eggs, betel-nuts, spices, honey, cinema films, machine tools, bicycles and spare parts, surgical instruments and sports goods. Export or import of commodities not listed in the schedules, it is stated, will also be permitted in accordance with the laws of either country. The two Governments have agreed to enter into special arrangements for commodities listed in a separate schedule, upto quantities or values specified for each item. It is noteworthy that the two Governments have also agreed to accord to each other's commerce most-favoured-nation treatment. The agreement also provides for a review at the end of every six months; the schedules of commodities will be subject to revision before the beginning of each calendar year.

As in the previous agreements, so in the present, the importance of border trade has been recognised. In order to meet the day-to-day requirements of the people living within a ten-mile belt of the border between East Pakistan, on the one hand, and West Bengal, Assam and Tripura, on the other, the two Governments have agreed that border trade will be allowed in the commodities specified in a separate schedule. These commodities include items of daily consumption like fish, poultry and eggs, soap, vegetables and fresh fruits, milk and milk products, kerosene, betel leaves, fodder and firewood. It has, however, been agreed that, after six months from the date the present agreement comes into force, this trade will be carried on only through specified routes. This limitation is proposed evidently with a view to restricting the scope for smuggling.

A new principle which has now been accepted by the two countries is what might well be described as a convenient barter in transport. Indeed, this principle deserves to become an increasingly prominent part of Indo-Pakistani trade agreements in future. Briefly, the new feature envisages the purchase by India of certain commodities from one wing of Pakistan and export from India of the same commodities to another wing of Pakistan. This is a convenient way of solving the problem of transport of goods from one wing of Pakistan to its other wing. The arrangement now effected will mean a considerable saving in transport charges which would have to be incurred whether goods were sent from one wing to the other by the land route across India (over 1,000 miles) or by sea (a distance of over 3,000 miles). In accordance with this feature of the agreement, India, it is stated, will export 50,000 tons of cement to East Pakistan in exchange for the same quantity to be exported by West Pakistan to India. A similar arrangement, it is reported, has been made for salt; India will get rock salt from West Pakistan in exchange for sea salt to be supplied to East Pakistan.

While the working of the Indo-Pakistan trade agreement will naturally be watched with interest, it seems necessary to reiterate the point that, unless the trade between the two countries is allowed to attain a certain balance, it will be difficult to bring about any great expansion in the volume of the trade. So long as the present imbalance lasts, Pakistan will have to be content with a trade which will be largely confined to a few articles of export, such as raw jute and a few articles of import, such as coal. The two countries will do well to examine whether additional commodities cannot be brought within the scope of the agreement.

SHARES, BULLION AND COMMODITIES UP

SUGAR EXPORTS—CAPITAL GAINS TAX—SHORTAGE OF CEMENT

THURSDAY, 5 P.M.

MARKET GOSSIP

FOR the second week in succession, the share markets have presented a cheerful appearance. Further substantial gains in equity values have been recorded on a wide front. But it will be still not right to say that a definite change for the better in market sentiment has come to prevail. Confidence in the immediate future is still lacking. The main factors for the rise in prices are bear covering and bull support to a few selected scrips on a very small scale. It is, of course, noteworthy that bears have chosen to cover their outstanding positions, instead of indulging in further sales. It would appear that a prominent operator, who was a bear in bullion and lost heavily, was also short in shares. He is, therefore, said to have found it necessary to square up his account in the latter too. Further, the last fortnightly settlement showed that, technically, bears were in a particularly weak position. This encouraged some bulls to wag their tail a bit. But, though bears have chosen to be on the defensive, bulls are still timid and are afraid of going far. This is evident from the absence of fresh support at higher levels this week and the fact that the closing rates today are well below the highest levels witnessed yesterday or the day before.

Despite the handsome gains recorded during the past fortnight, the current rates are well below the levels that were prevailing before Mr. T. T. Krishnamachari took the markets by surprise on 30th November last. Many first class equities are standing at levels that are quite attractive. This is particularly so in regard to a number of bank shares. Those who are prepared to take some risk will not have cause to regret if they decide to lock up their savings in them from the long-term point of view. For whatever may be the shocks that are in store in the next 12 months, there is no doubt that, at the end of three or four years, the Indian economy will show a substantial growth. It is in this hope that many investors did not unload their holdings in the depression that overtook equity values in the last quarter of 1956.

A scrip that has staged a remarkable rise in the last fifteen days is Bombay-Burmah; the old shares have added 69 points and the new ones 35 points, to stand at Rs. 725 and Rs. 272-8, respectively. At these levels, they are well above the previous 30th November quotations. But they had suffered heavily even before T.T.K.'s hit at the markets, on account of the Plantation Award, the fate of which is yet hanging in the balance. Nevertheless, the rise in this scrip is well merited in the light of the Company's financial position, its results for 1955-56, and satisfactory outlook. That much of the recent fall was due to short-selling became clear on the last settlement day, when many of those who had bought decided to take delivery rather than carry forward or cut their losses. It is reported in market circles that there is still a sizable short position in this scrip. If that is true and if no further adverse developments take place, this scrip may see a further rise.

• • • •

Both the bullion and commodity markets have moved up to further high levels. Groundnut futures have gone up to Rs. 176-10, which compares with Rs. 160 at the end of December, Rs. 152 at the end of November, Rs. 135-12 on 1st November and Rs. 127 on 1st October. This rise is more spectacular than that in the ready rate which at Rs. 35-6 is only Rs. 2-6 higher on 1st October. In other words, whereas spot has gone up by only about 6 per cent. during the last four months, forward has jumped up by 40 per cent. It is thus obvious that there has been too much speculation in this commodity and that the authorities have been very lenient, if not complacent, about it. The Forward Markets Commission was, therefore, quite justified in asking the Board of the Oilseeds Exchange to look into this matter and stiffen the margin system. Its actions against this market now are by no means comparable with the high-handed manner in which it tackled the E.I.C.A. Board and its erstwhile Chairman, Mr. Purshotamdas Thakurdas, early last year. In fact, the oilseeds interests ought to be thankful to the Government and the Commission for not closing down futures trading in groundnuts, though there is a fairly good case for it. It would be folly on their part to exaggerate, as is being done by a few, the minor faults in the steps taken by the market authorities during the last four or five days to curb the bullish fervour. It is also unrealistic to argue that there is no need to place any restrictions on futures trading in castorseeds, as it is chiefly an export commodity. For castorseed has become a hedge against many things and futures trading in it has become a source of unhealthy speculation in other oilseeds, if not other commodities. There is, therefore, a strong case for restraining speculative activity in this oilseed also, though domestic consumption of it constitutes only a fraction of the total crop and the rise in its value may be due to favourable developments in export markets.

• • • •

Raw cotton, too, has gone up, but the rise has been very modest, as compared with oilseeds, and not unmerited. Over 1st January, Jarilia March contract has advanced by Rs. 40 and Vijay by Rs. 45 per candy. Unlike groundnuts, cotton futures have remained unduly depressed due to the heavy increase in excise duty on cloth, excessively bearish nature of the hedge contract and the raw deal given by the Government to the bulls a year ago. With the settlement date drawing near and steps initiated for amending the terms of the hedge contracts for the distant *vaidas* of the current season, bears have become a little cautious and have been booking their profits. Again, the futures are standing at ridiculously low levels as compared with the spot rates. There is thus really no justification for finding fault with the rise in the cotton market. It is a corrective movement long overdue. May be, this may cause an increase in the cost of making cloth for the millowner. But that is no reason why cotton growers should suffer, while the growers of all other crops are receiving bumper prices. The increase in excise duty on cloth was not meant to be passed on to them. If mills make less profit or if the consumer has to pay more for the cloth, the solution lies in reducing the burden of taxation on this item.

Prices of wheat, rice and other foodgrains, which were steady to firm early this month, have started moving up again. A rise of nearly Re. 1-8 to Rs. 2 per railway maund has been recorded in wheat and rice. The arrival of new crop in South India has made no difference to the bullish trend of the market.

• • • •

There has been a spectacular rise in gold and silver this week, which is only a continuation of the bullish trend that had been begun a few weeks earlier. Silver ready touched a high of Rs. 185-8 and gold of Rs. 103-15 during mid-week and are standing at Rs. 184-7 and Rs. 108-1 at the time of writing. The peaks seen this week are the highest since 1951. It is easy to blame the speculators for this appreciation in the value of precious metals. But, fundamentally, they reflect the law of supply and demand. Smuggling in gold is less attractive now, owing to better vigilance by the customs authorities and the rise in the price of the metal in the sources from which they migrate. The flow of silver from Tibet has dried up due to transit difficulties caused by the winter. In recent years, floating stocks have always been meagre as compared with the size of the annual absorption and the addition of a few hundred bars of Tibetan silver this season has not made much difference. In the face of such a situation, the demand for both the metals has picked up. The tension in Indo-Pakistan relations on account of Kashmir has given additional fillip to the seasonal bullish fervour. Between December and May or June every year, prices of bullion always tend to remain on the high side and, with the absorption by hoarders and consumers exceeding the arrivals, every succeeding year has been seeing this seasonal upward curve at higher and higher levels. This ceased to happen only when money supply tended to shrink but now that money supply has been rising ever since the first Five-year Plan gathered momentum, the phenomenon has begun again. Mere abolition of futures trading in these metals, as suggested by some, is no remedy for reversing this trend. It may arrest the upward movement for some time. But, after the initial effects of the shock are over, it will reappear.

It is now certain that India will have to its credit some export of sugar this year. A small quantity of 10,000 metric tons, equal to a little less than half per cent. of India's production in the current season, has already been sold to Persian Gulf ports at rates ranging between £59 and £62 per ton f.o.b., and further sales are likely. Strenuous efforts are being made to book orders from Pakistan, Burma, Ceylon, Africa and other neighbouring countries also. It is possible that some business with Pakistan may materialise in the near future. Consumers in West Pakistan, it may be interesting to note, are said to be paying Re. 1-12 to Re. 1-14 per seer (2 lbs.), as against only As. 14 to Re. 1 in India, despite the fact that world price of sugar is much cheaper than Indian. This is due to heavy import duty and restrictions imposed by the Pakistan Government.

All the adjacent countries are evincing keen interest in India's offer to sell sugar. But the stumbling blocks are price and shipping. The cost of making sugar in India is pretty high and does not compare favourably with other giant exporters such as Java, Cuba, and the Philippines, the proximity of markets notwithstanding. Indian shipping is small and that too fully booked. The world shipping position, which has been tight for over a year, has been rendered extremely difficult owing to the blocking of the Suez Canal. Freight rates have gone up steeply. Since orders for Indian sugar are only in relatively small quantities, the difficulty of chartering ships is enhanced.

The blocking of the Suez Canal has raised the price of sugar in the Middle East and Pakistan. This gives a small advantage for India in these markets. But this may not last long once the Canal is opened for traffic. Also, the margin in favour of India is so small that the other countries can easily elbow it out even now if they want to. The prospects for exporting any substantial quantity of sugar are thus slender. Nevertheless, India hopes to export at least 50,000 tons, though it has planned for 200,000 tons, that is, about 10 per cent. of its current season's production.

Exports are being arranged by the Indian Sugar Mills Association. All the member mills are co-operating in its efforts and are contributing at the rate of As. 4 per maund (that is, As. 11 per bag) of sugar on their entire production, in order to meet any possible loss on this commendable venture. Hitherto, only U.P. mills have been able to sell for export, because of the readiness of the Uttar Pradesh Government to forgo the cane cess which works out to Rs. 5-2 per bag (of 226 lbs.). The other State Governments have refused to follow this example, despite the recommendation of the Centre. It would appear that, on the sugar already sold for export, the manufacturer has been able to realise approximately Rs. 23 to Rs. 24 per maund, excluding the cane cess, which rate is said to compare not unfavourably with what he can currently realise on sales for the internal market.

• • • •

The fear has often been expressed that a capital gains tax, whatever might be its economic and political justification, is bound to have an unhealthy effect on stock exchange activity. That there is basis for this fear is evident from the observations made by the President of the New York Stock Exchange, in a recent article. The present rate of tax in the U.S., it may be mentioned here, ranges upto a rate of 25 per cent. on gains realised from the sale of securities held for more than six months. Reviewing the effect of the tax, in general, the President has estimated that American investors hold more than $200,000 million of unrealised capital gains. Obviously, what the President means is that the gains would have been realised in the absence of a tax on capital gains. The effect of the tax, he rightly points out, is to reduce the supply of stocks. This leads to an unnecessary inflation of equity values and adversely affects the free flow of risk capital into expanding industries.

Surely, if the situation created by the tax in the U.S., where it has been in force for long, is as difficult as is made out by the President, it cannot be long before this country, too, where the tax has been just reimposed, faces a similar situation. Indeed, since risk capital is much less venturesome in India than in the U.S., it is likely that a worse situation may have to be faced. Be that as it may, the President of the New York Stock Exchange has made two suggestions to ease the situation. The first is to reduce the maximum tax rate from 25 to 12½ per cent. and also the holding period from six to three months. The second suggestion—it is stated that the principle of this suggestion has been accepted in the case of commercial and private property—is that realised gains from security sales should be exempt from tax, provided that the proceeds are reinvested in a single stock within 30 days. If the effect on investment of the tax in India proves particularly burdensome, the authorities will probably find a good basis for desirable reform in the President's suggestions.

• • • •

In the past one year, the U.K. authorities have wielded the monetary weapon with considerable courage, never having hesitated to put the Bank rate up when the situation demanded it. Although opinions are bound to differ over the precise extent to which the authorities have succeeded in their anti-inflationary mission, there has been some demand for a reduction in the Bank rate—now 5½ per cent., to which level it was raised in February 1956—on the ground that it had been overdone. But the chairmen of the leading British banks, who have now an opportunity of expressing their views on the Bank rate in the annual meetings of the banks, have been somewhat cautious in discussing the issue. At least, they do not seem to have demanded an outright reduction in Bank rate. Nevertheless, the point made by A. W. Tuke, Chairman of Barclays Bank, deserves special mention. He believed that the traditional effect of an increase in the Bank rate on internal borrowing was much less potent with taxation at its present levels. He added: "Similarly, it no longer provides so powerful a magnet as in the past to attract additional overseas balances to this country. The foreigner has not forgotten the devaluation of 1949 and, if he has any doubts about the safety of his capital, they will not be removed and may even be increased by the offer of a higher rate of interest on it."

Although Mr. Tuke did not believe that the Bank rate should have been reduced in recent months, he thought that it would have been far better to concentrate on reducing the supply of money, and to increase the Bank rate only if that became necessary, in order to give recognition to the natural results of supply being unequal to demand.

While all this cautious discussion is taking place, and financial circles are anxiously waiting to see if the new Chancellor would reduce the Bank rate, it is noteworthy that there has already been

(Continued on page 203)

EQUITIES MARKED UP FURTHER

HESITANCY AT HIGHER LEVELS

(From Our Own Correspondent)

BOMBAY, *24th January*

THE share market passed through another week of cheerful conditions. Equity prices made further advance on a wide front on a broadening of speculative support and short-covering. There was also an expansion in the volume of business. The boomlet in the bullion, cotton and commodity markets proved to be a source of inspiration to the bulls. With the Ministers' attention diverted to election campaigns, there were no disquieting pronouncements from ministerial circles. Operators would appear to be trading on the hope that the February Budget, generally expected to be a "lame duck," might contain some election-eve gift by way of reduction in excise duties, particularly in cloth. At higher levels, however, operators appeared to be cautious, as witness the sizable profit-taking which set in today. Uncertainty about the Security Council's decision on the Kashmir issue and recurrent rumours about rise in Bank rate acted as restraining influences on the market.

In the steel section, Tata Ordinaries rallied from Rs. 176 to Rs. 183-8 yesterday. After dipping to Rs. 181-8, they again staged a recovery to Rs. 183-8 today, but at the close they gave way to Rs. 181 on realising pressure. Indian Irons provided a strong feature on consistent support from prominent operators. From Rs. 28-12, the shares advanced to Rs. 30-4 before closing at Rs. 29-15.

Textiles contributed to the general improvement with a further rise in prices under the leadership of Bombay Dyeings and Centurys. Reports that an understanding had been reached between the representatives of the industry and the British textile delegation on the issue of textile exports to the U.K. were noted with satisfaction. The agreement, the details of which have not yet been announced, is said to envisage the stabilisation of exports to the U.K. at present levels, instead of a reduction. Bombay Dyeings rallied from Rs. 565 to Rs. 585, but shaded off to Rs. 578-2 at the close. Centurys moved up from Rs. 495 to Rs. 515 before finishing at Rs. 512. Kohinoors made a cautious advance from Rs. 329 to Rs. 335, but a good part of the gain was wiped out at the close when the shares were done at Rs. 331. Central Indias gathered no more than Re. 1 to Rs. 126-8. Bradburys Re. 1-4 to Rs. 231-4 and Finlays Re. 1 to Rs. 314. Gokaks stood Rs. 2 higher at Rs. 227 and India United Ordinaries were just steady at Rs. 11-1. Indore Malwas were better by Re. 1-4 at Rs. 142-8, while Minervas shed Rs. 2-8 to Rs. 87-8. Hindoostan Spinnings had business Rs. 315 higher at Rs. 5,600. New City Mills were in demand and picked up Rs. 2-8 to Rs. 147-8, as also Phœnix at Rs. 147-8.

Barring one or two counters, bank shares displayed a quiet tone, the recent sharp rise in this section not having attracted follow-up support. Barodas shaded off from Rs. 104 to Rs. 103-8. Centrals were only a fraction better at Rs. 56-4, while their new shares dropped As. 12 to Rs. 59-8. Bank of Indias moved down by a rupee to Rs. 141, while their new shares gathered Rs. 2-8 to Rs. 141. Punjab Nationals shed Re. 1-8 to Rs. 58 and United Commercials Re. 1 to Rs. 58-8. Union Banks came in for good attention and rose by As. 7½ to Rs. 7-8½.

Electricity shares shaped well on small, but sustained, interest and moderate gains were recorded in leading counters. Ahmedabad Electrics jumped from Rs. 95-5 to Rs. 97-8. Bombay Suburbans were well held at Rs. 109-6, while Surats gained from Rs. 111-14 to Rs. 112-8. Tata Hydros moved up by Rs. 2-8 to Rs. 126-8 and their new shares by Rs. 2-4 to Rs. 120. Tata Powers rose by Rs. 11-4 to Rs. 1,248-12 and their new shares by Rs. 5 to Rs. 1,205. Andhra Valleys also stood Rs. 12-8 higher at Rs. 1,232-8.

The miscellaneous section continued to move in consonance with the general trend, though the gains, with a few exceptions, were less prominent than in the previous week. Sugar shares ruled firm, but the movements in Belapurs were narrow, being confined between Rs. 232-8 and Rs. 235-8. The closing was a fraction higher at Rs. 234. Bhopals received good attention, following the increase in dividend from Re. 1 to Re. 1-8 per share for the year ended 30th September 1956 and reports of good outlook for the current year. The shares spurted from Rs. 16-14 to Rs. 19-10. Phaltans gained Rs. 2-8 to Rs. 268-12. In the cement group, A.C.C. hardened from Rs. 183-8 to Rs. 187, before reacting to Rs. 185-8. Digvijays were just steady at Rs. 152-12 Jaipur Udyogs were As. 2 better at Rs. 12-2. Among engineering shares, Alcock Ashdowns were marked up by Rs. 2-8 to Rs. 276-4. Tata Locomotives ruled strong early in the week, with a rise from Rs. 157 to Rs. 159, but the prospect of a fresh issue of capital brought them down to Rs. 152-8. At the lower level, however, there was resistance and the shares gained some ground to Rs. 155-4. Mahindras were steady at Rs. 14-8, while Larsen and Toubros were in the limelight with a spurt from Rs. 16 to Rs. 17-2. Premier Constructions added Rs. 2 to Rs. 187. In the mining group, Shivrajpurs advanced by Rs. 2-8. Indian Coppers were steady at Rs. 3-12, while B.B. Petrols were a shade quiet at Rs. 2-13¾.

Automobile shares ruled steady, following the Government's acceptance of the Tariff Commission's recommendation giving protection to the industry for a period of ten years. Hindustan Motors staged a rise of As. 4½ to Rs. 8-5½. Premier Automobiles were a fraction better at Rs. 106. Shipping shares were strong. Scindias rising from Rs. 18-8½ to Rs. 19-3 and Great Easterns from Rs. 18-5 to Rs. 19-2. India Steamships gathered As. 8 to Rs. 10-10.

In the miscellaneous group, Bombay Burmahs provided the high light with a jump from Rs. 690 to Rs. 731-4. The closing was, however, lower at Rs. 725. The new shares gained by Rs. 10 to Rs. 272-8. National Rayons staged a rise from Rs. 242-4 to Rs. 247-12 before closing at Rs. 245-8. B.I.Cs were better by As. 4 at Rs. 8-12. Hindustan Levers changed hands As. 11 higher at Rs. 19-10. Tata Chemicals added As. 3 to Rs. 16-11 and Tata Oils Re. 1 to Rs. 47. Wimcos were marked up by Re. 1-4 to Rs. 171-4.

Calcutta Stock Exchange

(From Our Own Correspondent)

CALCUTTA, *23rd January*

The recovery that had set in last week on the Calcutta Stock Exchange continued during the week under review also. A favourable note was taken of the better Bombay advices and the strength of commodity markets. Nevertheless, the volume of business remained low. Mr. T. T. Krishnamachari's statement held out the hope that changes in taxation would not be made more than once a year normally. He stated that all major changes in taxation would be completed before February 1958. For a time, the reappearance of the Bank rate rumour affected sentiment, but, after it was found baseless, improvement was again in evidence. The conclusion of the Indo-Pakistani trade agreement of longer duration, which provides for the export to Pakistan of many industrial items, was a special factor which brought conditions akin to buoyancy yesterday, when the daily list of transactions reached a record level since the capital gains tax and super tax on dividends were introduced in November last. The market was closed today on account of the State holiday to celebrate Netaji Bose's birthday.

Local factors for the better conditions included local Congress leaders' strong opinion that the Congress would be voted to power in this problem State by a comfortable majority. The proposal by the National Insulated Cable Co. of India Ltd. to issue rights shares in the proportion of one share for every two shares held, at par, contributed to the brisk trading. The Company is also likely to capitalise reserves and issue ordinary shares as bonus in the proportion of one to four shares held. This is subject to approval by Government being obtained. The success of the convertible loan stock issue by Indian Aluminium Ltd. was another favourable factor. Of the issue of Rs. 2.68 crores, Rs. 78 lakhs has been subscribed by the shareholders and other supporters of the Company, and Rs. 1.34 crores or 50 per cent. by the firm of Aluminium Ltd. of Canada. The balance of Rs. 56 lakhs is proposed to be offered for public subscription at par on 4th February.

After a brief spell of quietness, following the West Bengal Ordinance calling on coal companies to pay royalty to the State Government, coal shares came in for more demand, particularly because of the attractively low levels touched in recent weeks. Bengals were lifted from Rs. 445-8 to Rs. 450 and East Indians scored from Rs. 26-12 to Rs. 27-3. Burrakurs continued to be in demand at Rs. 21-6, the scrip at one time touching Rs. 21-9. At Rs. 25-6, Equitables showed a gain of As. 4. In steady trading, Pench Valleys were raised from Rs. 18-12 to Rs. 19-2.

Jutes were in better form following fair support at lower levels. Kamarhatties reached as high a rate as Rs. 102 from Rs. 98. Ganges were stronger by Rs. 2 at Rs. 56. Kinnisons were fully steady at Rs. 137 and Nationals firmed up to Rs. 20. Howrahs, at Rs. 20, showed an impressive gain of Rs. 2, and Birlas hardened from Rs. 14-7 to Rs. 15-13. Another feature was the rise in New Centrals from Rs. 13-4 to Rs. 13-8.

Mining shares were highlighted by the continued steadiness of Indian Coppers at Rs. 3-12. Orissa Minerals were shown good attention and they hardened from Rs. 19-14 to Rs. 21-8. From Rs. 14-7 Karanpura Developments improved to Rs. 14-11.

Orients, in the paper section, were a feature with a rise to Rs. 33-14 from Rs. 30-12. Titaghurs, after being higher at Rs. 37-12 as against Rs. 36-8 earlier, closed at Rs. 37.

Guest Keens, among engineerings, encountered investment support at Rs. 23-12. B.I. Electric Constructions, on fair support, added a few annas at Rs. 12. Indian Irons were involved in replacement buying, and the scrip after opening at Rs. 28-8 improved to Rs. 29. Texmacos, after adding one point, were fully steady at Rs. 20-11. An increase in the number of inquiries for Kumardhubis lifted the counter to Rs. 9-11 from Rs. 9-1.

Miscellaneous industrials were in the forefront, and gains were attractive in selected counters. For reasons already listed, Niccos and Indian Aluminiums hardened from Rs. 25-15 and Rs. 14-6 to Rs. 26-11 and Rs. 14-12, respectively. Indian Cables, at Rs. 32-10, were fully steady. Electric Constructions jumped from Rs. 10-6 to Rs. 11-2. Martin Burns, at Rs. 23-6, were higher, as were Aluminium Corporations at Rs. 11-2. National Carbons were steady at Rs. 26-8 and Imperial Tobaccos at Rs. 14-10. At Rs. 34-6, Indo-Burma Petroleums were higher by As. 6.

* * * *

Madras Stock Exchange

(From Our Own Correspondent)

MADRAS, *22nd January*

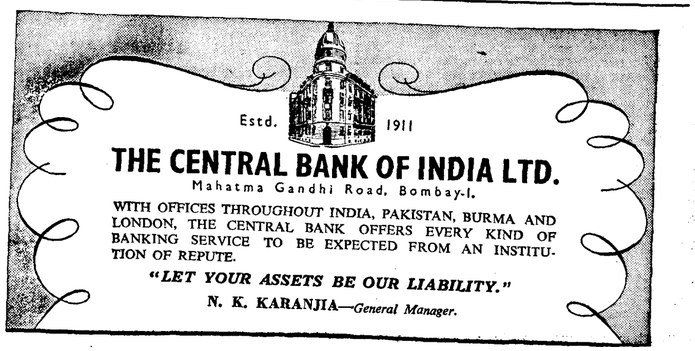
In marked contrast to the dull conditions which existed in the previous week on the Madras Stock Exchange, a steadier feeling came to prevail during the week under review. Activity was broad-based and there were some keen buying enquiries. Some measure of upcountry support was also noticed and sellers were reserved. The undertone at the close was firm.

Several counters in the textile section received large support. Buckinghams were a feature and spurted by Rs. 14 to Rs. 188. Bangalore Woollens showed no change, but there was business at Rs. 542-8. Cannanores and Coimbatore Cottons advanced by Rs. 5 and Rs. 11 to Rs. 168 and Rs. 385, respectively. Lakshmis picked up Rs. 8 to Rs. 254 and Metturs Rs. 12-8 to Rs. 432-8. Rajalakshmis gathered Rs. 9 to Rs. 184, Rajapalayams Rs. 2 to Rs. 154 and Ranga Vilas Rs. 6 to Rs. 92. Travancore Rayons were As. 11 better at Rs. 14-7. There was not much activity in the other counters. Vasantas remained quiet at Rs. 320, so also Premiers at Rs. 193 and Radhakrishnas at Rs. 325. Saradas and Pankajas both shed Rs. 2 to Rs. 122 and Rs. 75, respectively.

Plantation shares witnessed some modest turnover. Barring a few shares, however, there was no noteworthy change in the quotations. Among teas, Blue Mountains advanced by As. 4 to Rs. 5-6, Chandramalais by As. 1½ to Rs. 4-7, Kalasas by As. 8 to Rs. 13-8 and Kil Kotagiris by As. 6 to Rs. 6-11. Coonoor Teas remained unchanged at Rs. 25-4. Among coffee shares, Coffee Lands were Re. 1 better at Rs. 24, Consolidated Coffees by a like amount at Rs. 19-2 and Mysore Coffees by an anna at Rs. 2-9. Among rubber shares, Malankaras were talked Re. 1 higher at Rs. 28-12. Midlands gained As. 12 to Rs. 17-14 and Travancore Rubbers Re. 1 to Rs. 21-8. Nilamburs were dull at Rs. 16.

Activity in the miscellaneous section was restricted. Indian Aluminiums put on As. 7 to Rs. 14-8, Textools Re. 1 to Rs. 266 and F.A.C.Ts. As. 3 to Rs. 6-8. Aluminium Industries fell by As. 2 to Rs. 19-12, Binnys by Rs. 5 to Rs. 180, Mysore Papers by As. 2 to Rs. 16-2 and Singarenis by As. 4 to Rs. 10-8.

Sugars met with good support. Large blocks of Deccan and Travancore Sugars were offered and they were all absorbed, E.I.Ds. elicited attention and the shares were quoted As. 8 higher at Rs. 28-10. Deccans improved by As. 4 to Rs. 11-6 and Travancores by As. 3 to Rs. 11-15. United Breweries were down by Rs. 2 at Rs. 180 and Cauverys by Rs. 4-8 at Rs. 45-8. Mysores were unchanged at Rs. 44-12 *cum-div.*



Estd. 1911

THE CENTRAL BANK OF INDIA LTD.

Mahatma Gandhi Road, Bombay-1.

WITH OFFICES THROUGHOUT INDIA, PAKISTAN, BURMA AND LONDON, THE CENTRAL BANK OFFERS EVERY KIND OF BANKING SERVICE TO BE EXPECTED FROM AN INSTITUTION OF REPUTE.

"LET YOUR ASSETS BE OUR LIABILITY."

N. K. KARANJIA—*General Manager.*

NEWS IN BRIEF

THE Government of India will set up a zinc smelter plant at Udaipur. Other industries proposed to be started in the State are two wagon factories, a pig iron factory and a soda ash factory.

About 18,000 new quarters will be constructed in Uttar Pradesh in the second Plan period, at a cost of Rs. 5.61 crores, for persons of the low-income group, including industrial workers.

The Small-scale Industries Board has been reconstituted, with Mr. S. Ranganathan, Secretary to the Ministry of Commerce and Consumer Industries, Government of India, as Chairman. It consists of 44 members, mostly officials of the Central and State Governments.

The Government of India has decided to refer to the Tariff Commission the question of revision of prices of cement payable to certain producers. Firms or persons interested in the matter and who desire that their views should be considered are to address their representation to the Secretary of the Commission.

The validity of export quotas of linseed oilcake has been further extended up to the end of March 1957. The export quotas, announced in July 1956, were valid up to the end of December 1956 and the period was extended up to 15th January 1957. The Government has also decided not to release any fresh quota for the present.

Schemes for setting up 12 soap manufacturing units in Madras State for making soaps with non-edible oils have been sanctioned by the Union Ministry of Production. A grant of Rs. 91,250 has been made by the Ministry for the execution of the schemes. It covers 50 per cent. of the cost of the units and salaries of the chemists to be employed.

India's production of power transformers is estimated to have recorded a sharp increase from 565,200 kw. in 1955 to 817,200 kw. in 1956. The higher level of production has enabled the country to reduce import of this item. In the first seven months of the current fiscal year, imports of transformers were valued at Rs. 88,00,000, as against Rs. 1,05,00,000 in the same period last year.

The Standing Committee of experts on manures and fertilisers, which recently met at New Delhi, has decided to fix the consumption target of potash during the second Plan period at 30,000 tons. It also recommended the manufacture of di-ammonia phosphate, a fertiliser of excellent quality and low cost, for trial production at the Sindri Fertiliser Factory at the rate of 30,000 to 40,000 tons a year.

In order to investigate the possibilities of an export market for India's engineering goods, a five-man trade delegation will shortly leave for British East Africa, Ethiopia and Sudan. Sponsored by the Engineering Export Promotion Council, Calcutta, the delegation is headed by Mr. K. L. Chowdhury, Vice-Chairman of the Council. The delegation will also visit Mombasa, Zanzibar, Dar-es-Salaam and Addis Ababa.

A soda-ash-*cum*-ammonium chloride factory, involving a total investment of Rs. 2 crores, will be established this year at Moghalsarai in U.P. The Union Government has granted the necessary licence to a Calcutta firm. It is expected to produce 120 tons of soda ash and an equal amount of ammonium chloride a day. The factory will employ over 300 skilled and 250 unskilled workers, in addition to other staff in the supervisory scale.

The Chairman of the Forward Markets Commission, Mr. W. R. Natu, recently discussed with members of the Alleppey Oil Millers' and Merchants' Association, the question of setting up a second forward trading centre in coconut oil at Cochin. Formal inauguration of forward trading in coconut oil at Alleppey is held up, pending the approval of the amended constitution of the Association by the Union Government.

The Joint Consultative Board for Industry and Labour, which met in Bombay on the 20th inst., reviewed, among other things, the recent developments in the field of industrial relations. Representatives of both employers and workers felt the need to intensify the work of the joint consultative machinery and transfer the pending disputes to the Wage Board. It was further agreed that the possibility of setting up wage boards for as many industries as possible should be explored. The Board endorsed the suggestion of the Union Labour Minister to organise a seminar on labour-management co-operation on the same line as the recent Oxford Conference.

Under the import policy of the Government of India, the imports of caustic soda and soda ash are being canalised through the State Trading Corporation of India (Private) Ltd. The State Trading Corporation has entered into contracts with foreign suppliers for the regular import of these commodities in sufficient quantities. For efficient distribution in the country, the Corporation has appointed the following firms as its agents: The Imperial Chemical Industries (India) Private Ltd., Tata Industries Limited, Bombay, Chemical Importers and Distributors (Private) Ltd., Calcutta, and Chemical Alkali Distributors Ltd., Bombay. All inquiries for supplies should be addressed to the agents.

Sugar Production during the month of December 1956 was 336,236 tons, bringing the total production during the first two months of the Season 1956-57 to 452,183 tons. The corresponding figures during the last season were 280,000 tons and 357,000 tons respectively. The offtake of sugar from factories during the month of December 1956, was 163,000 tons, as against 113,000 tons during the corresponding period last season. The total offtake of indigenous sugar during the first two months of the current season comes to 316,000 tons, as against 243,000 tons during the same period last season. The closing stocks of indigenous sugar on 31st December 1956 were 658,000 tons, as against 526,000 tons on the same date last season.

A three-member trade delegation from the Democratic Republic of Viet-nam (North Viet-nam) is currently in Bombay to explore the possibilities of developing and promoting Indo-Vietnamese commerce. The delegation, being interested in Indian rayon and silk fabrics, visited the Silk and Rayon Textiles Export Promotion Council. The Council arranged a display of some representative varieties of Indian fabrics in its office which evoked considerable appreciation and enquiries from the delegates. The head of the delegation, Mr. Ngo Thans Giang, detailed the dress habits of the people and the type of demand in his country. The delegation showed interest in some of the pure silk varieties as well as some of the rayon material for women on display. The delegation was also given a set of samples.

From Abroad

The Australian Government has approved of a loan of $1 million to the United Nations to help meet the initial expenses of clearing the Suez Canal.

Soviet Russia will supply 400,000 tons of wheat to Egypt under an agreement signed between the two countries. Of this, about 98,000 tons have already been delivered.

West Germany is next only to the United Kingdom as the largest television-viewing country in Europe. The number of television sets in Germany currently aggregate 682,000.

A Canadian geologist, Mr. E. E. Smith, has predicted that the value of Canada's annual uranium production would reach $255 million by the end of this year, far exceeding the total production of the rest of the world.

The Australian Government will sponsor a trade mission to India and Ceylon consisting mainly of manufacturers and exporters. The mission will leave Australia towards the end of March and will be in these countries for six weeks.

The Nickel Rim Mines of Canada has announced that it has contracted to sell at least 2.1 million lbs. of nickel over the next 12 months, at prices averaging about 52 per lb. Of this, less than one-third will go to European buyers and the rest to the steel makers and other users in the United States.

Canadian steel mills produced record quantities of pig iron and steel ingots in 1956. According to a report of the Canadian Bureau of Statistics, output of pig iron during the year rose by more than 11 per cent. to 3,568,400 tons from 3,213,800 tons in the previous year and that of steel ingots by 17 per cent. to 5,179,300 tons from 4,441,700 tons in 1955.

Japan is reported to be ready to reduce tariffs for all member nations of the G.A.T.T. and is shortly to inform the headquarters of that organisation to this effect. The reduction will be on the basis of Article 6 of the Agreement which was signed in Geneva on 23rd May 1956 by Japan and other countries providing for mutual tariff benefits between the signatories.

The National Planning Council of Ceylon has set up a sub-committee to frame interim measures for improvement of the island's economy, pending the preparation of a long-term plan for development. The Committee is also charged with the task of formulating the basic objectives of planning and working out means of securing participation of the private sector and various agencies of economic activity in planned development.

The Soviet Union and Burma signed an agreement on the 17th inst. covering an exchange of gifts under which the former will supply the latter with a technological institute, hospital, theatre, stadium, conference hall and hotel, swimming pool and other buildings for agricultural and industrial exhibitions. Burma will give, on its part, rice and other agricultural products. Soviet Russia has also agreed to train suitable Burmese personnel as teachers for the technological institute.

The *Journal of Commerce of the U.S.* has reported that, rising at a record annual rate of 10 per cent., U.S. private investments abroad reached an estimated total of nearly $32,000 million at the end of 1956. In its survey, the paper notes that the accumulated total of investments abroad at the end of 1955 had been placed by the Department of Commerce at $29,000 million. The 1956 figure excludes the reinvestment of earnings by foreign subsidiaries of U.S. corporations and price increases in the U.S.-held foreign securities.

The U.S. Export-Import Bank has announced the authorisation of a credit of $500 million in favour of the British Government to be available for the latter's dollar requirements for purchasing U.S. goods and services including petroleum. The line of credit will be made against the U.K. Government's holdings of dollar securities. It will be available for a period of 12 months. Repayments will begin three years after each disbursement and will be made in semi-annual instalments spread over 4½ years thereafter. Interest on each disbursement will be chargeable at 4½ per cent., payable semi-annually.

The U.K.'s radio isotope production reached a record figure of 22,069 consignments during the twelve-month period from October 1955 to September 1956. This represents an increase of 3,830 consignments over the previous year's production. Thirty-seven per cent. of the total production was exported. Forty-seven countries purchased 8,617 consignments of radio isotope worth more than £100,000. The largest buyers of British radio isotopes in 1955-56 were Germany, France and Sweden, with 1,266, 1,051 and 1,022 consignments, respectively. In terms of monetary value, however, the U.S., which took only 170 consignments, was the biggest purchaser.

The Associated Electrical Industries, Ltd., a leading group of British manufacturers of electrical engineering equipment, is sending its chief, Lord Chandos, on a transatlantic trip to sell British-built atomic power stations to Canada. Announcing his plans in London, Lord Chandos said that his Company was already gaining a fund of knowledge from the work now started on a new 275 MW station at Berkeley, Gloucestershire. This experience put it in a favourable position for exporting gas-cooled, graphite-moderated nuclear-power stations of the Calder Hall type. He will have talks with Canadian Government officials as well as leaders of the electrical supply industry.

PERSONAL

MR. G. L. Mehta, Indian Ambassador in Washington, arrived in Bombay on Tuesday on a five-week holiday.

Mr. Shukri Al-Kuwatly, President of Syria, arrived in New Delhi last Thursday on a brief tour of the country as a guest of India.

Mr. Kewal Singh, at present Joint Secretary in the Ministry of External Affairs, has been appointed India's first Ambassador to Cambodia.

Mr. Merghani Hamza, Deputy Prime Minister of the Sudan, arrived in Bombay from Beirut on Thursday last. He is on a visit to India at the invitation of the Union Government.

Mr. Naval H. Tata has been unanimously elected President of the Indian Merchants' Chamber for the year 1957. Similarly, Mr. Gopaldas P. Kapadia has been unanimously elected its Vice-President for the same period.

Mr. Raj Bahadur, Minister in the Ministry of Communications, will henceforth be designated Minister of Communications. The Department of Civil Aviation will, however, continue to be in the charge of Mr. H. V. Pataskar.

Mr. Ramnath A. Podar, a prominent industrialist and head of the Podar group of concerns, has been elected Chairman of the Millowners' Association, Bombay, for 1957. Mr. Podar has been a member of the Committee of the Association since 1942 and was its Deputy Chairman in 1956.

Mr. W. H. McFadzean, Chairman and Managing Director of British Insulated Callender's Cables Ltd., is on a round-the-world tour and expects to be back in his country just before the end of March. During this tour, Mr. McFadzean will be visiting the B.I.C.C. group organisations in Pakistan, India, Singapore, Australia, New Zealand and North America.

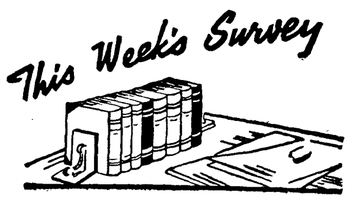
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *30th January*

Co-operation in Bengal

The failure on the part of many central banks and most credit societies to distinguish between long (or rather intermediate term) and short-term (crop loan) business is the most unsatisfactory feature of co-operative finance at the present moment. Loans for such widely divergent purposes as normal crop requirements and repayment of debts or land improvements are lumped together in one transaction, both in the case of loans granted by central banks to primary societies, nor is it possible to maintain a proper watch over repayments by members with reference to the fulfilment of purposes for which loans are taken. A great advantage of the co-operative credit system under which the danger of cheap credit is avoided by ensuring a proper use of the loan is thus lost. The splitting up of the consolidated loans into its component parts under the test of the uses to which they are put discloses the real nature of loans. The distinction between long (that is, intermediate term and repayable within a period of three years which may be extended a little, to, say, five years at most) and short-term or crop loans (and repayable within a year from the proceeds of the harvest) which corresponds to a real distinction in the needs of agriculturists would undoubtedly assist the movement to introduce better business methods through the maintenance of an effective watch over the proper use of loans and their repayments. It would also help in keeping the major portion of the assets of the societies in a fluid state. The value of this distinction and the need for its adoption has been preached by the department for about seven years now, but unfortunately the distinction has not yet been widely adopted.



INDIA'S ATOMIC PLANS

AN assurance that India would never use atomic energy for "evil purposes" was given by Mr. Nehru, Prime Minister, Government of India, when he formally inaugurated the Atomic Energy Establishment and the atomic reactor at Trombay (Bombay), last week. Speaking in the presence of distinguished atomic scientists from 30 countries, Mr. Nehru emphasised that the world would gain a great deal through the peaceful uses of atomic energy. He said that they were now witnessing an "atomic revolution." It was something in the nature of an inevitability, just as the world had witnessed the Industrial Revolution. He added: "Either you go ahead with it or succumb and others go ahead with it."

Mr. Nehru, as is well known, has taken a special interest in the development of atomic energy in India. For this, posterity will be grateful to him, because indications are that atomic power has come to stay—and, it is hoped, for good. There are several reasons why India should not lose the initiative in the "Atoms for Peace" plans. In the first place, in the technological world, the first entrants, have a decided advantage over others. Secondly, India's hydro-electric and coal resources may be completely utilised in a few generations, so that the need for other sources of power is likely to be keenly felt sooner than many expect. Thirdly, in the context of the difficult transport situation, the large size of India and the concentration of coal only in some parts of the country, atomic power stations, which make very little demand on transport, have a special significance. They will be particularly useful to such regions as Rajasthan, Gujerat and Tamil Nad which are situated far from coal-producing tracts and in which the scope for hydel potential is limited or has been practically fully exploited. Indeed, the Madras Government and the industrialists of Gujerat are already hoping that they will be the first areas to benefit from the establishment of atomic power projects and have started voicing their demand for them. Fourthly, India has large reserves of atomic materials which it would be unwise not to utilise.

Some of these reasons were succinctly explained by Dr. H. J. Bhabha, India's well-known atomic scientist and Chairman of the Atomic Energy Commission. He said that, with only 110 tons of coal *per capita*, small known reserves of oil and an estimated hydro-electric potential of under 40 million kw., India will be unable to attain a standard of living comparable with that in industrially advanced countries. On the other hand, India's uranium and thorium reserves, he pointed out, were more than 15 times its coal reserves. Experience of atomic power stations abroad, he said, suggests the possibility of electricity being available from atomic energy at a cost that will compare favourably with that produced from conventional thermal stations.

Dr. Bhabha, however, admitted that an atomic power station would require 50 per cent. larger initial outlay than a thermal station. But apart from the fact that this difference is likely to narrow down in course of time, there are a few factors which make the establishment of atomic power stations particularly beneficial to this country. Discussing these factors, Dr. Bhabha said:

"A conventional power station of 140 megawatts located at some place in India remote from the coalfields, as, for example, Delhi, would require the transport of nearly 2,000 tons of coal per day, and this would require the permanent locking up of some 1,700 wagons and nearly 30 locomotives, representing a capital investment of over Rs. 3 crores. This does not take into consideration the additional congestion that would be produced on the railway line concerned, and if, as is the case in India, the railway capacity is already overloaded, we would only be able to set up such a power station at the expense of sacrificing the transport of some other commodity, or at the expense of building an additional railway line. An atomic power station of this size would only require the transport of 50 to 100 tons of uranium per annum, and would, therefore, completely avoid all the transport problems and the corresponding expenditure I have just mentioned.

"Moreover, the thermal station just mentioned would require the mining of an additional 750,000 tons of coal per year, with a corresponding investment in coal mines and coal mining machinery. On the other hand, the 50 to 100 tons of uranium required by an atomic power station of the same size could be obtained from only about 150,000 tons of ore, assuming that the ore is of the grade we know to exist in India, having half a part per thousand of uranium. The capital investment required for the mining of this uranium ore would clearly be very much less than that required for the mining of five times as much coal, especially when one remembers that the mining of uranium ore would involve operation at or not far from the surface. Thus, if we take the entire picture, including the cost of mining the fuel, whether conventional or atomic, the cost of its transport and the cost of burning it to produce electricity, it is questionable whether atomic power would involve any greater burden on the economy as a whole. Indeed, it is possible that it may involve less."

A notable stage in the implementation of India's atomic programme was reached on 4th August last, when its first reactor—also the first to go into operation in Asia, outside the U.S.S.R. —reached "criticality." This reactor is of the "swimming pool" type; the fuel elements contain enriched uranium and have been provided by the U.K. Atomic Energy Authority. Indeed, it must be acknowledged that, in setting up this reactor, India has received much friendly co-operation from several British atomic experts. The second reactor, which is in the constructional stage, is of the NRX type, made possible through the generous offer of Canadian assistance. This reactor is likely to be completed in the first half of 1958. It requires some 20 tons of heavy water which was sold to India by the U.S. Atomic Energy Commission. A third reactor, which is also likely to go into operation in the first half of 1958, will enable India's scientists to study the effect of different lattices, shapes and sizes of fuel elements. Since the need in many parts of the country is for small power stations of 20 to 50 megawatts, the authorities are studying the possibility of setting up reactors, moderated with beryllium oxide, gas cooled and working on natural or slightly enriched uranium. In this study, the authorities have received considerable assistance from the Commissariat a l'Europe Atomique, France. It will thus be noted that India owes a great deal to the free world—Britain, Canada, United States and France—for the substantial progress it has made so far in the field of atomic power production. And it has been able to obtain this assistance mainly because of India's desire to use the atomic power only for peace. While acknowledging this help, it is also necessary not to minimise India's own determined efforts, without which it would not have been possible to absorb such aid. It is fortunate that the country has renowned scientists like Dr. Bhabha and Dr. Krishnan, well-versed in the highly technical atomic science, a progressive business firm like Tatas which took considerable interest in the possibilities of producing atomic power in the initial stages and a far-sighted Prime Minister like Mr. Nehru who could visualise miles ahead of others the vast potentialities of the atom for the benefit of mankind.

India has yet to make much progress even in the fundamental stages of atomic power production. None is more keenly alive to this aspect than Dr. Bhabha himself, as will be seen from the following quotation from his aforesaid speech:

"It is likely that in future more advanced and efficient types of atomic power stations will use concentrated atomic fuel, such as uranium 235, uranium 233, or plutonium, rather than the naturally occurring uranium. If we are not to depend on the import of such fuel from abroad, and not to build a gaseous diffusion plant, involving an enormous expenditure and technical effort, it is necessary for us to start producing this fuel now by converting natural uranium into plutonium, and thorium into uranium 233 in atomic reactors. If we are, therefore, not to lose further ground in the modern world, it is necessary for us to set up some atomic power stations within the coming five years, which will produce plutonium for our future power reactors, in addition to producing electricity now. These problems are being studied in the Department of Atomic Energy in consultation with the Planning Commission and the other Ministries concerned of the Government, and we hope to reach some decisions within the next few months."

India's planners realise that the programme of industrial expansion cannot be implemented in the absence of adequate supply of power. Thus, Mr. Gulzarilal Nanda, the Union Minister for Irrigation and Power, stated in his inaugural address at the All-India Power Engineers Conference, which commenced this week at Bangalore, that he visualised a mounting demand for power in the next few years. Mr. Nanda pointed out that a million kw. had been added during the first Five-year Plan period and that 3.5 million kw. would be added to generating capacity in the second Plan period. In order to meet the growing demand for power, the Government, he revealed, had proposed to set up a nuclear power station with a capacity of 140,000 kw. at a suitable place in India. Mr. Nanda too admitted that generation of energy at the proposed nuclear station might be costlier than hydro or thermal power station. Nevertheless, it is likely that improved techniques and designs, as Mr. Nanda himself recognised, might enable economies to be effected, thereby making the cost of power generated in nuclear stations compare favourably with that in a conventional thermal power station located at some distance from the coalfields.

COCONUT INDUSTRY

It is heartening to note that the method of international discussion and co-operation is being applied to solving the problems in the field of coconut industry. Thus, last week, Colombo played host to a conference between major coconut producing and consuming countries. The participants at the Conference were twelve countries, eight of them were present as members, while the remaining four were present as observers and representatives of the U.N. Economic Commission for Asia and the Far East. Appropriately enough, the participating countries agreed that some of the problems facing the coconut industry could be solved only through regular international consultations, under the auspices of the F.A.O. between both importing and exporting countries. It was recognised that the subjects calling for international study were trends in the demand for and supply of coconut and coconut products, instability of prices and international trade, terms of trade in international markets, problems of quality and grades, improvement of statistics in world coconut industry and study of new processing techniques.

The value of coconut oil for edible and industrial purposes and that of copra for industrial purposes is too well known to need repetition. But, all these years, the coconut industry has not received as much attention as it deserves. A start has been made in India to overcome the problems facing the industry with the establishment of the Indian Central Coconut Committee and of a research station in Kerala. Some more research stations in other parts where coconut is abundantly grown are also proposed to be started. But, no amount of effort in the domestic field of any one country interested in this industry could solve the aforesaid problems without the willing and the unstinted co-operation of producers and consumers of coconut in the rest of the world. New methods of cultivation and processing are matters which should get priority. In this connection, an interesting new development is the evolution of a new process in the Philippines for the extraction of edible oil and meal from fresh coconut.

Stability of prices, as is well known, provides security to the grower, and the necessary incentive for increasing production. This need is no less important in regard to coconut than other commodities which figure in international trade. Not the least important is the need for dissemination of information about the results of research and marketing. It is expected that these problems will come up for consideration at the session of the Committee on Commodity Problems to be held at the F.A.O. headquarters at Rome, in March next. The Colombo Conference, on its part, has recommended to the F.A.O. that a permanent study group should be set up to serve as a forum for international consultation on world coconut economy. It also recommended the establishment of a bureau for collection and dissemination of information relating to the coconut industry.

OILS FOR PERFUMES

The products of essential oils and perfumes occupy today a place of priority among the needs of people belonging to the rich and upper middle classes, while the people lower down in the scale of incomes are also gradually getting familiar with their use. The number of people using these products is thus increasing day by day. This is reflected in the rising demand for such products and in the imports of essential oils and perfumery. Such imports aggregated Rs. 1.29 crores in 1955-56, as against Rs. 89.21 lakhs in the previous year. Since the increase in these imports intensify the pressure on India's limited foreign exchange resources, any step that is designed to obviate the need for such imports should be welcomed. It is, therefore, gratifying to note that Messrs. W. J. Bush Products, a British firm, has taken the initiative in establishing a factory at Nellikuppam (South India) for the manufacture of essential oils, liquid colours and perfume compounds, in collaboration with East India Distilleries, a company under the management of Parrys, Madras. Inaugurating the factory last week, Mrs. Maragatham Chandrasekhar, Union Deputy Minister for Health, predicted a great future for the essential oil industry in this country.

The factory has been set up at an initial cost of about Rs. 5 lakhs. It is expected to produce initially 150,000 lbs. of essences, 50,000 lbs. of liquid colours, and 4,000 lbs. of perfume compounds per annum. It will also produce extracts from ginger, chillies and essential oils from indigenous raw materials, the value of which together amount to Rs. 40 lakhs. It is estimated that, in the first year alone, foreign exchange to the tune of £80,000 would be saved as a result of the production of these items. The factory is the result of fruitful co-operation between Messrs. Parry & Co., one of the oldest foreign enterprises in India, and the century-old British firm, Messrs. Bush & Co., the association between the two firms extending over a period of 50 years. The establishment of the factory also represents a step in the direction of India retrieving its former role in the production and supply of spices, perfumes and aromatics. Essential oils, as is well known, find an extensive use in the pharmaceutical industry, in the preparation of cosmetics and perfumes, confectioneries and ærated waters.

Declaring open the factory, the Union Deputy Health Minister rightly pointed out that India lost its predominant position in the trade of these commodities because of the ignorance of scientific methodology, and the reluctance of the indigenous producers to change over from the relatively crude methods of manufacture to more refined and technically advanced ones. Another factor responsible for the decline in the Indian position is, as the Minister remarked, intensive cultivation abroad of the various aromatic plants, as, for instance, the growth of roses in the Balkans which have become the world's leading producers of rose oil. The Minister also complained that much interest had not been evinced in the varied uses of these essential oils, spices and aromatics.

Climatic conditions in India are quite suitable for the cultivation of a large number—no less than 100 varieties—of aromatic plants in the country. What is, therefore, of importance for effecting expansion in the cultivation of these plants is dissemination of information about the conditions in which they can be grown and facilities for immediate disposal of the harvests. Research, obviously, has a great role to play in this field and it is gratifying to note that it has been found that certain varieties of lavender can be grown successfully in the lower altitudes of the Nilgiri and Shevaroy hills and that cloves can be grown in Kerala.

As the Minister has pointed out, cultivation of roses can be stepped up considerably, and distillation of oil started. There is also scope for the manufacture of citrus oil. This underlines the need for technical knowledge, on the one hand, and convenient transport and marketing facilities, on the other. The need for co-operation among agriculturists, industrialists, plant physiologists, engineers and synthetic chemists is, of course, the *sine qua non* for the success of the projects. Moreover, if the resources are developed in a co-ordinated manner, as the Minister pleaded it should be, there is scope for earning substantial amounts of much needed foreign exchange.

ENGINEERING EDUCATION

One of the major impediments in the way of rapid industrial development in India is the shortage of adequate technical personnel to man the various development projects. The Government had early enough realised this lacuna and appointed the Engineering Personnel Committee to study the problem and make suitable recommendations. The Committee submitted its report in May last. The Planning Commission and the Union Ministry of Education, after a thorough re-examination of the whole problem and a study of the Committee's report, have made certain proposals which mark a departure from the basic assumptions of the Committee and the scheme drawn up by it. The divergence between the two points of view appears to lie in the reversal of emphasis as between establishing a number of new educational institutions and expanding the existing facilities. The Planning Commission and the Union Ministry of Education favour the latter approach.

It may be recalled, in this connection, that the Engineering Personnel Committee had recommended the establishment of 18 new engineering colleges and 62 new polytechnics. But, under the new proposal, only three new engineering colleges and 27 polytechnics are to be started. These are considered adequate to meet the requirements, if the training capacity of the existing 19 engineering colleges and 46 polytechnics are increased. Under the new proposals, the number of additional seats available will increase by 264 for degree and 684 for diploma courses, as compared with what the new institutions proposed by the Committee would have provided for. The Engineering Personnel Committee had estimated that, according to the projected demand for and supply of technical personnel in 1960-61, the shortage will be of the order of 1,800 graduates and 8,000 diploma holders. After carefully considering the question as to the best means by which the required expansion of technical education may be brought about, the Planning Commission and the Ministry of Education, in consultation with the All-India Council of Technical Education and the heads of various technical institutions, have come to the conclusion that it would be impracticable at this stage to start a number of new institutions.

Shortage of sufficient teaching personnel and other difficulties attendant on the starting of new institutions appear to have been the most important considerations which weighed with the Planning Commission and the Ministry in their decision not to favour the multiplication of institutions. The second Plan already includes five new engineering colleges, 21 polytechnics and three higher technological institutes. In these circumstances, they seem to have taken the realistic view that, if the existing institutions can be expanded and better utilised, it will not only lessen the difficulties of starting the minimum number of new institutions but also hasten the process of expansion of technical education and make possible economies in resources and teaching personnel. The best and the most economical way of increasing the facilities is considered to be to enlarge the "unit size" of selected existing colleges and polytechnics.

Nineteen engineering colleges have been selected for the proposed expansion, five each from the three regions, northern, eastern and western and four from the southern region. At present, the average strength of an engineering college is between 400 and 500 students, on the basis of an annual admission of 100 to 120 students, whereas that of a polytechnic is about 360 students. It is estimated that, as the institutions are at present working on the single-batch system, the laboratories, workshops and classrooms are generally not used more than 60 per cent. of the time each working day. It is considered entirely feasible to have an engineering college with an enrolment of 1,000 to 1,600 students and polytechnics with a capacity of 600 to 1,000 students each, provided instructional facilities and the administrative structure are suitably adapted.

After discussion with the heads of selected institutions, the Ministry of Education and the Planning Commission are reported to have arrived at certain "ceilings" of cost for the expansion proposed. On the basis of these ceilings, it is estimated that the total cost of the expansion of existing institutions and the establishment of new ones in the second Plan period might come to Rs. 12 crores non-recurring and Rs. 3 crores recurring. The estimate of the Engineering Personnel Committee placed the non-recurring cost of the engineering education scheme adumbrated by it at Rs. 16 crores which is now regarded by experts in the field as an underestimate.

An aspect of economising costs of technical education is to locate, wherever possible, both diploma and degree courses in the same institution. This will also enable the diploma students to get better facilities—both tutorial and laboratory—than would be available in an institution specialising only in diploma courses. Further, diploma students should be given opportunities of acquiring a degree at a later stage of their career, provided they are willing to take the examination and undergo the necessary laboratory and workshop training.

An important objective which should not be lost sight of in implementing the scheme is the maintenance of the standards of instruction. It would be quite undesirable, if, for the sake of numerical increase, standards are allowed to fall. But the authorities appear to be fully alive to this question, as they have recognised that the main problem lies in ensuring a proper student-teacher ratio.

FISH PRODUCTION

From the nutritional point of view, the lack of protein makes the average Indian diet a poor one. This deficiency has to be made up in the interests of balanced diet. In such a situation, fish, an important source of proteinous food, comes in handy and offers a feasible and permanent solution. According to the nutritional standards of balanced diet for this country, a daily consumption of three ounces of fish is required, as against an estimated *per capita* consumption of only 3.9 lbs. per annum. It, therefore, becomes imperative that, in order to maintain adequate standards of nutrition, the present estimated fish production of about 11 lakh tons in this country would have to be stepped up to many times that level.

The question of improving and increasing the fish supply in the country, in view of the rapidly increasing population, has been seriously engaging the attention of the Government of India since independence. Under its ægis, the State Governments received sufficient impetus in implementing programmes of fisheries development and the progress achieved thus far is, in itself, commendable. The estimated landings of sea fish and the marketable surplus of inland fish amounted to 5.22 lakh tons in 1948 and increased to 8.1 lakh tons in 1954. Improved methods of fishing by mechanisation and better type of craft, provision of ice and cold storages for fish and other methods envisaged in the fisheries schemes in the second Plan, are expected to increase the output of fish at a faster rate.

Since fish is among the most perishable of food products, it has to be handled in such a way that it retains its freshness from the time it is caught up to the moment of consumption. It is estimated that about two-thirds of the world fish catches are marketed as fresh, frozen, canned or cured fish products for human food and the remaining one-third is converted into fishmeal and oil. The trend of preservation since 1940 has been increasingly towards fresh-fish consumption in the form of iced, chilled or frozen fish. It is estimated that, in India, only 43 per cent. of the total production is consumed as fresh fish. This quantity could be increased if adequate facilities for proper storage and rapid transport are provided. Against this background, the ice-factory plant at Quilon, which was opened recently by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, acquires special significance. The plant is being set up under the Indo-Norwegian Aid Programme in connection with the Community Project established in 1953 at Quilon.

Ice is now being extensively used in some parts of the country for preservation of fish. The few ice plants that the State Governments and the trade had established during the last five years have not been found adequate. The Central Government established a large ice factory and quick freezing and cold storage plant in 1951 in conjunction with their Deep-sea Fishing Station at Bombay. The plant provides ice, freezing and storage facilities not only for the catches of the vessels of the Central Government operating at Bombay but also for the fishing industry. This plant supplied about 2,500 tons of ice in 1954, 3,500 tons in 1955 and over 4,000 tons in 1956 to meet the increasing demands of the fishing industry in and around Bombay. There are also several other private ice and cold storage plants in the city. In addition to this, on the West Coast, two fairly large ice and cold storage plants are now operating—one in Mangalore and the other in Kozhikode—with considerable success. Private enterprise has, in addition, established some small units. The State Governments of West Bengal, Orissa, Andhra, Madras, Bombay and Kerala are also setting up ice and cold storage plants. Under the Indo-American Technical Co-operation Programme, several plants of this type have been procured and they are under installation in these States.

It is hoped that the ice plant now being inaugurated at Quilon will definitely bring a better return for the fishermen through better preservation of the catches. The plant is designed to produce 25 tons of ice per day. Facilities will also be provided for freezing fish at a later date along with frozen fish storage. This plant will greatly assist in developing not only the fresh fish trade within the country but also frozen prawns and fish for export purposes. The unit in question will also create an expansion in frozen prawn trade. It will be the first large unit in the southern area to meet the needs of the region till such time as more units are established. It is to be hoped that the activities of this ice factory in the successful preservation of fish in fresh condition, as the Union Minister for Agriculture pointed out, would give a fillip to the establishment of more of such units at important landing and consuming centres.

AMERICAN LETTER

ENQUIRY INTO FINANCIAL SYSTEM

NO CAUSE FOR PESSIMISM ABOUT THE FUTURE

From Our Special Correspondent

NEW YORK, 10*th January*
(Delayed in Transit)

THE resignation of Sir Anthony Eden as British Prime Minister, came as no surprise in the United States where Anglo-French action in the Middle East found no sympathy. The action by London and Paris was regarded as completely inexcusable and in violation of the United Nations charter. Moreover, the bombing of Egypt and the occupation of the Suez Canal was a first-class blunder, not only in the opinion of editorial writers here, but in Britain as well.

The choice of Mr. Harold MacMillan to succeed Sir Anthony is largely attributed to recommendations by Sir Winston Churchill to Queen Elizabeth. There is no preconceived opinion here about Mr. MacMillan and the country has adopted a wait-and-see attitude and hopes that the rift in Anglo-American relations will be healed by Mr. MacMillan who has an American mother.

President Eisenhower's State of the Union message was the subject of much applause by the Press here. He made many constructive suggestions. The President spoke of the strides which had been made on the road to greater freedom of oppressed people.

"Our pledged word, our enlightened self-interest, our character as a nation commit us to a high role in world affairs, a role of vigorous leadership, ready strength, sympathetic understanding," the Chief Executive declared.

Turning to the economic state of affairs, he pointed to the high level of activity, unprecedented in peace-time. "We can look back on four years of prosperous activities during which prices, the cost of living, have been relatively stable," he said.

Mr. Eisenhower called for further economy in Government, but he warned that the Government alone could not prevent inflation and the efforts of everyone are required in this direction.

President Orders Probes

Of particular interest to the financial community was the President's recommendation to create a commission "of able and qualified citizens" to survey the nature, performance and adequacy of the U.S. financial system, both in terms of its direct service to the whole economy, and in terms of its functions as the mechanism through which monetary and credit policy takes effect.

There are various investigations going on now in several States regarding revision of the banking laws. However, since the dual banking system of the U.S. comprises both State- and Federally chartered institutions, an overall Federal inquiry into the mumbo-jumbo of the U.S. financial structure is not only desirable, but long overdue. Such a commission, the President hoped, would come up with legislation which would improve the workings of the economy.

Among the general prosperity prevailing here, there are now cries from disbelievers that this cannot possibly continue. The doubting Thomases point out that, once before in our lifetime, the idea of a new era was promulgated and that the biggest depression in history followed. Do not follow false prophets again, these people warn, including well-known economists.

There is, indeed, a new era in progress now. Backed by the experience and knowledge acquired in the fateful 'thirties, banking and Government are trying hard to create a depression-proof society. Owing to wise advance planning, the generally expected setback in business has been avoided since the end of the last war and the economy has been booming along.

That not everything is rosy, is strictly human and natural. There are bottlenecks in supplies, raw materials and shipping, to mention only a few items. If not corrected in time, such conditions may lead, in due course, to a reduction of activity here and abroad with detrimental effects all around, here and abroad.

It is such conditions that the pessimists fear might occur. While it is a possibility, it is by no means a probability. The oil pinch was met promptly by American oil companies through a seaborne oil lift. The fuel shortage arising out of the Middle Eastern situation was also met by greater exports of coal from this side and there are still dozens of ships in the so-called mothball fleets on both coasts which could be reactivated in the event the situation should become more serious.

The reserve fleets were laid up after the last war. They comprise vessels of all descriptions, but the bulk are so-called "Liberties" which are relatively slow. However, if the necessity should arise, the active world shipping space could certainly be increased substantially.

Outside of world political perils, the picture in this country is thoroughly reassuring. The automobile industry expects to make a much better showing this year than last. The labour contracts in both steel and the automotive industry run beyond 1957 and no major strikes are foreseeable—no interruption of production except for model changeovers. Steel expects an excellent year even though capacity has been built up steadily to an estimated 130 million tons-plus annually.

Building, construction and housing, other big mainstays of the economy, also should have no complaints this year either. While individual housing starts have fallen in number, actual construction and construction blue-prints are on the way up.

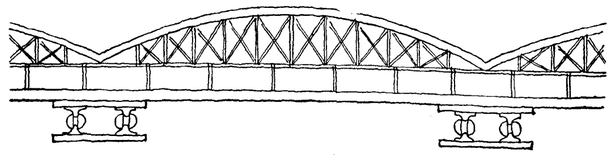
This upward movement is supported mainly by the Federal highway programme and the large private extension of plant and other buildings. Municipal projects enter into this picture, too. Airports all over this country are being rebuilt and enlarged and the network of roads is being expanded.

The news in the agricultural field is good as well. Farm surpluses are being whittled down by stepped up exports. The soil bank will not be allowed to fail and acreages for certain crops will be smaller this year, so that the outlook for the price structure seems to be reassuring.

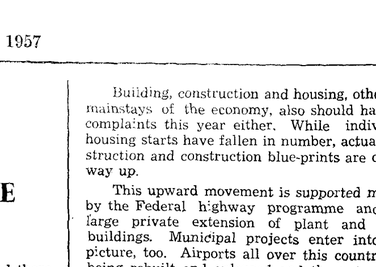
Foreign trade is enjoying a bonanza also which is likely to continue, despite and above the steady movement of United States military goods' shipments. The only possible deterrent in this direction could be a further severe depletion of gold and foreign exchange reserves by European nations. Imports to the U.S. are rising and provide considerable foreign exchange reserves and act as a cushion before the situation straightens itself out.

Inflation is another subject to be watched closely in the coming months. Government policies are designed to stem it, but continual

(Continued on next page)



Bridging the Future...



Rs. 25 crores are to be spent during the next five years on bridges alone. For these reinforced concrete and structural steel bridges, thousands of cast steel roller and rocker bearings will be needed. These cast bearings form an integral part of bridge construction because they allow for free movement of the bridge caused by temperature variations.

We, at Mukand, have a large expansion programme under way. Production capacity at the Mukand foundries is being stepped up to supply India's construction and engineering companies with the cast steel roller and rocker bearings which they will need. We are proud of our role in India's industrial progress.

NEW BROOM OR OLD LAMP?

SIGNIFICANCE OF CHANGE IN GOVERNMENT

From Our Own Correspondent

LONDON, 19*th January*

LONDON LETTER

THE joy and relief with which the appointment of the new Prime Minister has been greeted by much of the Conservative Party and a section of the Press is basically a reaction to the uncertainty which has surrounded Sir Anthony Eden's future after the utter failure of his Suez policy and of his unfortunate need to seek temporary rest in Jamaica. So far as the Government Party was concerned, Sir Anthony's fate was sealed while he was abroad—the trouble was which successor to appoint. In the end, the right wing of the Party proved dominant and Mr. Macmillan stepped into office.

But a moment's analysis of the fact of the appointment of Mr. Macmillan instead of Mr. Butler—who was Acting Premier in Sir Anthony Eden's absence—and of the composition of the new Government, makes it clear that all that has happened is that the old lamp has been polished up to shine as new. If, while it still retains some of its brightness, the new Premier is lucky enough with this country's domestic problems, he may find an opportunity of renewing his authority in a General Election: but, if not, then the lamp will surely go dim again.

The first point, on which it is obvious that no real change is going to occur, is that of Foreign Policy. Mr. Macmillan has been criticised for retaining Sir Anthony's Foreign Secretary but what else could he have done? Mr. Macmillan was as implicated as the former Premier in the Suez Policy and Mr. Selwyn Lloyd faithfully carried out that policy. To have dropped him would have indicated a complete repudiation of the Suez Policy which would not have been tolerated by that section of the Party which supports Mr. Macmillan. The new Premier is clearly basing his approach to the rest of the world on the simple proposition that there is a change of Government and that, whatever the faults of the past, that Government will work with U.N.O. to put them right. But what about Britain's relations with Cyprus? and with the Middle East, the Arabian oil countries?

Free Trade Area

What about Britain's economic relations with Europe? Mr. Macmillan is enormously keen to develop the idea of the "Common Market," but the biggest difficulty in this country's co-operation with Europe is the refusal so far to agree that foodstuffs and agricultural products can be brought into the market. Mr. Macmillan's supporters are not likely to allow a departure from this stand. He will in any case have enough difficulty in carrying through the United Kingdom's adherence to a "Common Market" if this proves to be possible against the opposition of industries such as the motor car manufacturers and the textile trades.

On the domestic front, a really worthwhile move has been made in appointing a leading industrialist, Sir Percy Mills, as Minister of Power. He has absorbed the Ministry of Fuel and Power and will be charged primarily with developing the atomic energy programme. But everything will depend upon the real weight which the Government as a whole are prepared to give to the priorities of this programme. For instance, in spite of the need for economies to avoid inflation, is Sir Percy Mills to be told that there is virtually no financial limit to be put on the building of the new stations? He may, indeed, well be told this, because the real brakes can be put on when it comes to the allocation of the materials. Must the new stations, essential to the development of this country's industries, take their place in a queue for steel and equipment, or are they to be given priority? If the latter, then there will be some hope of real progress.

Outlook

On the broad economic front, the immediate outlook is more promising than it has been since the Suez crisis began to develop. The pound looks strong, the visible balance of trade has been satisfactory for the last half-year, spending by the ordinary consumer has been restricted, the rise in the cost of living over the past year has been held down to about 3½ per cent.—but all this has been achieved at the cost of a 50 per cent. increase in the numbers of unemployed from a figure of a little over 200,000 a year ago to 300,000 at the present time. However, this in itself is not an alarming figure since it is no more than the level of two years ago. Back of it, however, is the fact that overtime in industry has been drastically reduced over the last couple of months and large numbers of workers have been put on to short time. The number of vacancies notified to the Labour Exchanges has fallen dramatically. Thus, against the ever-present fears of inflation must be reckoned the possibility of depression, viz., a fall in incomes and employment and a slackening of the economy to an extent not known since the war. With these problems Mr. Macmillan's Government will have to contend.—*All Rights Reserved.*

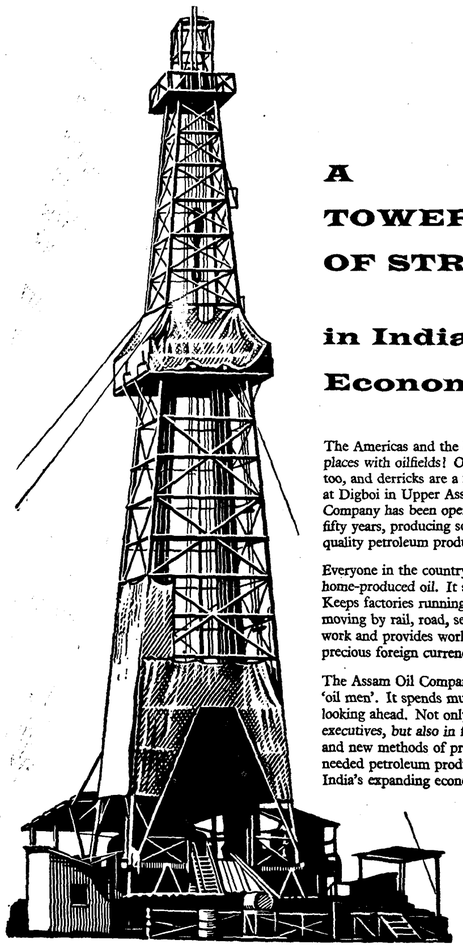
AMERICAN LETTER

(Concluded from previous page)

wage boosts and increases in prices exert a steady pressure. This development goes on quite unnoticed, because all these increases are rather fractional but the steady and cumulative effect is there. Rising costs stemming from automation and other costlier machinery are contributing to the upward trend.

Savings continue satisfactory, but they will be required to carry an unusually large amount of new issues for capital purposes. The emphasis on increased savings which has become a concerted effort of all organised banking will become more important as the years go by, since the American population is increasing at the rate of 3 million a year which compares with 130,000 new babies being born every day the world over. This population explosion is, of course, offset by deaths, but these have become lower in relation to the entire populations because of greater medical knowledge. The financial and economic implications are enormous. The need for expansion in nearly everything we require in daily life is self-evident.

Thus the main pillars upholding the U.S. economy are fairly strong and no major setbacks are expected.—*All Rights Reserved.*



A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

ASSAM OIL COMPANY

BANKING AND MONETARY TRENDS

MONEY SUPPLY EXPANDS BY 23 PER CENT. IN FIVE YEARS

(Now that monetary data have become available for the whole of 1956, we publish on this page a review of banking and monetary trends, supplementing the one in our 1956 Annual Review Number in which figures only up to the end of November last could be given.—ED.)

THE year 1956, which witnessed the completion of the first Five-year Plan and the beginning of the second Plan, experienced a perceptible acceleration of the pace of economic activity in the country. The economic expansion was reflected in a rise in industrial production of over 15 per cent. (up to the end of September), though agricultural production as a whole disclosed a slight fall. There was also a considerable increase in the level of development expenditure. The higher industrial production and the increased development outlays on a wide front by the public and private sectors caused a sizable rise of nearly 25 per cent. in bank credit. This, together with a larger budgetary deficit, mainly contributed to a 6 per cent. expansion in money supply.

The tempo of economic activity caused some strain on the economy. The strain was rather heavy especially during the latter part of the year, as witness the marked rise in commodity prices and cost of living index during this period. The general index number of wholesale prices (base year ended August 1939=100) recorded an advance from 373.2 at the end of 1955 to 421.9 at the end of 1956. The rise was quite marked in food articles which rose from 327.4 to 392, and so also in industrial raw materials which went up from 453.4 to 520.2. Semi-manufactures advanced from 351.4 to 415.9, manufactured articles from 373.6 to 387.1 and miscellaneous articles from 547.5 to 589.3. The all-India cost of living index moved up from 98 to 108 (in September). The heavy rise in the cost of raw materials, stores, labour, unaccompanied by a corresponding rise in selling prices, enhanced the industrialists' demand for bank credit. The heavy increase in imports as well as a larger domestic production, led to an addition in the demand for bank accommodation from traders too. The Governments' reliance on banks for making their borrowing programme a success also added to the strain on the latter's resources. As there was no corresponding expansion in banks' resources, the money market experienced an unprecedented stringency even during the traditional slack season.

Rise in Money Supply

The expansion of credit by banks to the private sector, together with the rise in the Reserve Bank's credit to the Government, resulted in an expansion of money supply, which over the year showed a rise of 6 per cent. Was this increase in money supply during a year, which witnessed the inauguration of a gigantic development plan, excessive? Was the growth in bank credit, which is said to be one of the contributory factors for the rise in money supply, abnormal, what with the rise in tempo of industrial development? Some say "yes" and others "no". To us, it seems that the latter is correct, though it must be said that it is difficult to give a categorical answer in the absence of adequate data for judging the velocity of money correctly. But this much can be stated without fear of contradiction. The rise in prices and cost of living in the past year was not due to monetary causes. It was due mainly to the failure of the supply of goods to keep pace with the demand, the momentum for which was given in the preceding two years. It may be argued that a further increase in money supply will accentuate the rising spiral of prices, but such a trend is inevitable to a large extent if the large-scale developmental work is to be pushed through. The rise in money supply must, therefore, be studied against the background of the expansionary trends in production, industrial and agricultural, and the general level of economic activity; in other words, the issue must be judged whether money supply has outpaced the rise in production and economic activity.

The object of this survey, however, is not to raise a controversy over this point, but to present, as already stated, the monetary and banking trends during 1956, as well as during the past five years. The relevant monetary data are given in the table at the foot of this page.

The money supply during the year rose by Rs. 131.03 crores to Rs. 2,178.18 crores, the expansion being much less than that noted in 1955. The bulk of this rise was accounted for by the currency with the public, of which notes in circulation and rupee coin alone represent over 72 per cent. This shows that the disbursements arising out of the development expenditure have gone to raise the income of those classes of people among whom the banking habit has not developed. The demand deposits of banks which form the other main constituent of money supply show a relatively smaller rise, as witness the increase of only Rs. 35.48 crores, or 5.8 per cent., in the demand deposits of Scheduled banks.

The main factors which have contributed to the expansion in money supply are the budgetary deficit and credit extension by banks to the private sector. For purposes of analysis of money supply variations, the budgetary deficit is measured by the extension of credit by the Reserve Bank to the Government which now mainly takes the shape of purchase by the Bank of Government securities (mostly *ad hoc* Treasury Bills). Some idea of the budgetary deficit for the year can be had from the increase of Rs. 246.68 crores in rupee securities held by the Bank, which at Rs. 785.35 crores probably constitute a year-end record.

Foreign Exchange Reserves Down

The expansion in notes in circulation noted above has occurred against a rise of Rs. 246.68 crores in rupee securities, and of Rs. 77.74 crores in gold and bullion following the revaluation of the Reserve Bank's gold holdings. The notes in circulation would have been more, as indicated by the rise in rupee securities and gold coin and bullion, but for the contraction in foreign securities to the tune of Rs. 239.58 crores, which represented the transfer over the year from the Issue Department to the Banking Department. Balances held abroad have, on the other hand, risen by Rs. 34.31 crores, with the result that the total foreign assets of the Reserve Bank have suffered a net recession of Rs. 205.27 crores, as against an accretion of Rs. 4.39 crores in 1955.

The reduction in foreign exchange reserves, it is now well known, is due to the substantial deficit in the country's external payments position, brought about by the huge imports of capital equipment for the Plan projects and the deterioration in the terms of trade. This, together with the decline in holdings of Government securities by banks, considerably reduced the impact of the rise in development expenditure (budgetary deficit, to be precise) on money supply. Further, the effect of the huge import surplus on price levels was not fully felt, because there was no corresponding addition to the supply of consumer goods. On the contrary, the large quantity of plant and machinery, steel, and transport equipment, which constituted the bulk of the imports, generated a larger demand for bank credit as they are heavy consumers of capital in the initial stages and do not produce saleable goods forthwith. In contrast to these developments in 1956, the preceding year witnessed a slightly favourable external payments position. There was also an increase in banks' holdings of Government securities. Both these factors were favourable for an increase in money supply.

A glance at the table (given at the bottom of the page) shows that, over the past five years, the money supply has risen by Rs. 404.79 crores, or nearly 23 per cent. It should, however, be noted that the trend during this period was not one of continuous rise. For, in 1952, there was a contraction to the tune of Rs. 90.58 crores, reflecting the deficit in external transactions—as indicated by the fall of Rs. 75.60 crores in foreign exchange reserves—and the decline in Reserve Bank's credit to Government and banks' credit to the private sector. In the subsequent four years, however, the expansion in money supply was of the order of Rs. 495.37 crores, thus more than making good the contraction in 1952. This was mainly due to the substantial rise in budgetary deficit of the Government during the last two years, as also in bank credit during the last three years. The improvement in the external payments position during 1953, 1954 and 1955, as reflected in the net rise of Rs. 29.69 crores in foreign exchange reserves, also contributed to the expansionist trend in money supply, but the effect of this was more than wiped out in 1956, following the substantial fall of Rs. 205.27 crores in foreign assets as already noted.

Rise in Banks' Advances

The growing industrial activity, the larger volume of imports and the issue of Central and State loans during the year all called for a larger credit from banks. Consequently, the Scheduled Banks' advances (including bills purchased and discounted) recorded an increase of Rs. 157.01 crores in 1956, as compared with that of Rs. 93.04 crores in the previous year. Over the past five years, the rise in this item is of the order of Rs. 245.93 crores, or 45 per cent. The increase in the Scheduled banks' resources, however, lagged very much behind the increased demand for credit, the rise in net deposits of Scheduled banks during 1956 being only Rs. 79.43 crores, as against Rs. 90.02 crores in 1955 and Rs. 255.54 crores over the five years. Consequently, the ratio of advances to net deposits touched a peak of 71.6 per cent. at the end of 1956, having gone up from 61.8 per cent. a year before. At the end of 1953, it was only 55.4 per cent.

An interesting feature of the rise in banks' resources is the relatively larger expansion in time deposits as compared with that in demand deposits. This is not a peculiar feature of 1956 alone; it has been the case in previous years also, with the result that the share of time deposits in the total at the end of 1956 was 41.5 per cent., as against 34.6 per cent. at the close of 1951.

Larger Borrowings from Reserve Bank

With the calls on the banks for credit exceeding their readily lendable resources and the consequent stringency in the money market, interest rates ruled firm throughout the past year. The customary slack season was almost unfelt, while the busy season was felt more acutely than in recent years. The result was that banks had to resort to larger borrowings from the Reserve Bank besides reducing their liquid assets to the barest minimum. Thus, the aggregate borrowings by scheduled banks from the Reserve Bank during the year amounted to Rs. 903.77 crores, more than double those in 1955. What is more noteworthy is that the share of borrowings against Government securities was larger than those against usance bills, in distinct contrast to the trend noted in 1955. This is explained by the fact that the cost of borrowing against usance bills, which was cheaper as compared with that against Government securities in 1955, went up in 1956, following the increase in the Reserve Bank's lending rate under Section 17(4)(c) of the Reserve Bank of India Act, first from 3 to 3½ per cent. and the withdrawal of stamp duty concession with effect from 1st March 1956, and again, to 3½ per cent. (that is on par with the Bank rate), with effect from 21st November. Banks, therefore, found it less cumbersome to borrow against Government securities. Nevertheless, the pressure of demand for bank accommodation was so great that the utility of usance bills to the Scheduled banks was substantially greater than in the preceding years.

Be that as it may, over the year 1956, banks had to reduce their investments by Rs. 20.30 crores, in distinct contrast to the accretion of Rs. 37.01 crores in 1955, and their cash balances by Rs. 7.23 crores, as against only to the extent of Rs. 5.22 crores in the previous year. The result, as will be seen from the table, was that the cash ratio—and presumably the total liquidity ratio also—fell to the lowest level on record.

† Provisional.

DECIMAL COINAGE

Arrangements for the changeover from the existing coinage to the decimal system with effect from 1st April 1957 are in progress. The new coins will be put in circulation on that date. While the existing coins will continue to be in circulation as legal tender side by side with the new ones till they are ultimately withdrawn, the Government proposes to make every effort to have the existing coins withdrawn from circulation as early as possible.

In the first instance, only coins of the denomination of one naya paisa, 2 naye paise, 5 naye paise and 10 naye paise will be issued. This will be followed later by the issue of 25 and 50 naye paise coins and the new rupee (equivalent to 100 naye paise). Coins of the denominations of As. 2 and under will be withdrawn first, as decimal coins of 10 naye paise and below will be put in circulation in sufficient quantities in the initial stages.

The Comptroller and Auditor-General of India has issued a circular to the effect that, from 1st April 1957, all Government accounting will be maintained in terms of rupees and naye paise, instead of in rupees annas and pies. Explaining the procedure to be followed by Government departments, the circular says that all *challans* in support of money tendered in payment of Government dues are to be expressed in new coinage. Similarly, all bills for withdrawals also are to be expressed in terms of rupees and naye paise. The forms of bills, *challans* and other books of account used by Government Departments are to be revised to provide only two columns to show rupees and naye paise separately. Until, however, the new forms and bills, etc., are printed, the existing ones will be suitably adapted for use. The circular indicates the standard method of expressing amounts in the new coinage. A sum of Rs. 25 and 5 naye paise is to be written as Rs. 25.05 and not Rs. 25.5 and Rs. 55 and 83 naye paise is to be written as Rs. 55.83. For entering an amount of Rs. 25 and 5 naye paise, in forms providing for separate columns for rupees and naye paise, 25 will be entered in the rupee column and 5 in the naye paise column. Amounts expressed in annas and pies will be converted into whole numbers of naye paise according to the conversion table before they are entered in the books. The abbreviated forms to be used for naye paise will be N.P.

Rounding off is to be made only at the stage when payment of tender of money takes place. In agreements, enactments, etc., where rates are specified, the rounding off should be made only in respect of the total amount payable, or receivable in a single transaction, and the amounts specified in rupees annas and pies in financial sanctions, rules, orders, notifications, contracts, deeds or other enactments will be automatically construed as expressed in terms of equivalent value under the decimal system without any rounding off. While payment of Government dues will be accepted in whatever currency it is made, every endeavour shall be made to make payment of Government dues only in new coins.

According to the rate of exchange prescribed in the Indian Coinage (Amendment) Act, 1955, there is no exact equivalent in naye paise in respect of coins of two annas and below and their exchange individually, or in combination with other coins, will result in a small profit or loss in the aggregate to either of the parties exchanging the coins. This element of profit or loss, it is pointed out, will occur so long as the existing coins continue to circulate, but it will diminish progressively as increasing quantities of new coins enter into circulation. The public can, however, keep down to the minimum the element of profit or loss in exchange of coins by having their holdings of existing coins exchanged for new ones by tendering amounts in terms of four annas and multiples thereof, for which exact equivalents in terms of new coinage exist. The treasuries, etc., will give new coins in exchange for existing coins only on this basis.

The Government of India has published in this connection two tables for conversion of the existing coins into the decimal system, giving the decimal coin equivalents of the existing coins and explaining how and when to make use of them. The longer table gives the naya paisa equivalent of each pie up to one rupee, while the shorter table omits references to pie coins. The rate of conversion between the existing coins and the new coins in the shorter table does not follow the strict arithmetical proportion.

The conversion tables are to be made use of only when actual tender of existing coins takes place in the course of any single transaction, namely, the total amount one has to pay or receive in a deal. The Coinage Act lays down a method of computation only for finding out the equivalents of existing coinage in the new coinage in the course of transactions involving actual tenders of money. When, however, actual tenders of coins are not involved, such as calculations of rates, or for construing existing values mentioned in Acts, etc., in terms of decimal coinage, no elaborate conversion table is required. The values are to be converted into their exact equivalents at the rate of 100 naye paise to 16 annas, or 64 pice or 192 pies. To avoid inconvenience in working out exact equivalents in terms of decimal coinage, calculations ought to be made on the basis of existing rates and the total amount arrived at should then be converted into decimal coinage.

RESULTS OF MORE BANKS FOR 1956

Central Bank of India

The working of the Central Bank of India Ltd. during the year ended 31st December 1956 has resulted in a profit (subject to audit) of Rs. 104.36 lakhs, which represents an increase of Rs. 26.60 lakhs over that for 1955. The profit for the year is by no means a record as in the case of many other banks; for it falls very much short of the highest level of Rs. 152.53 lakhs touched in 1948. It is, however, the highest since 1951, when the Bank earned a profit of Rs. 125.40 lakhs. After bringing a surplus of Rs. 18.40 lakhs from the previous year, the Directors have set aside a sum of Rs. 13 lakhs as provision for taxation, raising it from Rs. 5.50 lakhs provided a year ago. The allocation to the Bank's investments has been maintained at Rs. 15 lakhs, while that for staff gratuity has been reduced slightly from Rs. 5.50 lakhs to Rs. 5 lakhs. Bonus to staff has been more than doubled from Rs. 13.50 lakhs to Rs. 27.50 lakhs. The interim dividend at 12 per cent. per annum (same as that for the previous year) absorbed Rs. 18.87 lakhs. The Directors have now recommended a final distribution at 16 per cent. per annum, raising it from 12 per cent. per annum paid last year and requiring Rs. 25.16 lakhs (Rs. 18.87 lakhs). The total dividend for the year thus amounts to 14 per cent., as against 12 per cent. paid for the previous three years, thus restoring the cut made in 1953 from 14 per cent., a rate which the Bank had paid consistently for six years from 1947 to 1952. The surplus left to be carried forward after these appropriations is Rs. 18.23 lakhs.

Punjab National Bank

The profit of the Punjab National Bank Ltd. for the year 1956 amounts to Rs. 87.85 lakhs, as compared with Rs. 64.41 lakhs for the previous year. With this rise, the profit has not only maintained the upward trend for the fourth year in succession but established a fresh record in its history. The Bank's deposits as at the end of the year, at Rs. 106 crores, also constitute a record, having risen from Rs. 90 crores at the end of 1955.

Canara Bank

The Canara Bank Ltd. has earned a profit of Rs. 8.21 lakhs for the past year, after making the usual and necessary provisions and after payment of special Golden Jubilee bonus to staff and dividend to the shareholders in July last. The profit for the previous year was Rs. 10.01 lakhs. The Directors have raised the provision for taxation from Rs. 3.75 lakhs to Rs. 4.60 lakhs and that for bonus to staff from Rs. 1.25 lakhs to Rs. 1.40 lakhs. The dividend on 5 per cent. preference shares absorbs Rs. 52,500 and the ordinary dividend, which is being maintained at 10 per cent. per annum, requires Rs. 1.50 lakhs, leaving to be carried forward Rs. 38,502, as against Rs. 19,501 brought in.

Indian Bank Ltd.

An impressive rise of Rs. 23.93 lakhs to Rs. 44.21 lakhs in the profit (subject to audit) is disclosed by the working results of the Indian Bank Ltd. for the year 1956. The profit, which has thus more than doubled itself, constitutes a record. The interim distribution to shareholders, made up of a dividend of 5 per cent. and a bonus of 1½ per cent., as against the corresponding payment of 5 per cent. dividend and 1 per cent. bonus last year, absorbs Rs. 3.91 lakhs (Rs. 3.40 lakhs). After making the other usual and necessary provisions, the Directors have recommended, a similar increase in final distribution, by raising the bonus part from 1 per cent. to 1½ per cent.—the dividend part being unchanged at 5 per cent.—thereby making the total distribution for the year 13 per cent., as against 12 per cent. paid for the previous six years.

Travancore Bank

For the second year in succession, the Travancore Bank Ltd. has shown an upward trend in earnings. The profit, which had gone up from Rs. 7.36 lakhs in 1954 to Rs. 10.20 lakhs in the following year, has staged a further rise to Rs. 11.91 lakhs in 1956, thus establishing a new record in its history. After bringing in Rs. 43,597, the Directors have raised the provision for taxation from Rs. 4 lakhs to Rs. 4.90 lakhs and the transfer to the reserve fund from Rs. 2.05 lakhs to Rs. 2.40 lakhs. The allocation for depreciation reserve on investments has been reduced from Rs. 25,000 to Rs. 20,000, while that for gratuity and bonus to staff has been maintained at Rs. 40,000. These appropriations leave a surplus of Rs. 45,060 to be carried forward.

Union Bank of India

Encouraging results are disclosed by the working of the Union Bank of India Ltd. during the year ended 31st December 1956. The profit for the year, at Rs. 11.14 lakhs (subject to audit), shows an increase of Rs. 1.69 lakhs over the previous year, thus keeping up the upward trend for the second year in succession. The provision for taxation has been raised from Rs. 1.75 lakhs to Rs. 2.25 lakhs, while the transfer to the reserve fund has been maintained at Rs. 2.50 lakhs. Bonus to staff has also increased from Rs. 1.25 lakhs to Rs. 1.80 lakhs. Besides, a sum of Rs. 1.25 lakhs has been set aside to the investment account, for which purpose no provision was made last year. The dividend is proposed to be stepped up to 8¾ per cent. per annum from 7½ per cent., to which level it had been raised last year from 6¾ per cent. paid for the preceding four years. The surplus left to be carried forward is Rs. 1.81 lakhs, as against Rs. 1.96 lakhs brought in.

THE CENTRAL BANK OF INDIA LIMITED

PROFITS FOR 1956 — DIVIDEND INCREASED

The Net Profits of the Central Bank of India, Limited, for the year ended 31st December 1956, subject to audit, including the sum of Rs. 18,40,358-8-6 brought forward from the previous year's Account, amounted to Rs. 1,22,76,643-7-11 which the Directors have disposed of as follows:—

The following appropriations have been made:—

	Rs.	a.	p.
An *ad-interim* dividend paid for the half-year ended 30th June 1956, at the rate of 12 per cent. per annum, free of income-tax, i.e., Rs. 1-8-0 per share, on 12,58,170 shares	18,87,255	0	0
Amount transferred to Bank's Investments	15,00,000	0	0
Amount provided for Taxation	13,00,000	0	0
Amount transferred to Staff Gratuity Fund	5,00,000	0	0
Amount provided for Bonus to Staff	27,50,000	0	0
	79,37,255	0	0
The balance of Rs. 43,39,388-7-11 the Directors propose to recommend to the Shareholders to dispose of as follows:—			
To pay a final dividend for the half-year ended 31st December 1956, at the rate of 16 per cent. per annum, free of income-tax, i.e., Rs. 2 per share, on 12,58,170 shares (making in all 14 per cent. for the whole year as against 12 per cent. for the previous year)	25,16,340	0	0
To carry forward to next year's account	18,23,048	7	11
	Rs. 1,22,76,643	7	11

OVERDRAFT Vs. PROMISSORY NOTE

The Economic Department of the Bank of America has prepared a note showing the desirability of extending credit through promissory notes rather than through overdraft facilities. From the standpoint of the economy as a whole, it makes little difference whether credits are extended via the overdraft method or by promissory notes. That is, the effect on the effective money supply will be the same. From the standpoint of the individual bank at any given time, however, there may be a significant difference.

If the credit is extended by an overdraft, the proceeds of the loan are advanced as they are spent and there is no increase in deposits of the lending bank. If, on the other hand, the loan is against the promissory note, the entire proceeds of the loan are credited to the account of the borrower and drawn subsequently as need arises. Consequently, at any given time there will be more funds available with the bank using promissory note method than the overdraft.

The Bank of America note mentions the following disadvantages of extending credit through the overdraft system: (1) There is less control over borrowing; (2) there is an extra routine, such as referring cheques to the manager or other competent officer; (3) credits extended by overdrafts do not give rise to eligible paper for rediscounting or advances from the Central bank, and (4) legal difficulty may arise in proving the liability of the borrower.

This is one side of the medal; on the other side, according to the *Fortnightly Business Letter* of the United Commercial Bank, is the reluctance of customers to use promissory notes rather than overdrafts, since the first is considered disreputable and the second enterprising. Moreover, overdrafts provide flexibility in the credit requirements of the borrower. Apart from the academic aspect of this, India is, says the *aforesaid Business Letter*, specially interested in any scheme for switching loans from overdrafts to promissory notes. Under the 'bill market scheme,' Scheduled banks may obtain advances from the Reserve Bank against their promissory notes, if they are secured by usance bills or time promissory notes.

SOCIALIST PATTERN AND PRIVATE OWNERSHIP

MUCH OF THE POPULAR THINKING IN INDIA OUT OF DATE

By "Mithras"

THE metamorphosis that the motives and attitudes of the business class have undergone and the diminution of the power of this class to make economic decisions have led to a growing thought that private ownership of means of production is not an antithesis of socialism or the socialist pattern of society. Denoting a purpose and not merely an institutional change, socialism may be defined as consisting of "every aspiration towards the amelioration of our society." In the historical development of economic thought, some of the evil consequences of the industrial revolution and vast technological improvements, such as "exploitation of workers," "ever-increasing misery" of the masses, occurrence of "economic crises" and what Bernard Shaw later described as "division of society into hostile classes with large appetites and no dinners at one extreme and large dinners and no appetites at the other," all began to be ascribed to the private ownership of means of production. Their "socialisation," it was believed, would in one stroke put an end to all these "inner contradictions" and let humanity get the full benefit of technological discoveries.

Thus, State ownership began to be regarded as the fundamental conditioning factor for the amelioration and progress of the society. And, gradually, this purpose or end, which was denoted by the word socialism, was equated with State ownership, so much so that Marx defined socialism as the "nationalisation of the means of production, distribution and exchange." In the changed circumstances of today, there seems to be no logical reason why nationalisation of large-scale units of production should be so inextricably linked with socialism. Pattern of society need not be uniquely dependent on pattern of ownership. We may agree on ends but legitimately disagree on means. The means most suitable in past generations may be wholly irrelevant in contemporary circumstances.

Happily, the Government and the majority of the people in this country favour a non-doctrinal approach to the evolution of a socialist society. But, in reality, enslavement to the Marxist dogma of no socialism without State ownership still persists in our thoughts and feelings, and the growing irrelevance of ownership of means of production to the setting up of an egalitarian society is not yet clearly perceived.

General Approach

There may be an economic case for State ownership of certain industries or certain units in these industries. These cases have to be considered on their individual merit. For instance, the importance and necessity of public ownership of basic industries and industries requiring unitary control or involving very heavy risks is more or less universally recognised in this country. But we are concerned here not with the specific approach but with the general approach, under which the catalogue of industries reserved for the State sector has been growing in the name of the socialist pattern of society, ever since the Industrial Policy Statement of 1948 which assigned only the basic industries to the exclusive responsibility of the State.

This general approach is based very largely on the equalitarian argument. The belief that maldistribution of wealth and incomes gets worse as a result of economic growth has led to a policy of enlarging the State sector of ownership of industries. This belief has been challenged and disproved in countries like the United Kingdom and the United States. But, quite apart from that, the equalitarian argument has been given absurdly excessive importance. A glance at the national income accounts of this country would show that the amount of company profits forms an infinitesimal proportion of the national income—hardly 3 per cent. Only a part of this goes to the wealthy people, the distribution of whose incomes alone is the target of policy.

There is also much exaggeration in the logic that the share of industrial profits in national income will increase as industrial development proceeds apace. In a highly industrialised country like the United Kingdom, dividends on ordinary shares net of tax are only some 3 per cent. of total net personal income.

And how much of this "great unearned income" can be extinguished by a policy of State ownership of industries? Public ownership can appropriate only the difference between the rate of dividends and the yield on Gilt-edged securities, because, in a democracy, the policy has to be one of nationalisation with compensation. If the average yield on equities is 6 per cent. and that on Gilt-edged securities 4 per cent., then public ownership can extinguish only one-third of the already puny share of business profits in the national income. It comes to only 1 per cent. of the national income. What an equalitarian effect!

A Fallacy Exposed

This single point of fact smashes the equalitarian argument advanced in favour of State ownership, and the vast and heated controversy that has been raised seems utterly futile. But this is by no means the major point in the *rationale* of new socialist thinking which regards ownership as of not much relevance to "Socialism in practice." In the new thought, decisive importance is given to consumption and not income. There is nothing disquieting about high business profits, so long as they are not sequestered for personal consumption but are largely added to the "national investment fund." It was a fallacy in the old socialist thought to talk of "large dinners and no appetites" but to refuse to carry this assertion to its logical conclusion. The growing enrichment of men of "no appetites" is of little consequence to a true socialist, when the additional incomes of these men are, by and large, for no other purpose than to be ploughed back into investment. Concentration of income, in our generation, is not inconsistent with more equitable enjoyment of goods and services.

This reasoning does not appear plausible to many. The basis of doubt is the question why the industrialists should carry on a hard struggle of business, if extension of, and more success in, business is not meant for larger material enjoyments. But men of knowledge and insight know that a transformation in the motives of the business class has taken place. John Strachey, in his book *New Capitalism* (1955) writes:

> "... Such developments point to the fact that capitalism as characterised by the struggle for maximum profit has already been metamorphosised into another system characterised by the struggle for more prestige. ... Their motive is no longer self-enrichment. They wish their 'show' to expand and succeed even if they continue to get much the same remuneration. Competition for profit has given place to rivalry for prestige. The acquisitive element is after prestige and not wealth."

Thus, for the reason that additional income will not bring about any change in his level of consumption, the attitude of the contemporary business leader towards profit has changed. He wants high profit not primarily as a source of high personal income but because his social status and prestige depends on the level of profits. Good profit is the conventional test of business performance; it determines the strength and prestige of the firm and the social status of its executives. Though profit still remains an essential incentive, it is so largely as a source of social status and influence and not as an avenue to a privileged consumption position. The frame of mind of the business leaders has changed. This change has, of course, not spread to all large owners of means of production. But the leading businessmen, whose incomes are an eye-sore to us, have changed and have set the tone for others also.

Positive Contribution

With the shift from accumulation of personal incomes to earning of social reputation and status, the aggressive pursuit of maximum profit has also come to an end. Maximum profit is one source of prestige and influence but not the only source. The contemporary industrialists are trying to acquire a position of high status and prestige in society through a number of benevolent activities—by opening educational trusts, research foundations, social welfare and cultural centres, by giving grants or donating buildings to universities and various schools of economics, sociology and sciences, by constructing temples, by acquiring local and civic reputation and seeking elections to Parliament, by becoming intellectuals and getting positions on high-ranking committees, commissions, tribunals, missions to foreign countries, by establishing reputation as progressive employers and by adopting fair and reasonable price policies. These activities of the industrialists fulfil an important national task of expanding and developing higher pursuits of life.

No Sequestration of Surplus for Consumption

The abandonment of aggressive pursuit of profits and the shift in emphasis from consumption to vertical and horizontal expansion of business is partly voluntary and partly has been forced on the business class by the Government's fiscal policies and physical regulation. Whatever the reasons, the fundamental point is that profits should not be used for increasing the consumption and other material enjoyments of the *bourgeoisie*. On the relevance of pattern of ownership to this desideratum, Mr. C. A. R. Crosland, a former Labour M.P. in Britain, in his book *The Future of Socialism* (1956) says:

> "Now, in fact, this possibility (increased consumption) does not depend on private ownership. It also exists in a State-owned economy, where the State bureaucracy responsible for appropriating and disposing of surplus value may equally well use it to allot themselves a privileged consumption position. The possibility of the 'misuse' of surplus value arises inevitably from the alienation of the means of production from those who operate them. But, under conditions of large-scale production, the alienation has little to do with ownership. *The Soviet worker is no more able than the British worker to determine the disposal of his surplus value. Conversely, the Gosplan manager is as easily able as the British shareholder or director to appropriate surplus value not for reinvestment but to allocate himself a differential income. In practice, of course, he is far more easily able, since he has neither free trade unions nor political opposition to contend with.* (Italics mine). In any society, in which the disposal of surplus value is determined from above, the possibility of its sequestration for privileged consumption must exist. But the likelihood of this occurring depends far less on the pattern of ownership than on the strength of democratic institutions.
>
> "The problem facing us, therefore, is so to use our democratic institutions as to ensure that profits in the private sector are used primarily for reinvestment—i.e., mainly as a source of collective capital accumulation and not as a form of personal income."

That the democratic processes in this country are effectively preventing the sequestration of surplus value for consumption is beyond doubt. Of the total amount of profits in the organised industrial sector, roughly one-third goes towards taxation, another one-third is retained as reserves and the remainder is distributed as dividends. About two-thirds of the capital expenditure of companies is financed from retained profits. Even the distributed profits are not entirely utilised for privileged consumption. A large part of the amount of dividends, particularly that accruing to men with "no appetites," is saved and reinvested. Thus, out of the amount of total industrial profits, which forms 3 per cent. of the national income, only one-third, that is, 1 per cent. of the national income, is distributed as dividends, a substantial portion of which again is saved. It is manifestly clear how ludicrously small part of the national income is the amount of surplus value going to privileged consumption. The newly introduced Capital Gains Tax will help in preventing the consumption of enhanced value of share capital, which, in any case, seems to be already insignificant.

Situation Has Changed

The above discussion shows that socialisation of large-scale enterprises as a means for establishing an egalitarian society was never very important. Whatever importance it had in the past generations has now been lost as a result of increase in the powers of the political authority and its extensive regulation of the economy. When public ownership was first stressed as a necessary condition for socialism, the State was weak and subservient to the business class on the analogy of an executive committee which carries out the directions of the Board of Directors. All economic decisions were made by the business class and the political authority only underwrote them; political power belonged to those who possessed the economic power. In that situation, phrases like "ever-growing misery" of the masses corresponded to reality of the situation. But now the situation has changed. Economic power belongs to those who possess the political power.

Owing their existence to the popular vote of a welfare-conscious electorate, Governments today are concerned with safeguarding the interests of the masses rather than underwriting or buttressing the actions of the business class.

Similarly, there has been a tremendous loss of power from the business class to the labour, which has outmoded the theory of exploitation. "Wage-slavery" has passed into history. Indeed, people today are not so much worried about exploitation of the labour by management but what has made them nervous is the fear of abuse of new bargaining strength by the trade unions. The view is gaining more and more acceptance that, in the context of the increasing bargaining strength of the trade unions, Government should preserve its position of playing the role of an arbitrator in labour-management disputes, and should not, through nationalisation, become a party to the disputes. The Government's new role as owner of industries would land it into a difficult position, as labour gains further and further strength. Only a totalitarian political authority can deal with such a situation, by excluding bargaining from the functions of the trade unions. There would be no half-way to totalitarianism.

Ownership and Management

Another aspect generally mentioned in favour of the altered situation is the divorce between ownership and management. In view of the increasingly specialised nature of industrial production, the management consisting of the plant engineer, the research chemist, the market expert and the lawyer is becoming more and more independent of the capitalist owner. Economic decisions are, therefore, made largely by paid experts who have different motives and outlook than those of a capitalist.

These developments have taken out whatever wind was left in the sails of the Marxist gospel of State ownership. It never deserved much esteem, which was, however, enjoyed by it, because of the scant attention hitherto paid to the argument of insignificant privileged consumption. But now, due to an agglomeration of factors—namely, the consumption argument, the tiny share of distributed dividends in the national income, the change in the attitude of the business class from the cult of exploitation to the cult of co-operation and service, the pervasive power of the State, the bargaining capacity of labour and the divorce between management and ownership—little room is left for doubt about the irrelevance of pattern of ownership to the creation of an egalitarian society.

Capitalist Socialism

In spite of these advances in the socialist thought, the Marxists continue to identify socialism with State ownership and capitalism with private ownership. But the new socialist thought regards socialism as a flexible *method* and not a rigid *system*. The thousand and one names given, in current literature, to socialism and capitalism—and we may add two more to this list, namely, socialist capitalism and capitalist socialism—testify to the diminishing area of controversy between State ownership and private ownership. These "isms" are used as facility for, and not a fetter on, social analysis. The ultimate end is kept in mind, and the doctrinaire adherence to the belief that this end can be achieved by State ownership alone is being given up.

While the thought on the subject has considerably advanced, Marxists have continued to call a society with private ownership as capitalist. Once claimed to be scientific socialism, Marxist thought has now degenerated into a most unscientific set of ideas. Instead of taking part in the latest development of thought, rebutting or accepting new ideas, Marxists have continued to harp on old ideas, which, in the changed circumstances of the present generation, are devoid of sense and appeal.

To cite an instance, a booklet, *The Basic Economic Laws of Modern Capitalism*, published by the Foreign Languages Publishing House in Moscow in 1955, has nothing to say except repeating the eighteenth century slogans of Marx. These slogans are so obsolete, outmoded and have so often been exploded that no columnist today would see any purpose in quoting them, let alone their discussion. The political division between Communist countries with State ownership, and major Democracies with a large sector in private hands, has precluded the realisation by people of the diminishing area of controversy on the economic front. Had there been a congenial political atmosphere between the two power blocs, economic issues would have been viewed in an objective way and the irrelevance of ownership would have been seen properly.

India, being free from power blocs, the atmosphere here is favourable for an impartial and scientific treatment of economic problems. But there is another difficulty. Marxist doctrine being sloganish is easy of mass appeal than the new socialist thought which is somewhat difficult to comprehend. The Government has to do what the masses wish. The present stress in Government circles on State ownership is, therefore, the result of absence of a well-organised campaign to educate the illiterate masses on the growing irrelevance of pattern of ownership.

Planning

Another argument in favour of State ownership which has been popular among the new socialists also is that of planning. This argument, which is in line with the Marxist doctrine of "anarchy of production" under private ownership, stresses that, first, under private ownership, no planned set of priorities laid down in accordance with the needs of the people and availability of resources, can be enforced, and, secondly, though the State can by law subject private enterprises to control, in practice it becomes difficult to prevent evasion of this control and to enforce efficiency. The belief has, therefore, gained ground that titular ownership by the State is a condition of State control and the only effective remedy for planned production.

This argument underrates the potentialities of the mighty and comprehensive legislation which goes by the name of the Industries (Development and Regulation) Act. Under this Act, no new enterprises can be established and no substantial expansion of an industrial undertaking can be effected, except under licence from Government which lays down conditions as to the location of the undertaking, minimum standards in respect of size, etc. The Central Government may order a full and complete investigation into the functioning of an undertaking, if there has been a substantial fall in production or a marked deterioration in quality or arise in price for which there is no justification. It may also order an inquiry, if an undertaking is suspected of being managed in a manner likely to cause serious injury to the interests of the consumers. Government may issue directions to the industrial undertaking for regulating production of an article, fixing standards of production, and requiring the undertaking to take such steps as Government thinks necessary to stimulate the development of the industry. It may control the price and regulate the distribution of any article which has been the subject matter of investigation. If an undertaking is being managed in a manner detrimental to the public interest or to the industry concerned, even after Government's issue of directions, Government may order the taking over of the management of the undertaking. This Act, together with the Capital Issues Act, gives Government every power, short of ownership, of control over an enterprise.

Importance of Ownership

As against this, control over public enterprises has fallen short of expectations. The Boards of public undertakings are no more accountable and amenable to Government control than private enterprises. The functioning of public undertakings has provoked widespread complaints. Lay Ministers often take the line of least resistance, allowing the nationalised Boards to do as they wish. In the first instance, they are not aware of the technicalities and do not possess the specialised knowledge about the technical aspects of production of a nationalised corporation. As such, it is very easy for the specialists of the enterprise to give justification for their activities, however questionable they may be, to the Minister or any other officer or body inquiring into the working of the enterprise. Moreover, the belief in the theory of independence of public enterprises prevents them from imposing their views on the nationalised boards. The detailed Parliamentary supervision or even departmental control is considered to be against the smooth functioning of the State enterprises and is not conducive to the adoption of dynamic policies and programmes by these enterprises. Parliamentary debates on the working of these enterprises in which the Minister acts as counsel for defence, do not improve the position. In these circumstances, it has begun to be remarked that the Government has less power of control over public enterprises than over private enterprises. In any case, ownership is no longer an important determinant of economic control over enterprises.

Thus, the general case for State ownership in the name of a socialist pattern of society and welfare State is getting weaker and weaker. The private industrialists are like bees that gather honey but do not eat it. These industrialists are no longer after profit and privileged consumption but after social honours. The bigger the industrialist, the more is this true. It is not in the national interest to kill this new spirit of seeking distinction by trying to make the best performance. Private ownership might have led to "inner contradictions" of capitalism in the days of Marx. But, today, the inner contradiction is that we are trying to eradicate those who are the locomotives of progress and best servants of society and who do all this for nothing but a name in the society.—*All Rights Reserved.*

"PEOPLE'S CAPITALISM" IN AMERICA

That the present American economic system is a far cry from the outmoded capitalism of the past is made clear by Dr. Marcus Nadler, Professor of Banking and Finance at New York University and Research Director of the University's Institute of International Finance, in a pamphlet published by the Hanover Bank of New York.

"The economy of the United States," Dr. Nadler writes, "is rapidly assuming the character of what may be termed 'People's Capitalism,' under which the production facilities of the nation—notably manufacturing—have come to be increasingly owned by the people in the middle and lower income brackets or indirectly by mutual institutions which manage their savings. "Management is being rapidly dissociated from ownership. The standard of living—and, with it, financial security—is rising at a rate which two or three decades ago would have been thought impossible. The number of people receiving college education has reached an all-time high, and the opportunities of advancement for those qualified—irrespective of their income or family background—are greater today than ever before. All these economic gains have been achieved without any sacrifice of political freedom or social and moral values."

Professor Nadler cites a good many facts to back up his statements. He notes that 8,600,000 people own stock in the nation's publicly held corporations—a figure that has increased substantially in recent years. He shows how life insurance ownership, savings accounts and mutual investment funds—ways in which people invest in U.S. industries indirectly—have increased both in dollar amounts and in numbers of people participating. He lists other forms of indirect ownership—investment in common stocks by pension and profit-sharing funds, by American universities endowment funds, by foundations and philanthropic institutions, and even by some labour unions. He notes that many family-owned corporations have been converted into investor-owned companies, leading to the wider spread of shares of industrial companies among the public. And he cites other facts about high U.S. living standards—an increasing growth in home ownership, the broadening of educational training, and the like.

How have these things been achieved? What are the basic characteristics of this system? Here are some key factors mentioned by Professor Nadler. He says: "Private ownership of the means of production, private initiative; the right to earn profits and to enjoy the fruits of one's labour (after taxes)—these are the keynotes of capitalism as a form of economic organisation. As practised in the United States, competition is keen and drives management to produce better products and evolve new ones."

He points out that the concentration of wealth in the hands of a few families and individuals has been decreasing rapidly. Wealth concentrated in the hands of mutual organisations, foundations and philanthropic institutions is increasing at a rapid pace. This process, he says, is accelerated by steeply graduated income-taxes and inheritance taxes and by the growth of the middle class.

Professor Nadler singles out one fact—the advance of labour, particularly skilled labour, into the middle class—as being notably significant. Labour as a group, he points out, has been the principal beneficiary of the substantial increase in the national income over the past two decades. This has meant new savings by individuals who previously had no surplus funds. The savings of this new middle class have gone—through mutual institutions—into the building of new factories, new assembly lines, new power plants, new machinery, new trains and trucks for transportation. As Professor Nadler writes:

"The increase in productive capacity and productivity benefits the entire population—in the form of higher wages and salaries, larger dividends, better products and increased investment in plant, equipment and research. These, in turn, lay the foundation for new wealth, greater productivity and a still higher standard of living. The economic security of the people is high and increasing—and the average citizen is protected against most of the economic emergencies and contingencies. Freedom from want and fear as the ultimate goal is rapidly being achieved.

"Economic and social developments in the United States ... have demonstrated ... that a free nation—living under a system of law administered by elected officials responsible to the people, a system that encourages individual initiative and free competitive enterprise—holds out the greatest hope for the future of mankind and by far surpasses in achievement even the wildest promises made by the leaders of totalitarian countries."

JAPANESE TEXTILE EXPORTS TO U.S.

VOLUNTARY RESTRICTION IMPOSED

OF late there has been much agitation in the United States over the large-scale imports into the country of Japanese textiles. In 1955, the latest year for which complete figures are available, actual shipments of Japanese textiles to the United States aggregated 270 million square yards. During the first six months of 1956 they are said to have been well over double that in the corresponding period of 1955. It has been argued by U.S. textile interests that Japan is able to undersell them, because it can take advantage of the cheaper raw cotton offered by the U.S. Department of Agriculture for foreign buyers. Another advantage which Japan is said to have over the U.S. is lower labour costs. This affects U.S. exports of cotton cloth also.

Owing to the insistent demand for governmental measures to improve the competitive position of the U.S. textiles and to place it on a basis of equality with foreign goods, the Eisenhower Administration introduced a subsidy programme in August 1956. The measure was designed to compensate exporters for the difference between the domestic cotton price and the lower foreign price. The base subsidy rate on exports was fixed at 6.58 cents per lb. and this rate was applicable till the end of September. Thereafter, the rate was to be fixed monthly on the basis of the difference, as determined by the C.C.C., between the average price for Middling 1" cotton in 14 designated spot markets, converted to average location and the average price at which the C.C.C. sells its cotton basis Middling, at average location, under the export programme in the month preceding the announcement of such rate.

Recently there has been considerable overtures from domestic textile interests for some sort of governmetal regulation of imports from Japan. It may be observed, in this connection, that, actually, total textile imports from foreign countries represent only about 4 per cent. of domestic production of which imports from Japan account for 3 per cent. It is, however, pointed out by the interests concerned that, though the volume is not much, their impact on particular segments of the textile industry, such as velveteens and ginghams, is much more significant. The Tariff Commission also had suggested recently quota restrictions on velveteens.

The Japanese Plan

The textile producers of the United States have, therefore, heaved a sigh of relief at the Japanese decision of the 16th inst. to restrict, voluntarily, exports to the U.S. markets. According to the agreement, negotiated between the two Governments, Japan has undertaken to restrict cotton textile exports to the U.S. to 235 million square yards per annum. The agreement is to run for five years and the position would be reviewed annually. The general figure of 235 million yards, with provisions for spreading shipments equitably over the year, is reported to have satisfied the interests concerned in the U.S. as it is believed that this would go a long way towards dispelling the doubt and uncertainty overhanging the domestic textile markets. Some quarters are, however, known to be unhappy over some of the details of the agreement and certain complaints have been raised regarding the quotas for individual items. A section of the U.S. manufacturers is still concerned about the potential competition from ginghams and velveteens. Under the agreement, Japan's gingham exports to the U.S. will be limited to some 35 million square yards and those of velveteens to 2.5 million square yards per annum. These represent only 50 per cent. of the permitted shipments under official export quotas applied by Japan last year. The total quota for cotton cloth is set at 113 million square yards, as compared with 150 million yards last year. Japanese exports of blouses which too raised complaints from the U.S. industry, have also been limited, under the agreement, to 1.5 million dozens per annum, as against the quota of 2.5 million dozens last year.

Whatever the deficiency of the Japanese plan, it is believed in U.S. industrial circles that the measure will help to improve the domestic textile situation. It is also expected that, since the Japanese action is unilateral, it does not necessarily rule out the imposition of restrictions on individual categories of textiles. There is a general feeling in business circles that, now that Japan has voluntarily restricted exports, the U.S. President will reject the Tariff Commission's recommendation for quota restrictions on velveteens and also that the appeal to the Commission for similar action on ginghams will be shelved.

MILL CONSUMPTION OF COTTON

Indian mills consumed during the first quarter of the current season 1,269,045 bales of raw cotton (of 400 lbs.) comprising 1,117,406 bales of Indian and 151,639 bales of foreign cotton. This compares with 1,255,533 bales consumed during the corresponding period of the previous season, of which 1,121,560 bales were indigenous growths and 133,993 bales imported foreign styles. Thus, there has been a slight fall in the volume of Indian cotton consumed, whereas consumption of foreign cotton registered an improvement.

The following table gives the variety-wise break-down of the foreign cotton consumed by mills:

(In bales of 400 lbs.)

Variety	1st September to 30th November	
	1956	1955
Indian cotton	1,117,406	1,121,560
Foreign cotton	151,639	133,993
Of which:		
Egyptians	34,925	42,532
Peruvians	1,821	1,195
Sudans	26,298	28,073
East Africans	75,052	51,467
Russians	174	185
U.S.A.	10,453	9,609
Mexican	174	21
Belgian Congo	926	138
Other foreign cotton ..	1,816	773
Grand total ..	1,269,045	1,255,553

As will be seen from the above table, East African cotton accounts for the largest share, Egyptians and Sudans occupying the second and third places. Offtake of U.S. cotton by mills during the period was a shade higher at 10,453 bales, as compared with 9,609 bales in the corresponding quarter of the 1955-56 season. It is expected to increase further in the current season, as a result of the increasing use of U.S. aid cotton.

The monthly average consumption of both Indian and foreign cotton during the period works out to 423,015 bales, as against 418,518 bales in the corresponding period of last year.

RUSSIAN COTTON

A record cotton crop was harvested by the cotton growers of Uzbekistan Soviet Socialist Republic, the premier cotton growing region of Soviet Russia in 1956. About 5.5 million acres of land are sown to cotton in the Soviet Union every year, of which the major portion is in Uzbekistan. And this Central Asian Republic accounts for more than 60 per cent. of the total output of cotton. In 1956, about 1,300,000 hectares (3,250,000 acres, approximately) were sown to cotton in Uzbekistan. The yield is estimated to have been 22 metric centners per hectare (about 985 lbs. per acre), this being 3 centners more than that of the previous year. The progress of cotton growing in the Republic is primarily attributable to the adoption of scientific methods of cultivation. Sowing in close rows which "thickens" the crops is widely prevalent. Square packet sowing is also followed and in 1956 about 800,000 hectares were sown in this manner.

Mechanisation of almost every aspect of cultivation has been one of the remarkable features of cultivation of cotton in Russia. The square packet method of sowing enables the tractor cultivators to loosen and weed the soil between the rows in two directions and, therefore, the need for handhoeing no longer exists. Mechanisation of sowing and ploughing has enabled the diversion of fewer workers from other more important operations requiring personal attention. Thus the care of crops has greatly improved and as a result crops develop better and yield more.

Development of cotton growing was promoted by undertaking measures for the general improvement of agriculture adopted by the Soviet Government. An aspect that deserves special attention in this connection is the newly introduced scheme for a material incentive for production. Procurement of cotton by the Government has also been based on the specific features of cotton growing in the different zones characterised by varying soil and climatic conditions. As a result, in all the cotton-growing districts, the farmer's interest in increasing the crop has correspondingly enhanced. Intensification of the collective farmers' work was also promoted by the changes introduced by the Soviet Government in the methods of planning agriculture. The collective farms have been given more initiative in devising such changes. The introduction of monthly advance payments to the collective farmers, replenishment of the machine and tractor stations with new machinery, provision of State farms and collective farms with agronomists and machine operators, etc., had done much to intensify work in collective farm villages. The income of collective farmers has, therefore, increased considerably.

During the course of the sixth Five-year Plan (1956-60), Uzbekistan is to increase cotton production by about 50 per cent. Cultivation of virgin soil in the Hungry Stepees for future cotton growing has already commenced. Irrigation work is planned on a big scale for this area which is sought to be converted into one of the largest areas of irrigated cotton in the U.S.S.R. Considerable attention is also being devoted to the all-round mechanisation of cultivation, propagation of new varieties and further improvement of the methods of cultivation.

THE

UNION BANK OF INDIA LTD.

BOMBAY

PROFIT FOR THE YEAR 1956

The net profit of the Union Bank of India Ltd. for the year ended 31st December 1956, including the sum of Rs. 1,96,238-0-5 brought forward from the last year's account, amounts, subject to audit, to Rs. 13,10,787-0-9. Out of this sum the Directors have made the following appropriations :—

	Rs.	a.	p.
1. To Reserve Fund Account ..	2,50,000	0	0
2. To Investment Account ..	1,25,000	0	0
3. To Provision for Taxation Account	2,25,000	0	0
4. To Provision made for Bonus to Staff	1,80,000	0	0
5. To Balance	5,30,787	0	9
Rs.	13,10,787	0	9

Out of the above balance the Directors propose to recommend to the Shareholders at the next General Meeting payment of dividend at the rate of 8½ per cent. per annum, free of income-tax, i.e. As. 7 per share on 8,00,000 shares leaving Rs. 1,80,787-0-9 to be carried forward to the next year's account.

EXPORTS OF EGYPTIAN COTTON

Figures relating to export sales of Egyptian cotton from 1st September to 15th December show that the performance in the current season has been poor, as compared with the same period of the previous season. During the 3½ months under reference, total export business aggregated only 231,842 bales (of 730 lbs.), as against 510,068 bales in the previous season. The fall was shared by almost all types of cotton, except Menoufi. Export sales of Karnak, Giza 30 and Ashmouni were of the order of 94,345 bales, 57,130 bales and 26,883 bales, as against 196,207 bales 143,021 bales and 144,851 bales, respectively, in the comparable period of the 1955-56 season. But Menoufi registered a distinct improvement from 22,546 bales to 51,539 bales. The following table gives the variety-wise break-down of the total sales effected:

(In bales of 730 lbs.)

	1st September to 15th December	
	1956-57	1955-56
Karnak	94,345	196,207
Menoufi	51,539	22,546
Giza 30	57,130	143,021
Ashmouni	26,883	144,851
Others	1,945	3,443
Total ..	231,842	510,068

This fall in export sales is generally attributed to the high prices prevailing in the Alexandria market and the limitation of offerings. It may be recalled, in this connection, that the second official crop estimate put the 1956-57 crop at 958,000 bales, which is slightly less than the first estimate and about 30,000 bales below last year's production. In view of the fact that the carry-over stock at the beginning of the current season was practically *nil*, the supply position of Egyptian cotton is not very encouraging.

PRICES OF IMPORTED RAW SILK

The Central Silk Board, Bombay, has issued a notification to the effect that the present selling prices for imported raw silk will be continued unchanged, in order to maintain a reasonable price level. The Board has also revealed that the State Trading Corporation of India had imported 57 metric tons of raw silk from Japan and China for distribution to the weaving industry through the Board. This was in pursuance of the decision to allow imports of raw silk only through the agency of the Government to meet the demand of the silk weaving industry and to protect the interest of the indigenous sericulture industry. Allotments of silk are under issue to Varanasi, Surat and other important silk-weaving centres. The ex-godown prices at Madras, Calcutta and Bombay has been fixed by the Board as under:

(1) Chinese raw silk 20/22 denier 'A' grade Rs. 33-8, (2) Japanese raw silk 20/22 denier 'A' grade Rs. 35-8, and (3) Japanese raw silk 13/15 denier 'A' grade Rs. 37-8.

GROWING COMPETITION IN CLOTH IN WORLD MARKETS

U.S. MANUFACTURERS SEEK HIGHER PROTECTION

From A Special Correspondent

MANCHESTER, 15*th January*

MANCHESTER LETTER

THE full export and import returns affecting British trade during 1956 are due to be published very shortly. Needless to say, the results collated on behalf of the cotton and rayon industries will fail to give much satisfaction to traders. The trend of events throughout the past year has been too discouraging for any last-minute revival to offer salvation in that direction.

The hampering effect of import restrictions, tariff barriers and foreign competition is increasingly accentuated by the steady industrialisation of areas which were formerly ready to accept textiles from beyond their own boundaries. The market, in fact, is getting progressively smaller while rivals multiply and only a steady expansion in consumption of clothing and other textiles *per head* of the world population can redress the balance.

This is the background against which the series of annual meetings of various sections of the Manchester Chamber of Commerce are held. Every year, these accounts can be calculated to provide a gloomy commentary on Lancashire's former glories, with only an occasional gleam of light when some special effort has achieved success which all too frequently proves transitory in character.

One such case has lately been the limited revival of business with India following the 1955 trade mission which secured certain concessions from the Indian Government. Much of the credit for the slightly better trend in shipments of cotton goods to certain Eastern markets, including Pakistan, Burma and Indonesia, must be attributed to the triangular deals under which surplus American cotton has been processed in this country for disposal in Asia.

In the Far East, however, as the China sectional report points out, markets which are already the scene of highly competitive textile trading are seeing the entry into the arena of more and more manufacturing countries. "The fight for the bulk trade in cheaper fabrics is increasing in intensity and the Lancashire exporter remains quite unable to meet the prices of the low cost producing countries."

Hong Kong Rivalry

The name of Japan inevitably crops up when assessing the strength of competitors to Lancashire's textile trade, but it is noticeable that the reports under review more readily turn to the current threat from Hong Kong. The overall trade picture shows that the Colony absorbed more British goods of all kinds by value last year than were exported to this country. Lancashire's complaint, however, is that most of Hong Kong's exports were in textiles, to the detriment of our local industry.

The Far Eastern section of the Chamber, however, looking a little further ahead, poses the question as to whether Hong Kong's recovery in her role as the leading *entrepot* port in the area will affect the activity of the manufacturing industry which has arisen in the Colony since the war. "Hong Kong's imports from all sources, particularly from Japan and China, conflict greatly with some of her own major products, and it is difficult to see how the two interests can continue expansion," the report remarks.

Imports from Hong Kong were also the subject of comment at the meeting of the Garment Manufacturers' Section. Pointing out that arrivals from this source now constituted 40 per cent. of clothing imports from all areas, the report described the average price of Hong Kong shirts at about one quarter of the selling rates of British goods, although both quality and size were not comparable.

In Africa, for so long a large buyer of Lancashire-made textiles, further appreciable reductions in purchases have occurred. The Africa Section of the Chamber painted a gloomy picture of the outlook, commenting: "The continued price differential between British goods, on the one hand, and Japanese and Indian goods, on the other, has not narrowed, if anything, it has widened, and it cannot be expected that, in its new-found independence, which in the Gold Coast will mature in March, there will be any urge to support British products at a substantial cost to the consumers."

Where textiles are faltering, however, other industries are benefiting materially from the development of African territories. In particular, many types of building materials, hardware, machinery, electrical appliances and other general merchandise are being imported in increasing quantities.

Rayon Pay Cuts

The demand by employers in the Lancashire weaving industry for pay cuts of upto 3s.-in-the-£ for 20,000 operatives engaged on weaving rayon is to be put before the conciliation committee for the industry under the chairmanship of Lord Terrington. This follows the final rejection of the demand by union leaders at a joint meeting with millowners in Manchester. The cuts would range up to 30s. weekly.

The employers asked for a premium of 40 per cent. paid to rayon weavers operating four to six looms to be reduced to 12½ per cent. The premium was introduced more than 20 years ago when rayon was a novelty fibre, more difficult to weave than cotton.

Mr. G. B. Fielding, Director of the Cotton Spinners' and Manufacturers' Association, representing millowners, said, after the meeting, that the premium was no longer justified, because technical progress had made it easier to weave rayon. This system of payment, known as the uniform list system, was a discouragement to higher productivity, because weavers did not want to switch to a more modern system where they received a smaller premium but operated more looms.

Rayon Cloth Dearer?

An increase in the price of rayon cloths produced from filament yarns has been foreshadowed by Mr. R. W. Pennington, Chairman of the Rayon Weaving Association, which represents 320 firms.

Referring to the recent 10 per cent. increase in viscose and acetate filament yarn prices, he refuted suggestions that this might not affect retail prices and might be absorbed by the rest of the textile industry.

The rayon weaving industry, he said, had not merely held its prices for the last three and a half years but had actually reduced them. This had meant absorbing substantial increases in pretty nearly every item of cost.

After the yarn cost, the next and largest item in the weavers' costs was wages and these had risen during this period by over 16¾ per cent.

"The plain facts are that not only is there a limit to the cost increase that can be absorbed at any given time but the rayon weaving section has already reached that limit and many of its prices are so unremunerative that it is hardly able to maintain its plant and machinery adequately, let alone provide for essential re-equipment," said Mr. Pennington.

Textile Unemployment

Latest returns of unemployment in the Lancashire textile industry show that 794 spinning workers and 804 weaving operatives are unemployed. Of this number, 99 are temporarily stopped in spinning and 209 in weaving.

When the last survey of the position was made by the Ministry of Labour in mid-December, 5,498 workers were needed in the spinning section and 1,343 in weaving.

In the finishing section of the industry, of the 563 unemployed, 299 were on short-time. Unfilled vacancies in finishing total 421.

"Export to U.S.", Call

British manufacturing firms, now turning to new export outlets because of the credit squeeze in the home market, have been urged to consider the "vast potentialities" of the United States market. The report to the annual meeting of the Manchester Chamber of Commerce said there was an excellent chance of success for goods with a relatively high labour content or in which traditional British skill or quality constituted an appeal. British goods which continued to be favoured by American buyers included whisky, woollen goods, clothing, footwear, linens and cottons. The quality and value of British machinery was also appreciated.

Reviewing Lancashire textile trade with the U.S. the report said that slight gains were recorded in 10 months of last year with shipments of 10,693,000 square yards.

The executive of the Chamber's U.S. Section was gravely concerned, however, at recent moves

RESERVES OF RANIGANJ COALFIELD

EXPECTED TO LAST A FEW CENTURIES

A RE-SURVEY undertaken by Mr. D. R. S. Mehta of the Geological Survey of India during 1951-52 has shown that the Raniganj coalfields contain an estimated reserve of about 13,000 million tons, which is nearly twice the amount estimated as far back as in 1928. The reserves, at the current rate of consumption, should last a few centuries. The results of Mr. Mehta's survey, which form part of the *Memoirs of the Geological Survey of India*, indicate that coal seams of the Raniganj and Barakar measures of the Raniganj coalfield fall into two distinct groups, which may be termed "high volatile" and "low volatile." The survey has also revealed that the Sanctoria and Dishergarh of the Raniganj measures in the coalfields are caking coals, while the better quality of coals of the Barakar measures exhibit a tendency to form hard coke. None of the coal seams of the Raniganj measures in the eastern part of the coalfield is known to be caking coal, while the Barakar seams are generally of inferior quality in the Gaurangdih-Churulia and Trans-Ajay Kasta areas.

The latest survey of the Geological Survey of India has re-established the correlation of some of the seams, which is of almost equal importance to the revised mapping of faults and coal seams and the revised estimates of reserves. The correlation is said to have taken place in the key area in the east central part of the coalfield in the Raniganj coal measures. The re-survey has discovered the Taltor seam outcrop south of the village Taltor and east of the Nandi fault. The seam previously designated as the Peniati seam in the area has now been correlated with the Koithi seam to the west of the Nandi fault. Further to the south-east, in the Satgram-Tapasi area, the Satgram seam has now been found to be the continuation westwards of the Jote Janaki seam.

Satgram Seam

It has also been found that an outcrop of coal seam mapped previously at the Satgram seam to the east of the Jamuria-Raniganj fault corresponds to the Shripur seam and this has been found to continue further to the east as the Toposi seam. The outcrop of another seam located on both sides of the Jamuria-Raniganj fault, some distance to the north of the Satgram seam outcrop, appears to be the Dhasul-Chichuria seam of the eastern part of the coalfield. The Dhasul-Chichuria seam is, thus, more likely to be the equivalent of the Dishergarh seam in the eastern part of the coalfield than the Chowkidanga-Jote Janaki seam.

The survey has also shown that the dip direction in the area south of the Damodar River near Raniganj is actually the strike direction of the seams and that the Ghusick, Raniganj and Narainkuri seam outcrops swing southwards across the river in the general north-east-south-west direction. The re-survey report draws attention to the fact that this part of the coalfield was much neglected in the past, due perhaps to the confusion about the identity of the seams cropping out along the north and south banks of the Damodar River. It is hoped, adds the report, that additional areas will now be opened up to the south of the Damodar River and necessary bore hole data will become available in due course to enable more detailed mapping of the coal seams in that part of the coalfield.

An Important Field

The Raniganj coalfield in W. Bengal, it may be noted, is one of the two most important coal-producing areas of India. This, along with the Jharia coalfield in Bihar, accounts for the bulk of the country's coal production. The two coalfields also produce the best coals in India and contain the entire reserves of coal considered suitable for metallurgical purposes, the best gas coals and the best coals for the generation of steam. The Raniganj coalfield was opened in 1820 and the Jharia field in 1893. Till 1906, Raniganj was producing more coal than Jharia, but, since then, the share of the latter coalfield has exceeded that of the former.

The first attempt to estimate the total reserves of coal in India was made by Dr. C. S. Fox in 1932. His estimate, made on the basis of a rough and ready method of assessment, placed these reserves at 60,000 million tons, of which only 20,000 million tons were workable. Out of these, only 5,000 million tons were, according to Dr. Fox, good quality coal, of which Raniganj coalfield accounted for 1,800 million tons and Jharia for 1,250 million tons. The figure of Dr. Fox in respect of good quality coal was brought up-to-date by the Coal Mining Committee in 1937, on the basis of subsequent production, and its estimate was 4,889.1 million tons, of which Raniganj accounted for 1,763.3 million tons and Jharia for 1,209.5 million tons. Allowing for the production in subsequent years, the reserves at the end of 1944 was placed by Dr. Gee at 4,520 million tons of good quality coal. In 1946, Mr. A. B. Dutt, working on Dr. Fox's figure, estimated that there were 4,460 million tons of good quality Gondwana coal in seams not less than 4 ft. thick and within 2,000 feet from the surface. He also stated that reserves of tertiary coals would be of the order of 2,527 million tons.

First Attempt At Qualitative Survey

The first attempt to determine the reserves qualitatively with some precision was made in 1950 by the Metallurgical Coal Conservation Committee which, after a survey of the working collieries and a study of data regarding reserves in virgin areas, estimated the reserves of coking coal as follows:

Grades	*Quantity* (In million tons)
Selected A and B	1,300
Grade I	659
Grade II	553

The data taken by the Coal Conservation Committee and its methods of estimation were not, however, accepted without criticism.

The Working Party of the Coal Industry made an estimate in 1951 of non-coking coal in the country, according to the figures furnished by the Geological Survey of India as based on Dr. Fox's estimates, and stated that the total quantity of non-coking coal, including tertiary coals, was of the order of 39,650.25 million tons. The Working Party, however, was not sure of the total reserves of good quality non-coking coal. Though there might be a shortage of the best quality coal, the Party stated, there was not likely to be any shortage of the good quality non-coking coal in the country. It suggested that steps should be taken to determine the total availability of non-coking coal. In order to bring up-to-date the estimation made by Dr. Fox in regard to Jharia coalfield and Dr. Gee in respect of the Raniganj coalfield, the Geological Survey of India undertook more recently a re-assessment, by fresh boring and mapping, of the reserves of coal in Jharia and Raniganj coalfields and the aforesaid estimate of the reserves of the Raniganj coalfield is the result of this re-survey.

Amalgamation Committee's Suggestion

The question of estimating the reserves of coal received the attention of the Collieries Amalgamation Committee also. In its report, it has urged the need for laying down a definite procedure for estimating the quantum and quality of reserves. The Committee says:

"It appears that no definite procedure has been laid down in India in regard to elimination of reserves of coal, and no attempts made *de novo* to estimate the total reserves of coal qualitywise. Other countries have adopted certain principles and have by now evolved standard methods of estimating the reserves. We understand that the importance of this matter has been realised and that the appointment of a committee to draw up the principles and procedure of determining the reserves of coal has been proposed by the Coal Board and that the Government of India will soon take action to appoint such a committee, not only to draw up the procedure but also to determine the reserves of coking and non-coking coal in India. We also understand that the Government of India have appointed a Coal Council, one of the functions of which will be to make an estimate of the reserves of coal. Considering the fact that no dependable data regarding the reserves of coal gradewise and fieldwise is available in India, we feel that it is high time that the procedure is laid down and the reserves are properly estimated. Arrangements should also be made to reassess the reserves every five years."

It is not known whether the latest re-survey of the Geological Survey of India has made any attempt to estimate the reserves quality-wise. For we have received a brief summary of its report giving the total reserves in the Raniganj field only.

BRITISH COALMINERS' RECORD

Workers in Britain's coal mines last year beat two output records. It was disclosed by Mr. James Bowman, Chairman of the National Coal Board, in London last week. Output per man-shift at the coal-face increased from 65.50 cwts. in 1955 to 66.67 cwts. and output per man-year by coal-face workers from 728 to 734 tons. Both figures were the highest ever recorded. There were also fewer fatal and serious pit accidents last year than in any previous year.

Continuing his review for 1956, Mr. Bowman said that by reducing the amount of coal exported from 13.9 million tons in 1955 to 9.7 million tons, it had been possible to cut down imports by more than half. Britain's total exports this year would be about 1 million tons less than in 1956. The financial results of the mining industry for the year were not yet available, but it was known that there was a substantial surplus. Work had been started on 15 new collieries, and 146 major reconstruction schemes were in progress.

Young German mining engineers would shortly be helping to meet Britain's shortage of technicians. Following discussions in West Germany, the National Coal Board had decided to recruit up to about 40 German university graduates in the next three years, and it was possible that qualified people from other Continental countries would also be recruited. The Board had also agreed to help about 40 students and lecturers from one Hungarian university, now refugees in England, to complete their studies. They might enter British universities and, when they graduated, the Board would offer them jobs. Those already qualified would be able to take up appointments as soon as they learned English.

INTERNATIONAL CLASSIFICATION OF COAL

The need for an internationally recognised and commercially operable system of coal classification was felt by the Coal Committee of the Economic Commission for Europe as far back as in 1949. The absence of such classification had created confusion and inconvenience in several fields of the Committee's activity. Moreover, since a number of countries were in the course of reviewing their various classification systems, many of which had not yet been rigidly established on a national level, it was considered by the Committee that the time was particularly opportune for the development of an international system. Accordingly, it set up in 1949 the Classification Working Party to examine work on the classification of coals and to make recommendations designed to achieve an international coal classification. The classification system and the statistical grouping of hard coals worked out by the Working Party are contained in a report* published by the E.C.E. Secretariat last month.

The international coal classification system has been drawn up to meet the needs of producers, traders and users of coal for a common language. The system provides a relatively simple procedure for the accurate identification of hard coals by type and should facilitate international trade in coal as well as encourage efficient utilisation.

The Working Party first collected and examined detailed information on the national systems of classification and methods of coal sampling and analysis used in the various European countries and the United States of America. Many of the national systems were found to have certain features in common and there seemed every possibility of evolving an international classification of hard coals by type which would retain the best features of the individual systems.

Extensive exchanges of coal samples among the participating countries were arranged so that laboratories could compare methods of analysis and testing. Examination of the results showed that, while methods of both sampling and analysis called for international standardisation, there was sufficient comparability between the results of proximate and ultimate analysis and the determination of calorific value for the various methods to be used for an international classification until such time as final standards became available. The question of standardisation was referred to the International Organisation for Standardisation and the Solid Mineral Fuels Technical Committee of that organisation is now proceeding with this work. The classification system finally agreed, and described in the report, is based on the intrinsic properties of coal and includes classes, groups, and sub-groups according to volatile matter, calorific value, caking and coking properties.

Experts from Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, the Federal Republic of Germany, France, Greece, Hungary, Italy, the Netherlands, Poland, Sweden, the Union of Soviet Socialist Republics, the Eastern Zone of Germany, the United Kingdom, the United States of America and Yugoslavia participated in the various stages of the Working Party's activities.

Following a decision of the E.C.E. Coal Committee in December 1953, the international classification system of hard coals by type and the statistical group of hard coals were both given a two-year trial period, ended 31st December 1955; during this time no major difficulty was encountered in the implementation of these systems in the countries participating in the Coal Committee's work. In March 1956, the Coal Committee, noting that the trials had been successful, recommended to governments the practical application of the system.

*"*International Classification of Hard Coals by Type*," 56 pages including 3 tables and 21 charts, Geneva; available in bilingual edition, English-French from Sales Section, European Office of the United Nations, Geneva, or may be ordered through Sales Agents for United Nations Publications. WHAT HAS HE TO DO WITH CEMENT ?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

TEA TRADE IN BRITAIN

MONOPOLY COMMISSION GIVES CLEAN BILL OF HEALTH

THE Monopolies and Restrictive Practices Commission of the U.K. has found, after a thorough inquiry, that there is no monopoly in the tea trade in Britain and that the trade, in general, is conducted on keenly competitive lines. It will be recalled that, in September 1955, the Commission was asked to inquire into the conditions in the trade, in response to the vociferous demand by British housewives, consequent upon the violent fluctuations in tea prices, following the "decontrol" of tea in Britain. At the end of 1954, it may be noted, tea prices recorded a steep rise and touched a peak of 7*s.* per lb. in the London auctions in January 1955. The precipitous rise was due to the shortage of supplies caused by (*a*) heavy floods in Assam and (*b*) the strike at the London docks. The supply position had been underestimated and the fear that prices would shoot up accentuated the rising trend. There was a strong tendency to accumulate stocks and push up prices. But soon the trade had to face consumer resistance and prices began to recede. By the summer of 1955, prices of tea were no more than half of those which had prevailed in January 1955.

These violent movements in prices within a short period were thus due more to factors beyond the control of the trade than to any deliberate practices on the part of traders, such as cornering of stocks by a few. This, however, was not popularly understood by consumers and there was, therefore, a clamour for reference of the case to the Monopoly Commission. The Commission could have rejected the demand for inquiry, as the Monopolies Act of 1948 did not apply to the tea trade. But the steps taken to curb the violent fluctuations, namely, the organisation of the London tea auctions and the arrangements for regulating the quantity of tea offered at each auction, though without any restriction on the total quantity offered during the year, brought the trade within the conditions to which the Act applied and required a fuller study by the Commission. As already stated, the Commission has held that the severe fluctuations in the price of tea following decontrol were not due to the existence of monopoly conditions or restrictive practices in the U.K. trade.

The Commission has found that the conditions to which the Monopolies Act, 1948, applies prevail in relation to the supply of tea on three separate grounds. These are: (1) about 55 per cent. of the tea supplied in the U.K. during 1954 was sold at London auctions where all sales are subject to uniform and obligatory conditions laid down by the Tea Brokers' Association in agreement with the association representing producers and buyers, (2) the volume of tea sold at the London auctions is regulated from time to time by the sub-committee for regulation of sales set up by the associations representing producers and selling brokers of tea; and (3) at least half the tea supplied in the U.K. is sold subject to resale price maintenance.

The Commission is of the view that, in these respects, those concerned conduct their affairs in such a way as to restrict competition in connection with the supply of tea in the U.K. It has, however, vindicated these measures by saying that the scheme to regulate sales is "a reasonable and practical measure which does not operate against the public interest." The Commission has also taken a similar view of the uniform conditions of sale at the London auctions. It says that it had no evidence that the regulation-of-sales schemes at Calcutta and Colombo, or the uniform conditions of sale at Calcutta, Cochin, Colombo and Chittagong are in any way against the public interest in the U.K. So far as individual resale price maintenance is concerned, the Commission is of the view that no special circumstances or practices distinguish the tea trade from other trades in this respect and it is not against the public interest.

The Monopoly Commission's report draws attention to the understanding between Brooke Bond & Co. and J. Lyons & Co. to notify each other, in advance, of any changes in prices of their packeted teas. Commenting that these two firms are keenly competitive, the Commission says that it is satisfied that there is no agreement on the level of prices. The understanding between the two, according to the Commission, is no more than a reasonable administrative measure and does not operate against the public interest. The Commission is of the view that, as a result of the passing of the Restrictive Trade Practices Act, 1956, agreements for the collective enforcement of conditions as to resale prices will become unlawful.

The Commission's findings have been welcomed by tea traders in London. At least, as the Chairman of the Tea Trade Committee put it, they have no complaints about the report, which describes the tea trade as the traders have always known it. Nevertheless, the findings of a public inquiry commission, such as the Monopoly Commission, serve a very useful purpose in clearing any misunderstanding against the trade and as such are beneficial to the latter. They also help the cause against restrictive practices in the trade.

OUTLOOK FOR NATURAL RUBBER

The way in which investment plans are being pushed forward by the U.K. rubber manufacturers suggests that there is no lack of confidence in the future of natural rubber. This is the considered view of the *Manchester Guardian*, expressed in the course of a comprehensive survey on the British rubber industry.

Discussing the relative shares of natural and synthetic rubber in future world consumption, the survey points out that increased output of synthetic rubber has brought about misgivings in Ceylon, Malaya and other Asian countries, for the well-being of which sales of natural rubber are vital. The industry's answer to this is two-fold. In the first place, the industry denies that there is any danger that natural rubber will give way to synthetics altogether. There is still a wide range of uses in which natural rubber is technically preferable. Secondly, the industry complains that the output of natural rubber has failed to keep pace with the growing market and that, without the production of synthetics, there will now be a world shortage. It also points to the severe fluctuations which have added greatly to the commercial hazards of industrial planning.

In the course of an editorial on the subject, the *Manchester Guardian* says:

"Until the war, almost the whole of this vast enterprise depended on the rubber planter and on the labourers who tapped the trees. That dependence has been broken—indeed, a few decades from now natural rubber may seem a rarity. There are good economic reasons why it should not, and there will certainly be a place for natural rubber in the world—provided that those who produce it understand that they are not indispensable. Technical ingenuity is making that a proviso that should be understood by primary producers everywhere, not only on the rubber plantations."

WORLD CONSUMPTION OF RUBBER

World consumption of natural rubber during 1956 is expected to be about 1,900,000 tons, the same as in the previous year, while production is believed to have declined from 1,950,000 tons to about 1,925,000 tons, due to a fall in output by small holders, consequent on the lower prices fetched during the major part of 1956. Consumption, too, would have shown a shrinkage but for the purchases of Russia and China, which have been the main feature of trading in the London and Singapore markets during the past 18 months.

Preliminary figures for November released by the International Rubber Study Group show that the world output of natural rubber for the month amounted to 167,500 tons, an increase of 12,500 tons over October 1956, while the aggregate production for the first 11 months of the year reveals a fall from 1,687,500 tons to 1,677,500 tons. World consumption during the month went up by 2,500 tons to 162,500 tons. The rise in usage is mainly accounted for by Russian and Chinese buying which rose by 11,800 tons to 27,200 tons, more than offsetting the fall of 9,500 tons in U.S. consumption. For the 11 months, as a whole, world consumption shows a slight increase, despite a fall in consumption outside the Communist countries, on account of the cut in car production in the free world and the larger use of synthetic rubber.

(*Concluded from next column*)

should be forthcoming from the Middle East and some of the other outmarkets."

If a stable and remunerative market is to be assured, a correct adjustment of supply against demand is necessary and Messrs. Thomas & Co. suggest that producers in India should bear in mind the experience of the early months of 1956 when setting the production targets for 1957. For, they say, a recession from the present price level may set in at the outset of the 1957 season, if production is allowed to increase too sharply in the early months of the new season.

TEA PRODUCTION IN 1956

GOOD RISE IN OFFTAKE

THE output of tea by North-east Indian estates during December 1956 amounted to 2.9 million lbs., as compared with 12.1 million lbs. in the corresponding month of 1955. This quantity probably represents an adjustment of the previous month's production, as the gardens in Assam had stopped plucking on 20th November and the other gardens at the end of the month. The fall in production during December has considerably reduced the excess in output seen up to the end of November over that in the corresponding period of 1955. Thus, the production of North-east Indian tea for the year 1956 amounts to 536.7 million lbs., as compared with 533.2 million lbs. in 1955.

The estimated production of South Indian tea for December is 10.7 million lbs., bringing the total production for the 12 months to 126.9 million lbs. (estimated), as against the actual output of 128.9 million lbs. in the corresponding period of 1955. On this basis, India's production of tea in 1956 may be placed at 663.6 million lbs., as against 662.1 million lbs. in 1955, that is, a fractional increase of 1.5 million lbs.

With the productions of Pakistan and Ceylon for the month of December and Indonesian output for the last two months of the year yet to be announced, the total world crop stands at 1,131.2 million lbs., as against 1,189.6 million lbs. in the whole of 1955. At best, the final world crop for 1956 is expected to be the same as that for the previous year.

In distinct contrast to the aforesaid world supply position, the world offtake has, according to Messrs. J. Thomas & Co., Calcutta, risen by over 125 million lbs., as compared with that in 1955. Although the increased offtake includes a substantial surplus brought in from 1955 North Indian teas, there has been heavy buying and the total world absorption out of the 1956 crop is expected to show a net increase of 50 million lbs. over the averages of recent years. Indian shipments account for the bulk of the increase in exports, with the result that the quantum of tea left for internal consumption in India is likely to show a shortfall. If, therefore, the domestic requirements are to be fully secured, internal buyers will have to operate on a heavier scale than usual and compete with the outmarkets.

The latest statistics of shipments of tea during 1956 to the U.K. from the main producing countries, aggregating 477.7 million lbs., show an increase of 134.5 million lbs. over 1955, and 43.2 million lbs. over 1954. Deliveries from the U.K. warehouses during the last few months have been consistently on a higher level, as compared with 1955 and 1954, and the total for 1956, at 543.9 million lbs., represents not only an increase of 25.8 million lbs. over 1955 but a record in recent years. It is not known whether there has been an actual rise in *per capita* consumption in the U.K. It is also difficult to say whether the *per capita* consumption is likely to be affected by the recent increase in retail prices. Be that as it may, the increased imports and purchases by the U.K. have to a very large extent contributed to the current "prosperity" of the tea industry.

The stocks in London at the end of December amounted to 62.5 million lbs. (as compared with 101.2 million lbs. at the close of 1955), the lowest figure in many years. They will, however, be augmented, to a considerable extent, when the large quantity of tea afloat—estimated at 78 million lbs., as against 29.7 million lbs. a year ago—arrives in the U.K. Besides, there were 27.8 million lbs. (as against 23.4 million lbs.) of tea entered for customs, but not received in warehouse.

Discussing the prospects for the earlier months of 1957, Messrs. Thomas & Co. observe:

"Prospects for the balance crop available for sale in Calcutta are good and it is difficult to conceive that clean common tea will be available below Rs. 2 per lb. at any time during the current season. January sales may show a slightly easier tendency, especially as a heavy weight of rains' teas are placed on the market from week to week. It is possible, however, that the market may register an upward trend during February, with the seasonal improvement in quality and reduction in the weight of auction offerings. There may be a slight decline in the tempo of purchases by the U.K. as its depleted stock position builds up, but this is likely to be offset by increased internal purchases of the end-of-the-season teas. The U.S.S.R. is expected to continue to lend its support to this market, especially for autumnal teas, while satisfactory demand

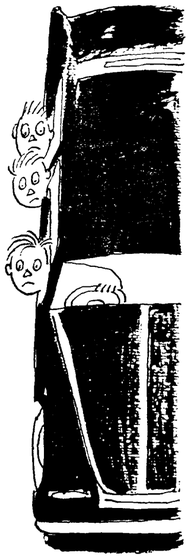
Can your car make a split-second stop?



As a responsible motorist you know that it should be able to. An emergency may arise any moment...it comes unannounced. So play safe. Among other things, see that you have a really reliable braking system.
Wise motorists all over the world have their brakes tested regularly and have them fitted with FERODO—the brake linings that make motoring safe. FERODO Brake Linings are made with asbestos because they have a tough job to do. In an emergency, their unfailing efficiency can prevent disaster.
There are FERODO Brake and Clutch Linings for every type of vehicle in the country—but these are only a part of the wide range of technical asbestos products which we make at AM&FM to meet the needs of Indian industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

STORY OF BURMAH-SHELL IN INDIA

FINANCIAL RESULTS OF TRADING ACTIVITY REVEALED FOR THE FIRST TIME

CONSIDERING that oil is a commodity in daily use, whether as fuel for lamps or energy for transport and machines, it may be somewhat surprising that so little is known about the economics of the industry. This ignorance often lies at the root of the wrong notions in some quarters that, in the oil industry, it is all fun and money and little labour. Perhaps, this prejudice can be traced to the numerically small number of units in relation to the magnitude of the industry's operations and also to the stories of large and quick fortunes which men built up through striking oil and the glamour which the great oil "kings" acquired in the public eye. Obviously, these stories, like all good stories, are true in a way, but they never wholly reflect the truth about the oil industry—the hard labour of exploration of oil, the large sums of money involved in its exploitation and the thin margin of profit with which it has to work, in order to meet taxation and save money for further prospecting for and production of oil.

It is not for nothing that the phrase "wild cat" scheme is particularly used in the context of oil exploration. For the essence of the process lies in chance occurrence of oil, though intelligent anticipation based on years of patient investigation has necessarily to precede explcration. In India, in particular, the misunderstanding about oil industry is widespread, due largely to absence of popular literature about the economics of the industry and the financial results of the few foreign companies that operate here. The blame for this must be laid mainly at the doors of the companies themselves. In pre-independent India, they could afford to ignore public opinion and keep their secret to themselves. But not so in an independent democratic India, where the public is quite conscious of its rights and politicians of all shades are tempted to exploit public ignorance to serve their ends. Much of the wrong notion about the operations of oil companies in India would not have survived had a true account of them been furnished to the public and the Press.

Energy Pattern

Against this background, one will certainly appreciate the need for a publication of the kind represented by *Background to Burmah-Shell*, brought out by the Burmah-Shell Oil Storage and Distributing Company of India Ltd. "Burmah-Shell" is a household name in this country, thanks to the fact that it produces articles of such vital necessity as kerosene and petrol. The pamphlet which it has brought out is somewhat inappropriately termed *Background to Burmah-Shell* for it contains much material that is of wider general interest, namely, the world energy pattern, the role of oil in that pattern and the financial magnitude of the industry. But the most noteworthy feature of this publication is the disclosure, for the first time, of the financial position and the trading results of the Burmah-Shell Oil Storage and Distributing Company of India Ltd., an aspect which was a closed book to the public till now. A perusal of the accounts of the Company shows that, contrary to popular belief, net earnings work out to no more than 6.58 per cent. of the capital employed and to 3.30 per cent. of gross proceeds of sales. It is to be hoped that other oil companies too will follow this example of Burmah-Shell and tell the public the story of their operations in this country. Meanwhile, the management of Burmah-Shell deserves to be complimented for giving this excellent lead.

The three main sources of commercial energy, as is well known, are oil, coal and water power. World energy output is rapidly expanding, in order to meet the growing demand from ordinary and industrial consumers. In 1955, the quantity of energy effectively consumed by the world was about 2½ times as much as in 1920. But, in this rapid improvement in production of energy, oil and natural gas have made a more notable contribution than even coal, the traditional source of energy. Over the last 35 years, the consumption of petroleum fuels has increased almost sevenfold and moved up in rank as the supplier of effective requirements of energy from one-seventh to over one-half of such requirements. Coal, on the other hand, has moved down from five-sixths to much less than one-half of the world's energy requirements. At the same time, the effective supplies of hydro-electricity have grown from 3 per cent. in 1920 to 7 per cent. in 1955. Expert opinion, it is stated, is now agreed that world supply of energy by coal is not likely to increase significantly from now onwards.

Atomic Energy

The energy locked up in the atom presents the picture of a source which makes the long-term future entirely secure, but the "speed of development and the extent of its possible application to the full range of energy requirements is still uncertain and speculative." The probability is that, for the next 20 years, the contribution of atomic energy will still have only small significance in relation to present established sources. The rate of growth of the world demand for energy is expected to be about 3 per cent. per year in the next three years. Coal consumption is expected to grow at less than 1 per cent. only. By comparison, oil together with natural gas is expected to grow at four times this rate. In the next 20 years, world demand for oil will have doubled. In India, the demand for oil is likely to double itself in less than ten years. Indeed, it doubled itself in the seven-year period ended 1955. There is certainly scope for increased consumption, considering that the *per capita* consumption is only 3 gallons per year, as against the world average of 70 gallons and the *per capita* consumption of 500 gallons in the industrially advanced countries.

Large investments of capital are needed in order to meet the growing demand for oil, a fact little realised in this country. The pamphlet avers that it appears unlikely that more than 10 per cent. of the money required can be drawn from the world's markets, without "seriously disrupting the flow of badly needed capital required for a multitude of other important claimants in industry and development schemes." The logical consequence of this fact, as the pamphlet rightly points out, is that the oil industry as a whole must be largely self-financing. This means that, after provision has been made for replacement of outdated existing plant, the money required to meet the expanding demand for oil can only be found by retaining in the business the major proportion of net earnings, and also that the size of those earnings must be adequate to sustain the required growth. It is noteworthy that, in the Shell group of companies, the finance set aside for reinvestment is no less than 80 per cent. of net earnings and forms a pool of finance to be employed where the expansion of facilities is required.

An important point which must be remembered in estimating the cost of meeting the expansion in the demand for oil is that the "marketing facilities which the public see represent only a relatively small proportion of the total cost." Money has to be found continuously to finance exploration for new oil sources often in extremely difficult territory without roads or the normal amenities of life, for drilling and for production facilities after oil has been found, for tankers, refineries, research and, finally, the network of ocean installations, depots and other marketing facilities. The cost for every additional ton of oil required in excess of existing demand, it is computed, calls for an investment of at least the equivalent of Rs. 535 per ton. And this cost is steadily rising. Fresh capital required by the oil industry throughout the world in 1956 is placed at Rs. 4,000 crores. During the last ten years, investment has been of the order of Rs. 26,000 crores and, in the next ten years will probably more than double itself to Rs. 55,000 crores. So far as India is concerned, according to the pamphlet, to find and supply the additional oil which the country will need in the next ten years, an investment of Rs. 360 crores will be required.

Pricing System

The pricing system for oil, it is needless to add, must take into account the growing cost of undertaking the capital investments necessary for meeting the increase in demand. Viewed against this need, it is noteworthy that the price of oil has been held well below general price levels. In India, for instance, the index of kerosene prices (Base 1939=100) in the last quarter of 1956 was 180, as against the general wholesale price index of 420. Explaining the pricing system for oil now in vogue, the pamphlet says:

"As an international commodity, oil moves freely across the oceans from several main supply sources and a number of tributary supply sources to almost every country of the world. It is, therefore, inevitable that there should be an integrated world market. This market develops from the activities of a very large number of buyers and sellers, including the biggest groups. It follows that world market prices are not based on any 'structure' laid down by any individual authority, but reflect the equilibrium between many factors frequently in conflict with each other. Tributary sources of supply bear a natural price relationship to main sources of supply and the range of prices offered for various qualities of crude are posted at these main sources of supply. An example of a reporting system which records oil prices is that of Platt's Oilgram Price Service published in the U.S. Gulf, which, in fact, is an independent market survey on a day-to-day basis. It is a reflection, and no more than a reflection of the equilibrium of prices caused by supply and demand and is influenced by the pattern and pressures of world oil trade. The basic product prices at Indian ports are established on the basis of Platt's quotations plus freights from the Persian Gulf and revised from time to time in sympathy with fluctuations in world prices and tanker freight rates.

"It is commonly believed that the big oil companies own the bulk of the world's tanker tonnage and therefore control the freight, market; this is quite incorrect. In point of fact, although the big companies have invested heavily in tanker fleets, 60 per cent. of the total tonnage is owned outside the oil industry, mostly by a number of independent operators. It follows that, here too, the quotations offered and accepted for short-term and long-term charters reflect the interplay of supply and demand and competitive forces.

"The more important petroleum products in India are sold in accordance with an establishd price formula and the prices are reviewed from time to time. This formula is simply the f.o.b. to c.i.f. computation, as already outlined, plus expenses, plus remuneration to give a reasonable return on capital employed. The size of these earnings which accrue should be enough to maintain the self-financing nature of the business. In fact, over several years, after payment of all taxes the net earnings of Burmah-Shell and its consignors averaged about one anna per gallon sold, and in 1955, amounted to about 3 per cent. of the proceeds of sales. As we have pointed out, this has not in fact proved adequate in India to meet the required increase in capital employed over these years. The small margin of profit, coupled with the necessity to finance continuous expansion, is at once the explanation and the justification of the large size of the major companies in the competitive world of the oil industry."

Vague charges are sometimes made against oil companies to the effect that they charge high prices for their product. But an analysis of the accounts of the Burmah-Shell, included in the pamphlet, shows that the earnings have proved insufficient to finance the capital investments and that the parent companies of the Burmah-Shell have had to provide the shortfall of capital. In 1955, the trading receipts of the Company aggregated Rs. 106.53 crores. The f.o.b. value of the oil accounted for 35.8 per cent. of the total receipts, ocean freights for 4.5 per cent., costs of distribution for 27.4 per cent., and duties and taxes paid to Government for 29.0 per cent. This left a balance of Rs. 3.52 crores or 3.30 per cent. of the receipts, representing the tax-paid earnings in India. In other words, net earnings constitute only 3.30 per cent. of the gross proceeds of sales. On the capital employed of Rs. 53.52 crores, made up of fixed assets (Rs. 10.83 crores), stocks (Rs. 18.91 crores) and other net assets (Rs. 23.78 crores), the net earnings represented a return of no more than 6.58 per cent.

Foreign Capital

The gross earnings during the seven-year period 1949-55 aggregated Rs. 57.95 crores. Out of this amount, Indian taxes absorbed about half or Rs. 28.84 crores, and U.K. taxes Rs. 6.08 crores, leaving a balance of Rs. 23.03 crores. The entire net earnings, it must be noted, were ploughed back into industry in the shape of an increase in working capital to the tune of Rs. 13.45 crores and in the net capital expenditure of Rs. 9.58 crores. The total capital employed increased, during this period, from Rs. 21.56 crores to Rs. 53.52 crores. In other words, the increase in capital employed was of the order of Rs. 31.96 crores, whereas the net earnings, re-

NEW PRODUCTS AND PROCESSES

New Radar for Air Traffic Control

THE Raytheon Manufacturing Company of the U.S. has developed long-range Terminal and Airways Surveillance Radar Systems. These radar systems will cost approximately $9,000,000. The Civil Aeronautics Administration of the U.S. has ordered 23 of these radar systems. Deliveries will begin in the summer of 1957 and will be part of an expanding coast-to-coast traffic control network of more than 70 civil and military radar installations. The network will give controllers a picture of aircraft traffic from 15,000 to 70,000 feet in virtually all the nation's air space and of aircraft at lower altitudes on the densely travelled routes. It will serve to track the civil and military jets which move at 600 miles per hour or more in the higher altitudes, as well as the conventional aircraft traffic using the lower altitudes. Some of the special features of the T.A.S.R. systems are a giant 40-foot antenna, which effectively covers more than 125,000 square miles of area . . . circular polarization which enables the radar to detect and track aircraft in rain and other weather conditions that often cause excessive "clutter" . . . an improved "moving target indication" which enables the radar to select only moving objects by filtering out reflections from buildings, mountains and similar fixed objects . . . an ingenious system of pin pointing the exact geographical location of a plane at all times by superimposing an electronically-generated map onto the face of the radar scope. The T.A.S.R. radar system is designed from a *basic* system with a "growth potential" that enables it to add units to meet the air traffic needs of the future. The current requirements are met by combining units already developed while other units are being perfected to meet the requirements as they present themselves, two to ten years hence. It is this "growth potential," it is claimed, that has attracted world-wide attention ever since the system was made available to the Governments of other countries. The Canadian Government ordered long-range radar systems to be installed at all airfields from coast to coast at a cost of approximately $5,000,000. The Raytheon systems are "tailored" to meet the needs of each airfield in every country.

TV on Tape

A demonstration of television programmes recorded on magnetic tape was recently staged by the Columbia Broadcasting System, and officials predicted it would not be long before programmes could be presented that would be as technically good as filmed TV shows. A popular talent-type show, "Art Linkletter's House Party," was used for the experiment. The show was staged in Hollywood, and was relayed by closed-circuit to the company's headquarters at Madison Avenue, New York City. The tape recorder used was made by the Ampex Corporation, of Redwood City, California, a leading U.S. manufacturer of this type of equipment. The tape was two inches wide, and recorded both picture and sound simultaneously. As soon as the show has been taped, it can be projected at once, without further processing, through a standard TV transmitter. The only unfavourable feature of the telecast was some instances of what is known as "drop-out"—a flashing of white lines intermittently across the screen. These were attributed to flaws in the tape, which could be eliminated as more experience was gained in the new technique. C.B.S. has begun to make commercial use of tape-recorded television shows, in the first instance involving rebroadcast of the news. News programmes presented "live" in New York have been recorded on tape, and telecast to the West Coast later, to take care of the time differential.

Measuring Ozone in the Atmosphere

An exceptionally sensitive unit for automatically analysing the amounts of ozone (a specially heavy form of oxygen) occurring in the air has been developed for the American Petroleum Institute. The device which operates electrically and not chemically, can, it is claimed, detect the presence of proportions of ozone as low as two parts of ozone per million parts of air in the atmosphere, and quantities as high as 50 parts of ozone per million parts of air. In between these ranges it can measure the quantity of ozone present with exceptional sensitivity. The instrument which was developed by the Armour Research Foundation of the United States is expected to contribute valuable information about the causes and form of atmospheric pollution, since the ozone in the atmosphere is believed to play an important role in air pollution. The operation of the ozone measuring unit is not affected by the occurrence of air polluting chemicals such as carbon monoxide, hydrocarbon vapours, or chlorine. A similar but more sensitive electronic ozone measuring system is now being developed by the Armour Research Foundation.

Welding of Plastic Materials

An electronic welding process which permits the quilting of plastic materials has been developed and perfected by an Australian firm, Moulded Products Ltd., of Richmond, Victoria, Australia. Quilted plastic materials are now widely used to trim motor car interiors, as upholstery for furniture and baby carriages, bedspreads, toilet bags and pillow covers. They consist of two sheets of plastic film, the top of vinyl plastic, the bottom of polythene, between which there is a padding material such as cotton wool. The welding apparatus manufactured by Moulded Products is electronically powered and operated, and the electronic generator converts the electricity to high-frequency power to weld the material. Welding is done on dielectric heating principles.

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Bombay, one of the more than five hundred offices waiting to take care of your savings throughout India.

GENERAL INSURERS ACCEPT NEW CODE OF CONDUCT

PROVISION MADE FOR PERIODICAL INSPECTION OF ACCOUNTS

LAST week, general insurers accepted a new code of conduct which provides for periodical inspection of their accounts by the Controller of Insurance and also seeks to reform the general insurance business, with a view to eradicating malpractices like rebating, which unfortunately continue to be practised. The new code supplements, rather than supplants, the existing code, formulated four years ago. In other words, the new code has substantially the same object in view, namely, the maintenance of right standards of business. Only, it introduces certain new restrictions, with a view to making the observance of those standards more universal than it has been. Explaining the significance of the new code, at a Press conference held last week, Mr. H. M. Patel, Chairman of the Executive Committee of the General Insurance Council, stated that it was a "renewed" effort by the general insurance industry to "set its house in order."

The last code of conduct for general insurers, it may be recalled, was revolved in 1952. An administrative machinery was also set up to ensure proper observance of the code. Further, the code was modified, reformed and improved from time to time in the light of the actual experience gained in its administration. It would appear that the Executive Committee of the General Insurance Council, which carried out an exhaustive review of the operation of the code, found that the code had not succeeded in achieving its objective.

The review also indicated certain lines of reform. They were: (1) insurers should maintain certain minimum departmental reserves; (2) they should maintain a certain minimum margin between their assets and their liabilities, called the "minimum security margin"; (3) they should, except in specified cases, collect premium before assuming risk; and (4) the Controller of Insurance should carry out an inspection of all insurers as often and at such intervals as he considers necessary, in order to establish that their business is being conducted in accordance with the law and tariff regulations.

Giving the background to the code, now formulated for observance by general insurers, a Press note says:

"The regulations prescribed so far by the Executive Committee of the General Insurance Council with a view to setting up high standards of conduct and sound practice for conducting the business were found, from experience, not to have produced the desired results. Certain practices which were found to be undesirable have unfortunately been found to persist despite all efforts. This question was reviewed by the Executive Committee a few months back and the matter was also discussed with various associations. Eventually, a scheme was drawn up by the Chairman of the Executive Committee and put to the Executive Committee for consideration. The Chairman's proposals were accepted by the Executive Committee and thereafter the scheme was circulated to all the general insurers, requesting them voluntarily to undertake to comply with the new set of regulations and also accept such disciplinary action as may become necessary, where there is failure to comply with these. The scheme is to be administered under the general supervision of the Executive Committee itself by the Controller of Insurance, acting on the advice of an independent committee consisting of (1) a senior member drawn from the profession of auditors, (2) another member, an experienced solicitor, lawyer or a business man, (3) an insurance executive appointed with reference to each case under consideration.

"The revised code came into operation from 1st January 1957, except in respect of one provision, namely, the payment of premium in advance. The proposal to insist upon advance payment of premium before assumption of risk was discussed again and the provision has now been decided upon to be made operative from 1st March 1957. It was felt that this additional time was essential in order that the insurers may be able to advise their clients. In the meantime, the Executive Committee would also arrange for examining, further points, if any, of practical difficulties so that from 1st March 1957, when these regulations would become operative, provision would be made for meeting such practical difficulties."

Under the new code, the Board of Directors of a general insurance company has to give an undertaking to afford all necessary facilities for inspection by the Controller, to abide by the disciplinary action imposed by the Controller in the event of breach of the code, to maintain minimum departmental reserves and, generally, to observe the code of conduct. The various provisions of the new code are:

Minimum Reserves

(i) The minimum departmental reserves to be provided by way of unexpired risk reserve plus additional reserves, if any, shall be 50 per cent. of the net premium income in the year in fire and miscellaneous (including aviation) departments and 100 per cent. in the case of marine cargo and marine hull business. (ii) Insurers, who provided less than the above percentages on the 31st December 1955, shall step up the reserves to the above percentages by increasing the reserve each year by not less than 2 per cent. of the net premium income or the profit earned in the department, whichever is higher, till the above percentages are reached; provided that, on 31st December 1956, they shall maintain not less than 42 per cent. in fire and miscellaneous departments, 52 per cent. in respect of marine cargo and 100 per cent. in respect of marine hull business. (iii) The Controller of Insurance may relax the above requirement and fix lower percentages in individual cases for any particular year, if he is satisfied that, by reason of transfer of portfolio at the beginning of a calendar year in any class of business, or rapid expansion of the portfolio in marine cargo business, undue hardship will otherwise be caused. (iv) In the case of country craft insurers, the Controller of Insurance may lower the above percentages to the extent he deems fit, but with the ultimate aim that these insurers should also come up to the level of maintaining 100 per cent. reserves in respect of both cargo and hull business.

Minimum Security Margin

(i) Every general insurer must maintain an excess of assets over liabilities of at least Rs. 5 lakhs or 10 per cent. of his net premium income, whichever is higher.

(ii) The existing insurers who do not have this excess margin at present will be given time to come up to this level by the 31st December 1959, provided that the excess margin should at least be Rs. 2½ lakhs or 10 per cent. of the net premium income in the year, whichever is higher, as at the end of 1956; Rs. 3½ lakhs or 10 per cent. of the net premium income in the year, whichever is higher, as at the end of 1957; and Rs. 4 lakhs or 10 per cent. of the net premium income in the year, whichever is higher, as at the end of 1958.

(iii) In respect of insurers not having a share capital and operating in a restricted way, that is, not doing business with the general public, the excess margin will be such as may be fixed by the Controller of Insurance.

(iv) In the case of country craft insurers, the excess margin shall be Rs. 1 lakh or 10 per cent. of the net premium income, whichever is higher, but such an insurer will be allowed to come up to this level by adding to whatever excess margin he holds as on 31st December 1956, at least Rs. 5,000 each year by way of additional margin. The relevant sum for the year or 10 per cent. of the premium income in that year, whichever is higher, will be the minimum margin for such an insurer.

(v) The minimum margin which has to be maintained by an insurer (whether Indian or non-Indian) will be assessed in respect of his world business.

(vi) In valuing the assets, a proper value will be placed on all the assets. However, assets will be excluded. Such assets are:

(1) *Agents' Balances and Outstanding Premiums in India*: (a) In respect of the year ending the 31st December 1956 such balances and outstandings not confirmed by the 31st March 1957 shall be excluded. Out of the confirmed balances and outstandings, what is not realised by the time the balance-sheet for 1956 is signed, to the extent it exceeds 10 per cent. of the gross premium income in India in 1956, shall also be excluded. (b) In respect of the year ending the 31st December 1957 and subsequent years this item shall be excluded except to the extent the amount is realised by the 15th January following.

(2) *Agents' Balances and Outstanding Premiums outside India*: These to the extent they are not realisable shall be excluded.

(3) *Sundry Debts*: Sundry debts not realised before the signing of the balance-sheet shall be excluded.

(4) *Advances*: Advances of an unrealisable character shall be excluded.

(5) *Furniture, Fixtures, Dead Stock, Stationery*: These shall be excluded.

(6) Pre-paid expenses may be included, but deferred expenses shall be excluded.

(vii) In valuing the liabilities, share capital plus other free reserves (like general reserve, investment reserve, reserve for bad and doubtful debts, depreciation fund, except on such items which are taken credit for as "assets") shall not be included. All other liabilities shall be included. In particular, the liabilities that will be included are: (1) provision for dividends and unpaid dividends in full. (2) Reserves for unexpired risks in respect of fire and miscellaneous departments: 40 per cent. of the net premium income; marine cargo: 40 per cent. of the net premium income and marine hull: 100 per cent. of the net premium income. (3) Outstanding claims in full. (4) Amounts due to insurance companies carrying on insurance business in full. (5) Amounts to sundry creditors in full. (6) Provision for taxation in full.

(viii) A statement of assets and liabilities and the values placed thereon, certified by the auditors of the insurer, should be submitted to the Controller of Insurance along with the annual accounts.

Premium Payments

Premium should be paid to the insurer before assumption of risk by the insurer, except: (i) where an insured or a principal agent gives business with a premium income of Rs. 25,000 or more per year and where an adequate bank guarantee is forthcoming as to payment of the premium, risks may be assumed without payment of premium, provided that the premiums in respect of risks assumed in a calendar month are paid by the 15th of the next calendar month and (ii) in cases where the exact premium for a risk cannot be ascertained without reference to head office or to the Tariff Committee, or for any reason, the risk may be assumed if there is a deposit made by the insured with the company at a suitable rate not less than As. 4 per cent. The premium must be adjusted within a month if it involves a reference to the Tariff Committee otherwise within a week. However, in the case of open covers in the marine department where declarations of interests are made overseas, adjustments of premiums may be made within 14 days.

It is to be hoped that general insurers will abide by the new code of conduct. After all, it must be remembered that the alternative to the acceptance of restrictions by their own representatives is legislative enactment. They ought to know that, if any Bill were brought forward in Parliament for a reform of the law relating to general insurers, there might be a more insistent clamour for nationalisation of general insurance than was witnessed at the time of the nationalisation of life insurance. It is, therefore, in the interests of general insurers that they should abide by the code of conduct. Further, there is a certain inherent advantage in observing a code formulated by their own representatives and accepted voluntarily by them. The advantage is that it can be worked in a manner that is free from the rigour and inhibiting restrictions inevitable in the observance of a legal enactment. It is noteworthy that a certain degree of flexibility will be maintained in the enforcement of the code. Although there will be no general relaxation, each hard case, it is stated, will be examined on its merits.
