Reports of encouraging trend in cloth exports failed to stem the rot in textiles, which were evidently still concerned with the absence of any increase in domestic consumption on account of the high prices. Bombay Dyeings slumped from Rs. 554-6 to Rs. 543-12 and, after a recovery to Rs. 551-14, retreated hastily to Rs. 538-12. Century gave way from Rs. 493 to Rs. 470-8. Kohinoors, however, proved to be a better feature with an erratically better trend. On buying support induced by expectations of encouraging working results, the shares climbed up to Rs. 329-8, after an initial drop from Rs. 324 to Rs. 321-8. Towards the close again, there was a setback to Rs. 325. Central Indias dropped by Rs. 9 to Rs. 113. Finlays were lower by a rupee at Rs. 304, as also Gokaks at Rs. 219-8. Indu Ordinaries were quiet at Rs. 10-7½, while Indore Malwas showed a gain of Re. 1-14 at Rs. 140. New Greats were maintained at Rs. 235, but New City Mills shed Rs. 2-8 to Rs. 149-6. New Kaiser-I-Hinds fell by Rs. 3-12 to Rs. 105 and Phoenix by Rs. 3-12 to Rs. 141-4. Khataus suffered a decline of Rs. 17-8 to Rs. 193-12, and Shree Niwas Rs. 6-14 to Rs. 178-2. Simplex moved down from Rs. 179 to Rs. 175-8, before gaining to Rs. 178. Standards drifted down from Rs. 421-4 to Rs. 407-8 and Svadeshis from Rs. 219-12 to Rs. 212-4. Tata Mills were quiet at Rs. 48-12. Colabas lost Rs. 9-8 to Rs. 60-8.

Bank shares were dull, but there was not any selling pressure and prices were nearly well maintained at the previous week's levels. Barodas were As. 4 lower at Rs. 103-8. Centrals were unchanged at Rs. 54-4, while their new shares shed As. 4 to Rs. 58-4. Bank of Indias gained As. 8 to Rs. 139-8, while Punjab Nationals were a shade quiet at Rs. 54-4. United Commercials were, however, lower by Re. 1 at Rs. 56-8.

Selected counters in the electricity section attracted investment enquiries and recorded fractional gains over the week. Ahmedabad Electrics were, however, erratic, moving between Rs. 100 and Rs. 99-6 before finishing As. 5 lower at Rs. 99-11. Bombay Suburbans moved up from Rs. 109-6 to Rs. 110, while Surat Electrics were lower by As. 10 at Rs. 112-8, despite the declaration of a second interim dividend at 5 per cent. per annum for the six months ended 31st December 1956. Tata Hydros gathered Rs. 2-8 to Rs. 122-8, Tata Powers Re. 1-4 to Rs. 1,217-8 and Andhra Valleys Rs. 7-8 to Rs. 1,210.

Sugar shares presented a mixed pattern. Belapurs were marked down from Rs. 230 to Rs. 228 and Phaltans from Rs. 146-8 to Rs. 144-8, while Walchandnagars advanced from Rs. 276-4 to Rs. 280, following the declaration of a higher dividend of Rs. 21 per share of Rs. 100 each for the year ended 30th September 1956, as against Rs. 18 for the previous year. On profit-taking, the shares slipped back to Rs. 277-8 at the close. Kesar Sugars changed hands Rs. 2 higher at Rs. 45 and Changdeo Sugars Re. 1 better at Rs. 30. The cement group shared the general depression, with A.C.C. receding from Rs. 169-8 to Rs. 165-8 and Digvijays from Rs. 149-8 to Rs. 147. Orissa Cements were featureless at Rs. 13, while Dalmia Cements gave way from Rs. 14-8 to Rs. 12. Jaipur Udyogs were dull at Rs. 12-0½. In the engineering and mining section, Alcocks were depressed at Rs. 251-4, a drop of Rs. 8-12 over the week. Tata Locomotives were subjected to heavy selling pressure, which pushed them down from Rs. 147 to Rs. 139-8. Premier Constructions were done Rs. 3-12 lower at Rs. 175-4. Jost's Engineerings were Rs. 3 down at Rs. 66. Shivraipurs continued to move down, declining by Rs. 2-12 to Rs. 91-12, during the week. Indian Coppers lost As. 3½ to Rs. 3-5½, as also B.B. Petrols to Rs. 2-8½.

Scindias displayed an erratic trend moving between Rs. 19-7 and Rs. 18-13, before finishing As. 2½ lower over the week at Rs. 18-14. Great Easterns were relatively steady with a fractional rise at Rs. 18-10. Hindustan Motors relapsed from Rs. 7-15 to Rs. 7-7 and Premier Automobiles from Rs. 104 to Rs. 103.

In the miscellaneous group, Bombay Burmahs (Old) declined earlier in the week from Rs. 695 to Rs. 678-2, following the extension of the Employees Provident Fund Act to plantations. The reports from Madras that the State Minister for Labour was having a round of talks with representatives of estates and labour to effect a settlement over the Tribunal's Award lifted the shares to Rs. 699-6. However, this improvement was short-lived and the shares receded to Rs. 681-4 at the close. National Rayons were on offer receding from Rs. 234 to Rs. 227-8. B.I.Cs lost As. 9 to Rs. 7-8 and Tata Chemicals As. 7 to Rs. 15-5, while Tata Oils were unchanged at Rs. 44-8. Wimcos dropped from Rs. 178-2 to Rs. 173-12. Hindustan Levers were steady at Rs. 19-3. Industrial Credit and Investment Corporations had business at Rs. 75-8 and United Motors at Rs. 24-8.

Calcutta Stock Exchange

CALCUTTA, 20*th February*

Lack of incentives was responsible for this week's decline in the volume of transactions and the marked fall in prices on the Calcutta Stock Exchange. Mr. T. T. Krishnamachari's helpful statement in Madras, wherein he declared that the Plan would not stifle the private sector and that he could not visualise the State at any time being in complete charge of industry and trade, as also his confidence in the country's economy being resilient to raise adequate funds for the Plan either by saving, or taxation, or investment by the people, aided sentiment for a time. However, lethargic conditions soon set in, and the Government of India's announcement that the Securities Contracts (Regulations) Act would come into force on 20th February, made operators reluctant to enter into fresh commitments. Speculative counters naturally looked back, and the heavy liquidation in Tata Steels in Bombay chilled operators' enthusiasm.

Government measures to prevent excessive speculation in industrial securities led operators to think over the future of Calcutta's leading speculative counter, Indian Irons. With the forthcoming rights issue, it was thought that there would be no shortage in these scrips, and this factor would also act as an element against excessive speculation.

Budget fears continued to restrain business, and the delay occurring in New Delhi in the disposal of the pending bonus issue applications was thought as a possible clue to apprehensions that tax on bonus shares would be increased in the same way as the recent raising of the super-tax on dividends. No indications from New Delhi were available as to the way of official thinking on the coal industry's demand for a further increase in coal prices to cover the new burdens which the Appellate Tribunal's award had imposed on collieries. The industry has represented that implementation of the award would raise output cost by Re. 1-12 per ton. Coals were naturally in the doldrums. The increase in jute goods stocks with mills and the rapid fall in prices of goods affected trading in shares of jute mills, while the general apathy led to an extremely quiet trend in the engineering and miscellaneous industrials section.

Coals were paid little attention, and Burrakurs turned quiet at Rs. 21. Talchers fell from Rs. 2-9 to Rs. 2-3, and East Indias from Rs. 27-4 to Rs. 27. Bengals were sought at Rs. 462, as against Rs. 463 previously. Central Indias were unchanged at Rs. 6-3.

Among minings, Indian Coppers shaded off from Rs. 3-8 to Rs. 3-4, but Burma Mines were firm at Rs. 3-12. Sone Valleys moved down from Rs. 7-11 to Rs. 7-6. Shares of paper mills were also affected, Titaghurs sagging from Rs. 38-9 to Rs. 38-2 and Orients from Rs. 33-8 to Rs. 32-6.

Engineering shares were far from lively. Selling pressure continued to depress Indian Irons which recorded a gradual fall from Rs. 28-11 to Rs. 26-15. Texmacos, at Rs. 19-8, were one point lower, and Jessop & Cos. were driven from Rs. 27-6 to Rs. 26-12. Braithwaite & Cos. gathered attention at Rs. 28, as against Rs. 28-6 early in the week and after mid-week fall to Rs. 27-11. Guest Keens had recovered to Rs. 24-7 before being lower at Rs. 24. Kumardhubis were steady at Rs. 9-13.

Teas were this week affected by the general dullness, and Tezpores, at Rs. 20-6, represented a fall by almost a point. Bishnauths recorded a rapid fall from Rs. 21-11 to Rs. 20-13. At Rs. 28-9, Hasimaras were lower by a few annas.

Miscellaneous industrials joined the quiet and featureless trend. B.I. Corporations, at Rs. 7-13, were lower by As. 6. Martin Burns on poor support realised Rs. 23-12, as against Rs. 24-14. Indian Cables at Rs. 29-4 were lighter by nearly two points. After a period of absence, National Rollings attracted support at Rs. 9-15, as against Rs. 10-6 previously.

* * * *

Madras Stock Exchange

MADRAS, 19*th February*

Dull conditions prevailed on the Madras Stock Exchange during the week under review. The continued stringency in the money market acted as the chief restraining influence. Even reports of efforts to reach an amicable settlement with regard to the Plantation Labour Award failed to infuse confidence. Transactions, therefore, were few and far between, the general tendency of prices being downward. Textile shares were subjected to selling on fears of fresh taxes and reports of accumulation of stocks at various centres. Planting shares were subdued. Banking and miscellaneous shares were neglected in the absence of buyers.

In the textile section, Radhakrishnas were pushed down by Rs. 10 to Rs. 295. Vasantas dropped a like amount to Rs. 310. Rajalakshmis and B. Woollens fell by Rs. 7 each to Rs. 173 and Rs. 365-8, respectively. Lakshmis receded by Rs. 6 to Rs. 252. Rajapalayams declined by Rs. 2 to Rs. 152. Vijayamohinis and Palani Andavar 'A's shed a rupee each, the former to Rs. 86 and the latter to Rs. 147. Balasubramanias were neglected at Rs. 73, as against Rs. 74 last week-end. Ranga Vilas eased by As. 8 to Rs. 86-8. Cauvery Spinnings lost a like amount to Rs. 12. Pankajas were quiet at Rs. 77, as also Premiers at Rs. 194, R. C. Ambikais at Rs. 262 and Metturs at Rs. 440. Malabar Spinnings, however, met with some buying enquiries and moved up by a rupee to Rs. 109. Coimbatore Spinnings were also favoured As. 8 higher at Rs. 88.

Among tea shares in the planting section, Coonoor Teas receded by As. 8 to Rs. 24-8. Kalasas and Peeranades decreased by As. 6 each to Rs. 14-2 and Rs. 29-2, respectively. Periakaramalais shed As. 3 to Rs. 7-5. Nelliampathys lost an anna to Rs. 3-4. Nilgiris Teas remained quiet at Rs. 9-12, Nonsuch Teas at Rs. 22-12 and Neelamalais at Rs. 6-1. Waterfalls, however, gathered half-an-anna to Rs. 5-8-6. Among rubber shares, Tropicals decreased by As. 10 to Rs. 33. Rajagiris declined by As. 9 to Rs. 21-3. Midlands and Pullangodes eased by As. 2 each to Rs. 18-3 and Rs. 2-11, respectively. Nennemys, on the other hand, had some support and rose by a rupee to Rs. 22-8. Malankaras were bought As. 12 higher at Rs. 30. Coffee shares proved an exception to the general trend and tended to move up, following reports of an all-time record output of coffee in the current season. Consolidated Coffees rallied As. 9 to Rs. 20-12. Coffee Lands were on request, their quotation advancing by As. 4 to Rs. 23-6. Rajendras were firm at Rs. 11-6, as also Mysore Coffees at Rs. 2-14 and Kumergodes at Rs. 6-12 *cum-div.*

In the sugar section, Mysores and Kirlampandis were both done As. 8 lower, the former at Rs. 41-8 and the latter at Rs. 33-12. Travancores eased by As. 3 to Rs. 11-1 and E.I.Ds. by As. 2 to Rs. 28-6. Deccans were a fraction lower at Rs. 11-1. Cauverys were quiet at Rs. 35. United Breweries, however, had some buying enquiries and advanced by Rs. 2 to Rs. 182. Indias were better by As. 2 at Rs. 16-8.

Activity in the miscellaneous section was restricted. Textools came in for selling and dropped Rs. 5 to Rs. 260. India Cements lost As. 8 to Rs. 29-3. F.A.C.Ts declined by As. 2 to Rs. 6-4-6 and Mysore Papers by an anna to Rs. 16-3. Singarenis were quiet at Rs. 10-8, Travancore Cements at Rs. 9-15 and Sen-Raleighs at Rs. 13-6. But Binnys were in request and the value increased by Rs. 2 to Rs. 182.

In the banking section, Indian fully paids and Rs. 75 paids eased by Rs. 2 each to Rs. 198 and Rs. 150, respectively. Indian Overseas declined by As. 8 to Rs. 132. Punjab Nationals were neglected at Rs. 56. Pandyans were stagnant at Rs. 40 *cum-div.* Bank of Mysores, however, elicited some support and gathered As. 8 to Rs. 255-8 *cum-div.* (final).

MARKET GOSSIP

(Concluded from previous page)

provide working capital. The purchase consideration, including the value of current season's crop, is Rs. 20.5 lacs. The estates, which have 890 acres under Arabica and 260 acres under Robusta, have given an average yield of 3.6 cwts. per acre during the past eight years and, with more intensive cultivation, the yield is expected to go up to 4½ cwts. per acre. On a conservative basis, the profit on current year's crop is estimated at Rs. 4.6 lakhs. This is arrived at on a selling price of Rs. 2.6 per pound and an estate expenditure of Rs. 450 per acre. On the basis of a yield of 4.5 cwts. per acre and an estate expenditure of Rs. 500 per acre, the future profits are assessed at an average of Rs. 3.23 lakhs, which will provide enough cover for the interest on the preference shares and debentures and will also give a return of 17.5 per cent. on the ordinary capital. Even after taking into account the amortisation of the debentures and capital expenditure on labour amenities which have to be provided out of this profit margin, the return to ordinary shareholders is expected to be reasonable.

NEWS IN BRIEF

THE Tariff Commission has taken up for investigation the claim of the woodscrew industry for continuance of protection beyond 31st December 1957 and proposes to conduct a public inquiry some time next month.

The trade agreement between India and Indonesia, which was concluded on 30th January 1953, has been extended up to the end of June next. The agreement was last extended up to 31st December 1956. India has a favourable balance of trade with Indonesia.

The 12,970-ton *m.v. Jaglaxmi*, the largest cargo ship to be listed on the Indian registry, built by a Japanese ship-building yard for the Great Eastern Shipping Company, Bombay, was handed over to the latter at Osaka, Japan, on the 14th inst. The ship is fitted with the largest cargo-handling appliances and will be operated by the Company on its overseas tramp service.

A geological and geophysical survey conducted by experts of the Government of India has revealed the possibility of striking oil in parts of Jaisalmer district of Rajasthan. An aero-magnetic survey by foreign experts has strengthened the belief. No drilling operations have been undertaken so far, but tube-wells sunk in the areas, have revealed the presence of shells and hard rock formations, instead of porous sandstone, even at a depth of 1,000 feet.

The Government of India has increased the allotment of ammonium sulphate manure to Andhra State from 95,000 tons in 1956-57 to 150,000 tons in 1957-58. The increased allotment will help the State Government to enhance foodgrains production according to the target laid down in the second Plan. The present production of foodgrains in Andhra is about 5.50 million tons, which is estimated to rise to 7.05 million tons by the end of the second Plan period.

The Neiveli Lignite Corporation proposes to participate in the scheme for the training of foremen and supervisors by opening an institute at the proposed site. Candidates required for the project will be trained for direct absorption at Neiveli. The scheme is to train 50 persons in a four-year course. Similar courses will be started in three centres in the South, namely, Coimbatore, Bangalore and Madras, in co-operation with local industrialists. The facilities offered in these "sandwich" courses will enable the students to learn under actual industrial conditions and to become acquainted with job practices, plant operations, etc., before rather than after graduation.

The erection of the Rs. 85-lakh high voltage insulators factory, set up at Bangalore by the Government of Mysore in collaboration with the N.G.K. firm of Japan, is complete and it will be formally inaugurated by the Prime Minister. The capacity of the factory is 2,500 tons of high voltage insulators per year. With the present equipment and kiln, the factory could manufacture about 400 tons per month, though the target figure is only 210 tons. There are at present six Japanese technicians in charge of production. Under the agreement between the Mysore Government and the Japanese firm, six nominees of the Government are to get training in the manufacture of high tension insulators.

The Government of India has set up a Committee, headed by Mr. B. K. Gokhale, a former Chairman of the Tungabhadra Board, to recommend measures for the development of the inland water transport system. The Committee will examine, among other things, the prospects for increasing and extending the river and canal service. The inclusion of a representative of the Central Water and Power Commission in the Committee suggests that the master plan for development of inland transport service in the country, recently drawn up by the Commission, will be considered by the Committee. It will also suggest steps for effective co-ordination between railways and inland waterways and for appropriate allocation of traffic between the two.

The Government of India has set up a panel of experts, with Dr. S. P. Varma, Development Officer, Ministry of Heavy Industries, as convener, to draw up programmes for the development of the refractory industry, with particular reference to the needs of the iron and steel industry. The requirements of the different types of refractories—fireclay, silica, cement and mortar—are expected to be of the order of one million tons per year by the end of the second Plan period. The actual capacity at present is about 450,000 tons and nearly 70 firms are engaged in the manufacture of different types of refractories in India. Licences have been issued or are proposed to be issued for additional capacity for the manufacture of refractories. This will bring the total actual and projected capacity to 1.15 million tons. The panel will have to consider, among other things, how soon these schemes will materialise.

More than 500 applications have so far been accepted by the National Small Industries Corporation for the supply of 2,000 machines on hire-purchase basis to small industrial units. The hire-purchase scheme, which was started in March 1956, is applicable to small industrial units having an investment not exceeding Rs. 5 lakhs and employing not more than 50 persons, using power, or 100 persons without the use of power. Until 25th January 1957, about Rs. 6.8 lakhs had been received as earnest money from small industrial units desiring to take advantage of the scheme. This amount was in respect of 529 machines, out of which orders had been placed for 442 valued at over Rs. 37.56 lakhs. Nearly 127 machines valued at Rs. 7.26 lakhs have already been delivered under the scheme to small-scale industries. In addition, orders for over 630 machines valued at over Rs. 21.3 lakhs have been placed for keeping machines in stock.

From Abroad

Rich nickel and cobalt deposits, estimated at 75.5 million tons, have been found in the Island of Waigeo, north-east of Netherland's New Guinea.

A West German trade delegation, headed by Dr. Werner von Bargen of the Foreign Office, is to visit India, Pakistan, Ceylon and Burma next month for routine trade talks.

A five-day exhibition of Indian textiles was opened on the 20th inst. at Singapore. The show, primarily meant for importers and dealers, is organised by the Cotton Textiles Export Promotion Council of India.

The Institute of London Underwriters has announced reductions—in most cases by 50 per cent.—in war, strike, riot and civil commotion shipping risk rates for voyages to, from or between ports on the Chinese coast.

The East Pakistan Government has announced that the Pakistan Government has not made any decision to nationalise the jute trade. Jute traders were recently worried over reports that the Government would nationalise the jute trade.

Japan is planning to order an atomic reactor from Britain next year. A survey mission will be sent to the U.K. to inquire into the availability of an earthquake-proof reactor and to make preliminary arrangements for a contract to buy atomic fuel.

Saudi Arabia has applied for membership in the I.M.F. and the International Bank for Reconstruction and Development. Five countries, namely, Saudi Arabia, Libya, Tunisia, Sudan and the Gold Coast, are now on the waiting list to join the twin institutions.

The prospects for exporting jute goods to South Africa were discussed at Dundee recently when representatives of jute firms met Mr. Gray, former U.K. Trade Commissioner at Wellington, New Zealand, who is shortly taking up similar duties in Cape Town, South Africa.

The Chinese Academy of Science has set up a geo-physical observatory at Lhasa for observing terrestrial magnetism and earthquakes and for investigating different strata of the Tibetan plateau. The centre will also carry on research in solar energy for which it provides unique facilities.

The scope for Swedish exports to the Soviet Union has been fixed at Kr. 160 million ($31 million) under the Swedish-Soviet trade agreement for 1957 signed in Moscow on the 5th inst. This compares with Kr. 90 million for 1956. The scale of Swedish imports from Soviet Russia has been raised from Kr. 150 million to Kr. 160 million.

British and Japanese officials, who had been negotiating new trade agreements in London, are reported to have reached substantial agreement. Under the proposed arrangements, Japan and the sterling area, of which Britain is the banker, may balance their trade during the new 12-month period at about £300 million each way.

Canada's population increased almost as much in the five years from 1951 to 1956 as in the previous ten years. Canada's population, according to the Dominion Bureau of Statistics, stood at 16.08 million as on 1st June 1956, an increase of two million over the 1951 figure of 14 million. This compares with an increase of 2.5 million in the ten-year period 1941-51.

The U.S. Government and private American industry are experimenting with powdered butter for export to countries where dairy products are in short supply. The powdered butter is a combination of butter and non-fat dry milk, processed under a new formula. The product contains 72 per cent. butterfat, but will remain unspoilt for long periods in tropical climates.

A new chemical called Simazin, tested by the University of Missouri College of Agriculture (U.S.A.), has shown that it can give excellent control over growth of weeds in maize fields when sprayed behind the "planter." Simazin, made by the Geigy Chemical Corporation, is expected to be available in sufficient quantities to meet the United States corn belt demand this year.

The wholesale price index of the Swedish Board of Trade rose by three points to 328 in December, which is just one point below the all-time peak of 329, reached in June 1956, and seven points above the figure for December 1955. The December increase was largely due to higher prices for certain imported raw materials and oil which were passed on to products manufactured locally.

The U.S. Department of Agriculture has reported that employment of factory workers in the United States reached a record high of 51,500,000 during 1956. This is 1,500,000 higher than the previous high set in 1955. There also was increase in employment in every non-manufacturing segment of industry. The figures do not include farm workers, the self-employed, and persons in military service.

Nepal will undertake an exhaustive physical and aero-magnetic survey in search of oil under its first Five-Year Plan. A Swiss firm has also approached the Nepalese Government with proposals for oil prospecting. It is understood that efforts will be made to associate India with the final stages of the project, if the initial survey proves successful. The area for the initial survey will be Eastern Nepal, the belt contiguous to Assam's oil-bearing region.

Most of the Rs. 138.75 crores of foreign exchange earned by Pakistan in 1956 was through exports from East Pakistan. As regards allocation of earnings, out of the total allotment of Rs. 46 crores in the January-June 1956 shipping period, East Pakistan had been allotted Rs. 11 crores for imports, Karachi Rs. 11 crores, West Pakistan Rs. 6 crores and Rs. 18 crores for invisible imports. In the following shipping period, Rs. 14 crores were earmarked for invisible imports, Rs. 12 crores for imports into East Pakistan, Rs. 13 crores for Karachi and Rs. 7 crores for West Pakistan.

PERSONAL

MR. Ellsworth Bunker, U.S. Ambassador-designate to India, has arrived in New Delhi.

Dr. H. Dietmar, Consul-General-designate in Bombay for West Germany, has arrived in Bombay from Duesseldorf.

Mr. Var Kamel, Cambodian Minister in India, has been appointed Ambassador Extraordinary and Plenipotentiary of Cambodia to India.

Mr. Chester Ronning has been appointed High Commissioner for Canada to India in succession to Mr. Escott Reid who will be leaving by about the end of April.

Mr. Purshottam Lal Bhandari has been appointed as Deputy High Commissioner for India in Pakistan, Lahore. He will shortly assume charge of his new post.

Mr. P. C. Malhotra, a member of the Income-tax Appellate Tribunal, has been appointed President of the Tribunal. He took charge of that office on Saturday last.

Mr. Babubhai M. Chinai, a prominent businessman of Bombay, has been unanimously elected President of the Federation of Indian Chambers of Commerce and Industry for the current year.

Dr. H. Hussain Zaheer, President, Association of Scientific Workers of India, Regional Laboratory, Hyderabad, has been appointed a Member of the Panel of Scientists set up by the Planning Commission.

Mr. J. Luckham, the new Managing Director of Dunlop Rubber Co. (India) Ltd., was unanimously elected Chairman of the Association of Rubber Manufacturers in India, *vice* Mr. Cecil Stack, who has resigned.

Mr. E. Parker, Director, Imperial Chemical Industries (India) Private Ltd., has been elected President of the Bombay Chamber of Commerce and Industry, for the year 1957-58. He will take office after the annual general meeting to be held on or about 20th March 1957.

Sir Norman Kipping, Director-General of the Federation of British Industries, will visit India from 15th March to 3rd April. His principal calls will be at Bombay, Calcutta and Delhi, where he hopes to meet ministers, senior Government officials and leading business men.

Mr. N. R. Pillai, I.C.S., Secretary-General, Ministry of External Affairs, has been appointed Chairman of the Board of Directors of the Hindustan Machine Tools (Private) Ltd., Bangalore. Mr. Pillai is also the Chairman of the Hindustan Shipyard. He will hold these posts in addition to his present duties in the External Affairs Ministry.

Mr. William E. Barrat, a British expert in lighthouse equipment, will arrive in India in March on a one-year assignment to advise the Government of India on the installation and testing of lighthouse units, as part of a major programme of lighthouse improvement and modernisation. He will also train installation engineers.

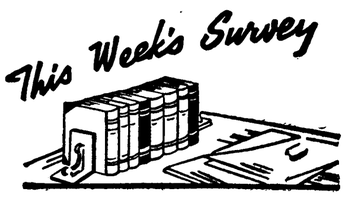
"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 27*th February*

The British Bank Rate

The Bank of England discount rate has been reduced from 6 per cent. to 5 per cent. The last change in the rate was on 20th September last. It was then increased from 4½ to 6 per cent. During the past month there has been a marked increase in proportion of the Bank of England reserves to liabilities, the figures being 35.4 per cent on 22nd January, 39.5 per cent. on 28th January, 38.9 per cent. on 4th February and 42.8 per cent. on 13th February. The enhanced rate has evidently, on the present occasion, caused no surprise in London. On the contrary, the City has been asking itself for some days past why the 6 per cent. rate was still allowed to remain, in spite of the fact that there was no longer any danger of undesirable speculation or other inflationary tendencies, while, at the same time, a fall in the official minimum had become urgently necessary in order to encourage legitimate trade activity. No surprise is expressed at the reduction of the rate; no surprise would have been expressed had it remained unaltered—but in the latter case, the City, we believe, would have been greatly disappointed.



TRAINED PERSONNEL

THE long-range objective of projecting the country on the industrial map of the world, as well as the immediate requirement of the successful implementation of the second Plan, makes training of adequate personnel, technical and administrative, an imperative necessity. An underdeveloped country like India, planning for rapid industrial advancement, has to face many problems. Many seem to gloss over the fact that lack of adequate financial resources is not the only one and that shortage of skilled personnel is an equally serious obstacle in the realisation of its desire. Mr. Jehangir Ghandy, Chairman of the Board of Management Studies of the All-India Council for Technical Education, has, therefore, rightly emphasised the necessity for increasing the supply of trained personnel to cope with the economic development of the country. Addressing a meeting held under the auspices of the Madras Institute of Management, Mr. Ghandy observed that, while the area of agreement on matters of economic policy and objective was pretty wide, considerable doubt existed in many minds whether, in its range and quality, administrative action, in the private and public sectors alike, would prove equal to the responsibilities and challenges contained in the Plan. In fact, as the Plan proceeds, difficult issues are likely to relate less to matters of policy and approach than to questions of administration and organisation.

The Government, it cannot be said, is unaware of the graveness of the problem. In the first Plan, a sum of Rs. 28 crores was allocated for technical and vocational education. Although only 50 per cent. of this could be spent, an increase of 120 per cent. in the outturn of engineering graduates and 160 per cent. in that of diploma holders was achieved by the end of the Plan period. The second Plan has earmarked Rs. 50 crores for technical education. According to the estimates of the Engineering Personnel Committee, even if the whole amount is spent on expansion and development of technical education, as envisaged in the Plan, there will still be a shortage of 1,690 graduate engineers and 5,750 diploma holders. As regards administrative personnel, the demand for them would only grow with economic development.

All this serves to underline the need for increasing the supply of skilled personnel through training and every other method possible. Since the first and the second Plan periods mark only the beginning of a long era of planning in India, it is necessary to take a long-range view of the problem. For, executives and administrators are not made in a day. Nor is management the simple art it used to be. The growth of the size of the organisation, the rise of trade unionism and the growing State participation in industrial undertakings, etc., have made management a profession requiring specialised knowledge and skill. The recent formation of an Industrial Management Cadre by the Government is, therefore, a step in the right direction. So is the proposed Administrative Staff College at Hyderabad and the National Institute of Management, both being non-Governmental institutions. They would turn out to be very useful institutions, if they were run on right lines.

The Joint Committee, appointed by the All-India Council for Technical Education, had recommended that the Staff College should be patterned on the college at Henley-on-Thames, England. But one thing that should not be lost sight of is that, whether the model is Henley or the Harvard Business School of the U.S., the Indian institution should be so designed as to suit the special circumstances of the country. The decision to make this educational institution an autonomous body, functioning as a registered society, completely free from Government control and financed out of voluntary contributions, is quite sound, as it will obviate the necessity of cutting through the vast morass of red-tapism which usually stands in the way of evolving an independent policy. The members of the Society will consist of patrons, who subscribe a minimum sum of Rs. 20,000 a year for five years and ordinary members subscribing Rs. 2,000 a year for five years. The Tata Iron and Steel Company Ltd., true to the best philanthropic traditions of the House of Tatas, has already joined as patron and nine different Tata companies have agreed to become ordinary members. It is to be hoped that all enlightened business men in the country will come forward and share in an undertaking meant to serve the larger national interest of economic development in the best manner.

MORE ON I.F.C. LOANS

Further elucidation of the credit policy of the Industrial Finance Corporation of India was made by the Corporation's Chairman, Mr. K. R. K. Menon, in the course of his reply to the memorandum submitted by the Madurai-Ramnad Chambers of Commerce last week-end. Mr. Menon also disclosed that he had submitted a proposal to the Government of India to approach the capital market with a debenture issue in order to augment the resources of the Corporation. He hoped that the same would be accepted by the Government.

The Corporation's resources, as is well known, are very limited as compared with the demand for credit and further loan operations can be carried out only by raising its resources by more loans from the Government or by the issue of capital to the public. The Corporation is seized of the problem. Its Chairman, however, assured the business men of Madras two weeks back that lack of resources would not stand in the way of the Corporation meeting their genuine demand for financial assistance. There would appear to be a fear among the business men that the I.F.C., being a corporate body depending on subsidies from the Government which was wedded to the policy of developing the public sector, would not be able to render necessary financial assistance to the private sector. Allaying these fears, Mr. Menon said that the Corporation had sanctioned almost all loan applications which conformed to its requirements.

Alluding to the misconception that the Corporation was working with limited funds and was dispersing loans on a rationing basis, Mr. Menon said that, while it was true that the Corporation had only limited funds, at the present moment, as far as could be foreseen, it would be able to meet the likely demands. As long as business men conformed to the terms and conditions stipulated by the Corporation, there would not be any difficulty. The Industrial Finance Corporation in the preamble to its constitution had laid down certain conditions under which loans could be given. The constitution of the Corporation laid down that only in cases where it was impossible to raise necessary funds from the public by way of share capital the Corporation was intended to help. In fact, in many cases, it had given loans even where money could have been raised by other methods. A notable instance in point is provided by the West Coast Paper Mills Ltd. which was given financial assistance by the Corporation even before the Company's capital was issued to the public. Mr. Menon was not, therefore, wrong when he claimed that the I.F.C. has so far taken a broad and generous view in this matter of giving loans.

Referring to the remark that the Corporation owed its existence and resources only to Government subsidies, the I.F.C. Chairman said that, though it was a Government-sponsored organisation, the Corporation had as its shareholders more than 200 to 300 co-operative societies and a number of Scheduled banks; and that the Government had guaranteed these shareholders a minimum dividend. It was true that the advances given by the Government would hardly be sufficient for the Corporation. The Government had, therefore, taken up the question of devising ways and means of augmenting the resources of the Corporation. It was in this connection that the proposal to issue debentures had been forwarded to the Government.

The delay in the disposal of applications for loans is an oft-repeated complaint against the Corporation. The delay in the majority of cases, Mr. Menon said, was due to non-availability of adequate information from the applicants. The formalities in procedure, though some of them were seemingly trivial, were serious ones and the I.F.C. Chairman admitted that, unless there was change in the existing system of law relating to mortgage, etc., it was not possible to make any compromise on them. In order that genuine requirements may not suffer in the meantime, the Corporation has introduced recently the system of giving interim loans.

Another handicap in obtaining loans from the Corporation is the high level of stamp duty on mortgage transactions. In reply to the plea for a reduction in stamp duty, Mr. Menon said that the Corporation took up this matter with various State Governments with a request to them to either exempt all loan transactions of the Corporation from stamp duty or at least reduce it. It is rather disheartening, though not surprising, to hear from Mr. Menon that the response from the State Governments to the Corporation's request is not encouraging. So far only two State Governments, namely, those of the Punjab and Saurashtra, have made liberal concessions and one of them has agreed to reduce the duty by half for a certain period. Other States have refused to budge. That only goes to show how shortsighted they are in their anxiety to gather as much revenue as possible. They do not seem to have realised that the more industries a State had the more prosperous it would be and the revenues of the Government concerned would be greater.

SMALL-SCALE INDUSTRIES

The development of cottage and small-scale industries would be greatly accelerated in the coming years if the series of recommendations made by the First Inter-State Seminar, held at Rajgir a few days ago, were implemented successfully. One of the decisions taken at this seminar was that the National Extension Service block headquarters should be developed as centres of industrial progress from where the common services "can radiate to the surrounding areas." Accordingly, one of the vital considerations governing the location of block headquarters should in future relate to the possibilities of developing industries in that place.

While the above suggestion is interesting, much will depend on the quality of persons who are actually entrusted with the task of carrying out the scheme. It is this factor which imparts urgency to the need for expanding facilities for training personnel. The Rajgir seminar did well, therefore, to urge the adoption of a quicker method of assessing the requirements of trained personnel. It recommended that case studies in different industries should be undertaken by investigation teams, with a view to linking the demand for trained personnel with the production targets and financial outlay on the basis of studies made by the Engineering Personnel Committee. The seminar noted that the training-*cum*-production centres had not been very effective so far and stressed the necessity for a more intensive programme, especially for advanced trades like carpentry, blacksmithy and leather works. It also suggested the establishment of a few well-equipped central training institutions in each State, in order to train people in various crafts and trades. Until, however, such institutions are established, the existing facilities must be co-ordinated under the supervision of one authority.

Besides trained personnel, provision of adequate financial assistance will also influence the progress of the development programme for cottage and small-scale industries. This aspect was fully recognised by the seminar which urged the State Governments to follow a bold policy of giving loans on a liberal basis to small artisans. It was suggested that assistance might be given to industrial co-operative societies, as in the case of weavers' societies, by way of interest-free share capital, subsidy for employment of technical staff, and grants for emporia and housing colonies. In this connection, the seminar recommended that the industrial co-operatives should, as a rule, be crafts-wise, even though a society might cover a wide area. In exceptional cases, however, where organisation of craft-wise societies was difficult, individual craftsmen should be enrolled as members of multi-purpose co-operative societies and helped with credit. Further, marketing federations must be organised separately for such products of cottage and small-scale industries as can be marketed over wide areas. With regard to the development of marketing organisations for products of cottage industries in project areas, the seminar favoured the marketing of all such products through one depot or emporium wherever located. Such a course, it was pointed out, would lead not only to economy in running the depot but also to increased sales.

Considering the vital place which the cottage and small-scale industries occupy in the country's economic set-up, the need for developing them on the lines suggested by the Rajgir seminar is, indeed, imperative. It must, however, be emphasised that, while implementing the scheme of development, utmost attention must be paid to the aspects relating to quality and price of products manufactured by these industries. For the progress of a cottage or small-scale industry, just as that of the large-scale industry, will be judged not by the increase in output recorded but by the extent to which the industry is in a position to produce quality goods at an economic cost.

BOMBAY PORT TRUST

The budgetary position of the Bombay Port Trust would appear to have suffered a slight setback of late. The sizable surplus of Rs. 1.41 crores revealed in the revised budget estimates for the current year (1956-57) is expected to be reduced to Rs. 98 lakhs next year (1957-58). The reduction in surplus is attributed solely to a decline in receipts (general), the budget estimate for 1957-58 being Rs. 10.38 crores, as against Rs. 10.82 crores for 1956-57. The estimate of total expenditure is also placed slightly lower at Rs. 9.40 crores, as against Rs. 9.41 crores.

The anticipated fall of Rs. 44 lakhs under revenue receipts in the coming year is somewhat surprising, considering the improvement in traffic handled by the Port and the revenue of as much as Rs. 84 lakhs accruing from the continuance of the 33⅓ per cent. surcharge. The volume of trade that is expected to pass through the Bombay Port during 1957-58 is put at 11.6 million tons, an increase of 400,000 tons as compared with that in the current year. The increase would have been more marked but for the fall of 200,000 tons to 1.5 million tons in exports from the Bunders and the exports from the Docks not showing any change from the level of 1.8 million tons maintained in 1956-57. The aggregate volume of imports, however, is estimated substantially higher at 8.3 million tons, as against 7.7 million tons. The expansion is accounted for entirely by the improvement of 800,000 tons to 3.7 million tons in imports into Docks, while those into Bunders are expected to decline by 200,000 tons to 4.6 million tons.

The revenue estimate for the ensuing year has been framed on the assumption that the surcharge of 33⅓ per cent. will continue. The total revenue from this source is put at Rs. 84 lakhs, which is, of course, lower by over Rs. 10 lakhs as compared with the revised estimate for 1956-57. The fall is due to the decrease in wharfage and demurrage fees. But for the sizable surcharge, the surplus on revenue account will be about Rs. 14 lakhs only, instead of Rs. 98 lakhs.

The finances of the Bombay Port Trust are quite sound on the whole. The closing balance of the reserve funds of the Port Trust as on 31st March 1957 is estimated at Rs. 12.22 crores, as against the opening balance of Rs. 11.09 crores. Thanks to the strong reserve position thus, the authorities have been able to meet the capital expenditure (other than that on the marine oil terminal works) out of their own resources without asking for any loan from the Government. The total of expenditure in 1957-58 is estimated at Rs. 2.89 crores, as against Rs. 1.54 crores in 1956-57. Consequent on the increased provision made in the capital budget, the closing balance of reserve funds at the end of next year is placed lower at Rs. 10.13 crores. The outlay on the marine oil terminal works amounts to Rs. 1.01 crores and Rs. 86 lakhs in the current and the coming year, respectively; the whole of this outlay will be met, as before by Government loans.

The capital programme of the Bombay Port Trust for the coming year envisages improvement of dock facilities—Prince's, Victoria, Merewether, Alexandra and Hughes Docks—expansion of Port Trust railway and depots, construction of quarters for the staff, and building of a hospital for Port Trust staff. Special importance is attached to the construction of houses for officers, as well as for non-scheduled, clerical and other staff. As much as Rs. 57 lakhs are proposed to be spent under this head. Special importance is also given to the purchase of diesel hydraulic locomotives, tugs, (including diesel tugs), dredgers, barges, mobile diesel cranes, diesel mooring launches, portable diesel-driven welding plants for boilershop, anchor boats, boring and drilling machines, and machinery for machine and carpenter shops.

INDUSTRIAL BOMBAY

With the formation of the enlarged Bombay State, its mineral, forest and other wealth has increased. Vidarbha, for instance, provides rich forests, besides manganese ore and iron ore. Saurashtra and Kutch have large deposits of limestone. Along with these new potentialities have also grown the responsibilities of the State, for the newly merged areas are comparatively less developed industrially than the pre-reorganisation Bombay.

The importance of tapping the industrial potentialities of the new State in order to build up the prosperity of the nation was stressed by Mr. V. K. Sathe, Minister for Industries and Civil Supplies, Bombay, in the course of his inaugural address to the second quarterly meeting of the Association of Indian Industries, held in Bombay on the 15th inst. In the industrial progress of the State, industrial organisations such as the one he was addressing, have a very constructive role to play with their experience in various industrial lines, trade contacts, etc. The services of these organisations are nowhere more important than in developing, as the Minister stated, various industries, such as cotton ginning, textiles, cottonseed crushing, oilseed crushing and others. For this, an encouraging factor is the availability of increased supplies of cotton and groundnut. Mr. Sathe disclosed that, following reorganisation of the State, the *per capita* availability of the former has increased from 13.7 lbs. to 18.4 lbs. and that of the latter from 40 lbs. to 59 lbs. Through these factors, it should be possible to provide non-agricultural vocation to the rural population and to restore the extent of urbanisation to that prevailing before the new set-up, namely, 31 per cent. from 28 per cent., the level to which it has fallen on account of adding new areas to the State.

Referring to the small-scale industries, the Minister expressed the view that there was wide scope for development in that field. Industrialists can play a large part in the production of consumer goods, spare parts and intermediate goods required by large industries, railway equipment, etc., on a small-scale basis. He stressed the point that, unless industrialists came forward in those ventures, the development of small-scale industries would not take place at a sufficiently rapid pace. There is much force in the opinion held by Mr. Sathe that the small-scale industries can enjoy central facilities and those of large scale organisations through formation of co-operative societies or similar organisations. Such organisations will also enable them to produce quality goods and to face competition. He expressed the hope that the Association of Indian Industries would render all possible assistance to bring about effective forms of organisation to foster the development of small-scale and cottage industries.

Mr. Sathe appealed to the industrialists to regard it as their duty to help the country tide over the present difficult balance of payments position, first, by putting to use all indigenously available resources and, secondly, by promoting exports. In this connection, he made a pertinent suggestion when he said that, as far as possible, the exports of semi-finished or finished products rather than exports of raw materials should be encouraged. Mr. Sathe was also hopeful that, following the expanding network of electricity supply in the State, more and more advantage would be taken by businessmen to establish industries away from the already congested areas. Through such organised decentralisation, many of the problems facing the industrial cities can be conveniently avoided.

UP and OVER . . .

Watch a champion hurdler in action and you'll see perfect co-ordination. So it is with Caltex fuels and lubricants—the co-ordination qualities of these products mean better performance from your truck or bus. RAILWAY FARES AND FREIGHTS TO BE RAISED?

WORLD BANK MISSION TO STUDY PORT DEVELOPMENT PROGRAMME

From Our Special Correspondent

NEW DELHI, 20*th February*

DELHI LETTER

WILL railway fares and freight rates be raised in the coming year? This question has evoked considerable speculation in the past few days. The clue to these speculations is provided by a recent candid statement of the Union Finance Minister at Madras, that he had a "quarrel" with the Railway Ministry, because it did not adequately discharge its responsibility in keeping up rates proportionately with the increased cost in other directions. If only the Railway Ministry had raised the rates for the service as and when it became proper and necessary to do so, it would not, he declared, now be complaining of lack of money for development. Indeed, the Finance Minister revealed that "anyway, something is being done now in that direction."

While the Finance Minister's hint is taken as a clear indication of a possible increase in railway fares and freight rates, the actual timing of such announcement will undoubtedly be delayed till the presentation of the full Railway budget for 1957-58 in May, that is, after the new Parliament assembles. Further, the Railway Freights Enquiry Committee, under the chairmanship of Mr. A. Ramaswamy Mudaliar, has still not completed its findings which are expected to be finalised in about two months. Surely, the Railway Minister will not be so rash as not to wait for the proposals of this Committee. All that the Minister will do at the ensuing final session of Parliament—due to commence on the 18th of next month—is, therefore, to present the general finances and working results of the railways for the current year, asking Parliament merely to vote on account.

Several arguments nave been advanced in support of an upward revision in railway fares and freights. The chief argument stems from the observation of the World Bank Mission in its report on the second Five-year Plan which said: " . . . the provision made for depreciation in the past has been quite inadequate to meet replacement needs in full and we feel that the railways ought to be financing a much larger proportion of their current development programme out of their own resources." The case for higher railway fares is also made to rest on considerations of enhanced operating expenses, following the recent Appellate Tribunal's award for colliery labour and the implementation of the new deal for non-gazetted railwaymen at an additional cost of about Rs. 5 crores per annum.

Port Development

Due to arrive in India next month is a mission from the World Bank which will study the programme of development drawn up for ports in India under the second Five-year Plan. The Planning Commission has accorded a high priority for development of major ports, the aggregate outlay on which is put at as much as Rs. 76 crores. While examining the port development scheme, the World Bank Mission will determine the extent to which the Bank will have to assist India in meeting the amount of foreign exchange required for implementing the scheme successfully. The mission's study will be based largely on the details of the scheme now being worked out by the Union Ministry of Transport. The Ministry, it is reported, is trying to strike "a better balance" between expansion of facilities such as those for berthing, on the one hand, and provision of modern equipment for handling at ports, on the other.

In the development programme for ports drawn up in the second Five-year Plan, the Port of Bombay has been given a prominent place. Thus, out of the total outlay of Rs. 76 crores, this port accounts for more than 38 per cent., its actual share being Rs. 29.3 crores; the ports of Calcutta, Kandla, Madras and Cochin account for Rs. 19.9 crores, Rs. 14.0 crores, Rs. 9.2 crores and Rs. 4.0 crores, respectively. The importance attached to Bombay Port is only as it should be, considering that this port handles a large portion of India's foreign trade. The aggregate volume of imports and exports passing through this port comes on an average to as much as 43,000-47,000 tons per day or 16-17 million tons per annum, which is expected to rise substantially in the coming years.

Economy in Cement Use

An "economy-in-cement-use" campaign is expected to be launched by the Government of India. Mr. Morarji Desai, Minister for Commerce and Industry, is understood to have already written to the State Chief Ministers asking the latter to make concerted efforts to economise the use of cement. The move is a sequel partly to the yawning gap that now exists between the current rate of output—about 5 million tons—and the actual requirements—estimated at 14 million tons—and partly to the complete stoppage of imports with effect from January last necessitated by foreign exchange difficulties.

Meanwhile, the Railway Ministry is reported to be considering the feasibility of depending on lime mortar and other alternatives as far as construction of buildings is concerned. The Central Water and Power Commission is also examining the recommendation of the 14th Seminar of irrigation and Power Engineers, held at Hirakud last month, that lime mortar and lime *pozzolana* can be used in construction work in river valley projects, provided the structures are not above certain specific heights and are only for certain types of functions. It may be interesting to note here that the cement requirements of the Irrigation and Power Ministry alone are estimated at 2 million tons per annum.

Purchase of Liberty Ships

Nothing concrete seems to have emerged from India's efforts at getting 12 Liberty ships for its coastal trade from the U.S. reserve fleet, Mr. S. K. Ghose, Deputy Secretary to the Union Transport Ministry, has just returned from the U.S. after discussing this question with U.S. officials. The Liberty ships are part of the U.S. "moth-ball" fleet and can be sold only by a special Act of the U.S. Congress. The U.S. Government may be willing to oblige India, but the U.S. Congress is a harder nut to crack. Many Congressmen are critical of selling ships from their reserve fleet to countries which hob-nob with the Communist world, as ships are rated highly as tools of strategic importance. Even otherwise, it takes a long time for the U.S. Congress to come to a decision on subjects of economic aid of any kind. And no move has yet been made by the Administration to secure Congressional permission. Incidentally, India is not the ony country which is interested in buying U.S. Liberty ships; several other countries are also interested, their total demand being put at 200 ships.

Advances Against Rice and Paddy

Genuine traders in rice and paddy are greatly disappointed at the restrictions on bank advances announced by the Reserve Bank last week aimed at checking the rise in prices, a part of which is attributed to hoarding and other anti-social activities indulged in by speculative elements. The restrictions are: (1) a cut of 25 per cent. in the total advance of banks against rice and paddy as compared with the levels a year ago; (2) an increase of 10 per cent. in the margin to be maintained by a buyer against such advances, provided that the margin so increased shall not be less than 35 per cent. of the value of commodities. The credit squeeze will, it is feared, lead to considerable hardship to genuine traders in rice and paddy who are already keeenly feeling the impact of stringency of money. The traders no doubt admit that a section of the mercantile community indulges in hoarding activities, but points out that that is not the major factor responsible for pushing up the prices of rice and paddy. The real cause for the rise in price is, in their opinion, inadequacy of supplies. It is, therefore, felt that, if the prices of rice and paddy are to be maintained at a reasonable level, it can be done more effectively not by negative measures such as credit squeeze but by adoption of energetic steps to ensure adequate and regular supplies. It is further pointed out that credit restrictions on paddy and rice adversely affect the genuine traders more than the speculative-minded ones who invariably manage to find sufficient funds outside the banking system to finance their activities. They, therefore, drive the trade in these commodities into undesirable hands and thereby add to the hardships of consumers.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of Kalbadevi, Abdul Rehman Street, Mandvi, Bhat Bazar, Princess Street, Rajkot and Surat Branches and the unaudited Returns from eleven other Branches, not visited by us for the purposes of this Report.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be, and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

REGULATION OF MONEY-LENDING

CAUSE OF FAILURE—ABSENCE OF ALTERNATIVE SOURCE OF FINANCE

MONEY-LENDERS in India are a very ingenious lot. From time immemorial, they have played a vital part in the economy of the country and secured a place for themselves in the social fabric. According to the Rural Credit Survey, the latest authoritative publication on the subject, professional and agriculturist money-lenders together accounted for no less than 69.7 per cent. of the total requirements of the cultivators in 1951-52. A combination of forces has helped to create this intolerable state of affairs. While the needs of the small agriculturists for credit increased rapidly for various reasons, scant attention had been paid by the State to meet them either through institutional arrangements or otherwise. No less important has been the inveterate habit of the people of playing ducks and drakes with their income, of living beyond their means and, in the end, playing into the hands of the professional money-lenders. Thus, to a considerable extent, the causes of agricultural indebtedness could be traced to customs, habit, and system of values prevailing in rural areas. In a society, where family respectability depends on the level of expenditure incurred on social occasions and ceremonies, the state of bankruptcy is easily reached. The glaring fact that, on an average, family expenditure constitutes a large proportion to the total expenditure is substantiated by the Rural Credit Survey. According to the Survey, of the five main purposes of borrowing, namely, capital expenditure on farms, current expenditure on farms, non-farm business expenditure, family expenditure and other expenditure, more than 50 per cent. is accounted for by family expenditure and only 28 per cent. by the first category. This is only an all-India average picture; and an examination of corresponding figures for various districts clearly brings out the overwhelming nature of family expenditure. No wonder, then, that the conditions are such as to enable not only the professional money-lenders to thrive but also to encourage new entrants to the profession.

Increase in Indebtedness

The growth of money-lenders, the fast increase in agricultural indebtedness, the legislative enactments that have been passed from time to time to control money-lending and to protect the borrowers, and the failure of the legislation to produce the desired results, are some of the aspects objectively discussed in a recent publication, entitled *Agricultural Legislation in India. Vol.* 1, *Regulation of Money-lending*, issued by the Economic and Statistical Adviser, Ministry of Food and Agriculture, Government of India. Various factors, such as the increase in population, decay of indigenous crafts, the system of land tenures and the consequent commercialisation of agriculture, helped to create conditions in the beginning of the present century which were conducive to the exploitation of the ordinary small cultivator by the money-lenders. The persistence of these conditions in a more pronounced form is reflected in the stupendous increase in estimated agricultural indebtedness from Rs. 300 crores in 1911 to Rs. 1,800 crores in 1937. A good part of it is believed to have been liquidated by the war-time and post-war inflation. The All-India Rural Credit Survey places the total borrowings of the agriculturists as at the end of 1951-52 at Rs. 750 crores, of which, as already stated, no less than 69.7 per cent. was supplied by the professional and agriculturist money-lenders. As compared with this, the Government and the co-operatives together had been able to supply only 6.4 per cent. of the total requirements. When seen purposewise, these two classes of money-lenders supplied in the shape of both long-term and short-term credit about 71 per cent. of the loans needed for agricultural purposes, about 78 per cent. for non-agricultural purposes, as much as 76 per cent. for consumption purposes and 80 per cent. of the borrowings intended for the purpose of old debts and other purposes.

Thus, as stated by the Agricultural Finance Sub-Committee (1944), the main characteristics of the rural debt in India are four: First, the repayment of old debts is an important factor in the contraction of new debt; secondly, social and ceremonial expenditure is seen to be responsible for a considerable proportion of the total burden of debt; thirdly, purely consumer needs and distress circumstances are seen to assume an important role in adding to the total burden of debt, and, lastly, the debt contracted on development account generally forms a very insignificant proportion of the total.

Enactments

Since 1879, when the Deccan Agriculturists Relief Act was introduced, a number of enactments have been passed with a view to regulating the business of private money-lending. There are two basic objectives underlying the various legislative enactments. In the first place, it was designed to bring about an improvement in the terms on which private credit was available to the agriculturists and place legal restrictions on the unreasonable extractions of the money-lender. Provision such as licensing and/or registration of money-lenders, fixation of maximum rates of interest and maintenance of accounts by money-lenders, and grant of regular receipts were designed to achieve this aim. The second object was to enable the civil courts to do greater justice as between the lenders and the borrowers than was possible, in the prevailing circumstances, under the ordinary Code of Civil Procedure, through such provisions as (i) the empowering of the courts to "reopen" the closed transactions, (ii) protection of certain forms of assets from attachment in execution of decrees, and (iii) the empowering of the courts to direct payment of decretal amount by instalments, etc.

Despite these well designed provisions incorporated in the Acts, in actual practice, they failed to produce any noteworthy results. Some of the reasons may be cited here. In the first place, all the Acts are not equally comprehensive. For example, the Madras Debtors' Protection Act, and the Assam and Coorg Money-lenders Acts do not provide for licensing or regulation of creditors. Secondly, the scope of the Acts is not uniform. To cite a few examples, the Bengal Act excludes all commercial loans; the definition of a loan under the Madras Debtors' Protection Act does not include an advance made by a landlord to his tenants, by a lessor to his lessee, or by a partner in cultivation or co-sharer to another. Again, the maximum rates of interest permitted under the Acts show great variation from State to State. The Bihar Money-lenders Act, for instance, prescribes a simple interest rate of 9 per cent. per annum on secured loan and 12 per cent. on unsecured loans, while compound interest is prohibited. The M.P. Usurious Loans Act, to take another example, stipulates 12 per cent. and 18 per cent. simple interest per annum on secured and unsecured loans, respectively. In Hyderabad, the corresponding rates are fixed at 6 per cent. and 9 per cent., respectively, and in Madras at 6¼ per cent. for both types of loans.

Administrative Machinery

Despite these lacunæ, however, some progress would have been possible had there been any adequate machinery in any of the States for the specific purpose of ensuring an effective implementation of the provisions of the Acts. The absence of any such machinery solely devoted to the administration of money-lending legislation is the most serious of the drawbacks. Just a few examples would suffice to indicate the scant attention that has been paid to this very important aspect. Though registration of money-lenders is the simplest of the responsilities placed on the State by the various enactments, hardly any adequate arrangements have been made in any State to supervise the activities of the registered money-lenders or to check surreptitious money-lending by the unregistered lenders. Though, again, the Bombay Money-lenders Act, 1946, provides for the verification of the business of money-lending in order to see whether it is carried on according to the provisions of the Act, and the Registrar or the Assistant Registrar has been empowered to enforce the provisions, in practice it is found to be of little practical value. In a large number of States, the Courts cannot secure the observance of the provisions of the Acts, unless disputes between creditors and debtors come up for judgment before them. This is unlikely to happen, for the simple reason that, "because of the inadequacy of the supervising machinery, absence of an alternate source of credit and the compelling nature of borrowers' requirements, the money-lenders are able, without much difficulty, to

(*Continued on page* 399)

UNION BANK'S BUSINESS EXPANDS SIZABLY

PROFIT ONLY SLIGHTLY HIGHER

THE audited accounts of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) for the year ended 31st December 1956 fully reflect the rising tempo of economic activity in the country during the past year and the banking sector's contribution to such expansion. Thus, the Bank s deposits at the end of the year show an increase of Rs. 4.12 crores over the year and a rise of Rs. 3.20 crores in its advances. The expansion of business, no doubt, resulted in higher earnings, but a substantial part of the gain was offset by larger outgo by way of interest and expenses, as will be shown presently, with the result that the profit at Rs. 11.55 lakhs shows a rise of only Rs. 1.70 lakhs.

Though the Bank's profit has followed the upward trend for the second year in succession, the rise of Rs. 1.70 lakhs in 1956 is considerably less than that of Rs. 2.69 lakhs noted in the previous year, when the profit had risen from Rs. 6.76 lakhs to Rs. 9.45 lakhs. In other words, the rise in earnings is not quite proportionate to the expansion in business, but this was due to factors over which the Bank had no control. Nevertheless, it will be refreshing to note that the profit for the year under review is a fresh record in the history of the Bank.

Out of the profit, the Directors have transferred to the reserve fund, under section 17 of the Banking Companies Act, 1949, a sum of Rs. 2.50 lakhs, as against Rs. 2 lakhs set aside last year, while no allocation has been made to contingency account and to write off premises, for which purposes Rs. 50,000 and Rs. 75,000, respectively, were utilised a year ago. However, a sum of Rs. 1.25 lakhs has been provided for investment account, as against nil. The provision for taxation has been raised from Rs. 1.75 lakhs to Rs. 2.25 lakhs. The dividend has also been stepped up to 8¾ per cent. from 7½ per cent. paid for 1955, to which level it had been raised from 6¾ per cent. paid for the preceding four years.

The following table provides a broad idea of the Bank's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Gross income	62.55	40.53	31.07	27.00
Interest and discount	48.35	31.52	26.74	24.55
Exchange and commission	9.98	6.21	1.97	1.02
Interest paid	24.65	14.08	12.14	10.32
Expenses	26.20	16.57	12.00	9.61
Depreciation	0.55	0.43	0.17	0.22
Profit	11.15	9.45	6.76	6.79
Appropriations—				
Taxation	2.25	1.75	1.15	1.00
Reserves	2.50	2.50	2.00	2.00
Bonus to staff	1.80	1.25	0.90	0.80
Premises written off				0.50
Investment account	1.25	0.75	..	
Dividend	3.50	3.00	2.75	2.75
	(8¾%)	(7½%)	(6¾%)	(6¾%)
Carry forward	1.81	1.96	1.76	1.80
	As on 31st December			
	1956	1955	1954	1953
Capital	40.00	40.00	40.00	40.00
Reserves	37.50	35.00	33.00	31.50
Deposits	13,23.45	9,10.74	5,88.66	5,78.00
Borrowings from banks			40.00	14.50
Advances	8,70.52	5,50.26	3,33.75	3,06.24
Investments	3,48.69	2,94.60	2,34.31	2,80.76
Cash	1,76.76	1,40.42	74.38	72.46
Balance-sheet total	20,72.36	13,05.01	7,95.61	7,01.32
Ratio to deposits of—	%	%	%	%
Advances	65.8	60.4	65.2	54.7
Investments	26.3	32.4	34.5*	47.0*
Cash	13.3	15.4	12.6	12.5

* After excluding investments pledged against borrowings from banks.

It will be noted from the above table that, with the rise of Rs. 22.02 lakhs in 1956, the gross income has more than doubled itself in the course of two years. Of the increase during 1956, interest and discount earned account for Rs. 16.83 lakhs and exchange and commission for Rs. 4.75 lakhs. This is offset by a rise of Rs. 10.57 lakhs in interest paid and of Rs. 9.63 lakhs in expenses; both these items of outgo show increases of more than 100 per cent. in two years.

The outstanding feature disclosed by the Bank's latest balance-sheet is the expansion of Rs. 4.12 crores in deposits to Rs. 13.23 crores, thus maintaining the upward trend for the fourth year in succession. As will be seen from the table, the pace of expansion has been larger in the last two years. As in the previous year, the bulk of the rise in deposits during 1956 is accounted for by current accounts, contingency accounts, etc., which have gone up from Rs. 5.96

crores to Rs. 9.36 crores. Savings bank deposits have risen from Rs. 66.08 lakhs to Rs. 77.98 lakhs and short and fixed deposits and three-year cash certificates from Rs. 2.48 crores to Rs. 3.09 crores.

The sizable expansion in resources is reflected on the assets side by the increase of Rs. 3.20 crores in advances and bills, which at Rs. 8.70 crores, constitute a record. Of this rise, cash credits, overdrafts and loans account for an increase from Rs. 3.72 crores to Rs. 5.66 crores and bills purchased and discounted from Rs. 1.78 crores to Rs. 3.05 crores. The rise in advances being relatively sharper than that in deposits, the credit ratio has jumped up from 60.4 per cent. to 65.8 per cent. and this has also been responsible for the decline in liquidity ratio.

A commendable feature of the Bank's working during the year under review is the substantial expansion in its bills business, particularly foreign bills. Thus, in addition to the rise of Rs. 1.27 crores in bills purchased and discounted noted above, bills for collection outstanding at the close of the year have gone up from Rs. 80.48 lakhs to Rs. 127.49 lakhs.

U.K.'S ECONOMY

The recent cut in the U.K. Bank rate from 5½ to 5 per cent. was justified by Mr. Cameron Cobbold, Governor of the Bank of England, in the course of a speech to the Coventry Chamber of Commerce last week. The former Bank rate of 5½ per cent. which, he believed, helped materially in weathering last year's storm, was a crisis rate and it was obviously desirable to make some adjustment as soon as conditions allowed. The alteration of the Bank rate to 5 per cent. should, he said, thus be seen as an adjustment to market conditions with no implication of a change of policy. He added that it should not be taken as a decision to abandon the use of interest rates in favour of other ingredients of monetary control.

The economy of Britain is now generally a good deal stronger than it would have been without the financial measures taken in the past two years, according to Mr. Cobbold. "We are now entering a new phase," he added. "We have survived some critical months in the exchanges and sterling has regained its strength in the markets. But this has been done largely by negotiating big credits, and to the extent that we draw on those credits, repayment will add to our future burdens."

Appealing for a bigger safety margin in domestic finances and balance of payments, Mr. Cobbold said that the standards of living, production and employment which the people hoped were within their grasp, but it required several years' hard blodding. He warned that it was not safe to risk another crisis.

Renewing his plea for a cut in Government expenditure, the Bank of England Governor admitted the practical difficulties of containing the growth of public spending. Nevertheless, he warned that "the economic machine cannot be driven with one foot on the accelerator of public expenditure and the other on the brake of credit restriction." Although it was not for the Bank to suggest where public expenditure should be cut, since that was a political judgment, the Bank had "a primary duty to sound warning bells when Government and near-Government spending is putting too heavy a burden on the country's resources. He added that, ever since the war, there had been too much tendency to take on commitments without first counting the cost, the public purse had been continuously strained, the economy overburdened by taxation and inadequate resources left for investment.

REFORM OF BANKING IN AUSTRALIA

The heads of private banks in Australia have submitted certain proposals for the reform of banking in their country, which they consider essential in the national interest. Among the suggested measures are: the establishment of a "true and proper" central bank, entirely separated from any trading bank functions or activities, and replacement of the existing special accounts provisions of the Banking Act by a system of statutory reserve deposits.

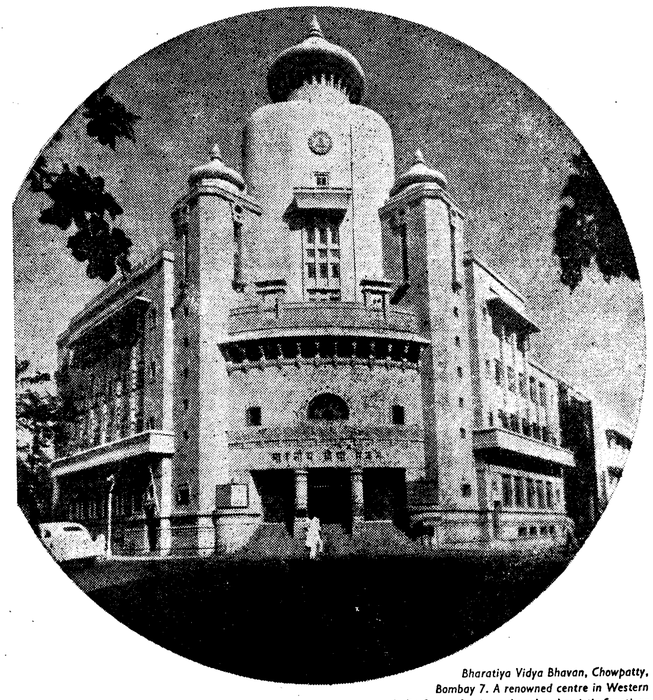
If the statutory reserve deposits system, which the bankers have volunteered to accept, is adopted, it will replace the present system under which the Central Bank call up 75 per cent. of the increase since 1952 of the banks' deposits. The proposal is for adoption of a system based on a percentage of deposits containing an "ordinary" control power and an "emergency" authority.

The Australian Government has not made any promise or commitments to the bankers who met the Prime Minister, the Treasurer and the Minister of National Development last week. The Cabinet, however, discussed the banking policy on Tuesday last and a further meeting of Government parties will be held on Tuesday next week to consider the question further.

U.S. EXPORT-IMPORT BANK

The operations of the Export-Import Bank, an independent agency of the U.S. Government, during the year 1956 showed that credit facilities for exports from the U.S. to buyers throughout the world were the most extensive for any year in the past decade. It authorised 193 credits in 1956 had the total of $1,156.61 million. Not since 1946 had the Bank authorised a larger amount for new credits.

Another YORK triumph!



Bharatiya Vidya Bhavan, Chowpatty, Bombay 7. A renowned centre in Western India for conducting cultural and artistic functions

Bombay's home of cultural endeavour now has 'weather as you want it'! YORK Air Conditioning and Refrigeration systems have been recently installed in the auditorium of the Bharatiya Vidya Bhavan.

For more than 25 years, we have been designing and installing air-conditioning systems for many of the finest buildings in India. Every year more and more business leaders are recognizing the economic necessity of air-conditioning... and are depending on YORK for installations controlling the seasonal changes.

WORKING OF AMBAR CHARKHA PROGRAMME

PROGRESS WELL MAINTAINED

NOT less than 180,000 Ambar Charkhas will be manufactured during the second year of the second Five-year Plan, that is, 1957-58. This is revealed in the latest report issued by the All-India *Khadi* and Village Industries Board reviewing the working of the Ambar Charkha programme up to the end of January 1957. The target of 180,000 Charkhas represents a rise of 105,000 Charkhas as compared with the target of 75,000 set for 1956-57. The number of Charkhas actually produced up to 21st January 1957 is put at 50,026 and the number available for commercial production of yarn was 20,000. The target, it is said, is more or less in keeping with the recommendations of the Ambar Charkha Enquiry Committee. Justifying its decision to intensify the manufacturing programme, the Board claims that the progress made in each item of the programme, namely, production of Ambar sets, arrangements for training of technical personnel and spinners, and distribution of Charkhas, is considerable. Indeed, it is said that the programme has not only kept to schedule but exceeded it in many respects.

While the progress made in the implementation of the Ambar Charkha programme is thus notable, one would want to know whether the Board has cared fully to assess the technical and economic feasibility of large-scale introduction of these Charkhas. The results of tests on Ambar Charkha conducted by some impartial interests show that the quality of Ambar yarn is very poor *vis-a-vis* that produced in mills on scientific lines and under the supervision of experts. Even when produced from mill rovings, the strength of the yarn is reported to be only 50 per cent. of mill-made yarn of identical counts made of identical cotton. Further, the Ambar yarn is very much costlier than mill-made yarn, the difference being as much as 80-90 per cent., according to one estimate. The cost differential will widen increasingly with higher counts. In view of this, some experts of the cotton textile industry are of the view that the Ambar Charkha cannot produce yarns above 25s economically.

The *Khadi* and Village Industries Board will do well to examine all these issues thoroughly before it thinks of augmenting the manufacture of Ambar Charkhas. After all, it must be emphasised that the employment consideration underlying the Ambar Charkha programme must be matched against considerations of price and the quality of cloth woven from Ambar yarn. The Board should also examine the question relating to demand for Ambar Charkhas. This is of the utmost importance, considering that the demand for traditional charkhas, as it was revealed during the discussions held by the Board, was increasing in proportion to the tempo created by the Ambar Charkha programme. Does this mean that the weavers prefer more yarn spun from traditional charkhas to Ambar yarn, even though the former costs more than the latter? The cost of producing *khadi* from hand-spun yarn of the traditional charkha is estimated at Rs. 2 per yard, as against the average cost of Re. 1-4 for producing the same quantity of cloth from Ambar yarn. Incidentally, the *Khadi* Board is contemplating to combine yarn spun on the traditional charkha with Ambar yarn in the weaving of cloth so as to bring down the price of *khadi* generally.

Viewed thus, it is not surprising that the Board has devoted considerable time to the consideration of the position of *khadi* weavers. The Board had asked for the extension to *khadi* weavers of the same financial aids and facilities that are being offered by the Handloom Board. This plea would appear to have not found favour with the Government for two reasons. First, the official policy is to encourage the formation of co-operative societies of weavers. Secondly, the aim should generally be not to create a new class of weavers but to bring into the Ambar Charkha scheme the existing handlooms as far as possible. The Board no doubt agrees with the Government's policy of forming co-operatives of handloom weavers and has, in fact, instructed the institutions engaged in the implementation of the programme to take steps in this direction. But it points out that there are other considerations which should weigh in the matter of extending the required assistance to *khadi* weavers. According to it, the Board's programme, in respect of both production and marketing, aims at attaining self-sufficiency in cloth in the villages, talukas and districts with the help of *Gramodya Sanghs* and other similar institutions. A programme of this nature, it is said, does not facilitate formation of co-operative societies of weavers, as their number in a village will be below the required minimum to form such societies.

BOMBAY HANDLOOM BOARD

The Government of Bombay has decided to establish Divisional Handloom Boards in all the divisions of the State, with a view to popularising handloom products and furthering the development programme. This was disclosed by Mr. Ratubhai Adani, Minister for Cottage Industries, Prohibition and Village *Panchayats*, while inaugurating the first meeting of the newly reconstituted State Handloom Board held at Nagpur on 9th February 1957. Mr. Adani expressed concern over the number of idle handlooms and weavers in the State and said that the Board would have to take steps to solve the problem. Nearly 800,000 handlooms all over the country had been put to re-use, as a result of the development schemes in this regard. It would, he added, be a happy day when all the 240,000 handlooms in the State were restarted. He alluded, in particular, to the introduction of powerlooms in the handloom sector and observed:

"The Board wants to enable cottage industries to provide employment. A certain amount of care is necessarily to be exercised in seeing that this object is not frustrated. Thus, where powerlooms are to be introduced, preference can be given to co-operative societies, as against individuals, to run them, or, elsewhere it is inevitable, allotment to individuals can be specified up to a certain number and, where handlooms and *khadi* production are flourishing, care can be taken to restrain powerlooms from making an adverse effect on them."

Proceeding, the Minister stated that concessions had been made available by the Government of India and the Reserve Bank for the development of the handloom industry. He revealed that, where apex societies needed working capital, concessions were likely to be given by the Government in that regard. Emphasising the importance of co-operative movement in furthering the development of the handloom industry, Mr. Adani suggested the establishment of district organisations all over the State. He also wanted that the technical, research and training centres now being run under the auspices of the Government should increasingly become the concern of the public or the co-operative organisation.

At its Nagpur meeting, the Bombay State Handloom Board took three important decisions. These are: (1) Introduction of powerlooms will not be encouraged out of the co-operative sector; (2) only the existing societies of handloom weavers will be permitted to convert themselves into power-loom societies, and (3) the speed and the extent of the programme will have relation to the law of supply and demand. The Board agreed that, in view of the Reserve Bank scheme to make available cheap credit to industrial co-operatives, efforts be made to channelise all credit activities through the Bank.

AUTOMATION IN RUSSIAN TEXTILE INDUSTRY

A brief reference to the development of the textile industry envisaged under the sixth Five-year Plan of Soviet Russia was made in these columns last week. Further details since available reveal that great importance has been attached to automation. During 1956, the engineering works furnished the textile industry more than 12,000 automatic looms. The Soviet designers and engineering plants are working on designs of new types of highly productive automatic looms for the different branches of the industry. Of special interest, among others, is a new automatic loom with a change of bobbins for silk mills. This loom, it is claimed, operates at a much higher speed than that of mechanical looms.

The development scheme for the textile industry includes a project for establishing an automatic bleaching factory. The proposed factory is expected to bleach fabrics by means of hydrogen peroxide, instead of calcium hypochlorite. The bleaching will be done on two production lines, and an operator is to watch their operation with the aid of a special installation. Labour productivity in this factory, it is said, will increase almost fourfold. A textile machinery manufacturing firm has produced a new machine for continuous bleaching of cotton fabrics. By using this machine, which is made up of 15 pieces and apparatus, it will be possible, it is said, to cut the period of bleaching process from 36-48 hours to 2½-3 hours. The machine will first steam the cloth and then bleach it by means of hydrogen peroxide. Another textile machine manufacturing firm has completed automatisation of the whole weft winding shop, which by augmenting labour productivity, renders possible a rise of about 50 per cent. in output.

The research organisations of the U.S.S.R. Ministries of Light Industry and Machine-building Industry are now working on designs of machines and devices for the first automatic transfer machines for cotton spinning. One of the machines is proposed to be installed near Moscow. In all, seven such machines will go into operation during the current Five-year Plan period.

BRITISH WOOL SALES

A wool promotion committee has been set up in the U.K. to launch a publicity campaign for the sale of products containing home-grown wool. The Committee consists of members of the British Wool Marketing Board and the International Wool Secretariat (I.W.S.). The most important products which use British wool extensively are carpets, knitwear and tweeds. Welcoming the establishment of the Committee, the Chairman of the I.W.S. says: "The growers of Australia, New Zealand and South Africa have long envisaged the ideal of wool producers throughout the world, combining their resources in one powerful continuous drive to protect their product and safeguard it against the ever-growing threat of man-made fibres and to increase its use and usefulness everywhere."

RESULTS OF TRADE MISSION TO INDIA

REACTIONS TO EUROPEAN COMMON MARKET

From A Special Correspondent

MANCHESTER, *12th February*

MANCHESTER LETTER

AFTER a week or two of speculation as to the results secured from the visit to India and Hong Kong, the Lancashire trade mission has now reported to the Standing Consultative Committee of the Cotton Board. Although details of the discussions were not made public, a guarded statement on the progress of negotiations was issued.

It was announced that the delegation was able to carry through their discussions against a background of friendly contacts with leading members of the Indian industry and that the Indian representatives finally expressed their willingness to accept the possibility of a ceiling on their exports to the United Kingdom for a period of three years, subject to the conclusion of satisfactory arrangements.

This conditional clause was held in Lancashire to mean that the Indian millowners were unwilling to reach any definite agreement with the British team until they were assured that a pact covering all Eastern textile producers could be drawn up. It would obviously be unfair if Indian manufacturers were to suffer at the expense of their rivals in Hong Kong or Pakistan by their willingness to accede to the request of the British mission.

In Hong Kong, the Lancashire team was received in a friendly manner but no understanding was secured in the discussions which ensued. The mission expressed the hope that, after the leaders of the Hong Kong industry had given further consideration to the proposals put before them, it would be possible to obtain a favourable arrangement, subject to further exchanges and communications.

Common Agreement

Summing up their visit, the delegation reported that, although they could not at this stage claim a final solution to the whole problem, they believed very considerable progress had been made towards the achievement of a solution by common agreement between the interests directly concerned.

It was agreed that, as Pakistan was another Commonwealth country with a legitimate interest in these matters, a proposal to send a mission there in the near future should be put forward to bring mill interests in Pakistan into the present series of discussions. In the meantime, Sir Cuthbert Clegg, leader of the Lancashire team, and his colleagues are to meet the President of the Board of Trade, Sir David Eccles, to report on the results of their tour.

Members of Parliament have lately been given details by the President of the Board of Trade as to the comparative arrivals of foreign cotton yarn and cloth during recent years. Extracts from these figures are shown below:

	1951	1953	1955	1956
Yarn (In million lbs.)				
Total	31.7	3.4	14.0	16.8
India	4.0	0.8	1.6	4.8
Hong Kong ..	0.3	..	2.1	4.4
Belgium ..	11.0	0.4	2.2	0.9
Italy	9.1	1.4	2.3	2.4
Egypt	3.0	..	2.2	0.8
Pakistan ..	..	..	0.1	2.5
Grey Cloth (In million square yards)				
Total	340.0	76.2	268.2	267.7
India	105.6	15.9	130.3	128.1
Hong Kong ..	12.4	0.7	48.8	55.9
Japan	85.0	38.3	68.9	32.1
Other Cloth (In million square yards)				
Total	35.5	22.5	31.3	38.5
India	2.8	0.6	6.1	4.9
Hong Kong ..	4.6	1.3	2.6	1.9
Germany ..	8.5	8.7	8.5	5.8
Belgium ..	7.9	7.8	12.5	13.8

Although 1951 marked the post-war peak for arrivals of foreign goods of all kinds, the equivalent totals during the past two years have shown an unmistakable upward tendency. It is notable, however, that, whereas in 1951 most of the supplies of cotton yarn came from European sources, the volume shipped from the East accounted for the preponderance of last year's total.

Grey cloth imports have always been taken largely from Asiatic countries and the only major change in the situation over recent years has been the expansion of purchases from Hong Kong at the expense of Japanese cloth. The reverse is true in the case of finished cotton textiles, where European countries are now providing more supplies, while the volume of Eastern trade is slightly lower than in 1951.

"Tomorrow's Leaders"

Under this slogan, the Cotton Board has now gathered together the organisations and firms within the industry which are prepared to sponsor and aid its scholarship scheme aimed at the student who contemplates a career in textiles. The main purpose is to provide, without a means test, a university course in textile subjects for any student who can satisfy the industry's selection requirements. Not only are many new scholarships being created to augment those already in existence through the generosity and farsightedness of individual firms, but, in addition a number of the industry's greatest concerns have agreed to support the scheme, if the number of suitable applicants exceeds the existing provision of scholarships. Thus every well qualified and deserving candidate may reasonably expect to receive an award.

Such a compaign, overdue perhaps in the view of some, is only a beginning, if the industry is to derive all the benefit it can get from the younger generation of technologists. Over seventy scholarships will be available, of which about half are university entrance scholarships and thirty for post-graduate study and research. Many of the grants have a value of £300 a year for three or four years.

Throughout the post-war years, it has been widely recognised in Lancashire that the mechanical age and the rise of the chemist in textiles had brought a second industrial revolution. It has taken a long time for the full realisation to sink, in that, without increased incentives, the leaders of the future will ignore the mills as means of gaining their livelihood. To quote the booklet, which has now been distributed to grammer schools, public schools, technical colleges and universities all over the country: "In the future, the industry will look increasingly to the universities and the colleges of advanced technology for those destined to fill its highest ranks. Due to the remarkable changes taking place within the industry, the number of higher grade staff positions, as a proportion of the total employed, is steadily increasing."

European Common Market

A sharp attack on the likely developments arising from the establishment of a European free trade area was made at the annual meeting of the Manchester Chamber of Commerce by the President, Mr. Frank Rostron. He denied the impression that had gained ground that industry had given *carte blanche* to the negotiators of the pact. "Nothing could be further from the truth," he declared. "Industry as a whole has not given the green light to participation in this scheme, it has only given a very cautious yellow to preliminary discussions only." As members of a free trade area, he pointed out, Britain's key industry duties and import duties would disappear. Not only were there general dangers but particular dangers might well arise under the arrangement. "Should we not, for example, find that the double pricing of British coal and steel with high prices for export and low prices for home would have to disappear," he asked. "The hope has been expressed that the provisions of our projected Anti-dumping Bill will be copied by European countries and permit this double pricing but I have my doubts."

Mr. Rostron, who is the export manager of a large electrical engineering group near Manchester, expressed the opinion that there was little hope of Britain being competitive in a European free trade area, either on the Continent of Europe or at home, except in the case of specialities having a modest turnover. "I am very much afraid that, to become competitive, except in the hardest of ways through unemployment and misery, we should have to accept a controlled reduction of our standard of living over the period of tariff reductions," he said. His alternative was a Commonwealth Government with power to unify tariffs, monetary systems and other economic matters throughout the member nations. "The United States owes its economic success to the fact that its 48 States are a firmly integrated political and economic unit under one Federal Government," he added. Proceeding, he said: "The proper strengthening of the economic interdependence of the Commonwealth plus redoubled efforts in the United States would increase British exports enormously without anything like the same risk of disturbance of our own industries, as must necessarily follow the proposed European association."—*All Rights Reserved.*

RAW COTTON SITUATION IN INDIA

QUINQUENNIAL PROGRESS REVIEWED

A DETAILED analysis of the raw cotton position in India during the quinquennium 1950-51 to 1954-55 is contained in the seventh issue of the Publication *Cotton in India* issued by the Directorate of Economics and Statistics, Ministry of Food and Agriculture. Part I of the survey relates to almost every aspect of the commodity, namely, production, yield per acre, internal and international trade, utilisation, prices, etc., and is illustrated by charts and exhaustive statistical tables. In order to give the reader an idea of the position Indian cotton holds in the international cotton economy, an entire section is devoted to foreign cotton. This section gives, in tabular form, the area under cotton in different countries, the yield per acre, imports into principal importing countries, exports by principal exporting countries, world mill consumption, world stocks and prices of cotton in important international markets during the quinquennium. An idea of the cropping practices and sowing and harvesting periods in India as well as foreign countries can be obtained from two of the appendices forming Part III of the booklet. Another appendix gives a list of comparable varieties of Indian and foreign cotton. Another interesting item relates to a comparison, based on the estimates of the final report on the Pilot Schemes conducted by the Indian Central Cotton Committee, of the cost of production of cotton with that of substitute crops such as *jowar* and groundnut in the Akola district of Madhya Pradesh.

The most striking feature of cotton cultivation in India during the quinquennium 1950-51 to 1954-55 is the remarkable progress made in the production of the fibre, both in respect of quantity as well as of quality. Area under the crop, which was 14.5 million acres in 1950-51, increased to 18.3 million in 1954-55. But total production of lint was more than in proportion to the rise in acreage. In 1954-55, production aggregated 4.3 million bales, as compared with 2.9 million bales in 1950-51. Thus, while the area increased by only 25 per cent., production rose by about 48 per cent. Consequently, the yield per acre increased from 78 lbs. per acre in 1950-51 to 92 lbs. in 1954-55.

Remarkable Progress

An idea of the impressive progress made by Indian cotton during the post-Partition period can be obtained from a comparison of the output in 1954-55 with that of 1947-48. Area under the crop during the seven-year period increased from 10.6 million acres to 18.3 million acres, while production improved from 2.2 million bales to 4.3 million bales during the period. The percentage increase in acreage was about 70, while the percentage increase in output was about 90. The yield per acre, which was 80 lbs. in 1947-48, increased to 92 lbs. in 1954-55. Satisfactory as this progress has been, it must be borne in mind that the yield per acre still compares very unfavourably with those in other cotton-producing countries. In 1954-55, the average yield per acre was 439 lbs. in Egypt, 416 in Peru, 350 in Mexico, 341 in the U.S. and 185 in Pakistan. A remarkable feature of yield per acre in India is that it shows very wide variations from State to State, ranging from 227 lbs. in the Punjab to 31 lbs. in Orissa. The average yield per acre in 1954-55 in some of the other cotton-producing States was 122 lbs. in Madras, 109 in Bombay, 84 in Saurashtra, 83 in Madhya Bharat and 49 in Hyderabad.

An important feature of cotton production during the quinquennium was that the area and production of long- and medium-staple cotton went up considerably, whereas that under short-staple cotton remained more or less stationary. The following table gives the variety-wise breakdown of area and production during the period:

(In millions)

	1950-51	1951-52	1952-53	1953-54	1954-55
Long Staple—					
Area (acres) ..	3.4	4.8	4.7	5.8	6.3
Production (bales).	0.7	0.9	1.0	1.3	1.6
Medium Staple—					
Area (acres) ..	7.5	7.1	7.4	7.9	8.2
Production (bales).	1.4	1.2	1.4	1.7	1.9
Short Staple—					
Area (acres) ..	3.6	4.3	3.6	3.7	3.8
Production (bales).	0.8	1.0	0.8	0.9	0.8
Total—					
Area (acres) ..	14.5	16.2	15.7	17.3	18.3
Production (bales).	2.9	3.1	3.2	3.9	4.3

It will be seen from the above table that the area under long-staple cotton was only 23 per cent. of total acreage during 1950-51. It went up to 34 per cent. in 1954-55. The area under short-staple cotton in 1954-55 declined to 21 per cent. of total as against 25 per cent. in 1950-51, even though the absolute area under cotton increased considerably. Production of long- and medium-staple cotton increased from 700,000 bales and 1.4 million bales in 1950-51 to 1.6 million and 1.9 million bales respectively in 1954-55, while that of short-staple cotton remained constant at 800,000 bales.

Imports Decline

This improved supply position has led, in recent years, to a decline in the quantity of cotton imported into India and an increase in exports of cotton. For the first time, since independence, India turned out to be a net exporter in the 1955-56 season. Import of foreign cotton in that year amounted to a little over 6 lakh bales, while total exports for the season amounted to 630,000 bales. Imports are now mainly confined to such long-staple varieties that cannot be produced in the country. But attempts are being made to acclimatise some of these varieties to Indian conditions and encouraging results are reported. The famous Sea Island cotton of the West Indies, for instance, has been found to be suitable to the climatic conditions of Malabar in the west coast, as will be seen from a separate note on it which appears elsewhere in this issue.

EGYPTIAN COTTON EXPORTS

Figures relating to export sales of Egyptian cotton from the commencement of the current season till the 15th of last month show that the blocking of traffic through the Suez Canal has adversely affected Egyptian cotton business. Total sales effected till that date aggregated 310,632 bales (of 720 lbs.), as compared with 593,582 bales in the corresponding period of the previous season. The fall is most marked in the case of Karnak, Giza 30 and Ashmouni, their exports having been of the order of 127,219 bales, 61,121 bales and 59,549 bales, as against 227,203 bales, 165,540 bales and 168,394 bales in the comparable period of last season. The following table gives the variety-wise break-down:

(In bales of 720 lbs.)

Variety	1st Sept. to 15th Jan.	
	1956-57	1955-56
Karnak	127,219	227,203
Menoufi	60,593	26,310
Giza 30	61,121	165,540
Ashmouni	59,549	168,394
Others	2,150	6,135
Total ..	310,632	593,582

The Egyptian Government has of late been striving hard to devise various measures to boost the country's cotton business. Bilateral arrangements and barter deals were concluded with Russia and many other countries, especially East European countries. Recently, a big Egyptian deal with Russia, involving about 10,000 tons of Karnak, Menoufi and Ashmouni, was reported. Payment will be partly in certain foreign currencies required by Egypt. A novel device evolved by Egypt is the linking of exports of cotton with imports of goods into that country. It is also reported that France, whose trade with Egypt had recently been disrupted, is planning to get Egyptian cotton via Hungary.

IMPORT AND EXPORT OF COTTON BY INDIA

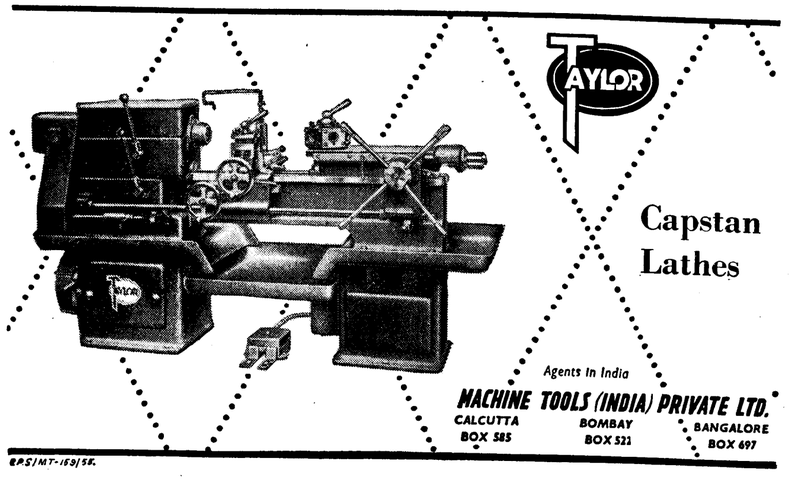
The recent political disturbances in West Asia, the breakdown of traffic through the Suez Canal and the delay in the announcement of export quota have all adversely affected exports of Indian cotton so far in the current season. During the period 1st September 1956 to 2nd February 1957, exports from India aggregated only 107,922 bales (of 392 lbs.), as compared with 301,640 bales during the corresponding period of the previous season. That the dislocation of shipping had much to do with this is evident from the fact that shipments to the Continent and the U.K. were of the order of only 27,185 bales, while, during the same period last season, they amounted to 95,029 bales. The following table gives the import and export figures for the period.

(In bales of 392 lbs.)

	1st Sept. to 2nd Feb.	
	1956-57	1955-56
Exports to—		
Japan	66,259	144,617
Continent	13,884	61,793
U.K.	13,301	33,236
Hong Kong	10,012	23,314
China	3,277	31,488
U.S.A.	825	2,208
Others	364	4,984
Total ..	107,922	301,640
Imports (varieties)—		
American	134,267	6,800
Sudan	31,446	45,135
Egyptian	13,029	100,535
East African	68,672	36,835
Pakistan	478	..
Other sorts	765	4,258
Total ..	248,657	193,563

As already stated, the drop in exports cannot be wholly attributed to causes beyond India's

(*Continued on page 399*)



THIS IS ONLY AN ANNOUNCEMENT AND NOT AN OFFICIAL COPY OF THE PROSPECTUS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company or at the Office of the Secretaries and Treasurers, Messrs. Patco Agencies, 22 Errabalu Chetty Street, G.T., Madras-1. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness, of any of the statements made or opinions expressed with regard to these. A copy of this Prospectus has been delivered to the Registrar of Companies, Madras, for registration as required by Section 60 of the Companies Act, 1956.

Application will be made to the Stock Exchange at Madras for permission to deal in the shares now being offered and in due course for an official quotation.

The Subscription Lists will open at 10 a.m. on Monday the 25th day of February, 1957 and will close as soon as the Directors may decide but not earlier than the 1st day of March, 1957.

PRESENT ISSUE:

6,00,000 Equity shares (Ordinary shares) of Rs. 2 each. Rs. 12,00,000

35,000—7 per cent. cumulative Preference shares of Rs. 10 each ... ... Rs. 3,50,000

Rs. 15,50,000

All payable in full on application.

In addition the Company offers 1,400 Seven per cent. Debentures of Rs. 500 each for subscription at par.

DIVIDENDS, CAPITAL AND VOTING RIGHTS OF SHARES

(a) Dividend : The dividend on the Preference shares shall accrue from the date of allotment and shall be payable on 1st April and 1st October in every year; the first dividend being payable on 1st October 1957.

(b) Capital : The assets available for distribution to members whether on a liquidation or not shall be applied, first in repaying to the holders of the Preference shares the amounts paid-up on such Preference shares together with a sum equal to any arrears or deficiency of the fixed dividend thereon, whether earned or declared or not, upto the commencement of the winding-up in the case of a liquidation, and in any other case upto the date of the occurrence of the event which gives rise to the return of assets and the balance of the assets shall be distributed amongst the holders of the Equity (Ordinary) shares in proportion to the amounts paid-up on the Equity (Ordinary) shares held by them respectively.

(c) Voting : The right of voting at General Meetings is one vote for every Equity (Ordinary) share. The Preference shares entitle the holders to receive notices of any General Meetings and to attend and speak thereat but do not entitle them to vote thereat unless either—

(i) the dividend on the Preference Shares or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of commencement of the meeting; or

(ii) the business of the Meeting includes the consideration of a Resolution for reducing the capital of the Company or altering the provisions of the Memorandum of Association with respect to the objects of the Company or varying or abrogating any of the special rights attached to the Preference shares.

(iii) On a show of hands every member entitled to vote who (being an individual) is present in person or (being a corporation) is present by a representative or proxy not being himself a member, shall have one vote. On a Poll every member entitled to vote who is present in person or by proxy shall have one vote for every Equity (Ordinary) share and Five votes for every Preference share held by him.

DEBENTURES

The 1,400 Debentures of Rs. 500 each for Rs. 7 lakhs will be constituted and secured by a Trust Deed in favour of Mr. John Deavin or the senior partner for the time being of Messrs. Fraser and Ross, Chartered Accountants, Madras, as Trustee for the Debenture-holders. The Debentures will carry interest at the rate of 7 per cent., subject to tax, and confer a first fixed charge on the Company's immovable properties. Interest on Debentures will be payable in equal half-yearly instalments on 1st April and 1st October each year in respect of the half-yearly periods ended on the previous day, to the Debenture-holders whose names are registered in the Books of the Company on those dates. The first payment will be made on 1st October, 1957 and will be calculated as from the date of receipt by the Company of the Capital sum.

The Company shall be at liberty to create charges on its raw material and stock in trade and other assets not being part of the specific mortgage to secure sums borrowed from or obligations incurred to bankers and others in the ordinary course of business of the Company but the company shall not create any further issue of Debentures ranking in priority to or *pari passu* with the charge in the Trust Deed.

The Trust Deed will contain, among others, the following provisions

1. All Debentures not previously redeemed will mature for repayment at par on the 1st April, 1967.

2. The Company may redeem the whole or any part (to be selected by drawings) of the Debentures after the 31st March, 1960 at par, together with accrued interest after giving 3 months' notice.

3. The Company may at any time purchase any of the Debentures in the market at a price not exceeding par with accrued interest exclusive of expenses or at a higher price with the consent of the Trustee, which consent is not to be unreasonably withheld, and the Company may re-issue any Debentures so purchased.

4. The Company will create a Sinking Fund, contributions to which will commence with the accounting year ending 31st March, 1961, or earlier at the option of the Company to the extent of a minimum of Rs. 50,000 per annum out of its profits which fund may be utilised in the redemption of the Debentures by purchase in the market or by drawings or may be invested in Trustee securities or deposited with a bank until required for the purpose of redemption.

5. The Debentures will rank *pari passu* without preference or priority one over another.

PRESENT OFFER.

Of the above Issued Capital, 3,75,000 Equity (Ordinary) shares, 15,000 Preference shares and 300 Debentures have been agreed to be subscribed for by the signatories to the Memorandum of Association, the Directors and their friends. The balance of 2,25,000 Equity (Ordinary) shares, 20,000 Preference shares and 1,100 Debentures are now offered to the public for subscription.

Applications for less than 100 Equity (Ordinary) shares and/or 50 Preference Shares will not be considered.

DIRECTORS

1. R. RADCLIFFE, Esq., M. C., Coffee Planter, Oosoor Estate, Mysore State.
2. SRI. K. M. DESIKAR, Landholder, Valivalam, Tanjore District.
3. A. S. JEFFARES Esq., "Regal House," McLean St., Madras-1.
4. SRI. M. A. KRISHNAMACHARI, Advocate, 186, Foonamallee High Road, Madras-7.

TRUSTEE FOR DEBENTURE HOLDERS

JOHN DEAVIN, Esq., or the Senior Partner for the time being of Messrs. Fraser & Ross, Chartered Accountants, Madras.

BOARD OF DIRECTORS AND MANAGEMENT

The affairs of the Company, will, subject to the control and direction of a strong Board of Directors consisting of successful and well-known Coffee Planters and leading businessmen, vest in the hands of the Secretaries and Treasurers. The Company are fortunate indeed to have secured the services of Mr. G. V. R. Frend and Mr. J. H. Alexander, both well-known and respected Mysore Planters, who will act as Resident Managers of the Estates. They have been connected with these properties for many years and possess a sound knowledge and experience of conditions in Mysore. With this arrangement the benefits of continuity of management are assured—a matter of great importance in Estate administration.

OBJECTS

The Company has been formed generally for the purposes set out in the Memorandum of Association, a copy of which together with the names and addresses of the signatories thereto is annexed and forms part of the prospectus; the primary object of the formation of the Company, however, is to acquire the freehold rights of Karadykhan, Gungegiri and Kondadkhan Coffee Estates being the main block of the well-known Crawford Group of Estates. Details of the Estates are given below:

	Karadykhan	Gungegiri	Kondadkhan	Total
Cultivated Area under Coffee :	Acres	Acres	Acres	Acres
Arabica	209.25	431.50	251.00	891.75
Arabica under conversion to Robusta	85.75	..	..	85.75
Robusta	160.75	17	..	177.75
	455.75	448.50	251.00	1,155.25
Uncultivated ..	182.35	75.36	76.22	333.93
Wet area	73.39	Nil.	Nil.	73.39
Dry area	1.38	Nil.	Nil.	1.38

According to the agreement entered into with the vendors, the entire Coffee Crop for 1956-57 season together with all standing crops on the Estates as on 1st April 1956, will accrue to the benefit of the Company. The Estates to be purchased are among the best known properties in Mysore and have been very favourably commented upon by Mr. F. G. Foster, Director and General Manager of Coffee Lands and Industries (Mysore) Limited.

PROSPECTS AND ANTICIPATED RESULTS

The Estates have been conservatively managed and hitherto have been largely geared to a policy of heavy shade and restricted crop. This recently has undergone some modification by means of increasing application of artificial fertilisers, and from the figures as disclosed in the accounts of past working of the Estates there are very good indications that more intensive cultivation will produce substantially higher yields. It is a satisfactory feature of the properties to be acquired that even with limited Estate expenditure in the past, which until recently was not higher than Rs. 350 per acre, the estates have shown such good average return as 3½ cwts.

The estimated profits for the three estates on the current season's crop will be approximately Rs. 4.6 lakhs and this is arrived at on a selling price of Rs. 2-6 per point and an Estate expenditure of Rs. 450 per acre. However, assessing the future profits of the Company on an average crop of 4½ cwts. per acre and a revenue expenditure, based on current rates, of Rs. 500 per acre, the prospects are as under:

	Rs.
The crop on 1,154 acres of Arabica and Robusta at 4½ cwts. per acre will be 260 tons which valued at Rs. 2-6 per point will yield ...	9,00,000
Less: Revenue Expenditure at Rs. 500 an acre on 1,154 acres would amount to	5,77,000
Balance Rs.	3,23,000

The estimated future profits from these Estates according to the figures mentioned above amount to Rs. 3,23,000. After making due provision for Mysore Agricultural tax on the compounding basis as it exists at present, interest on the Debentures for Rs. 7 lakhs at the rate of 7 per cent. subject to tax and the interest on the Preference shares per Rs. 3½ lakhs at the rate of 7 per cent. per annum, the residual profits will be approximately Rs. 2,10,000 representing a return of 17.5 per cent, approximately on the Equity (Ordinary) Capital. However, as provision for the amortisation of the Debentures and for capital expenditure required to improve the Labour Housing, buildings etc., have to be met out of this amount, the sum distributable to the Ordinary shareholders as dividends will be lower; even so, the prospects of a return to the Equity (Ordinary) shareholders on the basis of the figures mentioned above appear very favourable.

SECRETARIES AND TREASURERS

Subject to the approval of the Central Government to whom an application is being made, Messrs. Patco Agencies, 22, Errabalu Chetty St., Madras-1, consisting of Partners, Messrs. H. Hadow and K. S. Vaidyanathan are appointed as Secretaries and Treasurers of the Company by the Articles of Association and as per agreement to be entered into as soon as possible after the incorporation of the Company. The terms of the agreement will provide, among others, that—

(1) the appointment of Secretaries and Treasurers shall be for a period of 10 years from the date of incorporation of the Company.

(2) The Secretaries and Treasurers will carry on the business of the Company subject to the control and direction of the Board of Directors.

(*Continued on page 400*)

SUGARCANE OUTPUT RISES MARKEDLY

PER-ACRE YIELD SLIGHTLY HIGHER

THE current sugar season—that is, 1956-57—is expected to witness a marked improvement in the production of sugarcane. The all-India second estimate of cane puts the aggregate yield at as high as 58.91 million tons, as against the adjusted second estimate of 50.46 million tons for 1955-56, a rise of 16.8 per cent. This increase in output is due, to a great extent, to an expansion in the area devoted to cane cultivation. The aggregate area during the season under review is estimated at 4.53 million acres, which compares very favourably with 3.95 million acres in the previous season, an improvement of 14.9 per cent. The area under sugarcane at the second estimate stage is said to be the highest on record. The per-acre yield of cane has also gone up, albeit slightly, the all-India average for 1956-57 being 13.2 tons as against 12.8 tons for 1955-56.

Apart from the expansion in acreage, three other factors have been responsible for the rise in sugarcane crop during 1956-57. First, rains were timely and adequate. Secondly, weather conditions at both the sowing and growing periods of the crop have been favourable. Thirdly, better irrigation facilities have been made available to cultivators. The above estimate, it must, however, be pointed out, does not cover the entire area sown to cane crop during 1956-57. Past experience has shown that the area at the second estimate stage forms roughly 95 per cent. of the area finally reported.

Trend of Crop

The following table shows the trend of sugarcane crop at the second estimate stage in the different States (prior to Reorganisation) during the current and the previous seasons:

	Production (000 tons)		Area (000 acres)	
	1956-57	1955-56	1956-57	1955-56
Uttar Pradesh ..	30,099	25,694	2,707	2,311
Bombay	5,643	5,404	206	196
Punjab	3,990	3,770	370	355
Bihar	3,951	2,684	418	342
Andhra	2,860	2,718	98	90
Madras	2,601	2,533	100	97
Hyderabad ..	1,929	1,333	88	64
Mysore	1,513	856	62	58
W. Bengal ..	1,069	902	15	51
P.E.P.S.U. ..	1,028	787	78	71
Orissa	918	918	56	56
Madhya Bharat ..	675	434	60	39
Assam	655	767	64	63
Rajasthan ..	548	469	67	62
Saurashtra ..	496	330	31	16
Madhya Pradesh ..	398	367	31	29
Travancore-Cochin.	326	305	18	17
Other States* ..	215	179	37	25
Total ..	58,914	50,455	4,532	3,932

* Include Jammu and Kashmir.

It will be seen from the above figures that the overall increase in acreage under, and production of, sugarcane in 1956-57 has occurred in almost all the States, but more substantially in Uttar Pradesh, Bihar, Mysore, Hyderabad, Madhya Bharat and Bombay. The improvement is in marked evidence in Uttar Pradesh, the increase in area and yield being 396,000 acres and 4.41 million tons, respectively. This is quite significant, considering the damage caused to the crop by water-logging in the flood-affected areas and attack of red-rot, top-borers and pyrilla in certain parts of Eastern Uttar Pradesh. The extent of improvement noted in Bombay State would have been more but for the occurrence of floods, heavy rains, and sporadic attack of smut, stem-borer and top-shoot-borer.

"Gur" Production

The total quantity of cane expected to be produced in the current season is, as already noted, put at 58.91 million tons, as against 50.46 million tons in the adjusted second estimate for 1955-56. Expressed in terms of raw sugar or *gur*, the output comes to 5,946,000 tons, which compares favourably with 5,096,000 tons, or an advance of nearly 16.7 per cent. Out of this output, the State of Uttar Pradesh alone accounts for over 50 per cent., the estimated output being 3.01 million tons (2.57 million tons in 1955-56). The anticipated production of *gur*—in thousand tons—in other States during 1956-57, the figures in brackets giving the previous season's second estimate, is as follows.

Bombay 592 (567); Punjab 399 (377); Bihar 395 (268); Andhra 286 (272); Madras 285 (277); Hyderabad 193 (133); Mysore 151 (86); West Bengal 107 (90); P.E.P.S.U. 103 (79); Orissa 92 (92); Madhya Bharat 67 (43); Assam 66 (77); Rajasthan 55 (47); Saurashtra 53 (31); Madhya Pradesh 40 (37); Travancore-Cochin 33 (31); other States 22 (18).

As already stated, the per-acre yield of sugarcane has recorded a slight rise. The rise is very marked in the State of Mysore, the average yield going up from 14.6 tons in 1955-56 to 24.4 tons in 1956-57. Similarly, P.E.P.S.U., Bihar, Rajasthan and Hyderabad have reported an increase in per-acre yield. In contrast, there has been some setback in yield in the States of Andhra, Saurashtra, Assam, Bombay and Madras.

Per-acre Yields

An idea of the trend of per-acre yields in the different States (before Reorganisation) during the second estimate stage of 1956-57 and 1955-56 can be had from the following figures:

	Yield of cane per acre (in tons)	
	1956-57	1955-56
Andhra	29.1	30.2
Bombay	27.4	27.6
Madras	26.0	26.1
Mysore	24.4	14.6
Hyderabad	21.9	20.8
Travancore-Cochin	18.1	18.1
W. Bengal	17.3	17.7
Orissa	16.4	16.4
Saurashtra	16.0	20.6
P.E.P.S.U.	13.2	11.1
Madhya Pradesh	12.8	12.7
Madhya Bharat	11.3	11.1
Uttar Pradesh	11.1	11.1
Punjab	10.8	10.6
Assam	10.2	12.2
Bihar	9.6	7.8
Rajasthan	8.2	7.6
Other States	5.8	7.1
All-India average ..	13.2	12.8

A striking feature revealed by the above statement is that the per-acre yield of cane continues to be very low in Bihar and Uttar Pradesh—the two largest sugar-producing States in India—and several other North Indian States continue to be very low, while the same in the States lying south of the country stands high. It is obvious, therefore, that the tropical conditions of South India are more suitable for cane cultivation than the sub-tropical climate of North India. Even so, it must be said that, even under the unfavourable climatic conditions of North India, higher yields of superior quality sugarcane can be secured, provided an all-out effort is made to intensify cane development work with special emphasis on the adoption of suitable cultural practices.

(Concluded from next column)

potentials. Mr. George A. Lamb, Manager of Business Surveys for the Pittsburgh Consolidation Coal Company of Pittsburgh, recently summed up what an important group of coal producers has concluded about the U.S. coal industry's future. "The coal industry's number 1 target," Mr. Lamb said, "is increased efficiency and greater productivity—and we are going to make it." In order to achieve this target, he said, about $1,000 million in capital outlays would be needed in the next five to 10 years. In addition to extensive modernisation and expansion of present mines, he said that new mines also would have to be developed to help supply rising domestic and export requirements.

What is particularly interesting about Mr. Lamb's statement is that it shows the U.S. coal producers are by no means satisfied with the remarkable 70 per cent. rise in productivity in the coal industry which occurred between 1946 and 1955. Productivity per miner per shift during that time rose from 5.8 short tons (5.3 metric tons) in 1946 to 10.3 short tons (9.3 metric tons) in 1955. This striking productivity advance has kept U.S. coal prices down, making it economically feasible to ship American coal to such distant places as Western Europe, Brazil, and Asia. It also has made it possible for the coal producers to pay higher wages and so-called "fringe benefits" to the miners. Organised in a strong union, the miners today are one of the best paid groups of workers in the United States.

FUTURE OF U.S. COAL INDUSTRY

STRIKING RISE IN PRODUCTIVITY

OVER the last two decades, more and more Americans have come to heat their homes not with coal but with oil and natural gas—fuels that are considered more convenient and cleaner by many home owners. Also, American railroads have switched almost entirely to the use of oil-driven diesel locomotives. The decline of these two traditional domestic markets for coal has dealt the American coal industry two heavy blows. The producers of bituminous or soft coal, however, have staged a vigorous recovery since the 1954 post-war low, and the industry's prospects for the future are considered bright, even though a new competitor—atomic energy—has appeared on the scene.

Rising domestic demand from electric power generation and steel plants, *plus* higher economic activity in the free world which has increased the demand for U.S. coal, have contributed importantly to the U.S. coal industry's recovery. This was noted even before the blocking of the Suez Canal curtailed the flow of oil from the Middle East.

The National Coal Association, which represents the leading U.S. producers of bituminous coal, estimates that the U.S. soft coal production will rise to 532 million short tons (483 million metric tons) in 1957. This compares with the estimated 1956 soft coal production of 505 million short tons (458 million metric tons). The 1956 output was the highest since 1951 and 113 million short tons (102.5 million metric tons) more than the 1954 post-war low level.

Two U.S. Government experts, R. C. Dalzell, Chief Development Engineer for the Atomic Energy Commission, and Harry Perry, Chief Coal Research Engineer for the Bureau of Mines, stated recently that atom power would not supersede coal power in the United States in the next two decades, because it would be more costly to make electricity with atomic heat. They said that this means that the U.S. coal industry could look forward to expanding energy markets in the next 20 years, and that the U.S. electrical generating plants would not be compelled to junk all their coal-steam power equipment because of cheaper fuels.

The best available estimates of coal required for the 1975 power load in the United States, according to these experts, range from 340 to 488 million short tons (308 to 443 million metric tons). This probable demand from coal's largest domestic consumer will increase total annual domestic and export coal requirements by 1975 to about 886 million short tons (804 million metric tons).

Export Demand

As for export demand, the Organisation for European Economic Co-operation (O.E.E.C.) recently made a forecast, before the Suez crisis interrupted European oil supplies, that there would be a growing need for the shipment of U.S. coal to Western Europe's industrial centres during the next two decades.

Although Messrs. Dalzell and Perry foresaw only 38 million short tons (34.5 million metric tons) of bituminous tons displaced in the year 1975 by the use of nuclear energy in generating electric power, they conceded that there was always the possibility of a "dramatic technical break-through" within the field of nuclear energy which might make it much more competitive with coal. On the other hand, these two Government experts saw a new future market for at least 100 million short tons (91 million metric tons) of U.S. bituminous coal annually through use of atomic heat to synthesize hydrogen in the future production of synthetic fuels needed to supplement petroleum natural supplies. Depending on plant size, the average costs per kilowatt for coal-burning power plants, according to the experts, range from $115 to $200 in the United States, whereas the average cost per kilowatt of installed capacity in the nuclear power plants now ranges between $230 and $450. They added that, in the seven U.S. coal-burning power plants surveyed, electricity was produced at the record low cost of 2.37 mills (10 mills equals one U.S. cent).

Neither Government officials nor coal producers believe that the American coal industry today, despite the fact that it has achieved remarkable progress in productivity in recent years, has approached its greatest economic

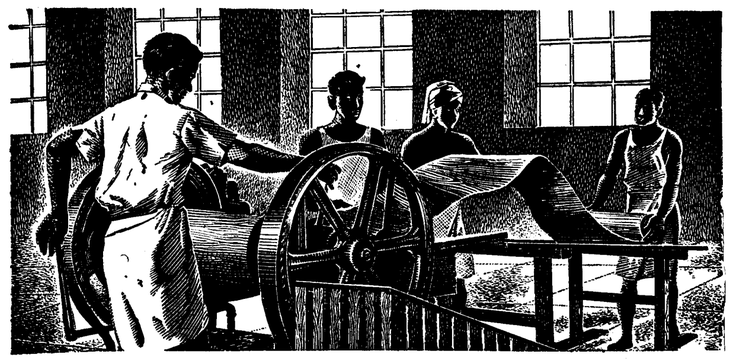
How banking serves the
PLYWOOD INDUSTRY



TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

PC. 9734

DEVELOPMENT OF RUBBER INDUSTRY

COMPENSATION OF RAW RUBBER EXPECTED TO REACH 60,000 TONS IN 1961

ADDRESSING the annual meeting of the Association of Rubber Manufacturers in India last week, Mr. Cecil Stack, Chairman of the Association, struck a note of optimism on the outlook for natural rubber production in India. He said that the rubber planters need have no fears about the future of natural rubber or about the Government's proposal to set up a plant for the manufacture of synthetic rubber. Mr. Stack's estimate was based on the assumption that consumption of rubber in the country would almost double itself by 1961. He also pointed out that the *per capita* consumption of rubber in India during 1955 was only 0.2 lb., as compared with 0.3 lb. in China, 2.3 lbs. in Japan, 3 lbs. in Russia, 7.4 lbs. in West Germany, 11.7 lbs. in the U.K. and 20.7 lbs. in the U.S. These figures, he added helped to emphasise the tremendous scope for development of rubber goods manufacturing.

The trend of consumption of raw rubber during the past few years also justifies the hope that the upward trend will gather momentum in the coming years, what with a more rapid industrial progress envisaged in the second Five-year Plan and the resultant rise in national income. Thus, the consumption has expanded from 19,192 tons in 1949 to a record level of 31,405 tons in 1956 (the Rubber Board's statements, however, show a consumption of only 28,996 tons during the past year), as against an increase in production from 15,587 tons to 23,444 tons during the same period. The production of various rubber goods also shows an encouraging trend, as will be seen from the following table of output of some important items:

	1956 (Jan.-Oct.)	1955	1954	1949
Tyres—				
Automobile (000s) ..	769.2	882.0	832.8	686.4

* For eight months.

In August 1955, it will be recalled, a conference of members of the Planning Commission and the representatives of the rubber manufacturing industry was held in Delhi to discuss the various aspects of the development of the industry. The main outcome of the discussions was: (1) that there was a case for building up additional capacity for the production of automobile tyres and tubes to 1.44 million each by 1960-61, as against the consumption of 834,000 tyres and 749,000 tubes in 1954; and a production of 9.7 million and 10.4 million cycle tyres and tubes by 1960, as against the consumption of 5.44 million tyres and 5.58 million tubes in 1954; (2) that it was necessary to create a capacity of 58 million pairs of footwear on a single-shift basis by 1960 in order to achieve a target of 50 million pairs; (3) that there was a case for the establishment of a synthetic rubber plant of the capacity of about 10,000 tons per annum.

On the basis of the targets fixed for rubber goods production under the second Plan, the Planning Commission estimated the manufacturers' requirements of raw rubber in 1961 at 40,000 tons. In September 1956, the Plantation Enquiry Commission invited the A.R.M.I. to give its estimate of the requirements of rubber in the next 5 to 15 years, as also to state how much of these were likely to be met from indigenous production of natural rubber, how much from synthetic and how much by imports. In reply, the Association stated that the total requirements were likely to be about 45,000 tons by 1961 and 85,000 tons by 1971. As regards local production, the Association expressed the view that no increase in the present rate of production of 24,000 tons of natural rubber might be expected before 1964-65 when the effect of the current replanting scheme would begin to be felt. Both these estimates are now considered by the Association itself as an underestimate. According to it, the requirements of manufacturers may go up to 60,000 tons by 1961 and indigenous production may reach 27,000 tons by that year. On the basis of the estimated consumption of 60,000 tons, the requirements of synthetic rubber are estimated at 15,000 tons, provided prices maintain their present differential in favour of synthetic. Should, however, the price of synthetic be the same as for natural, then the requirements might be only 7,500 tons.

It will be seen from the above that India has to depend for many years to come on imported rubber, so that the natural rubber producers need have no fear of competition from the proposed synthetic rubber plant. During 1956, imports aggregated 9,213 tons, that is, 1,252 tons more than the gap between the total consumption and local production. In 1955, imports amounted to 4,401 tons, that is, 766 tons short of the deficit for that year. Despite the larger imports, the total stocks of rubber in the country at the end of the year, at 8,311 tons, were 3,400 tons short of the minimum considered necessary to ensure continuity of production, that is, four months' estimated consumption. It will be interesting to note that 2,409 tons of synthetic rubber were used by manufacturers during 1956, as compared with only 105 tons in 1955, as against the import of 2,710 tons and 562 tons, respectively.

During the year, natural rubber prices in India remained constant at Rs. 155-12 per 100 lbs. f.o.b. Cochin for R.M.A. 1. Singapore prices for imported rubber ranged from a high of Rs. 191 per 100 lbs. in January to a low of Rs. 119 in June. At the end of the year, the price was Rs. 176. The price of imported synthetic G.R.S. was constant at Rs. 125 per 100 lbs. f.a.s. New York. In July last, the Government of India introduced a price equalisation scheme, under which the difference between the imported and the local price for natural rubber, when the import price is lower, has to be paid to the Rubber Board. At the same time, permission was given to the Rubber Board to import rubber and sell it to manufacturers. The money raised under this scheme is meant to assist the rehabilitation of rubber estates. During the latter half of 1956, the Board received a sum of over Rs. 2 lakhs on this account. The Association of Rubber Manufacturers in India strongly protested against this price equalisation policy but to no avail.

Negotiations are in progress at the present time for the establishment of a carbon black factory in this country, as also for the manufacture of high tenacity rayon tyre yarn. If these plans materialise, a considerable step forward will have been taken in making the rubber goods manufacturers self-sufficient in regard to their requirements of basic raw materials.

COFFEE CROP

The coffee crop in India during the 1956-57 season is expected to yield about 38,000 tons, according to the Coffee Board's latest revised estimate, as against an earlier estimate of 36,000 tons. Rains in some parts seem to have hindered picking and caused dropping of fruits to a slight extent. Nevertheless, it will not be surprising if the final crop turns out to be a little higher than what the latest estimate indicates. For private estimates of growers place the crop at 40,000 tons. In the light of the latest revised estimates of 1956-57 crop, the exportable surplus out of this crop is now placed at 11,100 tons. The prospects for 1957-58, according to the Board, are at the moment bright. There were, however, some scattered premature showers in Malabar-Wynaad about the middle of January, but these are not expected to affect the prospects seriously.

The stocks of 1955-56 crop as on 1st February 1957 amounted to 3,456 tons, of which Plantation accounted for 940 tons, that is, about a month's requirement, Arabica Cherry for 491 tons, slightly more than a month's requirement, and Robusta for 2,025 tons, representing less than three months' requirements. The Board expects to clear these stocks within the time scheduled.

Pool releases for the internal market during January 1957 amounted to 1,939 tons, as compared with 1,693 tons in December 1956 and 1,734 tons in January 1956. Export sales out of the new crop, which had been programmed late last year, have already started and the programme is being kept up. The quantities put up are short of anticipations, but these will be made up in the months of March and April. During January, 591 tons of Plantation were sold. A further quantity of 839 tons of Plantation was offered for sale on the 13th inst. Tenders have been called for 1,240 tons of

(*Continued on page 399*)

OUTPUT OF JUTE GOODS

RISE OF 8,400 TONS IN THREE MONTHS

THE Indian jute industry is again in a depressed state of affairs, following a heavy fall in prices of its manufactured goods. By an unhappy coincidence an increase in production has been accompanied by a slackening of overseas demand. Consequently, mills are burdened with heavy stocks again. As pointed out in these columns last week, stocks of manufactured goods as at the end of last month were higher by 8,400 tons, as compared with those at the close of December 1956, and 25,700 tons more than those a year ago. The statistics of production for the month of January show that, of this increase in stocks, a rise in production accounted for 3,900 tons.

The total production in the past month amounted to 88,800 tons, as compared with 84,900 tons for the previous month and 88,900 tons for the corresponding month of 1956. This is the third month in succession to show an expansion in production, the aggregate rise during the three months being 8,400 tons, bringing the monthly output to the highest level since August 1956.

Trend of Production

The following table shows the production during January, as compared with that in the preceding two months and in January 1956:

Jute Goods Production

(In tons)

	Jan. 1957	Dec. 1956	Nov. 1956	Jan. 1956
Hessian	38,800	37,700	36,800	30,300
Sacking	43,500	41,300	41,800	52,600
Others	6,500	5,900	5,200	6,000
Total ..	88,800	84,900	83,800	88,900

It will be seen from the table above that all the varieties of goods have contributed to the rise in production during the month, and a sizable part of it is accounted for by sacking, which constituted nearly 50 per cent. of the total output. The rise in sacking production is double that in hessian, which has served to reverse the slightly downward trend noted in December last. The increase in hessian production is maintained for the third month in succession, the aggregate rise for the three months being 4,100 tons, mainly due to the diversion of some of the looms from sacking to hessian production. The output of "other manufactures" has been at the highest level since July last.

A break-up analysis of hessian and sacking shows that production of hessian bags has declined from 3,358 tons to 2,767 tons, while that of hessian cloth has gone up from 34,383 tons to 36,092 tons. Sacking bags and cloth have both risen from 40,439 tons and 905 tons to 41,478 tons and 1,996 tons, respectively.

Increased Working Period

The larger production during the month under review is due to the increase in the working period from 206 hours to 212 hours, thus bringing it to the level of May 1956, that is, before the re-sealing of the looms. It is noteworthy that, with the re-sealing of the looms in two stages in July and September last, the number of hours worked declined from 212 in May to 197.5 in September. The production also fell by 21,300 tons, that is, from 101,700 tons in May to 80,400 tons in October. Subsequently, the working hours rose to 212 in the month under review, thus offsetting to a large extent the benefit of the re-sealing. For production has, in the last three months, gone up by 8,400 tons.

Though the position is not alarming, it is by no means comfortable enough to be viewed lightheartedly. With the recent decline in raw jute prices and with the prospect of a fairly comfortable supply position, the cost of production of mills may come down, but, being dependent on the foreign markets to a large extent for their products, it is doubtful whether Indian mills will be able to compete successfully with other manufacturing countries and cheaper substitutes. In the circumstances, a concerted attempt at utilising the idle looms of jute mills to production of cross-blended jute fabrics with the mixture and association of other natural or synthetic fibres should be made. A number of cheap, artistic and useful fabrics of daily use can be produced on these looms, in order to enable the industry to preserve its position as the foremost foreign exchange earner for the country.

NATIONAL BANK OF INDIA LIMITED

Incorporated in the United Kingdom (Established 1863)
The Liability of Members is Limited
BANKERS TO THE GOVERNMENT IN KENYA, UGANDA, ZANZIBAR AND ADEN

Subscribed Capital £4,562,500

Would the top blow off?

It might...if there was an acute shortage of CAF (compressed asbestos fibre) Jointing. Not only would many engineers "hit the ceiling", but there would be "blown" gaskets everywhere, with disastrous results. But thanks to the new AM & FM factory at Ghatkopar, Bombay, the chances of this happening are remote. We make this vital material in sufficient quantities to meet the entire demand of Indian Industry.

CAF Jointing is used wherever a good, strong, efficient seal is needed—sealing flanged joints in pipe-lines, making cylinder head gaskets, boiler joints, etc. This jointing holds fast and remains leak-proof against steam, water and oil at varying temperatures and pressures.

This is just one of the many unobtrusive but important parts that this versatile raw material — asbestos—plays in our daily lives. We at AM & FM make a wide range of technical asbestos products to meet the varying needs of India's industry. The increasing use of asbestos is an index to India's industrial progress.

Where There's Industry There's Asbestos

AM & FM

We supply:
•FERODO' BRAKE AND CLUTCH LININGS
•FIREFLY' ASBESTOS PRODUCTS
SPRAYED 'LIMPET' ASBESTOS
•NEWALLS' INSULATION MATERIALS
•PATTINSON'S' BRAND MAGNESIA CHEMICALS
•SINDANYO' ELECTRICAL INSULATING BOARDS

DEVELOPMENT OF PORT FACILITIES

FINANCE MINISTER STRESSES NEED

THE importance of ports as the gateways of a country's foreign trade and commerce and an indispensible prerequisite for industrial development cannot be over-emphasised. As a result of the increased outlay on development projects under the second Plan, the tempo of economic activity will have been considerably increased by 1960 and this will make port capacity in the country, already insufficient in relation to needs, totally inadequate. Top priority is, therefore, being given to the needs of ports and Mr. T. T. Krishnamachari, Union Minister for Finance, has assured port authorities that, if they have properly considered and organised programmes of expansion, they will not suffer in regard to their implementation for want of foreign exchange. Speaking at the foundation-stone-laying ceremony of the Administrative Office building of the Madras Port Trust, Mr. Krishnamachari said last week that the Ministry of Transport would shortly be convening a meeting of the Chairmen of the various Port Trusts to prepare plans for the immediate augmentation of port facilities and to indicate the amount of foreign exchange needed for the purpose. He also disclosed that the World Bank had promised consideration of any scheme for loan for increasing the railway and port facilities.

Most of the ports in India are still "ancient" in several respects—in their equipment, way of handling traffic and other ancillary arrangements. The number of ships which have to stand outside the ports due to inadequacy of berths is increasing. True, the blocking of traffic through the Suez Canal has reduced the number of ships coming to Indian ports. But when the Canal is cleared and normal traffic restored, the number will tend to increase considerably. The effect of inadequacy of port facilities on freight rates and other costs is very considerable. Shipping companies have been wanting to raise their rates by as much as 30 per cent. because ships have to stand outside the harbour and could not unload their cargoes. Often-times, goods awaiting shipment could not get ships as the latter by-passed many Indian ports. Sometimes incoming ships go to other ports and come back for unloading. All this involves not only considerable delay but also additional costs.

In relation to the large volume of traffic that will have to be handled in the future, the proposed expansion plans and the estimated expenditure on them are manifestly inadequate. Any expansion of port facilities necessitated a corresponding augmentation in the outlay on railways which was a much bigger problem. Mr. Krishnamachari observed that the Railway and Transport Ministry had not taken care to keep up their rates in proportion to increased costs in other directions. If they had done so, he said, they would not have had to suffer from lack of resources for development. This remark suggests that, in the coming Railway Budget, the railway fares and freights might be substantially raised.

Loans for Development

Regarding loans for development of ports, the Minister said that the Government would evolve some system of loans which would induce the Port Trusts to raise their service charges. It is a false economy, he said, to drive away ships from the ports and make them ultimately raise their freight rates. The present rates charged on ships by the ports are, according to him, "miserably low" and forms only a fraction of the total cost of imported goods. He assured the Port Authorities that, if they raised resources for port development, the Union Government would give them equal amounts as loan. He also welcomed the Madras Port Authority's decision to abolish the existing surcharge and to pitch their rates a little below double the pre-war levels, in order to find part of the money required for the expansion of the Port which is scheduled to have 17 berths by 1960-61. But the Minister felt that even these would not be sufficient to handle the increasing traffic which required development of facilities in geometric proportion. He, therefore, suggested to the Chairman of the Madras Port Trust to plan for a few more berths.

Mr. Krishnamachari characterised the dock labour's opposition to mechanisation of the handling of cargo as "short-sighted policy." The fear that mechanisation would affect the employment opportunities and earnings of port labour was unfounded. In fact, mechanisation would only lead to a considerable enlargement of the employment potential not only in the ports but also in the hinterland. If goods moved quickly there would be greater flow of trade and commerce. He cited, in this connection, the instance of Bombay, where the Port Authorities have a mechanical device for loading and unloading of foodgrains but it could not be used because the dock labour was opposed to it. Expressing the hope that the labour union leaders would soon realise that they were putting a check on progress and opportunities for increasing employment by resisting mechanisation, the Finance Minister said that, besides planning and framing schemes and providing funds, it had also become necessary to consider the attitude of labour towards such issues.

MANGANESE SULPHATE FROM INDIAN ORES

Manganese sulphate is extensively used for stimulating plant growth and combating chlorosis of various crops, formerly considered failures, particularly in calcareous and highly organic soils. It greatly increases the yield of tomatoes and other crops like spinach, corn, soya bean, etc.; it is also used for direct spraying on crops to counteract deficiencies of manganese in the soil. Fertiliser grades of manganese sulphate are usually available in 65 per cent. and 75 per cent. grades containing some amount of ammonium sulphate.

The importance of manganese sulphate in commerce is due to its prevailing use as the starting material for the manufacture of various other manganese compounds, chiefly in chrome brown, in textile dyeing and calico printing, in medicine and in paper manufacture. The purer varieties, usually monohydrate, are incorporated in cattle and chicken feeds.

In very pure form, manganese sulphate forms the raw material for production of electrolytic manganese metal which is being increasingly employed in metallurgical industries and for production of manganese dioxide required by dry cell industry.

There is no significant production of manganese sulphate in India at present. Besides the anticipated demand for agriculture and the manufacture of manganese compounds, a sizable export market for the product could be developed.

A process for the production of manganese sulphate monohydrate of 93.6 per cent. purity from manganese ores has been worked out and conditions of working standardised on the basis of work to produce batches of 20-30 lb. of manganese sulphate. The process involves mainly mixing of the ore with a reducing agent (charcoal or coke), roasting of the mixture at a moderately high temperature followed by leaching of the calcine with dilute sulphuric acid. The leach liquor after removal of impurities is concentrated to saturation when crystals of manganese sulphate separate out. Recovery is about 60 per cent. The product obtained is totally soluble in water.

The main raw materials for the manufacture are manganese, or charcoal or coke and sulphuric acid, other chemicals being required only in small quantities. Ample resources of manganese ores are available in the country and most of the available grades, including precipitated hydrated manganese dioxide, can be used. The equipment required, namely, jaw crushers, ball mills, vibrating screch, roast reduction rotary-tube furnace, leaching, purification and storage tanks, filter press, evaporating pans, driers and boiler, etc., is available or can be easily fabricated.

Parties interested in undertaking the commercial development of the process are invited to correspond with the Secretary of the National Research Development Corporation of India, New Delhi.

METRIC SYSTEM IN ENGINEERING INDUSTRY

The engineering industry in India will change over to the metric system of weights by April 1958, according to the decision taken at a meeting of the representatives of the Indian Engineering Association, the Engineering Association of India and the Government of India and the Indian Decimal Society held at Calcutta the other day. It was, however, emphasised that booking of goods on railways should change to the metric system at an early date. Discussing the requirements of the engineering industry in so far as specifications and drawings of the metric system, were concerned, the Chairman, Dr. Lal C. Verman, Director, the Indian Standards Institution, described the steps taken by the institutions in supplying the necessary conversion tables and standard specifications.

The representatives of the industry asked for data on costing in respect of the change-over from the foot-pound system to the metric system. It was revealed that the Railways, P. and T. Department and the Ordnance Depots had conducted certain surveys. It has already been decided that all machinery to be indented by the railways will be on the metric system; the study groups in the Government undertakings have been examining the problems relating to the conversion and the reports which have been submitted to the Government will shortly be taken up for implementation. After studying the technical reports of these Government Departments, the engineering industry will be in a position to draw up more detailed plans for the change-over and these will be discussed at the next meeting after two or three months.

To ensure co-ordination, it was agreed to set up an agency for continuous mutual exchange of information among the industries themselves, on the one hand, and between the industries and the Government, on the other. The meeting also considered the plans for providing technical education on the metric system, the facilities available and the need for the large number of draughtsmen who will be required for carrying out the conversion.

ENGINEERING EDUCATION

PRESENT SYSTEM DEFECTIVE

BASIC sciences like mathematics, physics and chemistry form the foundation for a thorough study of engineering. With the furtherance of engineering study, all its various branches are continually becoming more dependent upon mathematics on an increasingly high level. Likewise, modern physics, including an introduction to nuclear physics, is very essential in the rapidly progressing developments in engineering. As such, the old methods of teaching of physics and mathematics need to be re-orientated. A thorough knowledge of inorganic, organic and physical chemistry is also becoming more and more important for a proper appreciation of different aspects of engineering studies. In fine, engineering science is a subject that involves largely the study of basic scientific principles as related to engineering problems and situations.

Inaugurating the sixteenth annual conference of the Association of Principals of Technical Institutions (India) at Karaikudi resently, Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor, Madras University, deplored the present system of making students decide at the under-graduate level itself whether they would take to civil, mechanical or electrical engineering. He rightly pointed out that, at a time when the broad principles of engineering had yet to be correctly appreciated, the student was switched off to one or other of these special branches. This system did not make for turning out fully qualified, competent engineers. He contended that the students must first complete the graduate course before proceeding to specialise in the branches of engineering science.

Seeing that such defective specialisation is already in existence in several colleges, the Joint Committee of the All-India Council for Technical Education and the Inter-University Board, however, decided that specialisation should be limited to civil, mechanical and electrical engineering and perhaps to telecommunication also and that it should be allowed only at the post-graduate level. This recommendation was made for two reasons. First, in view of the fact that, practically in all engineering colleges, civil, mechanical and electrical engineering is differentiated at the under-graduate level, it would perhaps be a formidable task to effect a change in the curricula of studies. Secondly, in the conditions as they existed in India today, it would be extremely difficult for any specialised course of study at the under-graduate level to be profitably utilised. Hence all specialisation should be at the post-graduate level so that such specialised persons could be utilised either in the capacity of a basic engineer or as a specialist in the particular line. No action seems to have been taken yet on this suggestion.

A thorough understanding of the fundamental laws and modes of procedure that are common to all branches of engineering is essential to any specialised branch of engineering. By so doing, further study of engineering becomes simpler. The basic engineer should be not just a civil, mechanical or electrical engineer but one who knows something of all these three branches of study. In the circumstances, a specialisation undertaken later would prove more than beneficial. Again, it has to be seen whether sufficient facilities exist for a study at the different levels of practical instruction and that such instruction is actually being given under the supervision of well-qualified persons.

The rapid development of the country envisaged by the Government would call for a large number of such specialised basic engineers. If this need is to be met ably, it is necessary to remove quickly the defects in the present system of imparting engineering education to India's young men.

NEW PRODUCTS AND PROCESSES

Radial Water Level

THE plumb rule (a narrow board with a plumb line and bob) and the conventional spirit level are still in frequent use for positioning bulkheads, trunks, stanchions, etc., in shipbuilding and mains, sewers, joists, casements and bevels in the building trade. In shipbuilding, working in the open with a plumb line is difficult and inaccurate as it never keeps still, and it is not easy to lay the plumb rule flat against round objects and parallax errors are practically unavoidable. The plumb line presents the same drawbacks in building, while a water level can only be used for positioning mains, sewers, etc., at an incline after it has been fitted with attachments. A technical, commercial and advisory bureau of the Netherlands has put on the market a *radial water level* which can be adjusted to any angle and overcomes these drawbacks. The instrument consists of a colourless nylon case in which a black nylon head is rotatably mounted. A spirit level is suspended from this head in a rocker. The rocker compensates the forward or backward inclination and the spirit level is set at the desired angle by means of the rotating head.

Audiometer

An electronics laboratory of Rotterdam the Netherlands has recently started manufacturing an audiometer (an instrument for examining the auditory acuity of the human ear) which operates on a new principle. Unlike the conventional *octave* method using test tones with pitches lying an octave or half an octave apart, in the new audiometer the pitch is varied continuously. The hearing is thus examined over the whole range of hearing and far more details are obtained regarding the patient's auditory acuity. The level of the acoustic signal produced by the audiometer in the frequency range 200-8,000 cycles per second is in a direct linear correspondence with the threshold- sensitivity of the average healthy human ear. This new audiometer therefore enables rapid selective tests to be made on groups of persons such as school children, soldiers and factory workers. The results are recorded on an audiogram chart. It has also been found that this new audiometer provides the only correct method for the early detection of incipient acoustic trauma.

Better Use of Engineers

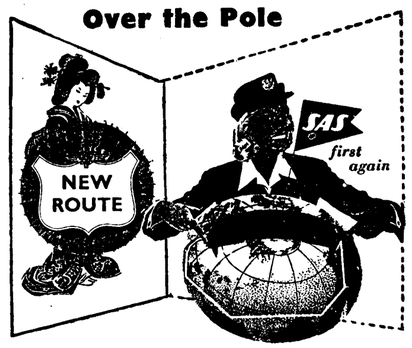
Psychological testing is aiding in the better utilisation of scientific manpower resources. Research on the use of tests for the engineering profession has been aimed at avoiding many instances of severe waste and mis-application of technical manpower. By resorting to trial and error, many engineers have spent years in unsuccessful pursuit of graduate training, careers in sales engineering, research or some other technical function before moving, finally, into areas best suited to them. Most recently, research at the University of Minnesota and elsewhere has provided answers to such questions as: How many jobs in engineering be most efficiently analysed? How do engineers performing different functions differ from one another? How may differences be measured reliably? How may all such knowledge be used to foster better guidance and placement of engineers? Simple, objective and accurate analyses and tests are being used effectively now.

Novel Flowmeter

A novel type of flowmeter is now to become available to British industry. The device which can measure the flow of gases, or liquids in industrial quantities, operates on aeronautical principles. It measures the flow of the gases, or liquids, by means of the pressures they exert on a small aero-foil shaped like a miniature aircraft wing. Five years of research, development and field testing of the aero-foil unit have shown, it is claimed, that the system can be used to measure gases and liquids flowing at exceptionally varied rates of flow and widely different pressures. Thus the system has been used effectively in one case to measure the flow of 3 million gallons of liquid a day at a pressure of 150 lbs. per square inch. In another case it has been successfully used to measure the air flow in a mining ventilation system. Units have been tested out for measuring the flow of water, producer gas, coke-oven gas and town gas, and experiments are continuing in the application of the aero-foil units for measuring the movement of hot air in ducts, and also of oil, blast furnace gas and sea water.

Vibrationless Pneumatic Drills

Virtually vibrationless pneumatic drills for industrial use are now being developed for experimental testing as the result of research which has been carried out since 1955. The research has already shown that it is possible to design pneumatic drills which do not vibrate when they are used to drill most kinds of materials. Investigations are now being made to try and eliminate the vibration in the case of the few remaining exceptionally vibration prone materials and some success is being achieved. Already pneumatic reciprocating drills have been designed in which vibration is only slight even when they are used to drill the very worst materials. A further advantage of the new types of drills which are being developed, will be their very light weight—a feature which does not, the scientists working on their development claim, lead to any reduction in the amount of work they can undertake when compared with the standard heavier vibrating tools in general industrial use.



Quality Flashlight Lamps for dry cell battery torches are now made in India. "RADIO" Flashlight lamps are available in 2.5, 3.8 and 6.2 volts.

ROLE OF LIFE FUNDS IN FINANCING ECONOMIC DEVELOPMENT

VERY VITAL FOR STIMULATING SAVINGS

By T. A. A. Latif

ONE of our major limiting factors to any quickened pace of economic development, is the paucity of adequate finances. The second Five-year Plan particularly has, as its objectives, a more rapid industrialisation of the country and a more even distribution of economic power. We know from the experience of countries like the U.S. or of West Europe, that insurance companies have been in the forefront in providing long-term capital for development purposes. The objective of the Government in taking over the insurance industry has been twofold. First, the need to control the investment of life funds so as to be able to direct it towards socially purposive channels and, secondly, to undertake the work of expanding the scope of operations so as to generate a greater and greater volume of savings. There can be no doubt that, in the context of our present economic planning, there should be the greatest emphasis on the need to inculcate in our people the habit of saving through insurance. The importance of this point will become clearer, if we remember that successful economic planning requires us to rely increasingly on internal resources. Perhaps, the greatest contribution of insurance to the national economy lies in the fact that it can be of help to fill up a big gap in our financial resources.

The most pertinent feature of life insurance is that life policies are long-term contracts under which premiums are paid regularly for a long-term of years. This is accumulated to form a fund, out of which claims are paid or other liabilities met. Life funds are thus a reserve formed as a result of the operation of what is called the level premium system. The level premium system simply means that, in the earlier years of a life insurance policy, we pay an amount greater than the actual cost of insurance warranted by the risk, so that a reserve fund is built up to meet the deficit in premiums in the later years of the policy when the risk naturally is greater. The life fund is, therefore, not an extra amount to meet contingencies, but it represents the accumulated liabilities of the insurer towards policyholders and is to be kept as trust money. What is important is that this money must yield a return, because, at the time when the premium was calculated, a certain rate of interest was assumed and that consideration was shown to the policyholder by giving him the benefit of a lower premium. Investment of funds is, therefore, a must function of a life insurance office and this is a very important matter, because greater care has to be taken in choosing the best investment market.

As a rule, investment policy should be guided by certain broad principles, by the principles of safety, yield, liquidity and distribution. Absolute security of trust money is vital, because a life office cannot venture putting money on speculative and risky investments. It is always a guiding principle for a life office not to make profits that way. In all countries, Governments have imposed severe restrictions on the investment policy of life offices, with a view to protecting the interest of the policyholder. It is another safe rule in insurance investment not to put all the eggs in the same basket. Speaking broadly, investment of life fund is guided by a compromise between maximum yield and absolute security and convertibility. Life insurance offices are thus important financial institutions handling large funds of a trust character.

This factor highlights the significance of life insurance as, perhaps, the most important single source of long-term finance. Life insurers are also the biggest institutional investors in any country. This point is of particular importance for us, because we have to remember that private individual investors in any country do not play as effective a role as the institutional investors could possibly do. Here, we can afford to take a lesson from the industrial countries like the United States or of West Europe or Japan, where insurance companies have been in the forefront in providing long-term capital for industrial investment. According to an earlier estimate, about 50 per cent. of the assets of life offices in the United States are invested in industry. Perhaps there the higher return by way of interest or profits on invested funds have been a major incentive.

In India our problems are more basic. So far as we are concerned, as a country with huge development programme under way, the biggest problem is how increased finances can be made available for industrial investment. It is very pertinent to note here that the Shroff Committee appointed by the Reserve Bank of India some time back suggested some sort of an investment syndicate of banks and insurance companies to invest in new issues of industrial shares or debentures. But whatever may be the points of merit regarding this particular recommendation now, it is pertinent to think that the investment policy of the Life Insurance Corporation will have to be necessarily very broadbased, especially in view of the fact that the second Five-year Plan contemplates as immediate objective a more rapid industrialisation of the country.

Thus in the context of the present economic policy and needs, life insurance has a very significant role to play in promoting the accumulation of capital and place at the disposal of the country on appreciable volume of capital best suited for long-term productive investment. For, even at the present low level of *per capita* insurance, the total life funds available for investment amount to Rs. 380 crores which may be only a fraction of what could be mobilised. We should note the economic fact that, for a vast and populous country like India, the rate of accretion to the life funds are but a poor contribution to the capital resources of our country. The needs of industrial expansion will be very much conditioned by the availability of long-term finance. In the U.S., life funds have financed not only its general industrial development but also the construction of a number of public utility services and private industrial ventures. In the case of India, the creation and promotion of its industries, the building of power and irrigation projects, warehouses and a network of new construction works can be benefited by insurance finance. Investments in the future, therefore, have to be tuned to the demands of a new industrial society. The considerable funds which life insurance controls will supplement greatly the financial resources of a State. For India, the major sources of plan finance have been fourfold external help, internal borrowing, taxation and deficit financing. But, in the context of the present economic and political situation, economic statesmanship makes us rely in a greater and greater measure on our own capital resources. It is here that we have to affirm again and again the importance of promoting the practice of saving through insurance as a national habit.

The role of insurance funds is, therefore, very basic to the national economy and life funds are an integral part of national finance. This is more so for an underdeveloped economy, where the normal channels of capital formation are not activated to a sufficiently high decree. Life insurance funds in other countries have been used to finance reconstruction schemes. In our country, it can not only contribute to financing industrial ventures but also add to the strength and stability of the national economy and speed up social well-being.

LIFE INSURANCE IN U.S.

RECORD BUSINESS DONE LAST YEAR

LIFE insurance business in the United States enjoyed the most prosperous period in its history during 1956, the number of persons owning life policies and sales both setting up new records. By the end of 1956, over 62 per cent. of the nation's population, that is, 106 million out of the total of 169.67 million, possessed life assurance cover, the value of their holdings amounting to $415 billion. The number of persons owning life policies and the business in force at the end of the year represented an increase of 3 million and $43 billion, respectively. The average family ownership increased by $600-$700.

The new life insurance business done during the year aggregated about $55.6 billion, that is, $7.2 billion more than in 1955. The outgo by way of benefit payments to both policyholders and their beneficiaries amounted to about $5.83 billion, an increase of $450 million over the year. Of these, "living" benefits given to the policyholders themselves accounted for about 58.7 per cent. Death benefits were higher by about $170 million, despite the low death rate among such holders, thus indicating that larger amounts of protection were the order of the day among the policyholders.

Several factors were responsible for the substantial expansion in life business during the year. First, there was an increase in the number of life companies, as many as 120 new concerns entering the field, raising the total number of legal life insurance companies to 1,144. Most prominent among these was the Insurance Company of North America, which returned to the field after an absence of 139 years. Secondly, there was "greater competition for the insureds' dollars." Thirdly, insurance was made more attractive by introducing new types of policies covering from birth to death and removing the most hazardous employment classifications, thus making available life insurance available at normal rates for workers employed in hazardous occupations. Fourthly, insurance was made cheaper by some companies which cut their premium rates. It is likely that the cuts in premium rates will be extended during the current year, such being made possible by the rise in interest rates which, in turn, increased the earnings on the companies' investments.

The assets of the life insurance companies soared to a record level of $96.25 billion, an increase of $5.8 billion over the year. For the second year in succession, mortgages represented the bulk of new investments done by the companies. Mortgage acquisitions touched a record total of $6.8 billion or $200 million more than in 1955, thus disproving reports that the tight money market had dried up the mortgage field. There was, however, a decline of $91 million in veterans administration mortgages from the 1955 total of $1.84 billion. Nevertheless, the mortgage holdings of all types at the end of the year amounted to $33.1 billion, an increase of $3.7 billion over 1955.

The year was not, however, one of smooth sailing for the insurance business. For the industry was plagued by threats of national regulations of its advertising. At the end of the year, there was no clear-cut analysis of just where the regulatory power resides. The Life Insurance Association of America concedes that actions so far only serve to confuse the problem. The issue is being tested in Federal Courts and may be settled this year. Another major threat to the conduct of life business was the proposal to raise the taxation of life insurance companies. According to Mr. Louis W. Dawson, President of the Mutual Life Insurance Company of New York, "life insurance is being penalised by a greater total weight of taxation than any other form of thrift institution." He estimates that the life insurance companies would have paid about $263 million by way of corporate income-tax to

Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

ECONOMIC BENEFITS OF WORLD DISARMAMENT

By Dr. Grover W. Ensley

EXECUTIVE DIRECTOR, JOINT ECONOMIC COMMITTEE, UNITED STATES CONGRESS

A PRINCIPAL objective of U.S. foreign policy is securing the peace and prosperity of the world. As a major step in attaining this objective, the United States has sought world disarmament whenever the objective bases for disarmament existed.

Disarmament was a major item in President Wilson's 14 points. During the 1920's, the United States disarmed to a significant extent and maintained a minimum military establishment during the 1930's. Other nations increased armaments despite efforts by Presidents Hoover and Roosevelt to obtain their co-operation through the Disarmament Conference of the League of Nations. Following World War II, President Truman consistently worked for disarmament through the United Nations. The Communist invasion of South Korea in the summer of 1950 found the United States and the Western world's military preparedness woefully inadequate.

After the Armistice in Korea, the U.S. Senate passed unanimously on 29th July 1953, Senate Resolution 150 which states: "That it continues to be the declared purpose of the United States to obtain within the United Nations, agreements by all nations for enforceable world disarmament."

Over a year ago, President Eisenhower appointed Harold Stassen, Special Assistant on Disarmament, with Cabinet rank. Mr. Stassen has been seeking agreement for an exchange of military information between the United States and the U.S.S.R. as a first step towards a comprehensive and effective system of inspection and disarmament. The continuing intense interest of the U.S. Congress in disarmament is reflected in its creation a year ago of a special Senate Sub-Committee on Disarmament under the Chairmanship of Senator Hubert H. Humphrey.

This record over four decades gives clear evidence of the sincere hope of Americans for disarmament and the use of our resources for peaceful purpose. We are not blind to the tremendous problems in international relations which must be overcome to make world disarmament feasible. On the other hand, it is surely not premature to give serious consideration at this time to the consequences of achievement of a truly peaceful world.

One of the most important of these consequences, I believe, will be a significant change in the character of the American economy. Such a change will present problems requiring adjustments both in public policy and in private management of economic affairs. More important, it will present us with opportunities for making tremendous advances in the material well-being not only of the United States but of all the world.

Defence Needs Limit Economic Advance

Defence needs in the United States have limited the extent to which all levels of Government have been able to provide the public services demanded by a growing population. Let us take a look at the additional advances which might have been made in the civilian sector of the American economy, had it not been necessary to allocate resources to defence production. For instance, the cost of one destroyer is enough to provide new $10,000 homes for more than 3,000 families. The price of one modern heavy bomber would provide hospital facilities for a population of more than 125,000 people. The cost of one modern jet fighter would finance four years of college education for more than 100 young people.

In 1955, about two per cent. of our steel shipments, three per cent. of copper, and nine per cent. of aluminium shipments went into defence production. Although these percentages are small, they represent the commitment of substantial quantities of our resources to production that is not available for consumption and which does not add to the nation's industrial capacity.

Communist aggression, with the persistent threat of its renewal, has cost us—and the rest of the world—the higher real living standards, including leisure, educational, cultural, and recreational opportunities, which would have measured our economic potentials in a peaceful world. In the broadest sense, therefore, the principal economic consequences of disarmament would be the opportunity for a major reorientation of our economic activity toward more complete satisfaction of the virtually infinite variety of human wants.

We must, realistically, expect that this reorientation will present significant problems and require major adjustments. Significant reductions in the U.S. military spending have occurred twice in the past decade. After World War II, our defence spending was reduced by $54,700 million between 1945 and 1946. Under the impetus of extraordinary domestic consumer demand, outlays for relief and capital requirements in many war-torn areas of the world, conversion was very rapid. Measured in current dollars, the gross national product fell only $4,400 million. In constant prices, the decline was more significant, although full employment levels were maintained because of voluntary withdrawals from the labour force.

The second adjustment, occurring at the end of the Korean War in mid-1953, was complicated by a related inventory adjustment. Not only was the level of defence spending reduced from $51,500 million in 1953 to $43,000 million in 1954, but there was a significant shift in composition of defence expenditures from guns, ammunition, and tanks to larger outlays for research, development, and production of new offensive and defensive weapons.

Gross national product dropped $2,500 million from 1953 to 1954, but reached a new high of $390,000 million in the following year. Monetary and fiscal action was helpful in easing the impact of reduced defence spending.

The successful post-Korean adjustment points up the strength of our overall economy in adjusting to lower levels of defence spending. It appears that the U.S. gross national product for 1956 will be close to $410,000 million. The largest portion of this, roughly $265,000 million, is being purchased by consumers. Federal, state and local governments are buying nearly $80,000 million and business purchases of new capital goods are close to $65,000 million. Net foreign investment will be small. It is clear that, in the context of these gross national product components, the American economy as a whole could successfully adjust to quite substantial cuts in the current $41,000 million level of defence spending.

The sheer magnitude and infinite variety of unsatisfied human wants which have been postponed because of defence demands are convincing evidence that our economy would have little difficulty in finding outlets for resources released by reducing defence outlays should disarmament

more homes every day...

Today India needs more homes—better homes—for her millions, calling for *more* cement and *more* steel. For the maintenance and expansion of cement production, components such as lining plates and grate plates are essential. Until recently these tough castings made of manganese steel were imported, but now they are made in India—by Mukand. We are equipped to manufacture, in increasing quantities, reinforced mild steel bars and rods, too, so vitally needed for the construction of buildings. With our expansion programme taking shape, we at Mukand, will help meet the nation's growing needs in Steel and Steel Castings.

MUKAND

WHAT HAS HE TO DO WITH CEMENT?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the next five years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

ever become possible. Not only do these wants exist but we in America have demonstrated the know-how, ingenuity, and drive to translate wants into satisfaction.

Impact of Growing Population

Another significant factor underlying the expansion of the American economy is our rapidly growing population. But of even more economic significance than the growth is the changing age characteristics of the population. The demand forces set in motion by these population trends stagger the imagination. Business opportunities are unlimited if this challenge is translated into expansion programmes.

During the past decade, there has been a clarification of responsibilities, the establishment of machinery, and the development of techniques whereby Government and private industry can with greater confidence tackle aggregate economic adjustment problems in the future. Under the Employment Act of 1946, the U.S. Congress declared that it is the responsibility of the Federal Government to "promote maximum employment, and purchasing power" with the co-operation of industry, agriculture, labour, and state and local governments. The effects of this legislation have proved a stabilising force in the national economy by providing confidence both for business and consumers that maintaining high levels of economic activity is our common goal.

The changed complexion of the economy resulting from substantial reduction in the defence programme might well occasion significant changes in both our tax system and monetary policy. Apart from these revisions, rapid reduction in defence spending would call for prompt fiscal and monetary action to the extent required by inadequacy of private demand.

The success of such compensatory policy over the past 10 years and the confidence that timely action would be taken to maintain employment have done much to minimise fluctuations in U.S. economic activity.

The most effective stabilisation device to meet a substantial drop in aggregate demand is fiscal policy. If a cut in defence spending were to result in a deficiency in aggregate demand, other Government outlays might be increased, taxes reduced, or both, depending on the value judgments of the country as a whole with respect to public as opposed to private spending.

A decision to rely on expansion of private rather than public spending would call for tax reduction, in order to increase business and consumer purchasing power. Alternatively, reduction in defence outlays would provide the opportunity for expansion of long-deferred public services and facilities, such as schools, hospitals, and highways, demanded by an expanding population. Expansion of private demand would be facilitated by making money and credit more readily available at lower interest rates.

There is increasingly widespread appreciation of the built-in stabilisers which operate automatically to maintain disposable personal income. On the expenditure side are unemployment compensation, old age and survivors insurance, agricultural payments, grants-in-aid to states, and other programmes. Our progressive federal income-taxes are important automatic stabilisers on the revenue side.

Foreign Investment

Increased foreign investment in a period of reduced defence spending would provide an opportunity for economic growth and expansion of our own as well as the economies of other countries. Political and economic uncertainties created by international tension represent a major deterrent to private investment abroad. Substantial alleviation of these tensions is a basic requirement for a general reduction in armaments and de-emphasis of our defence programme. Accordingly, we may look forward to a higher level of private foreign investment when reductions in defence spending become feasible.

The Federal Government could contribute to expansion of this foreign private investment by such revisions of foreign economic policy as would be made possible and necessary by the changed international conditions. Direct participation by the Government might also be desirable, at least initially.

For example, pooling private capital and public funds to provide a world-wide industrial development fund might be a useful approach, particularly in connection with such types of industrialisation programmes as atomic energy development. Such industrial advance in the present newly-developing countries would afford vast new opportunities for increased private foreign investment, with resulting improvements in levels of living standards.

What President Eisenhower said in April 1953 is still true today:

"This Government is ready to ask its people to join with all nations in devoting a substantial percentage of the savings achieved by disarmament to a fund for world aid and reconstruction. The purposes of this great work would be: to help other peoples to develop the underdeveloped areas of the world, to stimulate profitable and fair world trade, to assist all peoples to know the blessings of productive freedom."

We must anticipate that the change in the character of the economy resulting from substantial reduction in our defence programme would require revisions in other areas of public policy. The implication of such a reduction for federal policy with respect to the agricultural and natural resources sectors of our economy, for example, might well be of broad significance.

The more difficult problems, we must anticipate, will arise in connection with the short-run adjustments to be made by specific industries, localities, and sectors of the economy in response to basic changes in the economic setting. Such adjustments cannot be lightly regarded. They may well have significant consequences not only for the management, employees, and shareholders of affected companies, but for entire communities. On the whole, the best assurance that such adjustments will be most readily effected could be afforded by public policy aimed at substantially increasing the mobility of all types of industrial resources—labour as well as non-labour.

No one, I am afraid, is in a position today to tell us when disarmament may become a reality, not even to characterise the process of reducing defence expenditures. Yet the appeal of attaining a peaceful world and the horror of failure is so compelling that we cannot overlook our responsibilities in anticipating and preparing for the adjustments which will be required. It may be concluded, therefore, that economic considerations support every feasible effort on the part of the United States for disarmament. Certainly, the problems and adjustments occasioned by cuts in defence spending do not represent—and must not be regarded as—economic barriers in the way of disarmament or peace.

INSURANCE

(*Concluded from page 374*)

the Federal Government and $220 million in State premium taxes during 1956 alone, thus taking away $4 out of every $100 of premium deposits made by policyholders. Life insurance companies operating under a mutual plan are not corporations operated for a profit. They have no stockholders; they are true mutuals—groups of individuals banded together to provide themselves with a security for their families. Nevertheless, it is contended that they are subjected to penal taxation as other life insurance companies.

The outlook for the current year indicates another year of record business. Mr. Holgar J. Johnson, President of the Institute of Life Insurance, foresees a new peak, possibly in excess of $450 billion, by the end of 1957. The average family ownership of life policies, according to the estimate of the Institute, should pass $8,000 this year. The fact that American families bought last year more new life insurance, increased their ownership of life insurance to a larger aggregate and received more by way of benefit payments than in any year on record, appears to back the industry's optimism for the future.

MORE POWER TO OUR VILLAGES

The achievements in power and irrigation under the First Five Year Plan are actually the first phase of a long-term expansion. Within 15 years our total irrigated area will be doubled, production of electricity will increase from 2.3 million KW to 15 million KW !

During the Second Plan 21 million acres of fallow land will be irrigated, per capita consumption of electricity will rise from 25 units to 50. Over 80% of all villages of over 5,000 population will be electrified.

In these vast power and irrigation projects paper will play an important part. Wherever plans and estimates have to be made, paper will supply the means of record and communication.

Serving Industry—which Serves Mankind

1901—the birth of Monsanto starting with practically sweet nothing—the manufacture of a *single* chemical—Saccharin. Today, Monsanto ranks among the greatest names in chemicals and plastics, serving industry which serves mankind. Today—hundreds of industries rely on Monsanto : Agriculture—Automotive — Aviation — Beverages — Ceramics — Chemical Processing — Cosmetics, Perfumes—Dental—Dyeing—Electrical—Foods—Insecticides—Leather Tanning — Lumber — Machinery — Mining — Packaging — Paint, Varnish, Lacquer—Petroleum—Pharmaceutical—Pulp, Paper—Plastics—Printing Ink—Radio—Rayon—Refrigeration—Rubber—Soaps and Detergents—Textiles.

To those of you who are concerned with any operation in any of these industries, we extend a personal invitation—"Come and consult us". We shall help you increase production ... improve products ... decrease operating costs ... and increase your sales.

POSITION AND PROBLEMS OF GLASS INDUSTRY

OUTLOOK APPEARS TO BE BRIGHT

AN important industry the capacity of which has expanded faster than the internal requirements is the glass industry. No wonder the glass industry has for some time been faced with all those problems that are peculiar to such an industry. In 1955-56, there were 131 glass factories registered under the Industries (Development and Regulation) Act 1951, with an installed capacity of about 314,500 tons. Of these, however, only 84 units, with a total capacity of 247,000 tons, are actually working while 25 factories, with a capacity of about 44,000 tons, are temporarily closed and 22 factories, with a capacity of 23,000 tons, can be regarded as having permanently closed down. The effective capacity of the industry at the end of the first Plan was of the order of 292,500 tons. As against this, the production of glass products was low, being no more than 124,205 tons, or about 42.5 per cent. of capacity. It was, however, substantially higher than 87,130 tons produced in 1950, that is, on the eve of the first Five-year Plan. The main lines of production are bottles and phials, sheet glass, tableware and pressureware, lampware, scientific glassware, shells for lamps, and thermos flasks.

Unit (tons)	1950	1951	1952	1953	1954	1955	Targets of production under Second Plan 1960-61
Bottles and phials	51,850	50,640	50,220	40,750	47,840	55,270	90,000
Sheet glass	5,100	5,800	4,780	11,990	17,950	20,540	35,000
Table and pressedware	12,950	15,340	17,920	17,620	22,050	25,460	35,000
Lampware	13,150	16,340	15,580	12,400	12,660	16,690	18,000
Scientific glassware	2,140	2,000	1,500	1,320	1,510	2,500	6,000
Shells for lamps	N.A.	620	740	750	1,000	1,160	2,200
Thermos flasks	N.A.	330	110	90	180	315	750
Miscellaneous glassware	1,990	2,080	1,230	960	2,460	2,270	12,000
Safety glass	..	..	..	..	..	N.A.	1,500
Optical and Ophthalmic glass	..	..	..	..	..	..	250
Total	87,180	93,150	92,080	86,080	105,640	124,205	200,900

The comparative table above gives a picture of the trend of production of various types of glassware since 1950. As can be seen from the table, the production of glass products declined from 93,150 tons in 1951 to about 86,000 tons in 1953, but increased to 124,000 tons in 1955. This level was substantially lower than not only the capacity but also the target fixed in the first Plan for 1955-56, namely, 168,500 tons. The reasons for this shortfall are stated to be lack of sufficient domestic demand for a number of products of the industry, irregular and inadequate supply of transport and the failure of exports to attain the targets envisaged in the first Plan. Neither the existence of surplus capacity in the industry nor the failure of the industry to reach the production target should be taken to mean that the country has achieved self-sufficiency in glass manufactures. This point is obvious from the substantial imports of glass and glassware. The value of such imports during the last four years of the Plan was Rs. 1.29 crores (in 1952-53), Rs. 1.36 crores (1953-54), Rs. 1.37 crores (1954-55) and Rs. 1.64 crores (1955-56). In the first year of the Plan, the imports were Rs. 2.15 crores. The fall in the following years was mainly reflected in sheet glass and plate glass, two items in the production of which the country has made some advance. Nevertheless, these very items still head the list of glass imports. Other items that figure in the list are bottles and phials, beads and false pearls, scientific glassware, funnels, globes, glass parts of lamps, tableware, thermos flasks. The continued imports of even some of the items that are produced in the country may mean that either the quality of the domestic production is not up to the mark or what is produced does not cover all the types of goods needed by the country. In our view, both the causes are responsible for the imports. In any case, some imports are necessary in an industry like glass for stimulating the manufacturers' pride for producing high class goods and a desire to attain competitive standards.

Exports Small

As compared with imports, exports were negligible. In terms of value, they averaged Rs. 30.80 lakhs per annum during the five-years 1952-53 to 1955-56. The tendency in the later years of this period was rather downward. On the basis of imports, internal production and exports, the domestic consumption of various types of glass and glasswares in 1955-56 is estimated at 135,500 tons.

Notable among the developments in the sphere of production during the first Plan period was the commencement of the manufacture of penicillin vials, sheet glass of sizes less than 16 ozs. and over 32 ozs., glass tubing by automatic drawing, and narrow mouth thermos flasks. Considerable progress was also noted in the efforts of many factories to raise the quality of their products though there is still great scope for improvement in this direction.

The Planning Commission has estimated that the domestic consumption of glass and glassware will go up from 135,000 tons in 1955-56 to 200,900 tons by the end of the second Plan. The programmes of development drawn up for meeting this estimated demand include the establishment of new factories for the production of thermos flasks, penicillin and vaccine vials, bottles, battery jars, glass tumblers, cups, etc., and substantial expansion of certain existing units. The effective capacity is thus expected to be raised to 338,000 tons by the end of the second Plan, as against 291,000 tons in 1955-56. Both the imports and exports are expected to amount to Rs. 50 lakhs each during the same period.

Serious Handicaps

The attainment of the targets fixed in the second Plan, however, depends to a large extent on the removal of the serious handicaps from which the industry now suffers. These handicaps were dealt with at considerable length by Mr. F. N. Sen, the retiring Chairman of the Bengal Glass Manufacturers' Association, in the course of his presidential address at its twelfth annual general meeting held at Calcutta a few days ago. First, there is the problem of idle capacity, to which reference has already been made. No less than 50 per cent. of the capacity of the working units and about 65 per cent. of the installed capacity are lying idle, despite the progress already made. In view of this, Mr. Sen cautioned the Government against issuing licences for setting up new units or for sanctioning expansion of the existing ones, unless such a course was dictated by reasons of economy of production and diversification of production in newer lines. He referred, in this connection, to the provision made in the second Plan for the manufacture of certain items, such as safety glass, optical glass, etc., and said that it was too early to say whether there was in adequate market for them. Nevertheless, he thought that an exhaustive market research would be useful. A second hurdle, which, according to Mr. Sen, is of crucial significance to the progress of the industry is placed by the railways. The glass industry is a major user of railway transport and has to get raw materials in bulk supply. It is said that there is both inadequacy as well as irregularity in the supply of railway wagon facilities. If this difficulty is not solved in time, it is feared that it would lead to accumulation of stocks and constitute a serious disincentive to the investment of fresh capital.

Inadequate and haphazard supply of raw materials, chemicals and fuels constitutes another serious problem. This is also due, to a large extent, to transport bottlenecks. The industry has to resort to road transport of coal at prohibitive costs. The high rates of freight is another handicap. Mr. Sen felt that the industry had reached such a stage that it could cater to the requirements of specialised consumers all over India, if only transport and freight facilities were favourable.

Yet another factor that would help the industry to grow with less friction, Mr. Sen said, was a sympathetic import policy, which should be so designed as to lead not only to conservation of foreign exchange resources, but also to expansion of the industry. This is a plea which many Indian manufacturers are apt to put forward as a matter of course, with little regard for the value of a reasonable measure of competition as a factor that ensures production of quality goods. It will, indeed, be a good thing if the country's balance of payments position can permit imports of certain types of consumer goods, in sizable quantities, in order to keep the domestic manufacturers on their toes all the time. It will be a valuable experience for them and help them compete effectively in foreign markets later. It should be noted that the industry has been enjoying tariff protection since 1950 and the question of its extension beyond the end of the current year will soon come up for scrutiny. The present rates of protective duty vary from 47½ per cent. *ad valorem* to 70 per cent. *ad valorem*. If, on the top of this high tariff wall, the industry wants to be protected through import controls also, the issue must be specifically referred to the Tariff Commission.

The price factor plays an important part in influencing the demand for glass products. The lower the price the greater will be the demand. Referring to this point, Mr. Sen emphasised the need for reducing the supply price of raw materials, the freight rates and refund of import duties, in order to enable the industry to reduce the prices of its products. But he said little about raising the productivity of the industry and the quality of its products. If Indian manufacturers wish to carry public opinion with them and conviction to the authorities in their demand for concessions in the cost of public services, they must make sure that they have taken all the other steps necessary to keep their cost of production down.

Government's Interest

The glass industry is one of those in the progress of which the Government has been taking keen interest and providing guidance and assistance. Apart from assuring tariff protection which was steadfastly denied by the British regime, the Government has constituted an Export Promotion Council for the industry along with that for chemicals and allied industries, and Mr. Sen felt that it should go a long way towards helping the industries in their export drive. Mr. Sen also referred appreciatively to the efforts that were being made by the Government to render technical assistance to the industry in respect of designing, construction, etc. He referred, in this connection, to the Technical Survey Team which has been formed with three foreign experts, and expressed the view that their findings would be of great value to the industry.

Turning to the labour problems facing the industry, Mr. Sen pointed out that the glass industry, unlike others, provided employment not only to skilled, but to unskilled workers as well. But, he averred, the over-dose of hasty labour legislation reacted most adversely on the industry. "Such legislation," he said, "hopelessly ignored the special characteristics of different industries along with their widely varying paying capacities." He felt that this trend was pregnant with dangerous consequences to the industry, especially to weaker units. He rightly stated further that higher rates of wages fixed by the industrial tribunals without regard to the productivity of the workers could not be sustained for long. He drew the pointed attention of the authorities concerned to the dangers to which the manufacturing units were exposed in times of strikes as a result of treating workers engaged in the furnaces on par with others. Since the glass furnaces are continuous process ones, and any discontinuation will lead to technical complications, the argument that, in times of strikes, the firemen at the furnaces should be declared essential workers has special force. Another pertinent suggestion made by him was that the Government should make provision for flexibility in labour laws to accommodate the industries at varying levels of development.

Outlook

As the major portion of the glass industry's products are of intermediate nature which are consumed by other industries, its fortunes are closely linked with those of the latter. About 45 per cent. of the glass industry's products, for instance, consist of containerwares used by pharmaceuticals, chemicals, preserved fruits and food, etc. Accordingly, unless these industries prosper and grow, the manufacture of bottles and phials will languish. Lampwares and glass shells, to give another instance, depend for their outlet on the development of lantern and lantern making industries. In fine, the glass industry draws its strength and succour, as Mr. Sen remarked, from the development and progress of other industries and much less from direct market demand for consumer goods like tumblers, jars, plates, cups and so on. Since the second Plan provides for the development of all the industries mentioned above and expects a substantial increase in national income, the outlook for the glass industry is generally bright and its progress is well assured if the problems discussed in this article are successfully tackled. Glassware can be used for multifarious purposes, especially for conservation of metallic resources which are scarce.

The extensive development in various fields envisaged in the second Plan would necessitate increasing uses of scientific and laboratory glassware and apparatus. Even from the point of view of saving foreign exchange and providing employment there is great need for expanding this industry. Further, the progress of housing schemes would also lend support to sheet glass industry. The industry, however, can avail itself of all these opportunities only if it produces high quality goods and sells them at competitive prices. This aspect is of cardinal importance, especially if the industry is to contribute its share to the country's foreign exchange resources. In this connection, the Central Glass and Ceramic Research Institute should be of special value. It is noteworthy that the symposium on Quality Control organised jointly by the Institute and the Society of Glass Technologists has given a new lead to the industry.

IMPORT LICENCES

It will be recalled that, under the import licensing policy for the current half-year, the Government has granted concession by which the licences issued during this period could be utilised for imports from the dollar area to the extent of 50 per cent. of their face value. The Government, according to an announcement on 12th February, extended this concession to cover soft currency licences issued during the two half-yearly periods of 1956, provided they are still valid. It is stated, however, that no extension in the period of their validity will be allowed as a result of this concession. It is further stated that requests for utilisation of such licences for imports from the dollar area will be considered on an *ad hoc* basis by the licensing authorities. In this review, the concession will be restricted to individual cases, where the importers can adduce satisfactory evidence to show that the imports from the dollar area would have a substantial price advantage over the same imports from the soft currency area.

SCINDIA STEAM FARES BETTER

DEPRECIATION, HOWEVER, STILL IN ARREARS

IN refreshing contrast to the depressing trend noted in the previous year, the working of the Scindia Steam Navigation Company, Ltd. (Chairman: Mr. Dharamsey M. Khatau, Bombay), for the year ended 30th June 1956, has produced results which are highly encouraging. The earnings for the year are substantially higher than those for 1954-55. The factor mainly responsible for the sharp spurt in earnings is an increase in freights in overseas services. The better profits have brought some heartening news to the shareholders, in that their dividend for the year has been stepped up from As. 8 to Re. 1 per share. In other words, the dividend has been increased from a meagre 2½ per cent., to which level it had been stepped down in 1953-54, to a modest level of 5 per cent. per annum.

The Company's gross profit, which had suffered a progressive fall in the preceding two years from Rs. 242.29 lakhs for 1952-53 to Rs. 117.69 lakhs for 1954-55, has staged a very smart recovery to Rs. 269.31 lakhs. This is, indeed, a commendable performance. The impressive rise in profit is chiefly due to a substantial increase in freight and passage receipts from Rs. 888.22 lakhs in 1954-55 to Rs. 1,018.75 lakhs in the year under review. No less is it due to a handsome advance in other receipts from Rs. 25.68 lakhs to Rs. 42.41 lakhs. The net profit, too, has more than doubled from Rs. 32.73 lakhs to Rs. 71.41 lakhs. It is significant that this higher net profit has been arrived at after providing a substantially higher amount for depreciation; this account has received Rs. 172.16 lakhs, as against Rs. 74.70 lakhs a year ago. The sum of Rs. 172.16 lakhs consists of Rs. 78.00 lakhs special depreciation and Rs. 94.16 lakhs normal depreciation. Two factors are responsible for the sharp rise in the provision for depreciation. One is the increase in the size of the fleet and the other is the 25 per cent. development rebate allowed under the Income-tax Act in respect of new ships commissioned during the year. Such rebate works out to Rs. 67 lakhs. To this, the Directors have added the sum of Rs. 11 lakhs by writing back the provision for development rebate from the 1954-55 profits.

Thanks to the development rebate, the Company's tax liability is reduced by a corresponding amount. No provision has, however, been made for deferred taxation reserve for the second year in succession. One reason for this omission may be the conversion of the initial depreciation allowance in respect of plant and machinery into a development rebate.

Results Compared

The following table shows at a glance the trend of financial results of the Company since 1952-53:

(In lakhs of rupees)

	For the year ended 30th June			
	1956	1955	1954	1953
Freight and passage money	1,018.75	888.22	917.87	1,141.74
Other income	42.41	25.68	34.92	107.81
Expenses	791.85	796.21	793.44	1,007.25
Gross profit	269.31	117.69	159.35	242.29
Agents' commission	25.74	10.27	16.08	20.57
Depreciation	172.16	74.70	81.32	93.64
Deferred taxation account	..	..	29.50	60.00
Net profit	71.41	32.73	33.45	68.08
To debenture sinking fund	10.00	10.00	10.00	10.00
,, gratuity reserve	13.00	..	..	..
,, reserves	..	..	..	21.75
,, dividend	46.93 (5%)	23.47 (2½%)	23.47 (2½%)*	36.18 (5%)
Transfer from reserves and excess provision	55.08	11.75	..	..
To reserves	53.68	11.00	..	..
Carry forward	5.62	2.74	2.73	2.74

* On the increased capital of Rs. 9.39 crores raised by the capitalisation of Rs. 2.35 crores and increasing the paid-up value from Rs. 15 to Rs. 20 per share.

It will be seen from the table above that, though there has been a substantial rise in earnings over those for the previous years, the profit for the year under review is not that large to cause anybody's envy. After providing for all essential transfers, the net profit constitutes only about 7 per cent. of the freight and passage income. If one were to take into account the heavy cost of replacing old ships and provide for it adequate sums out of the current year's profit, there would hardly be any balance left to pay a dividend. It would, therefore, be no exaggeration were we to say that, in actual effect, even the 5 per cent. dividend is being paid out of capital. Judged thus, the Directors do not seem to be justified in raising the dividend level. One can have a picture of a shipping company's true profit only if the provision for depreciation is calculated on the basis of replacement cost. The Directors themselves admit that the Company has not been able to write off even the full depreciation as allowed under the Income-tax Act. As a result of this action, they seem to have provoked the Government to nullify a part of the assistance it was giving in the form of low interest-bearing loans provided by it for buying ships for overseas trade.

Out of the net profit indicated in the table above, even the modest dividend of 5 per cent. absorbs as much as Rs. 46.93 lakhs, that is, more than 66 per cent. The balance of Rs. 24.48 lakhs represents the sum ploughed back. As the appropriation account this time has been distorted by writing back reserves that had been created out of previous years' profits, it is not possible to say to which reserve accounts the sum of Rs. 24.48 lakhs has been distributed. It, however, roughly equals the transfers made to debenture sinking fund (Rs. 10 lakhs), the gratuity reserve fund (Rs. 13 lakhs) and general reserve (Rs. 90,751).

Fictitious Asset Written Off

Including the sum of Rs. 11 lakhs written back from the development rebate created last year, the Directors have brought back to the surface Rs. 55.08 lakhs, of which Rs. 21.50 lakhs are from the depreciation account and the balance from other heads. They say that these sums are no longer required under these heads. Since the amount carried forward is Rs. 5.62 lakhs, as against Rs. 2.73 lakhs brought in—a difference of Rs. 2.88 lakhs—a sum of Rs. 52.20 lakhs of the amount brought to the surface has been ploughed back under different heads. Thus, a fictitious asset, namely, debenture issue expenses amounting to Rs. 19.76 lakhs has been written off. A sum of Rs. 20 lakhs has been placed with the Annual Special Survey reserve and another Rs. 13 lakhs to dividend equalisation reserve.

A word about the managing agency commission is necessary here. Although a sum of Rs. 25.74 lakhs has been provided in the accounts, the Managing Agents have agreed to accept a lower sum of Rs. 17.41 lakhs (calculated on the basis of net profit after depreciation), provided the Tax Authorities agree to this arrangement.

Cargo carried by the Company's steamers during the year was slightly less, at 1.91 million tons, as compared with 1.96 million tons last year, but the effect of this deficiency on revenue was offset by higher freight earnings. The fall in the cargo lifted was due not to lack of goods to be moved but to unsatisfactory working conditions in ports all over the world. Conditions on the Indian coast, too, were anything but satisfactory; in fact, there was considerable deterioration on the west coast.

The Company started during the year a new cargo service to West African ports and to and from Black Sea ports of Russia. It has also resumed the Burma/India service for carriage of rice from Burma to India.

Financial Position

As regards the finances of the Company, in 1953-54, the capital was raised to Rs. 9.39 crores, by capitalisation of reserves to the tune of Rs. 2.35 crores and increasing the paid-up value of the shares from Rs. 15 to Rs. 20 per share. The entire capital is in ordinary shares. Even after this transfer, the Company's reserves and surplus aggregate Rs. 9.11 crores. The Company has supplemented its capital and reserves by securing long-term loans. Thus, it has 4½ per cent. 1963 debentures amounting to Rs. 4.14 crores. In addition, it has loans from Government aggregating Rs. 3.34 crores, so that the total of long-term secured liabilities are Rs. 7.48 crores. As against these capital resources of the order of Rs. 25.93 crores, the fixed assets, after depreciation, appear at Rs. 17.80 crores, of which the net value of fleet account is Rs. 14.52 crores and payments on account of steamers under construction of Rs. 3.07 crores. The gross value of fixed assets comes to Rs. 22.65 crores, as against which a total depreciation of Rs. 4.86 crores has been provided. As already mentioned, this provision falls short of the amount allowed under the Income-tax Act.

A part of the capital resources is being utilised as working capital also. This is clear from the aforesaid analysis as well as from the fact that, whereas current liabilities amount to Rs. 7.88 crores, current assets aggregate Rs. 11.54 crores, thereby exceeding the former by Rs. 3.66 crores. The current assets include the Company's investments in subsidiaries and others of the value of Rs. 5.73 crores, of which Rs. 2.35 crores are in quoted investments and Rs. 3.39 crores in unquoted investments. It is noteworthy that the market value of the quoted investments as at the close of June last was almost equal to that of the book value.

The Directors have been actively following a policy of replacing their old and worn-out vessels as also those which prove unremunerative. Commenting on this, they observe:

"The sale of the s.s. *Jalagopal* and the s.s. *Rosebank* was reported last year. Since then, we have sold the s.s. *Jalaratna* and the s.s. *Kalavati*, due to their old age and prohibitive cost of putting them through special survey. The s.s. *Kutubtari*, which was specially built for Chittagong/Cox's Bazar service in the then undivided India, could not be profitably employed elsewhere. The Directors have, therefore, disposed of this vessel during the year. In addition, we have also sold two small launches, the m.v. *Jaldhara* and the s.l. *Ravi*, due to their old age."

Expansion

With regard to the Company's scheme of expansion, which is going apace, the Directors state thus:

"Out of the five ships ordered from Messrs. Hindustan Shipyard Ltd., the first ship, m.v. *Jalavihar*, was delivered in June 1955. Two ships, m.v. *Jalavijaya* and m.v. *Jalavishnu*, were delivered during the year, in December 1955 and in May 1956, respectively. The remaining two ships are expected to be delivered in the second half of 1957. The m.v. *Jalazad* and m.v. *Jaljawahar*, two of the eight ships ordered from German shipbuilders for the India/U.K. Continent service, were delivered in May and July 1955 as reported last year. Two more ships, m.v. *Jaladhan* and m.v. *Jaladharup*, were delivered to us in September and October 1956. Of the remaining four ships, one was expected to be delivered in November 1956 and three in the first half of 1957. It is regretted, however, that owing to workers' strike in the shipbuilding yard, these deliveries have been delayed.

"In pursuance of the policy of modernising the fleet of the Company, your Directors took the opportunity of purchasing in March 1956 the two-year-old m.v. *Jersey Dawn* of 9,150 tons dw., now renamed *Jalagovind*, in replacement of the Liberty ship s.s. *Jalakirti* which was sold in July 1956. All the eight ships, that is, three delivered by Messrs. Hindustan Shipyard Ltd., four from Germany and one purchased in replacement of s.s. *Jalakirti*, have been employed on the India/U.K. Continent service. One small ship, m.v. *Jalatapi*, which was ordered in Germany for the west coast trade, was delivered in June 1956 and now operates on the west coast. The Directors have placed orders with the German shipbuilders for two more ships, each of 9,300 tons deadweight, and a speed of 17 knots. These ships can also be operated as closed shelter deckers with a capacity of 12,300 tons deadweight. They are expected to be delivered in 1959 and 1960."

The Managing Agency agreement between the Company and Messrs. Narottam Morarjee & Co., expired under law on 15th January 1957. The question of the future managing agency of the Company has been under discussion and negotiation with the parties concerned. The Directors have now approved the broad outlines of a scheme for the new managing agency. The proposed scheme provides for the managing agency of the Company to be taken over by a private limited company, to be styled as Narottam Morarjee & Co. (Private) Ltd., of which Mr. Dharamsey M. Khatau will be a director, in addition to two of the old partners, namely, Mr. Shantikumar Morarjee and Mrs. Sumati S. Morarjee. Necessary arrangements in this connection are being finalised. Pending appointment of the new managing agents, it has been decided to carry on the administration and management of the Company by a Committee of Directors.

The Rs. 20 fully paid-up shares of the Company are being currently quoted at Rs. 19.5 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 5.46 per cent. per annum, free of income-tax.

MALLYA'S IDEAL READY RECKONER NAYE PAISE

contains salary, interest (365 and 360 days a year) tables, useful six appendices including Government Exchange rates in Naye Paise for annas and pies. Appreciated by leading Scheduled Banks who purchased in fifties. Price Rs. 10 per copy. Liberal discount on bulk orders. Separate salary tables in the Press.

EARNINGS OF BRADY MILLS SHRINK

DIVIDENDS, HOWEVER, MAINTAINED

THE successful efforts of the cotton mill industry to provide more clothing to the millions of population by raising its production by 150 million yards during 1956 proved to be not only a thankless performance but distinctly unremunerative. There was a steep rise in prices of cotton and an increase in the wage bill and, though these were offset, to some extent, by a rise in the price of cloth and yarn, the position was complicated by the staggering increase in excise duty on 31st August 1956. As prices of cloth had already reached high levels, the heavy impost could not be passed on to consumers. It had, therefore, to be met, in the case of the majority of mills, by dipping into their profit margins. But what was more damaging was the disruption in cloth trade brought about by the heavy rise in the excise duties. This disruption has led to a fall in the mills' selling prices of cloth, an accumulation of stocks and the consequent locking up of resources. Thus, the benefit of increase in production and of the higher margin of profit secured in the first half of 1956 were offset by the adverse developments that took place in the last four months of the year.

Two instances of such victims of the Government's negative step are provided by the New Great Eastern Spinning and Weaving Company, Ltd., and the New City of Bombay Manufacturing Company, Ltd. (both under the management of Messrs. W. H. Brady & Co., Ltd., Bombay). The audited accounts of these two Companies for the year ended 31st December 1956 show a shrinkage in their earnings, the decline being more marked in the case of the former. The gross profit of the New Great, which had nearly doubled itself in 1955 from Rs. 3.39 lakhs to Rs. 6.32 lakhs, dropped to Rs. 2.10 lakhs in 1956. This profit, which is just a third of that for 1955, is the lowest in the history of the Company since 1939. Even in 1952, which was the leanest year in the war and post-war period for cloth trade, the Company's profit was higher—albeit slightly—at Rs. 2.68 lakhs. The net profit for the year under review has also shrunk markedly from Rs. 4.61 lakhs to a mere Rs. 0.68 lakh. After rising from Rs. 4.48 lakhs in 1954 to Rs. 5.12 lakhs in 1956, the gross profit of the New City has receded to Rs. 4.55 lakhs. The net profit has come down from Rs. 3.26 lakhs to Rs. 2.51 lakhs. In the case of both the Companies, no provision for taxation has been made, while the provision for depreciation has been barely maintained at the previous year's level.

Both New Great and New City have maintained the dividend at 10 per cent. per annum, to which level the New Great had raised it last year, thus restoring the cut made in 1954. The New City is repeating the dividend for the fifth year in succession. In the case of New Great, the distribution of 10 per cent., despite the very poor profit, is being rendered possible by drawing on the reserves accumulated in the past by keeping the dividend at moderate levels and ploughing back the balance of profit. The Directors have now written back a sum of Rs. 1.52 lakhs being the excess provision no more required and have transferred Rs. 2.06 lakhs from the rehabilitation reserve. Out of these, a sum of Rs. 0.75 lakh has been transferred to the general reserve, as against Rs. 1 lakh provided last year.

The Directors of the New City have also written back a sum of Rs. 2.89 lakhs being the excess provision no longer required, but this has not been utilised for payment of dividend, as the net profit adequately covers the proposed dividend. On the other hand, this has been used to strengthen the general reserve by Rs. 2 lakhs, as against Rs. 1 lakh added last year, to raise the pension and gratuity fund from Rs. 10,000 to Rs. 50,000 and to carry forward a larger surplus.

Referring to the conditions which obtained in the textile trade during the year under review and which were responsible for the setback in the Companies' earnings, the Directors observe:

"At the commencement of the year under review, textile trading conditions were such that, although increases in production costs and rising prices of raw materials were prominent, an optimistic view could be taken for the immediate future. A serious deterrent, however, was presented by increases in excise duty on cloth which took effect from 1st March 1956, and a further heavy incidence from 1st September 1956, which, notwithstanding the Company's willingness to accept a part of the increase on their own account, led to widespread disruption of trade and rapid lowering of prices."

The sale proceeds of both the Companies show a drop and the closing stocks of cloth, yarn, etc., a sizable rise. On the expenses side, the cost of raw materials consumed by the New Great have gone up by Rs. 5.40 lakhs, which is offset, to some extent, by the fall of Rs. 2.85 lakhs in stores and spares consumed. Other expenses show a negligible decline. In the case of New City, the cost of raw materials and stores does not show any marked variation, but other expenses have risen by nearly Rs. 5 lakhs.

The latest balance-sheets of both the Companies disclose satisfactory financial positions. The paid-up capital of the New Great, at Rs. 38 lakhs, is supplemented by reserves and surplus (excluding pension and gratuity reserve) aggregating Rs. 22.02 lakhs. The gross block of the value of Rs. 95.52 lakhs has been well written down to Rs. 32.15 lakhs. As against the current assets amounting to Rs. 62.94 lakhs, of which stock-in-trade and stores alone account for Rs. 55.10 lakhs, the current liabilities and provision for taxation amount to only Rs. 35.07 lakhs.

The paid-up capital of the New City is Rs. 24 lakhs and reserves and surplus amount to Rs. 30.03 lakhs. The gross block of the value of Rs. 78.05 lakhs has been depreciated to Rs. 29.36 lakhs. The current assets aggregate Rs. 52.91 lakhs, of which cash balances alone, at Rs. 19.51 lakhs, provide a substantial cover to current liabilities and provision for taxation amounting to Rs. 28.24 lakhs.

Both the Companies have incurred further capital expenditure in the progressive modernisation of the spinning machinery of the mills. Towards the end of the year, the Government of India approved the installation of 48 further looms in the New City Mills and work is in hand for these being put into operation.

The Rs. 100 fully paid-up shares of the New Great are being currently quoted at Rs. 235 *cum-div.* and those of the New City at Rs. 149-6 *cum-div.* On an *ex-div.* basis, the yield on the former works out to 4.4 per cent. and on the latter 7.1 per cent. per annum, free of income-tax. The relatively high market value of New Great shares, as compared with those of New City, despite appreciably lower profit, may seem surprising. But such is attributed in market circles to the attempts of an operator to corner as many shares of the Company as possible. These attempts have been going on for a fairly long time. Consequently, the market value of New Greats is artificial to a high degree.

The comparative tables given below provide an idea of the Companies' progress during the last three years.

RESULTS OF THIRUMBADI RUBBER SATISFACTORY

OUTPUT HIGHER—DIVIDEND LEVEL HELD

THE earnings of Thirumbadi Rubber Company Ltd. (Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode), for the year ended 30th September 1956, show a substantial improvement over that for the previous year. This is, no doubt, due to the purchase of the Calicut Estate which was completed during the year under review and also on account of the bumper crop harvested. The business, as well as the expenses accruing from this new estate, has been incorporated in the Company's accounts for the year. The dividend has been maintained at 12½ per cent., the same as that for the previous year, but with this difference, namely, it is on a higher capital of Rs. 9.15 lakhs. The previous year's dividend, it may be remembered, was on a lower capital of Rs. 6.10 lakhs.

The gross profit, which had touched a low of Rs. 1.58 lakhs in 1953-54, has jumped up to Rs. 3.73 lakhs, after the modest recovery to Rs. 1.84 lakhs in the previous year. This is a new record high for the Company, in that it is almost double the previous record at Rs. 1.88 lakhs touched in 1952-53. The net profit, too, after providing more than twice the amount for depreciation and taxation, amounts to Rs. 2.16 lakhs, as against Rs. 1.08 lakhs in the previous year and only Rs. 93,157 the year before that. Commensurate with the encouraging results, general reserves also have proportionately gone up. The allocation of Rs. 99,995 out of 1955-56 profit is appreciably higher than Rs. 25,000 made in each of the last two years while it is almost equal to Rs. 1 lakh provided for 1952-53.

The main factors which have brought about this record profit are: (1) addition of the new Calicut estate, (2) increase in the rubber crop harvested and (3) the higher average sale price realised per pound of rubber. The crop of rubber harvested by the Company amounted to 813,698 lbs., representing an increase of 490,698 lbs. over that for the previous season. Of this, the share from the Calicut estate is 141,377 lbs. over a period of about seven months, that is, from March to end of September 1955. It will be seen from this information that, even without the contribution from the Calicut estate, the crop harvested has been higher, such having exceeded the estimated crop for the season at 335,000 lbs. by a very substantial margin. Production cost has, however, gone up from 79.13 cents to 98.66 cents per lb. and the Directors say that this is due to the inclusion of the high cost period on the Calicut estate. One welcome feature is that this has been neutralised, to some extent, by the increase in the average sale price from 137.62 cents to 148.12 cents per pound.

The following comparative table brings out the progress of the Company during the past three years:

	For the year ended 30th September			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of rubber	11,09,446	3,64,037	3,54,647	3,62,778

Crop harvested (in lbs.)	813,698	322,000	315,000	322,260
Cost of production per lb.	Cents 98.66	Cents 79.13	As. 12.81	As. 11.26
Average sale price per lb.	148.12	137.62	20.73	20.66

* On the increased capital of Rs. 9.15 lakhs, raised by the issue of 305,100 new ordinary shares of Re. 1 each.
† On the higher capital of Rs. 6,10,200, doubled during the year by the capitalisation of Rs. 3,05,100.

The crop for the current season is estimated at 715,000 lbs. to be produced at a cost of 80.03 cents per lb. f.o.b.

The important event of the year was the purchase of the Calicut Estate, consisting of 1,023 acres of mature rubber of a total extent of 1,455 acres, from the Kerala Calicut Estates Ltd. at a total cost of Rs. 10.73 lakhs. The purchase of this estate was financed from the issue of 305,100 new ordinary shares of Re. 1 each and also by a debenture issue of Rs. 5 lakhs, both of which were completed during the year. The new shares were issued at par to the stockholders of the acquired estate as on 16th August 1955, in the ratio of one new ordinary share of Re. 1 for every Rs. 2 in the nominal value of stocks

(*Continued on page 385*)

PHALTAN SUGAR RAISES DIVIDEND

RESULTS OF SPENCER AND COMPANY SATISFACTORY

Phaltan Sugar Works Ltd.

THE directors of the above Company (Managing Agents: Messrs. Mafatlal, Apte and Kantilal Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1956.

The accounts shows a net profit of Rs. 11,82,919 (Rs. 10,45,651) after providing Rs. 3,22,196 (Rs. 3,74,263) for depreciation and Rs. 12,25,000 (Rs. 11,75,000) as provision for taxation which together with a balance of Rs. 11,062 (Rs. 15,411) brought forward from the last year's profit and loss account amounts to Rs. 11,93,981 (Rs. 10,61,062) out of which a sum of Rs. 2,00,000 (Rs. 1,50,000) has been appropriated towards reserve for gratuity. The dividend now proposed is Rs. 9 lakhs, on one lakh ordinary shares at Rs. 9 (Rs. 8) per share free of income-tax. The surplus carried forward is Rs. 93,981 (Rs. 11,062 after providing Rs. 1,00,000 for dividend equalisation reserve).

Factory: The factory commenced sugarcane crushing on the 28th of October, 1955 and stopped on the 30th of April 1956. The sugarcane crushed during the season was 1,25,008 tons and the sugar manufactured was 1,58,170 bags with a recovery of 12.785 per cent., as against 1,07,766 tons of cane, 1,35,215 bags of sugar and 12.67 per cent. sugar recovery of the last year. The sugar recovery was higher than last year's. The quantity of finished sugar was the highest in the history of the factory. The sugar produced was of D-29 grade and sold as per Union Government Release Orders as usual. At the close of the year there was a balance of 31 per cent. of the year's production, to be released for sale. The Factory worked quite well throughout the season and the overall efficiency of the factory was maintained. The price realised for the sugar was slightly higher than last year's.

Estate: The standing crops as at 30th September 1956 were 4,464 *acres* and 29 *gunthas*. Out of this, 1,878 *acres* and 28 *gunthas* of cane will be harvested for the crushing season 1956-57 and the seed for new cane plantation. 1,492 *acres* and 21 *gunthas* of cane crop will be carried over for the 1957-58 season, leaving a balance of 1,093 *acres* and 20 *gunthas* of fodder crop for the year 1956-57. The yield of the crop for the season was higher than last year's.

Income-tax Assessments: The Appeal (referred to in our last report) preferred by the Income-tax Department to the Appellate Tribunal against the decision of the Appellate Assistant Commissioner in favour of the Company has been rejected by the Tribunal. As regards the Re-assessments for the accounting years ended 30th September 1944 and 1945 the Appellate Assistant Commissioner of Income-tax has decided the appeals in favour of the Company and the tax of Rs. 6,10,146 paid by the Company has been refunded after the close of the year.

Accounts in brief are as under:—

Spencer and Co., Ltd.

The directors of the above Company (Ag. Chairman: Mr. Z. R. Irani, Madras) submit the audited accounts of the Company for the year ended 30th June 1956.

The net profit for the year after charging all expenses other than depreciation and taxation is Rs. 23,64,725 (Rs. 19,67,156) from which must be deducted depreciation and depreciation reserve Rs. 2,90,621 (Rs. 2,79,113) and provision for taxation Rs. 9,95,000 (Rs. 6,90,000) leaving a balance of Rs. 10,79,104 (Rs. 9,98,043). After adding the amount brought forward from the last account of Rs. 5,10,675 (Rs. 4,54,537) there is a total of Rs. 15,89,779 (Rs. 14,52,580). From this amount falls to be deducted the dividends already paid on "A" and "B" preference shares absorbing Rs. 3,41,905 (Rs. 3,41,905) and *ad interim* on ordinary shares—5 (5) per cent. free of income-tax absorbing Rs. 2,00,000 (Rs. 2,00,000) leaving available for distribution Rs. 10,47,874 (Rs. 9,10,675). The directors recommend that the dividends already paid be confirmed and that the above amount be dealt with as follows: In payment of a final dividend for the year at 10 (10) per cent. Rs. 4,00,000 (Rs. 4,00,000), to transfer to exchange reserve Rs. 15,662 (*nil*) and to carry forward Rs. 6,32,212 (Rs. 5,10,675).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,00,00,000	Block ...	48,58,477
Reserves ...	87,06,558	Stock of finished goods ...	64,40,510

Britannia Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Trading.—The results of the Works Department for the year show a profit on trading account amounting to Rs. 18,24,127 compared with Rs. 11,90,036 for the preceding 12 months. The Agency Department shows a profit of Rs. 13,294 compared with Rs. 30,788 for 1954.

After charging interest, debenture interest, commissions, depreciation and providing for taxation which it is estimated will be payable on the year's profit, and taking into account the carry-forward from 1954, there remains at credit of profit and loss account a balance of Rs. 9,45,544 (Rs. 5,36,319). In view of the various modernisation and expansion schemes which the Company has undertaken, and in order to provide for possible bad debts the directors have set aside to machinery reserve Rs. 4,00,000 (Rs. 2,50,000), to depreciation reserve Rs. 1,67,365 (*nil*) and to reserve for doubtful debts Rs. 1,00,000 (*nil*) leaving a balance of Rs. 2,78,179 (Rs. 2,86,319) from which the directors recommended payment of dividend on 1,00,000 old ordinary shares, numbered 1-1,00,000 at 15 (15) per cent. per annum for the year, which absorbs Rs. 1,50,000 (Rs. 1,50,000) leaving Rs. 1,28,179 (Rs. 1,36,319) to be carried forward. As the period covered by these accounts ended prior to the commencement at the Companies Act, 1956, they have been prepared in accordance with the provisions of the Indian Companies Act, 1913.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,37,520	Block ...	28,95,167
Debentures ...	5,00,000	Patent Rights	1,23,000

Gujerat Safe Deposit Co., Ltd.

The directors of the above Company (Managing Agents: Gujerat Investment Trust Ltd., Surat) submit the audited accounts of the Company for the year ended 30th September 1956.

The net profit for the year after making provision for depreciation on building, vault, air-conditioning plant and furniture of Rs. 9,300, for bonus to members of the staff equal to one month's salary amounting to Rs. 1,185 and making a provision of Rs. 5,400 for managing agents' remuneration comes to Rs. 22,365. The amount together with Rs. 1,161 carried forward from the previous year aggregates Rs. 23,526. From this sum the directors have made a provision of Rs. 8,000 for income-tax leaving a balance of Rs. 15,526. The directors take this opportunity to invite attention to the fact that the dividend at the rate of Rs. 4-12 per share paid last year to the shareholders in pursuance of a resolution carried in their last annual general meeting was four annas per share in excess of what was recommended by them. Under Artice 126 of the present Articles of Association of the Company the general meeting had no power to enhance the amount of dividend. The Board therefore recommends that a sum of Rs. 15,000 be set apart for the dividend account out of which Rs. 750 be appropriated towards excess dividend of annas four per share paid last year and the balance at the rate of Rs. 4-12 per share be paid as dividend for the year ending 30th September 1956. This arrangement will entail a provision for payment of dividend to the extent of Rs. 15,000 out of which Rs. 750 calculated at the rate of four annas per share will be deducted and appropriated to the profit and loss account. This will leave a balance of Rs. 1,276 which may be carried forward to the next year.

During the year under review arrangements were made for installing new locker cabinets containing 390 lockers to meet the demand of prospective depositors. The directors thus note with satisfaction, the progress in the business of the Company. Out of the total number of 4,723 lockers in the vault 4,492 were occupied on 30th September 1956. The concession scheme extended to shareholders has been taken advantage of in the case of 567 lockers in this year.

By reason of the termination on 22nd August 1956 of the period of agreement with the Gujerat Investment Trust Limited, managing agents of the Company and by further reason of the necessity of making a new agreement with them in conformity with the provisions contained in the Companies Act 1956, pertaining to managing agents, an extraordinary general meeting of our Company was held on 21st April 1956, wherein it was resolved to re-appoint, subject to the approval of the Central Government being obtained, the Gujerat Investment Trust Ltd., as managing agents of the Company for a further period of ten years and upon the terms, provisions and conditions as set out in the draft agreement submitted in the said meeting. It will be noted that the Central Government has approved of the re-appointment of Gujerat Investment Trust Limited as managing agents of the Company for a further period of ten years commencing from 22nd April 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,25,000	Block ...	2,41,508
Reserves ...	17,700	Stock of stationery ...	1,013

Rs.	3,76,313	Rs.	3,76,313

Hindusthan Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Bachraj and Co. Private Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th June 1956.

After providing Rs. 5,00,000 (Rs. 6,75,000) for depreciation, Rs. 15,00,000 (Rs. 10,00,000) for taxation on income and Rs. 5,222 (*nil*) as reserve for doubtful debts, the Company made a net profit of Rs. 21,45,704 (Rs. 12,68,417). To this, a sum of Rs. 62,419 (Rs. 1,64,002) carried over from last year's accounts has been added, making a total of Rs. 22,08,123 (Rs. 14,32,419). Out of this amount Rs. 11,00,000 (Rs. 4,00,000 to rehabilitation and development reserve) have been carried to reserve fund, leaving balance profit of Rs. 11,08,123 (Rs. 10,32,419). From this amount the directors paid dividends free of income-tax on preference shares at Rs. 5 (Rs. 5) per share absorbing Rs. 25,000 (Rs. 25,000), on ordinary and "A" ordinary shares at Rs. 12 (Rs. 12) per share and bonus at Rs. 3 (Rs. 3) per share absorbing Rs. 9,00,000 (Rs. 9,00,000), placed to reserve for charitable, public, general or useful objects or for charitable and other funds not directly relating to the business of the Company or the welfare of its employees Rs. 1,50,000 (Rs. 45,000) and carried forward Rs. 33,123 (Rs. 62,419).

In the sugarcane crushing season 1955-56 the Company's factory crushed 1,23,03,986 (93,97,131) maunds of cane, with sugar recovery of 9.83 (10.41) per cent. As sugarcane supplies by the sugarcane growers continue to increase in the reserved zone of the Company's sugar factory, a licence for substantial expansion, viz., to increase the crushing capacity of the Company's factory by 50 per cent., was obtained during the year from the Central Government under the Industries (Development and Regulation) Act. Orders for machinery for effecting the said expansion have been placed and it is expected that the increased capacity will come into operation from the commencement of the next season, that is, season 1957-58. The capital expenditure for machinery, buildings, etc., for the same has been estimated to be about Rs. 80 lakhs.

Further, a licence to put up a Cement Factory having capacity of 2,00,000 tons per year in Dehra Dun District of Uttar Pradesh was sanctioned by the Central Government under the Industries (Development and Regulation) Act. The prospecting work in respect of the limestone deposits in this area is proceeding and analysis results so far received give hope that it may be possible for the directors to call a general meeting of the shareholders at an early date for passing an ordinary resolution to sanction this project as provided in the memorandum of the Company. The prospecting expenses of Rs. 19,866 incurred therefor have been included in the balance sheet.

The distillery attached with the Company's Sugar Factory, which utilises molasses, a by-product of sugar, produced during the year under report altogether 9,08,889 (6,33,044) gallons of power alcohol, denatured rectified spirit and fusel-oil. As with increase in sugar production capacity of the factory, molasses production will also increase and as demand for power alcohol as well as other alcohol for industrial purposes is increasing, the Company has also applied to the Central Government for substantial expansion of the capacity of the distillery. It is reported that during the Second Five-year Plan period, installation of a plant in the public sector in Uttar Pradesh for manufacture of synthetic rubber out of alcohol, which will need nearly 11 million gallons of alcohol per year, is under the contemplation of the Central Government. The substantial expansion asked for will, if sanctioned, enable the Company not only to utilise its entire production of molasses, but also the molasses of some neighbouring sugar factories which have not got distillation plants.

United Breweries Ltd.

The directors of the above Company (Chairman: Mr. Vittal Mallya, Bangalore) submitted the audited accounts of the Company for the 41st year which ended on the 31st March 1956.

The working of the Company for the year under review resulted in a profit of Rs. 1,65,569 (Rs. 2,32,356) from which was deducted provision for taxation Rs. 50,000 (Rs. 1,00,000). Adding the profit brought forward from the previous year of Rs. 9,111 (Rs. 4,057) there was a total of Rs. 1,24,679 (Rs. 1,36,413). The directors paid an interim dividend at the rate of Rs. 7-8 (Rs. 7-8) per share, free of income-tax, on 28th February 1956 absorbing Rs. 60,000 (Rs. 60,000) leaving available a balance of Rs. 64,679 (Rs. 76,413). Out of this the directors paid a final dividend at the rate of Rs. 7-8 (second interim dividend of Rs. 7-8) per share, free of income-tax absorbing Rs. 60,000 (Rs. 60,000) leaving a balance of Rs. 4,679 (Rs. 9,111 after writing off Investments to the extent of Rs. 7,303) to be carried forward to next year.

Trading.—The improvement in sales mentioned in previous year's report continued throughout the year under review and for the first time in many years the demand for the Company's products was commensurate with the production capacity. Part of the new plant and machinery which was on order was received and installed during the year and helped considerably in increasing the output. During the current year, following a change-over to the Lager process of brewing, the demand for the Company's beer increased sharply and the directors have placed orders for additional machinery which will enable the output to be substantially increased. Apart from the continued threat of total prohibition, the prospects appear to be satisfactory.

Though the sales of McDowells aerated waters, which are bottled under licence from the Company's subsidiary, showed an increase, this venture made no contribution to the year's results. Sales continue to increase and the prospects for the current year are appreciably better.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	7
Reserves ...	9,60,000	Stock-in-trade	25,125

Rs.	22,72,925	Rs.	22,72,925

Amalgamated Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

The Company's profit for the half-year, after the inclusion of Rs. 26,953 (Rs. 21,411) brought forward, was Rs. 3,19,343 (Rs. 4,68,902) and after providing for taxation a sum of Rs. 1,33,233 (Rs. 1,46,501) there remained Rs. 1,86,110 (Rs. 3,22,401). Out of this amount, the directors placed to dividend equalisation reserve Rs. 30,000 (Rs. 1,25,000 to machinery replacement reserve), paid a dividend at the rate of 10 (12½) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 1,27,500 (Rs. 1,59,375) and carried forward Rs. 28,610 (Rs. 38,026).

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
31st March, 1956 ...	4,19,014	4,25,735
30th September, 1955 ...	4,15,791	4,36,024
31st March, 1955 ...	3,98,230	3,90,920

While raisings show a slight improvement, despatches have been somewhat affected due to short supply of wagons.

The Government of India has revised the selling prices of coal to offset the increase in costs due to the Coal Tribunal Award and the control price of the Company's coal has accordingly been increased by Rs. 3 per ton. This increase came into force from 5th July, 1956, whereas the Award had to be implemented from 26th May, 1956, which has had an adverse effect on costs and will be reflected in the accounts for the next period. As this increase was not considered adequate, representation was made to the Ministry of Production and the directors report that they have agreed to re-examine the accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,50,000	Block ...	27,13,000
Reserves ...	25,05,000	Capital expenditure in suspense ...	17,536
Provision for taxation ...	4,25,000	Stock of coal	61,348
Liabilities ...	26,70,244	Stores ...	14,82,681
Profit and loss account ...	28,610	Debts, deposits and advances ...	35,43,492
		Investments	1,12,500
		Cash ...	2,48,297
Rs.	81,78,854	Rs.	81,78,854

Pench Valley Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace and Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1956.

The Company's profit for the half-year after the inclusion of Rs. 33,343 (Rs. 20,192) brought forward, amounted to Rs. 2,81,604 (Rs. 4,08,731) and after providing for taxation Rs. 1,07,620 (Rs. 1,52,403) there remained Rs. 1,73,984 (Rs. 2,56,328). Out of this amount the directors placed to dividend equalisation reserve Rs. 30,000 (*nil*), paid a dividend at the rate of 14 (15) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 1,10,250 (Rs. 1,18,125) and carried forward Rs. 33,734 (Rs. 38,203 after placing Rs. 75,000 to development reserve and Rs. 25,000 to general reserve).

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
31st March, 1956 ...	2,24,523	2,29,159
30th September, 1955 ...	2,22,222	2,25,767
31st March, 1955 ...	2,07,654	2,07,432

Raisings and despatches have been well maintained during the half-year under review, a contributory factor being the increased offtake of Khaperkhada Power House on the Narrow Gauge which has been met from the Collieries served by the Broad Gauge.

The Government of India has revised the selling prices of coal to offset the increase in costs due to the Coal Tribunal Award and the control price of the Company's coal has accordingly been increased by Rs. 3 per ton. This increase came into force from 5th July, 1956, whereas the Award had to be implemented from 26th May, 1956, which has had an adverse effect on costs and will be reflected in the accounts for the next period. As this increase was not considered adequate, representation was made to the Ministry of Production and the directors report that they have agreed to re-examine the accounts.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,75,000	Block ...	13,30,000
Reserves ...	16,50,000	Capital expenditure in suspense ...	9,443
Provision for taxation ...	3,15,000	Stock of coal	16,308
Liabilities ...	17,71,921	Stores ...	7,98,533
Profit and loss account ...	33,734	Debts, deposits and advances ...	24,87,791
		Investments	4,07,240
		Cash ...	2,96,340
Rs.	53,45,655	Rs.	53,45,655

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(*Concluded from page 383*)

held. The debentures carry interest at 7½ per cent. per annum taxable. They can be redeemed after five years from the date of issue at Rs. 50,000 per annum.

The acreage of the Company's properties is now 1,921.04 acres of mature rubber (1,437.68 acres seedlings and 483.36 acres budded) and 263.29 acres (254.94 acres new clearings budded and 8.35 acres replanted budded) of immature rubber.

The paid-up capital of the Company, as shown by its balance-sheet as at 30th September 1956, stands at Rs. 9.15 lakhs in ordinary shares of Re. 1 each. It may not be out of place to state, in this connection, that, in June 1954, the paid-up capital of the Company was doubled to Rs. 6.10 lakhs by the capitalisation of Rs. 3.05 lakhs. The recent further increase, as has already been mentioned, was for the specific purpose of acquiring the new estate. With the addition of Rs. 99,995 from the profit for the year, the reserves together with the surplus stand at Rs. 4.27 lakhs. The 7½ per cent. taxable debenture capital amounts to Rs. 5 lakhs. The current liabilities aggregate Rs. 5.17 lakhs, including a provision of Rs. 1.17 lakhs for taxation. The gross block of the value of Rs. 21 lakhs, including cost of development amounting to Rs. 6.17 lakhs, has been written down to Rs. 20.04 lakhs. During the year, the Company spent Rs. 37,406 on the upkeep of the immature new clearings. The current assets amount to Rs. 3.55 lakhs and are not enough to cover the current liabilities and provision for taxation.

The ordinary stocks of the Company in units of Re. 1 each are being currently quoted at Rs. 2-2 *cum-div.* On an *ex-div.* basis, the proposed dividend at 12½ per cent. gives a yield of 6.25 per cent. per annum.

COMPANY MEETINGS AND DIVIDENDS

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Annual General Meeting, Kozhikode, 28th February 1957. Dividend: As. 2 (2½ per cent.) per share. Transfer books remain closed from 19th to 28th February 1957, both days inclusive.

THIRUMBADI RUBBER CO., LTD. Annual General Meeting, Kozhikode, 28th February 1957. Dividend: As. 2 (12½ per cent.) per share. Transfer books remain closed from 19th to 28th February 1957, both days inclusive.

PHALTAN SUGAR WORKS LTD. Annual General Meeting, Bombay, 1st March 1957. Dividend: Rs. 9 per share.

GUJERAT SAFE DEPOSIT CO., LTD. Annual General Meeting, Surat, 7th March 1957. Dividend: Rs. 4-12 per share. Transfer books remain closed from 19th February to 7th March 1957, both days inclusive.

SPENCER & CO., LTD. Annual General Meeting, Madras, 9th March 1957. Dividend: Re. 1-8 per share. Transfer books will remain closed from 1st to 9th March 1957, both days inclusive.

REWA COALFIELDS LTD. Half-yearly General Meeting, Calcutta, 11th March 1957. Dividend: As. 12 per share. Transfer books will remain closed from 4th to 11th March 1957, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 22-8 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

NEW GREAT EASTERN SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 10 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 10 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

TINGAMIRA TEA SEED CO., LTD. Annual General Meeting, Calcutta, 12th March 1957. Transfer books will remain closed from 1st to 12th March 1957, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 3 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

EMPIRE DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 3 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

G. CLARIDGE & CO., LTD. Annual General Meeting, Bombay, 12th March 1957. Dividend: Rs. 15 per share. Transfer books remain closed from 22nd February to 15th March 1957, both days inclusive.

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 14th March 1957. Transfer books will remain closed from 7th to 20th March 1957, both days inclusive.

JUBILEE MILLS LTD. Annual General Meeting, Bombay, 14th March 1957. Transfer books will remain closed from 1st to 14th March 1957, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 14th March 1957. Dividend: Nil. Transfer books will remain closed from 1st to 14th March 1957, both days inclusive.

NEW SWADESHI SUGAR MILLS LTD. Annual General Meeting, Bombay, 14th March 1957. Dividend: Rs. 20 per ordinary share and Rs. 5 per quarter ordinary share, payable on or after 18th March 1957. Transfer books will remain closed from 8th to 14th March 1957, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Annual General Meeting, Sehore (Madhya Pradesh), 23rd March 1957. Dividend: Re. 1-8 per share. Transfer books will remain closed from 25th February to 10th March 1957, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Dividend of Re. 1 per share, for the half-year ended 30th June 1956.

GOHPUR TEA CO., LTD. Interim dividend of Re. 1 (10 per cent.) per share, for the year 1956. Transfer books will remain closed from 25th February to 6th March 1957, both days inclusive.

BORREA COAL CO., LTD. Dividend of 5 per cent. per annum, on ordinary shares, for the year ending 31st December 1956, payable on or after 7th March 1957. Transfer books remain closed from 21st to 28th February 1957, both days inclusive.

COMPANY REGISTRATIONS

X-RAY ENGINEERING CO. (INDIA) PRIVATE LTD. (First Director: Mr. Walter W. Offner.) Business: Installation and operation of radiographic inspection equipment. Authorised capital: Rs. 5,00,000. Private company. Address: "Kamani Chambers," Nicol Road, Ballard Estate, Bombay.

ALKA CORPORATION PRIVATE LTD. (First Director: Mr. M. J. Tibrewalla.) Business: Financiers. Authorised capital: Rs. 5,00,000. Private company. The registered office of the Company will be situated in the State of Bombay.

A NEW LABOUR INCENTIVE SCHEME AT CHITTARANJAN

OUTTURN GOES UP BY 30 PER CENT.

By Shanti Swarup Jagota, M.I.Mech.E., D.M.E.C. (Hons.)

DEPUTY CHIEF MECHANICAL ENGINEER, CHITTARANJAN LOCOMOTIVE WORKS

THE Chittaranjan Locomotive Works has introduced a system of "payment by results" or "rate-fixing." This helps to create initiative for the quicker and abler worker and also to encourage the slower worker to emulate his quicker comrade, both to his own advantage and to that of the administration. Chittaranjan realised the need of this system at its very inception. In fact, as soon as the agreement for technical aid was signed between the Railway Board and the Locomotive Manufacturers' Company Ltd., a number of rate-fixing experts were invited. Later, similar personnel were obtained under the Colombo Plan. In addition, steps were taken to send out selected personnel to the U.K. and Germany for specialised training in this field. Thus, a full-fledged team has now been created to handle this job satisfactorily.

Unfortunately, rate-fixing has led to serious labour troubles in some Western countries. The employers tried to cut down piece-rates after an increase in output beyond certain expectations. The labour resisted it. But fundamentally, the cause of most of this trouble has been the incorrect method of fixing piece-rates. In many industrial concerns, money is the basis of fixing job rates. But, though this system has the merit of being easily comprehensible, its intrinsic value changes with the change of basic wage structure, and needs either constant revision or leads to labour trouble. Chittaranjan has, therefore, decided to adopt time as a yardstick for measuring work and productivity. In the absence of standard job rates, the comparison method was not considered suitable. Similarly, the observation method was found to be much too dependent on the personal element between the operator and the rate-fixer.

Analytical Method

Chittaranjan, therefore, decided to follow the analytical method. In this system rates are computed from carefully calculated, reliable and tangible data which could form the basis for investigation in the event of any dispute arising between the operators and the management at a later date. However, the implementation of this system depends on the fulfilment of certain requirements. In the first instance, all the machines had to be calibrated to find out the speeds, feeds and depth of cut which each machine could stand as against those specified by the makers. The next step was to observe the capabilities of the various types of materials by actual cutting tests, in order to establish the maximum material removal rate. This was governed by four factors, namely, (*a*) tool life, (*b*) horse-power of the machine, (*c*) class of finish required and (*d*) use of coolant.

Having decided a maximum material removal rate, the optimum value of feeds and speeds were decided. Based upon these, speeds and feeds, machining procedure charts were tabulated for varying diameters within the range of machining for various materials. The allowed minutes were worked out for unit values for various depths of cut, class of finish and class of material and served as a guidance to the rate-fixer to compute the allowed machining times for a particular operation. In addition to machining time, there are a large number of other operations such as manipulating, loading and unloading, setting up and changing tools which are performed by the operator during a particular operation.

Average Time Studies

A number of time studies were taken to establish the average time for the above operations. Average normalised values were calculated and constants were arrived at to form the synthetic data and to compute the allowed time for a particular operation before the job was started.

Chittaranjan crefully considered the systems of payment by results such as payment of a premium or bonus at present in vogue in Western countries. Amongst those considered were the Halsey, Weir, Rowan and Bedaux systems. All these schemes involved complicated calculations, which, due to the low standard of education, are not easily comprehensible to an average operator in this country. In order, therefore, to avoid an impression that the scheme was being introduced as a device to increase the output without adequate compensation and advantage to the operators and for gaining their confidence, it was decided that the bonus paid to the worker should correspond to the total time saved, so that they could figure out the day-to-day savings.

Bonus and Work Co-related

To ensure that the bonus earned has a direct relation to the quantum of work performed by an operator, piece-work timings are issued only to those workmen whose output can be measured with reasonable accuracy. As far as possible, piece-work timings are issued to individual workers, but collective piece-work timings are issued when efforts of a number of workmen are required to complete a job and it is not practicable to obtain the output of individuals. All the staff who constitute the gang, whether belonging to the skilled, semi-skilled or unskilled categories, and who directly contribute to the output, are allowed to participate in the scheme.

As it is only logical to relate payment to the amount and quality of work performed, it is laid down that only work which passes inspection will be paid for. It is further stipulated that piece-work prices once fixed are not altered unless a change in the method of manufacture could be effected or if there was any error in computation or in printing. The time-saving suggestions, whether made individually or collectively, are compensated by the grant of a reward equivalent to the corresponding expected saving in standard basic wages for six months.

Difficulties

The introduction of this system at Chittaranjan was beset with difficulties. Some of these arose because Chittaranjan is only one of the units of the big railway system. It was considered that the limitations imposed by existing code rules, which lay down that the ceiling of profits earned by workers should be 25 per cent. of their basic wages and that the maximum allowance that could be given to an operator was 33 per cent., were found too restrictive to be of any real incentive to production. Therefore, on the advice of the representatives of the Locomotive Manufacturers' Company and in consonance with the practice which prevailed in the normal locomotive building workshops in Britain, an allowance of 33 per cent. was determined as an appropriate incentive.

In order, however, not to allow the worker to overstrain himself, ceiling profits to be earned by him were restricted to 50 per cent. of the basic wages.

For the successful performance of an operation, essential supplies like raw materials, tools and other equipment, must be available freely. The supplies, to a large extent, depend upon the supervisor. It was, therefore, felt that the supervisors who were immediately concerned with production should also participate in the scheme. Similar consideration applied to the indirect workers, who, though employed in independent work, were essential to ensure continuity of production. It was, therefore, decided to pay the immediate supervisors and essential indirect workers 80 per cent. of the earnings of the staff served by them.

In view of the incremental time-scale of pay existing for the workmen in the workshops, the choice was either to pay the piece-work profit to workers in direct proportion to their individual rates of pay or to pay on uniform basis irrespective of the varying day wages.

As mentioned earlier, the time allowed for an operation had been fixed by normalising the time taken by an operator under time study. It was, therefore, considered logical to remunerate the operators or an average normalised rate of pay. After considerable study, it was decided that the piece-work payable to operators other than the skilled category should be calculated on the average rate of pay of the category concerned. In the case of skilled workers, since the prescribed scale was a long one extending over 20 years, single average rate was not considered appropriate and it was, therefore, decided that the grade should be broken into two at the efficiency bar and two standard rates were adopted.

Advantages Listed

The following advantages were expected to accrue out of the adoption of this method:

(*a*) The remuneration for extra work would be made consistent with the normalised calculation in terms of time.

(*b*) Additional payments under the incentive scheme would be proportionate to the output of the individual worker.

(*c*) Saving in the calculation of piece-work earnings of the operator.

Before the actual system of payment was introduced, however, it was ensured that:

(*a*) Materials and tools to the required specification were available;

(*b*) suitable jigs and fixtures were utilised;

(*c*) that a proper drawing and tool service and proper system of supervision, inspection and accounting had been introduced;

(*d*) quota and method cards indicating the number of components expected to be manufactured during a certain period, based upon synthetic data were introduced and it was observed that in a very large number of cards the rates so arrived at were workable.

Even after the abovementioned difficulties were overcome, it was considered opportune to introduce the incentive scheme in stages on a phased programme. Later, a programme was drawn up to cover the entire production shops within a period of about one year.

After the above scheme had been in operation for over a year, a comprehensive review was carried out. It was observed that the staff had, on the whole, reacted very favourably to the scheme and were generally eager to take part in it. In the early stages, however, in some sections, owing to uncertain type of work, there was reluctance to work to the rates due to some unfounded suspicions. Some of the workers were under the impression that the scheme had been introduced only as a means of increasing production and once that was established, it would be withdrawn. Also, there was some difficulty in persuading the staff working on collective piece-work timings where the slow workers were affecting the earnings of the faster workers. To overcome this, steps were taken to segregate the good workers from the slow workers and form smaller gangs which resulted in improvement.

Although the scheme has been in operation for hardly a year, the effect on the outturn and cost has been considerable. The outturn has increased by 30 per cent. and staff emoluments have gone up. Based on the system described above, it has also been observed that, allowing for different conditions of work, the quantum of productivity of an Indian worker compares very favourably with that of any operator abroad. This leads to the conclusion that, if similar systems are introduced in other railway workshops, there is bound to be considerable increase in production capacity.

WORKERS' EDUCATION

A manual on co-operation in Hindi and English has just been published by the International Labour Organisation as one of the first steps in the implementation of the I.L.O.'s systematic programme of workers' education. Under this programme, the I.L.O. began in 1956 to prepare a number of courses in the form of convenient manuals written in concise language and dealing with questions on which the I.L.O. has accumulated data and information during the past 36 years. In form and in content, these courses are specially conceived for workers' education, for both teachers and pupils. Manuals to be produced later include courses in social security and certain aspects of labour-management relations.

The course contained in the manual consists of 14 lessons which deal comprehensively with the different aspects of this vast subject, ranging from the origins of the movement and problems of structure and management to the relationship between the State and co-operative movement. Each lesson is followed by a series of questions. There is a bibliography. In his report to the I.L.O.'s annual conference, in June 1956, the Director-General, Mr. David A. Morse, said that the aim of the workers' education programme is "to promote among the workers, in all parts of the world, an objective knowledge of the social conditions and problems confronting them, so that they will be able to deal with these problems in an intelligent, rational and responsible way."

MONEY RATES UNCHANGED

(From Our Own Correspondent)

BOMBAY, 20*th February*

The short-term money market continued to experience the seasonal pressure of demand for money during the week under review, in the face of an acute shortage of supplies. The results was that banks had to seek large-scale accommodation from the Reserve Bank of India to satisfy their requirements. Towards the close, however, signs of a slight relaxation in the pressure were visible and banks were reported to be not as keen borrowers as they were earlier. This is presumably due to the flow of funds from the Reserve Bank following its relaxation of the limits on advances under the Bill Market scheme and the reintroduction of credit restriction on rice and paddy. This was not, however, reflected in interest rates, because the shortage of floating supplies had not disappeared completely.

Inter-bank call money was done at 3½ per cent., but in the last two days some banks were reported to have offered no more than 3¼ per cent. House money, however, continued to fetch 4 to 4¼ per cent., the latter rate on large sums. Short-term deposits were bid at 4 to 4¼ per cent. for one to six months.

The Reserve Bank's statement for the week ended 15th February 1957 does not disclose any notable variations in the Issue Department. Notes in circulation show a contraction of Rs. 4.03 crores, in contrast to the expansion of Rs. 34.12 crores in the previous two weeks. Notes held in the Banking Department have risen by Rs. 4.27 crores. Though the foreign securities held in the Issue Department are unchanged over the week, there has been a decline of Rs. 8.73 crores in balances held abroad, in the Banking Department, with the result that total foreign exchange reserves have shrunk to that extent. As regards other items in the Banking Department, no significant variations are noted in Government deposits and deposits of Banks. The total of loans and advances other than to Governments have dropped by Rs. 3.89 crores, after two weeks of successive rise to the tune of Rs. 22.03 crores. The outstanding loans to Scheduled banks against usance bills alone show a bigger fall of Rs. 8.44 crores. This fall in outstanding advances, as against fresh advances amounting to Rs. 7.70 crores during the week, suggests that repayments of matured bills must have been of the order of Rs. 16.15 crores. It may also be noted that fresh borrowings by banks against usance bills during the week were much less than those in the previous weeks. There has been an addition of Rs. 7.30 crores to the Bank's investment portfolio, reflecting the effect of its open market operation.

After four weeks of sustained rise, Scheduled banks' deposits have recorded a decline during the week ended 8th February 1957. The Scheduled banks' statement for that week shows a fall of Rs. 3.18 crores in demand deposits and of Rs. 75 lakhs in time deposits. Borrowings from the Reserve Bank have, however, gone up by Rs. 15.87 crores and those from the State Bank by Rs. 2.53 crores. On the assets side, advances show a sharp rise of Rs. 19.25 crores, while bills purchased and discounted are lower by Rs. 3.71 crores. Cash balances have shrunk by Rs. 1.30 crores.

The Gilt-edged market ruled steady, with a sharp rise in Conversion Loan and a slight hardening in a few other issues. The main inspiration for the better sentiment was the shortage of floating stocks. The continued support to the short-dated loans and the occasional purchases by the Life Insurance Corporation and other institutions also improved the tone of the market. 3 per cent. Conversion Loan advanced from Rs. 73-10 to Rs. 74-4. 3 per cent. 1970-75 was in demand and rose by As. 2 to Rs. 87-3. 3 per cent. 1966-68 was maintained at Rs. 92-4, 3 per cent. 1964 at Rs. 94-6 and 3 per cent. 1963-65 at Rs. 94-3. 3 per cent. 1959-61 was placed at Rs. 97-11 *ex*-voucher, as against Rs. 97-12 *cum*-voucher. 3 per cent. 1958 was quoted at Rs. 99-9 ex-voucher, as against the same rate before payment of interest. 3½ per cent. 1962 had business at Rs. 97-13. 3½ per cent. 1961 showed no change at Rs. 99-7, while 3½ per cent. 1964 gained an anna to Rs. 98-5. 3½ per cent. 1965 was unchanged at Rs. 98-3. 3½ per cent. 1967 gathered an anna to Rs. 98-8 and 4 per cent. 1960-70 to Rs. 100-13.

State loans were devoid of any interest.

There was a further slight weakening of the rupee in terms of the dollar during the week. Banks' selling rate for ready dollars rose from Rs. 478½ to Rs. 478¼ per $100, while the buying rate was unchanged at Rs. 475 per $100. The selling rate for Canadian dollars rose from Rs. 500½ to Rs. 500¾ per $100 and the buying rate from Rs. 494½ to Rs. 494¾ per $100. In New York, spot sterling was marked down from $2.79½-2.79¾ to $2.79.11/16-2.79.13/16 before gaining back to $2.79¾-2.79⅞. Three months' forward dropped from $2.78.15/16-2.79.1/16 to $2.78¾-2.79¾ and transferable sterling from 276.60-276.70 cents to 276.25-276.35 cents.

KEEN DEMAND FOR HIDES

(From Our Own Correspondent)

KANPUR, 11*th February*

During the week under review, the conditions of the hides and skins market were quite stable. There was keen demand for high class buff and cow. The Madras dealers were very active for goat and sheep whose supplies were ample. The supply of buff, however, was slightly less in volume. The main purchasers were Messrs Cooper Allen.

The latest available quotations are: Wet salted cow 1st grade Rs. 350 to Rs. 360, 2nd grade Rs. 260 to Rs. 280 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep white wool Rs. 300 to Rs. 330 and black wool Rs. 200 to Rs. 230 per 100 pieces.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 20*th February*

The bullion market displayed a two-sided trend during the week under review. During the major part of the week, prices of both silver and gold hardened, the rise in the former being more marked. In the last two days, however, sentiment changed considerably and the earlier gain in silver was nearly wiped out and that in gold was more than offset.

The sharp rise in silver noted at the close of the previous week gathered further momentum in the earlier part of the week under review on heavy short-covering by those who had sold earlier following the arrival of some Tibetan coins in Calcutta and in anticipation of further influx of these coins. As these expectations did not materialise, these operators covered their sales. Towards the close, however, there were again rumours that import duty for about 130,000 coins had been paid on Monday; this caused nervousness and the market relapsed once again.

The absence of any offerings of Mysore gold by the National Bank of India till Monday last, the slackening of arrivals in the ready section and the disquieting news about Kashmir were the main bullish factors for gold. The yellow metal recorded a high level of Rs. 109-11 for ready and Rs. 108-15 for forward on Saturday. The resumption of sale of Mysore gold yesterday, after a lapse of eight days, and large arrivals adversely affected the bullish sentiment in the last two days.

Forward silver (15th February settlement) moved up from Rs. 184-3 to Rs. 185-1 before the settlement ran out at Rs. 184-15. The 16th March settlement hardened from Rs. 183-13 to Rs. 186-4, but gave way to a low of Rs. 183-12 today. The closing was a shade better at Rs. 184-5.

Ready silver gained from Rs. 184-13 to Rs. 187-4 before receding to Rs. 184-10 and closing at Rs. 185-3. The premium of ready over the forward (March settlement) narrowed down from Re. 1 to As. 14, reflecting the slackness in offtake. The floating stocks of silver are reported to be 1,100 bars. The daily average offtake was 15 bars.

Gold for forward delivery (15th March settlement) improved from Rs. 108-6 to Rs. 108-15, but slipped back to close at Rs. 107-15.

Ready gold finished at Rs. 108-9, after being marked up from Rs. 109 to Rs. 109-11. The premium of ready over forward widened from As. 10 to As. 12 before standing at As. 10 again today. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was 3,000 tolas on an average.

In New York, silver remained unchanged at 91⅛c. while in London it gained ¼d., spot metal from 79¼d. to 80d. and forward from 79½d. to 79¾d. Gold, on the other hand, was marked down from 249s. 6d. to 249s. 4½d.

The following comparative table shows the trend of market during the week under review:

	20-2-1957	Highest	Lowest	13-2-57
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine-Mint)	108 9	109 11	108 7	109 0

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 18*th February*

Trading in kips with the U.K. was on a limited scale, as importers were trying to bring down Madras levels. Arrivals were moderate and clearances fair-sized. Prices ruled unchanged, except those of light weights which tended to recede. Demand for buff calf, buff hides and cow calf was poor. There was good call for lower grade cow hides for local trade and prices were 2*d.* above U.K. bids. U.S. buyers were completely out of the market.

In the tanned skins section, prices were steady, and tanners were not keen to follow importers' bids at 3*d.* less. There were more inquiries for light weight goat and prices hardened by 3*d.* per lb., also on common lining sheep skins which were in short supply. Prices in the raw skins sections remained firm, due to purchases by tanners.

LINSEED DECLINES

(Messrs. A. Bradley and Co.)

CALCUTTA, 18*th February*

Following continued withdrawal of buying support, linseed prices have progressively declined. Despite lower offerings from sellers, the weekly turnover has been very poor, in anticipation of a further decline at the commencement of the new crop. Dull conditions prevail in the oil section, where overseas as well as local buyers are very bearish. The sellers are further discounting the market in order to unload their ready stocks.

The latest available quotations are: February Rs. 22-6 and April-May Rs. 20-8 per maund.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 20*th February*

The cotton futures market depicted a fully steady trend during the week under review. The chief helpful factors were the possibility of an *ad hoc* export quota for China and reduced arrivals of new crop. Nevertheless, the bulls would appear to have been cautious not to push up values unduly. There was considerable volume of profit-taking sales, but still, values were well maintained. With just a week to run for the Jarilla contract, there was much talk in market circles about the quantity that would be tendered. The general impression was that tenders would be comparatively small, in spite of a good crop, because the tendering differences would be fixed on the basis of futures rate and ready cotton commands a handsome premium at present.

Jarilla March opened the week at Rs. 692 and advanced to Rs. 693-8 the same day before closing lower at Rs. 692-12. After moving in a narrow groove on alternate bouts of buying and profit-taking sales. On the following two days the contract declined to Rs. 685-8 on the 18th inst. Opening firmer today at Rs. 695, it improved fractionally before winding up the session at Rs. 694-8.

Trading in Vijay April was characterised by price fluctuations over a wider range. The contract opened the week at Rs. 818, same as last week's closing rate, and improved to Rs. 829 on the following day on sustained buying support. The profit-taking sales induced by the high rates brought the contract down to Rs. 810 on Monday. It again improved to Rs. 816 yesterday, but closed lower at Rs. 812-4. Opening at Rs. 815 today, the contract dipped to Rs. 812 before closing slightly higher at Rs. 813. The following table shows the trend of prices during the week:

(In rupees per candy of 784 lbs.)

	20-2-57	*High*	*Low*	13-2-57
Jarilla (March) ...	694½	695½	691	692
Vijay (April) ...	813	829	810	818

The spot cotton market ruled steady. Enquiry was noted for 0394, Khandesh Jarilla, Berar 197/3, 216F and 320F. In view of high prices, mills were not inclined to augment stocks to any large extent. Southern mills were interested in some popular varieties. In the export section, there were enquiries from shippers for all permissible varieties, especially *deshi* styles. Japan was reported to have booked 2,598,000 bales of American cotton for shipment in the current year. This would mean reduced offtake of Indian cotton by that country which used to be one of India's best customers. Quiet conditions prevailed in the foreign section. Traders were awaiting a fresh release of U.S. cotton under Public Law 480. About 60,229 bales of American cotton arrived from New York in Bombay by the Norwegian motor vessel *Hoegh Cape*. The cargo is now being unloaded at the Alexandra dock. This cotton has been received under the U.S. Development Assistance Programme and Public Law 480 Programme of the recent Indo-U.S. farm supplies agreement.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 735; Berar Jarilla 785; Khandesh 810; Vijay 930; Oomra *Deshi* 795; Mogiai 740.

In contrast to the easy trend noted last week, the Karachi market ruled firm during the week under review. There was speculative buying induced by continued large purchases of Pakistan cotton by overseas interests in the past fortnight. Consequently, values were pushed higher. Towards the close of the week, however, there was some selling induced by lower New York cables and liquidation by upcountry houses, which brought about a fall in prices. At the lower rates, some foreign business was reported with Hong Kong and Liverpool. N.T.R.G. March improved from Rs. 79-12 last week-end to Rs. 80-8. Over the week, May delivery gathered a rupee to Rs. 80-14. Spot values of cotton also registered some improvement. The latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton are given below:

Sind *Deshi* 90-8; Punjab *Deshi* 78-8; 4F Roller 85-13; S.G. 89-5; 289F N.T. Sind S.G. 92-5; 289F Punjab Roller 89-13; S.G. 102-13.

The easy trend presented by Alexandria futures market last week gathered fresh momentum this week. Transactions with Communist countries were very few, thanks to high price and shipment difficulties. The following are the latest available rates—in tallaris per lb.—from Alexandria:

Karnak: March 117.25; May 117.05; July 116.30.
Ashmouni: February 84.15; April 84.10; June 84.00.

Cotton values in the Liverpool market declined during the week, due mainly to selling against imports of American cotton. Local prices were not much affected by the announcement of the U.S. Department of Agriculture that the 1957 loan rate would be 28.15 cents for Middling 1", as against 29.34 cents last year. Weakness in the near months of both the American and American type contracts were induced by fears of heavy tenders in these positions. Distants, however, attracted trade buying and inter-month switchings. Their values, as a result, improved. There was not much interest in Indian cotton, despite the quota announcement, because of the unexpected rise in c.i.f. offers. Some varieties of Pakistan cotton evoked some interest and small business was reported in Punjab *Deshi*. The Egyptian Karnak contract was neglected, while Sudan Lambert Seed contract eased further.

Cotton circles in the U.K. are much concerned about the selling terms for the C.C.C.'s new catalogue. The C.C.C. has acquired about 6 million bales of the 1955 crop, but the price and the rate at which this cotton will be sold will be made known only next month. The terms of the new catalogue, it is felt, would have an important effect on the position of the U.K. cotton trade in the coming years.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American one inch Staple Contract: March-April 25.83; May-June 25.80; July-August 25.50; October-November 25.17. *American Cotton Mixed Growth Contract*: March-April 26.03; May-June 25.95; July-August 25.65; October-November 25.26. *Egyptian Karnak Contract*: March-April 60. *Sudan Lambert Seed Contract*: May-June 43.50; July-August 42.50.

The New York cotton futures market registered a steep drop in prices, following the U.S. Government announcement of lower 1957 loan rate. There was large-scale liquidation in new drop. The decline in prices would have been more marked but for trade support and commission house replacement buying based on the belief that the lower loan rate would encourage more acreage being placed under the Soil Bank next season. Spot values also suffered a break.

The preliminary loan rate for cotton now announced is based on 77 per cent. of mid-January parity price. The loan rate for upland cotton Middling ⅞" will be 28.15 cents per lb. as against 29.34 cents last year, and for Middling 1" cotton 31.60 cents per lb. The final loan rate will be increased proportionately if the mid-July parity price is higher than the mid-January.

The Commodity Credit Corporation has announced a further sale of 47,264 bales, bringing the total sales thus far to 6,363,959 bales. The acreage price for Middling 15/16" cotton was 25.84 cents per lb.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	19-2-57	12-2-57	5-2-57
Spot	35.25	35.55	35.40
March	35.08	35.38	35.20
May	35.10	35.29	35.07
July	34.42	34.70	34.52

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 20*th February*

The bearish trend noted in the yarn market last week continued unabated during the week under review. Buying enquiries were at a low ebb, thanks to stringency in the money market. The general attitude adopted by banks towards advances to trade was unfavourable, with interest charges raised further. Operators were, therefore, generally inclined towards reducing their commitments, and buyers being reserved, yarn values continued to march downward. Rayon yarns came in for selling and suffered a decline in prices. The offtake of even acetate yarns in deniers 120 and 150 bright, the imports of which have been completely stopped, was very poor. Hitherto, it will be recalled, the Import Control authorities were allowing imports of these varieties up to 5 per cent. on quota-holders' licences. Staple fibre yarns were also on offer at reduced prices. Cotton yarns ruled dull, with restricted turnover and narrow movement in prices. Coarse and medium counts, of course, evoked some scattered enquiries, particularly from North Indian markets, but prices offered were lower.

Snia rayon yarn (120 dull cones) for February delivery slumped by Rs. 12 to Rs. 774. April delivery dropped Rs. 11 to Rs. 795. 150 Bt. cones April delivery shed Re. 1 to Rs. 652. In the spot section, 120 Italy lost half an anna to Rs. 4-0-6. 150 Italy were neglected at Rs. 3-11. 150 Japan declined by 18 pies to Rs. 4-6. 120 Japan eased by six pies to Rs. 4-6. Among indigenous yarns, National Rayons 150 Bt. cones first grade were lower by 3 pies at Rs. 3-5-9. 120 Bt. cones first grade were unaltered at Rs. 3-11-6.

In the staple fibre yarn section (40x2), February delivery fell by Rs. 9 to Rs. 638. April delivery receded by Rs. 7 to Rs. 647. Among spot indigenous yarns (40×2), New Greats were done half anna lower at Rs. 3-5-6. Citys and Centurys lost three pies each to Rs. 3-6-3 and Rs. 3-7, respectively. Kohinoors were unchanged at Rs. 3-8. Deals in foreign yarns (80×2) were put through at reduced prices, Fujis receding by As. 3 to Rs. 5-3-6 and Paramounts by As. 2-9 to Rs. 5-1-6.

In the cotton yarn section, 10 counts Podars fell by As. 6 to Rs. 14-14. Moderns shed As. 2 to Rs. 15-4. 20s Maduras slumped by Rs. 2-2 to Rs. 19-10. Gokaks were neglected at Rs. 18-12. Moderns were done at Rs. 19-6. Among 40s, Moderns and Gokaks remained unaltered at Rs. 28-8 and Rs. 27-8, respectively. Moderns were quiet at Rs. 63, as also Finlays at Rs. 61. Raghuvamshis, however, elicited some support and gathered As. 4 to Rs. 58. Eighty counts Mahendras were quoted at Rs. 75, same as last week, and Finlays at Rs. 81-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	20-2-1957	13-2-1957
	Rs. a.	Rs. a.
Art silk yarns **(per case of 200 lbs.)—**		
150 Doll Cone Snia February	774 0	786 0
120 Doll Cone Snia April	795 0	806 0
150 Bt. Cones April	652 0	653 0
120 Japan (per lb.)	4 6	4 6½
150 Japan (per lb.)	4 6	4 7½
120 Italy (per lb.)	4 ½	4 1
150 Italy (per lb.)	3 11	3 11
Staple fibre yarns **(per case of 200 lbs.)—**		
40 × 2 February	638 0	649 0
40 × 2 April	647 0	654 0
40 × 2 New Great (per lb.)	3 5½	3 6
40 × 2 Century (per lb.)	3 7	3 7½
40 × 2 City (per lb.)	3 6½	3 6½
Cotton yarns **(per bundle of 10 lbs.)—**		
10s Podar	14 14	15 4
20s Madura	19 10	21 12
40s Gokak	27 8	27 8
60s Finlay	61 0	61 0
80s Modern	77 0	77 0

OILSEEDS MOVE DOWN

(From Our Own Correspondent)

BOMBAY, 20*th February*

In an otherwise almost featureless trading in the oilseeds market, the linseed spot section and cottonseed futures section reflected a distinctly easy tendency during the week under review. The castor section ruled bearish early in the week on reports of discouraging prices of castor oil in London and hope that Government will not interfere in the exports of non-edible oils. Subsequently, however, castorseed picked up strength on rumours that overseas buyers were evincing interest in castor oil. The linseed spot section staged a setback, following, fresh arrivals and lack of encouraging overseas buying. Groundnut and cottonseed moved in sympathy with linseed.

In the groundnut section, the February contract opened the week at Rs. 167-2 and, after moving between the highest level of Rs. 169-8 touched on the 18th and Rs. 166-8 touched today, closed at Rs. 167-4. The May contract opened at Rs. 164-4 and reached the peak of Rs. 166-12 on the 16th and 17th, but declined today to Rs. 162-6 before finishing at Rs. 163-4. While the February contract lost As. 4, May contract lost Re. 1-10. In the spot section, Bold F.A.Q. was lower by As. 10 at Rs. 33-6. Groundnut oil ex-mill was done at Rs. 18-5.

Linseed May contract opened the week at Rs. 28-12 and, after climbing up to Rs. 29-2 on the 18th and 19th, receded to touch the low of Rs. 27-14 today. It, however, closed higher at Rs. 28-3. The net loss over the week was As. 9. In the spot section, Bold ready shed Re. 1-14 to Rs. 28-14. Linseed oil ready was quoted As. 10 lower at Rs. 16-6.

Castorseed May contract showed similar irregular movement. It opened the week at Rs. 152-4 and advanced, after considerable fluctuations, to Rs. 157-4 on the 18th. It, however, declined to Rs. 152-4 today before closing at Rs. 152-14. Over the week, it was only a shade higher. Spot Madras and Bold closed today at last week's levels of Rs. 31-4 and Rs. 32-8, respectively. Oil B.S.S., however, put on As. 4 to Rs. 20.

The cottonseed futures section displayed an easy tendency. February contract was quoted at Rs. 97-8 on the opening. It moved up to Rs. 99-8 on the 18th, but closed today at Rs. 96, having thus lost Re. 1-8 over the week. May contract opened at Rs. 99-6, touched the highest of Rs. 100 on 16th, but receded to Rs. 97 at the close today.

Kardi seed Bold lost As. 4 to Rs. 21-4. *Niger* seed Madras shed As. 8 to Rs. 28-4.

Forward trading in linseed will start shortly in Calcutta under the auspices of the Calcutta Wheat and Seeds Association. It will be recalled that the Central Government, by a resolution on 19th November 1955, recognised two associations—one in Calcutta and the other in Bombay—to conduct forward trading in linseed under the Forward Contracts Regulation Act of 1952. It had earlier been banned under the Oilseeds (Forward Contracts) Prohibition Order of 1943. The trading in Calcutta will now take place at 149, Cotton Street.

The all-India first estimate of linseed for 1956-57 puts the current year's area at 2,728,000 acres, as against the adjusted corresponding estimate of 2,461,000 acres for 1955-56. This shows an increase of 267,000 acres or 10.8 per cent. in area during the current year as compared with last year. The overall increase in area during the current year has been shared mainly by Madhya Pradesh, Uttar Pradesh and Rajasthan and is attributed to favourable climatic conditions at sowing time.

Exports of castor oil from Bombay during the first week of February amounted to 1,509 tons. Thus, from 1st January to 7th February 1957, export of castor oil from Bombay aggregated 5,321 tons as against 37,729 tons for the whole of 1956.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	20-2-1957	13-2-1957	6-2-1957
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
February 1957	167 4	167 8	167 0

Linseed oil—			
Ready	16 6	17 0	18 0

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 20*th February*

Despite the expected monthly release of sugar before the week-end, bearish advices from U.P. side and poor offtake, the sugar market ruled steady, as there were rumours of the Central Government permitting export of an additional quantity of 50,000 tons. Another helpful factor was a reduction in arrivals of sugar into the market, aggregating 16,800 bags, as against 22,800 bags in the previous week.

Large grain indigenous sugar improved by a rupee to Rs. 92-Rs. 98 per bag. Medium grain was fully maintained at Rs. 89-Rs. 91, as also small grain at Rs. 88.

Fagan delivery contract for 'C' grade sugar rose by As. 7 to Rs. 91-11 on rumours of additional export of sugar. Today, however, it was quoted lower at Rs. 91-4 for want of follow-up support.

There are still large stocks of old crop sugar lying unsold with the mills. In view of this and also of crushing being in full swing, a section of the sugar trade feels that the trend of prices will continue to be downward. Those who are bullishly inclined, however, lay stress on the bright prospects of export and anticipated rise in domestic consumption of sugar. In the opinion of the latter, the manufacturers will not be in a mood to offer their stocks at a price lower than that which can be obtained by selling for export.

BLACK PEPPER RECEDES

(Messrs. Parekh & Co.)

BOMBAY, 20*th February*

Malabar black pepper during the week ruled easier under liquidation by holders and pressure of sales by the bears. New York was also reported quiet where spot marked down from $0.29 to $0.27 on settlement of the dock strike. Dealers there remained selective buyers. After buying a small quantity, they continued to ask for a concession in the price. They paid for a small quantity under February shipment $0.24. Now they indicate $0.23½, but without any firm bid for a sizable quantity.

Alleppey and Cochin went down, reflecting weakness in the Bombay market. There are sellers for ungarbled at Alleppey at Rs. 537½. At Cochin, garbled is nominally quoted at Rs. 92½. The present levels are new lows in the recent years. Since the beginning of February, exporters became scarce buyers, as orders from the U.S.A., Russia, Europe and the U.K. were few and far between.

The terminal markets in North Malabar remained comparatively steady, owing to limited arrivals, in view of poor crop in the area. Singapore, after showing a steady front for a few days, again turned quiet with anxiety on the part of packers and holders to sell out before the new arrival of Sarawak which is expected during the last week of March or early April.

The position is reported to be obscure and the general sentiment in India is slowly veering round a bear side, despite present low prices, since demand from New York failed to develop as earlier expected and arrivals continued to be satisfactory and did not taper off as envisaged before. Russia is reported to have almost covered their annual requirement and may not be interested in buying further unless at reduced prices.

The future is very uncertain and prices are likely to work lower unless there is good demand from the U.S.A. during the coming month, as, with the passing of time, growers will be more anxious to liquidate, as they generally fear keen competition from Sarawak from April onwards. However, everything depends upon the size of new production in Sarawak.

February was done at $0.24½-$0.23½, while March at $0.24½-$0.23¾ and April-May-June at $0.25-$0.24½. In delivery, March and April deliveries were marked down, owing to bear pressure and for want of support from outsiders.

Today's nominal quotations are: Ready delivery Rs. 77 per Bengal maund; March Rs. 528-Rs. 733 and April Rs. 533-Rs. 738 per candy of 5¼ cwts.

BETTER LIQUORING TEAS STEADY

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 14*th February*

A little over 550,000 lbs. were on offer in dust sale D, which was held on Tuesday, 12th February. The sale opened to a good general demand for all types and commons and the better liquoring dusts remained steady. Buyers, however, followed quality closely in their dealings with highgrown dusts. All other types showed a slightly easier tendency and prices were irregularly one anna lower.

The average price realised in Dust Sale D was Re. 1-15-2 per lb., as compared with Re. 1-10-8 per lb. in the corresponding sale of 1956.

London Market: *Sale of 11th February 1957*:—Best 3*d*. Others irregularly 6*d*. lower.

Sale of 12th February 1957.—Generally 6*d*. to 9*d*. lower.

Colombo Market: *Sale of 11th February* 1957:—Stalky broken mixeds easier. Good liquoring fannings and broken mixeds very firm. Dusts considerably dearer.

Sale of 12th February 1957:—Good demand. Lowgrown brokens steady. Mediums declined 15 cents. Dimbula dickoya types with improved quality considerably dearer.

Calcutta Market: *Export*.—Commonest firm to dearer. Mediums one anna lower. Whole leaf and others irregular.

Internal:—19,000 dust. Met with good general demand at prices generally one anna to As. 2 easier. Clean leaf and bright liquoring teas about steady. 2,400 leaf. Good general demand at slightly easier rates.

Export Quota:—There has again been an easier tendency and the market fell to 33 pies. Business has since been done at 35 pies.

Forthcoming Auctions:—Dust Sale E will be held on Tuesday, 26th February.

The South Indian tea crop for January is estimated at 7.36 million lbs., as against the actual production of 7.07 million lbs. in January 1956.

As we go to press Messrs. Forbes, Ewart & Figgis (Private) Ltd., wire as follows:

"*Sale* 4:—1.7 million lbs. Good general demand; commonest low medium fully firm; improved quality mediums and highgrowns often dearer. Good mediums irregular and easier; all fannings weakest feature; whole leaf steady."

TEAS DECLINE

(From Our Own Correspondent)

CALCUTTA, 19*th February*

Conditions in the export auctions held yesterday did not show any change from the recent pattern. Although there was good demand, prices eased further by As. 2. It was, however, noted that a gain in prices for all descriptions was recorded in the sales held in London on 13th February. Demand there was strong and prices for common low mediums rose by 1*d*. to 2*d*. and those for good liquoring medium teas by 2*d*. On the other hand, although demand was strong in the Colombo sales held on the same day and demand on behalf of the United States, Canada and the United Kingdom was fair, prices were reported easier.

More demand on Calcutta for export is believed to be in the offing. The world output of tea for 1956, when final figures are available, is not expected to exceed the previous year's production of 1,189.6 million lbs., and it should be noted that world demand for 1956 increased by about 125 million lbs. Adding the December figure, North Indian output for 1956 stood at 536.7 million lbs., representing an insignificant increase of 3.5 million lbs., thanks to the crop regulation scheme in force since November. Adding the estimate for December, South Indian production for 1956 was 2 million lbs. lower at 126.9 million lbs., *so that total all-Indian output*, at 663.6 million lbs., was higher by only 1.5 million lbs.

In view of the payment difficulties with Ceylon, Egyptian demand on Indian tea continues to be stronger than before. So far, Egypt has purchased from India about 4 million lbs., and desires to buy a further quantity of about 12 million lbs. However, here again, as in the case of its trade with Ceylon, Egypt is experiencing considerable payments difficulty. The results of the Egyptian attempts to solve its payments difficulty with Ceylon by increasing raw cotton exports to Japan and by paying Ceylon in Japanese yen are not known. In its trade with India, Egypt suffers from considerable deficit, and negotiations between Cairo and New Delhi have given birth to the following proposals: grant of an Indian loan of Rs. 10 crores, or a barter trade agreement between the two countries. Egypt is willing to export to India a large quantity of surplus cement. As and when these proposals are finalised, Egyptian support in Calcutta auctions would be considerable.

There are ample indications that internal consumption, against the background of an almost static production and an improved offtake for export, would rise, and considering that the quantity hitherto bid in auctions for domestic consumption has not shown any significant rise, competition by internal buyers in future auctions is anticipated. If only the internal market is given full attention, tea trade circles feel that East Africa's increasing exports to London would not affect the overall demand for Indian tea. East African estates are making strenuous attempts to increase output, although climatic conditions would be a restraining factor.

Offerings during yesterday's export sale aggregated 64,275 chests. There was fair general demand at easier rates. Mediums, C.T.Cs. and commons opened an anna to As. 1½, lower and closed As. 2 lower. Bright liquoring teas were supported at or above valuations as were tippy teas. A strong trend was also in evidence in well-made stylish whole leaf grades; however, the poorer teas in this category shared the general decline. Darjeelings also declined. The rates were: best C.T.C. Assam B.P. Rs. 2-6 (nominal), medium Assam B.P. Re. 1-14, plain B.P. Re. 1-13 to Re. 1-13-6, and clean black pekoe Rs. 2-2.

Export quota changed hands at 45 pies per lb. with buyers paying no attention when sellers raised the rate to 47 pies.

Dusts on offer during last week's sales for domestic consumption aggregated 18,718 chests, the quality of which was better. There was good demand, and brokers' valuations were realised by sellers of all teas possessing clean leaf appearance and bright liquors. Non-withered Dooars with improved liquors also realised valuations. The rest of the teas eased by As. 2. The rates were: best Assam C.T.C. Rs. 2-10 (nominal), medium Assam C.T.C. Rs. 2-2, medium Assam grainy dust Re. 1-13-6, and medium Dooars Re. 1-2 to Re. 1-13.

FURTHER FALL IN JUTES

(From Our Own Correspondent)

CALCUTTA, 19*th February*

Earlier in the week under review, jute goods recorded a slow and fractional recovery, but this trend was soon arrested and prices closed lower on balance, following withdrawal of support by speculators and the announcement of increased production for the month of January. The total of all goods produced was 88,800 tons, an increase of 3,900 tons. The increase was distributed as follows with the output figures given in brackets: 2,200 tons sacking (43,500), 1,100 tons hessian (38,800), and 600 tons miscellaneous constructions (6,500). Adequate export business to keep the market on an even keel was lacking. The earlier rise in prices was attributed to the belief that bulls would attempt cornering B. twills on 13th February. The subsequent fall, which affected both hessian and sacking goods, occurred when it was known that no cornering was in fact proposed on the above date. Attempts of mills to sell ready goods did not receive any satisfactory response. There was again a slight recovery at yesterday's trading, following buying interest at lower levels on the belief that after the present pause, prices would recover. But the closing prices were still below the week's best levels. In the meantime, raw jute prices continued to decline, and this indicated the comfortable stock position within the country.

Jute trade circles read with considerable interest the speech of Mr. A. Dada, President of the Pakistan Jute Association, at the recent meeting of the Association. He dealt with many problems concerning the jute trade, but of particular interest to the trade in India was his appeal to the Government to appoint an inquiry committee to examine the export procedure for raw jute with a view to improving it. He had no hesitation to state that the jute export procedure was cumbersome, complicated, and time-consuming, and prevented an unimpeded outflow of the crop. Exporters of jute to India have often complained of the great delay in getting the E.P.C. forms passed by the State Bank of Pakistan. Transport is another serious bottleneck, and even after the jute gets moving the cumbersome procedure for customs check at border points cause additional delay and exasperation. During this long period, funds of the importers in this country would remain blocked up. Indian mills have often felt that not much can be bought from Pakistan, in view of the very high prices fixed for export. There are, however, no indications that the authorities in East Pakistan have realised the folly of fixing high prices for export. For the East Pakistan Chief Minister, Mr. Ataur Rahman Khan, has said that the cultivators are not getting fair prices, in that they have to sell their produce immediately after harvest when market conditions can only be dull. Naturally, the difference between the price which the *cultivators actually get and the minimum export prices go into the pockets of the middlemen*, who, Mr. Khan thinks, do not deserve such compensation for their service to the trade. The Chief Minister, therefore, wants that cultivators should obtain higher prices by the elimination of the middlemen.

Those who are concerned with the welfare and future of the jute industry the world over aver that Pakistan's export policy on raw jute should at once be remoulded in a realistic manner. Mr. A. Dada referred to the strenuous attempts by foreign countries to find substitutes for jute. That these attempts have met with a measure of success is indicated by the fact that jute has not been able to maintain its former supremacy, despite the need for more packaging material consequent on the increased farms output and industrial production. Mr. Dada was alive to the ability of the Western countries "with their incomparable technological advance" to make anything out of anything. If, however, there was a feeling that jute had held its own against substitutes, it was merely because the shrinkage of its consumption in more advanced countries had been offset by its increasing consumption in countries that had yet to develop substitutes. Trade circles here fully appreciate the remark made by Mr. Dada that any unsuccessful experiment with the jute crop would go down as an historic tragedy.

The market opened during the week on a steady note following support by speculative elements and shippers at lower levels. The result was that ready B. twills soon gained to Rs. 113-10 and hessian 40" 10 oz. to Rs. 41-10 from Rs. 113-2 and Rs. 41-2, respectively. The uptrend was helped by attempts by bulls in *fatka* to corner the above two constructions. However, it was soon known that bulls did not propose to take delivery. Further, the increased output in the month of January was announced. Both these factors had their impact on the market and, on Wednesday, ready B. twills sagged to Rs. 112-8 and hessian 40" 10 oz. to Rs. 41-11. Covering demand developed at this stage and, for a time, the lower levels were maintained. However, manipulations in the *fatka* reversed this trend and by the week-end B. twills had fallen to Rs. 110-12 and hessian 40" 10 oz. to Rs. 41. Lower levels attracted fresh attention yesterday, with the result that B. twills improved to Rs. 111 and hessian 40" 10 oz. to Rs. 41-7.

Poor support was accorded to raw jute. Prices declined by As. 8. Latest quotations of the different varieties for February-March delivery, 1956-57 crop, are given below and those of a week ago in brackets:

	Middles	*Bottoms*
Pakistani:	Rs. a.	Rs. a.
Northern ...	35 8 (37-0)	32 8 (34-0)
District ...	36 0 (37-8)	33 0 (34-8)
Indian:		
Northern ...	30 8 (31-0)	28 0 (28-8)

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 18*th February*

Steady conditions prevailed in the foodgrain markets during the past week, while reports from some other States indicated that, due to bright prospects of the coming wheat crop, especially from Punjab where a bumper crop of wheat is expected, prices recorded some fall in those centres.

Wheat prices at Hapur recorded a gain of As. 8 per maund during the week to Rs. 16-10 per maund for average quality, while farm quality was quoted as high as Rs. 17-12 per maund and wholesale *khati* was quoted at Rs. 16-3 per maund. Due to some demand from east U.P., local stock of wheat ran down by 6 *khaties* during the week to 42 *khaties* estimated on Monday. Sales through fair-price shops is very regular here and in the rural areas, thanks to the arrivals of imported wheat in large quantities from the ports, but demand on these shops is increasing daily due to increasing difference in its price and the open market prices. The State Government is receiving imported wheat from the Centre in increased quantities and, although the State Government's demand for a monthly quota of 65,000 tons has not been wholly met, the present allocation of 40,000 tons has evidently sufficed to satisfy the most pressing demand and the additional Central assistance for the Kabal towns has greatly eased the position.

Prices of rice scored some gains during the week and the Government, in order to check this rise, is reported to have asked the Reserve Bank to re-impose restrictions on credit facilities on rice and paddy. Prevailing prices are: *Basmati* Rs. 23 to Rs. 27, *Manipuri* Rs. 20-8, and coarse quality Rs. 16-8 per maund. Coarse grain prices recorded sharp gains during the week, as local stocks ran down considerably and it is still over a month for the arrivals of the new crop. Latest prevailing prices here on Monday are: barley Rs. 13-8, *bejhar* Rs. 13-8, maize Rs. 13-2, *bajra* Rs. 14-6, *jowar* Rs. 13 and *guwar* Rs. 11-12 per maund. Despite good crop prospects here as well as in the Punjab, gram prices continued steady at Rs. 13-6 per maund for average quality and Rs. 13-14 for Punjab produce, due to good consumer demand and local stock ran down by 10 *khaties* during the week to 11 *khaties*.

Peas prices ruled quiet, as standing crop is reported to be fairly good and is expected in the market by the middle of next month. Prices of *arhar* declined due to slack outside demand and prices of other pulses were steady to be quoted at: peas *dara* green Rs. 14-4, white Rs. 16-8, *arhar* Rs. 13, *urd* Rs. 18-8 to Rs. 20-8, *moong* Rs. 14-8 to Rs. 16 and *massoor* Rs. 16-8 per maund.

After early gains due to bull support, pulses futures eased in the week-end on east U.P. selling and the quotations on Monday were: peas *jeth* Rs. 10-6-9, peas farm *jeth* Rs. 10-8-9, *arhar jeth* Rs. 10-14-6, and *urd baisakh* Rs. 18-12.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 18*th February*

Sugar prices ruled quiet during the week and latest reports from the producing centres indicate that sugar production in the country this season will be greater than last season. The production up to 31st January 1957 amounted to 8.12 lakh tons in the current season, as against 7.12 lakh tons in the corresponding period of the last year and the stocks with the factories on this date stood at 8.81 lakh tons, as compared with 7.58 lakh tons last year. Cane supplies to the factories is very adequate, due to further fall in ready *gur* prices and latest mill delivery prices here are: Jaswant Rs. 28-12, Simbhauli Rs. 28-14, Mawana Rs. 28 to Rs. 29, Daurala Rs. 29 to Rs. 30, Amroha Rs. 28-4, Bijnore Rs. 28-4, Mansoorpur Rs. 29 to Rs. 30, Rampur Rs. 31-8; retail Rs. 30-15. The *khandsari* market continued dull and weak, with increasing stocks and slack demand, and prevailing prices in the week-end were: Rs. 22 to Rs. 25-8 per maund according to quality.

Ready *gur* prices further declined during the week as local stocks were higher with the arrivals of large quantity of *gur* from nearby districts. Outside buying enquiry was very small and with arrivals, daily at an average of 4,000 to 5,000 maunds, local stocks swelled to about 85,000 maunds. Latest prices are: Rs. 9-10 to Rs. 9-14 according to quality.

Future *gur* prices also declined steeply on bear pressure, influenced by depressed conditions in the ready section. *Gur fagun* was quoted on Monday at Rs. 9-14-6 and *baisakh* at Rs. 10-9-6, as against Rs. 10-10-9 and Rs. 11-6, respectively, a week ago.

LEIPZIG SPRING FAIR

At the Leipzig Spring Fair, due to be held between 3rd and 14th March 1957, will be represented nearly 40 countries. In all, 55 trade groups are expected to open pavilions at the Fair. A noteworthy feature is that the exact division of the branches permits of a quick survey of the entire assortment of goods.

Governmental agencies and trade corporations from as many as 17 countries will stage collective exhibitions at the Spring Fair. Moreover, foreign exhibitors at the Leipzig Fair will include leading firms from all branches of industry. Among the participants in the Technical Fair, for instance, mention must be made of the A.O.E.C. from Belgium, Standard Motors, Pye, Massey Harris and Ferguson from Great Britain, Renault, Eclair Simca from France, Sandoz and Geigy and a group of exhibitors showing precision machine tools and automatics from Switzerland. There is also a great number of foreign exhibitors of consumer goods.

A feature of particular interest in the Fair will be the section covering foodstuffs and allied industries wherein a large number of countries of North and Western Europe and North and South America will participate.

It is expected that the countries of the East will show their export programmes in collective exhibitions. Foreign trade corporations of certain East European countries have also booked stands in the Fair. The publications from the East European countries will be displayed within the international offer of books in the "Hans-Haus." The exhibits of the U.S.S.R. will include, among others, industrial equipment, automatic machine tools, agricultural machinery, etc. China, Bulgaria and Hungary will also exhibit a wide range of machines.

***These shares carry the right of a preferentia dividend at the rate of 5 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up those shares have a preferential claim to repayment of capital.

†Only 7 per cent. out of the 10 per cent. dividend is cumulative.

††In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†††These shares can be redeemed at Rs. 105 at any time by special resolution.

‡These carry the right to cumulative dividend of 7 per cent. and of any surplus profits available after 10 per cent. ordinary capital.

‖These shares are entitled to receive 25 per cent. of the divisible profits in addition to the Dividend Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co. Ltd.

ABBREVIATIONS.
A—Held by Government of India. B.—Taken up by State Bank of India. C—Held by Commissioners. B—Domestic Loan not
(f) Income-tax free. * Loans held entirely by the Trustees. *** Rupee Counterparts.
‡Bombay State Transport. †† Rate of interest reduced from 6 to 2 per cent. with effect from 1st June 1944.
§ Rate of interest reduced from 4½ to 4 per cent. with effect from 1st April, 1954.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.= Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters "A" and "B" under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may set aside excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales. If any, and for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where given for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. s) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (c) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Re. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 100 into shares of Rs. 10 each.

BANKING

(*Concluded from page 362*)

evade almost all the important provisions of the enactments." Moreover, the absence of an alternate agency which can meet the credit requirements of the agriculturist on terms better than those offered by the money-lender makes even a well-placed borrower to co-operate with the money-lender in evading the provisions of the Acts. The Rural Credit Survey rightly observes. "The dominance (of the money-lender) itself has been made possible by the ineffectiveness of all attempts hitherto made to organise a competitive agency for the supply of credit to rural areas; the main fact meanwhile is that the needs exist and must seek fulfilment as well as they can in the given conditions." The net result is the violation of the Acts in letter in a very large number of cases and in spirit in many cases.

Evasion of Provisions

The Survey gives some of the commonly used methods of evasion. To quote:

"The modes of evasion reported are as numerous as they are ingenious. Only a few need be mentioned by way of illustration: (1) obtaining a promote for a larger amount of principal than that actually lent; (2) interest computed at illegal rate and deducted in advance from the amount lent; (3) the making of a separate pro-note (besides the main one) in the name of a servant or relative of the money-lender to cover the extra interest; (4) forward purchase, together with false evaluation, of the debtor's produce; (5) conditional sale; (6) unobjectionable sale deed for purposes of the law, and illegal, if

SANGAMESHWAR COFFEE

(*Concluded from page 367*)

(3) The Secretaries and Treasurers will be paid as and for their remuneration 5 per cent. of the net profits of the Company from the date of incorporation of the Company subject to a minimum of Rs. 10,000 per year in the event of absence or inadequacy of profits.

CAPITALISATION AND VALUATION

The purchase consideration for the Estates including the value of the current season's crop is Rs. 20,50,000 and the capitalisation on this basis works out as follows:—

	Rs.
COFFEE LAND:	
Arabica: 890 acres at Rs. 1,600/- per acre	14,24,000
Robusta: 260 acres at Rs. 1,400/- per acre	3,64,000
Paddy Land: 75 acres at Rs. 200/- per acre	15,000
Cardamom: 10 acres at Rs. 300/- per acre	3,000
Jungle: 275 acres at Rs. 200/- per acre	55,000
Buildings, lines etc.	1,89,000
Rs.	20,50,000

As already mentioned, the purchase consideration includes the current season's crop, the profit on which is estimated at approximately Rs. 4,60,000. It will thus be seen that the capitalisation taking into account the profit that will accrue to the Company on the incoming crop, is very reasonable indeed and much lower than the figure mentioned above.

PROCEEDS OF THE ISSUE

The whole of the proceeds of the issue, including the Debentures, will be utilised in the purchase of the three Coffee Estates with the stocks and stores thereon and for working capital.

In the opinion of the Directors, the following will be the financial requirements:

	Rs.
Purchase consideration of Estates ...	20,50,000
Stocks on Estates	1,68,000
Working capital	72,000
Brokerage	30,000
Preliminary expenses (including expenses of issue, stamp duties and registration charges)	80,000
Rs.	24,00,000

In addition, the vendors will have to be paid working and cultivation expenses from 1st April 1956, to date of taking possession of the Estates and this will amount to approximately Rs. 2 lakhs. This is proposed to be met by a temporary loan from the Company's Bankers and others. Having regard to the estimated profit on the crop from the Estates for the 1956-57 season at approximately Rs. 4,60,000, the promoters consider that the minimum amount to be raised on the issue may be fixed at Rs. 18½ lakhs. The amount which will then be required to meet the balance purchase consideration and other financial requirements listed above can be raised without difficulty from bank and other borrowings. The preliminary expenses have been paid by the promoters and will be recovered from the Company.

BROKERAGE

Messrs. R. Radcliffe and G. V. R. Frend, who are amongst the vendors, have expressed their willingness to subscribe to 600 Debentures of Rs. 500 each for Rs. 3 lakhs while the promoters, Messrs. K. M. Desikar, R. Sundaram and R. S. A. Sankarier and Sons, have offered to procure subscriptions or subscribe themselves to the balance of 500 7 per cent. Debentures of Rs. 500 each and 20,000 Preference shares of Rs. 10 each and no consideration as commission or brokerage is payable to them therefor.

Brokerage will be paid by the Company to recognised brokers and banks at the rate of As. per share on the Equity (Ordinary) shares, 1 per cent. of the nominal value on the Preference shares and ½ per cent. of the nominal value of Debentures allotted in respect of applications bearing their stamp. The Directors are of the opinion that the resources of the promoters are sufficient to meet their obligations mentioned above.

DIRECTORS' INTERESTS

Mr. Desikar, Mr. Sundaram and Mr. Vaidyanathan, the last as a member of Messrs. R. S. A. Sankarier and Sons are interested as promoters of the Company and as parties to the agreement under which the Estates have been purchased.

Mr. Vaidyanathan is also interested as a partner of Messrs. Patco Agencies, the proposed Secretaries and Treasurers and of Messrs. Paterson & Co. Brokers to the issue.

Mr. R. Radcliffe is interested as a party to the sale agreements of Karadykhan and Gungegudi Estates and as a part owner of Kondadkhan Estates.

Mr. J. H. Alexander will be a Resident Manager.

Mr. A. S. Jeffares is interested as a partner of Messrs. King and Partridge, Legal Advisers to the Company.

Application forms for shares and Debentures and copies of the Prospectus can be had from the Registered Office of the Company, their Bankers and the Official Brokers to the issue. Application for shares and Debentures must be made on the official forms issued by the Company and delivered before the closure of the subscription lists to the official Brokers mentioned in the Prospectus or, branches of the National Bank of India Ltd., at Madras, Bombay, Calcutta, Bangalore, New Delhi and Cochin or the Bank of Mysore Ltd., at their Head Office in Bangalore and their branch office in Madras. Cheques or drafts should be made payable to the Company or to their Bankers "A/c Sangameshwar Issue" and should, for the applicants' protection, be crossed "A/c Payee only." A separate cheque or draft must accompany each application form.

Dated: 16th February 1957.

WAGE-PRICE SPIRAL IN THE OFFING

WHILE the Government is trying to keep down deficit financing by pruning the second Plan and restraining bank credit, a fresh round of wage increases is taking place which will inevitably push up the price levels and generate an upward revision of wages in other sectors that have so far remained unaffected. A section of railway workers and employees of some of the State Governments have recently had a rise in their emoluments, the incidence of which on the respective authorities is sought to be covered by higher railway freights and heavier taxation. The amendment made by the Appellate Labour Tribunal to the award of the lower Tribunal to colliery workers has meant a further rise, of about Re. 1-12 per ton, to the cost of raising coal. Of this rise, the Government is reported to have decided—an official announcement is yet to come—that consumers of coal should pay Re. 1-8 per ton. The latest report of a rise in wages pertains to the plantations in the Madras State. As a result of an amicable settlement promoted by the Madras Government, plantation workers will receive substantially enhanced pay. The increase, of course, is not as large as was awarded by the one-man Special Tribunal five months ago in a spirit of magnanimity but with little regard to either the finances of the industry or its capacity to pay. Nevertheless, the effect of this understanding is more money in the pockets of plantation workers in the State without a corresponding rise in the supply of goods. At the same time, the cost of producing tea will go up by at least an anna per pound, if not more. It will have to be met at the expense of the public either directly or indirectly. Further, the Union Finance Minister has been promising during the past two and a half months to secure more pay for teachers, low-paid Government servants and constables.

In making a reference to these developments, we are not questioning the merits or demerits of the demands of the workers concerned. In the case of some of them, the increase may have been long overdue. But it is the timing of this trend and its implications to the second Plan that we are concerned with. Coinciding as they do with the General Elections, these wage increases have a political colour. Their implications to the Plan are quite disturbing, as they portend a strong wage-price spiral. If the latter were to materialise, it would hamper still further the progress of the Plan, already handicapped by the marked deterioration in the foreign exchange reserve position. Viewed in this context, the note of caution struck by Mr. Homi Mody in his presidential address at the twenty-fourth annual meeting of the Employers' Federation of India held at Calcutta this week was quite appropriate. Characterising the campaign for a 25 per cent. blanket increase in wages, initiated by the labour unions affiliated to the I.N.T.U.C., as a matter for serious consideration for employers, Mr. Mody remarked that neither the claim nor the reasons advanced in support of it was understandable. It will be recalled that this demand has been made on the ground that such is necessary to "enthuse workers in fulfilling their onerous responsibilities in implementing the second Plan and in the interest of industrial peace." Strangely enough, this is almost the ground on which the Appellate Tribunal has justified its revision of the lower Tribunal's coal award. The same has been the justification of the Railway Ministry also. And since both acted after the I.N.T.U.C. had voiced its demand, it is not unreasonable to infer that the Trade Union's line of reasoning has already begun to weigh with the Government and labour courts. It is no secret that the Union Minister for Labour has already given his blessings to the I.N.T.U.C.'s demand.

The employers' contention is not to deny the workers higher wages. All that they say is that a stage has been reached in Indian economy when higher wages have to be related to workers' productivity and the profits of industry. If productivity rises and the profits are good, the employers will not grudge workers drawing more. That is why Mr. Mody urged in his Calcutta speech a dispassionate consideration of the problems from all the relevant angles, instead of an arbitrary disposal of it. Since such consideration has to be at expert level, he welcomed the move to refer the issue to Wage Boards. All those who have the larger interests of the country at heart will doubtless concede that the employers' approach, as indicated by Mr. Mody, is both sound and just. One will do well to realise that, in suggesting that higher wages must be dependent on production, that is to say, piece-rates or incentive schemes rather than outright wage increases or bonuses should be the order of the day, employers are influenced not by any narrow considerations of self-interest but by the interests of the society as a whole, including the workers. It is an illusion to think that increases in wages always come out of the pockets of employers, for, ultimately, it is the entire society that foots the wage bill and any additions to it. The state of India's economy now is such that any increase in the wage element of goods and services unrelated to productivity will have to be quickly passed on to consumers, if the trend of production is not to be retarded. Coal provides a typical example, in that every rise in wages means an almost corresponding expansion in the cost of this solid fuel which in turn starts a chain reaction and makes itself felt on all sectors of the economy.

VEGETABLE OIL INDUSTRY

VANASPATI is a valuable modern food-processing industry. It provides a nutritious and vitaminised cooking media, hygienically prepared and packed. The product is easy to handle, keeps well for a longer period than *ghani* oil, and has all the qualities of the costlier *ghee* which the vast majority of India's population cannot afford. It is, therefore, growing in popularity, especially in urban areas. The misguided and ill-informed opposition to its use is dying down. It can be confidently hoped that public prejudices against this product, all based on misconceptions, will soon turn out to be history. As urbanisation grows so will this industry rise in importance. Apart from its use as a convenient form of cooking oil, vanaspati—elsewhere in the world it is known as hydrogenated vegetable oil—has four qualities which ought to engender greater recognition for it at the hands of the Government and the public.

First, vanaspati manufacture offers the most economic method of exploiting the country's vegetable oil resources. Large-scale crushing of oilseeds enables the utilisation of this valuable raw material to the maximum extent, including the growth of by-product industries. As it facili-

tates the blending of various kinds of vegetable oils into an odourless product, it will prevent wastage of cottonseed now taking place on a colossal scale, which in turn will make available for export the highly prized groundnut oil. Secondly, when its use grows, it will reduce the dependence of people on particular kinds of vegetable oils to which they have become accustomed for ages, as, for instance, South-East India on sesamum (*thil*), South-West on coconut, Central and Western on groundnut and North and North-Eastern on *kardi* and mustard. This dependence exposes the family budgets to the uncertain price trends of individual oils and deprives them of the benefit of price stability. Thirdly, it is a unifying factor, in that it will ultimately lead to a national taste for edible oils. The advantage of this development is obvious. A Punjabi or a Bengali will not find a visit to the South uncomfortable and so will a southerner visiting the Punjab or Bengal. And, fourthly, like all modern industries, vanaspati will provide more employment on better wages than either the village *ghani* or mere power presses can.

Despite the adverse propaganda carried on by influential personalities, the vanaspati industry has come to stay. This fact alone is sufficient to prove its economic advantages. In twenty-five years, the production of vanaspati has gone up from a mere 298 tons to about 260,000 tons—the estimated production for 1956 being 255,000 tons. The growth of this industry in the past ten years, in particular, has been fairly rapid, the production in 1945 having been no more than 132,627 tons. In other words, in the last one decade, production had more than doubled, the growth being almost equal to that registered in the first fifteen years. If it is borne in mind that it was during this last decade that vanaspati had been subjected to an unwarranted, virulent propaganda by the pro-*ghee* interests, it will be conceded that its growth is firmly based on the consumer's preference for it.

Substantial though the rise in production has been in the past decade, it has not come up to expectations. The first Five-year Plan had provided for a target of 59 factories, a capacity of 389,000 tons and a production of 300,000 tons, as against 48 factories, 330,000 tons and 152,000 tons, respectively, in 1950-51, the base year. The position in 1955-56, the last year of the Plan, was that the industry consisted of 51 factories, with a capacity of 412,100 tons and an output of 274,000 tons. The capital invested in the industry was Rs. 22 crores. As many as 10,000 persons were directly employed in it, but, to get a correct idea of its employment potential, one must take into account the indirect employment that springs from it.

It will be noted from the foregoing data that the number of factories was smaller than the target, not a bad development by itself. The productive capacity shot above the target, but actual production fell short by 26,000 tons. The result was that underemployment of capacity turned out to be greater than the level the Planning Commission had bargained for. Today, under-utilisation of capacity is the main problem of the industry. And, according to the report of the Vanaspati Manufacturers' Association of India for 1956, the magnitude of the problem is bigger than that disclosed by the figures quoted above. A recent survey puts the industry's capacity at no less than 500,000 tons, while the Planning Commission places it at 445,000 tons, *vide* its publication, *Programmes of Industrial Development* 1956-57. Whatever may be the difference between the various estimates of capacity, it is agreed by all the interests concerned that the country has now enough capacity to meet the expected increase in the demand for vanaspati during the second Plan period. The second Plan provides for an increase in production from 274,000 tons in 1955-56 to 400,000 tons in 1960-61. The latter quantity is expected to take care of the domestic demand (estimated at 380,000 tons) in full, leaving a surplus of 20,000 tons for export, which compares with the actual shipment of 12,900 tons in the last year of the first Plan.

It is not easy to say to what extent the industry will succeed in reaching the production target. The ground to be covered is almost as much as that achieved in the decade ended 1956. Judged from the needs of the country and the expected increase in the national income by a quarter, the targets may appear to be actually small. But, as every student of economics knows, wants do not necessarily mean demand of equal magnitude, and, where they do, one cannot take it for granted that all the demand can be met. Vanaspati is one of the industries which happen to be in this difficult position. Even though there are good grounds for assuming that there is no exaggeration in the demand estimate, it is doubtful whether the industry will receive adequate supply of raw materials to meet the demand. This doubt is not without valid reasons.

Past experience is one of them. Scarcity of raw material was one of the basic causes for the industry's failure to step up production to the extent anticipated. The main raw materials are groundnut and sesamum. When there is not enough supply of these, prices go up and reduce the profitability of manufacture, for it is not always possible to pass on the entire rise in the cost of basic oils to consumers of vanaspati, as there is keen competition among the various manufacturers, owing to excess capacity, and as the Government is always keeping an eye on the selling prices of their products and usually pounces upon them when they effect any big increase in such prices. Because of a short supply of groundnuts in 1956, production of vanaspati, which had steadily gone up from 190,448 tons in 1952 to 260,330 tons in 1955, dropped to 255,000 tons, though it was a little better than 230,243 tons produced in 1954. This decline took place, despite a heavier groundnut crop in the 1955-56 season than in the 1954-55 season and the Government's check on exports. The explanation for this phenomenon lies in the fact that domestic consumption of groundnut oil in forms other than vanaspati, which accounts for only a small share, has gone up substantially in recent years.

The future of vanaspati industry thus depends, to a very large extent, on the availability of adequate supply of groundnut and other edible oils that are used by it. Accordingly, it is not surprising that Mr. A. J. C. Hoskyns-Abrahall, Chairman of the Vanaspati Manufacturers' Association, dwelt on this aspect of the problem at some length in his speech at the annual general meeting of this organisation held in Bombay a few days ago. As readers are aware, the second Plan for agriculture, as revised at the Mussoorie Conference in the latter half of 1956, provides for a 37 per cent. increase in the production target for the five major oilseeds, namely, groundnut, sesamum, mustard, linseed, and castor. Ths means that, by 1960-61, production of these will have to be raised to 7.6 million tons from 5.6 million tons, the estimated output in 1955-56. The planners hope that this increase will enable the country to meet the additional requirements for edible purposes, of the expanding vanaspati and other industries and yet leave a surplus for export of 700,000 tons of seed in the form of oil. Will the quantity be sufficient to serve all these purposes? Mr. Hoskyns-Abrahall has his doubts and they are not baseless, as will be seen from the following quotation from his speech:

"The Plan envisages an increase of 25 per cent. in the national income, which will largely go to raise the meagre standards of the low income groups of people in the country. A significant proportion of this additional income will, therefore, be spent on foods. Since cereal consumption has already reached the optimum level, it is likely that this additional expenditure on food will largely be on such items as fats, sugar and milk. The consumption of these articles should, therefore, increase disproportionately to the rise in the national income. The very rapid increase in sugar consumption in recent years supports this contention. I, therefore, feel that the planned rate of increase in oilseed output, ambitious as it is, may yet not prove enough to meet indigenous needs, let alone allow a surplus for exports."

There is little that we can add to this convincing explanation, except to say that, like everything else about the necessaries of life, India's *per capita* consumption of fats is the lowest in the world and far below the minimum a human being requires for keeping good health. Experts say that, in the present diet of an average Indian, the *per capita* consumption of fat is only half ounce per day, as against a minimum of two ounces per person per day, recommended by the Nutritional Advisory Committee. It is mainly through vegetable oils that this deficiency can be rectified, as the calorific value of oilseeds is high at 150 to 160 calories per ounce, as against 100 calories in wheat and rice.

Although the target seems inadequate, it is futile to say that it should be fixed at a higher level, because it is extremely doubtful whether even the one already decided on can be hit within the time limit. It has been decided that, as India cannot afford to spare any more land for oilseeds, the increase of 2 million tons in their production should be secured only through intensive cultivation and higher yield per acre. This is a very tough job, which, if past experience is any guide, is unlikely to be effectively done. In the first Plan period, production of oilseeds rose by 10 per cent., from 5.076 million tons to 5.596 million tons, but all this increase was brought about by putting more land under these crops; indeed, the area devoted to them rose by 11.3 per cent. (or 3 million acres) to 29.5 million acres, indicating thereby a slight fall in the per-acre yield. And this happened, despite the Planning Commission's directive that an eight per cent. increase in the output of oilseeds should be brought about without transferring more land to it. The main factor responsible for this outcome was the phenomenally high prices, especially of groundnut. The practical man that Mr. Hoskyns-Abrahall is, he is fully aware of all these conditions. Hence he remarked that it would be "idle to stretch the target further, until progress indicates what is already prescribed to be within reach." The main thing to be borne in mind by all those concerned is the urgency of raising the size of the crop through higher yield per acre. Failure here will lead to a deterioration in the situation already causing anxiety, owing to the sustained high level of oil prices.

That there is plenty of scope for raising the yield per acre of oilseeds is not disputed by anybody. We find that all technologists of the Government admit it. They also agree that higher yield per acre is the right solution. The extent to which India is backward in this respect will be evident from a comparison with other countries. India uses, according to Mr. Hoskyns-Abrahall, 3.5 acres to produce one ton of groundnut, while China uses only 1.5 acre and Indonesia 2 acres. Similarly, India uses roughly twice as much land as Pakistan and four times as much as Burma for producing sesamum. The Indian yield of linseed is only half that of Canada and the mustard yield in India is only about a third of that in Japan. It may be argued by some that India is India and there is no point in comparing it with other countries. But even within India, there are wide disparities. For instance, the average yield of groundnut per acre is 60 to 80 per cent. higher in Madras and Andhra than in Bombay and Madhya Pradesh and other oilseeds vary in similar fashion. All these facts are well known to students of Indian agriculture not now but for years. Yet little progress has been made in removing this grave drawback in the economy of Indian oilseeds.

It is, of course, of no avail to wring one's hands in despair. The problem is a challenge essentially to the public sector, to the State and Central Governments, in particular, to the Agricultural Ministries of these Governments, to be more precise. Whoever the politicians that take over this portfolio after the present elections, they will do well to realise that they are taking up a problem of great magnitude, crying for an effective solution. Those who succeed in solving it would be entitled to special awards. It would be a good thing, if the President of India fixes in advance the type of award to be given to successful Agricultural Ministers, for it might serve as a valuable incentive for displaying initiative and drive. It may be noted here that so far little progress has been made to implement the increased target fixed at the Mussoorie Conference. No detailed programme has been drawn up. Although the first year of the second Plan is drawing to a close, even the break-down of the target seed-wise and State-wise is not known. All this delay is exasperating.

The main ways in which an increase in yield per acre can be achieved are: more irrigation, judicious application of manures, proper rotation of crops, evolution and multiplication of better types of seed, eradication of pests, proper timing of sowing operations, and soil survey. It, of course, goes without saying that the benefits of research should be quickly and effectively passed on to farmers; besides, the latter should be given all reasonable facilities for adopting the improved cultural practices. These measures should be supplemented by grading, provision of scientific storage facilities and elimination of uneconomic methods of crushing, as well as of wasteful utilisation of the seeds that are available. In this connection, it is folly to suggest, as the Oilseeds Crushing Enquiry Committee has done, that whole cottonseed should be earmarked mainly for feeding cattle and that crushing of this seed should be encouraged only gradually, and that without offering special incentives It has been proved beyond doubt that cottonseed cake is as nutritious a cattle-feed as whole cottonseed and that cottonseed is serving as a valuable source of edible oil throughout the world. It is high time India outgrew some of its old ideas and notions rendered obsolete by the advance of science.

MR. IENGAR ON STATE BANK AFFAIRS

U.S. HELPS U.K. AGAIN—COTTON GOODS SITUATION DEPRESSING—CONCILIATION TRIUMPHS

THURSDAY, 5 P.M.

MARKET GOSSIP

HAVE the misgivings expressed at the time of nationalisation of the Imperial Bank of India that the dominant role of that great institution in the field of commercial banking in the country would be distorted by State control proved correct? Are the Government's assurances that it would not interfere in the Bank's day-to-day operations and that the Bank would operate on sound commercial lines with due regard to public interest being scrupulously observed? Has the State Bank of India, which stepped into the place of the Imperial Bank, during the last twenty months of its existence, been fulfilling the purposes for which it was constituted and thus justifying the nationalisation? An attempt was made to answer these posers by Mr. H. V. R. Iengar, as Chairman of the State Bank of India, in his speech to the shareholders at the second annual general meeting held today, and in his informal talk to the Press earlier in the day. This was probably the last act of Mr. Iengar as Chairman of the State Bank, for the very next day he became the Governor of the Reserve Bank; Mr. Iengar has been succeeded by Mr. P. C. Bhattacharyya as the State Bank chief. Mr. Iengar assured the Press that there had been no interference whatever by the State in the day-to-day operations of the Bank. It is doubtful whether the public will be convinced by this assurance. For, if there was no such interference, why did Dr. John Matthai, Mr. Vithal Chandavarkar and Mr. S. K. Handoo resign?

Mr. Iengar claimed that the State Bank had made a good start in fulfilling its statutory obligations in helping co-operative institutions and small-scale industries. This is too vague a claim. The impression in quarters that ought to know is that the Bank's progress in this direction, as well as in the opening of more branches, is far below expectations. Was that not the reason why Mr. T. T. Krishnamachari dubbed the State Bank, too, along with the Reserve Bank and the other commercial banks, as being clerical-minded and hidebound?

In one respect, however, the misgivings of the critics of nationalisation have not materialised. And that is in regard to the financial results of the Bank. As indicated elsewhere in this issue, the Bank's performance during 1956 was quite encouraging and this, as Mr. Iengar also admitted, was due to the fact that the Bank continued to be run on strictly commercial lines, notwithstanding the nationalisation. During 1956, its deposits grew by Rs. 16 crores and this was achieved, despite the fact that the rates of interest on deposits offered by other commercial banks were much more attractive than those offered by the State Bank. No doubt, the State Bank also raised its interest rates on deposits, but it was only done on 1st December 1956. Even this increase, Mr. Iengar described, was only a readjustment to a rapidly changing situation and in no sense an attempt to catch up with other Scheduled banks. This is true, because, in spite of the rise, the State Bank's rates are lower than those of other banks.

Since the close of the year, the progress has been even more encouraging, as witness the rise of Rs. 21 crores in deposits between the close of 1956 and 15th February 1957, out of a total increase of about Rs. 37 crores of all Scheduled banks.

Criticisms are sometimes made to the effect that, being a State Bank operating in a commercial field, it had certain advantages over the other Scheduled banks and that it was using its privileged position to attract business to itself. Answering these criticisms, Mr. Iengar said:

"If it were, indeed, to be the policy of the State Bank to operate flat out as a commercial institution, irrespective of the consequences to other Scheduled Banks, it would have been quite easy to increase its interest rates still further and I have little doubt that thereby a much larger volume of deposits would have accrued to us, some of it perhaps in the form of fresh deposits, but a larger proportion as diversions from other banks. As a matter of deliberate policy, the State Bank has declined to pursue such a step. We cannot forget the historical traditions of this ancient institution. Moreover, although the Statute authorises us to operate as a commercial bank, it enjoins on us due regard to the public interest and we have interpreted this to include our obligations to the banking structure as a whole. It is not our intention to enter into a race, as we could easily do, if we were merely concerned with swelling our profits. On the contrary, it is our hope that, by pursuing a policy of moderation in our rates both for deposits and advances, we may act as a steadying influence, more particularly during a period of great stringency when runaway conditions are so easy. Even so, the shareholders will observe that our profits have increased substantially, principally by the larger turnover of our funds."

It will be interesting to know what the other commercial banks have to say on the aforesaid remarks of Mr. Iengar which sound, on the face of it, quite convincing. The rest of them, however, may not be willing to voice their grouse against the State Bank in public, more so because Mr. Iengar is now the Governor of the Reserve Bank with whom they would naturally like to be on the best friendly terms possible. But healthy criticism constitutes the fundamental basis of democracy. So, they should not really be afraid of stating their views.

Although the Government is said to be not interfering with the day-to-day running of the Bank and the latter is left free to operate on commercial lines, it may relevantly be felt by some that the Bank may be offering to State enterprises advances on more favourable terms than it would have done if it had remained a shareholders' bank and on better terms than those offered to private enterprises. This suspicion was, in fact, anticipated by Mr. Iengar and cleared by saying:

"Certain State enterprises have applied to the Bank for advances and all these have been accepted in full, but on normal commercial terms. No discrimination in favour of such enterprises, such as, for instance, in the rates of interest, has been asked for. It would be relevant to point out in this connection that the sanction of advances to State enterprises has not restricted in range or volume the sanction of advances to enterprises in the private sector. On the contrary, consistently with the rising tempo of economic activity, our advances to the private sector of commerce and industry have increased very substantially—from Rs. 72 crores in December 1955 to approximately Rs. 100 crores in December 1956."

The Bank has been given, we are told, freedom to operate on purely commercial lines, subject to the proviso that due regard must be paid to public interest. In fact, the object of nationalisation of the Bank, Mr. Iengar pointed out, was to keep the public interest in mind, that is, to provide assistance to small-scale industries, to give special credit facilities to co-operative institutions and to stimulate the development of banking, particularly in the rural and semi-urban areas, by opening more branches. As regards the financing of small-scale industries, due recognition has been given to the special needs of these industries and the Bank has launched pilot schemes at three centres in each of the three circles, Bombay, Bengal and Madras. It has also put into operation a liberalised scheme at these pilot centres. Under this scheme, the rigidity of standards and the administrative procedures have been relaxed in favour of the small industrialist. Mr. Iengar admitted that the Bank's activities in this field were "still somewhat exploratory in character," but hastened to add that for a bank with its traditions it had been "a big step to break away from the concept of security of property as the main criterion for making an advance and to be prepared to give credit on the basis of mere capacity to produce and sell." In other words, as recommended by the Rural Credit Survey Committee, the Bank has abandoned, in the case of small industries, the old idea of asking for tangible assets as security in favour of a much more flexible policy. If it feels satisfied that the products of a small-scale industrialist have a good market or that he has secured Government orders, advances are granted to him. Mr. Iengar was confident that the steps which the Bank had initiated in this field would acquire increasing momentum during the Plan period.

In the field of providing special credit facilities to co-operative institutions also, Mr. Iengar said, the Bank was only making a beginning. Here also, the Bank has abandoned the old policy. Credit is now granted to farmers through co-operative societies on the estimate of crop, on general reputation and the signature of the party, and repayment of loans is accepted as and when the crop is sold. This scheme is being worked in Bombay and, to some extent, in Madras. Further, credit is being made available at the same rate of interest throughout the country and remittance facilities are being improved. Mr. Iengar was of the view that the possibilities of progress were immense and that co-operative institutions could form a dominant part in the country's economy. He added that the Bank was examining in what other ways it could help co-operative institutions.

Mr. Iengar justified the nationalisation of the Bank by saying that, had it remained a purely shareholders' bank, it could not have undertaken the aforesaid work and operated on the lines now followed by the State Bank in respect of helping small-scale industries and co-operative institutions.

As regards the obligation to open more branches, the Bank opened during 1956, 46 branches, as against 404 programmed to be opened in the five-year period from 1st July 1955. The average number of branches opened per month during the last seven months of the year was 6 and that during the last four months alone was 7. Mr. Iengar said that this rate of opening branches could not be bettered in 1957, because of many difficulties, the chief of which was the problem of getting suitable accommodation. Lack of adequately trained and experienced personnel was also cited as a major problem.

As a member of the Commonwealth and sterling area and as one having all its currency reserves with Britain, India is vitally interested in all those developments that affect the future of sterling. One such development is the decision taken by the U.S. Government last week to revise the terms of its $4,372-million loan given to Britain in 1945. This decision is a sequel to the British Government's plea put forward early in December as part of its bid to maintain the value of sterling. The revised agreement gives the United Kingdom the right to claim a 45-year postponement of the yearly instalments of both capital and interest in case of need (that is, when Britain encounters financial difficulties), rather than a waiver of the interest payment alone. The payments postponed—$31.6 million of principal and $56.4 million of interest per annum—will be repayable in annual instalments at the end of the present agreement, that is, from December 2001 onwards. In addition to the abandonment of the waiver section from the agreement, the controversial sterling balances proviso has been eliminated. It will be recalled that this proviso requires Britain to cut payments to holders of sterling balances proportionately whenever it cancels the annual Anglo-American loan agreement interest charge. The removal of this proviso is of particular advantage to India which even now is a holder of large sterling balances.

Canada is expected to follow the U.S. lead by so modifying its loan agreement with Britain as to include a similar arrangement for postponing the annual principal and interest charges in respect of its 1946 loan. In accordance with the existing arrangement, Canada is required to waive its interest payment automatically, if the U.S. does so.

Close on the heels of the revised understanding between the U.K. and U.S. Governments has come the finalisation of Britain's application to the Export-Import Bank for establishing a $500-million "loan of credit," to which the U.S. Government had agreed in principle in December itself. The loan, which bears 4½ per cent. interest and is repayable in four-and-a-half years, will be utilised by Britain to buy petroleum and other products in the U.S., in order to replace those cut off by the Suez crisis. It will be recalled that, only towards the end of December last, the I.M.F. had sanctioned a loan of $1,300 million to Britain.

The speed and the effectiveness with which the U.S. has come out with the aforesaid measures of assistance to Britain clearly serves to indicate that country's anxiety to see that the pound sterling is firmly put on its feet. These measures will enable Britain "to recoup a substantial part of its dollar expenditure on goods and services from the beginning of this year" and, to this extent, the gold and dollar reserves "are effectively reinforced." Surely, Britain and the rest of the sterling area must be grateful to the U.S. for this generous assistance, which will strengthen the hands of the U.K. authorities who are making an all-out drive to restore their country's economic health.

Investors in cotton mill shares are greatly perturbed by the continued slump in prices which set in immediately after the steep upward revision in excise duty on cloth with effect from 1st September last. Over the past six months, Bombay Dyeings—one of the blue-chips of the share market—have dropped Rs. 131. Centurys have fallen by Rs. 122, Khataus by Rs. 107, Finlays by Rs. 74 and Kohinoors by Rs. 54. The landslide in prices thus has followed persistent selling induced by a number of factors, of which apprehensions of a marked setback in the earnings of cotton mills are one of them. To what extent these apprehensions are justified only events can show. But there is no doubt that the cotton mill industry is passing through a very critical stage at present. Apart from the higher wage bill and the recent increase in cotton prices, the mills are at present confronted with the most pressing problem of heavy accumulations of stocks. The aggregate quantity of cloth now lying uncleared with mills is estimated at as high as 200,000 bales which represents nearly a month's output; at this time last year, the figure was only 73,000 bales. Besides these, large stocks are said to be held by the traders.

These huge stocks must be attributed to poor offtake—domestic and overseas—which indicates strong consumer resistance to the heavy incidence of tax. In many varieties of coarse and medium cloth, the burden of excise duty and sales tax now amounts to 25 per cent. of the total sale price. In fact, consumer resistance is so much that several mills have been compelled to bear a substantial part of the tax burden themselves without passing it on to the consumers. Even then, demand for cloth has been at a low ebb, with prices continuing their downward march. A rough idea of the drop in cloth prices can be had from the following figures which relate to a few varieties of cloth sold in the Bombay market:

(Wholesale prices, inclusive of excise duty)

	Latest	*Before enhancement of duty on 31st August, 1956*
	Rs. a.	Rs. a.
Medium grey *dhoti* (Edward Mills No. 550—42"×9 yds.) per pair	6 8	6 13
Medium grey shirting (Elphinstone Mills No. 9900—39") per yard	0 15½	1 0¾
Bleached drill (Swadeshi Mills No. 2547—27") per yard ..	1 7¼	1 8¼

The fall in prices may appear to be only fractional, but it must be borne in mind that the latest prices include the steeply enhanced excise duties.

The mills are thus caught between the decline in prices of their products, on the one hand, and a substantial increase in their cost of production and taxation, on the other. Surely, there is no exaggeration whatever in the statement that the cotton mill industry has turned out to be a high-cost, over-taxed industry. The problem of huge stock accumulations has been further aggravated by the stringency in the money market. It is reported that, forced by the difficulty of finding sufficient bank accommodation, some mills have resorted to press sales at appreciably low prices.

Viewed thus, it is regrettable that the powers-that-be should not have revised their attitude on questions of excise duty and sales tax. When the Finance Minister lost no time in announcing a few months ago a steep increase in excise duty on cloth following an acute scarcity of supplies and soaring prices, one fails to understand as to why he should not revise the duty downward now that the trend of the cloth market has been reversed to

SMALL RECOVERY IN SHARES

BEAR COVERING AT CLOSE

(From Our Own Correspondents)

BOMBAY, 28*th February*

BARRING a mild recovery at the close, the share market remained depressed during the week under review. The spurt just before the close was not due to any change in sentiment, but was solely the result of short-covering on end-of-account considerations. Apparently, the bears wanted to create the conditions that would enable them to carry forward their sales at a smaller cost.

There were, no doubt, some helpful news for the market, but these did not induce any buoyancy in it. In the first instance, the threat of the Kashmir situation developing into a conflict had, for the time being, been removed with the Security Council's decision to send its President to India and Pakistan to study the position and report back by 15th April. Secondly, the crisis in Indian Irons on the Calcutta Stock Exchange was averted, thanks to the intervention of the Exchange authorities by levying a margin of Rs. 3 per share, if the price went down below Rs. 24-12, by enforcing an interim clearing on Tuesday and by fixing the settlement price at Rs. 25. Thirdly, an out-of-court settlement had been arrived at between the plantation owners and workers in Madras over the Plantation Award, the main feature of which was the giving up by workers of their claim for higher wages with long retrospective effect. This compromise, brought about by the State Minister for Labour and Industries, would be of considerable benefit to Bombay Burmah, in that the large burden as a result of the retrospective nature of the Tribunal's award has been removed. This, however, did not bring any cheer to the counter because of the heavy bear position.

The weakness of steels, the absence of any relief in excise duty to the textile industry, the persistent stringency of the money market, and the fear of heavy taxation in the forthcoming budget were the main dominant factors which kept sentiment at a low ebb.

In the steel section, Tata Ordinaries staged a recovery early in the week from Rs. 168-4 to Rs. 171. but soon made a retreat to Rs. 166, before recouping to Rs. 168-8. Indian Irons were taken down to a low of Rs. 19-11, after an early advance from Rs. 20-6½ to Rs. 20-12. The closing was, however, done at Rs. 20-1. The Rights sagged from Rs. 5-6¼ to Rs. 4-14, but improved to Rs. 5-2 at the close.

Small gains were recorded on balance in textiles, as a result of today's recovery, but the closing prices were below the week's best levels early in the week. After improving from Rs. 538-12 to Rs. 546-4, Bombay Dyeings slumped to Rs. 531-4. Today, however, they recovered to close at Rs. 541-14. Centurys closed with a loss of Rs. 5-8 at Rs. 465, after dipping to Rs. 459 from the week's high of Rs. 477-8. Kohinoors finished with a gain of Rs. 3-4 at Rs. 328-4, the highest and the lowest levels for the week being Rs. 330-4 and Rs. 322-8. Central Indias managed to score a gain of Re. 1 to Rs. 114 and Gokaks Rs. 2-8 to Rs. 222, while Indore Malwas shed Rs. 5 to Rs. 133. Indu Ordinaries were steady at Rs. 10-8. Khataus lost Rs. 3-2 to Rs. 190-10 and New Greats Rs. 5 to Rs. 230, while New City Mills were unchanged at Rs. 149-6. Shree Niwas were steady at Rs. 178-12, but Simplex drifted to close with a loss of Rs. 2 at Rs. 176. Standards were marked up Rs. 6-4 to Rs. 413-12. Svadeshis, on the other hand, recorded a loss of Rs. 7 at Rs. 217. Tata Mills improved by Re. 1-4 to Rs. 50.

Bank shares showed a mixed pattern, but the changes were small and activity was on a small scale. Barodas were better by As. 4 at Rs. 103-12, while Centrals were marked down by Re. 1 to Rs. 53-4 and their new shares by Re. 1-4 to Rs. 57. Bank of Indias were taken Re. 1-8 higher at Rs. 141. United Commercials were As. 8 higher at Rs. 57, while Union Banks were dull at Rs. 7-8.

There was little of note in the insurance section which was quiet. New Indias changed hands Re. 1-4 lower at Rs. 42 and Indian Mercantiles shed As. 8 to Rs. 40-8.

Fluctuations in electricity shares were confined to a small range and the undertone was quiet. Ahmedabad Electrics, however, attracted investment enquiries and rose to touch Rs. 100-5. The closing was done at par, a gain of As. 5 over the week. Bombay Suburbans were unchanged on balance at Rs. 110, as also Surat Electrics at Rs. 112-8. Tata Hydros lost As. 8 to Rs. 122, while their New shares gained As. 8 to Rs. 117-8. Tata Powers drifted down by Rs. 5 to Rs. 1,212-8 and Andhra Valleys by Rs. 6-4 to Rs. 1,203-12.

Sugar shares provided a dull feature, but the undertone was steady. Belapurs moved in a narrow groove and finished with a fractional gain at Rs. 228-4. Phaltans were up by Re. 1 at Rs. 145-8. Bhopals were a shade down at Rs. 18-8, while Walchandnagars were unchanged on balance at Rs. 277-8. In the cement group, A.C.Cs moved between Rs. 167 and Rs. 165-8 before closing Re. 1 higher at Rs. 166-8. A.C.C. coupons were bid Rs. 2 higher at Rs. 61. Digvijays were marked down by Re. 1-8 to Rs. 145-4 and Ashoka Cements by As. 11 to Rs. 10-7. Dalmias were a fraction better at Rs. 12-1, while Jaipur Udyogs were a shade down at Rs. 11-15 and Orissa Cements at Rs. 12-13. Among engineerings and minings, Alcocks fared better with a gain of Rs. 2-8 to Rs. 253-12. After going up from Rs. 139-8 to Rs. 142-8. Tata Locomotives retreated to Rs. 138, but again gained ground to close at Rs. 141-4. Premier Constructions were steady at Rs. 176 while Larsen and Toubros drifted down by Re. 1-8 to Rs. 15-8. Shivrajpurs were a bright feature with a gain of Rs. 2 to Rs. 93-12. Indian Coppers were featureless at Rs. 3-6. B.B. Petrols were steady at Rs. 2-9½.

Scindias improved early in the week from Rs. 18-14 to Rs. 19-6½, but soon gave way to Rs. 18-12½. At the close, there was again a recovery to Rs. 19-1½. Great Easterns lost on balance As. 11 to Rs. 17-15. Hindustan Motors were a shade better at Rs. 7-8, while Premier Automobiles were dull at Rs. 102-12.

In the miscellaneous section, Bombay Burmahs were erratically lower, attempts at recovery being thwarted by renewed selling pressure. After moving up from Rs. 681-4 to Rs. 695, the shares slumped to Rs. 655. Today again there was a good recovery to Rs. 681-4, but the higher level attracted selling and they closed at Rs. 673-12. The Chairman's observations about the good outlook for the Company would appear to have made no impression on the market. National Rayons were hammered down from Rs. 227-8 to Rs. 222-8, but this loss was made good today when the shares finished at Rs. 227-12. B.I.Cs were quiet at Rs. 7-6½ and Tata Chemicals at Rs. 15-4. Tata Oils were a shade better at Rs. 45. Hindustan Levers were taken As. 5 higher to Rs. 19-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, 27*th February*

The existence of a number of uncertainties, where investors were concerned, led to a great deal of selling pressure on the Calcutta Stock Exchange during the week under review. The nervous liquidation which continued throughout the week took equities down to the lowest levels for the year—in fact lower than those which occurred in the depression that had set in following the taxaton changes in November last. The daily list of transactions showed a progressive contraction, which was, of course, not a surprise in the prevailing conditions. Sellers predominated the scene as the holders desired to lessen commitments and losses. They feared the recession was bound to continue throughout the election period and until the presentation of the full Budget after the new Government takes over. Buyers were hard to be found.

There were also a few other specific causes. First was the coming into being of the Security Contracts (Regulation) Act and the need to amend the by-laws of the Exchange in the near future. New Delhi's proposal to raise the coal price by Re. 1-8 a ton, as against Re. 1-12 demanded by the industry, was another factor. According to New Delhi reports, the proposed increase of Re. 1-8 would cover expenses of the industry for the implementation of the Appellate Tribunal's award with retrospective effect. The industry does not share this view. It has also strongly represented that the last increase of Rs. 3 per ton has not been adequate to cover the cost of implementation of the lower Tribunal's award. Secondly, the price of jute goods recorded further declines, but the raw material prices recovered fractionally. These factors together with the anticipated increase in stocks of goods drove away buying interest from jutes. In view of the general dullness, the slight improvement in tea auctions on Monday did not make a note in the tea section.

With a view to preventing speculative selling in Indian Irons, the Committee of the Calcutta Stock Exchange took some measures on Tuesday this week. According to these, if the price falls below Rs. 24-12, the seller should deposit a margin of Rs. 3 before transacting the deal. An interim clearing was also arranged yesterday and the settlement rate was fixed at Rs. 25 per share.

Sectionwise, coals were under selling pressure for the reason already stated. Bengals were smashed down from Rs. 462 to Rs. 446 and, at Rs. 16, New Beerbhooms lost one point. Dhemo Mains could be put through at only Rs. 5-12, as against Rs. 6-4 previously. But Raneegunges were unchanged at Rs. 11-5. Burrakurs continued to be quiet at Rs. 21.

Jutes were uninteresting, with Nationals at Rs. 18-8 losing one point. Even after falling from Rs. 102 to Rs. 97 Barnagores were hard-pressed to find buyers. Howrahs were driven down from Rs. 22 to Rs. 17-8. Budge Budges were noted for an early recovery from Rs. 102 to Rs. 107, while Aucklands slipped from Rs. 95 to Rs. 93. Nellimarlas met with business at Rs. 11-5, as against Rs. 12 previously and Nuddeas at Rs. 31-2, as against Rs. 32-2.

In the mining section, Indian Coppers were dull at Rs. 3-3 and at Rs. 3-1. Burma Mines showed a greater recession than the former.

There was nothing of note in the engineering section. Indian Irons opened at Rs. 27-4 and, after the settlement on Wednesday, were as low as Rs. 25-7 on the following day. Subsequently, there was a recovery to Rs. 26-3, but since Monday the rate came down to as low as Rs. 24-12. Kumardhubis were quiet at Rs. 9-11, and Jessop & Cos. were pulled down from Rs. 26-9 to Rs. 24-14. Guest Keens, after being lower at Rs. 23-14, improved to Rs. 24-6.

Teas could gather only limited support. Hasimaras were sent down from Rs. 28-8 to Rs. 27-4, and Dhelakhats from Rs. 21-12 to Rs. 21-4. Bishnauths were quiet at Rs. 20-8.

Indian Cables, among miscellaneous industrials, came down from Rs. 29-2 to Rs. 28-4, India Steamships from Rs. 10-3 to Rs. 9-15, and Sone Valley Cements from Rs. 7-6 to Rs. 7. From Rs. 20-8, Niccos moved down to Rs. 19-13. Calcutta Electrics were quiet at Rs. 12-15. Imperial Tobaccos were driven from Rs. 14-7 to Rs. 13-15, despite the announcement of a second interim dividend of 2 per cent., in addition to the first one of 2 per cent., for the year ending 31st March 1957. B.I. Corporations were lower at Rs. 7-6. Titaghur Papers gave way from Rs. 38-2 to Rs. 26-7.

* * * *

Madras Stock Exchange

MADRAS, 26*th February*

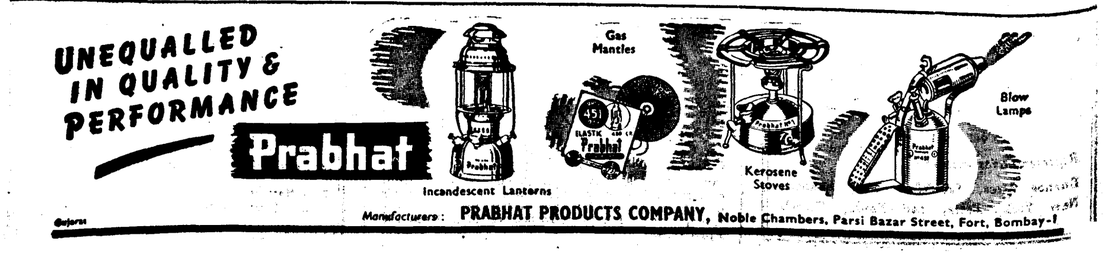
With the exception of planting scrips which ruled firm, the Madras Stock Exchange depicted a distinctly easy trend during the week under review. Renewed fears of fresh taxes affected the sentiment of operators adversely. These fears were based on reports that the Planning Commission wants the State Governments to raise, by way of additional tax measures, nearly a third of the States' outlay of Rs. 450 crores fixed for 1957-58. The coming into force of the rigorous Securities Contracts (Regulation) Act 1956 with effect from the 20th inst. also acted as a restraining influence. In addition, there were, of course, continued stringency in money market and reports of accumulation of cloth stocks at various centres. Consequently, equity values generally tended to look down.

Planting shares, however, encountered good buying support induced by the settlement of the dispute over the implementation of the Plantation Labour Award.

Textile shares came in for persistent selling and values continued to march downward. Bangalore Woollens fell by Rs. 16-12 to Rs. 548-12. Coimbatore Pioneers dropped Rs. 15 to Rs. 275 and Radhakrishnas Rs. 10 to Rs. 285. Rajalakshmis receded by Rs. 6 to Rs. 167, Vijayamohinis decreased by Rs. 4 to Rs. 82. Coimbatore Spinnings declined by Rs. 2 to Rs. 86. Buckinghams and Dhanalakshmis shed a like amount to Rs. 181 and Rs. 374 *cum-div.*, respectively. Janardhanas were neglected at Rs. 107-8, as also Cannanores at Rs. 177. Travancore Rayons slipped by As. 2 to Rs. 13-8.

In the planting section, tea shares were well favoured at higher prices. United Nilgiris advanced by As. 10 to Rs. 17-14 *cum-div.* Twyfords and Peribakaramalais spurted by As. 8-6 each to Rs. 18-15 and Rs. 7-2, respectively. Waterfalls were done at Rs. 6 *cum-right*. An extraordinary general meeting of the Waterfall Estates will be held on 30th March

(*Continued on page* 408)



NEWS IN BRIEF

THE estimated total output of iron ore in India increased to 418,198 tons in December 1956 as against 376,789 tons in November. Returns received from 123 mines for December 1956 show despatches aggregating 290,726 tons to the iron and steel plants and 96,978 tons to the export market. Stocks at the end of the month amounted to 1,521,635 tons.

An Australian trade mission will arrive in India on 23rd March for a five-week tour. The mission is led by Mr. John G. Hurley, President of the New South Wales Chamber of Manufacturers, and includes thirty representatives of industry, commerce, banking and the Wheat and Dairy Boards in Australia. The purpose of the visit is to explore the possibilities of expanding trade between the two countries.

Importers who are granted licence for the import of capital goods and heavy electrical plant should in future furnish to the Reserve Bank of India full particulars of credit facilities of deferred payment, if any, arranged by them with the foreign suppliers or manufacturers. This information will help the Government to assess precisely the outstanding foreign exchange liability of the country at any time on account of commercial imports.

A Technical Committee, consisting of some of the top engineers of the country, with Mr. Jehangir Ghandy, a Director of the Tata Iron and Steel Company, as Chairman, is reported to have been formed by the Government of India. The Committee will study the reports submitted by the Soviet heavy machinery experts and the British heavy engineering mission on raising India's capacity for manufacture of heavy machinery and plant.

Discussions are at present going on between individual firms in both India and Sweden for greater industrial collaboration between the two countries in the form of Swedish capital investments to India and the supply of technical know-how. Wimco, a predominantly Swedish concern, which at present is manufacturing matches, is setting up a paper factory near Calcutta. Sweden is also willing to supply capital goods and steel to India on a long-term credit basis.

The Indian Standards Institution has published an Indian Standard Guide for inter-conversion of values from one system of units to another. This standard is intended to serve as a guide in converting numerical values of physical quantities from one system of units of measurement to another system of units. In particular, it will assist the designer and the draftsman in converting dimensions and tolerance on engineering drawings from inches to millimetres. It also deals with the conversion of monetary values which is of interest to administrators, traders and industrialists.

A study of the marketing of chemical fertilisers in India is being carried out, for the first time, by Mr. Hart Walters, a marketing expert of the School of Finance and Commerce of Pennsylvania University, U.S.A., under a programme of economic development and administration sponsored by the Ford Foundation. The Union Ministry of Agriculture, the Standing Committee of Experts on Manures and Fertilisers and the Fertiliser Association of India have endorsed the study as it is likely to prove useful in formulating the policy of fertiliser distribution. Mr. Walters will visit various States to study personally the marketing of fertilisers, the distribution arrangements, subsidy and credit facilities. He will also submit a report to the Ministry of Agriculture.

Four subsidiary corporations of the National Small Industries Corporation, set up by the Ministry of Commerce and Consumer Industries, are expected to start functioning early next month at Bombay, Calcutta, Delhi and Madras. The Corporations will have an authorised capital of Rs. 10 lakhs and issued capital of Rs. 2.5 lakhs each. With the opening of these corporations the scope and extent of marketing and other assistance available to the small industries will considerably expand. The Corporations are expected to pay special attention to the receipt and disposal of applications for the supply of machinery under the hire-purchase scheme, marketing of products manufactured by the small-scale industries and running of mobile vans and wholesale depots in different regions.

Negotiations for settling the details of contracts for the supply of about 1.3 million tons of iron ore by India to Japan during 1957-58 began on 21st February at New Delhi between the State Trading Corporation of India and a delegation of seven steel mills of Japan. The negotiations follow the broad agreement arrived at between Mr. B. K. Kochar, Deputy Secretary in the Union Ministry of Commerce and Consumer Industries, and representatives of the Japanese mills in Tokyo, last November, for the purchase of 7.2 million tons of Indian iron ore by Japanese mills during five years beginning April next. The mills include Theyawata Iron and Steel Company, the Fuji Iron and Steel Company, and the Japan Steel and Tube Corporation. The discussions cover the finalisation of the contracts to be entered into between the steel mills, on the one hand, and the State Trading Corporation, on the other, implementation of the contracts and the possibility of developing some Indian ports with the assistance of the Japanese steel interests, in order to make additional supplies of iron ore to Japan.

From Abroad

The French factories built 827,048 automobiles in 1956, as compared with 725,083 in 1955.

Britain's dollar income from the U.S. military programmes rose by 32 per cent. to $346 million in the year ended 30th June 1956. This was more than four times the sum spent by U.S. tourists in Britain last year and a record for peace-time service spending.

The Russian Statistical Board has reported that gross industrial output in the Soviet Union went up by 10 per cent. in 1956. Iron production rose by 11 per cent., steel by 7 per cent., rolling stock by 6 per cent., oil by 24 per cent., and power generation by 11 per cent.

The ban on the export of Malaya's highest-yielding rubber seed—T.J.1.—will continue till the end of this year. The ban was originally imposed for a period of three months from January last. This action has been taken to ensure an adequate supply of seed to the producers in the country.

A special survey of the administration and operations of Air-India International is to be made by the American Trans World Airlines under the auspices of the U.S. International Co-operation Administration. The object is to determine the level of future U.S. technical aid to Air-India International.

The Standard Oil Company of Californin has diverted about 1 million tons of oil to Europe since last November. Mr. R. G. Follis, Chairman of the Company, said that his Company intended to continue diversion of supplies for the duration of the present emergency and to co-operate to the fullest extent with the U.S. Government in its efforts to alleviate the oil shortage in Europe.

The U.S. Government has reported that cost of living in that country rose to a new record level in January for the fifth consecutive month. This brings the index to 118.2 per cent. of the 1947-48 average. The rise means higher wages to workers in the car, aircraft and farm equipment industries whose labour contracts have clauses gearing pay to the cost of living index.

The U.N. General Assembly has decided that an international conference on the law of the sea should be held in March next year, to draft instruments dealing with current maritime problems. The suggestion for a conference was made by the Organisation's International Law Commission which has been working on such problems as territorial seas, conservation of fisheries, and continental shelf for several years without success.

The National Union of Plantation Workers, which claims a representation of 300,000 workers of Malayan estates, has announced that it intends to buy a rubber estate to be run on model lines in order to find out the production cost of estates. According to the General Secretary of the Union, employers kept production costs secret in negotiations with the Union. The experiment is being carried out to enable the Union to gain the necessary knowledge.

Three scientists of the Californian Institute of Technology have discovered a new method which might revolutionise prospecting for iron ore. Studying clues left by Nature, the scientists have found that the location of underground ore is indicated by variations in oxygen isotope ratios in surrounding rock. Dr. Robert P. Sharp, Chairman of the Institute's Geological Division, said that the new discovery might prove one of the most significant contributions to ore prospecting in the past 50 years.

According to an amendment of Israel's basic petroleum law of 1952, oil companies and drilling contractors operating in that country would be exempt from payment of sales and excise taxes on such locally produced materials as cement and tyres bought for oil exploration and development. Drilling contractors have been given exemption from customs duties which previously had been given only to companies holding oil licences. The new exemptions will have retrospective effect from 1st

PERSONAL

MR. R. R. Kenderdine, Works Director of the British engineering firm, Crompton Parkinson, Ltd., of Chelmsford, Essex, is expected to visit India shortly.

Mr. W. H. S. Michelmore and Mr. D. F. Macmillan have been elected President and Vice-President, respectively, of the Bengal Chamber of Commerce, Calcutta, for 1957-58. The other elected members are: Messrs. J. D. K. Brown, G. H. J. Clarke, N. D. Harris, R. R. Hogarth, J. Latimer, G. K. Macfarlane, A. T. Montgomery, P. E. G. W. Parish and H. M. L. Williams.

Mr. B. K. Nehru, I.C.S., has been appointed Secretary to the Union Ministry of Finance, Department of Economic Affairs, *vice* Mr. H. M. Patel, I.C.S., who has taken over as Principal Secretary in the Ministry of Finance with effect from 1st February 1957. Mr. S. Ratnam, who was Financial Adviser to the Ministry of Defence, has been appointed Secretary, Expenditure Division in the Ministry of Finance, in place of Mr. P. C. Bhattacharya who has been appointed Chairman of the State Bank of India.

At the request of the Argentine Government, the World Bank is sending a mission to Argentina to study the general economic situation and the Government's investment plans. Mr. G. Lincoln Sandelin of the Department of Operations for the Western Hemisphere will head the mission. Argentina became a member of the Bank in September 1956 and this is the Bank's first mission to visit the country. The mission will start its discussions with Government officials in Buenos Aires, and then visit other important centres to obtain at first hand an idea of the position of important sectors of the economy, especially agriculture, transportation and power. The mission will be in Argentina for about six weeks.

A new trade agreement has been signed between Australia and the United Kingdom on 26th February. The agreement, which replaces the 1932 Ottawa agreement, maintains tariff preference for British goods in Australia, subject to reductions in the guaranteed margins. It also provides for the maintenance of tariff preferences and duty-free entry of Australian goods seeking the British market. An important feature of the agreement is the scope it gives to Australia to negotiate improved export opportunities with other countries. Another advantage of the agreement is that it will enable Australian industry to reduce its cost. This will follow reductions in the excessive margin of preference which has operated against equipment, raw materials and producer goods from foreign countries, without cutting the new minimum margins of preference for British goods.

The 100,000-ton super-tanker on order from the Bethlehem Steel Company shipyard at Massachusetts, U.S.A., is expected to be the world's largest vessel. To show how big the new super-tanker will be, the planners point out that the new vessel, if loaded with gasoline, could fill the tanks of 2,150,000 automobiles. To carry an equal amount of petroleum, a rail-road tank-car train would have to be 28 miles long. In a single voyage, the new tanker will be able to carry enough petroleum to supply an American city with a population of 600,000 for a month. It will be 940 feet long and 132 feet wide and the depth from keel to main deck will be the equivalent of a seven-storey building. The war-time biggest T-2 tanker could carry 140,000 barrels of oil; but the new giant tanker will have a liquid capacity of about 825,000 barrels. The super-tanker will have a cruising radius of 26,000 nautical miles and a speed of 17 knots, which is considerably faster than the average freighter. However, its huge size limits the routes it can ply. For example, fully loaded, the ship cannot go through the Suez Canal, but empty it might. It will not be able to go through the Panama Canal at all, empty or full, because of the breadth of the beam.

TECHNICAL EDUCATION

ADDRESSING the tenth annual meeting of the All-India Council for Technical Education held at New Delhi on 22nd February, Mr. Maulana Azad, Union Minister for Education, made some pertinent remarks regarding technical education in India. The crux of the problem, according to him, lies in finding teachers of the right calibre and students of requisite ability. It is an admitted fact that educational institutions cannot compete with industry in the matter of salaries; nevertheless, it is imperative to create suitable conditions which would induce brilliant young men to take to the educational field. The Minister said that steps should also be taken for increasing the pool of scholarships available to students in order to attract bright students to technical careers. A sufficient number of fellowships needs to be created and awarded to promising candidates who may be apprenticed to professors and senior teachers for stated periods. Emphasising the importance of increasing the supply of technical personnel, Mr. Azad observed: "Unless this is done, none of our plan targets in the economic or industrial sphere could be fulfilled."

Referring to the criticism that instruction in the colleges has a predominantly academic bias, and that the personnel turned out is not immediately useful to industry, Maulana Azad pointed out that practical experience of production techniques and plant operation could only be expected in industry and technical institutions could not be expected to provide it. But the defect could be remedied by introducing "sandwich courses" and providing larger opportunities for practical training. It is necessary that industry should co-operate with educational institutions in this matter. The Minister attributed the shortage of engineers and technologists at the higher levels to the employers' practice of putting graduates to routine work which could as well be done by persons with lower qualifications.

The Council has approved the establishment of five new engineering colleges, 22 polytechnics and 61 junior technical schools as provided for in the second Plan. Of the five engineering colleges, one each will be established in Andhra, Assam, Madhya Pradesh, Orissa and the Punjab. Of the 22 polytechnics, five have been allotted to Bombay, two each to Andhra, Mysore, Madhya Pradesh, Punjab, Rajasthan, U.P. and West Bengal and one each to Assam, Kerala and Jammu and Kashmir. Out of the 61 technical schools, 18 will be established in Kerala, 10 in Bihar, seven in West Bengal, six in Punjab, five in Madhya Pradesh, four each in Rajasthan and Jammu and Kashmir, two each in Bombay and Orissa and one each in Assam, Himachal Pradesh and Tripura.

It may be recalled, in this connection, that the Engineering Personnel Committee, in its report submitted in May last, had recommended that, in order to meet the demand for technical personnel, 18 new engineering colleges and 61 polytechnics should be established, besides increasing the training capacity of existing institutions by 20 per cent. for degree and 25 per cent. for diploma courses. The Committee had estimated that the above expansion would yield about 2,794 additional seats for degree and 3,220 seats for the diploma course. The cost of the scheme had been estimated by the Committee at Rs. 16 crores.

The Central Government and the Planning Commission, having carefully considered the question of expansion of technical education, however, came to the conclusion that the starting of 18 new engineering colleges and 62 polytechnics, as suggested by the Committee, was not a feasible proposition. The most important limiting factor, in their view, is the shortage of adequate teaching personnel. Further, the five new engineering colleges and 21 polytechnics and three higher technological institutes, envisaged under the second Plan, require all the available technical and financial resources of the Government. It was, therefore, thought that the most fruitful and practicable way of expanding technical education was to enlarge the unit size of the existing well established institutions. A special committee, consisting of Dr. J. C. Ghosh, Member of the Planning Commission, and Mr. L. S. Chandrakant, Deputy Educational Adviser, was appointed to hold discussions with the Chairmen of the various Committees connected with technical education, heads of institutions and State Governments regarding the possibilities of expanding the training capacity of existing institutions and to suggest, in the light of the discussions, the number of new institutions which would be necessary. The Committee prepared a report, embodying the principle of larger unit size, in which it made various proposals for expansion of training facilities. These proposals were that the 19 existing engineering colleges and 46 polytechnics should be so enlarged as to yield 2,538 additional seats for degree courses and 4,225 additional seats for diploma courses. For the balance of the requirements, three new engineering colleges and 27 new polytechnics, capable of providing 520 seats for degree and 4,680 seats for diploma courses, were suggested. These proposals have now been accepted by the Council.

The present capacity of all existing technical institutions is of the order of 4,980 seats for degree courses and 8,870 for diploma courses. The proposals now made, together with the provision already included in the second Plan, will offer facilities for training 8,680 degree students and 18,735 diploma students. On this basis, an annual outturn of about 7,500 graduates and 15,000 diploma holders is expected. On the recommendation of the All-India Council, all States have taken, or are taking, steps to set up their own Boards of Technical Education for coordinated development of technical education, holding examinations and awarding diplomas and certificates. The State Boards will provide the much needed local machinery for maintaining proper standards of technical education and co-operative effort between the State Governments, educational authorities, industry, commerce and other relevant agencies.

HIGH-VOLTAGE INSULATORS

The inauguration of the high-voltage insulator factory by the Prime Minister, Mr. Jawaharlal Nehru, at Bangalore on Saturday last constitutes a landmark in the economic history of India for two reasons. First, the factory marks a significant step towards attaining self-sufficiency in high-voltage insulators so essential for the several electrification schemes under the second Five-year Plan. It is the first of its kind to be started in India and is considered to be the biggest in the whole of Asia. It is planned to manufacture as many as 3,000 insulators per day; India has been importing every year large quantities of these insulators at a cost of much precious foreign exchange. Secondly, the factory opens a new chapter in the history of economic relations between India and Japan; it is a project undertaken by the Government of Mysore with the technical collaboration of that reputed Japanese firm, Nippon Gaishi Kaisha Ltd. Surely, the collaboration between the two countries should, as Mr. K. Yoshimoto, President of the Nippon Gaishi Kaisha, aptly remarked, be looked upon not merely as a commercial venture but "as yet another way of bringing the people of Japan and India closer."

In view of the important role played by the high-voltage insulator factory of Bangalore, a few words may be said about the details of the project. The capital outlay of this venture is estimated at Rs. 85 lakhs. To start with, the factory will manufacture insulators at an annual rate of 480-600 tons and the production will be stepped to the full capacity of 2,500 tons in about two years. The factory has a tunnel kiln 350 feet long, claimed to be one of the biggest in the world, second only to the kiln in the General Electric Company. The tunnel is fixed by light diesel oil sprayed into the combustion chamber along with heat compressed air. It is equipped with an efficient temperature recording apparatus and admits effective control of the air and oil, so as to maintain not only a steady temperature but also the required atmospheric conditions around the articles under fire. It has 62 wagons and at the present speed of vitrification in the hottest zone, it will take nearly six days for an article charged at the leading end to emerge at the exit. The speed of delivery is likely to increase as soon as temperature conditions and operations are established.

A notable feature of the above factory is that all the raw materials used in the manufacture of high-voltage insulators, with the exception of ball clay which has to be imported, are available within the country itself. The components like china-clay and feldspar are said to be in abundant supply in India. The technical advisers have tested these raw materials in their laboratories in Japan and the quality of insulators manufactured out of them, it is said, compares satisfactorily with that of the imported ones. Even with regard to ball clay, the recent discovery of good plastic clay layer during the pilot plan operations in the lignite project of Neiveli had raised great hopes of adequate supply of this clay being found in the country itself. The management of the factory has already deputed a team of Japanese experts to visit the place and to examine the plastic clay.

Backed as it is by Japanese technical collaboration, the high-voltage insulator factory at Bangalore will, there is no doubt, be a successful venture. Reassuring is the statement of the Japanese collaborators that they will not spare any efforts to enable the management to shorten the period of preliminary production and standardisation of operations. Also reassuring is their promise that they will train most of the workers engaged in the operations and qualified engineers in the techniques developed by them in Japan. It is, indeed, gratifying to be told that the band of Japanese technicians working at the factory under the leadership of Mr. Kojima, Chief Engineer, has been working with single-minded determination "to see that this agreement of technical collaboration between India and Japan is such that the door may be opened for many more fruitful Indo-Japanese interchanges of technical know-how in future."

U. S. AID TO INDIA

The misgivings about large-scale U.S. economic aid to India, expressed by many sometime ago following some differences in political ideologies, have since been removed, at least partly, and it now looks reasonably certain that the U.S. Government will help India to fill the wide gap in the foreign exchange resources in the second Five-year Plan to some extent, though it is not possible to say to what extent. Addressing a Press Conference at New Delhi last week, Mr. John B. Hollister, Director of the U.S. International Co-operation Administration, declared, for instance, that the U.S. was most sympathetic towards India's second Plan as a well-thought-out one and would help India substantially in the new Plan." He revealed that he had learned a great deal during his brief stay in India and observed: "When I get back with the information I have here in India and with what I have seen, I would be helping to work out plans for appropriations which would include substantial appropriations to India. . . . I have a feeling that development assistance mostly should be by way of loan."

The above remarks of Mr. Hollister are certainly encouraging and indicates the recognition by the U.S. of the imperative need for raising the living standards in India through the implementation of a series of development schemes—economic and social—under the second and subsequent five-year plans. While one eagerly looks forward to increased American aid to India in the coming years, it will be appropriate to take stock of the wide and varied contribution which the U.S. Government has already made to India's economic development under the Indo-American Technical Assistance Programme. The total assistance received by India under this programme during the first Five-year Plan period (commitments upto 30th June 1956) amounted to as much as $326.8 million (or Rs. 153.54 crores), which accounts for about 7.7 per cent. of the aggregate estimated Plan expenditure of $4,250 million (Rs. 2,021 crores). The whole of this amount was represented by development assistance. In addition, there was the technical assistance which consisted of salary, transportation and other expenses of experts provided and the cost of training Indian nationals abroad. The aid on this account was—and still is—running at an average of $5.5 million per annum. Since the programme was initiated on 5th January 1952, the Governments of the U.S. and India have signed agreements covering in all 63 projects. The total number of experts who came to India till December 1956 was 338 and the number of Indian nationals trained in the U.S. was 505.

Out of the $326.8 million development assistance granted to India during the period January 1952-June 1956, the commodity component accounted for $298.3 million. The distribution of this by activity fields is indicated below:

Activity field	Commitments (Million dollars)	Percentage share in the total
Industry and mining	90.2	30.3
Transportation	65.2	21.9
Agriculture and natural resources	61.0	20.5
Health and sanitation	30.1	10.0
Community development	12.9	4.3
Education	2.1	0.7
Labour	0.7	0.3
Others	36.1	12.0
Total	298.3	100.0

The financial assistance granted by the U.S. Government to India thus, welcome as it is, cannot in itself be expected to work miracles, or to accelerate the pace of economic development of India to any marked extent. For the total resources required for implementing the large number of development projects and for developing industries in the private sector are very considerable. What India needs is financial backing for its projects on a much larger scale. There should be a freer and larger flow into India of U.S. private capital. Mr. Hollister did well fully to recognise this need, as witness his remark: "I am firmly convinced that more can be done by private capital than that can be done by Government . . . ultimately India should be a place where substantial amount of American capital can be used." These words of Mr. Hollister, as also his statement that the U.S. Government is anxious to do what it can to encourage investment of private capital in India, are, indeed, very encouraging.

PRESERVED FRUITS INDUSTRY

Quite in consonance with the general rule applicable to India, the *per capita* consumption of fruit and vegetable products is very low. In 1952, it was only 2 ozs., as against 86 lbs. in the U.S., 57 lbs. in Canada, and 20 lbs. in Australia and the U.K. The preserved fruits industry has been enjoying protection for the last 10 years. Despite this, however, one gathers, from the remarks made by Mr. K. R. Damle, Chairman of the Tariff Commission, on the occasion of opening (on 21st February) the public inquiry into the question of continuance of protection to the industry beyond the end of this year, that the industry has not made much progress. The scope of the present enquiry includes, among others, canned or bottled or otherwise packed products such as (*a*) jams, jellies and marmalades, (*b*) fruits like apricots, berries, grapes, plums and prunes and fruit salads composed of not less than 80 per cent. in quantity and in value of the above named fruits, and (*c*) pine-apples and other fruits—candied and crystallised.

The inadequate progress of the industry is reflected in more than one ways. First, the estimates of internal demand arrived at by various agencies differ widely. While, for instance, the Agricultural Marketing Adviser has estimated the current demand for all categories of preserved fuits at 23,000 tons and that for the protected category at 1,650 tons and expects it to increase to 40,000 tons by 1960-61 in the caset of the former and 3,600 tons by 1959-60 in the case of the latter, the Tariff Commission in 1954 estimated the domestic demand for the protected categories of preserved fruits at 4,000 tons. The Commission conceded, however, that it was difficult to assess the future demand, as it depended on a number of factors, including changes in the consumption habits of the people which would make themselves clear slowly in response to changes in prices and stricter enforcement of the Fruit Products Order.

Secondly, there has been no proper assessment of the capacity of the industry, and Mr. Damle rightly characterised this aspect as unfortunate. According to the Ministry of Food and Agriculture, there were 720 units licensed under the Fruit Products Order, as against 602 in 1953. Of these 720, only 121 units were engaged in the manufacture of protected categories of preserved fruits. Out of these, again, 22 were large-scale units, with a production valued at over a lakh of rupees each per year, 55 were small-scale units with a production worth over Rs. 10,000 but less than Rs. 1 lakh each, and the value of production of 44 units of cottage-industry size was placed at less than Rs. 10,000 a year each. The Agricultural Marketing Adviser, however, has estimated the capacity of the mechanised units at 14,000 tons per year for canned fruits and vegetables, of which the capacity for preserved fruits of the protected categories is estimated at 5,600 tons. Be that as it may, the information obtained from the manufacturers is no more satisfactory.

The Agricultural Marketing Adviser has furnished certain production figures to the Commission, which, too, are not complete, according to Mr. Damle. According to the Adviser, the total production of preserved fruits in the country in 1953, 1954 and 1955 was 14,216 tons, 11,541 tons and 14,061 tons, respectively, of which the production of protected categories was 1,245 tons, 1,387 tons, and 1,674 tons, respectively, and stood at 627 tons for the period January-June 1956. It is significant, however, that, despite this low production in relation to the capacity estimated by the Adviser, there were considerable quantities of imports. According to Mr. Damle, between 1953-54 and 1955-56, imports moved from 400 tons in the first year to 600 tons in the second, and to 480 tons in the third, while they stood around 90 tons in the first six months of 1956-57. Besides, exports, too, seem to have figured prominently, for, according to the Ministry of Food and Agriculture, about 1,000 tons of fruit products, including about 200 tons of the protected categories, were exported in 1954.

The principal raw materials and stores required by the industry are fruits, sugar, cans, bottles and chemicals. A noteworthy feature in this regard is that, except chemicals, all the raw materials are available in the country. But the industry does not seem to have derived much advantage from this position and some of the handicaps have been brought to the attention of the members by Mr. Damle. In the first place, in the case of fruits, there has been a constant complaint in regard to grading of fruits. It is noteworthy that certain amount of grading is being carried out in certain States. Nevertheless, there is need for great improvement in the position, and the Chairman has rightly appealed to the manufacturers to furnish their views in this regard. Mr. Damle has also called upon the members to give their views on the recommendations of and programme drawn up by the Panel for the better cultivation of fruits and vegetables at a cost of Rs. 8 crores. Moreover, a suggestion of some importance is the one that new factories should be located at the fruit-growing centres.

In the case of sugar, the main defect appears to be in regard to sulphur content which affects the quality of the preserved fruits. The Chairman has been informed that the question is being examined by the Indian Institute of Sugar Technology, Kanpur. A third raw material is cans about which complaints exist in regard to both quality and prices. The industry finds that cans produced out of indigenous tinplate are not satisfactory. Prices, moreover, have been increasing ever since the last enquiry. This is due, it is stated, to the high cost of tinplate.

The industry is also not satisfied with the quality of the bottles. Some of the complaints are that they are reddish or greenish, that the mouths are uneven, and that they break easily during sterilisation and transportation. The Chairman has stated that the work of the Indian Standards Institution, in this connection, has been delayed, because of lack of co-operation between the manufacturers of glass and producers of preserved fruits. He has rightly pleaded for greater co-operation between them.

It is, however, gratifying to hear that the fruit industry is now better equipped and is producing better quality products than at the time of the last enquiry. There is yet great scope for improvement. Mr. Damle has informed the members that the Central Food and Technological Research Institute, Mysore, includes certain suggestions for improvement in its reports of analysis of preserved fruit products. The Chairman has also reminded them of the view expressed by the Commission at the time of the last enquiry that the sale of sub-standard products along with those of good quality results in a considerable measure of prejudice against all indigenous products. The consumers also feel, according to him, that indigenous products are generally inferior to those of imported ones.

EUROPEAN COMMON MARKET

The implementation of the scheme envisaging establishment of a customs-free European common market has been carried a stage further with the Prime Ministers of the six Messina countries—France, W. Germany, Italy, Belgium, the Netherlands and Luxemburg—arriving at an agreement in Paris on 20th February last. The agreement provides for the linking of the proposed customs-free common market with the French and Belgian territories in Africa. The six Messina countries will invest in all about $581.25 million in these territories for an initial five-year period, the French territories accounting for $512 million, or as much as 80 per cent. Of this investment, West Germany and France will each contribute $200 million, the Netherlands and Belgium $70 million each, Italy $40 million, and Luxemburg $1.25 million. Thus, the net investment by the other five nations in the French colonies will amount to $312 million. Algeria will be regarded as part of the common market (and will also benefit from the investment fund), though, at first, it will enjoy special exemptions from the common market rules, with a view to protecting the nascent industries.

Immediately after the above agreement was reached, the experts of the Messina countries took up the question of drafting the text of the common market treaty. The treaty is expected to be ready for signature during the second half of this month. Before the signing, however, the treaty will have to pass the scrutiny of the Organisation for European Economic Co-operation (O.E.E.C.) and meet the approval of the General Agreement on Tariffs and Trade (G.A.T.T.). Even after the signing, the treaty will have to be ratified by the Parliaments of individual countries.

The common market arrangements as agreed to by the Prime Ministers of the Messina countries, it is felt by Western observers of economic trends, will evoke severe criticism in the G.A.T.T., for they aim at something less than complete free trade. According to the *Financial Times*, the Messina powers appear to want to institute a preferential trading agreement with French overseas territories, other than Algeria, from which the rest of the world will be excluded. Further, the arrangements proposed for exports and imports of agricultural produce among the six members of the group amount, in effect, to an agreement on mutual preferences, rather than free trade.

The Commonwealth countries in the G.A.T.T. are expected to be most vociferous in their criticism of this part of the scheme. Indeed, these countries may, to quote the *Financial Times*, "specially make it a condition, in granting permission for this new system of agricultural preference to come into existence, that the old system of imperial preference for foodstuffs in the British market be maintained intact within the framework of the proposed European free trade area." So far as the United Kingdom is concerned, the insistence, it is said, will be on the principle that there must be no excuse for a new system of preferences; the colonies and the associated territories of the European countries must either accept the full obligations of the free trade system or stay out of it. There is, besides, the difficulty of persuading the underdeveloped countries of the O.E.E.C.—as, for instance, Turkey, Greece and Austria—to stay out of the free trade area, now that Algeria is proposed to be included as a full-fledged member of the common market scheme. In view of all these considerations, there is room for doubt whether the formation of an effective free trade area is a feasible proposition.

WORDS OF CHEER FROM U.S. VISITORS

SCOPE FOR ASSISTANCE FROM SWEDEN LIMITED

From Our Own Correspondent

DELHI LETTER

NEW DELHI, *26th February*

THE gloomy capital city—gloomy on account of the Kashmir issue—has just heard some words of cheer from Mr. Hollister, Director of the International Co-operation Administration of the U.S. Government, and from Mr. J. E. Slater, leader of the World Bank's team of railway consultants. Mr. Hollister told a Press conference that United States assistance to India for the second Five-year Plan would be "substantial." This was enough of an assurance, although he ruled out the possibility of his Government stepping in to fill the *entire* gap in India's foreign exchange requirements. His remark that he knew of no instance where there had been substantial waste of aid provided so far by the United States, also lent support to the view that this country could look forward to greater assistance from year to year.

If, with an eye on the U.S. Congress, Mr. Hollister had to be somewhat restrained in his assurance of Government aid, he spoke with greater confidence on the possible flow of private capital into India. As, in his view, there was political stability in India, he saw no reason why a substantial amount of private capital should not come in. Here he emphasised that U.S. capital was not generally interested in very big and quick profits but was only interested in settling down for a long period. His further observation that private capital was willing to plough back into the country a substantial amount of the profit made here and that, ultimately, India should be a place where substantial U.S. investment should be made, was particularly significant. The fact that the Government of India has a reasonably clean record in its treatment of foreign capital, had probably been noted by Mr. Hollister.

If Mr. Hollister's assurance was encouraging, Mr. Slater's interview broadcast by All-India Radio was no less so. The World Bank consultant's finding was that the railway plan was headed in the right direction and that the Indian railways had the financial ability (in its reserve and other funds) to provide that portion of the funds which would be called for under the Plan itself for new capital improvements. India's loan application was only in respect of import of equipment and additional locomotives (additional to what would be manufactured within the country). That the World Bank's team would be submitting a favourable technical report on some of the railway projects, may be inferred in a way from Mr. Slater's interview.

Although Mr. Slater refused to be drawn into a controversy over the operational efficiency of Indian railways, he indicated that there was scope for increasing it when he spoke approvingly of the railway electrification programme under the second Plan. As India was getting into availability a large amount of cheap hydro-electric power, the gradual elimination of the handling of coal would mean so much added capacity for other things. Mr. Slater did not favour hasty introduction of diesel locomotives for the reason that this would add to the problem of foreign exchange costs so long as India had to import diesel fuel. The significance of Mr. Slater's remark on electric traction probably also lay in that the World Bank might not sanction loans for meeting the railway plan's *entire* foreign exchange requirement of Rs. 425 crores.

Both Mr. Hollister and Mr. Slater were tactful in their remarks about controversial subjects and were obviously anxious not to wound the sensitive Indian's feelings at a time when he is despondent on the score of the Security Council's handling of the Kashmir issue. Their delicate job of understanding India's needs with sympathy has just been passed on to the U.S. Trade Mission which has arrived in the capital. The Mission, headed by Mr. Preston Forbes of the United States Department of Commerce, will be here till 4th March. It is stated that the supply of capital goods on long-term credit would be the main subject of the Mission's discussions with the Government and business community in India. As East Germany and, probably, France are willing to supply capital goods on a long-term credit basis, the U.S. Mission may have to recommend the same (although long-term credit is not in vogue in the States), inasmuch as the object of the Mission is to expand the volume of Indo-American trade. Indications as to the trend of discussions between the Mission and the Government of India may be known in the course of this week.

The arrival of the U.S. Trade Mission has just been preceded by the departure of the Swedish Trade-*cum*-Goodwill Mission and will be followed by the arrival of a trade delegation from West Germany. The Swedish Mission's leader told a Press conference here that it would be difficult for Swedish industrialists to provide long-term credits (for six or seven years) on machinery and other capital goods. He, however, spoke hopefully of the possibilities of collaboration between India and Sweden for the purpose of starting or developing some mechanical industries in India. Collaboration in capital investment was also likely. There was also ample scope, he said, for increasing imports from India of goods like textiles, coffee and tea. Even markets for manganese and chromium ore could be found and increased in Sweden. The leader of the Mission also assured India of his country's readiness to make technical know-how available.

ROUND THE EXCHANGES

(*Concluded from page* 404)

next to consider the issue of bonus shares at the rate of five ordinary shares for every ten held. The official consent has already been obtained. Nilgiris advanced by As. 6 to Rs. 10-2 and Ouchterlonys by As. 5 to Rs. 4-12 *cum-div.* Chembras strengthened from Rs. 3-11-6 to Rs. 4. Kil Kotagiris put on As. 3 to Rs. 6-11 *cum-div.* Blue Mountains were bought at Rs. 5-10 *cum-right*, as against Rs. 5-5-6. The Blue Mountain Estates Ltd. has received Government consent for the issue of bonus shares in the ratio of four ordinary shares for every ten held. Neelamalais were better by an anna at Rs. 6-2. Parksides were fully maintained at Rs. 16-4. Among rubber shares, Malankaras elicited good enquiries induced by reports that the Company had applied for permission to the issue of bonus shares worth Rs. 4.50 lakhs to the shareholders at 1:2, and the shares of this Company picked up As. 8 to Rs. 30-8. Cochin Malabars rose by As. 5-6 to Rs. 9. Pullangodes gained an anna to Rs. 2-12. Kailas and Thirumbadis improved by half an anna each to Rs. 6-1-6 *cum-div.* (interim) and Rs. 2-2 *cum-div.* respectively. Deals in coffee shares were put through at slightly enhanced rates. Consolidateds improved by As. 6 to Rs. 21-2. Amalgamateds and Mysores gathered an anna each to Rs. 11-10 and Rs. 2-15, respectively. Shevroys were firm at Rs. 2-2. Among others, Tropicals increased by As. 2 to Rs. 32-4. Midlands, however, receded by As. 4 to Rs. 18 for want of follow-up support.

The sugar section ruled dull, with limited turnover. Mysores dropped As. 8 to Rs. 41. E.I.Ds. declined by As. 4 to Rs. 28-2. Deccans lost As. 3 to Rs. 10-14. Indias were unchanged at Rs. 16-8, as also Travancores at Rs. 11-2, Jeypores at Rs. 13-14 and Kirlampudis at Rs. 33-12. Andhras, on the other hand, had some buyers and picked up As. 14 to Rs. 17. Cauverys were favoured As. 8 higher at Rs. 35-8.

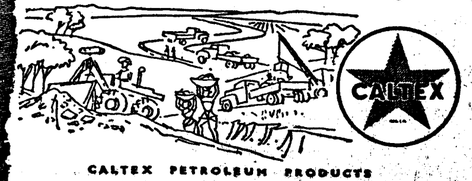
Among miscellaneous industrials, Binnys encountered selling and declined by Rs. 2 to Rs. 198. Rallis dropped Re. 1-8 to Rs. 37-8. India Cements receded by As. 11 to Rs. 28-8. Mysore Chemicals, Fertilisers shed As. 5 to Rs. 8-2. Bruntons lost As. 4 to Rs. 5-11.

There was scattered buying in some selected electric shares, the values of which recorded an improvement. South Arcots advanced by Re. 1-8 to Rs. 97-8. Ellores put on As. 6 to Rs. 12. Nellapatams and West Coasts gathered As. 4 each to Rs. 11 and Rs. 13-4 respectively. Berhampurs gained As. 3 to Rs. 7-12.

oil comes to Visakhapatnam

Dredging operations now allow Visakhapatnam harbour's new oil berths to receive large ocean-going tankers. The first tanker carrying crude oil for the new Caltex Refinery arrived in February 1957, and pumps carried the oil through a mile-long pipeline to the Refinery's storage tanks. When processing begins, the Caltex Oil Refinery, a monument to free enterprise, will supply, by land and sea, the petroleum products so essential to India's progress.

OIL is the Lifestream of Progress



CALTEX PETROLEUM PRODUCTS

BUSINESS MEN'S LOBBY IN PARLIAMENT

By A Correspondent

REPRESENTATION in the legislatures of India is based simply and completely on election, on the basis of adult franchise, except in the case of the Upper Chambers, and, where the Constitution specifically provides for minority representation, by nomination by the President of the Union. So, a member in the Lok Sabha or any of the Legislative Assemblies of the States represents the people who voted him to the Legislature and not any particular interest. This gives him a wide range of representation, as it restricts him from being a spokesman of any special interest. So, a millowner or union leader in the House, whatever be his personal sympathies, under the law represents his constituency and not any particular interest or group to which he may belong. The millowner member, who speaks on textiles in the House, is supposed to represent his point of view as a member of the House but not as a spokesman of the mill industry. The same freedom and restriction apply to a union leader. He speaks on labour matters as a member of the House, not as a union official.

These definitions of the constitutional status of a member in Parliament are not always before the House and, not infrequently, spokesmen of special interests put forward their views and quite as often they are referred to or replied to in debate as representing the particular interest to which he belongs, although, strictly before law or parliamentary rights, the member cannot be recognised as a spokesman of that interest. In practice, the latitude allowed to members in such matters is however a useful thing and by convention it is established.

To take the Lok Sabha, for instance, the 500 members are drawn from all walks of life and quite a few are members with industrial or business connections and probably a greater member with trade union background. On economic issues, these groups naturally range themselves on the opposite sides, although quite a number of them may belong to the same party. Divisions in the House are not only according to parties but also according to economic interests. The members, who, outside Parliament, belong to the business community, bring to bear on economic discussions in the House an attitude more in keeping with the member's business than his constituency background. A corresponding attitude is taken by labour leaders.

In State Legislatures, where the State's or the whole country's affairs are discussed, debated and evolved into policy, the conflict that is part of industrial life is allowed to enter. The workers' representatives have a great numerical advantage in almost all Legislatures and it is particularly true of the Union Parliament. But, outside the group of business men and trade union leaders and their supporters, there is a large block of "neutral" members, who speak on each issue according to their light and vote according to the whip of the party. Whichever side obtains the sympathy of the "neutral" block usually wins the day.

Whatever the economic importance and influence of the business community, the latter cannot but be a microscopic minority within a House elected on the basis of adult franchise. On the other hand, labour representatives form a substantial block and, with sufficient unity of purpose as to be a big influence within the Legislature. More used to the public platform than business men, they are a tremendous force to reckon with, as has been amply proved in the present Parliament. If policies are initiated or influenced by the views held by powerful segments within the House, as they should be, is it any wonder why both the business men and labour leaders should equally exert, in order to influence the large number of "neutral" members?

Not even the strongest advocates of adult franchise suggest that members elected by this system to the Legislature are sufficiently well-informed to arrive at the right decisions. An element of persuasion is inherent in any discussion or debate. Some of it is carried on in open debate but a considerable amount of it is also done in personal or group discussions among the members themselves. Whenever a group of members of like views take form and hold together in debate and persuasion, it may be said a lobby has been formed, whether the group is interested in prohibition, prevention of cow-killing or subsidy for handloom.

The idea of lobby did not originate in India; it is a development witnessed wherever Parlia-

AMERICAN BANKING ABROAD

CORRESPONDENTS GENERALLY PREFERRED TO DIRECT REPRESENTATION

THE U.S. has one of the most highly developed and efficient banking organisations in the world. The foreign operations of its banking organisations have grown along with the industrial advancement at home and the increasing participation of the country in international trade and commerce. With its emergence as a world power and a strong financial centre, the measure of overseas responsibilities of the U.S. banking system has increased enormously. The provisions of American banking legislation as they affect foreign business have been adapted from time to time to cope with these growing burdens. The illuminating article entitled "United States Banking Organisation Abroad" published in the December 1956 issue of the *Federal Reserve Bulletin* provides a fund of knowledge on this little known aspect of American banking in India.

The U.S. banks conduct business abroad in three ways, correspondents, branches and subsidiary institutions. A bank's choice of the means depends principally upon the relative advantages in terms of its own organisation and type of business as well as conditions in the countries in which it intends to operate. It is significant that most of the U.S. banks that conduct foreign business rely on correspondent banks to conduct their overseas transactions. This is unlike the British banks which invariably open branches of their own in foreign countries. The characteristic feature of the correspondents system is that a U.S. bank has an arrangement with a foreign bank, either directly or through another domestic bank, under which the two banks act as agents for each other. This arrangement is also often supplemented by establishing representatives' offices in selected foreign cities. A special advantage of these offices is that they provide a means of establishing better relations with foreign markets and closer ties with banks located in these markets. The wide use of this system reflects two significant points: (1) the tradition and nature of the unit banking system, and (2) most of the U.S. banks do not have sufficient foreign business to justify direct establishments of their own abroad.

Large Institutions

A few large institutions, which command no less than two-thirds of the foreign business of the U.S., have, however, developed their own direct foreign branch organisations, or, as in some cases, foreign banking corporations to supplement the foreign branch operations. As compared with the correspondent system, a direct organisation has certain advantages, such as the prestige attached to the name of the parent bank, direct relations with prospective foreign customers and greater understanding of the conditions abroad. As against this, the drawback is that the U.S. bank loses some foreign correspondent business.

As between a branch and a banking corporation, the latter has some disadvantages, such as smaller loan limits. Nevertheless, it has the advantage of being more flexible than a branch in meeting particular or changing conditions in foreign markets. To cite an example, it can acquire controlling or minority interests in a foreign bank, thus holding shares jointly with local investors. It can also undertake certain investment type activities abroad that are not permitted to a U.S. bank These foreign corporations, which are of two types, namely, banking and financing, foster the use of American and foreign capital for financial trade and investment overseas.

The story of the growth of foreign banking business in the U.S. makes interesting reading. Before the enactment of the Federal Reserve Act, national banks did not have the power to establish branches either at home or abroad. The relatively small amount of foreign business was conducted by a few "private" (unincorporated) banks and one or two State banks. The first overseas branch of a U.S. banking institution is believed to have been opened in London in 1887 by Jarvis-Conclklin Mortgage Trust Company, New York. Ten years later another institution opened a branch in London, followed by opening of further branches in 1901 in London and Asia by the International Banking Corporation, subsequently merged with the present First National City Bank of New York. Some other branches followed in subsequent years; and, by 1914, four U.S. banks incorporated and doing regular banking business in New York and two foreign banking corporations operating primarily abroad had a total of 26 branches in foreign countries.

Shift in the Pattern of Trade

This expansion in branches after 1900 took place primarily to meet the needs arising from a shift in the pattern of trade between the U.S. and Europe. The partial shift from exports of food and raw materials to manufactured products gave rise to complex and diverse problems of marketing and financing, and, consequently, to the need for improved foreign banking facilities. The National Monetary Commission, in its report submitted in 1911, specifically pointed to the absence of U.S. banking institutions in foreign countries as one of the weak points in the country's financial structure. Till the First World War, however, the role played by the U.S. banks in foreign financing was small, first, because the foreign trade was financed in sterling, and, secondly, because the U.S. banks were hard pressed to service domestic trade and investments.

It may be said that, with the passing of the Federal Reserve Act in 1913, a new chapter was started in the history of foreign financing. The Act provided for authorising national banks to accept drafts and to establish branches abroad when approved by the Federal Reserve Board. This, in addition to other factors such as the establishment of the Federal Reserve System, expansion in foreign trade and the emergence of the U.S. as a creditor nation, facilitated a rapid expansion of foreign branches. Though, in the first instance, Section 25 of the Act authorised the establishment of branches abroad by national banks having capital and surplus of not less than $1 million, with the approval of the Federal Reserve Board, subsequently, that is, in 1916, the section was amended so as to enable smaller banks also to take advantage of the provisions. In effect, national banks with certain minimum of capital and surplus were allowed to invest 10 per cent. of their capital and surplus in the stock of certain specified types of corporations. This was, however, made subject to the approval of the Board. One of the conditions to be satisfied by the corporation was that it should enter into an agreement with the Board to conduct its business in the manner prescribed by the Board. These corporations were known as "Agreement Corporations." The National City Bank of New York and the First National Bank of Boston were the first to have their own foreign banking corporations under this provision.

Maintenance of Exports

Section 25 was further amended in September 1919 as part of the measure to facilitate the maintenance of a high level of exports to Europe and the long-term borrowing by Europeans. Under this amendment, the Federal Reserve Board was authorised to invest up to 5 per cent. of its capital and surplus in the stocks of corporations engaged in "international and foreign financial operations." This was soon followed by the Edge Act of December 1919, which allowed the Board to charter financial corporations for the purpose of engaging in international or foreign banking. Corporations under this Act, otherwise called "Edge Corporations," were required to have a minimum capital of $2 million with the controlling interest held by U.S. citizens, and were subject to regulation by the Board. Further, in this Act, appropriate safeguards were provided to prevent the formation of monopolies. It is also noteworthy that, subsequently, the "agreement" and "Edge" corporations were permitted certain flexibility of operations in order to help them meet foreign competition.

It will be seen from this account that the growth and development of U.S. foreign banking were closely regulated and supervised by the Federal Reserve System which even went to the extent of owning a part of the share capital of the national banks wishing to operate abroad. This served a twofold purpose, (a) it imparted confidence to the foreign customers of the American banks and thereby helped them to get business, and (b) it enabled the Federal Reserve System to exercise a close watch over the management of the banks concerned, so that they might not injure the reputation of American credit through the misbehaviour of banks going abroad. As compared with these controls, the controls now exercised by the Reserve Bank of India over Indian banks operating abroad appear to be quite liberal and are not without precedents. Much, however, depends on the way the controls are exercised.

To revert to the story of American foreign banking. The growth of the number of foreign offices and the number of banks and banking corporations between 1913 and 1956 (30th November) is indicated by the following table:

Year-end	*No. of banks and banking corporations*	*No. of foreign offices*
1913	6	26
1920	12	181
1926	12	107
1933	9	132
1937	11	108
1945	10	78
1955	11	117
1956*	11	122

* As on 30th November.

Foreign Subsidiaries

The period during the First World War and after was also marked by the passage of legislation relating to foreign subsidiaries of U.S. banks, and the growth of foreign trade and investment. Between 1919 and 1929, as many as 18 corporations were organised, of which 15 were established under State charters and 3 were chartered by the Board. A significant feature of these corporations was that most of them represented the combined interests of various U.S. banks, while some of them were jointly owned with foreign participants and a few were wholly owned subsidiaries of leading banks in New York and Boston. Their branches were located throughout Latin America, in the Far East, and in important European cities. Sixteen of them, however, were liquidated by the early thirties or absorbed by other corporations or banks. Since 1930, only two "agreement" and three "Edge" corporations have been established.

The experience of the foreign banking corporations in the early years was none too encouraging. Nevertheless, it was reflected in additional foreign facilities, some improvement in banking practices, and recognition of the problems and hazards involved in foreign financing. One of the more important reasons attributed to the failure of these corporations was the decline in foreign trade during the economic crisis of 1920-21 and the instability of prices that persisted in later years. Undue reliance on untested techniques, paucity of trained personnel and the expansion of certain banks of their own foreign departments were the other causes. The depression of the thirties and the trade and exchange controls that followed affected the activities of the corporations. World War II further reduced the number of establishments abroad.

In recent years, again, there has been evident persistent growth in U.S. foreign trade and investment. This, together with the gradual liberalisation and stabilisation of foreign currencies, has resulted in renewed interest in foreign banking. New Edge corporations were formed in 1949 and 1955, and older ones have shown a tendency to expand.

BANK OF INDIA EARNS RECORD PROFIT

PROFIT MARGIN, HOWEVER, DROPS—CREDIT RATIO AT VERY HIGH LEVEL

IT is a happy coincidence that the Golden Jubilee year of the Bank of India Ltd., that is, the one ended 31st December 1956, has proved to be the most prosperous one in the history of Indian banking. This has enabled the Bank to mark the occasion with an all-round expansion in business and a record profit. The main features of the Bank's working during the year under review are : (1) a rise of Rs. 2 crores in deposits to Rs. 69.55 crores, the highest in its history; (2) an increase of over Rs. 11 crores in advances to Rs. 57.21 crores—also a record; (3) a shrinkage of Rs. 3.67 crores in its liquid assets; (4) a sharp expansion of Rs. 5.85 crores in its borrowings to augment its resources, and (5) a bumper profit of Rs. 92.03 lakhs, representing an increase of Rs. 7.12 lakhs over the year.

With the increase of Rs. 7.12 lakhs during 1956, the upward trend in profit has been maintained for the third year in succession, the aggregate rise during the three years being Rs. 16 lakhs. The impressive rise in earnings has not, however, brought any higher return to the shareholders; for the dividend is being maintained at 16 per cent. per annum. This is presumably because it was only last year that the distribution was stepped up from 14 per cent., a rate which had been consistently paid for nine years from 1946 onwards on a capital which had been increased twice during the period. Moreover, the shareholders had received during the year a jubilee gift in the shape of scrip bonus at the rate of one share for every five shares. The bonus shares, which were issued as new 'A' shares of Rs. 50 fully paid-up, however, rank for dividend only from the current year onwards.

The Directors have also carried a sum of Rs. 8 lakhs to the reserve fund, which had not received anything in the previous nine years. The provision for taxation too has been stepped up from Rs. 25 lakhs to Rs. 28 lakhs and that for bonus to staff from Rs. 12.75 lakhs to Rs. 13.75 lakhs.

An idea of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	272.08	218.41	189.08	175.76

Investments	25.9*	27.4*	29.6*	35.0
Cash	11.5	14.3	15.8	15.4

* After taking into account investments earmarked against borrowings from other banks.

The increase of Rs. 70.53 lakhs in gross income during the year under review is much sharper than in the previous years; in fact, it is much more than the cumulative rise in 1954 and 1955. The bulk of the rise is accounted for by interest and discount earned which have gone up by no less than Rs. 53.67 lakhs, as against Rs. 42.65 lakhs in the previous two years. Commission and exchange earned also have risen by Rs. 17.11 lakhs; this source of income, it may be noted here, has more than doubled in three years.

On the expenditure side, there has been a rise of Rs. 37.53 lakhs in interest paid, evidently due to the increase in fixed and savings bank deposits, the substantial increase in borrowings from the Reserve Bank against usance bills and the higher interest rates which prevailed throughout the year. Of the increase of Rs. 25.27 lakhs in expenses, salaries, allowances and provident fund alone account for Rs. 18.51 lakhs. Thus, interest paid and expenses on staff have together offset, to a large extent, the improvement in the earnings noted above. This is not a peculiar feature of the Bank of India alone; it is a common feature of all banks consequent upon higher costs. The net rise in profit is not commensurate with the expansion in business. In fact, if one compares the profit margin of banks for 1956, with that for any of the previous years, it will be found to have shrunk in most cases. Thus, in the case of the Bank of India, the ratio of profit to gross income has declined to 26.2 per cent. in 1956 from 30.3 per cent. in 1955 and 35.1 per cent. in 1953.

The capital of the Bank was raised during the year by Rs. 50 lakhs by the creation of 100,000 ordinary 'A' shares of Rs. 50 each fully paid-up and issue of bonus shares to mark the Golden Jubilee of the Bank. This was done by capitalising Rs. 50 lakhs from the reserves. Such drawing from the reserves and the subsequent replacing of Rs. 8 lakhs from the year's profit is reflected in the decline of Rs. 42 lakhs in the reserve fund. A notable feature of the Bank's balance-sheet is that the deposits touched a record level of Rs. 69.55 crores, exceeding the previous high of Rs. 68.63 crores reached in 1947. It must, however, be noted that the rise of Rs. 2 crores over 1955 does not compare well with that in each of the previous two years. Of this rise, fixed deposits account for an increase of over Rs. 40 lakhs, savings bank deposits for Rs. 1.10 crores and current accounts, etc., for about Rs. 50 lakhs. This slower pace of expansion in the principal resources of the Bank has been made good by the substantially large borrowings which have gone up from Rs. 2 crores to Rs. 7.85 crores, though it had cost the Bank a good lot by way of interest payment. Of these borrowings, Rs. 50 lakhs are secured by part of the Bank's investments and the balance by bills discounted.

On the assets side, loans, cash credits and overdrafts have gone up from Rs. 37.49 crores to Rs. 42.10 crores and bills purchased and discounted from Rs. 8.60 crores to Rs. 15.11 crores. Such a large increase in advances in the face of a rise of only Rs. 2 crores in deposits has pushed up the advances ratio to an abnormally high level of 82.3 per cent., as against the average of 71.65 per cent. for all Scheduled banks. The credit squeeze has also resulted in a reduction in the Bank's investments and cash balances, thereby bringing down the liquidity ratio, which is, however, well above the all-India average of about 32 per cent.

The Government of Brazil has created a fund to supply financial and technical assistance to cocoa planters in Brazil. The Bahia Cocoa Institute will be charged with the task of dispensing funds to farmers and supervising the improvement of cultivation processes. Finance will be provided by the Bank of Brazil by allotting to the fund 10 per cent. of the proceeds from premiums paid by importers for foreign exchange.

(Concluded from next column)

by part of the Bank's investments in Gilt-edged securities.

On the assets side, advances are higher by Rs. 2.11 crores, but this is not shared by all classes of advances. Thus, while loans, cash credits and advances have risen from Rs. 5.80 crores to Rs. 8.01 crores, bills purchased and discounted have declined from Rs. 1.21 crores to Rs. 1.11 crores. Unlike in the case of other banks, the Bank's investments have been further strengthened—albeit slightly—by Rs. 19 lakhs. The entire investments are in Central and State Government bonds and other trustee securities, the market value of the same being Rs.3.94 crores. The difference between the market value and the book value of the investments, that is Rs. 9 lakhs, is more than adequately covered by the provision for depreciation on investments amounting to Rs. 9.33 lakhs. Cash balances have, however, shrunk by no less than Rs. 52 lakhs, which has brought down the cash ratio from 13.5 per cent. to 7.6 per cent., a level which is very much below the all-India average of 10.7 per cent. The total liquidity ratio, however, is slightly above the general average of 32.2 per cent.

BANK OF MYSORE'S GOOD PERFORMANCE

PROFIT HIGHEST SINCE 1951

IN consonance with the general trend of bank results, the performance of the Bank of Mysore Ltd. (General Manager: Mr. B. V. Narayana Reddy, Bangalore) during the year ended 31st December 1956 is also encouraging. The profit, which had shown a slightly declining trend in the previous two years, has advanced by Rs. 3.39 lakhs to Rs. 20.60 lakhs in the year under review, thus bringing it to the highest level since 1951, when the Bank had earned a record profit of Rs. 21.85 lakhs. The higher profit has been due mainly to the expansion in business, as indicated by the sharp rise of Rs. 2.11 crores in advances over the year.

Despite the increase in profit, the provision for taxation has been reduced from Rs. 6 lakhs to Rs. 5.50 lakhs and no allocation has been made to the reserves which had received Rs. 1 lakh in the previous year. The provision for bonus to staff has, on the other hand, been slightly raised from Rs. 2.81 lakhs to Rs. 3 lakhs, but the distribution to shareholders has only been maintained at 16 per cent. per annum, a rate which the Bank has paid on the present capital consistently for the previous 9½ years. There is, however, a slight change in the method of distribution for the year under review. In the earlier years the Bank had been paying a dividend of 12 per cent. and a bonus of 4 per cent., but this year, the dividend part has been raised to 14 per cent. with a corresponding cut in the bonus. The distribution absorbs Rs. 8 lakhs, leaving a surplus of Rs. 5.92 lakhs to be carried forward, as against Rs. 1.82 lakhs brought in.

The following comparative table shows at a glance the Bank's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	57.60	50.90	49.55	47.35
Commission and exchange ..	10.22	9.64	7.04	5.69
Gross income	68.74	60.78	56.80	53.24
Interest paid	22.06	19.18	17.91	15.47
Expenses	24.70	23.53	20.58	19.10
Depreciation	1.32	0.81	0.67	0.76
Profit	20.60	17.21	17.64	17.91
Provision for taxation ..	5.50	6.00	7.00	6.00
To reserves	..	1.00	..	..
" bonus to staff	3.00	2.81	2.60	2.50
Dividend	8.00 (D. 14% +B. 2%)	8.00 (D. 12% +B. 4%)	8.00 (D. 12% +B. 4%)	8.00 (D.12% +B. 4%)
Carry forward	5.92	1.82	2.42	2.38
	As on 31st December			
	1956	1955	1954	1953
Capital	50.00	50.00	50.00	50.00
Reserve fund	84.00	84.00	84.00	84.00
Deposits	11,10.17	10,55.86	9,08.86	8,88.90
Borrowings from banks	90.00	..	..	..
Advances and bills purchased and discounted	9,12.89	7,01.33	6,91.19	6,87.78
Investments	4,02.75	3,83.83	2,99.88	2,92.61
Cash (including money at call).	90.13	1,42.24	1,01.53	87.14
Acceptances, endorsements, etc.	55.80	14.08	25.57	5.70
Bills for collection	91.59	66.42	61.48	59.07
Balance-sheet total	16,03.17	13,45.75	13,05.03	11,58.25
Ratio to deposits of—	%	%	%	%
Advances	76.6	66.4	69.2	77.4
Investments	25.5*	36.7	30.0	32.9
Cash	7.6	13.5	19.2	9.8

* After taking into account the investments earmarked against borrowings from banks.

The upward trend in total income has been maintained, with an increase of Rs. 8.01 lakhs in the year under review, thus raising it to the highest level in the history of the Bank. To this rise, interest and discount earned have contributed Rs. 6.70 lakhs and commission and exchange Rs. 0.58 lakh. As against these, the rise in outgo by way of interest paid is Rs. 2.88 lakhs and that in administrative expenses Rs. 1.23 lakhs, the latter being accounted for by salaries and allowances and provident and gratuity fund contributions.

As in the case of other banks, the Mysore Bank's efforts to enlarge its deposit resources have not met with good success, as witness the increase of only Rs. 64 lakhs in total deposits as at the end of the year. Even this increase is accounted for only by thrift and savings bank deposits, as well as current and contingency accounts, which have gone up by Rs. 32 lakhs to Rs. 2.55 crores and by Rs. 36 lakhs to Rs. 4.68 crores, respectively. Fixed deposits, on the other hand, are a shade lower at Rs. 3.96 crores, as against Rs. 4.00 crores a year ago. The deposits are supplemented by borrowings from other banks, which stand as at the end of the year at Rs. 99 lakhs. The entire borrowings are secured

(Continued in previous column)

REMARKABLE EXPANSION IN WORLD COTTON SPINNING CAPACITY

RUSSIA ACCOUNTS FOR A BIG SLICE

THERE was a remarkable expansion in world cotton spinning capacity during the cotton year ended July 1956. The net addition to world cotton spindleage in that year consisted of as many as 1.50 million spindles, which compares very favourably with 317,000 in the preceding year (1954-55) and 199,000 in the year previous to it. The aggregate number of spindles as at 31st July 1956 was 131,340,000, as against 129,838,000 and 129,521,000 on the corresponding dates in 1955 and 1954, respectively, according to the latest issue of *International Cotton Statistics*, published by the International Federation of Cotton and Allied Textile Industries, Manchester. Besides the large number of spindles actually added during 1955-56, there were as many as 2,825,000 spindles in course of erection, the figure for 1954-55 being 1,400,000 and for 1953-54 1,574,000. Of this, 2,199,000 spindles represented an increase and the balance of 626,000 was replacement to existing machinery.

A striking feature of development in the cotton year under review was that, while the expansion of the spinning capacity of the Asian, Oceanic, South American and African Continents gathered further considerable momentum, the declining trend in Europe and North America continued unabated. The cotton mills in Asia (and Oceania) added more than 2.71 million spindles—all ring spindles—to their existing plant. In addition, a further 2,067,000 spindles were in course of erection. The South American Continent accounted for a rise of 225,000 spindles, the total at the end of July 1956 being 5,436,000. The number of spindles in Africa increased by 70,000 to 1,040,000. The continued expansion in the cotton spindleage in these regions indicates the renewed efforts on their part to develop the cotton textile industry with the twin objects of providing more employment opportunities to people and of reducing dependence on foreign textiles. In contrast, the spindleage of Europe suffered a fall of 1.5 million, from 70,044,000 to 68,895,000 spindles. The reduction was due, to a large extent, to the scrapping of mule spindles, although the increase in ring spindles (approximately 1.0 million) had not yet offset the loss in mule spindles. The number of spindles installed in North America also declined by 357,000 to 24,303,000.

Changes in Spindleage

An idea of the changes in spindleage occurring in the world's leading cotton textile producing countries during the last three years can be had from the statement given below:

(In millions)

	For the year ended		
	1956	1955	1954
U.K.	23.97	25.18	26.56
U.S.A.	21.90	22.25	22.71
India	12.07	11.89	11.72
U.S.S.R.	12.25	10.15	10.15
Japan	8.50	7.96	7.85
France	5.55	7.62	7.68
W. Germany	5.95	6.01	6.08
Italy	5.73	5.70	5.76
China	6.29	5.40	4.15
Brazil	3.39	3.36	3.38
Czechoslovakia	2.43	2.45	2.42
Spain	2.36	2.34	2.34
Belgium	1.66	1.75	1.82
Pakistan	1.68	1.36	0.71
Other countries	17.76	16.42	16.26
Total	131.34	129.84	129.52

The above statement shows a phenomenal expansion in spinning capacity in the U.S.S.R. during 1955-56, the number of spindles installed advancing by 2.10 million to 12.25 million. There was also a rise of 890,000 spindles in China and 540,000 spindles in Japan. The number of spindles in India, too, increased but by only 180,000. The negligible improvement thus must be attributed to the restrictive policy of the Government of India based on the consideration of giving encouragement to the less efficient decentralised sector. Be that as it may, France and the U.K. accounted for a marked shrinkage in spindleage, the actual decline in the number of spindles during 1955-56 being 2.07 million and 1.21 million, respectively. The setback indicates that the spindles which had been worn out were not replaced but scrapped, following slackness in the export demand for cloth and the scarcity of labour. Likewise and almost for the same reasons, the U.S., West Germany and Belgium suffered a recession in cotton spindleage.

The aggregate number of spindles installed in the world's textile producing countries during the year 1955-56 was, as already noted, higher by 1.5 million as compared with the previous year. The increase would have been more appreciable but for the scrapping of 2,227,000 mule spindles in several countries of Europe. The scrapping was more than counterbalanced by a substantial rise of 3,729,000 in ring spindles. Consequently, the percentage share of ring spindles in the world total improved markedly from 86.7 in 1954-55 to 88.6 in 1955-56, whereas that of mule spindles dropped from 13.3 to 11.4. The change in the character of spindles thus brings out the fact that, as the outmoded mule spindles are being scrapped, the world today has more modern spindles than before. The number of spindles spinning Egyptian type cottons was markedly lower at 12.78 million, as against 13.93 million a year before, but those spinning rayon staple fibre—100 per cent. and blended—were higher by 36,000 at 4,176,000.

Distribution

The following table gives the distribution of the different kinds of spindles in various countries as at 31st July 1956:

(In thousands)

	Ring spindles	Mule spindles	Spindles spinning Egyptian cotton	Spindles spinning rayon staple
India	11,884	184	1,515	25
U.K.	10,746	13,227	7,421	1,204
U.S.A.	21,397	..	..	241
U.S.S.R.	11,750	500	N.A.	N.A.
Japan	8,501	..	821	196
France	5,314	233	995	326
W. Germany	5,950	4	N.A.	N.A.
Italy	5,711	15	1,200	150
China	6,290	..	500	..
Brazil	3,391	..	..	..
Czechoslovakia	2,180	300	1,200	N.A.
Spain	2,259	105	450	N.A.
Belgium	1,656	5	N.A.	N.A.
Pakistan	1,679	..	36	..
Other countries	17,118	442	2,168	246
Total	116,325	15,015	16,306	2,388

N.A.—Not available.

It will be seen from the foregoing figures that ring spindles constitute the major portion of the spindleage of practically all countries, barring the U.K. Even in the latter country, the recent tendency has been to replace the mule spindles with ring spindles. Thus, the number of mule spindles in the U.K. has declined, the number installed as at the end of July 1956 being less than 13.23 million, as against 14.29 million a year before and 15.76 million two years before.

Following the expansion in world cotton spinning capacity during the cotton year 1955-56, the production of cotton goods recorded a handsome improvement. An indication of this is provided by the increase in the quantity of cotton consumed, from 35.71 million bales (of 478 lbs. each) in 1954-55 to 38.94 million bales, or a rise of 3.23 million bales. Expressed in percentage, the rise comes to over 9 per cent., as against the increase of 1.16 per cent. in the number of spindles installed. Cotton consumption per 1,000 spindles, therefore, improved to 296 bales, as against 275 bales. In other words, this means that there was a more intensive utilisation of spinning capacity in several countries through increased shift-working. The bulk of the rise in the use of cotton came from the continued transfer of allegiance among spinners to what were at one time called "outside growths." The total consumption of these growths in 1955-56 was higher by 2.19 million bales at 19.34 million bales. It will be interesting to note here that the consumption of "outside growths" was as low as 8-9 million bales just before the Second World War. Indian and Pakistan varieties accounted for an increase from 5.01 million bales to 6.79 million bales and Egyptian from 1.19 million bales to 1.25 million bales. The consumption of American styles, on the other hand, was less at 11.55 million bales, as against 12.36 million bales.

The statistics relating to the number of spindle-hours worked during the 12 months August 1955 to July 1956 show that the spindles in Hong Kong were working at an average of 8,523 hours. The average number of spindle hours worked was 5,602 in India, 6,047 in Pakistan, 5,793 in the U.S. and 4,026 in Japan.

COTTON MILLS IN U.P.

MR. POWELL ON THEIR PLIGHT

PARTICULAR reference to the plight of the cotton textile industry in the State of Uttar Pradesh was made by Mr. R. L. Powell, the retiring President of the Upper India Chamber of Commerce, Kanpur, in the course of his address at the recent annual meeting of the Chamber held at Kanpur on 22nd February 1957, to which a reference was made in our Market Gossip columns last week. In his inimitable style, Mr. Powell described its plight thus: "The cotton textile industry in this State (Uttar Pradesh) is the Cinderella of India, with a number of unattractive stepsisters and not a fairy godmother in sight. For the role of stepmother, there are too many candidates for a choice to be possible. There is no point in self-pity, and Cinderella will have to be her own fairy godmother—even if she has to leave home—but let us at least face facts." He dilated at some length on some of the handicaps facing the cotton mills in U.P. *vis-a-vis* their counterparts elsewhere. They include the following:

(1) The mills in U.P. manufacture mainly coarse and medium varieties of cloth which are, in relation to other varities, overtaxed. Thus, when the consumer buys a yard of cloth that costs about As. 8 to make, he pays over 35 per cent. in excise duty, handloom cess and sales tax, not to speak of his indirect contribution to electricity duty and other imposts. The consumer (of superfine cloth) in Bombay pays, perhaps, half that proportion of tax.

(2) The geographical position of the mills in U.P. handicaps them in competing for exports, which are free of excise duty, with mills in Bombay and Ahmedabad and, at the same time, ensures that, mainly because of higher transport charges, most of their raw materials cost more.

(3) Comparatively high stocks of raw cotton and mill stores have to be carried, because of distance from supplies, and those stocks absorb capital and storage accommodation, all of which mean higher manufacturing costs.

(4) The electricity that U.P. mills consume is among the most expensive of the major industrial centres by virtue of a 25 per cent. duty levied by the State Government.

In addition to the aforesaid handicaps, the cotton mills in U.P., it is said, have fallen behind in the race to modernise, thanks to labour's opposition. Alluding to this, Mr. Powell stated that a shortsighted agitation, which labelled all modern improvements in technique as "rationalisation," was worked up and was used to persuade labour that greater efficiency meant less employment. He observed: "The agitation has so far succeeded in prostrating for eight years or so much of the improvement in the industry's position that managements would otherwise have brought about—and brought about without transgressing the Indian Government's general ban on the installation of new looms. That agitation culminated in the disastrous Kanpur strike of 1955, which did untold harm to the industry here, including, of course, the interests of the workers. Any improvement that can be called "rationalisation" is still in cold storage for an indefinite period. Market demand began to seek satisfaction in other producing centres and outlets for the products of the U.P. mills diminished."

Strain on Finance

In view of all these factors, the financial position of mills in U.P. had, Mr. Powell pointed out, deteriorated; whereas some years ago, they had both the will and the money to modernise, much of the money they now had, or could borrow from the banks, was required for financing unsold stocks. The stocks at the end of 1956 were about 60 per cent. above the figure on 31st August 1956, although the main lines of production were being offered for sale at prices as low as or lower than those ruling in December 1956. The strain on finance, with the new season's cotton stocks to be bought, became intense and remained so. Indeed, the U.P. textile industry has turned out, according to Mr. Powell, to be a high-cost, overtaxed industry.

The picture of U.P. cotton mills as pointed above is certainly depressing. Here is an industry which can be made competitive, in order to serve a great and growing market for textiles—domestic and overseas. But this industry must have, as Mr. Powell emphasised, more capital to invest, greater freedom in the ordering of its affairs, a greater measure of equity in the taxation which it is called upon to bear, and a better understanding with the leaders of the labour it employs. It is to be hoped that the Governments—Central and State—will ponder this statement and revise their policies accordingly. Otherwise, the cotton mill industry is bound to "decline in productive-employment and revenue-earning capacity."

INTERNATIONAL TRADE IN RAW COTTON

EVENING HOUSEWIVES' SHIFTS REVIVED TO COUNTER LABOUR SHORTAGE

By Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 19*th February*

THE history of international trade in raw cotton so far this season has been almost entirely one of the vast gains made by the American staple at the expense of almost every other variety. By offering its surplus supplies at competitive prices, the United States Government has not only caused large quantities to be set aside for export but has secured a firmer grip of the complicated raw material situation than for several years past.

At the end of the first half of the season, exports of United States cotton had reached 3,608,137 bales, as against only 755,253 bales a year previously. Lancashire's share in these takings has been of moderate dimensions and there are signs that, if present trends continue, the United States will recover part at least of its traditional share of our local trade.

Arrivals

The following table shows a comparison of arrivals of the raw material from different sources in recent seasons:

(In bales)

	1st half 1956-57	1st half 1955-56	1st half 1954-55	Total 1955-56
American	487,763	99,409	417,573	195,300
Mexican	71,021	69,730	67,331	214,900
Nicaraguan	2,712	7,383	4,632	19,000
Brazilian	32,500	85,006	164,491	165,000
Argentine	..	1,313	59,379	2,000
Peruvian	37,256	30,606	27,054	66,600
Egyptian	976	11,308	23,322	29,600
Sudan	113,803	101,248	84,388	246,500
East African	13,094	13,726	34,079	42,600
Nigerian	23,556	67,279	40,955	182,200
Congo	7,494	18,481	12,079	55,900
Turkish	16,302	497	653	3,500
Syrian	5,178	21,015	22,215	32,500
Pakistan	2,578	21,671	22,923	66,100
Indian	4,536	42,286	10,548	76,000
Russian	18,534	41,690	34,445	76,500
Others	30,617	52,717	40,959	106,800
Total	872,917	679,943	1,059,126	1,581,700

The large slice taken by the American grower and shipper has not left room for much expansion by other suppliers. Lancashire spinners have grown accustomed to experimenting with a number of substitute cottons in the years when American supplies have been scarce for one reason or another. Now such raw material is available again, however, the tendency has been to return to former sources and keen interest has been taken in the cotton grown in the fresh and fertile Western States.

Although Mexican growers have maintained their important position in the Lancashire market, there are signs of a decline in takings from South America, while African sources have lately provided much smaller quantities of cotton for our local mills. Less material is now being taken from India, Syria and Russia, but there has been a sharp increase in supplies from Turkey. The Sudan continues to make good most of the losses in long-staple cotton, since purchases from their traditional country of origin are now banned.

Stocks

A good deal of irregularity has occurred in the weekly imports of raw material due to shipping difficulties not only in the Eastern hemisphere. Stocks of cotton in visible supply in this country, however, are now at a higher level than for the past 18 months. The quantity held in Liverpool and Manchester and still afloat represented 289,000 bales at the end of the first half of the season.

More than half the stocks were United States cotton at 155,000 bales, while a further 46,000 bales of Sudanese cotton were available, chiefly in Liverpool. Judging by the trend of raw cotton trade so far this season, the quantity of imports over the whole 12 months is likely to be higher than for several years past.

Pay Cut Claim

The application by Lancashire weaving employers for a substantial reduction in bonus paid to 20,000 rayon weavers on the Uniform List system will be considered by the Conciliation Committee for the industry in Manchester on 25th March. This is the first move to reduce wages in the Lancashire textile industry for almost a quarter of a century. It would cut the earnings of some rayon weavers by as much as 30*s.* a week.

Millowners want to cut the bonus from 40 per cent. to 12½ per cent. It was introduced when rayon was a novelty fibre difficult to process. Now, say the employers, it is as easy to weave as cotton. The weaving unions rejected the application at joint talks. They claim payment of the premium can be avoided, if more mills adopt modern methods of weaving.

Labour Shortages

Evening "housewives' shifts" are being revived on a wide scale in the Lancashire textile industry to counter the shortage of full-time workers and cope with the flow of fresh business to the mills. Mills are competing for the services of wives who are prepared to work a part-time evening shift—usually 5-30 to 9-30. Some mills are also recruiting workers for half-day shifts.

Mr. Henry Pemberton, President of the Bolton Master Cotton Spinners' Association, told the annual meeting of members that the number employed on housewives' evening shifts in the Bolton area during the past four months had increased substantially. The recent surge of buying and the lengthening of order books had brought an acute shortage of labour in the Bolton area.

The number of young people joining the industry's introduction to cotton courses was—like the housewives' evening shifts—a reliable barometer of the state of trade. During January, more than 100 young people joined the introduction courses at Bolton and Leigh. If more workers who passed through the mills could be retained, the industry's labour problems would be solved. "Never in the history of the trade has there been such an opportunity for qualified men to secure a foothold on the ladder of promotion," added Mr. Pemberton.

Trade With South Africa

The tendency for Lancashire textile exporters to regard South Africa as an outlet for traditional styles of cloth should be discarded, Mr. Charles F. Dymond, U.K. Trade Commissioner at Capetown, said during a visit to Manchester. The time had come, with intense competition in the market, he said, for Lancashire to concentrate more on the designs, novelty cloths and elaborate weaves and prints, which South African customers liked. "It is no good getting out a design in Lancashire which can be sold in a dozen countries and hoping that South Africa will take its share," he said at the Manchester Chamber of Commerce where he began a three-day visit to the North-West for talks with exporters.

Mr. Dymond said that there was intense competition in the market. South Africa's own textile industry which enjoyed protection, particularly in plain fabrics, had cornered a market which Lancashire had held for some time. There was also competition from Germany, which did particularly well with bright printed cottons often extremely good in colour definition, from Holland, the Iron Curtain countries and America. In the range of cheaper goods, there was rivalry from Hong Kong and Japan. In rayon and nylon, America held "complete ascendancy" with top class novelties and, in cheaper goods, we could not compete on price with Japan.

The story of textile exports to the Union over the past three years was a rather sombre one, said Mr. Dymond. The average monthly business in cotton yarns and woven fabrics had fallen from £980,000 in 1954 to £689,000 last year, and, in synthetic yarns and woven fabrics from £337,000 to £243,000. But what the United Kingdom has lost on textiles had to some extent been regained with exports of other goods, he said. Exports of machinery and electrical machinery were extremely good, chemicals were a growing line, and exports of paper and paperboard were also fairly buoyant.—*All Rights Reserved.*

IMPROVING COTTON FABRICS

Resin-treated cotton fabrics that wear better and have greater resistance to tearing will be sought in a special research project being set up by the U.S. Department of Agriculture. Although crease-resistance that permits cotton wearing apparel to be laundered and worn without ironing can be imparted by resin treatment, and large quantities of treated cotton fabrics are being used for this purpose, development of yarn and fabric structures that would significantly improve the tear strength of resin-treated cotton would be valuable in holding and expanding this market for cotton.

In the research, commercially available cotton apparel and heavier industrial-type fabrics will be studied before and after application of resin, vinyl, and other treatments to determine why these fabrics lose tear strength when treated.

REPORT OF THE DIRECTORS TO BE PRESENTED TO SHAREHOLDERS AT THE FORTY-FOURTH ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December, 1956.

The result of the Bank's working for the year ended 31st December, 1956, is a surplus of Rs. 20,59,973-6-1, which sum, together with Rs. 1,81,937-2-1 brought forward from 31st December, 1955, aggregates Rs. 22,41,910-8-2.

The following appropriations have been made :—

	Rs.	a.	p.
An Interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 4 per cent. per annum, free of Income-tax, was paid for the half-year ended 30th June, 1956, which absorbed	4,00,000	0	0
Transferred to Reserve for Income-tax and Super-tax	2,50,000	0	0

The Directors now propose :

To pay a final Dividend at the rate of 16 per cent. per annum for the year ended 31st December, 1956, free of Income-tax, which will absorb	4,00,000	0	0
To provide for Income-tax and Super-tax	3,00,000	0	0
To pay a Bonus to Staff of three months' salary about	3,00,000	0	0
To carry forward to next account	5,91,910	8	2
Total .. Rs.	22,41,910	8	2

The Central and Head Office accounts, as at 30th June and 31st December, 1956, have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. B. K. Ramadhyani & Co., Chartered Accountants, K. E. Kotre & Co., Chartered Accountants and Sri. S. R. Mandre, Chartered Accountant. Sri. R. V. Subramanyam, Deputy Controller, has examined the accounts for the year on behalf of the Government of Mysore.

Dharmaprakasha Lokasevasiratha Sri. V. R. Chikkachannanjappa Setty resigned from the Directorate on 18th September, 1956, and Sri. V. H. Channabasaviah was co-opted in his place, subject to confirmation at the General Meeting.

Under Section 256 of the Companies Act, Rajasevasaktha Sri. P. Subbarama Chetty, Sri. V. H. Channabasaviah and Sri. S. Ramanathan are the Directors due to retire on this occasion. Messrs. V. H. Channabasaviah and S. Ramanathan offer themselves for re-election. Rajasevasaktha Sri. P. Subbarama Chetty is not seeking re-election.

The Auditors, Messrs. Fraser and Ross, B. K. Ramadhyani & Co., R. E. Kotre & Co., and Sri. S. R. Mandre, also retire and offer themselves for re-appointment.

The Dividend, when sanctioned, will be payable on and after 16th March, 1957.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY,
2nd February, 1957.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

BALANCE SHEET AS AT 31st DECEMBER, 1956.

(*Continued on next page*)

SUPPLY POSITION OF INDIAN COTTON

CROP ESTIMATE LOWER—CONSUMPTION HIGHER

THE earlier estimate of a bumper crop of about 5.4 million bales (commercial) in the current season has been found to need revision, in view of untimely rains in November and December and the recent cold wave. The more recent estimates, therefore, point to a smaller crop, varying from 5 million to 5.2 million bales. This scaling down has been necessitated by reduced estimates of the Broach and Western styles. In the case of Westerns, the heavy rain in October and November seems to have done more harm than had been originally anticipated. Lower yields are expected in Broach district while, in Saurashtra, the crop condition is satisfactory, though the bumper crop expected earlier may not materialise. The Laxmi crop has suffered considerable damage due to boll-worm attacks. Yield of Jayadhar is expected to be below normal, while Karunganni crop is reported to be in fairly good shape.

Assuming that the total crop for the season will approximate about 5.1 million bales, it is still higher than the 1955-56 crop, estimated at 4.7 to 4.9 million bales; some have placed it at no more than 4.5 million bales. Carryover stocks, with trade and mills, at the beginning of the current season, were 1,913,000 bales. Adding those to the estimated crop one gets a visible supply for the season of about 7 million bales. This compares with the last season's supply of 6.9 million bales. It will thus be seen that the supply this season would have been substantially more but for the smaller quantity of stocks brought in.

Mill Consumption

As regards mill consumption of Indian cotton, the consensus of opinion is that it would reach a new peak of about 4.5 million bales, as compared with the previous season's 4.3 million bales. Figures compiled by the office of the Textile Commissioner show that during the first four months of the current season, that is, September to December 1956, mill consumption aggregated 1,525,011 bales, as against 1,518,805 bales in the comparable period of the previous season. The table in the next column gives the monthly consumption figures for the period September to December 1956, along with that of the corresponding months of the 1955-56 season.

As will be seen from the table, consumption during September and October 1956 was lower, but it began to improve thereafter and reached the high of 407,605 bales in December, as compared with 397,245 bales in December 1955. If the present trend is maintained, total consumption for the season may aggregate 4.5 million bales. An additional 100,000 bales are expected to be consumed by the recently perfected hand-spinning wheel, the Ambar Charkha. Assuming that the stock position would remain more or less unchanged, a surplus of about 500,000 bales would be left for export, of which quotas for 400,000 bales have already been announced.

The performance of Indian cotton on the export front has not been satisfactory. Exports from the beginning of the current season till 2nd February was only 107,922 bales (including Zoda and yellow pickings) as compared with 301,640 bales during the same period of the previous season. The delay in the announcement of the first quota, which came as late as 1st December, and shipping difficulties, due to the blocking of traffic through the Suez Canal, were mainly responsible for the drop in exports. The enhancement of the export duty on Bengal *Deshi* from Rs. 50 to Rs. 100 per bale was another discouraging factor. Nevertheless, export prospects appear to have brightened recently. It is reported that the Government of Japan has decided to increase its quarterly allotment of sterling for cotton purchases, which would enable that country to buy 350,000 bales, instead of the existing allotment which is sufficient to cover only 150,000 bales. It is quite likely that this will lead to better demand for Indian cotton and there are already signs of renewed Japanese interest in Indian cotton. It may be observed, in this connection, that of the 107,922 bales exported during the period 1st September 1956 to 2nd February 1957, Japan accounted for 66,259 bales. Although this is the largest quantity taken by any single country, it is not even 50 per cent. of that country's offtake during the same period of the previous season.

Trend of Cotton Consumption

Month	Season 1956-57	Season 1955-56
September ..	377,078	382,979
October ..	369,923	385,909
November ..	369,505	352,872
December ..	407,605	397,245
Total ..	1,525,011	1,518,805

Reduced crop estimate, fairly favourable export prospects and encouraging trend in domestic consumption appear to be the main factors responsible for the firm trend recently evident in the forward and the ready sections of the cotton market. Despite the introduction of a rigorous margin system, Jarilla contract crossed the sub-ceiling of Rs. 700 and touched Rs. 725 on 23rd February. Although this necessitated the payment of a margin of Rs. 25 per bale, the leading bulls were prepared to meet it, rather than retreat from the market, because, in their view, such a course was merited by the statistical position of cotton.

EAST AFRICAN COTTON

The Lint Marketing Board is expected to resume auction sales of East African cotton at Kampala shortly. More than 55 per cent. of the crop is estimated to have been sold at the auctions held in November and December last. Since, under the current import policy for sterling area cotton, only cotton of stapling 1.3/16" and higher could be imported, Indian importers are not in a position to participate in the auctions in any significant degree. In respect of East African cotton, only B.P. 52 of 1.3/16" staple and Grade UNUG and higher will be permitted to be imported. But the proportion of B.P.52 qualifying for this range is expected to be extremely small.

At the last auctions, the prices fetched were reported to have been fairly high. Overseas demand, especially from Western Europe, was readily forthcoming, in view of the world scarcity of cotton stapling 1.3/32" and above and also because of the preference for sterling cotton, as against dollar cottons, on account of shortage of dollars. Indian mills are said to have a preference for East African styles, because of its low blow-room loss percentage. It is also easy to handle in dry atmosphere. But price-wise, it stands at a definite disadvantage *vis-a-vis* comparable U.S. cotton. Whether the Government will make any modifications in its import policy so as to enable India to participate in the forthcoming auctions is anybody's guess. But the chances of any change in policy appear to be extremely remote at present, in view of the fact that the Government is determined to see that the aid cotton received from the U.S., as per the Indo-U.S. agreement, is utilised to the full. The difficult foreign exchange position only strengthens this belief.

As regards the supply position of East African cotton, out of an estimated crop of 380,000 bales (of 400 lbs.) the Lint Marketing Board has sold about 210,000 bales during the previous auctions. The following table gives the quality-wise break-up of the estimated crop, sales made up to the end of December and the balance to be sold :

Variety	Estimated production	Sales already made	Balance to be sold
A.B. B.P. 52	100,000	75,000	25,000
,, Masaka	6,000	4,000	2,000
,, Busoga	107,800	47,800	60,000
,, Budama	21,500	14,000	7,500
,, Bukhedi	28,000	18,000	10,000
,, Jinja	90,000	40,000	50,000
,, Bunyaro	8,900	3,400	5,500
,, West Nile	10,000	3,000	7,000
,, Kenya	9,800	4,800	5,000
Total ..	380,000	210,000	170,000

SUDAN COTTON

Sudan is expected to harvest a fine cotton crop in the current season. According to the latest estimates, production this season is expected to aggregate 653,497 bales, as against last season's 509,380 bales. The crop is reported to be progressing very satisfactorily and quality is promising, but Lambert crop is somewhat late. The following table gives the variety-wise break-down of the crop :

(In bales of 420 lbs. each)

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE, LIMITED.

We have audited the Balance Sheet of The Bank of Mysore, Limited, as at 31st December, 1956, and also the Profit and Loss Account of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory

(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account and the returns ;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

BANGALORE, 5th *February*, 1957.

PLACE OF PALM "GUR" IN SUGAR ECONOMY

RS. 5 CRORES TO BE SPENT ON DEVELOPMENT

THE vital role played by palm *gur* manufacture in the sugar economy of India was stressed by several delegates to the All-India Palm *Gur* Workers' Conference in the course of their speeches at the eighth session of the Conference held at Nidadavole (Andhra) last week. Inaugurating the session, Mr. Chundi Jagannathan, for instance, observed that the development of palm *gur* industry would release fertile land under sugarcane for growing food crops. Further, the industry would, he pointed out, help to solve the problem of unemployment among tappers consequent on the introduction of prohibition. Expressing opinions more or less similar, Dr. R. V. Rao, Joint Director of Industries, Government of Andhra, declared: "At a time when we are anxious to give increased employment to the people and step up production of consumer goods, industries like palm *gur* industry would go a long way."

The magnitude of the palm *gur* industry can be judged from the fact that, in India, over 10 million palm trees are tapped annually for sweet juices producing more than 170,000 tons of sugar and sugar products expressed in terms of *gur*. The total number of palm trees in India is many times the above figure, as the number of trees tapped for sweet juice is a small fraction of the total number of trees. A large majority of the trees is tapped for toddy and a still larger percentage is not tapped at all. The industry has, therefore, large scope for expansion. Recognising this aspect, the Planning Commission has attached great importance to the palm *gur* industry. The development programme drawn up for the industry under the first Five-year Plan, it will be recalled, envisaged an increase of 81,852 tons in the production of palm *gur*, that is, from 171,500 tons in 1950-51 to 253,252 tons in 1955-56. The programme, the estimated outlay on which was put at Rs. 1.0 crore, was expected to afford employment to about 60,000 agriculturists, tappers, etc.

Development Scheme

It is not known how far and to what extent the above programme was implemented. According to the Union Production Ministry's Report on Cottage Industries (1955-56), however, the output of palm *gur* in production centres during 1954-55 amounted to just 80,000 tons (2.14 million maunds) valued at Rs. 4.28 crores. The number of persons employed was 240,000. The second Five-year Plan does not give any indication of the production target set for the palm *gur* industry to be reached in 1960-61. All that the Plan says is that the revised programme of the All-India *Khadi* and Village Industries Board envisages an increase in the total development expenditure from Rs. 59 lakhs in 1956-57 to Rs. 86 lakhs in 1960-61, the aggregate expenditure over the second Plan period being Rs. 5 crores. This represents a rise of Rs. 4 crores as compared with the provision made in the first Plan. The scheme provides for the establishment of different types of production units to suit the varying skills of the tappers. It also provides for grant of assistance to tappers in different areas. An important item of the scheme relates to assistance to co-operative societies and federations of co-operatives in undertaking and encouraging additional lines of production such as manufacture of palm *gur*, palm leaf and other subsidiary products.

More Nutritious

The need for developing the palm *gur* industry will be evident from the food value of its product. The results of chemical analysis conducted by nutritional experts have shown that palm *gur* contains 79.92 per cent. of sucrose, as against 59.71 per cent. in cane *gur*. The protein-content and calorific value are also claimed to be comparatively high in date palm *gur* which is, therefore, more nutritious. By augmenting the production of palm gur, the pressure of consumer demand on cane *gur* can be reduced greatly. By doing so, it is argued, a larger part of the sugarcane supplies can be diverted to the sugar mills for the crushing of white sugar.

It will be interesting to note, in this connection, that palm trees can be grown on non-cultivable waste lands and do not need either manuring or irrigation or protection from wild animals as are required in the case of sugarcane. Palm trees can be easily grown on bunds of fields, banks of streams, rivers and canals and roadsides. Simple tools prepared by village smiths are adequate for tapping the palms and the manufacturer can adjust his programme to suit his other agricultural activities by tapping a convenient number of trees at a time. The palmyra palm trees are particularly useful in several other ways. The leaf, stalk, trunk, fibre, etc., can be conveniently employed for making accessories needed for agricultural operations such as matting, rope, basket, water drain, fencing, shed, etc. Tender leaves are used as fodder for milch cattle. Indeed, palm trees are described as "an asset to agriculture."

Improving Production Technique

Despite the importance of palm *gur* industry thus, not much progress seems to have so far been achieved in solving the various problems confronting the industry. The methods of tapping and boiling of palm juice are generally crude. It is this factor which is largely responsible for the high cost of manufacture. If palm *gur* production is to be made economic, it is of the utmost importance that tapping tools are standardised, methods of tapping modernised and boiling processes improved. Applied research for the improvements in manufacturing technique, furnaces and *bels*, tools and implements should be undertaken.

Since those engaged in the palm *gur* industry are in illiterate and ignorant lot, technical advice and guidance should be freely made available in an easily understandable manner through demonstration, publicity and training. Special agencies may be set up to apply the results of research to palm *gur* manufacture and to make the cultivator "actively conscious of the need of technical improvement." Special stress must be laid on intensive scientific research on aspects relating to composition of *neera*, its yield and variation in composition in different seasons and prevention of fermentation with a view to the keeping quality of *neera*. Prevention of charring during boiling in the preparation of *gur*, as it chars at a lower temperature than cane *gur*, is an important reform that requires to be carried out. The factors affecting the keeping quality of palm *gur* and the causes for the lack of setting quality of *gur* in making sweets from it must also be thoroughly investigated.

SUGARCANE PRICES

It is understood that the Government of India has decided to maintain the minimum prices of cane for the 1957-58 season at the existing levels, that is, Re. 1-7 per maund for deliveries at factory gates and Re. 1-5 for delivery at outstation rail centres. The decision is based on the ground that any reduction in the price of cane is not feasible on account of comparatively high prices of other agricultural produce, while any further increase is likely to have the effect of diverting more land from food crops to cane crop. It is pointed out that even the existing prices have resulted in a substantial rise in the production of cane, particularly in areas supplying cane to the sugar mills. The all-India second estimate of cane (1956-57) puts the aggregate yield at 58.91 million tons, as against the adjusted second estimate of 50.46 million tons for 1955-56, a rise of 16.8 per cent. Maintenance of the old prices for cane is thus considered equitable *inter se* between growers of cane and other farmers, as also in the general interests of the country's economy, in order to avoid any imbalance between the production of food and other crops.

SUGAR PRODUCTION AND RELEASE

About 364,216 tons of white sugar came off the crushing plants of mills during January 1957, as against 355,000 tons in the corresponding month of 1956. This output brings the aggregate quantity of sugar produced in the first three months of the 1956-57 season to 816,399 tons, a rise of 104,399 tons as compared with the output a year before. Out of this quantity, about 396,000 tons have already been released for sale in the free market, which include 35,000 tons released for export. The figure of 396,000 tons includes the quantity of 165,000 tons released by the Government of India on 21st February 1957.

The current season's sugar beet harvest in Britain exceeds 5.0 million tons, as against 4.4 million tons in the previous season, according to the British Sugar Corporation. The average yield per acre is put at 12.65 tons. The total production of beet white sugar amounts to 692,000 tons.

APPELLATE TRIBUNAL'S AWARD ON COAL INDUSTRY

CASE FOR REVISION OF PRICES

THE representatives of the coal industry submitted last week a memorandum to the Union Ministry of Production explaining the difficulties facing the industry as a result of the Labour Appellate Tribunal's award, revising upwards, to a substantial extent, the emoluments to labour granted earlier by the All-India Industrial Tribunal (Colliery Disputes). As a result of this revision, the industry has to bear a "crushing financial burden." The collieries have, therefore, prepared and submitted to the Central Government a case for a suitable increase in prices of coal, that is, to an extent which will enable them to carry on their task of implementing the production target fixed under the second Five-year Plan.

Explaining the main features of the industry's case at a Press Conference in Calcutta prior to the departure of the representatives for New Delhi, Mr. R. Moulik, Chairman of the Indian Mining Association, said that the All-India Industrial Tribunal's award, covering 960 collieries, became effective on 26th May 1956. Although there were certain anomalies in the award, they were, in the main, resolved, as a result of discussions between the representatives of employers, workers and the Government. Nevertheless, a few appeals were preferred, as a result of which the Appellate Tribunal gave its award granting substantial additional benefits to all colliery labour and staff. The minimum emolument for the lowest category of unskilled worker, for instance, was fixed by the lower Tribunal at Rs. 69-1 (inclusive of bonus) which itself represented a substantial increase over the rates which had prevailed prior to the award. This minimum emolument was further raised by the Appellate Tribunal to Rs. 78-4-4 (inclusive of bonus). While fixing the minimum emolument, the lower Tribunal had taken into account all privileges and amenities, such as free housing, free supply of coal, medical and educational facilities, but, under the Appellate Tribunal's award, these privileges and amenities were to be given in addition to the enhanced minimum emolument.

Additional Concessions

The Appellate Tribunal also reduced the units of work-loads for certain categories of workers and, in addition, raised further the rates for payment of wagon loaders. Besides, certain workers were placed in higher categories resulting in increased wages. Salaries and grades of clerical and mining staff were further increased. Equal pay was granted for men and women workers irrespective of the quantum of production. A variable dearness allowance had been related to the cost of living index; this was over and above the fixed dearness allowance attached to the basic wage. The dearness allowance, Mr. Moulik pointed out, had been made variable, although the selling price of coal was statutorily fixed. Not only were these additional concessions given but they were awarded with retrospective effect from 26th May 1956, the date on which the lower Tribunal's award was to have been given effect.

Even to comply with the retrospective aspect of the Appellate Tribunal's award, the industry would have to incur an additional cost of Rs. 4.25 crores. Other concessions would increase production costs by about Re. 1-12 per ton. Besides the difficulty of finding large sums to give retrospective effect, another retrograde effect of such a step might, according to Mr. Moulik, be a fall in attendance and consequent decline in production. In other words, Mr. Moulik feared that the Appellate Tribunal's expectation that, with a sound and attractive wage structure, the avoidable absenteeism would decline was not likely to be realised. The industry, therefore, desired that the retrospective aspect of the decision should be given up, because coal prices could not be recovered retrospectively. The award, on the whole, would, according to Mr. Moulik, raise the wage bill of the industry by 60 per cent.

Referring to the statutory prices for coal, Mr. Moulik said that there was an incease of Rs. 3 per ton for Bengal and Bihar coal in July last to meet the enhanced cost of production at that time. This was, however, considered inadequate by the industry. In this connection, he sought to clear a misunderstanding which had arisen as a result of the Appellate Tribunal's reference to the assessment made by the lower Tribunal that a 40 per cent. increase in wages was commensurate with an increase of Rs. 3 per ton in the price of Bengal and Bihar coal.

The Appellate Tribunal, he said, seemed to have worked on the assumption that this price increase was based on the recommendations of the lower Tribunal. The increase was, on the other hand, given as a result of the examination of working costs of several representative collieries by the Coal Price Revision Committee and was not based on the Tribunal's observation.

Long before the award of the lower Tribunal, the industry had been pressing for an increase in price to cover rising costs of production owing to factors, such as increased costs of plant, machinery and essential stores. The position, Mr. Moulik added, was aggravated by the fact that the industry could not, of its own, increase the selling prices of coal, as these were fixed by the Government. Any disintegration of the industry at this stage of the country's industrial development would naturally have widespread repercussions on national economy. He also regretted that the industry should be placed in this predicament at a time when every effort should be made to increase coal production under the second Plan.

Upward Revision Justified

It is clear from Mr. Moulik's observations that the industry is not grudging to pay reasonable wages and provide all amenities to labour consistent with the hazardous nature of the work. It is only asking for a corresponding rise in the selling price of coal. Apart from the effect of the Appellate Tribunal's award, there are reasons which justify an upward revision of coal prices. First, even before the lower Tribunal's award, the industry had been pressing for an increase in coal prices, as production costs had gone up since the previous revision of prices. The lower Tribunal's award itself would, if implemented, cost the industry not less than Rs. 4 per ton, as against which the Bengal and Bihar coalfields were given an increase of only Rs. 3 per ton and other collieries Rs. 2 to Rs. 5 per ton in July last. In the meantime, in the interests of the nation and to maintain good relations with labour, the colliery owners decided to implement the lower Tribunal's award. Secondly, the delay in the announcement of the last increase in coal prices had cost the industry Rs. 1.5 crores. Thirdly, coal prices should include an element for covering at least in part the cost of expansion in production.

It may be argued, on behalf of consumers of coal, that any further increase in the price of coal would enhance their production costs. It is stated that the last revision of coal prices had put up the coal bill of consuming industries by Rs. 10 crores and further increase would cost at least Rs. 5 crores more. On the other hand, it may be noted that the coal consuming industries had not protested against the last revision of coal prices. Besides, if the coal prices are not revised, the effect on the coal industry would be far more serious than that on other industries if they are raised and any decline in coal production would have its own repercussions on other industries which depend to a large extent on coal for their power needs. In deciding the revision of coal prices, the Government should, therefore, take into account the overall position, namely, the need for increased coal production, particularly in the context of the industry's financial ability to fulfil the role allocated to it.

COAL STATISTICS

Production of coal in India during December 1956 amounted to 3.68 million tons, as compared with 3.32 million tons in the previous month and 3.39 million tons in the correspondng month of 1955. This is the highest monthly output for the year and brings the total production for the year to 39.43 million tons, which represents an increase of 1.20 million tons over that in 1955. With this expansion not only the upward trend in production has been maintained for the third year in succession but a fresh record in the history of the Indian coal industry established.

Despatches during the month under review aggregated 3.04 million tons, as against 3.03 million tons in November and 2.78 million tons in December 1955. The total despatches for the year come to 34.96 million tons and compare favourably with 32.94 million tons in 1955.

Stocks at pitheads amounted to 2.77 million tons at the close of the year, having gone up from 2.56 million tons at the end of November; they were, however, lower than those a year before when they stood at 3.60 million tons.

During the month under review, 838 collieries were reported to be working, with an average daily employment of 342,759 workers. Output per manshift was estimated at 1.18 tons for miners and loaders, 0.62 ton for all workers underground and in open-workings and 0.41 ton for all persons employed, including surface workers. The percentage of absenteeism was of the order of 12.72.

Nine coke plants at collieries and elsewhere produced 359,360 tons of hard, soft and other kinds of coke during the month and despatched 173,943 tons.

LIONEL EDWARDS (PRIVATE) LIMITED

ENCOURAGING TREND IN TEA EXPORTS

RECORD LEVEL REACHED IN 1956

THE Government of India released last week a further quota of 10 million lbs. of tea for export, bringing the total allotment so far for the year 1956-57 to 453.3 million lbs. It is not known whether this represents the final allotment for the year. If it is so—because the final release is usually made by the middle of February—then the total quantity released for the year is equivalent to 68.3 per cent. of the year's crop. It also represents a cut of 26.7 million lbs. from the quantity permitted to be exported in the previous year at 480 million lbs. or 69.3 per cent. of the crop and of 11.6 million lbs. from that of 464.9 million lbs. allowed in 1954-55, which was the final year of the International Tea Agreement.

It will be interesting to note that the export quota for 1956-57 is equal to 130 per cent. of the standard export figure permitted under the I.T.A. During the currency of the Agreement, India's export allotment had been less than the maximum permitted, namely, 135 per cent. In 1955-56, the first year after the expiry of the Agreement, however, the quota was raised to 138 per cent., but this has now been cut to 130 per cent. in the current year. The year's export allotment leaves, besides the surplus brought forward from the previous year, the exact quantity of which is not known, 210.3 million lbs. for internal consumption, as against the corresponding figure of 183.2 million lbs. in 1955-56. The cut in export allotment is presumably due to the anxiety of the Government to ensure enough supply for domestic consumption which is said to be rapidly rising. Further, the demand from foreign countries has dropped substantially in recent weeks, as witness the decline in exports of North Indian teas during January to 33.01 million lbs., as against 39.75 million lbs. in the corresponding month of 1956, though the overall trend of exports during 1956 was very encouraging. In the context of increasing competition from other new tea-growing regions, the Government's anxiety to stimulate domestic consumption of tea is understandable.

As against the quantity permitted to be exported, the shipments of North Indian tea during the period 1st April 1956 to 9th February 1957 aggregated 362.7 million lbs., as compared with 257.9 million lbs. and 342.3 million lbs. in the corresponding periods of 1955-56 and 1954-55, respectively. Exports from Cochin during the twelve months ended December 1956 amounted to 80.2 million lbs., the corresponding figure for 1955 being 75.9 million lbs. and for 1954 78.0 million lbs.

The data relating to exports of Indian tea during the calendar year 1956 make encouraging reading, in that the quantity shipped reached a record total of about 516 million lbs., representing an increase of 152 million lbs. or nearly 42 per cent. over that exported in 1955, at 363.8 million lbs. It may be recalled that 1955 was an unfavourable one for Indian tea exports, these having declined from about 459 million lbs. in 1954 to 364 million lbs. With the increase in 1956, the exports have not only recovered the ground lost in the previous year but set up a fresh record in the history of Indian tea. In terms of value, the exports during the past year aggregated Rs. 140.6 crores, which is also a record, as compared with Rs. 112.7 crores in the previous year and Rs. 131 crores in 1954.

The increase in exports was shared by all the principal markets for Indian tea, as will be seen from the following table:

(In million lbs.)

	1956	1955
U.K.	366.5	248.9
U.S.	28.5	23.7
Canada	22.6	16.3
Egypt	21.6	12.9
Australia	9.4	6.1

It will be noted from the figures quoted above that the U.K. continues to be the main foreign customer for Indian tea, its share having gone up by 118 million lbs. or nearly 48 per cent., while its purchases from Pakistan and the Far East had declined. In terms of value, the U.K.'s offtake has gone up from Rs. 73.3 crores to nearly Rs. 100 crores. Among the other countries, exports to Egypt show a marked rise of 8.7 million lbs. (the value from Rs. 3.9 crores to Rs. 5.9 crores); this was due mainly to the diversion of its purchases from Ceylon to India on account of exchange difficulties with the former. During the year, the U.S.S.R. purchased substantial quantities from India, while it did not purchase anything in 1955.

The favourable trend in exports was due partly to fortuitous circumstances and partly to the efforts of India to promote exports. The decline in world production, resulting in an increased demand, the lifting of the ban on exports of tea for sale in London auctions in February 1956, the Suez crisis and the useful work done by Joint Tea Promotion Councils set up by India in collaboration with the tea trade organisations in the U.S., Canada, West Germany, Eire and the Netherlands, were all factors which were responsible for the rise in exports.

As against the sharp rise in exports, the production in India has not gone up by any perceptible extent, the total output in 1956 having been 663.6 million lbs., as compared with 663.2 million lbs. in the preceding year. The share of North-East India has gone up from 534.2 million lbs. to 536.7 million lbs., while that of South India has dropped from 129 million lbs. to 126.9 million lbs. The total world crop is placed lower at 1,178.9 million lbs., as compared with 1,183.7 million lbs. in 1955 (the crop figures of Indonesia are only up to November).

The record exports during 1956 should not, however, induce any sense of complacency. Though there is nothing to show that world demand for tea would fall in the current year, India has to take note particularly of the increasing competition. The latest competitor in world markets is East Africa. The efforts of the Tea Board further to explore markets abroad, accompanied by the Government's helpful fiscal measures, would possibly help India to maintain its export level, if not raise it. Above all, the promotion of domestic consumption, which offers immense scope, has to be largely depended upon for ensuring stability of markets for the tea industry.

TEA REPLANTING IN CEYLON

The Minister for Agriculture and Food, Ceylon, has submitted to the Government a plan for rehabilitation of tea estates in the Island. A census conducted by the Government recently revealed that about 12 per cent. of the tea acreage in Ceylon was uneconomic to maintain production, except in times of boom prices. The tea planters proposed some time ago that the Government should give a subsidy of 50 per cent. of the expenditure to replant senile tea, the programme to be implemented at the rate of 5,000 acres per annum, at a cost of Rs. 5,000 per acre. The details of the Minister's latest plan are not available. It may be noted that tea is the only major crop so far without a rehabilitation programme. Such schemes are already in operation in respect of rubber and coconut.

PAKISTAN TO HAVE ONE MORE JUTE MILL

IMPROVED VARIETY OF RAW JUTE EVOLVED

A CONCERTED effort at developing the jute trade and industry is being made in Pakistan. Recently, the Jute Advisory Board recommended to the East Pakistan Government that steps should be taken to increase the jute acreage during the next season so as to yield 500,000 bales over and above the present production of 5.5 to 6 million bales. This increased output, along with the 200,000 bales brought in from the previous season, is expected to be enough for meeting the world demand for Pakistan jute, after satisfying internal requirements. The present internal consumption is 1 million bales. With the proposed increase in capacity from 6,000 looms to 9,000 looms during 1957, the consumption will go up a considerable extent.

Along with the proposal to increase the acreage under jute, steps are being taken to improve the quality of raw jute produced. As a result of researches conducted, two varieties of *Capsularis* have been evolved. These are expected to yield 10 to 15 per cent. more than the existing varieties. The new varieties are said to have been released to cultivators. New strains have also been evolved from the *Olitorius* variety, giving a yield of 30 per cent. above that of the standard varieties. Attention is also being directed to the question of producing improved varieties of seeds for supply to cultivators. The Chitla Jute Seed Farm, run by the Pakistan Central Jute Committee, has produced 600 maunds of pedigree jute seeds. These seeds will be handed over to the Provincial Government for distribution to selected growers. The Central Jute Committee, at its recent meeting, sanctioned the establishment of another farm of 400 acres in Dinajpur. This farm is expected to produce 1,000 maunds of pedigree jute seeds which will be supplied to registered seeds growers for further multiplication. The Committee also sanctioned the establishment of two more research stations, one at Rangpur and the other at Comilla.

As stated earlier, 3,000 looms are expected to be installed during the current year. Of these, 1,500 looms are said to have been already purchased and construction work at the mill premises to house these looms is in progress. With the working of these looms, Pakistan is expected to export to foreign countries manufactured jute goods worth about Rs. 26 crores in 1957-58. The Government is also considering a scheme for setting up a new jute mill in East Pakistan, the proposal for which was made by the Pakistan Industrial Development Corporation. According to the proposal, the mill will have an initial capacity of 250 looms, which will, in due course, be expanded to 500 looms. The mill will lay special emphasis on production of fine quality jute fabrics which are not now produced in Pakistan. The fine quality jute required for such production is said to be available in abundance in Pakistan.

Pakistan's efforts to raise output of jute and increase its production of manufactured goods are not likely to succeed, unless the large-scale smuggling of jute across the border is stopped. The Government has already paid attention to it and the proposed Jute Marketing Corporation will lift all the jute in the border belt of East Bengal, with a view to preventing smuggling. The East Bengal and Central Pakistan Governments have decided to advance Rs. 2 crores for the purchase of a 51 per cent. share in the capital of the Corporation.

It has also been decided to send a trade delegation to South-East Asian countries to find a market for raw jute as well as jute manufactures.

COFFEE EXPORT ALLOTMENT

The Government of India has decided to allocate a further quantity of 3,150 tons of coffee for export out of the 1956-57 crop. Earlier, it had announced an allocation of 7,900 tons, bringing the total quantity made available for export to 11,050 tons. The increase in allocation is evidently due to the higher estimate of the crop for the year which is placed at the record level of 37,800 tons. After providing for internal consumption and for a suitable carryover for the next year, the Coffee Board recently estimated the available exportable surplus at 11,100 tons, out of which the Government has decided to release 11,050 tons, as against 7,800 tons released out of the 1955-56 crop.

TARIFF COMMISSION AND ROAD TRANSPORT

NEED FOR PAYING EARLY ATTENTION TO ITS SUGGESTIONS

By B. V. Vagh, B.E. (Civil), M.I.E. (Ind.)

IN addition to the many valuable suggestions in regard to the development of the automobile industry and its rate structure, the Tariff Commission has made a number of observations and recommendations on the need to develop road transport in the country, particularly, *vis-a-vis* the implementation of the second Five-Year Plan; these recommendations deserve the notice of all concerned. Briefly, they are, in the words of the Commission, as follows:—

1. "We are, therefore, convinced that, if the implementation of the second Five-year Plan is not to suffer, positive measures have to be taken to foster the demand for commercial vehicles, so as to increase it substantially above the target figure of 40,000 vehicles per annum indicated by the Planning Commission for 1960-61. (Para 12.5.)

2. "We recommend that the attention of the State Governments should be drawn to the fact that the degree of expansion in road transport capacity which is essential for the effective implementation of the second Five-year Plan will not take place, unless they co-operate in removing the various factors which are today hampering the demand for commercial vehicles, in particular, the following:

(i) inadequate road development and bad conditions of roads;

(ii) heavy and varying rates of taxation of commercial vehicles; and

(iii) restrictions on inter-State movement of commercial vehicles. (Para 12.6.)

3. "Lack of credit facilities has been an additional factor inhibiting the expansion of the road transport industry.

"We recommend that the Reserve Bank of India, in consultation with commercial banks, should evolve a suitable scheme for extending credit facilities to transport operators for purchase of vehicles. (Para 12.7.)

4. "The disparate levels of taxation applying to diesel oil and motor spirit have recently attracted considerable attention and a tendency is noticeable, particularly on the part of the State Governments, to levy additional taxes on diesel oil.

"We strongly recommend that no taxation or other measures should be adopted which are likely to discourage the current trend towards dieselisation of such vehicles. (Para 12.8.)

5. "Two measures deserve special mention, namely, an increase in the limit of permissible laden weights of vehicles, and the use of trailors.

"We recommend that a fresh examination should be undertaken by all State Governments to see how far the restrictions on permissible laden weights could be relaxed, and the use of trailers with goods vehicles allowed. (Para 12.9.)

6. "Since uniformity between civilian and army vehicles will help standardisation, the transport authorities may examine the possibility of amending rule 120 of the Motor Vehicles Act, so as to prescribe the same maximum width for civilian vehicles as is adopted for army vehicles. (Para 23.4.)"

Note.—The rule prescribes 90" width for civilian and 93" width for military vehicles against a width of 96" recommended by the Indian Roads Congress.

The foregoing recommendations relate to the following points:

(i) Production of commercial vehicles.

(ii) Conditions of operation, namely, (a) inadequate road development, (b) heavy and varying rates of taxation, and (c) restrictions on inter-State traffic.

(iii) Lack of credit facilities.

(iv) Tendency to tax diesel fuel.

(v) Increase of permissible laden weights.

(vi) Use of trailers.

(vii) Standardisation of civilian and army vehicles.

Since these points have a profound bearing on the future of our road transport it may be useful to review the present position in regard to them.

Production of Commercial Vehicles

The Commission has examined this issue in some detail and, after taking into account various estimates received by it, has finally based its recommendation on the figure supplied by the Development Wing of the Ministry of Transport and Planning Commission, namely, 40,000 trucks per annum by 1960-61. However, it has qualified it by stating that, "allowing for replacement needs, the number of additional commercial vehicles required to be placed on the road during the period of the second Plan would be very much higher than the cumulative figure of approximately 130,000 vehicles indicated by this estimate," and further that "positive measures have to be taken to foster the demand for commercial vehicles, so as to increase it substantially above the target figure of 40,000 vehicles indicated by the Planning Commission for 1960-61." It may be mentioned, in this connection, that a very careful estimate, based on the overall production in the country during our two Plans, shows the requirements of feeder goods, passenger traffic and replacements will be of the order of 220,000. To this figure has to be added a certain figure to supplement the capacity of the railways in regard to inter-State traffic and also bullock-cart capacity. This point has been stressed by the Commission as follows:

"Actually, the railways do not expect to be able to carry more than 160 million tons by 1960-61 and it is also not likely that the capacity of coastal and inland shipping and bullock carts will increase so much as to make good this shortfall to any significant extent. Consequently, commercial vehicles will have to fill the gap left by other forms of transport . . ."

It has been estimated that about 50,000 units, half as trucks and half as truck-trailers, will be required for the railway gap and at least 30,000 to supplement bullock carts. The total, therefore, is about 300,000, as against about 200,000 likely to be available, including 'disposal' vehicles, thereby leaving about 100,000 vehicles to be produced in five years, that is, an average of about 20,000 per annum. *Therefore, the production target will have to be raised from* 40,000 to 60,000 *trucks per annum by* 1960-61.

Since the Planning Commission fixed its target of 40,000 vehicles per annum to be attained in 1960-61, the following new factors have emerged:

(i) Against a provision by the railways for an increase of 3 per cent. per annum in passenger traffic, the estimated increase is from 6 to 7 per cent. per annum. The difference will have to be carried by roads.

(ii) The railway gap, after providing for a possible increase of about 5 million tons in the capacity of water transport by 1960-61, is of the order of 33 million tons per annum. This also will have to be carried by roads and the new Motor Vehicles Act makes a special provision for this by setting up an Inter-State Transport Commission to "develop, coordinate and regulate" inter-State road traffic.

(iii) An estimated increase of about 19 million tons in agricultural production will produce a gap in the capacity of bullock carts for traffic in commodities other than agricultural products and here also trucks will be required.

It is thus clear that the Planning Commission's target has to be revised and the sooner it is done the better it will be for the implementation of the Plan. Now that the Tariff Commission has expressed its views on this very important point, it is to be hoped that the Planning Commission will lose no time in coming to a decision.

Conditions of Operation

Here the position is much better than envisaged by the Commission. By 1955-56, the country had about 122,000 miles of surfaced roads, against about 88,000 miles in 1943-44. National Highways also are being improved both in regard to their geometric design and surfacing and, while a number of things still remain to be done, the overall improvement is such that lack of road facilities need no longer stand in the way of development of road transport. Restrictions on road transport have also been removed under the new Motor Vehicles Act and the role of road transport in long-distance traffic has not only been recognised but Government have committed themselves to it. Therefore, this disability also will apply no longer. The only point on which Government have to announce its decision is taxation.

The present tax incidence is about 29 per cent. of the cost per ton-mile of a truck and works out to nearly 15 pies in a rate of 53 pies. When the average railway freight is about 11 pies per ton-mile, it can be imagined what progress road transport can make in inter-State transport by having to pay 15 pies on taxes alone! Based on the Planning Commission's target of automobile production, the number of additional vehicles in the country by 1960-61, excluding replacements will be over 75 per cent. over the number of vehicles in 1950-51, an average of about 38 per cent. per annum during the period. When the targets are revised for reasons mentioned earlier, the increase will be higher. Therefore, it is reasonable to expect that, within the present tax receipts, there is a margin for reducing taxation by 40 per cent. at least. This will reduce the road rate per ton-mile by about half an anna. It is to be hoped that Government will go into this matter early.

Credit Facilities

It has been estimated that the capital required for additional trucks, excluding replacements, is of the order of about Rs. 600 crores. This has to come by way of loans which are not expected to be available to this extent from private financiers. Moreover, rates of interest of private financiers will be high and will increase the cost of vehicle operation. Hence, the State has to come into the picture and a scheme should be framed to make this finance available from the various Industrial Finance Corporations, Co-operative Banks and the State Bank.

Diesel Oil

The Tariff Commission has estimated that the demand for diesel trucks will be from 70 to 80 per cent. of the total truck requirements and are of the opinion that, "from the point of view of foreign exchange and fuel economy, diesel operation of medium and heavy commercial vehicles is distinctly more economical and, therefore, deserves to be promoted in the larger interests of the country." This point is overlooked by States whose approach to this problem is principally from the point of view of making good the loss from tax receipts from petrol. It is also overlooked that a diesel vehicle costs more than a petrol vehicle, and, therefore, the only way it can make itself useful by providing cheap transport will be on the price of the fuel. It is hoped that the States will bear in mind these important points.

Permissible Laden Weights

In the Motor Vehicles Act of 1939, the gross laden weight of a medium vehicle was laid down as 14,500 lbs. In those days, the condition of our roads was poor but, even so, this weight was too low for economic operation. The technique of both automobile design and road construction has been developed a great deal during the past 18 years, and, in industrialised countries, gross loads of nearly 100 tons are carried by roads. The limit in this country has since been raised from 14,500 to 18,000 lbs. Against this, the loads carried normally in other countries are 27,000 lbs. on two axles, 40,000 lbs. on three axles and up to 72,000 lbs. on four axles. This shows the extent to which we have been conservative in this respect. Between 1943-44 and 1960-61, the country will have spent about Rs. 476 crores on our roads. A good deal of it is on improvements in the lay-out and pavements and the provision of new bridges, culverts, etc. The standards of design recommended by the Indian Roads Congress and presumably employed in all this work are very up to date. Hence, at any rate, on the bulk of our surfaced roads, totalling about 122,000 miles, our standards for road vehicles should be the same as in other countries and should be revised as quickly as possible.

Trailers

From the point of view of cheapening road cost, the evolution of the multiple-unit vehicle is of profound interest to the community. Here, the principle is that within the carrying capacity of a road a vehicle can be included nearly

NEW PRODUCTS AND PROCESSES

Electronic Tailoring

AT least two automatic electronic systems for cutting out, both men's and ladies' suits are now under development in Europe and in the U.S. One such system has already reached the stage where an engineered prototype has been produced which is capable of translating cutting instructions based on the measurements carried out by the tailor into practice. The eventual aim of these developments is to enable popular bespoke made-to-measure tailors to produce suiting ready cut to the measure of individual customers' requirements on a virtually mass production basis. The chief problem in the development of these electronic cutting systems lies in the development of a fully efficient, yet relatively simple, electronic system which will ensure that the cutter cuts all types of cloths accurately according to its instructions. To achieve this the cutter must automatically allow for variations in the thickness, stretchability and other qualities of many different types of cloths. Although further experiments have yet to be carried out in both the U.S. and the European systems, the work carried out so far has convinced the scientists working on their development that full production size prototype units could be produced within the next two or three years at costs of between £25,000 and £35,000 per unit.

New Man-made Isotopes

Five new materials hitherto unknown in the world have been created by scientists working at the University of California, U.S.A. All the new materials are isotopes of the element einsteinium, which is itself a man-made element created in the laboratory by nuclear physicists. Although the new materials are all chemically identical with einsteinium, they have differing weights. Thus the new isotopes are called einsteinium 248, einsteinium 249, einsteinium 250, einsteinium 251 and einsteinium 252, the figures referring to their respective atomic weights. They were created by bombarding the man-made elements berkelium and californium (elements number 95 and 98—einsteinium is element number 99) with atomic particles in a nuclear accelerator, or atomic-smashing machine. Although these new materials are not expected to have any immediate practical application, their discovery is of considerable importance for the future application of atomic energy.

Pumping Corrosive Liquids

A new pump for pumping corrosive liquids which is said to be capable of giving an exceptionally exact controlled flow over a wide range, has been developed by Swedish engineers. The operation of the pump depends on the use of a special acid-resistant piston whose movement can be very accurately controlled. Special corrosion-resistant fitments made from asbestos impregnated with polytetrafluorethylene (P.T.F.E.) are also used in the construction of the unit. The pump, which has been designed especially for long unattended running under conditions where very exact control over the quantities of liquid pumped must be maintained, is claimed to be of very robust construction and should, it is expected, be easy to install in most types of chemical plant systems.

New Drug for Malaria

Research carried out by a Malayan medical research group indicates that the drug camoquin may be an efficient agent in suppressing malaria in people of Asiatic nationality. The research which was carried out by scientists and doctors from the Malaria Research Division of the Institute for Medical Research, Kuala Lumpur and from the District Hospital, Tampin, showed that the camoquin had a rapid action on both the fever and the symptoms, relief from malarial symptoms being obtained within 24 hours to 36 hours of the dose being given. The malaria admissions to hospitals from those given the drug as a suppressive were two over a 12-month period, as against 57 for the previous 12-month period when no treatment had been given.

New Chemical

A new chemical will become available commercially for the first time in the U.S. late this summer. The new chemical, called phthalonitrile, will be used in the dye-making industry to manufacture brilliant permanent blue and green pigments. At the same time it is expected, by the scientists who have developed its commercial production, that it will also be a valuable new compound for the production of many altogether new types of industrial chemicals.

Refractories from Titanium Waste

Useful base materials for the manufacture of refractory compounds can be obtained from the residues, or tailings, from plants producing zirconium and titanium according to scientists at the U.S. Bureau of Mines. Work carried out at the Tuscaloosa research centre of the Bureau of Mines has shown that these residues contain high-grade kyanite and sillimanite compounds, which can be separated out from other compounds in the tailings by a magnetic separation process. The concentrate of refractory base materials thus obtained contains up to 96 per cent. of kyanite and sillimanite compounds.

Electronic Brain

New York University experts now have the aid of an electronic brain in solving research problems on guided missiles, cloud seeding, weather prediction, psychology, industrial management and the design of ocean liners. The data-processing machine was built by the International Business Machine Corporation (I.B.M.). As part of its educational aid programme, I.B.M. will pay $2,400 or 60 per cent. toward the $4,000 monthly rental fee for the electronic computer.

THE STANDARD BATTERIES LIMITED

FRESH ISSUE OF CAPITAL PROPOSED TO FINANCE DEVELOPMENT PROGRAMME

ADDRESSING the shareholders of the Standard Batteries Ltd. at their Eleventh Annual General Meeting held in Bombay on 31st January 1956, Mr. R. D. Char, Chairman of the Company, said that the Company proposed to undertake a development programme, in order to meet the increased demand for its products. He added that the Company would shortly issue further capital to finance this programme.

The following is the full text of Mr. Char's speech:

"GENTLEMEN,

"Allow me to extend to you on behalf of myself and my colleagues on the Board, a cordial welcome to this Eleventh Annual General Meeting of your Company.

"The Directors' report and the statement of accounts together with the auditors' report for the year ended 30th June 1956 have been in your hands for some time and I will take these, with your permission, as read.

"In this year under report, I am glad to inform you that there has been a steady increase in the users of our automobile batteries. This upward tendency curve, I am afraid, may start flattening out, unless favourable climate is created for the road transport industry throughout the country to catch up quickly and fill the gap in our transport problem. During the year under report, several new processes in the manufacture, test and control were put into operation and as a natural consequence the period of guarantee on our car batteries was increased from six months to one year. In spite of this increased period of guarantee, the percentage of claims, I am glad to inform you, has come down considerably as compared to the previous years. This can only be accounted for the improvement in the manufacturing process and strict laboratory controls.

"The laboratory has been completely reorganised and special latest testing equipment have been installed. Some more of the testing and control instruments have been ordered out overseas during the year under report. They are expected during the current period. With the installation of these, the laboratory at our works would be able to tackle all the problems involved in the development, testing and control comparable with any modern unit of our size in Europe and America.

Reorganisation

"With the continuous operation of our lead refining plant at the southern end of our factory, it was decided to re-arrange the various manufacturing process, with a view to streamlining the flow of manufacture and material handling. Most of the re-organising work is nearing completion during the current year. All this had to be achieved with as little dislocation in the day-to-day production to meet the regular demands.

"You will see from the above that during the year under report, your Company had concentrated in improving the quality, test and control and in the reorganisation of the plant. It is expected in the coming years that this new arrangement will substantially reflect on the results of the working of your Company.

"Our 'Standard RPG' Tudor's Patent railway train lighting cells are now in commission in almost all the railway systems. Their initial tests at the different railways have been uniformly very good. Your Company is looking forward for an early decision from the Government to utilise our capacity. Foreign exchange to the extent of Rs. 30,00,000 could easily be saved during this year and during the next four years of the Plan period foreign exchange to the extent of Rs. 3 crores can be conserved by the country in this item alone, if production and off-take are put on an economic war footing. The 'Standard RPG' railway cells have decided advantages and improvement over the older tubular or 'pencil' type batteries that are familiar to our railways. We are ready and look forward with great hope the decision of our Railway Board.

"Prototypes of telephone cells of 'Standard TPg' type are on test and your Company is confident, in the not distant future, to get its legitimate share in this field of considerable offtake in the country.

"Our 'Mitex' microporous rubber separator plant started actually arriving at the fag end of the year under report. The erection is complete and trial runs are being taken. There was quite a bit of delay in shipment from our overseas suppliers.

"With the separator plant in production, your factory will be producing cent per cent of all the components, under strict quality control, that go to a modern long life battery for the first time in this country. The effect of this is far-reaching.

"Most of our equipment and machinery were installed some ten years ago. There have been many improvements and developments in the process and design of important special purposes machines in Europe during this period. Your Directors are constantly in touch with these developments and also through our technical collaborators, Messrs. A. B. Tudor of Sweden. Action was taken to replace some of them and add a few balancing units during the year and were received and installed in the current year.

Financial Requirements

"To finance this new capital investment, your Directors issued the balance of the unissued capital of Rs. 5 lakhs during the current year. All this issue is fully subscribed and at present the issued and paid-up capital of your Company stands at Rs. 25,00,000. As mentioned earlier, we have still to order out some more balancing units in our container plant and other processes to take care of the diversification of production to meet the various demands on your factory. This demand has increased considerably of late.

"In achieving this objective, we shall have to face a variety of problems, the most important being finance. Your Directors have given considerable thought to this and will be coming in the near future before you for permission to increase the capital by Rs. 12,50,000 by issuing further 12,500 ordinary shares. Arrangements in this connection are being made and when completed will be put before you for approval. I have the assurance from a financing institution of high repute and considerable resources to underwrite this whole new issue. This testifies to the financial stabilty and future possibilities in the diversification of production that is on the anvil of the Company.

"The railways, telegraphs and telephones and the special batteries for the defence services, I have reason to believe, have a demand during the Plan period of nearly Rs. 2½ to 3 crores worth of lead acid batteries annually, which are today mostly imported items. It is your Directors' aim and objective to equip with the necessary facilities to meet the challenge of the foreign exchange shortage facing our Government in the Second Plan period.

Cent Per Cent National

"Your factory, may I say with pardonable pride, is the only hundred per cent. national unit in the country, which is organised and equipped for building lead acid batteres for various applications in industries, transport, communication, traction, etc., and I have hopes during this second Five-year Plan to fulfil our due share in reducing the imports on this account.

"I take this opportunity of sincerely thanking all our customers, distributors, automobile manufacturing industry and the various departments of the Government for the continued patronage and goodwill shown towards us. It is our business to build better and better batteries and to this end all our efforts are geared.

"The officers, members of the staff and operatives of the Company are fully aware of the great task ahead of us and I thank them sincerely on your behalf for their co-operation.

"With these words, I beg to move that the Directors' report and audited balance-sheet as at 30th June 1956 and the profit and loss account for the year ended 30th June 1956 be and are hereby approved and adopted."

LABOUR ALL OVER WORLD MAKES MODEST BUT GENERAL GAINS

PRODUCTIVITY AND REAL WAGES UP

DESPITE an increase in the number of labour disputes over the previous year, modest gains in earnings were achieved by workers throughout the world in 1956. These gains were widespread and were general enough to make the year the best in labour's history. This is the conclusion reached by the International Labour Organisation (I.L.O.) from a review of the situation in the year just ended. Commenting on labour's record in 1956, Mr. David A. Morse, Director-General of the I.L.O., observes: "Only a world which has grown accustomed to substantial gains year after year could regard 1956 as disappointing." Although the number of man-hours lost through stoppage of work in 1956 was greater by one-sixth than in 1955, employment was up and productivity and real wages were, generally speaking, slightly higher. The protection afforded by Social Security Schemes was more generally available and more liberal. There was a growing tendency towards shortening the legal or normal working week, particularly in North America and in Western and Eastern Europe. In certain countries, where there were full employment, the immediate effect was to raise gross weekly earnings, because of employers' desire to maintain previous work schedules, even when this involved increased overtime payments. On the whole, workers' level of living all over the world was enhanced, though a few countries reported a fall in real wages. But the year could by no means be regarded as having been a satisfactory one for workers in every respect. After several years of price stability, the threat of monetary inflation, for instance, hung over most part of the world and industrial disputes, which had established a post-war low in 1954, were showing, due to a variety of reasons, an upward trend.

The Employment Situation

The I.L.O. Study is based mainly on official statistics supplied by member Governments and the data relate, in most cases, to a period late in 1956 as compared with the same period of 1955.

Various measures of employment trends are available, some covering all branches of employment, some excluding agriculture and some limited to manufacturing industry. Using the broadest indicator available for each country, 19 of the 23 countries reporting recent data showed increases in employment over 1955 levels. The median (average) increase was a little less than 3 per cent. Most of the countries reporting on the general level of employment (i.e., those with comprehensive data), showed relatively little change, while statistics of employment in manufacturing—which are often a more sensitive indicator of changing economic conditions—showed wider variation.

In the United States, there was an increase of about 1 per cent. in the general level of employment, and almost 2 per cent. in manufacturing employment, while unemployment tended to be slightly higher than in 1955 because of the continued growth of the labour force. In the United Kingdom, the general level of employment showed no significant change, but manufacturing employment declined slightly, with the textile and automobile industries suffering more than the general average. Unemployment in the United Kingdom increased somewhat. In Canada the general level of employment was about 4 per cent. over 1955 levels, manufacturing employment was up nearly 5 per cent., while unemployment declined substantially. The general level of employment was up about 4 per cent. in the German Federal Republic, while manufacturing employment was more than 10 per cent. over 1955 levels. In Japan, where manufacturing employment was also more than 10 per cent. above 1955 levels, an important drop in unemployment was recorded.

Decreases in unemployment were significant in Belgium and Burma, while, in France and in the Netherlands, registered unemployment declined more than 20 per cent. from 1955 to 1956. Since unemployment levels were generally low, these percentages do not, in general, represent significant changes in the actual numbers of unemployed persons.

Substantial percentage increases in unemployment—but again representing small absolute numbers in most cases—occurred in Chile, Haiti, India, Ireland, Norway, Pakistan and the Union of South Africa. In Chile, the number of unemployed reported was almost double the 1955 figure. In addition to unemployment, underemployment is chronic in most underdeveloped countries. A recent survey in India shows that some 10 per cent. of those gainfully employed can be considered as underemployed, and that almost five million workers are unemployed or seriously underemployed in urban areas.

At the end of 1956, the unemployment situation looked somewhat more disquieting than during the earlier part of the year. In November 1956, the number of unemployed in the United States was 3 per cent. greater than in November 1955. In the United Kingdom the 12-month increase was relatively more important. The latest information available indicates that, though unemployment in the United Kingdom represented only 1.4 per cent. of the labour force in December 1956, as compared with 1.0 per cent. in December 1955, the number of persons out of work exceeded the number of jobs being offered for the first time since March 1954. The Suez crisis reduced oil supplies in Western Europe, threatened the activity of the automobile industry and, indirectly, the demand for steel used in automobile manufacture. In Hungary, many thousands of workers were unemployed or on half-pay at the end of the year, and it was still uncertain how soon industrial activity would be fully re-established. As a result of declining coal output and related economic difficulties, the threat of unemployment also menaced Poland.

Consumer Prices

Consumer prices, which had shown an upturn in a number of countries late in 1955, rose more generally during 1956. The latest information available for 83 countries (principally relating to September, October or November) shows a median increase of 3 per cent. from 1955 to 1956—this increase being somewhat greater than the median rise during the preceding 12 months. Available figures do not fully reflect the influence of the Suez crisis and recent developments in Hungary and Poland, which will probably exert upward pressure on prices in the countries immediately concerned, if not on world markets.

Twelve-month median price increases were 7.4 per cent. in Latin America and 6.8 per cent. in Asia. Certain countries in these regions have been in the grip of inflation for many years. More moderate increases were recorded in North America, Europe and Africa. In the Americas, price movements ranged widely from a decline of 5 per cent. in Ecuador to a rise of 38 per cent. in Chile. The increase in Chile, however, represents a lesser pace of inflation than that recorded from 1954 to 1955. Increases of more than 15 per cent. were recorded in Brazil, Argentina and Paraguay. Prices in the United States and Canada, which had remained relatively stable from 1952 to 1955, began to rise again in 1956, considerably influenced by increases in the price of food. No serious price inflation was apparent in African countries among which the median price increase was 2.5 per cent.

Of the 25 countries reporting wage statistics for 1955 and 1956, only one showed a slight decline in money wages. In nine other cases, however money wages failed to keep pace with rising consumer prices, resulting in a decline in real wages. Among the 25 countries as a group the median rise in real wages was 1.6 per cent., compared with 3.5 per cent. during the preceding 12-month period. The countries showing the greatest increase in real wages were Puerto Rico, with an increase of 13 per cent. in real hourly earnings and 11 per cent. in real weekly earnings, and Japan, with a 6 per cent. increase in monthly earnings over 1955. In most cases, however, the change in real wages was within a range of plus or minus 3 per cent. Declines in real wages were mitigated and increases augmented in many cases by increases in social benefits and the year also witnessed important advances in family allowances and other forms of social protection.

Productivity

Manufacturing production, as indicated by preliminary figures, continued to rise more rapidly than manufacturing employment in most countries in 1956, implying a continuing increase in productivity per person employed. In a number of cases, however, and particularly in Europe, the increase in manufacturing output was smaller than in 1955. Manufacturing output is estimated to have risen by about 5 per cent. in aggregate in 11 countries of Western Europe which recorded a rise of 9 per cent. in the preceding 12 months. The recent increase in output, in conjunction with a rise of about 2.5 per cent. in employment, implies an increase in productivity of some 2.5 per cent. in 1956, or less than half the increase in productivity which occurred in 1955.

Within the European average, there are substantial country-to-country differences. Preliminary figures suggest that output and employment in the United Kingdom were largely unchanged from 1955 levels. Both output and employment rose in the German Federal Republic, leaving productivity at about 1955 levels, compared with a more than 10 per cent. increase in output per worker from 1954 to 1955.

In France, where output rose by more than 20 per cent. and employment rose only moderately, output per worker continued to increase, as it had in the previous year. Output rose by 7 per cent. in Italy, with employment rising by only 1.5 per cent. Manufacturing output in the United States increased by about 2.5 per cent., and manufacturing employment by somewhat less than 2 per cent., implying only a small increase in productivity. Output per man from 1954 to 1955 had risen by about 8 per cent. in the United States. In Japan, manufacturing production continued to rise much more rapidly than manufacturing employment, indicating a gain of nearly 5 per cent. in output per man, as in the preceding year. Economic developments in Argentina subsequent to the change of regime brought about an increase of some 3 per cent. in manufacturing output, with manufacturing employment stable or slightly down from 1955 levels.

EMPLOYMENT MARKET INFORMATION

A three-week training course for State officers connected with the employment market information programme of the Government of India was inaugurated at New Delhi on 20th February by Mr. S. A. Qadir, Director-General of Resettlement and Employment. Emphasising the importance of employment market data for preparing training schemes and for undertaking measures to meet the manpower requirements of various development schemes, Mr. Qadir referred to the scientific nature of the work involved and called upon the officers to take a live interest in the task which, he said, was of national importance. The training course will initiate nearly 15 employment officers from the States into the techniques of the scheme and methods of work.

Prepared with the assistance of an I.L.O. expert, the employment market information scheme aims at collecting from employers, both in the public and private sectors, information regarding the existing labour force, changes in the level of employment, current and prospective demand for labour, shortages of various categories of personnel and the disposition of the labour force in regard to different occupations and industries. The data thus collected will be used in man-power planning, in preparation of training programmes and the study of impact of development plans on employment.

A pilot project under the scheme was introduced in Delhi State at the end of 1955. The project, which is being carried out on a quarterly basis, has yielded satisfactory results and it has now been decided to extend the scheme to other States also.

WAGES IN RELATION TO PROFITS AND COST OF LIVING

IS THERE NEED FOR RAISING WORKERS' EARNINGS?

By Dr. R. Singh, M.A. Ph.D.

CONSISTENT with the larger interests of the community, it would be unfair to treat wages and profits in isolation. In order to have a balanced and unbiased view, the problem may be analysed as an integrated whole with all its possible ramifications. Of late, there has been in this country a controversy on the judicious relationship between wages and profits. Each of the two parties, labour and capital, contends that it is not being equitably remunerated and that it should have an increasing share in the fortunes of industry. The worker's demand for a general wage increase has been voiced by the biggest all-India workers' organisation, the Indian National Trade Union Congress. On the other hand, the capitalist's argument regarding the shrinkage of finance for the private sector due, among other factors, to the policy of restraint on dividend and compulsory deposit of a substantial portion of the reserves and depreciation allowances with the Government cannot easily be overlooked. Both these factors complicate an economic situation already rendered difficult by the inflationary trends.

It is proposed in this article to make an objective assessment of the respective shares going to capital and labour out of the gains of industry over the war and the post-war periods against the background of the fair standards as understood in the modern regulatory practices in force in this country. In this context, it is relevant to enquire as to how far real wage has increased or decreased; what amount of progress has been made towards the attainment of a fair wage promised to the worker in terms of the Industrial Truce Resolution of 1948; how far worker's productivity has improved and so on. It is equally important to investigate how the capitalist has fared during all these years of war and post-war period. Has real profit registered an increase and helped in capital formation? What fluctuations have occurred in the rate of profit as percentage of net worth and how such fluctuations compare with those in wages? Has there been any change in the relative shares of capital and labour in the gains of industry? How does the *per capita* income compare with the worker's average earnings?

Dog Chasing His Own Tail

Now supposing the demand for increases in wages is conceded, the question may further arise whether such a demand—unless it is accompanied by the worker's improved efficiency—would contract profits to such an extent that marginal units as a consequence may have to go out of existence and cause unemployment in the economy? Or would wage increases, create an inflationary situation and soon defeat the purpose for which they are granted? If a vicious circle is created, in which increases in wages will follow those in prices, it will be like a dog chasing his own tail. Any policy advocating a particular wage level or profit level must take these questions into consideration.

Unfortunately, the statistics of industrial profits are not available in the form and manner in which they may readily be utilised for an accurate and objective study of these problems. Even the authoritative profit index prepared by the Economic Adviser's office suffers from certain limitations. Its main drawback is the definition of "net profits" embodying depreciation charges. It also does not provide for a fair regional representation of industrial units. The study of the trends of industrial profits by Mr. M. C Munshi, though made on a scientific basis, covers but a limited field and does not extend beyond 1944. The Taxation Enquiry Commission compiled, for its own use, some very valuable tables bearing on industrial profits for the years 1946-51. This series also suffers from similar limitations. A recent attempt by the Statistical Department of the Reserve Bank of India, though surveying an extensive field, dates back only from 1950.

Trend of Profits

It is primarily with a view, among other things, to projecting an altogether new and continuous series of net profits as related to net worth that this article has been attempted. This lends support to the reliance that can be placed on the discrete series of net profits. Moreover, it furnishes another useful scale for measuring industrial prosperity. The only reliable and authenticated statistics which can be utilised for ascertaining profits on a continuous and common plank for a major section of industry since 1946 is the Census of Manufactures. It must, however, be borne in mind that the census does not set forth some of the minor items of expenses such as interest, insurance and advertisement charges. The profits ascertained from the figures contained in it are likely to be slightly overrated. Net profits, however, have been struck by deducting the amount of tax at the varying rates of income-tax applicable during different years. They have been shown in the following tables as one of the two series of percentage figures under the heading of net profit as percentage of net worth and juxtaposed with corresponding figures of the discrete series referred to above with a view to enabling the reader to form a nearly correct picture of the rate of profitability. The corresponding percentages in the two series do show differences to be explained by the smaller or larger number of units studied. They, however, establish similar trends in industrial profits.

The worker's annual average earnings deflated by all-India Cost of Living Index in cotton, jute and industries as a whole have been picked up for economic analysis in relation to real profit index and profits as percentage of net worth over the entire war and post-war periods.

The phenomenal gains that came the way of the cotton textile industry may be attributed to the abnormal conditions created by World War II. In fact, from 1940 onwards, the industry enjoyed a period of prosperity which reached its peak in 1943. Thereafter, profits gradually declined till 1947. Nevertheless, the years between 1943-47 were highly prosperous for the industry and the worst for labour since real earnings experienced a progressive decline. The remarkable feature of the period was that labour was denied a share in this war-caused prosperity and that capital pocketed the entire gains of industry. Unlike the practice in the boom years of the first post-war period, the cotton mill industry was more prudent in conserving profits made in the Second World War and in the following years. The huge reserves that could be built up were subsequently capitalised by the industry by issuing bonus shares in 1946-47. This reduced the rate per cent. on dividend on the increased capital. Obviously, therefore, the rate of dividend should not be regarded as an infallible scale to measure industrial prosperity. The year 1947 brought considerable relief to the working population as a consequence of the enforcement of standard wages, higher rates of dearness allowance and bonus under the awards of the various tribunals. The industry made exceptionally high profits in 1948 and 1951. The year 1952 saw the real profit index touching the lowest point of 69 which is further confirmed by the lowest profit percentage registered at 1.7 and real earnings attaining the peak. By 1954, the distribution of the gains between capital and labour resumed the same proportions as in 1939 with a slight handicap against labour.

Labour's Share

Labour's share in the gross receipts of the cotton textile industry varies from 22.7 per cent. in 1946 to the highest point, 27.6 per cent. receding to its former level in 1952. Almost similar

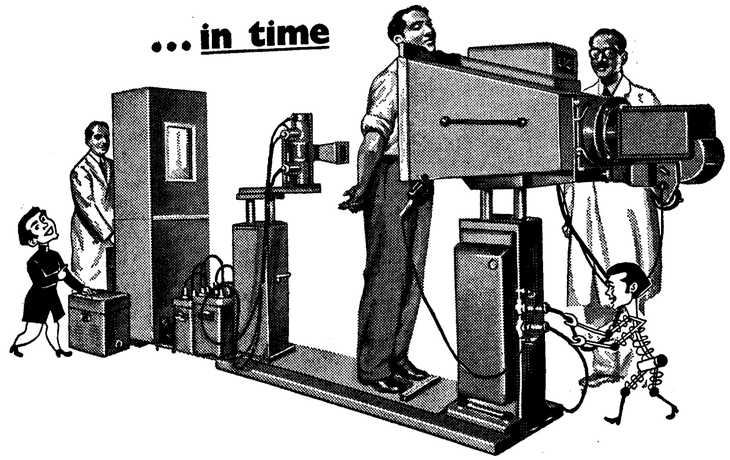
the detection of

the threat of disease...

...in time



X-Rays are an indispensable adjunct to modern medical practice. With the help of X-Rays the presence of disease or illness is detected, its nature and extent assessed instantly and exactly. Treatment then becomes more definite and direct, cure more certain and rapid.

Today the eyes of X-Ray watch over the health of the nation. They probe and seek for signs of illness and infection, give warning to doctors to mobilise the means of meeting and overcoming the threat of disease as it appears.

Philips take pride in the fact that many of Philips X-Ray units are helping to cope with this great task in many parts of India. These units, already installed in hospitals and clinics, are giving true and valued service in the constant fight against disease and illness.

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-First Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 7th day of March, 1957, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1956

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1956. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 13,25,030-2-5, have resulted in a profit of	1,05,29,924	7	2
An interim dividend was paid for the half-year ended 30th June, 1956, at the rate of 6 per cent. free of Income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income-tax and Super-tax for the year	28,00,000	0	0
Bonus to Staff	13,75,000	0	0
The Directors now propose :—			
To pay a final dividend for the half-year ended 31st December, 1956, at the rate of 10 per cent. free of Income-tax, making 16 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	25,00,000	0	0
To place to the Bank's Reserve Fund	8,00,000	0	0
To carry forward to the next account	15,54,924	7	2
Total .. Rs.	1,05,29,924	7	2

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½ per cent.

During the year the Bank celebrated its Golden Jubilee. To mark the event, the Paid-up Capital was increased from Rs. 250 lakhs to Rs. 300 lakhs by making a bonus issue to the Shareholders of 1,00,000 "A" issues of shares.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Sir Cowasjee Jehangir, Baronet, G.B.E., K.C.I.E.
Mr. Bhagvandas Chunilal Mehta.
Mr. A. D. Shroff.

Under the provisions of Section 260 of the Companies Act, 1956, the under-noted Directors, who have been appointed as additional Directors during the year 1956, will hold office up to the date of the Annual General Meeting, namely, up to 7th March, 1957. They stand for election in the manner provided by the Act.

Mr. Madanmohan Mangaldas.
Mr. N. K. Petigara.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*
AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, *Directors.* K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS, N. K. PETIGARA, V. N. CHANDAVARKAR.

H. A. CURRIMBHOY, *Chief Accountant.*
D. R. THOM, *General Manager.*

BOMBAY, 31*st January*, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1956.

trend is discernible in the case of the jute industry. Labour's share, however, in the gross receipts of industries as a whole moves up from 15.4 per cent. in 1946 to 18.3 per cent. in 1953. It is striking that the year 1951 in all cases registers the lowest percentage share for labour, i.e., 19.5 per cent., 12.3 per cent. and 14.5 per cent., respectively.

By 1939, the jute industry could emerge with confidence from the grip of the economic crisis of the last year. In fact, orders for sandbags from the British Government ushered in boom conditions. From 1940 onwards, the industry entered upon what may be termed as a wave of prosperity which stands more or less in wide contrast chronologically to the boom enjoyed by the cotton textile industry and reached the peak in 1942, due to war orders from the Government at home as well as from abroad. The profit index again began to mount in 1944, the upward trend being maintained till 1946, owing to the revival of steady demand for jute manufactures from the United Kingdom Commercial Corporation and later from South Africa.

Jute Workers

The money earnings gradually increased, but could not keep pace with the increase in living costs in Calcutta. The real earnings touched the lowest point of 58 in 1944 and gradually moved up to 67 in 1946 when real profits were up by nearly 50 per cent. It is deplorable that the employers not only denied the workers a share in the war-caused gains of the industry, but what is even more deplorable is that they deprived the workers of a portion of what belonged to him in 1939. In other words, the 1939 standard of living which was already below the subsistence level was further pushed down, while real profits were constantly increasing. The year 1949 brought substantial relief to the worker as a result of the award and proved to be the worst for the industry which sustained huge losses as supported by the lowest point of profit index and profit percentage over the period under observation. The tables almost turned by 1951 which brought considerable gains to employers and a slight setback in worker's real earnings. The real profit index touched the highest point during the decade as borne out by net profit as a percentage of net worth. The year 1954 is quite reassuring and puts labour ahead by a considerable margin in relation to the employer.

Labour Gets More

The table relating to all industries is significant. The index of real earnings after the year 1940 started a downward trend. The declining phase set in in 1942, continued through the whole of the following quinquennium, touching the lowest point of 73 in 1946. This was due, in spite of increases in money earnings, to tremendously larger increases in cost of living index which exceeded the former. The profit and productivity indices also reflected a similar tendency. During the years 1947-51, the index of real earnings rose almost steadily, while profit and productivity indices kept curving up and down. The year 1952 is marked by a sizable advance in real earnings, over-stepping the base, but by a steep fall in the profit index which stands almost at the lowest rung of the ladder. The sudden fall in profits is also corroborated by the lowest rate of profit as a percentage of net worth. The year 1950 proved the turning point in the history of Indian industry when the index of productivity took a definite upward turn and, for the first time since the outbreak of the war, did productivity surpass the pre-war period in 1953 and touch the highest point of 113 in 1954. In brief, the present position is that productivity indices have registered a heartening tone of improvement over those of real earnings and indices of real earnings have raced ahead of those of profits by a considerable margin.

This brief survey of the country's major industries reveals the facts of the situation and helps enlighten informed public opinion that should determine the future line of action and influence the formulation of a suitable wage policy. The country-wide clamour for a sizable increase in wages and industrial unrest reinforce the imperative need for such a policy.

The argument which is often advanced that the worker's average earnings are many times larger than the *per capita* income, is hardly tenable. Family earnings are often mistaken for individual earnings. They should be divided by the average number of consumption units in a family, that is, by three, before being equated with the *per capita* income. Such a comparison, apart from being fair, will convey a correct picture of the worker's social and economic status. To concretise, the average annual earnings in organised industries in 1954 amount to Rs. 1,111 which are unquestionably family earnings and as such ought to be divided by three. This gives an income of Rs. 370 per head which, in all fairness, can be equated to *per capita* income which, for the same year, stands at Rs. 262. An industrial worker's economic position today is thus far superior to that of an average person in the country.

It is contended that the real wages have decreased, despite the intensified efforts on the part of labour resulting in considerably enhanced output. Over a wide range of industries, real wages, instead of lagging behind, have actually advanced towards fair wage consistent with our low national income. The case of the cotton textile industry is slightly different. From 1948 onwards, wages have been linked, under various awards to the cost of living index and, *ipso facto*, have been moving in close sympathy with it. If the 1948 wage level was held to be adequate to keep the worker in a requisite state of efficiency, the present wage level can hardly be otherwise. The same statistical tables prove that the real profits have considerably declined, hence no further relief to the worker is possible at the cost of profits.

Fleece the Consumer?

The other alternative, therefore, to push up the real wage level, is to raise the price of the product. But would it not be regarded as an act of perverted vision to fleece the consumer still further in an atmosphere charged with ever-swelling prices in order to foot the inceased wage bill? At a time when the nation's attention and energy are bent on how to implement the Plan successfully, the prerequisite of which is price

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Bank of India Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(*a*) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

BOMBAY, 31*st January*, 1957.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1956, does not include any profit or loss of its subsidiary, The Bank of India (U.K.) Nominees Limited (a Nominee Company incorporated and operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

DIRECTORS' REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1956.

The Directors submit the Balance Sheet for the year ended 31st December, 1956. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

J. DONALDSON, S. H. BRADFORD, *Directors.*

LONDON, 1*st January*, 1957.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

Balance Sheet, 31st December, 1956.

Capital Authorised and Fully Paid-up:			
100 Ordinary Shares of £1 each ..	£100	Cash at Bankers	£100
	£100		£100

Signed on behalf of the Board,

J. DONALDSON, S. H. BRADFORD, *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1956, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

NEW PUBLICATIONS

The Transfer of Power in India. By V. P. Menon. Published by Orient Longmans, Bombay. Pages: 534. Price: Rs. 25.

POLITICIANS and distinguished service members of England, in particular, follow a healthy example of writing out their memoirs on their retirement and thus place before the public a wealth of undisclosed information with a view to enlightening them on the past and providing, at the same time, a guide for the future. These publications not only enrich the literature but also form the basis for research and close study. Very often, they help political students to take a proper perspective of the country's affairs.

Viewed from this angle, Mr. V. P. Menon's latest publication, "The Transfer of Power in India," under review is a welcome addition to the information available on the political history of India. The author was a distinguished member of the Political Department of the Government of India, with nearly three decades of service. He actually grew with the constitutional developments from the Montford reforms days and held the high position of Constitutional Adviser to the British Governor-Generals from 1942 to 1947 when power was transferred to the people of India by the British. He was also the Secretary of the Indian Cabinet for a brief period and the first Secretary of the newly created Ministry of States. As he was actually handling all the papers relating to constitutional developments in India, his account is readily authentic and informative.

After rapidly reviewing the early history of the British administration in India from the days of the East India Company and the efforts of the British Government to enact the Government of India Act of 1935, Mr. Menon plunges into the events that took place in India since the outbreak of the Second World War, a turning point in the history of mankind. From the Indian point of view, this period is important, as it marked the demand for the partition of India by Mr. Jinnah. There was no reference to the demand for Partition or the demand for Pakistan in the 1935 Act. The establishment of an all-India Federation held the field. The then Viceroy, Lord Linlithgow, was actually toying with the Federal part of the Constitution without making any progress. It receded to the background when the 1939 war broke out. The Indian National Congress, which was running the administration in nine out of the eleven provinces in British India, demanded the immediate transfer of power to the people of India as an earnest implementation of the war aims outlined by the British Government. History would have been different, if the Congress Party had not voluntarily thrown away the trump card and walked out of office in 1939.

Mr. Menon vividly narrates the march of events from the outbreak of war, throwing ample light on how the demand for Pakistan was conceived and developed under the patronage of Lord Linlithgow in the early forties. The Viceroy turned his back against the Congress as the latter did not co-operate in war efforts on his terms. The Mission undertaken by Sir Stafford Cripps revealed that the British Government was not at all prepared to relax its hold on India. Mr. Menon's version of the Cripps Mission confirms this reading. At one stage of the talks, differences between Sir Stafford Cripps and the Congress leaders narrowed down to the control of the Defence Department in the interim government to be set up at the Centre. Col. Lewis Johnson's intervention (Johnson was President Roosevelt's personal envoy who happened to be in Delhi during the Cripps negotiations) resulted in a new formula, known as "Johnson's formula," which almost bridged the gulf. Sir Stafford finalised it and discussed it with the Viceroy who did not accept it. Recalling this event, Mr. Menon says:

"Sir Stafford Cripps telegraphed the revised formula to His Majesty's Government as the basis on which the negotiations were proceeding and with a strong recommendation for its acceptance. He urged that, without it, there was no prospect of success, but, on this basis, there was considerable chance of securing the agreement of the Congress. Simultaneously, the Viceroy communicated his own views to His Majesty's Government which decided that it could not agree, especially during the period of war, to lessening in any material respect the powers of the Commander-in-Chief. Sir Stafford felt that he was unable to proceed further and the negotiations came to an abrupt end." (Page 130).

The public will remember that Sir Stafford, in his farewell broadcast in 1942, held the failure of the Congress and the League to reach an agreement responsible for the breakdown of the negotiations in Delhi and his return to London. The author should have given here the full text of Sir Stafford's cable to His Majesty's Government and the latter's reply for the edification of future historians.

Lord Wavell, when he became Viceroy in 1943, began well in his efforts to solve the deadlock between the Government and the Congress. He sent an admirable despatch to His Majesty's Government on the need to promote a settlement with India. Here also, the author should have quoted the text of the despatch, for that would have heightened the interest of readers. Be that as it may, Mr. Amery, the then Secretary of State for India, proved a stumbling-block. But when the Labour Party came to power and decided to withdraw from India, Lord Wavell proved unequal to the task. A soldier Viceroy, with no political background and political experience, found himself a prisoner in the hands of a sinister clique composed of a few official elements who had developed antipathy towards the Congress. Mr. Menon's unvarnished account of the interim government formation discloses that Lord Wavell committed blunders in allowing the Muslim League members enter the Executive Council, without accepting the Cabinet Mission Plan of 11th May 1946 and without even withdrawing the "direct action" launched by the League. This was a breach of faith both on the part of the Viceroy and the League as the Congress formed the interim government on acceptance of the Cabinet Mission Plan. Wavell was also guilty of failure to take the Bengal Governor to task for not maintaining law and order in Bengal at a critical juncture, when the "great killings" took place in Calcutta and elsewhere in that State. Under the 1935 Act, which was still in force, the minorities were special responsibilities of the Governors. The author should have also given the readers fuller details of the assurance given by the Cabinet Mission in 1946 to the Muslim League behind the back of the Congress leaders. Instead, he has dismissed it with a casual reference. This is a relevant and very vital point of importance to students of Constitution.

Similarly, when the author deals with the evolution of the 3rd June plan by Lord Mountbatten, he should have given the full text of the first plan which the new Viceroy sent to the British Government without even consulting Mr. Jawaharlal Nehru. It was a fantastic scheme of balkanisation of the country which fell through at Mr. Nehru's protest when he got scent of it. As a piece of history, the author has no right to withhold it from the public. Space is no consideration when history is being recorded. Mr. Winston Churchill, for instance, in his six volumes of the Second World War, has not hesitated to include even those documents which were painting him dark. Mr. Menon's contribution to the 3rd June Plan would have been highlighted if Lord Mountbatten's first plan had also been published. He would have made his book very thorough, had he added the fuller texts of the despatches of the Viceroys, the Cripps' Mission and the Cabinet Mission and published his effort in two volumes of 350 pages each, instead of one volume of 534 pages.

In conclusion, it should be affirmed that the volume under review, written in lucid language, is a valuable addition to the history of the constitutional struggle of India to achieve independence. The author has rightly earned the gratitude of future generations of India.

—*N. Salivateeswaran, M.L.A.*

The "Eastern Economist" Annual Number 1956. Edited by E. P. W. da Costa. 52, Queensway, New Delhi. Price: Rs. 7-8.

Economic forecasting, though it cannot be regarded as a mere exercise in astrology, has many limitations which make the charting of the future course of a developing economy a hazardous job. Although the recently developed input-output analysis and the modern refinements in statistical methods have made the science more precise, a quantitatively accurate predictive economics still remains one of the most cherished dreams of economists.

The *Eastern Economist* has selected "India in 1975" as the theme of its Annual Number which, of course, involves some long-range economic projections. The method followed, it is pointed out at the outset, is the same as that of the Report entitled "Resources for Freedom," prepared by the President's Material Policy Commission of the U.S.A. which, admittedly, is a masterpiece in intelligent economic speculation. It is no exaggeration to say that the U.S. is the most statistically-minded nation in the world and there is a wealth of firsthand statistical data regarding almost every aspect of American life, not to speak of economic. But, in India, an economic analyst has to face formidable difficulties because of the dearth of adequate and reliable data concerning even such vital economic magnitudes as national income and employment. Such being the case, delineation of the economic pattern of the country in 1975 is a hard task and, therefore, our New Delhi contemporary deserves praise for this undoubtedly bold, if not totally hazardous, attempt.

The publication falls into three parts, Part A a political prologue, Part B an economic review, and Part C the epilogue, a sketchy essay on philosophic and cultural values in 1975. It also contains, as a separate section, a review of Indian economy in 1956. It is said that India will be a great industrial power and a great democracy in 1975 and the prediction is that it will be closer to the U.S. and more removed from the Soviet Union than at present. The country's economy, about two decades ahead, will have experienced considerable improvement. The national income, industrial and agricultural production, etc., will have risen substantially. And so too population. The cultural scene is not likely to be very much different from the present and India in 1975 will have the same spiritual needs as it has now. On the whole, the picture of India 18 years hence, as visualised by the journal, appears to be encouraging. But, whether the projection will assume the contours of reality, time alone can say.

Capital's Annual Review of Commerce, Trade and Industry. Editor: George Barrel. 5, Mission Row, Calcutta. Price: Rs. 5.

Our Calcutta contemporary has taken pains to bring together top-ranking economic experts both from within and outside the country to analyse various aspects of economic development in India, with special reference to the second Plan. In a thought-provoking article on the employment potential of the second Plan, Mrs. Joan Robinson of Cambridge contends that full employment of the existing labour force is not an unattainable goal during the short duration of the Plan. Dr. V. K. R. V. Rao assesses the foreign exchange needs of the second Plan, while Dr. P. R. Brahmananda makes out a case for revision of the second Plan so as to make possible a more rapid expansion of wage-goods output. Dr. Thomas Balogh attempts to impress upon Western democracies the need for generous and imaginative planning of economic development of underdeveloped countries through financial aid and technical assistance in order to achieve a balance of international economic power. The European Common Market Scheme is discussed by Mr. Geoffrey Tyson while Mr. Neil McInnes computes the social costs of economic progress. The dangers of bureaucratic power to democratic planning are pointed out by Mr. Tulsidas Kilachand. Mr. Naval H. Tata emphasises the need for eschewing the jealousies between public and private enterprises and urges closer collaboration between the two. Some other articles of particular interest are those entitled Growing Opportunities for Indian Exports in East Africa, Working of Life Insurance in India, Scope for British Co-operation in Indian Economic Plans, Managerial Autonomy in Public Enterprises, Need for Greater Emphasis on Banking Stability, Regulation of Stock Exchanges in India, etc. In addition, the number also contains reviews of the year's developments in the major industries of India.

The Economic Weekly Annual Number. Editor: Sachin Chaudhuri. 15, Tamarind Lane, Fort, Bombay. Price: Rs. 2-8.

This publication contains a number of interesting articles dealing with various aspects of Indian economy. Particular attention is paid to the financial aspects of the Plan, especially the foreign exchange needs. A re-examination of trade policy and an assessment of the implications of Britain joining the free trade area and its bearing on Indo-British trade are urged by Dr. B. N. Ganguly in an article entitled "The Outlook for India's Balance of Payments"; Mr. Shigeto Tsuru expresses some theoretical doubts about the Indian Plan-frame and Dr. Jan Tinbergen analyses the economic implications of the mill *versus* cottage industries controversy. The National Economy of the U.S. in 1957 is the subject of an article by Prof. Galbraith. There are also other articles of topical interest like Import Trade Control and Industrialisation, Recent Monetary Development, Rural Under-employment, Community Development and Economic Growth, to mention only a few.

THE INDIAN OVERSEAS BANK LTD. MADRAS

The South East Asian market — a problem ?

Businessmen interested in trade with South East Asia couldn't do better than to consult the Indian Overseas Bank. The bank has extensive experience in trade with South East Asian countries through its chain of branches strategically located all over South East Asia. Before you invest in trade in this area it would be wise to consult the Indian Overseas Bank.

STATE BANK MAINTAINS PROGRESS

BUSINESS EXPANDS—RECORD PROFIT

THE financial results for the first full year of working of the State Bank of India, after it took over the Imperial Bank of India on 1st July 1955, show that the change-over to State control has not affected in the least either the Bank's business or its earnings. On the other hand, there has been a sizable expansion in both; this is obviously due to the facts that the set-up of the Bank has been preserved, that the purely commercial nature of its business has been strictly adhered to and that it is not run as a department of the Government. The audited accounts of the Bank for the year ended 31st December 1956 disclose that the Bank had a good share in the prosperity of banks in general during the past year.

The Bank's profit for the year under review amounted to Rs. 1.56 crores, as compared with the combined profit, at Rs. 1.36 crores, of the Imperial Bank of India in the first half of 1955 and of the State Bank of India in the latter half. The rise of Rs. 20 lakhs compares favourably with the negligible decline of about Rs. 1 lakh noted in 1955 and has helped the Bank exceed the record profit of Rs. 1.37 crores earned by the Imperial Bank of India in 1954 by a substantial extent. The sharp rise in profit is due to the increase of Rs. 28 lakhs in interest and discount earned to Rs. 6.19 crores and of Rs. 23 lakhs in commission, exchange and brokerage to Rs. 2.44 crores. The outgo by way of interest paid on deposits and borrowings also shows a rise from Rs. 1.37 crores to Rs. 1.59 crores. An increase of Rs. 8.5 lakhs to Rs. 5.51 crores is also noted in expenses. Of these expenses, salaries and allowances and provident fund account for Rs. 4.30 crores, as against Rs. 4.40 crores in the previous year, while other expenses (including depreciation on Bank's property) for Rs. 1.13 crores, having gone up from Rs. 1.03 crores in 1955.

The increase of over Rs. 20 lakhs in profit has not been utilised to any extent in paying a higher dividend, which, on the other hand, is being maintained at 16 per cent. per annum, a rate which the Imperial Bank of India had been paying from 1950 onwards, after having raised it from 14 per cent. The dividend absorbs Rs. 90 lakhs. The main beneficiaries of the rise in profit are the members of the staff. For as much as Rs. 10 lakhs has been set aside, for the first time, to staff welfare fund, and the allocation to pension fund has been raised from Rs. 5.75 lakhs to Rs. 6.14 lakhs, while bonus to staff is kept unchanged at Rs. 40 lakhs. After a lapse of four years, the reserve fund has been strengthened by a sum of Rs. 2.50 lakhs. Even then, the amount carried forward is substantially higher at Rs. 41.91 lakhs.

Finances at a Glance

Advances	57.9	46.8	43.6	50.6
Investments	44.1	51.7	47.0	45.4
Cash	11.9	13.7	16.4	9.6

Note.—The figures relating to 1954 and 1953 are those of the Imperial Bank of India.

The latest balance-sheet, as compared with the one preceding, fully reflects the conditions in the money market during the year under review. Though there has been a rise of Rs. 16 crores in deposits, as against a shrinkage of Rs. 5 crores in 1955, it is not commensurate with the rise in demand for bank credit, as indicated by the increase of Rs. 34 crores in advances. The bulk of the rise in deposits is accounted for by current deposits, which have gone up by Rs. 10 crores to Rs. 174 crores. The increase in fixed and savings bank deposits is evidently due to the steps taken by the Bank to enlarge its resources. Giving an account of these measures, the Directors' report says:

"The rise in the Bank's resources under deposits being relatively slow, with a view to attracting deposits and improving the facilities to depositors, the State Bank raised at the beginning of 1956 the limits in regard to savings bank accounts. Savings bank depositors were allowed to deposit upto Rs. 10,000 (instead of Rs. 5,000 as previously) in a calendar year and interest was allowed on savings bank balances upto Rs. 20,000 (instead of Rs. 10,000 as in the past). As the year progressed, interest rates hardened further and the Bank decided to raise its deposit rates, though not to the same level as those of other banks. With effect from 1st December 1956, the Bank raised the rates of interest in India and Pakistan on: (i) Savings bank accounts from 1 per cent. to 1½ per cent. per annum; (ii) savings bank deposit accounts from 1½ per cent. to 2 per cent. per annum; (iii) fixed deposits for 12 months from 1½ per cent. to 2½ per cent. per annum; and (iv) fixed deposits for 3 and 6 months—accepted for the first time—at rates varying from 1 per cent. to 2 per cent. per annum. In addition, the Bank has decided to accept short-term deposits of large amounts upto 3 months at negotiated rates of interest. Savings bank depositors at selected centres will also be shortly given the facility for withdrawal of funds by cheques."

Nevertheless, the expansion in deposit resources having proved incommensurate with the rise in advances, the Bank, as in the case of other Scheduled banks had to borrow substantially from the Reserve Bank, as indicated by the increase from Rs. 5 crores to Rs. 17.27 crores in borrowings from other banks at the close of the year. Of these borrowings, Rs. 16 crores represent those in India and the balance outside India. The entire borrowings are secured by

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1956.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been within the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

INDIAN STANDARDS INSTITUTION

ENCOURAGING PROGRESS IN 1955-56

THE setting up of the Indian Standards Institution in 1947 following the recommendations of the Industrial Research Planning Committee (1945), reflected the fulfilment of a long-felt need. In fact, as long back as 1940, a demand for its establishment was put forward by the Twelfth Industries Conference held in Lucknow. With the growing industrialisation of the country, the need for evolving standards for materials, commodities, etc., for adoption at the national and international levels, for avoiding wastage of resources and for improving quality, can hardly be overemphasised. Appropriately, the objects of the I.S.I. include the preparation, promotion and general adoption, at the national and international levels, of standards relating to materials, commodities, structures, practices and operations. It also assists in the rationalisation of industry by co-ordinating the efforts of producers and consumers for the improvement of appliances, processes, raw materials and products. Further, it promotes quality control methods and provides for the registration of Standard Marks applicable to materials, commodities, etc., conforming to standards issued by it. Though, since its inception, the Institute has had to labour under serious limitations imposed by lack of adequate financial resources and paucity of man-power possessing the kind of experience needed in the field, it has made impressive progress in the year April 1955-March 1956. The Institute's functions, organisational structure and its progress in the the year under review are dealt with at considerable length in its annual statement for that year, just published.

The General Council of the Institution, in which rests its overall control, consists of representatives of industry, Central and State Governments, scientific organisations, subscribing members and the Division Councils of the I.S.I. The actual management of the affairs of the Institution is looked after by the Executive Committee and the financial matters are dealt with by the Finance Committee, both of which are appointed by the General Council. The income of the Institution is derived from Government grants from the Centre, subscription from the members, including the States, and sale of standards.

Functions

The I.S.I. carries out its functions through a large number of Sectional Committees, Sub-Committees and Panels, consisting of scientists, technologists and representatives drawn from industrial and Government organisations. These Committees are appointed by the Executive Committee or the five Division Councils of the I.S.I., namely, the Engineering Division Council (E.D.C.), the Building Division Council (B.D.C.), the Textile Division Council (T.D.C.), the Chemical Division Council (C.D.C.), and the Agricultural and Food Products Division Council (A.F.D.C.). Two more Division Councils, that is, the Electro-technical Division Council (E.T.D.C.) and the Structural and Metal Division Council (S.M.D.C.) are proposed to be added soon.

The procedure followed for evolving standards makes interesting reading. When the I.S.I. receives a proposal for Indian Standard—which is normally entertained from the members—the proposal will be scrutinised by the appropriate Division Council, by the Executive Committee, and then forwarded to the Sectional Committee concerned with the subject. The Sectional Committee, which is composed of the representatives of various interests concerned, prepares, with the help of sub-committees and panels, a working document, after studying the relevant literature and, where necessary, undertaking testing in a laboratory. The draft is then sent out to various interested parties for their opinions, in the light of which it is finalised by the Sectional Committee and submitted in the form of a recommendation to the Division Council and then to the Chairman of the Executive Committee, who is authorised to publish the same as an Indian Standard. The period normally taken for this procedure to be completed is one to three years from the date an item is proposed for standardisation. Besides this technical work, the staff of the I.S.I. Directorate is engaged in co-ordinating the work of these committees, in undertaking the necessary secretarial duties, and in organising investigation, etc. The published standards are brought to the notice of the various indenting and purchase departments of the different Governments, Central and State, to ensure their early adoption.

Wide Collaboration

A heartening feature of the work of the Institute is that the Standards are formulated in collaboration with the largest number of interests concerned; and the Institute quite legitimately believes that this feature should ensure their widespread acceptance. Moreover, the Indian Standards are voluntary and the membership of the Institution involves no compulsion on the part of members to follow them either in manufacture or in making purchases. Adoption by the various Central Government Departments of the Standards already in existence for placing orders of their requirements to various industries has been going a long way in diverting Indian production to standardised channels. Consumers are thereby assured of goods produced according to standard specifications. Besides this, another notable step taken by the Institution in order to aid industrialists to produce quality goods, and the consumer to recognise them, is the establishment of I.S.I. Certification Marks Division which issues licences to manufacturers to stamp their goods with a Standard Mark certifying that the goods conform to the relevant Indian Standard.

A notable development during the year under review was the creation of the Agricultural and Food Products Division Council; this was done on 18th February 1956. This Council's work relates to evolving standards in the fields of grading, storage and marketing, processing, etc., of agricultural products.

The creation of the Structural and Metals Division Council, the decision on which was taken on 24th March 1956, brings under one Council those aspects formerly dealt with by the Steel Economy Section, namely, dimensional specifications of structural steel products and codes of practice dealing with designs fabrication and maintenance of steel structures, and those of metallurgical standards, hitherto forming part of the functions of the Engineering Division Council. The formation of this Council was found to be necessary in view of the proposed introduction of the metric system and the improved prospects for metal producing and processing industries in the country.

Another development of some significance was the opening of a branch office of the Institute at Bombay in September 1955. This office assists and serves the Bombay area in matters relating to standards generally. Among the other functions, it disseminates information to the industry regarding the work of the Institution, helps and advises those engaged in industry and commerce who wish to adopt standards, conducts technical enquiries and preliminary inspections in connection with the I.S.I. Certification Marks Scheme, and holds stock of Indian, British, A.S.T.M. and I.E.C. Standards for reference purposes and for sale to the public. An Advisory Committee is also proposed to be set up to this branch to enable it to serve the area more efficiently.

Certification Marks Scheme

Following the introduction of the Certification Marks Scheme in the year, 70 applications for the grant of Certification Marks for engineering, chemical, textile, metallurgical and building materials conforming to Indian Standards were received. Effective action on a large number of applications, however, could not be taken for the reason that the applicants were not aware of either the responsibilities that devolve on them under the scheme or the financial implications of the scheme. Steps are, however, being taken to get over these difficulties, and arrangements have also been made with scientific laboratories to carry out the testing of the goods concerned before issuing licences.

It is also to be noted with interest that the I.S.I. has prepared a comprehensive second Five-year Plan for itself. This plan takes into account the needs of expansion in various directions. The plan was approved by the Planning Commission and has been accordingly included in the second Plan. The total expenditure envisaged for implementing the plan will be just over a crore of rupees, of which the Central Government is expected to make a grant of Rs. 60.6 lakhs. Further, the plan contemplates an increase in output of standards from 140 to 200 standards per year, as against the estimated demand of about 200 standards per year. In the field of certification marking, the plan visualises that 300 licences will be issued during the Plan period.

An idea of the work turned out by various Division Councils during 1955-56 can be had from the following table:

Name of the Council	No. of meetings of various sectional committees sub-committees, etc.	New standards published or in press	Standards revised	Amendments to standards	Draft standards finalised	Draft standards circulated	Draft standards compiled	Draft standards under preparation
1. Engineering Division ..	76	41	1	4	27	31	96	251
2. Building Division ..	97	15	2	..	24	13	61	62
3. Textile Division ..	42	45	..	..	3	46	23	96
4. Chemical Division ..	54	46	..	16	26	23	28	55
5. Agricultural and Food Products Division ..	15	15	..	..	2	1	6	21

It will be seen from the table that, except in respect of A.F.D.C. which was formed only in February 1956, the progress of the work of the Institute has been impressive.

In addition to this progress on the domestic front, the I.S.I. continued to maintain during the year under review cordial and co-operative relations with the various National Standards bodies of the Commonwealth and other countries. The I.S.I., it may be noted, represents India as a founder member of the International Organisation for Standardisation (I.O.S.), participates in 55 of the 83 technical committees of this Organisation, and carries the Secretariates of two Technical Committees and one Sub-committee.

A further significant development during the year under review was the marked increase in the membership of the Institute by 191, as against 153 in the previous year, raising the total membership to 1,181. The I.S.I. keeps its members and the general public informed of the developments in the field of standards through the publication of *Indian Standards* issued from time to time and through a useful and informative *Bulletin* issued every two months.

DANES ACCUSE U.K. OF DUMPING

Denmark is reported to have strongly protested against dumping by Britain. It is said that the Danish Ambassador in Britain has conveyed his Government's grave anxiety to the British authorities that the subsidy policy followed by Britain has been leading to surplus production being used for export and "dumping" in foreign markets. The items involved are eggs and cattle. The Danish Government has expressed the fear that such exports affect seriously Danish agricultural exports, and would also constitute a violation of the General Agreement on Tariffs and Trade. Meanwhile, the Danish bacon factories have decided to continue the system of centralised bacon export to Britain through the sales of Union of Danish Bacon Factories. Denmark's cattle exports, which were higher in the first half of 1956, as compared with those in the corresponding period of 1955, declined, however, in the second half of 1956. As a consequence, the total exports for 1956 stood 10,200 head less than in the preceding year, when they were 481,000. The Sales Union of the Bacon Factories claims that the Danish market for cattle in West Germany has declined because the U.K. has started a regular dumping of live cattle to West Germany, with subsidies of several hundred kroner per head. It is further claimed that the present U.K. egg exports are at a level of about 100,000 boxes a week and correspond to two-thirds of Danish exports. The Danish farmer, it is stated, is receiving less than half the price paid to his counterpart in the U.K.

The Government of India proposes to set up a Central Indian Medicinal Plants Organisation in collaboration with the Indian Council of Medical Research, the Council of Scientific and Industrial Research and the Indian Council of Agricultural Research. This body will co-ordinate the activities in connection with the cultivation of medicinal plants, standardisation and certification of drugs, correct identification, prevention of adulteration in drugs, etc.

Notices

THE BURDWAN CUTWA RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Members of The Burdwan Cutwa Railway Company, Limited, will be held at No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 25th day of March 1957, at 4-15 p.m., for the following purposes:

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. O. N. Goenka, who retires by rotation, but who is eligible for reappointment.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 25th March 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *25th February* 1957.

Note.—Payment of the proposed dividend, if declared, will be made on or after 15th April 1957 to those members whose names are registered in the Books of the Company on 25th March 1957 or to their mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE AHMADPUR KATWA RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the Members of The Ahmadpur Katwa Railway Company, Limited, will be held at No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 25th day of March 1957, at 4-20 p.m., for the following purposes:

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Rai Bahadur N. Singh Roy who retires by rotation, but who is eligible for reappointment.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 25th March 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,

A. T. DOIG,
Managing Director.
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *25th February* 1957.

Note.—Payment of the proposed dividend, if declared, will be made on or after 15th April 1957 to those members whose names are registered in the Books of the Company on 25th March 1957 or to their mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE BANKURA DAMOODAR RIVER RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Members of The Bankura Damoodar River Railway Company, Limited, will be held at No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 25th day of March 1957, at 4-25 p.m., for the following purposes:

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. T. K. Basu, the Director retiring by rotation at the meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. T. K. Basu be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special notice dated 28th January 1957 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. T. K. Basu is an Associate of the Managing Agents within the meaning of the Act by reason of his being a Director of a subsidiary of the Managing Agents' Company and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 25th March 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,

THE KALIGHAT FALTA RAILWAY COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-eighth Annual General Meeting of the Members of The Kalighat Falta Railway Company, Limited, will be held at No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 25th day of March 1957, at 4-30 p.m., for the following purposes:

1. To receive and consider the Profit and Loss Account for the year ended 31st March 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. T. K. Basu, the Director retiring by rotation at the meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:

   "That Mr. T. K. Basu be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special notice dated 28th January 1957 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. T. K. Basu is an Associate of the Managing Agents within the meaning of the Act by reason of his being a Director of a subsidiary of the Managing Agents' Company and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 25th March 1957, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *25th February* 1957.

Note.—Payment of the proposed dividend, if declared, will be made on or after 15th April 1957 to those members whose names are registered in the Books of the Company on 25th March 1957 or to their mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 11th March 1957 (additional to the Interim Dividend of 2 per cent., free of income-tax, declared on 9th August 1956) in respect of the Company's financial year ending 31st March 1957, of 2 per cent., free of income-tax, payable on or after 28th March 1957 to registered shareholders whose names appear in the Register on 11th March 1957 or to their mandatees.

Transfers received at the Company's Registered Office before 12.30 p.m. on 9th March 1957 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,

AHMEDABAD ELECTRIC MAKES FURTHER HEADWAY

SHAREHOLDERS GET BETTER RETURN

THE hope expressed by the Chairman of the Ahmedabad Electricity Company, Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay), at the last annual general meeting about the Company's ability to tide over its difficulties which, in turn, visualised some degree of confidence in the future, seems to have been fulfilled. He had also struck an optimistic note on maintaining the dividend for future years at about 6 per cent. The shareholders of the Company would feel gratified that this optimism was not unwarranted. The performance of the Company for the year ended 30th September 1956 is quite satisfactory. Earnings have improved considerably, profits have gone up appreciably and, last but not least, the cut in dividend made last year has been restored, albeit with the help of the dividend equalisation fund to some extent. The shareholders will get 6½ per cent., as against 5 per cent. for the previous year, to which level it had to be pruned from 6½ per cent. for 1953-54. It may also be noted that the latest dividend is on the increased capital raised by the issue of further calls on the new capital issue made in 1954.

It redounds to the credit of the management that the Company's earnings as well as profits have been progressively going up, maintaining, as it does, a steady upward trend. This achievement, it is needless to add, would have been possible only if the management had been on the alert all the time, planned for an expansion in the supply of power and maintained a high degree of efficiency. The gross profit at Rs. 111.53 lakhs has improved by about 75 per cent. from Rs. 65.41 lakhs for 1952-53 while it is about 50 per cent. better than the profit for the preceding year at Rs. 75.96 lakhs. The net profit too, after making a larger provision for depreciation, stands higher at Rs. 61.21 lakhs as against only Rs. 36.12 lakhs a year before. No provision has been made for taxation, as the Company considers that there is no liability on this account owing to Income-tax depreciation allowance. The higher earnings have enabled the Directors to provide a higher allocation to the reserves at Rs. 13.45 lakhs, as against a smaller provision of Rs. 3.83 lakhs a year ago. The year's allocation consists of contingencies reserve Rs. 3.36 lakhs, provision for retiring gratuities Rs. 70,841 and general reserve Rs. 9.39 lakhs. The provision to the last mentioned reserve, namely, general, has been done in accordance with an agreement entered into with the Government of Bombay in 1955.

Although the reserves have in all received Rs. 13.45 lakhs, the net addition to them this year is only Rs. 5.01 lakhs, as no less than Rs. 8.44 lakhs have been withdrawn from the dividend equalisation fund to meet the proposed dividend. The position in this respect is, however, better now than last year, in that, whereas there was a net depletion of Rs. 2.17 lakhs in the reserves a year ago, there has been a net addition this year, as just mentioned. It may be added that, while last year the assistance from the dividend equalisation fund to pay a dividend of 5 per cent. on a relatively smaller capital was of the order of 16 per cent., such assistance this year for a higher dividend on a bigger capital is only 15 per cent.

The following comparative table brings out some of the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Earnings from sale of energy ..	326.46	269.18	240.69	220.52
Other income	6.05	5.81	5.36	5.47
Expenses	220.98	199.03	180.12	160.58
Gross profit	111.53	75.96	65.93	65.41
Managing Agents' commission..	5.37	3.50	3.68	3.64
Depreciation	44.95	36.34	22.44	20.43
Taxation				
Net profit	61.21	36.12	39.81	41.34
Transfer from dividend equalisation reserve	8.44	6.00	8.80	..
Promotion, share capital and other expenses written off ..				
Transfer to reserves	0.42	0.36	0.33	0.25
Dividend	13.45	3.83	3.17	3.32
	55.77	37.93	45.13	37.76
Carry forward .. .. Rs.	(6¼%)* 440	(5%) 188	(6⅓%) 1,357	(6⅓%) 3,687

* Made up of *ad-interim* Rs. 2-8 and final of Rs. 4 per share of Rs. 100 each.

As can be seen from the table, the Company's proceeds from sale of energy have registered a sharp rise from Rs. 269.18 lakhs to Rs. 326.46 lakhs. Similarly, sales of energy during the year rose by 12.9 per cent., that is, from 485.98 million kw.h. to 548.69 million kw.h.

Describing the Company's progress, new connections, generating capacity and its transmission and distribution system, the Directors observe:

"During the year, 6,895 new connections were made, bringing the total as at 30th September 1956 to 49,728 which includes 110 large high tension consumers and the North Gujerat grid.

"The generating capacity of the three stations 'A', 'B' and 'C' at Sabarmati as at 30th September 1956 was 142,500 kw. All plant has functioned and been maintained satisfactorily. The highest peak demand recorded during the year was 110,400 kw. as against 100,000 kw. in the previous year. The import licence for the fourth 15 M.W. turbo-alternator has been received and shipments are expected to commence in the course of the next few months. Coal deliveries have been causing some anxiety but constant efforts made it possible to maintain stock at a reasonable level.

"There has been steady progress in the offtake from the North Gujerat grid scheme and the grid maximum demand during the year was 20,350 kw. against 17,000 kw. in 1954-55.

"During the year, 5.77 miles of H.T. mains and 7.95 miles of L.T. mains were laid. The length of 66 kV. transmission lines remains unchanged at 20.25 miles. Both the systems were maintained and operated satisfactorily. Eight new substations for general supply, 10 for rural electrification and two for industrial 11 kV. supply were erected and commissioned during 1955-56."

A feature of the Company's financial position is the low level of reserves. The paid-up capital of the Company, as shown by its balance-sheet as at 30th September 1956, stands at Rs. 874.73 lakhs, all in ordinary shares of Rs. 100 each, as compared with Rs. 7.87 crores at the end of the previous year. The increase in capital is due to the final call of Rs. 25 per share made during the year on the issue of 175,000 ordinary shares made in 1954. The first and second calls at Rs. 25 each per share on this issue were called up in the previous year. As against this enormous capital, the reserves and surplus aggregate only Rs. 75.03 lakhs. These funds would have been richer to the tune of Rs. 23.24 lakhs, if it had not been necessary for the Company to draw this amount to meet a part of the dividends for the three years ended September 1956. The management is, of course, not to be blamed for this state of affairs. It is the rating policy of the Bombay Government that has been at fault. As the capital and reserves are not adequate, the Company has found a part of its financial needs by borrowings. Thus, loans secured against 4½ per cent. mortgage debentures, redeemable in June 1960, amount to Rs. 200 lakhs. The current liabilities account for Rs. 94.84 lakhs. The gross block of the value of Rs. 13.44 crores has been written down to a book value of Rs. 10.95 crores by providing Rs. 2.50 crores for depreciation. The book value includes additions made during the year amounting to Rs. 33.82 lakhs. Capital-work-in-progress is shown at Rs. 4.92 lakhs. Investments in Government securities together with interest accrued amount to Rs. 15.56 lakhs. These had a market value of Rs. 15.34 lakhs as at the close of September 1956. The current assets aggregate Rs. 120.05 lakhs and include, among other items, stores Rs. 52.47 lakhs, sundry debtors considered good Rs. 43.32 lakhs and cash and bank balances Rs. 6.88 lakhs. Besides these, there are fictitious assets amounting to Rs. 8.67 lakhs. The current assets cover the current liabilities by a margin of Rs. 25.21 lakhs.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 100-5 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6.74 per cent. per annum.

The Directors of Pan American World Airways, Inc. have declared a dividend of 20 cents per share payable on 15th February 1957 to stockholders of record at the close of business on 25th January 1957. This is the forty-ninth dividend paid by Pan American. Four dividends of 20 cents a share each were paid in 1956. Dividend payments have been made each year since 1941.

(*Concluded from next column*)

Rs. 20,173 represents upkeep charges on immature clearings. The current assets of Rs. 1.95 lakhs are enough to cover the current liabilities and provision for taxation. Thus, the financial position of the Company is satisfactory on the whole.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 6-12 *cum-div.* On an *ex-div.* basis, the dividend for the year at 20 per cent. provides a yield of 6.3 per cent. per annum.

KUMERGODE REPEATS DIVIDEND

PROFIT, HOWEVER, SMALLER

A SIZABLE diminution in production of coffee, has reversed the upward trend in the earnings of the Kumergode Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Mangalore) during the year ended 31st October 1956. The output of coffee, which had recorded a sharp rise to 3,021 cwts. in 1954-55 from only 1,880 cwts. in 1953-54, has dropped to 1,943 cwts. for the year under review. Indeed, had it not been for the fact that the crop fetched a slightly higher price than in the previous year, the financial results would have proved far worse. There is, however, no reason to feel disappointed over this outcome, because coffee is an agricultural crop the yield of which fluctuates very widely from year to year. Invariably, a bigger crop in one year is followed by a smaller crop in the following year. Such fluctuations are chiefly the outcome of Nature's behaviour and are beyond the control of management. Having regard to this fact, it is noteworthy that, barring the very favourable working in the previous year, the results for 1955-56 make satisfactory comparison with those for the preceding other years. Further, the profit has been just enough to maintain the dividend at the previous year's level of 20 per cent., to which rate it had been stepped up from the maiden dividend of 10 per cent. declared out of the 1953-54 profit.

The gross profit at Rs. 94,097 adversely compares with Rs. 2.26 lakhs for 1954-55, but it is better than that for any other period. The net profit has recorded an even sharper decline. At Rs. 45,796, it is less than one-third of that for the previous year at Rs. 1.62 lakhs. It is nevertheless sufficient to cover the dividend in full. The allocation to the reserves has been substantially pruned from Rs. 1.30 lakhs to Rs. 30,000.

The following comparative table provides an idea about the salient features of the Company's working during the past four years:

	For the year ended 31st October			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.
Proceeds of coffee crop ..	4,88,387	5,70,218	3,75,902	3,48,554
Proceeds of other crop ..	2,749	2,523	2,492	3,775
Expenses	3,15,178	3,48,406	2,91,209	2,79,236
Gross profit	94,097	2,26,395	87,564	75,485
Managing Agents' commission..	5,859	10,317	8,903	6,199
Depreciation	22,842	20,362	9,775	9,995
Taxation	19,800	33,705		
Net profit	45,796	1,62,011	69,186	59,291
Preliminary expenses written off	..	..	24,380	..
Loss prior to Incorporation written off				36,348
To reserves	30,000	1,30,000	50,312	..
Dividend	40,000 (20%)	40,000 (20%)	20,000 (10%)	..
Carry forward	37,383	61,537	69,575	95,081
Coffee crop (in cwts.)	1,943	3,021	1,880	1,98
Value of coffee per point (Rs.).	2-8-0	2-4-0	2-8-0	2-4-0

The decline in coffee crop harvested was not altogether unexpected, since it is only in consonance with, or perhaps a shade better than, the revised estimate of 80 to 90 tons. The crop was originally estimated at 105 tons but later investigations proved that this was exaggerated. It will be seen from the table above that the proceeds from coffee crop for the year at Rs. 4,88,387 are better than those for 1952-53 and 1953-54, in spite of the appreciable fall in production. This is, no doubt, due to the improvement in prices realised.

Subject to any alterations which the recent re-survey might necessitate, the Company's estate consists of 814.69 acres. Of these, 521 acres are under mature coffee (Arabica 419 acres and Robusta 102 acres), and 89 acres under immature coffee (Arabica 74 acres and Robusta 15 acres). The area in reserve is 79.33 acres. The balance is devoted to cardamons (5 acres), oranges (5 acres), paddy (93.09 acres) and sites, etc., 22.27 acres.

The current season's (1956-57) crop was originally estimated on blossom at 3,000 cwts., but the visiting agent, who saw the estate later, has indicated that this may not be harvested and the estimate has, therefore, been revised downwards to 2,800 cwts.

The Company has got a paid-up capital of Rs. 2 lakhs in ordinary shares of Rs. 2 each. The capital is supplemented by reserves and surplus aggregating Rs. 2.47 lakhs. The debenture liability, on account of 7½ per cent. first mortgage debentures, has been reduced by Rs. 30,000 to Rs. 2.40 lakhs. The current liabilities amount to Rs. 1.35 lakhs. This is inclusive of a provision for taxation at Rs. 53,505. The gross block of Rs. 6.91 lakhs stands depreciated to Rs. 6.27 lakhs. There have been additions during the year of a total value of Rs. 60,431 in which

(*Continued in previous column*)

KIL KOTAGIRI SHOWS BETTER PROFIT

RESERVES STRENGTHENED

THE accounts of the Kil Kotagiri Tea and Coffee Estates Company, Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar) for the year ended 31st October 1956, disclose the results of a company which has not only turned the corner, but the future prosperity of which appears to be fairly stabilised at a relatively higher level, assuming that other things will remain the same. This is, of course, due to the amalgamation with the Company of the Nilgiri Neerugundi Estates. The accounts of the latter have been incorporated in the results of the Company for 1955-56 for the first time. Accordingly, these results are not strictly comparable with those for the preceding year. If, nevertheless, a comparison is made, it is done only to give a rough picture of the Company's progress.

The proceeds from sale of tea and coffee in 1955-56 have both substantially improved; profits have gone up and reserves strengthened. The gross profit for the year under review at Rs. 9.60 lakhs is more than double that earned in 1954-55 at Rs. 4.27 lakhs. It may be noted that, before the amalgamation, the gross profit rose from Rs. 5.14 lakhs for 1952-53 to Rs. 6.36 lakhs for 1953-54. This upward trend was reversed and in the following year, that is, 1954-55, it fell sharply to Rs. 4.27 lakhs. The net profit, too, has gone up to Rs. 5.23 lakhs, after having fallen from Rs. 3.45 lakhs for 1953-54 to Rs. 2.32 lakhs for 1954-55, the lowest earned since 1949-50.

The higher earnings have not, as is usually expected, brought a higher dividend, but it has only been maintained at the previous year's level of 20 per cent. This is obviously due to the Directors' wise policy of ploughing back the major portion of the profits. Accordingly, the reserves get a higher allocation this year at Rs. 3.25 lakhs. It may be remembered that, in the previous year, the allocation to this account had to be pruned to Rs. 1 lakh from Rs. 1.25 lakhs provided a year earlier.

The main features of the Company's working results are given in the comparative table below:

	For the year ended 31st October			
	1956	1955	1954	1953
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of—				
Tea	15,76,723	8,09,076	8,90,047	7,46,742
Coffee	7,22,534	25,342	1,42,062	49,814
Stocks of tea	1,45,748	1,42,789	1,14,376	1,72,224
Expenses	15,36,920	5,68,454	5,24,078	4,62,931
Gross profit	9,60,542	4,27,506	6,35,929	5,14,087
Managing Agents' commission..	89,886	20,203	30,191	25,272
	49,496	28,293	40,971	43,333
Depreciation	3,48,000	1,47,000	2,14,000	1,14,000
Taxation	5,23,160	2,32,010	3,45,767	3,26,477

To reserve				
Dividends—				
6 per cent. preference	15,000	15,000	15,000	15,000
Ordinary	1,71,708 (20%)	1,71,708 (20%)*	2,25,000 (30%)†	2,00,000 (40%)
	27,172	15,720	70,418	90,651
Carry forward	342,560	374,800	302,400	370,500
Tea crop (in lbs.) ..	144.30	129.29	114.54	96.39
Cost per lb. (in cents) ..				
Average price realised per lb. (in cents)	262.69	252.08	261.19	209.24
	4,469	38	701	297
Coffee crop (in cwts.)	122.92	1,840.07	137.77	217.71
Cost per cwt. (in Rs.)	192.31	176.18	192.09	155.16
Value per cwt. (in Rs.)				

* On the further increased capital as a result of the issue of shares to the shareholders of Nilgiri Neerugundi Estates, following the amalgamation of the two companies.
† On the increased capital of Rs. 7.50 lakhs raised by the capitalisation of Rs. 2.50 lakhs.

The crop of brown tea harvested from the Kil Kotagiri Estates during the year at 342,560 lbs. was down by 32,000 lbs. as compared with 1954-55 when a record crop of 374,800 lbs. was secured. It was the lowest since 1951-52 when 257,200 lbs. was harvested. Consequent on lower output, the cost of production was higher at 144.30 cents per lb., as against 129.29 cents in 1954-55 and 96.39 cents in 1952-53. The average price realised, however, was a shade higher at 262.29 cents per lb. as compared with 252.08 cents in 1954-55. Though this was the highest price secured by the Company so far—the previous peak was 261.19 cents in 1953-54—the increase in it was surpassed by the rise in the cost of production. Accordingly, the profit-margin per lb. of tea was appreciably less.

From the Nilgiri Neerugundi Estate 1,390,696 lbs. of green leaf tea were sold at an average price of As. 6.66 per lb. This fetched a sum of Rs. 5,78,660 to the sale proceeds during 1955-56.

The Company's coffee crop was more favourable than the tea crop both in regard to production and income. The production at 4,469 cwts. in 1955-56 bears no comparison to the meagre,

Notice

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE TO MEMBERS

NOTICE IS HEREBY GIVEN THAT THE Twentieth Ordinary General Meeting of the Members of the Alkali & Chemical Corporation of India, Ltd., will be held on Thursday, 28th March 1957, at 3-30 p.m. at the Registered Office, 34, Chowringhee, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1956.

(2) To declare a Dividend on the Ordinary Shares.

(3) To elect Directors.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from the 20th March 1957 to the 28th March 1957, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

CALCUTTA, 12*th February* 1957.

Note.— If the Dividend as recommended by the Directors is sanctioned at the Meeting, it will be paid on or after the 28th March 1957, to those Shareholders whose names are on the Company's Register on the 19th March 1957.

To,

The Shareholders of the Alkali & Chemical Corporation of India, Limited, and in particular to:—

Mr. J. A. Butterworth, Mr. J. V. A. e Brito, Mr. G. F. Carter, Dr. S. B. Cormack, Her Highness Bada Maharani Deela Kumari Devi, Mrs. M. Duncan, Mrs. H. C. D'Cruz, Mrs. E. M. Fanthome, Mrs. J. Guest, Mr. P. H. Guest, Mr. B. R. Goodfellow, Mr. W. A. T. Hollingbery and Mrs. E. M. Hollingberry, Commdg. Genl. Mohun S. S. Jung B.R., and Major Genl. Bijaya S. S. Jung B.R., Genl. Sir Baber S. S. Jung B.R., and Major Genl. Mrigendra S. S. Jung B.R., Mr. A. Y. Kadwa, Mr. F. J. C. Melhuish, Mrs. C. V. Pandit, Mr. A. R. Sahasranam, Mrs. E. E. Thompson and Mr. W. B. Joiner, Mr. S. P. Upadhya, Mr. C. R. Witcher.

(*Concluded from first column*)

almost insignificant, crop of 38 cwts. in the previous year. Indeed, it will be no exaggeration to say that it is this bumper coffee crop that has contributed to the vastly better results.

The paid-up capital of the Company, as shown by its balance-sheet as at 31st October 1956, stands at Rs. 11.08 lakhs of which 6 per cent. cumulative preference share capital accounts for Rs. 2.50 lakhs. The balance is in ordinary shares of Rs. 2 each. Of the ordinary capital, the sum of Rs. 1.08 lakhs represents the amount allotted to the shareholders of the Nilgiri Neerugundi Estates in fully paid-up shares in part consideration of the terms of amalgamation by which the latter estate was taken over by the Kil Kotagiri with effect from 1st July 1955. The reserves and surplus aggregate Rs. 11.01 lakhs. The current liabilities at Rs. 9 lakhs include a provision for taxation of Rs. 5.47 lakhs. The gross block of the value of Rs. 25.36 lakhs has been written down to Rs. 22.20 lakhs. The current assets amount to Rs. 8.89 lakhs and falls short of the current liabilities only by a narrow margin.

The Company's amalgamation with the Nilgiri Neerugundi Estates Company, Ltd., has been completed and the latter was taken over from the Liquidators as from 15th May 1956. The acreage of the Company's properties after amalgamation is: tea 705.97 acres (mature 674.89 acres and immature 31.08 acres) and coffee 787.92 acres (mature 755.92 acres and immature 42 acres).

The Rs. 2 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 6-8 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 6.55 per cent. per annum.

PROFIT OF REWA COALFIELDS LOWER

NEW SWADESHI SUGAR REPEATS DIVIDEND

Rewa Coalfields, Ltd.

THE directors of the above Company (Managing Agents: Messrs: Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1956.

The Company's profit for the half-year after the inclusion of Rs. 26,029 (Rs. 22,975) brought forward and Rs. 78,659 (Rs. 32,074) provision for liability written back is Rs. 2,49,082 (Rs. 3,31,991) and after making provision for taxation Rs. 1,02,218 (Rs. 1,35,345) there remains Rs. 1,46,864 (Rs. 1,96,646). Out of this amount the directors have placed to development reserve Rs. 30,000 (Rs. 50,000) and recommended the payment of a dividend at the rate of 15 (17½) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 1,01,250 (Rs. 1,18,125) leaving to be carried forward Rs. 15,614 (Rs. 28,521).

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings*	*Despatches*
	Tons	Tons
30th June, 1956 ...	1,76,705	1,80,614
31st December, 1955 ...	1,83,555	1,86,060
30th June, 1955 ...	1,64,865	1,62,787

The supply of wagons during the half-year was not very satisfactory and this has deteriorated further since the close of the half-year.

The Coal Tribunal Award became effective from 26th May, 1956, but the controlled selling price of this Company's coal was increased by only Rs. 2 as from 5th of July, 1956. This utterly inadequate and belated increase has had adverse effects on costs as reflected in this account. While, on the directors' representation, the Company's accounts were being re-examined for the purpose of revising prices, the Appellate Tribunal has delivered its judgment, the full text of which is not yet in their hand and full implications have, therefore, to be yet worked out. In any case, the Company's costs are sure to go up further. This new Award has been made effective from 26th May, 1956, and unless a compensatory allowance be made in arriving at the new statutory selling price, this Company's costs for the next half-year are likely to be seriously affected.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,50,000	Block ...	8,88,001
Reserves ...	10,45,115	Stock of coal	1,11,379
Provision for taxation ...	4,89,037	Stores ...	7,39,361
Liabilities ...	21,81,222	Debts, deposits and advances ...	17,90,746
Profit and loss account ...	15,614	Investments	3,78,438
		Cash ...	11,73,063
Rs.	50,80,988	Rs.	50,80,988

New Swadeshi Sugar Mills Ltd.

The directors have pleasure in presenting their Report and the Accounts of the Company for the year ended 30th June 1956.

The consolidated profit and loss account for the year shows a net profit (after providing for welfare and charities, managing agents' remuneration, depreciation and taxation) of Rs. 2,76,327 (Rs. 2,77,192). To this has been added the credit balance of Rs. 5,317 (Rs. 25,558) brought forward, making a total consolidated profit of Rs. 2,81,644 (Rs. 2,77,192). The directors recommend the appropriation of this profit as under:—

To dividend on 12,980 (10,875) ordinary shares of Rs. 100 each at the rate of Rs. 20 (Rs. 20) per share free of income-tax absorbing Rs. 2,59,600 (Rs. 2,17,500), to dividend on 2,455 (10,875) quarter ordinary shares of Rs. 25 each at the rate of Rs. 5 (Rs. 5) per share free of income-tax absorbing Rs. 12,275 (Rs. 54,375) and balance to be carried forward Rs. 9,769 (Rs. 5,317).

The working of the factory during the year was satisfactory. The total quantity of 39,30,875 maunds of cane was crushed—a record figure in the Company's history. The average recovery, however, fell to 9.9 per cent., as against an average recovery of 10.5 per cent. in the previous season. The fall in recovery was due to cane having been affected with red-rot disease.

The Company's farms yielded a cane crop of about 4 lakh maunds, as against about 2,25,000 maunds in the previous season. There was also an improvement in the yield and quality of cane. Consequently the profits of the farms during the year under review have been much better as compared to the previous year.

The Company has obtained a licence from the Central Government for increasing the crushing capacity to 1,300 tons of cane per day.

As required under section 212 (3) of the Companies Act, 1956 the directors have to state that as the entire issued share capital of the Narkatiaganj Farms Ltd., and the Rajpur Farms Ltd., as on 30th June, 1956 and of the Champaran Marketing Co., Ltd., as on 31st March, 1956 was held by the Company, the profit of the Narkatiaganj Farms Ltd. and the Rajpur Farms Ltd. and the loss of the Champaran Marketing Co., Ltd., for the last financial year and the profits of all the three subsidiary companies for the previous financial years which have not been dealt with in or for the purposes of the accounts of the Company, concern wholly the members of the company.

As regards the Tims Products Ltd., 58.49 per cent. of the equity share capital of the said company as on 30th September, 1955 was held by the company and accordingly the proportionate amount of Rs. 1,831 being the profit of the subsidiary company for the last financial year and Rs. 3,83,878 being the net aggregate losses of the previous financial years, which has not been dealt with in or for the purposes of the accounts of the company, concern the members of the company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,59,375	Block ...	46,91,078
Reserves ...	48,01,854	Stock-in-trade	55,59,610
Provision for taxation ...	14,61,508	Stores etc. ...	4,64,026
Liabilities ...	70,56,142	Debts deposits and advances ...	31,06,158
Profit and loss account ...	6,269	Investments	7,46,524
		Cash ...	1,17,752
Rs.	1,46,85,148	Rs.	1,46,85,148

New Savan Sugar and Gur Refining Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Karam Chand Thapar and Bros. Private Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st May 1956.

The directors report that the Lessees crushed a total quantity of 25,86,200 maunds of cane during the crushing season 1955-56 and produced 2,52,720 maunds of sugar and 1,04,972 maunds of molasses. All these figures are marked improvements on previous year's performance when 23,69,264 maunds of cane were crushed producing 2,32,900 maunds of sugar and 99,107 maunds of molasses.

It is reported by the Lessees that there was a general deterioration of quality of cane and a fall in recovery throughout the entire region. They have taken steps for varietal improvement and manurial culture with a view to augment the cane supplies on one hand and improve the recovery figures on the other. The efforts made by them, however, are not likely to be reflected fully in the next year's figures because of the heavy rains which caused water logging in several areas for weeks together. Incidence of disease also is reported to be pretty marked. All remedial measures, however, are being adopted by them.

The accounts for the year show a profit of Rs. 1,07,147 (Rs. 2,47,478). A sum of Rs. 55,000 (Rs. 35,000) has been set aside for taxation, leaving a sum of Rs. 77,046 (Rs. 52,399 after providing Rs. 1,64,214 for depreciation, including last year's carry forward, which the directors propose to distribute as follows:

To dividend at As. 6 (As. 4) per share free of income-tax for the year ended 31st May 1956 Rs. 41,250 (Rs. 27,500), to reserve Rs. 25,000 (*nil*) and to carry forward Rs. 10,796 (Rs. 24,899).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	11,00,000	Block ...	18,98,343
Reserves ...	4,45,000	Debts ...	6,668
Provision for taxation ...	88,087	Investments	1,08,109
Liabilities ...	3,83,511	Cash ...	14,274
Profit and loss account ...	10,796		
Rs.	20,27,394	Rs.	20,27,394

Brady Engineering Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts after charging Rs. 96,145 (Rs. 85,378) for depreciation and providing Rs. 33,000 (Rs. 5,000) for taxation, shows a net profit of Rs. 1,12,666 (Rs. 1,18,389) which together with the balance brought forward from last year's account of Rs. 9,402 (Rs. 6,013) gives an amount of Rs. 1,22,068 (Rs. 1,24,402). This amount the directors propose to dispose of as follows:—

To dividend at Rs. 3 (Rs. 3) per share free of income-tax on 25,000 shares of the Company, absorbing Rs. 75,000 (Rs. 75,000), transfer to reserve fund Rs. 25,000 (Rs. 40,000) and to carry forward to next year's account Rs. 22,068 (Rs. 9,402).

The Company's business continues to be of a general nature but some further progress was made during the year. An agreement has been entered into with the workers in regard to scales and grades of salary. This agreement will remain in effect until 15th August 1958. Capital expenditure amounting to Rs. 26,334 (Rs. 89,617) was incurred in purchasing machinery and plant.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,99,960	Block ...	9,79,407
Reserves ...	2,15,000	Stock-in-trade	1,84,276
Provision for taxation ...	37,477	Stores ...	1,07,742
Liabilities ...	1,21,295	Debts deposits and advances ...	1,77,330
Profit and loss account ...	22,068	Cash ...	4,47,045
Rs.	18,95,800	Rs.	18,95,800

Empire Dyeing and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a net profit on the year's working after writing off depreciation of Rs. 35,340 (Rs. 35,512) on machinery and plant, etc., setting aside Rs. 87,500 (Rs. 1,00,000) for taxation and charging the managing agents' commission amounting to Rs. 37,168 (Rs. 38,971) of Rs. 2,08,706 (Rs. 2,12,261) which together with the balance brought forward from last year's account of Rs. 8,224 (Rs. 5,963) gives an amount for disposal of Rs. 2,16,930 (Rs. 2,18,224). This sum the directors propose to dispose of as follows:—

To dividend of Rs. 3 (Rs. 3) per share on 60,000 shares of the Company, free of income-tax absorbing Rs. 1,80,000 (Rs. 1,80,000), transfer to general reserve Rs. 20,000 (Rs. 20,000) and to staff gratuity fund Rs. 10,000 (Rs. 10,000), leaving a balance to be carried forward to next year's account of Rs. 6,930 (Rs. 8,224) which your directors think you will find satisfactory.

The year 1956 was a period of increases in production costs, but the plant was fully occupied, for the greater part of the year and in the majority of cases productions achieved were slightly higher than the previous year. During the year a new Baling Press was received and arrangements for installation put in hand.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	4,95,236
Reserves ...	9,57,117	Stock-in-trade	32,329
Provision for taxation ...	1,50,060	Stores and spare gear	98,882
Liabilities ...	6,98,266	Debts, deposits and advances ...	2,91,380
Profit and loss account ...	6,930	Investments	3,39,245
		Cash ...	14,55,296
Rs.	27,12,373	Rs.	27,12,373

Rallis India Ltd.

The directors of the above Company (Managing Director and Chairman: Mr. M. P. A. Paspatti, Calcutta), submit the audited accounts of the Company for the year ended 31st August 1956.

The form of these accounts varies from that adopted in previous years and the individual figures thereon are, therefore, not directly comparable with those of the accounts for the year ended 31st August 1955.

Reference is made to the interim report which was sent to Members on 10th October, 1956, in which the fortunes of the different branches and departments of Company's business were described, and the estimates then made have, on completion of the accounts, proved to be close.

The formalities of the sale of the Calcutta office building are still not fully completed at the date of this report and the value of that building is still included in the balance-sheet under fixed assets.

The result of the year's working, after charging all expenses and after providing Rs. 7,65,379 for depreciation, was a profit of Rs. 13,16,241. It will be recalled that no depreciation was charged in the accounts of the two previous years. While one year's depreciation has been charged on this occasion, there remain arrears of depreciation. The allocations to profit and loss account for the year are as follows:—

The balance of loss brought forward from the last account is Rs. 63,99,179 less the profit for the year *after* charging depreciation is Rs. 13,16,241 to which is added reserve for depreciation of investments no longer required Rs. 2,70,000 and part of provision for taxation and taxation contingencies no longer required Rs. 4,00,000 making a total of Rs. 19,86,241. After adjusting this amount against the previous year's loss of Rs. 63,99,179, there is a balance to the debit of profit and loss account to be carried forward to the next account of Rs. 44,12,938. It is regretted that the directors are unable to recommend a dividend on either preference or ordinary shares for the year ended 31st August 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	3,00,00,000	Block	1,01,05,141
		Stock	2,82,38,806
Reserves ...	8,71,248	Stores etc. ...	11,79,475
		Work-in-progress ...	7,731
Liabilities ...	3,06,68,881	Debts, deposits and advances ...	1,39,11,230
		Investments	11,04,621
		Cash ...	25,80,187
		Profit and loss account ...	44,12,938
Rs.	6,15,40,129	Rs.	6,15,40,129

N.B.—Figures within brackets relate to the corresponding period of the previous year.

INDIAN TRADE UNIONISTS IN U.K.

Three executives of Indian textile unions who are now on a visit to Britain share the distinction of being the first party of Indian trade-union officials to go to the United Kingdom under the Colombo Plan. They are touring the Manchester area, where they have already spent two weeks, and will shortly be returning home. The three Indians are Mr. N. S. Deshpande, of Bombay, who is workers' representative at industrial tribunals; Mr. N. Rangasamy, of Madurai, Madras State, who is secretary to a number of textile and engineering unions, including the National Textile Workers' Union; and Mr. M. Vyas, officer in charge of the complaints division of the Textile Labour Association, Ahmedabad. So far the Indians have visited textile mills, rubber manufacturers and chemical works, and have had meetings with leading trade-union officials and officers of the British Ministry of Labour.

Notice

THE KOHINOOR MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956 (being the Sixty-second Ordinary General Meeting) of THE KOHINOOR MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, on Friday the 29th March, 1957, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1956.
2. To declare a Dividend.
3. To elect a Director in the place of Sir Purshotamdas Thakurdas, K.B.E., C.I.E., who retires by rotation but who offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution, of which special notice as required by Sections 261 and 281 of the Companies Act, 1956, has been received by the Company:—

"THAT Sir Purshotamdas Thakurdas, K.B.E., C.I.E., who has attained the age of 77 years and who is a Director of Killick Industries Limited, the Managing Agents of the Company, be and he is hereby appointed a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

4. To elect a Director in the place of Mr. K. G. Milne, who retires by rotation but who offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution, of which special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"THAT Mr. K. G. Milne who retires by rotation from his office as Director and who is a Director of Killick Industries Limited, the Managing Agents of the Company, be and he is hereby appointed a Director of the Company."

5. To elect a Director in the place of Mr. Yogindra N. Mafatlal, who retires under Article 98 of the Company's Articles of Association but who offers himself for election.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"THAT pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a contract being entered into (in terms of the draft initialled for the sake of identification by the Chairman) with Narandas Rajaram and Company Private Ltd., who are or may be deemed to be associates of the Managing Agents, Killick Industries Limited, for the purchase by the Company from the said Narandas Rajaram and Company Private Ltd., of not more than 15,000 bales of cotton (being goods in which the said Narandas Rajaram and Co. Private Ltd., regularly trade or do business) for the period commencing from 30th March 1957, until the next Annual General Meeting of the Company at rates which are not less favourable than the market rates."

8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"THAT the Company hereby approves of contract or arrangement being entered into with Killick, Nixon & Co. Private Limited and/or Vickers India Private Limited, which Companies are or may be deemed to be Associates of Killick Industries Limited, the Managing Agents of the Company, for the sale, purchase or supply of any property, movable or immovable, or for the supply or rendering of any service as may be required by the Company or the said Companies from time to time upon the terms:—

(*a*) that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or are otherwise reasonable,

(*b*) that the other terms and conditions of such sales, purchases, supply of property or rendering of services shall be generally the same as those on which the Company can sell, purchase or supply such property or acquire such services elsewhere,

(*c*) that the said sales, purchases, supplies or rendering of services shall be sanctioned by the Board of Directors,

and provided further

(*d*) that for any property supplied or sold, or any services supplied or rendered, by the Company, the said Companies shall make payment to the Company within one month from the date of the supply or sale of the goods, or the supply or rendering of the services, as the case may be."

9. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"THAT pursuant to Section 31 of the Companies Act, 1956, the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof, be and are hereby approved with such modifications, if any, as may be agreed to at this meeting, as the Articles of Association of the Company in substitution for and to the exclusion of the Articles of Association thereof."

10. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

"THAT Killick Industries Limited, Managing Agents of the Company, be and are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time or hereafter as Principal Agents of the British India General Insurance Company Ltd., The Concord of India Insurance Company Ltd., The Oriental Fire and General Insurance Company Ltd., and the Yorkshire Insurance Company Ltd., in regard to any contracts for the purposes of effecting fire, marine or miscellaneous insurance against all risks which may have been or which may at any time or hereafter be entered into between the Company and the said British India General Insurance Company Ltd., The Concord of India Insurance Company Ltd., The Oriental Fire and General Insurance Company Ltd., and the Yorkshire Insurance Company Ltd."

11. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

"THAT Killick, Nixon & Co. Private Ltd., and/or Vickers India Private Ltd., which Companies are or may be deemed to be Associates of Killick Industries Ltd., the Managing Agents of the Company, be and they are hereby authorised to retain any commission or other remuneration earned or to be earned by them as managing agents, secretaries, and treasurers, managers, agents, selling or buying agents of any firm, body corporate or other concern in respect of any goods, power, freight, repairs or other services, for the sale, purchase, supply or rendering of which any contract or arrangement has been or will be entered into by such firm, body or concern with the Company, provided the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

By Order of the Board,

FOR THE KOHINOOR MILLS COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
E. D. SHEPPARD,
Managing Director,
Managing Agents.

BOMBAY, 25*th February*, 1957.

N.B.—(*a*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND A PROXY NEED NOT BE A MEMBER.

(*b*) The Transfer Books of the Company will be closed from Friday the 8th March, 1957 to Friday the 29th March, 1957, both days inclusive.

(*c*) The Dividend, when sactioned, will be made payable at the National Bank of India, Limited, Bombay, on and after 11th April, 1957, to those shareholders whose names stand on the Register on the 29th March, 1957, to whom Dividend Warrants will be posted.

Annexure to the Notice

EXPLANATORY STATEMENTS UNDER SECTIONS 261(3) AND 173(2) OF THE COMPANIES ACT, 1956

Items Nos. 3 *and* 4. Sir Purshotamdas Thakurdas and Mr. K. G. Milne retire from their office as Directors of the Company but offer themselves for re-election. Special notices of the Special Resolutions set out in items 3 and 4 have been received by the Company. The special notices state that the Special Resolutions are necessary in order that the experience and valuable services of Sir Purshotamdas Thakurdas and Mr. K. G. Milne should continue to be made available to the Company and, accordingly, the Special Resolutions are commended for acceptance.

In the case of Sir Purshotamdas Thakurdas special notice has also been received declaring that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.

Item No. 7. The Company for many years had been purchasing a part of its requirements of cotton from Narandas Rajaram & Co. Private Ltd. Under the Companies Act, 1956, however, Narandas Rajaram & Co. Private Ltd., are or may be deemed to be an 'Associate' of the Company's Managing Agents, Killick Industries Limited, by virtue of Sir Purshotamdas Thakurdas, K.B.E., C.I.E., a Director of the Managing Agency Company, exercising more than one-third of the voting power in Narandas Rajaram & Co. Private Ltd., and it is, therefore, advisable, having regard to the provisions of Section 360 of the Companies Act, 1956, for the Company to approve, by Special Resolution, the contract (copy of which is open to inspection at the Registered Office of the Company on working days except on Saturdays from 11 a.m. to 4 p.m.) proposed to be entered between the Company and Narandas Rajaram & Co. Private Ltd., and the Special Resolution is, accordingly, commended for acceptance.

Item No. 8. The Company has been accustomed to enter into contracts or arrangements for the purchase, sale of various machineries and goods and for the clearing of the Company's goods and the rendering of other services incidental to the conduct and business of the Company with Killick Nixon & Co., Private Limited and also with Vickers India Private Limited at rates which are not less favourable than those prevailing in the market or which are otherwise reasonable. Killick Industries Limited, the Managing Agents of the Company, have acquired a controlling interest in Killick Nixon & Co., Private Limited as from 1st February, 1957, and the latter has become, accordingly, an 'Associate' of the Managing Agents of the Company within the meaning of the Companies Act, 1956. Killick Nixon & Co., Private Limited have been Managers of Vickers India Private Limited since 1954 and by reason of this may be deemed to be the Managing Agents of the latter within the meaning of the said Act. Vickers India Private Limited may, accordingly, also be deemed to be the Associates of Killick Industries Limited. Having regard, therefore, to the provisions of Section 360 of the Act, it is expedient to pass a Special Resolution to approve of contract or arrangement being entered into by the Company with Killick Nixon & Co., Private Limited and/or Vickers India Private Limited and, accordingly, the Special Resolution under item No. 8 is commended for acceptance.

Item No. 9. The existing Articles of Association of the Company date from the 6th April, 1938. From time to time the Articles have been amended in certain respects by special resolutions. The Companies Act, 1956, has effected considerable changes in the law and procedure relating to companies. Several sections of this Act override or affect various provisions in the Articles of Association of the Company which consequently require amendments to bring them into line with the amended provisions of the new Act, and certain new provisions in the Act for the regulation of companies need to be incorporated in the Articles.

As the alterations are numerous, it has been considered desirable to substitute a new set of

Articles for the present Articles of Association of the Company. The proposed alterations fall into the following categories:—

(*a*) Alterations made to comply with the provisions of the Companies Act, 1956, where the present Articles are in direct conflict with such provisions;

(*b*) Alterations which, though not essential for removal of a conflict between the present Articles and the provisions of the Act, have been rendered necessary or desirable as a result of such provisions;

(*c*) Deletion of obsolete Articles;

(*d*) A few alterations not falling under any of the above categories but considered desirable.

A copy of the above-mentioned documents containing the draft of the proposed new Articles of Association and a copy of the existing Articles of Association may be inspected at the Registered Office of the Company during the hours of 11 a.m. to 1 p.m. and 3 p.m. to 5 p.m. on any working day except Saturday and the hours of 11 a.m. to 1 p.m. on Saturdays.

A summary of the important changes proposed to be effected in the Company's Articles of Association referred to in item No 9 above accompanies this Notice.

Item No. 10. Killick Industries Limited, the Managing Agents of the Company, are the Principal Agents of the British India General Insurance Co. Ltd., the Concord of India Insurance Co. Ltd., the Oriental Fire and General Insurance Co. Ltd., and the Yorkshire Insurance Co. Ltd., with which Companies the Company places its insurance business at rates of premium which are not less favourable than those prevailing in the market. It is necessary having regard to the provisions of Section 359 of the Act to pass the Ordinary Resolution under item No. 10 above in order that Killick Industries Limited may retain any commission or other remuneration earned or to be earned by them from any of these Companies as their Principal Agents. The Resolution is commended for acceptance.

Item No. 11. The Company has been accustomed to enter into contracts or arrangements for the purchase or supply of various machineries and goods and for the rendering of services, such as marine and accident insurance, shipping of goods and other services incidental to the conduct and business of the Company from companies or parties of which Killick Nixon & Co., Private Limited are agents at rates which are not less favourable than those prevailng in the market or which are otherwise reasonable. Killick Industries Limited, the Managing Agents of the Company, have acquired a controlling interest in Killick Nixon & Co., Private Limited as from 1st February, 1957, and the latter has become, accordingly, an 'Associate' of the Managing Agents of the Company within the meaning of the Companies Act, 1956. Killick Nixon & Co., Private Limited have been Managers of Vickers India Private Limited since 1954 and by reason of this may be deemed to be Managing Agents of the latter within the meaning of the said Act. Vickers India Private Limited may, accordingly also be deemed to be Associates of Killick Industries Limited. Having regard, therefore, to the provisions of Section 359 of the Act, it is expedient to have the Company's authority to the retention of any commission or other remuneration earned or to be earned by Killick Nixon & Co., Private Limited and/or Vickers India Private Limited as Agents of such parties and, accordingly, the Ordinary Resolution in item No. 11 above is commended for acceptance.

Sir Purshotamdas Thakurdas, K.B.E., C.I.E., and Mr. Dinsha K. Daji are interested as Directors and Shareholders of Killick Industries Limited. Mr. E. D. Sheppard is interested as a Director and Shareholder of Killick Industries Limited and also as a Director of Killick Nixon & Co., Private Ltd., and as a Director of Vickers India Private Limited. Mr. K. G. Milne who is or may become a Director of the Company is interested as a Director and Shareholder of Killick Industries Limited and also as a Director of Killick Nixon & Co., Private Limited and as a Director of Vickers India Private Limited. Mr. M. S. Captain and Mr. Maneklal Premchand are interested as Shareholders of Killick Industries Limited. Mr. A. N. Haksar is interested as an Associate and Shareholder of Killick Industries Limited and also as a Director and Member of Killick Nixon & Co., Private Limited. Killick Industries Limited who are the Managing Agents of the Company and are or may be deemed to be Associates of Killick Nixon & Co., Private Limited and of Vickers India Private Limited are interested for those reasons and as Shareholders of the Company.

By Order of the Board,
For THE KOHINOOR MILLS COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
E. D. SHEPPARD,
Managing Director,
Managing Agents.

BOMBAY, 25*th February*, 1957.

THE KOHINOOR MILLS CO., LTD.

Summary of important changes to be effected in the Company's Articles of Association by the document referred to in Item No. 9 of the Notice convening the Annual General Meeting (being the 62nd Ordinary General Meeting) to be held on 29th March, 1957.

INTERPRETATION

Article 2 has been re-drafted to bring some of the definitions in line with those given in Section 2 of the Companies Act, 1956 (hereinafter called the Act).

CAPITAL, SHARES, CERTIFICATES, UNDERWRITING, INTEREST AND CALLS

Draft Articles 3 to 35 are substantially the same as existing Articles 3 to 31 except for verbal alterations to accord with the Act.

LIEN ON SHARES

Draft Articles 36 to 38 correspond to existing Articles 32 to 34. They are in conformity with the Act and with the listing requirements of the Stock Exchange.

FORFEITURE OF SHARES

Draft Articles 39 to 48 are substantially the same as existing Articles 35 to 43.

TRANSFER AND TRANSMISSION OF SHARES

Draft Articles 49 to 62 correspond to existing Articles 44 to 56. The right of Directors to refuse to register a transfer under existing Article 48 has been retained in draft Article 53 but made subject to the provisions of Section 111 of the Act.

Draft Article 56 has been inserted on account of the necessity of the Company complying with the provisions of the Estate Duty Act, 1953.

BORROWING POWERS, STOCK

Draft Articles 63 and 64 correspond to existing Article 57 except that the powers of the Board of Directors to borrow have been made subject to the provisions of Sections 292 and 293 of the Act; it provides that when the total amount borrowed at any time together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) exceeds the aggregate of the paid-up Capital of the Company and its free reserves, the consent of the Company in General Meeting must be obtained.

Draft Articles 65 to 69 correspond to existing Articles 58 to 62.

MEETING OF MEMBERS

Draft Article 70 is an enlargement of existing Article 63 to conform with the requirements of Section 166 of the Act and sets out in detail what are to be laid on the table in the case of the Company's Annual General Meetings.

Draft Articles 71 to 88 correspond to existing Articles 64 to 80.

Draft Article 75, corresponding to existing Article 68, now provides for 21 days' notice instead of 14 days' notice under the old Act for convening a Meeting of the Company and sets out what is deemed to be special business and what is to be done in that case under Section 173 (2) of the Act.

Draft Article 78 (existing Article 71) now provides that a quorum for a General Meeting shall be five Members present in person and not, as under the old Article and Act, present in person or by proxy.

Draft Article 86 has been inserted dealing with the appointment of scrutineers under Section 184 of the Act when a poll is demanded.

VOTES OF MEMBERS

Draft Articles 89 to 100 bring existing Articles 81 to 92 in line with the requirements of the new Act.

A Member can now appoint another as his proxy who need not be a Member but a person so appointed can attend but cannot speak at a Meeting.

Under draft Article 96 proxies must now be lodged with the Company not later than 48 hours before Meetings and not 72 hours beforehand as under existing Article 88.

Draft Article 101 has been inserted dealing with the Minutes of General Meetings and inspection thereof by Members and setting out the various provisions of Sections 193 to 196 of the Act regarding the maintenance of the Minute Books and what has and has not to be entered therein.

DIRECTORS

The existing Articles 93 to 114 have been substantially amended to conform to various sections of the Act dealing with the appointment, qualification, remuneration and removal of Directors.

Draft Articles 103 and 104 correspond to existing Articles 94 and 96.

Existing Article 95 has been deleted.

Under draft Article 105 alternate Directors are now to be appointed by the Board of Directors as required by Section 313 of the Act instead of by the absenting Director as under existing Article 97.

Draft Article 106 corresponding to existing Article 98, now makes the power of the Board of Directors to fill vacancies or to add to their number subject to the provisions of the new Act.

Draft Article 107 corresponds to existing Article 99.

Draft Articles 108 to 110 dealing with the remuneration and expenses of Directors are substantially the same as existing Articles 100, 101 and 102 except that they have been redrafted to conform with the provisions of the Act.

The grounds on which a Director vacates his office under draft Article 112 (corresponding to existing Article 104) over all the disqualifications set out in various sections of the Act.

Draft Article 113 dealing with the right of a Director to contract with the Company brings existing Article 105 in line with the requirements of the Act.

Draft Articles 114 to 117 have been inserted dealing with the disclosure of interest of Directors, their inability to participate or vote in Board's proceedings on contracts or arrangements in which they are interested under Section 297 of the Act and with the maintenance of a Register of Contracts in which Directors are interested under Section 301 of the Act and the right of Members to inspect and to take copies of such Registers.

Draft Article 122 deals with provisions relative to default in appointment of Directors and amends and enlarges existing Article 111 to comply with the provisions of the Act.

Draft Articles 125 and 126 have been inserted dealing with the maintenance of a Register of Directors under Section 303 of the Act and the notification to the Registrar of Companies of any change, the maintenance under Section 307 of the Act of a Register of Shares and Debentures held by Directors, the disclosure by Directors of appointment to any other body corporate and the duty of a Director to disclose his holdings of Shares or Debentures in the Company.

PROCEEDINGS OF THE BOARD OF DIRECTORS

Draft Articles 127 to 138 correspond to existing Articles 115 to 125. Draft Article 128—relating to Quorum—substantially alters existing Article 116 by bringing in the provisions of Section 287 of the Act.

The other draft Articles under this Chapter bring the existing Articles into line with the requirements of the Act.

POWERS OF DIRECTORS

Draft Article 139 brings existing Article 126 in line with Section 293 of the Act which prohibits the Board of Directors from exercising any of the following powers except with the consent of the Company in General Meeting:—

(*a*) sell, lease or otherwise dispose of the whole, or substantially the whole, of the undertaking of the Company, or where the Company owns more than one undertaking, of the whole, or substantially the whole, of any such undertaking;

(*b*) remit, or give time for the repayment of, any debt due by a Director;

(*c*) invest, otherwise than in trust securities, the sale proceeds resulting from the acquisition without the consent of the

(*Continued on page 452*)

MONEY UNCHANGED

(From Our Own Correspondent)

BOMBAY, 27*th February*

There was no perceptible change this week in the state of the short-term money market from that noted towards the close of the previous week. Though the demand for credit did not slacken to any perceptible extent, banks were able to get their requirements without much difficulty. They had also a fair supply of funds, thanks to the return of money from mofussil branches and to the sale of securities to the Reserve Bank. There was, therefore, a slight broadening of activity in the inter-bank call money section. Though the common rate for inter-bank call was still 3½ per cent., a few borrowers were able to get some funds even at 3¼ per cent. House money continued to fetch 4 per cent. and in special cases 4¼ per cent. Sort-term deposits were taken at 4 per cent. for one to six months.

A further contraction of Rs. 9.38 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 22nd February 1957. Notes held in the Banking Department are higher by Rs. 9.80 crores. The small increase in total notes issued is covered by a corresponding rise in rupee coin. There is no change in foreign securities, but there has been withdrawal of Rs. 7.08 crores from foreign balances in the Banking Department, bringing the total fall in foreign reserves during the past two weeks to Rs. 15.81 crores. As regards the other items in the Banking Department, deposits of the Central Government have gone up by Rs.1.73 crores, while those of other Governments have declined by Rs. 1.24 crores. Deposits of banks have, however, risen by Rs. 4.89 crores. Loans and advances other than to Governments have further dropped by Rs. 7.67 crores and there has been a corresponding increase —Rs. 7.63 crores to be precise—in the Bank's investments. These two changes indicate that banks must have reduced their borrowings against securities from the Reserve Bank by ultimate sale of these securities to the latter. Fresh advances to Scheduled banks against usance bills during the week are of the order of Rs. 11.19 crores, while repayments amount to Rs. 11.52 crores.

The Scheduled banks' statement for the week ended 15th February 1957 shows a rise of Rs. 6.87 crores in demand deposits and of Rs. 37 lakhs in time deposits, in contrast to the decline of Rs. 3.18 crores and Rs. 75 lakhs, respectively, noted in the previous week. Borrowings from the Reserve Bank have consequently been reduced by Rs. 3.91 crores and those from the State Bank of India by Rs. 55 lakhs. On the assets side, advances are up by Rs. 8.46 crores and foreign bills purchased and discounted by Rs. 2.83 crores, while inland bills purchased and discounted are lower by Rs. 6.72 crores. Investments stand reduced by Rs. 4.74 crores. Cash balances are higher by Rs. 1.10 crores.

The Gilt-edged market continued to rule steady during the week under review also. A slight hardening tendency was noted in selected issues, thanks to some fresh buying interest and short-covering. 3 per cent. Conversion Loan was marked up by a further As. 2 to Rs. 74-6, but towards the close it declined to Rs. 74-5. 3 per cent. 1970-75 gathered As. 2 to Rs. 67-3. 3 per cent. 1966-68 was unchanged at Rs. 92-4, at which level there were some sellers. 3 per cent. 1964 and 3 per cent. 1963-65 were maintained at Rs. 94-6 and Rs. 94-3, respectively. 3 per cent. 1959-61 recovered an anna to Rs. 97-12. 2½ per cent. 1961 improved by As. 2 to Rs. 93-5. 3½ per cent. 1962, which continued to receive the Reserve Bank's support at Rs. 97-13, held its ground at that level. 3½ per cent. 1961 showed no change at Rs. 99-7, while 3½ per cent. 1964 was marked up by an anna to Rs. 98-6, 3½ per cent. 1965 stood at Rs. 98-3 and 3¾ per cent. 1967 at Rs. 98-8. 4 per cent. 1960-70 gained an anna to Rs. 100-15.

The rupee ruled slightly stronger in terms of the dollar during the week. Banks' selling rate for ready dollars declined from Rs. 478½ to Rs. 478¼ per $100, while their buying rate was unchanged at Rs. 475 per $100. The selling rate for Canadian dollars moved down from Rs. 500¾ to Rs. 500¼ per $100 and the buying rate from Rs. 494¾ to Rs. 493¾ per $100. This is in consonance with the trend of sterling abroad. Thus, in New York, spot sterling and three months' forward both gained from $2.79¾-2.79¾ to $2.79.13/16-2.79.15/16. At one time, sterling actually touched the par value of $2.80. Transferable sterling hardened from 276.25-276.35 to 276.45-276.55 cents.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 25*th February*

Prices in the kip market remain unchanged, though U.K. buying has been patchy. Arrivals are smaller than usual. Tanners are not willing to accept importers' ideas of values, because raw prices continue to rule firm. Further, the tanners find great deterioration in their output, in that they do not get as much top grades as reckoned by them when they bought raw stocks, and this has upset all their calculations. U.K. demand for buff calf and cow calf has been poor and prices are weak as a consequence.

Demand for prime tanned goat skins 8/9 lbs. upto 22/24 lbs. has been brisk from the U.K. and the Continent, and prices have firmed up considerably. Light weights which have been weak have also improved in price. Arrivals of common tannages of goat and sheep skins have been limited and demand has exceeded supplies. Semi-prime and medium sheep skins have ruled unchanged.

It is reported that the spot stocks of goat skins in the U.K. have been cleared and this, if true, is welcome news, as March auctions would show reasonably good results, despite large stocks expected to be catalogued.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 27*th February*

The bullion market ruled perceptibly weak during the week under review. The reactionary trend in prices noted towards the close of the previous week gathered considerable momentum on nervous liquidation by bulls and fresh bear pressure, with the result that silver disclosed a loss of Rs. 5-2 in both ready and forward over the week and gold Rs. 2-11 in ready and Rs. 2-1 in forward. With this recession, both the metals came down to the lowest levels to be seen since 10th January, the entire gains built up since then having been wiped out in less than ten days.

The market remained closed today on account of *Maha Shivrathri.*

The sharp drop in silver was due to reports that sizable quantity of silver had arrived in Calcutta from Kalimpong and rumours that fairly large sums by way of import duty had been paid for further import of coins. Though no authentic confirmation of these reports are available, they had a demoralising effect on the bulls, who preferred to liquidate their holdings when the going was good. Bears tried to exploit the situation.

The depression in gold was mainly in sympathy with silver. The offtake in the ready section was no doubt slightly lower than the arrivals. The belief that there would be no immediate trouble in Kashmir, on account of the U.N. Security Council's decision to send its President to India and Pakistan to examine the problem and report back by 15th April, also affected sentiment.

Silver forward (15th February settlement) dropped relentlessly from Rs. 184-5 to Rs. 179-3 and ready from Rs. 185-3 to Rs. 180-1. Despite the poor offtake, the ready metal kept up its premium over forward at As. 14 on account of the low level of stocks, which are estimated at 900 bars. The daily average offtake was 15 bars.

Forward gold (16th March settlement) retreated from Rs. 107-15 to Rs. 105-14 and ready from Rs. 108-9 to Rs. 105-14. The premium of As. 10 which ready commanded last week was gradually wiped out in the course of this week which indicates the weakness of the ready section. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was no more than 3,000 tolas.

In New York, silver was unchanged at 91⅛c. London prices also were maintained at 80d. for spot and 79¾d. for forward. London gold reacted from 249s. 4¼d. to 249s. 2¼d.

The following comparative table shows the trend of market during the week under review:

	6-2-1957	Highest	Lowest	20-2-57
	Rs. a	Rs. a.	Rs. a.	Rs. a.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, 25*th February*

Sugar prices eased slightly during the week, due to easy supply position, following a further release of 165,000 tons for free sale by the Government of India. The prevailing mill delivery prices of sugar were: Jaswant Rs. 28-11; Simbhauli Rs. 28-12; Mawana Rs. 28 to Rs. 28-12; Daurala Rs. 29 to Rs. 29-12; Amroha Rs. 28-3; Bijnore Rs. 28-2; Rampur Rs. 31-6; Mansoorpur Rs. 29 to Rs. 30 per maund; retail Rs. 30-10.

Production of sugar in the country is proceeding satisfactorily. The total output upto 31st January in the current season amounted to 816,399 tons, as against 712,000 tons a year before. The all-India second estimate of sugarcane puts the area and production for 1956-57 at 4,532,000 acres and 58,914,000 tons of cane, as against 3,945,000 acres and 50,455,000 tons, respectively, for 1955-56, an increase of 14.9 per cent. in area and 16.8 per cent. in production over last year. In order to stimulate sugar production in the country, the Government of India has decided to maintain the *status quo* in the sugarcane prices for 1957-58 season at Re. 1-7 per maund for cane at factory gates and Re. 1-5 at other centres.

The *khandsari* market continues dull and depressed in view of increasing stocks and slack demand. Prices ranged between Rs. 22 and Rs. 25-8 per maund.

The ready *gur* prices improved towards the week-end, due to poor arrivals—at an average of 2,000 maunds daily—although outside buying enquiry continued to be slack and stockists were the main purchasers. Local stock swelled to about 100,000 maunds estimated on Monday, as heavy quantities were reaching here from nearby centres for stocks. Latest prevailing prices were Rs. 10 to Rs. 10-4 per maund. Future *gur* prices, after early fall, advanced towards the week-end in line with prices in the ready section. *Fagun* and *baisakh* opened at Rs. 9-14-6 and Rs. 10-0-7½, respectively, on Monday last. They touched the lowest at Rs. 9-8-10½ and Rs. 10-4-6 on Thursday but recovered to Rs. 10-0-9 and Rs. 10-12-3 today.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, 27*th February*

The much-awaited trading in the new settlements, Jarilla May and Vijay June, commenced on Monday this week. While the Vijay June contract continues to be based on 27/32" fine Vijay, the Jarilla May contract is based on M.G. former Madhya Pradesh Jarilla 25/32" and is tenderable up to Fully Good with an allowance of "2 clause off" (Rs. 10). Business will be confined within the floor and ceiling prices prescribed by the Government, namely, Rs. 495 and Rs. 820 for Jarilla and Rs. 610 and Rs. 970 for Vijay.

The cotton futures market depicted a distinctly bullish trend, quite contrary to the earlier general expectation of a break in values. The bullish fervour was fanned by two chief factors. First, tendering differences fixed for the maturing Jarilla contract at the special meeting of the East India Cotton Association were considered to be on the high side. This, of course, had a psychological influence on the market. Secondly, the reported decision of the Japanese Government to increase the sterling allocation for cotton purchases led to expectation of enlarged export demand for Indian cotton. The recent scaling down of the crop estimate and reports of higher mill consumption in December also served to strengthen the sentiment of operators. The buying spree induced by these factors pushed up the prices of both the contracts to new heights, with Jarilla March crossing the sub-ceiling of Rs. 700 on the 21st inst. The bulls were thus compelled to pay a margin of Rs. 25 per bale on all outstanding commitments over Rs. 700 per candy.

Jarilla March opened the week firm at Rs. 701, as against the previous close of Rs. 694-8, and met with sustained bull support which took the contract to a high of Rs. 738-8 on Monday. After easing subsequently to Rs. 723-8, the contract again improved to Rs. 726 yesterday before closing at Rs. 723-8. Today the market remained closed due to *Maha Shivratri.* Jarilla May contract opened at Rs. 679 and after rising by a rupee to Rs. 680, receded to close at Rs. 675 yesterday.

M.G. Vijay April forged ahead from last week's closing rate of Rs. 813 to Rs. 833 on Monday. After declining to Rs. 829-8 the same day the contract again firmed up to Rs. 839, yesterday before closing lower at Rs. 833-8. Vijay June commenced business at Rs. 795 and, under the leadership of the April contract, improved to Rs. 803 but relapsed to Rs. 800 yesterday for want of follow-up support.

The following table gives the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	26-2-57	*High*	*Low*	20-2-57
Jarilla (March) ...	723½	726	701	694½
Vijay (April) ...	833½	839	814	813
New Contracts	26-2-57	*High*	*Low*	25-2-57
Jarilla (May) ...	675	680	672	674½
Vijay (June) ...	800	803	795	799

In the spot section, activity was at a very low ebb, thanks to the high prices prevailing. Mills were reluctant to make large purchases; only the immediate requirements were being covered by stray transactions. In the export section, Japanese inquiry was noted for Bengals. Since Japan has increased its sterling allocation for cotton purchases, it is expected that this would lead to renewed interest in Indian cotton. The visit to this country of an Egyptian trade mission has induced hopes of getting Egyptian cotton cheaper, because of the possibility of India entering into a barter trade agreement with that country.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 725; Berar Jarilla 805; Khandesh 835; Vijay 930; Oomra *Deshi* 795; Moglai 750.

The Karachi cotton market presented an easy trend during the week. Considerable slackness in overseas demand induced selling which resulted in a mild fall in values. The decline would have been more sharp but for some speculative buying based on reports of further business done with Russia. N.T.R.G. March eased from Rs. 80-8 last week-end to Rs. 79-14. The May position shed As. 8 to Rs. 80-6. The spot section ruled dull, on account of poor enquiries. The latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton are given below:—

Sind *Deshi* 92; Punjab *Deshi* 84; 4F Punjab Roller 86-10; S.G. 88-2; L.S.S. Punjab Roller 86-2; S.G. 90-2; N.T.R.G. 84-2; S.G. 92-2; 289F Punjab Roller 89-2; S.G. 102-2.

The Alexandria futures market ruled easy on weak advices from the ready section where values fell due to lack of foreign demand. The Egyptian Ministry of Agriculture, in its third estimate of the 1956-57 crop, has placed production at 6,942,813 kantars (1 kantar=99 lbs. weight) excluding Scarto. The second estimate was 7,037,000 kantars and first 7,201,000 kantars. The official estimate had little effect on prices in the futures market, as it was more or less in line with private expectations. The fourth and final estimate of the crop is due to be announced on 15th April next. Total export sales during the current season upto 31st January were only 385,463 bales (730 lbs.), as against 632,825 bales during the same period last season. The Egyptian Government is planning to send two missions, one to Western Europe and the other to India, for exploring the possibilities of finding markets for Egyptian cotton. The following are the latest available rates—in tallaris per lb.—from Alexandria:

Karnak: March 116.60; May 117.10; July 116.70.
Ashmouni: February 83.10; April 84.05; June 83.90.

The Liverpool market ruled easy during the week. Dealings were slow and prices showed a declining trend. This was due to the bearish influence of poor offtake in the ready section and lower support price for U.S. cotton published a fortnight

ago. Both American and American type contracts declined. Egyptian Karnak contract was neglected, while Sudan Lambert Seed remained unchanged. The U.S. Agricultural Department's announcement that its current export programme would continue unchanged till 15th August 1958 came as a disappointment to Liverpool which was expecting a shift-over to the system of export subsidy. Nevertheless, the announcement served to wipe off the uncertainty regarding the U.S. cotton policy. Since mills were fairly well covered, demand for ready and shipment cotton was slack. Pakistan offers, though at much lower rates, were still out of range with other comparable growths. Some interest was noted in Punjab *Deshi*. Indian Oomras, Bengals and Dhollerahs, etc., failed to attract buyers.

The latest available rates—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: March-April 26.68; May-June 25.73; July-August 25.47; October-November 25.23. *American Cotton Mixed Growth Contract*: March-April 25.90; May-June 25.90; July-August 25.62; October-November 25.33. *Egyptian Karnak*: March-April 60.00. *Sudan Lambert Seed*: May-June 43.50; July-August 42.50.

Values in the New York cotton futures market registered sizable improvement, thanks to trade buying and short covering. The gain would have been more substantial but for Commission House and New Orleans selling prompted by reports of favourable rain in the Texas region.

The U.S. Department of Agriculture has announced that the present system of selling U.S. surplus Government-owned cotton for export on a competitive bid basis will be continued during the next season. The only change in the programme will be that purchasers must export the cotton within nine months or by the 31st of July 1958 whichever is earlier. This announcement has removed the general apprehension that the Department might swith over to an export subsidy in place of the present competitive bid basis for export sales next season. It will be recalled that cotton exchanges had pleaded for an export subsidy. The Department is reported to have observed that, while cotton cannot be exported under the 1957-58 programme until after 15th August 1957, the programme was being announced at this time, so that the domestic industry, as well as foreign users of cotton, will know the Department's export sales policy and can begin to make sales and purchases for the new year. In general, it is believed, the programme will be substantially the same as the current programme. There is as yet no indication of what will be the minimum price acceptable to the Commodity Credit Corporation for the programme for next season. However, it is reported that the first bid day for the new programme will be 19th March and first delivery day 16th August this year.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	25-2-57	19-2-57	12-2-57
Spot	35.33	35.25	35.55
March	35.29	35.08	35.38
May	35.25	35.10	35.29
July	34.67	34.42	34.70

YARNS DECLINE FURTHER

(From Our Own Correspondent)

BOMBAY, *27th February*

For the fourth week in succession, the yarn market ruled bearish. Despite high replacement costs, selling continued unabated, thanks to persistent stringency in the money market. The banks, it was reported, were pressing their clients to clear the goods as quickly as possible, while buying enquiries from consuming centres were poor. Values of yarns, as a consequence, suffered a further setback. In particular, staple fibre yarns encountered heavy selling, following pressing sales of large holdings by several South Indian mills. Rayon yarns were neglected, as offtake was none too encouraging on account of the sluggishness in the rayon fabrics market. Cotton yarns were also neglected even at lower prices. Although there were some overseas enquiries, actual export business was very much restricted, because of competition from countries like Pakistan. The market was closed today on account of *Maha Shivrathri*.

In the staple fibre yarn section, 40x2 February delivery moved down by Rs. 9 to Rs. 638. April delivery dropped a like amount to Rs. 629. Among spot indigenous yarns (40x2), Kohinoors fell by an anna to Rs. 3-7. Citys and Centurys lost half-an-anna each to Rs. 3-5-9 and Rs. 3-6-6, respectively. New Greats eased by three pies to Rs. 3-5-3. Foreign yarns (80x2), however, were somewhat steady, Paramounts gaining six pies to Rs. 5-2 and Fujis three pies to Rs. 5-3-9.

Rayon yarn (150 bright cones) April delivery receded by Rs. 3 to Rs. 649. 120 dull cones April delivery shed a rupee to Rs. 794. February contract was neglected at Rs. 774, same as last week. Among spot yarns, 150 Japan dropped As. 2 to Rs. 4-4. 120 Japan was done lower at Rs. 4-4-6, as against Rs. 4-6. 150 Italy eased by three pies to Rs. 3-10-9. 120 Italy was dull at Rs. 4-0-6. National Rayons 150 Bt. cones 1st grade receded from Rs. 3-5-9 to Rs. 3-5-6.

In the cotton yarn section, sixty counts staged a retreat, Moderns and Raghuvamshis declining by As. 8 each to Rs. 62-8 and Rs. 57-8, respectively. Forty counts Minaxis lost As. 2 to Rs. 27-2. Moderns were dull at Rs. 28-8, as also Gokaks at Rs. 27-8. Among 20s, Maduras decreased by As. 2 to Rs. 19-8, while Moderns were unchanged at Rs. 19-6 and Gokaks at Rs. 18-12. Ten counts Gokaks eased by an anna to Rs. 15-5. Moderns were unaltered at Rs. 15-4. Podars, however, met with some special buying support and hardened by As. 5 to Rs. 15-3. Transactions put through in eighty counts were very much limited, Mahendras being quoted at Rs. 75, Moderns at Rs. 77, and Finlays at Rs. 81-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted yesterday, as compared with those a week before:

	26-2-1957	20-2-1957
	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)—**		
120 Unit Cones Spin February	774 0	774 0
120 Dull Cones Spin April	794 0	795 0
150 Bt. Cones April	649 0	652 0
120 Japan (per lb.)	4 4½	4 6
150 Japan (per lb.)	4 4	4 6
120 Italy (per lb.)	4 0½	4 1
150 Italy (per lb.)	3 10½	3 11
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 February	629 0	638 0
40 x 2 April	638 0	647 0
40 x 2 New Great (per lb.)	3 5½	3 6½
40 x 2 Century (per lb.)	3 6½	3 7
40 x 2 City (per lb.)	3 5½	3 6½

10s Podar	15 4	14 14
20s Madura	19 8	19 10
40s Gokak	27 8	27 8
60s Raghuvamshi	57 8	58 0
80s Modern	77 0	77 0

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, *27th February*

The oilseeds market ruled steady during the week under review barring the linseed section which presented a bearish trend. The groundnut market opened the week subdued on upcountry offerings, but steadied up subsequently, following better offtake of groundnut oil and demand from crushers. The castorseed section, though it moved irregularly early in the week, firmed up towards the closing sessions on rumours of a favourable announcement on the export front. Cottonseed, too, slightly improved over the week. Linseed, however, sagged further on fresh arrivals, lack of overseas enquiries and hedge selling. The market was closed today on account of *Maha Shivrathri*.

Groundnut February contract opened the week at Rs. 166 and touched the bottom level of the week the same day at Rs. 164-4. With minor fluctuations, it improved and reached the peak level of Rs. 170 yesterday, before closing As. 8 lower at Rs. 169-8. May contract opened at Rs. 162, moved up to Rs. 164-12, the highest for the week, yesterday, before finishing at Rs. 164-8. Over the week, the former put on Rs. 2-4 and the latter Re. 1-4. Spot Bold F.A.Q. was higher by As. 2 at Rs. 33-8. Groundnut oil ex-mill was quoted at Rs. 18-8 as against Rs. 18-5 last week-end.

Linseed May contract opened the week at Rs. 27-14 and declined the same day to Rs. 27-4 but recovered to close the week at Rs. 28. Spot Bold was done As. 14 lower at Rs. 28. Linseed oil ready was subjected to heavy selling and fell by Re. 1-8 to Rs. 14-14.

Castorseed September contract commenced at Rs. 152-4, as against Rs. 154-12 and declined to Rs. 150-4 the next day. The movements remained irregular during the following days. Yesterday, however, the contract touched Rs. 156 on special buying support before closing at Rs. 155-4. Over the week, it put on Rs. 2-6. In the spot section Bold was higher by Re. 1-14 at Rs. 33-2.

Cottonseed February contract moved down from an opening level of Rs. 96-8 to Rs. 95-12 the same day. In the following days, it improved steadily with minor fluctuations, having touched yesterday the level of Rs. 100 before finishing at Rs. 99-12. Over the week, it was higher by Rs. 3-12. May contract opened at Rs. 97 and moved up to Rs. 98 yesterday before closing at Rs. 97-12.

Among others, *kardi* seed remained steady at Rs. 21, as also *niger* seed Madras at Rs. 28-4. Export of castor oil from Bombay during the second week of February amounted to 629 tons, thus making a total of 2,138 tons for the first half of February. The total exports from Bombay from 1st January to 14th February amounted to 5,950 tons. Linseed oil exports in the same period aggregated to 971 tons.

The all-India first estimate of linseed for 1956-57 puts the current years area at 2,728,000 acres as against the adjusted corresponding estimate of 2,461,000 acres for 1955-56. This shows an increase of 267,000 acres or 10.8 per cent. in area during the current year as compared to last year. The overall increase in area during the current year has been shared mainly by Madhya Pradesh, U.P. and Rajasthan and has been attributed to favourable climatic conditions at sowing time.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	26-2-1957	20-2-1957	13-2-1957
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

TEA PRICES MOVE UP

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *21st February*

Approximately 1,700,000 lbs. were on offer in sale No. 4 which was held on Tuesday 19th February. Quality showed an all-round improvement and there were some attractive high grown teas on offer. The sale opened to a good demand, although competition was confined to a few buyers. Common and low medium brokens were well supported and prices were fully firm. Medium brokens of improved quality were often dearer to buy, but good medium teas were irregular and easier. Best liquoring high growns met with some competition and flavoury invoices sold well at dearer rates. Fannings of all types were in much less demand and prices were irregularly As. 2 lower. These sorts accounted for the majority of the withdrawals. Whole leaf teas sold well and must be quoted fully firm to dearer. The following are the quotations:

	1957 Rs. a. p.
Plain B.P.	2 1 0
Low medium B.O.P.	2 7 0
Medium B.O.P.	2 8 0
Good B.O.P.	2 11 0
Well made black leaf O.P.	2 8 0

The average price realised in sale No. 4 was Rs. 2-9-5 per lb., as compared with Rs. 2-8-3 in sale No. 3 and Rs. 2-3-3 in the corresponding sale of 1956.

London Market—Sale of 18th February 1957.—Little irregular, but stronger at the bottom.

Sale of 19th February 1957.—Plainest steady. All others irregularly 2d. to 3d. easier.

Colombo Market—Sale of 18th February 1957.—Fair demand. Dusts and black fannings firm. Others lower, particularly stalky kinds.

Sale of 19th February 1957.—Small selection. Improved flavoury high-growns dearer. Otherwise fair demand at lower levels. Low and medium brokens declined 20c. Poorer high-growns 30c. to 40c. lower.

Calcutta Market—Export.—With exception best liquoring sorts, tippy teas and stylish whole leaf grades, market one anna to As. 2 lower.

Internal.—18,000 packages. Dust met good general demand. Sale opened one anna to As. 1½ easier, closed irregularly steady. 2,600 packages leaf. Good general demand one anna to As. 1½ easier.

Export Quota.—The market has hardened during the week and business has been done at 43-44 pies.

Forthcoming Auctions.—Sale No. 5 will be held on Tuesday 5th March.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale E.*—340,000 lbs. Strong demand, particularly for medium sorts which are half to one anna dearer."

JUTE GOODS LOWER

(From Our Own Correspondent)

CALCUTTA, *26th February*

Jute goods continued to be quoted at lower levels during the week, but raw jute prices gained about As. 8 to Re. 1 per maund. In jute goods, small interest was shown by buyers on behalf of foreign consumers and some business was eventually put through. The volume was insufficient to move quotations upward. However, prices recovered from the lowest levels to which they had fallen during mid-week. The levy of an excise duty of Rs. 70 per ton on jute goods by Pakistan was believed not to affect exports from that country, as the imposition was interpreted as relating to internal consumption only. However, in view of the confusion and lack of clarification from the Central Pakistani Government, exporters in East Pakistan were reported paying the duty. They expected refund as and when clarification was issued from Karachi. The Pakistani mills are already burdened with high costs of production, consequent on the high prices they have to pay for the raw material, and, if the fresh impost is also to be collected on exports also, there is bound to be some diversion of business from Dacca to Calcutta. The present lull in the export market in Calcutta would duly be reflected in the stock figures as at the end of this month, although production for the shorter working month of February, it is expected, would be lower than in the last month. A further increase in stocks was considered a certainty.

The difficulties in getting raw jute from Pakistan have been often referred to in these columns, and the need for India reaching self-sufficiency in feeding the mills has been rightly in the thoughts of both the Government and the industry. In this context, it was with interest that trade circles read the speech of Mr. O. T. Jenkins when he presided over the annual meeting of the Bengal Chamber of Commerce and Industry on Friday last. After stating that in the last 12 years jute output in India had gone up by 200 per cent. and that even at the increased output of 5.2 million bales in an area of 2.3 million acres in 1956-57 requirements fell short by 1.4 million bales, Mr. Jenkins detailed four measures, i.e., the use of improved seed, mechanical sowing by seed drills, a reduction in weed growth by inter-row hoeing, and the application of chemical fertilisers, which, if implemented, in the current sowing season, would increase output by 20 per cent. If this increase can only be achieved that would mean self-sufficiency and doing away with imports from Pakistan. Prior to partition, India used to export raw jute, and West Bengal's Daisee variety had always found a popular overseas market. Mr. Jenkins said that it was on account of the inroads of substitutes and bulk handling methods into the fortunes of jute goods that world consumption of jute manufactures had not increased commensurate with the increase in the world's agricultural produce. Mr. Jenkins' remarks are timely. If only India can export more jute goods, grow more raw jute, and earn more foreign exchange, that would help considerably in the rehabilitation of this State's economy, considerably affected by the pressure of a continuing flow of refugees.

Early in the week, prices of jute goods were steady with ready B. twills being quoted at Rs. 111-6 and 40" 10 oz. hessian at Rs. 41-7. There were some enquiries from overseas, including those from Australia for special constructions. However, the business that followed was inadequate to keep prices firm. By Thursday last week, ready B. twills had fallen to Rs. 108-8 and hessian 40" 10 oz. to Rs. 40-5. Some amount of covering business followed in both hessian and sacking, more so in the latter. This was reflected by the recovery which ready B. twills made by the week-end to Rs. 109-6 and hessian 40" 10 oz. to Rs. 40-12. Yesterday, however, while hessian 40" 10 oz. remained unchanged at Rs. 40-12, B. twills sagged to Rs. 109. The eight oz. hessian was quiet at Rs. 33-12 f.a.s.

Mills accorded some support to raw jute. Business was put through. Sellers lost no time to put on a reserved air. The latest quotations for the 1956-57 crop with February-March-April delivery position are as follows. Those of a week ago are given in brackets for comparison:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
Northern	36-0 (35-8)	33-0 (32-8)
District	36-8 (33-8)	33-8 (33-0)
Indian:		
Northern	31-0 (30-8)	28-8 (28-0)
Assam Upper ..	31-0 (30-8)	28-8 (28-0)
Assam Lower ..	31-0 (30-8)	28-8 (28-0)

Bimli f.a.q.	Rs. 23-8 (23-0)	
Pucca bales 1st marks ready	.. Rs. 180 per bale (same).	

TEA RULES BETTER

(From Our Own Correspondent)

CALCUTTA, *26th February*

Better conditions prevailed in the export tea sales held yesterday. On good demand prices recovered. The Government of India's announcement increasing the export allotment of 1956-57 tea by 10 million lbs. has been hailed with great enthusiasm in trade circles. With the present revision, the quota stands at 453.3 million lbs. The 1956 crop is believed to have amounted to 663.6 million lbs., including South Indian production, and internal consumption 200 million lbs. Considering this statistical position and also the substantial carryover from the 1955 crop, the tea trade strongly feels that the export quota can further be raised.

Export demand for Indian tea continues to be good, and this is amply demonstrated in the hardening price for export quota rights. Plenty of tea remains to be sold, and if a recession in prices has to be avoided, the export quota should be further increased. In this context, the dearer tendency in the Mincing Lane auctions should be conclusively noted. In the sales in London on 18th February, prices of the plainer colourry teas and Dooars gained in competition. Similarly, steady conditions were also reported in the subsequent sales held on Wednesday last. In 1956, Britain imported 512,634,000 lbs. of tea or 21,330,000 lbs. more than in 1955. Imports from India were 299,673,000 lbs. or 58 per cent. of total imports. In 1955, India had sent to Britain 283,394,000 lbs. and thus it is seen of the increase in 1956, India's share was as much as 76 per cent.

Last week's internal sales opened on a quiet tone, but towards the close prices recorded gains. Dusts offerings aggregated 18,001 chests. The price of the leafy orthodox Assams declined by an anna to As. 14, but the price of the powdery kinds was maintained at the opening level. The bright liquor-ing C.T.C. Assams representing improved quality were in good demand, but the ordinary lots from this category gave way. Orthodox Dooars and commons presented an irregular pattern; however, those lots with a clean and black leaf appearance rose above brokers' valuations. The quotations were: Best Assam C.T.C. Rs. 2-10 (nominal), medium Assam C.T.C. Rs. 2-2, medium Assam grainy dust Re. 1-13-6, and medium Dooars Re. 1-13.

Leaf prices declined by As. 2, although there was fair demand. Offerings totalled 2,578 chests.

As already stated, steady conditions were in evidence during the export sales held yesterday, when offerings amounted to 61,500 chests. Prices for all constructions moved up. Teas for price gained by As. 2. A similar rise was also recorded in clean common and low medium teas and all teas with useful liquors. Often keen competition was offered to stylish and well-made whole leaf grades prices of which rose; but the poorer grades declined slightly. Among C.T.Cs. the cheaper lots rose by As. 2, but the remainder gave way by As. 2. Prices of medium Assams of poor quality also declined by As. 2. The quotations were: Best C.T.C. Assam B.P. Rs. 2-6 (nominal), medium Assam B.P. Re. 1-15 to Re. 1-15-6, plain B.P. Re. 1-14, and clean black pekoe Rs. 2-2 to Rs. 2-3.

METALS MOVE DOWN

(From Our Own Correspondent)

CALCUTTA, *26th February*

The week under review in the metal market was noted for a sharp recession in the prices of tin and copper, and other base metals came down in sympathy. From Rs. 590, tin receded to Rs. 562. Even at the lower level, the prices was several points above the replacement cost. Ready material was in short supply, but fresh arrivals were soon expected. During the week, some shipments of electrolytic copper wire bars were received. Most of these were direct imports by consumers, and as such they did not reflect on bazar stocks. The bazar price was extremely quiet at Rs. 182, to which it had fallen from Rs. 190 earlier. Advices from New York and London were far from encouraging, and these indicated that the world supply position was comfortable. It is evident that demand is below production. The reduction in price in the United States by copper smelting firms by 2 cents per pound to 34 cents preceded the announcement by the Rhodesian Selection Trust group of companies slashing the copper price by £20 a ton to £250 a ton. These cuts in prices naturally have had their reflection in the price in Calcutta. Virgin lead was quiet at Rs. 79-8, as was electrolytic zinc at Rs. 74. However, while the supply position in lead was free from anxiety, that in zinc was not so. The ready supplies in zinc had become difficult, but fresh imports were expected to reach docks soon.

LINSEED RECOVERS AT CLOSE

(Messrs. A. Bradley and Co.)

CALCUTTA, *25th February*

A considerable decline in linseed prices was noted earlier in the week, owing to the withdrawal of buyers. The downward trend was, however, checked towards the close, following better demand from crushers. Activity recorded was on a small scale, for near positions only. In the oil section, some enquiries from shippers at appreciably lower rates resulted in a very small turnover. Sellers were unwilling to make lower offers in anticipation of higher price levels.

The latest available quotations are: February Rs. 21-6 and April-May Rs. 20-10 per maund.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *24th February*

During the week under review, the hides and skins market ruled steady. The Madras dealers were lukewarm, whereas the country tanners were keen buyers of low grade cow. The upper grades of cow and buff were eagerly sought for by the local tanners headed by Messrs. Cooper Allens.

The latest available quotations are: Wet salted cow 1st grade Rs. 350 to Rs. 360, 2nd grade Rs. 260 to Rs. 280 and 3rd grade Rs. 150 per score; wet salted buff 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; goat 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, *25th February*

Prospects of good wheat crop in Northern India, together with the Government's heavy import programme, have improved the food situation in the country and prices have not only not gone up but have tended to recede. The all-India first estimate of *rabi* cereals (wheat and barley) for 1956-57 puts the current year's area at 38,772,000 acres, as against 36,015,000 acres for 1955-56. Of this, wheat accounts for 30,502,000 acres and barley for 8,270,000 acres, as against the previous year's figures of 27,756,000 acres and 9,259,000 acres, respectively. The all-India second estimate of rice shows an increase of 0.9 per cent. in area and 1.6 per cent. in production over last year at 72,512,000 acres and 23,900,000 tons, respectively. The import programme in the country has been stepped up, with a view to building up of fairly big reserves. Over 605,000 tons of wheat and nearly 284,000 tons of rice are expected to arrive in India from abroad in the next three months, by which time the new wheat crop will also arrive in the market.

Wheat at Hapur is now quoted at Rs. 16-4 for *dara* quality, at Rs. 17-6 for farm quality at Rs. 15-14 for wholesale *khati*. Sales through fair-price shops have been increased and most of the demand is now met through these shops. Outside buying inquiry is slack and stockists are now reported to be anxious to sell their stocks. The weather continues favourable for the standing crops. Rice has also eased slightly. *Basmati* was quoted at Rs. 23 to Rs. 26, *Manipuri* at Rs. 20-6, coarse at Rs. 16-4 per maund.

Gram has recorded a fall of As. 8 per maund during the week on good crop prospects, here as well as in Punjab. The all-India first estimate of gram at 22,937,000 acres which is an increase of 3 per cent. over last year has also acted as a bearish factor. Barley and bejhar, however, rule steady, due to poor local stocks and the new crop arrivals will begin after a month. Fall in consumer seasonal demand accounted for the depressed conditions in maize and *bajra*. Prevailing prices as on Monday were: gram local Rs. 12-12; Punjabi Rs. 13-4; barley Rs. 13-10; bejhar Rs. 13-10; maize Rs. 13-14; *bajra* Rs. 13-14; *jowar* Rs. 12-6 to Rs. 13 and *guwar* Rs. 11 per maund.

Peas have recorded a quiet trend on good crop prospects at an early date, although local stocks have dwindled to small quantities. *Arhar* rules weak on slack outside demand and other pulses are mostly unchanged. Peas *dara* was done at Rs. 13-8, *arhar* at Rs. 12-14, *urd* at Rs. 18-6 to Rs. 21, *moong* at Rs. 14-6 to Rs. 16 and *masoor* at Rs. 16 per maund.

Pulses futures rule easy on east U.P. selling. On Monday they were quoted at: peas *jeth* Rs. 10; peas farm *jeth* Rs. 10-6-4½; *arhar jeth* Rs. 10-10-6; and *urd baisakh* Rs. 18-8.

PALAI CENTRAL BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE 29th Annual General Meeting of the Shareholders of the Palai Central Bank Limited will be held at the Registered Office of the Company at Palai on Thursday the 4th day of April 1957, at 3-30 p.m., to transact the following business:—

(*a*) To consider the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1956 and the Reports of the Directors and Auditors.

(*b*) To declare a Dividend.

(*c*) To elect Directors in place of the retiring Directors.

Note—(1) Shri K. George Thomas retires by rotation and is eligible for re-election.

(2) Shri V. Joseph Kuruvilla retires by rotation and is eligible for re-election subject to his being exempted from the age limit prescribed under section 280 of the Companies Act. Special Notice has been received by the Company and is hereby given that the following resolution would be moved:—

"Resolved that the age limit of 65 years prescribed under section 280 of the Companies Act shall not apply to Shri V. Joseph Kuruvilla who has attained the age of 68 years at his last birthday and that he be re-elected a Director of the Company."

(*d*) To appoint an Auditor or Auditors and to fix his or their remuneration. The retiring Auditors, Messrs. Srinivasan & Co., are eligible for re-appointment.

(*e*) To consider and, if thought fit, to pass the following resolution:—

"Resolved that with effect from 5th May 1956 the sitting fee of each Director be increased to Rs. 50 for every Meeting of the Board attended as already approved by the Central Government."

(*f*) To consider and, if thought fit, to pass the following resolution:—

"Resolved to approve of and to authorise the Board of Directors to borrow, whether with or without security, for the purposes of the Bank from time to time or at any time with effect from the date of commencement of the Companies Act, 1956, such amounts as they may consider necessary to any extent or without any limit."

(*g*) To transact any other business that can be transacted at the Meeting.

The Explanatory Statement under section 173 is annexed hereto.

A member who is unable to attend in person is entitled to appoint another (whether a member or not) as his proxy to attend and vote instead of himself subject to section 176. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

The Register of Shareholders and the Transfer Books of the Company will be closed from 5th March 1957 to 3rd April 1957, both days inclusive.

By Order of the Board,
K. JOSEPH AUGUSTI,
Managing Director.

PALAI, *21st February* 1957.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. *Including bonus.
(i) Made up of an interim dividend of Rs. 1-12 per share on 1,80,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,80,000 shares are bonus shares. (c) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
‡—Fort William Jute Co. has sub-divided ordinary shares as Rs.100 1st share to 10 Rs.10 each.

BUSINESS MEN'S LOBBY IN PARLIAMENT

(*Concluded from page 409*)

mentary form of Government exists. As in all human institutions, excesses and perversions are possible and only the good sense of the members themselves can prevent lobbying to degenerate from education into abuses. It is now reported that business men are trying to get into Parliament to form a "lobby" and some are talking about it, as if it were, almost an act of subversion. Business men, as any other citizens of India, have the right to stand for elections and to speak of their lobbying proclivities as though they are a crime is a bit of counter-propaganda. Would the same description apply to the intention of union leaders who stand for elections? If there is a lobby in the present Parliament, the most powerful one belongs to labour and, in number, they preponderate many times over their opposite among business men, and in influence they are even greater.

There is nothing wrong in business men standing for elections and it is quite unreasonable to accuse them with the intention of creating a business men's lobby when that ban does not apply to any other group. But from the business men's own interest, the forming of a lobby of their elected members would be the least effective way of achieving their purpose.

In a Parliamentary democracy, there is a generative influence concentrated within the Legislature and a continuous process of education of its members is essential to their intelligent functioning. In the vast conglomeration of interests, economic and otherwise, extant within a nation, is it to be wondered if recognition to particular interests are drawn by personal representation to members and by persuading a sufficient number of them to support a particular view? It is within the experience of all members of Legislatures to have received thousands of packages of written representations of all sorts of interests. Does lobbying assume a sinister connotation the moment a group of persons are approached and the same written representations are verbally made?

What is obviously intended to convey by referring to a "business men's lobby" in Parliament is that a number of members with business interests in private life is seeking to form a group within Parliament to put forward the business men's point of view. There should really be nothing objectionable about this any more than a group of trade unionists forming another lobby. There is no valid reason why a business men's lobby should be objectionable or suspiciously viewed any more than that of any other interest.

It is, however, another question whether the business community would serve its interests best by having such a distinct group within Parliament. By the sheer arithmetic of franchise, the business community, as a distinct group, cannot return a number sufficient to influence Parliament in any great degree. What they can, however, do is to put forward the community's views. This function has been admirably fulfilled by Mr. Bansal, Mr. Somani and Mr. Khilachand in the present Parliament without any great influence on the Government's economic policy or attitude towards business men. If at all, we are to draw a lesson from their experience, it is that their views are discounted before they are on their feet and they will continue to be so discounted until business men form a sufficiently large number in Parliament. But this seems quite unlikely to happen. The other alternative is to inform, educate and persuade a sufficient number of ideologically uncommitted members within the House to an intelligent view of private enterprise.

TARIFF COMMISSION AND ROAD TRANSPORT

(*Concluded from page 420*)

2½ times its load by the simple expedient of employing more than two axles. Experience in other countries shows that this expedient reduces the cost of operation by over 20 per cent. Apart from that, the main advantage to a country like ours is in the saving in the number of vehicles required to handle the same traffic. The Tariff Commission's report has shown that, as matters stand at present, there is not much scope for the reduction of prices of motor vehicles. Here, the obvious remedy is the employment of multiple-unit vehicles, since, per unit load, they are cheaper in initial cost than normal vehicles on two axles. In the U.S.A., such vehicles are understood to be in use in all classes of vehicles above a gross laden weight of 12,000 lbs.

Standardisation

The Indian Roads Congress's standard for vehicles is as follows:—

Maximum width	...	8′
Maximum height	...	12′-6″
Maximum length (single unit)	...	35′
Maximum length (semi-trailer)	...	50′
Maximum length (two-unit)	...	60′
Maximum axle-load	...	18,000 lbs.

We cannot yet employ the maxima indicated above on all our roads, at any rate till the end of our third Five-year Plan in 1965-66, by which time the entire Nagpur Road Plan is expected to be completed. But we can and should try to go as near as possible to these maxima on our surface roads which today are only about 1,000 miles short of the target in the Nagpur Plan, excepting, of course, the unbridged portions. This will facilitate the employment of economic units which are our main requirements.—*All Rights Reserved.*

IRRIGATION IN SAHARA

New palm groves will be planted in the Sahara. Thanks to the progress made in the last few years in the realm of drilling, several beds of subterranean water have been discovered recently in southern Algeria, notably in the Ouargla region.

Drilling effected near Ouargla reached the bed at a depth of 1,500 metres. The water rises from the well at the rate of 15,000 litres per minute. Half of this water will be used to revive old palm groves; the rest will be used to create new palm groves.

Drilling undertaken at Zelfana and Guerrara, between Ouargla and Ghardaia, has also encountered subterranean beds at a depth of about 1,000 metres. At Zelfana, the water rises at the rate of about 10,000 litres per minute, which will enable the creation around the oasis of about 200 hectares of additional palm groves.

WAGES IN RELATION TO PRO

MARKET GOSSIP

(Concluded from page 403)

one of plentiful stocks of cloth with mills and a break in prices. If the fiscal policy of the Government is not revised, the sluggishness of the cotton piecegoods market is bound to be protracted and the mills may be compelled to curtail output.

• • • •

The plantation owners and the estate workers in Madras and Kerala States owe a debt of gratitude to the State Minister for Labour and Industries, Mr. M. Bhaktavatsalam, for effecting an amicable compromise in the dispute between them over the award of the Special Tribunal on the wages to workers which is on appeal before the Supreme Court. The Minister has spared no efforts in bringing about this out-of-court settlement ever since the award was gazetted in October last. The task was undertaken more at the request of workers than that of employers. The significance of this is that workers' leaders themselves began to feel that the Tribunal's award lacked a sense of realism and would inflict a permanent injury on workers for a passing lump-sum gain.

The two notable features of the compromise terms are: (1) the workers have given up their claim for increased wages prior to the date of award, namely, 24th October 1956; in other words, they have agreed to forgo the claim for increased wages with retrospective effect as far back as from 24th March 1952 as sanctioned by the Tribunal; and (2) the wages which are to be paid from the date on which the Tribunal's award came into effect are a little higher than those envisaged earlier during the compromise talks. They are also higher than those fixed by the Minimum Wages Committee, but considerably lower than those granted by the Tribunal. The managements of plantations have agreed not to press their appeal which is now before the Supreme Court and the workers not to press their claims under the Special Tribunal's award. It will be recalled that the U.P.A.S.I. had calculated the financial burden of this award on the industry at Rs. 4.5 crores per annum recurring expenditure on account of prospective increase in wages and amenities and Rs. 17.02 crores on account of the retrospective application of such increase in wages. If this award had been enforced, a large sector of the industry would have been crippled beyond recovery and thousands of workers would have been thrown out of employment.

Under the terms of the compromise, the workers have been grouped in four categories, namely, grade I and grade II adult, adolescent and child, as against only three groups, grade I, grade II and child, under the award of the Minimum Wages Committee and that of the Special Tribunal. Further, estates have been classified into Class A and Class B. The classifications are as follows:

(Planted acres)	Class A	Class B
Tea	.. 200 and more	Less than 200
Coffee ..	.. 300 ,,	,, 300
Rubber ..	.. 400 ,,	,, 400

The coffee estates in the Shevaroys, Madurai and Tirunelveli districts, irrespective of their acreage, have been placed, for the purpose of wages, under Class B estates, presumably because they came into existence only recently and these areas have yet to be fully developed. As regards mixed tea and coffee estates, if more than 200 planted acres are tea and the said area is more than two-fifths of the entire planted acreage, the said estate will be treated as Class A tea estate and the workers paid accordingly. In other cases, the workers will be paid according to the rates applicable to Class B estates. This new classification of estates is a welcome feature, in that the burden on small estates has been considerably reduced with an eye, on their capacity to pay.

The daily wages of workers suggested by the Government and accepted by both parties are as follows:

	Grade I	Grade II	Adolescent	Child
Tea—	Re. a. p.	Re. a. p.	Re. a. p.	Re. a. p.
A ..	1 11 6	1 5 0	1 0 0	0 11 6
B ..	1 9 0	1 2 6	0 15 0	0 11 6
Coffee—				
A ..	1 9 0	1 2 6	0 15 0	0 11 6
B ..	1 6 0	1 2 6	0 15 0	0 11 6
Rubber—				
A ..	1 11 6	1 5 0	1 0 0	0 11 6
B ..	1 9 0	1 2 6	0 15 0	0 11 6

It will be noted that workers in tea and rubber estates will be paid the same wages, while those in coffee estates will be getting slightly lower wages. So far as child worker is concerned, he will get a uniform rate of As. 11-6, irrespective of the fact that he belongs to Class A or Class B of either of the three classes of plantations. It may be noted here that the wages fixed by the Special Tribunal were: Rs. 2-4 for grade I, Re. 1-12 for grade II and Re. 1 for child.

Under the compromise agreement, extra remuneration for various jobs like pruning, weeding, etc., will be paid on the same differentials as those now maintained in respect of such work. Workmen will also be paid retirement benefit at the rate of 15 days' wages for each year of service, subject to a maximum of 15 months' wages. Provident fund scheme will also be introduced, the contribution being at 8-1/3 per cent. in respect of labourers in Class A rubber and tea estates with effect from 1st January 1957. The statutory provident fund scheme which will come into force on 1st May will apply to all workers, but the rate of contribution under this scheme is lower. Thus, the workers of bigger estates distinctly stand to gain under the present agreement.

Both the parties to the dispute have accepted that the agreement should be in force till 31st March 1961. Accordingly, the industry is assured of peaceful labour relations for a period of four years.

The precise effect of the compromise terms on the cost structure of plantations is not yet known, but, on a rough guess, it is not expected to be more than an anna per lb. of tea, as against As. 3¼ to As. 4 estimated as a result of the Tribunal's award. Roughly speaking, therefore, the industry, besides being relieved of the huge unbearable burden of about Rs. 17 crores, will be paying about a fourth of the recurring cost of what the Tribunal awarded.

Apart from the relief obtained by planters from the rigours of the Tribunal's award, the out-of-court settlement is a triumph for conciliation and will help foster cordial relationship between employers and employees and facilitate mutual consultations in future. It should also serve as a guide to all labour disputes, so that the trouble, cost and vexation involved in case of reference to courts can be avoided.

STANDARD RATE UNDER THE ELECTRICITY (SUPPLY) ACT 1948

The Federation of Electricity Undertakings of India has addressed a communication to the Union Ministry of Irrigation and Power, inviting the latter's attention to the serious repercussions on the electric supply industry of the recent Reserve Bank of India announcement that from 1st February 1957 the Bank's rate of interest on advances to Scheduled banks against Government and other eligible securities under section 17 (4) (b) of the Reserve Bank of India Act, 1934, has been raised to 4 per cent. per annum, while the Bank rate remains unchanged. A basic object of the Electricity (Supply) Amendment Act, 1956, in linking the "standard rate" to the Reserve Bank rate was, it is pointed out, to enable an automatic adjustment of the standard rate to the conditions prevailing in the money market. The Federation points out that the Reserve Bank has, by raising by ½ per cent. the rate of interest chargeable on loans taken by the Scheduled banks against Government and other eligible securities, brought about a *de facto* increase in the Bank rate and that the electric supply industry will face a serious situation if remedial action is not taken to bring about an automatic adjustment of the "standard rate" with the money market, that is, unless the official Bank rate is brought in line with the prevailing usance rate, before long. If this development is not to materialise, the Federation holds, an amendment of the Electricity (Supply) Act will be necessary. The proposal which the Federation suggests for the consideration of the Government is the addition of an explanation to the definition of Standard Rate—Para XVII (x) of the Sixth Schedule—to the following effect: "For purposes of this paragraph, the Reserve Bank Rate means the bank rate under section 49 of the Reserve Bank of India Act, 1934 or the rate of interest on advances to Scheduled banks against Government and other eligible securities under section 17 of the Reserve Bank of India Act, 1934, whichever is higher."

With the Government bringing in the amendments to the Sixth Schedule effective from 1st April, the official Reserve Bank rate, prevailing on that date, will govern the return permitted to the investor during the financial year 1957-58 and, unless the Bank rate is officially increased by that date, the amendment to the Electricity (Supply) Act suggested above will have to be brought into force with effect from 1st April 1957. The Federation feels that the situation calls for an emergency Bill being rushed through the forthcoming session of Parliament. But if, through pressure of legislative business, this course of action cannot be taken, it pleads that the emergency be met by appropriate ordinance after the coming session of Parliament has been prorogued. A delegation of the Federation is expected to call on the Minister concerned to explain the situation.

NOTICE

(Concluded from page 438)

Company, of any such undertaking as is referred to in Clause (*a*), or of any premises or properties used for any such undertaking and without which it cannot be carried on or can be carried on only with difficulty or only after a considerable time;

(*d*) borrow moneys, where the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business), will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes;

Provided further that the powers specified in Section 292 of the Act shall be exercised only at meetings of the Board, unless the same be delegated to the extent therein stated; or

(*e*) contribute to charitable and other funds not directly relating to the business of the Company or the welfare of its employees, any amounts the aggregate of which will, in any financial year, exceed twenty-five thousand Rupees or five per cent. of its average net profits as determined in accordance with the provisions of Sections 349 and 350 of the Act during the three financial years immediately preceding, whichever is greater.

Draft Article 140 (Certain powers of the Board) is substantially the same as existing Article 127 except that the powers enumerated therein have been made subject to various sections of the Act applicable thereto.

SECRETARY

Draft Article 141 has been inserted giving power to the Directors to appoint and to remove a person to perform the duties that may be assigned to him or which may be applicable to him under the Act. The Directors have also been empowered to appoint some other person to keep the registers required to be kept by the Company.

MANAGEMENT OF BUSINESS

Draft Articles 142 to 146 correspond to existing Articles 130 to 133. Draft Articles 142 and 143 incorporate the restrictions imposed by the Companies Act 1956 on the powers exercisable by Managing Agents.

THE SEAL

Draft Articles 147 and 148 correspond to existing Articles 128 and 129.

DIVIDENDS

Draft Articles 149 to 162 are virtually the same as existing Articles 134 to 146 except that existing Article 146—Capitalisation—has been amplified (in draft Article 162) to bring out its proper meaning and import.

ACCOUNTS

Draft Articles 163 to 169 correspond to existing Articles 147 to 153.

Draft Article 163 (Directors to keep true Accounts) is the same as existing Article 147 except that provision has been made to include what requires to be done in case the Company should at any time open a branch office.

Draft Article 167 (Board's Report) enlarges existing Article 151 to include the provisions of Section 217 of the Act which sets out what has to go in such Report.

AUDIT

Draft Articles 170 to 175 are substantially the same as existing Articles 154 to 159 with necessary changes to accord with the Act.

DOCUMENTS AND NOTICES

Draft Articles 176 to 183 are substantially the same as existing Articles 160 to 167 except that provisions have been made for the service of documents by and on the Company in accordance with Sections 53 and 51 respectively of the Act.

WINDING UP

Draft Article 184 corresponds to existing Article 168 with little change except that for an Extraordinary Resolution a Special Resolution has been substituted, as the Act has done away with Extraordinary Resolutions.

INDEMNITY, RESPONSIBILITY AND SECRECY

Draft Articles 185 and 186 correspond to existing Articles 169 and 170.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

WANTED—A FAIR DEAL FOR COAL

IT is of the utmost importance to the future of national economy that the target for coal (60 million tons), fixed under the second Five-year Plan, should be reached. For a country like India, which has little oil, hardly any tankers and an extremely limited supply of foreign exchange, coal is the main fuel and constitutes, along with steel and cement, the basic means for economic advancement, so that any setback on the coal front would inflict severe damage on the economy. What really should matter is not that the nice balance between the private and public sectors is maintained—though this is an important point by itself—but that the overall target is reached. As is well known, under the second Plan, the private sector in coal has no inconsiderable role to play, charged as it is with the responsibility for increasing the output of coal by nearly 10 million tons to 43.5 million tons, as against the public sector's responsibility for raising the output by 12 million tons to 16.5 million tons. In the last few years, the output of coal—mined at present predominantly by private-owned collieries—has risen by one to two million tons. In 1956, it was 39.43 million tons, an increase of 1.20 million tons over the production in 1955. Obviously, a great deal of new effort will be needed to step up output to an annual rate of increase of over four million tons, of which the share of the private sector will have to be no less than two million tons. In order to realise how hard the task is, it is necessary to bear in mind that many new areas have to be opened up requiring large capital and equipment. And yet, unless this is done, it will be difficult to pave the way for the much larger target—something of the order of 120 million tons—that may have to be set under the third Plan.

In an industry like coal, where the price of the product is controlled by the Government, it should be obvious that production will necessarily depend upon the price policy. It is not, therefore, surprising that Mr. R. Maulik, Chairman of the Indian Mining Association, should have devoted a considerable portion of his address, at the annual meeting of the Association, held at Calcutta last week, to a discussion of the issues relating to the control of coal prices. Some of the general observations he made, in this connection, deserve notice. He averred that the selling price of coal should be "reasonable and just," having regard to the increasing operational costs. At the same time, he agreed that, in a vital consumer product like coal, there "will doubtless be solicitude for keeping in check as far as practicable any increase in the price." In other words, the Government's policy should be aimed at striking a mean between the producers' interests and those of the consumers. Nor can it be ignored that, in the ultimate analysis, their interests are synonymous, not necessarily antagonistic.

Two additional considerations must be borne in mind in fixing coal prices. In the first place, the coal industry, like any other industry, needs funds for development. It would be well-nigh impossible for the industry to achieve an increase in output, if it were denied facilities for building up developmental reserves and paying reasonable dividends without which fresh capital cannot be found. Appropriately enough, Mr. Maulik referred to steel and cement—the two commodities the prices of which are controlled by the Government. In both these instances, the Government has accepted the principle that, in the price paid to the industry for its products, there should be a special element for covering partially at least the cost of development. All that he insisted upon was that the basic criterion for determining prices, which already existed in steel and cement, should be applied to coal. The fairness of this demand is so obvious that it needs no reiteration.

Secondly—and this is a consideration which is peculiar to all mining enterprises in general—the coal industry is not a perennial or continuing industry. Since no mine is inexhaustible, all mining should come to a stop at the end of a period of years. This means that the original capital invested in the enterprise should be returned to the owners before the mining operations cease to be profitable. It is only then that the investor will be enabled to recover his capital for re-investment elsewhere. Under conditions of free enterprise, the price of a mineral will be generally determined by this consideration and the return to the investor will carry a certain element of capital. This is a vital consideration which should not be ignored when the prices of coal are statutorily fixed. To ignore it would mean not only an injustice to the investors at present but an unhealthy deterrent for all investors in future.

Against this background, if one judges the Government's coal price policy, it will be seen that the coal industry has received a raw deal during the last several years in which its price has been controlled. In July 1947, a rise in coal prices was permitted, in order to enable the industry to meet the increase in wages of workers. But, in November 1949, the prices of coal were actually revised downwards, with a view to initiating a downward trend in price levels and cost of living. But this end was never reached. On the contrary, prices and living costs went up. Consequently, production costs of coal rose heavily, but no increase in coal prices was permitted. Following the publication of the award of the All-India Industrial Tribunal (Colliery Disputes) in May 1956, the Government granted a rise of Rs. 3 per ton to compensate for the increased wages of labour, but the industry has maintained that the increase is insufficient to meet the additional financial burden. Nor has any further increase been permitted, despite the fact that the wages of workers have been further raised by the Appellate Tribunal, the award of which was announced on 29th January 1957. It must be remembered that the award of the Appellate Tribunal has been given retrospective effect from the date of the original award. There was also a time lag between the original award and the date of announcement of the increase in coal prices (Rs. 3 per ton). All this has necessarily imposed a great burden on an industry, the only fault of which is that it produces a commodity so vitally needed by the community that the Government deems it essential to control its prices. Surely, the authorities ought to know that, if an industry produces an article of vital importance to the community, it has a valid claim for at least bare economic justice, if not for generous treatment.

Because coal is a commodity which forms an element in the production costs of a number of manufactured articles, any increase in its prices, it has been contended, will add to the inflationary potential in the country. By and large, this argument is correct. But its significance and applicability could be easily overrated. As Mr. Maulik pointed out, it is simply not true that the price of coal has marched in line with the general price level. Thus, while the index of wholesale prices has risen from 297 in 1947 to 427 in February 1947, that is, by as much as 47 per cent., the rise in price of coal has been of the order of only 15 to 16 per cent. over this period. Further, it must be remembered that the cost of coal is a much less significant proportion of production costs of manufactured articles than is sometimes imagined. Mr. Maulik calculated that the cost of

coal expressed as a ratio of the gross ex-factory value of various products and by-products is, on average, only 1.96 per cent., and is much less than the ratio (about 3.45 per cent.) in the case of other fuels and electricity. Only, in the cement and steel industries, coal forms a fairly large proportion of production costs. Coal and coke work out to 11.25 per cent. of steel costs and 14.22 per cent. of cement costs; the corresponding ratios for other fuels are higher at 12.70 per cent and 18.28 per cent. Yet another striking feature of the pattern of production costs is that, in the case of both steel and cement, coal forms a much less significant proportion in India than elsewhere. Thus, coal accounts for 40 per cent. of U.K.-produced steel, as against 11.25 per cent. in India, and for 30 per cent. of U.K.-produced cement, as against 14.32 per cent. in this country.

The "inflation" argument against an increase in coal prices can also cut both ways. For it is inconceivable that inflation can be prevented by merely keeping down the price of coal. The past nine years' experience fully bears out this point. It is equally inconceivable that inflation would not receive a very bad twist, if an inadequate price for coal were to result in shortage of coal supply and consequent loss of production in the coal-consuming industries. Again, it is not clear why coal alone should be singled out for anti-inflationary treatment at a time when the prices of many other commodities, not less essential to the life of the community than coal, have risen steeply in recent years. There is thus little justice in demanding special sacrifices on the part of the coal producers in the interests of anti-inflationary drive. The fact is that, once it is conceded that coal is a basic commodity, the prices of which should be controlled by the Government, it becomes incumbent upon the authorities to see that its prices are fixed at a level that takes into account all the relevant considerations, such as production costs, reasonable profits and the character of coal as a wasting asset. It is to be hoped that the Government will bring to bear upon the problem of coal prices a mind which is sufficiently constructive to encourage rapid increase in the output of coal.

No less important than the production of coal is the problem of its transport. Since coal is produced in a few compact regions but is consumed all over the country, the question of its transport becomes a matter of real urgency. Despite the progress that has been made in railway transport in recent years, the fact remains that coal is among the commodities for which the supply of wagons is still insufficient to meet the demand of the coal consumers. The daily requirements of wagons for the coal industry during the second Plan are: 4,860 wagons in 1957-58; 6,159 wagons in 1958-59; 6,481 wagons in 1959-60 and 6,804 wagons in 1960-61. It is not clear whether the railways will be able to step up the supply of wagons to these levels. During the current year, the daily requirements of W. Bengal and Bihar collieries are stated to be 3,778 wagons, whereas the supply is estimated to be only 3,500 wagons, so that the shortage is of the order of 278 wagons. In this connection, Mr. Maulik made two notable suggestions—one for integration of the portion of the railway which serves W. Bengal and Bihar coalfields with the Eastern Railway and the other for increasing the siding facilities and relaxation of indent limitations; these deserve the attention of the Government. In any case, the authorities will do well to ensure that wagons are ready to carry the increased output of coal, for, in the absence of the necessary transport facilities, an increase in output, even if it were possible, would be of little avail to the consumer.

INDUSTRIAL RELATIONS

HEALTHY industrial relations can develop only in an atmosphere of goodwill. Laws and regulations can at best ensure that such relations do not deteriorate so far as to create a danger to the community. Even so, their effect is often chiefly negative, rather than constructive. But, if the labour laws themselves embody a partisan attitude, favouring one section too heavily at the expense of another, they might even lose whatever value they may otherwise have in fostering better industrial relations. A case in point is the abolition of the Labour Appellate Tribunal in this country without adequate safeguards and without any attempt being made to fill satisfactorily the void created by such abolition.

Some interesting points about labour legislation, arbitration in industrial disputes and voluntary negotiation were made by Mr. E. F. G. Hunter, Chairman of the Employers' Federation of Southern India, at the recent annual general meeting of the Federation, held at Madras. He averred that the disquieting feature of the disappearance of the Labour Appellate Tribunal was the creation of a lacuna from which both parties might well suffer. After referring to the provisions relating to the appointment of national industrial tribunals, industrial tribunals and labour courts, he said: "Although Government lay emphasis on direct negotiations and collective bargaining, the institution of these various authorities could well increase labour litigation and it is by no means certain that Government's objectives will be achieved by the creation of these authorities. Time alone will show the wisdom or otherwise of these changes."

A specific issue to which Mr. Hunter made a pointed reference is the compensation to workers for lay-off periods. Criticising the extension of the period of compensation beyond 45 days, he pointed out that involuntary unemployment or lay-off often resulted from circumstances beyond the control of the employer, such as breakdown of machinery and fire. Since, under such circumstances, it might well be impossible to resume production in a factory for several months, he rightly held that it was "unjustifiable and unfair to make an employer liable for compensation for the entire period of such lay-off and this new measure could well result in delay in reopening the undertaking because of the financial burden now placed upon it." Referring to the criticisms of the recent judgment of the Supreme Court regarding the definition of "retrenchment" in factories which have closed down, Mr. Hunter wondered whether the critics had considered "how and where the money is to be found for retrenchment compensation in the case of business being wound up on account of heavy losses." He pointed out that, even if the retrenchment compensation was made a first charge on the scrap value of the business undertaking, the amount might well be inadequate. In any case, he said, the legality of making such compensation a first charge over secured debts was "itself not without doubt." Clearly, the critics, in their understandable anxiety to secure better conditions for labour, are not prepared to consider even the legality of the issue, let alone the economic realities of a closed business.

Although Mr. Hunter was thus intellectually unconvinced about the merits of some of the provisions in the labour legislation, he showed he was a good friend of labour by emphasising the essentially human approach to labour problems. He thus welcomed the provision for voluntary arbitration. Prolonged adjudications, he rightly said, invariably left workers with a sense of frustration, especially if the leaders failed to achieve the success they promised. Hitherto, there was no provision for arbitration except under the Indian Arbitration Act and the technicalities to be gone through for an arbitration under the Act were indeed formidable. Further, the machinery for the enforcement of awards under the Arbitration Act was very involved. We, therefore, join him in his hope that the provision for voluntary arbitration would be enforced without delay.

Those who are inclined to lay considerable emphasis on legal provisions for protecting workers' interests will do well to ponder some of the recent healthy trends in collective bargaining in this country. Employers and workers have successfully concluded notable agreements, covering such items as wages and dealing with participation of labour in management at various levels. To many of these agreements, we have drawn readers' attention in the past, besides welcoming them. Mr. Hunter referred to two such agreements in the Madras State. One is the recent pact between the employers and workers of the Coimbatore textile industry under which the minimum basic wage was increased to Rs. 30 per month. The second is the agreement between the management and workers of the Buckingham and Carnatic Mills to refer to arbitration 13 major demands, including wages, dearness allowance, bonus and leave facilities. Mr. Hunter said: "I am unaware of any previous instance where so many important matters have been referred to private arbitration."

It would appear that the "experience of private arbitration has been encouraging to both sides as the spirit of give and take prevailed throughout." Mr. Hunter said: "The Arbitration Award which is likely to be published shortly may well be of considerable importance to industry in South India. Indeed, just as the 1951 Labour Appellate Tribunal's decision in the Buckingham and Carnatic Mills case is frequently quoted by adjudicators, so possibly will the present award prove to be another useful contribution towards the maintenance of industrial peace." Naturally enough, the publication of the Award will be awaited with considerable interest in this country. But the point that deserves to be noted is that these instances of out-of-court agreements—small in number, as they have been, in relation to the cases that come up before labour courts—show that, given goodwill and responsible, non-political leadership, Indian workers are as capable of treading the path of voluntary negotiation and benefiting by it as their confreres in many democratic countries.

CENTRAL WAREHOUSING CORPORATION

TWO of the main lines of development basic to the integrated scheme of rural credit recommended by the All-India Rural Credit Survey and accepted by the Government are the extension of co-operative credit and the extension of co-operative economic activity. While the responsibility for the former at the all-India level of planning, co-ordination and finance rests with the Reserve Bank, that for the latter lies with the Union Ministry of Food and Agriculture. Reorganisation of credit institutions is progressing slowly but steadily, under the expert direction of the Reserve Bank, and there are unmistakable indications that, by the end of the first year of the second Plan, strong foundations will have been laid for an accelerated development in the ensuing years. But no measure of progress in the field of credit can produce any significant results without a corresponding advance in other lines of activity which together form the integrated scheme. With the passing of the Agricultural Produce (Development and Warehousing) Act in May 1956, however, a major step has been taken in the direction of the extension of co-operative economic activity such as processing and warehousing. In accordance with the provisions laid down in the Act, the National Co-operative Development and Warehousing (N.C.D.W.) Board has been set up, the functions of which, briefly, are to plan and promote programmes for the production, processing, marketing, storage, warehousing, etc., of agricultural produce, through co-operative organisations.

Another important provision of the Act relates to the establishment of the Central Warehousing Corporation. With the establishment of the body on the 2nd inst., the stage is set for the actual implementation of the programmes in regard to warehousing. For the Central Warehousing Corporation will be entrusted with the task of carrying out the programme on the lines indicated by the N.C.D.W. Board. Among others, its functions will be (*a*) to acquire and build godowns, (*b*) to run warehouses for the storage of agricultural produce, (*c*) to arrange facilities for the transport of agricultural produce to and from warehouses, (*d*) to subscribe to the share capital of State Warehousing Corporations, and (*e*) to act as agent of the N.C.D.W. Board for the purpose of the purchase, sale, etc., of agricultural produce, seeds, manures, implements and so on.

During the second Plan period, the Corporation is expected to set up a chain of about 100 warehouses, spread all over India. It will also promote the formation of State Warehousing Corporations which, in turn, will establish about 250 warehouses at important centres in the States. It will thus be seen that the success of the Corporation depends very much on the activities of the State Governments.

The authorised capital of the Corporation is Rs. 20 crores, divided into 200,000 shares of the face value of Rs. 1,000 each. Half of this amount will be issued in the first instance, of which Rs. 4 crores are to be subscribed by the N.C.D.W. Board and the balance by the State Bank, scheduled and co-operative banks, insurance, investment and other financial institutions. Under the able direction of the Board of Directors on which are represented the Government of India, the Reserve Bank, the State Bank of India and All India Co-operative Union and other institutions, it is to be hoped that expeditious progress will be made in providing institutional credit and marketing arrangements to the rural areas which constitute more than four-fifths of India. The provision of these facilities, it is now conceded by all, is one of the prerequisites for transforming the rural economy.

UNEXPECTED RECOVERY IN SHARES

BOMBAY DYEING SCRIP—ALKALI CHEMICAL'S NEW ISSUE—WORLD TREND IN MONEY RATES

THURSDAY, 5 P.M.

THE recovery in the share market has been both handsome and unexpected. It is purely of a technical nature. Seeing that some operators had sold short heavily, a few other speculators seem to have decided to squeeze them. How long this game will go on and to what extent prices will move up are questions on which one's guess is as good as another's. If no new bearish developments materialise, the bulls would appear to be in for a period of good luck. The election shots are practically over. The budget on 18th March will most probably be a tame affair. In his speech, the Finance Minister may strike a note of optimism. It is the budget to come in May that will be of real importance. But it is still two months away. It is just possible that it may not be as bad as many imagine, though the Finance Minister has been repeatedly saying that, as deficit financing is out of question in the present circumstances of high price levels, taxation is the only way open for gathering more funds for the Government. Nevertheless, one cannot be very hopeful about it and it will be rank speculation to proceed on the assumption that the worst is over. For the present, however, the technical position is in favour of the bulls.

MARKET GOSSIP

Corporate news has been encouraging. Kohinoor Mills have reported good profits. Bombay Dyeing is said to have fared well. Though the Madura Mills have cut the dividend, their earnings are higher. The final distribution of Hindustan Lever has turned out to be better than anticipated. The trend of business, except in cotton textiles and jute, is satisfactory. Labour relations are peaceful. The agreement reached at Madras on the Plantation Award has revived investors' confidence in plantation shares.

The general elections have so far been in favour of the Congress Party. There is no doubt that this party-in-power will be returned by a substantial majority in all parts of the country. This will ensure political stability, without which there can be no economic development. The Kashmir problem is doubtless a serious one, but one need not give up hopes of a peaceful solution. The world political situation is steadily improving and the scattered fears of business recession in the U.S. and Europe are receding. Britain is trying hard to improve its economy and safeguard the future of the pound sterling.

• • • •

An event of some importance is the decision of the Directors of the Bombay Dyeing and Manufacturing Company, Ltd., to split the face and paid-up value of its shares of Rs. 250 each into those of Rs. 25 each. This means that one share of Rs. 250 will become 10 shares of Rs. 25 each. Since shares of smaller face value have an attraction for small investors, this decision, when implemented, will lead to a wider holding of the Company's share capital, assuming that the present holders will be prepared to part with a portion of their holdings. Such liquidation may not materialise in the near future, unless the market value goes up to a substantially high level. With prospects for the Company being promising, many genuine investors will prefer to stick to their holdings. Accordingly, the increase in the number of shareholders of the Company can only be gradual. All the same, the Directors' decision is a move in the right direction and in consonance with the spirit of the times. It shows that, though the management of the Company is well known for its conservative outlook, it is also progressive at the same time.

The object of popularising the shares among small investors will not fully materialise, unless the Stock Exchange authorities fix the unit of trading at a small figure, say, five.

Another welcome decision taken by the Directors of the Bombay Dyeing is to maintain the return to shareholders at Rs. 25 per share (or 10 per cent.) and to treat the whole of it as dividend. In the past year, the return consisted of a dividend of Rs. 20 per share and a bonus of Rs. 5 per share. Usually, such consolidation is done only when the Directors take the view that the outlook for the Company is favourable enough to maintain the dividend in the coming years. If a conservative and cautious management like that of Bombay Dyeing decides on such consolidation, it means that the outlook for the Company is definitely good.

The share market naturally greeted these two developments pertaining to the leader of the cotton textile section with cheers. Bombay Dyeings, for instance, shot up from Rs. 535-10 (the closing level of the old settlement) to Rs. 581-14 on Tuesday. In the subsequent reaction, they came down to Rs. 577-9, the drop being relatively smaller than in many other counters. Centuries were marked by Rs. 9 over the week to Rs. 474 and Kohinoors by Rs. 5-12 to Rs. 334.

• • • •

In distinct contrast to the general trend of the markets, the shares of the Alkali and Chemical Corporation of India Ltd. slumped from Rs. 18-8 to Rs. 13-8 in the last few days, following the announcement of the terms of the Company's rights issue. The Company proposes to issue 2,480,000 'A' ordinary shares of Rs. 10 each at par to the existing shareholders in the ratio of four shares for every one share held by them as on 19th March 1957. The selling pressure in the shares was due to the belief that the terms of the issue were disappointing. It was feared that the issue was rather a heavy one and it might not be possible for the shareholders to take them up in the present state of the money market. There was also a misconception that the issue did not carry renunciation rights.

A careful perusal of the circular to the shareholders, however, shows that the above fears are based on an incorrect understanding of the position. In the first place, of the proposed issue of 2,480,000 shares, Imperial Chemical Industries (India) Ltd., the principal shareholders of the Alkali and Chemical, has agreed to take up its allotment of 1,753,072 shares; the balance to be taken up by the other shareholders is only 726,928 shares. Secondly, though the issue is not being underwritten, there need not be any doubt about its success, as I.C.I. has undertaken to apply and pay for any shares which are not taken up. Thirdly, the members will have the right to renounce their allotment either wholly or in part. Full particulars will, we are told, be given in the 'rights' letter to be issued early in April. Fourthly, the terms of payment for the issue have been conveniently fixed. Thus, a sum of Rs. 5 per share is payable on or before 27th April, a further sum of Rs. 2 8 per share on or before 27th June and the balance within the next three months.

The present paid-up ordinary capital of the Company is Rs. 62 lakhs and with the proposed issue it will become Rs. 3.10 crores. The purpose of the issue is to provide a part of the finance required to implement the Company's scheme to manufacture Polythene in India. The total cost of the scheme is estimated at Rs. 3.93 crores, of which the present issue will provide Rs. 2.48 crores and the balance of Rs. 1.45 crores will be met by borrowings from the Industrial Credit Corporation, banks, etc. The Government of India has given its approval to the project and I.C.I., the inventor of Polythene, has agreed to supply its process and technical know-how on favourable terms.

The new 'A' ordinary shares are expected to qualify for relief under section 56A of the Indian Income-tax Act, and dividends received by companies on these shares will be exempt from super-tax. These shares will not participate in any dividend which may be paid in respect of the year ending 30th September 1957, but will otherwise carry full dividend rights from 1st October 1957 and will rank *pari passu* in other respects with the existing ordinary shares. The Company has maintained the dividend for the year ended 30th September 1956 at 8 per cent. As regards the future dividend prospects, the Chairman, in the circular letter to the shareholders, says:

"The Board have given careful consideration to the profitability of the project. In their view, the return on it will be satisfactory, but it must be realised that the capital invested during the construction period will earn no return. Subject to no unforeseen circumstances occurring and to no material deterioration in trading conditions, it is your Directors' opinion that the Company's profits should be maintained at not less than their present level, but this rate of earnings will have to be related to the old and new capital as from 1st October 1957 until such time as the Polythene plant comes into production when an adequate return will be earned on the new capital invested and profits should rise appreciably."

It will be seen from what is stated above that the prospects of the project are necessarily of a somewhat long-term character. Even so, the magnitude of the fall in the Company's shares does not seem to be justified.

• • • •

Although the fifth month of the traditional busy season has just begun, the stringency in short-term money market does not show any signs of relaxation. Interest rates are as high as they were five weeks ago, following the increase in the Reserve Bank's lending rate against Government securities from 3½ to 4 per cent., and the rise in cost of borrowing by banks against usance bills from 3½ to 4 per cent. consequent upon the increase in stamp duty with effect from 1st February last. Though inter-bank call-money is available at 3¾ per cent. per annum, as against 3½ to 3¾ per cent. two weeks back, it is higher than that a year ago, when banks were borrowers at 3¼ per cent. among themselves, with some business passing even at 3¾ per cent. The rise in interest rates has been more marked during the last one year in the case of house money at call and short-term deposits for one to six months, the rates on both having hardened from 3¾ per cent. to 4 per cent. At this time last year, banks paid a slightly higher rate of 3¼ per cent. for deposits of Rs. 5 lakhs and over, but today they are offering 4½ per cent.

It will be interesting to recall that the Government of India's 91-day Treasury Bill rate at this time in 1956 was only a shade better than 2½ per cent per annum. Being unwilling to follow the market trend and borrow at higher rate of interest, the authorities gave up the sales of these Bills after 3rd April 1956. They were, however, quite eager to follow up the market rates in respect of their lending rates. It was on 1st March 1956 that the Reserve Bank stepped up its rate on usance bills, for the first time after the introduction of the bill market scheme, from 3 to 3½ per cent. and abolished the stamp duty concession. This step gave further momentum to the upward trend in interest rates, until the Bank further raised its lending rates this season.

In distinct contrast to this trend in India, interest rates abroad have been tending downwards. In London, for instance, the average rate of discount for 91-day Treasury Bills offered last week was almost 4 per cent. per annum, as against 4.3/20 per cent. a week before and 4 11/20 per cent. two weeks back. Last week's rate was lower than that, namely, 4½ per cent., which prevailed at the tender on 10th February 1956, that is, immediately before the British Bank rate was raised from 4½ per cent. to 5½ per cent. on 16th February. In fact, the rate was the lowest since 5th August 1955. The trend in other interest rates in London is indicated in the following table:

	Latest	A year ago
	Per cent.	Per cent.
Loans:		
Day-to-day	3½—4	3½—4½
Short periods	3½	4½
Bank Bills:		
2 months	4⅝—4½	5⅛—5⅜
3 and 4 months	Do.	Do.
6 months	4⅝—4⅜	5⅜—5½
Fine trade bills:		
3 months	5½—6	6—6½
6 months	5½—6½	6—7

The downward trend in market rates brought about a technical adjustment in the Bank rate from 5½ to 5 per cent. on 7th February this year. This cut was, however, considered by many as quite inadequate, as the fall in market rates had been much sharper. They expected, therefore, a further reduction in Bank rate within the next few months. Whether this expectation will prove correct or not remains to be seen, but it is clear that their hopes have been strengthened by the further fall in Treasury bill rate since the last cut.

The one consequence of this all-round fall in interest rates is that London has again become a competitive centre for international financing. This competitive position has been further reinforced by the tightening of credit conditions in other overseas countries, thanks to official monetary policies and the keen demand for credit. India is an instance in point. The British financial institutions are now in a much better position to compete for business in financing international trade. All these days the external banking activities of British banks suffered very much by the credit squeeze and restrictions on bank lending. The unusually high rates of interest also made the cost of arranging trade finance in London much higher than in many other countries. Another factor which discouraged international traders from arranging credit in London was the restrictions on foreign exchange placed by other countries. There was, therefore, a tendency on the part of traders to arrange for finance in their own home countries and to some extent in other centres where credit was cheaper than in London. An instance in point is provided by Australia, where the shipment of wool to European countries was financed to a greater extent than usual by Australian banks and by a correspondingly small extent by London financial institutions. In India, Exchange banks, which used to get funds to a large extent from their home offices in order to finance the foreign trade of Indian clients, have in the last one or two years been forced to borrow in this country. Thus, their borrowings from the Reserve Bank at the end of January this year stood at about Rs. 36 crores, as against Rs. 10 crores a year ago. Further, many Indian traders preferred to arrange credit in India itself rather than in London. The result was greater pressure on the Indian money market and an increase in the advances and bills of domestic banks.

This does not mean that London lost its prominence as an international centre even when the interest rates were at their peak. For there are many who do not think it fit to give up their business connections with London for the sake of a slight saving in cost, which they feel will be only temporary. Further, the advantages provided by other centres, apart from slightly cheaper credit, have been found to be no better than those available in London.

The position has, however, considerably changed. With the drastic fall in interest rates in London and the rising cost in other centres, the gap between the rates charged in London for international trade financing and those quoted abroad for similar business has considerably narrowed. While it is true that it is still possible to get finance abroad at more favourable rates than in London, the cost of arranging credit in the latter centre is now much cheaper than it was three or four months ago, with the result that the temptation to switch over from London to other centres is much less.

So far as India is concerned, if the present divergent trends in interest rates continue and the disparity in the British and Indian interest rates is reduced further, there is every chance of this country utilising London again to finance its foreign trade. Such a development is to be welcomed, in that it would ease to some extent India's balance of payments difficulties. If this advantage is to be had, the monetary authorities will do well to bring about a further gradual rise in interest rates. In any case, it will be unwise to bring these rates down, if and when a further reduction takes place in the British bank rate.

• • • •

The past fortnight has witnessed a spurt in the prices of castor oil. Commercial quality, for instance, is quoted at Rs. 19-12 per quarter, a rise of Rs. 2-11 as compared with 21st February. Oil B.S.S. is also higher by Rs. 2-7 at Rs. 20-10. The firmness in castor oil prices has been aided principally by hopes of good export business with the U.S. There were enquiries from that country at about 17 50 cents (As. 13-4) per lb. The enquiries are expected to gather momentum in the coming weeks. The expectation is based on the ground that the U.S. trade mission, which is now on a visit to India, will help remove some of the handicaps hampering exports of Indian castor oil to the U.S. The problems of export trade in castor oil were discussed in some detail at a meeting of the representatives of the mission

(Continued on page 508)

EQUITIES RULE FIRM

SHARP RISE IN VALUES

(From Our Own Correspondents)

BOMBAY, *7th March*

THE share market ruled firm during the week under review on heavy bear covering and revival of bull support. The old account closed on Friday on a subdued note with a marking down in values from last week's closing levels. The new account, however, opened on a cheerful note and equities staged a sharp jump. The change in sentiment was somewhat unexpected and the bears, who were caught unawares, were forced to cover their sales, so that, on Tuesday, prices touched levels not seen since the first week of February. As the rise was so sudden and sharp in the first two days of the new account, the operators were somewhat reluctant to follow it up. On the other hand, they preferred to consolidate their gains. There was, therefore, a minor reaction in the last two days and closing levels were below the week's best levels.

The main bullish factors which changed the complexion of the market were: (1) the moderate *budla* charges in the last settlement, except in a few counters, such as Indian Irons, Bombay Dyeings and Premier Constructions, (2) the action of the Calcutta Stock Exchange authorities in placing the rights for Indian Iron's new shares on the clearing list along with the old shares, (3) good corporate news from textile mills, (4) the decision of the Directors of Bombay Dyeing to split up the Company's shares of Rs. 250 each into shares of Rs. 25 each, and (5) expectations that there would be no more serious bearish factors till the May Budget.

In the steel section, Tata Ordinaries, after an early dip from Rs. 168-8 to Rs. 166, shot up to a high of Rs. 178-8, from which level there was a reaction to Rs. 175-4 at the close. Indian Irons came up to Rs. 21, after sagging from Rs. 20-1 to Rs. 19-5¼, but the closing was done at Rs. 20-7¼. The Rights gained on balance As. 7 at Rs. 5-9, the highest and lowest levels touched being Rs. 6 and Rs. 4-8, respectively. There were unconfirmed rumours in the market that two institutions in Calcutta had offered to purchase the Right shares not taken up by the other shareholders.

The textile section was in good form under the leadership of Bombay Dyeings, which rallied from Rs. 541-14 to Rs. 581-14 on news of share-splitting and the maintenance of the distribution to shareholders at Rs. 25 per share by consolidating the dividend and bonus parts of it. The higher levels brought profit-taking and the closing was lower at Rs. 577-8. Centurys advanced from Rs. 465 to Rs. 482-8 before closing at Rs. 474. Kohinoors finished with a gain of Rs. 5-12 at Rs. 334, after touching Rs. 338-4. Central Indias moved up by Rs. 3 to Rs. 117, Finlays by Rs. 6-8 to Rs. 307 and Indu Ordinaries by As. 4 to Rs. 10-12. Gokaks were, however, lower at Rs. 219-8. Indore Malwas gathered Rs. 5 to Rs. 140 and Khataus Rs. 5-10 to Rs. 196-4. New Greats were maintained at Rs. 230, while Shree Niwas moved up by Rs. 5 to Rs. 183-12. Simplex moved between Rs. 173-8 and Rs. 180, before closing at Rs. 176. Standards rallied by Rs. 26-14 to Rs. 440. Svadeshis gained Rs. 5 to Rs. 222, Swans Rs. 6-14 to Rs. 410-10 and Tatas Re. 1 to Rs. 51.

Bank shares were steady with a fractional rise in values in selected counters. Central Banks gathered Re. 1 to Rs. 54-4 and their new shares As. 8 to Rs. 57-8. Barodas were a shade better at Rs. 104. Bank of Indias were maintained at Rs. 141 and United Commercials at Rs. 57. Union Banks were done an anna higher at Rs. 7-9.

Electricity shares ruled better with good enquiries. Ahmedabad Electrics improved by As. 15 to Rs. 100-15. Bombay Suburbans were done Re. 1-4 higher at Rs. 111-4 and Surat Electrics As. 10 better at Rs. 113-2. Tata Hydros gained As. 8 to Rs. 122-8 and Tata Powers Rs. 7-8 to Rs. 1,220, while Andhra Valleys were lower by Rs. 3-12 at Rs. 1,200.

In consonance with the general trend, the miscellaneous section displayed a cheerful tone. Sugar shares gathered sizable gains, Belapurs rising from Rs. 228-4 to Rs. 230. Phaltans were done at Rs. 140-8 *ex-div.*, as against Rs. 145-8 *cum-div.* Walchandnagars moved up by Re. 1-4 to Rs. 278-12. Gains in cement shares were less marked. After recording a rise from Rs. 166-8 to Rs. 171, A.C.C. shaded off to Rs. 168. Digvijays moved up by no more than As. 12 to Rs. 146-4. Orissa Cements were up by As. 4 at Rs. 13-3. A sharp upswing from Rs. 253-12 to Rs. 280 in Alcock Ashdowns was the highlight of the engineering section. Premier Constructions scored no more than Rs. 2 over the week, on disappointment caused by the Directors' decision to maintain the dividend at Rs. 8-8 per share for the year ended 31st December 1956. Tata Locomotives hardened from Rs. 141-4 to Rs. 149 before finishing at Rs. 147-8. Larsen and Toubros stood As. 10 higher at Rs. 16-2. In the mining group, Shivrajpurs provided one of the exceptions to the general trend with a drop of Re. 1-4 to Rs. 92-8. Indian Coppers were steady at Rs. 3-6¾ and B.B. Petrols at Rs. 2-11.

Scindias provided an exceptionally firm feature with a jump from Rs. 19-1¾ to Rs. 20-14, but shaded off to close at Rs. 20-9¾. Great Eastern Shippings were marked up from Rs. 17-15 to Rs. 18-14 and India Steamships from Rs. 10-2 to Rs. 10-9. Hindustan Motors were steady at Rs. 7-9, while Premier Automobiles were bid at Rs. 100 *ex-div.*, as against Rs. 102-12 *cum-div.* a week ago.

In the other miscellaneous group, Bombay Burmahs provided a notable exception. On heavy offerings, the old shares slided back from Rs. 673-12 *cum-div.* to Rs. 633-2 *ex-div.* British India Corporations advanced by As. 9½ to Rs. 8. National Rayons came up from Rs. 227-12 to Rs. 241-8, before closing at Rs. 236-8. Tata Chemicals were marked up by Re. 1-0½ to Rs. 16-4½, while Tata Oils were maintained at Rs. 45. Hindustan Levers were keenly bid, following the announcement of the higher final dividend of As. 12, and rose by Re. 1-1 to Rs. 20-9.

Calcutta Stock Exchange

CALCUTTA, *6th March*

Up to Friday of the week under review the Calcutta Stock Exchange continued to tread on a listless line, and with buyers keeping shy quotations reached further lower levels. Indian Irons slumped by Friday to Rs. 23-10, as against the closing rate of Rs. 24-12 on Tuesday. There was no trading on Wednesday, being *Sivarathri*. However, from Monday onwards there was noticeable improvement in sentiment and, on revival of interest in Indian Irons, prices began to register a healthy recovery.

The recovery followed the timely and noteworthy decision by the Stock Exchange Committee on Monday to include in the clearing list from today all renounced rights of Indian Iron shares from the forthcoming issue. Signs were abundant that the forthcoming rights issue would not be as smooth as per original expectations, in view of the Government's disinclination to permit the Company to declare ordinary dividend at more than 10 per cent. during the expansion period. That being so, the share value had been declining progressively for a few weeks. The present decision of the Committee, according to which shareholders are now enabled to dispose of their rights—one new share for every old share held—at Rs. 5-4 per share, has greatly improved the prospects for the rights issue and, as such, has been hailed by the market. This, in effect, means the issue price of Rs. 13-8 would be paid by the new buyer who would also at the same time pay Rs. 5-4 to the present shareholder if he were unwilling to accept his right.

The market noted with satisfaction the agreement between the plantation industry in South India and its employees, in regard to the implementation of the Appellate Tribunal Award from October last instead of from 1952. Another cheerful news was the recommendation by the Directors of Hindustan Levers proposing a final dividend of As. 12, instead of As. 6 as anticipated originally.

The difficulties facing the colliery owners arising out of the latest award continued to weaken coal shares. Equitables were hammered down to Rs. 23-14 from Rs. 25-4, with Bengals falling to Rs. 440 from Rs. 445. Pench Valleys were quiet at the unchanged rate of Rs. 17, while East Indians were firm at Rs. 26-4. Burrakurs, at one time, had fallen too Rs. 20-12 but, following the subsequent general recovery, regained to Rs. 21-4.

Bombay rumours of a reduction of cloth output in Ahmedabad affected sentiment in textiles, although there were also reports hinting at the possibility of grant of excise duty relief to the industry by the Government. Dunbars changed hands at Rs. 177, as against Rs. 190 previously. Elgin Mills sagged to Rs. 25 from Rs. 26-4.

In line with the general trend, jutes also recorded some recovery since Monday, albeit the poor advices from the commodity market and the growing difficulty to get raw jute from Pakistan. Nationals, at Rs. 19-6, improved by one point. At Rs. 18, Howrahs put on a few annas. Gourepores were unchanged at Rs. 220 and Barnagores had fallen from Rs. 97 to Rs. 94.

In the engineering section, Indian Irons opened at Rs. 25-3 and fell to Rs. 23-13 by Friday last. Since Monday, for reasons already stated, a smart rally to Rs. 26-14 was recorded. Following the declaration of a satisfactory dividend, Braithwaites were difficult to be located. Jessop & Cos. recovered to Rs. 26-8 from Rs. 24-8, to which the rate had fallen earlier. At Rs. 20-4, Texmacos showed a gain of Re. 1-4. Kumardhubis were steady at Rs. 9-12.

Among miscellaneous industrials, Angelo Bros. were lifted to Rs. 21-3 from Rs. 20-8, following the maintenance of dividend of 20 per cent. for 1956 and the announcement of more profits for that year. The improvement in Indian Aluminiums to Rs. 13-10 from Rs. 13-4, followed the announcement of dividend of 10 per cent. for 1956, as against 9 per cent. for the previous year. The news of complete success of the recent issue of 5 per cent. convertible loan stock for Rs. 2.68 crores also aided sentiment. News about an impending rights issue in proportion of four to every share now held drove down Alkali Chemicals to Rs. 13-12 from Rs. 18-4. Sellers predominated in Indian Cables, which were quiet at Rs. 28-1. B.I. Corporations, after being lower at Rs. 7-4, picked up to Rs. 8-4.

Madras Stock Exchange

MADRAS, *5th March*

After a long spell of dull conditions, the Madras Stock Exchange put on a cheerful appearance during the week under review. Planting shares were particularly buoyant, thanks to the buying spree let lose by optimism over the future of companies, following the out-of-court settlement of the plantation dispute. As a result of the settlement, the planters are greatly relieved from the rigours of the Tribunal's award. The effect of the compromise terms on the cost structure of the plantations is expected to be very much less than that of the award. It is felt that most of the companies, especially the old-established ones, can easily bear the burden of the net addition to the wage bill which, it is calculated, is about one-fourth of what had been given in the award. Now that a settlement has been effected, the plantation industry is expected to develop according to programme.

The favourable terms of the agreement, coupled with the announcement of bonus issues by two well-known plantation companies—Blue Mountain and Waterfall Estates—let loose, as already stated, a buying spree which lifted up the prices quite markedly. In sympathy with planting shares and on rumours of a downward revision in the excise duty on cloth, textiles also evoked some buying inquiries, with prices tending to move up. Sugar and miscellaneous industrials ruled distinctly steady.

Tea shares were greatly in demand and prices scored handsome gains. Haileyburias forged ahead by Rs. 2-4 to Rs. 25-4 and Nonsuch Teas by Rs. 2 to Rs. 24-8. Perksides and Periakaramalais firmed up by Re. 1-2 each to Rs. 17-10 and Rs. 8-14, respectively. Coorg Teas rallied As. 12 to Rs. 12-4. Ouchterlonys advanced by As. 10 to Rs. 5-6 *cum-div.* Nilgiris rose by a like amount to Rs. 10-12. Blue Mountains, Kalasas, Neelamalais and Waterfalls spurted by As. 9 each to Rs. 6-3 *cum-right*, Rs. 14-12, Rs. 6-11 and Rs. 6-9 *cum-right*, respectively. Devasholas moved up by As. 8 to Rs. 2-12 *ex-div.* Chembras hardened by As. 6 to Rs. 4-6. A like sum was added to Peermades which were quoted at Rs. 29-8.

Rubber shares were also keenly sought. Tropicals and Rajagiris strengthened by As. 12 each to Rs. 33 and Rs. 21-12, respectively. Cochin Malabars put on As. 11 to Rs. 10-3. Vaikundams increased by As. 8 to Rs. 32-4. Midlands gathered As. 7 to Rs. 18-7. Kalpettas improved by As. 6 to Rs. 25. Pullangodes were taken As. 3-6 higher at Rs. 2-15-6. Mercaras gained As. 2 to Rs. 9-10 *cum-div.* (final). The Directors of Mercara Rubbers Ltd. have recommended a final dividend of 15 per cent. for the year ended June 1956, making a total of 22 per cent., as against 15 per cent. for the previous year.

Among coffee shares, Consolidated Coffees met with persistent buying inquiries and rallied Rs. 2 to Rs. 23-2. Coffee Lands climbed up by Re. 1-4 to Rs. 25-10. Amalgamateds advanced by As. 10 to Rs. 12-4 *ex-right*. Anaparais spurted by As. 7-6 to Rs. 4-10 *cum-div.* The Directors of the Anaparai Estates Ltd. have recommended a dividend of 25 per cent. for the year ended June 1956, as against 16¾ per cent. for the previous year. Shevroys were taken up by As. 3 at Rs. 2-5. Mysore Coffees gained As. 2 to Rs. 3-10.

In the textile section, Rajalakshmis were well favoured, their quotation moving up by Rs. 7 to Rs. 173. Coimbatore Spinnings recorded a rise of Rs. 5 to Rs. 91. Janardhanas hardened by Rs. 4-8 to Rs. 112 and Ranga Vilas by Rs. 3 to Rs. 89. Loyals increased by Rs. 2 to Rs. 51-8. Buckinghams gathered Re. 1-8 to Rs. 182-8. Maduras gained As. 6 to Rs. 47-10 *cum-div.* Bangalore Woollens were quoted at Rs. 585 *cum-right*, as against Rs. 548-12.

Among miscellaneous industrials Mysore I.T.Ls. picked up As. 4 to Rs. 6-4. India Cements, Mysore Papers, Spencers and Travancore Chemicals improved by As. 2 each to Rs. 28-10, Rs. 16-6, Rs. 16-12 *cum-div.* (final) and Rs. 15-12, respectively. Aluminium Industries gathered an anna to Rs. 15-3 *ex-right cum-div.* (final). F.A.C.Ts. were a shade better at Rs. 6-5. Binnys, however, were dull at Rs. 180 *cum-div.* (final), as against Rs. 180. A final dividend of 6 per cent. has been announced for the year 1956, making a total of 10 per cent., same as last year. Indian Aluminiums were also neglected at Rs. 14-6 *cum-div.* (final), as against Rs. 14-6. The Directors of the Company have recommended a final dividend of 5 per cent. for 1956, making a total of 10 per cent., as against 9 per cent. for 1955.

THE BORREA COAL CO., LTD.

Corrigendum

In our issue dated 16th February 1957, *vide* page 304), the interim dividend on ordinary shares of the Company in respect of the year ended 31st December 1956, without deduction of income-tax paid by the Company, was inadvertently mentioned as 5 per cent. per annum, whereas it should read as 5 per cent.

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 11th March 1957 (additional to the Interim Dividend of 2 per cent., free of income-tax, declared on 9th August 1956) in respect of the Company's financial year ending 31st March 1957, of 2 per cent., free of income-tax, payable on or after 28th March 1957 to registered shareholders whose names appear in the Register on 11th March 1957 or to their mandatees.

Transfers received at the Company's Registered Office before 12.30 p.m. on 9th March 1957 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA, *27th February* 1957.

N.B.—Shareholders should inform the Registrar of any changes in their registered addresses.

NEWS IN BRIEF

THE Tariff Commission has taken up for investigation the question of continuing protection to the sheet glass industry beyond 31st December 1957.

The price of tea, for the purpose of determining the export duty, has been fixed at Rs. 3-6-1 per lb., as against Rs. 3-15 per lb. in force from 1st February. There is no change in the existing rate of export duty of As. 6 per lb.

Letters extending the schedules to the Indo-Polish Trade Agreement signed in April last upto the end of the current calendar year with slight modifications were exchanged by the representatives of the two Governments at New Delhi on the 1st inst.

In order to augment the supply of water to the steel plant at Rourkela, it has been decided to construct a dam across the river Sankh, near the steel project. The dam, which is estimated to cost over Rs. 1.5 crores, will be built by the Hirakud project authorities and is expected to be completed by the middle of next year.

The Union Government has now decided to allow a small quota of 5 per cent. for the import of rough precious stones, unset and imported uncut including rough diamonds, during the first half of the year. The decision is a sequel to the representations made by the indigenous industry engaged in cutting, drilling and polishing precious stones for essential supplies of raw materials.

A Finnish trade and goodwill mission is expected to arrive in India shortly to explore the possibilities of expanding trade between the two countries and study the industrial development in this country under the second Five-year Plan. The delegation will meet the officials of the Planning Commission, the Ministries of Commerce and Consumer Industries and Heavy Industries and also the Federation of Indian Chambers of Commerce and Industry.

The World Bank has announced that the Air India International has arranged to borrow $16.8 million—$11.2 million from five U.S. commercial banks and $5.6 million from the World Bank—to buy three long-range jet passenger planes. The loan is guaranteed by the Government of India and bears 5½ per cent. interest per annum, including the one per cent. commission charged by the Bank. Amortisation will be in four semi-annual instalments beginning 1st April 1965 and ending 1st October 1966.

In view of the general shortage of tyres and tubes in the country, the Government of India has withdrawn the restrictions on the import of certain sizes of tyres and tubes. Accordingly, quota licences granted for January-June 1957, unless otherwise specified, are now valid for import of all or any sizes of tyres and tubes. This exemption is applicable to giant-size tyres and tubes, motor, motorcycle and bicycle tyres and tubes, flaps and solid tyres. Tractor and off-the-road-tyres and tubes are, however, excluded.

The power plant of the Caltex Oil Refinery at Visakhapatnam is now ready, after a series of successful tests in the month of February. The plant is responsible for adequate steam and compressed air supplies for the major units of the Refinery. The plant, the operation of which is a necessary prelude to the overall functioning of the Refinery, has other uses. It treats fresh water for drinking purposes, and houses power pumps such as the emergency fire pump. The power plant also possesses a generator which can serve as a standby in an emergency.

While the Caltex Oil Refinery at Visakhapatnam will use its power plant for specialised purposes, it will derive its chief supplies of electric and water power from the Government Machkund Hydro-electric Scheme and the Gosthani River Project. The Caltex Oil Refinery will be ready by the middle of this year for full operation.

The Government of India has published the Constitution (Distribution of Revenues) Order, 1957, which seeks to allocate the percentage of the net proceeds of the taxes on income to the States. The percentage of the net proceeds which are to be assigned to the States are 55 per cent., and this would be distributed among the States in the following percentages: Andhra 8.01; Assam 2.23; Bihar 9.31; Bombay 18.91; Kerala 3.60; Madhya Pradesh 5.09; Madras 7.95; Mysore 5.93; Orissa 3.46; Punjab 3.96; Rajasthan 3.47; Uttar Pradesh 15.59; West Bengal 11.48; and Jammu and Kashmir 1.01. The Order allocates the shares of each State to be charged on the Consolidated Fund of India as grants-in-aid as under (in lakhs of rupees): Andhra 24; Assam 100; Bihar 80; Bombay 130; Kerala 41; Madhya Pradesh 251; Madras 5; Mysore 46; Orissa 107; Punjab 163; Rajasthan 115; West Bengal 83; and Jammu and Kashmir 175.

Two additional courses, namely, Petroleum Technology and Applied Geophysics, are proposed to be introduced in the Indian School of Mines and Applied Geology, Dhanbad, from July 1957. The number of admissions of students has already been doubled to 110 (90 in mining and 20 in geology) from July 1956, in view of the pressing demand for technical personnel during the second Plan period. A sum of Rs. 122 lakhs has been allocated in the second Plan for the expansion of the School. Equipment necessary for the two additional courses is being obtained under the Technical Co-operation Assistance Aid Programme from the U.S.A. The services of two American experts under Point Four Programme for the School are also likely to be secured. Foreign experts who visited India, both from Russia and America recently, were impressed by the School of Mines and had commended the standard and curricula of education at the School. The introduction of the new courses was recommended by these experts who had also advised a larger intake for the School.

* * * *

From Abroad

Negotiations for extending the European Payments Union and expected to start shortly in Paris.

Ceylon had a favourable trade balance of Rs. 9.65 crores in 1956, as compared with Rs. 47.93 crores in 1955.

Pakistan has set up an Economic Committee, with a Supreme Court judge as its Chairman, to study measures for cutting expenditure on administration.

Yugoslavia has concluded a trade agreement with the Soviet Union which provides for exchange of goods between the two countries. Under the terms of the agreement, Yugoslavia will get an increased credit of £1,786,000 for the purchase of Soviet industrial and agricultural equipment.

The Australian Government has authorised a further easing of import restrictions on a larger number of goods, the most important category being crude, waste and masticated rubber. Special licences of 100 per cent. will be granted for this form of rubber and numerous goods, in order to allow business to increase stocks which are now at a low level.

The National Bank of Brazil has new regulations aimed at preventing triangular deals in Brazilian exports to be paid for in inconvertible currencies or clearing dollars. Licences will not be granted where these exports are to cross or be transhipped to third countries, unless the country of destination has no ports. In that case, letters of credit will have to stipulate the shipment route in detail.

World wheat production for the current crop year (1956-57), according to the U.N. Food and Agricultural Organisation, is likely to be about 121 million metric tons, about 2 million tons below the 1955-56 production. In the U.S. and Canada, the two major producers and stock-holders' recent efforts to cut production have been defeated by high yields. With present stocks of 28 million tons, supplies for 1956-57 would reach the all-time record of 55.1 million tons.

The Ceylon Government proposes to invite an official trade mission from India shortly to negotiate a fresh Indo-Ceylon tobacco trade agreement. The existing five-year trade agreement between the two countries is due to expire in August next. The present pact provides for an annual export to India of 2,500 candies of raw Ceylon tobacco. This represents the bulk of Ceylon's production. In exchange for raw tobacco, Ceylon imports Indian-grown tobacco used in the manufacture of *bidis* and cigars.

PERSONAL

MR. Ellsworth Bunker, United States Ambassador to India, presented his credentials to the Union President on Monday this week.

Mr. Murarji J. Vaidya, Mr. M. A. Master, Mr. Ramdas Kilachand, Mr. Babubhai M. Chinai and Mr. Ramnath A. Podar have been co-opted on the Committee of the Indian Merchants' Chamber for 1957.

Mr. H. L. Murray, Managing Director of Mackinnon Mackenzie and Company (Private) Ltd., has been elected Vice-President of the Bombay Chamber of Commerce and Industry for the year 1957-58.

Mr. H. V. R. Iengar, I.C.S., took over charge as the Governor of the Reserve Bank of India on Friday last week. On the same day, Mr. P. C. Bhattacharya assumed the chairmanship of the State Bank of India.

Mr. J. F. Sinclair, until recently General Manager of Burmah-Shell in India and Chairman of the Burmah-Shell Refineries Ltd., left for the U.K. on Thursday last week, to take up a senior appointment with the Shell group of companies in the U.K.

Mr. L. D. Mudie has succeeded Mr. Sinclair as the General Manager of Burmah-Shell.

Mr. E. A. Jenkins, Anchor Line Ltd., and Mr. S. M. Scott, Burmah-Shell Oil Storage and Distributing Co. of India Ltd., have been elected to serve as the representatives of the Bombay Chamber of Commerce and Industry on the Board of Trustees of the Port of Bombay for a period of two years from 1st April 1957.

Mr. K. Ramachandran, who was Additional Member (Mechanical), Railway Board, has taken over as General Manager of the Chittaranjan Locomotive Works *vice* Mr. Karnail Singh who has joined the Railway Board as a Member (Engineering). Mr. Ramachandran has been succeeded by Mr. E. W. Isaacs, ex-Chief Mechanical Engineer, Chittaranjan Locomotive Works.

Dr. C. E. Salkeld, of Messrs. Imperial Chemical Industries (India) Private Ltd., has been elected Chairman of the Bombay Section of the Textile Institute, Manchester, for 1957. Mr. J. G. Parikh of the Silk and Art Silk Mills' Research Association has been elected Honorary Secretary. The other members of the Committee are: Dr. C. Nanjundayya, Prof. R. K. Mody, Mr. N. V. Ullal, Mr. J. J. Master, Mr. R. M. Khatau and Mr. D. P. Ketkar.

A proposal for a "World Coffee Council" to include producers all over the world is currently being discussed by the Pan American Coffee Bureau, an organisation of Western Hemisphere coffee producing and manufacturing countries. Under the proposal, African, Asian and adjacent coffee-producing countries would be invited to join in forming the the World Coffee Council. They also would be expected to contribute to the promotional activities of the type now being conducted by the Pan American Coffee Bureau and in new joint activities initiated in the future. Proposed international coffee marketing agreements would be deferred until the new council was formed.

CENTRAL AND WESTERN RAILWAYS

IMPORTANT NOTICE

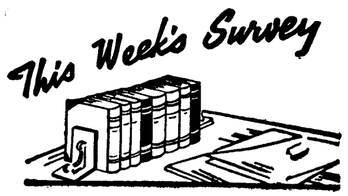
With effect from March 1, 1957, the following sections of the Central Railway will be transferred to the Western Railway for the purposes of administrative control.

(i) Bhopal (exclusive)—Ujjain
(ii) Bina (exclusive)—Kotah
(iii) Ujjain—Agar

The existing procedure for calculating distances, fares, rates, etc., for traffic from and to stations on these sections will, however, continue both in local and through booking.

All enquiries or claims in respect of passengers, luggage, parcels and goods traffic dealt with at any of the stations on these sections which were so far being addressed to the Chief Commercial Superintendent, Central Railway, Bombay, V.T., or Superintendent of Claims, Central Railway, Byculla, Bombay, should be addressed to them in respect of traffic dealt with upto and inclusive of 28th February 1957 only.

In respect of traffic dealt with thereafter (i.e., after 28th February, 1957), such references should be addressed to the Chief Commercial Superintendent, Western Railway, Churchgate, Bombay.



INDO-U.S. TRADE

ON a visit to India now is a six-member trade mission from the U.S. The mission is headed by Mr. F. Preston Forbes, Director of the U.S. International Trade Development Division, and consists of three prominent business men and two Government experts on foreign trade. The main object of its visit is to pave, through discussions at open meetings and private consultations with Government officials and as many individual business men as possible, the way for greater two-way trade between India and the U.S. The mission which arrived in New Delhi on 25th February last is expected to stay in the country for three more weeks. It is at present in Bombay and will return to the U.S. after perambulating through Hyderabad, Coimbatore, Madras, Visakhapatnam, Calcutta, Patna and Kanpur.

Much significance attaches to the visit of the U.S. trade mission to India. The U.S., as readers are aware, is one of the biggest buyers of Indian goods. Thus, in every rupee's worth of commodities sent out of this country, the share of the U.S. alone comes to nearly As. 2-6. The total value of exports to the U.S. during the year 1955-56 amounted to over Rs. 87 crores, which represents 14.7 per cent. of the aggregate exports of Rs. 591 crores. The chief items of exports were the following:

	Quantity	Value (Rs. crores)
Gunny cloth (tons)	173,259	28.87
Tea (million lbs.)	25.44	6.78
Manganese ore (tons)	321,259	4.05
Mica (cwts.)	114,344	3.61
Pepper (cwts.)	132,264	2.31

The U.S. is also one of the largest suppliers of articles to India. Thus, out of the aggregate imports into India valued at Rs. 650 crores in 1955-56, the U.S. alone accounted for more than Rs. 89 crores, or 13.7 per cent. of the total. Among the chief items of imports were machinery and mill-work Rs. 16.54 crores; steel sheets and plates Rs. 6.93 crores (88,718 tons); vehicles (excluding locomotives, etc., for railways) Rs. 5.88 crores (9,461); lubricating oils, motor spirit and kerosene Rs. 4.49 crores (Rs. 24.86 million gallons); copper Rs. 2.27 crores (97,402 cwts); drugs and medicines Rs. 2.30 crores; and chemicals and chemical preparations Rs. 1.91 crores.

The need for augmenting trade between India and the U.S. is of utmost importance especially in the present context when India has launched upon a giant programme of industrialisation. In fulfilling this programme, the technically and industrially advanced U.S. can be of immense benefit. The U.S. trade mission will do well to recognise this aspect fully. It should, while exploring the possibilities of expanding the trade between the two countries, examine the extent to which the U.S. can help India in its programme of industrialisation by investing a part of its large savings in this country and by supplying capital goods on a long-term credit basis. How valuable such assistance is to India will be evident from the history of U.S. economic development and from the tight foreign exchange position that India is experiencing at present.

The U.S. trade mission should also examine the ways and means of augmenting U.S. purchases of Indian goods. It will be recalled that, under the current import policy, restrictions on imports from the dollar area have been greatly reduced and the Indian market for American goods has expanded. It is obvious, therefore, that greater stress must be laid on improving India's export trade with the U.S. Apart from the main items of export like jute goods, tea, pepper and cashewnuts, there is great scope for raising exports of commodities such as silk and silk manufactures, handloom fabrics, handicrafts, and manganese and chrome ores. One of the stumbling blocks in the way of India's export trade with the U.S. has all along been the high tariff wall maintained by the U.S. and the complicated system of tariff laws and customs procedure. It would be in the interest of Indo-U.S. trade, indeed, in that of world trade, if the U.S. were to effect appropriate tariff concessions and simplification of tariff laws and customs procedure. The U.S. trade mission should examine the question from this angle and put forward, after its return home, concrete suggestions to the U.S. Government for reducing the handicap.

There may be a number of difficulties in the way of exports to the U.S. on the Indian side. While it is primarily the duty of business men and the Administration of this country to discover and remove them, the mission will be doing a real service to India by giving its views on this question to the concerned interests. The mission can also tell the Government of India candidly what it thinks of the climate in India for investment of foreign capital, particularly American capital, and the ways in which the climate can be made more favourable for achieving satisfactory results. Since the mission is not concerned with any specific deal or project, it is eminently qualified to express its views generally on the most favourable conditions under which American capital and technical know-how can be obtained for giving real momentum to India's plans for economic advancement.

While on the subject of export promotion, to the U.S. in particular, it is quite pertinent to draw attention to the difficulty caused in the administration of export duty on manganese, an article of great importance in exports to the U.S. and one in which many competitors are springing up in the northern hemisphere. It will be recalled that, on 3rd September 1956, the Government re-imposed the export duty on manganese at rates varying from Rs. 10 to Rs. 30 per ton with a manganese content of over 38 per cent. and with varying scales independent of the manganese content. The difficulty referred to is described by Mr. R. Maulik, Chairman, Indian Mining Association, as follows:

"One unfortunate point about this duty is that the Government machinery is ill-equipped to impose such a duty, as the Collector of Customs has not an adequate qualified staff, nor the laboratory facilities to carry out the necessary analyses. He is also unwilling, or not prepared, to accept the results of qualified, world-renowned analysts, but insists on independent sampling by his own organisation. To do this work efficiently, his organisation would have to be capable of doing the full amount of such work now carried out by all of the local analysts. I have just heard of cases where the Customs authorities have now informed shippers that they must pay an increased rate of duty on parcels which were shipped five months ago and which have reached their destination *via* the Cape, and have probably now been used in the manufacture of steel and, for all I know, may be on the way to India in the form of machinery. Under the sales contracts, the sellers will ask the foreign buyers to pay this additional duty—a request which cannot enhance India's reputation in the world's metal markets."

The complaint of Mr. Maulik sounds genuine and quite reasonable. In its anxiety to earn revenue, the Government should be careful enough not to kill the goose that lays golden eggs. Having imposed the export duty on this foreign exchange earner, it owes a duty to the public to keep a vigilant eye on the trend of prices and promptly reduce or remove the duty once prices fall, as they invariably do after some time. Further, now that several competitors are coming up in the world manganese trade, the Government should be careful not to repeat the blunder it made in the jute goods export trade. It should not be forgotten that any prolonged impediment placed in the way of exports of products amounts to a protective umbrella to the competitor and will ultimately result in a substantial reduction, if not total loss, of export markets.

AUSTRALIAN TRADE MISSION

The arrival of the Australian trade mission, the first of its kind to visit India from that country, on the 23rd inst., is awaited with considerable interest by importers, exporters and manufacturers in India. For, it is generally believed that the forthcoming visit of the delegation will be instrumental in bringing about a much larger flow of trade between the two countries. Although Australia currently stands fourth in the list of India's customers and India accounts for about four per cent. of that country's exports, it is realised that there is scope for a larger volume of mutually beneficial trade between the two countries. That the Australian Government attaches much importance to the development of trade with India is evident from the fact that the proposed mission will be one of the largest ever sent out by that country and will represent a good cross-section of the Australian business world. Among those sending delegates are refrigeration and air-conditioning engineers, manufacturers of plastics, automotive spare parts manufacturers, telecommunication engineers and wool top suppliers. One of the largest ferrous and non-ferrous foundries in Australia is also sending its representative. Import and export companies and at least five leading banks are included in the list. So far 21 representatives of Australian firms have joined the mission and more are expected to join before the party leaves for India.

The object of the mission is twofold—primarily to develop trade between the two countries and, at the same time, to enable manufacturers in India to appreciate better Australia's industrial resources. Since India's second Plan involves a large outlay on industries, on Government as well as private account, it is clear that there will be demand for many types of industrial goods and raw materials which Australia can supply. India has currently a favourable trade balance with Australia and this trend was in evidence during the past five years, excepting 1952-53. In 1955-56, India's total exports to Australia was valued at Rs. 24.8 crores, as against imports valued at Rs. 13.46 crores. India has long been an important supplier of raw materials as well as manufactured goods to Australia. Australian trade statistics for the 12 months ended June 1956 show that India was the fifth most important supplier of goods to that country, accounting for 2.9 per cent. of its total imports. Among the major items supplied by India are vegetable oils and fats, unmanufactured fibres and jute bags and sacks for the agricultural and pastoral industries, tea, linseed oil, cotton waste, etc. In 1955-56 Australia imported from India tea, corn and flour sacks, wool packs, jute piecegoods and cotton piecegoods valued at Rs 1.41 crores, Rs. 7.95 crores, Rs. 1.78 crores, Rs. 2.61 crores and Rs. 2.81 crores, respectively. Australia's exports to India are principally wheat, zinc bars, blocks and ingots, processed milk, wool machinery, etc. The levels of exports to India have generally fluctuated in the past in the same direction as the value of wheat shipments.

It may be observed, in this connection, that neither country accords tariff preference to the other. But both are signatories of the General Agreement on Tariffs and Trade and have exchanged tariff concessions with each other during the negotiations in Geneva in 1947.

The attention of the visiting mission will not be concentrated solely on selling Australian products. It will also explore the possibility of expanding exports of Indian products to Australia. With this object in view, every effort will be made by the delegation to get in touch with as many interested parties here as possible. Expressing the keen interest of Australia in the development projects undertaken by India, Mr. John McEwen, Australian Minister for Trade, observed recently: "The forthcoming trade mission to India will enable Australian manufacturers and exporters to take a close and practical interest in India's modern industrial revolution." In choosing the members of the mission, the Australian Government has paid particular attention to India's needs under the second Plan and to ensure that they will be able to offer technical "know-how," besides goods and equipment. Although of recent origin, Australia has a well developed industrial structure and the research and development work in many industries has been aimed at meeting the needs of manufacturers faced with problems similar to those encountered in India today. It is to be hoped that the mission's visit will lead to closer Indo-Australian economic relations.

EUROPEAN COMMON MARKET

Concluding our survey on the new arrangement of the Messina countries to widen the scope of the proposed European Common Market to include the French and Belgian territories in Africa, we observed in these columns last week that there was room for doubt whether the formation of an effectively integrated market such as that was a feasible proposition. That this doubt is a very genuine one will be evident from the immediate reactions of Britain, one of the important participants in the proposed free trade area, to the decisions arrived at by the Prime Ministers of the Messina countries at Paris on 20th February last. Replying to questions in the House of Commons the other day, Mr. Thorneycroft, Chancellor of the Exchequer, for instance, declared that the new arrangement providing for the linking of the customs-free Common Market with the French and Belgian territories in Africa "would appear to contravene the international obligations of the G.A.T.T., and it would be necessary, in any event, to put it before that body." Mr. Thorneycroft, of course, pointed out that Britain could not prevent countries on the Continent coming to arrangements among themselves. But he hastened to add that his Government did not regard these matters as ones to be simply settled either in London or in Europe; the Governors of the Colonies would have to be consulted.

While it will be interesting to watch the attitude of both the O.E.E.C. and the G.A.T.T. to the new arrangement agreed to by the Messina countries, the scheme is expected to evoke severe criticism from the dependent territories of France and Belgium themselves. The International Federation of Free Trade Unions—this body represents 55 million trade unionists throughout the Western world—has already urged the Governments of the Messina countries to consult the peoples of overseas territories before incorporating them in the Common Market. In the course of what is called "the prior consultation manifesto" issued from its Brussels headquarters, the Federation makes it clear that the time has passed when the Governments of the metropolitan countries could come together and unilaterally decide the fate of dependent territories without asking African opinion. To quote it: ". . . the association of these territories shall not be visualised in such a way as to hamper their political evolution and the human aspirations of their populations . . . any association of overseas territories with the Common Market shall be based on the principle of freely-accepted co-operation on the part of all participating countries and territories."

The foregoing brief account will indicate that the arrangements now agreed among the Messina countries "opens up at least as many problems as it solves." And the task of solving these problems is by no means an easy one. In fact, it is a stupendous one. This is so, because the very nature of the Common Market project is avowedly political. Considering the growing political consciousness among the dependent territories of metropolitan countries, the question arises as to whether these territories will agree to subject themselves to the regulations and controls under the proposed Common Market. Even assuming that the problems facing the Common Market are solved and that the Market will come into existence, the difficulty of combining this Market with the proposed free trade area will be insurmountable.

Be that as it may, the establishment of the European Common Market will have wide repercussions on the trade of the countries outside Europe, especially the predominantly raw material-producing countries of Asia. When the Common Market begins to operate, the competition which now exists among the countries of Europe to secure supplies of raw materials and other goods from the Asian countries will be done away with. In other words, this means that the prices of Asian exports will be determined not by the suppliers but by the Common Market countries collectively. Similarly, the latter countries will be in a better position to dictate the prices and terms of sales of machinery and equipment made by them to Asian countries.

WORLD SHIPBUILDING

As the wheels of industrial progress roll on throughout the world, Britain finds, to its great disappointment, all its titles to greatness falling off one by one. That country *once* used to be the richest in the world, the workshop of the world, the world's banker, the world's shipbuilder, etc. But now the former manufacturer for the world finds it hard to maintain its competitive position in the face of more enterprising and ingenious rivals. London, which at one time was the nerve-centre of international finance, now finds itself terribly short of funds. Far from being the richest country in the world, Britain is now struggling, under the crushing burden of heavy defence spending, to make both ends meet. And the latest addition to the already long list of forfeited titles of greatness is "the world's shipbuilder." It must, however, be acknowledged that undeterred by these adverse developments, Britain is making a gallant attempt to retain its position. Although it might have turned out to be a little "backward" in some of the traditional fields of industry, it has gone ahead of every other country (not excluding the U.S.A.) in the new realm of nuclear power generation and its peaceful application to industry. For instance, in the production of nuclear power plants and isotopes, it is in the forefront of all other nations. It has also established a great lead in the manufacture of aircraft. Again, Britain is planning to build shortly atom-powered ships which, when accomplished, will open up a new chapter in world shipbuilding and restore to the U.K. its former pre-eminent position.

THE ALUMINIUM INDUSTRIES LIMITED, KUNDARA

(*Incorporated in Travancore State with Limited Liability*)

ANNOUNCEMENT TO SHAREHOLDERS

PURSUANT to the resolution passed by the Directors at their Meeting held on the 27th February 1957, we have pleasure in announcing Interim Dividend at 6¼ per cent. (on account of the next final dividend for the year ending 31st March 1957) on all shares of the Company.

Payment will be made during the third week of March 1957 to the Shareholders whose names are on the Register of the Company on the 14th March 1957.

The Share Transfer Books of the Company will be closed from 15th March 1957 to 17th March 1957 (both days inclusive).

By Order of the Board,
SESHASAYEE BROTHERS (TRAVANCORE) PRIVATE LTD.,
Managing Agents.

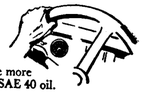
KUNDARA, 27*th February* 1957.

A motor oil so good it cuts petrol consumption up to 15%

CALTEX RPM 20-40 SPECIAL WORKS FOR YOU LIKE THIS

when you start your car
you need the performance of a 20 oil
Every time you start, your engine needs a light, quick-lubricating 20 oil. Bearings are then instantly protected, petrol is not wasted overcoming friction caused by a heavier oil, excess power is not drained from the battery.

ten minutes later
you need the performance of a 30 oil
As your engine warms up it needs a SAE 30 oil—an oil with more "body" to resist the increase in engine temperature. At this stage, a lighter 20 oil would not give complete protection or maximum performance, a SAE 40 oil would be too heavy.



twenty minutes later
you need the performance of a 40 oil
Out on the open road your engine will operate more efficiently with the full-bodied protection of a SAE 40 oil.

RPM 20-40 SPECIAL meets engine requirements during all stages, gives extra protection at full throttle and ensures cooler, smoother running all the time.

RPM 20-40 SPECIAL gives you these important benefits:

1. Up to 15% increased mileage per gallon
2. Up to 33% less consumption of oil
3. Quicker, smoother engine response during warm-up
4. Less drain on battery
5. Minimises wear
6. Meets passenger car and truck manufacturers specifications
7. Can be used in all weathers, all seasons, all driving conditions

change to CALTEX RPM 20-40 SPECIAL

AND SEE HOW SHE GOES!

A PROVOCATIVE THESIS BY PROF. MYRDAL

SOCIALIST TREND IN ASIA WELCOMED

From Our Own Correspondent

NEW DELHI, *5th March*

DELHI LETTER

THE Delhi School of Economics, directed by Dr. V. K. R. V. Rao, celebrated its Foundation Day in the last week of February. The occasion was highlighted by a provocative thesis presented by Prof. Gunnar Myrdal, Executive Secretary of the U.N. Economic Commission for Europe. In an address concerned with the problems of economic integration, with particular reference to underdeveloped countries, Prof. Myrdal started with the proposition that, on the whole, only the already industrialised countries are industrialising further. On the average, economic development in the underdeveloped countries (in which more than two-thirds of the people in the non-Soviet world live) has in the last century been, and is today, slower and more hesitant. The income gap between the richer and the poorer countries has therefore been widening.

The richer countries have also reached the stage at which further economic progress has become an almost automatic thing. This phenomenon, Prof. Myrdal explained, is the result of a rapid movement towards economic integration in recent decades. This integration, in its turn, has meant that no localities and regions and no occupational groups or social classes are now allowed to fall far behind what is becoming general standard in the country as a whole. In the cumulative social process, economic development, equalisation of opportunities and political democracy are interrelated by circular causation, each one being each other's both cause and effect.

Economic Integration

In the underdeveloped countries, Prof. Myrdal continued, the lack of economic integration is also the social result of generations of economic stagnation. Planning of economic development in an underdeveloped country has, therefore, to be directed towards such integration. This, according to Prof. Myrdal, is just as important as any amount of capital investment. The underdeveloped countries have also very good reasons, which the richer countries do not have, for applying nationalistic economic policies. Prof. Myrdal argued here for the rationality of a "double standard morality" under which the underdeveloped countries have rational grounds for asking the developed countries to liberalise their trade and capital movements unilaterally. They (the underdeveloped countries) need to be staunch free traders, and even preserve for themselves the right to give export subsidies, so far as the advanced countries' imports from them are concerned, but restrictionists in respect of their own imports.

Prof. Myrdal's related plea was that, besides national integration, the underdeveloped countries should strive more diligently for regional economic integration. There is, for instance, almost no practical economic co-operation in South-East Asia. The underdeveloped countries, Prof. Myrdal made clear, would need much more than do the developed regions, neighbourhood co-operation, agreed specialisation in industrialisation and, indeed, "free trade areas" for themselves behind common protective walls.

Socialism in Asia

While Prof. Myrdal has not specifically described planned economic development in underdeveloped countries as "socialistic," Mr. Julius Braunthal, a former General Secretary of the Socialist International, has, at a Press Conference here, welcomed the socialist trend in Asia as the surest means of achieving prosperity and the soundest deterrent to the spread of communism. He thought that concentration of resources on agricultural development (which, of course, is as important as industrial development in underdeveloped countries) is not conducive to the speeding up of the rate of capital formation for swift industrialisation. Thus, Mr. Braunthal opined, industrial development in Asiatic countries would have to be dependent on the influx of foreign capital. The socialist leader has not paused to explain how foreign capital can be attracted to a country devoted to noisy socialist planning. Will the political potentialities of socialism as a deterrent to Soviet-style communism be sufficient to attract foreign capital?

Machine Tools

It is just possible that socialist planning in India, at any rate, may be moderate enough to attract foreign capital. Much, of course, would depend on the fair treatment meted out to it. The latest example of such fair treatment is provided by the new agreement between the Government of India and the Swiss firm of consultants for the Hindustan Machine Tools Company in the public sector. The new agreement terminates the financial partnership of the Swiss firm with the Government in the management of the Bangalore factory. The Swiss firm will now transfer the shares, valued at Rs. 30 lakhs, held by it, on receiving from the Government the value of those shares together with interest thereon from the date of investment. In lieu of the firm's surrender of its right to have 5 per cent. free shares and in consideration of the transfer of its licence to manufacture machine tools to the Hindustan Machine Tools (Private) Ltd., a net sum of Rs. 12½ lakhs will be given to it before the end of June 1957. The Swiss firm is also to sign two separate agreements with the Hindustan Machine Tools—one providing for its technical collaboration in the manufacture of or research into machine tools and the other providing for the transfer of the full licence authority and the right to sell 8½-inch highspeed centre lathes throughout India, Burma, Ceylon and Pakistan.

Under the second agreement, the Bangalore company will give the Swiss firm a royalty on actual sales, the percentage of which will become less in successive five-year periods. The three agreements are bound to reflect creditably on the practice of Government's policy towards foreign capital and to impress visiting trade missions from abroad. Following last year's settlement of fair compensation for the nationalised Kolar Gold Mines, it may be recalled, there has come about a trend, albeit slow, in favour of possible foreign investment on an increased scale.

Heavy Engineering

It is expected here that British industrial interests may well co-operate in the implementation of the U.K. Heavy Engineering Mission's Report. This is not improbable, because the Mission was, in part, sponsored by the Federation of British Industries and their recommendations to the Government of India appear to be more realistic and practical than those of the Soviet experts. The U.K. mission has recommended the establishment, *at this stage*, of four heavy machinery manufacturing plants, each estimated to involve a capital cost of less than Rs. 5 crores. The estimated capital costs do not include working capital, site purchase and housing for labour. The four plants are to produce heavy sections for the structural engineering industry; to manufacture storage tanks, blast furnaces and pressure vessels for major chemical plants and steel works; to do machine jobbing on heavy castings and forgings; and to manufacture big machine tools such as vertical borers. These plants are to supplement the N.I.D.C.'s project for heavy castings and forgings. The Soviet mission's report (recommending a foundry forge and a heavy machinery manufacturing plant at a total cost of Rs. 94 crores in two stages) and the British mission's report have just been referred to a technical committee for examination. Incidentally, the Tata project (in the private sector) for a foundry for heavy castings is scheduled to be completed early next year. It is feared that there might arise a further transport bottleneck on the score of possible heavy machinery manufacturing plants, in view of the fact that the Railway Plan has not taken into account the requirements of such plants. However, the British project seems to be modest enough for execution in the second Plan period, particularly because the foreign exchange content of the Russian project is about half its total cost.

The British mission has also recommended the setting up of a specialised factory for making coal-mining machinery at an estimated cost of Rs. 3 crores. A Russian team of experts has, on the other hand, recommended the setting up of a plant for making coal-mining equipment at an estimated capital cost of Rs. 13.2 crores. It is stated on behalf of the Government that the Russian team has taken into account the requirements of the public and private sectors in fulfilling coal targets in the next 15 years.

State Trading

The U.S. Trade Mission has had a busy time here, discussing possibilities of increased Indo-American trade with the representatives of the Ministry of Commerce and Consumer Industries and of the Finance and Heavy Industries Ministries. In particular, the officials of the Commerce Ministry assured the U.S. Mission that the State Trading Corporation could enter into long-term contracts, at steady prices, for export of manganese ore. The American ships bringing foodgrains and cotton from the United States would also be available for carrying the ores from India.

That the possible export of ores by the State Trading Corporation on an increasing scale is figuring prominently in the Commerce Ministry's negotiations with foreign delegations, is also learnt from some Japanese representatives of steel mills who are here. They have, I learn, concluded a deal for the purchase of 1.3 million tons of iron ore for shipment, during the period 1st April 1957, to 31st March 1958, on f.o.b. basis. Although the Government of India has been pressing the Japanese representatives to enter into a long-term contract for the purchase of 7.5 million tons (including the above 1.3 million tons) of iron and manganese ores, the latter are reluctant to come to any such agreement in view of possible future price fluctuations. It is rather incomprehensible why the State Trading Corporation is not making necessary arrangements to ship the commodities sold by it by acquiring the required tonnage. It is known in this connection that, from May to December 1956, the State Trading Corporation sold for export goods worth about Rs. 10.7 crores on f.o.b. basis. The anomaly of the whole situation is that the State Trading Corporation, which has entered the sphere of foreign trade in a massive way to the detriment of private exporters and importers, has not considered it necessary to enable India to earn a part at least of the freight on exports and imports.

Brevities

A Finnish trade delegation, consisting of leading industrialists of Finland, will come to Delhi on 17th March. Early in April, the West German trade mission will arrive here; this mission is likely to show particular interest in the National Industrial Development Corporation's foundry-forge project and in the heavy machine-tools, fertilisers, intermediary dyestuffs and wagon building industries. An Australian trade mission, led by the President of the New South Wales Chamber of Manufacturers and including 30 representatives of industry, commerce, banking and the Wheat and Dairy Boards in Australia, is scheduled to arrive here on 19th April 1957.

* * * *

The Government of India has just announced the names of members of two delegations which are leaving this month for Bangkok to attend the E.C.A.F.E. session. One delegation led by Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Consumer Industries, will be to the session of the E.C.A.F.E. Committee on Trade and Industry. This session is to begin on 7th March 1957. The main delegation to the E.C.A.F.E. session, beginning on 18th March, will be led by Mr. D. P. Karmarkar, Union Minister for Trade.

AMERICAN LETTER

IMPATIENCE OVER TARDINESS IN SOLVING SUEZ PROBLEM

CUT IN SOME BUSINESS EXPANSION PLANS REPORTED

From Our Special Correspondent

NEW YORK, *21st February*

THE Middle East is the focal point of attention in the United States at the present time. President Eisenhower found it necessary to make a television and radio address to the country to support at least a reprimand to Israel by the United Nations for not withdrawing from the Gaza strip and other territories.

This supports the views expressed by Secretary of State, Dulles, but it does not make much sense to a wide sector of public opinion here. Editorials of newspapers of various shades of opinion draw attention to the fact that fighting in the Middle East has been going on for some time. Many nations have been aggressors and if one is to be singled out, the others should be, too. Such an opinion was forcefully expressed by Senator Knowland. He strongly opposed bringing pressure on Israel and not on others.

What the final outcome of this problem will be, remains to be seen. The President spoke of the danger of an outbreak of war. In the background is the attitude of Egypt which does not seem conducive to expediting the clearing of the Suez Canal. The plea of the principal maritime nations to find some way out, does not appear to have fallen on responsive ears at Cairo. Meanwhile the Egyptian Exchequer must be suffering quite badly from lack of receipts of Canal tolls. That does not make very much sense either, but the facts remain just the same.

The fuel crisis remains too. Oil company officials say that 80 per cent. of the oil shipments to bring European industry to a pre-crisis par, are actually being delivered. Thus, the resultant hardships are not too great despite the severity of the winter both here and on the Continent. Because of the relative scarcity, petroleum executies defend the increase in oil prices as justified. They have come under attack recently by politicians.

Suez Problem

There is growing impatience here over the tardiness with which the Suez Canal problem is being tackled by the affected nations in the East. It could just barely be that some way may be found to expedite shipments without using this waterway. Similar emergency measures were found during the war. The losers in such case would certainly be mainly the peoples of the Middle East.

Another problem which is receiving much attention here is that of a common marketing area for Europe. Government officials of six European nations met at Paris recently to arrive at a framework for such a new organisation which would scrap all customs' barriers among them and equalise their duties for foreign goods.

There is much apprehension among commodity growing countries, such as Canada, that a common European market may cut deeply into the exports of such raw materials as wheat on which the Dominion depends for a livelihood. Wheat growing, transportation and handling employs a substantial portion of the Canadian population. It may be noted that, dollar-wise, uranium is catching up fast with the importance of wheat, but not population-wise.

Initial reports on the European common market meetings in Paris were somewhat reassuring to the trading community here. For the time being, agricultural produce is not going to be included in the trading area. There remain several uncertainties, however. One is the definition of an agricultural commodity as against an industrial product. Vegetable oils, for example, may be both. All depends on the official classification.

Other complications which have yet to be ironed out, in the opinion of informed quarters here, include the demand of France to include overseas territories in the new arrangement. The plan is approved by Belgium, but opposed by Germany. As the French Foreign Minister told the United Nations the other day, Paris considers Algeria and other North African territories part of continental France.

For this and other reasons, it is suggested that a mutual investment fund be established by the participating nations of the trade area to further industrial projects and social welfare. While Germany would, thus, get access to African products, Bonn seems to object to the scheme. Being part of such arrangement, the Germans argue, might place them, in the eyes of the world, in the light of being another "colonial" power and they want to avoid that. This is the best interpretation here.

Common Market

No immediate developments can be expected, although the common market project is being pushed just as much as "Euratom," the common development of atom power in Europe. Treaties will have to be passed by the various national legislatures and signed by the heads of State. The contemplated machinery is to be put in force slowly and the final structure of a common marketing area may not be achieved before 1975.

By that time, some 16 nations may belong to it. One observation on the subject was made in a recent book by Professor Ehrhard, German Minister of Economics. He said that the common marketing idea and Euratom are desirable goals. There was danger, however, that a common trade area may become a bureaucrats' paradise, which might breed protectionist ideas against the outside world instead of fostering international trade.

Meanwhile, most ports on the Atlantic and Gulf ports in the U.S. are still strike-bound by longshoremen. An agreement was reached between union leaders and management, but the men refuse to go back to work until an agreement has been reached in all ports.

Dozens of cargoes are anchored outside the ports waiting to be unloaded and new ones are arriving daily. Some raw materials, such as sugar in various forms, are in short supply already and others may follow. As of this writing full resumption of work has been expected every day for the past week to ten days, but it has not materialised yet.

Business Plans

Some anxious glances are being cast these days here on business expansion plans. Industry and business are usually quite articulate in advertising the millions of dollars which have been earmarked for expansion. Very little is said when such programmes are revised downward later. Some private reports have it that such revisions have been decided upon. Nothing has been published yet, but the Department of Commerce and the Securities and Exchange Commission are making a joint survey and findings are expected to be published next month.

Outlays for new plant and equipment have been for years one of the sustaining factors of the U.S. economy. The trend, therefore, is of considerable importance. The best guesses at this point are that when all the plus and minus signs are evened up, proposed expansion expenditures for the second quarter will probably equal the last three months of 1956. With the tremendous demand for more electrical energy, utility spending is apt to remain high, but commercial and trade expansion may enter a downswing.

Textiles are still a soft spot and there are other areas in the economy which will bear watching. Spring sales of automobiles have yet to come and demonstrate a substantial public demand before any forecast for 1957 car production can be made. January auto sales were the highest since June 1956, consisting of 490,500 units.—*All Rights Reserved.*

GROWTH OF BANKING IN KERALA

A FEW LARGE-SIZED BANKS DOMINATE FIELD

THAT the banking system in Kerala needs no drastic measures of comprehensive reconstruction, that it can be strengthened through weeding out of the extremely unsound banks or through rectifying the defects of those which are not so unsound, and that the existence of those banks which are not entitled to transact business in terms of section 11 (1) of the Banking Companies Act, 1949, should not be allowed to continue, these are some of the main recommendations of the Travancore-Cochin Banking Enquiry Commission, the Report of which has just been published. Some of the other important recommendations and suggestions of the Commission —which will be dealt with in another article— relate to (*a*) extending the period of exemption to certain banks under section 11 of the aforesaid Act, (*b*) prescribing different ratios for demand and time liabilities, and computation of liabilities, for the purposes of section 24 of the Act, (*c*) interest rates on deposits, (*d*) granting of advances against real estate, and (*e*) terms and conditions of service of bank employees.

It will be recalled that the Travancore-Cochin Banking Enquiry Commission was appointed by the Government of India on 19th January 1956, under the chairmanship of Mr. K. Ramanni Menon, with Dr. P. J. Thomas and Prof. M. L. Dantwala as members. Its terms of reference were, among other things, to (1) enquire into and ascertain the position of banking in the State, and the role played by the banks in the economic activities of the State, and to assess their financial position in relation to the special characteristics and needs of the State; (2) to ascertain whether the terms and conditions of service of the workmen of the banks (other than the Travancore Bank Ltd.) incorporated in the Travancore-Cochin State to which the provisions of the Industrial Disputes (Banking Companies) Decision Act, 1955, apply should be modified and, if so, in what respects, and (3) to recommend steps to be taken for strengthening the banking business and for the reorganisation and reconstruction of banking structure in the area.

Special Features

Appropriately enough, the Commission set out to consider, before going into a detailed consideration of the position, the role and the difficulties of the banks, and the special characteristics of the economy of Travancore-Cochin now called Kerala State. Nature has bestowed some special favours on the area covered by this State. Sandwiched between the Western Ghats and the Western Coast, this State has a habitable area of about 5,000 square miles, out of a total area of 9,144 square miles, extending for 250 miles at the southern tip. Its width varies between 20 miles and 75 miles. In this narrow stretch of land live no less than 9.2 million people (according to the 1951 census) leading a busy life. This area consists of lowlands along the sea coast, constituting about 18 per cent., midlands, comprising the area of hills and dales forming 37 per cent., and highlands, that is, hills with thick foliage, forming 45 per cent. These three portions differ from one another in density of population, agricultural and non-agricultural activities. While the density of population in the lowlands is 2,448 per square mile, in the midlands it is 1,381 and in the highlands a mere 147. For the State as a whole, the density is 1,015 per square mile, as against the all-India average of 281. The annual rate of increase in population between 1941-51 was 2.12 per cent. In the lowlands, covered by lagoons and backwaters, coconut palms and rice cultivation predominate. Of the total area of 688,000 acres devoted to coconut palms, a major proportion is in the lowlands. Consequently, the coir industry, with over 200 factories, exports products worth about Rs. 8 crores every year, and provides employment to large numbers of people—about 700,000 —in this area. Another important industry of this area is cashewnut, consisting of 190 factories and providing employment to 46,000 persons. Exports of cashew kernels were worth about Rs. 11 crores in 1954-55. In the midland area, not only food crops like rice and tapioca, but also a number of cash crops such as pepper, ginger, coconut, lemon-grass, cardamom, cashewnut and others are grown. The area under tapioca was nearly 600,000 acres in 1953, and the production was 750,000 tons of dry chips. An area of 111,000 acres was devoted to pepper and ginger, and pepper production reached the level of 23,000 tons in 1949, and is an important foreign exchange earner. Exports of lemon-grass oil brought in Rs. 1.5 crores in 1951-52.

The State is also endowed with many natural resources, such as fishing, rare mineral sands and extensive forests with abundance of raw materials for numerous industries. Nevertheless, in Kerala, expansion of industries has not kept pace with that elsewhere in India, but population has kept growing. No less than 69 per cent. of the population still depends on agriculture. The resultant oppressive pressure on land brings one to another important characteristic, that is, the very low *per capita* holding of land, which is around 0.30 acre. This compares with the corresponding figures at 0.58 acre and 0.45 acre in the States of Bihar and West Bengal, respectively, the other densely populated regions of India. In addition, the average size of the holding is as low as 2.4 acres, the lowest in India, as compared with 4.5 acres in Madras and 7.2 acres in Mysore; on top of this, the size of 60 per cent. of the holdings is below 1 acre. If, in the face of these facts, the people of Kerala have managed to maintain themselves without serious distress, it is because of the specialisation achieved by them in the cultivation of commercial crops. An important outcome of the variegated crop pattern is that the economy is comparatively free from the cycles of seasonal activity common in the rest of India, although the seasonal ebb and flow of business activity is generally regarded as the characteristic feature of a predominantly agricultural economy. Besides, the large number of ancillary industries and trades has been able to spread out the demand for labour throughout the year. Yet another important feature of the economy of the State is that, though 45 per cent. of the State's population and 60 per cent. of the population of the lowlands area depend on non-agricultural occupations, the proportion of those living in urban areas is only 27 per cent.

The high degree of education and monetisation achieved by the economy of Kerala gave powerful impetus to the banking activity in the State. The earliest bank to be established was the Travancore Bank Ltd. in 1900. In 1917-18, there were only five banks in Travancore State; but the number shot up to 274 by 1932-33, the highest number of banks in the State at any time. A powerful fillip to this numerical expansion came from the peak level of world prosperity between 1927 and 1930, when the number expanded by 200. The number of banks in Travancore in 1929-30 at 258 constituted about one-fifth of the total banks existing in the whole of British India at that time. The paid-up capital of all the banks, however, was no more than Rs. 42.5 lakhs, averaging a mere Rs. 22,000 per bank, which was about one-eighth of the average paid-up capital of commercial banks in British India in the corresponding period. Out of the total, only five had a paid-up capital of more than Rs. 1 lakh. Besides the twin functions of accepting deposits and dispensing credit, the business of *kuries* and *chittis* also formed a substantial portion of the banks. In addition to the boom conditions, two more important contributory factors responsible for the sudden increase in the number of banks were the absence of any law to regulate the growth of banks, and, secondly, the restrictions imposed on *kuries*.

Effect of Legislation

By 1939, however, the number in the Travancore State declined to 221, as a result of the legislation enacted following the recommendations of the Travancore Banking Enquiry Committee to ensure the observance by the banks of prudent banking principles. After 1939, however, the surviving banks increased their branches. The total number of banks further declined to 105 in 1947 in Travancore, but subsequently, following boom conditions, increased to 123 in 1950. Thereafter, it declined again and touched 85 in 1955. In the Cochin State, on the other hand, the number of banks rose from 64 in 1928-29 to 107 in 1939-40 but declined to 68 in 1954-55.

The total number of banks in the Travancore-Cochin State as on 31st May 1956 was 163. Of these, 148 were incorporated within the State and 15 outside the State. Of those incorporated within the State, only five including the Travancore Bank Ltd. are included in the Second Schedule to the Reserve Bank of India Act. The total paid-up capital of as many as 136 banks which have responded to the questionnaire of the Commission was Rs. 2.38 crores as on 31st December 1955, of which the share of the Scheduled banks excluding the Travancore Bank alone, accounted for only Rs. 66 lakhs. The total deposits of all these banks at their offices within the State amounted to Rs. 37.37 crores as at the end of 1955, of which the share of those incorporated within the State was no less than Rs. 25.97 crores.

The total number of bank offices in the State as at the end of 1955 was 584. Thus, the average number of people per office works out to 15,891 as against 87,675 for the Indian Union as a whole. The corresponding figures for certain foreign countries indicate the extent to which the expansion has reached. In the U.K., for example, it is 4,600, in the U.S.A. 7,600 and in Japan 15,800. Another interesting feature is that the *per capita* deposit of the Scheduled banks alone was as much as Rs. 25 in 1955. As against this, the corresponding figures in certain advanced States of India were much higher as, for instance, Rs. 89.3 in Bombay, Rs. 87.8 in West Bengal and Rs. 37.9 in the Punjab. But, if all the banks in the State are taken into account, the *per capita* deposit works out to Rs. 40.3.

Age and Size of Banks

The age and size of the banks also reveal certain significant features. Of the total number of banks, 16 have a working capital of over Rs. 40 lakhs. These are called large-sized banks. The working funds of 25 banks vary between Rs. 10 lakhs and Rs. 40 lakhs and are termed medium-sized banks. The remaining 95 are of small size. Of the total of 136 reporting banks, as many as 73 have a life of more than 25 years. Of these, again, 11 are large-sized banks, 8 medium-sized and 54 small-sized. Banks with a life of 15 years or less are very few. In regard to the distribution of offices, urban bias is conspicuous by its absence. For instance, whereas in the Bombay State 73 out of a total of 577 offices, or 13 per cent., and in Madras State 135 out of a total of 780 offices, or 18 per cent., are located in places with less than a population of 10,000, in Travancore-Cochin no less than 197 bank offices or 35 per cent. of the total are located in similar places. The expansion of the banks, however, is not balanced, as is reflected by the fact that two places with a population of over 100,000 command 60 offices out of a total of 571. Similarly, 158 offices are squeezed in just seven places with a population varying between 30,000 and 100,000.

The main business of these banks is to finance the rural people engaged in small business, such as crop-raising, produce-processing, transporting, vending, etc. The banking activity has thus been an important activity in the State for the last 40 years, and has absorbed a considerable amount of capital. The explanation for the phenomenal development of banks, albeit small, in the State can be found, according to the Report, to some extent in the sociological and psychological environments of the State, and in some of the ancient institutions which have been developed through the centuries.

Current Deposit Accounts.—Except at certain places interest is allowed on daily balances from Rs. 500 to Rs. 1,00,000 at ½ per cent. per annum. No credit will be given for interest amounting to less than Rs. 5 per half-year.

Fixed, Short and Savings Bank Deposits received on favourable terms. Rates on application.

Foreign Exchange Business Transacted and Letters of Credit opened for approved customers.

The Bank acts as Executor and Trustee under Wills and Settlements and undertakes Trustee business generally.

Every Description of Banking Business Undertaken.

D. R. THOM, *General Manager.*

DENA BANK'S RECORD RESULTS

HIGH LIQUIDITY RATIO

IN consonance with the general trend of banking results, the performance of the Devkaran Nanjee Banking Company, Ltd. (Managing Director: Mr. Pravinchandra V. Gandhi, Bombay), during the year ended 31st December 1956, has been very encouraging. The profit for the year amounts to Rs. 14.87 lakhs, disclosing a rise of Rs. 3.76 lakhs over the previous year. With this expansion, the upward trend in earnings has been maintained for the fourth year in succession, having gone up by no less than Rs. 6.53 lakhs during this period, that is, from Rs. 5.34 lakhs in 1952. It is noteworthy that the pace of increase in earnings has been more marked in the last two years.

The impressive results of the year under review have been due to the all-round expansion in the Bank's business, as witness the increase in number of accounts with the Bank from 100,000 to 120,000, the rise of Rs. 3.36 crores in deposits and the increase of Rs. 3.56 crores in advances.

Out of the year's profit of Rs. 14.87 lakhs, the Directors have set aside as much as Rs. 8 lakhs for taxation, having raised it from Rs. 5.60 lakhs provided a year ago. The allocation to reserves has also been increased from Rs. 2.90 lakhs to Rs. 3.50 lakhs, by enhancing the amount to be set aside to the reserve fund under section 17 of the Banking Companies Act from Rs. 2.40 lakhs to Rs. 3 lakhs. The transfer to the investment reserve has been maintained at Rs. 50,000. The dividend, which had been raised last year from 4 per cent. to 5 per cent., has been further stepped up to 6 per cent.

The following comparative table will give an idea of the Bank's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Gross income	81.50	64.30	50.30	40.95
Interest and discount earned	62.84	49.09	36.94	30.48
Commission and exchange	13.23	9.85	8.16	5.92
Interest paid	27.33	20.15	13.74	10.39
Expenses	38.24	31.89	27.65	23.58
Depreciation and repairs	1.06	1.15	0.96	0.90
Profit	14.87	11.11	7.94	6.07
Provision for taxation	8.00	5.60	3.75	2.00
To reserves	3.50	2.90	2.10	2.00
Dividend	3.00	2.50	2.00	2.00
	(6%)	(5%)	(4%)	(4%)
Carry forward	2.13	1.76	1.65	1.55

	As on 31st December			
	1956	1955	1954	1953
Capital	50.00	50.00	50.00	50.00
Reserves	34.50	31.00	28.10	26.00
Deposits	19,48.83	16,12.35	12,55.99	10,37.48
Borrowings from other banks	50.00	..	..	15.00
Advances and bills	9,15.38	5,59.17	4,31.80	3,64.30
Investments	8,52.35	8,20.61	5,68.73	4,94.45
Cash balances	3,39.98	3,44.97	3,44.00	2,76.70
Balance-sheet total	25,07.16	20,16.01	15,36.07	12,98.33
Ratio to deposits of—	%	%	%	%
Advances	47.0	34.7	34.4	35.1
Investments	41.2*	50.9	45.3	46.2*
Cash	17.4	21.4	27.3	27.7

* Ratio arrived at after taking into account investments earmarked against borrowings from other banks.

It is encouraging to note that, with the rise of Rs. 17.20 lakhs during 1956, the Bank's gross income has almost doubled itself in the last three years.

A noteworthy feature of the Bank's working in recent years is the growth in deposits, which have successively risen almost without a break from Rs. 6.87 crores at the end of 1949 to a record high of Rs. 19.49 crores at the close of 1956, thus nearly trebling themselves. Of the rise of Rs. 3.36 crores in the year under review, fixed deposits (at Rs. 5.05 crores) account for Rs. 95 lakhs, savings bank deposits (at Rs. 4.80 crores) for Rs. 76 lakhs and current deposits, contingency accounts, etc. (at Rs. 9.63 crores) for Rs. 1.64 crores. This increase in deposits, together with the borrowings from other banks, has been fully utilised to improve the earnings of the Bank—as witness the increase of Rs. 3.56 crores in advances—without seriously affecting the liquidity ratio. Of the total advances, loans, cash credits and overdrafts account for Rs. 6.59 crores, having risen by Rs. 2.24 crores over the year, and bills discounted and purchased for Rs. 2.56 crores, a rise of Rs. 1.31 crores. It is also noteworthy that, despite the increase in advances, the credit ratio is below 50 per cent. and is very much lower than the general average for all Scheduled banks. In fact, the ratio had been lower still in the previous years. It may also be noted that the liquidity ratio, which has no doubt declined over the year, is much above the all-India average.

SAVINGS BONDS IN U.S.

INTEREST RATES TO BE RAISED

By Gilbert Grant

THE U.S. Treasury Department took a long-awaited step last month, when it asked Congress to permit a rise in the interest rate on U.S. Government savings bonds. Behind the Treasury proposal is the fact that interest rates on other types of savings have been rising during the past year. As a result, savings bonds have become less competitive and less attractive. Purchases have been declining, and redemptions have been rising.

The purpose of the Treasury's proposal is to increase the attractiveness of these bonds, which for some two decades have been an important form of savings for millions of Americans. At the same time, the Treasury announced other moves to weed out larger and more sophisticated investors, who, by putting their money into savings bonds, have been able to obtain a guaranteed interest rate over a set period of time, and hence freedom from market fluctuations.

The proposed Treasury changes would help savings bonds accomplished their basic objective: encourage personal and family thrift, and attain a broad distribution of public savings and the public debt. The net result would be to strengthen further the foundations of the expanding U.S. economy. These bonds have proved a valuable form of economic security, and have enabled many families to put aside the money they need for important goals in life. Recent consumer surveys reveal, for instance, that 10 million out of the 50 million American families bought savings bonds last year.

Reasons for the purchases vary. Generally speaking, however, young people look forward to buying homes and furnishings, persons in the middle years to educating their children, and older persons to obtaining an additional source of retirement income. In almost every case, buyers place great value on the bonds as an automatic, easy route to regular savings. Three out of five families that bought bonds last year did so on the pay-roll savings plan, whereby set amounts are taken out of wages and applied to the purchase of bonds.

Under the Treasury proposal, the interest on series E and H bonds—the so-called "little man's" bonds—would go up from 3 to 3.25 per cent. This would be achieved by shortening the full maturity period from nine years and eight months to eight years and eleven months. The proposed changes would not affect outstanding bonds of the E and H series. At present, there is outstanding $38,100 million in E bonds, and $3,100 million in H bonds—more than one-seventh of the total public debt.

Sales prices also would remain the same, ranging in the case of E bonds from $18.75 to $750 per bond. H bonds, which pay cash interest semi-annually, are sold in multiples of $500. But the amount of these bonds one purchaser could buy in a year would be reduced from $20,000 to $10,000—a move to discourage big investors.

Another change announced by the Treasury Department does not require congressional approval. As of 30th April, it will stop offering its series J and K bonds, which are issued in large denominations to big investors.

NATIONAL BANK OF INDIA AND GRINDLAYS TO AMALGAMATE

The Directors of the National Bank of India Ltd. and Grindlays Bank Ltd. have decided to amalgamate the two banks into one single banking unit. It will be recalled that Grindlays Bank Ltd. has been a subsidiary of the National Bank, following the acquisition of its entire share capital by the latter from the National Provincial Bank Ltd. well over eight years ago, that is, as from 1st November 1948. The two banks have, however, been functioning as separate units.

Ever since the acquisition of Grindlay's share capital by the National Bank, the interests and managements of the two have grown more closely together. In order, however, that the full benefits of this association might be ensured, a "physical fusion of the resources and staff" is considered as desirable and logical. The Directors are of the opinion that the time is now ripe for a complete amalgamation. Preliminary steps in this connection are being taken. It is expected to bring about the fusion on 1st January 1958. The opportunity will also be taken to make a change in the name of the National Bank of India.

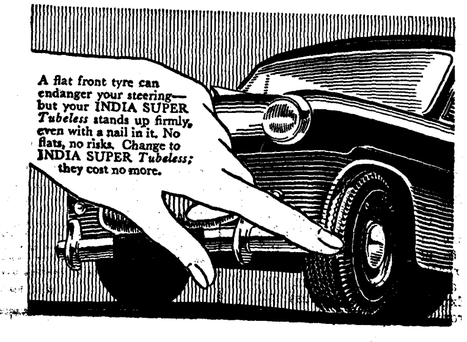
fit INDIA SUPER tubeless on the front

* Of course, it's best to fit INDIA SUPER Tubeless all round—they're the same price as tyres-with-tubes—but at least fit them on the front and drive with new confidence



STANDARD INDIAN COTTONS

FIBRE, YARN AND SPINNING TESTS SHOW NO MARKED GENERAL IMPROVEMENT

UNLIKE in countries such as the U.S. and Egypt, where cotton is grown in compact areas which make it possible to produce large quantities of one variety, in India cotton is cultivated in regions which have widely varying geographical and climatic conditions. Due to the wide disparity in the distribution of rainfall, composition and fertility of soil, etc., it has become necessary to grow a large number of varieties of cotton, each suited to a particular tract from the point of view of yield and quality. As a result, one finds in India cottons possessing a wide range of fibre properties and spinning performance. For instance, there is, on the one hand, short-stapled Bengals which are suitable for 8s to 10s reeling and, on the other, fine and long-stapled Madras Uganda I which is capable of being spun up to 36s warp or 44s weft under mill conditions. Although the major portion of cotton grown in India is of short and medium-staple, extensive research is being undertaken to evolve better varieties. In order to measure the improvement in quality, there should be some standards of reference and these standards are called standard cottons.

Before the establishment of the Agricultural Departments in the various States in India, different types of cotton used to be grown by the cultivators regardless of whether they were suited to the geographical and climatic conditions of the particular tract. The Agricultural Departments, therefore, began systematic work with a view to evolving new and improved varieties for each area. Selections were made, from time to time, from different materials in order to evolve varieties which were better than the existing ones in respect of hardihood, yield, ginning percentage, resistance to disease and pests, staple, grade, etc. This work obviously involved several physiological, botanical or agronomical experiments which had to be carried out by the Agricultural Departments. When one such variety was evolved and recommended for cultivation, in course of time, the farmers in each area grew it in their own fields extensively as it brought a higher monetary return and such varieties formed the commercial cotton crop of India. It is these improved varieties that are maintained as standard cottons in the experimental stations. They are grown each season from pure seeds and under as nearly the same conditions as possible to serve as standards of reference. In the 1953-54 season, standard cottons covered about 53 per cent. of the total cropped area in India. It is estimated that in the 1954-55 season alone cotton growers earned an extra income of over Rs. 14 crores by growing these improved varieties.

Selection of Standard Cotton

The selection of a sample of standard cotton is based on the recommendation made by the First Conference of Scientific Research Workers on Cotton in India in 1937. Their specifications were: (1) samples should be from the best seed used for sowing; (2) they should be taken from all pickings and, at the same time, from several samples of the various pickings and, if possible, with specification of the percentage in the main sample; (3) there should be no violent change of soil conditions of the farms from which the samples are supplied; (4) the type of soil and the type of field should generally be the same and no drastic changes should have taken place; (5) cotton breeders should be responsible for observing that the conditions specified are satisfied and also for supplying all the samples.

New and improved varieties evolved by cotton breeders are tested at the Technological Laboratory of the Indian Central Cotton Committee and authoritative valuations on the quality of cottons are supplied to them in comparison with the standard cotton. Standard cottons are subjected to a large number of tests in each season along with those that are evolved from time to time, the former serving as standards of reference. The standard cottons generally remain unchanged, but when one of them has definitely proved unsuitable or gone out of cultivation or has been superseded by a better variety it is omitted from the list and a new one added to it. Thus many additions and deletions have been made in the list of standard cottons since these tests were started in 1924.

The following table gives the present list of standard cottons arranged Statewise.

Bombay State	Buri 0394
Jayadhar	*Hyderabad State*
Laxmi	Gaorani 6
Vijay	Gaorani 12
Surat 1027 A.L.F.	Parbhani American 1
Suyog	*Madras State*
Jarilla	Cambodia Co2.
Virnar	Madras Uganda 1
Kalyan	(*a*) Summer crop
Punjab State	(*b*) Winter crop
Punjab American L.S.S.	Karunganni K2
	Karunganni K5
Punjab American 320F	*Andhra State*
Madhya Pradesh	Nandyal 14 (Northerns)
H 420	Westerns 1 (H1)

Objects of Testing

There are four objects in testing the standard Indian cottons. In the first place, since these tests are made in each season on the same varieties grown under nearly the same conditions, they serve to establish a scale of reference for the entire Indian cotton crop. For instance, one could compare, from the supplementary tests made for the trade, the performance of the commercial Virnar (197-3) cotton grown in the districts in any one season with that grown in the same season from pure seed on an experimental farm.

Secondly, tests on standard cottons grown in successive seasons would be helpful in studying the seasonal variations in fibre properties and spinning performance for these cottons, which again are valuable in two respects, namely, (i) when this study is extended over a sufficiently long period of time, it gives information regarding the average quality of the standard cottons and the maximum variation that might be expected to take place in any one season, and (ii) since the standard cottons have not been selected at random but with an eye to the geographical distribution of the commercial crop, their quality and seasonal variation reflect, to some extent at least, the quality and seasonal variation of the commercial crop.

Thirdly, the data collected on standard cottons are very valuable for determining the correlations of fibre properties of Indian cottons with their spinning values. The importance of such relationships to the cotton breeder cannot be overemphasised. The cotton breeder has to select a new strain which would produce lint acceptable to the spinner. These relationships would, therefore, help him to determine approximately the spinning value of a cotton even at the very early stages of its propagation, when sufficient quantity of lint is not available for performing small-scale spinning tests.

Fourthly, the purpose served by these tests is to place in the hands of the trade detailed information regarding the standard Indian cottons which have been evolved after considerable scientific work extending over a number of years and which represent improved varieties grown on commercial scale by the cultivators.

The standard Indian cottons of each season are subjected to a thorough test to ascertain their fibre properties and yarn characteristics. The results of tests made on standard Indian Cottons belonging to the 1954-55 season, together with the results of the previous season, are given in a bulletin issued by the Indian Central Cotton Committee's Technological Laboratory at Matunga, Bombay, entitled "Technological Reports on Standard Indian Cottons, 1955" by Dr. C. Nanjundayya, former Director of the Laboratory. The report on each cotton gives its agricultural details, the graders' valuation report and the spinning master's report and complete information regarding the treatment, waste percentage, yarn breakages and the test results carried out on fibre and yarn.

Performance of Standard Cottons

Surveying the test results of standard cottons during the last two and a half decades, the report notes that the standard cottons of 1930-31 gave, on the whole, much better performance than those of 1929-30; but this improvement was not maintained in the following season. The setback, however, proved temporary and the 1932-33 cottons registered, on the whole, better performance than those of 1931-32. This improvemen was maintained in the following two seasons and in 1934-35 the standard cottons yielded even better results than in the previous season. In a majority of cases these cottons showed steady improvement from 1930-31 to 1934-35. But they suffered a setback in 1935-36 from which there was a welcome change for the better in the 1936-37 season. The 1938-39 season registered an improvement in a few cases, but it was offset by a decline in the performance of a large number of varieties, while the 1939-40 season indicated a general improvement in most cases. This improvement was, however, not maintained in 1940-41; but the following season had given better results and these were generally maintained in the following six seasons. There was a setback in quality in 1948-49 and a partial recovery in the following season. The trend was maintained in the next four seasons beginning from 1950-54.

The results of the various fibre and yarn tests made on standard cottons of 1954-55 did not show any marked general improvement over that of the 1953-54 cotton. It may be observed that six varieties, namely, Jayadhar, Jarilla, Virnar, Gaorani 6, Cambodia Co2 and Westerns 1 showed an improvement in their spinning values over the last season, while another six types, namely, Vijay, Surat 1027 A.L.F., H. 420, Karunganni 2, Karunganni 5 and Nandyal 14, registered a decline in their spinning performance. Laxmi, Suyog, Punjab American L.S.S., Buri 0394, M.C.U1 (summer) and M.C.U1 Winter gave practically the same results.

TEXTILE OUTPUT IN 1956 LOWER

PROGRESS IN MAN-MADE FIBRES MAINTAINED

By Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 26*th February*

DESPITE the trade improvement noted in the final quarter of 1956, the year as a whole witnessed a further slide in yarn and cloth production in Lancashire as well as renewed contraction in the labour force. Figures now issued by the Board of Trade covering the 12 months are significant in that throughout the statistics cotton is shown to have lost further ground while the output of goods from man-made fibres has been at least maintained.

Total production of cotton, rayon and mixture yarn in 1956 was 849,340,000 lbs., as against 879,310,000 lbs. in the previous year. A reduction of nearly 50,000,000 lbs. was recorded in the quantity of cotton yarn spun but the volume of cotton waste produced was 4,000,000 lbs. higher and spun rayon and mixture yarns showed an expansion of 15,000,000 lbs.

Similar developments occurred in the cloth section, where total production of all kinds of fabric was 2,313,620,000 linear yards, as against 2,479,320,000 linear yards. The decline of 165,700,000 yards was entirely accounted for by the drop in output of cotton cloth, as production of rayon and mixture goods was more than 3,000,000 yards higher than in the previous year.

During 1956, the downward curve in the number of workers on the books of employers flattened out compared with the previous 12 months, when losses exceeded 30,000. Last year, the reduction was 12,760, the December manpower total being 243,320. The major loss occurred in the weaving branch, where the number of operatives declined from 126,630 to 117,350. In spinning, the reduction was from 100,130 to 97,780 and in doubling from 22,250 to 20,900. In contrast, the waste spinning section actually recruited more labour, man-power at the end of the year being 7,300 against 7,070 12 months previously.

Rising Imports

Swollen by the long-delayed arrival of many goods held up by world shipping difficulties, imports of cotton cloth into Britain in January were little short of the quantity of material shipped from Lancashire. Exports of 37,528,000 square yards compared with imports of 35,720,000 square yards.

During the month only 10 foreign countries took more than 1,000,000 yards of locally-made fabric and of these five were among the West African territories. Australia absorbed 5,261,000 square yards and South Africa 4,163,000 yards.

Although cotton yarn shipments exceeded 3,000,000 lbs., maintaining the slight improvement recorded towards the end of last year, the volume exported was below the January 1956 level. Australia again headed the list of destinations at 627,000 lbs. but exports to India and Pakistan were substantially lower than a year ago.

Arrivals of cotton grey cloth showed a marked expansion at 31,246,000 square yards. India's share of 12,345,000 yards in this trade was above the monthly average in 1956, as were the 5,648,000 yards from Hong Kong and 5,792,000 yards from Japan.

Advance of Man-made Fibres

Although cotton maintains its position as the dominant textile fibre, the continued progress in production and outlets for synthetics is an important feature of post-war trading. Output of man-made fibres in the United Kingdom last year reached the highest monthly average so far recorded, exceeding production in 1955 by 900,000 lbs. per month.

This was largely the result of an expansion in output of staple fibre, as production of continuous filament yarn showed a slight reduction in the previous year. Average monthly output of staple fibre was 21,300,000 lbs., as against 19,900,000 lbs., while filament yarn was produced at the rate of 18,900,000 lbs. per month, as compared with 19,400,000 lbs. in 1955.

The quarterly average deliveries of filament yarns last year were very like those of 1955. Only in the case of yarns used for industrial purposes was there any marked variation, the quantity per quarter being reduced by more than 2,000,000 lbs. at 16,486,000 lbs. On the other hand, there was an increase of 1,000,000 lbs. per quarter in the exports of filament yarns.

Deliveries of staple fibre to the different types of user, however, were in sharp contrast to the figures recorded in 1955. Not only were total deliveries more than 4,000,000 lbs. higher per quarter but there was a notable advance in the volume of staple distributed among the various spinning systems. The cotton trade took 6,000,000 lbs. more per quarter, the wool industry absorbed over 2,000,000 lbs. more and deliveries to flax spinning were over 1,000,000 lbs. up per quarter. On the other hand, exports of staple fibre showed a sharp reduction at 7,121,000 lbs. per quarter, as against 13,649,000 lbs. in 1955, a contraction of 48 per cent.

Mills and Spindles

A survey of machinery installed in the world's spinning mills compiled by the International Cotton Federation, Manchester, shows an increase to 131,340,000 spindles as on 31st July, 1956, as compared with 129,838,000 a year earlier. The European total declined to 68,895,000 (70,044,000 in 1955) but Asia advanced to 31,666,000 spindles (28,953,000). North America showed little change but South America and Africa recorded small gains.

The Federation's survey comments on the record consumption of 38,973,000 bales of raw cotton by the world's mills during the year. This was due not only to the increase in spindles but also to increased production per spindle largely as a result of the higher number of hours run in the coarser yarn mills. There was a further decline in consumption of American cotton but this was more than counterbalanced by increased consumption of all other varieties.

The Federation's table of hours worked by world mills on a spindleage basis shows that Lancashire machinery worked fewer hours than any of the 45 other countries making returns. The spindles of Hong Kong ran for nearly 8,523 hours in 12 months and India recorded 5,602 hours. The Lancashire figure was 1,526 hours. The figure for France was 3,325 hours, Germany 3,729, Belgium 3,688 and the Netherlands 4,308.

Free Trade Zone Warning

A forecast that the European free trade zone plan would "prejudice very materially" Lancashire trade was made by Mr. Percy C. Fish, the veteran textile director, at the annual meeting of J. F. & H. Roberts, the Manchester will group. Mr. Fish said the plan disturbed him because of the differences in living standards between Britain and the other countries joining in. If Lancashire could start with an equal chance against the rest then it would be all right.

Mr. C. H. Fish, Chairman and Managing Director, told shareholders that the free trade plan was moving ahead with "alarming rapidity." "The trade bodies have been giving careful consideration to the likely effects and there is a remarkable lack of agreement as to what will happen," he said.

New Zealand Trade

United Kingdom exporters will have to struggle hard to keep their hold on the New Zealand market in face of increasing competition, Mr. I. Gray, the United Kingdom Trade Commissioner at Wellington until recently, said during a visit to the Manchester Chamber of Commerce.

Some Lancashire firms, he said, had proved by giving special attention to styling and value for money that cotton exports to the market could be increased.

In rayons, however, Britain was taking a declining share of the market. Countries such as West Germany, Japan and Italy had increased their share from only a few per cent. to between 15 and 16 per cent.—*All Rights Reserved.*

JOINT PUBLICITY CAMPAIGN FOR WOOL IN U.K.

Woolgrowers of the United Kingdom, through the British Wool marketing Board, are to become partners with the International Wool Secretariat in a publicity campaign in the U.K. This announcement was made recently in a joint statement by the Marketing Board and the Secretariat. A joint control committee, to be known as the British Wool Promotion Committee, is to be established. This will consist of representatives of the Marketing Board and of the Secretariat. The Committee will promote the sale of those products in which extensive use is made of Britain's home-grown wool. Among the most important of these are carpets, knitwear and tweeds.

The British Wool Marketing Board started work in 1950 and is responsible for marketing virtually all fleece wool produced in the U.K. Ten of its 15 members are elected on a regional basis to represent farmers in the different parts of the country, two are elected on a national basis and three are appointed by the Government: In its first year, the Board handled 56.1 million lbs. of wool. Six years later, the figure was 67.3 million lbs.

INDIAN RAILWAYS STAND TEST OF TIME ADMIRABLY

GOODS AND PASSENGER TRAFFIC AT ALL-TIME PEAK

IT must be said to the credit of the Indian railways that they have admirably stood the test of time in keeping step with the vastly accelerated pace of economic expansion in the country. Not only has the volume of traffic handled registered a remarkable increase but the operating efficiency has also recorded a steady advance. During the year 1955-56—the last year of the first Five-year Plan—for instance, the railways carried an all-time record volume of both goods and passenger traffic, according to the latest Annual Report of the Railway Ministry, namely, that covering 1955-56. The goods traffic lifted by the railways touched 115.28 million tons and covered 36,458.36 million tonmiles, breaking the previous year's record of 106.98 million tons and 32,126.14 million tonmiles. Similarly, the number of originating passengers stood as high as 1,297.43 million carried over 39,083.52 million passenger-miles, which compares favourably with 1,260.89 million (38,649.31 million passenger-miles). Over the five-year period of the first Plan, the rise in goods and passenger traffic was 17.79 per cent. and 5.20 per cent., respectively. The achievement is all the creditable, considering the heavy rains and dislocation to train services caused by certain abnormal factors.

The appreciable expansion in the goods and passenger traffic handled by railways thus is fully reflected in the substantial increase in revenues. The gross earnings of railways (excluding Rs. 1.22 crores representing the share of non-Government railways in which the Government of India has no financial interest but including the worked lines) during 1955-56 amounted to Rs. 316.29 crores, as against Rs. 286.78 crores in 1954-55, or a rise of over 10 per cent. The bulk of the increase of Rs. 29.51 crores was accounted for by receipts from goods traffic, which were higher by Rs. 21.59 crores (or 13.7 per cent.) at Rs. 180.28 crores. Passenger earnings aggregated Rs. 107.71 crores, or a rise of Rs. 5.09 crores. Earnings from parcels, luggage and other miscellaneous sources were of the order of Rs. 28.30 crores, or an increase of Rs. 2.83 crores. The average of receipts per freight ton-mile was less at 10.8 pies, as against 11.1 pies, while that of receipts per passenger per mile was higher at 5.34 pies, as against 5.15 pies.

Net Revenue Higher

As against the gross traffic receipts of Rs. 316.29 crores, the total ordinary working expenses (excluding suspense) amounted to Rs. 212.54 crores, as against Rs. 205.87 crores for 1954-55. Payment to worked lines as their share of net earnings and other miscellaneous expenditure (net) was Rs. 27 lakhs (Rs. 21 lakhs) and Rs. 7.73 crores (Rs. 6.63 crores), respectively. The total expenses of railways thus came to Rs. 220.54 crores, as against Rs. 212.71 crores. The balance available for disposal with railways was Rs. 95.75 crores, as against Rs. 74.07 crores. In view of the improved financial position, the railways appropriated a much larger sum to the Depreciation Reserve Fund (D.R.F.); it was Rs. 45.41 crores, including Rs. 41 lakhs chargeable to the capital suspense of the Chittaranjan Locomotive Works as depreciation charges accruing on its plant, machinery, etc. This represents an increase of Rs. 15.04 crores, as compared with the previous year. It will be recalled here that, with the approval of Parliament, the contribution to the D.R.F. during the five years commencing from 1955-56 has been enhanced from Rs. 35 crores to Rs. 45 crores, as recommended by the Convention Committee, 1954. The operating ratio, that is the ratio of working expenses (excluding suspense but including appropriation to D.R.F.) to gross earnings was 81.95 per cent., as against 81.77 per cent. After deducting the appropriation to the D.R.F., the net revenue on the results of working of railways for the year was Rs. 50.34 crores, as against Rs. 43.70 crores. Out of this amount, Rs. 36.12 crores (Rs. 34.96 crores in 1954-55) were paid to the General Revenues as dividend under the Revised Convention of 1954. The net surplus for the year thus worked out to Rs. 14.22 crores, of which Rs. 7.08 crores were allocated to the Development Fund and Rs. 7.14 crores to the Revenue Reserve Fund. The net surplus for 1954-55 was only Rs. 8.74 crores which was wholly credited to the Development Fund.

Out of the total earnings of Rs. 180.28 crores from carriage of goods during 1955-56, coal, coke and patent fuel for the public sector alone accounted for Rs. 21.41 crores, as against Rs. 21.96 crores in 1954-55. The traffic receipts—in crores of rupees—from the other commodities in 1955-56 (with the figures in brackets giving the previous year's earnings), are given below:

Rice and paddy 5.76 (5.96); gram and pulses 6.45 (4.66); wheat and wheat flour 3.33 (2.54); oilseeds 3.96 (3.43); raw cotton 3.86 (3.21); fruits and vegetables 2.83 (2.65); marble and stone 5.42 (4.38); salt 3.66 (3.47); manganese ore 2.25 (2.10); other ores 3.64 (3.51); fuel oils 4.04 (3.52); kerosene oil 4.42 (3.67); petrol 4.34 (4.05); wood 3.28 (2.91); sugar 3.98 (3.91); cotton manufactures 3.81 (3.38); vegetable and other edible oils 3.08 (2.09); cement 5.89 (5.08); iron and steel 12.64 (10.44); provisions 3.64 (3.21); tea 1.45 (1.45); raw jute 1.41 (1.15); jute manufactures 1.43 (1.02).

The total tonnage of goods originating—both revenue-earning and non-revenue traffic—increased by about 8 million or by 7.76 per cent., but, as each ton of freight was carried on an average over a distance of 316.2 miles as compared with 300.4 miles during 1954-55, the total ton-miles increased by 4,332 million or 13.5 per cent. The revenue-earning tonnage originating during 1955-56 registered an increase of 8.52 million in comparison with 1954-55 and each ton of revenue-earning traffic was carried to a distance of 344.1 miles, as against 318.8 miles during 1954-55. There were thus only about 4,632 million more ton-miles of revenue-earning traffic during the year. The increase in goods earnings was brought about mainly by the rise in goods traffic.

Goods Traffic

The tonnage originating according to the different classes of commodities on the Government railways during 1955-56 as compared with 1954-55 is summarised below:

(In million tons)

	1955-56	1954-55
Revenue earning traffic—		
Foodgrains	9.04	8.12
Other agricultural products	7.54	5.99
Animal products	0.40	0.34
Coal	23.34	23.38
Other products of mines (including mineral oils)	16.84	15.06
Forest products	3.43	3.50
Manufactures	13.13	11.73
Miscellaneous (including military traffic)	17.96	15.51
Total	90.73	83.58
Non-revenue traffic—		
Railway coal and materials	23.32	22.23
Grand total	114.05	105.81

During the year under review, revenue loadings (wagons loaded for the public, etc., excluding those on account of railways' own service needs) averaged 11,377 per day on the broad-gauge and 7,264 on the metre-gauge, as against 10,672 and 6,489 on the broad and metre-gauge, respectively, in the previous year, an increase of 7 per cent. and 12 per cent. Taking into account non-revenue loadings also, an average of 13,420 broad-gauge and 8,028 metre-gauge wagons was loaded every day, as against the corresponding figures of 12,532 and 7,215 during the previous year—registering an increase of 7 and 11 per cent., respectively. The net ton-miles per wagon-day rose from the previous year's figure of 483 to 541 on the broad-gauge and from 194 to 203 on the metre-gauge. This is an increase of 12.08 per cent. on the broad-gauge and 4.64 per cent. on the metre-gauge. These results were achieved as a result of steady effort to secure better wagon loading and better wagon usage.

The aggregate passenger earnings on all Indian railways, including non-Government railways, during 1955-56 were Rs. 108.76 crores, the figure for 1954-55 being Rs. 103.74 crores. The major portion of these earnings came from third class passengers, the actual receipts being Rs. 95.88 crores (Rs. 92.19 crores). The earnings—in crores of rupees—from passengers travelling in higher classes were: Second class/inter (pre-April 1955) 6.12 (5.49); first class/second (pre-April 1955) 5.88 (4.75); first class (pre-April 1955) *nil* (0.72); air-conditioned 0.88 (0.59).

Passenger Traffic

The number of passengers originating and passenger-miles relating to the different classes are indicated in the following table:

(In millions)

Class	No. of passengers originating		Passenger-miles	
	1955-56	1954-55	1955-56	1954-55
Third	1,261.40	1,225.00	37,015	36,678
Second/Inter pre-April 1955	16.90	18.10	1,244	1,179
First/Second pre-April 1955	19.00	4.60	774	607
First pre-April 1955	..	13.01	..	151
Air-conditioned	0.09	0.07	51	34
Total	1,297.40	1,260.90	39,084	38,649

Special attention continued to be paid to the provision of amenities for passengers and other railway users at stations and in trains. Electric water-cooling plants were in service at 260 important stations at the end of the year, as against 158 at the end of the previous year. During the year, 1,241 new coaching vehicles were placed on line—449 broad-gauge, 744 metre-gauge and 48 narrow-gauge. Of these, 852 were lower class coaches built to improved specifications, 305 being broad-gauge, 499 metre-gauge and 48 narrow-gauge. Also, 437 broad-gauge, 221 metre-gauge and 16 narrow-gauge new locomotives were placed on the line. A total of 4,892 fans was fitted in second (former inter) and third class coaches and, of these, 4,451 were in the third class. The provision of sleeping accommodation for third class passengers was extended to four pairs of broad-gauge and two pairs of metre-gauge trains.

Capital Outlay

The total capital outlay on all railways as on 31st March 1956 amounted to Rs. 975.50 crores (including lines under construction), as against Rs. 910.91 crores on the same date in the previous year. Of this, Rs. 968.98 crores represented the capital-at-charge of the Indian Government railways. The balance of Rs. 6.52 crores was the capital raised by companies and district boards.

The total route mileage of all railways in India at the end of the year was 34,736, of which 34,182 miles were under Government management. The balance of 554 miles represented the mileage of minor railways under the management of non-Government agencies.

A length of 132.18 miles of lines was opened, of which 52.96 miles represented new lines (including 25.12 miles of conversion from narrow to metre-gauge) and 79.22 miles represented restoration of lines dismantled during the last war. At the end of the year, 581.73 miles of lines were still under construction, including the Khandwa-Hingoli link (187.23 miles), Quilon-Ernakulam (96.55 miles), Indore-Dewas-Ujjain (50.08 miles) and certain lines in the steel plant areas.

The Indian Government railways purchased stores worth Rs. 126.28 crores during the year, of

† Include earnings from Marmugoa Harbour and exclude suspense.
‡ Revised figures.
* The figures of earnings and expenses of Government Railways for the year 1952-53 and onwards included in the table above are exclusive of the freight charges on the carriage of Railway stores and fuel which during 1952-53 and 1953-54 were treated as free hauled traffic, but commencing from 1st April, 1954, the freight charges on this account are taken in reduction of operating expenses instead of being credited to earnings.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have examined the above Balance Sheet of the DEVKARAN NANJEE BANKING COMPANY LIMITED, as at 31st December, 1956, and the annexed Profit and Loss Account for the year ended on that date, and report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit, and have found them to be satisfactory;
(b) In our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns, adequate for the purposes of our audit, have been received from the branches not visited by us;
(c) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the report are in agreement with the books of account and returns;
(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by law, in the manner so required and on such basis at the end of its financial year, and, in the case of the Balance Sheet, of the state of the Bank's affairs as of profit for its financial year;
(e) The transactions of the Bank which have come to our notice are within the powers of the Bank.

CENSUS OF SUGAR INDUSTRY

VALUE OF CANE CONSUMED VERY HIGH

ALTHOUGH the latest official census of the sugar industry (excluding the *gur* sector) relates to a year which is more than two years old—that is, 1954—it is nevertheless of great value, inasmuch as it serves clearly to indicate the vital role played by the industry in the country's economy. The sugar industry ranks as the second biggest industry in India, next only to textiles. It produces an essential article of food, the importance of which as part of a balanced diet needs no emphasis. With steady improvement in the standard of living, the consumption of sugar is bound to increase in the coming years. The industry has vast scope for further growth and for contributing to the welfare of the nation's millions. Notwithstanding the prominent place occupied by the sugar industry thus, the general public is not adequately informed about the developments in the industry, especially its growing contribution to the national wealth. This lacuna has been filled, to some extent, by the wealth of statistical data contained in the latest census, the salient features of which are given in the table at the bottom of the page.

The sugar industry, as already stated, is the second largest in India. The total productive capital employed in the 154 sugar factories from which returns were received—out of the 160 units in existence—in 1954 amounted to as much as Rs. 69.13 crores. The bulk of this—Rs. 46.88 crores, to be precise—was accounted for by working capital, the balance of Rs. 22.25 crores representing the share of fixed capital. Of the working capital, stocks of finished products and by-products were valued at Rs. 32.13 crores. The value of raw material stocks and semi-finished products (in stock or in process) was Rs. 11.37 crores and Rs. 29.54 lakhs, respectively. Cash in hand and in banks was Rs. 3.08 crores. The fixed capital of Rs. 22.25 crores is made up of Rs. 12.75 crores plant and machinery, Rs. 6.86 crores buildings, Rs. 2.12 crores other fixed assets and Rs. 52.11 lakhs land.

A Big Paymaster

The number of persons directly employed in the aforesaid 154 sugar factories was of the order of 120,708, which represents nearly 4.7 per cent. of the entire labour force of 2,589,757 in factories (subject to the Factories Act) during 1954. The sugar industry is one of the biggest paymasters, the aggregate salaries and wages paid during 1954 having been Rs. 10.27 crores. The major portion of this sum—amounting to Rs. 6.93 crores—went to workers and Rs. 2.80 crores to persons other than workers. The money value of other benefits or privileges aggregated Rs. 54.39 lakhs.

In addition to the heavy salaries and wages bill for workers, the sugar industry pays every year considerable sums of money to agriculturists for the sugarcane supplied by them. An idea of such contribution can be had from the large value of cane consumed by the factories during 1954 which amounted to Rs. 64.90 crores; this sum, of course, includes the price of cane grown on farms owned by several mills. The value of the cane consumed, it will be interesting to note here, represents as much as 59 per cent. of the total value of production of sugar and other products, estimated at Rs. 111.40 crores. It is clear, therefore, that, if the price of sugar which is at present high in all conscience is to be reduced to a level that suits the pockets of the common man, it is imperative that the heavy incidence of cane price should be reduced. Such a reduction can be effected in two ways. First, the price that the factory pays for cane must either be lowered or be linked to the sucrose-content in cane. Secondly, the heavy burden of cess on cane crushed for manufacturing sugar—amounting to 15 per cent. of the minimum price fixed for cane—must be brought down.

Be that as it may, besides Rs. 64.90 crores representing the value of cane consumed (the quantity involved was 15.29 million tons), the sugar mills together paid in 1954 Rs. 2.36 crores for packing; more than 15.69 million gunny bags were used. The value of other goods and commodities consumed was Rs. 8.10 crores. Sugar mills also paid large sums of money for fuels, electricity, lubricants, etc., consumed, as will be seen from the figures cited below:

	Value (In lakhs of Rs.)	*Quantity*
Coal	39.74	128.807 tons
Electricity	16.84	15,965,486 kw.h.
Lubricating oils ...	31.20	677,710 gals
Others	79.26	—
Total ...	1,67.04	—

The value of production in the 154 sugar mills during 1954 aggregated Rs. 111.40 crores, inclusive of other products of the value of Rs. 2.02 crores. Over 56.3 per cent. of this value was accounted for by Uttar Pradesh, the biggest sugar-producing State, and 16.8 per cent. by Bihar. The percentage share of other States was 11.9 for Bombay, 4.1 each for Madras and Andhra, 6.8 for other States. The ex-factory value of products manufactured and work done for customers amounted to Rs. 110.79 crores. From this must be excluded (1) Rs. 81.24 crores representing the value at factory of materials, fuels, etc., consumed and work done for factory by other concerns (including the value of semi-finished products or finished parts manufactured earlier but consumed during the year) and (2) Rs. 1.62 crores representing depreciation. The value added by manufacture in 1954 thus works out to Rs. 27.93 crores.

WORLD SUGAR

There has been a sudden spurt in world sugar prices of late. Cuban raw sugar (f.o.b. Cuba) in New York is now quoted at 6.15 cents per lb., as against 5.60 cents a month ago. The firmness is aided by excellent demand for sugar, especially from Soviet Russia. This country, it is reported, has purchased 200,000 tons of Cuban sugar; the quantity, of course, falls short of the figure of 500,000 tons which it had contemplated to buy some time ago. The reported purchase of 200,000 tons has, however, been sufficient to wipe out entirely the stocks held in the Cuban Sugar Institute's reserve after the recent release of a further 100,000 tons for shipment to world markets. World demand for sugar, it is said, is potentially still very strong. Germany has still to acquire 100,000 tons of the 500,000 tons, which it is believed to want, and Chile, Japan, France and Holland all need fairly substantial quantities of sugar. Commenting on the recent trends in the world sugar market, a report observes:

"In the immediate future, the market in New York may fall into the hands of speculators, who are holding a good deal of sugar at the moment. The trade will clearly be extremely sensitive and prices will probably move fairly irregularly. To a large extent, however, this is only a continuation of the present trend, for, as the latest report by Messrs. J. V. Drake points out, there has been a tendency recently for holders of sugar to take their profits whenever there is a rise of, say, 10 to 15 points..."

The Andhra Pradesh Government has under consideration a proposal to start five sugar factories in Andhra on a co-operative basis. They will be located at Chittoor, Palacole, Hindupur, Chodavaram and Amadalavalasa. The total annual cutturn of all these factories will be 3,200 tons. The Government will take shares in these factories and secure loan assistance from the Industrial Finance Corporation. There are now eight sugar factories in Andhra area and three private factories are under construction.

Census of Manufacturing Industries—Sugar 1954

HIGHER WAGES FOR COAL WORKERS

REALISTIC OUTLOOK NEEDED

PRESIDING over the Annual Meeting of the Bengal Chamber of Commerce and Industry, recently held at Calcutta, Mr. O. T. Jenkins rightly deprecated the tendency in some quarters to regard wages as something divorced from productivity. Mr. Jenkins drew pointed attention to the deleterious effects of a rise in wage rates without a corresponding increase in productivity on the expansion and development of the industries concerned. Citing the coal industry as an instance in point, Mr. Jenkins discussed the implications of the recent rise in the wages of colliery workers, as a result of the Colliery Award, to the country's economy. This rise must surely occasion an increase in the price of coal which in turn will mean a rise in the cost of every process in which coal is used. If the higher emoluments, just granted to colliery workers, were not followed by a simultaneous increase in their output, it would surely leave less resources for the development of the industry. Stressing the need for countering the attempt to make the industry bear the incidence of higher wage rates, Mr. Jenkins asserted: "We must refuse to accept the suggestion that wage increases can be met by the industry concerned." Met with what?, he asked and answered: "Only with resources which should be devoted to development, to expansion and to cheapening of production."

The coal industry, according to him, provides the best example of how official intervention, though with the best of intentions, can produce the worst results. The wheel of governmental policy in respect of coal appears to have come full circle. Some three decades ago, the Railway Board was able to keep down the price of coal by using the State-operated collieries as a bargaining counter. In order to economise the cost of transport coal prices were sought to be kept down. This had the effect of reducing the coal industry to utter penury. The price of selected coal was as low as Rs. 2-12 per ton at the pit's-mouth and Raniganj slack could occasionally be bought at as low a rate as As. 15 per ton.

Poverty thus imposed upon collieries inevitably affected labour conditions. Even women were made to work underground and the industry could not provide such indispensable amenities as pit-head baths and creches for children. But the then Government failed to realise that the crux of the problem lay in the fact that the industry itself, as well as the labour employed in it, was working under near-subsistence level. It could not, therefore, set apart anything for development purposes. Fortunately, it did not take long for the Government to realise the dangers of its short-sighted policy. War-time demand convinced it that the timid and over-economical mining practice imposed by the official policy of "cheap coal today" could mean no coal tomorrow. "Now," added Mr. Jenkins, "it looks as though history is about to repeat itself," albeit for different reasons.

Higher Control Price Necessary

At present, the Government has in its armoury more modern and complex weapons than mere State competition; but its effect on the production potential of the industry is more or less the same. The needs of labour are sought to be met by Tribunal Awards and regulations and sound mining practices are being enforced by the Inspectorate. What is worse is the fact that the control price of coal allows no margin for the long-term development of the industry and the colliery-owners are facing the same problem as the one they had to contend with in the depression-ridden 'thirties. Representatives of the industry have pleaded with the Government once again that the price of coal should be raised and that a special element should be incorporated in the increase which should be earmarked for development purposes and, if necessary, deposited with the Government. Mr. Jenkins expressed the hope that the Ministry of Production would see this problem with a clearer eye than its predecessors did and profit by their experience. Stressing this point further, Mr. Jenkins warned: "If it did not, it is the considered opinion of this Chamber that the (coal) needs of the country both for industry and transport, will not be met and that, by 1960, there will be a shortage of coal which will gravely impede the progress of the Plan, if it does not bring it to a standstill."

The effect of a rise in colliery wages, without a compensating increase in *per capita* production, is more far-reaching than is generally realised. It will affect adversely the cost structure of every industry in which coal is used. Let it be borne in mind that the industries affected include all those that provide the basic services such as railways and electricity, as also basic industries, cement, steel, and fertilisers, for instance. Everything will, therefore, cost a little more and to that extent everyone will be a little poorer. More expensive coal will raise the price of brick and cement, which, in turn, will affect housing, rural and urban alike. Dearer coal retards its adoption as a fuel. This means that the trees which should clothe the hillsides and the cowdung which should enrich the fields will continue to be burnt. Mr. Jenkins hit the nail on the head when he remarked that it would, in fact, lead to the erosion of the country. Are the authorities really aware of the gravity of the problem?

MANUFACTURE OF COAL-MINING EQUIPMENT

The setting up of a plant in India for the manufacture of 30,000 tons of coal-mining equipment required for the development of the coal-mining industry in the country at an estimated cost of Rs. 13.2 crores was recommended by the Russian team of experts which investigated into the subject. The report of the team was presented to the Ministry of Production on 26th February.

The report refers to the organisation of and the facilities for establishing the plant for the manufacture of machinery, including some of the most important kinds of equipment necessary for coal-mining in India, such as locomotives, hoists, winches, ventilators and pumps. It pointed out that the plant suggested is designed to produce complete machines, though certain parts like transformers, ropes, electrical equipment and roller bearings, would have to be secured from other workshops in the country.

In making their recommendations the expert team took into account the requirements of the public and private sectors in fulfilling the targets of coal production for the next 5, 10 and 15 years, the level of mechanisation of mines and quarries for which the equipment would have to be utilised and the consideration that when set up the plant should be capable of producing all the important items of machinery required. It has been estimated that the total machinery required would be of the order of 170,000 tons, and the annual demand of the order of 30,000 to 33,000 tons. The capacity of the plant is designed to meet this annual demand.

In preparing its report the team had the benefit of the suggestions made by the coal-mining industry and of its engineering personnel and the final design for the plant was drawn up in consultation with them. The team did not make suggestion regarding the location and the site of the proposed plant, but indicated the optimum requirements of the site to be selected for the purpose.

The team expressed appreciation of the co-operation it received from the Indian experts and the Ministry of Production in the formulation of its recommendations.

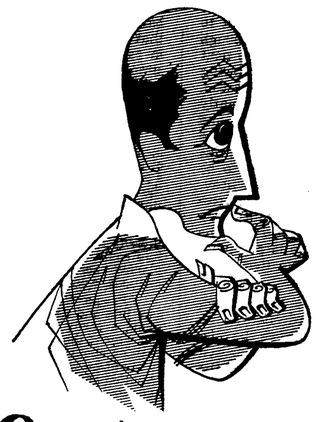
E.C.E. REVIEWS EUROPEAN COAL SITUATION

Coal experts from eastern and western European countries and the United States have concluded their regular quarterly discussion of the coal market situation in Europe and have examined supply prospects for the January-March quarter of 1957. The meeting was held last month under the auspices of the United Nations Economic Commission for Europe (E.C.E.). On the basis of production, demand and trading plans submitted by the various Governments, the expert delegates reported that, while there are difficulties in a number of countries, due to the shortfall in oil supplies, it would be possible through mutual co-operation to avert any serious dislocations in coal supplies during the winter.

In the particular case of Austria, difficulties have been accentuated, owing to a rapid decrease in coal stocks in consequence of a reduction in coal supplies and of oil shortage during the fourth quarter of 1956. Traditional suppliers of coal and coke, as well as countries which do not normally supply Austria, promised that every effort would be made to help Austria in its present difficulties.

As regards the general European coal situation during the first quarter of 1957, the experts reported that part of the additional requirements required to replace oil could be obtained by withdrawals from consumers' stock which in many countries were at satisfactory levels at the beginning of the winter. Although, with the present number of men working in the mines, no very substantial immediate increase in coal production can be anticipated, voluntary overtime work in Poland might lead to increases over and above those planned.

In the circumstances, very substantial tonnages of coal will be required from the United States. While there are no difficulties in making such increases possible and American port capacity is adequate, it was noted that ocean spot freight rates have reached an all-time high. The question of releases from the American reserve fleet is under active consideration by the competent authorities in Washington. There exists a short-term problem of bridging the gap which has to be solved before the vessels are put into service. This problem would imply that efforts should be made to postpone as far as possible the shipments that are not indispensable.



Good-bye, MR. BOTTLENECK!

Why fret and fume if you don't find the facts when you want them? Why waste time and effort thumbing through all those files?

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Work the VISADEX way to get the best out of your men, machines and materials.

RAW JUTE PRODUCTION IN INDIA

SELF-SUFFICIENCY CAN BE ATTAINED BY IMPROVED CULTIVATION

THE sowing season for raw jute is about to begin in both India and Pakistan. Though it is too early to attempt a forecast of the next crop, there is some misgiving that the sowing may fall short of that in the current season. This seems to be based on the fact that recently prices of raw jute have tended to decline and the higher prices fetched by paddy may make the sowing of jute and tossa unattractive. In this respect, the position in Pakistan is said to be more discouraging, in that, besides the disincentive provided by paddy prices, there is the prospect of a fall in raw jute prices, on account of the large stocks left with balers and dealers. The growers are also said to be having a larger quantity of raw jute, as despatches from that country have been lagging behind of late.

As pointed out in our last issue, the Pakistan Government is making a concerted effort to increase the acreage as well as to improve the quality of jute, by supplying new and improved varieties of seeds to growers. It has removed the restrictions on jute growing and has also abolished the licence fee of Re. 1 per acre. It remains to be seen how far these measures will induce the growers to devote more area to jute uninfluenced by the attractive paddy prices.

In India, there is no fear of any large carry-over of raw jute stocks at the end of the current season. It is stated that there is already a scarcity of white jute, tossa and daisee. This is reflected in the substantial premiums which tossa and daisee command over mesta. If at all there is a surplus, it will consist mostly of mesta. Despite the better prices fetched by tossa and daisee varieties of jute, the rising trend in paddy prices acts as a deterrent to increase sowing of jute. The cost of growing mesta is much less and the yield of this fibre in suitable areas is larger than the better quality varieties. Here also the lower prices fetched now are likely to affect sowing. It is true that, during the current season as a whole, raw jute prices have been higher than in the previous season, but usually this consideration does not weigh with the growers as much as the prices ruling at the time of sowing.

A shortfall in crop will mean a higher cost to manufacturers of jute goods, which in its turn will push up the prices of the latter. Dearer jute goods will mean greater use of substitutes. The need for preventing such a prospect was, therefore, rightly stressed by Mr. O. T. Jenkins, in his presidential address at the recent annual meeting of the Bengal Chamber of Commerce and Industry, Calcutta. He said that the jute sowing season was upon us now and there was no time to be lost if anything were to be achieved this year. He emphasised that India should be able to supply its own industry and mills abroad with low-priced jute.

Mr. Jenkins drew attention to the fact that jute was once used to pack the bulk of the world's agricultural produce and, if it had kept its place in the expanded world economy, the demand for jute manufactures would now have been 25 per cent. more than it was before the war. It is, on the other hand, 11 per cent. less. Such is the inroad which substitutes have made into the packaging industry. Mr. Jenkins had no hopes that Indian jute would be able to regain its old share in the packaging market, in the face of keen competition from paper bags and bulk handling methods. He however, said that if the world could continue to pack the commodities for which jute was still used (and that clearly meant keeping prices competitive), further expansion in total demand might restore the position of the jute industry. He warned that any policy which made jute expensive or unpopular would do lasting damage to the industry. He reminded his audience that among the factors which could make jute expensive was the rise in wages, unaccompanied by a commensurate increase in *per capita* production.

Tracing the history of raw jute production in India, Mr. Jenkins said the partition of the country made it necessary to raise jute output further. During the last 12 years, the area under jute in India has increased by almost 200 per cent., but this has not brought self-sufficiency. Last season, India had 2.3 million acres under jute producing therefrom 5.2 million bales of jute and mesta, as against which consumption of mills aggregated 6.6 million bales. This meant, allowing for a carryover an import of 1.4 million bales from Pakistan. Mr. Jenkins was confident that India could become not only self-sufficient in raw jute but even an exporter by adopting simple agricultural methods alone to improve cultivation. Explaining how this optimism was not beyond the realms of practicability, he observed:

"Experiments have shown that, if four simple measures are taken to improve cultivation, the use of improved seed, mechanical sowing by seed drills, a reduction of weed growth by inter-row boring and the application of chemical fertilisers, the yield of jute fibre per acre can be increased by over 20 per cent. It, therefore, follows that, if these improved methods could be applied over the whole of the present acreage. India's dependence on imported jute could be eliminated, while an increase in the planted acreage, combined with the improved methods, would give India an exportable surplus.

"Pre-partition India was always an exporter of raw jute and the daisee jute grown in West Bengal found a ready market overseas. There is no reason why, if the new methods could be followed, this position should not be at least in part restored, but it would be wrong to await the production and distribution of the new implements required for sowing and weeding or even the production of improved seed in sufficient quantity. We should push on with what is available and, more particularly, there should be a distribution of fertiliser to cultivators at concessional rates under Government subsidy. If the Union Government is prepared (as recent licensing measures indicate) to forgo revenue to secure foreign exchange, they would presumably not be reluctant to increase expenditure for the same purpose."

Mr. Jenkin's suggestions provided an example of the effect which simple improvements in agriculture can have on one of India's major industry and on its export potential. They also indicate how much can be done to improve our living standards and create more employment if steps are taken to increase the productivity per acre and per individual. The jute grower is, no doubt, influenced by the prices of his produce *vis-a-vis* those of the other agricultural commodities, but, if he is assured of a fair return by increased yield without much extra effort on his part, there is no reason to fear that he will divert his attention from growing jute to the other competitive crops.

U.S. BURLAP BUSINESS

Trading in burlap in New York during January 1957 was quiet, according to the *Jute Bulletin* of the Indian Central Jute Committee. Demand was on a much reduced scale, with consumers content to buy their immediate requirements only. After the heavy buying in the past three months as a result of the Middle East crisis, the slow-down of business during January did not take the market by surprise. Trade observers were of the view that the market undertone in the first quarter of 1957 would reflect the restraining influence of the over-bought position of consumers at all levels.

Lack of movement in burlap notwithstanding, prices for spots and offoats for practically all constructions commanded a substantial premium over early shipment prices. The single exception was 40" 7½ oz. which continued on offer at about the same rate as, and often somewhat below, early shipment.

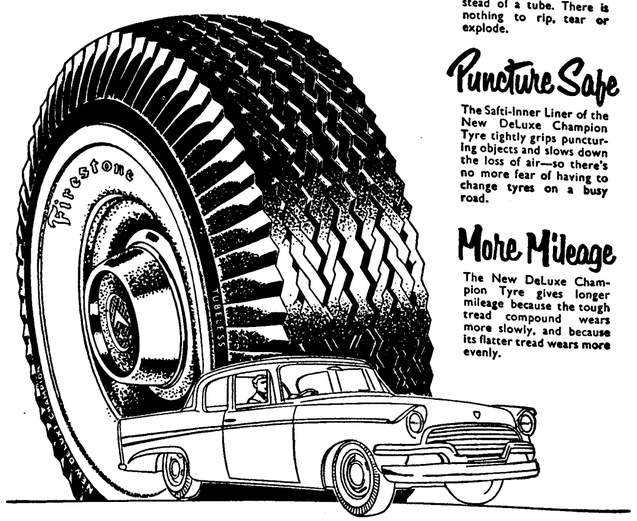
Calcutta shipments of burlap to the U.S. in December showed a decline from the previous month and amounted to 72.4 million yards, which put the total for 1956 at 763.6 million yards, a rise of 15.8 million yards over shipments in 1955.

CONSUMPTION OF BURLAP IN U.S.

The U.S. consumption of burlap for conversion into bags in the first nine months of 1956 recorded an advance of 7.5 per cent. over the same period a year ago, reports the *Jute Bulletin* of the Indian Central Jute Committee. A significant factor in the increased use of burlap bags in 1956, according to an authoritative source, is the 50-lb. potato bag which is enjoying wide consumer acceptance. The use of 50-lb. bags in the U.S. is reported to have increased 50 per cent. during January-September 1956. Burlap bags for fertiliser and meal are also showing good gains. Regarded as a favourable development is the growth of returnable burlap bag programme, particularly in the farm belt, which is credited for good part of the gains made in 1956.

To keep up consumer interest in continued use of burlap bags, the Textile Bag Manufacturers' Association has decided to spend $60,000 on a bag promotion programme in 1957. The promotion programme, is designed primarily to combat the use of paper and bulk handling.

the tyre with
BUILT-IN PEACE OF MIND



Blowout Safe
No longer any fear of dangerous blowouts—this tyre is fitted with an air-tight Safti-Inner Liner instead of a tube. There is nothing to rip, tear or explode.

Puncture Safe
The Safti-Inner Liner of the New DeLuxe Champion Tyre tightly grips puncturing objects and slows down the loss of air—so there's no more fear of having to change tyres on a busy road.

More Mileage
The New DeLuxe Champion Tyre gives longer mileage because the tough tread compound wears more slowly, and because its flatter tread wears more evenly.

Now from Firestone comes the modern safety tyre—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with *built-in peace of mind.*

WHAT HAS HE TO DO WITH CEMENT?

Cement builds his home. It is in the pavement on which he walks, the school in which he learns the arts of man, the hospital which he may need, the swimming pool, sports track and gymnasium that build his team spirit and his muscle. It is in the dams, power houses, factories, grain silos . . .

CEMENT — more and yet more cement — is the need of his future. The Associated Cement Companies Limited, which has doubled its output between 1948 and 1955, will double its production again during the coming years. The success of the Second Five-Year Plan and the future of India's youth both depend upon Free Enterprise.

The ACC is helping to build his India of tomorrow.

PROBLEMS OF MACHINE TOOL INDUSTRY

PLEA FOR ENCOURAGEMENT TO PRIVATE SECTOR

THE emphasis placed by the second Five-year Plan on large-scale and medium-sized industries implies a growing demand for all varieties of machine tools in the country. Unfortunately, the demand for machine tools, even as it is, has to be met largely by imports, thanks to the inadequacy of domestic production. Deploring this dependence on imports, the Union Minister for Heavy Industries, Mr. Manubhai Shah, emphasised, in the course of his recent address at the Development Council for Machine Tools, that the development of the industry was a "must" in the industrial expansion of the country. In this connection, the review of the problems of the industry, which Mr. S. L. Kirloskar, President of the Indian Machine Tool Manufacturers' Association, presented in his speech at the annual meeting of the Association, held at Bombay last week, deserves special notice.

Reviewing the trend in production and imports of machine tools, Mr. Kirloskar pointed out that, although domestic production was increasing steadily, imports of tools had been rising at an even faster pace. The values of imports in 1954 and 1955 were of the order of Rs. 3.86 crores and Rs. 3.29 crores, respectively. He estimated that, in 1956, imports must have reached a "staggering" figure of over Rs. 7 crores. He deplored that domestic production, despite the progress that had been made in recent years, was still as low as 13 per cent. of the total requirements. It would appear that, in these statistics, no account has been taken of the production figures of the State-owned Hindustan Machine Tool Factory at Bangalore and the Prototype Machine Tool Factory at Ambarnath. But the point that Mr. Kirloskar felt constrained to make was that, even if the production of these two factories reached their maximum capacity, it would "not affect the imports very much."

Mr. Kirloskar welcomed the formation of the Development Council for Machine Tools. He said: "The members of the Council are men of proved technical ability and knowledge of the industry and I am confident that they will soon evolve a programme for helping and developing the machine tool industry on right lines, which will be in the national interest." He also felt gratified to note that the member-firms of the Association had reported satisfactory progress in the manufacture and development of new and improved types of machine tools. In this connection, the annual report of the Association gives some information about the implementation of the development programme by the member-firms. From this report, it is seen that the Mysore Kirloskar Ltd. has successfully manufactured and marketed tool room lathes and has undertaken the production of M. B. type cone pulley lathes and capstan lathes. The Investa Machine Tools and Engineering Company Ltd., has marketed pillar drills and commenced producing radial drills and column drills, while Cooper Engineering Ltd. has carried beyond the blue-print stage the manufacture of shaping machines. The Praga Tools Corporation Ltd., has developed certain types of chucks and the Batala Engineering Company, Ltd., has started manufacturing heavy duty plating machines. Since the industry had undertaken all this development programme at considerable expense and without any hopes of "immediate" financial gains, Mr. Kirloskar emphasised that the industry needed "increasing Governmental assistance in its development and expansion, particularly financial assistance, and an assurance that wherever possible, orders against Government's requirements would be placed on the indigenous manufacturers."

The industry's two chief difficulties arise from imports and inadequate supply of raw materials. Mr. Kirloskar averred that the supplies of steel, graded pig iron, scrap iron and coke continue to be very difficult. As regards import policy, he suggested that, before issuing import licences, the Government should direct the users of machine tools to find out how best they could utilise the machine tools which were already being manufactured in the country to the maximum extent. He added: "Besides this, we would like to request the Government to make available to the Association periodically the actual purchases made by the Government departments of the various machine tools by classified and coded numbers. This will indicate the types of machines the Government requires and the purpose for which they are being used." Finally, he suggested the setting up of an import advisory council for machine tools which could review the Government's import policy from time to time and recommend measures for regulating the imports of machine tools of types comparable to those manufactured in the country.

In view of the large scope that still exists for the development of machine tool industry, it may be somewhat surprising that additional units for the manufacture of machine tools have not been set up in the private sector. Actually, their number has declined. During the war, there were as many as 250 manufacturers of machine tools; but now the number is less than 10. Mr. Kirloskar gave two reasons to explain why the industry has not made much progress. In the first place, since the demand for machine tools fluctuates very widely, the risk involved is "enormous." Secondly, the climate for private enterprise has been unfavourable. No individual, Mr. Kirloskar said, was prepared to embark on a risky venture when "he is confronted and circumscribed by innumerable rules, orders and regulations covering all conceivable aspects of running an industry."

In view of the large scope that still exists in certain other sectors of national economy, there are both Government-owned and private-owned units. The Government-owned units, according to Mr. Kirloskar, are likely to face the problem of disposing of their production before long, because of the high price of the product and the type of machines they turn out. He felt that the solution for the development of machine tool industry did not lie in the direction of starting huge Government-owned factories but in creating a climate in which individual *entrepreneurs* would be able to put forth their best efforts. It may be recalled that a reference to this problem of State *vs.* private sector in the sphere of machine tools was made by the Union Minister, Mr. Manubhai Shah, at the Development Council. He then said that the Government's view was that the roles of the two sectors were "to be complementary and not unnecessarily competitive or overlapping." It is to be hoped that the Government's policy towards the industry will be so framed as to maintain the letter and spirit of this assurance, even if it is not wholly favourable to the establishment of additional units in the private sector.

NEW PLASTICS

The staff of the Research Institute of Plastics in the U.S.S.R. have produced two new varieties of plastics) glassfibrite and glass-textolite. They resemble textolite, which is widely known, except that in their case textile fibre has been replaced by glass fibre. The new plastics, it is claimed, have great future prospects. They are twice lighter than aluminium, not less strong than steel and do not lose their qualities even under a temperature of 300° C. Depending on component parts the new material can be either in the form of flexible tissue or in the form of large, hard ingots suitable for the manufacture of machine parts. This unusual combination of lightness and solidity, peculiar to the new plastics, is now being used. In the nearest future, glassfibrite and glass-textolite will be used for stamping boats and launches. They will also be broadly used in house building. Light roofs made of these materials will look well and resist moisture and sharp changes in temperature, while strong walls built from the new materials will be very efficient in retaining heat.

Another kind of new plastics developed in the Institute is phenolite. Articles made of phenolite are less fragile and can remain a long time under water without losing their qualities. The Moscow Karbolit Works are now organising the production of this new material. Porous plastics, which are 8 or 10 times lighter than water, are already produced in small quantities. They are used for fishing net floats instead of cork. Scientists are now working on the development of new varieties of porous plastics which will be 20 times lighter than water and as solid as wood. These strong, light and elastic plastics will find wide use in technics and also in the manufacture of toys, mattresses and upholstered furniture.

The Scandinavian Airline System created aviation history when, on 24th February, two S.A.S. passenger aircraft met at the North Pole on the east-bound and west-bound flights marking the inauguration of the Line's new Copenhagen-Tokyo route. The new S.A.S. route reduces travel time between Europe and Japan by 22 hours to 30 hours, cutting the distance by 2,300 miles as compared with the route via the Middle East and India.

HINDUSTAN LEVER LIMITED

DIRECTORS

A. J. C. HOSKYNS-ABRAHALL, *Chairman*
S. H. TURNER, *Vice-Chairman*

K. S. BASU
K. T. CHANDY
D. A. ORR

K. T. CHANDY
Secretary.

A. F. FERGUSON & Co.
Auditors.

NOTICE OF MEETING

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the Members of HINDUSTAN LEVER LIMITED will be held at Green's Hotel, Apollo Bunder, Bombay, on Thursday, 4th April 1957, at 11.30 a.m., for the following purposes, namely:

ORDINARY BUSINESS

1. To receive and consider the Accounts and Balance Sheet, and the Reports of the Directors and Auditors.
2. To sanction the declaration of a Dividend.
   (If the declaration of a dividend is sanctioned it is proposed that it be made payable on Thursday, 4th April 1957, to the persons who were registered as Members of the Company on Monday, 11th March 1957).
3. To elect Directors in place of those retiring.
   (All the Directors retire in accordance with Clause 119 of the Articles of Association and, being eligible, offer themselves for re-election).
4. To fix the remuneration of the Auditors for the year ended 31st December 1956.
5. To re-appoint the Auditors and fix their remuneration for the year ending 31st December 1957.

SPECIAL BUSINESS

6. To consider and if thought fit to pass the following resolution as an ordinary resolution:

   That, until otherwise decided by the Company in General Meeting, the Accounts of the Branch Offices of the Company at Madras (including the depots at Bangalore and Cochin), Tiruchirapalli, the City Office at Calcutta (including the depot at Gauhati), and at Shamnagar, shall not be audited by the Auditors of the Company appointed at this meeting, but shall be audited by the Company's Audit Department notwithstanding that the members of that Department, being employees of the Company, are not persons qualified under Section 226 of the Companies Act, 1956, for appointment as auditors of the Company. (See Explanatory Statement below.)

A Member of the Company entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a Member.

Dated the 8th day of March, 1957.

By Order of the Board,
S. H. GURSAHANI,
Acting Secretary.

SCINDIA HOUSE,
BALLARD ESTATE,
BOMBAY.

Statement pursuant to Section 173 of the Companies Act, 1956, and Clause 77 of the Articles of Association in regard to Item 6 of the Agenda.

The Accounts of the Branch Offices of the Company at Madras (including the depots at Bangalore and Cochin), Tiruchirapalli, the City Office at Calcutta (including the depot at Gauhati) and at Shamnagar, have been audited in the past by the Company's Audit Department and not by persons qualified under Section 226 of the Companies Act, 1956, for appointment as Auditors of the Company. It is proposed that the accounts of the said Branch Offices should continue to be so audited.

To all shareholders of the Company and in particular to Unilever Limited, London.

NEW PRODUCTS AND PROCESSES

Vaccine for Encephalitis

A JOHN Hopkins University scientist announced the discovery of a vaccine to protect man from several forms of encephalitis, which can be fatal. Dr. Winston H. Price, who developed the vaccine says it is made from two strains of the "West Nile Virus," an organism which causes outbreaks of a minor illness in Egypt and adjacent areas. Dr. Price said that it is the first time that a single vaccine has been found that offers protection from several viruses that produce encephalitis, a brain infection that sometimes causes sleeping sickness and paralysis. Previously there have been no preventive measures for some of these illnesses. The scientist said the new vaccine, although still in the experimental stage, has major implications for the health of the populations of Asia, Africa, the Mediterranean area and South America where outbreaks of encephalitis are common. In addition to protecting from several kinds of encephalitis, the vaccine also prevents dengue fever which can sweep through a group and prostrate its victims with fever and fatigue. Dr. Price recommends a continued search for a better strain of the West Nile Virus before the vaccine is adopted on a worldwide basis. He says, however, that tests on human beings have proved already that the vaccine will work.

New Gyroscope for Planes

A new type of gyroscope built on principles postulated from a study of the common housefly, which will keep a plane in straight and level flight, has been developed in the United States by the Westinghouse Electric Corporation. In making the new gyroscope, Westinghouse scientists borrowed the housefly's halteres, which are two small needles sticking up from the fly's back. Muscles set these needles vibrating. If the fly changes its flight direction, the vibrating needles resist that change and create a force on sensitive nerve endings. By interpreting this force the fly can keep flying straight and level. The Westinghouse machine sets two heavy metal weights shaking by exposing them to a pulsating magnet. If the weights are turned, they exert a force on a magnetic sensing device which operates a recording instrument. Lighter in weight than the "spinning top" kind of gyroscope used in most planes, the so-called Vibragyro is more rugged, has no ball bearings, will last a longer time, and is much smaller than the rotating gyroscopes. The instrument will sense extremely small rates of change in direction.

Improved Nylon Artery

The Chemstrand Corporation of New York has announced the successful development and medical use of a new nylon Y-shaped artery which replaces the vital human aorta where it branches to carry blood to the legs. Today, less than eight months after the first medical meeting report on the nylon "aortic bifurcation graft," more than 200 people in the United States and other countries are, it is claimed, walking testimonials to the success of the new replacement artery. The new nylon Y graft artery was perfected by the same physician-scientist team that developed the original Chemstrand nylon "no-kink" artery announced in 1955. They are Dr. W. Sterling Edwards of the medical college of Alabama Surgery Department and Dr. James S. Tapp who heads the pioneering section of the Chemstrand research division. The Y graft artery is an outgrowth of the non-branching nylon "no-kink" artery which first took shape in Dr. Tapp's laboratory and was then tested extensively in animals and eventually used in human beings by Dr. Edwards.

One-man Water-purification Plant

A packaged water-purification plant capable of satisfying the emergency water needs of 50,000 people, has been developed at the U.S. Army Corps of Engineers Research and Development Laboratories in Fort Belvoir, Virginia. The plant, which can purify water up to the rate of 12,000 gallons per hour, can be operated by one man. The plant consists of three main all-aluminium sections—a cone shaped up-flow coagulation basin 14 feet in diameter, which removes mud, bacteria and other suspended matter from polluted water, and two gravity-type sand filters. The unit is housed in a 40-foot building.

New Fluids to Increase Oil Yields

A new type of oil-well drilling fluid designed to open up and increase yields from oil pools too deep to be dealt with by existing methods has been developed in the United States. Several types of the fluid are now being produced by the Second Mobil Oil Company, whose research scientists developed them. The fluids are being made available to the oil industry generally. One class of the fluid, called a calcium-surfacent mud, was successfully used early in 1956 in the completion of the world's deepest wildcat oil well, a 22,570-foot exploratory well in Louisiana. Earlier, the same fluid was used to continue drilling a deep Texas wildcat well after encountering one of the hottest bottom hole temperatures ever recorded in the oil industry—more than 400 degrees Fahrenheit. Conventional drilling muds deteriorate and solidify quickly at temperatures above 300 degrees Fahrenheit, which are commonly encountered in borings below 15,000 feet. The newly-developed fluids, because of their resistance to solidification at temperatures above this level, are expected to remove a serious limitation to finding and developing very deep oil sands.

LIFE CORPORATION TO IMPLEMENT GROUP INSURANCE

SOME DETAILS OF SCHEME

ENLIGHTENED employers in many countries now find that one of the best ways of preventing frequent changes in the personnel of their labour force and of inculcating a sense of loyalty in their workers is to institute group insurance schemes and pension plans in their factories and offices. In this country, apart from the staff insurance schemes, which were put into effect by certain private insurers in the immediate pre-nationalisation years, no serious attempt has been made to evolve a comprehensive group insurance plan. The authorities of the Life Insurance Corporation of India, therefore, deserve to be congratulated upon devising group insurance schemes for workers in factories and commercial establishments. The scheme, it is learnt, will soon be finalised and put into effect. There is no doubt that the scheme, when it is implemented, will mark another milestone on the road towards greater social security for workers.

The group insurance scheme now contemplated by the authorities, can be effected in four different forms—whole life (limited payment), endowment assurance, fixed term endowment and educational annuity. In order to cater to the needs of an employer who wishes to provide for his employees' life cover during the period of their service only at the minimum of cost, the Corporation is also prepared to issue temporary insurance policies in two forms. Under the first of these two forms, the employer may, on behalf of workers, take out a policy covering the risk of death in service, with uniform annual premiums. Under the plan, the full sum assured is payable if the employee dies before the retirement age, but nothing is payable if he survives that age. Uniform annual premiums will be paid throughout the period of the contract, apart, of course, from increases in premiums due to increases in sum assured consequent on increments in the salary received by the employee. The other plan is to issue a temporary insurance policy for one year which may be renewed for a year at a time. Under these one-year policies, the sum assured will be paid only if the employee dies during that year. Under this plan, the annual premium increases each year as the age of the employee advances even apart from increases in the sum assured consequent on increments in salary.

A group insurance policy may be effected by an employer or by independent trustees appointed by him covering all his employees or a section thereof. At the inception of the scheme, at least 50 per cent. of the eligible members are required to join. All future recruits who are eligible for membership must join the scheme. The maximum age at entry is 45 years nearer birthday, but where the normal retirement age is 60 years or over, employees aged between 45 and 50 years nearer birthday may be allowed to join the scheme, subject to satisfactory medical examination. The employer should contribute at least 25 per cent. of the total premium paid to the Corporation under the group insurance policy. The scheme provides for increased life insurance benefits by virtue of increases in salary either annually or at other intervals.

All plans of insurance under this scheme will be offered at specially reduced rates of premium. Such reduction has been rendered possible by the adoption of rationalised procedures designed to cut down the costs of procuration of business as also costs of administration. In the case of endowment assurance and whole life limited payment policies, the reduction (as compared with tabular rates) is to the tune of 8½ per cent.; where the premium-paying period is less than 15 years, the reduction is only 7½ per cent. Reduced premium rates will be charged where the number of members at the inception of the scheme is not less than 50 for tabular insurance plans and 100 for temporary insurance plans. Any contributions made by an employer under a group insurance scheme are permitted to be deducted in computing his income for purposes of income-tax but they will be added to the employee's income as perquisites. If the policies are taken out under the endowment assurance or whole life limited payment plan, the maturity or premium-ceasing age should coincide with the normal retirement age of the employees.

Medical examination would not ordinarily be required under any of the tabular insurance plans if the sum assured does not exceed Rs. 5,000. For temporary insurance policies, medical examination would be required if the sum assured exceeds Rs. 3,000. For subsequent increases in the sums assured on the life of an employee medical examination will be necessary only if the total increase in the sum insured since the date of last medical examination exceeds Rs. 5,000 or Rs. 3,000 as the case may be.

Where the sum insured is less than the limits mentioned above, the Corporation would be prepared to cover the risk on receipt of a certificate from the employer to the effect that the employee has been in continuous employment during the three months prior to the date of signing the proposal or the application for increased benefits and on completion of the non-medical proposal form. In the case of employees who were on sick leave on the date of commencement of insurance benefits or any increase thereof, or within the period of three months prior thereto, satisfactory evidence of health will be required by the Corporation before granting the original or any increased benefits. On the basis of evidence of health submitted in the above cases, the Corporation shall have the right (a) to accept the insurance on the life of any employee at an increased rate of premium or with a lien, or (b) to decline to accept the insurance on the life of any employee and entertain the proposal in respect of the particular employee under the deferred annuity plans only.

The Corporation will issue a single master policy to the employer, where the number of members under a scheme is not less than 50. The policy will set forth the rules determining the sum assured and also the manner in which the appropriate premium rates shall be determined and applied in each case. A schedule showing the names of the employees who are initially admitted to the scheme, their ages, particulars of insurances including the dates on which such insurances become effective and the amount of premium will also be incorporated in the policy. The policy will further set forth the conditions on which the sums assured shall be varied from time to time during the currency of the policy and the dates on which variations become effective, the manner of calculating the premiums therefor and the manner of payment of the premiums and the sums assured. In the case of group insurance schemes (other than under temporary insurance plan) where the number of members is less than 50 and for which tabular rates are quoted, individual policies will be issued to the employer in respect of each member. A master policy will not be issued for such a scheme.

What happens when an employee-policyholder under the group insurance scheme ceases to be an employee? Such a policyholder may choose any of the three following benefits:

(a) A cash surrender value which shall not be less than 50 per cent. of the total of the premiums paid in respect of the particular employee, except for premiums paid under temporary insurance policies which carry no surrender value.

(b) An individual paid-up assurance payable in the same manner and subject to the same conditions as the original assurance. Under endowment, whole life limited and similar policies, where the premium is payable for a definite period of years, the reduced sum assured will bear to the original sum assured the same proportion which the amount of premiums paid bears to the total amount payable, subject to the paid-up assurance being for a sum of not less than Rs. 100. The paid-up assurance will not participate in profits in future but all bonuses already declared and attaching to the policy shall be added thereto.

(c) Continuation of assurance as an individual policy subject to payment in future of such premiums as the employee would have been required to pay had he effected an individual policy under the same plan with the Corporation on the date the group insurance policy became effective.

We heartily commend the group insurance scheme to the attention of labour unions and employers alike. From the employee's point of view, the freedom from anxiety about the future which the scheme ensures will make him devote more attention to his work and bring greater peace of mind. Further, the fact that premiums are deducted from his wage or salary eliminates the need to remember the vexed "due dates." From the employer's point of view, the scheme ensures a devoted staff, loyal to their work and the organisation they serve. We hope that all employers in this country will fully utilise the manifold advantages of the group insurance scheme now offered by the Corporation.

DEFICIT INSURERS

The uncertainty over the prospects for policyholders in mismanaged and deficit insurance offices has been cleared by the authorities of the Life Insurance Corporation. It has now been announced that the Corporation will settle the claims of policyholders of "insolvent" offices by making "on account" payments, while the policyholders of these offices who continue to pay premiums after 19th January 1956 (the date on which nationalisation of insurance was announced) will get the full benefit of such payments.

Soon after the Government announced its decision to nationalise life insurance, there was a lively discussion both in Parliament and outside about the future of policyholders in companies which had been mismanaged. It would appear that the authorities of the Corporation immediately undertook an investigation of the affairs of all such offices. Investigation revealed that, in some companies, their liabilities, including the acturial reserve of the policies in force, were in excess of their assets. The financial position of some of these companies was so bad that, owing to want of funds, they had not been paying the claims of policyholders. Parliament, however, vested in the Corporation certain powers to reduce the value of the policies in such offices. Thus, section 14 of the Life Insurance Corporation Act provides that the "Corporation may, having regard to the financial condition on the appointed day of any insurer whose controlled business has been transferred to and vested in the Corporation, reduce the amounts of insurance under contracts of life insurance entered into by such insurer before the 19th day of January 1956, in such manner and subject to such conditions as it thinks fit: provided that no such deduction shall be made except in accordance with a scheme prepared by the Corporation in this behalf and approved by the Central Government."

It would appear that the Corporation has been examining the position of these insurers. But all investigations have not yet been completed. Where a preliminary investigation has adequately indicated *prima facie* insolvency, the Corporation has decided to settle policy claims by making an "on account" payment to the extent of 60 per cent. In the case of policy contracts of 16 insurers, namely, the Crescent, East and West, Ideal Mutual, Indian Economic, Prabartak, Presidency Life, Rajasthan, Warden, Bengal Industrial, Bombay Capital, Chhota Nagpur, East End, Hind Benefit, Inter-Provincial, Mahalaxmi and New Bengal, and to the extent of 45 per cent. in the case of the contracts of the Dominion. In all these cases, however, a final decision will be made after the audited accounts and valuation reports are available.

These reductions, it is stated, are only in respect of the insurance in force prior to 19th January 1956. For policyholders who continue to pay their premium after 19th January 1956, suitable adjustments will be made to ensure that they get the full benefit of such premiums. The precise manner in which such adjustments will be made so as to ensure that they receive full benefits in respect of subsequent premium will be announced later. Furthermore, the reduction in payment of claims affects

REVISIONS TO ELECTRICITY ACT

SALIENT FEATURES OF RECENT AMENDMENTS

By R. P. Aiyer

THE Electricity (Supply) Amendment Act, 1956, after having been passed by both the Houses of Parliament and after having received the assent of the President, became law on 30th December 1956. Except for the amendments to the Sixth Schedule (affecting licensees' finances), the amending Act came into force on the same day, and the Government of India in the Ministry of Irrigation and Power have since announced, by a notification dated 21st February 1957, that the changes to the Sixth Schedule will be brought into force from 1st April 1957. It would, therefore, be appropriate to analyse the implications of the amending law now.

Broad Changes

The changes could be grouped under three broad heads. First, modifications to the law in relation to the State Electricity Boards; secondly, important changes to the financial principles affecting licensees as are embodied in the Sixth Schedule, and, thirdly, changes which, by and large, govern regulation.

Under the original 1948 Act, the provisions governing removal or suspension of the members of the State Electricity Boards were in line with the general provision governing Directors' disqualification in a typical company's articles of association. These are now brought in line with the analogous provisions in the Damodar Valley Corporation Act, 1948. Under the new provisions, greater powers of control over the Boards are vested in State Governments.

Under the principal Act, the Board could prepare, on their own initiative, schemes without any monetary limit, but a restriction placed by the amending Act is that no scheme or part of a scheme estimated to result in a capital expenditure exceeding Rs. 15 lakhs shall be prepared by the Board without prior consultation with the State Government. Against this, there has been a loosening of control by the Central Electricity Authority, in that the limit of capital expenditure on the schemes which can be sanctioned by the Board without consulting the Central Electricity Authority has been raised from Rs. 50 lakhs to Rs. 1 crore.

Tax Precedence and Accounts

A redeeming feature in the Electricity (Supply) Act, 1948, is that State Electricity Boards are subject to income-tax, but the law in tabulating the priority of liabilities of the Board had made provision for a number of disbursements which would have left no "profit" liable for tax. The 1956 amendment Act has stipulated that taxes on income and profits should have priority after the operating and management costs have been met. The other statutory distributions can come only thereafter.

Under the 1948 Act, a State Electricity Board was enjoined to maintain "such proper books of account and other books in relation to its accounts as the regulations may require." The 1956 Act stiffens this provision, under which the Board "shall cause proper accounts and other records ... to be kept, including a proper system of internal check" and prepare "an annual statement of accounts, including the profit and loss account and the balance-sheet in such form as may be prescribed by the State Government in consultation with the Comptroller and Auditor General of India." Another innovation is that the accounts of the State Electricity Board are to be audited by the Comptroller and Auditor General of India or by such person as he may authorise in this behalf.

An additional obligation imposed on the State Electricity Board is that, while submitting to the State Government the annual report, the Board are also to give an account of the activities, if any, which they are likely to undertake in the next financial year.

Directions on Policy

By a new section, the State Government is empowered to issue directions to the Board on questions of policy and, if any dispute arises between the Board and the State Government as to whether a question is or is not one involving policy, it is arbitrable by the Central Electricity Authority.

Under the amended law, general consumers of electricity is to have representation on the State Electricity Consultative Council.

These changes have been made in order "to ensure the co-ordination of development policies of the State Electricity Boards with those of Government Departments." The 1948 Act having proclaimed that it is semi-autonomous bodies such as Electricity Boards which are suitable for furthering development, it may be that the supervisory powers now vested in State Governments may cut across the original idea. The provision in the Act with regard to Electricity Boards have remained unimplemented in most of the States, and it is therefore too early to say whether greater powers of control now vested in State Governments will promote or retard power development.

Changes in Regulation

Reference may now be made to changes in the law which are primarily of a regulatory nature.

Under the 1948 Act, the State Government or the State Electricity Board, as the case may be, were empowered to issue directions to licensees "for the purpose of achieving the maximum of economy and efficiency in the operation of the station." The Bill sought to cover such directions to the undertaking or part thereof. However, on reconsideration, the change came to be modified, and the position under the amended Act is that such "directions" should be "reasonable." Another safeguard is that disputes under the section are subject to arbitration by the Central Electricity Authority.

Local Authorities

Under the principal Act, the Electricity Boards had powers to direct the amortization and tariff policies of Local Authority electric supply undertakings. This power has now been circumscribed by the proviso that the Board shall not issue any directions, except after obtaining the prior approval of the State Government. This change has for its background the interests State Governments have in the financial policies of Local Authorities.

Rate Revisions

The Electricity (Supply) Act, 1948, when it fixed a limit on the return permitted to the investor, had also provided that the licensees shall be free to adjust their rates to consumers in such a way as to enable them to earn the "reasonable return," notwithstanding any limitations imposed by the licence. During the brief period the Act has been in force, one High Court had taken the view that the Act has not been explicit about licensees' rights. The situation has been rectified by the amending Act making it clear beyond doubt that the licensees' powers of adjusting rates include *enhancement* of rates irrespective of the limits imposed by the licence.

The power of the State Government or the State Electricity Board to enforce a Rating Committee under the principal Act acted as a deterrent against licensees adopting suitable tariff policies within the framework of the Act. The position before the amendment was that a Rating Committee could be constituted if the regulating authority was "satisfied" that the licensee had committed a breach of the provisions of the Sixth Schedule—a "satisfaction" which was regarded as "subjective." To adjudge a person guilty without indicating the cause offends against the Common Law practice, and the Legislature has, therefore, in the 1956 amending Act, made it obligatory for the State Electricity Board or the State Government, as the case may be, to give to the licensee a "show cause" notice, and then again, if the issue or issues cited raise disputes, they are first to be arbitrated upon by the Central Electricity Authority. This liberalising measure should introduce an element of stabilisation in rate-making policies of electric supply undertakings.

Composition of Rating Committee

The composition of the Rating Committee has also been improved upon. Under the principal Act, in the States where Boards have been constituted, the Rating Committee, when one was constituted, comprised two members of the Board who in turn co-opted one representative from the Licensee's Association. With the Board initially determining whether or not a licensee has committed a breach of the provisions of the Sixth Schedule, the Legislature has now considered that the Board should not have more than one representative on the Rating Committee. The result is that, of the three members of a Rating Committee, one is to be a judicial member (who also is to be the Chairman) appointed by the State Government, the other a member of the Board having experience of accounting and financial matters and the third a representative from the Licensees' Association jointly co-opted by the two members earlier mentioned.

Licensees' Finances

A large part of the amending Act deals with changes in the financial principles affecting licensees.

Under the principal Act, a licensee could not be considered to have breached the provisions of the Sixth Schedule if the clear profit did not exceed the "reasonable return" by more than 30 per cent. This margin was considered a necessary safeguard against licensees being faced with the charge of breaching the provisions of the Sixth Schedule if by chance they exceeded the limit of the "reasonable return." Of this margin, one-third (subject to a ceiling of 7½ per cent. of the "reasonable return") was to be at the disposal of the undertaking as a premium on efficiency. The margin is now limited to 15 per cent. and the licensee's share remains at one-third, subject to a ceiling of 5 per cent. of the "reasonable return."

Deposits made by consumers against Bills were, where invested in the business, permitted to be included in the capital base under the 1948 Act. Such funds are now to be deducted from the capital base.

Under the principal Act, interest on loan capital was permitted as an operating expenditure. Under the amending Act, such interest is not to be charged to revenue.

Interest charges on capital expenditure incurred from borrowed money was permitted to be capitalised under the 1948 Act. Such capitalisation is now restricted to new licensees. This should not affect very much existing licensees, as under a case law, established by the Central Electricity Authority in an arbitration, works-in-progress either at site or at manufacturers' works are permitted to be included in the capital base, thus ranking to earn the "reasonable return."

Incentives

Against these restrictions must be set the increase in the "reasonable return" by ½ per cent. following the linking of the "standard rate" to the Reserve Bank rate with a differential of 2 per cent.

Another incentive feature of the amending Act is that the electric supply industry has been enabled to avail of the benefits of the development rebate permitted under the Finance Act of 1956. The "benefits" are, however, subject to certain limitations. The reserve is available only for investment in the business. No return is permitted on the reserve so invested, and, on the purchase of the undertaking, the reserve is to be handed over to the purchaser and maintained as such development reserve. What looked at one stage as a wholly negative approach was modified by the Select Committee, and in the Act as finally passed an element of incentive was introduced by the licensees being permitted to earn ½ per cent. return on the accumulations in the development reserve as handling charges of the fund.

A fear the industry entertained in connection with this reserve was whether the obligation to provide for this reserve would encroach upon the "reasonable return" in case of inadequacy of the return. This difficulty has been met, first, by licensees being permitted to reduce the appropriations to the said reserve to the extent of the shortfall in the "reasonable return" and, secondly, by being permitted to spread over the appropriation, if need be, over a period of five years.

No Dividend Limitation

The amending Act has brought out clearly that no limitation on dividend or distribution of profits is intended in cases where the depreciation set aside for the year includes the normal component for the year and the equated instalment in respect of arrears, if any.

In the light of incentives offered and restrictions sought to be imposed by the amending Act, how does one assess the worth of the equity in an undertaking? The obvious point which suggests itself is that the capital employed in an undertaking should include a fair proportion of loan capital carrying interest at a rate below 5½ per cent. (the "standard rate"), so that the difference will be available to the equity shareholder.

It has been the unfortunate experience of the electric supply industry that the legislation

ANNUAL MEETING OF INDIAN MINING ASSOCIATION

MR. R. MAULIK SURVEYS PROBLEMS OF COAL INDUSTRY

REVISION OF COAL PRICE POLICY URGED

THE most important consideration which should govern the fixation of the selling price of the product of a controlled industry, particularly in the context of India's ambitious development plans, is the need for making the development endeavours of the industry a success. Thus declared Mr. R. Maulik, Chairman of the Indian Mining Association, in his address at the Annual General Meeting of the Association held in Calcutta on 1st March 1957. While this basic concept had been accepted by the Government and implemented in the case of two other industries, namely, steel and cement, Mr. Maulik regretted that the Government was adopting a different policy in the case of the coal industry. He warned the public by saying that the inevitable consequence of a selling price, which made no allowance for the demands of development, would be to retard the industry's progress.

The following is the full text of Mr. Maulik's speech:

"GENTLEMEN,

"As we meet here today, votes are being cast throughout the country to elect the Government representing the people's choice. There is none among us who is in doubt as to the results; we can confidently count upon a political stability in India which few other nations in the world could claim for themselves. We can realise how fortunate we are in this respect only if we recognise how ambitiously we have charted out economic targets for achievement. Economic progress cannot be attained without the prior condition of political stability. What is even more important, individual advancement, whether morally or materially, is best—and perhaps only—served by a democratically elected Government. For this reason, we must make allowance for the fact that, in recent months the Second Plan endeavour at Government level should have been obscured by the election campaign. In the result, however, we have had the regrettable consequence that valuable time, which could profitably have been utilised in furthering the Second Plan, has been lost. If we are to make sure that the Second Plan is to be fully implemented, the primary responsibility for underwriting its success will devolve upon all of us who are gathered here. Coal is the very basis for development; it is coal which has to feed and fire industries as they develop in this country. In terms of the Second Plan, we have been called upon to increase production from 38 million tons to 60 million tons. Of the anticipated increase in production of 22 million tons, 10 million tons must come from the private sector in coal.

"There are few of us here who would think that such a target is not within the ability of the industry. I venture to suggest that, provided we are permitted to do so and so long as there is sufficient inducement and incentive, it is within the capacity of the private sector in coal to deliver the full 22 million tons of additional production. Unfortunately, this past year has for a number of reasons not witnessed any substantial progress in respect of the coal plan.

Need to Revise Price Policy

"I shall not at this stage refer to the increase in costs arising from the Tribunal's Award last May; nor I think, is it germane to the issue for me to point out that the Appellate Tribunal's findings have further increased the costs of production for the coal industry. For the simple fact of the matter is that we must be prepared, as we have experienced in these past few years, for steadily mounting costs of production. But what I think it is my duty as Chairman of your Association is emphatically to draw attention to the need for the Government realistically to revise their coal selling price policy.

"It has happened that we in the coal industry have been called upon to bear steadily increasing operational costs; this, we could have done without difficulty, except for the fact that our representations to Government as regards coal selling prices have not had the desired results. Now, let me pose the question: What is the basis on which, in the case of a controlled industry, Government should determine the selling price? The first consideration is, perhaps, one of ensuring that, in the light of India's objective of a socialistic pattern of society, the return to the industry is reasonable and just—and not extortionate. In the second place, as affecting a vital consumer product, there will doubtless be solicitude for keeping in check as far as practicable any increase in the price. I need, however, to point out that price policy has to be attuned to a third consideration which, in the circumstances of India's ambitious planning policy, has been rendered the most basically important. I refer to the interconnection between the selling price for a commodity and the development of that industry. In this context, I may point out that Government are alive to this new and basic concept of a link between development endeavours and selling prices. There are two other industries wherein selling prices are determined by Government on this basis. These are steel and cement. In both, Government have accepted the proposition that, in the price paid to the industry for its products, there should be a special element which is intended to contribute to the industry's internal resources with which and on which it could proceed with development plans. It may be noted that steel, cement and coal form the triumvirate of the fundamental raw materials on which alone a country can plan ambitiously for industrial development. In regard both to cement and steel, not only the decisions but the policy as it has evolved has been such as to suggest, if not altogether ensure, that the targets of production will be attained.

"In coal, it is a different story, it is a somewhat dismal story. While the general index of wholesale prices has risen from 297 in 1947 to 427 in February 1957, the rise in the price of coal has scarcely been of the order of 15 to 16 per cent. The additional costs that, therefore, the coal industry has had to shoulder, over and above the labour cost arising from the Tribunal Awards include the higher prices of machinery and stores as well. It is no secret that the resulting higher costs were, on the basis of the selling prices, wholly beyond the ability of the industry to afford. Nor could there possibly be any margin by way of unappropriated profits which could be ploughed back for purposes of development. It has been and is our painful duty to draw the attention of Government to this vital fact. Especially in these days when money is so tight, capital for expansion has largely to be found in the internal resources of a company. And this brings me to another basic fact.

Deposit of Reserves

"The Finance Minister, Mr. T. T. Krishnamachari, has proposed that a moiety of the reserves of a company should be deposited with Government. His intention, is to ensure that there is no dissipation of unappropriated profits; the intention may also be that these should be canalised into productive endeavours in the national interest. I agree that all available money should be pressed into service on behalf of the Second Plan. But, of course, we need to make it clear that, in the case of companies where the reserves on the liabilities side of the balance-sheet are matched by money ploughed back into the business appearing on the assets side, whether in the form of additions to block or as increased working capital, the past reserves will not attract the new statutory requirement. In the case of the coal industry, the financing of development in the past has almost exclusively been done by utilisation of profits ploughed back. That is to say, in the coal industry, the reserves represent moneys which have long since been transformed into expanded block or which are being used to finance increased output. We, of this industry, would, therefore, welcome a categorical assurance that, in cases where reserves have clearly been utilised in or been set apart for development work, the new deposit regulations will not be enforced.

"Now, if I may, I should like to revert to this all-important question of selling price policy. We in this industry only ask that the basic criterion for determining such prices, as it already exists in steel and cement, should also be extended to coal. As I have already stated, capital is hard to come by in these difficult tight money days. The bulk of the financial requirements for expansion and development has necessarily to be found in the internal resources of the industry. Such internal reserves can only be built up by the provision of a special element in the selling price which, in the customary way, could expressly be set apart for such purpose. Moreover, in these days, when the increase in prices for a wide range of commodities has been sharp, is coal to be the only industry which is to have *status quo* prices? Let it also be recognised that Government do not believe, nor will they find an answer to, inflation by merely keeping coal prices in check. On the contrary, such an intention on the part of the Government will, as I shall presently show, be self-defeating. The inevitable consequences of a selling price which makes no allowance for the demand of development, will be to retard development. In other words, the inevitable consequence is that coal production will not go up to the extent and at the rate envisaged by the Second Plan. I need hardly say that, in the result, a vital raw material will be in short supply. Need I add that, thereafter, inflationary conditions will be fostered in every industry that, for lack of coal, is unable to attain targets of production?

"I trust that I have not altogether failed in the task that I have set out for myself. That task is to inform authority, with all the emphasis that this Association has at its command, that Government's selling price policy must immediately and without delay take note of the basic consideration that the margin available to the producer must be sufficient and adequate to finance the 10 million tons of additional coal production that we, as an industry, are expected to achieve by the end of 1960-61.

Nature of Coal Mining

"It is, I am sure, not out of place for me here to stress that the selling price for coal, in so far as it affects the return to the investor and, therefore, to the producer, has to take account of the very nature of coal mining—the fact that it is a wasting asset. I can, in this context, do no better than to quote from an eminent authority, who defines the principle of depleting reserves in the following words:

"'Most industries and enterprises have an intermediate life apparently perpetual and, therefore, are not called upon to replace the original investment. This does not mean that such industries (railroads, utilities, manufacturing, wholesale and retail houses, etc.) will continue for ever; it means merely that, except for competition, nothing is apparent which will cause a termination. Mining, however, differs from an ordinary industry in this respect; when the ore bodies are mined out, there is nothing left. The original capital investment must, therefore, be returned to the investor by the time that the profitable life of the enterprise is ended. When the operating company does not make any provision for perpetuating its life by investing a portion of its earnings in other properties, the usual procedure is to remit periodically to the investor a dividend sufficiently larger than the risk return on his investment to enable him, if he re-invests this overplus at a safe rate of compound interest, to replace his original capital at the expiration of the life of the mines. This overplus constitutes a return on the invested capital.'

"The second duty that I have is to express this industry's view that Government should, in the national interest, pay to the coal industry the attention that it deserves. As at presently constituted, we have in Delhi a Ministry to look after coal which is being overburdened with work. On the one hand, the Minister for Production, Mr. K. C. Reddy, who is the Chairman of the National Coal Development Corporation Ltd., is expected to draw up, approve and implement the series of plans and projects which will increase production of coal in the public sector by 12 million tons. On the other hand, it also devolves upon Mr. Reddy to examine, scrutinise and sanction the schemes for development in the private sector of coal production. These are responsibilities which one Ministry and one Minister cannot alone shoulder. This is patently clear, if we look at the events of the last year as affecting coal. The Ministry has been hard put to it to register the necessary progress in the State projects. But, preoccupied as the Ministry has been with this work, it has also happened that there has been untoward delay in the disposal of the matters relating to the private sector in coal. The fact is that it is nearly a year since plans and blue-prints were submitted to the Ministry for the expansion in production to the tune of 30 million tons. Naturally, the private sector in coal has sought to make available production in advance of the country's expanding demand. But the fact is that nearly a year has elapsed before the first sanctions are being received for proceeding with development work. The division of responsibility at the Government level as between the private and public sectors will do incalculable good. In the first place, it would free the existing Ministry to give their undivided time and energy to the furtherance of the State projects. In the second place, a proposed new Ministry for coal in the private sector and for the overall policy as we have suggested would enable development in the private sector to proceed at a brisk pace.

A National Asset

"I should make another point clear; and that is, that coal cannot properly be thought of as belonging to the private sector or to the public sector. It is a national asset which the country as a whole has to work with all available means and at optimum efficiency. There is no room for, and no need for, controversy as to the targets of production that ought to be set for either sector. What matters is total production. If the one sector, due to unavoidable reasons, is unable to achieve targets, it is the duty of the other to make good any shortfall in production. For our part, the Indian Mining Association is determined that the Second Plan should not fail because coal production has not achieved the target set. This determination on the part of the private sector as a whole is evidenced in the fact that the plans submitted to Government for expansion involve a total of not 10 million tons as allotted under the Plan, but 30 million tons. The coal industry will pledge itself to the proposition that neither doctrinaire politics nor ideological dogmatism will be permitted to prevent the coal production target from being attained. In the notion that, in India's mixed economy, there is to be co-operative co-existence as between Government endeavours, on the one hand, and efforts by the private sector, on the other, the Indian Mining Association assures the country that every effort will be made not only to attain but to exceed targets.

"While expressing the confidence that there appears to be the possibility of better appreciation of our difficulties and earlier solution of our problems, if the Planning Commission's greater interest and Mr. K. C. Neogy's recent visit to the coalfields are taken to be suggestive, it is necessary for me in some detail to describe the events of the past year as affecting the mining industry.

Coal Prices

"Recent history in the matter of coal prices proves to be extremely interesting. In July 1947, a rise in coal prices was permitted, so that the wage increase of workers could be met; but scarcely 2½ years later, in November 1949, coal prices were revised slightly downward. Since then, although the cost of production has steadily been mounting, there has scarcely been any compensatory revision of prices. The only increase allowed was during 1956; and this was intended partially to meet the additional labour costs arising from the Award of the All-India Industrial Tribunal (Colliery Disputes) in May 1956. It is important to recognise that the sole instance of a price increase being granted, not for affording any increased margin to the industry but only so that the industry could be compensated for the enhanced wages of labour; in fact, it was pointed out at the time that the rise of Rs. 3 allowed was insufficient to cover the additional financial burden which the industry, by terms of the Award, had to bear.

"Besides the higher cost of labour, prices of other essential equipment and stores have also risen substantially since 1947. Steel today costs 130 per cent. more than it used to in 1947; one has to pay 50 per cent. more for cement as compared to the price a decade ago.

"The prices of coal, however, continue to remain at an uneconomic level. Surely these prices can bear to be upgraded a trifle! They would even then be the lowest in the world. The cost of coal expressed as a ratio of the gross ex-factory value of various products and by-products is, on average, 1.96 per cent.; in the case of other fuels and electricity, the relevant ratio is 3.45 per cent. Coal and coke work out to 11.25 per cent. of the cost of steel, as against 12.70 per cent. in the case of other fuels. The apposite figure in the case of cement is 14.32 per cent. for coal and 18.28 per cent. for other fuels. Another pointer to the inexpensiveness of Indian coal is brought out in the fact that the cost element of coal in U.K.-produced steel is 41 per cent., as against 11.25 per cent. in India; for cement, coal works out to 38 per cent. in the U.K., as contrasted with 14.32 per cent. in India. I trust that the conclusion is clear that whether on the basis of world prices or whether on the basis of the cost of coal as compared to other fuels, the nation should comfortably be able to take in its stride some increase in the coal selling price.

Labour Position

"I should now like to describe at some length the labour position. You are aware that, as a result of agitation by trade union leaders in the coalfields, a special Tribunal was appointed by Government in February 1954 to go into the matter of wages and amenities of colliery workers.

"One year later, the Tribunal was reconstituted and the proceedings started anew. The award of this Tribunal was published on 26th May 1956 and became effective from that date. The Association, in consultation with other producer organisations, decided not to appeal against the Award. This, however, did not mean that we agreed with all the findings of the Award. Certainly, we did not agree that the minimum wage should be Rs. 69-1, inclusive of bonus for the unskilled surface worker. Besides, there were some anomalies to be noticed in the Award; but, taking into consideration the prevailing circumstances and mainly as a gesture of goodwill to the workers—who had been engaged in litigation for over two years—the decision was taken not to prefer an appeal. Furthermore, the Association, of its own accord, rectified some of the anomalies which existed in the Award. Workers were evidently satisfied with the new dispensation. Nevertheless, some of the minor trade unions appealed; and, at later stages, all the trade union organisations participated in the proceedings of the appeal and in attacking the lower Tribunal's Award. Ultimately, the employers found that, in spite of their efforts, they could not avoid litigation. It may be noted that they were placed in a position of considerable disadvantage because, in extending their gesture of goodwill, they had implemented the lower Tribunal's Award.

"The decision of the Appellate Tribunal was announced on 29th January 1957. The wages of workers were further increased; and other major modifications of far-reaching consequence were made. The decision, moreover, has been given with retrospective effect from the date of the original Award; and, in the result, the industry is immediately burdened with the awesome liability of over Rs. 4.25 crores. Where this money is to come from, the industry does not know. In fact, the retrospective aspect of the decision strikes at the very root of the industry. Undoubtedly, it will have serious repercussions on the progress of the development plans now in hand.

"Wages have been substantially increased; other facilities and amenities have been granted on a very liberal scale. Obviously, these must and will be reflected fully in the price of coal since as much as 70 per cent. of the production cost is accounted for by labour charges. Unfortunately, the rise in the level of wages for labour and an improvement in working conditions have not been accompanied by a better showing in productivity figures. Perhaps, it would be wise on our part to remember that productivity will not increase and the standard of living of colliery workers will not improve unless steps are taken to educate the workers that they themselves must make an effort at improving their living conditions. In this regard, the trade union organisations have done nothing in the diffusion of such education, and whatever has been done by the Coal Mines Welfare Organisation has failed to elicit the desired results.

Demand for Wage Increase

"This lack of improvement in productivity, however, does not deter the constant agitation for wage increases. At its last annual conference, the I.N.T.U.C. has put forward a demand for a blanket increase of 30 per cent. in wages for the workers of major industries; and, if the decision in regard to the justifiability or otherwise of such demand depends upon the discretion of outside bodies, prices of coal are bound to rise since the producers will have little to say in the matter. It is strange that the employer should have the dubious distinction of having a say neither in the wage increase to labour nor in the selling prices of his product. As far as the consumers are concerned, they need to appreciate that they cannot hope to continue to get coal at the present low prices. On the one hand, some benefit might accrue to the consumers when, in due course, productivity in the industry improves. On the other hand, however, there has to be dissemination of information as to the efficient use of coal and prevention of waste. Secondly, in so far as the workers are concerned, we must note with regret that the coal industry continues to be affected by the power politics of rival groups of trade union leaders. That the workers are mere pawns in the political game of the leaders has been amply demonstrated by the illegal, unjustified and unwarranted strike made last year in the West Bengal coalfields. It may be recalled that two of the largest groups of employers were affected; and the consequent loss in output amounted to 3 lakh tons. The Association places on record its appreciation of the action taken by the employers concerned in holding out against the strike threat; in the alternative, if the unreasonable demands had been met due to pressure, the coal industry would have been thrown into chaos.

"Great stress is being laid these days on more rigorous safety measures. The Mines Act and the Coal Mines Regulations are in the process of being amended. The provisions are most drastic; and as was pointed out at the Fifth Session of the Industrial Committee on Coal Mining held last year, considerable modification of the draft provisions is called for. What is required is advice as to the manner whereby safety measures can be improved, not rigid enforcement of drastic rules. Furthermore, if the mine manager is held personally responsible for every act of omission or commission in the mine, it will be impossible for him to function. He will always be in a state of uncertainty and apprehension; and this will affect the overall supervision of the mine and hamper his initiative as the principal person responsible for the production of coal. We have also to realise what the regulations, if they become enforceable as envisaged by Government, will mean to the industry. In monetary terms, we shall have to incur immediate expenditure to the tune of several crores of rupees; of this, I understand about two crores of rupees will be in the form of foreign exchange. There is no doubt that the Labour Ministry should take all possible precautions for the safety of workers in the mines; but there should be the realisation that, in view of the very nature of mining operations, it is impossible to have 100 per cent. safety—which is what appears to be aimed at. Cent per cent safety can be vouchsafed only if no mining operations take place at all. I would suggest that all concerned in this connection give this matter their serious thought so that a satisfactory solution can be reached. While on the subject of safety, I would point out that the overlapping jurisdiction of the Coal Board under the Production Ministry and the Mines Inspectorate under the Labour Ministry is likely to hamper production.

Transport Problems

"The transport position has continued to improve but, as has always been the case in the coal industry, wagon supply is still not sufficient to meet the demand of the coal consumers. Considering the condition of the railways during and after World War II and also the post-Partition period, our railways are to be congratulated on their achievements. The fact, however, remains that rail transport will be the limiting factor to all industrial production in the second Five-year Plan. This is especially applicable to the coal industry. The requirements of wagons of the coal industry during the second Plan period are as follows: for 1957-58—4,860 wagons; for 1958-59—6,159 wagons; for 1959-60—6,481 wagons; for 1960-61—6,804 wagons.

"Out of these, the requirements of West Bengal and Bihar will be 3,778 wagons, 4,603 wagons, 4,810 wagons, and 5,016 wagons, respectively. The present guaranteed supply of wagons for the West Bengal and Bihar coalfields is 3,500 wagons a day, of which 950 wagons are from the South Eastern Railway. The actual demand for the current year is 3,778 wagons a day. The daily requirement of the consumer is, therefore, not met to the extent of about 278 wagons a day. At the same time, the requirements of the railways themselves have also increased. Therefore, although the daily supply of wagons has improved, there is a shortfall in the minimum requirements in comparison to the total demand

of the country as a whole; consequently, a general overall shortage of coal supply, particularly domestic fuel, continues to be experienced. It is essential, therefore, that immediate steps should be taken to increase the minimum guaranteed supply of wagons during the current year, with a view to reaching the target of 3,778 wagons. From the general trend of discussions in the Coal Transport Advisory Committee it appears that little improvement can be expected over the South Eastern Railway for the next few years. Thus, the collieries in West Bengal and Bihar, who are served by the South Eastern Railway, will be handicapped so far as increased output is concerned. I would like to suggest that, since the railways are anxious to improve the wagon position, it may be of advantage to hand over the control of that portion of the South Eastern Railway which serves the West Bengal and Bihar coalfields to the Eastern Railway. One of the essential prerequisites in order to reach the target of increased production and expansion envisaged during the current Plan period is an increase in siding facilities and relaxation of indent limitation. The industry has been drawing the attention of all the authorities concerned to this matter; and we trust that we can count upon the co-operation of the railways in this regard.

Sweeping Controls

"The scope of Government control over the coal industry is incredibly sweeping production, selling prices, distribution, method of mining, workers' wages, and workers' amenities—practically all aspects of normal business are controlled. The Ministry through which the industry is controlled is mainly the Ministry of Production. The system of controls has been in force for the last decade and a half. In my opinion, it is totally outmoded. The system of controls should be thoroughly reviewed by a committee in which the coal producers should be adequately represented. Such a revision and reorientation of policy are, in the light of the present trend of events and the need for a quick increase in output, surely imperative.

"The Coal Board, which was formed in 1952 under the Coal Mines Conservation and Safety Act, has been unable to do much besides pegging the output of coking coal. The policy of the Coal Board has till recently been incongruous; while what is required is increased production of coal, the Board's policy seemed to be to obstruct it, with its restrictive policy. I am, however, glad to say that the Board lately seems to have altered this policy and is realising the urgency of coal development.

"I may now refer to developments in sand stowing. We have now reached such a pass that it is doubtful whether sufficient sand will be available for carrying out stowing in the Jharia coalfields. As early as 1953, Mr. Michelmore, in addressing you from this chair, had reached this conclusion:

"'I feel I must raise once again the doubt which has long been in my mind whether adequate supplies of sand will continue to be available after the completion of the Damodar Valley Corporation.'

He also expressed grave doubts as to the future availability of sand and requested that this problem should engage the serious attention of Government. It was only less than a year ago when a committee was appointed to go into the matter of the availability of sand, and we still await information as regards the Committee's findings.

Coal Board and the Private Sector

"This Association, along with other coal producers' organisations, has been repeatedly requesting Government for granting adequate representation of the private sector on the Coal Board. Unfortunately, however, this request has not yet been acted upon by Government. The present constitution of the Coal Board is practically departmental, except for the Chief Inspector of Mines and Chief Mining Engineer of the National Coal Development Corporation. It is a matter of regret that, while the public sector has been given representation on the Coal Board—and there is always the danger of its playing a dominant role in the deliberations—the private sector, which is responsible for 75 per cent. of the output of coal in the country, is denied the legitimate right of voicing its opinion in the deliberations of the Coal Board. It is essential that the Coal Board should be reconstituted on a broader basis and including the representatives of the private sector. The present position amounts to discrimination on the part of the Production Ministry in favour of the public sector. There is always the danger that the interest of the private sector may be neglected. Moreover, since the Production Ministry seems to depend completely on the advice of technical experts drawn from the public sector, it would not be an unjustified apprehension that the problem of the private sector will not get due emphasis and consideration in discussions with foreign experts or in shaping the overall policy.

"The policy of import licences so far as mining equipment is concerned will have to be considerably relaxed, because the coal industry has been called upon to produce 22 million tons more in the next four years and this can be only achieved by large-scale utilisation of machinery.

"Gentlemen, I would assure all concerned that my criticisms are not prompted by any factious spirit but with the best of intentions. I would emphatically state that, if the above difficulties are not remedied, increased coal production targets will not be attainable. Moreover, it is already time that we in this industry should start thinking in terms of the Third Plan, and the target to be achieved by 1965. For, current thoughts indicate that the country will need 120 million tons by the end of the third quinquennium. A doubling of production in such manner will necessitate much effort—and, what is more important, preparations being made well ahead. Is it, therefore, too much to ask of Government, in the interest of the Second no less than the Third Plan, that their policy needs to be re-orientated in order that development work is not unduly postponed?

"I would be failing in my duty if I do not offer our thanks both on my personal behalf and on behalf of your Association to our Coal Controller, Shri P. M. Nayak, who has always given us a patient and sympathetic hearing. I have no doubt that he has appreciated our problems and has done everything in his power to solve them.

Other Mining Interests

"The speech of the Chairman of the Indian Mining Association will be incomplete unless a reference is made to mining interests other than coal. I will now refer to them.

"The Mining Leases (Modification of Terms) Rules 1956 were published on 6th September. The object of these Rules is to bring leases granted prior to the commencement of the Mines and Minerals (Regulation and Development) Act, 1948, into conformity with the Mineral Concession Rules, 1949.

"A Controller has now been appointed for purpose of these rules with his headquarters at Ranchi. Those with leases covering minerals other than coal, petroleum, natural gas, and minor minerals, should now have submitted their returns to the Controller. If their leases exceed 10 sq. miles in area or if they are at present enjoying a low rate of royalty, they must now be awaiting the Controller's instructions.

State Trading Corporation

"Probably the most controversial event of the year has been the advent of the State Trading Corporation, particularly in the way in which the activities of this Corporation have expanded, not only in size but in the variety of goods involved, ranging from tobacco to iron ore. Originally, it was believed that the Corporation would restrict its activities to countries preferring to barter or sell on a Government-to-Government basis, and originally iron ore only appeared to be involved. Subsequent developments have shown that there would appear to be no limit either in regard to countries, quantities or commodities. At present, the Corporation appears to be concentrating mainly on iron ore exports and having granted itself one-fourth of the total country's export quota, rumour has it that it contemplates controlling the entire exports of iron ore by the middle of this year. I can only say, 'what next?'

"On 3rd September, the Government of India reimposed an export duty on manganese ore at rates varying from Rs. 10 to Rs. 30 per ton on ore with a manganese content of over 38 per cent. and with varying scales dependent on the manganese content. The manganese ore market, like many minerals, fluctuates widely. Having suffered a recent slump, prices have again been good during the year and exporters have not had great reason to complain about this duty. Their next concern will be to know if Government can, as speedily, remove the duty when prices fall, as they invariably will.

"One unfortunate point about this duty is that the Government machinery is ill-equipped to impose such a duty as the Controller of Customs has not an adequate qualified staff, nor the laboratory facilities to carry out the necessary analyses. He is also unwilling or not prepared to accept the results of qualified, world-renowned analysis, but insists on independent sampling by his own organisation. To do this work efficiently his organisation would have to be capable of doing the full amount of such work now carried out by all of the local analysts. I have just heard of cases where the Customs authorities have now informed shippers that they must pay an increased rate of duty on parcels which were shipped five months ago and which have reached their destination *via* the Cape, and have probably now been used in the manufacture of steel and for all I know may be on the way to India in the form of machinery. Under the sales contracts, the sellers will ask the foreign buyers to pay this additional duty—a request which cannot enhance India's reputation in the world's metal markets.

Wagon Shortage

"As in the case of coal, the severe wagon shortage has restricted the market and on some lines the volume of traffic also has been restricted by the railways improvement and doubling programmes. Fortunately, these are temporary restrictions and we look forward to increased traffic movement in the near future.

"For exports from some of the Orissa mines considerable assistance has been given by the railway permitting BOBX Hopper type wagons being used temporarily for ore traffic. Without the use of this there could have been an even greater wagon shortage and the trade is grateful for this assistance.

"It is regrettable that there must often be a sting in the tail of my remarks, but the fact is there are no weighbridges capable of weighing these large wagons and their carrying capacity appears to have been rated about 5 tons in excess of what can usually be carried.

"Gentlemen, since the mining industry as a whole is faced with so many problems it is only right that all organisations should work in close co-operation. I am happy to say that during the past year we have done so and for this our thanks are due to the other organisations, especially the Indian Mining Federation and the Indian Colliery Owners' Association.

"Before I conclude, gentlemen, I want to pay a tribute to the valuable assistance which has been given to me by your Committee, and, in particular, by the Vice-Chairman, in the past year.

"It is said that during the year Mr. Peary Mookherjee, who was a member of your Committee, passed away. He had served the Association sincerely for a number of years and he was one of its main supports. We have missed him much during the time of crises and his loss to the Association is irreparable.

"I thank the members of the Standing Coalfields Committee and the Honorary Joint Secretaries, Mr. W. J. Jameson and Mr. W. D. Forrest. I also wish to record my deep appreciation of the services rendered by the Secretariat of the Association, the Labour Department of the Bengal Chamber of Commerce and Industry and the Secretariat of the Joint Working Committee."

IS EUROPE ABOUT TO FEDERATE?

BACKGROUND AND SIGNIFICANCE OF THE MOVE FOR COMMON MARKET AND FREE TRADE AREA

(From the "Swiss Bank Corporation Bulletin" Correspondent)

ABRUPT closure of the Suez Canal—a calamity of major economic gravity—has focussed public attention in all western countries on the concerted efforts now being made to achieve the economic integration of Europe with all feasible speed.

Nothing less than a disaster of first magnitude—against whose sudden recurrence there is no safeguard—could have demonstrated so convincingly that all the peoples of Western Europe share a common destiny. "We are all together in the same boat."

Not only has the formidable energy deficit that handicaps Europe been widened immensely at a stroke—vastly augmenting the dependence of Europe on the countries of the dollar group for supplies of coal and oil, not only has the rhythm of European economic development been violently ruptured, but the political security of Western Europe has been gravely jeopardised. Any effectual system of European defence depends primarily on the abundance of supplies of fuel, raw materials and food. Owing to the closure of the Suez Canal, imports of coal from America have risen already from 24 million tons in 1955 to an annual rate of 50 million tons now.

In the present crisis, the sense of solidarity among the peoples of Europe has been immensely strengthened. Security for all now depends vitally on all being able to act together, promptly and unreservedly, whenever an emergency of first magnitude arises. Just the certainty that, if the safety of any one country were threatened all would instantly act together, would, by itself, be the most powerful possible protection against any threat of encroachment. This would be achieved if Western Europe became a single economic unit.

Two Distinct Projects

At present, two distinct projects for achieving unity are under animated discussion, known respectively as (1) The Common Market and (2) The Free Trade Area.

These two projects differ in prime essentials. The Common Market project has emerged, according to schedule from the operation of the European Coal and Steel Community, "the first step towards the unification of Europe," and is avowedly *political* by nature, whereas the Free Trade Area is a product of the O.E.E.C. and, as conceived at present, would be purely *economic*.

Both envisage the ultimate elimination of all customs duties and quota restrictions on import among the countries of the group. The Common Market is to be a customs union, permanent and indissoluble, its members forming a single organic unit with a supranational Government whose chief executive organ, known as the High Authority, is to be charged with the task of establishing and maintaining the common market. In the European Coal and Steel Community, the High Authority acts without having to obtain the consent of the Governments of the member countries. Its decisions are binding on the individual firms in the member States. The High Authority is responsible only to the Common Assembly and the Council of Ministers. A Court of Justice, consisting of seven judges, has the competence to decide whether or not the decisions of the High Authority are valid by the terms of the Treaty of constitution.

By contrast the aims of the Free Trade Area would be exclusively economic. All customs duties and all quota restrictions among the member countries would be removed, stage by stage. But the sovereignty of the member countries would be left intact. The adherent countries would still be separate political entities. In trading with countries outside the Area, each country would have its own individual customs tariff. The Free Trade Area would have no common economic structure or common political policy.

At the outset the Common Market would consist of the six countries that combined in 1951 to form the European Coal and Steel Community: France, Germany, Italy, Belgium, Holland, Luxembourg. The first task, at that time, was to form a common market for coal and steel and their allied products such as coke and scrap. This group embodied over 160,000,000 consumers, about the same number as in the U.S.A. The aggregate output of coal in 1950 was 220,000,000 tons and of crude steel over 31,000,000 tons. By 1955, the output had risen to 246,000,000 tons of coal and 52,650,000 tons of steel.

From the start, the essential aim of the European Coal and Steel Community was avowedly political, namely, to eliminate once for all the possibility of war between France and Germany by merging their coal and steel industries, so as to make their economies permanently one. Like Siamese twins, neither country would be able to act without the other. As far as coal and steel are concerned, the Common Market has since been fully established. One positive outcome of prime significance to all Europe has been the settlement of the embittered Saar dispute between France and Germany and the agreement to work together to construct the Moselle Canal, making French iron ore and German coking coal mutually accessible.

The Common Market, as now projected, would at first consist of the same six countries as belong to the European Coal and Steel Community. But the future aim would be to extend activities to bring all other commodities and products into the Common Market and to recruit all the other O.E.E.C. countries as members until Europe became a single economic unit with a definite organic structure, without any internal impediments to trade whatever. There would be a single customs tariff for the whole group.

Inevitably, the whole pattern of industrial production inside the group would in time be profoundly transformed. The Common Market would be large enough to permit the application to industry of all the principles of automation, production in very long series would be practicable, thus economising labour, cutting manufacturing costs, augmenting the power of European industry to compete on the world market with the U.S.A. and the U.S.S.R., shortening working hours and raising the standard of living all round.

Euratom

An integral part of the programme of work of the Common Market is to expedite nuclear research through the new organisation known as Euratom, enabling the countries of the Common Market to begin making atomic energy available for industrial use as quickly as possible, so as to cover their existing energy deficit and become independent of outside supplies. No single country of the group alone could afford to finance the production of atomic energy on this scale. By pooling all available capital resources, the group as a whole could accomplish the task.

Such a drastic economic transformation would have disastrous consequences unless spread over a long period. The intention is to implement the plan in three stages, each of four years, with a final period of another three if that proved necessary.

Deliberations going on for long past in Brussels among experts of the Common Market countries are now* at the decisive stage. Agreement on all essentials has been reached. Although some problems are still unsolved, the drafting of the treaty to establish the Common Market is now going on and is expected to be ready for signature in January. Hardly any doubt exists now that the Common Market will begin to function sometime in 1957.

This fact has obliged the other eight O.E.E.C. countries to consider the consequences of having to compete at a serious fiscal disadvantage on the Common Market, inside of which trade will ultimately be duty-free. All O.E.E.C. countries would be welcome as members of the Common Market at any time. Some would be disposed to do so now if this did not involve the sacrifice of a large measure of sovereignty. Being committed to a policy of perpetual neutrality, Switzerland is not able to join, because the Common Market is by nature essentially political. To obtain free access to the Common Market, Switzerland would probably feel compelled to join the Free Trade Area, if formed, although under present world trade conditions Switzerland has no serious foreign trade marketing problems.

In view of present trends of economic development in Europe, the individual markets of the O.E.E.C. countries are too narrow. Speaking in the House of Commons on 26th November, the British Chancellor of the Exchequer, Mr. Harold Macmillan, champion of the Free Trade Area project, said that, in order to develop rapidly, Europe needed a market comparable in size with that of the U.S.A. or the U.S.S.R. Only in a market of that extent would it be possible to take advantage of the principles of automation in industry, because the home market must be large enough to absorb the bulk of the output. Fluctuations of conditions on other markets would otherwise dislocate production too seriously. But automation involves the replacement of existing industrial plant by others quite different in character, depending on electronics. To change over, capital investment on an immense scale would be necessary.

Meaning to Germany

When the Common Market begins to operate, the economic strength of Germany will be very greatly augmented by the collaboration of the six member countries on a common plan of development. Already Germany attracts foreign trade more strongly than any other O.E.E.C. country but Switzerland.

If the Free Trade Area, as now conceived, came into being, the O.E.E.C. countries, it is true, would have access to the Common Market also. But only as individual States, not as integral parts of an organic economic unit. The Common Market is not an end in itself but simply a state of evolution towards European integration. The Free Market Area, on the contrary, would have no economic structure, no common aim, no cohesion. Members could break away at any time. If the Common Market did not exist, neither could the Free Market Area. In competition on the world market, pressure from the Common Market would become more and more disturbing for non-members. In 1955, 47.4 per cent. of the export of Switzerland was to other than O.E.E.C. countries. Switzerland needs the world market almost as much as she does the O.E.E.C. markets. On the world market, Switzerland would find herself in competition with the increasingly powerful Common Market.

Until now no specific plans for forming the Free Trade Area have been revealed. No single Government has committed itself. Discussions in Paris are still in the exploratory stage. But so much at least is clear: the Free Trade Area, sponsored by Great Britain, would consist of 14 O.E.E.C. countries with a total population of about 250 million. Six of the 14 countries would belong to the Common Market, an organic economic unit, with a population of more than 163 million, that is, about two-thirds of O.E.E.C. Europe. Many European experts believe that the difficulty of combining the amorphous Free Trade Area and the compact Common Market would be insurmountable. Collaboration would doubtless be simpler if the Free Trade Area consisted only of metropolitan countries. But the British Chancellor of the Exchequer has emphatically declared: "Britain would be no party to any arrangement drawing her away from the Commonwealth."

An O.E.E.C. study group has to report by 31st December 1956 whether the Free Trade Area project appears feasible. Early in 1957, the O.E.E.C. Council will decide whether to proceed further in that direction or not. If the Free Trade Area is not formed, each individual O.E.E.C. country will have to face the choice between retaining its sovereignty intact or of having to compete with the increasingly powerful Common Market, at a great disadvantage both on that market and on the world market.

Up till now hardly a word has been said about the complex monetary problems that will have to be solved in forming either a Free Trade Area or a Common Market. The economic co-ordination of any group of markets is inconceivable until price levels have been brought into alignment by the adjustment of rates of exchange to purchasing power.—*By courtesy of Swiss Bank Corporation.*

"RESOLVED that the consent of the Company under the provisions of Section 293(1) (d) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company to borrow from time to time for the purposes of the Company such sum or sums of money as they may in their absolute dircretion think fit notwithstanding that the moneys so borrowed may either by themselves or together with the moneys already borrowed by the Company and remaining outstanding (other than temporary loans obtained from the Company's Bankers in the ordinary course of business) may be in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

"RESOLVED further that the Company hereby ratifies and confirms all borrowings made by the Board of Directors after 1st April 1956, which together with the amounts previously borrowed by the Company and remainnig outstanding have been, during any period since the said date, in excess of the aggregate of the said paid-up capital and free reserves of the Company."

10. To consider and, if thought fit, to pass the following resolution the relative explanatory statement concerning which is annexed hereto as prescribed by Section 173 of the Companies Act, 1956:—

"RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301-304, 307, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 11-30 a.m. and 1-30 p.m. (S.T.) on any working day except Saturdays and between the hours of 11-00 a.m. and 1-00 p.m. (S.T.) on Saturdays, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act shall be open for inspection as aforesaid of the members of the Company between the times abovementioned during the period prescribed by sub-section 5(a) of Section 307."

By Order of the Board,
N. K. KARANJIA,
General Manager.

BOMBAY, 1*st March*, 1957.

Note.—A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*a*) The Transfer Books of the Bank will be closed from Wednesday the 6th day of March, 1957, to Thursday the 28th day of March, 1957, (both days inclusive).

(*b*) Dividend Warrants for the half-year ended 31st December, 1956, will be posted to the Shareholders at their registered address on and after the 29th day of March, 1957. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,

THE SHAREHOLDERS OF
THE CENTRAL BANK OF INDIA LIMITED.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to items 5, 9 and 10 mentioned in the accompanying Notice dated the 1st March, 1957.

2. In respect of item No. 5, it is notified that Mr. Dinshaw D. Romer who retires by rotation and is eligible for re-appointment, has attained the age of 81 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 5. Mr. Romer has been a Director on the Board of this Company since 1931. He is an eminent Solicitor and has wide and varied experience of banking and commerce and during his long period of association with the Company he has rendered very valuable services to the Company. It is in the interest of the Company that it should continue to receive the benefit of his services as a member of the Board.

3. As to item No. 9, it is proposed to meet the requirements of Section 293(1) (d) of the Companies Act, 1956. The Bank has had since 1st April, 1956, and may hereafter have occasions to borrow in excess of the limits prescribed by the said section and it is, therefore, necessary to ratify such previous borrowings and to give the necessary powers to the Board for such future borrowings, the same being necessary and expedient for the purposes of the Company's business.

4. In respect of item No. 10, it is notified that under the relevant sections of the Act, the Company in General Meeting is entitled to impose reasonable restrictions on keeping the said registers and documents open for inspection by the persons entitled thereto so that not less than two hours in each day are allowed for inspection. The hours of inspection sought to be prescribed by the said resolution are reasonable and convenient from the administrative point of view.

By Order of the Board,
N. K. KARANJIA,
General Manager.

BOMBAY, 1*st March*, 1957.

THE BANK OF INDORE, LIMITED

(*Incorporated in Indore*, 1920)

NOTICE IS HEREBY GIVEN THAT THE Thirty-seventh Annual Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Bank, Prince Yeshwant Road, Indore City, on Thursday the 28th March 1957, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1956.

(2) To declare a Dividend.

(3) Jain Ratna Seth Suganmal Bhandari and Seth Balkishan Muchhal retire by rotation but are eligible for re-election.

(4) To confirm the appointment of the undermentioned Directors: (1) Shri Sardarmal Lalwani, (2) Shri Murlidhar Mansinghka.

(5) To elect Auditors for the ensuing year and to fix their remuneration.

By Order of the Board of Directors,
N. D. JOSHI,
Manager.

INDORE CITY,
19*th February* 1957.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

N.B.—(*a*) The transfer books of the Company will be closed from 14th March 1957 to 28th March 1957, both days inclusive.

(*b*) The Dividend when sanctioned will be payable on and from Friday the 29th March 1957.

(*c*) Shareholders are requested to intimate the Bank their change of address, if any, immediately.

THE RAYALASEEMA MILLS LIMITED
ADONI, KURNOOL DISTRICT

NOTICE

NOTICE IS HEREBY GIVEN THAT THE ELEVENTH ANNUAL GENERAL MEETING of The Rayalaseema Mills Ltd., will be held at the Registered Office of the Company at Rayanagar, Adoni-Thungabhadra Road, Adoni P.O., on FRIDAY the 29th day of March, 1957, at 2 p.m. (S.T.), to transact the usual business and also special business, the details of which are contained in the Notice and the Explanatory statement accompanying the Notice as separately posted to the members of the Company. The Share Transfer Books and the Register of Members of the Company shall remain closed from the 22nd March 1957 to 5th April 1957, both days inclusive.

By Order of the Board,
For THE RAYALASEEMA DEVELOPMENT COMPANY,
M. SOMAPPA,

ADONI, *26th February*, 1957.

BHARAT SUGAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Bharat Sugar Mills Limited will be held at 8, India Exchange Place, Calcutta, on Friday the 29th day of March, 1957, at 11 a.m., to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTION

1. Resolved that:

(1) The approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd., with effect from the 1st day of April, 1956, at a commission of 10 per cent. of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956, subject to a minimum remuneration of Rs. 25,000 per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment upto 15th August, 1960, and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) The draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the Directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) The terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large-scale and whereas their expenses of maintaining their office, as assessed, amount approximately to $30,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the Company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz., the American East India Corporation in the manner sanctioned by the Directors of the Company.

(*a*) For ordering stores:

5 per cent. of the invoice price.

(*b*) For ordering machinery:

2½ per cent. of the invoice price on the first $50,000 worth of goods or less.

2 per cent. of the invoice price on the second $50,000 worth of goods or less.

1½ per cent. of the invoice price on the third $50,000 worth of goods or less.

1 per cent. on anything above $1,50,000.

N.B.—(1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

(2) $20,000 will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.

(3) Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the Company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the Company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTION

Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372 and Schedule VIII of the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the Company on all working days between the hours of 10-30 a.m. and 12-30 p.m. (I.S.T.) except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register required to be maintained under section 307 of the Companies Act, 1956, shall be open for inspection of the members of the Company at the place and between the times abovementioned during the period prescribed by sub-section 5(a) of section 307.

By Order of the Board,
THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 18*th February*, 1957.

N.B.—(1) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) **Explanatory Note:**

Special Resolution No. 1

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 1,000 per month and 10 per cent. commission on net profits. No office allowance can, however, be paid from 1st April, 1956, *vide* section 354 of the Companies Act, 1956. Further, the commission of 10 per cent. has to be computed in the manner laid down in section 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956, approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1st April, 1956, at 10 per cent. of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 25,000 per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 26th day of December, 1961. But section 330 of the Companies Act, 1956, provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956, relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956, necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the New Managing Agency Agreement shall prevail notwithstanding the present provisions of the Articles of Association of the Company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in terms of section 302(3) of the Companies Act, 1956, can be inspected on any working day during business hours at the registered office of the company at "India Exchange," Calcutta-1.

Special Resolution No. 2

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company as buying agents for and on behalf of the Company in the United States of America on the terms and conditions stated in the resolution.

Memorandum specifying the nature of interest of Directors in respect of Special Resolutions Nos. 1 and 2:

Shri K. K. Birla, Chairman of the Board of Directors of the Company, is a Director and shareholder of the Managing Agents, The Cotton Agents Private Ltd., and Shri B. P. Khaitan, a Director of the Company, is a co-sharer in the Managing Agency remuneration received by The Cotton Agents Private Ltd., from the Company.

Ordinary Resolution No. 1

The resolution has been proposed to fix the time for and mode of inspection of various registers, books and documents required to be maintained and kept open for inspection of the members and other persons keeping in view the administrative convenience.

BHARAT SUGAR MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-fifth Annual General Meeting of the Bharat Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Friday the 29th March, 1957, at 11-20 a.m. or so soon thereafter as the Extraordinary General Meeting of the Company called to be held on the same day at 11 a.m. is over, for the following purposes:—

1. To receive and adopt the Directors' Report and the Accounts of the Company for the year ended 30th June, 1956.
2. To declare Dividends.
3. To elect a Director in place of Shri B. P. Khaitan who retires by rotation as well as under Section 261 (1) (e) of the Companies Act, 1956.

   Shri B. P. Khaitan is a co-sharer in the Managing Agency Commission received from the Company by its Managing Agents, The Cotton Agents Private Ltd. Shri B. P. Khaitan has been on the Board of Directors for many years and has rendered valuable services to the Company as a Director. It is, therefore, in the interest of the Company that he should continue as Director of the Company. The Company has received the requisite Special Notice from a shareholder and accordingly the Special Notice is hereby given to the shareholders for passing the following Special Resolution for re-appointment of Shri B. P. Khaitan as a Director of the Company.

   "RESOLVED that Shri B. P. Khaitan who retires by rotation as well as under Section 261 (1) (e) of the Companies Act, 1956, be and is hereby re-appointed as a Director of the Company."
4. To appoint Auditors and fix their remuneration.

The Register of Members will remain closed from the 20th March to 29th March, 1957, both days inclusive.

By Order of the Board,
THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 18*th February*, 1957.

N.B.—1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividends when declared will be payable to registered shareholders as on 29th March, 1957 on/or after the 31st March, 1957.

GILLANDERS ARBUTHNOT AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE above Company's Register of Members will be closed from the 18th March to the 30th March, 1957, both days inclusive, for payment on the latter date of a dividend of 16 per cent. for the year ended 31st March, 1956, on the Company's Ordinary Share Capital without any deduction in respect of Income-tax payable by the Company.

By Order of the Board,
For GILLANDERS ARBUTHNOT & CO., LTD.,
J. F. E. D'A. WILLIS,
Managing Director.

CALCUTTA, 1*st March* 1957.

NEW INDIA SUGAR MILLS LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the New India Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Friday the 29th day of March, 1957, at 12 noon, to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS

1. Resolved that:

(1) The approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd., with effect from the 1st day of April, 1956, at a commission of 10 per cent. of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956, subject to a minimum remuneration of Rs. 25,000 per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment upto 15th August, 1960, and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) The draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the Directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) The terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to $30,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the Company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz., the American East India Corporation in the manner sanctioned by the Directors of the Company.

(a) For ordering stores:

5 per cent. of the invoice price.

(b) For ordering machinery:

2½ per cent. of the invoice price on the first $50,000 worth of goods or less.

2 per cent. of the invoice price on the second $50,000 worth of goods or less.

1½ per cent. of the invoice price on the third $50,000 worth of goods or less.

1 per cent. on anything above $1,50,000.

N. B.—(1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

(2) $20,000 will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.

(3) Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the Company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the Company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTION

Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372 and Schedule VIII of the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the Company on all working days between the hours of 10-30 a.m. and 12-30 p.m. (I.S.T.) except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company upon 24 hours' written notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register required to be maintained under section 307 of the Companies Act, 1956, shall be open for inspection of the members of the Company at the place and between the times above-mentioned during the period prescribed by sub-section 5(a) of section 307.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 18*th February* 1957.

N.B.—1. A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. **Explanatory Note:**

Special Resolution No. 1

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 750 per month, 1½ per cent. commission on sales and 7½ per cent. commission on net profits, but in accordance with the provisions of section 348 of the Companies Act, 1956, the remuneration payable to the Managing Agents cannot exceed 10 per cent. of the net profits of the Company to be computed in the manner laid down in sections 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956, approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1st April, 1956, at 10 per cent. of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 25,000 per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 26th December, 1961. But section 330 of the Companies Act, 1956, provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956, relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956, necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the new Managing Agency Agreement shall prevail notwithstanding the present provisions of the Articles of Association of the Company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in term of section 302(3) of the Companies Act, 1956, can be inspected on any working day during business hours at the registered office of the Company at "India Exchange," Calcutta-1.

Special Resolution No. 2

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company as buying agents for and on behalf of the Company in the United States of America on the terms and conditions stated in the resolution.

Memorandum specifying the nature of interest of Directors in respect of Special Resolutions No. 1 and 2:

Shri K. K. Birla, Chairman of the Board of Directors of the Company is a Director and shareholder of the Managing Agents, The Cotton Agents Private Ltd., and Shri G. D. Loyalka, a Director of the Company, is a co-sharer in the Managing Agency remuneration received by The Cotton Agents Private Ltd., from the Company.

Ordinary Resolution No. 1

The resolution has been proposed to fix the time for and mode of inspection of the various registers, books and documents to be maintained and kept open for inspection of the members and other persons keeping in view the administrative convenience.

NEW INDIA SUGAR MILLS LTD.

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Annual General Meeting of the New India Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Friday the 29th March, 1957, at 12-20 p.m. or so soon thereafter as the Extraordinary General Meeting of the Company called to be held on the same day at 12 noon is over, for the following purposes:—

1. To receive and adopt the Directors' Report and the Accounts of the Company for the year ended 30th June, 1956.
2. To declare Dividends.
3. (a) To approve of the appointment of Shri N. C. Mehta as a Director of the Company who retires under Article 126A of the Articles of Association of the Company.

   (b) To elect a Director in place of Shri G. D. Loyalka who retires by rotation as well as under Section 261(1) (e).

   Shri G. D. Loyalka is a co-sharer in the Managing Agency commission received from the Company by its Managing Agents, The Cotton Agents Private Ltd. Further, he has attained the age of 67 years. Shri G. D. Loyalka has been on the Board of Directors of the Company since the inception of the Company and has rendered valuable services to the Company as a Director. It is, therefore, in the interest of the Company that he should continue as a Director of the Company. The Company has received the requisite special notice from a shareholder and accordingly the special notice is hereby given to the shareholders for passing the following Special Resolution for reappointment of Shri G. D. Loyalka as a Director of the Company.

   "Resolved that Shri G. D. Loyalka who retires by rotation as well as under Section 261(1) (e) of the Companies Act, 1956, and who has attained the age of 67 years be and is hereby reappointed as a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint Auditors and fix their remuneration.

The Register of Members will remain closed from 20th March to 29th March, 1957, both days inclusive.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 18*th February*, 1957.

N.B.—1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividends when declared will be payable to registered shareholders as on 29th March, 1957 on/or after the 31st March, 1957.

UPPER GANGES SUGAR MILLS LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Upper Ganges Sugar Mills Ltd. will be held at 8, India Exchange Place, Calcutta, on Friday the 29th day of March, 1957, at 2-30 p.m., to consider and if thought fit to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS

1. Resolved that:

(1) The approval of the Central Government having been received for variation in the Managing Agency Agreement the Company do hereby approve of and consent to the variation of the Managing Agency Agreement so as to (i) fix the remuneration payable to the Managing Agents, The Cotton Agents Private Ltd., with effect from the 1st day of April, 1956, at a commission of 10 per cent. of the net profits of the Company as calculated in accordance with the provisions of the Companies Act, 1956, subject to a minimum remuneration of Rs. 45,000 per annum in the event of absence or inadequacy of profits; (ii) fix the term of appointment upto 15th August, 1960, and (iii) provide for the powers and duties of the Managing Agents in accordance with the provisions of the said Act.

(2) The draft agreement embodying the revised terms as aforesaid and placed before the meeting and for the purpose of identification endorsed with the signature of the Chairman of the meeting be and is hereby approved and the Directors be and are hereby authorised to execute engrossment thereof in duplicate.

(3) The terms of the Managing Agency Agreement will have effect notwithstanding any provisions to the contrary in the Articles of Association of the Company.

2. Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company, maintain an office at New York in the U.S.A. for purchase and sale of goods including stores and machinery and also have dealings and business connections with parties all over the U.S.A. and their operations are on a large scale and whereas their expenses of maintaining their office, as assessed, amount approximately to $30,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to its total turnover in each year it is hereby resolved that the American East India Corporation be appointed as Agents for the Company to purchase for and on behalf of the Company, stores and machinery for a period of three years and their commission for purchase of stores and machinery at the rates mentioned below, be paid by the Company to the Agents, viz., the American East India Corporation in the manner sanctioned by the Directors of the Company.

(a) For ordering stores:

5 per cent. of the invoice price.

(b) For ordering machinery:

2½ per cent of the invoice price on the first $50,000 worth of goods or less.

2 per cent. of the invoice price on the second $50,000 worth of goods or less.

1½ per cent. of the invoice price on the third $50,000 worth of goods or less.

1 per cent. on anything above $1,50,000.

N.B.—(1) Orders placed with different manufacturers or on different occasions with the same manufacturers will not be compounded for the purpose of calculating the commission due to American East India Corporation.

(2) $20,000 will be the maximum commission payable to American East India Corporation in respect of a single order, irrespective of the amount calculated on the percentage basis.

(3) Where the American East India Corporation receive any commission or discount from the manufacturers or other suppliers of goods ordered by them for the Company, they will not be entitled to retain the commission or discount so received and will duly account for the same to the Company.

If anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be the same will not be done unless such permission is obtained.

AS ORDINARY RESOLUTIONS

1. Resolved that the Registers, Books and documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303, 304, 307, 356-360, 362, 372 and Schedule VIII of the Act be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent, in the manner and on payment of fees, if any, specified in the aforesaid provisions at the registered office of the Company on all working days between the hours of 10-30 a.m. and 12-30 p.m. (I.S.T.) except when the registers and books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company upon 24 hours' notice of intention to inspect, such notice indicating what books, documents and registers are intended to be inspected, provided, however, that the register required to be maintained under section 307 of the Companies Act, 1956, shall be open for inspection of the members of the Company at the place and between the times above-mentioned during the period prescribed by sub-section 5(a) of section 307.

Ordinary Resolution No. 2.

Resolved that the appointment of Messrs. Nagarmal Radheshyam, Bhagalpur, and Messrs. Payal Private Ltd., Delhi, as sole selling agents for the areas allotted to them for sale of the products of the Birla Laboratories (Chemical Department) owned by the Company be and is hereby approved.

By Order of the Board,

THE COTTON AGENTS PRIVATE LTD.,
Managing Agents.

"INDIA EXCHANGE,"
CALCUTTA-1, 18*th February* 1957.

N.B.—(1) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(2) **Explanatory Note:**

Special Resolution No. 1

Under the provisions of the existing Managing Agency Agreement the Managing Agents are entitled to an office allowance of Rs. 1,000 per month, 2 per cent. commission on sales and 10 per cent. commission on net profits, but in accordance with the provisions of section 348 of the Companies Act, 1956, the remuneration payable to the Managing Agents cannot exceed 10 per cent. of the net profits of the Company to be computed in the manner laid down in sections 349 and 350 of the Act. In order to bring the remuneration of the Managing Agents in conformity with the provisions of the Companies Act, 1956, approval of the Central Government has been obtained for fixing the remuneration of the Managing Agents with effect from 1st April, 1956, at 10 per cent. of the net profits to be computed in the manner laid down in the said Act with a minimum remuneration of Rs. 45,000 per annum in the event of absence or inadequacy of profits.

The term of the Managing Agents under the present agreement expires on the 15th day of March, 1962. But section 330 of the Companies Act, 1956, provides for the expiry of the term of office of all Managing Agents on the 15th August, 1960. Accordingly the term of the Managing Agents has been fixed upto the 15th August, 1960.

In view of the various changes in the provisions of the Companies Act, 1956 relating to the Managing Agents, it is considered advisable that the present Managing Agency Agreement be replaced by a fresh agreement incorporating the revised remuneration and the term of office as also other provisions affecting the Managing Agents. As it is proposed to adopt a new set of Articles keeping in view the provisions of the Companies Act, 1956, necessary changes in the Articles of Association of the Company relating to the Managing Agents are not being made at present. Pending such wholesale revision of the Articles of Association, the provisions of the new Managing Agency Agreement shall prevail notwithstanding the present provisions of the Articles of Association of the Company affecting the Managing Agents. The draft Managing Agency Agreement, proposed to be entered into with The Cotton Agents Private Ltd., a copy of which is being sent to the shareholders in terms of section 302 (3) of the Companies Act, 1956, can be inspected on any working day during business hours at the registered office of the Company at "India Exchange," Calcutta-1.

Special Resolution No. 2

It is proposed to appoint the American East India Corporation, New York, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company as buying agents for and on behalf of the Company in the United States of America on the terms and conditions stated in the resolution.

Memorandum specifying the nature of interest of Directors in respect of Special Resolution No. 1 and 2:

Shri K. K. Birla, Chairman of the Board of Directors of the Company is a Director and shareholder of the Managing Agents. The Cotton Agents Private Ltd.

Ordinary Resolution No. 1

The resolution has been proposed to fix the time and for mode of inspection of various registers, books and documents required to be maintained and kept open for inspection of the members and other persons keeping in view the administrative convenience.

Ordinary Resolution No. 2

It is proposed to get the appointment of the sole selling agents for the sale of the products of the Birla Laboratories (Chemical Department) owned by the Company, approved in the General Meeting as required under section 294 of the Companies Act, 1956.

UPPER GANGES SUGAR MILLS LTD.

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of the Upper Ganges Sugar Mills Limited will be held at 8, India Exchange Place, Calcutta, on Friday the 29th March, 1957, at 3 p.m. or so soon thereafter as the Extraordinary General Meeting of the Company called to be held on the same day at 2-30 p.m. is over, for the following purposes:—

1. To receive and adopt the Directors' Report and the Accounts of the Company for the year ended 30th June, 1956.
2. To declare Dividends.
3. To elect a Director in place of Shri R. K. Kanoria who retires by rotation.
4. To appoint Auditors and fix their remuneration.

The Register of Members will remain closed from the 20th March to 29th March, 1957, both days inclusive.

CALCUTTA, 28*th February*, 1957.

PROBLEMS OF ECONOMIC INTEGRATION

RATIONALITY OF "DOUBLE STANDARD MORALITY"

A SYMPATHETIC view of the problems of economic development of underdeveloped countries was taken by Prof. Gunnar Myrdal, Executive Secretary of the United Nations' Economic Commission for Europe, Geneva, in his Foundation Day address at the Delhi School of Economics. In this address, he pinpointed the outstanding facts of the economic situation in the world today and highlighted the difficulty in bringing about economic integration of the developed and underdeveloped areas of the world. He recognised the need for the latter areas adopting a highly protectionist policy so far as their imports were concerned and asking for free trade in regard to their exports. In their struggle for economic salvation, the practice of "double standard morality" was not irrational. He reminded the industrialised countries of their responsibility to the backward parts of the world. He advised the underdeveloped countries to practise regional co-operation and to evolve a free trade area amongst themselves while keeping high tariff walls to protect their nascent industries against competition from the richer countries.

The following is a detailed summary of Prof. Myrdal's address:

A few countries of the temperate zone and inhabited by people of European stock have very high levels of real income per head; taken together they represent about one-sixth of the total population in the non-Soviet world. Their economies are continually developing rapidly. It is, on the whole, the already industrialised countries which are industrialising further. But more than two-thirds of the people in the non-Soviet world live in the underdeveloped countries where real incomes per head are very low, in most of them much lower than in the richer countries when they were in the beginning of their industrial revolution. On the average, economic development in the underdeveloped countries as in the last half century been, and is today, slower and more hesitant; some of them have fallen backwards in general economic well-being. The income gap between the richer and the poorer countries has, therefore, been widening, and is widening today. As the total population in the poorer parts of the world is so much bigger and, on the average, has been, and is, increasing at a faster rate, it is—in spite of the spectacular development of technological knowledge—very uncertain whether, and in what sense, it can be said that, in recent times, there has been any general economic improvement for mankind as a whole.

Richer Countries

The richer countries have now reached the situation where further economic progress has become an almost automatic thing. The explanation for this is the fact that, in these countries, there has, in recent decades, taken place a rapid movement towards economic integration. No localities and regions and no occupational groups or social classes are now allowed to fall far behind what is becoming general standard in the country as a whole, and that standard is continuously raised. Social and geographical mobility are safeguarded, and an ever greater equality of opportunity is assured to the newly born. This integration of a nation implies an ever fuller utilisation of the inherent productive potentialities of the most important natural resource of every country, which is the people. The higher level attained of economic development and income per head has been brought to reflect itself in an improved general education of the people and a broader sharing in the national culture; this has implied a more effective spread of expansionary momentum from one industry or locality to others which not only has spurred economic progress directly but also decreased internal economic inequalities; this, in its turn, has layed a still firmer basis for political democracy, which has become an ever more effective form of government in the richer countries and is continually the driving force behind the integration policies. In the cumulative social process, economic development, equalisation of opportunities, and political democracy are interrelated by circular causation, each one being mutually each others both cause and effect.

In the underdeveloped countries, the lack of national integration in this sense—that is, the lower level of general education and of broadly dispersed sharing in the ambitions and capacities of a common culture, the lower degree of social and economic mobility, the less effective spread of expansionary momentum from one industry and locality to others, the greater internal inequalities, and the lower average productivity of labour due to all this—is, on the one hand, the general cause of economic underdevelopment. On the other hand, it is the social result of generations of economic stagnation. This is a vicious circle, and its course will not be turned into a development upwards if nothing is done to effectuate this change. Planning of economic development in an underdeveloped country has, therefore, to be directed towards national integration of the people; by breaking down the social and economic chasms which have been fortified by economic stagnation, opening the sluices for social and economic mobility, improving the general education, increasing the effectiveness of the spread of expansionary momentum, and equalising opportunities. This is just as important as any amount of capital investment.

If this element of national integration is lacking in the economic planning of an underdeveloped country, economic development will be frustrated from the beginning and will, in fact, not get far. For this reason, political democracy has an instrumental role to play in the strivings for economic development in an underdeveloped country, in addition to its primary value in meeting the demand for justice; its only alternative in this function of loosening up the State social structure of a stagnant society and releasing the productive powers of a people is violent revolution and dictatorship. I am deeply conscious of the fact that India's great experiment is in line with the theory of economic integration I am here sketching. The most important element in what India is trying to do is to reshape radically the conditions under which the individuals live and work. The whole world has a vital stake in India's success in accomplishing economic progress on the basis of national integration.

International Integration

One problem which must be faced is whether, and how far, national integration is compatible with international integration. The welfare State in the richer countries has been narrowly nationalistic. The national integration in these countries has, as a matter of fact, implied deep disintegration internationally, and so even as between the countries in their own small division in the world. As yet, we have not come far in overcoming this most unwholesome situation. But the work cannot be given up of attempting to reach a better integrated world *without* abstaining from the attainments of economic security and equality of opportunity which we have reached in the richer countries. A higher level of international integration has to be accomplished, not simply by tearing down the structures of national regulations as the old free trade theory would prescribe, but by incorporating them into an international frame of agreed and co-ordinated national policies.

In this connection I want to stress, however, that the underdeveloped countries have very important reasons, which the richer countries do not have, for applying nationalistic economic policies in order to restore world balance. As a prominent Indian official, Mr. N. Raghavan Pillai, emphasised at an international meeting: "Equality of treatment is equitable only among equals." Pressing on towards economic development has by necessity the effect in a poor country that the foreign exchange situation becomes strained, and such a country is already for this reason simply compelled to take vigorous measures to regulate its foreign trade. An underdeveloped country has also quite special reasons, which the richer countries do not have, for utilising these regulations to protect its new industries. From a market point of view, being underdeveloped means precisely that industries do not initially have competitive strength and that without protective measures there is not enough of economic demand for its labour. On the basis of such considerations, I have argued for the rationality of a "double standard morality" in judging commercial policies of different countries. The underdeveloped countries have rational grounds for asking the developed countries to liberalise their trade and capital movements unilaterally. They need to be staunch free traders, and even preserve for themselves the right to give export subsidies, so far as the advanced countries' imports from them are concerned, but restrictionists in respect of their own imports. And they have in the dynamic theory of underdevelopment and development, which is now gradually being worked out, valid arguments against anyone who would find this position logically inconsistent.

Regional Co-operation

Besides national integration, the underdeveloped countries need to strive more diligently for regional economic integration. The underdeveloped countries tend all to have their cultural and economic ties and, in fact, most of their communications, with one or several industrial countries, while their mutual relations even within the closest neighbourhood region are weak. As yet, there is, for instance, almost no practical economic co-operation in South-East Asia, and the basis for fostering it is feeble, as the initial situation is almost complete absence of any economic relations and often of effective transport facilities. This all is the result of prolonged economic backwardness, foreign economic domination and, in particular, political colonialism. After liberation, the old commercial relations are kept up and, indeed, must be kept up, while almost no practical steps have been taken to compliment them by breaking the inherited and artificial economic isolation from neighbouring countries in the region.

Western as well as Eastern Europe, where the individual countries have never been so isolated from each other, have after the war been striving towards a higher degree of regional integration; they have not been too successful but the effort is not given up. It should be clear that the underdeveloped countries would need much more than do the developed regions, neighbourhood co-operation, agreed specialisation in their industrialisation and, indeed, "free trade areas" for themselves behind common protective walls in order to have real success with their development programmes.

Such a policy of regional integration would also make them stronger. As the basic economic and political disequilibrium in the world today is due to the exceedingly weak bargaining power of the poor and underdeveloped countries which make up the great majority of mankind, every step towards regional co-operation in the poorer parts of the world would also work for a greater democratic international power balance. It would thus bring us nearer to reaching the wholesome international integration between all countries in the world, rich and poor, based on a greater equality of opportunity of all peoples, which is the internationalist's dream.

The scientific study of the economic and social processes has an important role to play in the present phase of world history. The totally changed political situation in the world and the compulsion, implied in this political change to focus attention on entirely new and very different problems, are bound to cause the beginning of a revolution also in the social sciences, widening our horizon and radically redirecting our thinking. Out of this mighty process should also emerge a more realistic and relevant economic theory.

INCREASED INDO-BRITISH TRADE

SUBSTANTIAL RISE IN U.K.'S EXPORTS

THE total value of Indo-British trade in 1956 reached a record level. It was £309 million in 1956, as against £289 million in 1955 and £263 million in 1954. The rise in the total value of trade to the extent of £20 million in 1956, however, obscures the substantial increase in Britain's exports to India because of a similar amount of decline in the U.K.'s imports from India. The value of total U.K. exports to India rose from £115 million in 1954 to £130 million in 1955 and further to £168 million in the year under review. This means an increase of no less than 46 per cent. over the 1954 level and 29 per cent. over the 1955 level. As against this, total U.K. imports from India were valued at £141 million in 1956, that is, 11 per cent. less than in 1955 (£159 million) and 4 per cent. less than the 1954 figure (148 million). This trend is in keeping with India's plans for expanding its industrial wealth. It only reflects the increasing share which Britain receives in India's imports of machinery for implementing these plans. That is as it should be, because of Britain's long connection with India.

The increase in the value of the U.K.'s exports to India was reflected in the proportion of India's share in the U.K.'s total exports to all countries from 4.3 per cent. in 1954 to 4.4 per cent. in 1955 and 5.2 per cent. in 1956. Consequently, in the year under review, India ranked fourth as a market for U.K. exports, as compared with the sixth position it held in the two preceding years. The marked rise in the value of British exports to India was accounted for principally by machinery, other than electric, iron and steel, metal manufactures, railway vehicles, and electric machinery apparatus and appliances. Increases were also recorded in respect of chemicals and road vehicles and aircraft.

Principal Exports

The following table gives the values of principal exports of Britain to India in 1956 as compared with those of 1955:

(Value in £'000)

	Full year	
	1955	1956
Total All Exports	130,165	167,837
Of which:		
Machinery other than electric ..	32,340	45,271
Electric machinery, apparatus and appliances.	16,264	21,204
Wool and other animal hair and tops ..	4,819	5,359
Petroleum and petroleum products	1,735	2,876
Chemicals	10,525	13,266
Paper, paperboard and manufactures thereof	1,717	1,418
Iron and steel	8,795	15,926
Non-ferrous base metals	2,251	3,993
Manufactures of metals	6,994	13,458
Railway vehicles	3,366	6,473
Road vehicles and aircraft	10,025	11,927
Scientific instruments; photographic and optical goods; watches and clocks ..	2,975	2,941

The machinery exports, including electric machinery apparatus and appliances, valued at about £66.5 million, represented an increase of 30 per cent. over the previous year. It is noteworthy that India topped the list of countries receiving U.K. machinery (other than electric) and was a very close second for electric machinery and apparatus valued at £21.2 million. While in the case of the former India accounted for 8.9 per cent. of total U.K. exports in 1956, as against 6.9 per cent. in 1955, in the case of the latter, the corresponding proportions were 9.6 per cent. and 8.3 per cent., respectively. Some of the principal items among the exports were: textile machinery (£9.861 million), converting machinery, transformers, switchgear, etc. (£4.799 million), generating sets, generators and motors (3.498 million), electric cables, wires, strips and strands, insulated (£5.4 million), boilers and boiler-house plant (£2.252 million), internal combustion engines (£2.236 million), machine tools (£2.657 million), industrial and works trucks, and tractor and mechanical handling equipment (£2.245 million), and excavating and earthmoving equipment, etc. (£2.290 million).

In sharp contrast to the U.K.'s exports during the year under review, its imports from India witnessed a substantial reduction in value. Thus, the U.K.'s imports from India in 1956 accounted for 3.6 per cent. of the total U.K. imports from all sources, as against 4.1 per cent. in the previous year. Consequently, India's rank as a supplier of goods needed by the U.K. declined to sixth place in 1956 from fifth place in the preceding two years. The following table provides an idea of the U.K.'s import figures for the year under review juxtapositioned with those of the preceding year:

(Value in £ '000)

	Full year	
	1955	1956
Total All Imports	158,956	141,468
Of which:		
Tea	75,499	68,893
Leather, leather manufactures and dressed furs	12,618	11,475
Tobacco and tobacco manufactures	7,163	8,178
Wool and other animal hair and tops ..	4,898	4,154
Cotton	4,529	3,379
Miscellaneous textile fibres and waste ..	1,390	837
Crude fertilisers and crude minerals, excluding fuels	1,976	1,740
Metalliferous ores and metal scrap	2,444	2,497
Miscellaneous animal and vegetable crude materials	4,945	4,002
Animal and vegetable oils, fats, greases and derivatives	8,487	7,908
Cotton yarns and woven fabrics	7,037	7,475
Miscellaneous textile manufactures	14,386	11,729

As can be ascertained from the table, tea was, as usual, by far the largest item and accounted, at the value of £68.9 million, as against £75.5 million in 1955, for 48 per cent. of total U.K. imports—that is, 8 per cent. less than in 1955—from India. Imports of tobacco and its manufactures, however, increased by about a million pounds to £8.1 million. Leather and leather manufactures, again, recorded a decline of more than a million pounds. Other items in which there was a marked decline were: cotton, miscellaneous animal and vegetable crude materials, miscellaneous textile manufactures and animal and vegetable oils, fats, etc. In the case of cotton yarn and woven fabrics, however, a slight rise was witnessed.

The net result is that Britain's trading position with India improved from that of a debtor to the tune of £29 million in 1955 to that of a creditor to the extent of £27 million in 1956. This improvement is attributable to a combination of factors. On the one hand, the pace of development in India called for increased imports of machinery, iron and steel, etc.; on the other, the worsening economic situation forced the U.K. Government to follow certain consistent policies with a view to keeping its trading position strong. Some of the more notable measures were the credit squeeze, the rising of the Bank rate, restrictions on hire-purchase arrangements and critical scrutiny of applications by the Capital Issues Committee. All these measures were directed towards increasing the productivity and competitive position of industries at home, and exports, on the one side, and towards curbing internal consumption on the other. In other words, Britain's objective in 1956 was to export more and import less and its trade with India has been in keeping with that objective.

I.C.I. REDUCES WROUGHT TITANIUM PRICES

Imperial Chemical Industries Ltd., the largest producer of titanium in Great Britain, recently announced substantial reductions in the price of its wrought titanium and titanium alloy products. While continuing to vary according to the form of wrought product and the grade or alloy of titanium used, prices will in general be lowered by 10 per cent.

Two factors have contributed to this important development. First, the steadily expanding range of applications for titanium in the aircraft industry, coupled with increasing production efficiency. Secondly, the continuing decline in the price of I.C.I. raw titanium metal, which for the past year has been below that of equivalent American material. At 19s. 6d. per lb., I.C.I. raw titanium metal is selling at the lowest published price in the world.

(Concluded from next column)

importers in keeping the price levels under check as a result of the scarcity of consumer goods caused by the import policy and of inadequacy of home supplies to meet the growing demand. He acknowledged that the traders had a duty to supply goods to consumers at reasonable prices. But, if circumstances went out of hand, they could not help it, and in such circumstances it was not fair to blame the trade for prices going up. He pointed out, however, that causes for the rise in prices should be analysed before the trade was publicly held responsible for it. This is, indeed, a fair demand and the Government should have no difficulty in complying with it. After all, the first requisite for curing anybody suffering from a malady is to trace the cause of it.

IMPORT RESTRICTIONS

TRADERS' REACTIONS

THE view that the new import policy for the period January-June 1957 is so drastic that there will be an unfilled gap in a number of industrial raw materials and consumer goods was expressed by Mr. Shantilal M. Shah, in the course of his presidential address to the annual general meeting of the All-India Importers' Association which was held on 28th February. Mr. Shah, however, conceded that the step taken appeared to be the only course open to the Government to follow in its efforts to conserve foreign exchange resources at this critical period. Mr. Shah had no complaints if the new import policy was framed entirely to conserve foreign exchange. What was, however, unfortunate was the complicated and cumbersome aspect of the restrictions, some of which were old and continued to exist for no valid reason.

It was ironical, Mr. Shah complained, that while the policy of controlled liberalisation which had been in operation for the past three years had to be replaced by drastic cuts in import quotas and the face value restrictions which provided triple protection to home industries, the high tariffs introduced along with controlled liberalisation continued to exist. It was necessary, he said, to liberalise at least the face value restriction in order to make the indigenous industries more watchful about both quality and price. He thought that the vacuum thus created at present by the import policy would prove to be a remedy worse than the disease itself. He, therefore, appealed to the Government to keep this point in view, while framing the import policy for the next licensing period.

As a result of the new import policy which was likely to continue for three to four years, Mr. Shantilal Shah predicted that a number of importers would be forced to close down their business. This, obviously, created a situation of some seriousness. Mr. Shah complained in this connection that, though the importers had expressed their desire and anxiety to be absorbed in the distributive channels of the indigenous industries, there was no encouraging response from either the Government or the indigenous industries. Further, when imports were banned, the indigenous industries, contrary to expectations, created their own channels for the distribution of goods. This method, he contended, not only starved the existing trade channels, but also made it difficult for the domestic manufacturers themselves to market their products. In view of this state of affairs, there is much to be said in favour of Mr. Shah's plea that the Government and the industrialists should bear this point in mind and evolve a suitable voluntary scheme providing for the utilisation of the present importing channels for the distribution of indigenous production. He specially appealed to the Federation of Indian Chambers of Commerce and Industry to devote its attention to this aspect of the problem. By so doing, the speaker felt, the Federation would be doing service not only to the commercial community but also to the nation.

Customs Reorganisation Committee

Mr. Shah expressed his gratification at the acceptance by the Government of his suggestion put forth a year ago, and later supported by the Federation of Indian Chambers of Commerce and Industry, for the establishment of a Customs Enquiry Committee to evolve smooth and suitable procedure for the clearance of imported goods. The Customs Reorganisation Committee, as the enquiry committee is called, has been set up to examine in detail the whole question not only of sea customs, but also of land customs passengers' baggage, etc. The President of the Importers' Association welcomed also the constitution of the Local Advisory Committee with the Collectors of Central Excise at various divisions. He expressed the belief that it would not only help solve the procedural difficulties but would also go a long way towards creating a feeling of confidence in the minds of the trade that their views were being listened to. Mr. Shah felt that another step remained to be taken by the Central Board of Revenue. This was the creation of an Advisory Committee to assist the Commissioners of Income-tax of each division so that local difficulties could be solved in a rational manner. This arrangement, in Mr. Shah's view, would facilitate the industry and trade to ventilate their viewpoints before the executive authorities of the Income-tax Department.

Earlier in his speech, Mr. Shah reminded the audience of the duty that devolves on the

MADURA MILLS EARN HIGHER PROFIT

DIVIDEND, HOWEVER, PRUNED ON ACCOUNT OF PENAL DIVIDEND TAX

THE cut in the dividend from 20 per cent. to 17½ per cent. for the year ended 31st December 1956, announced by the Madura Mills Company, Ltd. (Managers: Messrs. A. & F. Harvey Ltd., Madurai) early last month, came as a shock to investors in the Company's shares. The announcement was made at a time when the share markets were in a sullen mood, and provided a real damper to the Madras market in particular. The reduction is not drastic, but the surprising thing about it is that the cut has been made notwithstanding the excellent performance of the Company during the year under review. For the gross profit, which had shrunk from Rs. 1.32 crores to Rs. 1.07 crores in 1955, has risen to Rs. 1.26 crores. There has, however, been no corresponding expansion in net profit, which is unchanged at Rs. 44.20 lakhs. This is because of the larger allocations to taxation at Rs. 51.50 lakhs, as against Rs. 34.78 lakhs, and to Managers' commission at Rs. 11.81 lakhs, as against Rs. 9.73 lakhs for the previous year. The provision for depreciation is only a shade higher at Rs. 18.79 lakhs.

As in the previous year, no addition has been made to the reserves. It may, therefore, be wondered why the customary 20 per cent. dividend which requires Rs. 35 lakhs and is well within the amount of net profit and which, in fact, will leave a sizable surplus to be carried forward, has not been repeated. The substantially larger provision for taxation provides the clue and the Directors' reasons for their decision, given in their report to the shareholders, are convincing. They say:

"The dividend taxes introduced in the Finance Act, 1956, and the Finance Act (No. 3), 1956, impose a heavy burden on your Company by reason of its relatively small subscribed capital in relation to the capital employed in the business. For example, dividends paid in excess of 18 per cent. have to bear the penal rate of dividend tax of As. 6 per rupee which, when added to the normal income-tax and super-tax payable on the profits, increases the total rate of taxation to approximately As. 13 per rupee on that part of the dividend in excess of 18 per cent. Moreover, in the interests of the Company and shareholders, the Directors are contemplating the implementation of a large-scale scheme of modernisation and rehabilitation of the mills during the next few years and there is, therefore, a need to conserve and, in fact, add to the liquid resources of the Company. It is for these reasons that the Directors recommend a slight decrease in the dividend as compared to the rate paid in recent years."

First Cut Since 1950

This is the first time since 1950 that the Company's dividend has been pruned. In 1950, the distribution was reduced from 17½ per cent. to 15 per cent. on account of the extremely disappointing results. In fact, the Directors had, in recommending a dividend of 15 per cent., been more liberal than was warranted by the profit for that year and the dividend had to be met by drawing a sizable sum from the preceding year's surplus and by writing back excess tax provisions. The following year, not only was the cut restored but a higher dividend of 20 per cent. was paid. This was maintained in the succeeding four years before being reduced to 17½ per cent., as stated at the outset.

The cut effected in 1950 and the one now recommended are, however, made under entirely different circumstances. On the previous occasion, when the profit did not even warrant a remuneration to the shareholders, the Directors could adopt a liberal policy, but now, when the profit itself justifies the payment of a certain rate of dividend, the Company is being penalised for doing so, with the result that as large a surplus as Rs 32.44 lakhs has to be carried forward. This surplus may be required, as the Directors point out, for the implementation of the large-scale modernisation and rehabilitation programme; but such ploughing back in the present socialist climate does not enthuse shareholders very much. They do not know for certain whether they would at all be allowed to reap the fruits of conserving the present profits for future gains. Moreover, the Company itself is not quite free to utilise it for the purpose it deems best. For it has, under the latest Finance Act, to deposit the prescribed percentage with the Reserve Bank and can draw on it only at the pleasure of the authorities.

The following comparative table gives an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds (net)	15,69.45	14,82.85	16,01.79	15,22.48
Other income ..	6 50	5 29	2 07	2 20
Raw materials consumed ..	9,06 54	9,48 18	10,35.08	9,72 44
Wages and other expenses ..	4,53 29	4,32 52	4,36.88	4,50 11
Gross profit	1,26 30	1,07 44	1,31 90	1,02 13
Managers' commission	11 81	9 73	12 30	7 99
Provision for—				
Depreciation	18 79	18 73	19 03	17 98
Taxation	51 50	34 78	45 25	30 09
Net profit	44 20	44 20	55 31	45 46
To reserves	..	..	20 00	10.00
Dividend	30 63 (17½%)	35 00 (20%)	35 00 (20%)	35 00 (20%)
Carry forward	32 44	18 87	9 67	9 36

There has been a welcome increase of Rs. 86.60 lakhs in sale proceeds, but this is not sufficient to make good the decline noted in the previous year. The bulk of this increase has, however, been offset by the rise of Rs. 48.36 lakhs in the cost of raw materials consumed, of Rs. 16.71 lakhs in salaries, wages and bonus and of Rs. 3.97 lakhs in other expenses.

The Company's financial position, as disclosed by the latest balance-sheet, is impressive. The reserves and surplus aggregate Rs. 4.57 crores, as against a paid-up capital of Rs. 1.75 crores. Of these reserves, renewal and replacement reserve accounts for Rs. 2.44 crores, general reserve for Rs. 1.70 crores, and provision for contingencies Rs. 10.58 lakhs. The gross block of the value of Rs. 5.83 crores has been written down to Rs. 2.06 crores. The current assets amount to Rs. 5.50 crores, of which stock-in-trade and stores and spares account for Rs. 3.55 crores, investments for Rs. 47.80 lakhs, cash balances for Rs. 67.19 lakhs and other assets for Rs. 79.53 lakhs.

The Rs. 15 fully paid-up shares of the Company are being currently quoted at Rs. 47-6 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 6 per cent. per annum, free of income-tax.

AMAR DYE-CHEM'S NEW ISSUE

The Directors of Amar Dye-Chem Ltd. (Managing Agents: Messrs. Amritlal & Co. Private Ltd., Bombay), have decided to issue 30,000 new ordinary shares of Rs. 100 each at par. This will be offered to the existing ordinary shareholders in the ratio of one share for every one ordinary share held by them as on 28th February 1957.

It will be recalled that the Company originally decided in January last, subject to the sanction of the Controller of Capital Issues, to issue 50,000 new ordinary shares of Rs. 100 each at par in the ratio of five new shares for every three ordinary shares held. The Controller of Capital Issues has, however, given sanction for the issue of ordinary shares to the extent of only Rs. 30 lakhs and the Directors have, accordingly, restricted the issue to Rs. 30 lakhs and the proportion of rights has also been changed from 5:3 to 1:1. The new ordinary shares will rank *pari passu* in all respects with the existing ordinary shares. A sum of Rs. 50 per share is to be paid on acceptance and the balance is payable within one month of allotment.

Of this issue, 15,000 ordinary shares will be taken up by the Managing Agents and their associates. The balance will be underwritten by the Industrial Credit and Investment Corporation of India Ltd. for a commission of 2½ per cent.

The new issue is to provide working capital to the Company, which has lately commenced sale of its products. As the sales so effected are on credit basis, the Company needs sufficient working capital. The Company completed the first stage of its activities, that is, construction of buildings and installation of plant and machinery, and commenced production in May 1956. The paid-up capital of the Company, amounting to Rs. 49.81 lakhs, has been fully utilised and the additional working capital required is being met by temporary loans from banks and the Managing Agents and/or their associates.

A CORRECTION

Seajuli Tea Co., Ltd.—In our issue dated 16th February 1957, under "Company Reports," the dividend amount of this Company for 1954 was shown as Rs. 1,16,643, which is wrong. The correct figure is Rs. 69,600. Similarly, the carry forward figure for 1954 was wrongly shown as Rs. 74,700, while it should be Rs. 41,943.

Bishnauth Tea Co., Ltd.—In the same issue, Messrs. Williamson Magor & Co., Ltd. who are the Secretaries of this Company, were inadvertently described as Managing Agents.

O. V. ESTATES' RESULTS DISAPPOINTING

PROFIT LOWEST SINCE 1947-48

FOR the second year in succession the Directors of the Ouchterloney Valley Estates (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode), have had to take the unpleasant step of pruning the dividend on ordinary shares of the Company, the latest one being in respect of the year ended 31st October 1956. Thus, the dividend, which had been cut from 30 per cent. to 20 per cent. for 1954-55, has been reduced further to 10 per cent., thus bringing it to the level paid for 1952-53 and 1951-52 on the present capital. This has been inevitable on account of the disappointing results for the year under review, brought about by the poor crop of coffee. The tea crop also dropped from the record output for 1954-55 and the cost of production thereof rose sharply. But for the better prices fetched for both the products, the financial results would have been worse still.

The gross profit for the year under review amounts to Rs. 1.54 lakhs, having shrunk from Rs. 10.68 lakhs earned in the previous year and Rs. 18.41 lakhs in 1953-54. In fact, the year 1955-56 has turned out to be the worst year since 1947-48, in so far as earnings are concerned. After providing a slightly larger sum of Rs. 2.24 lakhs for depreciation, as against Rs. 2.07 lakhs set aside a year ago, there is a net loss of Rs. 1.16 lakhs, in contrast to the profit of Rs. 3.60 lakhs for the previous year. In view of the loss, the Directors would have been justified in skipping over the dividend, but they have not chosen to do so. They have decided to pay a modest dividend, as mentioned above, by utilising a part of the reserves built up in previous years. This action is fully justified by the sound financial position of the Company.

The year's results could not have come as an unpleasant surprise to the shareholders, because they had already been told that the coffee crop for the year under review would be poor. All the same, they might have expected that the higher prices which tea and coffee fetched during the past year would make good the loss on production to a substantial extent. But this expectation has not fully materialised because of the higher cost of production.

The following comparative table, presenting the salient features of the Company's results for the past four years, gives a good idea of the progress since 1952-53:

	For the year ended 31st October			
	1956	1955	1954	1953

† Provided out of excess provision written back.
§ Transferred to general reserve.

As will be seen from the table, the tea crop for 1955-56 is the lowest since 1952-53. It is, however, better than that for any of the years preceding 1953-54. The upward trend in cost of production of tea continued maintained for the third year in succession, rising by 32.61 cents per lb. or 25.8 per cent. in three years. The increase in cost during the year under review alone was 19.28 cents per lb., whereas the increase in average price realised was no more than 4.69 cents per lb. or less than one-fourth of the rise in cost of production. The shrinkage of 4,398 cwts. in the Company's coffee crop during 1955-56 brings the total decline in two years to more than 50 per cent. and takes the crop down to the lowest level since 1947-48. This fall has been offset, to some extent, by the higher prices realised on sales but, even so, the price is lower than that got in 1953-54.

The tea crop for the current year is estimated at 1,075,000 lbs. to be harvested at an f.o.b. cost of 130.85 cents per lb. If the crop comes up to expectations, it will be a fresh record for the Company. It is, however, doubtful whether the cost of production can be maintained at the level anticipated, what with the increase in wages to be granted to workers under the compromise terms arrived at between the plantation owners and workers on the award of the Special Tribunal. The 1953-57 season's coffee crop is estimated at 830 tons.

The Company's financial position is quite sound. Even after drawing a sum of Rs. 1.95 lakhs for payment of dividend and writing off the year's net loss, the reserves as on 31st October 1956 stand at Rs. 21.30 lakhs, as against a paid-up capital of Rs. 19.46 lakhs. The provision for taxation amounts to Rs. 5.09 lakhs and the current liabilities aggregate no more than Rs. 3.94 lakhs. The gross block of the value of Rs. 43.87 lakhs, including additions during the year amounting to Rs. 2.74 lakhs, has been written down to Rs. 29.63 lakhs. The current assets amount to Rs. 20.16 lakhs, of which liquid assets alone account for Rs. 9.35 lakhs. The cash balances have, no doubt, declined from Rs. 12.72 lakhs to Rs. 5.82 lakhs, but the total liquid assets provide enough cover for the current liabilities and provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 5-4 *cum-div.* On an *ex-div.* basis, the shares offer a yield of 3.96 per cent. per annum, free of income-tax.

HINDUSTAN LEVER

The Directors of Hindustan Lever Ltd. have recommended the distribution of a final dividend of As. 12 (75 naya paise) per share, free of income-tax, for the year ended 31st December 1956. This is double the dividend indicated by them in the offer for sale in November 1956, when the Company was converted into a public limited one and Unilever Ltd., London, offered for sale a part of their holdings to the Indian public. The increase has been rendered possible by the excellent results of the Company for the year. With the interim dividend of As. 8 per share paid in November, the total distribution for the year comes to Re. 1-4 per share.

The net profit for the year, after charging Rs. 1.20 crores for taxation, amounts to Rs. 1.04 crores, and exceeds the estimate of Rs. 90 lakhs given in the offer for sale. Besides the improvement in results for 1956, another reason for recommending a higher final dividend is that the Directors have no intention of paying an interim dividend in respect of the current year. The Directors have, however, made it clear that, in doing so, they are not committing themselves in any way to a change in the Company's dividend policy for the future.

The annual general meeting of the Company will be held on 4th April 1957.

The Rs. 10 fully paid-up shares of the Company are being placed at Rs. 20-2, which includes the final dividend of As 12. On an *ex-div.* basis, the yield works out to 5.6 per cent. per annum, free of income-tax.

COMPANY FORMATION IN NORTHERN ZONE

Three public companies and 17 private companies with an authorised capital of Rs. 4.15 crores and Rs. 2.51 crores, respectively, were incorporated during the month of January 1957, in the Northern Region consisting of Delhi, Punjab, Rajasthan and Uttar Pradesh. Of these, one public company and two private companies were registered with an authorised capital of more than Rs. 10 lakhs.

One public company, having an authorised capital of Rs. 1 crore and seven private companies, having an authorised capital of Rs. 28.9 lakhs, went into liquidation during the period under review.

The names of nine public companies and 23 private companies with an authorised capital of Rs. 1.14 crores and Rs. 43.30 lakhs, respectively, were struck off the register under section 560 of the Companies Act, 1956.

Prosecutions for default in filing returns with the Registrars were launched against eight public and eight private companies. Of the pending cases, six were disposed of in Delhi and the Punjab. Six companies of the Punjab and Delhi were convicted for their failure to file the statutory documents under the Companies Act, resulting in a total fine of Rs. 775.

CONSULTATION WITH COMPANY LAW ADVISORY COMMISSION

From 1st April 1956, when the Companies Act, 1956, came into force, upto 31st January 1957, 1,353 applications in all were received by the Government from companies on matters requiring consultation with the Company Law Advisory Commission under section 411 of the Act, i.e., appointment or reappointment of managing agents and managing directors, changes in the constitution of managing agents, etc.

Of these, 1,127 applications were referred by the Central Government to the Commission. The Commission's advice was received on 1,119 cases and Government's orders were issued thereon.

The reasons for delay in referring to the Commission the balance of 226 applications, some of which were received only towards the end of January 1957, were mainly (1) the failure on the part of the companies concerned to furnish all necessary documents along with their applications; and (2) certain further inquiries were necessary. In view of objections received from shareholders to the proposals of the companies before reference could be made to the Commission.

The average time taken for disposal of applications is six to seven weeks from their receipt in the Department and the main reason for the delay, wherever it occurs, is due to the companies not furnishing the notices required under section 412(2) and other relevant documents. The desirability of timely submission of relevant documents indicated in the forms set forth in the Companies (Central Government's) General Rules and Forms, 1956, had been emphasised more than once by the Government in the past. In order to minimise such delays the companies are reminded in their own interest to forward all relevant documents along with their applications initially itself.

Points From The Chair

Second Five-year Plan and Bank Lending

"DESPITE legitimate mental reservations as to the timing and correlation of certain sections of the Plan and some doubt, having regard to the country's apparent resources—the significant reduction in her sterling balances has to be taken into account—whether too much is being attempted too quickly, it is generally agreed that the Plan is imaginative and certainly reflects a dynamic outlook and determination on the part of the Government. All people of goodwill will wish the Plan the greatest possible success. In such circumstances of stretched resources it is inevitable that larger calls are made on the banking system of the country. But banks, while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings. While the total of deposits with the banking system in India showed a moderate rise over the year, most recent figures available show that aggregate advances stand at over 70 per cent. of deposits; and, in spite of an unchanged Bank rate, money commands about 1 per cent. per annum more than a year ago. On this showing banks can hardly be accused of underlending, particularly in comparison with the ratio of lendings to deposits in the United Kingdom. Perhaps both reflect exaggerations of opposite policies."

J. K. MICHIE,
National Bank of India Ltd.

State Bank's Tradition

"This seems to be an appropriate moment to refer to the criticism sometimes made about the State Bank, viz., that because it is a State Bank operating in the commercial field it has certain inherent advantages over the other Scheduled banks and that it is using its privileged position to attract business to itself. If it were, indeed, to be the policy of the State Bank to operate flat out as a commercial institution irrespective of the consequences to other Scheduled banks, it would have been quite easy to increase its interest rates still further and I have little doubt that thereby a much larger volume of deposits would have accrued to us, some of it perhaps in the form of fresh deposits, but a larger proportion as diversions from other banks. As a matter of deliberate policy the State Bank has declined to pursue such a step. We cannot forget the historical traditions of this ancient institution. Moreover, although the Statute authorises us to operate as a commercial bank, it enjoins on us due regard to the public interest and we have interpreted this to include our obligations to the banking structure as a whole. It is not our intention to enter into a race, as we could easily do if we were merely concerned with swelling our profits."

H. V. R. IENGAR,
State Bank of India.

U.K.'s Economy

"For Britain, there are, however, other considerations the regard for which points to one overriding conclusion—that if she is to play her appointed role in world affairs she must be economically strong. Perhaps more than at any time in history does economic status measure the influence which any nation can exert on international affairs. And it would surely be defeatist if Britain were, even by implication, to accept any position other than one of leadership. Yet if the past year has demonstrated the need for a healthy national economy as a basis of world influence, it has also emphasised afresh the vulnerable condition Britain has reached in the post-war years. Of this the earlier economic crises had already given evidence. There need, of course, be no regret about this fact, which has arisen partly because of Britain's notable effort in two major wars in defence of freedom and partly by reason of the march of industrialisation throughout the world. It is the latter circumstance, however, which is now of relevance, and it is urgently necessary that regard be paid to it, for it means that the most efficient combination of our native skill and producing techniques must be constantly maintained if we are to ensure the progressive well-being of our country. It needs to be remembered that the large population of these Islands cannot be maintained, far less improved, in their standard of life, save on a basis of a large and successful volume of international trade. Happenings in the Middle East thus underline the need for a revision of our whole attitude towards economic matters."

SIR HAROLD E. YARROW,
Clydesdale and North of Scotland Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

OUCHTERLONY VALLEY ESTATES (1938) LTD. Annual General Meeting, Kozhikode, 16th March 1957. Dividend: 10 per cent. Transfer books remain closed from 6th to 16th March 1957, both days inclusive.

CALCUTTA CHEMICAL CO., LTD. Annual General Meeting, Calcutta, 18th March 1957. Transfer books remain closed from 4th to 18th March 1957, both days inclusive.

MERCARA RUBBERS LTD. Annual General Meeting, Tamaracherry, Pudupadi, P.O., Kerala State, 19th March 1957. Dividend: Re. 1-2 per share (22½ per cent.). Transfer books will remain closed from 12th to 19th March 1957, both days inclusive.

ANGELO BROTHERS LTD. Annual General Meeting, Calcutta, 20th March 1957. Dividend: Rs. 2 per share (includes bonus of As. 12 per share.) Transfer books remain closed from 7th to 20th March 1957, both days inclusive.

ANAPARAI ESTATES LTD. Annual General Meeting, Balehonnur, Mysore, 22nd March 1957. Dividend: As. 8 per share (25 per cent.). Transfer books will remain closed from 14th to 22nd March 1957, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 25th March 1957. Dividend: Rs. 2-10 (17½ per cent.) per share. Transfer books remain closed from 5th to 25th March 1957, both days inclusive.

JAYA SHANKAR MILLS BARSI LTD. Annual General Meeting, Barsi, 25th March 1957. Transfer books will remain closed from 18th March to 15th April 1957, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 28th March 1957. Transfer books will remain closed from 20th to 28th March 1957, both days inclusive.

K.C.P. LTD. Annual General Meeting, Madras, 28th March 1957. Transfer books will remain closed from 22nd to 28th March 1957, both days inclusive.

RAYALASEEMA MILLS LTD. Annual General Meeting, Rayanagar, Adoni, 29th March 1957. Dividend: Rs. 10 per share. Transfer books will remain closed from 22nd March to 5th April 1957, both days inclusive.

EASTERN INVESTMENTS LTD. Annual General Meeting, Bombay, 29th March 1957. Dividend: Rs. 9 per share, payable on or after 5th April 1957. Transfer books will remain closed from 16th to 29th March 1957, both days inclusive.

VOLTAS LTD. Annual General Meeting, Bombay, 29th March 1957. Dividend: 9 per cent. Transfer books will remain closed from 15th to 29th March 1957, both days inclusive.

DUNCAN STRATTON AND CO., LTD. Annual General Meeting, Bombay, 29th March 1957. Transfer books remain closed from 1st to 29th March 1957, both days inclusive.

T. STANES AND CO., LTD. Annual General Meeting, Coimbatore, 29th March 1957. Dividend: As. 12 per share (final). Transfer books will remain closed from 16th to 29th March 1957, both days inclusive.

DHANALAKSHMI MILLS LTD. Annual General Meeting, Tirupur, Coimbatore District, 29th March 1957. Dividend: Rs. 25 per share. Transfer books will remain closed from 16th to 29th March 1957, both days inclusive.

KOHINOOR MILLS CO., LTD. Annual General Meeting, Bombay, 29th March 1957. Dividend: Rs. 12 per share (final), payable on or after 11th April 1957. Transfer books remain closed from 8th to 29th March 1957, both days inclusive.

MARTIN BURN LTD. Annual General Meeting, Calcutta, 29th March 1957. Dividend: Rs. 2-2 per share (includes a cash bonus of As. 10 per share), payable on or after 30th April 1957. Transfer books will remain closed from 22nd to 29th March 1957, both days inclusive.

CHEMICAL INDUSTRIAL AND PHARMACEUTICAL LABORATORIES LTD. Annual General Meeting, Bombay, 29th March 1957. Dividend: Rs. 6 per share. Transfer books will remain closed from 11th to 29th March 1957, both days inclusive.

NEW TERAI ASSOCIATION LTD. Interim dividend of 10 per cent. for the year ended 31st December 1956.

PAHARGOOMIAH TEA ASSOCIATION LTD. Interim dividend of 15 per cent. for the year ended 31st December 1956.

METHONI TEA CO., LTD. Interim dividend of 10 per cent. for the year ended 31st December 1956, payable on 15th March 1957. Transfer books remain closed from 9th to 15th March 1957, both days inclusive.

DARJEELING TEA AND CHINCHONA ASSOCIATION LTD. Interim dividend of 10 per cent. for the year ended 31st December 1956.

CALCUTTA TRAMWAYS CO., LTD. Interim dividend of 3½ per cent. free of income-tax, for the year ended 31st December 1956. Transfer books remain closed from 6th to 19th March 1957, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Second interim dividend of 2 per cent. free of income-tax, for the year ending 31st March 1957, payable on 28th March 1957.

ALUMINIUM INDUSTRIES LTD. Interim dividend of As. 10 (6¼ per cent.) per share, for the year ending 31st March 1957. Transfer books will remain closed from 15th to 17th March 1957, both days inclusive.

CENTRAL SCIENTIFIC SUPPLIES CO., LTD. Interim dividend of As. 4 per share (5 per cent.) for the year ending 31st March 1957. Transfer books will remain closed from 25th March to 1st April 1957, both days inclusive.

RAYALASEEMA MILLS MAINTAIN DIVIDEND

CHANGDEO SUGAR INCREASES CRUSHING CAPACITY

Rayalaseema Mills Ltd.

THE directors of the above Company (Managing Agents: The Rayalaseema Development Co., Adoni) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts have been prepared in conformity with the Companies Act, 1956, which came into force since 1st April 1956.

The directors report that the Company has produced satisfactory results for the year under review. The accounts disclose a net profit of Rs. 5,48,343 (Rs. 4,89,141). Out of this amount the directors have provided Rs. 3,20,000 (Rs. 2,25,000) for income-tax which includes Rs. 50,000 towards previous years. The directors recommend payment of a dividend at 10 (10) per cent. on the ordinary shares, absorbing Rs. 2,23,380 (Rs. 2,23,380). The directors propose to carry forward the balance of Rs. 32,012 (Rs. 29,349).

Depreciation of Rs. 3,16,594 has been written off on buildings, plant and machinery. As against depreciation of 12½ per cent. provided on plant and machinery in the past, considering the present condition of plant and machinery, the directors have written off only 10 per cent. for the year under report.

During the year under review, the cost of cotton was much higher than in the previous year. But due to the slightly better rates that prevailed in the yarn market during the year, the profit position has been maintained. The Government allotted export quota to a small extent and though the Company availed the same, yet, the export market was not favourable.

During the year, eight ring spinning frames of Indian make have been installed. The Indian carding engines are expected to be delivered during the course of the year. All the machinery from Japan has arrived and the erection is in progress. It is hoped that all the new 6,400 spindles will be brought into commission very shortly. The buildings required (reeling shed and waste shed) have already been constructed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,31,750	Block ...	28,43,608
Reserves ...	12,40,000	Stock-in-trade	2,46,269

		Investments	1,56,493
		Cash ...	90,611
Rs.	50,15,907	Rs.	50,15,907

Shree Changdeo Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co., Bombay) submit the audited accounts of the Company for the year ended 30th September 1956.

To conform to the requirements of the Companies Act, 1956, it has been necessary to make changes in the presentation of a number of items and groupings in the balance-sheet and the profit and loss account.

The profit and loss account shows a net profit of Rs. 1,49,424 (Rs. 11,35,615) after providing for full depreciation and development rebate aggregating to Rs. 12,45,935 (Rs. 2,34,246) on the new machinery installed, as allowed by the Indian Income-tax Act. After adding Rs. 4,83,920 (Rs. 38,305) brought forward from the previous year to the net profit, the amount available for appropriation amounts to Rs. 6,33,344 (Rs. 11,73,921). There appears to be no tax liability on account of taxation, as after taking into account the agricultural profit, there will be no assessable income of the Company. The directors therefore recommend the following appropriations:—

Dividend on 120,000 (distinctive Nos. 1 to 120,000) ordinary shares of Rs. 12-8 each fully paid up at Rs. 5 (Rs. 2) per share free of tax absorbing Rs. 6,00,000 (Rs. 2,40,000) and balance carried over to next year's account Rs. 33,344 **(Rs. 4,83,921 after providing Rs. 4,50,000 for income-tax).**

Issue of Bonus Shares.—During the year, the Company received sanction from the Controller of Capital Issues to issue bonus shares after capitalising an amount of Rs. 22,50,000 out of the reserves of the Company. Accordingly during the current year the Company has issued 180,000 ordinary shares of the face value of Rs. 12-8 each to the shareholders whose names were on the Register of Members as on 1st October 1956 in the proportion of three shares for every two shares held by them. These shares will also rank for dividend from the said date.

Crushing.—The season ended on 24th May 1956. In all 19,03,931 (20,60,391) mds. of sugarcane were crushed, producing 73,379 (81,054) bags of sugar; the average recovery being 10.62 (10.85) per cent. The Company's cane area available for crushing was 996 acres yielding in all 1,224,003 mds.; 656,453 mds. came from the Company's scheme members and 23,474 mds. from outside cultivators. The average yield of the Company's farms was 45.10 (46.40) tons per acre.

Cane Scheme.—A scheme for increasing the quantity and improving the quality of sugarcane was launched last year and pumping sets on easy terms were made available to the cultivators. During the year under report, the Company had a total crushable area of 678.27 acres in the scheme, and this was grown by 162 members. At the end of the year, the total number of members in the scheme was 287 and the total area that would be available for crushing in the current season is 1,065 acres expected to yield about 36,000 tons of cane.

Factory Extension.—The year saw a heavy programme of extension, as the directors were extending the crushing capacity of the factory, from 500 to 750-800 tons per day in order to achieve the increased capacity sanctioned by the Government of India. Additional machinery of approximately over Rs. 28,00,000 was purchased.

Sugar Releases.—Sugar releases continued to be controlled, and at the end of the season 22,051 bags were unreleased. Sugar prices have remained steady during the year.

Current Season.—The entire machinery ordered has been installed and it is estimated that the Company will be able to crush more than 100,000 tons of cane and produce anything between 110,000 to 120,000 bags of sugar. The condition of the cane crop is good as the monsoon was satisfactory.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	29,64,916
Reserves ...	37,08,165	Stock-in-trade	22,28,731

		Cash ...	5,781
Rs.	93,86,907	Rs.	93,86,907

Mercara Rubbers, Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Mysore) submit the audited accounts of the Company for the year ended 30th June 1956.

The result of the Company's working for the period under review is a profit of Rs. 1,22,304 (Rs. 1,13,177). Depreciation written off on buildings and machinery, etc., absorbed Rs. 4,284 (Rs. 5,029). The Company's contribution to provident fund amounted to Rs. 1,823 (Rs. 1,411) and debenture interest and income-tax thereon was Rs. 3,650 (Rs. 7,180). Thus the net profit available is Rs. 1,12,542 (Rs. 99,557) to which is added the amount brought forward from last year of Rs. 20,550 (Rs. 4,743) making a total of Rs. 1,33,092 (Rs. 1,04,300). After transferring to reserve for agricultural income-tax Rs. 23,000 (Rs. 20,000) there is a balance of Rs. 1,10,092 (Rs. 84,300). The directors paid a tax-free interim dividend of 7½ per cent. on ordinary shares absorbing Rs. 24,375 (*nil*). They recommend a final dividend of 15 (15) per cent. tax-free, on ordinary shares which will absorb Rs. 48,750 (Rs. 48,750) and 6 per cent. tax-free on preference shares Rs. 15,000 (Rs. 15,000) leaving a balance of Rs. 21,967 (Rs. 20,550) to be carried forward to next year.

The directors consider that the working results of the Company for the year ended 30th June 1956, are satisfactory. The rainfall was heavier than usual and the crop is lower than estimated due to loss in tapping days. Major portion of the rubber trees are old and requires replanting. The directors are drawing up a scheme for replanting during the coming years.

Estate delivery cost per lb.		*Estimated cost for*
1955	1956	1957
69.46 cents	68.80 cents	64.64 cents

The average price realised for 1956 rubber is 149.45 (122.33) cents.

The crop of rubber realised in 1956 was 2,32,178 (2,26,350) lbs. The estimate for 1956-57 is 2,25,000 (2,50,000) lbs.

In October 1956 the Plantation Industrial Tribunal appointed by the Government of Madras, increased the wages of grade I worker in Madras State from Re. 1-4 to Rs. 2-4 and also granted various other amenities. The estates have filed an appeal with the Supreme Court against this award and an interim stay has been granted with an interim fixation of wages at Re. 1-8 for grade I worker. The muzdoors employed in the estates are also agitating for an increase in their wages from Re. 1-4 to the same rate as in Madras, and have adopted a policy of "go slow." They are demanding double the rates for working on Sundays as per the provisions of the Coorg State Plantation Rules and the directors had to stop tapping on Sundays. Due to these facts, the crop for the year 1956-57 is lower than the previous year.

On 7th November, the directors entered into a contract for purchase of half of the Faith Group of estates at cost from the option holder, Mr. M. C. George, an associate of the managing agents, for Rs. 3,90,000. The vendors of the Faith Group of Estates refused to give clear title to the properties and hence the directors thought it was advantageous to cancel the contract with the option holder and accordingly the contract with the option holder was cancelled on 16th June 1956. Time was given for the repayment of the earnest money, to the option holder.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,75,000	Block ...	7,03,247
Reserves ...	2,50,000	Stock of rubber ...	1,62,415
Provision for taxation ...	46,218	Stores and tools, etc.	29,501
Liabilities ...	2,20,422	Debts, deposits and advances ...	1,94,869
Profit and loss account ...	21,967	Cash ...	23,575
Rs.	11,13,607	Rs.	11,13,607

Associated Hotels of India Ltd.

The directors of the above Company (Managing Agents: Oberoi Hotels (India) Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1956.

Trading profits of the Company for the year ended 31st March 1956 are Rs. 18,21,194 (Rs. 12,22,981) and the total turnover of the business is Rs. 71,95,635 (Rs. 64,72,673), an increase of Rs. 7,22,962 in total turnover and Rs. 5,98,213 in the trading profits. After debiting sundry expenses such as "interest on debentures," "auditors' fees," "provident fund contribution," and "managing agents office allowance and commission," and making a provision of Rs. 5,70,000 (Rs. 3,00,000) for taxation (Indian income-tax and Pakistan B.P.T. and income-tax less adjustments due from the Department) the net profit for the year amounts to Rs. 8,51,311, as against Rs. 5,82,993 for the last year. The directors consider the results very satisfactory and these are the record figures since the inception of the Company in 1916. Out of the sum of Rs. 8,83,994 (Rs. 6,24,554) including the amount brought forward from last year Rs. 32,683 (Rs. 41,561), Rs. 1,11,871 (Rs. 1,11,871) have been utilised in the payment of dividend on preference shares during the year and Rs. 2,00,000 (Rs. 2,50,000 to general reserve) transferred to reinstatement and rehabilitation reserve, leaving a balance of Rs. 5,72,123 (Rs. 2,62,638). Out of this balance, a sum of Rs. 88,500 (*nil*) have since been utilised for the payment of ad-interim dividend of 6 per cent. (subject to tax) declared in June 1956. This leaves a balance of Rs. 4,83,622 (Rs. 3,12,682) available for further distribution, which the directors propose to utilise in the following manner:—

A sum of Rs. 1,50,000 (Rs. 1,50,000) to the debenture redemption sinking fund, making the total to the credit of the fund Rs. 12,00,000 and this amount has been utilised in redeeming the debentures. This leaves a balance of Rs. 3,33,622 (Rs. 1,12,683). The directors have already declared an ad-interim dividend of 6 per cent. (subject to tax) utilising a sum of Rs. 88,500. They now recommend that a final dividend of 6 (4) per cent. (subject to tax) be declared, making the total dividend of 12 (4) per cent. (subject to tax) for this year. After providing the amount of Rs. 88,500 already paid towards ad-interim dividend and the amount of Rs. 88,500 (Rs. 80,000) for final ordinary dividend there is a balance of Rs. 2,45,122 (Rs. 32,683) to be carried forward to the next year.

The sum of Rs. 3,00,000, shown in the previous balance-sheet as "depreciation unallocated," has been transferred to "reinstatement and rehabilitation reserve," which along with Rs. 6,50,000, transferred from "general reserves" and Rs. 2,00,000 transferred from profit and loss account make up the total in this accounts to Rs. 11,50,000.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	41,67,000	Block ...	65,70,191
Debentures	30,20,000	Stock of wines and stores	2,52,329
Reserves ...	32,47,883	Other assets	5,78,845
Provision for taxation ...	15,84,451	Debts, deposits and advances ...	30,88,960
Liabilities ...	37,56,681	Investments	46,40,707
Profit and loss account ...	5,72,123	Cash ...	12,17,106
Rs.	1,63,48,138	Rs.	1,63,48,138

United Motors (India) Ltd.

The directors of the above Company (Chairman: Sir Joseph Kay, K.B.E., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The result of the year's working, after providing Rs. 6,000 (*nil*) for taxation is Rs. 99,141 (Rs. 94,400) which together with the amount of Rs. 10,333 (Rs. 38,055) brought forward from last year, makes a total of Rs. 1,09,476 (Rs. 1,32,455). Out of this, the directors recommend a dividend of Rs. 2 (Rs. 2) per share free of income-tax absorbing Rs. 1,02,120 (Rs. 1,02,120) leaving a balance to be carried forward to next year of Rs. 7,356 (Rs. 10,355 after providing Rs. 20,000 for miscellaneous contingencies).

It will be observed from the figures given above that adequate provision has been made for taxation liability on the profits of the Company, for the year ended 31st December 1956. The profits of the Company have shown a progressive decline during the last two financial years. This situation has resulted from the policy adopted by the Government of India towards the automobile industry since the year 1953. At present there are no indications that this policy might change and would result in the import of passenger cars and trucks, in which this Company was dealing. The Company, however, is making moderately good profits on the servicing and repairs of cars and trucks, as well as the sale of Ford spare parts, etc. The directors hope that the Company will continue to maintain the present profit level during the next few years.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,21,200	Block ...	2,29,488
Reserves ...	5,05,419	Stock-in-trade	3,28,596

Liabilities ...	3,38,667	Debts, deposits and advances ...	1,65,404
Profit and loss account ...	7,357	Investments	48,503
		Cash ...	11,09,766
		Deferred revenue expenditure ...	18,228
Rs.	19,05,848	Rs.	19,05,848

Shree Gopal Paper Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Karam Chand Thapar and Bros, Private Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

The production during the period under review was 6,358.23 (6,879.57) tons. Efficiency was kept up on a high level and the Mills continued to manufacture paper of high standard throughout. In regard to supplies of paper to Government, the reduction of half pie per lb. mentioned in the directors' report for the half-year ended 30th June 1955 was restored with effect from 1st April 1956.

The increase in prices of wood pulp and imported machine furnishings continued and as a result of the Suez Canal crisis prices have gone up still further on account of higher freight. This, however, is only a temporary phase and as soon as traffic through the Suez Canal is opened once again prices of machinery, wood pulp and imported machine furnishings, etc., would come down.

On account of the stoppage of traffic through the Suez Canal there was an increase in the price of imported papers which in turn affected the demand for and price of paper of indigenous manufacture.

The modernisation of the existing Mill is progressing fast and is expected to be completed in April 1957 when the daily production would go up to 53-54 tons. In regard to the second phase of our expansion programme which consists of adding of a new Paper Machine and a new Pulp Mill the progress is considered to be satisfactory. The first consignment of machinery against order for the new Paper Machine has already been shipped by the suppliers and other consignments of Paper Machine, Pulp and Stock Preparation Plants are expected to follow regularly hereafter.

In view of the expansion of the Mills as mentioned above the directors were advised and they have decided to install a new and modern Soda Recovery Plant consisting of a Recovery Boiler Dorr-Recaustisizing Unit, an Evaporator and Electrostatic Precipitator. With the installation of this equipment the Mills will be able to recover 90 to 95 per cent. of the caustic soda used in digestion of the raw materials and this would bring down the cost of chemicals per ton of paper considerably. The Soda House Equipment will cost Rs. 38.2 lakhs.

When the scheme was originally drawn up it was expected that the additional electric power needed for the expanded capacity of the Mills would become available from the Bhakra Nangal scheme. Unfortunately this has not been so and consequently it has become necessary to expand the existing Power House of the Mills by installation of a new 6,250 kw. turbine and two steam boilers. This equipment will cost Rs. 35 lakhs.

While orders for some units of the Soda House Equipment and Power House Equipment have already been placed, others are in the course of being placed. Arrangements are being made to ensure that the Soda House Equipment and the Power House Equipment are delivered in time for being put in commission along with the new Paper Machine and the Pulp Mill.

Stationery sales on the whole remained more or less the same as before though there was improvement in the sales of items of fine stationery.

The hydrogenated oil factory continued working regularly though at reduced capacity, and produced 1,747.9 (2,433.9) tons of vanaspati as compared to 1,665.6 tons during the last half-year. With the imposition of a new duty of excise on vegetable oils with effect from 1st of March 1956, the vanaspati as also oil prices registered a sharp increase of about 20 per cent. The oil prices thereafter remained steady but the vanaspati prices were all along subject to wide fluctuation and were often not favourable from the manufacturer's point of view. This erratic trend resulted in restricted purchases of oil and the consequent lower production of vanaspati. The sales during the half-year amounted to 1,432 (2,836.1) tons. The position in this respect was fairly satisfactory.

During the half-year under review the Company made a gross profit of Rs. 29,37,720 (Rs. 32,05,057). After providing for interest on debentures and other interests, managing agents' remuneration, depreciation, contribution to the staff welfare fund, directors' fees, etc., and writing off Rs. 1,67,712 on account of underwriting commission on debentures and debenture issue expenses, the accounts show a net profit of Rs. 19,67,055 (Rs. 22,21,614). A sum of Rs. 9,90,000 (Rs. 9,30,000) has been set aside for income-tax, etc., and Rs. 56,207 (Rs. 33,078) has been provided for by way of development rebate leaving a balance of Rs. 21,45,412 (Rs. 14,93,105) in the profit and loss account including Rs. 12,24,563 (Rs. 2,34,569) brought forward from the last balance sheet. As approved in the general meeting held on 11th July 1956 a sum of Rs. 8,13,360 has already been distributed as dividend on Preference and Ordinary Shares for the half-year ended 31st December 1955, Rs. 2,50,000 has been transferred to general reserves. This leaves a balance of Rs. 10,82,052 (Rs. 14,93,105) to the credit of the profit and loss account. The directors disposed of this amount as follows:

Paid dividend on preference shares for half-year ended 30th June 1956 at 8 (3) per cent. per annum absorbing Rs. 30,000 (Rs. 30,000), paid dividend on ordinary shares for half-year ended 30th June 1956 at 12½ (12½) per cent. per annum absorbing Rs. 7,84,317 (Rs. 7,81,668), transferred to general reserves Rs. 1,50,000 (Rs. 5,00,000) and carried forward Rs. 1,17,735 (Rs. 1,81,437).

Hitherto half-yearly accounts have been issued by the Company to its shareholders, but in the opinion of the board of directors this is no longer practicable in view of the provisions of the Companies Act, 1956, regarding annual general meetings and the accounts to be presented at such meetings. Accordingly yearly accounts will be issued in future, commencing from 1st January 1957. This will not preclude the payment of half-yearly dividends, subject to the Company's results permitting, as the Company's Articles authorise the payment of interim dividends.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	1,32,99,675	Block ...	59,39,021
Debentures	40,00,000	Patent and trade marks	7,110
Reserves ...	67,82,768	Capital jobs at cost ...	5,65,810
Provision for taxation ...	22,23,634	Stock ...	23,15,439
Liabilities ...	72,07,298	Stores ...	81,88,746
Profit and loss account ...	1,17,735	Other assets	2,352
		Debts, deposits and advances ...	69,45,569
		Investments	30,33,871
		Cash ...	46,33,192
Rs.	3,36,31,110	Rs.	3,36,31,110

G. Claridge & Co., Ltd.

The directors of the above Company (Managing Agents: Messrs: W. H. Brady and Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts after charging Rs. 39,162 (Rs. 40,865) for depreciation, shows a net profit of Rs. 2,71,071 (Rs. 3,85,417), before providing for taxation which together with the balance of Rs. 28,308 (Rs. 24,891) brought forward from last year's profit and loss account, gives Rs. 2,99,379 (Rs. 4,10,308), and this amount the directors propose to dispose of as follows:—

To pay a dividend of Rs. 15 (Rs. 16-8) per share on 8,000 shares of the Company, free of income-tax, absorbing Rs. 1,20,000 (Rs. 1,32,000), to transfer to reserve for taxation Rs. 75,000 (Rs. 75,000) and to transfer to provision for gratuity Rs. 75,000 (Rs. 75,000 to gratuity and welfare fund) leaving a balance to be carried forward to next year's account of Rs. 29,379 (Rs. 28,308 after transferring Rs. 1,00,000 to rehabilitation of plant fund).

The decrease in the year's profit is attributable to higher establishment and works costs and certain non-recurring expenses which the Company had to meet. The actual volume of business handled has been maintained and with the new machinery already installed and further machines on order, it is hoped that the turnover this year will be increased.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	4,20,391
Reserves ...	10,27,839	Stock-in-trade	14,19,119
Provision for taxation ...	60,776	Stores and spare parts	33,896
Liabilities ...	8,26,891	Debts deposits and advances ...	6,78,817
Profit and loss account ...	29,379	Investments	500
		Cash ...	1,92,162
Rs.	27,44,885	Rs.	27,44,885

Standard Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1956.

Labour.—Under the Tribunal Award payments to labour were continued and made after the necessary scrutiny of claims. To date Rs. 1,20,359 has been disbursed.

The accounts have been drawn up in conformity with the Companies Act, 1956. The profit and loss account after providing for all charges, and making provision of Rs. 30,029 for taxation and Rs. 1,000 for depreciation shows a profit of Rs. 40,064 (debit of Rs. 74,927) to which is added the balance brought forward from the previous year of Rs. 17,347 (credit of Rs. 67,358) and excess provision for taxation no longer required Rs. 70,000 (*nil*) making a total of Rs. 1,27,411 (credit of Rs. 97,347 after transferring from dividend equalisation reserve Rs. 20,000 and Rs. 84,916 from general reserve). The amount transferred to general reserve absorbs Rs. 30,000 (*nil*) leaving a balance available of Rs. 97,411 (Rs. 97,347). The directors propose to dispose of this as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum without any deduction for income-tax paid by the Company Rs. 80,000 (Rs. 80,000) and by carrying forward Rs. 17,411 (Rs. 17,347).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	1,42,000
Reserves ...	14,01,053	Current assets	96,412
Provision for taxation ...	9,548	Debts, deposits and advances ...	19,089

THE GOKAK MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual General Meeting of Shareholders of The Gokak Mills Limited, will be held at the Registered Office of the Company, Forbes Building, Home Street, Fort, Bombay, on Wednesday the 10th April, 1957, at 5-00 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and Audited Statements of Account for the year ended 31st December, 1956.

(2) To sanction the declaration of a Dividend.

(3) To appoint a Director in place of Mr. B. M. Ghia, who retires under Article No. 97 of the Articles of Association of the Company, but who is eligible for re-appointment.

(4) To appoint a Director in place of Mr. Tricumdas Gordhandas Khattau, who retires under Article No. 97 of the Articles of Association of the Company, but who is eligible for re-appointment and to consider and if thought fit to pass the following Resolution, of which a special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:

Resolution

"Resolved that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Mr. Tricumdas Gordhandas Khattau, who has attained the age of 71 years and who retires under Article No. 97 of the Articles of Association of the Company and he be and is hereby re-appointed a Director of the Company."

(5) To appoint Auditors for the coming year and to fix their remuneration.

The Transfer Books of the Company will remain closed as previously advertised, from the 8th March, 1957, to the 28th March, 1957, both days inclusive.

By Order of the Board,
FORBES FORBES CAMPBELL & CO.
PRIVATE LIMITED,
Managing Agents.

BOMBAY, *28th February*, 1957.

Note.—(1) The Dividend, when sanctioned, will be made payable free of Income-tax at the Chartered Bank, Bombay or Madras, on and after 15th April 1957, to those Shareholders whose names stand on the Register on the 28th March 1957, to whom Dividend Warrants will be posted.

(2) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE GOKAK MILLS LIMITED

Explanatory Statement under Section 173 of the Companies Act, 1956.

This Explanatory Statement is given in respect of the Resolution mentioned in the accompanying Notice.

The Resolution for the re-appointment of Mr. Tricumdas Gordhandas Khattau as a Director of the Company (Item 4) is required to be passed in view of the provisions of Sections 280 and 281 of the Companies Act, 1956, because he has attained the age of 71 years. Mr. Tricumdas Gordhandas Khattau has been a Director of the Company for the past 36 years and his guidance and advice have been much valued by the Board.

By Order of the Board.
FORBES FORBES CAMPBELL & CO.
PRIVATE LTD.,
Managing Agents.

BOMBAY, *28th February* 1957.

(2) To declare a Dividend.

The Transfer Register will be closed from the 21st March to the 28th March, 1957, both days inclusive.

By Order of the Board,
SHAW WALLACE & COMPANY, LTD.,
Managing Agents.

CALCUTTA, *1st March*, 1957.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, *6th March*

The short-term money market experienced markedly stringent conditions during the week under review. Due to a keen shortage of floating funds and greater demand for credit, banks were said to have resorted liberally to borrowing from the Reserve Bank to meet the demand. Consequently, interest rates were firmly held at last week's levels. Inter-bank call money was bid at 3½ per cent. House money at call was on demand at 4 to 4½ per cent. and short-term deposits were offered 4 per cent. for one to six months.

The Reserve Bank's statement for the week ended 1st March 1957 discloses an expansion of Rs. 4.72 crores in notes in circulation and a contraction of Rs. 5.49 crores in notes held in the Banking Department. There are no changes in foreign and rupee securities, but there has been a further drop of Rs. 3.47 crores in balances held abroad in the Banking Department. Deposits of the Central Government have risen by Rs. 1.11 crores, while those of other Governments and banks have declined by Rs. 7.53 crores and Rs. 3.23 crores, respectively. On the assets side, loans and advances other than to Governments disclose a further fall of Rs. 4.53 crores, of which outstanding advances to Scheduled banks against usance bills account for Rs. 2.07 crores. There have been further borrowings by banks against these bills to the tune of Rs. 9.95 crores during the week under review, while repayments have been of the order of Rs. 11.96 crores. There has been a further increase of Rs. 4.61 crores in investments.

The most outstanding features disclosed by the Scheduled banks' statement for the week ended 22nd February 1957 are a sharp rise in deposits of banks, a sizable reduction in borrowings from the Reserve Bank and the State Bank, a fall in advances and bills, for the first time after many weeks, and an improvement in cash resources. Demand deposits are higher by Rs. 10.98 crores, bringing the total rise in two weeks to Rs. 17.85 crores. Borrowings from the Reserve Bank stand reduced by Rs. 7.63 crores and those from the State Bank by Rs. 5.35 crores. Advances have declined by Rs. 1.28 crores, and bills purchased and discounted by Rs. 2.07 crores. There has been a further reduction of Rs. 4.62 crores in investments; cash balances have swelled by Rs. 2.89 crores and money at call and short notice by Rs. 3.38 crores.

The Gilt-edged market ruled dull during the week under review and business was restricted. Barring the support by the Reserve Bank, there was no worthwhile inquiry in the market. State loans in particular were neglected. The undertone, however, remained steady. 3 per cent. 1986 Conversion Loan staged a sharp rise of As. 4 to Rs. 74-9 due to short-covering and proximity of voucher. 3 per cent. 1970-75 gained an anna to Rs. 87-6. 3 per cent. 1966-68 and 1964 were held at Rs. 92-4 and Rs. 94-6, respectively. 3 per cent. 1963-65 were on offer at Rs. 94-3. 3 per cent. 1959-61 was in request at Rs. 97-12. 3 per cent. 1958 was held at Rs. 99-9 and 3 per cent. 1957 at Rs. 99-12 *ex*-voucher, as against Rs. 99-12 *cum*-voucher. 3½ per cent 1962 was unchanged at Rs. 97-13, 3½ per cent. 1961 at Rs. 99-7, 3½ per cent. 1964 at Rs. 98-6, 3½ per cent. 1965 at Rs. 98-3 and 3½ per cent. 1967 at Rs. 98-8.

In the foreign exchange section, the slight hardening tendency of the rupee in terms of the dollar noted last week was reversed this week. Banks, selling rate for ready U.S. dollars rose from Rs. 478½ to Rs. 478¾ per $100 and their buying rate from Rs. 475 to Rs. 475¼ per $100. Banks were sellers of ready Canadian dollars at Rs. 501¾ and buyers at Rs. 495 per $100, as against Rs. 500¼ and Rs. 493¾ per $100, respectively. This is in consonance with the trend of sterling abroad. Thus, in New York, spot sterling receded from $2.79.13/16-2.79.15/16 to $2.79.9/16-2.79.11/16, three months' forward from $2.78.13/16 -2.78.15/16 to $2.78.11/16-2.78.13/16, and transferable sterling from 276.45-276.55 to 276.20-276.30 cents.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *3rd March*

During the week under review, the hides and skins market ruled steady. Supply of important categories of wet salted cow and buff was less as compared with the previous week. Demand for buff was very strong. The country tanners were not as active as in the previous week, while the reverse was the case in regard to Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 340, 2nd grade Rs. 280 and 3rd grade Rs. 245 per score; wet salted buff, 1st grade 1 lb. 14 ozs. and 2nd grade 2 lbs. per rupee; Goat 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 200 to Rs. 225 per 100 pieces; Sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

LINSEED ARRIVALS SCARCE

(Messrs. A. Bradley & Co.)

CALCUTTA, *4th March*

Quiet conditions prevailed in the linseed market throughout the earlier part of the week, but an advance in prices was noted towards the close, owing to an acute shortage of ready goods. Arrivals from the centres were very scarce, and activity was very limited for ready as well as forward deliveries. The oil market was rather dull and some small trading was recorded, following a few local enquiries. Overseas prices were still considerably out of line.

The latest available quotations are: March Rs. 22 and April-May Rs. 21 per maund.

MARGIN AND SPECIAL CLEARING IN SILVER

(From Our Own Correspondent)

BOMBAY, *6th March*

Trading in the bullion market during the week under review was highlighted by a landslide in silver, while gold was relatively more steady with fluctuations confined to a narrow range. This is the second week in succession, in which silver suffered a precipitate decline. Though towards the close there was a fair-sized recovery from the week's lowest level, the loss over the week was Rs. 2-4 (for forward), bringing the aggregate drop for the last two weeks to Rs. 7-6.

The weakness in silver was attributed to heavy selling by nervous bulls, induced by fears of heavy arrivals of Tibetan coins in the coming weeks. These fears were based on reports that large sums had been paid as import duty on these coins. Distress selling by a leading operator, who failed to meet his commitments, gave momentum to the downward trend. At the lower levels, however, there was some support and heavy short-covering which arrested the decline and helped the white metal to stabilise at slightly higher levels.

Gold also suffered a recession early in the week, but the good offtake in the ready section soon imparted strength to the metal. There was, however, no sizable improvement in prices, in the face of weakness of silver.

Forward silver (15th March settlement) sagged from Rs. 179-3 to Rs. 176-11 on 1st March. As the closing rate, at Rs. 176-15, on that day was more than Rs. 7 below the starting rate of Rs. 185 for that settlement, a margin of Rs. 500 per bar was imposed on sellers. Also, as the day's closing rate was more than Rs. 5 below the last clearing rate, special clearing was enforced in both the metals at Rs. 176-12 for silver and Rs. 104-8 for gold. After a recovery to Rs. 177-14 at the end, there was again a recession to Rs. 175-9 on the 4th inst. Heavy short-covering and fresh support at this level lifted the price to Rs. 177-13 before closing at Rs. 176-15.

Business in the next (April) settlement began on the 2nd inst. and the official starting rate was fixed at Rs. 177. Opening at Rs. 177-3, the new settlement declined to Rs. 175-7 before closing today at Rs. 177-1.

Ready silver dropped from Rs. 180-1 to Rs. 175-13, but recovered to touch Rs. 177-13. The closing was, however, lower at Rs. 176-15. The premium of As. 14 which ready commanded over the March settlement early in the week gradually narrowed down before being wiped out today. The floating stocks of silver are placed at 900 bars. The daily average offtake was 15 bars.

Gold for forward delivery (14th March settlement) declined from Rs. 105-14 to Rs. 104-6, but slowly gained ground to Rs. 105-9 at the close.

The official starting rate for April settlement was fixed at Rs. 105-2. Business in this settlement commenced at Rs. 105-1 and the rate advanced to Rs. 105-10 at the close today.

Ready gold finished today at Rs. 105-9, after having gone down from Rs. 105-14 to Rs. 104-5. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was also of the same order.

In New York, silver was unchanged at 91¾ c., as also in London at 80d. for spot and 79¾d. for forward. London gold, however, shot up from 249s. 2½d. to 249s. 7½d.

The following comparative table shows the trend of market during the week under review:

	6-3-57	Highest	Lowest	26-2-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.995 fine Mint)	105 9	105 12	104 5	105 14

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

TANNED COW HIDES ACTIVE

(From Our Own Correspondent)

MADRAS, *4th March*

Shippers of tanned cow hides have been active in the local market. As arrivals are small, prices have remained steady, but the tone is a shade weaker, because U.K. buying is poor and selective. If U.K. enquiries continue to be on the same scale as at present for another fortnight, prices in Madras may come into line with importers ideas.

During the week, there was selective call for cow calf and buff calf in top marks, while other standards were neglected. Demand for buff hides was poor from exporters to both the U.K. and the U.S.A.

There was no change in the tanned skins market. Tanners were trying to get increased prices on goat skins, but importers declined such offers.

The next London auctions will commence on the 18th inst., when 650,000 tanned goat skins and 450,000 sheep skins will be available for sale. As the quantities seem large, prices are likely to decline, unless bidding on Continental account is strong and active.

COTTON FUTURES FIRM

(From Our Own Correspondent)

BOMBAY, *6th March*

The most important feature of trading in the cotton market in the week under review is the commencement of the settlement of the Jarilla March contract. Quite in keeping with the general expectation, the volume of tenders on the first notice day, that is, 1st March, was very small, about 50 bales only, and they are believed to have been in the nature of "feelers" to test whether the cotton tendered would be passed. The market still remained in the grip of bulls and both the contracts scaled new heights, Jarilla March touching Rs. 745 and Vijay April Rs. 854 on the 2nd inst. The spurt in price brought into operation more rigorous margins in respect of the Jarilla March contract.

Meanwhile, there is considerable controversy in the trade over the latest changes in new Jarilla May contract. The change, as was pointed out in our last issue, is to the effect that the Jarilla May delivery will be based on M.G. former Madhya Pradesh Jarilla 25/32". Strong objection has been taken to this clause by a section of the trade which points out that, by making Madhya Pradesh (not the new Madhya Pradesh State but the one as it was before the States Reorganisation) Jarilla 25/32" staple as the basic variety and treating, at the same time, Khandesh, Madhya Bharat and Moglai Jarillas as separate, the Indian Cotton Control Order, which includes under Jarilla all cotton grown in Madhya Pradesh, Madhya Bharat, Khandesh and Moglais, has been clearly violated. This, it is maintained, is a clear discrimination against growers of Madhya Pradesh Jarilla, because cotton of the same quality and staple strength, but grown elsewhere, will be at an advantage when tendered. Another section of the trade holds that such arguments are irrelevant, because the Cotton Control Act becomes operative only when prices reach either the ceiling or the floor, in which case, all Jarillas will be treated according to their respective rules. They further point out that the so-called discrimination against Madhya Pradesh Jarilla is not confined to that variety alone but equally applies to Vijay 27/32". In view of these conflicting views, the Board of the East India Cotton Association and the Forward Markets Commission would do well to explain the significance of the change.

Notwithstanding these uncertainties, the cotton futures market depicted a firm trend. The general expectation that quality cotton, especially Vijay, would be scarce which induced good buying support was mainly responsible for the firmness. Towards the latter part of the week, however, there was a sizable volume of liquidation, prompted by apprehensions that the authorities were taking a serious view of the spurt in price, which resulted in a mild recession. Vijay April which had risen to as high as Rs. 854 came down to Rs. 840 today. The distant deliveries, however, fluctuated in either direction and, towards the close, values dipped.

Opening the week at Rs. 727, Jarilla March advanced to Rs. 745 on the 1st inst. but swiftly came down thereafter to Rs. 714 on the 4th inst. The contract, however, improved subsequently to Rs. 731 today before closing lower at Rs. 728. Jarilla May commenced the week at Rs. 676 and, after rising to Rs. 685 on the 2nd inst. declined to Rs. 664 today. The closing rate was, however, higher at Rs. 671.

Vijay April opened at Rs. 837 and spurted to Rs. 854 on the 2nd inst. Profit-taking sales induced by the high rate brought the contract down to Rs. 828 yesterday. Beginning today's trading at Rs. 842, the contract rose to touch Rs. 848 before closing at Rs. 844-8. Vijay June depicted an easy trend. It opened at Rs. 814 and came down to Rs. 791 on the 4th. Again a recovery was evident and the contract improved to Rs. 798 today at which rate it closed.

The following table gives the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	6-3-57	*High*	*Low*	26-2-57
Jarilla (March) ...	728	745	714	723½
Jarilla (May) ...	671	685½	663	675
Vijay (April) ...	844½	854	828	833½
Vijay (June) ...	798	821	791	800

In the spot section, activity was slow, thanks to the near-ceiling rates prevailing. Mills continued to be reluctant to enter into fresh commitments and only hand-to-mouth purchases were made. Mill demand was limited to ready lots of good quality 0394, Jarillas, Vijay, Surti Co 2 and Co 4. Export inquiry was noted for Bengal *Deshi* and Madhya Bharat Jarilla.

The Joint Chief Controller of Imports has announced that no application will be entertained for the import of raw cotton stapling 1.3/16" and above, as the monetary ceiling fixed for the import of these varieties during the current licensing period had been reached as early as on 14th February. Following this announcement and as no fresh quota for import of American "aid" cotton had yet been announced, import business was at a standstill.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below:

Bengal *Deshi* 730; Berar Jarilla 810; Khandesh 840; Vijay 935; Oomra *Deshi* 800; Moglai 760.

The Karachi cotton futures market continued to rule easy during the week under review, thanks to profit-taking sales and absence of trade support. Although Japan has made larger sterling allocation for purchase of cotton from the sterling area, no sizable inquiry was reported from that country. N.T.R.G. March which stood at Rs. 79-14 last week-end climbed down to Rs. 78-7. May position declined by As. 10 to Rs. 79-12. Spot values of cotton also suffered a break. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing in Karachi:

Sind *Deshi* 87; Punjab *Deshi* 78; 4F Punjab Roller 83-7; S.G. 86-15; L.S.S. Punjab Roller 85-7; S.G. 89-7; NT.R.G. 83-15; S.G. 91-7; 289F Punjab Roller 88-7; S.G. 100-7.

Under the impact of some liquidation in March delivery prior to the first tender day, an easy trend was in evidence in the Alexandria cotton futures market, earlier in the week. High margin deposits payable under current regulations also acted as a damper. The market, however, picked up strength towards the closing sessions, following the general unwillingness on the part of stockists to sell, and values registered a recovery. Exporters would appear to be generally hopeful of the grant of an official discount on sales of cotton to India. The following are the latest available rates—in tallaris per lb.—from Alexandria:

Karnak: March 199.40; May 119.85; July 119.4. *Ashmouni*: April 85.25; June 85.45; August 84.75.

It is reported that the Sudan Gezira Board will commence auction sales of new crop cotton on the 14th and 15th inst. Meanwhile, the Sudan Government has raised the export duty on cotton by 2½d. to 7½d. per lb., obviously to take advantage of the brisk overseas demand for Sudan cotton induced by the difficulty of getting Egyptian cotton.

The Liverpool cotton futures market presented a steady trend during the week. Although there was considedable hedge selling in both the American and the American type futures contracts the offers were absorbed by investment buying. Slack mill demand in the wake of comfortable supply position is expected to result in reduced tenders against the maturing March-April contracts. Egyptian Karnak contract was neglected and nominally unchanged, while Sudan Lambert Seed Contract tended to look down. Mill demand for ready cotton continued to be small, inquiries being generally limited to medium and lower U.S. styles with which other growths are still non-competitive. Some small turnover was reported in Russian, Peruvian, East African and Pakistani Punjab *Deshi*. The latest available rates—in pence per lb.—from Liverpool are given below:

American Cotton One Inch Staple Contract: March-April 26.10; May-June 26.15; July-August 25.78; October-November 25.46. *American Cotton Mixed Growth Contract*: March-April 26.17; May-June 26.32; July-August 25.95; October-November 25.52. *Egyptian Karnak*: March-April 60. *Sudan Lambert*: May-June 43; July-August 42.

Cotton futures values in New York dipped on scattered liquidation and commission house selling on news of favourable rain in the Texas cotton belt and the consequent moderate withdrawals from Soil Bank commitments. The rates, were, however, prevented from falling further by short-covering at lower levels.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	5-3-57	25-2-57	19-2-57
Spot	35.20	35.35	35.25
March	35.05	35.29	35.08
May	35.08	35.25	35.10
July	34.51	34.67	34.42

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, *6th March*

The bearish trend of the yarn market noted in the past four weeks continued unabated during the week under review. The persistent stringency in the money market and the consequent increase in the cost of holding stocks induced large offerings, while demand was at a low ebb. Yarn values, therefore, moved further downward. Dull cones (120) Snia rayon yarn forward delivery, however, proved an exception, in that they ruled firm. The firmness was aided by cornering of large stocks by a few prominent traders, with a view to creating scarcity in supplies and thus rigging up prices. The floating stocks of these varieties were reported to have been depleted and fresh arrivals, it was felt, would not be heavy.

Rayon yarn 150 bright cones for April delivery dropped Rs. 7 to Rs. 642, while 120 dull cones Snia yarn for April delivery forged ahead from Rs. 794 to Rs. 813. In the spot section, 120 Japan declined by half an anna to Rs. 4-4. 150 Japan was quiet at Rs. 4-4. 150 Italy, however, met with some support and improved by nine pies to Rs. 3-11-6. 120 Italy were also favoured six pies higher at Rs. 4-1. Among indigenous yarns, National Rayons 120 bright cones 1st grade was dull at Rs. 3-12, but 150 Bright Cones 1st grade was a shade better at Rs. 3-5-9.

Staple fibre yarn (40×2) for April delivery receded by Rs. 3 to Rs. 635 before finishing higher at Rs. 658. Spot Kohinoors and Centurys shed six pies each to Rs. 3-6-6 and Rs. 3-6, respectively. New Greats eased by three pies to Rs. 3-5. Citys lost a like amount to Rs. 3-5-6. Foreign yarns (80×2), on the other hand, elicited very good attention of operators and registered handsome gains. Paramounts rallied As. 4-6 to Rs. 5-6-6. Fujis moved up by As. 3-9 to Rs. 5-7-6.

Cotton yarns of all counts staged a retreat for want of support, notwithstanding firm advices from raw cotton market. Ten counts Podars fell by As. 5 to Rs. 14-14. Moderns were neglected at Rs. 15-4. Among 20s, Moderns declined by As. 2 to Rs. 19-4. Gokaks shed an anna to Rs. 18-11. Deals in thirty counts were put through at reduced prices, India Uniteds dropping As. 6 to Rs. 21-10 and Edwards As. 4 to Rs. 21-10. Among 40s, Moderns receded by As 8 to Rs. 28. Gokaks slipped by As. 4 to Rs. 27-4. Minaxis lost As. 2 to Rs. 27. Sixty counts Moderns were unaltered at Rs. 62-8, as also Raghuvamshis at Rs. 57-8 and Finlays at Rs. 61. Among 80s, Mahendras decreased by As. 8 to Rs. 74-8. Moderns were quiet at Rs. 77 and Finlays at Rs. 81-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those a week before:

	6-3-1957	26-2-1957
	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—		
120 Dull Cones Snia April	813 0	794 0
120 Jl. Cones April	—	640 0
120 Japan (per lb.)	4 4	4 4½
150 Japan (per lb.)	4 4	4 4
120 Italy (per lb.)	4 1	4 0½
150 Italy (per lb.)	3 11½	3 10½
Staple fibre yarn (per case of 200 lbs.)—		
40 × 2 April	638 0	638 0
40 × 2 New Great (per lb.)	3 5	3 5½
40 × 2 Century (per lb.)	3 6	3 6½
40 × 2 City (per lb.)	3 5½	3 5½
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	14 14	15 4
20s Madura	19 8	19 8
30s Edward	21 10	21 14
40s Gokak	27 4	27 8
60s Raghuvamshi	57 8	57 8
80s Modern	77 0	77 0

OILSEEDS BUOYANT

(From Our Own Correspondent)

BOMBAY, *6th March*

Trading in the oilseeds market during the week under review was very brisk and all sections made handsome gains. The sentiment of operators was influenced chiefly by hopes of a reduction in export duties on castor and linseed oils. There were reports that the U.S. was interested in purchasing Indian castor oil at about 17½ cents. Australia was said to have bought a large quantity of B.S.S. quality oil at £146-5 per ton. Russia was also said to be in the market for oil. There was also heavy bear covering, following reports of bad weather conditions in producing areas.

Castorseeds May contract forged ahead from Rs. 155-12 last week-end to Rs. 163-8 on Monday. At this level, profit-taking set in and the contract receded to Rs. 159-8 yesterday. But today, again, it picked up strength and advanced to Rs. 162-12 before finishing at Rs. 162. In the spot section, Madras rose by Re. 1 to Rs. 34-4. Oil B.S.S. rallied Rs. 2-2 to Rs. 20-10. Commercial quality spurted by Re. 1-11 to Rs. 19-12.

In the groundnut section, support from crushers was sustained and prices moved up. May contract opened at Rs. 165-8 and touched the peak level of Rs. 171-6 yesterday. At higher levels, profit-taking set in and the contract closed lower today at Rs. 169. Over the week, it gained Rs. 4-8. Business in February contract terminated at Rs. 170 on 28th February, total tenders being 4,000 candies. Spot Bold F.A.Q. improved by Re. 1-6 to Rs. 34-14. Groundnut oil ex-mill was done As. 4 higher at Rs. 18-12.

Linseed May contract commenced the week at Rs. 27-15 and, induced by inquiries from shippers, moved up to Rs. 29-13 on the 4th inst. The level was maintained with minor fluctuations. Owing to profit-taking at higher levels, however, it closed today lower at Rs. 29-1. In the spot section, Bold ready advanced by Re. 1-6 to Rs. 29-6. Linseed oil ready was firm at Rs. 16-10.

Cottonseed May contract strengthened from Rs. 98-8 on the opening day of the week to Rs. 101-4 on the 4th inst. It, however, closed lower at Rs. 99 today. Over the week, it was higher by Re. 1-4. Tenders of 1,100 were issued against February delivery.

Among others, *kardi* bold was higher by As. 6 at Rs. 21-6. *Niger* seed Madras hardened by As. 12, to Rs. 29.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	6-3-1957	26-2-1957	20-2-1957

SUGAR FULLY STEADY

(From Our Own Correspondent)

BOMBAY, *6th March*

The sugar market ruled distinctly steady during the fortnight under review. It was reported that the Government of India had decided to allow an additional 50,000 tons of sugar for export. This report, together with firmness in ex-mill quotations for sugar, induced good buying support and prices tended to move up. Arrivals of sugar into the market aggregated 23,700 bags.

Spot large grain sugar advanced by Rs. 2 to Rs. 94-Rs. 93 (inclusive of sales tax) per bag. Medium grain recorded a rise of Re. 1 to Rs. 90-Rs. 92. Small grain was fully maintained at Rs. 88.

In the forward section, *fagan* delivery contract for 'C' grade sugar was firm at Rs. 91-4, although at one time it had receded to Rs. 90-14. The contract is expected to be squared up at about Rs. 90½ to Rs. 91 on the 16th inst. *Vaisakh* delivery strengthened by As. 6 to Rs. 92-6; today, however, it was quoted As. 2 lower.

BLACK PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, *6th March*

Malabar black pepper during the week ended today continued to rule weak, following lack of support from New York and selling pressure from holders and growers.

Alleppey came down to Rs. 520. Garbled at Cochin established a new low at Rs. 90, with few buyers. Calicut remained sellers at Rs. 590. Growers in Travancore-Cochin area are trying to maintain the price line at around Rs. 520 in the hope of getting some business when the steamer for lifting the cargo of about 1,300 tons to Russia is due at Cochin. But most of the exporters having been fully covered, there appears poor chance of any fresh buying on U.S.S.R.'s account. Unless the U.S. puts in sizable buying during the coming week or two, the prices for Malabar black are likely to go lower. And if once the resistance level of Rs. 500 is pierced through, a scramble for selling is most likely, creating crisis in the trade. Owing to the present stringency in the money market, inland consuming demand is reported to be far from satisfactory, in spite of the present low prices.

Spot in New York has dropped down from $0.29 to $0.24, with absence of interest by grinders. Dealers there are reported to be unwilling to do any important replacement buying unless their spot holdings are finding ready buyers in grinders and packers. Although the dock strike in New York has ended, the anticipated congestion at the port prevented any general interest among the grinders who expected a further fall in prices when the strike-bound cargoes begin to move.

European dealers continue to remain small buyers either from Singapore or from India, as they have enough supply at hand in their own ports from the unsold consignments from Singapore on account of one of the Chinese interests. It is said that Europe is overburdened with stock shipped from Singapore during the Suez crisis. Consequently, it is not likely to come in for fresh purchases before the month of May. Sarawak crop is expected to move earlier this year and, if it is so, chances for any good buying either from Europe or from the U.S.A. for Malabar pepper will be meagre.

The majority of the New York dealers are reported to have postponed buying, awaiting new development at Singapore when new crop Sarawak starts coming in.

The present unrest in Indonesia is construed as a bullish factor by some, while others are arguing that there will be more smuggling from Indonesia to Singapore, as the police and the army will be preoccupied in fighting the rebels.

After buying a few parcels of Malabar black for February shipment by named steamer at $0.23, New York dealers are now indicating $0.22½. Some sales of Sarawak black special by the second hands for shipment during June-July are reported at round about 160s. to 165s. per cwt. c. & f. Continental basic ports. There are further sellers but small interest.

March shipment in A.S.T.A. was done at as low as $0.22½, while April-May-June were done at $0.23.

In the delivery section, the market, after showing a perpendicular drop from Rs. 540 to Rs. 505 for March delivery, has showed some technical improvement, but outsiders are conspicuous by their absence.

At the close of the week, however, prices both in A.S.T.A. and delivery sections showed some improvement in sympathy with New York which is reported to have paid $0.23½ for afloat and $0.23 for March shipment. Alleppey and Cochin improved to Rs. 537½ and Rs. 92½, respectively. In A.S.T.A., there are buyers for March at $0.23½ and April-May-June at $0.23¾.

Today's nominal quotations are: Ready Rs. 76 per Bengal maund; March Rs. 531-Rs. 536, April Rs. 536-Rs. 541 and May Rs. 541-Rs. 546 per candy of 5¼ cwts.

MEDIUM DUST TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *28th February*

Approximately 340,000 lbs. were on offer in dust sale "E", which was held on Tuesday, 26th February. The sale opened to a strong general demand which weakened slightly towards the close. Medium dusts were well supported and prices were half to one anna dearer. Commonest kinds remained steady. Better liquoring dusts were irregular and occasionally easier.

The average price realised in dust sale "E" was Rs. 2-0-3 per lb., as compared with Re. 1-11-6 per lb. in the corresponding sale of last year.

London Market—Sale of 25th February 1957.—Good demand. Mediums irregularly 1d. to 2d. lower. Others unchanged.

Sale of 26th February 1957.—1d. to 2d. easier quality plain.

Colombo Market—Sale of 25th February 1957.—Good demand. Better sorts declined 10c., poorer kinds about 20c. lower.

Sale of 26th February 1957.—Limited selection. Best flavoury Dimbula Dickoya types dearer, particularly fannings. Other kinds good demand about 10c. lower.

Calcutta Market—Export.—Better general demand for clean common and teas for price which were one anna to As. 2 dearer. Others irregular and cheaper.

Internal.—17,200 dust. Good general demand for all types at irregularly one anna to As. 1½ lower. Best C.T.C. strongest feature As. 3 to As. 4 dearer. 1,950 leaf. Good general demand, irregularly one anna to As. 1½ dearer.

Export Quota.—There has been a much stronger tendency and business has been done up to 5¼ pies. Market has since been a little quieter and at present there are buyers at 52 pies.

Forthcoming Auctions.—Dust sale "F" will be held on Tuesday, 12th March. The shipments of tea from Cochin during January 1957 amounted to 5.25 million lbs., as compared with 6.68 million lbs. in the corresponding month of 1956, of which those to the U.K. accounted for 2.89 million lbs., having declined from 3.60 million lbs.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 5.—1,400,000 lbs. Fair demand, but prices generally As. 4 to As. 6 lower all round. Fannings weakest feature."

JUTE GOODS DECLINE FURTHER

(From Our Own Correspondent)

CALCUTTA, *5th March*

A further sharp fall in the prices of jute goods was recorded during the week, attributed to the lack of adequate business for export and to the apprehension of a further increase in stocks of finished goods with mills. On the other hand, raw jute gave way only fractionally, and this was due to the decline in arrivals. Of the domestic 1956-57 crop, almost all the good quality jute has already been disposed of. What is left is principally mesta, and this position is duly reflected in the prices for such superior varieties as daissee, white jute, and tossa being higher by Rs. 5 per maund compared to mesta.

The news that burlap consumption in the United States for the month of January 1957 rose to 75 million yards from 72 million yards in the previous month was noted in trade circles with satisfaction. Some business was done with shippers. The trade mission sponsored by the American Government is in the country now, and it would consolidate the increase in Indo-American trade noticeable during recent months. Imports from the U.S. have increased and are mainly capital goods. However, the same is not the case with regard to exports to the United States. Trade circles here hoped that the mission would pay adequate attention to this matter, and felt that the U.S. could consume more burlap by restricting the use of paper bags and doing away with the bulk handling methods. If only this were done, balancing of trade would be easier, and the blanket provision in the current licensing period permitting soft currency licence holders to import 50 per cent. of the face value of their licences from the dollar area could be continued. For, this provision followed importers' representation to the effect that imports from the dollar area were easily arranged for and that there was not only advantage in regard to price but delivery time was considerably favourable in comparison. It was noted that the increasing tempo of farms' output in the U.S. required more packaging materials, and that hessian offered considerable scope, if only America paid more attention to the even flow of trade in both ways. When the mission visits Calcutta, it is to be hoped that efforts will be made to stress on it that the U.S. can be of considerable indirect economic assistance to India by lifting more hessian, the quality and price of which are competitive in world markets. Time was when, due to shortage in hessian, substitutes had to be invented and recourse was also taken to bulk handling methods. In the changed situation, the U.S. could afford to give up these, with advantage both to it and India.

Jute-growing districts in both the Bengals experienced light rain during the week, and this has helped cultivators to get the land ready for sowing. In view of the high prices for paddy, the fear that the land under jute in Pakistan for the coming season would be less is entertained. The carryover in Pakistan, it is expected, would amount to a fair quantity, in view of the decline in exports, particularly to India. This factor is causing a decline in prices in Narayanganj, and cultivators are likely to be influenced by this factor also to pay more attention to paddy. Shipping space has become difficult, and there is congestion in the ports of Chalna and Chittagong. This has led to cancellation of some earlier orders. In view of the poor export demand, it is felt that the withdrawal of the licence fee of Re. 1 per acre and of restrictions in jute-growing in Pakistan will not be adequate incentives for growers to sow more area under jute.

Early in the week, 40" 10 oz. hessian ready was steady at Rs. 40-10, but B. twills fell from Rs. 109 to Rs. 108-4. The decision of the *fatka* operators that sellers should deposit some amount with the committee, if they sold the above two constructions below certain minima, prevented prices from falling further for a while only. The *fatka* market was closed on Wednesday last on account of *Sivarathri*. Export business was lacking and on Wednesday, B. twills sagged to Rs. 107-6 and 40" 10 oz. hessian to Rs. 40-6. On Thursday, prices dipped following manipulations in *fatka* for due date. B. twills being priced at Rs. 106-4 and hessian 40" 10 oz. at Rs. 40. Bears continued to sell and on Friday the week's lowest levels for the above two constructions were touched at Rs. 105-8 and Rs. 39-2, respectively. At these rates, business was not passing and by the week-end some recovery was in evidence. B. twills were then quoted at Rs. 106-10 and 40" 10 oz. hessian at Rs. 39-8. The recovery was sustained yesterday also with a further rise to Rs. 107-8 and Rs. 39-12, respectively.

Prices of raw jute declined by about As. 8. In view of the rapid decline in prices of jute goods, mills were not inclined to support raw jute at current levels. Sellers also were not prepared to discount rates further. As a result, business could not take place. Current quotations for the different varieties of raw jute are given below, comparative quotations for the previous week being given in brackets:

	Middles	*Bottoms*
Pakistani:	Rs.	Rs.
Northern	36-0 (same)	33-0 (same)

FAIR DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *5th March*

Fair demand was in evidence in the tea sales for export held yesterday. The price of clean black pekoe was firm at Rs. 2-2 to Rs. 2-3, while that of plain B.P. recorded a gain of one anna at Re. 1-15. The slight decline in prices in last week's sales in Mincing Lane, despite the presence of a fair general demand, was attributed to stocks in the United Kingdom having risen by 8 million lbs. to 140.8 million lbs. for the week ended 22nd February. Tea afloat was also higher at 70.1 million lbs., as against 62.3 million lbs. Such a trend in London was a factor which acted against any impressive rise in prices in the sales held here yesterday. On the other hand, reports of sales held in Colombo on 26th February indicated fair activity by buyers on behalf of importers especially in the United States, Britain and South Africa. In the sales in Cochin also on the same day, prompt demand led to a fractional rise in prices.

The trade and the market derived considerable satisfaction in the figures published in New Delhi relating to tea exports in the year 1956.

Another news noted with satisfaction in both trade and industry circles was the agreement between the employers and employees of the plantation industry in South India, according to which the workers had given up their claim for higher wages prior to the date of the award of the Special Tribunal. That is the revised wages agreed in the compromise will take effect from 25th October 1956, instead of with retrospective effect as from 24th March 1952 in terms of the Award.

Steady conditions were in evidence during last week's sales for domestic consumption following active demand. Prices for selected lots were better. The total quantity of dusts catalogued was 17,009 chests. In keen competition, prices of the bright liquoring C.T.C. Assams with improving quality rose by As. 3 to As. 4, but the rest of this category was featureless. The attractive powdery teas from the other descriptions received fair support, and prices registered a dearer tendency. However, all other kinds including Dooars, Orthodox Assams and commons gave way by As. 1¼. The rates were: best Assam C.T.C. Rs. 2-10 to Rs. 2-15, medium Assam C.T.C. Rs. 2-1 to Rs. 2-3, medium Assam grainy dust Re. 1-12-6 to Re. 1-13, and medium Dooars Re. 1-12.

Leaf offerings totalled 2,049 chests. Prices firmed up following good demand.

Prices during yesterday's export auctions improved fractionally. There was strong and active demand for the offerings totalling 63,000 chests. Teas for price were supported at rates an anna to As. 2 higher than last week. They were thus the strongest feature of the sales. Medium B.Ps rose by 1 to 1 anna, and low mediums and clean commons by an anna to As. 2. There was keen competition in stylish whole leaf grades and a similar trend was also in evidence in B.Ps. On the other hand, a slightly easier tendency was in evidence in fannings. Prices of the better C.T.C. grades lost by As. 2, while those lots from this category representing poor quality and being semi-residue received greater attention, lifting prices up. The quotations were: best C.T.C. Assam B.P. Rs. 2-4 (nominal), clean black pekoe Rs. 2-2 to Rs. 2-3, medium Assam B.P. Rs. 2, and plain B.P. Re. 1-15.

Export quota changed hands at 60 pies, as against 47 pies last week.

COPPER AND TIN MARKED DOWN

(From Our Own Correspondent)

CALCUTTA, *5th March*

Fair demand was in evidence in the metal market during the week under review. However, in accord with world trend, copper and tin prices continued to give way, while zinc and lead recorded additions. In consonance with the fall in the price for electrolytic copper in the London Metal Exchange, a further downward revision of £10 per ton to £240 was announced by the Rhodesian Selection Trust Group of Companies. This was soon followed by American smelters, including the Anaconda Company, reducing their selling prices by 2 cents to 32 cents a lb. Rumours that America was likely to reduce copper production was reflected in prices in the London and New York markets gaining a little, but the earlier loss could not be fully recovered, as there had been no indication that demand would increase. There were also reports that custom smelters in the United States would revise their selling prices to 30 cents a lb. In Calcutta, electrolytic copper fell from Rs. 183 to Rs. 181, but good business was put through. Consumers demand at lower level was fair. Scrap and fine refined copper also changed hands in sizable quantities.

In tin, the price gave way from Rs. 558 to Rs. 530, although even the lower level was several points above the replacement cost. However, the decline occurred, following fresh arrivals and the consequent improvement in the ready supply position. From Rs. 74-8, electrolytic zinc gained to Rs. 76-8 following higher demand. The supply position nevertheless was satisfactory, but the tightness in Bombay was noted by stockists. More business was put through during this week, as consumers desired to have some stocks, in view of apprehensions of the continuance of the uptrend. The price of virgin lead, at Rs. 80, was Re. 1 higher than the opening quotation. The rise was not attributed to keen business, but to Government enquiries for fair tonnages.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, *4th March*

Easy conditions prevailed in the foodgrain market during the week, owing to Government's efforts to check the rising trend in prices by arranging increased sales through fair-price shops. Wheat prices recorded a fall of As. 4 to Rs. 16-2 per maund for average quality and to Rs. 17-2 for farm produce, while wholesale *khati* was quoted at Rs. 15-11. Stockists are now reported to be anxious to part with their stocks before the advent of the new season which will begin by the middle of April. Local stocks have run down by 10 *khaties* during the week to 20 *khaties* (estimated on Monday). Local supply position has improved, as fair-price shops which number over a dozen here are now selling at an average of 40 maunds each daily, as against 30 maunds sold last week. Imports of wheat and rice to the country have been expedited and the Government is determined to create a good reserve.

Rice ruled quiet at unchanged price levels, in the absence of new driving forces and comfortable supply position. Gram eased fractionally on good crop prospects from east U.P. and Punjab, although local stock ran down to 5 *khaties*, as against 10 *khaties* a year before. Maize and *bajra* eased further, due to falling seasonal demand from consumers, and prices of barley and *bejhar* were also depressed in sympathy. The latest available rates are: Gram local Rs. 12-15; Punjab produce Rs. 13-4; maize Rs. 13-8; *bajra* Rs. 13-10; barley Rs. 13-10; *bejhar* Rs. 13-10 per maund.

With the beginning of arrivals of new crop into some markets in east U.P., peas recorded a downward trend in prices and was now quoted at Rs. 13 per maund for *dara* quality and at Rs. 15-8 for white. Local stock was almost *nil* and arrivals were expected by the middle of the month. *Arhar* also sagged, due to want of trade enquiry. Other pulses were also depressed. *Arhar* was done at Rs. 12-6, *urd* at Rs. 18 to Rs. 20, *moong* at Rs. 14 to Rs. 16 and *masoor* at Rs. 16 per maund.

Barring *urd* futures which recorded a slight fall during the week, pulses futures ruled quietly steady. On Monday they were quoted at: Peas *jeth* Rs. 10-4-4½ and farm *jeth* Rs. 10-7-1½; *Arhar jeth* Rs. 10-11-4½; *urd baisakh* Rs. 18-4-6.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *4th March*

Sugar prices ruled quietly steady at almost unchanged price levels during the week under review. It is reported that the major part of 50,000 tons of sugar allowed for export previously has already been booked and, besides a deal of 8,000 tons for export to Ceylon, another 40,000 tons are considered for export. An overall increase in production over last year is predicted, as supplies of cane to factories is very adequate, due to fall in *gur* prices. The production up to 15th February in the current season was 10.03 lakh tons, as against 8.95 lakh tons in the corresponding period last year and stocks on this date stood at 9.81 lakh tons, as against 8.61 lakh tons a year before. The prevailing mill delivery prices of sugar are: Jaswant Rs. 28-12, Simbhauli Rs. 28-13; Mawana Rs. 28 to Rs. 28-12; Daurala Rs. 29 to Rs. 29-12; Amroha Rs. 28-3; Bijnore Rs. 28-3; Mansoorpur Rs. 29 to Rs. 30; Rampur Rs. 31-6; retail Rs. 30-10 per maund.

The *khandsari* market was further depressed during the week, due to increasing stocks and slack trade demand. Prices were Rs. 22 to Rs. 25 per maund, according to quality.

After an improvement in the earlier part of the week due to good offtake by consuming centres of Gujerat and Rajasthan, ready *gur* prices declined towards the week-end. Having touched the highest at Rs. 10-9 per maund for best quality, ready *gur* is now quoted Rs. 10 per maund. Arrivals average 3,000 maunds daily and local stock is put at 90,000 maunds, as against 81,000 maunds at this time last year. Total arrivals here from the beginning of the season are put at 413,000 maunds and only one-third of the cane crop still remains with the producer.

After an early appreciable advance, future *gur* prices eased towards the week-end, following issue of forward *fagan* delivery contracts. *Gur fagan* was quoted today at Rs. 9-14-9 and *baisakh* at Rs. 10-11, as against the opening rates of Rs. 10-0-9 and Rs. 10-12-3 and highest during the week at Rs. 10-6 and Rs. 11-1-6, respectively.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. F.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. ‡) Clive Mills have paid dividend at As. 10-4 on bonus shares for the year 1955. * Including bonus. (k. Investments. (l Made up of an interim dividend of Re. 1-12 per share on 1 20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (n) For seven months ended 31st March 1956. ‡ New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954. K—Fort William Jute Co. has sub-divided ordinary shares of Rs. 10 into shares of Re. 1-0 each.

SURVEY

(*Concluded from page 459*)

For the first time in peace-time history, the United Kingdom was ousted last year from its position of the premier shipbuilding nation of the world by Japan. According to Lloyd's Register of Shipping's annual summary, Japanese output of merchant ships in 1956, which aggregated 1,746,429 gross tons, was 26 per cent. of world production. Britain produced 1,383,387 tons, that is, 90,550 tons less than 1955, and accounted for only 20.7 per cent. of world tonnage; this is Britain's lowest peace-time figure on record. Total world output in 1956 was of the order of 6,673,701 gross tons, which was greater than the previous year's figure by 1,356,959 tons, and a peace-time record since 1919. The outstanding feature of the increase in production outside the U.K. was the rise in output in Japan by 917,699

THE GATHERING STORM

SUBSIDY ON MILK CUT

From Our Own Correspondent

LONDON, *23rd February*

THE world knows that the Government Party lost a significant by-election in a London Borough last week. It was the first by-election lost by any Government Party since the war. It was thought that the Government might take fright at the result and amend some of its legislation that appeared to antagonise the working class vote. Indeed, this week-end the Prime Minister and a number of his colleagues are meeting in special conference to consider their economic and domestic policy. But, between the two events, the Government appears to have thrown down a challenge not only to the Opposition but to just that section of their working class supporters which turned against them at the by-election.

LONDON LETTER

The Government's dilemma is real. On the one hand, while the danger of inflation continues to threaten, it alternates with a deflation which at present seems the more likely evil. At the same time, Government expenditure continues to rise, the hopes of diminishing taxation recede, the Government is criticised for a fiscal policy which gives little encouragement to enterprise, its own supporters accuse it of maintaining the extravagance of the Welfare State without the satisfaction of any political benefits from it and on the other hand, anything it attempts to do to satisfy its supporters and to reduce Government expenditure is almost bound to be interpreted as anti-social. There is the added dilemma that any measures which reduce taxation but raise the cost of living will be taken as an excuse for higher wage demands, thus being both inflationary and weakening the country's competitive power in exports. In the light of all this how can this week's Government challenge to the Opposition be interpreted? Has it decided that in a possible deflationary situation a bold Conservative policy will not create new wage demands, since employers would merely reply by dismissals? Yet such has not been the reaction of the Trade Unions—they have frankly told the Government that wage restraint is at an end and that it will henceforth be everyone for himself.

It must be appreciated that the Government's reduction of the cost of the social services is in line with the policy the Conservatives have been pursuing since they came into office, and which began with the cutting of the food subsidies. The difference lies in the background that, whereas in the early days, wage demands followed cost increases and were made in the inflationary spiral, today the increase in indirect taxes—which is what these reductions in the social services really amount to—cannot easily be followed by industry with price increases to meet higher wage claims. A battle is bound to ensue.

Challenge to Opposition

What has incensed the Opposition particularly, is that the Chancellor of the Exchequer should have made his proposals on the Expenditure Votes instead of on the Budget in six weeks' time. To them it appears like a deliberate challenge. Moreover, a challenge thrown down immediately after Labour had won a by-election fought largely on the issue of Government social policy. But the Chancellor presented his problem in this way: Britain's primary occupation is to restore international faith in sterling and to strengthen her balance of payments. This she can only do if she keeps Government expenditure within bounds so as not to perpetuate inflation. In line with this policy, the Government is already seeking substantial cuts in defence expenditure and parallel cuts must be made in civil expenditure. But civil expenditure for the year ahead looks like being up by about 4 per cent. by a figure well in excess of £100 million. This increase is principally in the social services where both education and the National Health Service will cost more money. Therefore, the beneficiaries from these services must increase their contribution. Milk for children is subsidised to the extent of about 80 per cent. of its cost, the Government proposes to more than double its price and reduce the subsidy to about 50 per cent. of its cost. School meals carry a subsidy of about 60 per cent. of their cost, the Government proposes to raise their price and to reduce the subsidy again to 50 per cent. of their cost. Finally, the National Health Services, originally financed about one-fifth from the contributions of employees and about four-fifths by the Exchequer, are now being financed only about one-seventeenth by the employee; the Government proposes to double the employees' contribution, so that it will amount to about one-ninth of the total expenditure. All these measures are estimated to recoup for the Government about £57 million or something like half of the estimated excess of civil expenditure. Of course, read by themselves, all these measures appear reasonable, but the context in which they have been introduced and the manner in which the Chancellor of the Exchequer has put them over have caused a political storm the limits of whose effect on the peaceful development of the country's economy it is difficult to foresee.

Kicks and Carrots

LONDON, *2nd March*

The Government, having lost two important by-elections and suffered a reduced majority at several others, has declared that it is going to pursue its policies regardless of their unpopularity to put the nation on a sounder economic basis. It believes that, when its term of office ends in three years' time, it will be able to satisfy the electorate of its good stewardship. The publication of the latest figures for the trend of industrial production stresses the need for a policy that will prevent deflation becoming depression. It is clear that last year represented a downward turn from the peak of the prolonged post-war curve. 1955 was the last year of inflation and 1956 the first in which financial measures to control the economy succeeded, but succeeded only at the expense of a cut in production. In the first month of this calendar year, the decline continued, the index being about 1 per cent. less than a year ago.

It si, however, significant that the details of the production curve reveal that capital goods industries have been expanding at the expense of the consumer goods industries and it is this change in industrial emphasis that the Chancellor of the Exchequer is to be called upon to intensify in his coming budget. The problem is how it is to be done. The Chancellor is getting plenty of advice about incentives and the Government is known to be anxious to provide incentives, particularly to the managerial ranks of industry and commerce. If they choose as their carrot a reduction in tax, the risk they take is that they will increase consumable incomes and may, therefore, defeat their objective of increasing investment. What they would like to do, and what the further-sighted leaders of industry would like to see them do, is to increase incomes and investment together, but the usual devices of fiscal policy are not easily adapted to this.

It is for this reason that economists have explored the idea of replacing a tax on income by a tax on expenditure. Of course, most fiscal systems have developed by imposing indirect taxes which are, of course, taxes on expenditure, and then at a late stage imposing a direct tax on income. The development of the Welfare State in all countries has accentuated the idea of the direct tax on the principle that such taxes bear most on those most able to pay. Carried to an extreme, the tax on expenditure could mean that the pauper and the wealthy miser paid exactly the same amount of tax, but, in practice, in a nation such as the United Kingdom, which does not consist substantially of either paupers or wealthy misers, this would be a theoretical objection. The idea of an expenditure tax must be seen in the context of full employment and the need to increase investment.

It has already been rumoured that the Government will now grope its way towards some shift in fiscal policy by introducing a sales tax, a sort of flat rate tax on all goods sold, such a tax gradually to replace the present purchase tax. Thus, by a combination of reduced taxation on the middle and higher incomes, and an increased taxation on expenditure, the Government may hope to apply both the incentive to enterprise and the incentive to saving, of which they feel so direly in need.—*All Rights Reserved.*

MARKET GOSSIP

(*Concluded from page* 455)

and the Bombay Oilseeds and Oils Exchange Ltd. held in the city yesterday. At this meeting, the Indian traders in oils drew the attention of the mission to the increase in freight rates following the Suez crisis and the variations in export duties, which, they urged, should be met by the U.S. buyers. Although the U.S. trade mission did not give any categorical reply to the points raised, it assured the members that it would bear them in mind.

The U.S., it may be noted here, is the biggest market for Indian castor oil. Thus, out of about 779,000 cwts. of oil exported by India during 1955-56, the U.S. alone accounted for as much as 410,000 cwts., representing over 50 per cent. of the total. Castor oil is one of our chief dollar earners, the value of exports in the aforesaid year being nearly Rs. 2 crores, out of the aggregate value of Rs. 4 crores. The exports of Indian castor oil in 1955-56 were no doubt higher by more than 100,000 cwts. as compared with the previous year, but they were still lower than the quantity exported in 1952-53, namely, about 505,000 cwts.

• • • •

Contrary to the general impression, the tendency to hoard precious metals is not a feature peculiar to India alone. In fact, it is said to be growing at such an alarmist rate in the case of gold in many countries of the world that it is feared there might be very little gold left to be added to the countries' official reserves. According to Messrs. Samuel Montagu, the well-known bullion house of London, the world production of gold, outside the Soviet Union, in 1956 amounted to the equivalent of $980 million. Of this, about $350 million was absorbed by private buyers and $105 million was estimated to have been bought for use in industry and fine arts. The large quantity which was supposed to have gone into private hoards was bought by Continental and Eastern markets, where the traditional lure for the yellow metal is still strong. It is, however, presumed that a part of the quantity bought by private hoards would have found its way to official stocks also. Estimates of the quantity which thus disappear into private hoards vary widely. Thus, in 1955, Messrs. Samuel Montagu placed this at 9 million ozs., while according to another estimate, it was a little over 4.5 million ozs.

Besides the world production mentioned above, the U.S.S.R. also sold a substantial quantity of gold in world markets during 1956. Even so, it is estimated that the accretion to official reserves could not have been more than $750 million. At the close of 1955, official world holdings of gold (excluding those held by the I.M.F. and the Bank for International Settlements) amounted to $35,000 million. The addition during 1956 meant an increase of just over 2 per cent. Though it is higher than that noted in the early years of the present decade, the average annual addition to official holdings for the period 1950-56 is hardly more than 1 per cent. per annum.

Such a rate of increase in official gold holdings is very much less than the pace of expansion of money supply in the leading commercial countries of the world during the past five or six years. Thus, during this period, in the U.S. and Canada, money supply has grown by 3 to 4 per cent. per annum, while in the sterling area countries, the increase has been of the order of about 5 per cent. In European countries, it is about 9 per cent., in Latin America about 16 per cent. and in other countries 12 per cent. Though there is no legal obligation on the part of the Governments to maintain a fixed relationship between the country's money supply and official holdings of gold and other external assets, there is still a tendency to maintain a certain balance between the two. But, this relationship is being maintained not by increasing the gold holdings in consonance with the expansion in money supply, but by raising the holdings of foreign currencies. Before the war, the gold holdings formed as much as 90 per cent. of the external reserves of the commercial countries of the world, but today the proportion is about 65 per cent. and it is feared that the pace of decline in gold holdings will grow. The effect of this trend can, however, be offset only by an increase in the world price of gold. The increase in external reserves in the form of currency holdings, particularly in U.S. dollars, may not seem to be a serious matter now, because of the faith in the U.S. dollar. If, however, the dollar were to lose its present position as world currency, the paucity of gold to be added to the reserves will offer a serious problem for the Governments concerned.

EUROPEAN COAL OUTPUT

According to recent estimates by the Economic Commission for Europe, the biggest rise in hard coal output in 1956, as compared with 1955, took place in Western Germany. The increase there was 3.7 million tons, it is provisionally calculated. West Germany was followed by Poland—up 1.5 million tons—and Czechoslovakia, up 1.4 million tons.

Coal output in Western Germany and in Poland has steadily increased year by year since the end of the war, but while Western Germany is still some way from the 1937 level; Poland has surpassed it by one-third. The only other major coal-producing country to increase its output in 1956 was the U.K. where an additional 0.4 million tons was extracted. In all other countries output either remained stationary or fell slightly.

Commenting on its provisional figure for European hard coal production for the year 1956 as a whole, the E.C.E. Secretariat points out that the increase of 6 million tons over 1956—1 per cent. failed to meet the increased demand of Europe. Imports of coal from the U.S. to 38.4 million metric tons, an increase of lion tons over the 1955 total. The 1956 i at an all-time peak: the previous rec million tons in 1947.

COMMUNITY DEVELOPMENT

VOLTAIRE once said that he would rather be a discontented man than a contented pig. All progress stems from a certain discontentment with gaps in established knowledge or evils in prevailing state of affairs. However, real and enduring progress, as distinguished from abrupt, violent and subversive transformation, can take place only when that discontentment is allowed to express itself in positive and constructive tasks. In community development projects, this country is engaged in precisely such an experiment. The programme is designed to rouse the rural sections from the age-old torpor which has stood so long in the way of any lasting improvement and to turn the people into a self-reliant and industrious community. The authorities rightly set great store by this programme which, in the period of the first Five-year Plan, absorbed Rs. 70 crores and covered nearly 70 million of the country's rural population. A more extensive programme forms part of the second Plan under which a sum of Rs. 200 crores has been allotted to community development. A programme of this magnitude embracing almost every conceivable aspect of rural economy obviously requires for its success a great deal of organisation and effort, designed to evoke the willing co-operation of the people for whose benefit it is intended. It is to these problems that the Estimates Committee, in its two reports (Parts III and IV) on the Ministry of Community Development, turns its searchlight of enquiry and makes some very pertinent suggestions for the speedier implementation of the programme and for obtaining better results.

There are, as is now well known, two phases of community development—the national extension service and the more intensive community development programme. A block which, on an average, represents some 100 villages with a population of 60,000 to 70,000, spread over an area of 150 to 170 sq. miles, is first taken up for national extension service for a period of three years. Thereafter, it is converted into a community development block for another period of three years for purposes of more intensive development. During the first Five-year Plan, 1,200 blocks were taken up, of which 900 blocks (covering 90,000 villages and a population of 59.4 million) were under national extension service and 300 blocks (covering 32,957 villages and a population of 20.4 million) were under the "community development" programme. Thus, by the end of the first Plan, development programmes had been initiated in areas which comprise about 123,000 villages and a population of about 80 million. During the second Plan, the entire country is expected to be served by national extension service and about 40 per cent. of the national extension blocks will be converted into community development blocks. There will be about 3,800 national extension blocks and about 1,120 will be transferred into community development blocks. The whole programme is being implemented by a four-tier administrative machinery—the village level worker, the block development officer, the Development Commissioner at the State level and the Community Projects Administration at the Centre.

Clearly, no aspect of rural economy is more important than the agricultural. Appropriately enough, the Estimates Committee has emphasised the need for improving agricultural practices. It recognises that crop yields could be improved by 10 to 20 per cent. through the use of improved varieties of seeds. It would appear that the intention of the authorities is to see that in all the 5,000 blocks which will be created all over the country by the end of the second Plan, there is a seed multiplication farm of at least 25 acres in each block area. The Committee, while appreciating the progress made in the use of improved seeds, feels that full advantage does not appear to have been taken of increasing the agricultural produce by providing improved varieties of seeds in all the areas covered by the development programme. It attributes this deficiency to the fact that adequate arrangements have not so far been made for multiplying the improved varieties of seed to keep pace with the increasing demand. It has suggested the construction of suitable godowns for the storage of seeds in villages or blocks.

No less important than improved varieties of seeds is the use of manures. Since full advantage of chemical fertilisers can be derived only when the farmers know the precise dose of fertilisers for each crop and the method and time of applying it, the Committee has suggested the need for demonstrating the use of chemical fertilisers to the rural population. It has also emphasised that research in fertilisers should be intensified with a view to ascertaining the different varieties of fertilisers required for different types of soil. In this connection, it says: "The Committee understand that, in the U.S., it had been found that indiscriminate use of chemical fertilisers had in several cases resulted in bumper crops for the first few years after which the land was exhausted and the yield of crops dropped suddenly." It suggests that this point should be carefully examined and adequate and authentic data obtained from the U.S. and other countries with a view to avoiding similar mistakes here. Other suggestions made by the Committee are: (1) The burning of cowdung should be discouraged and arrangements made for the supply of alternative fuel to the villagers. (2) The composting of farm refuse and cattle-shed wastes should be given more attention. (3) Construction of community cattle-sheds on the outskirts of the villages should be encouraged. (4) The training of village blacksmiths and carpenters in the repairs and maintenance of improved implements should be simultaneously arranged in training-*cum*-production centres in each block.

The dependence of the average Indian peasant on one or two crops has always been one of the defects of Indian economy. It is wise for the farmer to see that he does not put all his eggs in one basket. This implies that, in addition to the main crops that he cultivates, he should grow one or more supplementary minor crops. The Committee has rightly stressed the need for enabling the farmers to grow such additional crops. The expansion and production of fruits and vegetables, according to the Committee, should receive priority in all community development and national extension service blocks. With this end in view, it has made a number of notable suggestions. In the first place, co-operative nurseries should be set up for the supply of reliable seedlings, grafts and seeds. Secondly, standard plans for setting up kitchen gardens should be prepared and supplied to those who want to set up such gardens. Thirdly, arrangements must be made for the supply of proper manure and garden implements to the farmers at reasonable prices. Finally, training in preservation of fruits and vegetables and in preparation of jams, jellies and preserves should be given in the production-*cum*-training centres. It is to be hoped that the Government, in consultation with the State Agricultural Departments and the Food Technological Research Institute at Mysore, will devise measures designed to implement the suggestions made by the Committee.

The other aspects of rural agriculture which have received the Committee's attention are: minor irrigation facilities, reclamation of land and soil conservation. It is certainly unnecessary to deal extensively with the importance of these aspects, considering that they form the

basis of all sound agricultural planning. Presumably, the Committee has been led to stress these obvious factors because it has found that they have not received the attention they deserve. Thus, the Committee remarks that the progress in minor irrigation has not been "satisfactory," especially in arid areas where the need for such irrigation is greater. It has, therefore, recommended that a proper survey should be made in order to assess the requirements in each project area and to provide the basis for a programme of minor irrigation facilities. It has recommended measures such as construction, repair and deepening of surface wells, construction and repair of tanks and canals, construction of tube-wells and direct pumping from perennial streams and rivers. Again, it has suggested that, in areas where heavy erosion has thrown out of cultivation immense areas on banks of rivers or in hilly tracts where erosion is a very serious problem, special efforts should be made to conserve the land adversely affected in regard to its fertility. It adds: "Incidentally, it may be mentioned that, where landless labourers are available in abundance, they may be willing to reclaim such eroded land if it was allowed to them free and assistance was given to them by way of cattle, seed, manure, etc., for bringing under cultivation the land which could have otherwise been lost." Concentrated efforts, as the Committee itself suggests, should be made in this direction.

As regards credit facilities, the Committee has drawn attention to the recommendation of the Rural Credit Survey Committee that loans should be given for creditworthy purposes, as distinguished from creditworthy persons. It emphasises that both *taccavi* and co-operative credit should be expanded as far as possible and the State Governments should ensure that there is no duplication in the advance of loans from co-operative and Government sources. The Committee feels that there is "great scope" for popularising the small savings movement in villages and suggests that "this item may be included as one of the aims of the community development programme." After stressing the need for setting up advisory committees for giving the necessary impetus to savings movement, the Committee has recalled some of the observations made by the Development Commissioners' Conference, held at Nainital in 1956. The Conference then suggested: (1) With a view to encouraging the people to save more, the proceeds of small savings should be used, as far as possible, for development work locally and on what people generally consider their own projects. (2) Maximum co-ordination is needed among various Government agencies interested in small savings movement in rural areas, such as nationalised insurance, State Bank of India and Post Office Savings Bank. The Committee, after drawing attention to these suggestions, has recommended that the results of the small savings movement should be included in the annual reports of the Community Projects Administration.

Foreign assistance, and in particular, assistance from the U.S., plays a notable part in the community development programme. Under the Technical Co-operation Programme Agreement, signed by the two countries in 1952, the U.S. has agreed to provide financial and technical assistance for speeding up development projects in India. During the four years ended 1955-56, funds have been provided to the tune of $11.3 million. The equipment imported under the Agreement includes jeeps, trucks, water tanker, cameras and mobile cinema vans, tractors, road rollers, irrigation and well-boring machinery, precision grinding machines and several types of health equipment. The equipment manufactured in India is not imported under the dollar aid. As regards the distribution of imported equipment to various States, the Ministry informed the Committee that the "policy in that respect was somewhat erratic in the beginning, but by trial and error, they had arrived at some kind of an arrangement which was comparatively satisfactory." The Committee has, however, suggested that an expert committee should go into the matter from a broader angle and recommend "rationalised distribution of equipment according to the needs of the areas concerned." It would appear that the terms of the agreement make it somewhat difficult for the Government to utilise it for purchasing all the necessary equipment. Accordingly, the Committee has suggested that the "feasibility of revising the agreement suitably by negotiation might also be examined." It is to be hoped that the American authorities will co-operate with the Government of India in any move designed to make the agreement more beneficial to this country.

Finally, it is necessary to draw attention to some general criticisms made by the Estimates Committee. These criticisms relate to the absence of adequate records of achievement under the community development programme and to the failure to examine actual achievements in the light of earlier targets. This does not mean that records are not being maintained or that no attempt has been made to keep progress under expert scrutiny. But the criticism has been made that the progress made in the direction of implementing the suggestions of the Programme Evaluation Organisation is not satisfactory. Perpetual self-introspection and constant examination should form part of the activities of the Ministry of Community Development.

One way of ensuring that progress is rapid as well as continuous is to set realistic targets and see that they are reached, and if possible exceeded, and in the event of failure, examine why such failure has occurred. This will also enable the authorities to apply an important criterion for assessing the success of the programme, laid down by the Development Commissioners' Conference, namely, economy and efficiency in the operation of extension service and avoidance of duplication, delay and overlapping of administration. We do not, however, attach any special importance to maintenance of elaborate records and piles upon piles of statistics. For the essence of community development is not something that can be assessed quantitatively or expressed graphically. At the same time, this consideration should not be made an excuse for administrative complacency or slackness in objective evaluation of results.

STATE GOVERNMENT EMPLOYEES

IN recent months, there has been considerable unrest in the ranks of State Government employees. The Governments, faced as they are with the need for finding fresh resources for implementing the second Plan, have been understandably unwilling to commit themselves too far in the direction of meeting the legitimate demands of their employees. But it is somewhat disconcerting to note that the employees of some, at least, of the State Governments have carried on their agitation for better pay scales and allowances with a certain extravagant show of "grievance" psychology, somewhat unbecoming of Government servants. This is not to suggest that their grievances are imaginary or their demands err on the high side. Only, it is as wrong as it is unnecessary for them to don the mantle of trade union agitators. This must rob their cause of the public sympathy which it so richly deserves.

It must, however, be recognised that the whole issue of State Government employees' emoluments is a complicated one. In the first place, State Governments' revenues are by no means very elastic. Besides, their functions have been growing steadily of late. No longer are they merely a revenue-collecting authority charged only with the responsibility of the maintenance of law and order. Secondly, the linguistic reorganisation of the States and the consequent integration of new areas have posed a new problem of unification of pay scales. It will be some time before this problem is completely or satisfactorily solved. But these factors cannot obviously make the Governments blind to the justice of the cause of their employees. Nor can the Governments plead that, because they are non-profit making organisations, they have some supernatural right to deny living wages to their servants. After all, Governments do compel private employers to pay decent wages to their employees irrespective of whether they make a profit or not. Incidentally, if State Governments' experience in dealing with the demands of their employees induces in them a more sympathetic attitude towards the corresponding difficulties of private employers, the recent agitation on the part of State Government employees may have done some unexpected good. But the point that deserves to be noted is that it is up to the State Governments to see that they have a contented staff. If this means that the Centre should assist the States—this seems to have been realised by the Central Government—such aid should be ungrudgingly given.

It is gratifying to note that some State Governments have already agreed to meet, at least partially, the demands of their employees. The Mysore Government announced that, with effect from 1st January 1957, its employees would get a little more than what they were getting prior to the formation of the new State. Further, the Government seems to have already taken in hand measures to equalise the pay scales in the old Mysore State and the new areas which have been integrated with it. The Government of Madras has announced its decision to pay all its employees drawing up to Rs. 300 per month a sum of Rs. 12 more per month as dearness allowance than what they were paid prior to 1st November 1956. This decision is expected to take effect from 1st April 1957. The total cost of this concession will be about Rs. 4.5 crores per annum. An official Press note avers that the "Government have had under consideration for some time past the representation made by the State Government servants for increase in dearness allowance." It adds: "An official decision in regard to the limit of the increase in dearness allowance can be taken only after the recommendations of the Finance Commission in regard to additional resources that may be made available to this Government are known." It is emphasised that the "Government servants will appreciate the concession now given and take this as a proof of the Government's earnest efforts to meet their legitimate grievances."

The Kerala Government has sanctioned certain *ad hoc* increases in the emoluments of its low-paid employees. Those getting a pay not exceeding Rs. 60 per month will get an increase of Rs. 7, while those with a pay between Rs. 60 and Rs. 200 will get Rs. 5. The minimum rate of dearness allowance in the State will now be Rs. 32 per month. This concession, it is computed, will involve an additional expenditure of Rs. 1.12 crores.

The reaction of the employees of the State Governments concerned to these concessions is not known. But it is believed that the employees of the Madras Government have not been very enthusiastic over the concessions now granted. Presumably, the employees of several other States are awaiting the result of the agitation in Madras and other South Indian States before they start pressing their demand for higher salaries and allowances.

There is one aspect of the demand of the State Government employees which deserves wider notice than it has received so far. The employees have demanded that their pay scales and dearness allowance rates should be the same as those of the Central Government. By and large, this is a just demand. It certainly does not stand to reason that State Government servants in district centres or State capitals should get lower emoluments than Central Government servants, especially when the nature of their work is not in any way inferior in quality, to, or less in quantum than, the work of the Central Government employees. Living costs are, if anything, as oppressive for one class of men as for the other. The only extenuating explanation for differential treatment which could be advanced is that Central Government servants are subject to inter-State transfers. But it is not true that all Central Government servants become, in practice, subject to such transfers. Actually, this argument applies only to Central Government servants in the higher rungs of the official ladder. In any case, as against this consideration, it seems to be generally acknowledged that the chances of promotion are both more numerous and quicker for Central Government servants than for State Government servants. The whole subject is, therefore, a fit one for extended and impartial investigation which should reveal the measures that are necessary in order to eliminate some of the more glaring disparities in the emoluments of these two classes of Government servants.

There is a special reason which ought to make the Central and State Governments take a particularly sympathetic view of the State Government servants' legitimate grievances. It must be remembered that the work of State Government servants brings them into more intimate contact with the day-to-day life of the people than the duties of Central Government servants. Clearly, if State Government employees continue to harbour a sense of grievance, it is bound to affect adversely the quality of their work and may even prove infectious to the people with whom they have to deal. From this point of view, the aim of the State Governments ought to be to possess an able and devoted staff, contented with their lot and willing to undertake new and more onerous responsibilities. The compelling considerations of economy, however, set a limit to what the State Governments can pay to their employees. It is thus necessary to marry the twin considerations of budgetary economy and loyal staff. This cannot be done through thoughtless extension of depa[rt]ments and proliferation of offices. The best [w]ay is to see that a minimum staff is main[tai]ned and maintained in reasonable comfort—[a]nd it is at all times prepared to give its best [s]ervice to the Government.

SHARE MARKET STILL MARKING TIME

SILVER IMPORTS—COTTON FROM EGYPT

PROCEEDINGS OF SCINDIA MEETING

WEDNESDAY, 5 P.M.

ALTHOUGH there has been no notable setback on the stock exchange, this week, and the recovery, which commenced last week, has been generally maintained, it is still true to say that trading continues to be dull and turnover restricted. This hesitancy is to be attributed partly to the absence of fresh incentives and partly—and only partly—to pre-budget caution. Isolated counters continue to enjoy preference, just as there are the usually neglected scrips. Perhaps, it will be only in May when the regular budget will be presented before the new Parliament that any marked change in sentiment, either way, is likely to take place.

MARKET GOSSIP

The present Parliament will meet on 18th inst. for a brief session which is expected to last till 28th inst. The budget, which, according to general belief, will be a tame affair, devoid of new tax proposals, will be presented on Tuesday, 19th inst., on which date the Railway budget will also be presented. The main purpose of the session is to sanction funds for the interim period until the new Parliament is able to consider the budget. Nevertheless, the Union Finance Minister, Mr. T. T. Krishnamachari, is expected to give the usual overall review of revenue and expenditure. Perhaps, this would give some clue to the shape of budgetary things to come before the new Parliament.

It will, of course, be futile to expect any startling changes in the Government's economic policy even when the present Parliament is replaced by the new. It is now abundantly clear that the Congress will be returned to power. Indeed, the only question is the magnitude of its majority. But it will have sufficient backing to carry through all its measures. In the sphere of the States, too, all present indications point to a comfortable majority for the Congress, except perhaps in Kerala. Only, it is to be hoped that the Congress, for the very reason that its position is invincible, will be encouraged to take realistic decisions, free from ideological bias.

* * * *

The bullion market has staged a recovery this week, after a period of well-nigh continuous recession in the previous four weeks which brought the values down from the peak levels seen after 1951. Thus, forward silver, which touched a high of Rs. 186-14, and forward gold Rs. 109 on 2nd February, retreated to a low of Rs. 175-9 and Rs. 104-6 early this month. But this recession has only been partially regained this week, when forward silver closed today at Rs. 178-15 and gold at Rs. 106-6. The recovery has been mainly due to covering by sellers, who strove very hard to hammer down the market in the previous weeks. The bulls had earlier placed considerable faith in the consideration that the import of silver coins from Tibet would stop during winter. But they were caught unawares when large quantities of coins were brought to Calcutta. The bears seized this opportunity to turn the market in their favour. Though they succeeded to a large extent in their attempt, they have not been able to carry out their intentions fully, as the imports seem to have dwindled this week and they have taken care to cover their positions.

The bulls have, no doubt, the upper hand now, as witness the carry-forward charges against them at As. 4 to As. 5 in silver, as compared with As. 6 against the bears at the end of the last settlement. Nevertheless, they seem to be somewhat hesitant. They have reason to be so, because, now that winter is almost at an end, an easier flow of Tibetan coins cannot be ruled out.

It is estimated that since May last such imports of coins against export of goods aggregated approximately 20,000 bars valued at Rs. 9 to Rs. 10 crores. It is also stated that a wide range of goods is exported to Tibet, including art silk and cement. It is common knowledge that Tibet cannot absorb such a large quantity of imports and they must have, therefore, found markets elsewhere beyond the Tibetan frontiers. Market circles feel that this indirect way of encouraging exports *via* Tibet can be justified more on political grounds than on economic necessity. The essential commodities exported against imports of silver would have found a market in the area concerned even otherwise—that is, without imports of silver.

Be that as it may, this barter arrangement has resulted in a large supply of silver to the Indian market. It is noteworthy that the entire supply has been absorbed by India, which shows that there is a large and potential demand for silver in this country. This is further illustrated by the fact that, notwithstanding such large imports, silver touched this year peak levels not seen since 1951. Even today, it stands Rs. 3 higher than a year ago.

The slow progress of the small savings scheme, it is learnt, has led the Union Finance Ministry to examine a scheme for attracting deposits from small savers. Under this scheme, the Scheduled banks may be asked to accept fixed deposits for fairly long periods at 4½ per cent. interest. The depositor will have the facility of overdraft, and he can borrow, on the security of his deposit, up to 90 per cent. of the sum deposited. The interest on these loans would be ½ per cent. more than the rate allowed for deposits. The Government, it is stated, will allow Scheduled banks, accepting such long-term deposits, to employ those funds in making advances to business borrowers for periods up to four years. The banks can also earn interest at the rate of 6 per cent. on such medium-term loans. The new scheme, it is further stated, is intended to obviate the need for increasing the return under the existing small savings schemes, as a consequence of the Reserve Bank's new rate of 4 per cent. for discounting Government securities and of the Scheduled banks' new rate of 6 per cent. for short-term advances against first class securities.

The scheme, which is still under the scrutiny of the Government, has probably been taken up by it on its own initiative. Enquiries in banking circles show that banks are not aware of it, nor have they been sounded on it by the Government. It is likely that the authorities may forward the proposal, after finalising it, to banks. It, however, remains to be seen whether the banks will receive the scheme with any marked enthusiasm. For it is stated that it is not worthwhile for banks to work the scheme on a margin of ½ per cent. which will not even cover their expenses. Unless banks have a clear margin of 1¼ per cent., it will not be profitable for them to adopt it. Moreover, when they are lending at 6 per cent. on short-term advances against first class securities, it is not clear why they should make medium-term advances at 5 per cent. against deposits, although the borrowers' deposits are as good as any other first class security.

In the absence of any further details, it is not possible to examine the scheme in any elaborate manner. One thing is, however, clear. The Government, in implementing the scheme, is being forced to take an erroneous step in order to correct the earlier erroneous step of keeping the *de jure* Bank rate unchanged, while raising the *de facto* Bank rate. Moreover, the Government seems to have recognised its own folly, though it may not be willing to own it, in that it has not decided to raise straightaway the rates of interest on its own small savings scheme. It has probably chosen the medium of banks to carry out its intentions and incidentally pass on the burden of small savings scheme to banks.

* * * *

Cotton circles are eagerly awaiting the outcome of the meeting of the Cotton Buyers' Association and the Egyptian trade delegation to be held in the city tomorrow. Informal discussions have already been held by the Indian mill and trade interests with the members of the delegation. Although nothing concrete has emerged out of these discussions, the delegation would appear to be quite anxious to see that India augments its purchases of Egyptian cotton. In fact, it is reported to have expressed the Government of Egypt's willingness to give India a price discount of 7 to 7½ per cent. on purchases of cotton. It is also said to have agreed to accept payment in rupees.

While the aforesaid gesture of Egypt to offer India relief by way of price discount is welcome, it must be emphasised that the discount is too small to attract Indian mill interest in Egyptian cotton. For the currently prevailing prices of this cotton are very high. What is more, the cotton is of long-staple variety which is used mainly in the manufacture of superfine categories of piecegoods, in contrast to American and Sudan cottons which generally go into the production of medium and fine counts. The demand, particularly overseas, for the former categories of cloth is not encouraging, in view of high production cost and heavy excise duty of As. 4 per square yard. Thanks to these factors, imports of Egyptian cotton into India have slackened considerably of late. The aggregate quantity of Egyptian cotton actually imported into India during the period 1st September 1956 to 16th February 1957 was not more than 25,947 bales (of 400 lbs. each), as compared with 119,784 bales in the corresponding period of the previous season, or a drop of nearly 80 per cent.

The poor offtake of Egyptian cotton by India thus is bound to persist so long as the prices continue to rule high. With the recent fall in cotton prices at Alexandria and the discount of 7 to 7½ per cent. which the Government of Egypt is now willing to grant, one may no doubt expect an improvement in Indian purchases of Egyptian cotton. But the improvement will only be negligible. If Egypt is really anxious to push its sale of cotton to India, it must come forward with a more liberal discount than what is now offered, if not the full discount of 20 to 25 per cent. which some Indian cotton interests are asking. Such a course will, while helping India to secure a larger supply of long-staple cotton at a reasonable price, be of much advantage to Egypt itself. Raw cotton, it will be recalled, is one of Egypt's staple exports and, to the extent shipments of this commodity are augmented, the foreign exchange position of Egypt, which has deteriorated since the freezing of its sterling balances by the U.K., will improve.

* * * *

This year's annual general meeting of the Scindia Steam Navigation Co., Ltd., held in Bombay today, proved no less interesting than in the past. There was the usual volley of questions, some of which were relevant and some, perhaps, very much beside the point. Nevertheless, the Chairman, Mr. Dharamsey M. Khatau, justly well-known for his unperturbable temper, conducted the meeting with his usual charm. Before we record the proceedings of the meeting, it is, perhaps, well that we should refer to some salient features of the working of the Company to which Mr. Khatau himself drew the shareholders' attention. Mr. Khatau was naturally happy to report that his expectations of satisfactory earnings had proved correct. The Company's gross earnings of freight have shown an increase of 18 per cent. over the previous year. The improved results have enabled the management to pay, as is now well known, a dividend of Re. 1 per share and also to augment the Company's reserves and surpluses which now show a net increase of Rs. 107 lakhs over the corresponding figure at the end of the previous year. Mr. Khatau said: "These additions have enabled the Company to strengthen its finances and these will be necessary for the modernisation and expansion of our fleet."

The reform of the Company Law has had its effect on the connection between the Scindias and the Eastern Shipping Corporation Ltd., of which they were the managing agents. Since a company which has managing agents of its own cannot continue as the managing agents of another company, the managing agency of the Eastern Shipping Corporation Ltd. has now been terminated. The Government has, however, agreed to take over the shares held by Scindias in the Corporation amounting to Rs. 1.43 crore, at par. Mr. Khatau struck a felicitous note when he recalled how it was always a great pleasure for the Scindia management to work in co-operation with the Corporation. He hoped that these cordial relations would continue. The Company has, however, not been able to sever its connection with the Hindustan Shipyard Private Limited, in which it holds investments to the tune of Rs. 1.04 crore. Mr. Khatau said that the Company would continue its efforts to induce the Government to take over its interests in the Visakhapatnam shipyard.

It is gratifying to note from the Chairman's references to the operations of Scindia ships in overseas routes that there has been some welcome expansion in these operations. The working of the Company's Indo-U.K.-Continent service has been better this year, thanks to the fact that four additional ships were employed in this route and better rates of freight also prevailed. The Company has placed two ships on the Indo-Russian route with effect from July 1956. This has been made possible because of the bilateral clause for shipping services in the trade agreement between the two countries. The Company has also started, with effect from August 1956 a direct service from India to the West Coast of Africa *via* Mauritius. This is stated to be the first direct service to these countries from major Indian ports except Calcutta. It would appear that the Company has applied again for membership of the Conferences governing the trade from the U.K. to Colombo and from Colombo to the U.K. and the Continent. It is to be hoped that the Company will be admitted to these Conferences, considering that the claim for admission is based on historical, geographical and economic ties which this country has with its neighbours.

The Company has now a fleet of 41 vessels amounting to 215,435 tons gross. Out of these, 14 big cargo ships, three small cargo ships and four small passenger-*cum*-cargo ships of 101,372 tons gross serve the coastal and adjacent services. The remaining 20 vessels of 114,063 tons gross are employed in overseas services. Of particular interest to the shareholders should be Mr. Khatau's references to the future tonnage programme of the Company. The deliveries of four ships under construction in West Germany, he said, have been delayed owing to prolonged labour strike at the shipbuilding yard. It would, however, appear that all the ships will be delivered before August next. The two ships under construction at Visakhapatnam will be delivered towards the end of the year. All these ships will be employed on the overseas services. Since it has become more than necessary now to have faster ships, the management has taken care to see that at least a small beginning is made in the direction of possessing faster vessels. They have already placed with the Lubeck yard in West Germany an order for two 9,300 d.w.t. cargo vessels with a speed of 17 knots; one of them is expected to be delivered in 1959 and the other in 1960.

Finally, the Chairman attempted an assessment of the prospects for the Company in the immediate future. Although the expenditure side continues to show an upward trend, the freight increases made last year in the coastal and overseas trade will remain effective for the whole of the year 1956-57. Further, during the 1956-57 period, the Company's freight income will be augmented by the employment of two additional ships, *Jalavijaya* and *Jalavishnu*, which will have been in commission for the whole year. Two more ships, *Jaladhan* and *Jaladhruv*, will have operated for eight months each. The Chairman said: "We should, therefore, be able to show satisfactory results for the coming year also." It is to be hoped that the Chairman's prediction will again turn out to be as true next year as his last year's prediction proved itself this year.

The shareholders of the Company who attended the meeting were almost unanimous in pressing the demand for issue of bonus shares. They pointed out that a sum of over Rs. 1.98 crore, which was in the share premium account, belonged to them and should be returned to them in the form of bonus scrips. Mr. Dhirajlal Maganlal, one of the shareholders, said that the shares of the Company were now quoted at Rs. 20-5, whereas they were worth Rs. 25 per share. (The break-up value of the shares was, however, over Rs. 40 per share.) This gap, he said, should be made up by issuing bonus shares. He suggested that the bonus should be issued at the rate of at least one share for every four shares, on which basis the amount required to be capitalised was Rs. 2.35 crores. This could be made up by utilising the entire share premium account and a part

EQUITIES SLUGGISH

UNDERTONE FAIRLY STEADY

(From Our Own Correspondents)

BOMBAY, *13th March*

THE share market remained sluggish during the week under review, with the closing prices slightly lower than the week's best levels touched early in the week. The operators seemed to be in no mood to extend their commitments, in view of the settlement on Friday and the *Holi* holidays. They also seemed to await the forthcoming interim Budget on the 19th inst., though it was known that the Budget would be a "lame duck." In the absence of any depressing factors, the undertone of the market remained fairly steady, but the volume of business was low.

In the steel section, Tata Ordinaries staged an early spurt from Rs. 175-4 to Rs. 177-4, but relapsed to Rs. 174-4 yesterday. The closing was, however, a shade better at Rs. 175. Indian Irons gained from Rs. 20-7½ to Rs. 20-13, but slipped back to Rs. 20-2½ before closing at Rs. 20-5.

Textile shares moved in a narrow groove and variations over the week were small. Bombay Dyeings gained ground early in the week from Rs. 577-8 to Rs. 587-8. The improvement was not, however, sustained in the face of profit-taking which took them down to Rs. 572-8 yesterday. At the close, there was again a mild recovery to Rs. 575-10. Centurys remained steady, though the trend was erratic. After moving between Rs. 473 and Rs. 482-4, the share finished at Rs. 475, a gain of Re. 1 over the week. After an early hardening from Rs. 334 to Rs. 336, Kohinoors softened to Rs. 331-8 at the close. Central Indias were marked down by Rs. 3 to Rs. 114, while Elphinstones provided a feature with a rise of Rs. 18 to Rs. 66. Finlays showed no change at Rs. 307, while Indu Ordinaries shed As. 1½ to Rs. 10-10½. Indore Malwas were down by Rs. 3-12 at Rs. 136-4 and New Greats by Rs. 2 at Rs. 228. Model Mills dropped Re. 1-4 to Rs. 178-12. New Kaiser-I-Hinds were marked up from Rs. 105-10 *ex-div.* to Rs. 107-8 *ex-div.* Shree Niwas Cottons were unchanged on balance at Rs. 183-12. Simplex moved between Rs. 175-8 and Rs. 179 and closed at Rs. 176, with no change over the week. Standards were lifted up from Rs. 440 to Rs. 443-12. Svadeshis were steady at Rs. 222-8, while Tata Mills were featureless at Rs. 50-4. Colabas changed hands Rs. 4-8 higher at Rs. 65, but Vishnus were done Re. 1-4 lower at Rs. 140.

Bank shares were extremely dull, with business restricted to a small scale. Barodas disclosed no change at Rs. 104, while Centrals were As. 8 down at Rs. 53-12. The new shares also shed As. 8 to Rs. 57. Bank of Indias were maintained on balance at Rs. 141. Punjab Nationals were a shade down at Rs. 53-8. United Commercials were stagnant at Rs. 57. Dena Banks were done at Rs. 38-4 *ex-div.*, as against Rs. 42 *cum-div.* quoted a week ago.

The insurance section was devoid of any interest and no worthwhile business was reported done. New Indias were dull at Rs. 41-4 and Dena Insurance changed hands a rupee lower at Rs. 37-12.

Electricity shares came in for selling. Tata Powers moved down by Rs. 11-4 to Rs. 1,208-12. Tata Hydros fell by Re. 1-8 to Rs. 121. Ahmedabad Electrics gave way from Rs. 100-15 to Rs. 100-5. Bombay Suburbans were neglected at Rs. 111-4, as also Surat Electrics at Rs. 113-2. Andhra Valleys, however, elicited special attention of some operators and picked up Rs. 6-4 to Rs. 1,206-4.

Trading in the miscellaneous section was at a low ebb and values moved generally downward. Engineering shares were depressed. Alcock Ashdowns fell by Rs. 8-12 to Rs. 271-4. Premier Constructions dropped Rs. 4 to Rs. 174. Tata Locomotives receded by Rs. 3-8 to Rs. 144. Larsen and Toubros declined by As. 4 to Rs. 15-14. Mining shares lacked support. B.B. Petrols shed nine pies to Rs. 2-10½. Indian Coppers lost three pies to Rs. 3-6¼. Shivrajpurs were quite at Rs. 92-8. Among sugar shares, Phaltans declined by Rs. 2-8 to Rs. 138. Belapurs were done As. 8 lower at Rs. 230. Walchandnagars, however, elicited some scattered support and rose by As. 10 to Rs. 278-5. Deals in cement shares were put through at reduced rates, A.C.Cs receding by Re. 1-12 to Rs. 166-4 and Orissa Cements by an anna to Rs. 13-2. Digvijays, on the other hand, were somewhat favoured at Rs. 147, as against Rs. 146-4. Premier Automobiles encountered selling and suffered a loss of Re. 1-8 to Rs. 98-8. Hindustan Motors changed hands at Rs. 7-9¼, as against Rs. 7-9. Great Easterns eased by As. 2 to Rs. 18-12. India Steamships slided down by As. 2 to Rs. 10-7. Scindias, however, met with buying enquiries and hardened by As. 5-6 to Rs. 20-15.

Among other miscellaneous industrials, National Rayons were on offer Re. 1-8 lower at Rs. 235. Tata Chemicals slided back from Rs. 16-4½ to Rs. 16-1. British India Corporations lost As. 2 to Rs. 7-14. Tata Oils were unaltered at Rs. 45. Hindustan Levers, however, gained an anna to Rs. 20-10. Bombay Burmahs were on request Re. 1-14 higher at Rs. 635.

* * * *

Madras Stock Exchange

MADRAS, *12th March*

The bullish trend noted on the Madras Stock Exchange last week abated somewhat during the week under review. In fact, the market ruled easy. The easiness was due to lack of encouraging advices from Bombay market and profit-taking. Consequently, equity values generally tended to look down.

Among tea shares, Chembras declined by As. 2-6 to Rs. 4-3-6. Neelamalais shed As. 2 to Rs. 6-9. Talayar Teas lost an anna to Rs. 12-1. Blue Mountains were neglected at Rs. 6-3, as also Devasholas at Rs. 21-12 and Nelliampathys at Rs. 3-7. Nilgiri Teas were stagnant at Rs. 10-12 and Kalasas were dull at Rs. 14-12.

Among rubber shares, Cochin Malabars fell by As. 6 to Rs. 9-13. Ouchterloneys dropped As. 2 to Rs. 5-4. Pullangodes and T. R. & T.'s were both quoted an anna lower at Rs. 2-14-6 and Rs. 10-3, respectively. Vaikundams were done at Rs. 32-4, same as last week. Kalpettas, however, had some good buying enquiries and rallied As. 12 to Rs. 25-12. Rajagiris were favoured As. 2 higher at Rs. 21-14.

Some buying enquiries were in evidence in the coffee section. Coffee Lands spurted by As. 10 to Rs. 26-4. Anaparais gained As. 6 to Rs. 5 *cum-div.* Mysore Coffees gathered an anna to Rs. 3-2. Sheveroys were unchanged at Rs. 2-5, as also Consolidated Coffees at Rs. 23-2 and Kadur Coffees at Rs. 3.

In the textile section, Lakshmis and Premiers fell by Rs. 4 each to Rs. 138 and Rs. 190, respectively. Radhakrishnas shed Rs. 2-8 to Rs. 280. Rajapalayams eased by a rupee to Rs. 149 and Saradas by Re. 1-8 to Rs. 113-8. Travancore Rayons were quoted As. 2 lower at Rs. 14. Cambodias were dull at Rs. 14-10, Coimbatore Cottons at Rs. 386, Kotharis at Rs. 15-12, Pankajas at Rs. 77 and Rayalaseemas at Rs. 150. Bangalore Woollens, however, were much sought after on bonus issue considerations and the quotation was pushed up by Rs. 7-8 to Rs. 592-8. Coimbatore Pioneers were marked up by Rs. 3 to Rs. 278. Ranga Vilas advanced by Rs. 2 to Rs. 91. Rajalakshmis and Coimbatore Spinnings were done a rupee higher each at Rs. 174 and Rs. 92, respectively. Maduras spurted by As. 14 to Rs. 48-8. Metturs remained firm at Rs. 442-8.

The miscellaneous section ruled featureless. Deals in cement shares were put through at reduced prices. India Cements were on offer As. 11 lower at Rs. 27-15. Dalmia Cements eased by an anna to Rs. 12-5. Andhra Cements were dull at Rs. 14-2. Spencers moved down by As. 10 to Rs. 16-2. Indian Steel Rollings were a shade lower at Rs. 11-7. Mettur Chemicals were neglected at Rs. 9-9, as also Mysore Chemicals and Fertilisers at Rs. 7-14-6. There were, however, some enquiries for Rallis which picked up As. 4 to Rs. 37. Similarly, F.A.C.Ts were favoured an anna higher at Rs. 6-6. In the sugar group, Travancores met with sustained buying and improved by As. 4 to Rs. 11-10. Indias and Mysores were quoted at Rs. 16-8 and Rs. 41, respectively, same as last week. E.I.Ds, however, receded by As. 4 to Rs. 28.

MARKET GOSSIP

(Concluded from previous page)

of the general reserve. The shareholders drew the attention of the Chairman to the fact that, as things stood now, the bonus shares issued out of the share premium account was free from bonus tax. One could not be sure what would be the position in this regard in respect of such bonus shares in the next budget. It might be that the Finance Minister would subject such issues also to bonus tax. The Directors should, therefore, take a decision on issuing bonus shares before the next budget. If, however, the tax was levied with retrospective effect, one could not help it. Anyway, the shareholders felt that the Directors should take a quick decision on the matter.

Another ground on which the issue of bonus shares was demanded by the shareholders was the sacrifice made by them in the past. One of them recalled that those shareholders who had bought the shares at the original face value of Rs. 30 each had suffered a lot when the paid-up value was written down from Rs. 30 to Rs. 15 per share in 1924-25. Though this was made good partially in 1954 by increasing the paid-up value to Rs. 20 per share through capitalisation of Rs 2.35 crores from the reserves, it was not, according to him, sufficient.

Replying to the shareholders' demand, the Chairman, Mr. Khatau, admitted that the suggestion was a useful one. He did not, however, commit himself to carry it out. He promised that the Directors would give due consideration to it and come to an early decision, taking into account all relevant factors brought out by the shareholders.

Another welcome suggestion made by the shareholders was that the Company should take up the problem of expansion of fleet. During the past few years, one of them pointed out, the Company had confined its attention only to modernisation, without any worthwhile expansion. Thus, at the end of 1952, the Scindia fleet amounted to 206,163 g.r.t., while it was no more than 215,435 g.r.t. at the close of 1956. He urged that there was considerable scope for expansion and this was the appropriate time to adopt a 'go-ahead' policy. He was of the view that this bold policy of expanding the fleet would pay the Company in the long run. One of the shareholders, however, warned the Company against any hasty action in respect of expansion at any cost. He said that it should be taken up with due consideration of the resources of the Company.

Mr. Khatau agreed that the Company should expand its fleet, but this was subject to the availability of resources. If it had to purchase a few ships, it could be done only by borrowing. By 1960, the Company's borrowings from the Government would go up to Rs. 11 crores. Mr. Khatau disclosed that the Company was making efforts to secure some vessels from the mothball fleet of the U.S., without straining its resources.

Some shareholders suggested that the Company could reduce its liabilities by selling out part of its investments in Government securities. At the end of 1956, such investments amounted to Rs. 1.45 crores. It was suggested that a substantial part of these could be sold and the Company's debentures could be purchased back to that extent. In reply, Mr. Khatau said that the position of Scindia in respect of investments was somewhat peculiar. It had no alternative but to keep a substantial portion of its investments in Government securities. As the Company required large liquid resources, it had kept its cash balances with banks. The position was being constantly studied by the Board and, only if it was found that balances with the various banks were high enough, they were invested in Government securities.

Another point of interest to the shareholders which was disclosed by the Chairman related to the earnings during the current year. He said that, up to the end of December 1956, the freight earnings amounted to Rs. 6.23 crores, as against Rs. 4.84 crores in the corresponding period of the previous year.

Other points of interest which emerged from the Chairman's reply were:

(1) The arrears of depreciation to be provided for amount to Rs. 3.25 crores. (2) The Company had to write back Rs. 21.50 lakhs being excess depreciation provision made in previous years; in the past, the Company was making a lump sum provision, but under the Companies Act, 1956, it is required to provide depreciation for each of the fixed assets and when this was done, certain excess provisions were found to have been made. (3) The Jalnath Insurance Company—a 100 per cent. subsidiary of Scindias—was started with the idea of keeping a small portion of the Company's insurance with the subsidiary and slowly building it up; now all the insurance is placed with a group of insurance companies, with New India Insurance Co., Ltd. having the largest share. (4) The Insurance Corporation of India is holding 84,700 shares of the Scindia Steam Navigation Co., Ltd. (5) If a ship is lost, the Company gets the insured value of the ship, which is based on the market value. (6) On most of the ships sold, the Company got a price above the book value. (7) The ships built by Hindustan Shipyard are of different kinds and their prices are based on U.K. prices. The prices of German ships are the lowest; the Company's policy in ordering ships is based on lowest prices and early delivery of ships.

* * * *

Since the major portion of India's foreign trade is with the U.K. and West European countries, any factor which affects the trade of these countries is bound to have its repercussions on India. A look at the trend of trade since the time of the crisis in West Asia will clearly bring out the force of this statement. Not only has the volume of trade between India and the U.K. and W. European nations suffered a distinct setback but India has been forced to pay markedly enhanced prices for the goods and commodities supplied by them. The high cost of these imports was at one time expected to persist for long, thereby handicapping the implementation of the series of development schemes under the second Five-year Plan. Viewed thus, it is, indeed, gratifying to be told that the Suez Canal will be re-opened for traffic by the end of this month, although, to start with, navigation will be confined to major ships. Also gratifying is the news that the flow of oil from Iraq to the Mediterranean will be resumed in the next couple of days. The Iraq Petroleum Company has already engaged itself in repairing its damaged pipelines and pumping stations. The Company expects that the flow of oil can be maintained at an annual rate of 11 million tons—44 per cent. of normal—within seven days after minor repairs to the pipe manifolds. This means, it is said, that a big saving in long tanker hauls can be made which will probably be sufficient to bring the quantity of oil available to Europe up to 100 per cent. of normal requirements during the second quarter, even if no oil is received through the Suez Canal.

In the meantime, the Petroleum Emergency Group of the O.E.E.C. Oil Committee has come out with its forecast of a "big increase" in the flow of oil to Europe in the coming quarter, notwithstanding the continued closure of the Suez Canal and the pipelines across Syria. According to this Group, about 94 per cent. of the normal requirements of the 18 W. European nations will be available between April and June, as against 85 per cent. in the current quarter. W. Europe's total stocks of petroleum products at the end of the current month are estimated at about 5.1 million tons, as against 5.8 million tons at the beginning of the year. This quantity is equivalent to 3¼ weeks' normal consumption. The gas-diesel stocks are estimated to equal four weeks' consumption and that of fuel oil about three weeks.

Notice

THE ELGIN MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 30th March to 16th April 1957, both days inclusive.

By Order of the Board,
P. P. BEGG, SUTHERLAND & Co. PTE. LTD.,
E. C. CALDWELL,
Registrar,
Managing Agents.

KANPUR, U.P., *9th March* 1957.

NEWS IN BRIEF

THE Union Lighthouse Department will set up five new lighthouses with modern equipment within the next six months.

The 13th annual session of the Federation of Indian Chambers of Commerce and Industry will be held on the 22nd and 23rd inst. at New Delhi. Prime Minister Nehru will inaugurate the session.

The Union Ministry of Health has sanctioned the establishment of a demographic teaching and research centre at Bombay in collaboration with Sir Dorabji Tata Trust. The Centre will be developed further with U.N. assistance so as to enable it to serve the needs of all Asia.

The Rajasthan Government has appointed a Finance Enquiry Committee under the chairmanship of Mr. N. Madhava Rao, a former Dewan of Mysore. The Committee will review the trend of public expenditure in the State and the resources available therefor and is expected to submit its report by 1st March 1958.

The Agricultural Engineering Committee of the Indian Council of Agricultural Research has just approved three schemes for the production and popularisation of improved agricultural implements. Under another scheme, four testing centres are to be located on a regional basis for improving bullock-driven agricultural implements.

The Madras Government will shortly establish a production centre for the manufacture of scientific apparatus required by educational institutions and laboratories in the Industrial Estate at Guindy. It will also train 10 candidates every year. The scheme, which is estimated to cost Rs. 8.5 lakhs, will receive financial aid from the Centre to the tune of Rs. 6.31 lakhs.

The Government of India has sanctioned the purchase of conventional earthmoving machinery and special earthmoving equipment at a total cost of Rs. 5.5 crores for the Neiveli Lignite Project. Adequate provision has also been made for expenditure on execution of the mining part of the project for the next year, despite the need for conserving foreign exchange resources. The target date of mining lignite is the beginning of 1960.

It is made known that 80 engineers recruited for the Bhilai Steel Project are already undergoing training in the Soviet Union. Eleven more engineers have just left for that country. For the Rourkela Steel Plant, 67 engineers are undergoing training in steel works in West Germany. The first batch of engineers for the Durgapur Steel Plant will go to the United Kingdom in June this year. It is stated that 300 engineers for this plant will be trained in British steel works under the Colombo Plan.

An agreement between the Governments of India and the U.S. providing a sum of $1 million out of the Development Assistance Funds for India's filaria control programme was signed at New Delhi by Mr. B. K. Nehru, Secretary, Ministry of Finance, Government of India, and Mr. Howard E. Houstan, Director of the Technical Co-operation Mission. The funds provided under the agreement will be utilised for the purchase of 470 long tons of dieldrin and water wettable powder required for the use of 54 units under the filaria control programme. The Government of India will provide funds to meet the local costs of operation, including procurement of indigenous items of equipment and supplies.

The Travancore Rubber Works Ltd., a company owned by the Government of Kerala, is seeking U.S. technical assistance and collaboration for the expansion of its operations and development of new lines of production. The firm is interested in obtaining the services of technicians to train local employees and is reported to be willing to send its technical staff to the U.S. for specialised training, if necessary. It proposes to modernise a section of the existing factory for the manufacture of latex foam goods. In addition, it also seeks patents and 'know-how' for the manufacture of meteorological balloons, tested electrical gloves and related products.

The power plant of the Caltex Oil Refinery at Visakhapatnam is now ready after a series of successful tests in the month of February. The plant is responsible for adequate steam and compressed air supplies for the major units of the Refinery. The plant, operation of which is a necessary prelude to the overall functioning of the Refinery, has other uses. It treats fresh water for drinking purposes and houses power pumps such as the emergency fire pump. The power plant also possesses a generator which can serve as a standby in an emergency. While the Refinery will use its power plant for specialised purposes, it will derive its chief supplies of electric and water power from the Government Machkund hydro-electric scheme and the Gosthani river project. The Refinery will be ready for full operation by the middle of this year.

India has been authorised by the U.S. Department of Agriculture the purchase of an additional $658,000 worth of non-fat dry milk with Indian rupees. The authorisation amends an agreement entered into last February under which India was authorised to buy $133,000 worth of the commodity with Indian currency. The amendment increases the tonnage involved by about 3,000 metric tons. Shipment of the milk will be made from American ports until June. This is part of the agricultural commodities agreement between India and the United States for $360 million worth of wheat, rice, cotton, etc., to be shipped over the next two and a half years. Called the largest transaction ever negotiated between any two countries, most of the proceeds revert to India for economic development on a long-term loan basis. Last month, a shipment of 450 tons of dried milk reached India as part of a 3,000-ton gift from the U.S. for flood relief.

* * * *

From Abroad

The British Overseas Airways Corporation flew more passengers from North America to Britain than any other individual lines in 1956. It carried 39,533 passengers on scheduled flights from the American eastern seaboard and Canada.

A group of American banks, headed by the Chase Manhattan Bank of New York, has agreed to extend credit of about $100 million to a group of French banks, headed by *Lazard Freres et Cie*, for the purchase of petroleum and petroleum products.

Two professors of the Massachusetts Institute of Technology, U.S., have succeeded in producing artificial penicillin. Ten different types of the synthetic drug are being tested at present to ascertain their medical uses. The synthetic product is considered less likely to cause allergies, but it is expected to be more expensive.

The Hanover Fair will be held from 29th April to 7th May next. It will have several exhibits of interest to Indian industrialists. A vast range of light and heavy industrial equipment will be on display. Last year, visitors from 87 European and overseas countries went to the Fair. Foreign exhibitors numbered 385 from 18 nations.

The de Havilland Engine Company of Britain is developing what is believed to be the most powerful supersonic turbo-jet aero engine in the world. The engine has already successfully completed its first development stage. It has been designed for military aircraft flying at speeds between 1,000 and 2,000 miles per hour at an altitude of 50,000 feet.

In order to allow a freer flow of funds for income-tax payments, the Reserve Bank of New Zealand has cut the trading bank's reserve ratios by one half. The reduction is temporary and the ratios will be increased within a few weeks to ensure that the present degree of restraint on bank credit will be maintained until economic conditions justify the relaxation.

The Anglo-American group of firms, comprising American Machine and Foundry and Michell Engineering of London, will supply Germany's first privately-owned experimental power reactors of 15 megawatt electrical output. The value of the contract is about £3 to £3.5 million, a sum which covers the initial supply of uranium. The reactor will be owned and operated by one of Germany's largest industrial enterprises.

Russia is planning to build up a major industrial and agricultural centre in the Amur basin, in the country's easternmost area bordering on Manchuria. About 150 Soviet and Chinese scientists are studying problems connected with the project. It is estimated that Amur's power resources are sufficient for scores of hydro-electric power stations. Large deposits of coal, non-ferrous and rare metals had been discovered in the area.

Italy's industrial output last year rose by about 8 per cent. over that of 1955, despite a comparatively unfavourable year for Italian agriculture and the difficult financial situation. Foreign trade touched record levels and both imports and exports expanded. Deficit on visible trade, however, widened to £363 million. The invisible exports were, of course, sufficent to cover the deficit and, in fact, to leave a small favourable margin.

The largest oil refinery in Brazil with a daily capacity of 90,000 barrels will be built shortly in the Caxias district of Rio State. The refinery will cost $55 million and its products will be more than sufficient to meet the requirements of the Federal District and the State of Rio of petrol, kerosene, diesel oil, fuel oil, etc. Access to the refinery will be available to the largest tankers without high port charges such as are paid by the Cubatao refinery at Santos.

U.S. manufacturers will set up at least 180 new manufactured plants in Puerto Rico during the year ending 30th June 1957. The Commonwealth's Economic Development Administration says the total is a record high for industrial expansion in a one-year period, and will provide employment for about 14,000 additional workers. During the past year the Island Commonwealth's income from manufacturing exceeded that from agriculture for the first time in its history.

During the three months November 1956 to January 1957, Britain imported 2.6 million tons of oil valued at £31 million from the dollar area, as compared with 1.5 million tons valued at £17 million in the corresponding period of the previous year. The reduction in normal oil supplies to the U.K. in the same period was 4.5 million tons, of which nearly 1 million tons were made good from the dollar area.

PERSONAL

MR. S. V. Rayan, Editor, *Commerce*, left Bombay on the 8th inst. for a two-month tour of the United Kingdom and the Continent.

Mr. S. N. Haksar, lately Ambassador of India to Turkey, has been appointed India's Ambassador to Afghanistan. He will assume charge of his new assignment early in May.

Sir George Mackinlay, a former President of the Associated Chambers of Commerce of India and of the Bengal Chamber of Commerce, left Calcutta on 11th inst., on retirement after nearly 30 years' stay in India. He was till recently Chairman and Managing Director of Messrs. Jardine Henderson Limited.

Mr. Cecil Stack, Managing Director, Dunlop India, will shortly retire from India after 33 years to take up a new assignment with the Dunlop Company in the U.K.

Mr. John Luckham will succeed Mr. Cecil Stack as Managing Director of Dunlop India, on the latter's retirement at the end of March.

"COMMERCE" 1932

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *19th March*

Indo-British Trade

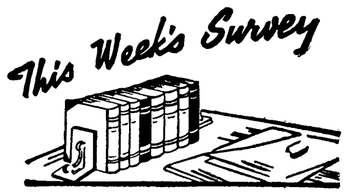
Despite the most cheery optimism stubbornly maintained by us with regard to the trend of trade, and although there are undoubtedly some signs of an improvement here and there, yet our gladness is constantly turned into sadness by appalling indications of the intensity of the depression, out of which we have not yet completely emerged. Reviewing the general economic position of the country in the course of his budget speech in the Legislative Assembly last week, the Finance Member stated that the monsoon was favourable and agricultural production was normal and yet our foreign trade had fallen to barely half of what it was two years ago; merchandise exports and imports dwindled to Rs. 134¾ crores and Rs. 105 crores, respectively, in the 10 months of the current year, as against Rs. 265 crores and Rs. 201 crores in the same period of 1929-30. These figures serve to indicate the extent to which our difficulties are due to world conditions. Jutes and jute products and raw cotton claimed a major share in the fall of exports from Rs. 120 crores to Rs. 49 crores. In imports, cotton manufactures accounted for about Rs. 34 crores and sugar for about Rs. 9 crores. The extent to which the British textile industry lost ground in the Indian market during 1931 is brought out in figures published in our textile section this week. In almost every case heavy reduction of imports is to known, though these figures should be read side by side with the reduced imports of foreign textile goods generally. In piecegoods imports for 1931, British trade suffered very heavily indeed—357 million yards compared with 797 million yards for 1930 and 1,276 million yards in 1929. A study of the figures shows that what Britain has lost India has not gained. The trade has gone eastwards to Japan. She is the second largest supplier of piecegoods in India and has not suffered from the trade depression to anything like the same extent. For instance, her piecegoods imports into India during the last three years were 336 million yards in 1931, 390 in 1930, and 521 in 1929.

The internationally-owned Iraq Petroleum Company of London has agreed to lend Iraq £24 million, free of interest, for three years. The loan will be an advance of future oil royalties to help the Government overcome its 1957 budgetary deficit and the Iraq Development Board to continue the implementation of its development programmes. It has also agreed to build a 30-inch pipeline from Iraq's southern oilfields to Kuwait. Construction is expected to start in September next.

The Union Carbide and Carbon Corporation of the U.S. has formed a new research institute to conduct basic scientific research. A major purpose of the institute will be to contribute to the store of fundamental knowledge by studying the physical and chemical behaviour of matter under ordinary as well as extreme conditions of pressure and temperature. The work at the proposed institute will complement and extend the basic research now being carried on in the existing research laboratories of the Corporation.

The Government of Nepal has constituted a council to act as machinery to expedite the execution of the country's first Five-year Plan. Three foreign agencies, including the U.S. Technical Co-operation Mission and the Ford Foundation, which are aiding Nepal, are associated with the Council in an advisory capacity. It may be recalled that, recently, the Prime Minister of Nepal, Tanka Prasad Acharya, inaugurated the 31-member Planning Commission representing various political parties in the country.

The advent of European free trade is the greatest challenge to British industry, according to Mr. C. S. Garland, President of the National Union of Manufacturers of Britain. Though it is recognised that the free trade plan presents a great opportunity for the expansion of British trade, it also means a time of serious difficulty and readjustments.



CREDIT FACILITIES FROM JAPAN

CONSIDERING the tight foreign exchange position that India is experiencing at present, it is, indeed, gratifying to be told that the Japanese industries manufacturing machinery and equipment would be prepared to extend credit facilities, if the Government of India were to guarantee such a deal. Addressing a meeting of the All-India Manufacturers' Organisation at Bombay last week, Mr. Teshigawara, one of the members of the six-member industrial delegation from Japan which was on a ten-day visit to India, stated that Japanese industrialists were prepared to consider on merits individual requests for credit from India, provided the Government guaranteed the credit. So far as the supply of Japanese machinery on credit for small industries is concerned, the question would, Mr. Teshigawara said, be discussed between the Indian Government and the Japanese Ministry of International Trade and Industry.

The willingness of Japanese industrialists to help India in the programme of industrialisation by supplying machinery and equipment on a long-term credit basis must be widely welcomed, especially in the context of the changed trend in Indo-Japanese trade during the last four years. Thus, during 1955-56, India had an adverse balance of trade to the extent of over Rs. 3 crores, in distinct contrast to the favourable balance of Rs. 16.07 crores in 1952-53. This is due to the fact that exports from India to Japan have not only not kept pace with imports from that country but have actually fallen. The value of goods and commodities exported from India to Japan has declined from Rs. 31.89 crores in 1952-53 to Rs. 30.22 crores in 1955-56, while that of imports has gone up from Rs. 15.82 crores to Rs. 33.37 crores. Imports are bound to be larger still in the coming years, what with the increasing tempo of imports necessitated by the implementation of the second Five-year Plan. While the goods that Japan supplies to India are of great value, the chief difficulty in the way of larger purchases by India is foreign exchange. This could be overcome only if Japan rendered necessary assistance to India in the shape of long-term credits, as some of the other industrially advanced countries are doing.

Equally imperative is the need for augmenting India's export trade with Japan, the scope for which is not inconsiderable. Viewed thus, the finalisation of the terms and conditions of the contracts for the supply of iron ore to Japanese steel mills by the State Trading Corporation of India, in pursuance of the broad agreement for the purchase of 7.2 million tons of Indian iron ore by the mills over a period of five years (beginning from April, 1957), is of great significance. The delegation of seven Japanese steel mills' representatives, which was in New Delhi for negotiations with the Corporation, left for Tokyo last week. In accordance with the agreement reached, the contract for 1957-58 provides for export to Japan of 1.3 million tons of iron ore; the shipments will be effective from 1st July next. During the negotiations at New Delhi, the possibility of Japanese interests collaborating in the improvement of facilities in minor ports on the east and west coasts of India in order to enable India to make larger supplies of iron ore to Japan was also discussed. Consideration of this question is expected to be continued later.

CUSTOMS RE-ORGANISATION

The Customs Re-organisation Committee (Chairman: Mr. F. C. Badhwar) has commenced its work in right earnest and with commendable speed. Instead of issuing, as is usual with an enquiry committee, a questionnaire to the interests mainly concerned and basing subsequent action on the data thus collected, the Badhwar Committee has first addressed a communication to the various chambers of commerce, trade associations, etc., in which it has asked the latter to indicate their more pressing problems and difficulties. Such a course, there is no doubt, will assist the Committee in framing a "topically important and balanced" questionnaire and also help in fixing priorities for investigation, as well as highlight items on which concentration will be advantageous.

In particular, the Committee has requested the chambers and associations to provide their constituents with opportunities to write direct to the Committee, if they so desire, on any subject relevant to the investigation. This move must be welcomed, considering that it is these constituents—individual importers and exporters—who have first-hand dealings with various customs regulations and procedures. Surely, the extent to which the Badhwar Committee can adopt correct approaches to its many-sided investigations and the ultimate results of its labours will depend, to a large extent, on the data and co-operation provided by the interests concerned. It must, of course, be emphasised here that, while submitting their memoranda to the Committee—the last date for the receipt of such memoranda is the 31st inst.—the business and mercantile community should confine itself to the terms of reference of the Committee. For what is required at this stage is not the collection of a mass of discursive material but practical suggestions to deal with delays, difficulties, out-of-date methods or cumbersome procedures.

After examining the memoranda submitted by the concerned interests, the Committee will prepare a questionnaire and circulate it among the chambers of commerce and trading associations for eliciting opinions. The latter will thus have another, and perhaps fuller, opportunity for making known their views. The Committee has been asked by the Government to submit its report within nine months of the date of its appointment, that is, before the end of October next. While the time given to the Committee for submitting its report is quite adequate, it is to be hoped that the Government will take a prompt decision on the recommendations of the Committee and implement them without any delay. For, if the pace of implementation of development schemes is not to receive a setback, the huge imports into the country must be freed from unnecessary and cumbersome customs procedures and regulations.

PLANTATION COMMISSION'S REPORT

The Plantation Enquiry Commission's report on tea, which is still under scrutiny by the Government of India, suffers from certain drawbacks. In the first place, its conclusions and recommendations on tea were based on figures relating to 1953. Secondly, the Commission drew certain comparisons between Indian and non-Indian estates which seemed to be based on incomplete data. As an instance in point we are told, on the authority of Mr. J. P. H. Bent, Chairman of the Indian Tea Association, the questionnaires which the Commission sent to all sections of the tea trade and industry, were completed by 99 per cent. of sterling and non-Indian controlled tea estates and by only 14.4 per cent. of Indian tea estates. When such a small percentage of Indian companies only came forward to answer the questionnaires, the comparisons drawn by the Commission, as Mr. Bent points out, can hardly be fair.

Based on such incomplete data, the Commission came to the conclusion that Indian companies showed a higher rate of growth of assets than non-Indian companies. Thus, according to the Commission, the total net assets of 247 companies increased from Rs. 41.80 crores in 1939 to Rs. 56.07 crores in 1946 and further to Rs. 88.62 crores in 1953. The increase in fixed assets between 1939 and 1953, the Commission went on to point out, was only 30.3 per cent. in sterling companies, about 56 per cent. in non-Indian companies, while in the Director-controlled public limited Indian companies, it was 92.7 per cent. and in companies under Indian managing agency it ranged between 47.5 per cent. and 80.8 per cent.

These figures seem to suggest that sterling companies spent very little money on the improvement and maintenance of their properties. The figures collected by the Indian Tea Association, however, depict a completely different picture. Thus, according to the Association, during the eight years 1947-54, 110 sterling companies with a total of 333,216 acres under tea spent as much as Rs. 17.75 crores on expenditure of a capital nature, such as additions and improvements to, or replacements of, buildings, machinery, plant, transport, electrical equipment, fences, water-supply and new planting, not to speak of the expenditure on replanting of existing tea areas. At the close of 1946, the fixed assets of these 110 companies, as shown in their balance-sheets, amounted to Rs. 25.3 crores, so that the capital expenditure of Rs. 17.75 crores in the subsequent eight years cannot be considered a small sum.

The Indian Tea Association, in the course of a memorandum submitted to the Government, has felt compelled to draw attention to some erroneous aspects of the Commission's report. For example, the Association feels that insufficient attention has been paid to the economics of quality production, to the effect of high taxation on the speedy implementation of social measures, and to the consequences of dwindling resources in land and money. It regrets that little credit has been given to the estates for the enormous works which were completed out of their revenue and that the Commission has attempted to assess the condition of an estate by seeking to interpret—not always correctly—what was in the balance-sheet. It is pointed out that in no instance are the dangers of such interpretation more manifest than in the matter of replanting. The Commission suggested that gardens had generally neglected replanting and that an annual programme of replanting at the rate of 1.66 per cent. of the acreage under tea should be aimed at. According to Mr. Bent, however, the average rate of replanting of the Association's member-estates, inclusive of infilling work, which is an important form of replanting, has been of the order of 1.82 per cent., that is, more than what the Commission recommended.

The Association is also unable to accept the sweeping changes which the Commission proposed in the marketing of tea or the enormous burdens which it suggested should be placed on the Tea Board's shoulders. It is of the view that many of the recommendations, if adopted, would have far-reaching effects on the fortunes of the tea industry—an industry which, it should be remembered, is the largest employer of labour in this country, and now the chief earner of foreign exchange. Much of the data collected relates to 1953, a year when short-term economies were introduced following the 1952 slump. Since then, the Association points out, improvement and maintenance work have been resumed, and costs have increased, due to the introduction of provident fund for the labourers, the Assam carriage tax, the Calcutta entry of goods tax, and the implementation of the Plantations Labour Act. To that extent the statistics appearing in the Report are already out of date. Many of the recommendations would appear to stem from a doctrinaire approach to the problems and to be coloured by preconceived views. Statistics have been taken at their face value to prove a point when a more exhaustive study would have shown the limited value of such figures when not read with other essential data. Percentages have been used to show increases for comparative purposes, without any comparison being made of the actual values. These pitfalls would have been avoided, the Association feels, if the Commission had devoted more time to actual inspection of the properties they were criticising.

The Commission's task was not an easy one and for that reason there is bound to be a time lag between the collection of statistics and the drawing of conclusions thereon. But the Commission's conclusions and recommendations seem to be somewhat outmoded so that the Government will necessarily have to examine the issues more thoroughly before it takes its final decisions.

LOANS TO AIR-INDIA INTERNATIONAL

The recent arrangement concluded by the Air-India International Corporation (A.I.I.C.) for a loan of $16.8 million from five United States commercial banks and the World Bank to finance the dollar costs of three Boeing long-range jet passenger planes marks an important stage in the progress of the Corporation. As far as the A.I.I.C. is concerned, considerable progress in respect of expansion, operational efficiency, etc., has been made since 1953, when it was nationalised. There were only five aircraft—all Constellations—at its disposal at the time of nationalisation. Subsequently, five more Super Constellations were added to its fleet in 1955, though one of the Constellations, namely, the "Kashmir Princess," was lost due to sabotage. Three more Super Constellations have been added more recently to the fleet, making a total of eleven. Besides, the Corporation's operations have grown from a weekly Bombay-London service in June 1948 to eleven services along routes aggregating over 22,000 miles.

The mariner and the marabou

WE have nothing against the *Leptopilus Marabou*. In fact, we can't but admire his magnificent detachment from the world's worries, his ability — if not to rise above it — at least to *look* above it.

But let's face it — a marabou is not a packageable item. Catch him with both legs on the ground, and you have some hope. Grab him when he's contemplating and you're faced with a sort of isosceles triangle, topped off with a lot of (very pretty) cotton wool. So we gulped a little when a Japanese naval officer asked us to send his latest acquisition after him. (Marabous hate sea voyages — the horizon keeps moving up and down.)

Maybe *you* are thinking of sending something to Japan? If you are, don't forget we fly twice a week to Tokyo — and whatever you send takes just 24 hours to get there.

Marabous and mica, mangoes, mice and machinery — Air-India International's Cargo Department handles them all. Let's hear from you.

Cargo by air:
* *saves money on insurance*
* *gets goods on the market quickly*
* *involves less tied-up capital*

FOREIGN EXCHANGE FOR PURCHASE OF CAPITAL GOODS

THERE ARE STILL CHANCES OF OUR GETTING U.S. LIBERTY SHIPS

From Our Own Correspondent

NEW DELHI, 12*th March*

DELHI LETTER

INDIAN industrialists who were asked to arrange for deferred payment for their imports of capital goods in the current half-year have not, it appears, found it easy to do so. The Industrial Credit and Investment Corporation has, therefore, decided to make available to Indian concerns the foreign exchange which it has by way of a 10-million dollar loan from the World Bank. The Corporation, however, does not appear to be adopting an expeditious procedure in the matter of dealing with the applications of Indian parties for foreign exchange to purchase capital goods. Instead of itself judging the creditworthiness of each industry, the Corporation, I learn, refers each and every application to the World Bank. This is a dilatory process which may cause further difficulties to the private industrial sector which is already handicapped by the foreign exchange crisis. It is hard to see why the Corporation, which has the discretion to deal with a loan application on its merits, should thus shirk its responsibility after having decided to make the World Bank loan (foreign exchange) available to Indian industries.

It is now becoming apparent that private industries in India are not quite succeeding in their efforts to persuade visiting foreign trade missions to take interest in their schemes for collaboration with foreign business. Foreign industrial interests, it appears, are more anxious to participate in the expansion plans of State enterprises rather than in those of private enterprises in India. Foreign business men's comparative lack of interest in the plans of private industries is attributed to the uncertainty regarding their institutional stability under the present industrial policy of our Government. Indian industrial interests, therefore, expect of the Government to make it easy for them to win the confidence of foreign creditors with whom they are asked to collaborate with a view to getting foreign exchange.

New Industrial Units

A related facet of the Government's policy is to be found in its stipulation that the new industrial units it is licensing should be set up with indigenous machinery. But where is the indigenous machinery? In effect, this condition would delay the establishment of new units. This delay which is perhaps deliberately intended can, of course, be explained on the score of foreign exchange difficulties. As this kind of delay should not be allowed to persist till heavy machinery manufacturing plants come into existence, it is thought that the Government should be somewhat considerate in the matter of allowing the private sector to get capital goods from abroad for setting up new units. As the Government, for example, is thinking in terms of raising the target of cement production to 16 million tons by 1960-61 and as the new cement units that are being licensed will be faced with the problem of how to import the required machinery, the need for liberalising import restrictions on capital goods is indicated.

If the present foreign exchange crisis is causing difficulties to the private sector, the crisis in internal resources for the Plan is perhaps developing in an even more acute form. The Government of India now appears to be anxious to import from the United States the entire quantity of wheat (under the Indo-American agreement for the loan of wheat, rice and cotton surpluses) by May 1958—that is, in less than two years, as against the agreed three years. This hurry is explained by the Government's need for getting the rupee equivalent by selling the wheat to consumers in India. Three million tons of wheat will be involved in this transaction.

Purchase of U.S. Liberty Ships

Conflicting reports are coming in regarding the possible purchase of a dozen or so ships of an aggregate 100,000 tons from the American mothball fleet. The ships are required to relieve the pressure on Indian coastal shipping to some extent. One report has it that our Government's negotiations in this regard have failed. I learn, however, that there are still chances of our getting the ships. It is only just a fortnight since Mr. Humphrey introduced a resolution in the U.S. Senate in this connection. The resolution, which seeks to authorise the sale of a certain number of merchant type vessels to the Government of India or to citizens of India for use in the coastal trade of the country, has been referred to the Senate Committee on Inter-State and Foreign Commerce. This is a joint resolution of the Senate and the House of Representatives. Under the resolution, the U.S. Secretary of Commerce will be authorised, at any time prior to 12 months from the date of enactment of the joint resolution, to sell on an as-is-where-is basis to the Government of India, or to citizens of India, not more than 12 Liberty-type vessels, or such number of smaller merchant type vessels as may have a total tonnage equivalent to such Liberty-type vessels. Sales authorised under this joint resolution shall not be made unless it is determined that such sales will contribute to the economic development of India and unless the Government of India agrees that the vessels sold shall be used only in the coastal trade of India. Sales shall be made at such prices as are determined by the U.S. Maritime Administrator to represent the reasonable fair market value of the ships sold, considering their present age and condition and the limited field of operation allowed under the terms of the sale. At the time of any such sale, the purchaser shall pay at least 25 per cent. of the price determined. In the event of the full purchase price not being paid at the time of the sale, the unpaid balance shall be secured by a first preferred mortgage on the vessel sold, with interest on such balance at the rate of 3½ per cent. per annum.

Sympathetic Approach

Introducing the resolution, Mr. Humphrey spoke, *inter alia*, as follows:

"Many Americans are not fully aware of the great efforts that are being made by the people of India to develop their inland transportation in order that the total economy of their country be improved. There is a tremendous shortage of means whereby materials can be moved within India. We have, through our I.C.A. programme, already assisted India by furnishing millions for the procurement of railroad equipment. However, even this assistance falls short of requirements.

"An important and vital part of transportation in India is found in their coastwise shipping. The Indians have been endeavouring to build vessels for this purpose, but, with present conditions in the shipbuilding industry, it has been impossible to secure deliveries to meet immediate and pressing problems.

"Unlike most nations of the world, India was not in a position to participate in the provisions of the Ship Sales Act when that authority was in existence. That authority coincided with the development of India as a separate nation, and they simply were not in a position to proceed with a ship-procurement programme. As they reached that position, the authority of the Ship Sales Act had expired and, in the absence of specific legislation of this type, there is no way they can buy any of our surplus vessels.

"It should be clearly understood that these vessels would be restricted to the coastwise trade of India, and could not compete in any way with our own merchant marine. In fact, their acquisition by the Indians should help some of the congested port conditions in the larger ports which are serviced by our merchant marine.

"The joint resolution provides in every way that the interest of our Government be protected, and I believe that it would be a material step forward in our assistance programme to the Indian Government with no cost to the American taxpayer. This is one type of foreign aid which would be paid for by the recipient country."

The above extracts reveal the sympathetic approach of friends of India in the U.S. The only question is whether India will be able to find the foreign exchange for paying immediately 25 per cent. of the price of 12 Liberty ships which, with slight modifications, can well serve as cargo vessels. The awaited World Bank's team of technical consultants on ports and shipping may, perhaps, recommend a loan for the purchase of the Liberty ships. This hope is fortified by the news that the World Bank is participating along with certain New York banks in the grant of a loan of about $17 million to Air-India International Corporation for the purchase of jet planes.—*All Rights Reserved.*

BLOOD FROM STONES

U.S. AND CANADIAN LOAN AGREEMENTS REVISED

(From Our Own Correspondent)

LONDON, *9th March*

LONDON LETTER

THE revision of the American and Canadian loan agreements has been hailed in the City as very satisfactory. Indeed, one cannot quarrel with the short-term result which will be to bring back the £37 million of the 1956 interest which was deposited with the two countries on the 31st December last, at the same time as a request was made for a waiver of this interest. The return of this £37 million will bring the total reserves in gold and dollars in excess of £900 million including, of course, the sum of £200 million which was drawn last December from the International Monetary Fund and which in due course must be repaid. Moreover, the revised arrangements must be seen in connection with the $500 million (about £180 million) line of credit which was granted by the United States to the United Kingdom last week.

The agreement itself provides that in exchange for the British Government giving up its right to have the interest repayments due on the loans cancelled, if it should not be able to repay, it may postpone seven annual repayments of both capital and interest over the next 43 years up to the year 2,000 when the loans were due to have been repaid. The seven postponed instalments—if they should amount to so many—would become due after the year 2,000.

The Other Side

But the other side of the bargain will be seen when it is appreciated that at the present time the annual repayment of interest amounts to more than the annual repayment of capital. We have already repaid the United States and Canada $440 million of capital but we have paid them $540 million of interest—excluding the amount now deferred in respect of 1956. Of course the interest repayments get progressively less and will be about halved in another 25 years' time. The old arrangements, however, provided that if the U.K. could not afford to pay interest, then the interest would be cancelled. The conditions which had to be observed were that the British Government should find that their overseas balance of payments and the level of their reserves both present and prospective, made it impractical to pay. But in order to ensure that the British Government did not make hasty decisions on this question of its inability to pay the International Monetary Fund was also called upon to certify regarding the overseas balance of payments. The basis for the I.M.F. certificate was the pre-war average annual imports into the U.K. If the U.K. could afford on the basis of the five previous years to pay for the pre-war quantum of imports, then the U.K. could not have the interest waived. In practice, permanent waiver would only have been possible if the U.K.'s standard of living had fallen below pre-war. Thus the interest waiver arrangements could not be satisfactory, except in circumstances to which it is fervently to be hoped the U.K. would never be reduced.

It would clearly have been far more to the U.K.'s advantage, if the conditions of interest waiver had been relaxed rather than introducing new provisions regarding capital postponement. For instance, interest payments could have been tied to current ability to pay so that payment was only called for out of a surplus on the current balance of payments.

The new arrangements are far more rigid than should have been necessary between countries as closely allied as those of North America and the U.K. The U.K. is now bound regardless of the state of its balance of payments to pay interest on its post-war loans and to pay that interest for the next 50 years. Its only relief is that in seven of those 50 years it can postpone if it cannot afford to pay. The point is that interest should never have been demanded on loans of this nature—loans made necessary by the sudden cutting off of lend-lease aid immediately after the war. The loans were in no sense commercial, they were not to enable the U.K. to invest in productive enterprise which would produce revenue. They were simply to enable the U.K. to maintain a reasonable standard of living while it was rebuilding its export trade. In relation to the North American gold reserves the total of the loans, $5,000 million, was not large.—*All Rights Reserved.*

GROWTH OF BANKING IN KERALA—II

ADVANCES TO TRADE PREDOMINATE

THE role played by the banks in Kerala reveals certain interesting features. In respect of the twin functions of the banks, namely, mobilisation of savings by way of acceptance of deposits from the public and purveying credit, the part played by the large-sized banks is predominant. The total deposits of all banks functioning in the Travancore-Cochin State as on 31st December 1955 amounted to Rs. 37.37 crores. Of this amount, the 14 banks incorporated outside the State, called "other banks," accounted for roughly 20 per cent. The large-sized banks incorporated in the State held Rs. 19.11 crores, which constituted about 51 per cent. of the total deposits. Thus, the share of the "other banks" together with large-sized banks accounted for 80 per cent. of total deposits. In the case of advances, which, as on the same date, stood at Rs. 22.74 crores for all the banks, forming 61 per cent. of the total deposits in the State, the share of the "other banks" together with that of the large-sized banks formed 76.4 per cent. of the total. The balance was contributed by the remaining small-sized and medium-sized banks. The composition of the deposits, again, points to the conclusion that the saving habit is widely prevalent. For, of the total deposits as at the end of 1955, 74.5 per cent. were in the form of time deposits. The corresponding figure for all the non-scheduled banks in India was only 63 per cent. In addition, the proportion of holdings of investments of banks in Kerala in Government and Trustee securities to total investments was small compared with that of the non-scheduled banks in the rest of India; while the former was 22 per cent., the latter constituted 36 per cent. of the total.

Of the various types of advances made by the banks, a larger part was utilised for financing trading activity—both agricultural and non-agricultural. This formed 40.7 per cent. of the total as against 23.7 per cent. for industry and 19.1 per cent. for personal purposes. The amount advanced for agricultural production, for both seasonal agricultural operations and improvements was only Rs. 1.57 crores, forming 6.9 per cent. of the total advances. A significant feature of this distribution of the advances was that, in respect of the advances for industry, the advances of "other banks" accounted for 59.4 per cent. while those of the banks incorporated in the State constituted 40.6 per cent. As regards the advances for other purposes, however, the share of the latter class of banks was predominant. For example, the banks incorporated in the State accounted for as much as 71 per cent. of the total advances for trade, 99 per cent. of those for agriculture, 92.6 per cent. of those for personal and 74.4 per cent. of those for other purposes. It is interesting to note, however, that the proportion of commercial advances to total was around 40 per cent. both for the banks incorporated in the State and "other banks."

Other Components of Advances

The other components of advances differed widely as between these two classes of banks. Thus, the industrial, agricultural and personal advances of the former formed 13.6 per cent., 9.8 per cent. and 25.1 per cent. of their total, as compared with 47.4 per cent., 0.2 per cent. and 19.1 per cent., respectively, of the latter. An important point to be noted in this connection is that the total advances by the banks (excepting "other banks") for financing agriculture, together with those for financing agricultural trade, formed only 24 per cent. of their total advances. But if the small banks only are taken into account, the highest proportion of their advances, that is, 26.6 per cent., went to agriculture and trading in agricultural commodities. On the other hand, personal and other advances, which are mostly unproductive, of these banks account for 45 per cent. of their total advances. Security-wise analysis of the advances reveals that of the total advances as on 31st December 1955 of Rs. 22.74 crores, Rs. 6.10 crores, forming 26.8 per cent., were advanced on an unsecured basis. Advances granted against merchandise amounted to Rs. 5.01 crores, which constituted 22 per cent. of the total. The advances against real estate at Rs. 4.59 crores formed about 20 per cent. of the total.

One point particularly noteworthy in this connection is that about 88 per cent. of the unsecured loans were granted by the banks incorporated in the State. According to the Commission, this is due to the fact that they are smaller in size and spread out in the rural areas. In respect of advances against real estate, once again, as much as 94 per cent. of such advances were made by those incorporated in the State. On the other hand, "other banks" normally preferred to advance against merchandise as was borne out by the fact that their advances accounted for 66 per cent. of such advances. This is, to a large extent, due to the fact that "other banks" have offices in big ports and trading centres and have warehousing and storage facilities. Other practices followed by the "other banks" and those incorporated in the State go to show that the banking practices adopted by the former are more in conformity with the practices of commercial banking than those of the latter.

Classification of Advances

The classification of the advances of the banks according to their size once again discloses certain significant features. Of the total advances, those of the small-sized banks occupied a relatively more important place. This was so despite the fact that the total number of borrowers from these banks were only 87,653—each accounting for less than Rs. 100—as against 135,230 in the case of large-sized banks. Thus, by and large, the trend is that the smaller the bank the smaller is the size of advances, and the small banks mainly cater to the needs of small traders, agriculturists, etc. The average size per account in the case of small-sized banks, as on 31st December 1955, was only Rs. 173, as against Rs. 377 and Rs. 575 in the case of medium and large-sized banks, respectively. Further, the Commission has also been able to find out that there has been a drain of funds away from the rural areas. This is revealed by a study of the volume of deposits and advances of branches of banks incorporated in the State. The Commission finds that the rural centres are mainly "deposit centres" for banks, that is, those centres which had deposits exceeding twice the amount of advances, and banks have utilised the funds so acquired for financing economic activities in urban areas.

Another significant characteristic noted by the Commission is that interest rates charged and paid by banks in the State were comparatively high. The weighted average rate paid by banks in the State worked out to 3.75 per cent. for 1955, as against the corresponding rates of 1.50 per cent. and 2.98 per cent. in the case of scheduled and non-scheduled banks, respectively.

Examining the scope for further extension of credit facilities, the Commission finds that, as in the case of the rest of the country, there is a heavy concentration of banking offices in the more important towns in the State. For example, of the total number of 571 offices, there were 44 offices at Trichur, 32 at Ernakulam, 30 each at Alleppey and Trivandrum, 27 at Mattancherry, 23 at Kottayyam and 17 at Quilon. While there are 364 places with a population of over 5,000, banking offices are situated only at 158 places. The Commission says that, while it is true that small villages can largely be served by co-operative societies, joint stock banks also can extend their activities to those places with a population of more than 5,000 not covered so far by offices. According to the Commission, expanding economy and expansion of commercial and trading activities in these centres offer increasing scope for commercial banks.

"Kuries"

Many banks in the State are conducting *kuries* or *chitties*. Before the advent of co-operative societies, *kuries* or *chitties* served to discharge the functions of Savings Trusts. Later this had become an important function of the banks. The Travancore Companies Act, 1938, prohibited *kuri* or *chitti* business. With the application of the Banking Companies Act, 1949, to that State in April 1951, however, a large number of banks resumed that business. The Commission found that out of 136 banks that replied to its questionnaire, as many as 85 were conducting *kuries* or *chitties*. As on 31st December 1955, the number of *kuries* or *chitties* conducted by them was 480, involving a total amount of Rs. 27.45 crores; a part of this amount represented amounts already paid in prizes and the other subscriptions which would be paid in future. The chief advantages of conducting *kuries* or *chitties* lies in the fact that the banks are able to attract many clients. This is so because the prize winners of the *kuri* or *chitti* have generally a tendency to keep their prize amounts as deposits with the banks, to serve the purpose of an acceptable security for the liability in respect of their future subscriptions to the *kuri* or *chitti*. Amounts kept in this way with the banks as on 31st December 1955 amounted to no less than Rs. 148 lakhs. In addition, prize amounts not disbursed to the winning subscribers but kept with the banks amounted to Rs. 28.74 lakhs. Another advantage is their profitability to the banks. It is usual for the foreman bank, as the bank doing *kuri* or *chitti* business is called, to take the prize money of the *kuri* or *chitti* without any discount at the first or second draw. This enables the bank to have a large sum at its disposal which it can use for banking operations. Besides, they derive income from discounts, commission, etc., to which they, as foremen, are entitled. This is reflected in their profits. For instance, the gross earnings of the 85 banks conducting this business increased from Rs. 104.22 lakhs in 1951 to Rs. 138.80 lakhs in 1955. During this period their *kuri* profit also increased from Rs. 4.30 lakhs to Rs. 10.85 lakhs. In certain cases, *kuri* profits exceeded 20 per cent. of their gross profits. Such banks were 26 in 1955, as against 10 in 1951. On an examination of the data the Commission feels that, in a large number of banks, the profit derived from *kuri* or *chitti* business forms a substantial proportion of gross earnings and that, but for the *kuri* or *chitti* business, some of them would have worked at a loss.

BRITAIN'S U.S. AND CANADIAN LOANS

It will be recalled that in December last the U.K. Government had invoked the provisions for the waiver of interest under its loan agreements with the U.S. and Canada of 1945 and 1946, respectively, in order to tide over the dollar crises facing it. Since then discussions have been going on between the respective parties for effecting revisions in the agreements. Last week, the terms of revision of these loan agreements were announced in London, Washington and Ottawa. In the revised agreements, the provisions for the waiver of interest have been replaced by an arrangement whereby the U.K. Government may defer up to seven of the annuity payments of both capital and interest, if it considers postponement to be necessary, either on account of international exchange considerations or of the level of its gold and foreign exchange reserves. These agreements are yet to be ratified by the U.S. and Canadian Legislatures. The new arrangements further provide that the payment of the deferred instalments will be taken up in the year 2,001, the interest charges being 2 per cent. per annum. It is also the rate applicable to the loans as a whole.

Regarding the claim for the waiver of interest in 1956, it is stated to have been agreed between the parties that the sum involved, namely, $104 million, shall be deferred on the same terms as those governing the seven deferments until all existing and deferred annuities have been paid.

PROFIT OF NATIONAL BANK HIGHER

DEPOSITS DECLINE

A FURTHER improvement in the earnings is disclosed by the audited accounts of the National Bank of India Ltd. (General Manager: Mr. W. Kerr, London) for the year ended 31st December 1956. The consolidated profit of the Bank (including its subsidiaries) for the past year shows an increase from £421,839 to £432,835, thus maintaining the upward trend for the second year in succession. With the expansion of £46,912 in the last two years, the Bank's profit has been brought to the highest level since 1951 when the profit aggregated £441,457. This increase in profit has been achieved in the face of the credit squeeze in Britain and the difficulty of getting adequate deposits.

The consolidated profit has been arrived at after providing for taxation, transfers to staff pension funds and contingency reserves, out of which reserves, provision has been made for diminution in value of assets. After bringing in a sum of £342,158 from the previous year, the Directors have set aside £100,000 to premises account, raising it from £75,000 provided in each of the previous four years, and £75,000 to contingencies account, which had received £85,000 in the previous year. The dividend for the year under review has been maintained at 15 per cent. less income-tax, the first and second interim distributions being the same, at 7½ per cent., as in the previous year. The dividend absorbs £245,947, leaving a surplus of £354,046 to be carried forward.

The following synopses of the Bank's balance-sheets as at the close of each of the last four years gives an idea of the Bank's progress:

(In thousands of £'s sterling)

	As on 31st December			
	1956	1955	1954	1953
LIABILITIES (*Main*)				
Capital	2,852	2,852	2,852	2,221
Reserve fund	3,105	3,105	3,105	3,675
Unappropriated surplus ..	275	275	273	275
Current and other accounts and deposits	128,528	130,034	123,324	103,563
Bills payable	2,833	2,141	1,722	1,985
Loans payable	..	4,000	..	371
Acceptances for customers ..	447	904	1,032	938
ASSETS (*Main*)				
Cash balances	16,547	16,844	15,756	16,778
Investments—				
British Government and other securities	8,133	11,964	11,587	11,320
Other Government securities and unquoted investments ..	15,583	15,127	13,756	12,060
Bills of Exchange (including Treasury Bills)	28,853	29,747	30,077	25,866
Advances and loans	65,583	66,439	63,026	45,804
Fixed assets	2,679	2,575	2,131	1,705
Balance-sheet total	140,129	145,529	139,845	116,140

The balance-sheet total shows a contraction of £5.40 million, thus reversing the upward trend noted in previous years. The consolidated balance-sheet total of the Bank and its subsidiaries also has dropped from £168.65 million to £163.63 million. This is not, however, unexpected, as the Chairman had already indicated in his speech last year that the upward trend was "much more likely to be reversed than continued during 1956." The decline in assets is mainly the result of the fall in deposits, which were difficult to secure. The current and other accounts of the Bank are higher at £101.49 million, as against £100.83 million at the close of 1955, while fixed and short deposits have fallen from £29.20 million to £27.04 million. The same trend is noted in the group figures also. The current and other accounts of the Bank and its subsidiaries aggregate £117.98 million, having risen from £116.82 million, but fixed and short deposits have shrunk from £37.19 million to £35.80 million.

The contraction in deposits is duly reflected in the fall in the Bank's advances and loans by £0.86 million to £65.58 million, at which level they constitute 51 per cent. of the current accounts and deposits the ratio being unchanged over the year. For the group as a whole the advances ratio has gone up slightly from 49.8 per cent. to 50.4 per cent. Even this level of lending has been rendered possible by a reduction in liquid assets (cash balances, investments and bills of exchange), the bulk of which is held in British Government and other securities quoted on the London Stock Exchange. The ratio of total liquid assets to current accounts and deposits of the Bank has dwindled from 56.7 per cent. to 53.8 per cent. and for the group from 55 per cent. to 53 per cent. The advances ratio of the Bank is, however, much lower than the general average of Scheduled banks in India and the liquidity ratio is far higher than the Indian average.

TRAVANCORE BANK'S PROFIT HIGHER

DEPOSITS DECLINE SLIGHTLY

A FURTHER improvement of Rs. 1.71 lakhs to Rs. 11.91 lakhs in the profit is disclosed by the audited accounts of the Travancore Bank Ltd. (General Manager: Mr. D. R. Vedamuthu, Trivandrum) for the year ended 31st December 1956. With this rise, the Bank has not only maintained the upward trend for the second year in succession but established a fresh record in its profit. It must, however, be noted that the rise is much less than that recorded in 1955, when the profit jumped from Rs. 7.36 lakhs to Rs. 10.20 lakhs. The distribution to the shareholders has been maintained at 4 per cent., to which level it had been raised last year from the modest dividend of 2.5 per cent. paid for 1953.

Out of the profit of Rs. 11.91 lakhs, the Directors have transferred Rs. 4.90 lakhs to provision for taxation, for which purpose a sum of Rs. 4 lakhs had been set aside last year. The allocation to the general reserve has been raised from Rs. 2.05 lakhs to Rs. 2.40 lakhs, while that for depreciation reserve on investments has been pruned from Rs. 25,000 to Rs. 20,000.

The progress of the Bank's working during the last three years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	25.79	23.81	21.16	19.11
Commission and exchange ..	5.15	4.64	3.92	3.78
Interest paid	9.80	8.82	8.76	6.20
Expenses	8.96	9.22	8.63	8.29
Depreciation	0.29	0.35	0.35	0.36
Profit	11.91	10.20	7.36	8.05

* After deducting reserve for depreciation.
† Ratio arrived at after taking into account the investments earmarked against borrowings from other banks.

It will be observed that the upward trend in the Bank's income from the main sources of earnings has been well maintained in the year under review also. Thus, interest and discount earned have gone up by Rs. 1.98 lakhs and commission and exchange by Rs. 0.51 lakh. While the rise in these two sources of income has been offset to the extent of only Rs. 0.98 lakh in interest paid, expenses have recorded a welcome decline, albeit by a small amount of Rs. 0.26 lakh, with the result that the Directors have been able to maintain the dividend comfortably, after strengthening the reserve fund.

It will be noted from the above table that the Bank has been strengthening its reserves at a steady pace. A noteworthy feature of the Bank's latest balance-sheet is that the deposits have suffered a decline, thus reversing the upward trend noted in the previous years. Though the fall in deposits is not marked, it is in distinct contrast to the general trend of all banks. The decline is accounted for by fixed and thrift deposits which have fallen from Rs. 218.48 lakhs to Rs. 187.92 lakhs. There is, however, an increase in savings bank deposits from Rs. 30.44 lakhs to Rs. 34.31 lakhs and in current and contingency accounts from Rs. 227.78 lakhs to Rs. 243.31 lakhs.

As against a fall of Rs. 11.16 lakhs in deposits and a rise of Rs. 10 lakhs in borrowings from other banks, advances show an increase of Rs. 12.24 lakhs, of which loans, cash credits and overdrafts account for Rs. 5.62 lakhs (at Rs. 224.44 lakhs) and bills purchased and discounted for Rs. 6.62 lakhs (at Rs. 39.37 lakhs). While this increase in advances has not affected investments (which, on the other hand, stand strengthened), it is fully reflected in the shrinkage of Rs. 13.19 lakhs in cash balances. Nevertheless, the total liquidity ratio is at a substantially higher level than the general average of Scheduled banks in India.

BANK OF INDORE STEPS UP DIVIDEND

PROFIT AT A RECORD HIGH

FOR the second year in succession the Directors of the Bank of Indore Ltd. (Manager: Mr. N. D. Joshi, Indore City) have decided to step up the diviend, the latest being the one ended 31st December 1956. The distribution, which had been raised to 14 per cent. last year from 12 per cent. paid for the preceding ten years, is proposed to be further increased to 16 per cent. for the year under review. This is the highest dividend to be paid in the history of the Bank so far.

The latest increase in distribution to the shareholders is in consonance with the improvement in the Bank's earnings, thanks to the sizable expansion in its business, as witness the rise of Rs. 66 lakhs in deposits and an increase of as much as Rs. 1.06 crores in advances. The profit for the year under review amounts to Rs. 6.05 lakhs, having gone up from Rs. 5.07 lakhs earned in 1955. With this increase, the Bank's profit has reached a record level in its history so far. As in the previous years, a sizable part of the profit has been ploughed back; the allocation to the reserve fund is maintained at Rs. 1 lakh, while the transfer to the contingency fund is raised from Rs. 1 lakh to Rs. 1.04 lakhs and that to gratuity fund from Rs. 25,000 to Rs. 70,000. The payment of bonus to staff takes up Rs. 79,434, as against Rs. 71,442.

The progress of the Bank during the last three years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Gross income	35.34	30.49	28.12	24.47
Interest and discount	31.14	27.11	25.16	22.02
Commission and exchange	3.78	3.02	2.55	2.10

Expenses	13.31	12.32	11.13	9.70
Depreciation and repairs ..	0.28	0.32	0.32	0.28
Profit	6.05	5.07	5.02	4.87
To reserves and other funds ..	2.74	2.25	2.15	2.10
,, bonus to staff	0.79	0.71	1.01	0.93
Dividend	2.45	2.14	1.84	1.84
	(16%)	(14%)	(12%)	(12%)
Carry forward	0.67	0.61	0.65	0.63

	As on 31st December			
	1956	1955	1954	1953
Capital	15.30	15.30	15.30	15.30
Reserves	28.00	27.00	26.00	25.00
Deposits	7,88.81	6,72.87	6,05.24	5,45.27
Advances and bills	4,81.91	3,75.64	3,65.31	3,56.36
Investments	2,60.05	2,65.29	2,04.78	1,81.79
Cash	56.56	75.48	79.56	81.60
Balance-sheet total	8,48.87	7,66.19	6,82.63	6,17.91
Ratio to deposits of—	%	%	%	%
Advances	65.2	55.8	60.8	65.3
Investments	33.8	39.4	33.8	33.3
Cash	7.6	11.2	13.1	9.5

As will be noted from the table, the rise in gross income during 1956 is sharper than in the previous year, which has helped the Bank to increase its total earnings by more than 50 per cent. in the course of the last four years. The bulk of the increase in income is accounted for by interest and discount earned which has gone up by Rs. 4.03 lakhs. Offsetting this expansion in earnings is the rise of Rs. 2.42 lakhs in interest paid and of Rs. 1.49 lakhs in expenses. A noteworthy feature of the Bank's profit and loss account is that interest paid on deposits and borrowings accounts for a relatively larger share of the total expenditure. This is due to the fact that fixed deposits constitute the bulk of the Bank's deposits.

The upward trend in deposits noted in the previous three years has been well maintained in the year under review also, with a further rise of Rs. 66 lakhs. This increase, which takes the year-end deposits to a record level, is shared by all classes of deposits. Fixed deposits have gone up from Rs. 4.15 crores to Rs. 4.56 crores, savings bank deposits from Rs. 72 lakhs to Rs. 79 lakhs and, current and contingency accounts from Rs. 1.86 crores to Rs. 2.04 crores. It may be noted in this context that, unlike in the case of most other banks, fixed deposits form the bulk of the Bank of Indore's deposits, which account for the large share of "interest paid" in total outgo mentioned above.

On the assets side, loans, cash credits and overdrafts, at Rs. 4.40 crores, show a rise of Rs. 96 lakhs and bills discounted and purchased (at Rs. 42 lakhs) an increase of Rs. 10 lakhs. The relatively larger expansion in advances, as compared with that in deposits, has resulted in a decline in investments and cash balances, bringing the liquidity ratio to the lowest level.

TRENDS IN WORLD FIBRE ECONOMY

IMPORTANCE OF SYNTHETICS GROWING

IT looks as though the textile industries the world over are entering a period of more acute competition among the various fibres—natural and man-made. The aggregate world output of new-made fibres today is roughly fifty times the production of rayon in the 1920s and twice the weight of the world wool clip. In view of the growing popularity of synthetic fibres, any study of the historical development of these fibres from their early beginnings to the important place they now hold in the international textile markets makes interesting reading. Such a study has been made by Mr. Daniel Duxbury, in the course of an article contributed to the current issue of the *District Bank Review*.

According to Mr. Duxbury, there is great ferment throughout the textile industry, from fibre production to finishing, and there is a "startling array of practical ideas which are either succeeding or showing great promise." It may be doubted whether any but the few in the textile industries are fully aware of the prospects ahead either for technical advance in yarn and fabrics production or in the opening of new markets. "Even the most enthusiastic," to quote him, "have difficulty in keeping pace with the literature of progress, let alone with all the practical evidence of improved materials and techniques." He forecasts keen competition both within the textile industry and with the natural fibres. In his opinion, consumption of all fibres will remain at or about present levels, with the constant risk that compulsory economies in household and personal budgets will enforce the usual cuts in expenditure on clothing and textiles. Although some fibres will be replaced by others, the interplay of pressures means that the movement will not involve simply the ousting of cotton and wool. Some man-made fibres may have to yield to others, and filament may give way still further to staple.

Man-made Fibres Output Rising

How far and to what extent will the above forecast of Mr. Duxbury prove correct, time alone will show. There is, however, no denying the fact that, while improvements in production and treatment of both natural and man-made fibre textiles are already influencing consumption, the steadily rising output of the latter is a major factor in the struggle to capture existing or new outlets in apparel, domestic and industrial fibres. This aspect has been well stressed by the Northern Representative of the *Financial Times*, London, in a recent despatch entitled "Seeking outlets for new textile fibres." Citing the example of the United Kingdom, he observes: "*Per capita* consumption of all textile fibres in this country is relatively stable at about the 1938 level. It follows that, unless total sales of textiles in the home market can be increased, or a substantial rise occurs in exports, some fibres will have to yield business to others. On the known facts, the natural fibres will probably bear the brunt of this scramble for markets. Output of man-made fibres at 482.6 million lbs. in 1956 had increased steedily from 1952, when the total was 283.2 million lbs., a considerable setback from the 380.4 million lbs. made in 1951."

The Representative next draws attention to the series of important additions to capacity and production in the next three to four years. These include two new plants of Courtaulds—viscose staple plant at Grimsby (with an annual capacity of 100 million lbs.) and the plant for the manufacture of acrylic fibre; prospects of increasing production by the British Celanese of nylon 6 fibre and triacetate yarn and fibre; new plant of Chemstrand for the production of acrylic fibre at an annual rate of 10 million lbs. which is expected to go into operation in 1959; and extensions to the I.C.I. terylene plant—to be completed by April 1959—which will raise the annual output from 22 million lbs. to 30 million lbs.

Response to Challenge

Those concerned with investment and technology for viscose rayon, it is said, are responding strongly to the challenge. Courtaulds, for instance, are already producing over 200 million lbs. of viscose staple every year and the new Grimsby plant represents an increase of 50 per cent. The main buildings are complete, and plant and machinery are now being installed, so that production can begin this spring. The factory is designed by the Company's own staff and is based on the most up-to-date practice in many fields in science and engineering. An important feature is the extensive use of instruments and automatic control apparatus to assist in maintaining optimum manufacturing conditions at every stage of the process.

Viscose technology has in the last year or two switched over from the primary task of producing cheaply to one of changing the physical properties and characteristics of the fibre. Typical examples are improvements and additions to the range of standard staple, including new types especially developed for the carpet trade. High tenacity viscose staple in fine filament sizes is now in production on a limited scale and this can be used for finer fabric constructions such as poplins normally made from Egyptian cottons. Luvisca, Courtaulds' subsidiary, will shortly launch a new range of cotton and "strong" staple blend poplin shirts retailing at 37*s*. 6*d*. and 40*s*.

Synthetic Fibre

In the meantime, notable progress has been made by the three main categories of synthetic fibre—polyamised nylon 6.6, the polyester fibre terylene and acrylics. As regards the polyamised nylon 6.6 (this was hitherto produced only by the British Nylon Spinners—B.N.S.), the joint I.C.I.-Courtaulds company, has expanded steadily into other fields of both woven and knitted fabrics, as well as industrial fabrics and cordage. The Pontypool factory of B.N.S. has an annual capacity of 30 million lbs. Since 1955, the Company has also made nylon at the former cuprammonium rayon factory of British Bemberg at Doncaster. Two other companies have lately been licensed to manufacture nylon. British Enka is actively preparing plans for production, and British Celanese is already producing nylon of a different type from B.N.S., known as nylon 6 and familiar as the German "Perlon." Celanese not only makes its own polymer for this, but, as it has its own oil-cracking plant, it also makes the monomer caprolactam which can be obtained from benzene by coal-tar distillation or oil cracking.

The second category of synthetic fibre consists of the polyster fibre terylene. Work is expected to begin shortly on further extensions to the I.C.I. plant at Wilton. The extensions will raise the capacity to 30 million lbs. annually. Additional quantities will become available early in 1959.

The Acrylics

As regards the third group—the acrylics—Courtaulds, who are producing their acrylic staple "Courtelle" in pilot plant quantities, are building a larger plant which is expected to go into production in the current year. Chemstrand, the American concern, is erecting a £3.5-million plant at Coleraine (Northern Ireland) to produce its acrylic fibre "Acrilan." Monsanto (which, with the American Viscose, is a parent company of Chemstrand) is constructing an acrylonitrile plant near the Esso refinery at Fawley; this will presumably supply the raw materials. The Coleraine plant with a capacity of 10 million lbs. is expected to turn out 5 million lbs. in 1959, doubling this in 1960. It is said, in this connection, that, since both "Acrilan" and the Du Pont acrylic "Orlon" have been imported in considerable quantities in the last year or two, the British textile industries have gained valuable experience in using acrylics.

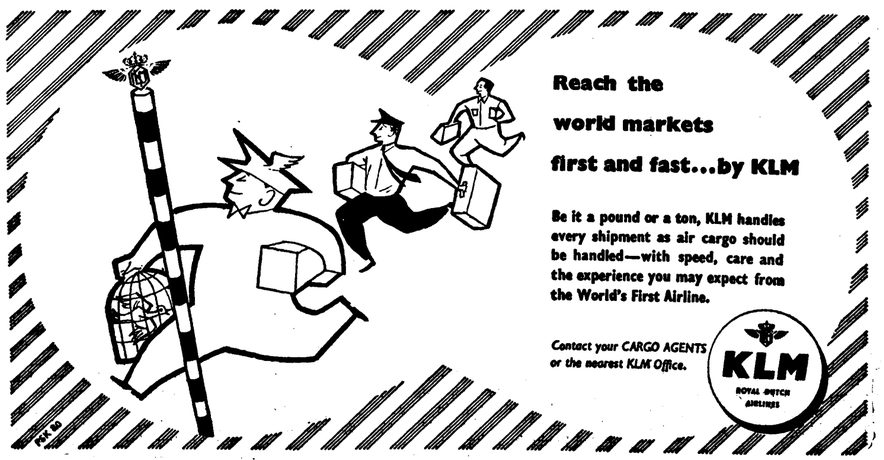
ASSISTANCE TO HANDLOOM INDUSTRY

The Government of India has sanctioned, during the months of January and February, grants amounting to Rs. 34,51,720 and loans aggregating Rs. 45,59,206 for being spent by the various State Governments on handloom development schemes. Conversion of looms, dye-houses, sales depots, mobile vans, research centres, rebate on sale of handloom fabrics, quality control and organisational expenses are some of the heads under which grants will be spent.

Under one of the schemes sanctioned, 200 handloom weavers are to be taken round the country on an educational tour. Loans and grants have been given for building housing colonies for weavers. Loans sanctioned for this purpose during the last two months amount to Rs. 8,49,871, while loans for share and working capital for primary and apex co-operative societies amount to Rs. 37,09,335. A loan of Rs. 3 lakhs has been given to All-India Handloom Fabrics Marketing Co-operative Society for affording immediate relief to weavers in Madras and Andhra with whom large quantities of Madras handkerchiefs had accumulated. The Fabrics Society is also negotiating export sales for these Madras handkerchiefs.

In order to revive traditional designs and develop new styles for fabrics to suit the rapidly expanding internal and external markets, the Board is setting up new designs centres at Madras, Banaras and Calcutta with extension centres at Chanderi, Maheshwar, Patna and Kancheepuram. Sample showrooms are being attached to these centres for studying trade and consumer reaction to the designs and weaves evolved.

The main feature of wool shipments from South Africa in the first half of the current wool season was the heavy buying by Japan. By the end of December 1956—figures for which have just been published—Japan took 10,200,000 lbs. of greasy and scoured wool, putting it into fifth place as a buyer of South African wool. It headed the United States, Belgium and Russia, all of which bought more wool in the 1955-56 season. In the first half of each of the previous four seasons, Japan's purchases aggregated 7.1 million lbs., 1.7 million lbs., 4.4 million lbs. and 3.8 million lbs., respectively.



OUTLOOK FOR COTTON INDUSTRY QUITE ENCOURAGING

JOBS ON OFFER IN EVERY SECTION OF TRADE

By Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 5*th March*

AFTER reading so many pessimistic, or at best cautious, estimates of the prospects for the industry in Lancashire, it is refreshing to come across a survey which tends to stress the encouraging aspects of the present situation. Despite setbacks which have been encountered during the past five years, the Master Spinners' Federation is prepared to put on record its faith in the future. To quote from the annual report of the organisation:

"Given fair trading conditions, the industry is in a healthier state than for many years past with reserves available for further investment, if reasonably regular offtake can be assured. Moreover, the alternative new wage agreement recently concluded with the Cardroom Association should assist materially in enabling higher efficiency and machine utilisation to be achieved."

Improved activity experienced during the final quarter of last year and the present length of order books is regarded as a reflection of the building up of depleted stocks, as confidence in the raw cotton price level was restored. Anxiety as to the reliability of supplies from the East, pending a solution of the Suez problem, is suggested as another factor in the expansion of demand.

Employment

Although employment in the spinning industry declined perceptibly in the first three-quarters of 1956, recruitment of full-time workers in the final three months exceeded wastage by 760, while a net increase of 810 in the number of part-time operatives working during that period was recorded. That the mills have substantial vacancies for suitable work people can easily be confirmed by a glance at any local newspaper published in the area, all of which contain lists of advertisements offering jobs in every section of the trade.

Wage levels, particularly for women and juveniles, compare favourably with those in other manufacturing industries and the improvement in working conditions over the past decade has been substantial. The three-point negotiations between the Master Spinners' Federation and the Cardroom Association, culminating in an important agreement signed at the end of last year, represented, as the Federation observes, a progressive step in the history of the Lancashire cotton industry. They provide ample proof that both employers and operatives are doing everything possible to ensure that the industry is efficient and at the same time offers fair working conditions.

A hint of further contraction in the size, if not the scope of the productivity, of the trade is contained in the report. "The employers," says the Federation, "have made it quite clear that the adoption of the proposed recommendations cannot mean that they will be introduced at an early date in all mills. It may be found that the best economic solution will be to concentrate expenditure on those mills which will provide the bulk of all future production."

Supply Survey

Availability of cotton and rayon goods either for export or for home distribution has shown no consistent pattern since the war. In the early years of the past decade, there was a steady rise in output with accompanying larger imports, because Lancashire manufacturers could not turn out goods fast enough for their customers.

Since the 1952 recession, the position has changed. Fewer machines at work, fewer hands to operate them, have meant a curtailment of production, while imports, after slumping, have again steadily increased in volume. Coupled with this evidence of contraction has been the unsatisfactory export performance of the industry, which last year shrunk to a new low level.

Details of these developments are given in the following table, setting out the variations in supplies from year to year:—

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937 ..	4,122	75	4,197	2,001	2,196
1947 ..	2,012	174	2,186	639	1,547
1948 ..	2,440	248	2,688	906	1,782
1949 ..	2,592	400	2,992	1,078	1,914
1950 ..	2,840	342	3,182	1,017	2,165
1951 ..	2,960	476	3,436	1,105	2,331
1952 ..	2,192	210	2,402	871	1,531
1953 ..	2,632	143	2,775	895	1,880
1954 ..	2,775	335	3,110	812	2,298
1955 ..	2,479	365	2,844	688	2,156
1956 ..	2,814	380	2,694	595	2,099

Although the quantity of cloth available from all sources in 1956 was smaller than for some time past, the amount which remained for distribution in the home market was not much lower than in the previous year. Over a large part of the period, wholesalers had allowed their stocks to decline to unusually low levels and, when demand revived in the autumn, there was naturally a rush to obtain supplies.

Shortage Made Good

To some extent, this shortage in the pipeline has now been made good, mainly as a result of the improved output recorded in the closing months of last year. The attitude of buyers has fluctuated, however, from extreme impatience to secure supplies in the early stages of the revival to a persistent lack of enterprise so far this year, when confidence in prices has drained away and delivery terms have been unattractive.

During this phase, the position of those traders catering for the needs of consumers in other industries has not been easy. Some have continued on their accustomed way, with a steady demand from a variety of sources. Others with commitments in the motor and ancillary trades have found their customers understandably nervous about their future requirements.

While undue optimism about the outlook would be unwise, there remain a number of stabilising factors which give grounds for at least quiet confidence that the efficient and modernised producers in Lancashire will continue to make progress. Changes are inevitable, but there are still many firms which have the ability and resources to cope with any emergencies which may arise.

Market Facilities

A long-felt need will be satisfied next week when a new Market Room is established by the Manchester Cotton Association offering facilities for spinners to sample a comprehensive range of raw cotton on the spot. This addition to the opportunities already available for traders to intermingle on the Royal Exchange is a move aimed at encouraging and fostering the importation of raw cotton to Manchester. One of the drawbacks with which the futures market in this country has had to contend since its revival has been the inability to build up a balanced spot market with corresponding supplies being shipped from abroad for inspection and sale to users. The Manchester Cotton Association in no way intends to usurp the functions of cotton brokers, nor is there any intention to negotiate actual business, although prospective buyers and sellers can be introduced in the market room. Spinners are being invited to indicate their requirements, while a list of the types on offer will be posted on the Royal Exchange.

The whole situation as regards spot supplies has changed fundamentally during the process of distributing the American surplus in recent months. Already the quantity of American cotton in visible supply in Liverpool, Manchester and afloat has reached 200,000 bales out of a total of 350,000 bales. Some idea of the remarkable switch in takings can be gauged from the fact that the quantity of American cotton now available exceeds the total supplies reaching Britain last season from the United States and is very little short of aggregate forwardings of American cotton to spinners throughout that period.

Anxiety is being expressed in some quarters at the steady flow of this cotton into distributive channels. It is felt that speculative interests have secured supplies in the United States on shipping terms without ensuring that the cotton is actually needed by consumers. Fears are, therefore, growing that over-buying by exporters may lead to the disposal of undesirable qualities at keen prices, so depressing the general level of values.

From the viewpoint of the ultimate user of the raw material, it should be a distinct advantage to regain the facilities of being able to make spot purchases from a variety of grades and staples. Competition is now keener as compared with the days when American cotton had a virtual monopoly over the world market. At the same time, the position of spinners and manufacturers will not be assisted by cut-throat rivalry among cotton producers, resulting in continually falling price levels.—*All Rights Reserved.*

WORLD COTTON CONSUMPTION IN 1956-57 SEASON

OFFTAKE EXPECTED TO REACH NEW PEAK

FOR the first time since 1950-51, world consumption of cotton is expected to exceed production in the current season. According to the estimates of the International Cotton Advisory Committee, Washington, consumption this season is likely to aggregate 39.2 million bales (of 473 lbs. each) which will more than counterbalance current production estimated at 38.76 million bales. Thus consumption is expected to outstrip production by a small margin. A point that deserves mention in this connection is that although the past few seasons were hard ones for cotton because of the marked disequilibrium between production and offtake and the consequent accumulation of stocks, they have been characterised by a steadily rising trend in consumption. During the 1951-52 recession in textile activity, free world consumption fell to 25.2 million bales, but in the relatively short space of the following four seasons consumption rose by 3.3 million bales or 13 per cent. The increase has not occurred in any one particular season but has been evenly spread. It is, therefore, generally expected that this trend will be continued in the present season and possibly in the coming few seasons also.

The major improvement in free world consumption is expected to occur outside the United States, and chiefly in Western Europe, Japan, and some other Asian countries and also possibly in India. Consumption in the communist countries is also likely to increase from the last season's 9.4 million bales to about 9.9 million bales. The following table gives the estimates of consumption of cotton in the free world and in the communist countries during each of the four seasons ending 1956-57:

(In million bales of 478 lbs.)

	1953-54	1954-55	1955-56	1956-57
United States	8.6	8.8	9.2	9.0
Western Europe	7.3	7.2	7.0	7.3
Of which :				
United Kingdom	1.8	1.8	1.5	1.5
France	1.3	1.3	1.2	1.3
West Germany	1.2	1.2	1.3	1.4
Italy	0.9	0.8	0.8	0.8
Other Western Europe	2.1	2.1	2.2	2.3
India	4.0	4.1	4.3	4.4
Japan	2.4	2.1	2.7	2.8
Other countries	4.6	5.4	5.7	5.8
Total free world	26.9	27.6	28.5	29.3
U.S.S.R.	4.2	4.3	4.4	4.7
China	3.5	3.3	3.5	3.7
Eastern Europe	1.4	1.5	1.5	1.5
Total communist world	9.1	9.1	9.4	9.9
Total world	36.0	36.7	37.9	39.2

In the U.S., informed sources predict that despite a general improvement in the textile situation, the offtake of cotton would be down by about 200,000 bales. In 1955-56, consumption aggregated 9.2 million bales which is expected to decline to 9 million bales this season. Owing to the drop in consumption in the U.K. and France, the overall figure for Western Europe showed a decline to 7 million bales in 1955-56, as compared with 7.2 million bales in the previous season. But since the beginning of the present season, the outlook for cotton textiles has become more favourable and current trends indicate that cotton consumption in Western Europe will probably increase to the 1950-51 boom level. An important factor responsible for this improvement has been the greater degree of stability in the prices of raw cotton and cotton textiles. The earlier fears entertained in certain quarters that the U.S.'s decision to revise its cotton policy to make its cotton fully competitive with other growths would inaugurate a new era of competitive price-cutting have subsequently proved to be unfounded and, in fact, the market turned upward in recent months. The stimulation in demand arising out of the turn of events in the Middle East and the recognition on the part of many countries of the need for active promotion and research to protect cotton's interest in the textile market have also been helpful factors.

The most serious decline in consumption since World War II has occurred in the U.K. From a peak of 2,135,000 bales in 1950-51 consumption fell last season to 1,545,000 bales, the lowest level for the entire post-war period. This fall had a direct relation to the decline in textile exports, competition from synthetic textiles and the failure of the cotton textile industry to keep pace with the growth experience in other sectors of the economy. Further, the reluctance of buyers to commit themselves far into the future in view of the anticipation of a change in price trend was another factor responsible for the low offtake of cotton in the past season. Cotton consumption during the opening months of the current season continued to run significantly under the comparable 1955-56 rate and even now, despite the better outlook for textiles, yarn production data suggests that consumption is no higher than a year ago. Competition from other countries as also from man-made fibres are still important factors in any assessment of cotton's potential. However, the general expectation is that the improved textile outlook might stimulate demand for cotton in the remaining part of the season.

Trend in Western Europe

The problems facing the textile industry in continental Western Europe are more or less the same as those present in the U.K. Cotton consumption there has, in the aggregate, remained more or less constant at around 5.5 million bales during the past few seasons but is expected to improve to 5.8 million bales in the current season. The improvement is likely to be more marked in the case of France and West Germany. In France, cotton consumption in the five months July to November 1956 exceeded half a million bales or an increase of some 14 per cent. above that of the comparable period a year ago. There has been a marked increase in domestic demand in that country and despite a higher level of production, textile stocks continue to decline. In recent months shipments have consistently exceeded production, yarn and cloth prices have risen and the future appears reassuring. The main motivating force behind this recovery was the Suez crisis.

The post-war period has been one of almost unbroken expansion of textile production in West Germany. Apart from Yugoslavia, West Germany was the only country in Western Europe to record an increase in consumption last season when consumption rose to a new peak of 1.3 million bales. In the current season the general expectation is that the rising trend in consumption will improve further because the basic situation in the industry is strong. Demand has been favourably affected by the firmness of the market, stocks in all distribution channels are low, and cheaper cotton prices, resulting from the U.S. special export programme, has led to some improvement in the profit margins of spinners and weavers. Although competition from rayon and other synthetics is an important factor it is doubtful whether this will have more than a minor effect on cotton consumption this season.

A recovery in consumption from the low point reached in 1955-56 seems quite probable in Italy and the Italian Cotton Institute anticipates that the offtake of cotton by mills during the current season may exceed the 800,000 bales reached in 1955-56. The upward trend in consumption seen in the major consuming countries is evident in most other countries of Western Europe, with the possible exception of Portugal. Barring any serious reversal of the present trend, aggregate consumption in Western Europe is likely to increase this season which might offset the anticipated decline in the United States.

In India, consumption for the first four months of the current season, that is, September to December 1956, aggregated 1,525,011 bales (of 392 lbs.), as compared with 1,518,805 bales during the corresponding period of the previous season and if the present trend continues, the aggregate figure for the entire season may reach 4.5 million bales.

Cotton Consumption in Japan

In Japan, despite the vigorous expansion in the production of man-made fibres, the cotton textile industry has staged a remarkable recovery. Official consumption statistics for August and September 1956 show an increase of nearly 50 per cent. over a year earlier and the same rate was maintained in the subsequent two months also. There is every likelihood that cotton consumption in Japan this season will set a new post-war record of over 2.8 million bales, as against 2.3 million bales last season. Aggregate consumption in other countries of the free world, particularly in Pakistan, Hong Kong and Mexico, is expected to register a small increase. On the whole, apart from the U.S., prospects for an increase in cotton consumption appear bright elsewhere in the free world, particularly in Asia.

In the communist world cotton consumption in 1955-56 aggregated 9.4 million bales and it is expected to rise by 500,000 bales in the current season, with the increase being shared by both U.S.S.R. and China. New capacity and higher productivity, coupled with increased availability of raw cotton, are the basis for the prosperity now enjoyed by the textile industry in China and raw cotton consumption during the present season is expected to set an all-time record of 3.7 million bales. Eastern European countries are, however, likely to maintain the previous season's level.

To sum up. For the world as a whole an increase in consumption of roughly 1.3 million bales, as against the annual increment of just over 1 million bales in recent seasons, appears to be in prospect. This would bring the total world consumption to about 39.2 million bales. It may be noted that, at this level, estimated world consumption would slightly exceed production for the first time since the 1950-51 season.

IMPORTS OF COTTON

Figures relating to imports of foreign cotton into India during the period 1st September 1956 to 16th February 1957 show that actual arrivals during the period aggregated 275,124 bales (of 400 lbs.) comprising 144,771 bales of American cotton, 70,680 bales East African, 32,483 bales Sudan, 25,947 bales Egyptian and 1,243 bales other varieties. The following table gives the comparative figures of the previous season:

Consumption of Cotton

(In bales of 400 lbs.)

	1st September to 16th February	
	1956-57	1955-56
East African	70,680	40,808
Sudan	32,483	51,766
Egyptian	25,947	119,784
American	144,771	7,744
Others	1,243	4,258
Total	275,124	224,360

As will be seen from the above table, American cotton occupies the first place in our import trade in the current season in sharp contrast to its insignificant position in the previous season. This is only to be expected in view of the Indo-U.S. agreement according to which India is to get American cotton as 'aid'. The Government of India's restricted import policy under which only cotton of stapling 1.3/16" and above (excluding U.S. cotton) are allowed to be imported is mainly responsible for the drop in imports of other varieties. Egyptian cotton accounted for only 25,947 bales of the total imports, as against 119,784 bales during the same period last season.

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LIMITED.

We have audited the annexed Balance Sheet of the Travancore Bank, Ltd., as on 31st December, 1956, and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of all branches audited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of sub-sections (1), (2) and (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank ;

(c) In our opinion, proper books of account as required by law have been kept by the bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank ;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

SALES TAX ON SUGAR TO BE ABOLISHED

LEVY OF A SURCHARGE ON EXCISE DUTY

THE sales tax on sugar (as also on cotton textiles and tobacco) levied by the Governments of the various States will be replaced in about three to four months by a Union surcharge on excise duty at the source of production, after the scheme, now being worked out by the Central Finance Ministry, is given effect to. This was disclosed by Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, Government of India, in a Press interview at Ahmedabad, the other day. According to Mr. Shah, the Finance Ministry has been able to persuade the State Governments to take out sugar (cotton textiles and tobacco) from the sales tax laws. The proceeds of the proposed surcharge will be distributed among the various States in proportion to the receipts realised from the tax.

The aforesaid move of the Central Government must be widely welcomed, inasmuch as it will do away with the divergent systems of subjecting sugar to sales tax prevailing in the various States, as will be seen from the following statement:

State	System of sales tax	Rate of tax per rupee (In pies)	Sales tax per maund of sugar*
			Rs. a.
Madras .. {	Multi-point	3	1 6
	Single-point	12	1 13
Total ..			3 3
U.P.	Single-point	6	0 14½
Bihar	Do.	6	0 14½
Hyderabad ..	Do.	9	1 6
Mysore	Do.	9	1 6
Madhya Pradesh ..	Do.	6	0 14½
Bombay	Do.	12	1 13
Andhra	Multi-point	3	1 6†
Kerala	Do.	3	1 6†

* Sales tax per maund of sugar from factory to wholesaler, wholesaler to retailer and retailer to consumer on an ex-factory price of Rs. 30 per maund.

† Sales tax calculated at a minimum of three points.

Under the proposed scheme, all these varying rates of tax on sale of sugar will be replaced by a uniform levy of surcharge. The replacement will provide great relief to traders, as they need not then bother about payment of sales tax and the more vexatious business of getting their accounts settled with the sales tax authorities. This is because the surcharge will be collected from the source of production. Further, the new arrangement will greatly minimise tax evasion.

Tax Impost Heavy

While the need for bringing about uniformity in the levy of tax on sugar sales is thus of great value, it must be emphasised that the Government of India should fix the surcharge on excise duty at a reasonable level. As it is, the consumers are paying a high rate of excise duty, amounting to as much as Rs. 4-2 per maund (or Rs. 5-10 per cwt.). In other words, on every pound of sugar costing about As. 7, the consumer is paying an excise duty of nearly 10 pies, representing about 12 per cent. of the price of sugar. In addition, the consumer is paying sales tax, the incidence of which varies from State to State; it works out to 11 per cent. (of the price of sugar) in Madras, 6.2 per cent. in Bombay and Madhya Bharat, 4.7 per cent. in Hyderabad, Mysore, Andhra and Kerala, and 3 per cent. in Bihar, Uttar Pradesh and Madhya Pradesh. On this basis, the aggregate amount of money derived every year by the Government of the ten States referred to above comes, even on a conservative estimate, to as much as Rs. 9 crores.

Viewed thus, the rate of surcharge that is proposed to be levied on sale of sugar should conform to the declared objective of reducing the price of sugar which is already high in all conscience. After all, it must be remembered that sugar is a valuable energy food. Steps should, therefore, be taken to see that the consumer is not denied adequate consumption of this food. If the present upward trend in consumption of sugar is to be sustained, it is imperative that the incidence of taxes—Central and State—on this commodity, which represents as much as 25 per cent. of the price of sugar, must be reduced. Otherwise, there is the danger of consumption receiving a setback, a highly undesirable trend indeed. The continued maintenance of a high level of sugar prices will lead, sooner or later, to a switch-over of consumer's preference to the less priced substitute of sugar, namely, *gur*. It will be recalled that, only three years ago, owing to the high price of *gur*, the pattern of consumption began to change from *gur* to sugar, resulting in greater demand for the latter commodity.

The authorities will do well not to forget this development. They must reduce the tax on sugar to a reasonable level, such being in consonance with the objective of ensuring a trend that will be in the direction of higher consumption of sugar. It is needless to emphasise that a change-over to consumption of *gur* will amount to a national waste. When sugarcane is crushed for making *gur*, there is considerable loss of sucrose, estimated at 40 per cent. If this loss is to be avoided, the maximum quantity of sugarcane grown will have to be crushed for manufacturing white sugar. Even the Karve Committee, the staunch supporter of cottage industries, has recognised this aspect. Maximum crushing of cane in sugar mills can be ensured only if these mills are given some incentive in the form of tax relief. This, indeed, is a basic consideration which should weigh with the Government in fixing the proposed surcharge on sugar excise duty.

DEVELOPMENT OF "GUR" AND "KHANDSARI" INDUSTRY

The Union Ministry of Production has sanctioned grants and loans amounting to Rs. 4,90,600 to be utilised during 1956-57 for the development of the *gur* and *khandsari* industry. This sum includes two amounts of Rs. 3,94,000 and Rs. 33,000 placed at the disposal of the All-India *Khadi* and Village Industries Board, the first to be utilised for sanction of loans to co-operative societies and registered bodies engaged in the industry, and the second to be utilised partly in making grants of 50 per cent. of the cost of construction of godowns for storing *gur*, and partly in popularising the use of *gur* in preparation of bakery products. The balance of Rs. 63,600 represents a loan to the Government of West Bengal for the purchase and introduction of improved implements and appliances required for the manufacture of *gur* and *khandsari*.

The Ministry of Production has also sanctioned grants varying from Rs. 2,000 to Rs. 6,000 to 12 States for meeting expenditure on publicity and on the payment of honoraria to local workers for popularising *gur* and *khandsari*.

EXPORT OF CANE "JAGGERY"

Sugarcane *jaggery* and *jaggery* powder (*gur*) will continue to be licensed freely for export up to the end of December next. The licensing will be done on the shipping bills as hitherto.

Thanks to the free licensing policy of the Government, India has been able to export fairly large quantities of *jaggery* (cane and palmyra). The aggregate exports during the first ten months of 1956 amounted to 18,091 tons, valued at Rs. 82.15 lakhs. This figure is, of course, less as compared with the 23,458 tons (Rs. 96.47 lakhs) shipped in the corresponding period of 1955.

SUGAR OUTPUT IN 1956-57

The all-India first estimate of sugar produced directly from cane in vacuum pan factories puts the current (1956-57) season's production at 1,938,000 tons, as against the actual output of 1,862,000 tons in the previous season. This shows an increase of 76,000 tons or about 4 per cent. The anticipated rise in sugar production is expected to be shared mainly by the States of Uttar Pradesh and Bombay. The estimate of output in the former State is placed higher by 51,000 tons at 1,047,915 tons and in the latter by 23,000 tons at 225,315 tons.

A deal for the sale of 8,000 tons of Indian sugar was recently concluded with Ceylon. First shipments are expected next month. This is the first time when Indian sugar will be offered in Ceylon.

STEEL AND CEMENT FOR COLLIERIES

QUOTA FOR PRIVATE SECTOR

THE private and public sectors of the coal industry will have separate quotas of steel and cement allocated to them with effect from April of this year. The decision to develop the public sector in the coal industry under the second Five-year Plan, had been the cause of some misgivings among the private colliery owners, in that they feared that they might not get a fair deal. The new separate quota system mentioned above, it is expected, would help to set at rest these apprehensions. Even under the existing system of allocation, the private sector of the coal industry, it is stated, has received in 1956 rather better consideration than the public sector.

As regards allocations of steel and cement for the industry, the procedure so far followed has been that the demands of both the State collieries and the private sector are checked by the Coal Controller, and after his scrutiny, they are sent to the Ministry of Heavy Industries for making a bulk allocation. Attention, of course, is paid to the claims of the two sectors for both maintenance of existing schemes and development needs. After taking all relevant factors into consideration, the Coal Controller makes detailed allocations to the two sectors.

In 1955-56, the private sector of the coal industry secured an overall allocation of 22,020 tons of steel, of which 14,430 tons were for maintenance and 7,590 tons for development, as against the overall demand of 29,522 tons, of which 17,943 tons were for maintenance and 11,579 tons for development. The allocation to the State collieries during the second half of 1955-56 was 702 tons. In the first half of the year, collieries in the public sector drew their steel requirements from the Eastern Railway quota.

During 1956-57, the Government of India has made allocations of steel to the private sector in the coal industry, amounting to 22,077 tons, of which 14,865 tons are for maintenance of existing works and 7,212 tons for development schemes. These allocations are against the demand of the sector for 19,007 tons of steel for maintenance and 18,556 tons for development. During the same period, the State collieries have been allocated a total of 600 tons of steel.

As regards cement, during 1956, the Government of India allocated 9,169 tons for the private sector and 6,201 tons for the public sector. The quota allocated to the State collieries includes a special allocation of 2,726 tons for the requirements of the washery plant at Bokaro. These allocations are against the demand of 42,800 tons by the private sector and 12,100 tons by the State collieries.

The disparity between the demands and allocations of steel and cement to the public and private sectors, it is stated, is to be attributed to the basic shortages of these commodities. The requirements of the State collieries are determined mainly with reference to the fact that development of coal mining in the public sector is of comparatively recent origin.

COAL OUTPUT IN EUROPE

There was a record production of coal in Europe in 1956 surpassing all past records. Figures compiled by the Secretariat of the United Nations Economic Commission for Europe, though provisional, indicate that the total European output of hard coal, barring the U.S.S.R., reached 622 million metric tons, as against the previous record figure of 616 million metric tons in 1955. Earlier peaks of coal production were 609 million tons in 1954 and 607 million tons in 1929.

The table appended below gives a comparable statistical data of hard coal production in the U.K. and other Continental countries:

(In million metric tons)

Country	1937	1954	1955	1956	Percentage change—1956 compared with 1955
Belgium	29.9	29.2	30.0	29.6	—1.4
Czechoslovakia ..	16.8	21.6	22.1	23.5	+6.3
France	44.3	54.4	55.3	55.1	—0.4

PROBLEMS OF TEA INDUSTRY

MR. J. P. H. BENT ON AGREEMENT TO RESTRICT OUTPUT

ADDRESSING the annual general meeting of the Indian Tea Association, held at Calcutta recently, Mr. J. P. H. Bent, Chairman of the Association, highlighted some of the problems facing the tea industry and urged for a greater degree of co-operation on the part of labour unions in the implementation of the Plantation Labour Act which, when accomplished, would bring about a big advance in the living standards of plantation labour. Mr. Bent particularly stressed that until the target set by this Act was achieved, it would be foolish to fritter away the resources of the industry by an all-round increase in wages or bonuses in an attempt to raise the minimum wage to a so-called living or fair wage. Certain unions are demanding a 25 per cent. increase in wages which cannot be regarded as justified especially in the tea industry, which is under an obligation to provide housing, medical, recreational and other amenities which, in other industries, are the responsibility of the State.

The large bonus paid, in 1956, did not unfortunately enter into national investments like National Savings Certificates, but was, in the majority of cases, spent on consumer goods which, by inflating local prices, resulted in a reduction in the real wages of workers. The demand for higher wages and less hours of work, Mr. Bent rightly pointed out, was fraught with grave inflationary consequences. Stressing the need for proper leadership for labour, Mr. Bent observed: "There has never been a greater need for enlightened union leadership and it remains to be seen whether the union leaders, whatever their political complexion, resisting the temptation to seek local and spectacular triumphs and using their undoubted influence with the workers, can show them that victory over fear and want in this generation cannot be obtained without remitting effort and perseverance."

Labour-Management Relations

Labour-management relations in 1956 were, however, not bad. There were only 76 strikes in that year and the number of work-days lost was only 108,419, out of a potential 150 million. And there is evidence, according to Mr. Bent, to show that the more representative of the unions in the industry have a growing sense of their responsibilities.

Defending the agreement of producer associations in North-East India to an early cessation of plucking last November, Mr. Bent said that it is unfair to label it as a monopoly practice involving the exploitation of the consumer. This step was made inevitable by the decline in prices which fell below cost of production. Had production not been restricted, it would have resulted in a serious slump for common teas entailing the closing down of many factories and wholesale retrenchment of workers.

The immediate future of the tea industry is not all bright. Disequilibrium in supply and demand is still a significant factor. The International Tea Committee's statistics showed a considerable overproduction in 1954 and 1955, to the tune of about 140 million lbs. Therefore, common teas are having a buyers' market although quality teas continue to have a handsome premium. Referring to the new International Tea Agreement proposed by the Government of India last year, Mr. Bent said that he considered it as of the greatest importance that the Agreement should be signed, if only by India and Ceylon in the first instance. The existence of such an agreement, he further added, should make it easier for these two countries to come to terms over the regulation of exports in future and circumstances may later make other countries like Indonesia and Pakistan to see the wisdom of becoming parties to it, especially if production increased significantly in Indonesia and Africa and exports from China and Japan continued to expand. But in the immediate future, it seems unlikely that Ceylon will agree to any degree of restriction that would curb its exports, as the scope for increasing internal consumption in that country is very little. Referring to overseas demand for tea, Mr. Bent said.

"Intensive propaganda is being conducted in America and other overseas markets. My visit to America and Canada last autumn with the Indian Government delegation has convinced me that the television propaganda . . . must eventually result in increased consumption, if only on account of the increasing population in those countries. Nevertheless, there is a danger that production will outstrip demand before the effect of that increased consumption is felt and that the poorer qualities of Indian tea will become difficult to sell.

"It is essential that India should prepare itself to meet this contingency. Being the largest producing country, it can decisively tip the scales by restricting its exports to a figure which will restore the equilibrium between supply and demand, but this has to be carried out with circumspection: for if this policy is overdone, or is carried on too long, it merely invites the other producing countries to increase their production and exports. Moreover, if exports are restricted without any restriction of crop, a glut of tea can be created on the internal market and prices may fall below the cost of production.

"It is therefore desirable that any regulation of crops in India should be brought about by gardens concentrating on improving the quality of their teas, so that not only will there be an automatic reduction in world crops, but Indian teas will be in a better position, as a result of their improved quality, to compete with other producing countries in the buyer's market which must be expected for the next few years." Proceeding, Mr. Bent observed that during the past year a most commendable improvement in manufacture was noticeable in nearly all districts. It was hoped that by thus concentrating on quality a sufficient check would be placed on production, but nature got the better of the planters, and when it was obvious that they would have a bumper crop, some corrective measures became inescapable. He added:

"We know that the Indian Government is averse to taking any statutory action for restricting crop, as this would run counter to the second Five-year Plan, which lays stress on the need, from the domestic point of view, for progressive increases in production in all industries. It is only too clear from our discussions early last year that it would not be possible to obtain sufficient adherence to a voluntary crop restriction scheme to make it a success. I must, therefore, emphasise the need for yet further concentration on quality this year, as circumstances in 1957 may make it impossible to correct any overproduction by a last-minute agreement to an early cessation of plucking."

Expansion of internal markets should also receive attention. *Per capita* consumption of tea in India is only half pound a year and if this could be doubled, it would help to mop up excess production. With this object in view, the Tea Board has recently considered the reorientation of its internal propaganda policy. Sir Percival Griffiths, who came last November at the invitation of the Government of India to investigate this problem, will, it is expected, give valuable suggestions in this regard. It is to be hoped that it will be possible to improve internal consumption so that the domestic market will take an increasingly larger share of the country's tea output.

PROVIDENT FUND FOR PLANTATION WORKERS

The Government of India has decided to extend the benefit of compulsory contributory provident fund under the Employees' Provident Funds Act, 1952, to workers in plantations of tea (except in Assam where a similar Act of the State Government is already in operation), coffee, rubber, cardamom and pepper employing 50 or more workers. A *Gazette* notification, requiring the recovery of provident fund from wages for and after the month of May 1957, is being issued by the Ministry of Labour, Government of India. With this extension, approximately 3.60 lakhs of additional workers are likely to get provident fund benefits and their monthly contributions to the fund including the employer's share are estimated to amount to Rs. 16.52 lakhs.

The Employees' Provident Funds Act was initially enforced in November 1952 in six industries, namely, cement, cigarettes, electrical, mechanical and general engineering products, iron and steel, paper and textiles. There was persistent demand for the extension of provident fund benefits to all categories of industrial workers. Recommendations for the extension of the Employees' Provident Funds Act to other industries were also made by the Planning Commission and by the Tripartite Consultative Committees. The Act was, accordingly, extended to 13 additional industries on 31st July 1956 and to another four on 30th September 1956. These industries include matches, sugar, tea factories, printing, glass, heavy and fine chemicals, edible and non-edible vegetable and animal oils and fats, etc. The Scheme was extended also to newspaper establishments with effect from 31st December 1956. The mineral oil refining industry was brought under the Act with effect from 31st January 1957.

The Employees' Provident Funds Act, 1952, which applied only to factory industries, was amended by Parliament in December 1956 to empower Government to extend it to non-factory establishments. The total number of factories brought under the Act so far is over 4,000. The number of subscribers in the covered factories exceeds 17 lakhs. The average monthly collection of provident fund contribution is about Rs. 1.65 crores. The total contributions up to November 1956 amounted to about Rs. 73 crores.

THE BANK OF INDIA LIMITED

SIR COWASJEE JEHANGIR'S ADDRESS AT FIFTY-FIRST ANNUAL MEETING

ASSURED FUTURE FOR FOREIGN EXCHANGE MARKET IN INDIA PREDICTED

ADDRESSING the Fifty-first Annual General Meeting of the Bank of India Ltd., held in Bombay on Thursday, 7th March 1957, Sir Cowasjee Jehangir, Bart., Chairman of the Bank, pointed out that the business of banking in 1956 operated under the handicap of a significant scarcity of funds. He alluded to the recent increase in interest rates in the context of the unchanged Bank Rate, and averred that the notice to a bank's customers of such an increase was "more provoking to them than an automatic increase due to a rise in the Bank Rate." Referring to foreign exchange business, he felt that there was an "assured future for India as a foreign exchange market." He expressed the hope that the authorities would do all they could to see that "the value and reputation of the rupee in foreign markets are maintained."

The following is the full text of Sir Cowasjee's speech:

"LADIES AND GENTLEMEN,

"With your permission the balance-sheet may be taken as read.

"At the time of our annual general meeting in 1956 the currency in circulation was Rs. 1,406 crores, whilst at the corresponding time, in 1955, it was Rs. 1,241 crores. This year, it is Rs. 1,515 crores. The increase on last year's figure is Rs. 109 crores. I consider that the substantial needs of the second Five-year Plan have tended to prevent an increase of this order from spelling material inflation.

"The year 1956 saw a major event in State ownership. This was the nationalisation of life assurance business in India from 19th January 1956. There was a transition period during which, until the inauguration of a Government corporation with legal status, Government custodians managed the life assurance business through the organisations of the old life assurance companies. A body corporate, the Life Insurance Corporation of India, was brought into being by an Act called the Life Insurance Corporation Act, 1956, and functioned from 1st September 1956. On that date, the Corporation took over fully, the interim period ended and the operation of nationalising life assurance in India was completed. The matter of compensation to the old companies remains.

Companies Act

"A far-reaching event in 1956 and one which intimately concerns the Bank was the coming into force from 1st April 1956 of the Companies Act, 1956. Some of the provisions of this voluminous legislation are most complicated and not easily carried out. Your Directors have devoted much attention to meeting the requirements of the Act. The extraordinary general meeting of 11th October 1956 for the bonus issue, passed some resolutions to meet the Act. You will see further evidence of the Act's requirements in the agenda of this meeting.

"The year has seen further taxation imposts and Government restrictions. In my speech last year, I spoke of the Finance Bill for 1956—the Budget—which had just then been introduced. It provided for substantial increases in taxation, particularly on companies. In December 1956, supplementary Finance Acts, called Finance (No. 2) Act, 1956, and Finance (No. 3) Act, 1956, were enacted. They enhance the existing burdens on free enterprise. The No. 2 Act, amongst other things, greatly increases the rates of stamp duty on usance bills of exchange and usance promissory notes and can, therefore, be said to be "in restraint of trade" so far as the banking business is concerned. The No. 3 Act will oblige companies to make compulsory deposits with the Government in certain circumstances. If I may be permitted to use a somewhat strong expression, I would say that this is the adoption of the principle of "forced loans" to the Government of the country. I do not think I am alone in this view—or in my rooted objections to the principle. This legislation will also have the effect of aggravating the already very tight money conditions to which I will refer later.

"The Act also resurrects the Capital Gains levy which was in force from 1946 to 1948. In the latter year it was allowed to become dormant. There was then a recession in trade. I imagine the levy ceased to produce much revenue to the tax-gatherer. In the present resurrection the impost is tightened in that the minimum amount of capital gains assessable is reduced from Rs. 15,000 to Rs. 5,000. The Act also enhances further the burden of the tax on dividends paid by companies levied by the main Finance Act of 1956, passed earlier in the year.

"The Banking Companies (Amendment) Act, 1956, was enacted at the end of 1956 and came into force on 14th January 1957. The main Banking Companies Act, 1949, gave the authorities wide powers over banks. The amending Act enhances these powers. The Reserve Bank of India is empowered, under certain circumstances, to order that a general meeting of a banking company be held to elect fresh directors and any such election duly held 'shall not be called in question in any court.' This is autocratic legislation. It is not the first example we have had. To take redress out of the control of the courts is undemocratic, to say the least. It is against the canons of justice as we know them. It is a dangerous practice to have started. It is a dangerous practice to develop. The appointment or remuneration of a managing or whole-time director or manager or chief executive officer of a bank must now have the approval of the Reserve Bank of India. An officer of the Reserve Bank of India shall, in certain circumstances, be entitled to attend the board meetings of a banking company.

Budget

"This is an exceptional year for the industrial and commercial life of India. The Budget is ordinarily introduced at the end of February. This year it is being postponed to a date in March or April, due, it is said, to the elections. I do not think the Government realise the inconvenience the postponement causes to industry and commerce. The Government might have arranged the elections in such a way as not to interfere with the usual date for the introduction of the Budget. The uncertainty that the delay causes does not strike the members of the Government who are, I fear, inclined to look to their own convenience and not always to that of the public. The anxiety due to the delay has been enhanced by rumours set afloat by irresponsible remarks. The rumours may or may not have any foundation but they cause damage by bringing about a lack of confidence in the future. Private enterprise can only thrive on credit and confidence. We are already possibly the highest taxed country in the world and rumours of still higher direct taxation shake the confidence of the public.

"When will Government learn to cut their coat according to their cloth? Five-year-plans are all very well on paper and are sometimes praised by foreigners who do not have to consider where the required money is to come from. One pertinent question about the gigantic schemes in the second Five-year Plan is whether we are going to get value for the money we spend. This, in my opinion, is very doubtful. Leaving aside the very high costs prevailing today, some money is lost by mistakes made by even the best of authorities. We cannot forget that miscalculations are almost bound to occur in all schemes, big and small. If only a portion of what one hears be correct, the amount lost in some of the schemes undertaken in this country would run into huge figures. It is earnestly to be hoped that the Government will reconsider their grandiose schemes before they are compelled to give them up after incurring losses.

Golden Jubilee

"During 1956, the Bank celebrated its golden jubilee. The Bank was established fifty years ago on 7th September 1906. It started business in November 1906. Golden jubilee functions were held at Bombay and at all other places where the Bank has branches. Special articles and supplements in the Press were arranged. A golden jubilee brochure was printed and circulated. A medal was struck and distributed to shareholders and customers. The Bank's head office building was illuminated for some nights in November. The illuminations had, I think, the full approval of you shareholders resident in Bombay. Also, to mark the completion of fifty years of the Bank's life, the paid-up capital was increased from Rs. 250 lakhs to Rs. 300 lakhs by making a bonus issue to shareholders of 100,000 "A" fully-paid shares of Rs. 50 each from that part of the reserve fund representing premiums received on past issues of shares. The new issue has been made in a smooth manner, greatly assisted by you shareholders deciding that no fractional coupons should be issued but that the proceeds of fractions should be given to shareholders in cash. We have thus been saved the inconvenience of having outstanding coupons not presented.

Scarcity of Funds

"The business of banking in 1956 operated under the handicap of a significant scarcity of funds, a condition which became more evident as the year progressed. It has been even more pronounced since the end of the year. There is an increasing unsatisfied demand for bank accommodation. It is a long time since a creditworthy customer could be so doubtful of getting an advance from his bank against even really good and acceptable security as he is today. With the sustained and effective—I might almost say preferential—demands for finance for the projects of the second Five-year Plan, there is little likelihood of any early easing of the money situation. Rather is the reverse the case. The position is made worse by the Government's insatiable tax levies. Industrial concerns can only meet the peremptory demands of the tax-gatherer by surrendering money they need for working capital or for maintenance and renovation and development of plant. They are obliged to apply to banks for money to replace the funds they have had to pay in taxes. They find the tightness of money prevents their demands being met. Their business and their profits—and their shareholders—suffer.

"As an indication of the money situation I may bring to your notice that the ratio of advances and bills discounted and purchased to the deposits of all Scheduled banks is now 75 per cent. This is the highest ratio since the Reserve Bank of India started publishing the figures in 1935. Interest rates on deposits with banks have risen to levels not seen for many years. Against a Bank rate of 3½ per cent. we have to pay more than 4 per cent. per annum for deposits fixed for some periods. The rates of interest on advances do not rise proportionately to the rise in deposit rates. I mentioned this in my speech last year and it has been particularly the case in 1956. Deposit rates go with the prevailing rates of interest and depend upon the supply of and demand for money. With very few exceptions, the rates of interest on our advances are related to the Bank rate. If there is no change in the Bank rate, and it has now been stationary since 15th November 1951, our rates of interest on advances do not automatically rise. We have, of course, increased our rates of interest by notice to our customers. Notice is more provoking to them than an automatic increase due to a rise in the Bank rate, where they do not need to receive any intimation from the bank. They see the rise in the Bank rate and recognise that interest on borrowings must, accordingly, rise.

Bank Rate

"Because the Bank rate has been kept at 3½ per cent. in recent years of rising money rates, it has, to some extent, lost its character as the standard of interest rates in the country. Even the Reserve Bank of India recognises this, because, from 1st February 1957, it has raised from 3½ per cent. per annum to 4 per cent. per annum the rate at which it will grant loans to banks against Government securities. This is not the official Bank rate. The Reserve Bank of India thus admitted the increase in interest rates but did not alter the Bank rate.

"Our foreign exchange business turnover has developed greatly and, with it, our earnings from that side of our trading. We are not only doing a larger volume of foreign exchange business than in earlier years, but we are financing

(*Continued on page 537*)

THE NATIONAL BANK OF INDIA, LIMITED

FURTHER PROGRESS ENVISAGED

MR. J. K. MICHIE REVIEWS CONDITIONS IN FAR EASTERN COUNTRIES

THE Annual General Meeting of the National Bank of India, Ltd., will be held in London on 26th March 1957. The customary statement of the Bank's Chairman, Mr. J. K. Michie, circulated to the shareholders along with the Directors' report and accounts for the year ended 31st December 1956, provides an analysis of the economic conditions and developments in the various countries in which the Bank operates. Referring to India, Mr. Michie says that the second Five-year Plan "reflects a dynamic outlook and determination on the part of the Government." He adds that all people of goodwill will wish the Plan the greatest possible success.

The following is the full text of Mr. Michie's statement:

"First, I wish to mention certain changes in the composition of our Board and in our General Management that have happened over the past year.

"In August last Mr. R. L. Hird died after a short illness. He had been a member of the Board since 1945 and previously had served the Bank for 48 years, finally as General Manager. Mr. Hird's wide and intimate knowledge of our affairs and his own qualities made him a particularly valuable member of the Board and we miss him greatly. In replacement, we invited Mr. N. W. Chisholm to join the Board and this appointment now comes up for confirmation at the annual general meeting.

"On 31st December Mr. Chisholm ended a career of nearly 50 years of distinguished service as an executive of the Bank, during the last four of which he was your General Manager. We are very glad indeed to continue to have the benefit of Mr. Chisholm's wide and up-to-date knowledge and experience.

"We have also appointed to the Board the Rt. Hon. A. R. W. Low, C.B.E., D.S.O., M.P. Previous to becoming a Minister of the Crown in 1951 Mr. Low was a Director of Grindlays Bank Ltd. His family connection with that Bank goes back well over a hundred years. Mr. Low's appointment also requires your confirmation.

"Mr. Kerr, previously Deputy General Manager, has succeeded, Mr. Chisholm as General Manager and, in turn, his place as Deputy General Manager has been taken by Mr. G. T. Gillespie. Both are fully qualified by ability and experience for these positions.

"Before turning to the accounts I have another matter of more than ordinary interest to report.

Amalgamation of Grindlays

"Ever since we acquired from the National Provincial Bank Ltd. the total capital of Grindlays Bank Ltd. the interests and managements of Grindlays Bank and ourselves have naturally grown more closely together and it has become increasingly clear as experience accumulated that to ensure the full benefits of this association a physical fusion of resources and staff must be the ultimate step. The Boards of both Banks have now decided that the time is ripe for an amalgamation and the necessary preliminaries have been set in motion. It is hoped that the fusion can be effected as from 1st January 1958, and every effort will be made to achieve this. Opportunity will be taken to make a change in our name and, despite the long and honourable associations attaching to the present titles, there are a number of good reasons for doing this. Until certain legal formalities are completed it is not possible to announce a name, but it is hoped to preserve in the one adopted associations with both now in use.

"What is important to our shareholders is that the two Boards are strongly and unanimously of the opinion that taking this action will solidify and strengthen our structure and enable us to progress both more soundly and more rapidly than would otherwise be the case. A public announcement of our intentions will be made at the earliest possible date. Any necessary resolutions will be put before you in due course.

"Our consolidated balance-sheet total, at £163,635,741, shows the contraction anticipated in my last statement, the comparable figure a year ago being £168,653,013.

"Our net profit figure is somewhat larger and, after full provisions for taxation, bad and doubtful debts and other necessary reservations, comes out at £432,835 against £421,839 the previous year. Dividends declared are unchanged at 15 per cent. for the year. £100,000 has been transferred to premises account against £75,000 and £75,000 to contingencies reserve account against £85,000 in 1955. The balance carried forward is increased by £11,888.

"The fall in the value of sterling securities was arrested before the end of 1956 and an upward movement has since taken place. As I have previously reported, all temporary depreciations in our holdings have been fully provided for ex interior reserves.

India

"All Indian economic activity is being dominated by the second Five-year Plan which has recently been widely commented on in the financial Press and our own *Quarterly Review* published in January carried an interesting article on the subject.

"Despite legitimate mental reservations as to the timing and correlation of certain sections of the Plan and some doubt, having regard to the country's apparent resources—the significant reduction in her sterling balances has to be taken into account—whether too much is being attempted too quickly, it is generally agreed that the Plan is imaginative and certainly reflects a dynamic outlook and determination on the part of the Government. All people of goodwill will wish the Plan the greatest possible success.

"In such circumstances of stretched resources it is inevitable that larger calls are made on the banking system of the country. But banks, while assisting their customers to the greatest possible extent, have the mundane and paramount duty of maintaining a reasonable liquidity and that can be achieved only by finding more deposits or by restricting their lendings. While the total of deposits with the banking system in India showed a moderate rise over the year, most recent figures available show that aggregate advances stand at over 70 per cent. of deposits; and, in spite of an unchanged Bank rate, money commands about 1 per cent. per annum more than a year ago. On this showing banks can hardly be accused of underlending, particularly in comparison with the ratio of lendings to deposits in the United Kingdom. Perhaps, both reflect exaggerations of opposite policies.

Causes

"This situation has been created partly by the Government's policy and partly by circumstances. To take the second first, the blocking of the Suez Canal automatically meant and still means that shipments have to be financed for considerably longer periods than normal, while a great deal of capital imports eventually are paid for by Government departments whose machinery for so doing works slowly. Secondly, there is so much pressure on the private sector of industry to expand that its reserves previously built up are rapidly being spent, plus very large additional sums, and that at a time when the Government is keeping an extremely tight rein on the capital market as well as on money rates. The proposal that part of company reserves should be deposited with the Reserve Bank would mean a depletion of ordinary banking deposits.

"Commerce and industry have recently had their tax burdens materially increased and there have been official indications that these possibilities are considered not yet to be exhausted.

"It is true that industrial profits are good but the atmosphere of doubt about the Government's intentions towards the private sector is very adversely affecting Stock Exchange values, in other words public confidence.

"India's food production is being wonderfully well maintained, but it is still the largest single problem which the Government has to face and will continue to be so in the foreseeable future. Other major cash crops, e.g., jute, tea and cotton, all enjoyed reasonably good years, tea prices particularly having made a very good recovery since December 1955.

"It is satisfactory to see that a fresh trade agreement between India and Pakistan has just been signed which should facilitate the natural transactions between the two countries. For the benefit of both it is to be hoped that this trade will steadily expand.

Pakistan

"The recently published Budget for 1957-58 indicates that Pakistan expects to finish this financial year with a favourable trade balance of just under £1,000,000 against a surplus and £24,000,000 in the previous year.

"The prime cause of this change was the food shortage in East Pakistan. Indeed, as the Budget statement admits, food production against the background of a rising population is the greatest weakness in the country's economy and the one perhaps which has had less than its meed of attention. Tax relief is given to the lower income groups, but surtax is raised by 6¼ per cent. and a wide range of tax increases is imposed on articles of consumption including tobacco, jute, cloth and oil. In other words, in the main, increases in direct taxation have been eschewed.

"Industrial expansion continues and during the year there was an increase of one-third in the number of looms in operation in the jute mills of East Pakistan. The target of the existing Companies is 8.500 looms which will mean an increase of nearly 60 per cent. on present capacity. At 1,750,000 bales, the cotton crop of West Pakistan, though larger than that of the previous year, was affected by adverse weather. The requirements of local mills are now estimated at 1,000,000 bales, which is an increase of 30 per cent. over the previous year.

Ceylon

"Economically Ceylon's experience in 1956 was a satisfactory one and in the year ended 31st October 1956 her accumulated surplus rose by £6,500,000 to nearly £90,000,000. Money rates were easy, tea prices were good and rubber prices moderately so. Her efforts to grow more food continue to expand.

"In certain respects the prospects for investors in Ceylon are, in weather forecasting parlance 'uncertain.' Some sections of the present Government have recently advocated the nationalisation of industry and specific suggestions have been made that the tea estates could be taken over at an average valuation of £69 per acre. Those competent to know state that tea cannot be brought into production and manufactured at a cost of less than £400 per acre. Some put it much higher, so there is little reality about the figure that has been named and estate owners cannot be blamed for feeling apprehensive. A policy involving a large measure of expropriation would be damaging to Ceylon's good name and to her prospects of obtaining outside capital for new projects and I hope the idea will not be pursued.

"The modernisation of Colombo port is now nearing completion, but labour relations have been bad and the turnround of ships visiting the port is extremely slow in consequence.

Burma

"Throughout 1956 rice prices and demand both remained very steady and previously accumulated crop balances were largely disposed of, exports reaching nearly 1,950,000, against an estimated exportable surplus of 1,500,000 tons. This year's exportable surplus is estimated at 1,575,000 tons.

"In these respects the position is sound and the country's financial resources have benefited. At 31st December 1956 her sterling balances stood at £39½, against £32 millions a year earlier.

"There is a welcome trend to curtail barter transactions and to sell a larger part of rice export for currency and I trust this policy will be increasingly pursued; for only by that means will she have freedom of choice in placing her purchases.

"Nevertheless, the sanctioning of remittances to cover accumulated profits belonging to foreign investors and for leave salaries and other legitimate personal needs is still being made a matter of great difficulty and is causing natural concern as well as hardship to those affected.

"The new refinery built near Rangoon by the Burma Oil Company (1954) Ltd. which is now a 'joint venture' with the Government is expected to go on stream in March and the economic benefit of this development will be considerable.

"Teak production has improved, but will not recover to any great extent until the Government has achieved a greater measure of law and order throughout the forest areas.

East Africa

"Since I last addressed you we have opened three branches and sub-branches in these territories and have closed one.

"It is good to be able to report that the Mau Mau problem has now reached the constructive stage of rehabilitation, the destructive force of the movement to all intents and purposes being exhausted. The Government of Kenya is to be congratulated on the enlightened way it has planned and is tackling the all-important question of the resettlement of those who were involved in Mau Mau and even more on the success of their efforts.

"Rightly much financial help has been given to Kenya by Her Majesty's Government, but a remarkable feature since the unfortunate movement began has been the resilience of its economy and the rate at which the inflow of capital has continued. The success of the internal loan of £2,500,000 issued a few weeks ago is another encouraging sign.

"Coffee prices have averaged about 10 per cent. higher than the previous year. Tea production has reached a new record of 19,000,000 lbs. and development continues.

Uganda

"The cotton yield was slightly in excess of the previous year and coffee production is expected to reach the record figure of 70,000 tons which compares with 45,000 tons for the year 1955-56.

"Owing to Indian buyers holding off, the marketing of cotton is slow, but the general trading situation appears to be sound and money is moving more freely than was the case last year.

"The demand for electricity from the Owen Falls scheme continues to increase and the general picture in Uganda is one of a steadily expanding economy.

"Through co-operative societies Africans are being increasingly introduced into the cotton ginning and coffee milling industries, while their share in the retail trade of the country has now risen to 35 per cent. All this spells progress.

Tanganyika

"Here too the production of cotton, coffee, tea and other cash crops continues to expand and exports of sisal also increased. Sisal prices have been fairly steady around £75 to £80 per ton.

"Our new office at Daressalaam was recently completed and H.E. the Governor, Sir Edward Twining, kindly performed the opening ceremony. A photograph of the building which His Excellency described as 'splendid and distinguished' is reproduced with the report.

Zanzibar

"The backbone of the island's economy is cloves and, because of drought, the yield of the crop now being marketed is estimated at only 7,000 tons, against 10,000 tons the previous year. The market, however, is firm and prices are about 25 per cent. over last year's level.

"The closing of the Suez Canal naturally has considerably affected Aden as a bunkering port and as a tourist shopping centre, the number of vessels entering the port having fallen by 60 per cent., but otherwise its trade has shown remarkable life.

"In July last, we occupied our fine new office at Crater—which also houses the Currency Office—and an official opening ceremony was kindly performed by Sir Tom Hickinbotham, just prior to his retirement from the Governorship of the Colony.

"We have recently sanctioned the rebuilding of our Steamer Point office, the present one being inadequate for our needs.

"The oil refinery at Little Aden is being expanded and we must hope that Aden will soon have a return to normal activity and expansion.

Somaliland Protectorate

"No large developments have taken place during the year and the effects of the drought in the early part of 1956 are still being felt.

"The use of our banking facilities continues to grow if slowly.

Grindlays Bank Ltd.

"I have already dealt with our proposals for the fusion of this business with our own.

"I am glad to report another successful year's operations which is reflected in the profit figure shown in their accounts attached to this report and, as you will see, the growth in the volume of the Bank's deposits has been well maintained. As in our own case, all necessary provisions have been internally made, including any depreciation on the Bank's holding of Government securities.

"During the year, two further branches have been opened in the Rhodesias and results of operations there show a considerable improvement and are encouraging.

"Our **Finance and Development Corporation** again operated at a profit which is being retained in the business.

General

"When I last addressed you we had a rise in the Bank rate to 5½ per cent. in a further attempt to curb inflationary tendencies. The situation was apparently improving when the economic results of the Suez crisis fell upon us. By dint of calling up our reserves the critical phase has been by-passed and money has been plentiful enough to justify an adjustment of the Bank of England rate to 5 per cent. I say adjustment advisedly, for, on the authority of the Governor of the Bank of England, that is all it is and we shall have to work hard for any further improvement in our monetary situation, whether expressed in gold and dollar balances or interest rates, and obviously they go together.

"This is no time to attempt prophecy; the imponderables are too many and certainties too few, but, as has been said before, no one owes this country a living and it can only be through the wisdom of our Government and the efforts of all our people that our present economic difficulties will be resolved; and surely there is nothing insurmountable about them so long as we do not spend as if we still had a large unearned income behind us.

"Last year, I remarked on the disparity between interest rates in London and those current in certain other countries. This gap has since been narrowed, but in today's relative circumstances it is in some cases still too wide. Supply and demand will doubtless have their way in due course.

"As to our own prospects, given reasonable operational conditions I feel sure our forward progress will continue.

"I wish again to thank our staff throughout our widespread organisation. Banking is a service and it is in its quality that the seeds of success lie. From my observation we have nothing to fear on that score."

D. A. DEELEY, *Accountant.*
J. K. MICHIE, A. N. STUART, N. W. CRISHOLM } *Directors.*

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956.

LONDON, 25th *February*, 1957.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1920)

REPORT OF THE DIRECTORS TO BE SUBMITTED TO THE SHAREHOLDERS AT THE THIRTY-SEVENTH ANNUAL ORDINARY GENERAL MEETING

GENTLEMEN,

The Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1956, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	a.	p.
The Net Profit for the year including the sum of Rs. 60,636-0-2 brought forward, amounts to	6,66,034	7	0
An ad-interim Dividend was paid for the half-year ended 30th June, 1956, at the rate of 16 per cent. per annum on 61,215 shares absorbing	1,22,430	0	0
Amount transferred to Reserve Fund (bringing that Fund upto Rs. 28,00,000)	1,00,000	0	0
Amount transferred to Contingency Fund	1,05,754	4	0
Bonus paid to the Bank's Staff	79,434	5	0
	4,05,618	9	0
Your Directors now recommend :—			
To pay a Final Dividend at the rate of 16 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1956, amounting to	1,22,430	0	0
To transfer to Gratuity Fund	70,000	0	0
To donate to the Indian Red Cross Society, Madhya Bharat Branch	500	0	0
To carry forward to the next account	67,485	14	0
Rs.	6,66,034	7	0

Seth Suganmal Bhandari being out of station has not signed the Balance Sheet.

The Directors hope that you will find the progress of the Bank satisfactory.

S. M. BAPNA,
Chairman.

THE BANK OF INDORE, LTD.,

From Our Special Correspondent

NEW YORK, 7th March

POPULARITY of India in the United States, which reached its zenith during and right after the visit of Prime Minister Nehru here, has subsided somewhat. Informed sources agree that this has been due, in part, to remarks by spokesmen for New Delhi which were interpreted as not being too friendly to the position of the United States Government in relation to Middle East and East-West problems. One outstanding example was the speech made by Mr. Menon, Indian delegate to the United Nations. He spoke for several hours and finally broke down from physical exhaustion. The burden of his argument that India would brook no interference from the United Nations, so far as Kashmir is concerned, received as little sympathetic comment as the statement of the French Prime Minister that France considered Algeria as part of continental France. He also disputed U.N. jurisdiction.

The displeasure with such remarks can only be understood if it is realised overseas that Washington regards the U.N. as its baby. The Eisenhower Administration is particularly imbued with the intention to solve world problems through the U.N., rather than through its own diplomatic channels, because it wants to avoid any possible accusation that the United States is following in the "colonial" footsteps of Great Britain and France. Therefore, public opinion is quite sensitive, if spokesmen for Western powers do not submit to U.N. jurisdiction.

It is felt here that the good intentions of the Eisenhower Administration in foreign affairs was particularly and amply demonstrated by its attitude towards the recent Israeli-Arab clashes. The strong Jewish pressure on this side was virtually ignored in Washington, in order to arrive at some sort of workable solution.

A Practical Question

A very practical question is whether the displeasure over some foreign reaction, such as the Indian and French, will lead to a curtailment of U.S. support, both moral and economic. The foreign aid programme is one of the next major issues to be taken up by the Congress before it adjourns.

The overall sentiment in Washington among legislators, at least, is to institute as many reductions in the size of the Federal Budget. The latter has been criticised in many quarters for being too large at its projected peace-time high. Since it was proposed in its present form by the Executive branch of the Government, it stands to reason that Congressmen and Senators would like to get credit for reductions among the rank and file of the people.

The existence of such sentiment makes it fairly certain that the utmost scrutiny will be exercised and that proposed spending may be cut all across the board. This is likely to affect India as well as all other nations on the list, but it should not be construed as discriminatory against New Delhi but merely the outcome of circumstances which are beyond the control of any party, since human beings, their desires and prejudices are involved. At least, that is the way matters stand at the present writing.

In a few weeks, it may be possible to get a little clearer picture of how things are likely to develop. So far, most of the attention of nearly everyone in Washington has been focussed on the Mediterranean basin. The U.S. Senate has finally passed the provisions of the so-called Eisenhower Doctrine, substantially as the President requested.

The Main Issue

With this major piece of legislation out of the way, the Government is likely to take a view with a wider perspective. The main issue is still the problem of the Soviet bloc and its relationship with the West. There has been a persistent view in private and Government quarters that the ideology of Communism would disappear if the people in Russia and the satellite countries were exposed to the high standard of living conditions which private enterprise, with all its faults, has made possible.

That is why aid has been extended to Marshal Tito of Yugoslavia, that is why considerable thought is being given to help Poland with materials and commodities, and that is why the sphere of aid has been continually extended as a matter of Government policy to all those who need help and by such help could be weaned from communist doctrines.

With aid going in those directions, no one in his or her right mind here doubts that nations such as India with its enormous populations and food problems deserves every consideration. It is not being placed in the same category as reluctant satellites of the Kremlin, but legislators, owing to pressure from their constituents, are nevertheless sensitive to isolationist demands from some quarters that aid to nations, even friendly to Russia, should be cut. The rise in Indo-Russian trade, as reported, is a case in point.

People with any understanding at all realise that social and economic necessity, as well as convenience, is at the bottom of this trend and that more and more East-West trade is being transacted throughout the world, but there are always a few articulate persons who jump at conclusions which are not necessarily justified, and they make enough noise that they cannot be ignored altogether by those who are running for office.

On the Domestic Scene

On the domestic scene, the U.S. economy is rocking along at a fairly even keel. The textile business is still slow and there is much complaint in commodities' circles that the disposal of Government surplus stocks is cutting too deeply into the areas which should be the normal functions of private business.

This is justified up to a point. At the same time, it is impossible to embrace the philosophy of parity prices for farmers to assure continued prosperity in that segment of the population without accumulating surpluses at a heavy cost to the taxpayer. Canada, it may be noted, so far has resisted parity prices and export subsidies as practised in the U.S.

The capital markets are behaving without undue emotion. Stocks prices have been on the weak side, while bond prices have been relatively firm. In those circumstances, continuation of tight money policies seems doubtful, although the spectre of inflation is still ever present.

Inventories have been rising, but the increase in wholesale prices seems to have come to an end, at least temporarily. The trend is not clear and even seasoned prognosticators are confused. The best thing which can be said at the moment is—so far so good.—*All Rights Reserved.*

The U.S. Commerce Department has announced that trade between the U.S.A. and the Soviet bloc has dropped to an almost negligible figure. Eastern Europe got less than 1/10th of 1 per cent. of all U.S. exports, while imports from that area represented only about ½ of 1 per cent. of the U.S. total. Shipments to the Soviet bloc were running far below authorisation and, for the 12-month period ended 30th September 1956, exports aggregated less than 41 per cent. of the amount authorised. The two largest exports to the Soviet bloc in the first nine months of 1956 were inedible tallow and cornseed, and the bulk of U.S. imports from Eastern Europe consisted of canned hams, shoulders and other pork products, and benzene, a coal derivative used in chemical processes. The 1957 figures are expected to show an increase in exports to the Soviet bloc, if Poland succeeds in negotiating credit purchases for surplus U.S. farm commodities. A Polish delegation arrived in the U.S.A. recently, seeking credit purchases and large loan from the U.S.A.

THE BANK OF INDORE, LIMITED—*Continued*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1956.

EXPENDITURE	Rs.	a.	p.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF INDORE, LIMITED

We have audited the foregoing Balance Sheet of The Bank of Indore, Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the Provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956; they are, therefore, drawn up in conformity with forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account;

(e) in our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

EXPANSION OF CEMENT PRODUCTION

NEW FACTORIES TO BE SET UP

THE recent announcement of the Government of India that cement production will be stepped up during the second Plan period by 10 million tons by establishing 31 new factories and by expansion of existing ones will be widely welcomed. It must, however, be stated here that even if this target were achieved in time, it would not be sufficient to meet the increasing demands. As things stand, there has been an acute shortage of cement in the country.

Perhaps, the varying estimates of demand that have been made from time to time by various authorities on the basis of which production targets appears to have been finalised have been responsible for a certain failure, on the part of the authorities, to evolve a bolder programme for the cement industry. While in 1953 the Tariff Commission estimated the demand for 1955-56 at 4.86 million tons, the Union Ministry of Commerce and Industry placed the current demand at a little less than 10 million tons. A subcommittee of the Irrigation and Power Engineers' Seminar, however, has placed the current demand recently at as high as 14 million tons. As against this, the current rate of production is only 4.87 million tons, leaving a gap of no less than 9 million tons.

The number of cement factories in the country is expected to be increased from 28 at present to 64 by the end of the second Plan period and their capacity from 6 million tons to 16 million tons, in the same period. Out of the present 28 cement factories, the Uttar Pradesh Government and the Mysore Government own one factory each. All the rest are privately-owned; out of them, Bihar claims seven, Bombay four, Madras three, Mysore, Andhra, M.P., Rajasthan and the Punjab two each, and Orissa and Kerala one each. The present expansion programme includes schemes for the establishment of 31 new factories and the expansion of the existing ones.

The distribution of new units which will have a total capacity of 5.6 million tons will be: 7 each in Andhra and Bombay, three each in Rajasthan and M.P., and two each in Assam, West Bengal, Madras, and one each in U.P., Bihar, Orissa, Pondicherry and Mysore. The expansion programmes envisage an output of 4.4 million tons. The programmes drawn up involves additional investment of Rs. 50 to Rs. 60 crores. It may be noted here that already Rs. 40 crores are invested in the industry. At present the industry provides employment to no less than 30,000 workers, and this number is expected to go up to 80,000 or 85,000 following the implementation of the programme.

Distribution of Factories

It is noteworthy that the two important governing factors in the distribution of new factories are the need for regional distribution and the availability of rail transport. While the Union Government is expected to facilitate the implementation of the programme through providing assistance to the industry in the matter of procurement of raw materials, and transport facilities, the States are expected to render help in the shape of allotting sites, granting mining leases, giving water and power connections, etc. Further, an important feature of the development programme is stated to be that while concentrating on the production of ordinary cement from limestone, due attention will be paid to tapping alternative sources of raw materials such as sea shells, slags, and chemical sludges. It is hoped that a capacity of a million tons of blast furnace slag cement might thereby be created. Proposals for the production of white and coloured cement are also said to be under consideration. Another notable development is that a special study has been initiated to augment supplies of cement by mixing either pozzolanic materials with it or certain wetting agents in the cement concrete mix and to explore the feasibility of using retarding agents other than gypsum in order to conserve gypsum.

During the last ten years, the output of cement in the country has increased by 350 per cent. from 1.4 million tons to 5 million tons. At the same time, the utilisation of rated capacity also went up from 70 per cent. in 1947 to nearly 92 per cent. last year. Available indications are that, by 1960-61, the demand for cement will exceed substantially the targets fixed. Imports of cement in the first 10 months of 1955-56 alone stood at 14,549 tons. Again, though the first Plan envisaged exports of 200,000 to 300,000 tons every year, the target was never reached. In fact, actual exports in the first ten months of 1955-56 stood at 51,700 tons only, owing, obviously, to increased internal demand.

Even the present shortage itself is nearly equal to the contemplated expansion in the next five years. Thus, the position of cement supply, in the near future, would be no better than it is today, if the target for 1960-61 were to remain at 16 million tons. This, obviously, calls for immediate re-assessment, on the basis of reliable data, of the demand for cement in the ensuing five years, and appropriate revision of the programmes of expansion. Since cement is an industry which is essential for industrial development and for the completion or irrigation, power and housing projects, and since the raw materials are mostly available in the country, it is necessary to accord a high priority to the industry. In this connection, the question of exploring alternative sources of raw material should be given special attention. The Central and State Governments, by giving the necessary assistance, could encourage the private sector to undertake the expansion of the cement industry.

STANDARD FOR SAGO

The Indian Standards Institution has published an Indian standard specification for sago, otherwise called *saboodana*. Sago, as is well known, is a processed food starch marketed in the form of small globules or pearls. As the name indicates, originally it used to be manufactured from the starchy core of the stem of sago palms. Now-a-days, however, it has also been manufactured from other starch-bearing materials, such as tapioca roots, potatoes, etc. Production of sago from tapioca has been in vogue for the last 15 years in India. India's production of sago is more than sufficient to meet the internal demand. The sago industry is a protected industry.

In order to provide an agreed connotation for sago as marketed in the country, and to avoid the difficulties confronted by the industry, trade and the State Governments, the Indian Standards Institution undertook the formulation of this standard. The standard details, among other things, various requirements such as size of globules, extent of gelatinisation, colour, chemical composition, etc. It also prescribes methods of sampling and tests for these requirements.

Copies of this standard which have been prepared by the I.S.I's Edible Starches Confectionery, and Cereal Products Sectional Committee, are available from the I.S.I. 19, Cowasji Patel Street, Bombay 1.

AMENDED INDUSTRIES ACT

With effect from 1st March 1957, the Industries (Development and Regulations) Amendment Act, 1956, has been brought into force. As a result, a number of new industries have been brought under the purview of the original Act passed in 1951.

The more important of the new industries are: ferro-alloys and special steels, lignite, television sets, teleprinters, amplifying and public address equipment, electrical furnaces, x-ray equipment, abrasives and grinding wheels, razor blades, commercial, office and household equipment, air conditioners and refrigerators, medical and surgical appliances such as surgical instruments, sterilisers, incubators, etc., plastics moulding industries, industrial instruments, fine chemicals including photographic chemicals, synthetic resins and plastics, paints, varnishes and enamels, synthetic rubber, man-made fibres including regenerated cellulose rayon, nylon and the like, explosives including gunpowder and safety fuses, insecticides, fungicides, weedicides, etc., textile accessories and auxiliaries, textile processing, photographic raw films and printing paper, pulp—wood pulp, mechanical, technical including dissolving pulp, fermentation industries, food processing industries, organic fertilisers, hardboard and chipboard, asbestos cement, insulating boards, gypsum boards, wall boards etc., matches, cigarettes, fire-fighting equipment and appliances including fire engines, and sizing materials including starch.

All industrial undertakings pertaining to these industries employing 50 or more workers with the aid of power, or 100 or more workers without the aid of power, will now fall within the purview of the Industries (Development and Regulation) Act, 1951, as amended.

It is stated that owners of all existing industrial undertakings pertaining to these industries should now apply for registration of their undertakings in form 'A' or 'B' attached to the Registration and Licencing of Industrial Undertakings Rules, 1952, according as their industrial undertaking is one which exists on 1st March 1957 or is one for the establishment of which effective steps have been taken on or before that date. All applications for registration are required to be sent to the Secretary to the Government of India, Ministry of Heavy Industries, New Delhi, in the prescribed forms as early as possible and in any case not later than 1st August 1957.

MANUFACTURE OF FOOTBALLS

A model scheme to enable prospective manufacturers to take up football making on a scientific scale has been prepared by the Small Industries Organisation of the Ministry of Commerce and Consumer Industries. In the booklet entitled "How to Manufacture Footballs," details of the raw materials and tools of equipment needed for the manufacture of footballs have been given. Illustrations are also given with suitable photographs and drawings.

Football being a popular game, the internal market for footballs is growing. Possibilities of export are also said to be wide. It is stated that exports, which amounted to Rs. 2 to Rs. 3 lakhs in value, could be increased with the production of standard quality goods. The manufacture is at present confined to places such as Jullundur, Meerut, Delhi and Calcutta. The model schemes prepared by the Organisation give valuable data pertaining to all the aspects of the industry to prospective small-scale manufacturers who may be entirely new to the field. Copies of the schemes can be obtained from the Office of the Development Commissioner, Small Scale Industries, 114, Sundar Nagar, and the Regional Directors of Small Industries in New Delhi, Calcutta, Bombay and Madras.

NEW U.K. TRADE AGREEMENTS

On 26th February last, Britain signed new trade agreements with Japan and Australia. The agreement with Japan covers a period of one year ending 30th September 1957. It provides for import facilities and relates to matters between Japan, on the one hand, and the U.K. and its dependent territories, on the other.

An important feature of the arrangements is that they maintain, with minor exceptions, all the trade quotas previously available to U.K. exporters. The previous trade quotas available to Japan have also been maintained, with increases in value in a few cases. As a result of these provisions, it is expected that there may be small expansion of the trade in both the directions.

The Government of India has decided to release a fresh quota of 5,000 tons of coconut oilcake for export to all permissible destinations. The export of oilcake will be permitted during the period March-June 1957 and the shipments against the quota of 5,000 tons will be valid up to the end of June 1957 or till the ceiling is reached, whichever is earlier. Exporters have been warned not to enter into long-term commitments, as licensing will be stopped as soon as the ceiling is reached.

TURNING A NEW ROLL

We have turned a new roll; and it has cost us three and a half crores of rupees.

To what purpose, pray?
At the end of the rolling, we get coils of flat, steel strip—skelp, as the steel man calls it. The skelp is passed on to the Indian Tube Company, which welds it into tubes.

So what?
Merely that steel tubes pipe up water from deep inside the earth to parched fields, helping to grow a rich harvest. In the cities, countless homes receive a protected supply of water through these pipes.

Soon, a new plant will turn out the kind of steel tubes that go into the making of bicycles. Remember also that the locomotive speeding along the track is kept going by steel tubes which hold the steam.

Tata Steel's new Skelp Mill, the first of its kind in India, has a capacity of 200,000 tons. When there is enough steel, this mill will roll all the skelp and strip the country needs.

ALKALI AND CHEMICAL'S PROFIT A RECORD

DIVIDEND WELL MAINTAINED—OUTLOOK GOOD

THERE has been considerable selling pressure in the shares of the Alkali and Chemical Corporation of India Ltd. (Secretaries: Imperial Chemical Industries (India) Private Ltd., Calcutta), following the announcement of the terms of the Company's new issue. Apparently, many investors, in their concern over the financing of the new issue, have failed to take into account the impressive performance of the Company during the year ended 30th September 1956 and the good outlook for the Company. Thanks to the record production in all the units of the factory at Rishra and satisfactory sales of the products, the gross profit has jumped up from Rs. 28.89 lakhs to Rs. 40.21 lakhs. It is the highest in the history of the Company, exceeding the previous best of Rs. 38.57 lakhs earned in 1950-51. It may also be noted that the profit of 1950-51 included the earnings of the Company's Khewra Alkali Works in Pakistan, the sale of which was completed in 1953. With the improvement in the year under review, the Company has more than made good the sharp setback suffered in 1952-53, when the profit suffered a precipitous fall from Rs. 38.57 lakhs in 1950-51 to Rs. 16.33 lakhs.

The net profit has recorded an improvement from Rs. 19.40 lakhs to Rs. 25.13 lakhs. This has not, however, brought any increase in the distribution to the shareholders; the dividend is being maintained at 8 per cent. There need not be any disappointment on this score, because it was only last year that the dividend was stepped up to the present level from 6 per cent. paid for the preceding four years. It is, however, gratifying to note that the Directors have ploughed back as much as Rs. 18.89 lakhs, as against Rs. 15.23 lakhs last year. Thus, a sum of Rs. 3 lakhs has been added to the general reserve, as against *nil* and Rs. 13.64 lakhs to the dividend equalisation reserve, which had received Rs. 2.73 lakhs a year ago. The transfer to the reserve for deferred income-tax liability due to initial allowances has, however, been reduced from Rs. 12.50 lakhs to Rs. 2.25 lakhs.

The following comparative table provides an idea of the Company's progress in the last three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sale proceeds	1,88.31	1,55.10	1,17.69	1,00.31
Stocks	38.77	33.25	30.62	31.94
Manufacturing expenses	99.34	81.62	67.41	1,07.93
Other expenses	54.61	44.30	31.92	54.70
Loss on exchange ..	..	3.20	..	..
Gross profit	40.21	28.89	17.21	16.33
Provision for—				
Depreciation	10.41	9.49	8.84	8.03
Taxation	4.67	..	..	6.78
Net profit	25.13	19.40	8.37	1.52
To reserves	18.89	15.23	3.00	3.00
Transfer from reserves ..	..	2.40	..	5.27
Dividends—				
5 per cent. preference ..	1.55	1.55	1.55	1.55
Ordinary	4.96	4.96	3.72	3.72
	(8%)	(8%)	(6%)	(6%)
Carry forward	0.92	1.19	1.14	1.03

That the Company's production during the year under review has been substantially higher than in the previous year is indicated by the rise of Rs. 33.21 lakhs in sale proceeds, Rs. 5.52 lakhs in stocks of finished goods and those in process, Rs. 17.72 lakhs in manufacturing expenses and Rs. 10.31 lakhs in other expenses. The Company's sales expenses alone account for an increase of Rs. 11.21 lakhs.

Reviewing the progress on the manufacturing side during the year under review, the Directors observe in their report:

"A record production in all units of the Rishra Factory was achieved for the year. The chlorine-caustic soda plant operated at full capacity in order to meet customers' requirements and our own demand for chlorine used in the manufacture of other products. The extension of the hydrochloric acid plant was completed and output increased substantially. Further increase can be made should the demand arise. The expansion of the 'Gammexane' technical Benzene Hexachloride plant was completed and, in spite of intense competition, our sales of 'Gammexane' formulation again showed an improvement over the previous year. Work on the extensions to the paints plant is in progress and will be completed during 1957. The 1955-56 production was a record and sales of 'Duco' and 'Dulux' paints, our range of ancillaries and metal pretreatment products, were the highest yet reached."

The Company is about to embark on a new venture, namely, the manufacture of polythene, for which the approval of the Government of India has been obtained. Polythene itself is not new to India, for it is being manufactured by Imperial Chemical Industries (India) Ltd. under the trade name of Alkathene. The process to be used by the Alkali and Chemical will be the same as that adopted by the I.C.I. Polythene has varied uses, the largest single use being for packaging both as film and as coating on paper and jute. The plant to be installed by the Company is so designed that its capacity can be doubled with minimum additional expenditure. The plant is expected to go into production in about two years' time and by that time India's consumption of polythene is expected to exceed the Company's production. There should, therefore, be no difficulty in selling the full rated output of the factory at a satisfactory price. The details of the proposal to raise the necessary finance required for this project were given in our last issue. (*vide* page 455).

The wide reputation which the Company's products enjoy in the market, the progress in the working results and the satisfactory financial position all indicate that the Company will find no difficulty in implementing successfully the new project.

The latest balance-sheet shows that the total assets of the Company amount to Rs. 278.86 lakhs, of which net block accounts for Rs. 157.65 lakhs. The depreciation provided so far on the block account aggregates Rs. 49.25 lakhs. The current assets amount to Rs. 121.21 lakhs, as against which the current liabilities and provision for taxation aggregate Rs. 96.98 lakhs. The excess of assets over current liabilities and provison for taxation, that is, the net assets, amounts to Rs. 181.88 lakhs, which is represented by paid-up capital amounting to Rs. 93 lakhs and reserves and surplus Rs. 88.88 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 13-10 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.2 per cent. per annum.

BANGALORE WOOLLEN TO ISSUE BONUS SHARES

The Directors of the Bangalore Woollen, Cotton, and Silk Mills Company, Ltd. (Agents: Binny & Co. (Madras) Ltd., Bangalore), have decided to carry out their old proposal to capitalise a sum of Rs. 81 lakhs out of the Company's reserves and to issue bonus ordinary shares to the existing ordinary shareholders in the ratio of two such shares for every one ordinary share held. This will raise the paid-up ordinary capital of the Company from Rs. 40.50 lakhs to Rs. 121.50 lakhs.

The decision to capitalise the above sum was taken as far back as 1953, but the consent of the Controller of Capital Issues was obtained only in early 1956. The Directors, however, deferred action on the proposal, in view of the complicated nature of the provisions of the Finance Bill 1956, regarding the proposal to impose taxes on bonus issues and dividends in excess of 6 per cent. of the issued ordinary capital. They have now finally decided to implement it. The bonus shares will not rank for dividend declared in respect of the year ended 31st December 1956.

INDIA JUTE TO CONVERT DEFERRED SHARES

The Directors of the India Jute Company, Ltd., Calcutta, have decided to consolidate the Company's 30,000 deferred shares of Re. 1 each into 240 deferred shares of Rs. 125 each. After consolidation, these deferred shares will be converted into ordinary shares of Rs. 125 each and will rank *pari passu* with the existing 69,600 ordinary shares of Rs. 125 each of the Company, bringing the total number of ordinary shares to 69,840. A meeting of the shareholders of the Company will be held on 25th March 1957 to approve the proposal.

KOHINOOR'S DIVIDEND UNCHANGED

PROFIT, HOWEVER, GOES UP

IN consonance with general expectations, the Kohinoor Mills Company, Ltd. (Managing Agents: Killick Industries Ltd., Bombay), has done well during the year ended 31st December 1956, with a sizable improvement in its earnings. The gross profit for the year amounts to Rs. 59.98 lakhs, which represents an increase of Rs. 18.24 lakhs over that for 1955. Notwithstanding this improvement, the year's profit falls short of that (at Rs. 65.16 lakhs) earned in 1953. The net profit does not show any increase; on the other hand, it is a shade lower at Rs. 22.29 lakhs, as against Rs. 22.72 lakhs for 1955. This is due to the larger allocations to provisions for depreciation and taxation, the transfer to the former having been raised from Rs. 6.33 lakhs to Rs. 11.21 lakhs and that to the latter from Rs. 8.50 lakhs to Rs. 20.50 lakhs. The assessment of the Company's profits for the years ended 31st December 1954 and 1955 is not yet over. The Directors have, however, made the above provision from the year's profit for tax liability on the profit of 1956 and for any liability for uncompleted assessments.

A sum of Rs. 3 lakhs has, nevertheless, been set aside to the various reserves, which had received Rs. 4.50 lakhs a year ago. Of this, the development reserve is provided with Rs. 75,000, as against Rs. 3 lakhs a year ago, and the dividend equalisation reserve with Rs. 75,000 as against *nil*. The allocation to the employees' pension and gratuity reserve has been maintained at Rs. 1.50 lakhs. Though the balance available for distribution permits of a slight increase in dividend, the Directors have not chosen to do so; they have decided to repeat it at 18 per cent., a rate which is being paid for the third year in succession. This is presumably because any increase from the present rate will attract the penal dividend tax of As. 6 in the rupee under the Finance (No. 3) Act 1956. Even on the present rate of 18 per cent. the Company has to pay one anna in the rupee more (that is, As. 4 in the rupee) than what was payable before.

The progress of the Company's working during the past three years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	6,75.32	6,69.76	6,79.25	7,19.99
Closing stocks	91.09	80.42	84.08	32.00
Cotton and fibre consumed	3,18.43	3,10.74	3,24.11	3,38.69
Silk and other yarn consumed	16.56	15.39	15.96	14.83
Other expenses	2,94.67	2,98.84	3,01.06	2,89.06
Gross profit	59.98	41.74	40.86	65.16
Managing Agents' commission	5.98	4.19	4.04	6.50
Provision for—				
Depreciation	11.21	6.33	17.76	14.97
Taxation	20.50	8.50	5.55	17.80
Net profit	22.29	22.72	13.51	25.88
Transfer from reserves	..	..	2.50	..
To reserves	3.00	4.50	..	6.00
Dividend	18.00	18.00	18.00	20.00
	(D. 18%)	(D. 18%)	(D. 18%)	(D. 18% +B. 2%)
Carry forward	1.63	0.34	0.12	2.11

The Company's earnings would have been much higher but for the heavy excise duty levied with effect from 1st September 1956, which affected the offtake of cloth. A good idea of the trading conditions which prevailed during the year under review is provided by the following extract from the Directors' report:

"The year under review has been a difficult one for Indian cotton, and the forward market remained closed from the 24th January until the middle of June. The 1955-56 crop, which was first expected to yield 55 lakh bales, finally produced approximately 44 lakh bales. Present indications are that the 1956-57 crop may yield only 50-51 lakh bales against original estimates of 55 lakh bales with a shortage of quality cotton. As regards imported cotton, the Government's constantly changing policy has made it difficult to plan ahead. All East Africans except top grades of BP-52, are now banned in favour of Americans, consequent on American aid, and prices of Egyptians and Sudans have become prohibitive, partially due to the Suez crisis.

"The prices and deliveries of cloth, continuing the trend seen in the last few months of 1955, were satisfactory for the first eight months of 1956. However, due to the uncertainty caused by the increase in excise duty imposed from 1st September 1956, the market again became weak. The cost to the Company of the extra excise duty is estimated to be about Rs. 1½ lakhs per month. Due to the uncertain conditions, the Company made only limited sales of cloth at *Divali*.

"The silk market was dull throughout the year and the position was made worse by the excise duty of As. 2 per lb. on fibre yarn and from As. 2 to Re. 1-8 per lb. on art-silk yarn levied from 21st December 1956.

"Sales of yarn for sewing thread and weaving purposes continued throughout the year, but a gradual weakening of prices was experienced. Export licences for sewing thread were again limited in spite of the overall increase in production throughout the country."

The Company's paid-up capital, at Rs. 100 lakhs, is supplemented by reserves and surplus aggregating Rs. 124.63 lakhs (excluding employees' pension and gratuity reserve amounting to Rs. 14 lakhs). The current liabilities and provision for taxation stand at Rs. 198.19 lakhs. Of these liabilities, loans from bank secured by stocks and stores account for Rs. 86.57 lakhs, having gone up from Rs. 38.84 lakhs. This is not surprising in view of the heavy accumulation of stocks for reasons mentioned above. The gross block of the value of Rs. 359.04 lakhs stands written down to Rs. 80.10 lakhs. The current assets aggregate Rs. 356.72 lakhs, of which stock-in-trade alone accounts for Rs. 261.55 lakhs, having risen from Rs. 219.07 lakhs at the end of 1955.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 334 *cum-div.* (final div. Rs. 12 per share). On an *ex-div.* basis, the shares provide a yield of 5.6 per cent. per annum, free of income-tax.

Points From The Chair

Nature of Coal Mining

"MOST industries and enterprises have an intermediate life apparently perpetual and, therefore, are not called upon to replace the original investment. This does not mean that such industries (railroads, utilities, manufacturing, wholesale and retail houses, etc.) will continue for ever; it means merely that, except for competition, nothing is apparent which will cause a termination. Mining, however, differs from an ordinary industry in this respect; when the ore bodies are mined out, there is nothing left. The original capital investment must, therefore, be returned to the investor by the time that the profitable life of the enterprise is ended. When the operating company does not make any provision for perpetuating its life by investing a portion of its earnings in other properties, the usual procedure is to remit periodically to the investor a dividend sufficiently larger than the risk return on his investment to enable him, if he re-invests this overplus at a safe rate of compound interest, to replace his original capital at the expiration of the life of the mines. This overplus constitutes a return on the invested capital."

R. MAULIK,

Indian Mining Association.

Banking Business

"The business of banking in 1956 operated under the handicap of a significant scarcity of funds, a condition which became more evident as the year progressed. It has been even more pronounced since the end of the year. There is an increasing unsatisfied demand for bank accommodation. It is a long time since a creditworthy customer could be so doubtful of getting an advance from his bank against even really good and acceptable security as he is today. With the sustained and effective—I might almost say preferential—demands for finance for the projects of the second Five-year Plan, there is little likelihood of any early easing of the money situation. Rather is the reverse the case. The position is made worse by the Government's insatiable tax levies. Industrial concerns can only meet the peremptory demands of the tax-gatherer by surrendering money they need for working capital or for maintenance and renovation and development of plant. They are obliged to apply to banks for money to replace the funds they have had to pay in taxes. They find the tightness of money prevents their demands being met. Their business and their profits—and their shareholders—suffer."

—SIR COWASJEE JEHANGIR,

Bank of India Ltd.

Demand for Tin

"Much money and considerable time are needed for prospecting and for the installation of plant on a new mining area. Unless some assurance can be felt that the right to work newly-found areas will be granted, and granted speedily and on reasonable terms, overseas investors are not likely to risk further capital in tin mining in Malaya. Prospectors for tin need the stimulant of more active co-operation and encouragement from the numerous local authorities concerned, particularly in the matter of alienation of land for mining. This is not a new problem and it is hoped that prompt attention will be given to its solution. In the view of those most competent to judge, the demand for tin is likely to increase as the standard of living rises in the underdeveloped areas of the world and as the tin-plate and other world industries which require tin continue their vigorous expansion. No adequate substitute for tin has yet been found and, thanks largely to the admirable work of the Tin Research Institute, new uses for tin have been discovered and existing tin products have been materially improved, both technically and economically. On the other hand, costs of production in Malaya continue to rise and the burden of taxation remains heavy."

—S. H. SMITH,

British Tin Investment Corpn. Ltd.

COMPANY MEETINGS AND DIVIDENDS

BENGAL BHATDEE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 18th March 1957. Transfer books remain closed from 11th to 18th March 1957, both days inclusive.

VIZAGAPATAM SUGARS AND REFINERY LTD. Annual General Meeting, Thumapala, Anakapalle P.O., 22nd March 1957. Transfer books remain closed from 8th to 22nd March 1957, both days inclusive.

SITALPORE SUGAR WORKS LTD. Annual General Meeting, Calcutta, 25th March, 1957. Dividend: *Nil*. Transfer books remain closed from 12th to 25th March 1957, both days inclusive.

COIMBATORE COTTON MILLS LTD. Annual General Meeting, Singanallur, Coimbatore, 25th March 1957. Dividend: Rs. 25 per share. Transfer books remain closed from 12th to 25th March 1957, both days inclusive.

Notices

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 24TH ANNUAL GENERAL MEETING of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on TUESDAY THE 26TH MARCH, 1957, AT 4.30 P.M. (S.T.) or immediately after the Extraordinary General Meeting of the Holders of Deferred Shares called on the same day at 4.00 p.m. (S.T.) is over, for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September, 1956.
2. To declare Dividends on Preference, Ordinary and Deferred Shares.
3. To appoint a Director in place of Shri Ratanchand Hirachand who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company.

   "Resolved that pursuant to the provisions of Section 261 of the Companies Act, 1956, Shri Ratanchand Hirachand who retires by rotation and who is an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."
4. To appoint a Director in place of Shri Shivlalchand Gulabchand Shah who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Shri Valchand Deochand who was appointed an additional Director of the Company and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for re-appointment. The Company has accordingly received a notice in writing proposing his candidature for office of Director.
6. To appoint and/or approve the appointment pursuant to Section 261 of the Companies Act, 1956, of Shri Lalchand Hirachand who was appointed a Director at the Ordinary General Meeting held on 19th March, 1956, and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Section 261 of the said Act has been received by the Company.

   "Resolved that pursuant to the provisions of Section 261 of the Companies Act, 1956, the appointment of Shri Lalchand Hirachand, an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said section."
7. To appoint and/or approve the appointment pursuant to Section 261 of the Companies Act, 1956, of Shri Govindji Raoji who was appointed a Director at the Ordinary General Meeting held on 19th March, 1956, and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by section 261 of the said Act has been received by the Company.

   "Resolved that pursuant to the provisions of Section 261 of the Companies Act, 1956, the appointment of Shri Govindji Raoji, an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby made and/or approved as required by the provisions of the said section."
8. To appoint Auditors for the current year and fix their remuneration.
9. To consider and if thought fit, to pass the following Resolution:—

   "Resolved that the consent of the Company under Section 293 (1) (d) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company for borrowing moneys for the purposes of the Company from time to time even though the moneys so borrowed together with the moneys already borrowed by the Company and remaining outstanding or the amounts for the time being and from time to time remaining undischarged of the moneys so borrowed together with the moneys already borrowed may be in excess of the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, provided that such excess shall not be more than Rs. 80,00,000 at any one time and provided further that in computing the amounts of borrowings whether already made or to be made the amounts of temporary loans obtained from the Company's Bankers in the ordinary course of business shall be excluded."
10. To consider and if thought fit, to pass the following resolution as a Special Resolution:—

    "Resolved that this Company hereby approves of all contracts to be entered into with Messrs. Standard Tool Co., an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for purchase of materials from them at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."
11. To consider and if thought fit, to pass the following resolution as an Ordinary Resolution:—

    "That the 40,000 Deferred Shares of Rs. 10 each in the Capital of the Company be consolidated and divided into 8,000 Deferred Shares of Rs. 50 each so that every five Deferred Shares of Rs. 10 each shall constitute one Deferred Share of Rs. 50 each. For the purpose of giving effect to such consolidation and division the Directors may issue fractional certificates in respect of holdings or part holdings of less than 5 Deferred Shares of Rs. 10 each and may call in the existing certificates of the 40,000 Deferred Shares for cancellation and issue new certificates within a period of six months of such recall and may settle any question or difficulty which may arise in regard to such consolidation and division (including any question or difficulty arising in connection with any deceased or insolvent or any member suffering from any disability)."
12. To consider and if thought fit, to pass the following resolution as a Special Resolution:—

    "That the Articles of Association of the Company be altered in the manner following:—

    In Article 6 for the figures and words "40,000 Deferred Shares of Rs. 10 each" substitute the figures and words "8,000 Deferred Shares of Rs. 50 each."
13. To consider and if thought fit, to pass the following Resolution:—

    "Resolved that the Registers, Minute Book and Documents of the Company required to be kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 144, 163, 196, 301, 302, 304, 307, 362 and 372 of the said Act be kept open for inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of the fees, if any, specified in the aforesaid sections, at the Registered Office of the Company between the hours of 11.00 a.m. and 1.00 p.m. on Saturdays and 3.00 p.m. and 5.00 p.m. on all other working days, unless otherwise provided in the said Act PROVIDED, however, that the Register required to be maintained under Section 307 of the Act shall be open to the inspection of any member or holder of debentures of the Company as aforesaid between the times abovementioned during the period prescribed by clause (a) of Sub-section (5) of Section 307 of the said Act."

The Transfer Books of the Company will remain closed as from Wednesday the 6th March, 1957, to Wednesday the 27th March, 1957 (both days inclusive).

By Order of the Board,

WALCHAND & CO. PRIVATE LTD.,
Managing Agents,
GULABCHAND HIRACHAND,
Director.

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-NINTH ANNUAL GENERAL MEETING of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on WEDNESDAY THE 27TH MARCH, 1957 AT 4-00 P.M. [S.T.] for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September 1956.
2. To declare Dividends on Preference and Ordinary Shares.
3. To appoint a Director in place of Shri Gulabchand Hirachand who retires by rotation and who is eligible for re-appointment.
4. To appoint a Director in place of Shri Lalchand Hirachand who retires by rotation and who is eligible for re-appointment.
5. To appoint a Director in place of Shri Maneklal Premchand who retires by rotation and who is eligible for re-appointment and to consider and if thought fit, to pass the following resolution in respect of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   "Resolved that pursuant to the provisions of Section 281 of the Companies Act, 1956, Shri Maneklal Premchand who has attained the age of 67 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit, to pass the following resolutions as Special Resolutions:—

   (i) "Resolved that this Company hereby approves of all contracts of sales of Company's products entered into with Messrs. P. V. Brothers, an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company."

   (ii) "Resolved that this Company hereby approves of all contracts to be entered into with Messrs. P. V. Brothers, an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale or supply of Company's products and/or purchase of goods and materials from them provided that the prices or amounts received by this Company and/or paid by this Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable and provided further that Messrs. P. V. Brothers shall make payment to this Company within one month from the date of sale or supply by this Company."
8. To consider and if thought fit, to pass the following resolutions as Special Resolutions:—

   (i) "Resolved that this Company hereby approves of all contracts of purchase made with Messrs. Standard Tool Co., an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company."

   (ii) "Resolved that this Company hereby approves of all contracts to be entered into with Messrs. Standard Tool Co., an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for purchase of goods and materials from them at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable."
9. To consider and if thought fit, to pass the following resolution as a Special Resolution:—

   "Resolved that this Company hereby approves of all contracts to be entered into with the Ravalgaon Sugar Farm Ltd., an Associate of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, for sale or supply of Company's products provided that the prices or amounts received by this Company are at rates which are not less favourable to this Company than the market rates or which are otherwise reasonable, and provided further that the Ravalgaon Sugar Farm Ltd. shall make payment to this Company within one month from the date of sale or supply of Company's products by this Company."

The Transfer Books of the Company will remain closed as from Monday the 11th March, 1957, to Saturday the 30th March, 1957 (both days inclusive).

By Order of the Board,

B. D. SARDESAI,
Secretary.

EAST INDIA AGENCIES PRIVATE LTD.,
Managing Agents.

PALAI, 7*th March* 1957.

THE BANK OF INDIA LIMITED

(*Concluded from page* 527)

larger individual transactions. There is, I think, an assured future for India as a foreign exchange market. Amongst the currencies of Asian countries our rupee stands very high. As a counter in international exchange its use is increasing. I trust that those in authority over the management of our currency will do all they can to see that the value and reputation of the rupee in foreign markets are maintained.

"I would now refer you, ladies and gentlemen, to the balance-sheet.

"The total at foot of the balance-sheet is over Rs. 96 crores. The figure of the previous year was something over Rs. 89 crores. This increase of Rs. 7 crores indicates the growth during the year of the Bank's business.

Increase in Profit

"The profit figure for 1956 is Rs. 92 lakhs, an increase of Rs. 7 lakhs over the figure of about Rs. 85 lakhs for 1955. Before the profit figure has been struck, usual appropriate and prudent provisions have been made. I think you shareholders will be satisfied with the profit figure. It is higher than that of any previous year and represents quite an achievement in these uncertain days.

"The provision for taxation absorbs Rs. 28 lakhs, as against Rs. 25 lakhs last year.

"Your Directors propose to place to the Bank's reserve fund the sum of Rs. 8 lakhs, making the reserve fund Rs. 310 lakhs.

"A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent. paid last August, a distribution of 16 per cent. per annum, or Rs. 40 lakhs for the year, free of income-tax. The carry forward is Rs. 15½ lakhs, as against Rs. 13 lakhs last year."

STRIKE AFFECTS ORISSA MINERALS

PROFIT OF ANGELO BROS. HIGHER

Orissa Minerals Development Co., Ltd.

THE directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the half-year ended 30th June 1956.

In confirmity with the provisions of the Companies' Act, 1956, the Company's accounts will henceforth be drawn up on an annual basis. From now on therefore, the Company's accounts will be closed and audited as at 30th June each year and the first annual closing will be for the 12 months period ending on 30th June 1957.

Iron Ore.—Raisings were 148,538 (220,283) tons compared with 191,184 tons in the previous half-year. Despatches amounted to 143,521 (224,788) tons, showing a considerable fall in comparison with 214,729 tons in the previous half-year. Raisings and despatches were low because of the lockout following the strike on the 20th April 1956, which continued until the 25th June, 1956. The Steel Works order was maintained in our books at 40,000 tons per month during this period.

Shipments to Japan were considerably lower at 8,612 (48,811) tons as compared with 20,745 tons during the previous period. This decrease was partly due to the cessation of work at the mines for a period of over two months and partly to shortage of railway transport.

Manganese Ore.—Raisings fell from 29,146 tons to 13,525 (38,720) tons in this half-year. Sales were also lower at 14,025 (16,959) tons as compared with 22,107 tons.

Manganese Dioxide.—Raisings fell still further to 395 (1,068) tons from the figure of 800 tons during the previous half-year. Sales decreased from 1,711 tons to 1,485 (1,547) tons in this half-year. The progress made in the proving of this area was interrupted by the strike and the culminating lockout.

Market.—The market continued to improve and the prices at which the various grades could be sold during the period under review were satisfactory. Unfortunately full advantage could not be taken due to shortage of wagons and the cessation of work.

Transport.—During the first few months this half-year the availability of transport was far from satisfactory and thereafter as a result of the strike and the lockout, full advantage of available transport could not be taken.

Labour.—As stated in the last report, work at the mines was suspended for a large part of the period under review and steady progress is now being made to bring back normalcy in labour relations and output. The issues concerning the strike and resultant lockout has been referred to an Industrial Tribunal before which proceedings are now taking place.

Bolani Area.—Progress continues to be made with regard to formation of a new company to develop this area as explained in the directors' last report and meanwhile investigations are continuing in regard to the opening up of this property.

The profit and loss account after providing for all charges and making provision of Rs. 1,80,000 (Rs. 1,50,000) for taxation and Rs. 82,805 (Rs. 89,344) for depreciation shows a profit of Rs. 2,17,464 (Rs. 4,19,646). To this profit is added the balance brought forward from the previous half-year of Rs. 1,18,835 (Rs. 91,384) making a total of Rs. 3,36,299 (Rs. 5,11,030). From this amount is to be deducted the amount transferred to general reserve Rs. 232 (*nil*), to tax contingency reserve Rs. 29,600 (Rs. 50,760) and to development rebate reserve Rs. 5,800 (*nil*) leaving a balance available of Rs. 3,00,667 (Rs. 3,05,053 after placing Rs. 1,40,000 to mechanisation reserve and Rs. 15,217 towards provision for staff and workmen's accidents and compensation). The directors propose to dispose of this amount by payment of a dividend on the 200,000 ordinary shares at the rate of 20 (20) per cent. per annum, without any deduction for income-tax payable by the Company Rs. 2,00,000 (Rs. 2,00,000) and by carrying forward Rs. 1,00,667 (Rs. 1,05,053).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	22,02,614
Reserves ...	35,94,529	Capital work-in-progress	1,43,227
Provision for taxation ...	9,86,498	Stock-in-trade	11,33,310
Liabilities ...	21,61,414	Stores & spare parts ...	6,63,524
Profit and loss account ...	1,00,667	Debts, deposits and advances ...	12,50,245
		Investments ...	30,38,027
		Cash ...	4,12,161
Rs.	88,43,108	Rs.	88,43,108

Angelo Bros., Ltd.

The directors of the above Company (Managing Agents: Messrs. Turner Morrison & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st August 1956.

The profit for the year after providing for depreciation, directors' fees and taxation, amounts to Rs. 7,41,914 (Rs. 6,89,131). Adding to this the balance brought forward from last year of Rs. 3,43,960 (Rs. 2,39,798) there is a total of Rs. 10,85,874 (Rs. 9,43,961 including Rs. 15,032 transferred from provision for taxation). After transferring to general reserve Rs. 150,000 (*nil*) the directors recommend payment of a dividend of 12½ (12½) per cent. and a bonus of 7½ (7½) per cent. absorbing Rs. 6,00,000 (Rs. 6,00,000) leaving a balance to be carried forward of Rs. 3,35,874 (Rs. 3,43,961).

Production and sales were well maintained during the year, and apart from price fluctuations which are a feature of the Company's business no major difficulties were encountered. Trading profits showed a satisfactory improvement, and this would have been reflected to a greater extent in the final profit figure had it not been for the introduction of a tax on dividends with retrospective effect.

At the beginning of the period, T.N. was quoted at Rs. 133. Seasonal demand took the rate gradually to Rs. 166 by early November and it fluctuated between Rs. 163 and Rs. 153 until January when a trend to lower levels appeared. The lowest point, Rs. 100, was touched in mid-April. Rs. 130 was seen again in May and thereafter only small variations occurred. At the close of the season T.N. was quoted at Rs. 126. The 1956 Bysaki crop was a little smaller than originally estimated but supplies of lac were adequate throughout.

The De-waxing plant has been modernised and extended and other Factory plant has been maintained at a high level of efficiency and economy.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	80,00,000	Block ...	11,39,552

Rs.	95,12,083	Rs.	95,12,083

Bhopal Sugar Industries Ltd.

The directors of the above Company [Managing Agents: Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., Bombay] submit the audited accounts of the Company for the year ended 30th September 1956.

The profit and loss account shows a net profit of Rs. 8,66,510 (Rs. 2,79,191) after providing for managing agents' commission of Rs. 96,279 (Rs. 31,021) and depreciation (including extra depreciation) and development rebate on machinery at Rs. 1,33,887. After transferring an amount of Rs. 12,407 from investment reserve fund and Rs. 25,000 from reserve for doubtful debts and Rs. 4,692 (Rs. 38,001) carried forward from the previous year, the amount available for appropriation amounts to Rs. 9,08,609 (Rs. 3,17,192). The directors recommend the following appropriations:—

To provision for taxation. (This includes estimated provision for previous years of which the assessment and appeals are pending) Rs. 5,50,000 (Rs. 75,000), to dividend on preference shares at 5 per cent. free of tax Rs. 62,500 (Rs. 62,500), to dividend on ordinary shares at Re 1-8 (Re. 1) per share free of tax Rs. 2,62,500 (Rs. 1,75,000) and balance to be carried over to the next year's accounts Rs. 33,609 (Rs. 4,692).

The crushing season for the year under review ended on 24th April 1956, the duration being of 112 days. The total quantity crushed was 2,031,425 (1,222,870) maunds, producing 68,581 (40,242) bags of sugar; the average recovery being 9.27 (9.10) per cent. The working of the factory was smooth and satisfactory without any serious mechanical troubles.

The farm results this year were very much better than in the past, the average yield being 31 tons per acre as compared to less than 26 tons per acre of the previous year. Every effort is being made to rear the crops in the best possible manner by utilising adequate qualities of fertilisers, compost manure, etc. The rains were quite good this year; the tank levels are normal, and the condition of the standing crops is good.

Factory Extension:—Suitable measures are being taken to add new machines, which will add to the efficiency of the factory. It is expected that after the erection of 1 more mill and 1 more pan which have been ordered, the grading of sugar will improve and that the extraction would be higher.

Current Season:—The crushing operations were started on 15th December, 1956, 2 weeks in advance as the Company expecting larger supplies of sugarcane this year. The Company's farms are expected to yield about 11 lakh maunds and outside supplies are likely to exceed this figure. It is hoped to continue crushing till end-April and produce about 85,000 to 90,000 bags of sugar.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	12,95,989

Polychem Ltd.

The directors of the above Company (Chairman: Mr. Ramdas Kilachand, Bombay) present the first annual report as also the audited accounts of the Company for the period from 24th October 1955 to 31st December 1956.

The accounts show a profit of Rs. 67,790 after appropriation of expenditure on fixed assets amounting to Rs. 3,18,663, which amount is proposed to be carried forward.

The Company was incorporated on 24th October, 1955 and obtained the Certificate for Commencement of Business on 17th May, 1956. The directors made a first call of Rs. 10, payable on 31st January, 1957, in respect of each of the 80,000 redeemable 7½ per cent. (taxable) cumulative first preference shares of Rs. 50 of the Company which would provide a sum of Rs. 8,00,000 to raise the paid-up capital of the Company to Rs. 72,00,000. The total amount received in respect of the said call till date is Rs. 7,94,470.

Despite the Suez trouble, progress of work achieved for installation of the Polystyrene Plant at Goregaon (B. S. D.) has been satisfactory and the directors feel that progress has been well maintained. The construction work of buildings has been completed and most of the machinery has been received and installed. The requisite raw materials and chemicals have been shipped from the U.S.A. and are expected to arrive during March, 1957. Piping, wiring and ancillary services are under final stages of completion. The initial test trial of the plant is expected to be taken by about the end of March, 1957. It is gratifying to note that the Government of India have put progressive restrictions on the import of Polystyrene which is the Company's finished product.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,98,975	Block ...	20,00,016
Liabilities ...	2,78,833	Expenditure during construction period ...	3,18,663
Profit and loss account ...	67,790	Stores, loose tools & raw materials ...	28,265
		Debts, deposits and advances ...	6,36,169
		Investments	5,000

		Miscellaneous expenditure and losses	2,56,199
Rs.	67,45,598	Rs.	67,45,598

Chemical, Industrial & Pharmaceutical Laboratories, Ltd.

The directors of the above Company (Managing Agents: Messrs. Hamilsons Private Ltd., Bombay) present the audited accounts of the Company for the year ended 31st October, 1956.

The directors inform that there was a steady progress in the Company's business during the year under review. There was an increase in the net sales amounting to Rs. 3,80,807. There was however a corresponding increase in sales promotion expenses, freight and forwarding charges, cost of packing materials and salaries and wages. Owing to severe competition the selling prices of many items had to be reduced. In spite of all this, the percentage of profit to net sales shows a slight increase.

The profits for the year under review after allowing for depreciation, bonus to staff and workers and managing agency commission amount to Rs. 2,60,415 (Rs. 2,04,431). The directors have provided for taxes Rs. 80,000 (*nil*) and for doubtful debts Rs. 10,000 (*nil*) leaving a balance of Rs. 1,70,415 (Rs. 1,47,431 after payment of bonus and special efficiency allowance to staff absorbing Rs. 57,000). After adding the amount of Rs. 97,974 (Rs. 93,181) brought forward from last year's account, the amount available for disposal for the year under review is Rs. 2,68,389 (Rs. 2,40,612). Out of this sum, the directors recommend a dividend of Rs. 5 (Rs. 5) per share, free of income-tax on 6,000 preference shares absorbing Rs. 30,000 (Rs. 30,000) and a dividend of Rs. 6 (Rs. 6) per share, free of income-tax on 18,773 ordinary shares absorbing Rs. 1,12,638 (Rs. 1,12,638) leaving a balance of Rs. 1,25,751 (Rs. 97,974) to be carried forward.

On account of congestion in various production departments the demand for the Company's products could not be fully met and the directors on the recommendations of the managing agents considered it necessary that certain additions and extensions to the existing premises be made so that the congestion in various departments be removed as far as possible. The directors wish to inform that permission for these alterations and additions has been received from the Municipality as well as from the Director of Industries, Government of Bombay, and the necessary building is now under construction.

Accounts in brief are as under:—

GILT-EDGED DULL

(From Our Own Correspondent)

BOMBAY, 12*th March*

Stringent conditions continued to prevail in the short-term money market during the week under review. With the progress of the busy season, the demand for bank credit seemed to be still on the high side, while the floating funds were far below the requirements. Consequently, banks continued to seek accommodation from the Reserve Bank to meet their needs and interest rates were well held at the previous week's levels.

Inter-bank call money was bid at the self-same rate of 3½ per cent. among the Exchange and big Indian banks. The rate among the smaller Indian banks was also 3½ per cent. House money at call was offered 4 to 4½ per cent., as were short-term deposits for one to six months. The higher rate was quoted only in special cases for large amounts.

The customary statement of the Reserve Bank of India for the week ended 8th March 1957 is not available, as we go to press a day earlier than usual.

The Scheduled Banks' statement for the week ended 1st March 1957 shows that banks' demand deposits continue to rise, the increase during the week under review being Rs. 4.14 crores, while time deposits have fallen by Rs. 4.26 crores, thus reversing the trend noted in the previous week. Inter-bank borrowings have gone up by Rs. 1.99 crores, while borrowings from the Reserve Bank show a fall of Rs. 3.54 crores. On the assets side, the small decline in advances noted in the previous week seems to have been a temporary feature; for the latest statement shows an increase of Rs. 3.08 crores in this portfolio. Bills purchased and discounted have also risen by Rs. 1.72 crores. Investments have further declined by Rs. 1.32 crores, bringing the aggregate fall since the beginning of the current year to Rs. 14.50 crores, the bulk of which (Rs. 10.69 crores) having occurred in the last three weeks alone. Cash balances and balances with other banks show small declines and money at call a drop of Rs. 1.01 crores.

The Gilt-edged market was featureless, with hardly any variations in quotations. In the absence of any support, except the Reserve Bank purchases, the volume of business was on the low side. 3 per cent. 1986 Conversion Loan was well maintained at Rs. 74-9. 3 per cent. 1970-75 was bid at the self-same rate of Rs. 87-6 and 3 per cent. 1966-68 held group at Rs. 92-4. 3 per cent 1964 showed no change at Rs. 94-6, 3 per cent. 1963-65 at Rs. 94-3 and 3 per cent. 1959-61 at Rs. 97-12. 3½ per cent 1962 was stagnant at Rs. 97-13, 3½ per cent. 1961 at Rs. 99-7, 3½ per cent. 1964 at Rs. 98-6, 3½ per cent. 1965 at Rs. 98-3 and 3½ per cent. 1967 at Rs. 98-8. The State loans were devoid of any interest.

In the foreign exchange section, the rupee continued to rule a shade easy in terms of U.S. and Canadian dollars. Banks' selling rate of ready U.S. dollar moved up from Rs. 4784 to Rs. 4784 per $100 and their buying rate, after declining from Rs. 475¼ to Rs. 475, rose again to Rs. 475¼ per $100 Banks were sellers of Canadian dollars at Rs. 502¼, as against Rs. 501¾ per $100 a week ago, and buyers at Rs. 495⅛, as compared with Rs. 495 per $100. In New York, sterling moved erratically, but on balance was slightly better. Thus, spot sterling, after gaining from $2.79-9/16—2.79-11/16 to $2.79-11/16—2.79-13/16, closed at $2.79-5/8—2.79¾. Three months' forward gained from $2.78-11/16—2.78-13/16 to $2.78-13/16—2.78-15/16, while transferable sterling was marked down from 276.20—276.30 cents to 276.10—276.20 cents.

COW HIDES IN DEMAND

(From Our Own Correspondent)

MADRAS, 11*th March*

There was no appreciable change in the kip market last week, except that U.K. inquiries were insistant for 8/8½ and 10/12 pounders wherein supplies were small. Arrivals of E.I. tanned cow hides were moderate and offtake was good. Demand for buff hides was limited. Moderate clearance was effected in cow calf and buff calf section and shippers to the U.S.A. showed some interest in buff calf, but prices were poor.

There was good call for top marks in goat skins from the Continent and slightly higher prices were paid for limited quantities. Prices of market quality goat skins and sheep skins remained steady, and shippers were moderately active.

Shipments during February 1957 were: to the U.K.: 2,213 bales tanned cow hides, 218 tanned cow calf, 7 tanned buff hides, 458 tanned buff calf, 722 tanned goat and 516 bales tanned sheep skins; to the Continent: 12 bales tanned cow calf, 543 tanned goat and 97 bales tanned sheep skins; to the U.S.A. ports: 23 bales tanned cow calf skins, 76 tanned buff hides, 31 tanned buff calf skins and 74 bales tanned goat skins.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, 11*th March*

Conditions in the linseed market remain more or less unchanged. Activity has been restricted, owing to scarcity of ready goods, and very poor arrivals from producing centres. Crushers have shown some interest for ready delivery, but are rather reserved for forward positions, thanks to the uncertain future offtake of oil. Dull conditions prevail in the oil section and a fair disparity between local and overseas prices still exists.

The latest available quotations are: March Rs. 22 and April-May Rs. 20-8 per maund.

BULLION RECOVERS

(From Our Own Correspondent)

BOMBAY, 12*th March*

After two weeks of successive landslide, the bullion market ruled steady during the week under review, with a recovery in prices in both metals. Just as the preceding week's fall was sharper in silver, this week's recovery also was more marked in the white metal, due to short-covering on reports that the import duty paid on Tibetan coins during the week was less than market expectations. Arrivals were also less than in the previous week.
