Gold also moved up in sympathy and on reports that the offtake in the ready section was quite encouraging, *vis-a-vis* the arrivals.

Forward silver (15th March settlement) edged forward from Rs. 176-15 to Rs. 179-6, before closing a shade lower at Rs. 178-13 on profit-taking. The next settlement (13th April) gained from Rs. 177-1 to Rs. 179-10 but finished at Rs. 179-1.

Ready silver moved up from Rs. 176-15 to Rs. 179-2 and closed at Rs. 178-9. The floating stocks of silver are placed at 800 bars. The daily average offtake was 15 bars.

Gold for forward delivery (14th March settlement) crept up from Rs. 105-9 to Rs. 106-9, before winding up at Rs. 106-6. The April settlement was done at the close at Rs. 106-7, after being lifted up from Rs. 105-10 to Rs. 106-10.

Ready gold advanced from Rs. 105-9 to Rs. 106-10 and finished at Rs. 106-7. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was a shade higher at 3,500 tolas.

In New York, silver price was unchanged at 91⅜c., while in London, spot silver declined from 80d. to 79¾d. and forward from 79¾d. to 79½d. Gold, on the other hand, showed a further rise from 249s. 7¼d. to 249s. 9½d.

The following comparative table shows the trend of market during the week under review:

	12-3-1957	Highest	Lowest	6-3-57

COARSE GRAINS LOOK UP

(From Our Own Correspondent)

HAPUR, 11*th March*

Steady conditions were observed in the foodgrains market during the week under review. Coarse grains tended to look up on good consumer demand and depleted stock position. Sales through fair-price shops were hardly sufficient to meet the day-to-day requirements of the locality and stocks were fast dwindling. Wheat stock which was put at 19 *khaties* last week-end was today estimated at 8 *khaties* only. Wheat recorded a rise of As. 4 to Rs. 16-6 per maund for average quality and to Rs. 17-12 for farm produce, while wholesale *khati* was quoted at Rs. 16-4 per maund. The week's offtake was mostly by roads to nearby districts in West U.P. and some despatches were made to east U.P.

Some losses to standing wheat crops were reported from east U.P., due to hailstorms last week; otherwise, the crops were reported to be fairly good. Rice, however, ruled quiet at mostly unchanged price levels. *Basmati* was done at Rs. 23-8 to Rs. 27, *Manipuri* at Rs. 20-8, coarse at Rs. 16-8 per maund.

Gram continued to attract fairly good consumer demand at increased rates. Local quality was transacted at Rs. 13-12 per maund and Punjab produce at Rs. 14-4. Local stock went down to one *khati* only. Barley and *bejhar* also advanced in sympathy with the general bullish trend in foodgrain prices and poor local stocks, with about a month still left for the arrivals of new crops into the market. Maize and *bajra*, however, ruled quiet, due to fall in seasonal demand. The latest available rates were: Barley Rs. 14-2; *bejhar* Rs. 13-14; maize Rs. 13-12; *bajra* Rs. 14-4; *jowar* Rs. 12-8 to Rs. 13; *guwar* Rs. 11 per maund.

Pulses ruled quiet, as harvesting of peas had begun here also in some centres and impending arrivals of new crop shortly. Standing crops of *arhar* were reported to have benefited, due to rains, and *arhar* were mostly unchanged during the week Other pulses, however, were depressed. Peas *dara* green was done at Rs. 13-2, white quality at Rs. 15-8, *arhar* at Rs. 12-6, *urd* Rs. 18 to Rs. 20-4, *moong* at Rs. 14 to Rs. 15-8 and *massoor* at Rs. 16 per maund. Continued bull support, however, accounted for a sharp advance in pulses futures, which, barring *urd baisakh* which ruled quiet, closed at the best levels of the week on Monday. The latest available rates are: Peas *jeth* Rs. 10-9-4½; peas farm *jeth* Rs. 10-11-1½; *arhar jeth* Rs. 10-15-3; *urd baisakh* Rs. 18-5.

COTTON FUTURES VERY FIRM

(From Our Own Correspondent)

BOMBAY, 12*th March*

The cotton futures market had a short week, as it was closed on the 9th and 11th inst. During this brief period, the market ruled distinctly firm, thanks to small volume of tenders on the Jarilla March contract, general shortage of tenderable cotton and tight statistical position. The firmness of the spot section, where prices were ruling at near-ceiling levels, imparted further strength to the market. As a result, handsome gains were recorded by the various contracts, the week's closing quotations being substantially higher than those at the end of last week.

Jarilla March opened the week at Rs. 730 and, induced by persistent spot house support, shot up to Rs. 770 today before closing a shade lower at Rs. 766. Under the leadership of this contract, the May position registered a handsome gain. It opened at Rs. 671-8 and steadily rose to Rs. 688 today before closing at Rs. 685-12.

M.G. Vijay April opened at Rs. 846, as against the previous close of Rs. 844-8. It attracted fresh buying support which pushed it up to Rs. 850 the next day. Commencing today's session at Rs. 857, the contract rallied to Rs. 869 on speculative buying, before winding up the session fractionally lower at Rs. 868-8. The June delivery followed more or less the same pattern. The week's trading in the contract started at Rs. 798 and it improved, in subsequent sessions, to touch a high of Rs. 804 on the 8th inst. Opening at Rs. 812 today, the contract firmed up to Rs. 819 before closing at Rs. 816.

The following is the trend of the week's trading in cotton futures:

(In rupees per candy of 784 lbs.)

	12-3-57	*High*	*Low*	6-3-57
Jarilla (March) ...	766	770	730	728
Jarilla (May) ...	685½	688	671½	671
Vijay (April) ...	868½	869	844	844½
Vijay (June) ...	816	819	796	798

In the spot cotton market, values were very firm, although daily offtake did not show any marked improvement as shippers and mills were not inclined to make large commitments. Spinner demand was noted for Moglai, and Berar, presumably to meet immediate requirements. Shipper's interest was confined to Bengal *Deshi* and yellow pickings. In the foreign section, since import licences are not available for any growths, shipment business was *nil*. However, in anticipation of a fresh quota for importing American aid cotton, interest in U.S. styles had revived. The progress of talks between the Egyptian delegation and representatives of the Government of India regarding Indo-Egyptian trade is watched with great interest and traders are generally inclined to think that India will be able to prevail upon Egypt to grant some price concessions in respect of cotton shipped to India, especially in view of the small offtake of Egyptian cotton by India in the current season.

Importers have heaved a sigh of relief at the reported decision of the Government of India to allow imports of cotton contracted for between 14th and 28th February 1957 which is said to be of the order of about 32,000 bales. The earlier announcement of the 1st inst. by the Joint Chief Controller of Imports that the monetary ceiling fixed in respect of imports of cotton had been reached as early as 14th February caused a flutter among importers, as it was feared that they would not be able to honour their commitments.

The latest available spot rates—in rupees per candy of 784 lbs.—from Sewri are given below:

Bengal *Deshi* 730; Berar Jarilla 815; Khandesh 835; Vijay 945; Oomra *Deshi* 800; Moglai 770.

Despite persistent reports that China was interested in purchasing cotton, the Karachi cotton market continued to rule easy during the week. Values were sticky and failed to rise. Some speculative buying was, however, noted in May deliveries. N.T.R.G. March delivery which had closed at Rs. 78-7 declined to Rs. 78. May position shed As. 4 to Rs. 79-8. In the spot section, *Deshi* cotton was especially easy. Total arrivals of cotton into the market since the season commenced aggregated 596,000 bales and total shipments amounted to 525,000 bales. The latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi are given below:

Sind *Deshi* 86; Punjab *Deshi* 76-8; 4F Roller 81-14; S.G. 85-6; Punjab Roller 84-6; S.G. 87-14; 289F N.T. Roller 83-6; 289F N.T. Sind S.G. 90-14; 289F Punjab Roller 86-6; S.G. 87-6.

The easy trend noted in the Alexandria cotton futures market last week gathered fresh momentum during the week, thanks to some speculative selling induced by absence of fresh inquiries from abroad. Local spinner demand was also very slack. Total export sales for the season till 15th February were 414,671 bales (730 lbs.) as against 682,162 bales in the corresponding period of the previous season. Actual shipments up to 13th February were 256,269 bales, as compared with 464,339 bales a year before. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 114.60; May 116.70; July 116.50; *Ashmouni*: April 83-10; June 83.25; August 83.00.

The auction dates of new crop Sudan are the 14th and 15th inst. About 6,000 bales are scheduled to be offered by the Gezira Board. Reserve prices have not yet been announced.

The Lint Marketing Board of Uganda sold 29,225 bales of cotton on tender basis on the 4th inst. But the Board announced suspension of sales on tender basis the next day itself and the system of sales by auctions was resumed on the 7th inst., with offerings of about 10,000 bales. It is reported that the Board accepted for sales on tender basis much lower prices than what the traders generally thought would be acceptable to the Board.

The Liverpool cotton futures market presented a steady trend during the week. As the uncertainty regarding U.S. cotton export policy had been removed, buying interest was slowly reviving. But, in view of the comfortable stock position of mill and trade, any marked improvement in the offtake of cotton would appear to be unlikely. Inquiries continued to be confined to medium and lower U.S. growths. Small turnover was reported in Turkish, East African and Syrian styles. Indian Oomras and Pakistani Sind and Punjab *Deshi* attracted some attention. Trading in both the American and American type contracts was fairly active. The volume of tender on the March contract has so far been below expectation indicating the general anticipation of better trade demand in future. It is reported that dockets aggregating 5,400 bales have been made on the March tender till the end of the first week of March. Sudans and Egyptians were neglected and remained unchanged. The latest available quotations—in pence per lb.—from Liverpool are as under:

American One Inch Staple Contract: March-April 26.12; May-June 26.23; July-August 25.83; October-November 25.52. *American Cotton Mixed Growth Contract*: March-April 26.30; May-June 26.40; July-August 26.00; October-November 25.62. *Egyptian Karnak*: March-April 60.00. *Sudan Lambert*: May-June 43.00.

Cotton values in the New York market registered a decline. The main influencing factors were slow conditions in the textile market, favourable weather and the belief that the Soil Bank would not absorb as much acreage as was previously expected. Although, earlier in the week, a slight rally was in evidence, values fell off later on heavy tender notices. In the spot section also, activity was slow. Offerings of qualities in good demand were light, while domestic mill support was limited.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	11-3-57	5-3-57	25-2-57
Spot	35.00	35.20	35.35
March	34.70	35.05	35.29
May	35.00	35.08	35.25
July	34.46	34.51	34.67

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 12*th March*

The undertone of the sugar market was bearish during the week under review. The chief factor which adversely affected the sentiment of traders was the downward revision in the ex-mill quotations of Bombay-Deccan sugar. Heavy arrivals of sugar into the market—aggregating 29,000 bags, as against 23,700 bags in the previous week—lent further support to the bearish trend. Selling ensued as a consequence and prices of sugar staged a retreat.

Spot medium grain sugar dropped a rupee to Rs. 89-Rs. 91 per bag, including sales tax. Large grain receded from Rs. 94-Rs. 98 to Rs. 93-Rs. 98. Small grain was quiet at Rs. 88.

Fagan delivery contract for 'C' grade sugar declined by As. 2 to Rs. 91-2; the contract is scheduled to be squared up on the 15th inst. *Vaisakh* delivery shed As. 4 to Rs. 92.2 with sellers at this price.

The normal monthly release of sugar for sale in the free market is expected to be issued before the next week is out. Trade circles are diffident about visualising any upward trend in sugar prices, notwithstanding fairly good export demand for Indian sugar.

YARNS DECLINE FURTHER

(From Our Own Correspondent)

BOMBAY, 12*th March*

There was no change in the trend of the yarn market which continued to be bearish during the week under review, with a further decline in prices. Rayon yarns were particularly depressed, thanks to rumours of one of the indigenous manufacturers lowering prices of yarn, provided sizable orders were placed. The reluctance of silk mills and dealers to make purchases except at reduced rates also acted as a damper. These factors induced selling and prices moved further downward. Staple fibre yarns ruled dull, with the exception of forward positions which met with good buying enquiries on reports of a gradual revival of demand from the leading consuming centres, especially the Punjab and West Bengal. Cotton yarns lacked support, owing to low level of offtake by handloom and powerloom interests. Even the distinctly firm trend of cotton prices failed to influence the cotton yarn section favourably.

Rayon yarns 150 bright cones for April delivery dropped Rs. 2 to Rs. 640. 120 dull cones Snia yarn for April delivery shed a similar amount to Rs. 811. In the spot section, 150 Japan fell by As. 2-6 to Rs. 4-1-6. 120 Japan was neglected at Rs. 4-4, as also 120 Italy at Rs. 4-1 and 150 Italy at Rs. 3-11-6. Among indigenous yarns, National Rayons 120 bright cones 1st grade lost three pies to Rs. 3-11-9. 150 bright cones 1st grade eased by a like sum to Rs. 3-5-6. Spot New Greats (40 x 2) was neglected at Rs. 3-5. Citys were dull at Rs. 3-5-6, Kohinoors at Rs. 3-6-6 and Centurys at Rs. 3-6. Foreign yarns (80×2) were done at lower prices. Paramounts and Fujis declined by 18 pies each to Rs. 5-5 and Rs. 5-6, respectively. Staple fibre yarn (40 x 2) for April delivery, however, evoked speculative buying enquiries and forged ahead from Rs. 638 to Rs. 643.

In the cotton yarn section, 10 counts Podars shed an anna to Rs. 14-13. Moderns were quiet at Rs. 15-4. Twenty counts Maduras and Gokaks were quiet at Rs. 19-8 and Rs. 18-11, respectively. Moderns, however, elicited some attention and rose by As. 4 to Rs. 19-8. Thirty counts Indus lost As. 2 to Rs. 21-8, while Edwards had some enquiries and gathered As. 2 to Rs. 21-12. Among 40 counts, Minaxis changed hands at Rs. 27, same as last week. Moderns were neglected at Rs. 28 and Gokaks at Rs. 27-4. Sixty counts Moderns were unchanged at Rs. 62-8, as also Raghuvamshis at Rs. 57-8 and Finlays at Rs. 61. Among 80s, Mahendras and Moderns were dull at Rs. 74-8 and Rs. 77, respectively. Finlays were on offer at Rs. 81-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	12-3-1957	6-3-1957
	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)—**		
120 Dull Cones Snia April	811 0	813 0
150 Bk. Cones April	640 0	642 0
120 Japan (per lb.)	4 4	4 4
150 Japan (per lb.)	4 1½	4 4
120 Italy (per lb.)	4 1	4 1
150 Italy (per lb.)	3 11½	3 11½
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 April	643 0	638 0
40 x 2 New Greats (per lb.)	3 5	3 5
40 x 2 Century (per lb.)	3 6	3 6
40 x 2 City (per lb.)	3 5½	3 5½
Cotton yarn **(per bundle of 10 lbs.)—**		
10s Podar	14 13	14 14
20s Maduras	19 8	19 8
30s Edward	21 12	21 10
40s Gokak	27 4	27 4
60s Raghuvanshi	57 8	57 8
80s Modern	77 0	77 0

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, 12*th March*

The oilseeds market ruled distinctly easy during the week under review. The easiness was particularly marked in the castor futures section. The groundnut section opened the week on a quiet note and picked up strength in the middle of the week following good demand from crushers and vanaspati manufacturers. Towards the close of the week, however, the section sagged owing to offerings from upcountry centres. In the castorseed and linseed sections, absence of any inquiries from shippers adversely affected the sentiment of operators, while offerings of castorseed from upcountry centres added momentum to the weakness in the castorseed section. Cottonseed, however, improved, following firm advices from the cotton market.

Groundnut May contract opened the week at Rs. 168 but moved down the same day to Rs. 166-14. It, however, rose to Rs. 170-6 on the 9th inst. owing to good demand from crushers. Subsequently, it declined to close at Rs. 168-2 today. It lost over the week As. 14. Ready Bold shed As. 6 to Rs. 34-8. Groundnut oil ex-mill remained unchanged at Rs. 18-12.

Linseed May contract commenced the week at Rs. 29 and receded to Rs. 28-6 on the following day. It improved today, on bear covering, to Rs. 29-4, before finishing at Rs. 28-14. Over the week, it was lower by As. 3. Spot Bold ready receded by As. 4 to Rs. 29-2. Linseed oil ready, too, was lower by As. 4 at Rs. 16-6.

Castorseed May (futures) began the week at Rs. 161-8 and moved up to Rs. 162-4—the highest level of the week—the same day. On the 8th inst., it slided back to Rs. 157, the lowest of the week, before recovering to Rs. 160-8, on the 9th. Today, once again, it withdrew to as low as Rs. 157-4 before finishing As. 4 higher. Spot Madras and Kanpur lost As. 8 each to Rs. 33-12 and Rs. 32-8, respectively. Oil B.S.S. was quoted As. 8 lower at Rs. 20-4.

Cottonseed May section forged ahead from the opening price of Rs. 98-12 to Rs. 100-8 with minor fluctuations. At the close today, it was quoted at Rs. 100. Over the week, the contract gained Re. 1.

Among others, *kardi* seed bold and *niger* seed Madras shed As. 2 each to Rs. 21-8 and Rs. 29-2, respectively.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	12-3-1957	6-3-1957	26-2-1957
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
February 1957 ..	—	—	169 8

Ready	16 6	16 10	—

BLACK PEPPER IMPROVES

(Messrs. Parekh and Co.)

BOMBAY, 12*th March*

After continuous weakness for more than a month, Malabar black pepper showed some improvement, thanks to sizable buying by one of the London operators for March shipment for c. & f. New York. The London buying was synchronised with the time of the arrival of steamer at Cochin for lifting the cargo sold to Russia and some of the exporters who were short had to come out to cover. This proved a supporting factor. New York, after paying $0.23½ to $0.24¼ for March shipment, refused to follow the advance in India. As a result, the market at the time of writing turned quiet, with sellers at Rs. 537½ and Rs. 93¾, after touching the highest at Rs. 550 and Rs. 95 at Alleppey and Cochin, respectively.

Singapore improved from Str.$73 to Str.$.76, but there was very little doing, as new crop from Sarawak was expected to arrive in the port at the end of the month. In London, Sarawak black improved from 19d. to 19¼d., but spice mills in Europe preferred to buy hand to mouth. Improvement in Singapore was, therefore, not followed through. The turnover at all the terminal markets is reported to be restricted and mostly comprises short covering. The future of the market is anything but rosy, as, unless there is sizable buying support from New York, prices for Malabar are likely to go down further, in view of the anxiety of the growers to liquidate their holdings before the arrival of new Sarawak.

March shipment was done at $0.24¼ and April-May-June at $0.24¼, while, in delivery, March, after touching Rs. 543, is now nominally quoted at Rs. 535 with little interest.

Today's nominal quotations are: Ready Rs. 76 per Bengal maund; March Rs. 536-Rs. 541, April Rs. 544-Rs. 549 and May Rs. 551-Rs. 556 per candy of 5½ cwts.

TEAS DECLINE

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, *7th March*

Approximately 1,400,000 lbs. were on offer in Sale No. 5 which was held on Tuesday, 5th March. Quality remained much the same as in the last sale and there was a useful selection of flavoury high-grown teas. The sale opened to a fair demand which was restricted to a few buyers. Prices for all types were irregularly As. 4 to As. 6 easier with fannings grades again the weakest feature. Indeed, fannings once more accounted for the majority of the withdrawn teas. High-grown teas with flavour met with some competition and sold well. Whole leaf grades were well supported at rates which were about steady. The following are the quotations:

	1957	1956
	Rs a. p.	Rs. a. p
Plain B.P.	1 14 0*	1 7 0*
Low Medium B.O.P. ...	2 3 0	1 13 0
Medium B.O.P.	2 4 6	2 2 0
		to 2 3 0
Good B.O.P.	2 7 0	3 0 0
		to 3 4 0
Well made black leaf O.P.	2 8 0	2 6 0

*=Nominal.

The combined average price fetched in Sale No. 5 was Rs. 2-6-10 per lb., as against Rs. 2-7-8 per lb. in the corresponding sale of 1956.

London Market—Sale of 4th March 1957:—Market generally 3d. to 6d. easier.

Sale of 5th March 1957:— Heavy withdrawals 4d. to 8d. lower.

Colombo Market—Sale of 4th March 1957:—Black leaf firm. Dusts dearer. Others declined 10c. to 15c., particularly stalk.

Sale of 5th March 1957:—Small selection best flavoury Dimbula types dearer. Otherwise quiet demand. Highgrowns below best declined 20c. to 40c. Mediums down 20c. Lowgrowns 5c. to 8c. lower.

Calcutta Market—Export:—67,000 packages. Market firm to often one anna dearer upto Rs. 2; above that As. 1 to As. 1½ lower.

Internal:—19,200 dust. Met a good general demand at half to one anna easier, except for best C.T.C. types which were about steady. Middle East types met a good market at firm to dearer rates 3,577 internal leaf. Market generally As. 2 easier, except for commonest types which were occasionally steady to dearer on valuations.

Export Duty:—It was announced on 1st March that Government had determined "the price of tea" for the month of February as Rs. 3-6-1, as against Rs. 3-15 the previous month. The duty, thereore, remains unchanged at As. 6 per lb.

Export Quota:—The market has remained unchanged and business is still being done at 51-52 pies.

Forthcoming Auctions:—Sale No. 6 will be held on Tuesday, 19th March.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:—

"*Dust Sale F*:—450,000 lbs. Good general demand, but prices irregularly As. 1 to As. 2 lower, particularly for best liquoring and high-grown sorts. Best feature medium descriptions which are steady."

SMART RECOVERY IN JUTES

(From Our Own Correspondent)

CALCUTTA, 11*th March*

The week under review in the jute markets was highlighted by a remarkable recovery in the prices of manufactures, following the expansion in export business and the spurt in fibre prices. During recent weeks, buyers on behalf of foreign consumers had paid poor attention, in view of the comfortable stock position in foreign markets and in anticipation that prices would move down further. They had also anticipated that gunny stocks, as at the end of the last month, would have moved up. However, contrary to this expectation, but much to the relief of the trade and industry, stock figures which were announced on Thursday last showed a welcome decline. The total of all constructions, at 7,600 tons, were lower by 5,600 tons compared to the previous month. However, the February-end stocks were higher by 8,200 tons as compared with the figure a year ago. Last month's decline was mainly accounted for by sacking goods, which fell by 5,900 tons to 61,800 tons. Miscellaneous constructions, at 9,600 tons, were lower by 1,100 tons. The total of these two declines was offset in part by a rise of 400 tons in hessian stock to 25,200 tons. It would be remembered that, during recent months, stocks of sacking were increasing. Demand for hessian had, at the same time, indicated an upward trend. These two factors enabled mills to decide to transfer a portion of the sacking looms to hessian. The stock figures reveal the success of this measure.

Now that the Suez Canal is partially open, the trade here expects increased business from foreign countries. The consumers abroad had increased their stocks during October and November, and had since been purchasing jute manufactures in nibbling quantities only. Also, the decline in stocks of mills and the steady fibre prices in Pakistan have cautioned foreign buyers against any more bidding of the time. Early in the week, Australian buyers showed interest in woolpacks and cornsacks and purchased some quantities in both constructions. West African buyers evinced interest in Liverpools. Export business was also done in sugar bags. More internal buying was also in evidence and there were also Government enquiries. Although the quantities in each transaction were small, yet the broadbased nature of the enquiries and eventual business eclipsed details of shipment figures relating to the month of February, available on Wednesday last. Hessian and sacking shipped, at 60,252 tons, were lower by 10,322 tons compared to January. These shipments included coastal despatches. Most of the decline occurred in hessian, which stood at 29,815 tons as against 39,195 tons. On the other hand, sacking goods shipped, at 30,438 tons, were lower by only 940 tons.

Early in the week, hessian 40" 10 oz. ready was as low as Rs. 39-12 and ready B. twills at Rs. 107-8. At this stage, support to sacking goods was forthcoming following Government enquiries and, in sympathy, hessian also looked up. Mills lost no time to put on a reserved air and B. twills improved to Rs. 108-14 and hessian 40" 10 oz. to Rs. 40-1. On the following day, i.e., Wednesday, profit-taking brought the prices down, and the announcement of a substantial decline in February shipments affected sentiment further. However, on Thursday, contrary to expectations, stock figures as at the end of February recorded a welcome decline. Such decline in stocks in the face of a decline in shipments was naturally attributed to more buying in Calcutta for needs of this industrial area and for despatch upcountry by rail. Ready B. twills jumped to Rs. 110-12 from Rs. 109-4 and hessian 40" 10 oz. to Rs. 40-7 from Rs. 40-3. On Friday, prices began to harden further, but the upward trend was arrested to pocket the gains by selling at the higher rate. However, news of expectation of a Burmese tender was soon received, and this lifted B. twills again to Rs. 111-14 and 40" 10 oz. hessian to Rs. 40-11. The market derived more support by bear-covering, and the week-end saw prices touch the highest levels for the week under review, B. twills being priced at Rs. 113-4 and hessian 40" 10 oz. at Rs. 41-1.

The sharp increase in the prices of raw jute varieties was not a surprise, in the context of the above trend in jute goods. Mills attempted to arrest the uptrend in view of the already uneconomic nature of raw jute prices even after taking into consideration this week's gains in goods. However, the restricted support of mills was of no avail. Fresh arrivals from upcountry were falling, and Pakistani prices showed a steady improvement, following apprehensions of shortage before the new crop would begin reaching trading centres. This apart, there were the growing difficulties in imports from Pakistan. All these factors lifted Upper Assam bottoms to Rs. 29-8 from Rs. 28-8. Mills were prepared to pay Rs. 29, but sellers were reserved. Local daisee bottoms were pushed up to Rs. 32 from Rs. 31.

TEA DUSTS CLOSE LOWER

(From Our Own Correspondent)

CALCUTTA, 11*th March*

When last week's internal sales opened, prices were firm on good general demand. However, demand soon declined and rates gave way by one anna by closure time. Dusts on offer totalled 18,993 chests. Brokers realised valuations for the brighter liquoring C.T.C. Assams which were thus the strongest feature. However, the orthodox kinds, although better in quality, declined by half to one anna, after being steady earlier. Dooars and commons opened well, but gave way by one anna. Darjeelings possessing attractive flavour were steady throughout. The quotations were: best Assam C.T.C. Rs. 2-12, medium Assam C.T.C. Re. 2-1, medium Assam grainy dust Re. 1-12 to Re. 1-12-6, and medium Dooars Re. 1-11.

Leaf offered totalled 4,080 chests. Although demand was fair, prices declined.

Tea trade and industry circles are becoming more and more interested in expanding internal consumption. A slump in tea prices was recently avoided by voluntary cessation of plucking last November by most north-east Indian gardens. However, in view of the second Five-year Plan, production would only tend to expand in the coming years, and a glut in supply in foreign markets would naturally bear the danger of pushing down prices below production costs. These problems were dealt with among others, by Mr. J. P. H. Bent, when he addressed on Friday last the annual meeting of the Indian Tea Association. He said that it was no use if India alone restricted its exports in an attempt to restore an equilibrium between supply and demand in foreign markets. In the absence of an international tea agreement, other producing countries, such as Ceylon, Africa and Indonesia, would increase their exports, in which event India's loss would be their gain. An agreement between India and Ceylon regulating exports on the basis of a standard export figure of 560 million lbs. for the former and 400 million lbs. for the latter, as suggested by the Government of India a year ago, would be most desirable, but Mr. Bent thought that, in view of little prospects for increasing internal consumption, Ceylon would not like to be tied down by any international agreement.

These problems of the tea industry are complicated, and their solution requires great circumspection. The rapid increase in the number of dependents of tea garden labour is a matter which results in labour demands without regard to *per capita* production. Mr. Bent noted, in this connection, that labour had changed the slogan of "Fair" wages to "Living" wages. He would relate fair wages to fair *per capita* production. The Government was averse to place any statutory restriction on production in view of the Five-year Plan, and Mr. Bent declared that any regulation of crops in India should be brought about by gardens concentrating on improving the quality of their teas, so that not only would there be an automatic reduction in world crops but Indian teas would be in a better position to compete with other producing countries in the buyers' market which must be expected for the next few years. He was hopeful that present efforts to increase home consumption would succeed, thereby mopping up excess production. There is also the hope that consumption in other countries also would increase. The export figures for 1956, already reviewed in these columns, indicate expanding consumption in several foreign countries. But, tea trade circles also point out to chances of more production in Japan, China and Africa which have hitherto been only insignificant exporters.

An easier tendency in London tea auctions was noted on 5th and 6th March. This was rightly attributed to the huge increase in stocks. Prices declined by 2d. to 6d. per lb. Conditions were not dissimilar in the Colombo sales held on the 5th. There was a decline in demand, and prices of most teas recorded declines. These conditions are a reminder, if any is needed, for an international agreement regulating exports. However, it would not pay if India alone restricted exports, as it should be noted that Ceylon is attempting to make Colombo the chief international centre for tea and to divert foreign business from Calcutta to Colombo.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 11*th March*

Although prices were unchanged, firm conditions were in evidence in the metal market during the week under review, following moderate demand at lower levels. Steady prices contributed to gaining of confidence by stockists, and consumers' interest widened beyond hand-to-mouth purchases. A fair quantity of electrolytic copper changed hands at Rs. 180 per cwt. and the higher Bombay rate was attributed to the keener demand in the western centre. Locally, the supply position continued to be comfortable. There were a number of Government inquiries. Prices in both London and New York registered slight improvement, following the announcement of curtailment of production by a big refinery in the United States, due to water scarcity. Although such a cut in output for water shortage is a usual feature for this time of the year for that particular refinery, which has announced this, there were reports that other refineries in the U.S. would follow suit, in view of the slump in prices and the trend of production having outstripped demand. Custom smelters in the U.S. had earlier sold electrolytic copper at 30 cents a lb. which was lower by 2 cents. In Calcutta, copper scrap was in short supply and realised Rs. 175.

Electrolytic zinc was quoted firm at Rs. 76-8. Demand was fair, and consumers were aware that spot supplies were becoming tight. Virgin lead, on the other hand, tended to be quiet at Rs. 76-8. The supply position was satisfactory. Tin, although at Rs. 517 lower by Rs. 3, was in good form. The increase in stocks following fresh arrivals did not affect sentiment, as keen demand continued and the Government was in the market for a fair quantity.

SUGAR HARDENS

(From Our Own Correspondent)

HAPUR, 11*th March*

Sugar prices showed a hardening tendency, thanks to better export prospects. Outlet for Indian sugar is bright, as a result of the tight conditions in world markets and demand from foreign countries is reported to be satisfactory. Owing to increase in the production of cane this year, sugar output during the season is likely to establish a new record.

The prevailing mill delivery prices of sugar are: Jaswant Rs. 28-13; Simbhauli Rs. 28-14; Mawana Rs. 28 to Rs. 29; Daurala Rs. 29 to Rs. 30; Amroha Rs. 28-4; Bijnore Rs. 28-4; Mansoorpur Rs. 29 to Rs. 30; Rampur Rs. 31-8; retail Rs. 30-10 per maund.

The *khandsari* market continued to rule dull and depressed. The prevailing rates were Rs. 22 to Rs. 25 per maund, according to quality.

Ready *gur* ruled quiet at almost unchanged price levels. The Government's announcement to continue to license freely export of cane *jaggery* (*gur*) and powder (*shakker*) up to the end of the year failed to cheer the market. Daily arrivals were at an average of 2,000 maunds only and, due to slack outside buying enquiry, stocks swelled to about 95,000 maunds on Monday. Most of the demand from the consuming centres of Madhya Pradesh and Gujarat was being met from the Punjab where prices were more competitive. Total arrivals into Hapur from the beginning of the season were estimated at 425,000 maunds, as against 418,000 maunds a year before. The prevailing prices were: Rs. 9-14 to Rs. 10-2 per maund, according to quality. Some quantity of *gur* was being received in the local market to be stocked for delivery purposes of forward contracts.

Futures *gur* moved both ways in heavy speculative activity during the week. Baisakh opened at Rs. 10-11 on Monday last, touched the highest and lowest at Rs. 10-14-9 and Rs. 10-4-6, respectively, and was quoted today at Rs. 10-9-3.

SURVEY

(Concluded from page 514)

Important among the various routes operated from India are: to the U.K. *via* West Asia and Europe, to South-East Asia and Japan, to East Africa, and to Australia.

Between 1952-53 and 1955-56, again, passengers carried increased from 22,165 to 62,100, cargo from 1,281,000 lbs. to 2,772,000 lbs. and mails from 486,000 lbs. to 975,000 lbs. Furthermore, while the capacity ton-miles increased between 1953-54 and 1955-56 from 17.33 million to 35.24 million, traffic revenues went up from Rs. 3.53 crores to Rs. 6.60 crores. In the case of operational profits, too, some improvement has been in evidence. Thus, from a position of loss to the tune of Rs. 2.13 lakhs in 1952, the Corporation was able to report an operational profit of Rs. 35.68 lakhs in 1954-55, though the position has once again deteriorated, owing to increased operational expenses and the need to provide larger depreciation following the increase in the frequency of services.

What is of utmost importance, and in regard to which a great deal has yet to be done, is to gear up the operational efficiency of, and the standard of comforts provided by, the airline. With the addition of the three Boeing jet aircraft, the delivery of which is expected to be completed by 1960, the Corporation will have an adequate number of aircraft not only to increase the frequency of flights along the existing routes and to launch services along new routes but also to raise the competitive position of the Corporation *vis-a-vis* the more experienced and advanced lines of foreign countries. In this connection, it may be pertinent to recall what the Estimates Committee has observed. To quote:

"When competition between the airlines is severe and the fare structure more or less uniform, owing to I.A.T.A. regulations, the extent to which a particular airline gets traffic in preference to another airline depends a great deal on the routes which are offered by that airline and also the comforts and conveniences it offers to the passengers. The Committee realise that much cannot be done in the direction of opening new routes in a short period, as it requires a great deal of initial planning and expenditure. As regards the second direction, namely, of passenger comforts and convenience, there is much which an international airline can do. The Committee are glad to note that, by and large, facilities abroad and ground offered by Air-India International are found by passengers to be comparable with those of other international airlines."

The $16.8 million loan, borrowed by the Corporation and guaranteed by the Government of India, was a joint operation whereby five U.S. commercial banks granted Air-India International a credit of $11.2 million and the World Bank, under a separate agreement, lent the Corporation $5.6 million. The First Boston Corporation acted as its agent in negotiating this first direct Indian borrowing in the New York market. The five U.S. banks which are partners in the joint operations are the First National City Bank of New York, the Bank of America, N.T. and S.A., the Chase Manhattan Bank, the Irving Trust Company, and the First National Bank of Boston. Under the agreement which was signed on 31st January 1957, borrowing may be taken down by the Corporation from 1st July 1959 to 30th September 1961. Sinking fund payments will begin six months after the scheduled delivery of the third aircraft in March 1960, but in no event later than 31st March 1962. Moreover, repayments will be made in seven semi-annual instalments so that the entire commercial bank loan will be retired by 31st March 1965, at the latest.

The loan agreement with the World Bank covering $5.6 million was signed on 5th March 1957. The loan bears interest of 5½ per cent. per annum, including the 1 per cent. commission charged by the Bank. Amortisation will be in four semi-annual instalments beginning 1st April 1965 and ending 1st October 1966. Air-India International's present purchases, costing the equivalent of $23 million, include, besides the three Boeing aircraft powered by four Rolls-Royce "Conway" engines each, nine spare engines and other spare parts, a flight simulator and ancillary equipment.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up Pref. share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(i) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (c) For seven months ended 31st March 1956.
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
‡—West William Jute Co. has sub-divided ordinary shares o Rs.10 into shares o Rs.10 each.

INCOME-TAX REVENUE FIGURES

ASSESSMENT DATA ANALYSED

THE *All-India Income-tax Revenue Statistics for the year 1955-56*, compiled by the Central Board of Revenue, places the total demand of income-tax in respect of assessments completed during the year 1955-56 at Rs. 111.97 crores and the net demand, after deducting rebates allowed, tax deducted or paid at source and double income-tax relief, at Rs. 76.55 crores. The total demand for super-tax during the same period is Rs. 95.47 crores and the net demand Rs. 75.29 crores. The statistics relate to a total of 527,737 assessments resulting in a positive demand and 67,188 assessments resulting in a net refund. The Department, during the year 1955-56, completed a larger number of assessments, the balance representing cases where no demand had been raised as a result of the assessment.

Although the total number of assessments mentioned above include a large number of assessments relating to the assessment year 1955-56, it does not correctly represent the results of all assessments relating to that assessment year. This is because a fairly large number of assessments for earlier years have been

THE BUDGET AND THE PLAN

THE country's planners are now beginning to learn that the task of budgeting for a developmental economy in which all the springs of action rest in the State is by no means free from difficulties. The White Paper on the Central Government's Budget for the year 1957-58, which was presented to the Lok Sabha on the 19th inst., sets forth in some detail the tasks which lie ahead of the Government. It is certainly satisfactory to note that neither the White Paper nor the speech of the Union Finance Minister, Mr. T. T. Krishnamachari, has ignored the difficult issues confronting the country today. These issues include the critical situation on the balance of payments front and the increase in prices. The fact that some of these difficulties had been forecast earlier does not in any way lessen the gravity of the issues. Nor does it make the task of finding an adequate solution any the easier.

Reflecting the increasingly important role the Government has decided to play in India's economic development, the Budget figures are showing an increase from year to year. The revised Budget for 1956-57 places the revenue at Rs. 571.49 crores and expenditure at Rs. 533.55 crores, while the capital expenditure for the year is expected to be of the order of Rs. 313.68 crores. For the year 1957-58, the figures for which have been framed on the basis of existing taxation, the revenue has been placed at Rs. 636.22 crores and expenditure at Rs. 663.09 crores; these figures include self-balancing items aggregating Rs. 38 crores. The total expenditure for 1957-58 is made up of civil expenditure of Rs. 410.39 crores and defence expenditure of Rs. 252.70 crores, as against Rs. 330.60 crores and Rs. 202.95 crores in 1956-57. Capital expenditure in 1957-58 is expected to move up to Rs. 454.77 crores, thanks to a large increase in the Government's investment in the three steel plants which will absorb Rs. 156.83 crores. The Government will need Rs. 27 crores for meeting the revenue deficit, Rs. 772 crores for financing the capital outlay and the State Governments' loan requirements, and Rs. 32 crores for repaying the maturing market loan. Against this, it is hoped to raise Rs. 100 crores from market loans and Rs. 80 crores in small savings. Foreign aid is expected to account for Rs. 135 crores and other miscellaneous transactions for Rs. 151 crores. There will thus be a gap of Rs. 365 crores in the available resources to balance the Budget.

The Finance Minister himself admitted that the overall deficit was a large one. He said: "There is certainly no slack in the economy at present which would permit a complacent view of the Budgetary deficit." Obviously, any improvement in India's external relations which will allow this country to spend less on defence will go some way towards reducing the overall deficit. It is to be hoped that such improvement will take place. In any case, the immediate prospect is not one that will cause any jubilation in the country. For the prospect is one of tightening the belt, of more sacrifices and of more taxation. The Finance Minister, after reiterating that he was not happy about a deficit of the order now revealed in the Budget, said: "The objective must be to reduce it to the extent possible by increasing the resources accruing to the public exchequer. May I, therefore, in conclusion, reiterate the point that, considering the immediate requirements as well as the fact that Plan expenditure will have to be stepped up year after year, public revenues have to be enlarged steadily and both the Centre and the States have to exert their utmost towards this end." This interrogatory note on which he ended his speech is a pointer to what one might expect in the next Central and State budgets.

The task of covering the deficit, difficult as it is, is not the only difficult issue before the Government. There are at least two more urgent tasks. One is the holding of the price-line and the other is the building up of foreign exchange reserves. The general index of wholesale prices (base: year ended August 1939=100) has increased from 390.3 on 1st April 1956 to 424.4 in the middle of February 1957, thereby exceeding the peak (397) witnessed at the time of the Korean war boom. It is difficult to explain how much of the price increase must be attributed to purely monetary causes and how much to physical shortages. Nevertheless, it is of some interest to note that the increase in prices has synchronised with the increase in public expenditure (combined expenditure of the Centre and the States) which during the year 1956-57 is estimated to be of the order of Rs. 1,894 crores, as against Rs. 1,430 crores in 1955-56, Rs. 1,234 crores in 1954-55 and Rs. 1,019 crores in 1953-54. The only way in which a further increase in prices could be held within limits is to increase ag

which has necessarily to be more rigorous than in the past will have to be worked with a great deal of imagination and farsightedness, if it is not to slow down economic activity. There is, however, a lively awareness on all sides of the fact that the available resources should be put to maximum use. Obviously, the projects which build up the basic economy, such as transport and communications and certain heavy industries, must have priority. It is reassuring to note that the Government is not altogether oblivious of these considerations. Thus, Mr. Krishnamachari said:

"For the immediate present, the need is for giving top priority to schemes which increase export earnings and reduce import needs without making an excessive claim on foreign exchange resources in the immediate future. Schemes which contribute most to an early increase in agricultural production also deserve high priority. Schemes which have already been commenced and on which considerable expenditure has been incurred claim, in any case, a considerable proportion of the resources available. Government intend to be guided strictly by such priority considerations. In determining the phasing of Plan expenditure, first things must necessarily come first. At the same time we have to ensure to the extent possible that development programmes, which are calculated to contribute most to an increase in the productive capacity of the country and a strengthening of the long-term balance of payments, do not suffer unduly. While a review and adjustment of priorities is essential in view of the limitation of resources, every precaution is being taken to see that the momentum gathered by the Indian economy in the last three or four years is kept up in the making of our budgets which are essentially development-oriented."

Even if the policy enunciated by the Minister were put into practice, it would still be wrong to pretend that the foreign exchange deficit would not call for large and heavy sacrifices all round. This fact, coupled with the prospect of further taxation necessary to raise the resources for implementing the second Plan, would, if anything, add considerably to the burdens on the economy. Indeed, the Union Finance Minister himself admitted that the Plan would "strain" the economy. Only, he missed the essential point when he said that it was important to think of how best to meet this strain rather than to question the "basic assumptions and postulates" behind the Plan. The fact is that the foreign exchange crisis in its present acute form and the severe strain which the Government's fiscal measures will impose on the economy stem, at least in part, precisely from the Government's "basic assumptions and postulates." If the Government had followed during the last few years a more realistic attitude towards the private sector, in general, and organised industries, in particular, the country would by now have had a much higher level of industrialisation which would have meant a greater resilience to our economy and a lesser reliance on equipment from foreign countries. Even now, a certain re-examination of these "assumptions and postulates" would, far from breeding idle philosophical controversy, prove immensely helpful in formulating policies of real benefit to the economy.

BUSINESS MEN'S VIEWS

OFFICE-BEARERS of chambers of commerce generally reflect the opinion of the members of the commercial community who ought to know best where the shoe of the Government's economic policy pinches most. This week, the outgoing President of the Bombay Chamber of Commerce and Industry, Mr. A. J. C. Hoskyns-Abrahall, and the incoming President, Mr. E. Parker, in their speeches at the annual meeting of the Chamber, held in Bombay, gave expression to their thoughts on a wide range of current economic problems. The Government's industrial and fiscal policies, the Five-year Plan and the labour problems are only a few of the issues covered by the two speakers. Even so, each had something very pertinent and thought-provoking to say on the topics they selected for special comment.

What business men dislike most is uncertainty, especially when it comes from official quarters. It is true that, both by training and by equipment, a business man has necessarily to brave the uncertainties of the economic weather. It is part of his task, nay, of his responsibility, that he should assess the imponderable factors and take the risks as they come. But even he is generally inclined to assume that there will be no want of correspondence between the Government's word and its deed. In fact, life for him would be unendurable, if, in addition to the calculable risks he takes, he were to face the risk of the Government itself going back on its word. It is to one such glaring disparity that Mr. Hoskyns-Abrahall referred when he criticised the Government's decision to enter the sphere of trading in cement and manganese. He said that the Government, "having in April 1956, delivered itself of an Industrial Policy Resolution brought up-to-date, proceeded, with the ink on it barely dry, not exactly to tear it up but at least to smudge it by taking a hand in cement distribution and the export trade in manganese ore, both of which had seemed to lie within the private sector." Therefore, any reassurance which the private sector had gleaned from that Resolution, he said, was short-lived. Surely, it does not behove the Government to issue a statement limiting the scope of the private sector and then proceed to abridge the scope of that sector still further in actual practice. Now, this is the sort of risk that the bravest of the insurers will not care to underwrite.

Discussing the larger issues of economic planning, Mr. Hoskyns-Abrahall felt that it was noteworthy that the Government of India had come to realise that some extension of the period of the Five-year Plan was "unavoidable or at least overwhelmingly preferable to any possible alternative." Referring, in particular, to the problem of of foreign exchange, he rightly suggested that its solution must assuredly lie in attracting foreign investment to fill the gap. But the more important question obviously is: What should be done in the event of the continuing gap in the country's foreign exchange earnings? What aspects of the Plan should be allowed to continue and what sectors made to slow down? Answering this question, he made a few interesting suggestions which deserve special notice. He said:

"We are told that steel plants go on and the coal and transport required for them, while some other projects, for example, foundries, fertiliser factories and power plants, may slow down or stop. The fact is that, if import licences, which in the last period totalled well over Rs. 500 crores, are for the current period being reduced to Rs. 200 crores, a whole lot of things will have to stop and we in the private sector cannot expect to escape lightly. It would be idle to suppose that we shall enjoy high priorities and, even if the momentum of import licences already issued continues to carry us forward for some little time, the further prospect for new or expanding industries is bleak. Rather, however, than beat our heads against a brick wall of Government refusal, we will probably be better employed in urging that, at all costs, the provision of basic services should continue according to Plan; that first priority should go to railways, roads, ports, power and steel and that there should be no reduction of the imports essential to this end. There might even be an advantage in slowing down the Plan, if the opportunity were taken to re-assess priorities, so as to make more sure that, when capital goods do arrive, they can be quickly unloaded at the ports and despatched to their destinations, that new factories are not still-born for want of power and the fuel to run them, and that, having started to produce, their products are not frozen in warehouses for want of transport by road and rail to carry them to their would-be consumers. If some sorting out along these lines can be done, the present crisis in foreign exchange may prove in the end to have been a blessing in disguise."

The outgoing President was not, of course, critical of all that the Government did. Indeed, in some spheres which were legitimately the Government's, he urged more energetic action. He welcomed, for instance, the Bombay Government's programme for setting up industrial estates. Only, he deplored that these estates with their organised communications and their power, water and even perhaps buildings provided on favourable terms are taking "so long to come to fruition." Again, he commended the Government's move to replace sales tax on certain commodities by a surcharge on excise. He welcomed, too, the extension of port facilities in Bombay. But he felt that the calls on the Port were still mounting. "For all the respite given by the blockage of the Suez Canal and the slashing of imports," he warned, "the congestion will assuredly come again, unless the Port is extended both landwards and seawards and the capacity not only to load and unload cargoes but also to clear them by road and rail is greatly increased." The authorities will certainly do well to heed this warning and take appropriate measures designed to expand and improve the facilities at the Bombay Port.

A feature of all legislation affecting trade and industry in recent years is that it is ostensibly aimed at catching a few unsocial elements in the ranks of traders and industrialists. But it cannot be denied that, whatever its laudable intentions may be, it does affect adversely the working of all industrial units and trading firms. As the outgoing President put it, some of the recent legislative measures, including nationalisation of life insurance and the new Companies Act, were "in some part designed to catch the few hornets, which proverbially the law misses while catching the many flies." While it is to be hoped that the Government will in future desist from punishing the many for the sake of a few offenders, it should obviously be the responsibility of the private sector to strive at all times to give a better and better account of itself. It has naturally two functions to perform. It must, in the first place, inform the Government—that is, make available to the latter its considered views on the Government's economic measures. Secondly—and this is by no means a lesser responsibility—it must constantly educate its masters, namely, the larger public whom it seeks to serve. It certainly has a right, as Mr. Hoskyns-Abrahall remarked, to justify itself in public and to the public, to draw attention to its past great achievements and to its future aspirations in the country's service. In the context of the country's democratic set-up, the private sector will be shirking this responsibility only at its peril. It is of the utmost importance that it should not only serve the public but also educate the public to appreciate the value of its services.

The incoming President, Mr. Parker, devoted his speech almost entirely to a discussion of what he called the problem of relations with labour. He was making what may seem a somewhat unpopular claim when he said that, in his opinion, trade unionism in India had not been a success. It is, however, difficult to deny that the trade union movement in this country, whatever the worth of its achievements, has not really derived its momentum from the ranks of the workers themselves. It is a movement developed, perhaps even imposed, from above and not something that has grown from below. Mr. Parker attributed the failure of genuine trade unionism in India, in part, to lack of "resolute and bold leadership." He rightly suggested that by "leadership" he really meant responsible leadership. It is a pity that union leaders in this country still seem to act upon the principle that nothing succeeds like excess and that the only way for maintaining themselves in power is to promise their followers more than what the rival unions hope to achieve. Further, political considerations are often imported into purely economic issues. Trade unions thus become hotbeds of party and political rivalry. In a way, such irresponsible leadership is encouraged by the law governing industrial relations. It is well known that the law, as it now stands, breeds almost endless litigation rather than fosters collective bargaining. In this connection, Mr. Parker did well to spotlight the unwholesome effect of section 33 of the Industrial Disputes Act. He pointed out that the "creation of a dispute immediately brings section 33 into operation and it is not unknown for unions to ensure that this section is a permanency."

If Mr. Parker felt compelled to criticise labour for its shortcomings, he was not oblivious of the responsibilities of the management towards workers. He emphasised that employers must learn the full meaning of the old saying that a "labourer is worthy of his hire." He added: "The dignity of the individual must be upheld and it must be understood that each individual is providing a contribution to the general well-being of the concern and the principle must be learnt that the 'more you ask the more you get is one that creates the opposite of co-operation." In this connection, it is noteworthy that a few enlightened industrial units in India have initiated certain notable experiments in the sphere of industrial relations. Perhaps, the success of these experiments which are designed to ensure better co-operation between management and labour will help create an atmosphere in which genuine trade unionism can hope to develop. There is certainly great scope for adopting these experiments on a wider scale. Indeed, industrial executives who strive hard to make these experiments a success may justifiably claim the title of "industrial humanitarians." For the success of these experiments will certainly bring industrial peace of more lasting benefit not only to the managements and the workers concerned but to the community at large.

IMPACT OF BUDGET ON SHARES

RETURN FOR ELECTRICITY UNDERTAKINGS—AID TO SMALL-SCALE INDUSTRIES

THURSDAY, 5 P.M.

THE initial reaction of the share market to the Budget estimates presented by the Union Finance Minister on Tuesday this week was tame and the hectic activity usually noted on such occasions was conspicuous by its absence during the one-hour Budget session held on that day. This was due to the fact that the earlier expectation that there would be no fresh tax proposals in the present Budget proved true. In fact, such a fond hope had induced some complacency in the market during the regular session held earlier in the day and values hardened all round. There was also expectation that the Finance Minister would offer some relief to the cotton textile industry by reducing the burden of excise duty. The absence of any announcement in this regard in the Budget came as a disappointment and, during the 'Budget' session of the market, textile scrips made a moderate retreat, which arrested the rise in other counters also.

MARKET GOSSIP

The sense of relief felt by the operators over the absence of any fresh tax proposals proved to be short-lived and second thoughts on the Finance Minister's speech presenting the White Paper seemed to have infused the fear that heavier tax measures were in store in the May Budget to be presented when the new Parliament meets. There was, therefore, a sizable setback in values yesterday, which wiped out entirely the earlier gains. Textile shares even showed a modest loss over the week. Thus, Tata Ordinaries, after rising from Rs. 175 to Rs. 181, relapsed to Rs. 175-8 and Indian Irons fell to Rs. 20-7 after an earlier advance from Rs. 20-5 to Rs. 21-7. Bombay Dyeings touched a high of Rs. 590-10 before giving way to close at Rs. 571-4, as against the previous week's close of Rs. 575-10. Centurys hardened from Rs. 475 to Rs. 491-8, only to recede to Rs. 473. Kohinoors shed Rs. 2-8 to Rs. 329, after improving to Rs. 336-8. The reactions of the important scrips to the Budget are indicated in the table published on this page.

The Finance Minister's speech is noted for its restrained tone and gives no indication of the sources of revenues that are likely to be tapped to meet the deficit of Rs. 26.87 crores that is estimated for 1957-58 even on the existing level of taxation. But the concluding lines of his speech provide enough clue that further tax burdens cannot be ruled out. Thus, the Finance Minister said: "I do not feel happy about a deficit of this order. The objective might be to reduce it to the extent possible by increasing the resources accruing to the public exchequer. May I, therefore, in conclusion, reiterate the point that, considering the immediate requirements, as well as the fact that Plan expenditure will have to be stepped up year by year, public revenues have to be enlarged steadily, and both the Centre and the States have to exert their utmost towards this end?"

It is noteworthy that, for the first time since planned development got under way, the country's economy showed evidence of some amount of strain during the year 1956-57, the first year of the second Five-year Plan. Mr. Krishnamachari is hopeful that the various measures taken by the Government during the last few months to bring the situation under control will prove effective in due course. His speech makes it clear that the Government is not likely to relax to any degree its present control over credit and budgetary policy which restricts the purchasing power in the hands of the public. He is afraid that the overall budgetary deficit of Rs. 365 crores is somewhat large considering the economic situation and he cautions that there is certainly no slack in the economy at present which would permit a complacent view of the budgetary deficit.

The disquieting features of the economy to which the White Paper draws attention are the serious drain on the foreign exchange reserves, as witness the drop of nearly Rs. 236 crores in the foreign assets of the Reserve Bank during the 10 months ended January 1957, the possibility of the gap in foreign exchange resources over the Plan period exceeding the original estimate of Rs. 1,100 crores and the failure of domestic savings to match the investment being undertaken. The White Paper also points out that corporate savings have been inadequate for financing the programmes in the private sector. This is illustrated by the fact that a large part of the finance required for expansion during 1956 was provided by bank credit, whereas normally a large part of the resources required for expansion comes from the profits of companies. Thus, the net indebtedness of the private sector to banks increased by as much as Rs. 117 crores in 1956, as against a rise of Rs. 50 crores in the previous year. The private sector cannot, however, be blamed for this, and if the pressure on the economy as a result of such a demand from the private sector is to be relaxed, then the heavy burden of corporation tax which leaves no room for saving in the corporate sector must be reduced.

The two main items of revenue which have helped the Government convert the deficit of Rs. 18.04 crores in the 1956-57 budget, expected earlier, into a surplus of Rs. 37.94 crores on the revenue account are the customs and excise duties, which have gone up by Rs. 21 crores and Rs. 18.38 crores, respectively. Of the latter, the additional excise duty on cloth levied in September last alone accounts for Rs. 17 crores. It is expected to bring in another Rs. 12.4 crores during the next financial year, out of a total increase of Rs. 20.70 crores in excise duties expected in 1957-58. Though the Finance Minister's object in levying the additional excise duty was to check the rise in prices of cloth and to mop up the extra profits of mills and not to consider it as a source of revenue alone, the figures of yield from this given above show that the levy has outlived its utility. It is true that the prices of cloth have come down after this levy, but they have not brought any increase in consumption and mills are burdened with the accumulated cloth. The effect of this development on the Government's revenue will be felt in another direction during the next financial year by way of a fall in income-tax, consequent on the decline in mill profits. From this point of view, there is a strong case for a reduction in excise duty on cloth. If the Finance Minister has not announced any reduction in this direction in the present Budget, it does not mean that one has to wait for him to do so till the May Budget, as the downward revision can be effected at any time through executive order.

* * * *

The electricity industry is learning to its great cost that the letter of the law "killeth." It derived, as is now well known, some comfort from the Electricity (Supply) Amendment Act, 1956 which linked the standard rate of return for the industry to the Bank rate; this was intended to enable it to earn 5½ per cent., as against the previous 5 per cent. This slight increase in return was less than what it claimed, and what certainly was its due. It nevertheless felt thankful for small mercies. To its dismay, it now finds that what the law gave the Reserve Bank's executive order has virtually taken away. This point was very convincingly brought out by Mr. K. G. Milne, Chairman of the Ahmedabad Electricity Company, Ltd., in the course of his speech at the recent annual meeting of the Company. Mr. Milne felt that it was unfortunate that "Parliament's estimable attempt to encourage the investor in our industry by making a provision for 'automatic adjustment' of the standard rate of return to follow fluctuations in the money market, has apparently been almost instantly frustrated by executive action." He added: "Hardly had the ink used in the new legislation dried when the announcement by the Reserve Bank came to the effect that, as from 1st February 1957, the rate of interest on advances to Scheduled banks against Government and other eligible securities had been raised to 4 per cent., while at the same time, the official Bank rate was unchanged at 3½ per cent."

EFFECT OF BUDGET ON SHARES

In other words, what has now happened is that the electricity industry has been allowed to hug the shadow of legal gain while missing the substance of an adequate monetary return. If the Bank rate does not reflect the effective rates in the money market, or is at variance with the Reserve Bank's own lending rates to Scheduled banks, it only means killing the industry with legal kindness. For it does not help the industry to raise its resources from the money market. A reference to this issue was made by Mr. A. J. C. Hoskyns-Abrahall, the outgoing President of the Bombay Chamber of Commerce and Industry, in his speech at the annual meeting of the Chamber, this week. He deplored that the electric supply industry found it difficult to raise resources for expansion. This, he rightly said, was a "serious matter where such a basic service is concerned." He added: "Recent amendments to the Central law governing the industry, which aimed at helping its units to attract more finance by increasing the statutory limit of their profits, has not had quite the desired effect. One reason for this is that the new limit has been related to the Bank rate, while the Reserve Bank has since found means of raising the cost of its lending without touching the official rate. Another reason is that no solution has yet been offered for the electric supply industry's special taxation problems which, among other things, result in shareholders of fast expanding undertakings losing their right to receive their dividends 'tax-free.' I hope that the need to remedy this situation, which was recognised by the Taxation Enquiry Commission, will not much longer go unheeded."

To revert to Mr. Milne's exposition of the problem. Referring to the Reserve Bank's announcement, he said: "For the electricity industry, this announcement came as a bolt from the blue, for, unless upon pressure of circumstances the Bank rate itself is officially raised to line up with the Reserve Bank's lending rate for advances to Scheduled banks, we are again caught by the necessity to plead for Parliamentary enactment so as to keep in line with the changes in the value of money." Proceeding, he observed: "It may be added that there is still no solution in sight to the discouraging effect of the knowledge that, the more rapidly you succeed in expanding electrical supply, the more likely the shareholders are to lose, or continue to be denied, their right to have their dividends credited as income-tax paid." It would appear that the industry has already approached the authorities for appropriate relief. It is to be hoped that the industry will not be denied what the Government, after such prolonged deliberations, promised only last year.

* * * *

In line with the Government's policy of assisting small-scale industries, the State Bank of India has devised a scheme for providing cheap credit—long-, medium- and short-term—for such industries. The Bank, it is stated, has introduced a pilot Scheme which has been put into operation, in the first instance, in nine selected centres, namely, Bombay, Surat, Kolhapur, Madras, Vijayawada, Coimbatore, Agra, Delhi and Ludhiana. Under this Scheme, credit will be made available to all small industrialists with capital assets of less than Rs. 5 lakhs and employing 50 workers if working with power or 100 workers if working without power. The prospective buyer should approach the Agent of the Bank or the co-operative bank at the centre. After a personal discussion, the Agent will ascertain the requirements of the applicant, give him the appropriate form, help him complete it and direct him, if desired, to the local representatives of the agencies concerned. The representatives will then decide which of them will entertain the application and the agency or agencies concerned will proceed with the granting of the loan. The other agencies will offer their own assistance, information and/or advice to the agency or agencies primarily responsible for the loan, the resources and efforts of all agencies being consequently placed in a co-ordinated manner at the disposal of the small industrialist. At the pilot centres in all the circles, the State Bank, on its own part, has put into operation a "Liberalised Credit Scheme." The Scheme envisages relaxation of the Bank's standard requirements, as well as the administrative procedures in favour of the small industrialist towards whom the Agents of the Bank have been asked to adopt an attitude of positive help and guidance. The small industrialist will also be considered for clean advances in appropriate cases.

The pilot Scheme for small-scale industries is being implemented in addition to the other sources for obtaining credit, namely, State Departments of Industries and State Finance Corporations and applications can continue to be made to them directly. If, however, these applications are sent to an Agent of the State Bank as mentioned earlier, he will forward them to the agency concerned, all of them being already actively associated with the Scheme. In the light of the experience gained at pilot centres, the scope of the Scheme will be extended to cover all places where the State Bank of India has its branches. Indeed, the State Bank is confident that a general scheme for small-scale industries should eventually emerge which will operate throughout the country and in which all types of credit agencies, including other commercial banks, will participate in a co-ordinated manner.

The aforesaid initiative of the State Bank of India is a step in the right direction, inasmuch as it will go a long way towards accelerating the tempo of activity in the small-scale industrial sector. One of the major handicaps which has all along been hampering the development of this sector is lack of adequate financial facilities. Many commercial and co-operative banks are, no doubt, supplying credit to small-scale industries, but most of them can, as the State Bank has pointed out, provide only short-term credit and meet only a portion of their customers' requirements, at that. Similarly, there are the finance corporations giving medium- and long-term credit, but they have no local agencies to deal with loan applications of *mofussil* industrialists. Hence the need for ensuring maximum credit facilities, on the one hand, and co-ordination of resources and efforts, on the other. It is this need which is proposed to be met by the State Bank's pilot Scheme.

While welcoming the Scheme, it must be emphasised that, before assistance is granted to any small-scale industry, the State Bank should properly assess the credit that is actually needed by the industry. The assessment should be based on a careful and realistic appraisal of the requirements. Due consideration must also be paid to the question whether the industry taking loans will be in a position to repay it after a sufficient number of years. This question is of utmost importance, considering the disquieting reports that several handloom co-operative societies have not paid back the loans which they took years ago and, in many cases, the authorities are said to have written off the loans. It is to be hoped that the State Bank of India will see that great vigilance is exercised over the way in which the loans granted by it are actually utilised by the small-scale industries.

GOVERNMENT OF INDIA'S BUDGET

OVERALL DEFICIT ESTIMATED AT RS. 365 CRORES

WITH speech lasting for just 15 minutes, the Union Finance Minister, Mr. T. T. Krishnamachari, presented the budget estimates of the Central Government for the coming year (1957-58) to the Lok Sabha on Tuesday last. The estimates reveal an overall deficit of Rs. 365.00 crores, of which deficit on revenue account is put at Rs. 26.87 crores and that on capital account at Rs. 338.13 crores. The revenue deficit of Rs. 26.87 crores, with estimates of revenue and expenditure placed at Rs. 636.22 crores and Rs. 663.09 crores, respectively, is in striking contrast to the surplus of Rs. 37.94 crores in the revised budget for the current year, that is, 1956-57, the revenue being placed at Rs. 571.49 crores and expenditure at Rs. 533.55 crores. The huge deficit of Rs. 338.13 crores on capital account is due mainly to the considerably large capital outlay contemplated, the estimate of which is placed at Rs. 772 crores, which is inclusive of assistance to States, and partly also to the repayment of the maturing market loan which requires Rs. 32 crores. As against these amounts, the budget estimates take credit for Rs. 100 crores from market loans, Rs. 80 crores from small savings, Rs. 135 crores from foreign aid, and Rs. 151 crores from other miscellaneous debt and remittance transactions, bringing the total to Rs. 466 crores.

The broad features of the budget estimates for 1957-58 and the revised estimates for 1956-57, as given in the White Paper on the Budget, are indicated below:

Financial Year 1956-57

The budget for the current year, as finally approved by Parliament, placed revenue at Rs. 527.39 crores and expenditure at Rs. 545.43 crores, leaving a deficit on revenue account of Rs. 18.04 crores. On present estimates, the year is likely to close with a surplus of Rs. 37.94 crores. This improvement is the result of an increase of Rs. 44.10 crores in revenue and a saving of Rs. 11.88 crores in expenditure.

The increase in revenue is almost entirely accounted for by customs and Union excise duties. The revenue from customs is now expected to be Rs. 171 crores, as against the budget figure of Rs. 150 crores, the increase reflecting largely the higher imports during the year and the increase during the year in import duties on a number of articles such as wines and spirits, clocks and watches, motor cycles and scooters, coal-tar dyes and certain types of machinery and staple fibre and staple fibre yarn. Union excise duties are now expected to yield Rs. 188.73 crores, as against Rs. 170.35 crores taken in the budget. The bulk of this increase, about Rs. 17 crores, is from the additional duty imposed on cotton cloth in September 1956. There is an increase of Rs. 3.25 crores in the collection of sugar excise duty due to higher production of sugar, but this is offset by shortfalls in other items. Income-tax revenue is not likely to show any significant variation from the budget figure of Rs. 189.60 crores. The revenue from Posts and Telegraphs is expected to increase from the budget figure of Rs. 1.60 crores to Rs. 5.30 crores, as a result of better traffic. The dividend from Railways is now estimated at Rs. 37.69 crores, as against the budget figure of Rs. 39.66 crores, the reduction being due to certain arrear adjustments following the reduction in the capital-at-charge at the date of Partition, which has only recently been worked out, over the provisional figure taken earlier. Of this amount, Rs. 31.66 crores represent the interest element which is taken in reduction of the interest payments on the expenditure side and the balance as contribution to revenue.

There is an increase of Rs. 1.01 crore from Mint receipts as a result of the accounting changes made during the current year. From 1942-43, it has been the practice to take to revenue as profits from circulation of small coins a stabilised figure of Rs. 45 lakhs over and above the net Mint expenditure. With effect from the current year, this arrangement has been discontinued and the normal practice of taking the profits arising from circulation of small coins each year to revenue and of treating the losses on destruction of coins returned from circulation as expenditure is being restored. Consequently, the Mint receipts this year are now estimated at Rs. 2.79 crores, as against the budget figure of Rs. 1.78 crore. The share of income-tax payable to the States will amount to Rs. 58.75 crores. The increase of Rs. 3.74 crores over the budget figure is mostly due to the fact that a part of the revenue gap grants payable to the former States of Mysore, Saurashtra and Travancore-Cochin is now, under the States Reorganisation Act, 1956, payable to the successor States in the form of income-tax share.

The expenditure this year is now placed at Rs. 533.55 crores, comprising Rs. 330.60 crores for civil expenditure and Rs. 202.95 crores for Defence services. In civil expenditure, there have been a number of variations under individual heads following the reorganisation of States on the 1st November 1956. Thus, a part of the revenue gap grants which Saurashtra, Mysore and Travancore-Cochin were getting formerly has now to be given in the form of shares of income-tax and Union excise duties to the successor States. This has led to a saving in the provision under grants-in-aid and to a small excess in the provision under Union excises. The revenue and expenditure of Himachal Pradesh and Delhi which had separate budgets as Part C States now enter directly in the Central Consolidated Fund under the respective heads. Although the net result of these changes, taking revenue and expenditure together, is not significant, there is a saving of Rs. 7.24 crores on the expenditure side with a reduction of Rs. 3.45 crores on the revenue side. Apart from this, there is a saving of Rs. 3.62 crores in the civil expenditure. This is spread over a number of heads and represents largely the somewhat slower expenditure on Community Development and other schemes in the Plan.

The revised estimate of the net Defence expenditure stands at Rs. 202.95 crores. Although this is about the same as the original budget estimate, the Army estimate shows a net increase of Rs. 5.4 crores, which is more than offset by corresponding savings under the Navy and the Air Force estimates.

Financial Year 1957-58

For the year 1957-58, revenue, on the basis of existing taxation, is estimated at Rs. 636.22 crores and expenditure at Rs. 663.09 crores, leaving a deficit of Rs. 26.87 crores on revenue account.

The Second Finance Commission provided for in Article 280 of the Constitution was constituted on 1st June 1956, under the chairmanship of Mr. K. Santhanam. Without prejudice to the final recommendation which they will be able to formulate only on completion of their investigations on which they are still engaged, the Commission have made interim recommendations to enable budget provision and provisional payments being made in 1957-58. Subject to minor adjustments arising mainly from the inclusion of the Jammu and Kashmir State in the scheme and the changes brought about by the reorganisation of States, the interim recommendations maintain broadly the existing position and pattern of the distribution of the various taxes and grants-in-aid. These recommendations have been accepted and provision has been made in the budget accordingly.

SUMMARY OF FINAL ESTIMATES

(In lakhs of Rs.)

	Budget 1956-57	Revised 1956-57	Budget 1957-58
Revenue			
Customs	150,00	171,00	162,00

Surplus (+) / Deficit (—) ..	(—)18,04	(+)37,94	(—)26,87

The revenue from customs next year has been placed at Rs. 162 crores. Although, as stated earlier, the import duties on a number of articles were enhanced during the course of the year the resultant increase has been more than neutralised by the fall resulting from the severe cuts in import quotas which have had to be imposed to conserve foreign exchange position. Excise duties are estimated to yield Rs. 209.43 crores, an increase of Rs. 20.7 crores over the current year's estimated collections. Of this increase, Rs. 12.4 crores represent the full year's yield of the increase in the duty on cotton cloth during the current year and the balance mainly large collections of duty on motor spirit and sugar. Under income-tax, the revenue next year is taken at Rs. 197.60 crores. The increase of Rs. 8 crores over the current year's revised estimates is due to the capital gains tax imposed last November and the increase then made in the rates of super-tax payable by companies both of which take effect from 1st April 1957. The revenue from Posts and Telegraphs is estimated at Rs. 4.34 crores, as against Rs. 5.30 crores this year. The dividend payable by Railways next year is estimated at Rs. 43.79 crores, an increase of Rs. 6.10 crores over the current year's revised estimates. Of this amount, Rs. 6.67 crores will be taken as contribution to revenue and the balance in reduction of the interest payment on the expenditure side.

Surplus profits of the Reserve Bank next year have been placed at Rs. 30 crores, as against the current year's credit of Rs. 20 crores, the bulk of the increase being due to larger earnings of the Bank. During the current year, gold in the Issue Department of the Reserve Bank has, by an amending legislation, been revalued from Rs. 40.02 crores to Rs. 117.76 crores. It has been decided that, of the resulting profit of Rs. 77.74 crores, Rs. 75 crores, should be added to the reserve fund of the Bank and the balance treated as ordinary profits accruing to the Government. This balance of Rs. 2.74 crores is included in the credit of Rs. 20 crores.

The revenue estimate includes a credit of Rs. 28 crores on account of the Steel Equalisation Fund. The transactions of this fund, which have so far been kept outside Government accounts, are now being brought within the Consolidated Fund with effect from 1957-58. This accounts for the increase of Rs. 28 crores in revenue; there will be a corresponding increase on the expenditure side.

There is another self-balancing item of Rs. 10 crores, representing the element of grant in the assistance from the U.S.A. Government under the agreement of August 1956. This grant, which is taken initially as revenue, is transferred to the Special Development Fund through an expenditure head. The only other item needing mention is the increase in the share of income-tax payable to States which is taken at Rs. 61.14 crores as against the current year's revised estimates of Rs. 58.75 crores.

The expenditure next year is estimated at Rs. 663.09 crores, of which Rs. 252.70 crores will be on Defence services and Rs. 410.39 crores under civil heads. The estimates for Defence services show an increase of Rs. 49.7 crores over the revised estimates of the current year. The bulk of the increase is for the Army and the Air Force and represents mainly larger outlay on fresh purchase of essential stores. Civil expenditure next year shows an increase of Rs. 41.79 crores, omitting the two self-balancing items in respect of Steel Equalisation Fund and grants from the U.S. Government. The bulk of the increase is due to larger provision for nation-building development and social services.

Nation-building Activities

The total expenditure on nation-building and development services under Civil Administration excluding Rs. 28 crores in respect of the Steel Equalisation Fund, amounts to about Rs. 115.13 crores, as compared with Rs. 92.96 crores during the current year. Provision for education has been increased by about Rs. 7 crores to Rs. 29.12 crores. This includes Rs. 11.62 crores for grants to States, of which Rs. 2 crores are towards revision of pay scales of school teachers, Rs. 5.20 crores towards primary, elementary and basic education and Rs. 4.25 crores for secondary, rural and higher education. Included in the provision for education are also Rs. 4.17 crores for the University Grants Commission and Rs. 1.67 crore for scholarship schemes including scholarships to students of scheduled castes, scheduled tribes and other backward classes. For expenditure on medical and public health, the provision has been increased from Rs. 8.17 crores this year to Rs. 10.79 crores next year. Agriculture and allied services will cost Rs. 4.97 crores more over the current year's estimated expenditure of Rs. 12.36 crores. Provision for scientific research has been increased by Rs. 1.35 crore and for oil and natural gas prospecting by about Rs. 2 crores.

In addition to the increase of Rs. 22.17 crores under Civil Administration mentioned above, the provision for Community Projects and National Extension Service has been raised by Rs. 2 crores to Rs. 13.15 crores. Similarly, the provision for welfare of scheduled tribes and scheduled castes and backward classes has been raised by about Rs. 2 crores to Rs. 11.38 crores.

A provision of Rs. 5 crores has been made for grants to States to help them raise the emoluments of their low-paid employees. The Government of India have agreed that some measure of relief to such employees is needed and that a part of the extra cost of such relief as the State Governments may decide to give should be met by them for the remaining four years of the second Plan, subject to review in the light of the Finance Commission's recommendations. Briefly, the Central Government would assist the States in raising emoluments up to Rs. 12 in each case to employees whose emoluments with this increase would not exceed Rs. 100, the Central assistance being equal to two-thirds of the extra cost in raising emoluments up to Rs. 60 and one-third of the extra cost of the balance.

The rest of the increase in Civil Administration is spread over a number of heads. Thus, expenditure on displaced persons increases by Rs. 64 lakhs to Rs. 22.5 crores. The States' share of Union excise duties on tobacco, matches and vegetable products increases by Rs. 95 lakhs to Rs. 19.17 crores. The provision for civil works increases by Rs. 1.15 crore.

Capital Expenditure

The current year's budget provided for a capital expenditure of Rs. 316.7 crores. There has been an increase of Rs. 20 crores in State trading schemes due mainly to larger imports of foodgrains for the Central reserve during the year; but this is largely offset by savings in the provisions for railways (Rs. 10 crores), steel plants (Rs. 9 crores), compensation to displaced persons (Rs. 5 crores), and Defence capital outlay (Rs. 5 crores). In the result, the revised estimate of capital outlay amounts to Rs. 313.68 crores.

For the next year, capital expenditure is estimated at Rs. 454.77 crores, excluding a formal adjusting item of Rs. 80 crores in respect of loan assistance from the U.S. Government, which is transferred to the Special Development Fund by debit to capital. The increase of Rs. 141.09 crores over the current year's revised estimates is largely accounted for by the three steel plants at Rourkela, Bhilai and Durgapur, the provision for which amounts to Rs. 156.83 crores, as against Rs. 35 crores in the current year. State trading schemes account for an increase of Rs. 19 crores, representing largely further imports of foodgrains for the Central reserve. There is also an increase in the provision for capital outlay on railways, which amounts to Rs. 124.17 crores, as against Rs. 103.81 crores this year. Against these increases, there are reductions under other heads aggregating Rs. 19 crores. Thus, the provision for capital outlay on civil works has been reduced by Rs. 6.5 crores and the non-recurring outlay of Rs. 7 crores this year on investments in the Life Insurance Corporation of India and the International Finance Corporation will disappear next year. Similarly, with the formation of the National Coal Development Corporation, the provision made this year for investment in the Corporation, about Rs. 4 crores, will not recur.

In addition to the provision for capital outlay, the estimates include Rs. 322.5 crores for loans to State Governments and others against the original budget provision of Rs. 386 crores. The saving arises in the main in respect of the provision of Rs. 50 crores for ways and means advances to the State Governments, and is also partly due to non-drawal by the Government of Burma of the loan of Rs. 15 crores, provided for in the Budget. The provision made next year for loans amounts to Rs. 317.44 crores. This includes Rs. 253.08 crores to State Governments, an increase of Rs. 12.29 crores over the current year's figure.

The estimates of revenue and capital expenditure for next year allow for a total outlay by the Centre of about Rs. 775 crores on the Plan schemes of the Centre and the States. Broadly, the provision made for expenditure directly incurred by the Central Ministries is Rs. 37 crores on revenue account and Rs. 460 crores on capital account (including expenditure met from Railway, etc., Funds) and the provision for assistance to States is about Rs. 70 crores on revenue account and Rs. 208 crores for capital grants and loans. The States are expected to spend on the Plan about Rs. 140 crores. The total Plan outlay of the Centre and the States will thus amount to over Rs. 900 crores.

Ways and Means

The current year's budget provided for an overall deficit of Rs. 356 crores to be met by expansion of treasury bills. The deficit is now expected to be Rs. 216 crores. As the opening balance of the year proved to be a negative figure of Rs. 4 crores and as a minimum of Rs. 50 crores is required to be kept as a working cash balance, the net expansion of treasury bills this year will be Rs. 270 crores.

During the year, the Central Government introduced a three-tier loan issue comprising a short-term loan of six years, a medium-term loan of 11 years and a long-term loan of 18 years, bearing interest, respectively, at 3¼, 3½, and 3¾ per cent, and with issue prices varying between Rs. 98 and Rs. 98-8. The subscriptions to these loans aggregated Rs. 158 crores, consisting of Rs. 77 crores in cash and Rs. 81 crores in conversion of 3 per cent. Victory Loan, 1957. In the net, on the credit of Rs. 100 crores assumed in the original budget, there was a shortfall of Rs. 23 crores.

Small savings this year have also shown some decline. The collections are now likely to amount to Rs. 65 crores, as against Rs. 70 crores assumed in the Budget. Every effort is being made to improve the collections of small savings.

The improvement in the ways and means position this year is largely due to the surplus in the revenue account and the saving in the provision for loans and advances by the Central Government. The fall in the market borrowings and small savings has been counterbalanced by improvement under other debt and deposit heads.

The overall deficit next year is estimated at Rs. 365 crores. The deficit in the revenue account and the larger provision for capital outlay and loans to State Governments for development expenditure account for the increase in the overall deficit. Credit has been taken for a new loan of Rs. 100 crores next year and small savings have been assumed to improve to Rs. 80 crores and foreign aid is expected to amount to Rs. 135 crores. Allowing for other miscellaneous transactions under debt and remittance heads on these estimates, the gap will remain at the figure of Rs. 365 crores.

The ways and means position for the coming year may be summarised thus: The Government need Rs. 27 crores for meeting the revenue deficit, Rs. 772 crores for financing the capital outlay and loan requirements of State Governments, and others and Rs. 32 crores for repaying the maturing market loan. Against this, it is hoped to raise Rs. 100 crores from the market loan and Rs. 80 crores from small savings. Foreign aid expected next year amounts to Rs. 135 crores (as against Rs. 65 crores this year) and other miscellaneous debt and remittance transactions may bring in Rs. 151 crores. This will leave a gap of about Rs. 365 crores in the available resources to balance the budget.

Presenting the White Paper on the Budget, the Finance Minister drew particular attention to the foreign exchange problem. Characterising this problem as a crucial one, he observed:

"The second Five-year Plan with its emphasis on the development of industry, mining and transport has a large foreign exchange component, and it now appears that the deficit in the balance of payments over the Plan period will be larger than was originally estimated. This is due both to the increase in the prices abroad and to the expansion of some of the projects included in the Plan. In fact, the draft on our foreign exchange resources has already been heavier than we had expected; since April 1956, this has amounted to about Rs. 260 crores. This strain on the balance of payments has necessitated the stiffening of import policy which was announced in January.

"The foreign exchange situation, as I now see it for the Plan period, is briefly as follows. The total deficit in balance of payments over the Plan period is likely to be about Rs. 400 crores more than was envisaged in the Plan. Taking into account the external finance that might be available for our various projects and the balance available from the authorisations of the first Plan period, we have in hand foreign exchange of the order of Rs. 450 crores to meet our requirements. With this, and assuming the continuance of aid from the U.S.A. and Colombo Plan countries more or less on the present scales and allowing for a moderate amount of private foreign investment coming in, we may take the total of resources in sight at about 50 per cent. of the total requirements. We are at present negotiating with the International Bank for Reconstruction and Development in respect of loans to cover the foreign exchange needs of several of our development projects. We are also exploring possibilities of deferred payments in respect of our imports of capital goods from various countries. On the whole, the prospects of our being able to raise the foreign exchange resources for the Plan are not altogether discouraging. This, of course, is not to say that the task is by any means easy.

"For tiding over the period, which must necessarily elapse before the new import policy becomes effective, we have obtained accommodation totalling in all $200 million from the International Monetary Fund. The problem, I must emphasise, is not one of achieving a balance in our external accounts by just cutting down imports. The task is two-fold. First, every care has to be taken to phase Plan expenditure in a manner that will not impose an excessive strain on the balance of payments. This requires adherence to a strict system of priorities within the general framework of the Plan. Secondly, we have to find ways and means of financing the large imports that will still be essential for the Plan, and this calls for sustained effort along several lines. The first essential step is to increase exports so as to enlarge our foreign exchange earnings and to cut down imports to the extent possible. Neither of these is possible without a sacrifice, but the sacrifice has to be made in the interests of planned development.

"The second Five-year Plan, needless to say, will strain the economy. But, I think, at this stage, it is important to think of how best to meet this strain rather than to question the basic assumptions or postulates behind the Plan. The path of development does not always run smooth. The experience of recent months only reinforces the well-known fact that the balances implicit in a five-year programme of development have to be checked and rechecked continually in the light of experience. The balances between investment and consumption, between available external resources and the claims on them, between the final flow of goods and services and the materials required for their production can hardly be estimated precisely in advance, and unforeseen factors do arise which upset these balances from time to time. It was in recognition of this fact that the second Plan report laid considerable emphasis on flexibility in planning and on the machinery of annual plans to provide for the necessary adjustments.

"For the immediate present, the need is for giving top priority to schemes which increase export earnings and reduce import needs without making an excessive claim on foreign exchange resources in the immediate future. Schemes which contribute most to an early increase in agricultural production also deserve high priority; schemes which have already been commenced and on which considerable expenditure has been incurred claimed, in any case, a considerable proportion of the resources available. Government intend to be guided strictly by such priority considerations in determining the phasing of Plan expenditure; first things must necessarily come first. At the same time, we have to ensure to the extent possible that development programmes which are calculated to contribute most to an increase in the productive capacity of the country and a strengthening of the long-term balance of payments do not suffer unduly. While a review and adjustment of priorities and strict adherence to them are essential in view of the limitation of resources, every care is being taken to see that the momentum gathered by the Indian economy in the last three or four years is kept up. In the making of our budgets—which are essentially development-oriented—and in the formulation of policies, this positive aspect of the tasks in hand is being constantly kept in mind."

The Call To Save

As citizens of India, you are called upon "to work wholeheartedly for the full and timely realisation of the tasks, targets and aims of the Second Five Year Plan."

The Plan has been embarked upon. Its success depends upon your providing capital for its working. In this effort no amount is too small—the man who saves a rupee and the man who saves hundreds—both are rendering national service.

Save as much as you can and entrust your savings to the nearest office of your Bank. In doing so you will help to build a new India and also create a valuable estate for yourself and your family.

The State Bank's local head office at Bombay, one of the more than five hundred offices waiting to take care of your savings throughout India.

INDO-U. S. TRADE

THE United States trade mission now on a visit to India has despatched to Washington a preliminary report in which it has stressed the need for a commerce and navigation treaty between the two countries. This was disclosed by the mission at a Press Conference held at Hyderabad the other day. The move of the mission is certainly commendable. The conclusion of a commerce and navigation treaty between India and the U.S. has unfortunately been hanging fire for the last five or six years. Thanks to the absence of such a treaty, the flow of Indo-U.S. trade has not been as smooth as it should be, although the share of the U.S. in India's foreign trade is quite large, being about 14 per cent. of the total. Unless this handicap is removed, the two-way trade between India and the U.S. cannot be expected to grow to any significant extent.

Viewed thus and considering the imperative necessity for large-scale investment of American capital in India's industrialisation, the Government of the two countries will do well to resume early negotiations for a treaty of commerce and navigation. The greatest value of such a treaty lies in the fillip it is bound to give to Indo-American economic co-operation. It is scarcely necessary to point out here that the total capital outlay required for the series of development projects and for developing industries in the private sector are so considerable that the pace of economic development will receive a setback, if there is no freer and a larger flow into India of U.S. private capital. Past experience in this field has not been encouraging. Thus, the amount of American private capital invested in India since independence is very negligible.

Why do American business men hesitate to invest in India? This is a very interesting poser which was raised by Mr. R. W. Kerr, Vice-President of the American Machine and Foundry Company of New York and one of the members of the trade mission, in the course of the discussions which the mission had with the members of the Hindustan and Andhra Chambers of Commerce at Madras last week-end. Answering the poser himself, Mr. Kerr observed that income-tax charged in India was higher than that collected in the U.S. There was also the question of double taxation. Further, the American investor was afraid of expropriation or nationalisation of his investments in India, the quantum of compensation to be paid to him being determined by Parliament.

The fears of U.S. business men about their investments in India are not unfounded. When Indian industrialists themselves are frequently deterred by the Government's irrational and unjustified policies, it is not surprising that foreign investors should be very reluctant about investing their savings in India. These apprehensions can be removed only if concrete steps are taken by the powers-that-be in India to announce their attitude towards foreign capital in unequivocally helpful terms. It will be worthwhile to consider the suggestion for setting up a central agency with adequate guarantees from both Governments to facilitate investment by the private sector, while there can also be direct agreement between firms in both the countries.

In the course of its discussions with Indian business men, the U.S. trade mission has drawn special attention to some of the special difficulties encountered by American importers of Indian goods. Mention, for instance, is made of the haphazard delivery which has been responsible for the recent sharp fall in the offtake of Indian manganese ore by the U.S. The quantity of ore actually exported to the U.S. during the period April-November 1956 was not more than 143,000 tons, as against 440,262 tons a year before. Owing to haphazard delivery, the U.S. has gone to Brazil for the ore, not because it is of better quality but because of reliability of shipments. Another difficulty relates to the quality aspect. One unfortunate feature is said to be that cheap and imitation goods, especially handloom fabrics, find their way into the American market. Traders in the U.S. have to come to India and examine the quality of fabrics to be imported into the U.S. This is a disquieting feature which should be done away with. Indian manufacturers and exporters, as one of the members of the trade mission rightly urged at Hyderabad, must take care to use that label which alone will keep down the danger of imitation products flooding the markets. This applies to all goods and commodities exported by India to the U.S. Further, modern techniques of advertising should be increasingly employed by India. It is only through the adoption of energetic steps in these directions that India can hope to augment its exports of a wide range of products to the U.S., including handicrafts, handloom products, oils, black pepper and mineral ores, for which there is a large outlet in the American market.

HEAVY ELECTRICAL EQUIPMENT FACTORY

The Project Report prepared by the Associated Electrical Industries Ltd., of England, the technical consultants of the Heavy Electricals (Private) Ltd., for the establishment of a heavy electrical equipment factory in Bhopal has been accepted by the Government of India and preliminary arrangements for the erection of the factory are progressing. The factory, when it is in full production, will be one of the biggest undertakings in the field of heavy electrical equipment manufacture in the whole of Asia. Under the original plans, the factory was expected to produce annually electrical equipment worth Rs. 8 crores, but according to the revised programme it is expected to produce electrical goods worth Rs. 16 to 18 crores per annum. Some of the principal items to be manufactured in the factory are hydraulic turbines and generators, generators for diesel sets, transformers 33 kw. and above, A.C. and D.C. circuit breakers, switchboards and control desks, tractor motors, static capacitors, etc.

The acceptance of the Project Report by the Government has been largely facilitated by the technical consultants agreeing to a provision for the payment of their remuneration in instalments at different stages of the progress of the factory. According to the present agreement, the first payment of £75,000 would be made six months after the placing of the first contract for the factory building or on 1st January 1959, whichever is earlier. Three other payments of £75,000 each would be at intervals of 18 month each after the first one. Payments will, however, be subject to the proviso that the progress of the factory is in strict accordance with the schedule laid down in the Report and any delay will be related to the dates for the payments which may also be similarly delayed.

The Government of India has, however, made it clear that the acceptance of the Report does not mean acceptance of all the details or rigid adherence to the time schedule for the implementation of the various stages of the project indicated therein. Also, the Heavy Electricals (Private) Ltd., which is in charge of the execution of the project, will have a free choice in adopting any particular type of design for the buildings of the factory that may be found suitable. It is hoped that in order to speed up the execution of the project long-term credit would be available and the consultants have agreed to make all possible efforts for securing such long-term credit facilities.

As provided for in the agreement, the consultants will set up a training school at Bhopal to train a large number of Indian technicians for supervisory positions. According to present plans, 900 candidates would be trained in the first year and during the second, third, fourth and fifth years the school is expected to take 2,000 trainees annually. Thereafter about 800 students are proposed to be trained annually as artisans, draughtsmen and other skilled workers.

While the establishment of the factory will no doubt go a long way towards meeting the requirements of heavy electrical equipments, the quantum of production in this factory will not be sufficient to meet even the present level of demand. At present, India produces only a few items of medium and light electrical equipment and hence almost the entire requirement of heavy electrical equipment has to be met by imports. Annual imports of all types of electrical equipment during the last two years have been of the order of Rs. 30 crores per annum of which heavy electrical equipment alone was of the order of Rs. 16 to 20 crores a year. In view of the long-term plan for electrical power development in the Second and succeeding five-year plans, the demand for heavy electrical equipment will increase substantially in the next few years.

ASIAN ECONOMY

An important feature of the economic development of the region covered by the Survey of the Economic Commission for Asia and the Far East for 1956 was that foreign aid on a significant scale helped the economies of several countries in averting foreign exchange difficulties, bridging budget deficits and easing food shortages. Yet another impressive factor was the realisation on the part of many countries of the continuing importance of the agricultural sector in their economies. The Survey, in this connection, cites the example of India where planners were of the view that it was possible and necessary to raise agricultural targets without withdrawing resources from planned uses in other sectors.

It is noteworthy, at the same time, that efforts were being made by the countries of the region to increase the pace of industrial progress. This was especially in evidence in India and China, where impressive progress was achieved under their first Five-year Plans. Meanwhile, their second Five-year Plans contemplate a faster pace of industrialisation, particularly in respect of heavy industries, than was achieved under the first. The problem of unemployment and underemployment, however, continued to be a pressing problem during the year in most countries.

A particularly noteworthy feature was the important role assigned to the Governments in economic programmes. This tendency was in evidence in a number of countries, whether public enterprise was favoured in principle or not. Nevertheless, the report finds that even among countries laying stress on private enterprise the Government's responsibility for laying the foundation for basic facilities and in participating actively in establishing important industries had been recognised. In certain countries, the Survey notes, the social philosophy was an added factor. For example, in India, the Survey states, the principle of State ownership and control received new impetus from the announced dedication to a socialist pattern of society.

The Survey is also emphatic that acceleration of economic development—which the present low output in several sectors, low *per capita* incomes, and rather high rates of population increase clearly make essential—will require increased attention to several questions at an early date. This calls for, among other things, foreign capital and assistance. The Survey rightly observes, in this connection, that "without prejudice to the national desire and the necessity of certain countries to achieve viability or self-support where they have not yet been able to do so, it is nevertheless to be hoped that means can be found for continuing and, where possible, increasing the flow of external assistance, as well as of private capital to the region as a whole." This observation seems particularly relevant to Indian economic conditions.

FINANCES OF INDIAN RAILWAYS

RS. 21.43 CRORES SURPLUS EXPECTED IN 1957-58

A NET surplus of Rs. 21.43 crores is disclosed in the White Paper on the Railway Budget for the coming year (1957-58), presented in the Lok Sabha on Tuesday this week by Mr. Jagjivan Ram, Union Minister for Railways. The anticipated surplus is, of course, lower by Rs. 5.52 crores as compared with the revised estimate for the current year, that is, 1956-57. The reduction in surplus is expected to occur despite a marked rise of Rs. 18.50 crores in the gross traffic receipts which in 1957-58 are put at Rs. 368.50 crores. For the working expenses of railways and net miscellaneous expenditure are expected to be substantially higher by Rs. 14.82 crores and Rs. 3.10 crores, respectively. The dividend to General Revenues is also proposed to be stepped up by Rs. 6.10 crores, from Rs. 37.69 crores in 1956-57 (revised) to Rs. 43.79 crores in the 1957-58 (budget).

The following table shows the budget estimates of railways for 1957-58, as against the budget and revised estimates for the current year and the actuals for the previous year:

Railway Budget at a Glance

(Rupees in crores)

	Actuals, 1955-56	Budget, 1956-57	Revised Estimate, 1956-57	Budget, 1957-58
Gross Traffic Receipts	316.29	345.00	350.00	368.50
Working Expenses	213.22	224.30	229.34	244.16
Net Miscellaneous Expenditure	7.73	13.04	11.02	14.12
Appropriation to Depreciation Reserve Fund	45.00	45.00	45.00	45.00
Total	265.95	282.34	285.36	303.28
Net Railway Revenues ..	50.34	62.66	64.64	65.22
Dividend to General Revenues..	36.12	39.67	37.69	43.79
Net Surplus	14.22	22.99	26.95	21.43

The estimate of passenger earnings in 1957-58 is placed at Rs. 119 crores, as against the revised estimate of Rs. 115.5 crores for the current year. Earnings from other coaching traffic are placed at Rs. 24 crores, as compared with the current year's revised estimate of Rs. 21.4 crores. The amount includes Rs. 2.2 crores on account of the haulage of postal traffic at revised rates effective from 1st April 1956, the adjustment for the current year also being made in 1957-58.

Goods Traffic

An increase of 5 per cent. in goods traffic is expected during 1957-58, the estimate of goods earnings being placed at Rs. 218 crores, as compared with the current year's revised estimate of Rs. 206.5 crores. The sum is inclusive of the supplementary charge of 6¼ per cent. which is proposed to be continued till a selective variation of charges is made on the basis of the recommendations of the Freight Structure Enquiry Committee. The Committee's report is expected to be received shortly and, as its recommendations are likely to be considered and implemented in the course of the budget year, the consequential changes in the freight rates of various commodities would naturally modify the estimate mentioned above. The extent of these modifications cannot now be anticipated, and the estimate of goods earnings now given can, therefore, only be purely tentative.

The gross budget estimate of ordinary working expenses for 1957-58 is placed at Rs. 284.42 crores, or Rs. 15.44 crores more than the revised estimate for 1956-57, which is placed at Rs. 268.98 crores. Taking into account credits adjusted in reduction of expenditure like freight on railway materials, however, the increase is only Rs. 14.82 crores. There is an increase of Rs. 4.6 crores in operating expenses due to the anticipated increase in train miles to cater for the increase in passenger and goods traffic expected during the budget year; of Rs. 3.32 crores under repairs to rolling stock reflecting the increase in rolling stock holdings and the larger numbers of them expected to undergo periodical overhaul and require running repairs in the course of intensive use to cope with the traffic; and of Rs. 9.03 crores mainly on staff expenditure, out of which Rs. 2.2 crores are for the effect of the redistribution of posts among different grades with retrospective effect from 1st April 1956, the balance being for normal annual increments, and the pay and allowances of additional staff appointed to cope with the increase in traffic and the increasing tempo of work in the implementation of the second Five-year Plan. The figure of increased expenditure will be offset by a decrease of Rs. 1.51 crores in transactions expected to be charged to revenue suspense. The net result of miscellaneous transactions for the budget year is expected to be a net expenditure of Rs. 14.12 crores.

The estimate of dividend to general revenues is placed at Rs. 43.79 crores on the basis of the Convention resolution. This compares with the revised estimate of Rs. 37.69 crores payable as dividend to general revenues in the current year, after taking into account an adjustment of about Rs. 2 crores made in favour of the railways following the revision of the figures of capital-at-charge adopted after Partition. The figure for the budget year takes into account an increase in capital outlay during 1957-58 to the extent of Rs. 124 crores. After payment of dividend to general revenues, the net surplus for 1957-58 is placed at Rs. 21.43 crores, which is proposed to be credited to the Development Fund.

Out of the total allotment of Rs. 1,125 crores to the railways under the second Plan, Rs. 178 crores are expected to be spent in the first year. The allotment for 1957-58, the second year of the Plan, is fixed at Rs. 218 crores. The programme for rolling stock machinery, works constructions, etc., provides for an outlay of this amount.

Financial Results for 1955-56

The gross traffic receipts during 1955-56 stood at Rs. 316.29 crores, an increase of Rs. 2.19 crores over the revised estimate for that year. The ordinary working expenses (gross) came to only Rs. 252.86 crores, as against the revised estimate of Rs. 254.59 crores, a shortfall of Rs. 1.73 crores.

The surplus for the year amounted to Rs. 14.22 crores, as against the revised estimate of Rs. 9.58 crores. Out of this surplus, Rs. 7.14 crores were credited to the Railway Reserve Fund and the balance of Rs. 7.08 crores to the Development Fund.

Revised Estimates for 1956-57

The rise in passenger traffic has been fairly steady during the current year. There was an increase under passenger earnings from the budget estimate of Rs. 111.4 crores to Rs. 115.5 crores under the revised estimate. The revised estimate of other coaching earnings is placed at Rs. 40 lakhs less than the budget figure, mainly because of an unfavourable fruit season and the tendency towards diversion of parcel traffic to the express goods service. Goods earnings have kept pace with the budget anticipation of eight per cent. increase in traffic over last year. The equalisation of terminals and the imposition of a short-distance charge on coal towards the end of October 1956 is anticipated to produce an extra revenue of about Rs. 90 lakhs. The revised estimate of goods earnings is, therefore, placed at Rs. 206.5 crores, about Rs. 1 crore higher than the budget estimate. Sundry earnings are estimated at Rs. 7.35 crores. The revised estimate of total gross traffic receipts for 1956-57 is placed at Rs. 350.00 crores, an increase of Rs. 5 crores over the budget estimate, the increase being mainly under passenger earnings.

As against the budget estimate of Rs. 252.05 crores for ordinary working expenses during 1956-57, the revised estimate comes to Rs. 268.98 crores. The increase has taken place on account of increased charges under administration, repairs and maintenance, higher fuel bill mainly on account of enhancement of coal prices from July 1956, and increase miscellaneous expenses, as well as higher labour welfare expenditure. The net miscellaneous expenditure is estimated at Rs. 11.02 crores as compared with the budget estimate of Rs. 13.04 crores.

The net railway revenue in 1956-57 is estimated at Rs. 64.64 crores, of which dividend to general revenues accounts for Rs. 37.69 crores, leaving a net surplus of Rs. 26.95 crores. The entire surplus is being credited to the Development Fund.

First Five-year Plan

The review of the progress made in the implementation of the development programme under the first Five-year Plan as contained in the White Paper reveals that the railways actually spent a sum of Rs. 423.73 crores during the Plan period, as against the original allocation of Rs. 400 crores. The increase took place under rolling stock and machinery. There was a small shortfall of expenditure on track and bridges, mainly due to shortage of materials. Even at the end of the Plan period, track renewal was in arrears to the extent of about 7,000 miles each for rails and sleepers.

During the Plan period, there was an increase of Rs. 69 crores in traffic receipts, which rose from Rs. 247 crores in 1950-51 (excluding the freight on railway materials) to Rs. 316 crores in 1955-56. The increase was made up of Rs. 10 crores in passenger earnings, Rs. 4 crores under other coaching earnings, Rs. 53 crores under goods and Rs. 2 crores under sundry earnings. Ordinary working expenses during the Plan period rose from about Rs. 165 crores in 1950-51, excluding freight on railway materials, to Rs. 212.95 crores, an increase of nearly Rs. 48 crores. The main reasons for higher expenditure were an increase of about Rs. 34½ crores in the cost of the staff and Rs. 3½ crores in the cost of fuel. Of the total expenditure of Rs. 423.73 crores in the Plan period, a sum of Rs. 284 crores was provided by the railways from their own current resources, which was Rs. 36 crores short of the original figure of Rs. 320 crores planned to be found by them. The balance of about Rs. 140 crores was met from the general revenues.

Second Five-year Plan

The White Paper refers at some length to the progress already made under the Railways' second Five-year Plan during the first year, and the development proposed for the second year of the Plan. A number of new lines and several important line capacity works provided for in the Railway Plan and required for carrying the additional coal and steel traffic have been either taken in hand during the current year or included in the programme for 1957-58.

The procurement of rolling stock envisaged in the Plan is proceeding satisfactorily. Orders for 557 locomotives, 1,931 carriages and 27,184 wagons (four-wheelers) have been placed in the current year, while 411 locomotives, 2,346 carriages, including 68 EMU coaches, and 17,729 wagons (four-wheelers) are proposed to be ordered against the 1957-58 programme. The locomotives already ordered include 100 diesel locos of 2,000 h.p. each for working main line goods traffic.

To cope with the repair work of the increased rolling stock holdings, which will also be put to more intensive use in the coming years than in the past, large-scale expansion and modernisation of the existing repair shops, as well as the establishment of a few new shops, have been or are being taken in hand.

In the second Plan, there is a provision of Rs. 80 crores for electrification. In addition, to the lines originally provided for, the electrification of the sections between Gomoh and Moghal-

AIMING AT ECONOMIC SELF-SUFFICIENCY
IS IT PRACTICABLE?

By Dr. M. H. Gopal

ALTHOUGH the Indian plans do not openly aim at self-sufficiency, there is an underlying suggestion of it and sometimes public men have hinted at this objective.* The implications of autarchy, in general, and to a developing economy, in particular, are briefly reviewed below.

Economic self-sufficiency has conjured up enchanting dreams in some countries and at some periods of recent history. It treats each nation as an absolute economic entity, following a purely self-regarding policy of its own. That is, a nation would try to produce all that she wants—food, raw materials, machines, manufactures and so forth. The needs of the people and the Government would be met very largely from within the country's own regions. There would be little of external trade, at least not much to import and so little of exports. The nation would become self-supporting, leading to unrestrained economic nationalism. This type of nationalism has off and on dominated men's minds and even been put into operation by some nations. It was the economic policy of Fascist Italy and Nazi Germany during the nineteen-thirties. Mussolini, for instance, proclaimed, in 1936, that Italy's principal future objective was "the achievement within the least possible time of a maximum of economic independence." More recently, the United States of America and, from its inception, the Soviet Union have been after economic self-sufficiency in various degrees. In a way, even India today is looking in that direction.*

What are the considerations which lead a nation that way? The story of Hitler's Germany which stood out for uncompromising autarchy is revealing in this respect. Even before their assumption of power, the economic policy of the Nazis was self-sufficiency, and this policy was strengthened by what happened to Germany during the Great Depression. Exports collapsed and imports had to be curtailed, resulting in a fall in the standard of living. Greater reliance on the domestic market became necessary. Moreover, the Nazis sought the political support of the peasants and the smaller industrialists, who produced for the home market. They also anticipated the struggle for political supremacy and the need for building up an economy self-sufficient in foodstuffs and raw materials so as not to be cut off in case of war or to come under economic pressure in time of peace. Thus, political factors as well as economic ones made the doctrine of self-sufficiency Germany's national economic policy.

Somewhat similar considerations underlie the adoption or the advocacy of autarchy in other countries. To borrow Mussolini's words: "A maximum of economic autarchy is the guarantee of the nation's political independence and power and the goal must be relentlessly pursued." Partly, the scope to exploit the vast resources available, partly the desire to increase the productive capacity and national income of the people, but, largely, security reasons to reduce economic dependence on other countries are behind the desire of the Soviet Union and the United States to become self-sufficient.

Certain Consequences

Whenever a country, small or large, takes this road, certain consequences follow. A high degree of State control, though not socialisation, direct or indirect, over economic activity becomes inevitable. Restrictions on the nature and flow of trade, control of investment, regulation of wages, etc., become necessary. International trade is reduced, tariff walls rise higher and, in fact, a new balance between agriculture and industry is introduced. The economy becomes regulated and regimented, limiting individual discretion and judgment. In Germany, for instance, there was an unparalleled amount of interference with personal freedom of action in economic matters. So was it in Italy, and is in the U.S.S.R. The actual instrument of economic development may, however, be private enterprise as in Germany, the corporation as in Italy or State management as in Soviet Russia.

The subsequent story of Germany and Italy leading to aggressive nationalism and ultimate destruction raise the questions: Is overall economic self-sufficiency practicable? Is it desirable? Obviously, a small nation trying to build a largely self-contained economic system is doomed to disaster. For, her needs, as those of any other, would be for a wide range of products, but her resources are definitely limited and cannot meet this demand except at an exorbitant production cost. The sacrifice in productive power would be tremendous. Moreover, many industries today have necessarily to be on a large scale, with a part of the output consumed at home and a part exchanged abroad. A small nation under autarchy cannot adopt large-scale methods all round. So she will have to sacrifice variety in products and restrict and regiment her internal demand, leading to an unpleasant degree of intervention in individual freedom in the economic sphere. It is also doubtful how far a small country can bear the economic and financial strain resulting from cutting herself off from the world. Finally, her action would lead to retaliation and perhaps to political repercussions too.

Large countries, however, can make a relatively better success of self-sufficiency, because of their diversified resources and large internal markets. There are six such countries in the world today—Canada, the U.S.A., Brazil, the U.S.S.R., China and India. But even they cannot avoid some of the difficulties arising from economic nationalism. For no nation is completely self-sufficient in natural resources, either in times of peace or in those of war. Nature's gifts have not been distributed according to national boundaries or needs. Thus, the United States is deficient in minerals, manganese and rubber and India in oil. Resort to substitutes or synthetic materials, even if possible in all cases, results in higher costs, lower technological standards and quicker depletion of reserves. Economic nationalism will also lead to perpetual economic warfare.

These remarks need slight modification in the case of underdeveloped areas like India and China. Where political dependence has left resources undeveloped, living conditions poor, and technological standards low, the scope for further development of the tremendous resource potential in directions so long dependent upon the West and for naturalising modern techniques of production within their own borders is very large. These possibilities of expansion and the resurgent nationalism suggest that, purely from the economic point of view, India and China can, for a long time to come, pursue the *ideal* of self-sufficiency and orient the build-up of their economies in that direction. The pursuit of this ideal would imply, and has actually resulted in, greater State control and regulation. The resort to planning, the pattern of diversification, and the projected pace of growth are symptoms of this.

Overall Self-sufficiency

But it is doubtful if the object of *overall* self-sufficiency can ever be attained. For, in the initial stages of development, import of capital goods becomes necessary, and thus affects self-sufficiency. At the later stages, the growth in population, continuous rise in levels of living, and the variety of demand as a result of contact and imitation, coupled with the natural limitations to produce all the diverse requirements, make resort to external sources inevitable.

Self-sufficiency in particular directions, however, is not only possible and desirable but also necessary, specially in large underdeveloped countries. Three such groups of products may be mentioned. First, for arms, ammunition and other defence materials, it is unwise to depend on outside supplies, however friendly such help may be. Generally, self-sufficiency in this direction involves financial loss, but business considerations alone should not count in this context. Next, self-sufficiency in food, at least in the basic commodities, such as rice and wheat, is necessary, as it would build up the economic strength of the country, save a good deal of foreign exchange and can easily be made a financial success. Finally, an underdeveloped country must avoid dependence on external sources for its key industries such as iron and steel, machine tools, and heavy chemicals, for these form the foundation of both physical security and economic development. Although by themselves some of these may not immediately repay the investment, in the long run and in terms of the overall advantage to the country, self-sufficiency in the key industries is absolutely essential.

But how far is the pursuit of complete autarchy desirable even in the larger countries, particularly in India? This question assumes greater importance, in view of planned development in India and the growing political tension in the world. No doubt, to increase their productive capacity, to strengthen their security and to find employment for their millions, India and China should adopt an economic policy of greater diversification and all-round development. Such an exploitation of potential resources is an urgent necessity. This however, does not mean a wholly nationalist policy of autarchy which is definitely artificial, and from the point of view of productivity, wasteful and uneconomic. Moreover, in a world of tension and suspicions, unrestrained economic nationalism may spell danger. An economic Iron Curtain, is as undesirable as a political one.

The policy suggested above is not tantamount to economic surrender. Economic nationalism is largely a reaction to the erstwhile economic domination by the smaller Western nations and the outcome of political distrust. The world, which in a way is getting smaller, cannot prosper on domination and distrust, and the prosperity of the individual nations is ultimately dependent on that of the world. The larger and underdeveloped countries can help themselves and other nations not by an uncompromising pursuit of self-sufficiency, but by an attempt at finding a balance between the nationalist objective of self-sufficiency and the international ideal of economic co-operation. It demands adjustments in details of economic development and instruments without compromising the foundations of national defence and the people's prosperity.—*All Rights Reserved.*

*"The principal objective of planning the national economy should be to attain, as far as possible, national self-sufficiency." [National Planning Committee, volume on *Manufacturing Industries*, pp. 22 and 24.] Prime Minister Nehru in a speech at Aurangabad on 2nd February 1957—"Self-sufficiency as early as possible."

THE STORM BREAKS

From Our Own Correspondent

LONDON, 16*th March*

LONDON LETTER

THE employers in the engineering and shipbuilding industries are the best organised in the country. The unions in these industries are highly organised, militant, and have for over a year felt frustrated over their wages. As long ago as last summer, the engineering employers declared that there would be no more wage increases—this was before a formal submission had been made by the unions, and this declaration by the employers confirmed the suspicion of the Amalgamated Engineering Union that a showdown was coming.

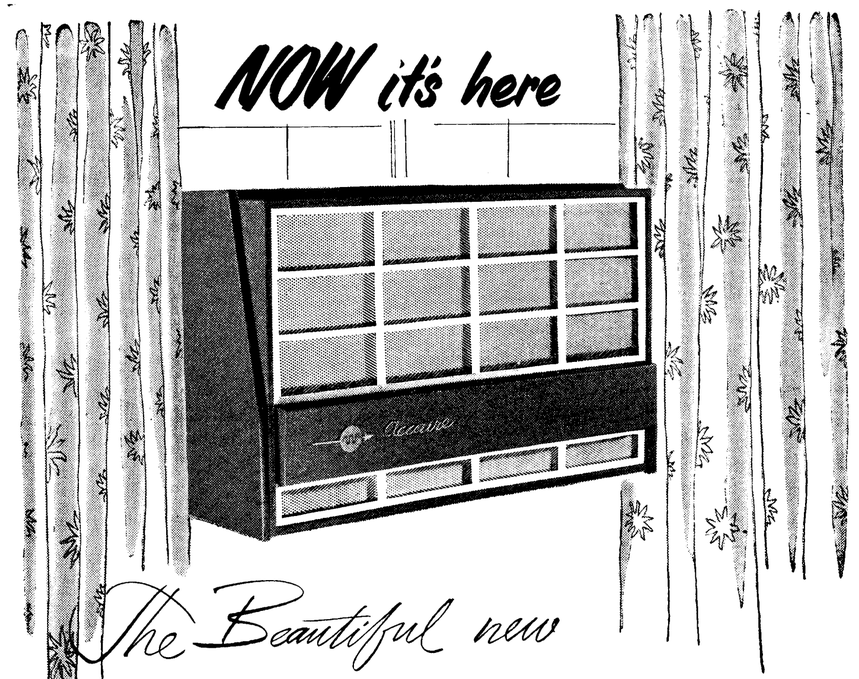
It is in an unfortunate mood of mutual suspicion that the present Union demand for a 10 per cent. increase has been made, rejected, and the call to strike sent out. The Government finally appointed an arbitrator and appealed to both sides to submit their case. Neither side would agree and the 200,000 shipbuilding workers and the 2¾ million workers in the engineering industries accordingly decided to confirm the strike calls.

At the last minute, the employers in shipbuilding agreed to submit to arbitration, provided the unions called the strike off. The latter, as a result of prolonged delays, decided to maintain their claim, reject arbitration and continue with the strike. Thus, from the end of this week, the shipyards will be idle. Repair work and new building will come to a standstill. Trade, naturally, will be diverted to Continental shipyards and the blow to the country's economy will be serious. How long the strike will last is anyone's guess, but the men have been well paid, their unions have got ample reserves, and above all, the men are unanimously in favour of fighting for what they regard is a fair claim. In these circumstances, the strike could easily continue a month or more.

Even more serious is the pending engineering strike called for next week. There is no likelihood that the workers in these vast industries will take any different line from those in shipbuilding. They want to negotiate directly with the employers and they want the employers to make an offer to them against their 10 per cent. claim. How the strikes will take place if they are not averted remains to be seen, but the general supposition is that it will follow the lines of the shipbuilding strike, inasmuch as it will be called industry by industry, rather than by attempting to call out all engineering workers regardless of their occupation. In other words, the unions are going to concentrate their resources—for these strikes cause vast drains on the unions' funds—where they will be most effective by bringing complete factories and industries to a standstill. For instance, the motor industry, which is only working at about 50 per cent. capacity, might be left untouched. It is the industries with the big order books, such as heavy engineering, where a strike will have its worst economic effect and where, therefore, there will be the greatest pressure on the employers to make concessions.

The obvious question is: Why are the unions refusing arbitration? The answer is that since the employers have repeatedly denied that any claim can lie against them and that they would refuse to make any concessions, the unions regard resort to arbitration as merely a time-saving device which could have no fruitful result. What the unions want is that the employers should concede that there is a case to answer and be prepared to discuss the unions' claim with them. This will only be done, if the Government intervenes.

On economic grounds, there is every reason why the Government should intervene, but the Government's task is confused by the determination of its right wing that a halt should be called to wage increases and that the time has come to test the unions' powers. The Government's right wing thinks that the country is ripe for a dose of deflation. A big reduction in working class spending power will provide this. That the country's economy may suffer they accept as an inevitable stage in the process of getting wage costs back to more competitive levels with those overseas. They see this struggle against the background of the general need to reduce taxes, welfare State expenditure and inflationary consumer expenditure in all its forms. The Government's task in bringing peace in this situation is difficult in the extreme.—*All Rights Reserved.*



The most uncommon design in room airconditioners and its beautiful finish in a variety of colours makes Accaire an excellent piece of furniture for any room. At the same time its efficiency and cooling capacity are of the highest order. Exceptionally silent in operation and low in current consumption. Each unit carries with it one whole year's guarantee. An organisation with more than a quarter century of experience in airconditioning is ready to give all the service you need after purchase.

EFFICIENT WORKING OF BANKING SYSTEM

CREATION OF PROPER CLIMATE STRESSED

THE view that despite the heavy odds it has had to contend with, the banking system in India has made good progress during the year ended 31st December 1956, and that it would not be in the nation's best interest if the Government were to interfere drastically with the system, was expressed by Mr. C. H. Bhabha, Chairman, Indian Banks Association, Bombay, in the course of his address to the tenth annual general meeting held in Bombay, on 19th inst. Mr. Bhabha also pointed out that the increase in the deposits of the banks during the year was not in line with the trend noticed in other advanced countries of the world, for, while notes in circulation went up by Rs. 104 crores, the deposits of the Scheduled banks improved only to the extent of Rs. 76 crores. Further, as against Rs. 1,446 crores of notes in circulation as at the end of 1956, the deposits of the Scheduled banks were of the order of only Rs. 1,102 crores.

The Chairman of the Indian Banks Association felt that though the objects of the Reserve Bank of India Act of May 1956, namely, the lowering of reserve requirements against the note issue in order to free monetary resources for the implementation of the Plan, and the regulation of credit creation by the banking system, were intrinsically good, there was need for extreme caution in the use of the powers vested in the authorities by the Act for the purpose. This was demonstrated by the fact that soon after the legislation was passed the value of the Indian rupee in the free markets of the world, measured in terms of sound currencies, depreciated appreciably.

A notable feature of the activity of the banks during the year under review, according to the Chairman, was that advances of Scheduled banks increased much faster than deposits. As against an increase of Rs. 79 crores in deposits, advances went up by no less than Rs. 106 crores. This performance of the banks in successfully fulfilling the demands of the economy was admirable. But it was also due, according to Mr. Bhabha, to the assistance of trade and industry, and not least of all to the bill market scheme inaugurated by the Reserve Bank five years ago. Since then, bills purchased and discounted by Scheduled banks increased from Rs. 45.43 crores in 1953 to Rs. 165.55 crores in 1956. Mr. Bhabha, however, felt that the recent stepping up of the rate for re-discounting of such bills in addition to imposing a steep unprecedented increase in stamp duty on them vitiated the value of the help given to banking institutions in the shape of the bill market scheme.

Expansion of Banking Facilities

Discussing the question of expanding banking services in India in the context of the peculiar conditions prevailing in the money market, Mr. Bhabha rightly opined that the extent to which such facilities could be provided by the banking system depended on the creation of appropriate climate by the central banking authority. Certain factors, in his view, militated against the enthusiasm of the banks in this regard. These included hasty legislation, bank awards, unhealthy competition from official sources and frequent changes in the policies and pronouncements bearing on trade, commerce and industry of the country. He cited, in this connection, the reported tendency on the part of some interested parties to apply pressure on Local Bodies and Governmental organisations to convert some of their fixed deposits with the commercial banks into Post Office Savings deposits or National Savings Certificates with a view to showing large figures for P.O.S. deposits and N.S. Certificates. The speaker also referred to another unhealthy tendency in this connection, namely, the application of certain measure of pressure to ensure the success of the loans floated by Government.

The year 1956 was also notable for the fairly profitable position of the banks. Nevertheless, there was need, according to Mr. Bhabha, for strengthening the edifice of banking in the country. This need was more pronounced now than ever before because of the persistent downward trend of values in the gilt-edged market, and the widening gap between the book values and market values of Government securities held in the portfolios of many banking institutions, which, in the nature of things, necessitated a larger provision for contingencies. A more alarming feature, in Mr. Bhabha's view, was the rapid growth in establishment charges. Between 1952 and 1956, he pointed out, the proportion of establishment charges to gross profits increased from 50.07 per cent. to 55.84 per cent. This growth, the speaker rightly pointed out, was not at all justified, and the position needed a thorough re-examination.

Mr. Bhabha also referred at considerable length to the problem of employee-management relations. An unhealthy tendency prevalent in a large number of banks was the fall in output of work per employee. This, the speaker rightly said, was in sharp contrast with the position in other advanced countries where less number of workers turned out larger volume of work. Although the Industrial Disputes (Banking Companies) Decision Act had given the Indian workers better conditions of work, emoluments, etc., the speaker complained, their hopes of healthy co-operation between the management and employees had been belied to a considerable extent. He hoped, however, that better counsels would prevail and a healthier climate would be created.

The Chairman of the Indian Banks Association was also of the view that the Indian Companies Act had increased the burdens already imposed by the Banking Companies Act and the Reserve Bank of India Act. Many sections of the Companies Act, he said, presented numerous practical difficulties and dislocated the working of the banks. Proceeding, he observed that the Banking Companies (Amendment) Act reflected, in contrast to the liberal policies prevailing elsewhere, the Government's desire to rely more and more on legislation for remedying the stray and unimportant defects in banks. He wondered, however, whether this legislation could achieve what the Act of 1949 failed to do. What was still more disturbing according to him, was the haste with which this important amending legislation was carried through without giving sufficient time to the public and to the parties concerned for expressing their considered views on it.

Referring to the nationalisation of the Imperial Bank, Mr. Bhabha felt that though its basic object was the expansion of banking facilities in rural areas, its record of achievement till the end of 1956 was disappointing. For, he pointed out that from 1st July 1955, when the State Bank was formed, till the end of 1956, it had been able to open only 66 new offices, as against its programme of 202. Again, only eight of the 66 branches were opened in places where there were no banking offices. Thus, according to him, the establishment of 58 offices served only to create unhealthy rivalry and competition with the already existing banks, to the detriment of the latter. He felt this kind of competition would hardly help the development of sound banking in India.

THE INDIAN OVERSEAS BANK LTD. MADRAS

We'll help you solve your trading problems

The Indian Overseas Bank can handle your overseas trading problems 'on the spot' With branches located strategically all over South East Asia, the Bank is in a position to offer Indian businessmen expert personalized service on all matters concerning foreign trade. If you are planning to develop your trade in this area of growing commercial importance you couldn't do better than to consult the Indian Overseas Bank.

BARODA BANK'S PROFIT WELL MARKED UP

ADVANCES AT RECORD LEVEL

THE decision of the Directors of the Bank of Baroda Ltd. (General Manager: Mr. N. M. Chokshi, Baroda) to step up the dividend for the year ended 31st December 1956 from 12 per cent. to 14 per cent., by raising the final distribution from 6 per cent. to 8 per cent., is in keeping with the encouraging results of the year. For the profit has recorded a sharp rise of Rs. 10.25 lakhs to Rs. 39.90 lakhs, thus not only maintaining the upward trend for the third year in succession but establishing a fresh record in the Bank's history. It exceeds the previous high of Rs. 32.48 lakhs reached in 1949 by as much as Rs. 7.42 lakhs.

The Bank's gross income for the year under review shows a rise of Rs. 49.61 lakhs, which is well shared by interest and discount earned, which have gone up by Rs. 37.56 lakhs, and commission and exchange, which are up by Rs. 12.26 lakhs. The rise in these two main sources of income are much sharper than those noted in earlier years and this is not surprising in the context of the expansion in advances and bills business and the general increase in rates of interest on advances effected by banks. The increase in deposits and higher interest rates paid on them, as well as on borrowings, have been responsible for the rise of Rs. 25.67 lakhs in interest paid. This is accompanied by a rise of Rs. 13.17 lakhs in expenses.

The provision for taxation has been raised from Rs. 9 lakhs to Rs. 15.75 lakhs and that for bonus to staff from Rs. 8 lakhs to Rs. 8.75 lakhs. As already mentioned, the distribution to the shareholders has been stepped up to 14 per cent. after having been maintained at 12 per cent. for the previous ten years.

The progress of the Bank's working during the past three years is reflected in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Gross income	2,29.65	1,80.04	1,52.52	1,19.76
Interest and discount earned	1,86.83	1,49.27	1,29.28	1,03.24
Commission, exchange, etc.	42.40	30.14	22.68	15.59
Interest paid	1,02.53	76.86	60.82	43.75
Expenses	85.12	71.95	62.36	53.02
Depreciation and repairs	2.10	1.58	1.32	0.54
Profit	39.90	29.65	28.02	22.45
Provision for—				
Taxation	15.75	9.00	8.00	3.00
Investment account				1.50
Bonus to staff	8.75	8.00	7.65	6.00
Dividend	14.00 (D. 14%)	12.00 (D. 12%)	12.00 (D. 10%) +B.2%	12.00 (D. 10%) +B.2%
Carry forward	4.76	3.36	2.70	2.33

	As on 31st December			
	1956	1955	1954	1953
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	1,28.00	1,28.00	1,28.00	1,28.00
Deposits	45,13.85	40,51.62	34,85.38	30,85.88
Borrowings from banks	4,16.21	4,03.45	3,73.80	25.00
Advances and bills purchased and discounted	35,86.57	30,41.56	25,50.18	17,98.74
Investments	11,80.33	12,29.79	11,33.72	11,92.05
Cash	4,52.38	4,76.61	3,84.06	3,35.33
Balance-sheet total	63,08.59	56,29.03	46,65.94	38,36.79
Ratio to deposits of—	%	%	%	%
Advances	79.4	75.0	73.2	58.3
Investments	26.1	30.4	34.0	37.6
Cash	10.0	11.8	10.4	12.5

The rise of Rs. 4.62 crores in deposits during the year compares with Rs. 5.66 crores noted in 1955 and reflects the difficulty experienced by banks in raising their resources, despite the higher interest rates offered on them. In the case of the Bank of Baroda, the bulk of the rise in deposits is accounted for by fixed deposits which have gone up by Rs. 3.54 crores (to Rs. 24.80 crores), as against Rs. 2.84 crores in 1955. Savings bank deposits also have risen by Rs. 1.33 crores to Rs. 7.66 crores, while the increase in the previous year was no more than Rs. 61 lakhs. There has been a slight fall of Rs. 26 lakhs (to Rs. 12.67 crores) in current and other accounts which had gone up by Rs. 2.22 crores in 1955.

The Bank's advances as at the end of the year constitute a record and the increase of Rs. 5.45 crores over the year is mainly accounted for by loans, cash credits and overdrafts, which have gone up by Rs. 5.32 crores, as against Rs. 52 lakhs in 1955. Bills discounted and purchased are up by only Rs. 14 lakhs, as compared with the rise of Rs. 4.39 crores noted a year ago. As the bulk of the increase in advances has been met by the rise in deposits, there has been no necessity to draw on the liquid assets to any notable extent. This accounts for the relatively small shrinkage in investments and cash balances.

PROFIT OF CHARTERED BANK GOES UP

SHARP RISE IN ADVANCES

THE statement of accounts of the Chartered Bank (Chief General Manager: Mr. H. F. Morford, London) for the year ended 31st December 1956 fully reflects the strain on the Bank's resources, as a result of the insistent demand for finance in many of the countries where the Bank operates. Thus, there has been a further expansion of over £12 million in the Bank's advances, as against an increase of only £3 million in current and other accounts and a shrinkage of more than £8 million in fixed deposits, with the result that the liquid assets of the Bank had to be run down—investments in Government and other securities showing a fall of about £10 million and cash balances £3.25 million.

There has also been a further rise in working costs, especially salaries and wages. Nevertheless, the Bank has been able to improve its earnings, thanks to the higher interest rates which prevailed in London during the year. The Bank's policy has always been to keep a liquid money position in London and this has enabled the Bank to make full use of the higher interest earnings and more than to offset the rise in costs. This explains the increase of £41,468 to £900,808 in net profit. This expansion in profit compares well with that of £36,193 noted in 1955 and takes the profit to the highest level for many years. Together with the surplus of £405,375 brought in from 1955, the profit available for appropriation is £1,206,183, as against £1,152,250. The Directors have maintained the allocations at the previous year's levels, except the provision for contingencies which has been raised from £100,000 to £150,000. The amount utilised to write off Bank premises is £200,000; officers' pension fund gets £125,000 and widows' and orphans' fund £20,000. The dividend also is unchanged at 15 per cent. per annum (less income-tax) for the third year in succession, absorbing £301,875, leaving to be carried forward £409,308.

The following synopses of the Bank's balance-sheets as at the close of the past four years provide an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

	As on 31st December			
	1956	1955	1954	1953
LIABILITIES (Main)				
Capital	3,500	3,500	3,500	3,500
Reserve fund	5,000	5,000	5,000	5,000
Undistributed surplus	409	405	393	403
Current and other accounts	175,370	172,434	159,651	147,925
Fixed deposits	22,344	30,658	20,483	17,112
Notes in circulation	3,267	2,906	2,902	2,765
Bills payable	1,817	1,705	1,220	926
Acceptances (*contra* item)	10,983	7,109	10,391	9,185
ASSETS (Main)				
Cash	36,956	40,207	33,616	31,495
Investments—				
Government and other securities	48,590	58,411	62,309	58,787
Securities lodged against note issue	3,423	2,684	2,889	2,679
Advances	103,950	91,871	74,737	67,249
Bills of exchange	13,785	17,086	14,046	11,235
Bank premises, etc.	2,303	2,180	2,166	1,961
Remittances in transit	1,704	3,140	2,148	3,587
Balance-sheet total	222,988	223,069	203,686	186,963

The decline in balance-sheet total at the end of 1956 is not marked, being less than £1 million, but this is in contrast to the sharp rises noted at the close of the previous two years. This is, in the main, due to the fall of £8.31 million in fixed deposits, on account of the "higher rates available in London market." This shrinkage in deposits is in distinct contrast to the rise of £10.18 million noted in 1955 and of £3.37 million in 1954. This is, however, offset partially by the rise of £2.94 million in current and other accounts. Even this rise does not compare well with that of £12.78 million in the previous year and of £11.73 million two years ago. There has been a notable increase in acceptances to the tune of £3.87 million, thus more than making good the decline in the previous year

On the assets side, as pointed out at the outset, advances have gone up by £12.08 million, thus maintaining the upward trend for the third year in succession and establishing a record in the Bank's history. A part of the increase in advances during the year is represented by prepayments under American Aid programmes. The Bank's holdings of bills of exchange show a fall of £3.30 million. Investments are lower by £9.08 million, of which Government and other securities, excluding those lodged against note issue, account for £9.82 million. This reduction is mainly accounted for by the maturity of a part of the Bank's holdings of Government securities during the year, which the Bank did not re-invest, but utilised the proceeds to meet the demand for advances.

PROFIT OF MERCANTILE BANK SHADE HIGHER

DIVIDEND UNCHANGED

A FURTHER expansion in business is indicated by the audited accounts of the Mercantile Bank of India Ltd. (Chief Manager: Mr. R. N. Drake, London) for the year ended 31st December 1956, thus maintaining the upward trend for the third year in succession. Thus, the balance-sheet total has recorded a rise of £2.83 million over the year, which compares with the increases of £3.47 million and £5.04 million noted at the close of 1955 and 1954, respectively. Deposits show an increase of £2.43 million, as against a rise of £3.76 million in the previous year. Loans and advances are up by £5.40 million, as compared with £2.30 million in 1955 and bills receivable by £0.77 million, the increases reflecting the larger share which the Bank took in the world trade with the Eastern countries. The profit also has gone up by £1,061, but such increase is not commensurate with the expansion in business during the year. This is obviously due to the general rise in working costs.

The net profit (after providing for taxation and after making allocations to the contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets) amounts to £236,484, as compared with £235,423 earned in 1955 and £194,324 in 1954. Thus, the pace of increase in profit has slowed considerably during the year under review. With the sum of £219,372 brought in from 1955, the amount available for appropriation is £455,856, as against £435,707 a year ago. The Directors have maintained the allocations to the officers' pension fund and additional provision for contingencies at £13,000 and £50,000, respectively. The amount written off freehold banking premises and property has, however, been raised from £35,000 to £50,000, thus restoring the cut made two years ago. The dividend is being repeated at 14 per cent. per annum, less income-tax, which requires £118,335, leaving to be carried forward £224,521, as against £219,372 brought in.

The progress of the Bank during the past three years is fully reflected in the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1956	1955	1954	1953
LIABILITIES (Main)				
Capital	1,470	1,470	1,470	1,050
Reserves	2,000	1,750	1,750	1,500
Unappropriated surplus	224	219	200	201
Notes in circulation	219	259	278	279
Deposits and other accounts	69,440	66,984	65,219	59,382
Bills payable	1,317	1,085	1,137	927
Acceptances (*contra* item)	124	195	445	211
ASSETS (Main)				
Cash	9,778	10,043	14,013	13,696
Investments	17,916	20,377	16,180	13,804
Securities against note issue	371	371	371	371
Bills receivable	17,281	16,509	15,815	14,570
Loans and advances	28,756	23,362	21,063	20,206
Fixed assets	617	652	652	620
Balance-sheet total	74,897	72,065	68,594	63,634

Though there has been no allocation to the reserve fund from the year's profit, the Directors have strengthened it by £250,000 by transferring a like sum from the inner contingencies account, thus raising it to £2 million. The deposits and other accounts, which include provisions for taxation, doubtful debts and reserves for contingencies, have expanded by £2.46 million, thus maintaining the upward trend for the third year in succession. With the aggregate increase of £10.06 million in three years, the Bank has been able to make good the shrinkage in deposits suffered in 1953.

There has been an increase of £5.39 million in loans and advances during the year, such expansion being much sharper than that noted in each of the previous two years. Bills receivable also have gone up by £0.77 million, as compared with £0.70 million in 1955. The increase in these two items, without a corresponding rise in deposits, is partly responsible for the decline in the liquid assets, investments (other than British Government securities lodged as security against note issue) recording a fall of £2.96 million and cash balances £0.26 million. Of the investments, Government securities quoted in Britain account for a decline of £4.02 million, while unquoted investments account for a rise of £1.10 million, evidently due to the addition of Federation of Malaya Treasury Deposit Receipts amounting to £1.05 million. The quoted investments are shown in the books at or under market value and the unquoted ones at or under cost.

CENTRAL BANK'S PROFIT HIGHEST SINCE 1951

MARKED EXPANSION IN TURNOVER

THE audited accounts of the Central Bank of India Ltd. (General Manager: Mr. N. K. Karanjia, Bombay) for the year ended 31st December, 1956, make impressive reading. There has been a sizable expansion in business during the year, as witness the rise in balance-sheet total from Rs. 158.09 crores to Rs. 180.60 crores, accompanied by an increase in profit from Rs. 78.67 lakhs to Rs. 105.32 lakhs. With this rise during the year under review, the profit has crossed the one-crore mark, after a lapse of three years, and stands at the highest level since 1951. It should be noted that the Bank has not been able to earn a record profit during the year, when its turnover was at the peak level, as in the case of many other banks, because of the substantial rise in cost of borrowing and increase in interest rates on deposits.

In consonance with the improvement in profit, the dividend also has been stepped up to 14 per cent. from 12 per cent. paid consistently for the previous three years, thus restoring the cut made in 1953. The larger distribution to the shareholders has been made by stepping up the final dividend from 6 per cent. to 8 per cent., while the interim is unchanged at 6 per cent. This has been done only after raising the provision for taxation from Rs. 5.50 lakhs to Rs. 13.00 lakhs and bonus to staff from Rs. 13.50 lakhs to Rs. 27.50 lakhs. The amount transferred to investment account is unchanged at Rs. 15 lakhs.

The progress of the Bank's working during the past three years is reflected in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Gross income	6,55.15	5,69 44	5,41.05	5,11.40

Investments	38.2	44.1	46.2	49.6
Cash	12.1	12.1	13.9	14.4

The gross income shows a rise of Rs. 1.44 crores during the past three years, the bulk of which—Rs. 85.71 lakhs to be precise—has taken place in 1956 alone. Interest and discount earned have gone up by Rs. 80.22 lakhs during the year under review and commission and exchange by Rs. 20.02 lakhs. Income from other sources has, however, gone down by Rs. 14.54 lakhs. This is because the Bank had earned in 1955 a net profit of Rs. 15 lakhs on sale of investment, but there has been no such profit in 1956. The increase in gross income has been offset to a large extent by the rise of Rs. 57.17 lakhs in interest paid on deposits and borrowings. It may be noted in this connection that the rise in profit during 1956 would have been more impressive but for the inclusion of Rs. 15 lakhs, being the profit on sale of investments mentioned above, in the profit of 1955.

With the rise of Rs. 10.06 crores during the year under review, the Bank's deposits, at Rs. 138.72 crores, have established a fresh record, exceeding the previous high of Rs. 132.24 crores touched in 1948. Of the deposits, fixed deposits and cash certificates account for an increase from Rs. 39.95 crores to Rs. 42.34 crores, savings bank deposits from Rs. 28.19 crores to Rs. 28.66 crores and current and other accounts from Rs. 60.52 crores to Rs. 67.71 crores. The increase in deposits has been supplemented by larger borrowings from other banks—these having gone up by Rs. 4.67 crores. The expansion in resources under these two items, however, falls short of the rise in advances, which have gone up by no less than

MEETING OF WORLD TEXTILE INTERESTS

PRESENT POSITION AND FUTURE PROSPECTS TO BE ASSESSED

MUCH significance attaches to the forthcoming International Conference of the Cotton and other Allied Textile Industries scheduled to be held at the Lido in Venice, Italy, from 22nd to 28th September next. The world textile situation, as readers are aware, has undergone a change of late. Thus, there is the rapidly growing importance of the man-made fibres (the synthetics) which are tending to offer acute competition to natural fibres. Another notable development is the emergence of cotton textile industry in several countries, especially in the underdeveloped regions of Asia and Africa, which were until recently large importers of textiles. The impact of these two developments on the world textile trade has been so marked that it is of great interest to assess the present state of trade and future prospects of the cotton and allied textile industries in the major manufacturing areas of the world. Appropriately enough, these developments will figure prominently in the deliberations of the aforesaid International Conference of World Textile Industries, to be held under the auspices of the Federation of Cotton and Allied Textile Industries.

The Conference, it is anticipated, will be attended by as many as 300 delegates from all West European countries (including the U.K.), the U.S., India, Egypt and Japan. Papers will be presented by the leading representatives of the industry, covering aspects of production, consumption and foreign trade in cotton and allied textiles. Studies will also be made of the general economic problems which will be of particular importance to the textile industries in the future. In this connection, emphasis will be laid on economic development and its effects on the old manufacturing and the newly industrialising countries and on the relationship between national income and consumer expenditure. It may be noted here that the Federation is a private, non-profit-making organisation, representing 17 countries and approximately two-thirds of the world's total cotton spindles and looms. It has as its members the trade associations of spinners and manufacturers of cotton and allied fibres; its associate members represent cotton exchanges, finishing trades and related textile merchants, and other organisations allied to the cotton spinning and manufacturing industries.

A Vital Issue

One of the vital issues that may be expected to come up for prominent discussion at the World Textile Conference at Lido relates to the effects of the common market project on the textile industry and trade of Western Europe. The discussions will centre round the deliberations of the Federation's Committee for European Affairs at its meeting held in Paris recently. This Committee considered a survey on supplies of raw materials which had been undertaken in order to investigate the position of West European coontries regarding the availability of raw cotton. The survey has revealed that some W. European countries are somewhat hampered in their access to raw cotton supplies due to foreign exchange and other restrictions. It is hoped that action which may result from this study will help to free world trade in raw cotton from such restrictions.

The Committee further undertook an appraisal of surplus capacity and obsolescence in the cotton spinning and manufacturing industries of W. Europe. In addition, reports were given on textile competition from extra-European countries with relatively low production costs and competition between Eastern and Western European countries.

Free Trade Area

There was a thorough discussion of the proposals for the creation of a customs union (common market) and an associated free trade area in W. Europe. The members of the Committee exchanged views and information upon these and other matters of common concern to the European textile industries. They recommended that, during the current negotiations regarding the two above-mentioned proposals, close contact with their Governments should be maintained, with a view to providing them with opinions and expert advice on the particular problems of the cotton and allied textile industries; it was also recommended that the Committee members should continue to maintain liaison with each other, within the framework of the International Cotton Federation, as further information becomes available. In connection with the above proposals, the special position of overseas dependencies in a common market for Europe was also studied. Particular attention was paid to safeguards against dumping and other unfair export trading practices, which would have to be adopted, should the common market come into effect.

Certain improvements in available statistics on the cotton and allied textile industries were recommended, with a view to co-ordinating statistical activities and improving the comparability of the available data. The Committee expressed great concern regarding the continually increasing ocean shipping freight rates to Europe for raw cotton. It was recommended that mutual consultations on the fixing of ocean shipping freight rates for raw cotton should be arranged between all the parties concerned.

In the subjects under discussion, the meeting revealed a most encouraging degree of unanimity and understanding among the representatives of the cotton and allied textile industries of W. Europe. Professor L. H. Dupriez (Belgium), President of the Belgian Cotton Spinners' Association and Director of the Institute of Economic and Social Research at the University of Louvain, was elected Chairman of the Committee for European Affairs, in succession to Dr. W. T. Kroese, whose term of office of two years had come to an end.

Damage caused to wool in carbonising can be avoided by a new Australian process developed by the Commonwealth Scientific and Industrial Research Organisation. The process requires the addition of a wetting agent to the sulphuric acid bath used in carbonising. Although the acid destroys the grass seed and other vegetable matter adhering to the wool, it also attacks the wool fibres.

CAUVERY BRAND CHEMICALS

CAUSTIC SODA Solid, flakes & lye
LIQUID CHLORINE
STABLE BLEACHING POWDER
SLAKED LIME
HYDROCHLORIC ACID
FERRIC CHLORIDE
BURNT LIME

COTTON CULTIVATION IN U.S.S.R.

SCIENTIFIC METHODS IMPROVE CROP YIELD

IT is a well-known fact that a major weak spot of the Soviet economy is its agricultural sector which had failed to catch up with the remarkable post-war developments in other sectors, especially in the field of industry. But so far as cotton growing in the U.S.S.R. in the post-war period is concerned, it is a success story. In 1938-39, cotton production in Russia aggregated 3.8 million bales (of 478 lbs.) only. But by 1955-56 it is estimated to have risen to about 5.3 million bales, an increase of about 40 per cent. But the improvement in the yield per acre was more marked. It increased from 292 lbs. to 554 lbs. in the same period, an increase of about 100 per cent. But this general average of output and yield per acre conceals some spectacular developments on particular farms where the results of intensive research on new varieties of cotton and new methods of cultivation have been put to actual practice. The experience of these farms shows the extent to which the yield can be improved provided cultivation and selection of seeds are undertaken in a scientific manner.

A collective farm in the Ilyich district of the Kazakh Soviet Socialist Republic, for instance, made a much better showing in respect of yield per acre than the average for the whole district and for the entire country. According to Messrs. F. Li, Chairman of the Third International Collective Farm and I. Tarabrina, Agronomist, the average raw cotton yield per hectare (2.5 acres approximately) of the farm in 1956 was 4.5 tons (seed cotton), as against the district average of 2.9 tons. This, of course, is a good performance especially because it was achieved on the recently irrigated land in the Hungry Steppe, which the Soviet Government has decided to convert into one of the biggest cotton-producing regions of the country. In this collective farm, 270 hectares were planted to cotton in 1951, and the yield per hectare amounted to only two tons in that year. The area was gradually expanded to 750 hectares in 1956. As a result of proper organisation of work and introduction of new methods of scientific farming the output rose to 4.5 tons per hectare in 1956.

Field Brigades

There are eight field brigades on the farm, each of which is sub-divided into two teams of 20 to 23 persons. Each team cultivates, on the average, from 40 to 50 hectares. The collective farm is serviced by a permanent group of farm machine operators from the machine and tractor station. This enables them to make a good study of the peculiarities of the farm fields.

It is said that the foundation of high harvests is timely autumn ploughing to a depth of 28 to 30 centimetres. In the spring, the ploughed-up sector is twice harrowed. Then, after the land is laid out, it is levelled. The planting is done, in the main, with a square-hill drill seeder. In 1956, the schemes adhered to in laying out the plants on the farm were: 60 x 45 cm. (rectangle-hill method) over an area of 380 hectares; 50 x 50 cm. (square-hill method) over an area of 150 hectares; and drilling with 60 cm. between rows over an area of 220 hectares.

Use of machines in cultivation operations has been found to be helpful in speeding up development of plants and cutting down expenditure on labour. Irrigation plays an important role in cotton growing on the farm. For getting good harvests great deal of attention is paid to fertilising the land with chemical manures. While doing the autumn ploughing, superphosphates, and just before budding begins ammonium nitrate are added. A second feeding of ammonium nitrate is given just before the flowering of the plant. Measures are also taken to combat cotton pests. Application of the rectangle-hill method of planting, mechanical cultivation of the crop both length-wise and cross-wise, proper irrigation and early cultivation have helped to speed up the development of plants.

It may be noted here that a material incentive, in the form of monthly advances, for increasing production was instituted last year. This, it is stated, is in line with the official policy which provides for setting apart up to 6 per cent. of the annual income for these purposes. Besides these, one per cent. of the income of the collective farm is earmarked for bonuses.

EFFECT OF COMMON MARKET PROJECT ON COTTON INDUSTRY

MORE GROUPINGS OF UNITS FORECAST

By Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 12*th March*

"A FAR-SIGHTED plan which could ultimately be of great benefit to industry, even though it might prove disadvantageous to textiles and certain other trades in its initial stages." —"From all appearances, it would at present seem that the cotton textile industry will be given an additional push-down towards further contraction." These two contrasting statements were published on the same day. They both referred to the effect of the European common market project on the Lancashire trade, but they very aptly illustrate the divergent opinion which splits the industry on this vital topic.

Author of the progressive outlook indicated in the first remark was Mr. Oliver L. Jacks, Chairman of Ashton Bros. & Co., the spinning and weaving group, which has frequently taken a leading role in supporting far-reaching proposals. Responsible for the second comment was Mr. Charles Schofield, Secretary of the Operative Spinners' Amalgamation, who sounded a warning note about those Continental countries which are known to secure their raw cotton supplies at below commercial rates. His solution to the problem of low price competition from the Continent was to call for a major alteration in the methods of the Yarn Spinners' Association price structure.

Improved Export Results

Understandably enough, firms which have lately achieved successful trading results in European markets and in the speciality business offered in the United States are less apprehensive about participating in the proposed plan than are some others. Ashton Brothers raised sales to Europe last year by 50 per cent. According to Mr. Jacks, the Continent is now running a close second to the United States in the volume of exports recorded by the group. "Such an improvement does suggest that the potentialities of the European market cannot be ignored and that the risks attendant on participation in a European free trade pact may be well worthwhile taking," he declared.

Meanwhile, the European Committee of the International Cotton Federation has discussed the common market project and urged that textile organisations in the countries concerned should keep in close contact with their Governments and maintain liaison with each other. All are keen to see that adequate safeguards against dumping and other unfair export trade practices are adopted, while the special position of overseas dependencies is an aspect of the scheme which cannot be ignored.

Leaders of the Lancashire cotton spinning industry have also been reviewing their attitude towards the proposed European common market. One of the major issues confronting them was: "What safeguards can we expect against unfair competition, if Britain enters the Euromart?" It is not only unfair competition in textiles that the millowners fear.

"You cannot have a prosperous textile trade at home, if the whole country is not prosperous," said one mill spokesman. "The textile trade is so much tied up with other trades—those needing industrial cloth, for instance—and with whether the man in the street has money in his pocket." Opinion on the advantages of a Euromart is understood to be divided among owners of Lancashire's 450 spinning mills. "The fine end of the trade and firms who are eager to expand export business are inclined to be in favour, but people handling 'run-of-the-mill' lines are more doubtful about it," said an industry spokesman.

History Up To Date

The latest in a long run of volumes surveying the past, present and future of Lancashire's mill industry comes from the pen of Mr. R. Robson, head of the Cotton Board's statistical department, and is a worthy successor to the many documents on the industry which have previously been compiled. *The Cotton Industry in Britain* contains an almost inexhaustible supply of facts and figures relating to the historical background involved, tracing the rise of the industry more than a century ago to its peak before the First World War. Of immediate interest to the present generation, however, will be the detailed summary of events of the past 40 years through the series of crises which have led to the sharply contracted industry which we know today.

In this connection, Mr. Robson lays considerable stress on the phase of collective regulation which dominated the inter-war years and still continues to be of fundamental importance to the trade. "While the need for the removal of restrictions of trade in conditions of full employment is obvious," he says, "it may be argued that, in the case of the cotton spinning industry, the minimum price regime has not meant stagnation, but has given firms the necessary basis for making take-over bids and has thus assisted the very rapid reconstruction of the industry during the last few years. It might, therefore, be expedient to leave this system undisturbed until the reorganisation has run its course."

Contracting industries need special consideration, in Mr. Robson's view, as competition in such cases is not necessarily constructive. "It is arguable that minimum prices help to check the speculative fluctuations in trade to which the textile industries, in particular, are subject, while a regime of differential prices, which might be necessary in the export trade, can only be established on the basis of agreed prices at home."

On the future structure of the industry in Lancashire, Mr. Robson joins the ranks of those who prophesy inevitable shrinkage. "A continuation at 1954-56, rates of the trend towards spinning-weaving integration and towards larger groupings would give the position within 10 years in which spinner-weavers would control two-thirds of the spinning required and converters three-quarters of the looms," he says. "Spinners below 200,000 spindles in size and weavers below 2,000 looms would only be half as numerous as at present."

Increasing verticalisation of the industry would tend to render the sectional price agreements less and less significant, he adds, while production and marketing policies would become more and more important. The diminishing importance of trade associations, especially among the employers, would be encouraged by increasing decentralisation of the industry and the difficulty of reconciling redeployment schemes with industry-wide agreements.

Redundancy Pay

Cash compensation for Lancashire mill girls who find themselves out of a job because of redundancy is a question that trade union leaders from the spinning and weaving sections will discuss in the near future when they meet to decide whether to make a new application for all-round wage increases for 250,000 workers.

The Secretary of the Operative Spinners' Amalgamation, Mr. Charles Schofield, said in a report that the question of compensation for redundant workers had commanded attention for a considerable time. It was surrounded by difficulty, but nevertheless it must be solved.

In the past two years, many thousands of Lancashire mill girls have lost their jobs—mainly, it is claimed, because of imports of millions of yards of cheap cloth from the Far East.

Manchester Market Room

Mr. Fred Wood, President of the Master Cotton Spinners' Federation, has opened the new market room provided by the Manchester Cotton Association. This offers facilities for spinners and other buyers to sample raw cotton available for sale. Merchant members of the Association can display samples of any cotton under their control which is on the spot or afloat.

Sales are not being negotiated by the Association, but the market room will be supervised by Mr. K. H. Everington, the Secretary, who is ready to supply prospective buyers with all particulars of the types of cotton in which they are interested and introduce them to sellers. A parallel service is the posting of notices on the Royal Exchange, three floors below, including lists of spinners' wants and merchants' offers. The market room is being combined with the former arbitration room of the Association, thus serving a dual purpose. Improved lighting has been installed with colour matching fluorescent tubes, in order that prospective customers can inspect cotton under good conditions on the dullest days.

Distinguished guests, including the Lord Mayor of Manchester, attended the opening ceremony which was followed by the sale of a bale of American cotton presented by the merchant members of the Association, the proceeds of which were given to the relief fund organised by the Anglo-Egyptian Aid Society.—*All Rights Reserved.*

TREND OF SUGAR PRODUCTION UPWARD

FURTHER EXPORTS MUST BE ALLOWED

THE Indian sugar industry deserves to be congratulated on its splendid performance on the production front. Despite the series of stresses and strains to which it is subjected, the industry has been endeavouring to maintain sugar output at as high a level as possible. The past season—that is, 1955-56—witnessed an all-time record production of white sugar; the quantity that actually came off the crushing plants of mills amounted to 1.86 million tons, as against 1.59 million tons in the previous season (1954-55), representing a rise of 17 per cent. This figure surpassed the revised production target of 1.80 million tons set in the first Five-year Plan by 60,000 tons. The output of sugar in the current season (1956-57) is expected to exceed the previous peak, the latest estimate of sugar traders being more than two million tons.

The effort of the sugar industry to maximise output is all the more creditable, considering the continuance of the several unhelpful measures adopted by the Central and State Governments. The persistent high level of the official minimum price for sugarcane, the principal raw material of the industry, is a case in point. Thus, out of the total cost of manufacturing sugar, cane alone accounts for as much as 60 per cent. It may be noted here that the minimum price should be paid by the sugar factories on all its purchases of cane irrespective of quality considerations, for the price is fixed only on the basis of weight and not the sucrose content in cane. The heavy load of taxes is another case in point. The proportion of taxes, including the average of 15 per cent. cess on cane consumed in factories, in the price which the consumer pays for his requirements of sugar, comes to more than 25 per cent. Certainly, it is regrettable that such an essential item of consumption as sugar is subjected to so heavy a tax impost. Besides high cane prices and heavy tax burden, sugar mills are forced to pay enhanced prices for their requirements of other materials like coal and coke, limestone and lime and sulphur, and higher transport charges following the imposition of a 6¼ per cent. surcharge on freight last February. It is these factors which have been responsible for the rigid cost structure of the sugar industry.

This is not all. There are the several pin-pricks in the official policy towards the sugar industry. Particular mention must be made of the unjustified controls over molasses—one of the main by-products of the sugar industry—and alcohol imposed by some State Governments. The Bombay Molasses (Control) Act, 1956, for instance, vests in the State Government full authority to control the price at which and the manner in which molasses is bought or sold generally for any industrial purpose. It also vests in the Government powers to regulate, by licences, permits or otherwise, disposal, acquisition, possession, and use or consumption of molasses. The series of restrictions imposed under the Act make it impossible for the sugar factories to dispose of their stocks of molasses, even though there is good demand for it in other States. Consequently, huge stocks of molasses have accumulated with the factories and their storage has been a standing problem to the mills ever since the Prohibition Act came into force. When faced with excess stocks of molasses, the factories try to solve the problem by destroying them or by using them as manure wherever they are found suitable. Even for this, they have to take the permission of the Government. The fulfilment of this condition involves considerable delay and expenditure.

Notwithstanding the aforesaid handicaps, the trend of sugar production continues to be upward. During the first 3½ months (ended 16th February) of the current season, over one million tons of sugar were produced, as against 896,000 tons in the corresponding period of the previous season, or an increase of nearly 12 per cent. Assuming that this trend will be maintained in the coming months also, the aggregate output of sugar for the season as a whole may be estimated at about 2.08 million tons, or a rise of 220,000 tons as compared with the 1955-56 season. Thanks to the high level of sugar production and to the previous season's huge carryover of 524,000 tons, the supply position of sugar continues to be very comfortable. The total quantity of sugar that will actually be available for consumption during 1956-57 may be put at 2.60 million tons, which compares very favourably with 2.48 million tons in 1955-56 and 2.26 million tons in 1954-55.

As against this supply, the agregate domestic consumption requirements are placed at about 2 to 2.1 million tons, so that there is a clear surplus of more than 500,000 tons. The Government of India has, therefore, allowed 50,000 tons of sugar for export. The whole of this quantity has already been shipped, the principal buying countries being Ceylon, Burma, Pakistan, Africa and Persian Gulf ports. These countries are still in the market for purchasing more Indian sugar. The sugar trade has accordingly requested the Union Food Ministry to permit an additional quantity of sugar for export.

In view of the highly satisfactory supply position and considering the currently ruling high prices of sugar in foreign markets and the need for earning foreign exchange, the Government will do well to concede the request. There is no need for domestic consumers to have any uneasy feeling on this score, because there is plenty of sugar in the country. If, however, the Government does not allow any further exports, the sugar factories may be faced with the disquieting problem of huge accumulations of stocks at the end of the season. As it is, the stocks are very heavy; they aggregated 981,329 tons as on 15th February 1957, the figure for the corresponding date last year being 860,822 tons. Incidentally, the total despatches of sugar during the 3½ months ended 15th February 1957 amounted to 549,473 tons, as against 447,986 tons a year before.

Since the current level of sugar supplies is very much higher than what is actually required for meeting the internal consumption requirements, there is need for building up an export trade in Indian sugar. In view of the precarious foreign exchange position of the country, the export of sugar must be considered as a welcome development which "will materially contribute towards the success of the second Five-year Plan." On every ton of sugar sent out, the

AUDITOR'S REPORT.

I beg to report that I have audited the above Balance Sheet of the Canara Bank Limited as at 31st December, 1956, and also the above Profit and Loss Account of the Bank for the year ended that date with the Books of Account and certified Returns from the Branches and that I have visited some major branches of the Bank during the year and have examined the books of account and cash and securities as at the time of my visit and report that :

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purposes of the audit.
(b) Such information and explanations have been found to be satisfactory.
(c) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank.
(d) The Returns received from the Branches have been found adequate for the purposes of my audit.
(e) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the Books of Account and the Returns.
(f) In my opinion and to the best of my information and according to the explanations given to me the said accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December, 1956.
(g) In my opinion proper books of account as required by law have been kept by the Bank so far as appears from my examination of those books.

BANGALORE, 15th JANUARY, 1957.

DIFFICULTIES FACING JUTE INDUSTRY

MR. D. P. GOENKA URGES SELF-SUFFICIENCY IN RAW JUTE

IT may sound strange and somewhat self-contradictory when we are told that the jute industry's production expanded substantially during 1956 to touch the highest level since 1942 and the offtake also improved sizably, but the past year proved to be a depressing one for the industry from the financial point of view. It is, however, an indisputable statement of fact that a great majority of the jute mills incurred huge losses which, coming, as they did, on the heels of the losses suffered in the previous year, resulted in a reduction in their working capital to dangerously low levels. The causes for such a state of affairs were examined by Mr. D. P. Goenka, Chairman of the Indian Jute Mills Association, in the course of his presidential address at the annual general meeting of the Association held on the 15th inst. The adverse trading conditions which affected the industry during 1956 are likely to continue and the industry cannot be expected to face them for long. Mr. Goenka did not, however, give way to despair. On the other hand, he viewed the future with sober confidence.

At the beginning of the year, the stocks of manufactured goods stood at less than 64,000 tons, the lowest level in any year since the war. Encouraged by the improved offtake in the latter half of 1955 which led to such low level of stocks and by indications of substantial orders from the Iron Curtain countries, the I.J.M.A. unsealed a part of the looms which had remained sealed since 1949. But this experiment proved to be too costly for the industry to bear, because the expected orders failed to materialise and stocks mounted up rapidly to a peak of about 138,000 tons, with the result that the mills had to retrace their steps and reseal the additional looms opened earlier in the year. The total production for the year amounted to 1,092,000 tons (a record since 1942), showing an increase of 65,000 tons over 1955. The closing months of the year, however, witnessed a turn for the better in the fortunes of the industry. Thanks to the international situation created by the Suez crisis, demand for jute goods was stimulated and this greatly offset the rise in production. At the end of the year, stocks were higher by only 32,000 tons, as against an increase of 65,000 tons in output.

A redeeming feature of this improvement in offtake was the larger domestic consumption, following the rise in demand for sacks. Though the expansion in domestic demand for jute goods was not as spectacular as in 1955, the steadily rising trend is encouraging. Mr. Goenka confidently expected the trend to continue, as a result of the Government's plans for agricultural development and for increasing the production of sugar, fertilisers, cement, etc., all of which are packed in jute sacks.

Exports Decline

As regards the overseas offtake, shipments of hessian showed an appreciable increase during 1956, despite a considerable drop in exports to the Argentine, and for the first time in many years they exceeded 400,000 tons. Half of these exports were accounted for by the U.S., where the annual burlap consumption rose by more than 6 per cent. in 1956. In contrast to this trend in hessian exports, shipments of sacking declined, thus reversing the rising trend noted since 1953. In fact, the drop in exports of sacking was as much as 36,000 tons, more than offsetting the increase in hessian shipments. The result was that the overall exports of jute goods were down by 25,000 tons.

Though the rising trend in domestic consumption of jute goods is encouraging, it offers no consolation for the decline in exports to foreign countries. In fact, the latter development is of more serious concern to India, in the context of the need for augmenting the foreign exchange earnings. Though the fall in exports may, to some extent, be a temporary phase, there is every reason to expect increased competition from other jute-manufacturing countries. Referring to this prospect, Mr. Goenka said:

"In the case of Australia, for example, if the production of wheat and wool continue to expand, shipments this year may return to the very high level of 1955, although, even in this market, we must not underrate the threat from bulk handling methods. In other areas, the establishment of new jute-manufacturing industries is likely to result in a permanent loss of markets. This is happening in many countries of the Far East—Burma, Thailand, Indonesia, and, above all, China, which was once by far the biggest market for our heavy goods. The growth of these indigenous industries—and they are still growing—represents a serious loss of markets to the Indian mills and is, undoubtedly, a major obstacle to an expansion of our export trade in this direction. There is also the foreign jute-manufacturing industries which not only supply the needs of their own countries but export their products in competition with ours. Although the high cost of Pakistani jute has virtually priced the European mills out of our markets, Japan is still a competitor to be reckoned with in the U.S. and the Pakistan industry continues to expand. As was to be expected after the devaluation of her currency, Pakistan's exports of jute goods have grown rapidly in the past 18 months. Last year, they totalled 80,000 tons, an increase of 50 per cent. over the previous year and one-tenth of our own exports. While nearly a third of the total went to South Africa, where we are not in a position to compete, the balance was in direct competition with Indian goods elsewhere. In addition to losing a market for about 70,000 tons a year in Pakistan itself, we are thus faced with competition from more than 50,000 tons of Pakistan manufactures in our other traditional markets and especially in North America and Burma."

Rise in Cost of Production

Another factor which was responsible for the losses suffered by many mills was the increase in costs of manufacture. Unlike some other industries, the jute industry is not in a position to raise its prices by a conveniently predetermined amount to cover the increase in costs; and when, as happened last year, the industry's costs are too high, it is forced to sell its products at uneconomic prices with disastrous results on the finances of mills. It is estimated that, during the seven months from April to October 1956, companies representing 57 per cent. of the industry incurred losses aggregating more than Rs. 1.75 crores.

Among the various causes for such staggering losses, the high cost of raw jute was the most important one. Though this was not a peculiar feature of the jute trade in 1956, the mills are now not in a position financially to build up large buffer stocks of jute. Consequently, they are left to the mercies of the day-to-day fluctuations of the raw jute market. Outlining the difficulties experienced by mills in respect of raw jute during 1956, Mr. Goenka observed:

"In 1956, the disparity between jute and gunny prices was aggravated by the decision to unseal looms. By increasing our consumption of jute, this immediately led to the hardening of an already firm jute market, while the higher production of gunnies weakened the goods market and induced overseas buyers to hold off in the hope of still lower prices. Even when the looms were re-sealed jute prices, which might have been expected to ease, followed the advance in gunnies, and with sellers failing to deliver against lower-priced contracts previously entered into, the mills were forced to buy for short delivery at very high prices. The Pakistan Government's decision to double the export duty on cuttings added to the industry's difficulties, and it was particularly unfortunate that in September, when the jute market at last showed signs of easing, the downward tendency was arrested by international developments in the Middle East and the closure of the Suez Canal. Keen overseas demand sent Pakistan prices soaring, and with Pakistani jute priced out of the Calcutta market, Indian prices also rose sharply. Any relief which the mills might have obtained from a hardening gunny market was thus lost."

Fundamental Weakness

Mr. Goenka admitted that circumstances last year were in some respects abnormal, but they serve to underline the fundamental weakness of the Indian jute industry in respect of raw material supplies and the importance of becoming self-sufficient in jute at an early date. It is reassuring to note that the Government is seized of the urgency of the problem, as witness the revision of the target for jute production from 50 lakh bales to 55.4 lakh bales (exclusive of mesta) and the measures outlined for reaching this target.

The I.J.M.A. Chairman was not so naive as to think that self-sufficiency in jute was going to solve all the industry's problems. All that he wished to point out was that this would, in addition to providing the industry with better quality raw material at more reasonable prices, have a stabilising effect on the market. The most uncertain factor which helps speculation is the size of the crop, which in turn depends on the weather. However, as Mr. Goenka pointed out, a more assured supply of raw jute will at least restrict speculative manipulations and give a reasonable degree of price stability which is of utmost importance to the export industry like jute, which has to sell its products in competitive markets.

The next largest element in the industry's cost of production is labour costs. The increase in wages granted by the Third Omnibus Jute Tribunal in 1955 and upheld by the Appellate Tribunal last year, cost the industry over Rs. 1.25 crores per annum. In addition, the industry is faced with a further rise in labour costs, as a result of the proposed increase in the rate of the employers' contribution to the Employees' State Insurance Scheme, which will mean an additional contribution of over Rs. 36 lakhs per annum by the whole industry, although the majority of the mills are still not covered by the scheme. Mr. Goenka explained that the industry did not grudge providing a fair return to workers for their labour, but the disquieting feature of the situation is that higher wages have not brought about a corresponding increase in productivity. Mr. Goenka emphasised that this was of utmost importance, if India's competitive position in world markets was not to be undermined.

Modernisation

Another problem of importance to the jute industry is the modernisation of the equipment. The jute industries of foreign countries with which India is competing in export markets are mostly equipped with the latest types of preparing and spinning machinery. The Indian industry also has for some time now been modernising as rapidly as possible. The progress in this direction during the past year is said to be highly encouraging. Mr. Goenka acknowledged with gratitude the financial assistance received from the National Industrial Development Corporation. He, however, suggested that the conditions governing the loans should be relaxed a little, so as to help the acceleration of the flow of applications for loans.

In outlining the difficulties of the industry, Mr. Goenka did not strike a note of despair, though the position now is no doubt serious. He said that the difficulties, though great, were not insuperable and there were grounds for sober confidence. Given the basic requirements of the jute trade, he had every confidence in the industry's ability to make the best use of them. He added that with co-operation among the members, the support of the Central and State Governments and the accumulated experience of a long-established industry, the future could be faced with confidence.

JUTE STATISTICS

A welcome decline in stocks is disclosed by the statistics relating to jute manufactures for the month of February 1957. As against a sharp rise of 7,500 tons (according to revised figures) noted at the end of January, the stocks at the close of February show a drop of 5,600 tons to 97,600 tons. Such a reduction is mainly due to the substantial fall of 8,600 tons (to 80,200 tons) in production during the month, bringing the monthly output to the lowest level since October 1955.

The decline in production is shared by all classes of manufactures, as will be seen from the following table:

Jute Goods Production

(In tons)

	February, 1957	January, 1957	December, 1956	February, 1956
Hessian	35,000	38,800	37,700	32,000
Sacking	39,600	43,500	41,800	54,700
Others	5,600	6,500	5,900	6,100
Total ..	80,200	88,800	84,900	92,800

The fall in production of hessian is as much as 3,800 tons, thus offsetting to a large extent the aggregate increase of 4,100 tons noted in the previous three months. This brings the monthly production of hessian to the lowest level since October 1956. It is higher than that for the corresponding month of 1956. Sacking accounts for a decline of 3,900 tons, as against an increase of 2,200 tons in January. The output of sacking is the lowest seen since May 1954.

The decline in production is evidently due to the shorter working period during the month, the number of hours worked being 192, as against 212 in the previous month and 200.5 in February 1956.

The following table shows the stock position as on 28th February 1957, as compared with that at the end of the previous two months and a year ago:

Jute Goods Stock

(In tons)

	As on			
	28-2-1957	31-1-1957	31-12-1956	28-2-1956
Hessian	25,200	23,800	19,700	23,200
Sacking	61,800	67,700	64,700	52,200
Others	10,600	11,700	11,300	9,000
Total ..	97,600	103,200	95,700	89,400

The bulk of the decline in stocks is accounted for by sacking with a fall of 5,900 tons, as compared with a rise of 3,000 tons noted at the end of the previous month. Stocks of hessian have gone up by 1,400 tons, thus maintaining the upward trend for the second month in succession. "Other manufactures" have fallen by 1,100 tons.

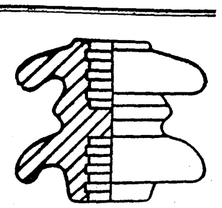
CALCUTTA-1



RAILWAY FREIGHT POOL AND ENGINEERING INDUSTRY

IMPLICATIONS OF UNIFORM PRICE FOR IRON AND STEEL ANALYSED

WHILE the Railway Freight Structure Inquiry Committee, appointed in June 1955, is examining the merits and defects of establishing a freight pool in respect of some of the basic articles necessary for industry such as coal, iron and steel, kerosene, petrol, cement, chemical manures and salt, the Government of India has already introduced a uniform freight charge for steel, pig iron and cement at all the railheads and also fixed a uniform price for these commodities. It is also reported to be considering a proposal to create a freight pool for coal.

The object of making freight charges uniform, irrespective of distance, for some of the basic industrial raw materials is, as is well known, to encourage a widespread dispersal of industry and to induce relatively backward regions to catch up with developments elsewhere in the country and also to avoid the undesirable social and economic effects of excessive industrial concentration. Representatives of industries located in centres far away from the coalfields had urged the Railway Equipment Committee, appointed in early 1955, to investigate the possibilities of producing within the country as much of the requirements of railways as possible, that the engineering establishments situated at places other than the "port towns" would not be able to expand their activities in the absence of a uniform price for steel, pig iron and fuel. The Committee, therefore, recommended the introduction of uniform prices for the basic raw materials of the engineering industry as one of the measures for encouraging equitable industrial development. The Government of India accepted the recommendation and, while giving effect to it by making the prices of steel and pig iron uniform, observed that the basic consideration underlying this change was the desire of the Government to encourage the decentralisation of industries and to reduce the disparities in levels of development between the different regions. Also, when equalising the price of cement it was explained that the basic objective of introducing a uniform price for cement was to promote industries in less developed areas and to rationalise the movement of cement so as to reduce the strain on the transportation system to the minimum.

There cannot be any disagreement on the basic objective of a regionally balanced industrial growth. But the point is whether, in the circumstances obtaining at present in India, a policy of freight equalisation for some of the basic materials of industry, which will reduce the disparity in their prices, is likely to attain the objective without producing other undesirable consequences. In this connection, mention may be made of an interesting study, contained in the latest issue of the *Tata Quarterly*, of the effect which the uniform price of steel, pig iron, coal etc., may have on industries, with particular reference to the engineering industry.

Effect of Freight Equalisation

The article points out that before 11th June 1956, when steel prices were equalised at the railheads all over the country, prices at the two production centres, namely, Jamshedpur and Burnpur, and the three port towns of Bombay, Calcutta and Madras, were the same. The new price of Rs. 525 per ton is higher, by Rs. 25, than the price prevailing at these centres prior to equalisation. Regions within a radius of 200 miles from the production centres have also to pay a varyingly higher price than before. The engineering industry, the principal consumer of steel, is at present highly concentrated around Bombay and Calcutta. For instance, according to the Seventh Census of Indian Manufactures 1952, the States of West Bengal and Bombay accounted for 46 and 28 per cent., respectively, of the total steel consumed by the engineering industry in 1952. All the engineering workshops have now large orders on hand and, as the Plan progresses, they are likely to increase. Therefore, as a result of establishing a uniform price for steel, the cost of production of engineering industry in West Bengal and Bombay, which account for about 74 per cent. of the entire engineering capacity in the country, would go up. True, in areas beyond 200 miles of these producing centres and the port towns, where, before equalisation of the price of steel, a freight charge in excess of Rs. 25 had to be added to the basic price of Rs. 500, steel would be cheaper. The benefit, which would accrue to the different regions on this score, would vary according to the distance of the railheads from the producing centres or the port towns. According to the Freight (Place Extras) List No. 1 of 1956, published by the Iron and Steel Controller of the Ministry of Commerce and Industry, out of the 1,645 railheads for steel in the country, about 66 per cent. were in the freight frequency of above Rs. 25 per ton and nearly 26 per cent. of the railheads had to pay more than Rs. 55 per ton. Therefore, for a number of centres the gain from lower price would be substantial and this would increase the competitive capacity of firms in these regions. But will the removal of the freight disadvantage itself promote the growth of engineering industries in these regions? Most probably not. And the Railway Equipment Committee itself had pointed out that the biggest single factor which had prevented the rapid growth of engineering industry in recent years has been the serious shortage of steel and pig iron. So long as this shortage persists, and it is bound to persist for some time more, observes the study, there is hardly any likelihood of a rapid development of engineering activity in the backward regions. As steel supplies improve gradually, other limiting factors, like lack of adequate transport and absence of a ready and near market, will still remain. The most important reasons which influenced the location of these industries in Calcutta and Bombay were the availability at these centres of proper facilities of transport and a ready market.

Price of Pig Iron

The consequences of a uniform price for pig iron, another essential raw material of engineering industry, would be similar to those flowing from the equalisation of steel prices. Prior to 11th June 1956, unlike steel, only the ex-work price of pig iron was fixed. Because of the freight charges, which varied from Rs. 10-14 per ton at Calcutta to Rs. 45-13 at Mithapur from Tatanagar, the price at the different railheads, including the port towns, was naturally different. The new price of Rs. 225 per ton eliminates the variations caused by freight charges and also provides a subsidy for the large imports of pig iron which would be necessary for the fulfilment of the second Plan. In respect of steel, the price ruling before 11th June already included such a provision. The consumption of pig iron (except that used for steel making) on a region-wise basis is more equitable than that of steel. In 1952, for which data are available, of the aggregate consumption of pig iron in the engineering industry, 15 per cent. was accounted for by the Punjab, 14 per cent. by Bombay, 12 per cent. by Bihar and 8 per cent. by the United Provinces. The share of West Bengal alone was disproportionately high at 41 per cent. As a result of the introduction of a uniform price, which in addition to the freight charge includes a subsidy for imported pig iron, the costs of production all over the country would increase. Relatively, however, the increase would be smaller in all the regions, including Bombay and Madras, which are at a long distance from the producing centres than in the regions in the vicinity of the producing centres like Bihar and West Bengal. In West Bengal, for instance, the new price represents an increase of about 30 per cent. Since pig iron too is in short supply and subject to distribution control and since the market for the engineering industry is concentrated in two or three regions, the relative improvement in the competitive capacity of the other regions and centres is also unlikely to make any material difference to the growth of industry there.

The disparity in cement prices has recently been eliminated and cement is now available at Rs. 102-8 per ton at all railheads. The new price, which came into force on 1st July 1956, is, like that of pig iron, higher than the average price prevailing before. Just as in the case of steel and pig iron, it is the shortage of cement in relation to demand and not the disparity in its price which constitutes a major obstacle in the way of widespread consumption of cement.

The Government is reported to be considering the proposal for the creation of a freight pool for coal on the same lines as that for steel, pig iron and cement. The price of coal has been subject to control for many years and the control price varies according to the quality and cost of production of the collieries in different areas. Unlike in the case of steel, pig iron and cement, equalisation of freight rates will not, therefore, lead to a uniform price for coal. Still, the range of existing price disparities will be considerably narrowed down. Since coal is required as fuel in all industries, the repercussions of this step would naturally be widespread. The chief result would be that consumers in the neighbourhood of the coal-mining areas would have to pay a higher price for coal than they are now paying, while regions like Saurashtra, Bombay and Madras would benefit. But, as the Working Party on Coal, which reported in 1950 pointed out, transport and not the freight charge is the most important bottleneck in the equitable distribution of coal. Thus, the real problem is one of developing coal mining on a zonal basis.

Cost of Engineering Goods

The study points out that, under the circumstances prevailing at present, the chief obstacle in the way of an equitable distribution of the basic requirements of industry such as steel, cement and coal, is not so much the disparity in freight rates as the shortage of these commodities and the lack of adequate transport. In respect of the engineering industry, the Railway Equipment Committee itself had drawn attention to these difficulties. Further, as a result of freight equalisation, the regions in which industry has been localised owing to favourable factors, would be adversely affected. The burden of industries established in West Bengal would be particularly heavy because, being situated near the centres of production of steel, pig iron and coal, a freight pool for these commodities will push up prices in West Bengal. For instance, it is estimated that as a result of the equalisation of steel prices alone, the engineering industry in this area would have to pay about Rs. 45 lakhs more per year. This must surely increase the price of engineering goods, thus bringing into existence another inflationary factor. The benefit accruing to producers in distant regions is not likely to result in a reduction in price in these regions. Owing to the shortage of steel, pig iron and other commodities and lack of adequate transport facilities, the establishment of new factories in distant regions to take advantage of the uniform price on any significant scale is also improbable. The policy of freight equalisation in itself is not, therefore, likely to be of much help in stimulating industrial development in backward regions. Instead, in the short run, by putting up cost of production and, therefore, the price, in the main producing centres, it will add to the inflationary pressure of the economy.

REFRIGERATED TRANSPORT

How to develop refrigerated transportation in Asian countries was one of the subjects considered by E.C.A.F.E.'s Inland Transport Committee which ended a week-long session at Bangkok, last month. A recurring theme in the discussion by the representatives of 18 countries present was the urgent and increasing need for transport facilities as Asian countries proceeded with their economic development. The Committee suggested that certain technical railway studies requiring physical experiments and field work might be undertaken in countries like India and Japan which have research facilities. It strongly urged that funds should be found for a study tour outside the region by Asian inland waterway experts and it noted a Soviet invitation that the tour should include place in U.S.S.R. Burma reported that substantial economies had been achieved by push barges on the Irrawaddy River. The Soviet delegation presented technical papers to the meeting on building low-cost roads in the U.S.S.R. and water transport on Russian rivers and canals. Its representative attended the meeting for the first time.

ROURKELA STEEL PLANT

The Government of India has decided to construct a dam across the river Sankh near the Rourkela steel project to augment the supply of water to the steel plant and township being built there. The dam, which is estimated to cost over Rs. 1.5 crores, will be built by the Hirakud project authorities. It is expected to be completed before the monsoon of 1958. Meanwhile, work on the Rourkela project is going ahead according to schedule. Contracts for all sections of the steel plant have been placed with German suppliers. The deliveries of plant and construction schedules have been so co-ordinated that the first blast furnace will go into production in 1958 and the steel plant be in operation by the end of 1959. Contracts have been placed for the civil engineering work for the blast furnace and steel melting shop. The formation of the site of the steel melting shop and the ingot yard is in progress.

It is estimated that in 1956-57 about Rs. 20 crores would have been spent on the Rourkela project. As against this, the expenditure in the coming year will be of the order of Rs. 60 crores—an indication of the increasing tempo of the work on the project.

ANNUAL MEETING OF THE CHARTERED BANK

MR. VINCENT ALPE GRANTHAM'S STATEMENT

SCOPE FOR STEADY ECONOMIC IMPROVEMENT IN INDIA

THE One Hundred and Third Ordinary General Meeting of the Chartered Bank will be held in London on 3rd April 1957. In his customary statement accompanying the Directors' report and audited accounts of the Bank for the year ended 31st December 1956, the Chairman, Mr. Vincent Alpe Grantham, expresses the view that the impressive reserve of labour and wealth in India could, if deployed advantageously, result in a steady improvement in the welfare of the people. It would be tragic, he said, if this desirable objective were not attained because of too rapid economic development being attempted without regard to monetary stability.

The following is the full text of Mr. V. A. Grantham's statement:

Constitution of the Bank

"Following the adjournment of the 102nd Annual General Meeting of the stockholders held on 4th April last an Extraordinary General Meeting was held to adopt the draft of a supplemental and consolidating Royal Charter which was the subject of a petition from the Court of Directors to Her Majesty the Queen in Council. The new charter was granted by Letters Patent issued under the Great Seal on 25th June 1956 when the provisions of the charter and the annexed by-laws and rules became effective.

"Clause 3 of the new charter empowered the Bank to change its name, and advantage of this provision was taken on 5th December when a special resolution, passed by an Extraordinary General Meeting of the stockholders and subsequently sanctioned by the Lords Commissioners of Her Majesty's Treasury, shortened the name of The Chartered Bank of India, Australia and China to The Chartered Bank. The change was brought about with a minimum of difficulty and it has been warmly welcomed by the stockholders, our customers, our banking correspondents and our friends everywhere.

General Management

"Mr. David Stewart, the senior of the Joint General Managers, retired on 31st January 1957 and I take this opportunity of acknowledging with gratitude the valuable services he rendered to the Bank over a period of 37 years. He joined the Head Office Executive from the Eastern service in 1945 and was a trusted adviser of the Court of Directors on matters of high policy and administration, particularly with regard to the affairs of India and Pakistan, Burma and Ceylon. We are not to lose entirely the benefit of his experience as I am glad to say that he agreed to accept a seat on the Board of The C.B.I. Development Corporation Limited, in which capacity he will be able to play an active part.

"Mr. G. A. Leiper, until recently Manager of our branch in Manila, has been appointed an Assistant General Manager.

New Branches

"The Bank has purchased the goodwill of the business in Pakistan conducted by the Allahabad Bank Limited and on 1st January last the branches of the latter institution at Lahore and Lyallpur were incorporated in the branch system of The Chartered Bank. The branch of the Allahabad Bank Limited at Karachi has been merged with our own branch in that city.

"To meet the growing need for banking services in North Borneo new branches have been opened during the past twelve months at Lahad Datu and Tenom. The former mercantile agency at Kudat has been replaced by a branch of the Bank.

"A new branch has been opened in Ampang Road, Kuala Lumpur, to serve expanding commercial development in that district of the federal capital.

C.B.I. Development Corporation Ltd.

"A year ago, I intimated that the Bank had promoted a wholly-owned subsidiary Company, The C.B.I. Development Corporation Limited, to engage in medium-term and similar credit operations connected with economic development in the Eastern countries to which the oversea representation of the Bank extends. During the first year of the Corporation's existence much time has been spent in research, investigation and the formulation of policy. The intensification of credit control in the United Kingdom has inevitably curtailed some of the opportunities open to the Corporation for lending in sterling. This and other factors, notably the necessity in most territories for registering the Corporation as a financial institution, have tended to circumscribe the framework within which the Corporation can function, but it is now possible to discern the pattern of future operations and I am quite sure that our new venture will fulfil a useful and creative function and bridge the gap between the short-term financing of trade and industry by overdraft, and the raising of capital from the public. I would like to say that I am quite satisfied with the initial experience of our Development Corporation.

Bank's Balance-sheet

"The balance-sheet total is very slightly lower than last year. Due to higher rates available in the London market, our fixed deposits are £8 million lower. This is set off by a smaller holding of bills of exchange and a reduction in our cash in hand and at call.

"Owing to the insistent demand for finance in those countries where in the rapid course of their development the pressure on local resources is much in evidence our advances to customers have increased by £12 million and this has been largely met by the non-investment of maturing Government securities.

"A part of the increase under the heading of advances is represented by pre-payments under American aid programmes.

"Our acceptances now exceed £10 million and indicate the growing popularity of this form of finance by Far Eastern merchants and bankers.

"You will note that we continue to show our investments in Government securities at market rates.

"For the first time, we are publishing a consolidated balance-sheet which includes the figures of our wholly-owned subsidiary companies.

Profit and Loss Account

"Despite the continued upward trend of working costs, especially salaries and wages, our earning capacity improved. The Bank's policy has always been to keep a liquid money position in London and we have made full use of the higher interest earnings available in 1956. This explains the increase in our net profit from £759,340 in 1955 to £800,808.

"The Bank paid an interim dividend in September last of 7½ per cent. less income-tax, absorbing £150,937 and it is now proposed that out of the balance available a final dividend of 7½ per cent. be paid, costing £150,938 making a total distribution of 15 per cent.

"It is proposed to repeat the allocation made in each of the past six years to Bank premises and furniture account, the pension fund and the widows' and orphans' fund of £200,000, £125,000 and £20,000, respectively.

"It is proposed to transfer £150,000 to contingencies account and to carry forward a balance of £409,308. I trust the stockholders will approve of all these proposals.

Overseas Survey

"In most of the statements I have circulated to the stockholders since the end of the war I have referred to the surge of Asian nationalism and to the significance of this for the Bank. The trend continues: Malaya and Singapore are moving rapidly towards political independence within the Commonwealth and a general election in Ceylon has returned to power a Government pledged to lead the Island to a more clearly defined sovereignty. The repercussions of such political movements are felt at every point in our extensive system of branches. They affect vitally our relations with our Asian employees; they influence the selection of business risks and circumscribe the deployment of our resources.

"Although our representation in the Middle East does not extend west of Aden Colony, there have been throughout the territories further East reactions to the crisis which arose in Egypt a few months ago. Fortunately, Britain has accumulated down the years a large fund of goodwill in the minds and hearts of the peoples of Asia and it would appear that notwithstanding widespread expressions of sympathy with Egypt that fund has been drawn upon to a much smaller extent than many critics of the British Government may have feared. The inner history has yet to be written, but it is clear even now that there is a greater understanding in the world of what may have been behind our country's action.

"In the East, our political role is obviously changing, but we can take credit for having created a defensive framework within which political independence, economic freedom, personal liberty and respect of human rights can take root.

"Quite surely British endeavour in the East is nowhere at an end; it is everywhere in progress.

"I now propose to review developments during 1956 in the territories served by our branches and to give some account of the contribution we are making to the promotion of economic interests common to East and West.

Aden

"Early in the year, political unrest and a series of strikes were sources of disturbance to trade, but on the whole Aden enjoyed considerable prosperity until August, when political events in the Middle East caused some diversion of shipping round the Cape route. Up to the time the Suez Canal was closed Aden's oversea trade was running at much the same level as in 1955, but it has been drastically reduced subsequently, the tonnage handled by the port and the bunkering trade both showing marked decrease. The tourist traffic, an important source of local prosperity, is now at a standstill, but trade in foodstuffs has not been seriously affected and there is considerable activity in the construction of new buildings and roads.

"Our own new building at Crater is expected to reach completion in the next few months, whilst we are also moving shortly into new premises at Steamer Point which are much more suitable than those now occupied. When the Canal reopens and given reasonable stability in the Middle East, there are grounds for hoping that the steady consolidation of our business in Aden, which has been taking place ever since the Bank opened there a few years ago, will show satisfactory results.

India

"Last year, I commented on the draft outline of Indian second Five-year Plan, whose major objectives are rapid industrialisation—particularly the development of heavy industry—and the expansion of opportunities for employment. The aims of the First Plan were relatively modest and most of its objectives were reached or even exceeded. The Second Plan is more ambitious. Total capital expenditure by the Central and State Governments over the five-year period 1956-60 is to be more than double what was spent during the First Plan. Already, in order to carry out the Plan in its existing form and without expanding its scope, rising prices both in India and abroad have made it necessary to revise the total expenditure in the public sector to Rs. 5,300 crores from Rs. 4,800 crores.

"It is open to question whether the planners have not set their sights too high for, vital and urgent as it may be to provide for the steadily increasing population and to achieve an all-round rise in the standard of living, no Five-year Plan should be allowed to dominate an economy to the extent of threatening it. This may be what is happening in India today, for it is significant that large purchases of steel and machinery have played their part in allowing imports far to exceed exports in value during recent months, thereby running down foreign resources to a level that gives little or no reserve for the further purchases of capital equipment envisaged in the new Plan. There must always be misgivings about an economic plan which, whilst relying largely on deficit financing and external aid, takes no account of or leaves little leeway for adverse internal factors in agriculture and industry and still leaves, as we have seen, a gap of Rs. 400 crores in the financial resources available in the public sector.

"Additional taxation is being imposed to help finance the Plan, but it would be well to recognise that more and more penal taxation may defeat its own ends for so many limitations surround the private investor today in India that it is, unfortunately, no longer clear how the skill and enterprise which is so necessary can be rewarded. Without fair rewards private enterprise cannot be expected to function or to provide the very large sums of money that the Plan expects from the private sector. Heavy taxation too in itself is going to do little to halt the steady inflationary tendency; for, although the money supply rose less in 1956 than in the previous year, the wholesale price index went up 13 per cent. on the year. Continued and increasing inflation could endanger the whole Plan. That the authorities are aware of this is encouraging for, commenting in the draft Plan on the difficulties of financing in part such an ambitious programme by deficit financing, the sponsors admitted that the stepping up of investment might have an inflationary impact, particularly if a relatively high proportion of the expenditure were found by an increase in the creation and supply of money.

Shortage of Investment Capital

"As savings are not keeping pace with industrial expenditure, there is already a woeful shortage of investment capital and more and more strain is being put on the banks who, whilst unable to attract sufficient extra deposits, are being faced with demands for fresh or increased facilities, and we for one have reluctantly been unable to entertain many of the propositions placed before us. The advances of the Scheduled banks in India have already reached unprecedented levels and the average ratio of advances to deposits of all the Scheduled banks is now in the region of 70 per cent. This has necessitated increasing use being made of the facilities provided by the Reserve Bank of India under the Bill Market Scheme introduced by them in 1952. Discussions have recently taken place in Bombay and Calcutta between the banks and the Finance Minister to find other means of alleviating the situation, but the problem is extremely difficult as the Indian authorities have stated that the tightening of bank credit is one of their anti-inflationary measures.

"In the meantime, efforts have been made by the tea industry to expand its export trade and progress has been made in this respect. Prices in the international tea markets were lower on average earlier in the year, but rose substantially later, owing to the situation in the Middle East. The jute industry has been passing through a difficult period owing to overproduction and lack of demand, especially for heavy goods, the prices obtainable for finished goods not having kept in line with the rising cost of raw jute and it became necessary owing to the accumulation of stocks to reseal by stages those looms which I mentioned last year had re-started production. Towards the close of the year, there was an improvement in jute exports at a time of year when demand normally declines and stocks showed a tendency to fall.

"I hope that I have not sounded too pessimistic a note. India has an impressive reserve of labour and wealth which, deployed advantageously, could result in a steady improvement in the welfare of the people. It would be tragic, therefore, if this desirable objective were not attained because of too rapid economic development being attempted without regard to monetary stability. Successful progress and development must depend to a great extent on wise counsel at the Centre and on the administrators showing a realisation of hard facts and a readiness to meet with sound and practical policies any distortions that may arise in the economy.

Pakistan

"The predominant feature of the past year in Pakistan has been the shortage of foreign exchange and, without assistance from the United States, the country's position would be far from happy. Early in the year, it had appeared reasonable to assume that after an extended period in which the balance of payments had been under continuous pressure as a result of the industrial development programme, Pakistan had at last turned the corner. The devaluation of the Pakistan rupee to parity with the Indian rupee in August 1955 helped to stimulate sales of the country's staple exports in international markets and was an important factor in the substantially increased payments surplus for the year 1955-56. In introducing the Budget last March the Finance Minister stated that the first phase of industrial development had been completed. It indeed appeared that a period of consolidation was at hand, inasmuch as, for the first time since Pakistan came into existence, no new taxation was imposed and some relief was given.

"By October, however, it was clear that the country was once again facing a severe food crisis, owing to deficiencies in the rice and wheat crops. This necessitated considerable imports of foodgrains into both East and West Pakistan and it will clearly be necessary for the authorities to take steps to encourage an increase in food production, if this is to be avoided in future. The Government, however, are fully alive to this need as the recently published Five-year Plan gives priority to agriculture and to an extension of irrigation facilities, drainage and flood control, whereas in the past the emphasis has tended to be more on industrialisation.

"The general objectives of the Plan are to raise the living standards of the population; to improve the country's balance of payments by increasing exports and by producing at home substitutes for imports; to create opportunities for employment and to accelerate the rate of development, particularly in East Pakistan, and it recognises the interdependence of the different sections of the economy and the need for their integrated development. Expansion is to take place in the output of such products as cement and jute goods, and the production of fertiliser is to be started. Although, in connection with the Plan, only a modest degree of deficit financing is intended, it is slightly disquieting when viewed in the light of the substantial expansion which has taken place in the note issue during the past year.

Encouraging Features

"Meanwhile, encouraging features have been the substantial rises in the value and volume of exports of Pakistan's raw jute and raw cotton during the past season. The country's new manufacturing industries have also expanded their sales oversea and there have been notable increases in exports of cotton yarn and cloth and jute goods. It is estimated that by 1960 Pakistan should be in a position to supply about one-third of the world's total requirements of jute goods, and the cotton industry is already taking advantage of the absence of export duty on its cloth and yarn to widen the range of its foreign markets. On the other hand, the continued restrictions on imports have led to price rises in domestic markets, as stocks of imported goods have run down. The country has, undoubtedly, been passing through a most difficult period, but it is encouraging to learn from the Finance Minister's recent speech, introducing the Budget for the coming fiscal year, that there was a small surplus on the balance of payments for 1956 as a whole.

"In a not uneventful political year the outstanding event was the assumption of the premiership by Mr. Suhrawardy who, since taking over the reins of Government, has shown himself to be a determined leader. He will need this attribute to the full to enable him to deal with the various problems which must confront him in the near future.

Burma

"It is pleasing to report that last year Burma succeeded in disposing of practically all its surplus stocks of rice, part of which had been carried forward from as far back as 1953. Rice exports for the year amounted to some 2 million tons, the highest total recorded since the war, although well below the pre-war level of shipments. Apart from increased rice shipments, exports of timber and non-ferrous metals have improved slightly, but not sufficiently to make any significant contribution to the country's exchange reserves.

"Burma should shortly achieve a large measure of self-sufficiency in petroleum products and the saving in foreign exchange will be appreciable. I stressed last year the importance of increasing the export of commodities other than rice. This would not only develop valuable sources of increased foreign earnings but would also have the effect of broadening the basis of the country's economy and rendering it less dependent on the international rice market.

"The improvement in the country's trade situation and official measures, such as severe restriction of imports and the pruning of Government expenditure, have been the major factors which have contributed to the improvement which has taken place during the past year in Burma's exchange reserves which showed a satisfactory increase over the year, but there is still little or no scope for their reduction for the purpose of financing the Government's economic and social development plans. In these circumstances and as Burma lacks investment capital, aid from abroad is clearly desirable, and a loan from the World Bank of U.S.$25 million has been arranged and will be used for financing projects in the public sector.

"Hopes were entertained that capital goods and equipment would be forthcoming from those countries of the Soviet bloc with which Burma concluded barter agreements for the disposal of its rice. So far these agreements have not proved a success and, on the whole, Burma has received in exchange for its rice, goods of inferior quality, expensive in comparison with similar merchandise supplied by the free world and representing in the aggregate only part of the value of the rice supplied. In theory, half Burma's exportable surplus of rice during the present year, which is expected to be much the same tonnage as in 1956, is committed for shipment on barter account, but efforts are being made to scale down this commitment in order to supply the requirements of buyers in the free world, who pay for their supplies with exchange which the Burmese authorities can use to finance their purchases in competitive international markets.

"Import restrictions and the increase in the note issue arising from the Budgetary deficit have been the major causes of the steady rise in prices. In framing the Budget for 1956 57, therefore, the Government has very sensibly slowed down its development programme in an effort to keep expenditure within the limits of revenue. This is a welcome sign that the authorities realise the dangers of paying for development by means of deficit financing, and although the aim is still to stimulate industrialisation, priority is now to be given to the development of those industries which will save foreign exchange. At the same time, the increased expenditure on the security forces, which is indeed essential if law and order are to be restored, places a serious strain on the country's resources and, unless order is maintained, the looked for improvement in the country's production, and hence its general economy, will not be realised.

Ceylon

"The latest figures available show that last year the surplus on Ceylon's oversea trade was running at a substantially lower level than in 1955. Imports were higher in aggregate value, owing largely to increased purchases of capital goods, while exports declined in value, much the same volume being shipped abroad as in 1955, but in the case of tea, which accounts for the bulk of Ceylon's export earnings, at a lower average price.

"A number of factors have militated against Ceylon's oversea trade surplus attaining the record level it reached in 1955. Adverse weather conditions and particularly the most severe drought the Island has experienced for fifty years caused a fall in coconut production, and, except in the western districts, a deterioration in the quality of the tea output. Frost conditions which occurred during a period of exceptionally cold weather in February also affected tea production adversely. Later in the year, events in the Middle East dislocated shipping schedules and made it necessary to direct shipments round the Cape and this, in conjunction with the congestion in the port of Colombo caused by labour trouble, had a detrimental effect on Ceylon's external trading position. It was particularly unfortunate that the benefits which were expected to materialise from the completion of the greater part of the Colombo Port Development Scheme were largely lost for the time being, owing to strikes and similar manifestations of labour unrest.

"A new price agreement was negotiated in December in connection with Ceylon's five-year rice-rubber contract with China and under its terms Ceylon has made some price concessions for rubber shipments to be made this year as compared with the scale of charges operating in 1956. Nevertheless, China is still to pay a premium over the international market price for the 50,000 tons of sheet rubber which Ceylon has once again agreed to supply in exchange for 270,000 tons of rice from China. This is a satisfactory bargain for the Ceylon rubber industry, inasmuch as China is now free to purchase rubber from Malaya. This is the final trading year of the five-year period covered by the original agreement between Ceylon and China, but both countries have indicated that trade between them in rice, rubber and other commodities will continue even after the agreement expires. This is certainly desirable from Ceylon's point of view, for her rubber industry has now become largely dependent on Chinese purchases. China is now absorbing almost the whole of Ceylon's exports of sheet rubber and about two-thirds of the Island's total rubber shipments to all international markets.

"Introducing the new Government's first Budget in July, the Finance Minister foresaw a fall in Ceylon's export income. In view, however, of the satisfactory level of the external assets, the Government was satisfied that the country could afford a reasonable deficit on the Budget, which would be met by domestic borrowing and by running down Government cash balances. In the Government's view, the most serious problem that faces the country is unemployment and the urgent need to expand opportunities for employment has led the Government to decide to accelerate the rate of development. I mentioned last year the six-year programme of investment which the previous Government had drawn up. The extension of this programme is now being discussed by the newly appointed National Planning Council which had its first meeting in November.

"The Finance Minister indicated that, as domestic saving and investment were insufficient to ensure a progressive improvement in the population's living standards, foreign capital would be welcomed. An assurance was also given to private enterprise that it would receive full support from the Government in the role assigned to it. However, the recent proposal by a member of the Government to nationalise the tea plantations on what the owners consider to be harsh terms, although it has not so far been formally adoped as Government policy, must inevitably impair the confidence of the potential oversea investor, and thus seriously impede the future economic development of Ceylon, on which the raising of the living standards of the population depends.

Malaya

"Once again, both the Federation of Malaya and Singapore have enjoyed a prosperous year. Taking both territories together, oversea trade rose in value to a level only previously exceeded in 1951 at the height of the Korean war boom. However, owing largely to the increased quantities of capital equipment and building materials purchased abroad in connection with development schemes, imports rose at a higher rate than exports and, in consequence, the favourable trade balance at M$12.6 million was substantially lower than in the previous year. It also has to be recognised that, although the continued improvement in the level of oversea trade is impressive, expansion in trade and industry, particularly in Singapore, has to some extent been curtailed during the year, owing to political uncertainty and labour unrest.

"Such uncertainty is rather to be expected at this stage in the progressive evolution of both territories towards independence. The Governments in both the Federation and Singapore have clearly indicated that they recognise the importance of attracting capital and enterprise from overseas to assist the economic development of their respective territories. In their fiscal policy so far they are making considerable efforts to ensure that conditions are sufficiently favourable to induce continued investment from abroad now that they are on the threshold of independence. These considerations were summed up by the Finance Minister of the Federation in his Budget speech in November when he said, 'It is not proposed to change the rate of tax on companies, because it is the policy of the Government to attract investment and the establishment of new enterprises in the Federation and the maintenance of a favourable taxation position is conducive to that end.' Similar views have been expressed by the Singapore Government, and it is fair to say that they indicate a refreshingly realistic outlook which I hope will meet with an encouraging response.

"One important matter which still gives rise to uncertainty is the question of the future of the currency. This is linked to a large extent with the recommendation, made by the World Bank mission in their report on the economic development of Malaya, that a central banking system should be established. I mentioned last year that preliminary inquiries into the project had been initiated by the two Governments.

"A report which was published in June, set out the advantages and disadvantages of establishing separate central banks in both Singapore and the Federation, but as might be expected, it clearly favoured a joint central bank covering both territories. It pointed out that to institute at this stage separate central banks would involve the creation of separate currencies. As both Governments wished to keep open the question of the future unity of the two territories at a later stage of political development, it was desirable, meanwhile, not to set up two central banks until political uncertainty was resolved. To do so and, therefore, to create separate currencies now would not only render it more difficult to unite the two territories in the future but would also disturb confidence in the Malayan dollar, a currency whose par value with sterling had remained unchanged for fifty years and had built up, therefore, to quote the report, 'a tradition of stability equalled by very few currencies in Asia or elsewhere.'

"In the light of the report, the two Governments have agreed that a 'central banking mechanism' should be established, but have not yet decided the form it is to take. It is possible that a final decision will await the outcome of the constitutional changes which are impending this year, but already the Governments of North Borneo, Sarawak and Brunei have decided to establish, in due course, a currency of their own which is to be independent of the Malayan dollar. It is to be hoped that there will be no further fragmentation of the existing currency area in which first the Straits dollar and subsequently the Malayan dollar have provided a stable and effective medium of exchange.

Rubber Exports

"Last year Malaya's rubber exports, at 983,281 tons, were slightly lower than in 1955. Early in the year, prices in the international market fell and by May natural rubber was no more expensive than the synthetic product. In some respects this was surprising as authoritative estimates had suggested a fine balance between world production and consumption and stocks were tending to fall in the early part of the year. The announcement of the lifting by the Governments of Singapore and the Federation of the ban on the export of rubber to China, which had been imposed during the Korean war, was the occasion of a rally in markets, but, in fact, no rubber was shipped to China from Malaya until late in the year. Nevertheless, Russian and Chinese purchases, as well as the international political situation, were major factors in the rise in prices during the second half of the year.

"Malayan production of tin-in-concentrates in 1956 reached record levels for the second consecutive year and, at 62,295 tons, was the highest output since 1940. Exports, at 73,278 tons, showed a small increase over the previous year. Except in February, when the threat of labour trouble in the Malayan tin industry temporarily restored the market, tin prices tended to fall until May. The decision of the United States Government to keep the Texas smelter operating until January 1957 and the final ratification of the International Tin Agreement led to an improvement in the market which tended to move upwards until late in the year. The International Tin Agreement, which I mentioned last year, came into force in July and steps have been taken to set up the buffer stock with contributions, which have so far been entirely in cash.

Singapore

"In Singapore, the revised budgetary estimates for 1956 showed a small surplus, instead of the deficit originally anticipated, but as in a number of recent years expenditure has been less than estimated. Allowing for a contribution to the territory's development fund, the estimates for the present year once again budget for a deficit but, provided that present trading conditions continue, it is hoped that revenue will exceed the estimate and in any case expenditure is again likely to be lower than expected. In the Federation, on the other hand, the revised estimates for 1956 indicate that revenue has been slighly less than expected, owing largely to the lower yield of the export duty on rubber early in the year, and that expenditure has been substantially higher. The budgetary deficit for the year, approximately M$90 million, is, therefore, more than double what originally was expected. As the Government is budgeting for a deficit of M$108 million in the present year, it will be necessary to run down surplus revenue balances.

"With the Federation of Malaya attaining political autonomy within the Commonwealth on 31st August next and with Singapore looking forward to similar independence, we are, of course, already giving serious thought to the effect upon the present banking system of the changed conditions, and to the steps which may be necessary to meet them. I believe that we shall be able to rely upon a realistic approach by the two Governments to economic and political problems and the banks can draw upon their experience in other territories where independent Governments have been set up. Whatever the future may bring, it will be this Bank's policy to continue its long years of service to the two countries and to assist to the greatest extent possible in their economic progress.

North Borneo

"North Borneo has now fully emerged from the post-war rehabilitation period and there is evidence in many directions of a well co-ordinated policy to develop within its means a well based economy which, given continuing peaceful conditions, augurs well for the future.

"A most important factor making for the general improvement is the remarkable change for the better in the labour situation, which shows a rise of more than 20 per cent. of employed persons, although a larger and more permanent labour force remains an essential need.

"In the field of communications much has been achieved by the construction of minor roads, the development of port facilities and the extension of air services.

"The latest figures available show that North Borneo's external trade last year may well reach a record level, although the trade surplus for the year as a whole is likely to be less than in 1955. The expansion in imports is not entirely to be attributed to purchases from oversea suppliers of equipment, machinery and materials required in connection with the territory's development programme, for there has also been a sizable increase in imports of consumer goods.

"Rubber continues to be North Borneo's major source of export earnings and shipments during 1956 are likely to amount to much the same total value as in the previous year. There is a welcome indication that the territory's oversea trade is growing somewhat less dependent on the fortunes of rubber in the international market and that other industries are now contributing to an increasing extent to North Borneo's prosperity. The Government's rubber replanting scheme which I have mentioned in previous years has continued to make satisfactory progress. Copra exports were substantially higher last year and by the end of October had already surpassed both in volume and value the levels reached in 1955.

"Although the timber industry still operates under difficulties, which include the remoteness of some concessions and the shortage of international shipping space, shipments have increased to a notable extent. The potentialities of the industry to the economy would seem to justify the effort being made to set it on a sound course.

"Last August, Victoria, Labuan Island, was declared a free port in the expectation that it would regain its former importance as an entrepot serving the British territories in Borneo and a successful trade convention was held there in November.

"North Borneo's prosperity continues to be reflected in its budgetary position. After meeting all ordinary expenditure and devoting M$6½ million of the revenue to development schemes, it was estimated that the general revenue balance in hand would slightly increase over the year 1956. At its present level this balance constitutes a reserve to be used only in emergency and with Government expenditure expected to increase this year and revenue to be rather lower than in 1956, it has been found necessary to increase import duties on tobacco and liquor to assist in meeting development expenditure estimated at some M$19 million during 1957, a sum which is slightly higher than the average annual expenditure on development during the past three years.

Sarawak

"A significant step forward in political development was taken in Sarawak during the year by the grant by Her Majesty the Queen of a new constitution under which the new Council Negri will have an unofficial majority and by the holding of the first Municipal election in the Colony in Kuching.

"Last year, the Colony's principal exports, rubber, pepper and timber, fetched less remunerative prices in international markets than in 1955 and, despite an increase in the volume of exports, external trade fell in aggregate value. Although imports were slightly lower, the favourable trade balance at M$12 million was substantially less than in the previous year.

"In view of the importance of the rubber industry to Sarawak's economy as the major source of export earnings, the Government's 1955 scheme to encourage by means of subsidies the planting and replanting of an increased acreage with high yielding stock was extensively revised last year and funds to finance it substantially increased.

"Earlier estimates of the pepper crop suggested that it would fall considerably below the previous year's crop, but in the event both production and exports were higher in 1956 and the increased tonnage shipped compensated to a large extent for the lower prices in oversea markets.

"The timber and, in particular, the ramin trade had a difficult year, but the Government scheme for the restriction of the production of ramin met with some success in checking the fall in price and the value of shipments proved to be only a little lower than that of the previous year.

"It is a commendable achievement on the part of Sarawak that, up to the end of 1957, Government will have made available from the territory's own resources approximately M$110 million for development purposes without resort to borrowing. However, the Financial Secretary indicated in his Budget speech in December last that the raising of loans to finance the necessary and well conceived development plan had become unavoidable and steps are to be taken to raise an external loan of M$30¾ million by stages to commence in 1958.

"Sarawak may be counted fortunate in that it continues to be free from industrial, political and racial disturbances and, with a Government very much alive to the need of maintaining this freedom, the future, apart from repercussions of unforeseeable world events, should hold a good measure of progress and prosperity.

Indonesia

"This time last year it seemed reasonable to take an optimistic view of the immediate future in Indonesia. The deterioration which had taken place in the country's economic situation since the collapse of the Korean war boom appeared to have been halted by the strong Masjumi-led caretaker Government which had taken office in July 1955. Then too there seemed a determination on the part of leading politicians of all parties and senior Government officials to give the Republic a good and stable government during the following two or three years, in order to put the economy on a sound basis.

"There was optimistic talk in some governmental circles of moving towards a free economy, but once again hopes have been dashed by a coalition Government unable or unwilling to take realistic steps to come to grips with major problems. The result has been a rapid deterioration in the economy which has finally resulted in political unrest of a magnitude which might yet prove a serious threat to the structure of the constitution.

"In the general setback that Indonesia has sustained it is very difficult to separate cause and effect. Perhaps, in some ways the new coalition Government was unfortunate in inheriting labour problems which should have been dealt with by preceding Governments, but nevertheless it did nothing to keep the demands of the labour unions, particularly the estate unions, within reasonable bounds and the resultant unrest and strikes must seriously have affected the volume of exports. That volume too was probably even more seriously affected by the smuggling of rubber and copra and it was not surprising, therefore, that 1956 turned out to be a disastrous trading year for the Republic even at a time when high world prices for its prime exports should have produced the opposite result.

"The seriousness of this cannot be overlooked for, in its turn, it caused the foreign exchange holdings to run down to a dangerously low level and at the same time accentuated the already large difference between the internal and the external value of the currency. This, in its turn, stimulated the inflation which had already shown signs of getting out of hand and the deterioration in the foreign exchange holdings was inversely reflected in the increase in the note issue.

"Ad hoc" Measures

"*Ad hoc* measures, such as the reintroduction of inducement certificates, 100 per cent. pre-deposits for imports and a revised and drastically altered set of import duties and luxury taxes did nothing to arrest the trend. Having seen over a number of years, Indonesia's unsuccessful attempts to right economic ills by the imposition of controls and other expediences, which have invariably brought abuse in their train, it seems inevitable that, sooner or later, there must be an outright devaluation of the rupiah and a return to simple commercial methods by the elimination of the present tortuous regulations.

"In any case, to spend time and effort on Five-year Plans embracing grandiose schemes before placing the country on a sound political and economic basis is fundamentally wrong, for until more stability is achieved the Republic cannot hope to attract outside capital. Nor can it hope to do so until it has made a clear declaration of the security of existing foreign capital and its ability and willingness to allow reasonable rewards in the form of profit or dividend remittances on investments.

"Notwithstanding all I have said, I am still optimistic regarding the long-term prospects of the Republic, for we do not believe its people will allow their rich heritage to deteriorate and disintegrate, and we are going steadily on with our own business in Java and Sumatra.

Thailand

"Last year, I drew attention to Thailand's return to a free economy. In a world in which Governments, to solve their economic problems, appear in general to put increasing faith in exchange control and import licensing, it required courage on the part of the authorities in Thailand to initiate what many regarded in the first place as a somewhat perilous experiment. The operation was carried out in stages, the first step being the restoration of the rice trade to private hands two years ago. Subsequent measures terminated the system under which the foreign exchange earned by exports of rice, rubber and tin had been sold partly at official and partly at free market rates: all such exchange is now sold at the free rate. Restrictions on imports were also removed.

"It is pleasing to report that the whole experiment has so far worked well. It was anticipated that, following the lifting of import controls in September 1955, there would be an immediate and considerable increase in imports. Such proved to be the case, and according to the latest figures available the country appeared to be running a trade deficit well into 1956. However, as a substantial proportion of Thailand's imports are shipped under American Aid and exports have been running at a higher level than in 1955, it is reasonable to assume that, except for the period immediately after the raising of import restrictions, the country's balance of trade has been favourable.

"Rice is still the backbone of the economy and exports, at roughly 1,200,000 tons, were about the same as the previous year but, unfortunately, through increased competition from the rice-producing countries and the incursion of the United States into Far Eastern markets, prices were substantially below those for 1955. Nevertheless, the authorities found no difficulty in maintaining the value of the tical and, in fact, owing to the supply of United States dollars accruing to Thailand through its exports to Laos and Cambodia under American Aid, it was more than once necessary for the Equalisation Fund to intervene in order to prevent an appreciation in the exchange value of the tical.

"In the latter part of the year, the political scene was dominated by the forthcomnig elections and further democratic reforms are promised. An unfortunate feature was a marked recrudescene of nationalistic agitation, which is rather surprising in a country of the maturity of outlook of Thailand, and particularly at a time when a feeling of confidence must be engendered in order to attract the foreign investor.

Vietnam

"Since last year, when I told you of the difficulties, both political and economic, confronting Vietnam, there has been steady progress in both fields, to an extent that allows one to be quietly optimistic about the future and perhaps the greatest encouragement in this view is the gradual strengthening of the country in relation to communist-held northern Vietnam.

"That this improvement in strength has been made is largely due to the forceful personality of President Ngo Dinh Diem, whose outstanding achievement was the promulgation of the Vietnam constitution in October last. The Government's newly-found strength has manifested itself in the emergence of certain nationalistic ordinances for land reform, for the naturalisation of Chinese born in Vietnam and for the prohibition of foreigners in engaging in certain trades. The last two, which are interconnected, are very bold measures, for the Chinese community, now cut off from the possibility of oversea aid, has to decide whether or not it will co-operate fully in the country's trade. If it does so, there is hope that economic recovery and final independence of American Aid may be an earlier possibility than could have been anticipated a year ago. As it is, although the country depends almost entirely upon American Aid, which provides the greater part of the Government's budgetary revenue and pays for all but 20 per cent. of the country's imports, there are signs that an early revival of exports may change drastically the extent of this dependence on external support.

"Rubber, which at the moment accounts for 80 per cent. of the total exports, should continue to be a useful exchange earner, but even more important is the promise of an immediate resumption of rice shipments, for it is on this commodity that the country must depend for the re-establishment of its economc stability, although, paradoxically, on the political stability of the country will depend the ability to produce and bring the rice to the ports.

"Business during the year has been difficult, but the Government has endeavoured, and with much success, to tackle black marketeering and profiteering, although, this has brought in its wake a form of control and interference in business that does not augur well.

"The country badly needs investment capital, but it is difficult to see this forthcoming until a strong but liberal administration is built up with the help of a good civil service, and unfortunately the country is woefully short of capable Government officials. For this reason great credit is due to the few that have carried the burden with some success during 1956.

Cambodia

"Cambodia, by accepting aid from China and Soviet Russia as well as the United States, has demonstrated that it wishes to be completely independent of any international political grouping and to be free to welcome investment and assistance from any foreign source, provided that it is offered without political conditions attached to it. Thus, the construction of the new ocean port at Kompong Som, a project of immense importance to the country and one which will render it largely independent of the Mekong River and Saigon, is being carried out with French aid. The modern highway from Kompong Speu to the new port and linking it with Phnom-Penh is an American-aided project, while the programme of Chinese aid also includes road construction as well as agricultural and electrical development schemes.

"The bulk of the country's imports continue to be financed by American Aid, but in order to assist its declared policy of lowering prices in the domestic market the Government has released part of its own foreign exchange holdings to pay for certain specified imports. Notwithstanding this, and despite two poor rice harvests in succession, the foreign exchange holdings of the Banque Nationale du Cambodge have steadily increased over the year.

"This cautious, but commendable, spending policy will undoubtedly assist in building up the country's economy on sound lines and we can look for further steady progress even in the absence of much needed investment capital.

The Philippines

"The Philippines would appear to have been successful in one major battle during 1956, that is defending the value of the peso. The rapid fall which took place in the Republic's international reserves during 1955 was halted and, mainly owing to drastic import control, there was a slow but steady increase in the foreign currency holdings during the year under review. As exports are tending to rise in value and American Aid has proved more than sufficient to cover the trade deficit, the peso should be in no immediate danger.

"The reappointment of Mr. Miguel Cuaderno as Governor of the Central Bank for a further year is a most encouraging factor, for the fundamental soundness of his hard-money policy has been clearly proved. It is apposite here to express our satisfaction too that one of his broad international outlook and experience should so fittingly have been appointed Chairman of the Boards of Governors of the World Bank and of the International Monetary Fund.

"The determination and realism that have played such a large part in readjusting the balance of trade and saving the peso will be needed by the administration in their second major struggle, that is the fight against inflation. If the Philippines succeed in halting inflation over the coming year a major economic victory will have been gained, but the task is not an easy one. To succeed it may be necessary to postpone some of the capital development programme and reduce deficit financing. Efforts will have to be made to see that local production is increased to offset import cuts and this would

seem to indicate a temporary switch at least from industrialisation to investment in indigenous activities such as mining, tobacco, desiccated coconut and paper production and to the purely agricultural industries of coconut-oil, sugar, hemp and lumber.

"Unfortunately, some of the proposed legislation in the Philippines is still such as to frighten away rather than encourage the foreign investor and our experience has been that the authorities, in order to conserve foreign exchange, have been overdrastic in their application of regulations to the detriment of ordinary profit remittance. We can only hope that a return to less anxious times will allow a more lenient and reasoned outlook.

"Although the foreign trade of the Philippines is still predominantly with the United States there was a continued trend during the year to trade more in European markets and with Japan and it is hoped that a formula will soon be found which will allow the Philippines to adopt sterling as its alternative trading medium and thus enable it to keep part of its reserves in a currency other than the United States dollar.

"The popularity of President Magsaysay remains unabated and his prestige is such that it is unlikely that any candidate could be found to defeat him in the next elections. All well-wishers of the Philippines will hope that he enjoys a long term in office for he remains a great stabilising influence on the country's politics and economy and an inspiration to his countrymen to work in the interests of their country.

Hong Kong

"Notwithstanding Hong Kong having better trading figures for the year, due no doubt more to higher prices than to increased volume, it is becoming increasingly clear that its importance as an entrepot is decreasing and that much of that business has probably gone for ever.

"That China will trade through Hong Kong when expedient was fully demonstrated by the modification of policy in the middle of the year which brought Hong Kong's merchants to an increased degree into China's pattern of trade. Unfortunately, because of China's dependence on the Soviet bloc for the bulk of its supplies, it is unlikely that an increased use of Hong Kong for inward and outward shipments will be a permanent feature. On the contrary, it seems that China is determined to develop a deepwater port at Tsaam Kong, formerly the French possession of Kwong Chow Wan, and although there will be much greater railway haulage involved, it seems that this port, at the expense of Hong Kong, may eventually serve most of South China.

"Fortunately, industrial development in the Colony has done much to offset its loss of entrepot trade and the various industries, particularly cotton spinning, can look forward optimistically into 1957, provided there is no change in Imperial preference. The mills and other industries are fortunate in having, partly through refugees, a seemingly inexhaustible reservoir of good labour which enables them to keep costs steady and competitive. This is perhaps the only bright aspect in connection with the refugees, for the housing of some 700,000 extra persons plus the school, sanitation and health services necessitated, are imposing a severe strain on the Colony's physical resources and on its budget. Of those physical resources, lack of water is still probably the most serious single factor and even the completion of the Tai Lam Chung dam in eighteen months' time will not fully meet the domestic and industrial demand.

"The political scene during the year was dominated by the riots commencing with the celebration of the anniversary of the foundation of the Nationalist Republic of China. Unruly elements seized their opportunity to indulge in looting, arson, stone throwing and intimidation, but a reassuring feature is that a Government enquiry has confirmed that political motives were to all intent and purpose absent.

China

"My report on China this year is in marked contrast to my remarks over the last few years, inasmuch as, under encouragement from the authorities, your Bank is again participating, if only to a small extent, directly in mainland China's oversea trade.

"It would appear that the authorities in Peking consider that it is useful to have trade links throughout the world additional to those provided by their own Bank of China and, as this change coincides with China's further progress towards normal commercial trading terms, it is hoped that we shall be in a position to handle useful and remunerative business.

"During 1956, notwithstanding some setbacks to crops through adverse climatic factors, the process of steady consolidation went on and the country has evidently reached a state where some liberalisation in the interpretation of the regulations is considered justifiable.

"An outward manifestation of the increase in foreign trade is the revival in the activity of Shanghai as a port, but the vexatious question of the embargo is still a stumbling block to Britain's increased participation.

Japan

"Three main and interrelated political events took place in Japan during the latter half of 1956: first, the state of war with the Soviet Union was ended and normal diplomatic relations resumed; secondly, Japan was admitted to membership of the United Nations; and thirdly, the Liberal-Democratic Party in power elected a new Premier who reshuffled the more important cabinet posts.

"Possibly the greatest advantage from these developments is an addition to the country's international bargaining power, and this it may well need if it is to succeed in consolidating and ensuring the continuance of the great economic strength that it has built up over the past two or three years, for the authorities are obviously trying to hedge against the disastrous effects that a recession in the United States could have on Japan's economy. To do this they must make certain of larger participation in the China market, which involves delicate negotiation with the United States, and an increase in the country's trade with South-East Asia countries and the sterling area which, too, may necessitate much hard bargaining. It is significant that the trade talks between Japan and the United Kingdom have dragged on for over three months without agreement having been reached whilst the talks between Japan and Australia were also indeterminate.

"It is perhaps surprising at the end of a most prosperous year when the economy expanded much more than could have been anticipated and a net gain on foreign exchange holdings was registered, that Japan should be worried about the future but, due possibly to a liberalisation of its import policy, not unconnected with negotiations on exports, the terms of trade turned rather quickly against the country in the second half of the year. This trend might be serious if certain key requisites for economic development, such as transport, steel and electric power, were to fall short of requirements. The extent to which Japan depends upon a good home rice crop is another potential weakness and so too is the threat of internal inflation.

"I do not wish to give an impression that I feel alarmed about Japan's future, for, on the contrary, the country enters 1957 on a very optimistic note and the fact that the weaknesses and possible dangers I have pointed out are well known to the authorities probably means that they will be well taken care of by sound fiscal and monetary policies. The country's inherent strength is reflected in the plans that are afoot for a welcome reduction in taxation and in the growing strength of its banks which, although still possibly over-lent by our standards, provide a sound basis for the growing industrial development.

"The growing use of sterling as a medium for settling Japan's multilateral trade has put a great strain on its holdings and the country's credit is extended in the London market to a degree that may necessitate continued sales of U.S. dollars to replenish its depleted sterling funds.

New York

"In 1956, we have had the interesting spectacle of the United States' authorities in their turn resorting to credit restraint to counteract the sharp rise in the demand for loans and the excess demand for capital investment over the supply of current savings. The result has been tight money market conditions and an increase in interest rates but, notwithstanding this and a cut in profit margins, the economy looks as sound as ever at the moment. In these conditions, our New York office, which progressively increases in importance in our branch system, has had perhaps more than usual demands made upon its resources.

"The United States has continued to be particularly generous in its aid to the Eastern countries in which we are interested, often thereby underpinning the economy of those countries, and we are pleased to say that when, as in the disposal of excess farm products, it has sold in Eastern markets, it has usually done so without unduly depressing prices. Whether the large sales of cotton to be made this year will be disruptive remains to be seen.

Hamburg

"Our Hamburg agency continues to increase its business and, as an active link between our branches in the East and trade and industry in West Germany, it occupies a position of growing importance in our organisation.

"The greatly increased surplus on the Federal Republic's balance of payments during the past year has been a renewed indication of the benefits which may accrue to a country whose financial authorities adhere resolutely to sound fiscal and monetary policies. This external surplus has caused a substantial rise in the domestic money supply and in bank liquidity, but the central bank's measures causing the banks to reduce their credit commitments have been instrumental in avoiding any serious inflationary tendencies, although unemployment has been increasing.

"The competitive prices and shorter delivery dates quoted by German manufacturers have led to a substantial increase in export orders placed with West German industry last year by countries in the Far East as well as elsewhere.

Manchester and Liverpool

"Our branches in Manchester and Liverpool fulfil a useful function in our organisation by maintaining our longstanding and close connections with commercial and industrial interests in Lancashire and Northern England.

West End, London

"An increasing number of visitors from the East avail themselves of the banking services available at this conveniently situated branch.

Conclusion

"With the industrial skill, mercantile capacity and administrative ability that is at our disposal, and a proper realisation of the fact that our endeavours in the East must in future be related to common economic interest rather than to politics and strategy, there is no reason for despondency.

"To that I would only add that we see everywhere throughout the East a steadily increasing competition for business, which is not likely to become less as the years go by and we must realise that the selling prices of our manufactured goods will be set by the world at large and not by ourselves. We cannot expect, indefinitely, to absorb increases in the cost of living in our selling prices or to get increased prosperity without increased production, which must entail an end to restrictive practices. Our income will be related to our output and our present standard of living will only be maintained, if we are prepared to match the output of other countries. If we do not do so, we shall find ourselves priced out of the world's markets."

THE
SOUTH INDIA INSURANCE
COMPANY, LIMITED
(Incorporated in India)
(Established 1934)

Transacts
Fire, Marine, Accident and Miscellaneous Insurance Business

Authorised Capital Rs. 1,00,00,000
Subscribed Capital ,, 50,00,000

THE
CANARA BANKING CORPORATION
LIMITED
Estd. 1906

Head Office : UDIPI (S.I.)
(A Scheduled Bank)

With a network of branches and agencies all over the Indian Republic, the Bank transacts banking business of every description.

Our Rates of Interest on Deposits:

Current Accounts	1/4% p.a.
Savings Bank Deposits	2½% p.a.
Fixed Deposits (for varying amounts and terms)	3 to 4½% p.a.
Golden Jubilee and Cumulative Deposits	4% p.a.

Season Deposits and Short Notice Deposits are accepted upto 31st May 1957, at attractive rates of interest ranging from 3½% to 4½% p.a.

Further particulars can be had from the Head Office or any of our branches.

Total Resources of over Rs. 7,00,00,000

THE TRAVANCORE BANK
LIMITED
Head Office: TRIVANDRUM
Under the patronage and largely supported by the Government of Kerala

Branches at
BOMBAY, MADRAS AND OTHER IMPORTANT CENTRES IN SOUTH INDIA

Current Accounts	.. ..	Interest at ¼ per cent p. a. upto Rs. 1,00,000.
Savings Bank Deposits	..	Interest at 2 per cent. p. a. upto Rs. 1,000, and 2½ per cent. p. a. over Rs. 1,000.
Fixed Deposits and Short-Term Deposits received on attractive terms		

THRIFT DEPOSIT SCHEME enables those with limited income to save systematically and earn good profits.

ADVANCES granted against Government and other approved securities

FOREIGN EXCHANGE BUSINESS of all descriptions transacted.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by us, 21 branches audited by other auditors and the unaudited returns from 87 other branches and 124 Pay Offices not visited by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the proviso to sub-sections (1) and (2) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;
(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

SIXTY-FOURTH ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1956.

The Balance of Profit and Loss Account for the year, after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets, amounts to £236,484
to which has to be added the balance brought forward from last account .. 219,372

making the amount available .. £455,856

out of which the following appropriations have been made:—

To Interim Dividend of 7 per cent. on the "A," "B" and "C" shares, less Income Tax at 8s. 6d. in the £, paid on 25th September, 1956	£59,168	
To Officers' Pension Fund	13,000	
To Amount written off Freehold Banking Premises and Property	50,000	
To Additional Allocation to Contingencies Account ..	50,000	
		172,168
leaving a sum of ..		£283,688

from which the Directors recommend:—
A Final Dividend of 7 per cent. on the "A," "B" and "C" shares, less Income Tax at 8s. 6d. in the £, payable on 26th March, 1957 .. 59,167

Balance to be carried forward to next account £224,521

The Reserve Fund has been increased to £2,000,000 by a transfer of £250,000 from Reserves previously set aside and now no longer required.

Agencies of the Bank were opened at No. 88 Main Street, Pettah, Colombo, Ceylon, on 1st October, 1956, and in Temerloh, Federation of Malaya, on 5th November, 1956.

The following Directors retire by rotation under Articles 120 and 121 of the Articles of Association, but being eligible, offer themselves for re-election:—

Sir John G. Hay.
Mr. E. J. Bunbury.
Sir Charles A. Innes.

Special Notice under Sections 142 and 185 of the Companies Act, 1948, has been received by the Bank of a Resolution for the re-election as Director of Sir John G. Hay, who has attained 73 years of age.

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

LONDON, 26th *February*, 1957.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the annexed Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

THE MERCANTILE BANK OF INDIA LIMITED

INCREASED SHARE IN WORLD TRADE WITH EASTERN COUNTRIES

SIR KENNETH W. MEALING'S REVIEW OF ECONOMIC DEVELOPMENTS

THE Sixty-fourth Annual General Meeting of the Mercantile Bank of India, Ltd., will be held in London on 26th March 1957. The Chairman, Sir Kenneth W. Mealing's statement accompanying the Directors' report and audited accounts for the year ended 31st December 1956, to be presented at the meeting, contains, as usual, a survey of the economic developments in the principal countries of the Bank's operations. Referring to India's second Five-year Plan, Sir Kenneth expresses the view that, initially it was inevitable that a degree of inflation and high taxation must be anticipated and was indeed already taking place. He hoped that the ultimate effects of the great production and employment that this Plan was expected to produce would justify this great undertaking.

The following is the full text of Sir Kenneth's statement:

"The expansion recorded last year in the Bank's general business continued during 1956. The balance-sheet total, at nearly £75 million, is higher by £3 million. Deposits are higher by £2¼ million, whilst on the assets side, there are increases of over £5 million in loans and advances and nearly £1 million in bills receivable. These higher figures indicate the increased share we are taking in world trade with the East and are in part responsible for the decrease in our holding of Government securities by nearly £3 million.

Net Profit Higher

"The net profit of £236,484 is slightly higher than the previous year and your Directors recommend a final dividend of 7 per cent. If this recommendation is approved the dividend for the year will be 14 per cent., the same as last year. From the balance the usual allocations have been made to the officers' pension fund, premises account and contingencies reserve account leaving the balance carried forward at £224,521, against £219,372 from the previous year.

"During the year the Board authorised the transfer of £250,000 from inner contingencies account to the reserve fund, which now stands at £2,000,000.

"The two significant events of 1956 were the strain put upon Anglo-American relations and the reimposition of Stalinism throughout Communist countries. The former resulted from the chain reaction starting with America's sudden withdrawal from the Aswan Dam project, the nationalisation of the Suez Canal Company, the attack by Israel on Egypt and the Franco-British intervention. The second resulted from the attempt by the workers and people of Hungary to secure the freedom which the new anti-Stalin policy of Russia seemed to promise.

No End of Cold War

"In the former case the British and French obeyed the resolutions of the United Nations and withdrew. The Canal was blocked by the Egyptians and only the future will show whether any nations (other than Britain and France) are willing to obey the edicts of the United Nations, to which so much political lip service is rendered. So far as the Hungarians are concerned the answer is clear: that Russian imperialism is not prepared to permit United Nations observers even to investigate the facts. I can only repeat my statement of a year ago, when I said 'there is little or no prospect of a real relaxation of tension or of ending the 'cold war' until a real disarmament agreement can be brought into effect' —and this seems now, if anything, still further away.

"In Britain, the Government's fiscal policy was beginning to be effective without resulting in unemployment, but the events in the Middle East checked the progress anticipated and the change in Government in January, 1957, resulting from the Prime Minister's illness and the re-entry into world affairs of the U.S.A. following the Presidential Election, may be expected to open a new era of Anglo-American co-operation and economic prosperity throughout the Western world.

India

"One of the principal events of the year in India was the introduction of the States Reorganisation Bill which, after some modification, resulting from troubles in Bombay and Bengal, came into effect throughout India on 1st November 1956. Under this new Act the State of Bombay becomes one of the largest in India and with the final extinction of the princely States the map of India takes on a rational and logical appearance, such as it has never had in the past. Sir Chintaman Deshmukh, the Finance Minister, disagreed with the Government over the States Reorganisation Bill, insofar as it affected Bombay, and resigned his post in the Government. After an interregnum Mr. T. T. Krishnamachari became the Finance Minister and Mr. Morarji Desai, lately the Chief Minister of Bombay, went to the Centre as Minister of Commerce and Industry.

"Mr. Krishnamachari introduced a surprise autumn budget which among other things, included the reintroduction of a capital gains tax, increases both in direct and indirect taxation, a proposal to siphon off reserves in private enterprise for the benefit of the public sector, and steps to bring the banking services under closer control by the Reserve Bank of India. A motion to nationalise all banks in India was heavily defeated in the Lok Sabha.

"The foreign policy continued to be directed by the Prime Minister, Pandit Nehru, who continues to maintain his policy of neutrality and non-alignment. During the Suez crisis he was under much pressure to sever India's connection with the Commonwealth, but stoutly refused to do so. During the year, a British consortium signed a contract with the Government of India for the erection of a steel plant at Durgapur. This plant is designed to produce ultimately a million tons of steel per annum and is the third such plant, the other two being respectively German and Russian, to be under construction in India at this time.

"The second Five-year Plan, to which I referred last year, is already rapidly getting under way and is estimated to have a total cost of some Rs. 5,300 crores. Inevitably, this vast project will have repercussions on many aspects of Indian life. Initially it is almost inevitable that a degree of inflation and high taxation must be anticipated and indeed is already taking place. It must be hoped that the ultimate effects of the great production and employment that this Plan is hoped to produce will justify this great undertaking.

"Towards the close of the year some anxiety has been caused regarding the country's economy following a continued rise in price levels, continued substantial dwindling of foreign exchange resources and the monetary stringency in the banking system. It is unfortunate that at this time the Indian jute trade, which is one of India's principal earners of foreign exchange, is passing through a time of economic crisis and heavy losses. The tea and cotton industries have both had a fairly successful year and on the whole labour relations throughout India have been reasonably harmonious.

Pakistan

"On 23rd March 1956, the new Constitution was adopted and the Islamic Republic of Pakistan with Major General Iskander Mirza, who had been Governor General, as the first President, came into being. Pakistan, however, remains a member of the Commonwealth. The enactment of this new Constitution was a personal triumph for the Prime Minister, Choudury Mohamed Ali, but, as a result of political realignments, he subsequently resigned, and Mr. H. S. Suhrawardy became Prime Minister in his place, heading a coalition whose principal component is the Awami League. Mr. Suhrawardy is an experienced politician and capable of real statesmanship: his task is formidable, but all well-wishers of Pakistan will hope for his success.

"In May 1956, a draft Five-year Plan was published envisaging the expenditure of Rs. 800 crores in the public, and Rs. 360 crores in the private sectors, estimated to increase national income by 12 per cent., foodgrain production by 13 per cent., provide employment for two million people and increases in electric output, irrigation, etc. The Plan relies upon foreign aid for some Rs. 300 crores of finance. It is regarded as being moderate and realistic and has been well received in the country, but it has been criticised as putting far too little emphasis on agriculture and communications including port facilities.

"Industrial development of East Pakistan is now receiving urgent consideration and may be greatly helped by the discovery of a gas field in Uchh. The jute industry now has some 7,750 looms and plans, by 1960, to have an output of jute manufactures capable of meeting over 30 per cent. of world consumption. Pakistan's devaluation in July 1955, has undoubtedly helped her export trade in raw and manufactured jute and cotton, but the necessity of importing and distributing very large quantities of foodstuffs, particularly in East Pakistan, has proved a major headache and resulted in much suffering in that State last year. No less than 883,000 tons of food were imported into East Pakistan and 600,000 to West Pakistan. The value of these food imports was in the neighbourhood of Rs. 80 crores which, had it not been for American aid would have seriously affected Pakistan's foreign exchange position. There is no doubt that Pakistan will continue to need foreign aid for some time to come, notwithstanding the strenuous efforts she is making, by severe restrictions in imports at the expense of some degree of inflation, coupled with an industrial programme designed further to reduce imports and to increase her income from exports.

Ceylon

"The Ceylonese General Election, held in April 1956, resulted in the unexpected defeat of Sir John Kotelawala's United National Party and its replacement in power by the Peoples United Front Party under the Premiership of Mr. S. W. R. D. Bandaranaike.

"It was believed that the policy of the P.U.F.P. included reductions in the price of rice, legislation to make Sinhalese the official language, and some degree of nationalisation including that of foreign-owned estates.

"Economically, the year 1956 proved less prosperous for Ceylon than the preceding year. This was largely due to circumstances outside Ceylon's own control. Adverse weather conditions, including the severest drought in 50 years, caused deterioration in the quality of tea and a falling off in coconut production. Delays in Colombo due to dock labour unrest and towards the end of the year the diversion of shipping round the Cape all had adverse effects on Ceylon's balance of trade. The Port development scheme was completed and ships are now able to go alongside for loading and discharging cargo. Given freedom from labour disputes, Colombo harbour should regain efficiency and cease to handicap the Island's trade as it has of recent years.

"In May 1956 the Development Finance Corporation of Ceylon was set up with a subscribed capital of Rs. 6,000,000 to assist in the finance of new industrial undertakings in the private sector. The Government also attach considerable importance to agricultural development and work is to begin on two major schemes, the Giritale Extension Scheme and Muthurajawela Scheme with the object of increasing the production of paddy. As foodstuffs, particularly rice, form Ceylon's principal import, it is clearly most desirable that the Island should be made less dependent on imports from overseas of this essential foodstuff.

Burma

"There is not very much change to report in regard to Burma during the past year. General Elections were held in April 1956, as a result of which the Anti-Fascist Peoples Freedom League were overwhelmingly re-elected, a coalition of opposition parties having fallen apart before the election took place. Subsequently, the popular Premier U Nu resigned in favour of U Ba Swe in order to devote his time to the strengthening and internal reorganisation of the Anti-Fascist Peoples Freedom League of which he continued to be President. It is now reported that he will shortly be resuming the Premiership.

"The problem of dealing with the insurgents has not yet been solved in Burma and until it is, the establishment of the rule of law and order throughout the land will remain unsolved.

"In the financial field it is satisfactory to report that Burma's foreign exchange reserves which, at the beginning of the year stood at K.405.5 million, rose by the end of December 1956, to K.569.6 million. This improvement is most welcome and is largely due to the strict limitation of imports. During the financial year which ended on 30th September 1956, 1,932,000 tons of rice and rice products were shipped. Out of this total, 459,000 tons were on account of barter agreements, despite which the total foreign exchange earnings were in the neighbourhood of the equivalent of K.96 crores and practically none of the 1956 crop has had to be carried over into the new year unsold. This, in comparison with previous years when there were large carry-overs of unsold rice stocks, is indeed satisfactory. On the other hand, only a fifth of the petroleum was produced in 1956 than was produced in 1939 and only a quarter of the teak and silver. Burma's potential export of her natural resources, therefore, is very great provided that tranquil conditions could be brought about throughout the country.

"During the year, loans were obtained from the World Bank, the Government of India, and the United States Government primarily to be used in the development of the Port of Rangoon and the railway system.

"Disturbing features are the gradual elimination of private enterprise by State organisations and the infiltration of communism into the Rangoon Universities Students' Union which may present the Government with serious problems in the future if it is permitted to continue.

"Towards the end of the year, Chou En Lai of China visited Rangoon and negotiations are continuing for withdrawal of Chinese troops which occupied Burmese territory adjacent to the border with China.

Federation of Malaya

"The Federation of Malaya has enjoyed a successful and prosperous year in 1956. Both imports and exports made a substantial increase and the prices of Malaya's two main exports—rubber and tin—have maintained a satisfactory level averaging around 96 cents a lb. for the former and $386 a picul for the latter.

"By an agreement signed by Her Majesty's Government on 8th February 1956, a considerable degree of self-government was brought into immediate effect and it is understood that there is every probability of full independence by the end of August 1957. The Constitutional changes effected immediately by the Agreement of February 1956, provided for the appointment of a Chief Minister and this office was assumed by and is still held by Tengku Abdul Rahman, who also assumed responsibility for the internal security of the country under the newly created post of Minister for Internal Defence and Security. Responsibllity for finance, including foreign exchange, was transferred to a Minister of Finance and this office was assumed by Col. H. S. Lee.

"The emergency created by communist terrorists still continues and, although it has been estimated that something like 80 per cent. of the terrorists who entered the jungle in 1948 and since have been eliminated it is nonetheless a fact that terrorists-inspired incidents continue, although they have been considerably reduced. There is no doubt that terrorism will continue to be a thorn in the side of the new Government, unless firm steps continue to be taken against it.

"Thus, a new chapter in the history of the Federation of Malaya having begun in 1956 will presumably come to fruition in 1957. The new Government will start off with enthusiasm and expansive plans which all well-wishers of Malaya must hope will attain success and lead to increased prosperity for the Federation.

Singapore

"1956 proved to be another prosperous and successful trading year for Singapore. Rubber averaged about 95 cents over the year and tin was obtaining good prices. The outlook for 1957 appears also to be favourable.

"The year has also been eventful in the political field. Early in the year, the Chief Minister, Mr. David Marshall, together with members from the other political parties, proceeded to London for constitutional talks which broke down on the question of internal security. On his return early in June Mr. Marshall resigned his position as Chief Minister and was succeeded by Mr. Lim Yew Hock.

"Rioting took place in October following upon the closure by the Government of certain Chinese middle schools which had become a hotbed of political activities of a subversive nature. The Chief Minister's firm handling of this situation created a very good impression and was responsible in large measure for the return of confidence. Although there were a number of strikes during the year, there were, in fact, considerably less than in 1955 and labour relations have towards the end of the year improved.

"Plans have been made to set up an Industrial Promotions Board to encourage and develop local industries in the island of Singapore. An institution of scientific and industrial research is also being set up to investigate and give advice chiefly on the technical and economic aspects of industry and an expert has been engaged to undertake this work. Government has made it clear that it will do all it can to encourage the investment of foreign capital in the Colony and to create a suitable climate for industry. It is evident that, if Singapore is to maintain its position as a great communication and trading centre and keep abreast of the times, a large development programme will require to be undertaken and the means for financing such a programme are under consideration.

Indonesia

"The re-emergence of this important country to a state of fiscal integrity and domestic stability is a matter desired by all countries with whom her trade and commerce can be of mutual benefit. Teething troubles in a young country are inevitable and the recent Sumatra troubles may be the prelude to progress resulting in due course to Indonesia taking its rightful place in the trade and commerce of South-East Asia.

Thailand

"Thailand continues to be one of the most prosperous and contented countries in South-East Asia, under the able Premiership of Marshal Pibul Songgram. There are to be elections in February for a proportion of the seats in the existing one Chamber Parliament, but the Premier recently announced that the present Constitution would be changed in order to provide for an Upper and a Lower House of Parliament: a further step towards liberalisation of the Constitution.

"Economically, Thailand had a good year. The paddy crop is estimated by the Ministry of Agriculture to be close on 8,000,000 tons, of which nearly 1,200,000 tons have been exported and the carryover into the New Year, which in the past has frequently amounted to as much as a quarter of a million tons, this year is regarded as negligible. The timber industry had a somewhat difficult year owing to an increase in costs, whilst the completion of the Chainat Dam across the Chao Thya has seriously hampered the delivery of rafts of timber to Bangkok. The tin, cement and sugar industries all show increased output, the latter being expected to supply the country's entire requirements by the end of 1957. The Government-controlled cotton mill in Bangkok is also said to be increasing its spindleage and by the end of 1957 should be capable of producing over 75 per cent. of the country's estimated requirements. A new paper mill is under construction just outside Bangkok and when this is in full production it is estimated that the country's total requirements will be provided. A plant for the manufacture of gunny bags which is being reconstructed and enlarged has also been taken over by the National Economic Development Corporation and is expected to come into production during 1957 and provide 25 per cent. of local needs, roughly 5½ million bags annually.

"To open up the country with a network of fine roads the 1956 Government programme of highway construction provides for an outlay of Tcs.2,000,000,000, of which 20 per cent. was subscribed under American aid.

Hong Kong

"Hong Kong has had another successful and prosperous year. Both imports and exports show increases in excess of 25 per cent. over the 1955 figures. In the case of exports the principal increases have been to Indonesia, Japan and Thailand. The principal exports to Indonesia consisted of piecegoods and enamelware. The principal increases in imports have come from Japan, China, the U.S.A. and the United Kingdom. The principal imports from China consisted of oilseeds, paper and piecegoods. Local industries in Hong Kong continued to make great strides and exports of locally-made products continued to expand. In value, cotton yarn and cotton piecegoods head the list of exports, but the value of enamelware shows considerable increase over the year. The variety of goods turned out by local industry is considerable and the Colony has become noted for the price, quality and range of the products of its light industries. Amongst the most important of these products apart from cotton piecegoods and cotton yarn are ready-made garments of all kinds, enamelware, torches, vacuum flasks and rubber and leather footwear also brocade, embroideries and drawn work of typically Chinese design and manufacture.

"The Colony's shipbuilding repair industry continues to expand and with its modern equipment and low costs is becoming a popular repair centre for many important shipping lines. Work is proceeding on the new airport at Kai Tak in Kowloon and it is expected to come into use in August 1958. A new power station is also being erected at North Point. The vast problems of housing, providing work and education for the large numbers of refugees who continue to come to Hong Kong are being resolutely tackled by the authorities with some success.

Mauritius

"The 1956 sugar crop in Mauritius was an all-time record at the figure of 571,893 metric tons produced at an average extraction rate of 12.94 per cent. which is also a record. The Commonwealth Sugar Agreement has been extended for a further year, i.e., up to and including the year 1964 and under the terms of the International Sugar Agreement the export quota for Mauritius remains the same at 470,000 long tons. Of this, 335,000 tons will be purchased by the Ministry of Food at an increased price of £42 3s. 4d. per ton, against £40 15s. 0d. per ton for the previous crop. The balance of 135,000 tons will, therefore, be offered for sale in the preferential markets in the United Kingdom and Canada.

"It is estimated that the Cyclone and Drought Insurance Fund exceeded the sum of Rs. 95 million by the end of 1956.

"In May 1956 the Legislative Council adopted a new Constitution for Mauritius proposed by the Secretary of State for the Colonies. The principal changes in the Constitution include that the present electoral system should be replaced by proportional representation by means of a single transferable vote; that the Legislative Assembly shall be composed of 25 elected members after a General Election in 1958; that a member of the Executive Council shall receive the title of Minister and the responsibilities of certain services be entrusted to six unofficial members of the Executive Council.

"It is to be hoped that the new Constitution will provide a workable and satisfactory form of Government until with the efflux of time there evolves some sense of common Mauritian citizenship among the various races and creeds who at present form the population of the Island.

"Trading conditions generally during the year have been satisfactory, although towards the close there was some inevitable disruption owing to the closure of the Suez Canal.

"The small tea industry has continued to expand on a moderate scale. Government have approved a scheme designed to assist the development of the industry on a substantial scale by subsidies and contributions to capital costs of establishing plantations. If the pilot scheme is successful, development on a larger scale is foreshadowed and finally should provide a much needed secondary industry for the Island.

"The finances of the Island continue to be sound. For the year ended 30th June there were increases both in revenue and in expenditure. Revenue exceeded expenditure by some Rs. 10 million and draft estimates for 1956-57 reveal that 35.7 per cent. of the revenue is to be derived from direct taxation with a further 23.4 per cent. accruing from customs duties. On the expenditure side, the largest items are again education and health which will account for 28.9 per cent.

"Population continues to grow rapidly and it has been estimated that at the normal rate of increase the population of the island may attain the million mark by 1972.

Japan

"1956 has proved to be by far the best year for Japan since the war. Exports rose by a further 25 per cent., domestic trade showed a healthy expansion, productivity improved and the harvest, although not quite so large as the previous year, was still exceptionally good. Moreover, these benefits have not been diminished by inflation, for prices remained stable and so all sections of the nation enjoyed conditions of prosperity with better living standards than for nearly 30 years. It is estimated that industrial production as a whole increased by no less than 25 per cent. over the production of 1955.

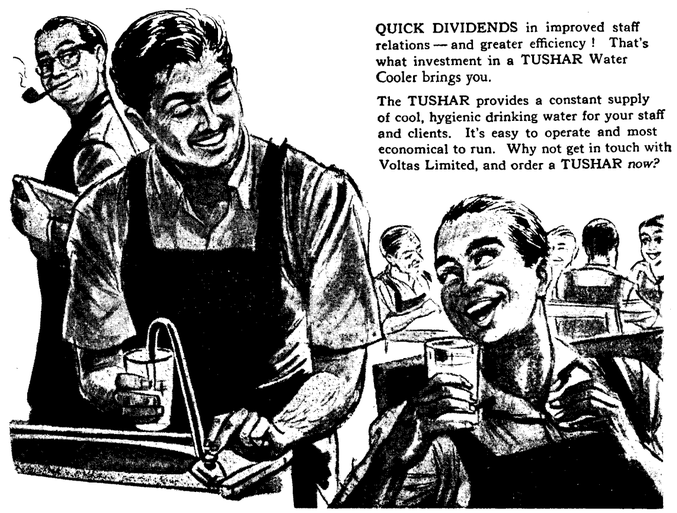
"...and a bonus of goodwill to the management —for installing the
'Tushar' WATER COOLER!"



QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR *now?*

With the TUSHAR you get
- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

BANK OF MAHARASHTRA LIMITED

HIGHLY SATISFACTORY PROGRESS

MR. V. P. VARDE REVIEWS GOVERNMENT'S MONETARY POLICY

THE view that the impact of the monetary and fiscal policies on the national economy had been much more serious than what was officially acknowledged was expressed by Mr. V. P. Varde, Chairman of the Bank of Maharashtra Ltd., in the course of his speech at the Twenty-second Annual Meeting of the Bank, held at Poona recently. Mr. Varde, who gave a comprehensive review of the Government's banking and monetary policy, expressed the hope that the authorities would give due recognition to the "economic truism that the country cannot prosper by debasing the rupee." Reviewing the progress of the Bank, he pointed out that the year was notable for an all-round expansion of its activities.

The following is the full text of Mr. Varde's speech:

"GENTLEMEN,

"It is my privilege to extend to you a cordial welcome to the annual meeting of the Bank. The Directors' report and the audited statements of accounts for 1956 have been in your hands for some days past and I shall take them as read.

"The year was notable for an all-round expansion of the activities of our Bank and these have been detailed in the Directors' report. I am sure you will consider them as highly satisfactory. During 1956, the Bank opened five more branches, bringing the total to 34, and the patronage received from the public has been gratifying. The deposits rose by 23 per cent. to Rs. 626 lakhs as against an increase of about 8 per cent. in the deposit resources of Scheduled banks. Compared to this increase in our resources, the rise in the net profit from Rs. 3.46 lakhs in 1955 to Rs. 4.01 lakhs in the following year is rather small and you are certainly entitled to an explanation. For a banking institution, the safety of funds is a primary consideration and the liquidity of funds is the best guarantee of safety to the depositors. Broadly, we have employed only 45 per cent. of our deposits in advances and have held the rest in liquid assets such as cash and bank balances and investment in Government securities. At a time when the banking system has locked nearly three-fourths of its deposits in extending bank credit, this policy might be considered *ultra-conservative*; but I am confident that it would pay us in the long run.

"The second reason is that our profits have been squeezed by the high cost of borrowing. Throughout the year, the demand for bank credit was so acute that the resources of the banking system were severely strained. To augment them, the banks sought to adopt all the possible devices to attract the people's savings. The scramble for deposits led, in turn, to higher rates on deposits, especially savings and short-term deposits. If in the face of this unhealthy competition we have been able to augment our resources, that is only because of the growing confidence of the public in this institution. Against a rise of 23 per cent. in our deposits, the interest paid during the year rose by 29 per cent. I am afraid this trend will persist so long as the demand for bank credit continues to outstrip the resources unless the Reserve Bank intervenes with a view to restoring order in the money market. Thirdly, our salary bill has gone up from Rs. 6.54 lakhs to Rs. 7.76 lakhs mainly on account of the substantial volume in our business on account of the addition of new branches. These two items, together with the increase in postal charges, have absorbed the increase in our earnings from lending operations.

Net Profit

"The rise in the net profit during the year is contributed by the increase in income from commission, exchange and brokerage and I hope that this source of income will continue to grow with the expansion of the Bank. I wish, however, to draw your attention to the strong position of the balance-sheet. Throughout its period of useful career, your Board has endeavoured to build up its strength and has subordinated the profit motive to service to the people. Against a paid-up capital of Rs. 16 lakhs, our reserves have now reached Rs. 10 lakhs. This has been rendered possible by your support to the Board's policy of paying only a reasonable return on the share capital. Considering the strength which has been built up so far and having regard to the increase in the profit, the Board has recommended this year an increase of one per cent. in the dividend and I am sure you will endorse it.

"The year 1956 was notable for a severe strain on the economy of the country and the banking system did not escape from the consequences. Throughout the period, the money conditions were extremely tight and banks were subjected to a heavy pressure for credit. Over the year, the Scheduled bank credit rose by Rs. 156 crores, while the deposits showed a gain of only Rs. 79 crores. Consequently, the banks were obliged to put up their borrowing rates, reduce their investment portfolio and rely rather heavily on the Reserve Bank for accommodation. To this general trend, your Bank is among the few exceptions. More recently, the Reserve Bank has raised its lending rate against Government securities, while the interest payable on advances against trade bills has moved up to four per cent. as a result of the increase in the stamp duty. Thus, the effective lending rate of the Reserve Bank has moved up to four per cent., though the official Bank rate has remained unchanged. In this country, the Bank rate has been always associated with the Reserve Bank's lending rate against Government securities and I am unable to comprehend the difference between the two rates which has now been made.

"Although the Reserve Bank was unwilling to give a signal to put up the lending rates by increasing the official Bank rate, it goes without saying that the Bank's decision has led to an all-round rise in the lending rates of the banking system and is an acknowledgment of the wide gap between the savings of the people and the demand for capital. It is to be wondered whether the Government will succeed in continuing to borrow on the basis of a three and a half per cent. Bank rate from the public which is able to earn substantially more from other sources. I submit that the Reserve Bank's action in divorcing its official Bank rate from the money market while linking its effective Bank rate with the current money condition is likely to make the Bank's task of enforcing monetary discipline rather difficult. At best, it may be constructed as a stepping stone towards the realignment of the money rates.

Monetary Policy

"Throughout the period under review, two conflicting monetary policies were at work. A selective credit squeeze was in operation so far as the private sector was concerned. On the other hand, the Government relied heavily on deficit financing, the amount raised by discounting Treasury bills during the year being of the order of Rs. 207 crores. The money supply rose in 1956 only by Rs. 131 crores; this comparatively small increase is to be attributed to the heavy imports which reduced our foreign exchange reserves to a low level of Rs. 530 crores. The Government was, therefore, obliged to amend the Reserve Bank of India Act with a view to reducing the minimum cover of foreign exchange for the note circulation to Rs. 400 crores and revaluing the gold reserve and to draw on the credit of the International Monetary Fund. At the same time, the Banking Companies Act was amended in order to enable the Reserve Bank to tighten its grip over the banking system.

"The impact of the monetary policy and the fiscal policy on the national economy has been far more serious than what is officially acknowledged. The industrial production rose during the year by 25 per cent. but the agricultural production received a serious setback owing to unfavourable monsoon. The shortage of essential goods, accompanied by heavy deficit financing, released new inflationary forces which raised the living costs, intensified the labour unrest and squeezed the profit between costs and prices. Even granting that we are all living in an inflationary world in which a decline in the purchasing power of the rupee is inevitable and the prospect for those who have to live on fixed incomes and savings is dismal, I wonder whether it is a sound policy to acquire assets even in the name of development by resorting to methods which, if adopted by an individual, would be termed as dubious. I concede that in these days, stabilisation of prices and costs is probably the best that we can look to because any drastic reduction would swing the balance to the other extreme, i.e., deflation, which would be equally disastrous; but what is desirable is a middle course which would avoid the two extremes. Unfortunately, it is not easy for politicians in a democracy to resist the temptation of trying to do too much too soon.

Stable Money

"The experience of the past decade has brought to the fore the conflict between development and stable money. The first year of the second Five-year Plan has particularly underlined the distortions which are liable to be generated by a policy of undertaking development far in excess of what is possible on the basis of the available resources in men, money and equipment. The danger of incurring excessive capital expenditure which cannot produce goods for some years has become apparent and the need of resorting to heavy deficit financing is the primary cause of our economic malaise. It cannot be cured, to quote the Governor of the Bank of England, by putting one foot on the accelerator of public expenditure and the other foot on the brake of credit restriction. Nor can we bring external solvency without building our internal strength. We have learnt from the past and are trying to retrace our steps by applying the correctives; but I am afraid the medicine is not strong enough to cure the disease. I am glad that the Governor of the Bank of England recently fixed the nail on the head of the central banking authority when he said, with reference to the United Kingdom, that the central bank of the country must 'sound warning bells when Government and near-Government spending is putting too heavy a burden on the country's resources.' The circumstances in which Mr. B. Rama Rau had to resign as the Governor of the Reserve Bank, however, make one sceptical of the utility of our central banking authority to give sound advice to the Government. I only pray that the role of the Reserve Bank will be adequately appreciated by the politicians who have to rule the country and a due recognition will be given to the economic truism that the country cannot prosper by debasing the rupee.

Banking System

"This brings me to two important aspects of the banking policy on which I have been dwelling in my annual statements. The banking system which a country needs has to be in conformity with the economic system which it has to develop. Our planning body has accepted decentralisation of the economic activity as its sheet anchor. It follows from this that a network of well-organised regional banks knowing the local conditions and needs should be encouraged to support the local economic activity. Since its inception, your Bank has been striving to meet the credit needs of small- and medium-sized industries and I am glad that the State Bank of India has now seized the initiative by launching a pilot scheme. There are, however, inherent limitations on the State Bank in spite of the change which is being brought about in its outlook. The State Bank cannot, therefore, be a substitute for a network of local banks. When the Banking Companies Act was enacted, it was hoped that the Reserve Bank would be able to serve these banks as a guide, friend and philosopher and make them increasingly useful to the small and medium enterprise. I regret to mention once again that there has been no marked change in the Reserve Bank's attitude with the result that the tendency of the banking resources to concentrate in bigger institutions has gained a further stimulant during the year under review. I hope the new Governor, Mr. Iengar, will look into this particular problem and evolve a pattern for banking development, which will be in conformity with the economic system we are trying to build up through planning.

"When I addressed you last year, the problem of reorganisation of States was uppermost in the minds of everybody. This has been tackled and the new Bombay State is now

Across the INDIAN skies

SWISSAIR

— SWISS AIR LINES —

start this April the flight of friendliness

with Modern luxurious Douglas Super 6-Bs, equipped with Airborne Radar.

Bombay to Bangkok, Manila, Tokyo—Geneva, Zurich and all important capitals in the West.

The Swiss Cross – the traditional symbol of peaceful Switzerland, a country of world-wide precision industry fame, will shortly be cruising Indian and Far Eastern skies – shortening distances, increasing friendliness.

With more than 35 years of experience in air service, Swissair is world famous for its expertly trained crews, its traditional Swiss courtesy, its thoroughness and for the utmost comfort offered on its luxury airliners.

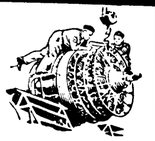
Enjoy Swiss care, make your next trip, East or West, by Swissair!

FIRST AND TOURIST CLASS

SWISS PRECISION AND HOSPITALITY WILL BE AVAILABLE IN INDIA FOR FLIGHT SERVICE FROM APRIL 24.

Kingly comforts
All the comforts of a Class One Swiss Luxury Hotel... specially prepared foods, vintage wines and champagne.

Traditional Swiss Courtesy
Sincere attention and flawless service both in the air and on the ground by trained hostesses and stewards.



Precise Technical Service
Precision, accuracy and thoroughness so characteristic of the Swiss are the watchwords of Swissair.

Schedules
Eastbound : Every Wednesday via Bangkok and Manila to Tokyo.
Westbound : Every Saturday to Geneva and Zurich with direct connections to all important capitals in the West.

Consult your Travel Agent or

Swiss Air Transport Co. Ltd.
Hotel Ambassador, Bombay.
Phone: 241554.

THE FARES ARE ALL THE SAME...

IT'S THE SERVICE THAT'S DIFFERENT.

SCINDIA STEAM NAVIGATION COMPANY LIMITED

MR. DHARAMSEY M. KHATAU'S SPEECH AT ANNUAL GENERAL MEETING

ECONOMIC FREIGHT RATES SHOULD PROVIDE FOR ANTICIPATED RISE IN COSTS

ADDRESSING the shareholders of the Scindia Steam Navigation Company, Ltd., at their Thirty-seventh Ordinary General Meeting held in Bombay on 13th March 1957, Mr. Dharamsey M. Khatau, Chairman, reiterated the request of the Coastal Conference to the Rail-Sea-Co-ordination Committee that in fixing the economic rates of freight, besides the present costs of operation, provision would have to be made for the anticipated increase in these costs over a period of time. In addition, provision would also have to be made for the creation of a rehabilitation reserve, besides normal depreciation and for a fair and an equitable return on capital employed in coastal shipping. This basis followed the principles accepted by the Tariff Commission in the case of other industries. Mr. Khatau added that the shipping industry was pre-eminently entitled to similar treatment.

The following are extracts from Mr. Khatau's speech:

"GENTLEMEN,

"There has been a continuous rise in operating costs during the last few years. To cover it partially the rates of freight in the India/U.K.-Continent Service were raised by 10 per cent. in March last year. For certain items like wages, stevedoring, ship-repairs, etc., the upward trend of costs still continues. Due to the very high prices of new ships the incidence of insurance and depreciation charges in respect of additions to fleet has become very heavy. Many Overseas Conferences have, therefore, decided to increase the rates further. In the case of India/U.K.-Continent Service freight rates have been increased by 10 per cent. with effect from 15th March 1957.

The Suez Crisis

"The situation brought about by rising costs was further aggravated by the closure of the Suez Canal from 1st November 1956. To cover additional costs due to the longer route via the Cape of Good Hope a 15 per cent. surcharge on freight rates was introduced by the Shipping Conferences hitherto operating through the Suez Canal. The Suez situation has also led to a very steep rise in the prices of fuel oil which are now about 60 per cent. higher than the prices a year ago. The result has been that in the case of India/U.K.-Continent trade the surcharge has been increased to 17½ per cent. with effect from 1st February 1957. In addition, the lengthening of the route between Europe and India by over 4,000 miles, on account of the closure of the Canal, has accentuated the general shortage of shipping created by a substantial increase in the demand for movement of bulk commodities, like coal and grains, between far-flung countries. We are fully alive to the fact that the Suez crisis has had serious repercussions on our seaborne foreign trade, especially in regard to our imports essential for the execution of various projects under the second Plan. We are, therefore, anxious to see that the Canal is reopened for traffic as early as possible with an assurance of its maintenance in good navigable condition.

Shipping Under Second Five-year Plan

"Prices of ships have risen beyond all expectations. The price of a 'Liberty,' which is an index to the market for second-hand tonnage, rose from about Rs. 24 lakhs at the end of 1953 to an all-time high of over Rs. 89 lakhs in December 1956. During the last three years the prices for new construction have increased by over 28 per cent. The order books of shipyards are so full that deliveries are available only after 1961 or 1962. Moreover, due to continuous rise in the costs of steel, equipment and labour, it has become impossible for the yards to quote a fixed price or even a price subject to a ceiling on escalation. There is no knowing what the ultimate price of a ship may work out to.

"In this context the provision of Rs. 37 crores made for shipping under the second Plan, which was insufficient *ab initio*, has fallen considerably short of the amount required for attaining the target of 9 lakhs g.r.t. at the end of the Plan period. The target of 9 lakhs g.r.t. for the country's requirements is on a very modest scale —in fact, I should say, it is inadequate, but I do not wish to deal with this aspect of the Plan on this occasion. With the provision of Rs. 37 crores it has been possible to place orders for about 1,75,000 g.r.t. only, bringing the total to about 7,75,000 g.r.t. only.

"It is now understood that no more provision will be made for shipping, on account of the very tight foreign exchange position of the country. Actually, an Indian vessel in the overseas trade contributes to our foreign exchange pool in two ways—(*a*) by *earning* freight in foreign currency and (*b*) by *saving* foreign exchange required (i) to pay freight on our imports carried by a foreign ship and (ii) for remittances of freight earned in rupees by a foreign shipowner on our exports. Such contribution amounts to nearly 55 per cent. of the overseas freight earnings. The Indian ships now engaged in overseas trades earn and save foreign exchange for the country to the tune of Rs. 7 to Rs. 8 crores and it will go up to about Rs. 12 crores when all ships on order at the end of the first Plan are delivered. The foreign exchange spent in acquiring an additional ship would be fully recouped in five to seven years out of her own contributions to the pool. To reach the target of 9 lakhs g.r.t. a further sum of about Rs. 40 crores will be required. Not only will it be repaid during the next five to seven years but the additional ships will contribute to the pool about Rs. 7 to Rs. 8 crores every year. The contribution of shipping to the foreign exchange resources of the country will then rise to about Rs. 19 to Rs. 20 crores by the end of the Plan period.

"Since the provision of Rs. 37 crores has been fully availed of during the first nine months of the Plan period, the allotment for shipping would have to be increased by about Rs. 40 crores to finance at least the balance of the tonnage required to reach the modest target of 9 lakhs g.r.t. by March 1961. This question deserves the most urgent attention, because if additional tonnage is to be procured by the end of the Plan period or even within a reasonable time thereafter, shipowners would have to start planning their requirements and place orders for ships *right now*.

"The foreign exchange position at present is difficult and priorities have to be given to essential requirements. I realise this and that is why I have tried to show how shipping can play an important part in earning and saving foreign exchange for the country. It is for the Government to decide what priority shipping can get. I would like to suggest that it should be as high as possible.

Rail-sea Co-ordination

"As I informed you last year, the proposal of the Coastal Conference to increase the freight rates was referred by Government to the Rail-Sea Co-ordination Committee that was appointed by them in June 1955. During the last year, the Committee ascertained the actual costs of operation by examining the accounts of coastal companies. The Coastal Conference submitted several memoranda to the Committee dealing with the determination of economic freight rates and the overall problem of rail-sea co-ordination.

"Even more important than the present costs of operation, however, is the continuous rising spiral of costs. Past experience bears testimony to this fact. While the costs have been increasing since 1951, freight rates have practically remained stationary barring small interim increases allowed in October 1955 and May 1956. These increases have been not only very inadequate but extremely slow in coming. This time lag by itself is costly. Shipping, unlike other industries, has not been able to offset increasing costs by raising, *within a reasonable time lag*, the prices for the transport service it renders. While some delay in granting increases in freight is inevitable under the regulatory system in which coastal shipping operates, the time lag of nearly two years since the Coastal Conference's first request in April 1955 for increase in rates cannot be viewed with equanimity by the shipowners. The effects of such delays can only undermine their financial position and detrimentally affect the expansion of coastal tonnage that is so essential. The time lag problem can be solved only if the Government and the public recognise that it is essential for the regulated utilities, like other business enterprises, to make appropriate and timely price adjustments.

"In connection with the main question of fixation of economic rates of freight, I would like to repeat the request of the Coastal Conference to the Committee that, besides the present costs of operation, provision will have to be made for the anticipated increase in these costs over a period of time, for the creation of a rehabilitation reserve, besides normal depreciation, and for a fair and an equitable return on capital employed in coastal shipping. The basis urged by the Coastal Conference follows the principles accepted by the Tariff Commission for the cement, steel and other industries. In the present circumstances, I venture to think that the shipping industry is pre-eminently entitled to similar treatment.

Biggest Bottleneck

"As the Second Plan progresses transport will be the biggest bottleneck. Shipping should be utilised as fully as possible to help solve this problem. It is, therefore, obvious that rail-sea co-ordination must hinge on the diversion of bulk cargoes for movement from rail to sea. Of the bulk cargoes which can be diverted, coal and salt are the most important, followed by grains, cement and fertilizers. The present opportunity should be taken to define on a permanent basis the fields of transport by rail and transport by sea.

"It is expected that at least five million tons of dry cargo will have to be moved by the coastal sea routes by the end of the Plan period. It will be necessary to expand coastal tonnage fully to the target of about four lakhs tons gross fixed by the Planning Commission. This means that, even without allowing for replacement of old ships, about 1,60,000 tons will have to be added to the present coastal tonnage. This will not be possible unless co-ordination of transport is based on the economic survival of coastal shipping and its progressive development on a permanent basis. Government have already accepted, as a matter of policy, that coastal shipping should be developed adequately and on sound lines in the larger and long-term interests of the country. I, therefore, hope that they will seriously consider these aspects of the problem in arriving at their decisions on the recommendations of the Committee.

"I shall now make a brief survey of our operations during the year.

Accounts

"Last year, I had informed you that the working during the year 1955-56 should be reasonably satisfactory compared with the previous year. I am happy—and, I am sure, so are all of you—that our expectations have been realised so far as the year's working results are concerned. Our gross earnings of freight have shown an increase of about 18 per cent. over the previous year. Owing to the lack of any substantial exports of rice from Burma to India and Ceylon, it was not necessary to charter any ships with the result that comparatively lesser tonnage was employed in uneconomic or less profitable operations in the coastal and adjacent trades. We were also able to employ more owned tonnage in the India/U.K.-Continent trade where freight rates are more realistic. Another reason for the improved results was that the 10 per cent. increase in overseas rates made in February 1955 was effective throughout the financial year. The rising charter-market was yet another factor which helped us secure better rates for the carriage of bulk cargoes like ores.

"The improved results have enabled your Company, in spite of enhanced costs of operation, to pay a dividend of Re. 1 per share and to augment our resources, with a view to meeting our obligations in the coming years. You will notice that, after writing off debenture issue expenses of Rs. 19.76 lakhs, we have added Rs. 67 lakhs to special depreciation reserve and have again created a dividend equalisation reserve of Rs. 13 lakhs. Consequent upon modernisation of our fleet with the addition of several new ships, our repairs expenditure will be lower in the earlier years of the life of a ship. In order that the incidence of repairs expenditure may be spread, more or less, evenly over a ship's life, we have considered it advisable to reinforce the annual and special survey reserve. With the addition of Rs. 20 lakhs this year it now stands at Rs. 40 lakhs. Our reserves and surplus in the aggregate, after writing off the loss of Rs. 31.98 lakhs on investments from investment reserve, show a net increase of about Rs. 107 lakhs over the corresponding figure at the end of the previous year. These additions have enabled the Company to strengthen its finances and these will be necessary for the modernisation and expansion of our fleet.

"Our Managing Agency of The Eastern Shipping Corporation Ltd. came to an end on 15th August 1956, because of the provision in the new Companies Act to the effect that a company which has managing agents of its own cannot continue to function beyond that date as the managing agents of another company. Government have consequently agreed, at our request, to take over the shares held by us in the Corporation amounting to Rs. 1.43 crores at par. This entire sum is expected to be received during our current financial year. I wish to recall here that one of the reasons for our accepting the Managing Agency of the Corporation was to see the flag of Indian shipping flying in the distant seas. The measure of success achieved can be seen from the fact that the Corporation now operates cargo services on the important trade routes between India and Japan, and India and Australia, and passenger services between India and Malaya, and India and East Africa. Though the operation of the new Companies Act has severed our connection with the Corporation, it will always be a pleasure for us to work in co-operation with them in future. It is a matter of great satisfaction that the cordial relations between the two Companies have been maintained throughout and, I have no doubt, will continue.

"With regard to our holding of Rs. 1,04,25,000 in the share capital of Hindustan Shipyard Private Ltd., I regret to inform you that Government have turned down our request to repay this amount to us. The release of this amount, on which we earn no return at all, has become vital for our needs, as it would assist us in meeting the cost of further expansion of our tonnage. We shall, therefore, continue our efforts to induce Government to take over our interest in the Visakhapatnam Shipyard.

Coastal and Adjacent Trades

"I informed you last year that a meagre interim increase of 5 per cent. in coal and general cargo rates on the Coast was permitted with effect from 15th October 1955. An additional interim increase of 15 per cent. was requested by the Coastal Conference, but only a 5 per cent. increase on general cargo rates was allowed effective from May 1956. As these increases were operative during only a part of our financial year, they made negligible difference to the average rate of freight earned. Pending the outcome of the Rail-Sea Co-ordination Committee's inquiry, the low rate structure on the Coast continues. With regard to the carriage of bulk salt, however, the Conference has reached an agreement with the Salt Manufacturers' Association on charter-party terms and rate of freight.

"During the year the Government of India did not import any rice from Burma. We, however, carried a few shiploads of rice from Burma to Ceylon. From June 1956 onwards Government have started importing rice from Burma, and the Indian companies, including ourselves, have given the necessary freight cover. While the terms of the contract are on the whole satisfactory, we have been allotted a quota of only 43.5 per cent. under the current contract, which we have accepted without prejudice to our legitimate claims.

Overseas Trades

"The working of our India/U.K.-Continent Service has been better this year, because four additional ships were available for employment during the year and better rates of freight were earned.

"Pursuant to the trade agreement concluded between India and the U.S.S.R., with a bilateral clause for shipping services, we started a service between the two countries. We have placed two ships on this service, which commenced in July 1956.

"We also started in August 1956 a direct service from India to the West Coast of Africa (Nigeria, Gold Coast, etc.) via Mauritius. This is the first direct service to these countries from major Indian ports, except Calcutta. We feel justified in hoping that this new service will assist in stimulating Indian exports to these countries. This service has been linked up with our Indo-Russian service, enabling us thereby to participate in the cross trade between the West African ports and the Mediterranean ports, especially the Italian ports.

"We have applied again for membership of the Conferences governing the trade from the U.K. to Colombo and from Colombo to the U.K. and the Continent. I think Indian lines have a stronger case for admission to these Conferences, in view of our historical, geographical, economic and cultural ties with Ceylon. I trust that the legitimate case of Indian Lines will receive the attention it deserves.

Port Conditions

"Though our ships suffered berthing delays at some ports, I am happy to say that the Port Authorities have spared no efforts to give better despatch to shipping. At Bombay, the introduction of piece-rate system of payment to stevedoring labour has resulted in improvement in the handling of cargo, though delays still occur at other points in the 'assembly line', e.g., supply of wagons, removal of cargo from sheds, etc. It is hoped that the contemplated introduction of the piece-rate system at Calcutta and Madras will not be delayed any longer.

"I should like to point out, however, that since the beginning of the current financial year the position in regard to loading of colliers at Calcutta has considerably worsened, the main reasons being the shortage of coal wagons and the lack of co-ordination between various authorities. During the last eight months the shipping companies have been vigorously pursuing this matter with the authorities concerned, but unfortunately no abiding improvement has occurred so far and ships still lose vitally important days in port.

"This brings me to the very vital question of expanding the capacity of our major ports in terms of berths, handling equipment, transit sheds, wagon supply, pilotage, facilities for night navigation, etc. This is an absolute *must*, if the implementation of the second Five-year Plan is not to suffer from any failure to cope effectively with the far larger quantities of coastal and overseas cargoes that will have to be handled during this period. The shipping companies have provided faster and more efficient ships and would like to continue to do so. But the advantages of such ships, which have been or will be acquired at high cost, cannot be fully reaped unless, correspondingly, they get quick despatch at loading and discharging ports. I wish, therefore, to urge to the authorities that the port development schemes should be executed with the utmost despatch.

Tonnage Programme

"We have now a fleet of 41 vessels amounting to 2,15,435 tons gross. Out of these, 14 big cargo ships, three small cargo ships and four small passenger-*cum*-cargo ships of 1,01,372 tons gross in the aggregate serve the coastal and adjacent trades. The remaining 20 vessels of 1,14,063 tons gross are employed in our overseas services.

"The deliveries of our four ships under construction at the Lubeck Yard in West Germany have been delayed, owing to about four months' labour strike. One of them will now be delivered at the end of this month and the remaining three in June, July and August next. The two ships under construction at Visakhapatnam also will be delivered towards the end of the year. All these ships will be employed on the overseas services. The average age of our entire fleet will then be about nine years.

"In order to have a satisfactory fleet position, a continuous process of modernisation through disposal of old vessels and their replacement with fast and modern ships is necessary. During the next six to seven years, about twelve to fourteen of our vessels will normally be due for replacement. It has become more necessary now to have faster ships to serve the growing requirements of the trades in which we are interested and such other trades as we may decide to enter on a liner or tramping basis. Several other liner companies operating in the India/U.K.-Continent trade have planned to build ships with a speed of 17 to 20 knots.

"Your Board after careful consideration decided that I should discuss the matter with the shipyards on the Continent before placing further orders. Accordingly, last September we have placed with the Lubeck Yard an order for two 9,300-d.w. ton cargo vessels with a speed of 17 knots. These ships can be operated also as closed-shelter deckers with a deadweight capacity of 12,300 tons. One of them is expected to be delivered in 1959 and the other in 1960. The escalation clause in respect of these ships is not subject to a ceiling.

"I shall now endeavour to assess the position with regard to our operations during the year 1956-57. The freight increases made last year in the coastal and overseas trades, to which I have already referred, will be effective for the whole year. On the expenditure side, the upward trend of costs continues. Especially, the prices of fuel oil have soared to about 60 per cent. more than they were about a year ago. Our colliers have suffered serious delays at Calcutta. We, however, expect to earn more freight because two additional ships, the m.v. *Jalavijaya* and the m.v. *Jalavishnu*, will have been in commission for the whole year and two more ships, the m.v. *Jaladhan* and the m.v. *Jaladhruv*, will have operated for about eight months each. We should, therefore, be able to show satisfactory results Government for their approval."

Managing Agency

"As mentioned in the Directors' report, the Agency Agreement with Messrs. Narottam Morarjee & Co. has expired and the new scheme for managing agency is being formulated. It will take some time yet to complete it. As soon as the requisite drafts are approved by the Board, it will be placed before the shareholders and the Government for their approval."

MERCANTILE BANK OF INDIA

(*Concluded from page 582*)

Consumption demand has increased both internally and also for exports, particularly to South-East Asia and North America. The closure of the Suez Canal has undoubtedly contributed to some extent to the boom that Japan is now enjoying.

"In December, the Hatoyama Cabinet resigned and Mr. Tanzan Ishibashi was elected Party President and Prime Minister. The new Prime Minister is a man of considerable knowledge and experience of economic matters and it seems probable that there will be needed adjustments in Japan's taxation laws and probably closer trading relations with China.

"It is good to report that Japan was admitted to the United Nations in December 1956. The ratification on 12th December of the joint declaration between Soviet Russia and Japan re-established diplomatic relations between those two countries and virtually ended the state of war which had existed for over 11 years.

"There is every reason to believe that, given normal conditions, the present era of prosperity for Japan should continue throughout the coming year.

Shanghai

"Further substantial progress has been made towards the final settlement of our affairs in Shanghai. An agreement was entered into with the Chinese Government authorities, whereby we relinquished to them our valuable local assets against the assumption of responsibility by them for settlement of all our local currency liabilities in China, as assessed against us by that Government. A further agreement was entered into with the same authorities for agreeing and settling the amount of our Shanghai branch foreign currency liabilities. These latter included a substantial amount of U.S. dollars held blocked under American legislation and after protracted negotiations, and through the good offices and assistance of H.B.M.'s Embassy in Washington, a licence was obtained from the American Treasury Department under which settlement was effected by us in sterling. This materially aided in obtaining the repatriation from China of Mr. D. A. Smith, our Shanghai Manager and last British employee in China.

"It was a part of the agreement that, on receipt of the foreign currency payment from us after the departure of Mr. Smith, steps would be taken to close our books in Shanghai by effecting payments where possible and transfer of the remaining liabilities to the books of a Chinese bank. We regret that, despite the lapse of many months, no progress has yet been made in fulfilling this undertaking. We trust the Chinese authorities will now give the necessary instructions to expedite a final settlement.

"During the year, agencies of the Bank were opened in the Pettah, Colombo, and in Temerloh, Pahang, Federation of Malaya.

"During the year, our numerous branches and agencies throughout South-East Asia and the Far East continued to render efficient services in every department of banking to a wide variety of industry, trade and commerce. Our thanks are due to our large staff, British and Asian, for their good work. I must also express our thanks to Mr. Drake our Chief Manager, Mr. Hawkins our Deputy Chief Manager, and to the Managers and staff in London."

SPENCER AND COMPANY LIMITED

MR. Z. R. IRANI'S SPEECH AT ANNUAL GENERAL MEETING

THE Fifty-ninth Ordinary General Meeting of the ordinary shareholders of Messrs. Spencer and Company Ltd. was held at the registered office of the Company in Madras. Addressing the shareholders on the occasion, Mr. Z. R. Irani, Acting Chairman of the Company, disclosed that the Company proposed to fill up the ground lost in import business by a shift to industrial activity which was likely to continue in greater measure in the coming years.

The following is the full text of Mr. Irani's speech:

"GENTLEMEN,

"I very much regret that Mr. Edwards cannot be with us today as he is on home leave. In his absence, my colleagues have appointed me to the proud and privileged position of taking the chair and I welcome you most cordially to the fifty-ninth annual general meeting of the Company.

"You will observe from the published accounts that there have been considerable changes in their presentation. Much time has been taken in re-analysing heads so as to conform with the provisions of the Companies Act 1956 and the result is a more voluminous document. It has, however, not been possible to show comparative figures for the year under review and the previous year since to have analysed the previous year's figures would have taken more time than could be afforded. Although the compiling of the accounts has led to a delay in the holding of our present meeting, the pattern having been established, I have no doubt that future annual meetings will be held earlier in each year.

Profit Margin Slightly Lower

"There is little comment I can make on the accounts, as they give full information and present satisfactory reading. Trading has been consistent, though profit margins slightly lower than previously. I shall be happy later to answer, to the best of my ability, any questions that you put.

"The Board has had to bid farewell recently to Messrs. J. Grieveson, S. J. Knights and H. B. Toothill. I would like here to pay a tribute to their loyal and valuable services to which, in fact, the Company's present financial position is in no small measure due. I am sure you will join with me in placing on record our appreciation of their help and wise counsel during the many years that they have been associated with the Company and to wish them every success in their new spheres of activity.

"Imported lines have always constituted a considerable part of the business of the Company, but of late years we have had to reconcile ourselves to a steady tapering off in this activity of ours. This is a sacrifice which in common with other importing concerns we have had to make in the national interest. The successful implementation of the two Five-year Plans have made it imperative that the country conserve its foreign exchange resources. These have been considerably depleted; exports, which are current exchange earners, have nearly always been smaller than the size of the payments that have had to be made for imports. Capital goods naturally have precedence and consumer goods from abroad have been allowed to come in steadily shrinking volumes, because there have been larger gaping deficits in our foreign exchange budgets.

"For the first Five-year Plan, a total foreign exchange deficit of about Rs. 700 crores was estimated; the actual deficit was even higher. For the Second Plan an average annual deficit of about Rs. 200 crores is anticipated. The axe naturally will fall heavily on consumer goods; even capital goods will not escape and, in fact, an order of priority has been introduced, first for capital goods required to maintain economy at present levels with those required for development schemes only ranking after. India's sterling reserves have been used up to an extent that the balance is just a little more than is required and must be preserved for the country's currency backing. In these circumstances, even the automatic basic two-year quota of £750 allowed unconditionally to each person going abroad has had to be withdrawn. Higher import duties have been imposed with a view to discouraging imported goods by making them costlier to the consumer; nevertheless, indigenous displacement of the vacuum is even now not of the same standard of quality or consumer preference as the foreign goods imported formerly.

"In such a situation, the Company is having to fill up the ground lost in import business by a shift to industrial activity, a trend which is likely to continue in greater measure in the coming years.

Outlook Not Discouraging

"It is not for us to criticise the Plan schemes as a little too optimistic and somewhat too ambitious for the country's rated optimum capacity. But the private sector has to keep on adjusting itself to national policies which create conditions where traditional and established business has to be conducted in the manner possible under Governmental policies. The outlook, is, however, not by any means discouraging. The Plans are creating more purchasing power. Theorists may say that present conditions may lead to a depression in business which may act as a corrective to the transitional maladjustment. In a controlled economy, however, trade cycles of booms and depressions do not have natural play; artificial stabilising factors, such as monetary policy, production-*cum*-import policy, etc., absorb many of the shocks, with the result that a violent disturbance of the normal economy is avoided, but controls to be effective must be imposed from every angle and direction, and not just one or two, thus making the economy one of severe regimentation—a state of affairs to be shunned by all who have the free commercial instinct, inherent in every one of us.

"Strictly speaking, all commodities emanate from the good earth and an analysis of their costs, whatever the nature of the commodity, whether raw produce, machinery or manufactured articles, will show that the value of the material content is negligible and, therefore, costs can be said to comprise cumulative stages of wages and remuneration for capital employed. An increase in the standard of wages will necessarily increase costs and it can be argued in theory that increased wages produce increased purchasing power and that the consequent rise in production absorbs the increased wages leaving costs reasonably constant. I don't wish to digress into a treatise on economics, but, briefly, in practice, what apparently evolves is the reverse in that costs rise in an ever mounting spiral. We are in this process today and I know of nothing to cause the spiral to topple save the impact of a trade depression. I sincerely hope and trust that the country is not heading for this with its attendant ills of wage cuts and unemployment and I have every right to believe that our able administrators will watch for and prevent such a circumstance arising.

Activities to be Extended

"I have no doubt that you are desirous of knowing what effect the impact of current import restrictions will have on our trading. It is fortunate that the Company has other irons in the fire and has the means of promoting other interests. Whilst the pattern of our activities will always include import trade as a major one, you may rest assured that your Board is studiously probing and pursuing openings which will be of benefit to the country and the Company. I am not at liberty at this stage to tell you much about our endeavours, but I am reasonably sure of giving you good news in fuller detail when we meet next year.

"Before I conclude, I must express our thanks to all grades of our staff for their loyal endeavours which have resulted in the satisfactory position now before you."

The balance-sheet as at 30th June 1956 was unanimously approved and adopted. A further and final dividend of 10 per cent., free of income-tax, on the ordinary shares, as recommended by the Directors, was declared, making in all a total dividend of 15 per cent., free of income-tax, for the year.

Note.—This does not purport to be a record of the proceedings of the Annual General Meeting which will be sent separately to shareholders.

THE BANK OF BARODA, LIMITED—*(Continued)*

Profit and Loss Account for the year ended 31st December, 1956.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Bank of Baroda, Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns of 12 Branches audited by us, 6 Branches audited by other auditors and the unaudited returns from other Branches not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

AHMEDABAD ELECTRICITY COMPANY, LIMITED

MR. K. G. MILNE'S SPEECH AT ANNUAL GENERAL MEETING

GOVERNMENT SHOULD DESIGN POLICIES SO AS TO CARRY BUSINESS PEOPLE WITH IT

ADDRESSING the shareholders of The Ahmedabad Electricity Company, Ltd., at their Annual General Meeting held in Bombay on 18th March 1957, Mr. K. G. Milne, Chairman of the Company, said that the Government, in raising the extra taxes needed to finance its development projects, would appear to be anxious to carry the people with it. These tasks, according to him, together dwarf in comparison with those which the myriads of ordinary business men had to perform all over the country and in countless different spheres if real overall progress was to be made. He was, therefore, of the view that the Government should evolve policies designed to carry the business people with it to a greater extent if all the people were to flourish.

The following is the full text of Mr. Milne's speech:

"GENTLEMEN,

"I would like to refer first of all to the resignations of Sir Purshotamdas Thakurdas and Mr. Ambalal Sarabhai from your Board of Directors during the year. Since the Company's inception 44 years ago, Sir Purshotamdas Thakurdas has given it his invaluable guidance. So too Mr. Ambalal Sarabhai, with 38 years of active membership on your Board, has been prominent in furtherance of the Company's well-being. With their intimate knowledge of affairs, and of the city of Ahmedabad, they have each rendered untold services to this Company, and I am sure you will wish to associate yourselves with the resolutions which were passed by the Board expressing their high appreciation.

"The health of a controlled industry like electric supply is greatly dependent on the regulatory climate in which it functions. We have the Electricity (Supply) Act, 1948, modified by the Electricity (Supply) Amendment Act, 1956, as our chief weather-maker on the stormy shores of the general economy. Shareholders must be anxious to know how far the changes brought about by the 1956 Amendment Act are likely to affect the Company and its equity, and I will, therefore, attempt an analysis.

Standard Rate of Return

"First, the standard rate of return permitted to the industry will become linked to the Bank rate as from 1st April 1957, making at present levels 5½ per cent., instead of the previous fixed figure of 5 per cent. Internal financing has also received a slight fillip from the provision that tax savings accruing from the development rebate allowed under the Finance Act are to be taken to a development reserve, subject to the earnings of the year not thereby being made to fall short of the reasonable return. The Company will be allowed one half of 1 per cent. on the annual balances in the development reserve as a sort of handling charge or risk money, though no other direct benefit will accrue to shareholders as the reserve is to be excluded from the capital base.

"Against these two gains by the industry must be set off the disallowance of interest on loan and debenture capital as an item of expenditure in arriving at the clear profit, evidently on the ground that the industry could always obtain a return on such moneys through the inclusion of the value of the counterpart assets in the capital base. It is evident, in the final result, that the increase in the standard rate will not compensate fully for the resultant drop in the permissible profit in the case of your Company, as approximately one-fifth of the capital is in the form of debentures.

"However, as things now stand, we may reasonably expect to be able to maintain a dividend of 6½ per cent. or thereabouts. The big question is, whether this is going to be enough to restore, in the present climate for investment, the confidence and incentive to the investor which have been so rudely shaken of recent times. The answer to this question, in its widest context, is really vital to India as well as to us.

"It is certain that our Government must have prominent before it the problem of carrying the people with it in the raising of extra taxes needed to finance all those tasks it has set itself—river valley projects, steel works, the expansion of the railways and the like. It seems to me, however, that all these tasks together dwarf in comparison to those which the myriads of ordinary business men have to perform all over the country and in countless different spheres, if real overall progress is to be made. It is a flashing danger sign if finance for worthwhile, and even for essential, projects threatens to dry up in what we may truly call the 'people's sector.'

"In the case of electricity, some 50 per cent. is still produced, and 75 per cent. distributed, by commercial undertakings in this country. It is an absolutely basic commodity whose increase all agree is a 'must' for progress. There is really no argument about it. Yet you know that the shares of our Company—the largest and one of the most rapidly expanding single producers of electricity in the State—have been actually standing at a considerable discount most of this year, all because of over-severe controls.

"It will be agreed that under such circumstances, we would hardly have been in a suitable position to raise more finance to promote expansion or development. Yet electric supply undertakings have normally a certain stability and position of their own; and others are usually worse placed than us, rather than better. Surely, therefore, the Government will have to evolve policies designed to carry the business people with it to a greater extent if all the people are to flourish.

Provision for Automatic Adjustment

"It seems for these reasons especially unfortunate that Parliament's estimable attempt to encourage the investor in our industry, by making a provision for 'automatic adjustment' of the standard rate of return to follow fluctuations in the money market, has apparently been almost instantly frustrated by executive action. Hardly had the ink used in the new legislation dried, when the announcement by the Reserve Bank came to the effect that, as from 1st February 1957, the rate of interest on advances to Scheduled banks against Government and other eligible securities had been raised to 4 per cent., while, at the same time, the official Bank rate was unchanged at 3½ per cent. For the electricity industry, this announcement came as a bolt from the blue, for, unless upon pressure of circumstances the Bank rate itself is officially raised to line up with the Reserve Bank's lending rate for advances to Scheduled banks, we are again caught by the necessity to plead for Parliamentary enactment so as to keep in line with the changes in the value of money.

"The industry has quickly reacted and approached the authorities for action, if necessary by an ordinance. It has been pointed out that the World Bank rate of lending against mortgage debentures carrying the unconditional guarantee of the Government of India, is now a minimum 5½ per cent., the same as is now available to our industry to cover any fresh equity investment. This is clearly absurd.

"It may be added that there is still no solution in sight to the discouraging effect of the knowledge that the more rapidly you succeed in expanding electrical supply, the more likely the shareholders are to lose, or continue to be denied, their right to have their dividends credited as income-tax paid.

"Reverting to the Electricity (Supply) Amendment Act, I will not try to decode many of the intricacies covering the wide field of regulation and powers and duties of State Electricity Boards that need not normally affect you. I will, however, refer to a few more points.

Deferred Tax Liability

"First, although the Act still makes no provision for meeting the deferred tax liability arising out of diverse depreciation provisions in the Electricity (Supply) Act and the Income-tax Act, the Government is reported to be sympathetically disposed to introducing a clause to cover this need, if a suitable formula can be found. In fact, a clause permitting appropriation towards a deferred taxation reserve was drafted by the Select Committee when considering the Amending Act. As worded, however, the clause would actually have caused considerable embarrassment to most undertakings, and at the industry's request it was dropped for the time being. The Federation of Electricity Undertakings of India is now in correspondence with the Government on a revised wording which, it is hoped, will satisfactorily cover all aspects of this problem.

"Another amendment of major importance and interest to you concerns the question of our freedom to adjust our rates for supply to consumers. The 1956 Act has made it clear beyond doubt that the licensee has the right to adjust his rates within the framework of the Act, including where necessary an enhancement of rates. With this has come to rest an unfortunate legal controversy which had developed, causing much confusion and loss. You will remember how a Rating Committee was formed in the case of your Company in June 1954, when we did not understand how we could have been said to have breached the law. You are not likely to forget the subsequent impasse we had to contend with and which resulted in our being denied a very necessary rate increase for about 18 months, at a cost of about Rs. 25 lakhs in revenue, necessitating one reduction of the dividend and significant withdrawals from our hard won reserves! This was a by-product of the defect in the law which the amending Act has now set right. Hereafter a licensee must be served with a 'show cause' notice, and the authorities must await the results of arbitration before the Central Electricity Authority in respect of any disputes raised, before there can be any question of appointing a Rating Committee. It is a notable step forward that the law now appears to ensure that the penalty of a Rating Committee cannot be inflicted on licensees hereafter without fully adequate cause.

Finance (No. 3) Act

"We have recently been threatened with the effects of some other legislation conflicting with the mandatory provisions of the Electricity (Supply) Act; to our detriment once again. This is the Finance (No. 3) Act, with its provisions for compulsory deposit with the Reserve Bank in respect of depreciation allowances given under section 10(2) of the Income-tax Act. Under the provisions of the Electricity (Supply) Act, we are not even permitted to earn equivalent allowances. We are hopeful that, in this instance at least, the rules which are now under consideration by the Central Board of Revenue will recognise the fact that the Electricity (Supply) Act has already made its own provisions towards an identical end, namely, the investment of depreciation allowances in the business or in Government securities, and that, consequently, the industry will be exempted from the operation of the relevant part of Finance No. 3 Act.

"I have been at some pains to point out that the difficulties incidental to dearer money, problems arising out of deferred tax, and denial of tax concessions, are of even more than usual importance to companies such as yours which have statutory as well as moral responsibilities for large-scale expansion in the national interest. By the very nature of its franchise, an electric supply undertaking must continue to expand, and it will certainly repercuss adversely on the country's economy, if such undertakings have to function in the twilight region between viability and subsistence. The legislative intent having been firmly expressed in the Electricity (Supply) Amendment Act, 1956, for a return which should provide 'automatic adjustment with variations in the money market,' it will certainly be a miscarriage of justice, to say the least, if the industry is to be condemned to a further life of hand-to-mouth existence. I have laboured this point especially because your Company, charged with the task of making power available to the industries and citizens of the progressive and expanding Ahmedabad region, has to look forward to greater achievements; and political misunderstandings or legislative lethargy cannot but impede development.

"With the commissioning towards the end of 1958 of the 15 m.w. turbo alternator set ordered last year, the first half of the Company's 'C' power station will be completed. Future power expansion in Ahmedabad is bound up with the plans of the State Electricity Board for increasing power capacity in their South Gujerat system, possible hydro-generation in the Tapti, Narbada and Mahi river systems, atomic power development, and even the prospect that natural gas might become available. Nevertheless, it is not disputed that with offtake developing at an average of over 10 per cent. annually—a phenomenon which is general to most of the major power systems in the country—the Company must give serious and now urgent consideration to plans for completion of the second half of the 'C' station project, involving the installation of an ultimate 60 m.w. of plant. How best this may be achieved and the manner in which it is to be financed is receiving your Board's earnest consideration.

"The completion of this development should take care of the demand in the Ahmedabad area until about 1965. The answer to what is to happen after that must not be delayed for too long either. A modern plant takes anything up to five years from the stage of planning to commissioning. In line with the past traditions of the Company we have already taken preliminary steps to ensure that the future power needs of our area in the mid 1960's are not prejudiced by lack of timely and co-ordinated thought.

Import of Heavy Electrical Plant

"The import licence having already been received for the 15 m.w. plant for completing the first half of 'C' station ordered last year, your Company has so far escaped the import restrictions following the recent foreign exchange crisis. How far this crisis will affect the import of heavy electrical plant and capital goods for future projects in the country, remains to be seen. In the interest of India's proclaimed need for long-term credits for the purpose, however, I do hope that official spokesmen will in future find it rather more possible to display a sense of greater confidence in the business community than they have sometimes done in the past few years. Lack of confidence was never conducive to any kind of credit, least of all cheap credit for long periods; and one could hardly blame overseas lenders, if they tended to assess their potential clients at the valuation of the latter's own Government. Besides, it is the Government itself which has now turned to the business men asking them to obtain the foreign exchange of which the country has run so short.

"Another important requirement is that a method should be found whereby borrowers will not be left with the risk of fluctuations in the rates of exchange; a factor which, in the context of long-term credit, could be much more serious than even a high rate of loan interest.

"It may appear that other things remaining equal, the electricity supply industry, being essential to the general economic uplift of the country, may have reason to hope its requirements of essential plant for power projects will escape drastic import cuts. In fact, the need for the electric supply industry to receive priority consideration in allocation of foreign exchange for import of essential plant has been the subject of a resolution adopted at the All-India Power Engineers' Conference held in Bangalore in January this year.

Coal Deliveries Irregular

"Coming now to local affairs, the operation of your Company's plant during the year continued satisfactorily, while the peak demand for the year, at 110,400 kw., recorded an increase of 10,000 kw. over that of the previous year. Coal deliveries have been rather irregular mainly due to the shortage of rail transport, but the Company's coal agents, through their intensive efforts, have been able to help us maintain stocks at a fairly satisfactory level. The quality of coal received has, however, deteriorated to some extent due to the better qualities of coal being in greater demand.

"The constant efforts of the Company to improve the efficiency of operation are being offset by the rise in the prices of materials, especially of plant and of fuel, so that in the result the cost of production continues to rise. During the past year, we have had to meet an upgrading in the price of coal, which has increased by between Rs. 3 and Rs. 3-8 per ton, together with a rise in freight of one anna in the rupee. It looks as if further rises in the price of coal are to be expected, if the development of this equally essential commodity is not to continue to be thwarted by lack of funds.

"The Indian Electricity Rules, 1956, brought into force from the end of June 1955, have made it obligatory for electric supply undertakings to close their annual accounts as at 31st March. As you know, this Company's accounts were being closed annually as at 30th September and it has now been decided, with the approval of the State Government and the income-tax authorities, that the next closing of the Company's accounts should be for a period of six months ending 31st March 1957. Thereafter, the Company's financial year will be 1st April to 31st March. This will necessitate the compiling of accounts for the short-term period of six months—October 1956 to March 1957—which will entail the calling of a general meeting in November to adopt the accounts and declare a dividend for that period. With three electricity companies under their management, your Agents have drawn up plans to ease the administrative difficulties inherent when all three have a common closing date. These plans envisage the payments of your *ad-interim* and final dividends in future in April and December, respectively.

Field Training Scheme

"The All-India Power Engineers' Conference at Bangalore referred to by me earlier has, in an important resolution, recognised the necessity of imparting field training to different categories of technical personnel. In this direction, your Company has for many years undertaken the training of diploma and graduate apprentices. We have also been sending selected members of the engineering staff abroad for training. At the moment, we have in the U.K. two charge engineers and one assistant mains engineer under training with the Central Electricity Authority. Consideration is also being given to further staff being sent abroad nearer the time when the three engineers now in the U.K. return to India.

"I should also add that the training-within-industry-scheme initiated by the Company a few years back is progressing well. As required by the Government, Unit Production Committees have been constituted in the various departments of the Company, each committee consisting of about six members representing 150 employees. Four of these members are elected representatives of labour and two nominated by management. In general, the functions of these committees are to ensure proper and efficient use of machinery and adoption of precautionary measures, so as to engender safety consciousness against occupational hazards. These committees have worked well during the year under review.

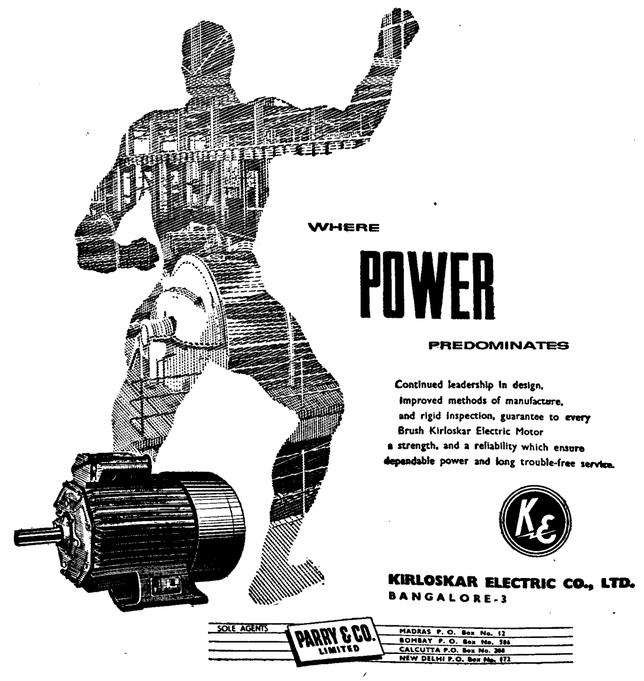
"In keeping with its staff welfare policy, the Sabarmati Primary School, which was in the past run by the local District Board, has now been taken over by the Company for the benefit of employees' children. The present strength of the school is 201 children and six teachers. It is the intention of the Company to add higher classes to this school in the future. The kindergarten school at Sabarmati which was opened in 1955 continues to provide excellent facilities for the younger children of the employees.

Transfer to Reserves

"The accounts, which have been drawn up in conformity with the provisions contained in this behalf in the Companies Act, 1956, are, I believe, fully informative, taken with the explanatory notes appearing on the face of the balance-sheet. You may, however, like some comment from me concerning appropriations with respect to reserves. This is an odd matter. In essence, we took Rs. 8,44,000 from the equalisation of dividends reserve, and put Rs. 9,38,708 to the general reserve. In the result, reserves gained about Rs. 95,000. It all arises from an undertaking which the Company had to give to the Bombay Electricity Board during the negotiations over the 8¾ per cent. surcharge which was made applicable to sales of energy to high tension consumers as from October 1955. As the arrangement will come to an end with the enforcement of the amendments to the Electricity (Supply) Act from 1st April 1957, I trust we will not have cause to bother about it thereafter. The main thing is that against the overall dividend for the year 1954-55 of 5 per cent., it has again been possible to recommend a final dividend of Rs. 4 per share, making 6½ per cent. for the year, and to have something over for reserve.

"It now remains for me to record our appreciation of the services rendered by the Resident General Manager and all ranks of the staff towards achieving the very satisfactory operational results during the year. This Company has always regarded the labourer as worthy of his hire and paid him accordingly—a policy which has been amply justified by the return received from its staff in the shape of loyal and efficient service. From the consumers' point of view it may be borne in mind that they in turn receive their benefits from progressive policies in the form of minimum production costs and, above all, continuity of electric service."

Note.—This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.



SUBSTANTIAL INCREASE IN BENEFITS TO WORKERS

DISCLOSURE BY CENSUS OF MANUFACTURES

A NOTABLE revelation of the Eighth Census of Indian Manufactures for 1953, which has just been published, is that between 1949 and 1953, the wages, salaries and other monetary benefits and privileges to workers employed in factories covered by the Census increased by nearly 24 per cent. During the same period, however, the number of workers witnessed a decline of no less than 57,000. There were substantial increases in other spheres of the factories' activities such as productive capital employed, value of factory materials and fuels consumed, gross ex-factory value of output, etc., but in no case was the increase as marked as that of the total money value of wages, salaries, etc., to workers.

The Census under review for 1953 covered 20 former Indian States in India, but not the State of Jammu and Kashmir, and the former States of Madhya Bharat, Hyderabad, Mysore, Travancore-Cochin, Bhopal, Bilaspur, Manipur, Tripura and the Andaman and Nicobar Islands. The Census was compiled under the Industrial Statistics Act, 1942. For the purpose of the Census, only registered factories which used power and employed 20 or more persons per day were taken into account. Although the industries had been classified under 63 heads, the census had been confined to only 29 of them. The more important among the industries covered were: Cotton, woollen and jute textiles, chemicals, iron and steel, aluminium, copper and brass, general and electrical engineering, cement, glassware, ceramics, plywood and tea chests, paper and paperboards, matches, bicycles, and sewing machines. Though the number of factories existing as on that date was 7,104, as against 6,758 in 1949, returns were not received by the authorities for 10 per cent. of the factories. Thus, the number of factories for which returns had been received stood at 6,470, as against the corresponding number of 6,250 in 1949.

The table given at the foot of the page provides a clear picture of the position of the factories obtaining in 1953. The productive capital invested in the factories, including the fixed and working capital, which stood at Rs. 728.65 crores as at the end of 1953, represented an increase of about 18 per cent. over the level of 1949, when it stood at Rs. 614.53 crores. During the same period, moreover, gross ex-factory value of output went up from Rs. 976.07 crores to Rs. 1,122.78 crores, that is, an increase of about 15 per cent. It is, however, significant that the value of factory materials, fuels, etc., consumed increased by Rs. 85.14 crores, or only 12 per cent. from Rs. 703.38 crores in 1949 to Rs. 788.52 crores during the period under review. A still more interesting feature of this expansion was that, as against the rates of increases witnessed in these two respects, namely, gross ex-factory value and the value of factory materials, fuels, etc., the value added by manufacture spurted by no less than 22.5 per cent. from Rs. 272.69 crores to Rs. 334.25 crores. It may be noted that the "value added by manufacture" represents that part of the value of the product which is created in the factory, and is computed by deducting from the gross ex-factory value of the product the value of fuels, materials, etc., used, work done for the factory by other concerns and depreciation of fixed assets.

A feature which deserves notice is that the total number of persons employed in the factories declined by 57,000 from 1,685,000 in 1949 to 1,628,000 in 1953. As against this, however, the wages, salaries, and money value of other benefits and privileges jumped up from Rs. 177.19 crores to Rs. 205.21 crores, or by no less than 24 per cent. This, obviously, reflects the impact of "welfare" legislation that had been passed by the Government during this period.

The publication which has been issued by the Directorate of Industrial Statistics, Ministry of Commerce and Industry, Calcutta, contains valuable statistical information about the factories in various industries, their capital, employment and output. Further, a separate chapter is devoted in the Report to each of the industries, in which details regarding the number of factories, distribution of ownership and gross receipts, consumption of materials, fuel, power, manufacture of products and by-products and other particulars, have been given.

Provision to repeal the Industrial Statistics Act, 1942, it may be noted, has been incorporated in the Collection of Statistics Act, 1953, which became effective as from 10th November 1956. Under the new Act, the Central Government will be responsible for the collection of data relating to the industries scheduled under the Industries (Development and Regulation) Act.

PRODUCTION OF BASIC CHEMICALS

Encouraged by the record increase in the production of certain basic chemicals, the Government has planned to raise their production nearly fourfold during the period of the second Five-year Plan. These chemicals are soda ash, caustic soda and liquid chlorine.

The production of soda ash is expected to go up to 250,000 or 300,000 tons by 1961 from 77,270 tons in 1955. The output of caustic soda will also increase from 34,250 tons in 1955 to 200,000 tons by the end of the Plan. The increase envisaged in the production of liquid chlorine is, on the other hand, expected to be the largest, being from 14,580 tons to 250,000 tons, during the same period.

It may be noted that adequate supply of heavy chemicals is essential for the establishment and expansion of industries, such as iron and steel, ferro-manganese, paper and paperboard, newsprint, rayon, petroleum, glass and others. Besides, production of these chemicals sufficient to meet domestic demands will obviate the need for heavy imports.

Despite the fact that there are two soda ash factories in the country with a capacity of 90,000 tons, and the production in 1955 was as much as 75,000 tons, no less than 72,000 tons had to be imported during the year. It is proposed to set up two soda ash factories soon. It is noteworthy that one of the proposed factories with a capacity of 200 tons per day will be located at Porbandar. It is also proposed to step up its production to 400 tons per day. Besides setting up another unit using the modified Solvay process, the capacity of one of the existing units will be expanded to 200 tons a day, and developed further to a capacity of 400 tons per day.

Name of the State	No. of factories from which returns were obtained	Productive capital employed (In Rs. lakhs)	No. of persons employed	Salaries, wages and other benefits to employees (In Rs. lakhs)	Value at factory of materials, fuels, etc., consumed* (In Rs. lakhs)	Gross ex-factory value of output (In Rs. lakhs)	Value added by manufacture (In Rs. lakhs)

* Includes value of fuels, lubricants, etc., of basic materials, chemicals, etc., of the work done for factory by other concerns and depreciation.

WORLD INDUSTRIAL PRODUCTION

SLIGHT DECLINE IN THIRD QUARTER

THE index of world industrial production, excluding U.S.S.R., China, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania, stood at 112 (1953=100) in the third quarter of 1956 as compared with 116 in the second quarter. This decline, according to the January 1957 issue of the U.N.'s *Monthly Bulletin of Statistics*, is no greater than that usually occurring during this period of the year. During the first nine months of 1956, as a whole, however, the world level of mining and manufacturing output stood approximately 5 per cent. higher than that of the corresponding period of 1955. But, for most industrial countries, the rate of expansion was found to be somewhat below that of 1955.

The production level in the third quarter of 1956 was 104 per cent. of that of the corresponding quarter of 1955. The latter itself was 110 per cent. of the corresponding level of 1954. The rate of increase was, however, greater in the first two quarters of 1956, being 106 per cent. and 105 per cent. of the output levels of the corresponding quarters of 1955. The data provided in the *Bulletin* indicate that the picture in the first three quarters of 1956 was one of normal increases for most countries with a few countries showing gains of less than normal and Japan alone showing striking increase over the preceding periods. For the fourth quarter, the *Bulletin* predicts that there will be further increases in the United States owing to the production of new model automobiles and the absence of major labour disputes.

In the case of raw materials, though the production during the period under review witnessed increases in a number of commodities over the corresponding period of 1955, the ratios of increases declined in many of the cases except in that of aluminium and lead. Between the third quarters of 1955 and 1956, the index of production of crude petroleum rose from 117 to 127, that of cement from 130 to 141, copper 103 to 116, zinc 112 to 117, lead 100 to 113, aluminium 125 to 127, and electricity 119 to 126. In the case of certain other commodities, however, a decline in output was witnessed. Between the same periods, the index of coal declined from 102 to 101, that of pig iron from 113 to 100, and crude steel from 111 to 100. This fall, however, was attributed chiefly to the decline in the production in the U.S.

During the first nine months of 1956, production of primary non-ferrous metals both within and outside the U.S. continued to increase with the exception of tin. Ferrous metal production, on the other hand, continued to increase in the first nine months of 1956, in the world, excluding the U.S.

Among the various countries where the rate of expansion in the third quarter of 1956 was less than the world average, mention must be made of the U.K., the U.S., Denmark and Sweden. Japan, India, West Germany are countries where the rate exceeded that of the world average.

The following table provides the rates of growth of industrial production in certain important countries in the third quarter of 1956, as compared with the corresponding quarter of 1955 (corresponding period of previous year=100):

	3rd quarter	
	1955	1956
World*	110	104
World excluding U.S.A.	110	106
Europe†	110	105
Austria	112	105‡
Belgium	107	108‡
Canada	110	107
Denmark	101	100
France	108	109
West Germany	114	107
India	111	113‡
Italy	108	108‡
Japan	114	120
Netherlands	107	103
Norway	102	106
Sweden	105	103
U.K.	104	100
U.S.A.	112	101

* Excluding U.S.S.R., China, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania.
† Excluding countries of Eastern Europe noted above.

A TOWER OF STRENGTH in India's Economy
The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.
Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.
The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

MARTIN BURN EARNS BUMPER PROFIT

DISTRIBUTION TO SHAREHOLDERS RAISED

HIGHLY encouraging results are disclosed by the working of Martin Burn Ltd. (Chairman and Governing Director: Mr. T. Leslie Martin, Calcutta) for the year ended 30th September 1956. With the year's gross profit at the bumper level of Rs. 110.44 lakhs, the Company has not only maintained but also improved its previous year's earnings, thereby showing a steady rate of progress. In fact, the rise in profit during the year under review is particularly conspicuous, in that it has enabled the profit to exceed the Rs. 1-crore mark for the first time. The profit for the year represents an increase of Rs. 24.55 lakhs over the profit for the previous year, at Rs. 85.89 lakhs, which, again, was an improvement on the profit two years ago by as much as Rs. 20.16 lakhs. The net profit for the year under review stands at Rs. 46.60 lakhs, as against Rs. 35.73 lakhs for 1954-55. The provision for taxation has been stepped up from Rs. 37.75 lakhs to Rs. 51.50 lakhs and that accounts for the relatively smaller increase in net profit.

Commensurate with the handsome rise in earnings, the distribution to the shareholders has also been stepped up to 21¼ per cent. from 18¾ per cent., to which level it had been raised a year ago from 13¾ per cent. paid consistently for the previous three years. The distribution is in the shape of a dividend of 15 per cent. and a cash bonus of 6¼ per cent. The distribution a year earlier consisted of 15 per cent. dividend and 3¾ per cent. cash bonus. It will thus be seen that, while the dividend part of the distribution has been maintained at the previous year's level, the cash payment has been doubled.

Additions to reserves have also been adequately increased to Rs. 14.17 lakhs from Rs. 11.60 lakhs provided for 1954-55. While the transfer to the capital redemption reserve fund has been maintained at Rs. 2 lakhs, the addition to the general reserve has been raised from Rs. 5.50 lakhs to Rs. 7.50 lakhs, as also the provision for doubtful debts from Rs. 61,163 to Rs. 1.67 lakhs. The provision for contingencies has received Rs. 3 lakhs, as against *nil*.

The following comparative table shows the progress of the Company during the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sale proceeds	8,23.40	5,72.17	5,00.16	4,60.58
Closing stocks and work-in-progress	2,11.00	2,07.09	2,59.28	1,90.01
Other income	1,09.38	99.26	72.79	70.30
Expenses including materials consumed	8,22.34	5,83.74	5,05.42	4,65.90
Gross profit	1,10.44	85.89	65.73	63.17
Managing Directors' remuneration	10.01	9.92	7.42	7.22
Provision for—Depreciation	2.33	2.49	2.29	2.36
Taxation	51.50	37.75	25.00	24.50
Net profit	46.60	35.73	31.02	29.09
Provisions not required written back	0.33			
Div. reserves	14.17	11.60	13.20	11.33
Dividends—6 per cent. preference	1.50	1.50	1.50	1.50
Ordinary	30.59 (D. 15% +B. 6¼%)	24.93 (D. 15% +B. 3¾%)	18.01 (D. 12½% +B. 1¼%)	17.97 (D. 12½% +B. 1¼%)
Carry forward	2.70	2.03	2.52	2.41

It will be seen from the table that sale proceeds have made an appreciable improvement of Rs. 2.51 crores, that is, from Rs. 5.72 crores to Rs. 8.23 crores. If 1952-53 is taken as the base year, this would represent an increase of about 80 per cent. in sales. This has been supplemented by other income which has also advanced by Rs. 10.12 lakhs. These improvements in earnings have, however, been neutralised to a great extent by the sharp increase in expenses which have gone up by Rs. 2.38 crores to Rs. 8.22 crores. But for the increase in expenses, the results of the Company's working would have been even more impressive than they have been.

The Company's paid-up capital stands at Rs. 173.96 lakhs, divided into 1,439,650 ordinary shares of Rs. 10 each and 30,000 five per cent. redeemable preference shares of Rs. 100 each. This represents an increase of Rs. 6.43 lakhs over the year, due to the conversion of convertible notes of the value of Rs. 12.87 lakhs at the rate of 25 ordinary shares for each convertible note of Rs. 500. The surplus arising from such conversion, amounting to Rs. 6.43 lakhs, has gone to strengthen the reserves. The outstanding convertible notes after the above conversion amount to Rs. 12.07 lakhs. The reserves and surplus aggregate Rs. 87.76 lakhs. The current liabilities amounting to Rs. 541.28 lakhs include a provision for taxation at Rs. 148.80 lakhs. The gross block of the value of Rs. 49.24 lakhs, including an addition of Rs. 2.49 lakhs during the year, has been written down to Rs. 35.89 lakhs. This is inclusive of goodwill at cost of Rs. 25.18 lakhs. The current assets amount to Rs. 767.11 lakhs, of which investments in Government securities and shares of companies account for Rs. 173.96 lakhs, stocks, stores and spares for Rs. 120.58 lakhs, work-in-progress for Rs. 121.97 lakhs, debts, deposits and advances for Rs. 317.51 lakhs and cash balances for Rs. 23.65 lakhs. The current assets cover the current liabilities and provision for taxation by a substantial margin of Rs. 225.83 lakhs.

During September 1956, the Directors of the Company offered for subscription 30,000 five per cent. redeemable preference shares of Rs. 100 each at par, being the balance of the unissued preference share capital of the Company. Since the allotment was made after 30th September 1956, the amount received along with applications has been included under current liabilities in the year's balance-sheet.

The Company relinquished the managing agency of the Sone Valley Portland Cement Company Ltd. during the year under review.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 26.6 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 8.76 per cent. per annum, free of income-tax.

HINDUSTAN LEVER LIMITED

A notable event in 1956 was the conversion of Messrs. Lever Brothers (India) Ltd. from a private to a public limited company as from October 1956 under the new title of Hindustan Lever Ltd. As the leading manufacturers of soaps, cosmetics, *vanaspati*, etc., in the country, the new set-up of the Company will mark its distinct contribution to the progress of the country, in general, and that of the Company, in particular. By virtue of the orders of the Bombay High Court, the old Lever Brothers (India) Ltd. was amalgamated with the Hindustan Vanaspati Manufacturing Company Private Ltd., William Gossage and Sons (India) Private Ltd. and Joseph Crosfield and Sons (India) Private Ltd. and the assets of the merged companies were thereby vested in the new Company.

The accounts of Hindustan Lever Limited (Chairman: Mr. A. J. C. Hoskyns-Abrahall, Bombay) for the year ended 31st December 1956 show that the Company's gross profit has advanced by Rs. 44.53 lakhs to Rs. 2.52 crores. The net profit, after providing for depreciation at Rs. 28.32 lakhs, as against Rs. 12.71 lakhs, and taxation at Rs. 119.88 lakhs, as against Rs. 105.29 lakhs, stands higher at Rs. 103.98 lakhs, showing a marked improvement over the previous year's profit at Rs. 89.65 lakhs. After payment of dividend, a sum of Rs. 34.36 lakhs is proposed to be carried forward, as against Rs. 14.65 lakhs brought in.

The Company's dividend for the year comes to Re. 1-4 per share, or 12½ per cent., which is composed of an interim dividend of As. 8 per share which was paid on 1st November 1956 and a proposed final dividend of As. 12 per share, free of income-tax. It may be stated in this context that the original idea of the Directors was to recommend a final dividend of only As. 6 per share. The decision to enhance this to As. 12 per share was due to the fact that the Company's profit had gone up to Rs. 104 lakhs, beyond the original estimated profit of Rs. 90 lakhs, and the Directors do not propose to pay an interim dividend during the coming year.

The Company's sale proceeds during the year under review have more than doubled; that is, from Rs. 12.11 crores they have shot up to Rs. 27.40 crores. The income from other sources, however, has fallen from Rs. 30.16 lakhs to Rs. 14.48 lakhs.

The issued capital of the Company was increased from Rs. 2 crores to Rs. 5.57 crores in October 1956 by the issue to Unilever Ltd. of 2,000,000 fully paid ordinary shares of Rs. 10 each in consideration of the vesting in the Company of the assets of the merged companies and 1,570,000 fully paid ordinary shares of Rs. 10 each by capitalising Rs. 157 lakhs of profits outstanding to the credit of general reserve. Subsequently, by an offer for sale dated 17th November 1956, Unilever Ltd. offered to the public in India 557,000 ordinary shares of Rs. 10 each. This was heavily oversubscribed. Of the 5,570,000 ordinary shares of Rs. 10 each fully paid representing the capital of Rs. 5.57 crores, 2,040,000 were allotted as fully paid up, pursuant to a contract for a consideration other than cash, and 3,290,000 were allotted as fully paid up bonus shares. The reserves and surplus aggregate Rs. 1.98 crores. The current liabilities amount to Rs. 3.41 crores, in which the provision for taxation stands at Rs. 80.84 lakhs. The gross block of the value of Rs. 4.55 crores has been depreciated to Rs. 3.52 crores. The current assets of Rs. 7.45 crores include advances and prepaid expenses amounting to Rs. 36.58 lakhs, deposits with Government and public bodies Rs. 27.52 lakhs, stores and spare parts Rs. 37.45 lakhs, stock-in-trade and raw materials Rs. 3.86 crores, work-in-progress Rs. 47.79 lakhs, sundry debtors considered good Rs. 1.09 crores and cash and bank balances Rs. 97.18 lakhs. The current assets cover the current liabilities and provision for taxation by a wide margin of Rs. 4.04 crores.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 20-8 *cum-div.* (final div. As. 12). On the basis of the year's dividend at 12½ per cent., the yield works out to 6.3 per cent. per annum.

MEN WHO WILL MOULD OUR FUTURE

Our scientists are the pilots of our destiny . . . the men who will chart our industrial progress. And in order to provide them with every equipment and facility, 11 National Laboratories were established in the First Plan. In the second Five Year Plan over Rs. 20 crores will be spent on scientific and industrial research.

In the work of our scientists, as in the training of research students in our universities, paper will play an important part. In laboratories all over the country paper will provide the means of computation and instruction.

CANARA BANK EARNS RECORD PROFIT

DIVIDEND RAISED

THE year 1956 provided an important landmark in the history of the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Bombay), in that the Bank celebrated its golden jubilee during the year. Befitting this happy occasion, the Bank's business recorded an all-round expansion and the profit also staged a notable increase to establish a fresh record in the history of the Bank. The profit, which had consistently been maintaining an upward trend since 1949, with a rise from Rs. 5.58 lakhs in that year to Rs. 10.01 lakhs in 1955, shows a further jump to Rs. 12.31 lakhs in the year under review.

More than 50 per cent. of the year's profit is absorbed by the provision for taxation, which has been raised from Rs. 3.75 lakhs to Rs. 4.60 lakhs, and bonus to staff, for which a sum of Rs. 2.05 lakhs has been utilised, as against Rs. 1.25 lakhs in the previous year. The allocation to reserve fund is unchanged at Rs. 3 lakhs, while the distribution to the shareholders has been stepped up to 15 per cent. from 10 per cent., to which level it had been raised last year from 9 per cent. paid consistently for the preceding 14 years. The increase in dividend for the year under review has been made by paying an interim distribution of 5 per cent. in commemoration of the Bank's golden jubilee.

The progress of the Bank during the past three years is indicated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned	49.54	36.34	30.09	28.17

* Including Golden Jubilee bonus Rs. 65,000.
† Including 5 per cent. interim paid on the occasion of Golden Jubilee.

The impressive rise in income from "interest and discount" to the tune of Rs. 13.20 lakhs and of Rs. 4.21 lakhs in "commission and exchange" reflects, in a large measure, the expansion in business. It is also due in part to the higher rates of interest. The increase in these two main sources of income is supplemented by a rise of Rs. 1.96 lakhs in other income. Such an enlargement in total income has, however, been offset to a substantial extent by the rise of Rs. 9.06 lakhs in interest paid and of Rs. 7.70 lakhs in expenses.

The notable features disclosed by the latest balance-sheet, as compared with that a year ago, are the sizable rise in deposits, a relatively small increase in advances and the strengthening of the investment portfolio. The increase of Rs. 2.37 crores in deposits during 1956 is smaller than that (Rs. 3.04 crores) recorded in the previous year, but this is not surprising in the context of the general shortage of funds during the year. Nevertheless, such an increase has helped the Bank to set up a fresh record in deposits in its history. It is also noteworthy that the Bank has raised its deposits by nearly 50 per cent. in the last four years. A break-up analysis of the deposits shows that fixed deposits have gone up by only Rs. 71 lakhs, against Rs. 1.84 crores noted in 1955, savings bank deposits by Rs. 40 lakhs (Rs. 25 lakhs) and current and other accounts by Rs. 1.26 crores (Rs. 95 lakhs). On the assets side, loans, overdrafts and cash credits show an increase of Rs. 1.23 crores (as against Rs. 83 lakhs in 1955) and bills purchased and discounted Rs. 42 lakhs (as compared with Rs. 93 lakhs in the previous year).

Points From The Chair

Private Sector and State

"IT is not for us to criticise the Plan schemes as a little too optimistic and somewhat too ambitious for the country's rated optimum capacity. But the private sector has to keep on adjusting itself to national policies which create conditions where traditional and established business has to be conducted in the manner possible under Governmental policies. The outlook, however, is not by any means discouraging. The Plans are creating more purchasing power. Theorists may say that present conditions may lead to a depression in business which may act as a corrective to the transitional maladjustment. In a controlled economy, however, trade cycles of booms and depressions do not have natural play; artificial stabilising factors such as monetary policy, production-*cum*-import policy, etc., absorb many of the shocks with the result that a violent disturbance of the normal economy is avoided, but controls to be effective must be imposed from every angle and direction, and not just one or two, thus making the economy one of severe regimentation—a state of affairs to be shunned by all who have the free commercial instinct, inherent in every one of us."

Z. R. IRANI,
Spencer & Co., Ltd.

India and the Second Five-year Plan

"The second Five-year Plan, to which I referred last year, is already rapidly getting under way and is estimated to have a total cost of some 5,300 crores of rupees. Inevitably, this vast project will have repercussions on many aspects of Indian life. Initially, it is almost inevitable that a degree of inflation and high taxation must be anticipated and, indeed, is already taking place. It must be hoped that the ultimate effects of the great production and employment that this Plan is hoped to produce, will justify this great undertaking. Towards the close of the year, some anxiety has been caused regarding the country's economy, following a continued rise in price levels, continued substantial dwindling of foreign exchange resources and the monetary stringency in the banking system. It is unfortunate that at this time the Indian jute trade, which is one of India's principal earners of foreign exchange, is passing through a time of economic crisis and heavy losses. The tea and cotton industries have both had a fairly successful year and, on the whole, labour relations throughout India have been reasonably harmonious."

SIR KENNETH W. MEALING,
Mercantile Bank of India Ltd.

Rail-sea Co-ordination

"In spite of the continuous rising spiral of costs since 1951, freight rates have practically remained stationary, barring small interim increases allowed in October 1955 and May 1956. The question of fixing economic rates has been examined by the Rail-Sea Co-ordination Committee and their report is awaited. I would like to repeat the request of the Coastal Conference to the Committee that freight rates should be so fixed as to leave, after meeting the increased costs of operation and normal depreciation, a reasonable provision for rehabilitation of fleet and a fair return on capital employed, following the principles accepted by the Tariff Commission for cement, steel and other industries. In order that shipping may be utilised as fully as possible to help solve the problem of transport during the Plan period, it was necessary not only to divert cargoes moving in bulk from rail to sea, but, to define on a permanent basis, the fields of transport by rail and transport by sea. Coastal shipping will not be able to expand to the required target unless co-ordination of transport is based, *inter alia*, on its economic survival and its progressive development on a permanent basis. I, therefore, hope that these aspects would be considered seriously before Government reach decisions on the recommendations of the Rail-Sea Co-ordination Committee."

DHARAMSEY M. KHATAU,
Scindia Steam Navigation Co., Ltd.

Standard Rate of Return

"It seems for these reasons especially unfortunate that Parliament's estimable attempt to encourage the investor in our industry by making a provision for 'automatic adjustment' of the standard rate of return to follow fluctuations in the money market, has apparently been almost instantly frustrated by executive action. Hardly had the ink used in the new legislation dried, when the announcement by the Reserve Bank came to the effect that, as from 1st February 1957, the rate of interest on advances to Scheduled banks against Government and other eligible securities had been raised to 4 per cent. while, at the same time, the official Bank rate was unchanged at 3½ per cent. For the electricity industry, this announcement came as a bolt from the blue, for, unless upon pressure of circumstances the Bank rate itself is officially raised to line up with the Reserve Bank's lending rate for advances to Scheduled banks, we are again caught by the necessity to plead for Parliamentary enactment so as to keep in line with the changes in the value of money. The industry has quickly reacted and approached the authorities for action, if necessary by an ordinance. It has been pointed out that the World Bank rate of lending against mortgage debentures carrying the unconditional guarantee of the Government of India is now a minimum 5½ per cent., the same as is now available to our industry to cover any fresh equity investment. This is clearly absurd."

K. G. MILNE,
Ahmedabad Electricity Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 26th March 1957. Transfer books remain closed from 6th to 27th March 1957, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Annual General Meeting, Bombay, 27th March 1957. Dividend: Rs. 21 per share, payable on 16th April 1957. Transfer books remain closed from 11th to 30th March 1957, both days inclusive.

HOOGHLY FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 28th March, 1957. Dividend: As. 2 per share, final (making a total of As. 14 per share). Transfer books remain closed from 21st to 28th March 1957, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 29th March 1957. Dividend: 7 per cent. Transfer books remain closed from 23rd to 29th March 1957, both days inclusive.

CENTRAL KURKEND COAL CO., LTD. Annual General Meeting, Calcutta, 29th March 1957.

T. STANES & CO., LTD. Annual General Meeting, Coimbatore, 29th March 1957. Dividend: As. 12 per share (final). Transfer books remain closed from 16th to 29th March 1957, both days inclusive.

EASTERN INVESTMENTS LTD. Annual General Meeting, Calcutta, 29th March 1957. Dividend: Rs. 9 per share. Transfer books remain closed from 16th to 29th March 1957, both days inclusive.

KELVIN JUTE CO., LTD. Annual General Meeting, Calcutta, 15th April 1957. Transfer books will remain closed from 1st to 15th April 1957, both days inclusive.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Second interim dividend of 10 per cent. for the year ended 30th September 1956. Transfer books remain closed from 21st to 30th March 1957, both days inclusive.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Interim dividend of As. 12 per share, for the year ending 30th June 1957. Transfer books will remain closed from 25th March to 6th April 1957, both days inclusive.

BINNY & CO. (MADRAS) LTD. Final dividend of 6 per cent. (making a total of 10 per cent.) for the year ended 31st December 1956. Transfer books remain closed from 16th to 29th March 1957, both days inclusive.

UNITED BREWERIES LTD. Interim dividend of Rs. 7-8 per share, for the year ending 31st March 1957. Transfer books will remain closed from 26th to 30th March 1957, both days inclusive.

TIDE WATER OIL CO. (INDIA) LTD. Dividend of As. 12 per share, for the year ended 31st October 1956.

INDIA PAPER PULP CO., LTD. Interim dividend of 7 per cent. for the year ending 31st March 1957. Transfer books remain closed from 18th to 27th March 1957, both days inclusive.

BENGAL ASSAM STEAMSHIP CO., LTD. Dividend of Rs. 7-8 per share, for the year ended 31st October 1956.

GILLANDERS ARBUTHNOT PAYS MORE

EARNINGS OF UPPER GANGES SUGAR BETTER

Gillanders Arbuthnot & Co., Ltd.

THE directors of the above Company (Managing Director and Chairman: Mr. J. F. E.d'A. Willis, Calcutta) submit the audited accounts of the Company for the year ended the 31st March 1956.

The trading results for the year have again been satisfactory, both in Calcutta and at the branches in India and Burma, while Commissions and allowances earned record an improvement over the previous year. The income from investments shows a substantial increase which is principally a reflection of the excellent year 1954, experienced by the Company.

During the course of the year the managing agencies of Cherra-Chhatak Ropeway Co., Ltd., and Arcuttipore Tea Co., Ltd., were relinquished by the Company. The Company has also severed its direct connection with the jute industry by relinquishing its offices as agents of Societe Generale Industrielle de Chandernagor (Gondalpara Mill) in October 1956, and as managing agents of the Hooghly Mills Co., Ltd., in August 1956. It is regretted that on the disposal of the shareholding in the former Company a loss of Rs. 4,52,930 was suffered and this amount features as part of the loss on sale of investments appearing in the profit and loss account. Against that loss, however, the Company received compensation of Rs. 1,00,000 for loss of Office.

Since the end of the year under review the Company has also relinquished the managing agency of the Air Conditioning Corporation Private Ltd., and it is with considerable regret that the directors have to record that as a result a substantial loss has accrued. The Company originally assumed responsibility for the management of the Air Conditioning Corporation Ltd. in 1946 on the retirement of the founder of the business. The prospects for Air Conditioning were then and have ever since been very promising, but unfortunately unexpected and, as it turned out, insurmountable difficulties were experienced, first, over the technical management and, secondly, over the types of business which could profitably be undertaken. As a result heavy losses were incurred which continued until early in 1956, when it became apparent that the Corporation required, in order that it might recover the losses incurred in earlier years and trade profitably in future, considerably more finance than the Company was in a position to provide.

Several schemes with outside parties were considered, all of them requiring the relinquishment of the managing agency, and in April 1956, the directors decided to accept what, in their opinion, was the best of these, namely, the sale of the total sum advanced at a price to be determined on the basis of a valuation of the Corporation's Balance Sheet, on condition that the managing agency would be given up and the total issued capital of the Corporation would be transferred to the purchaser. In consequence of this the advances made by the Company to the Air Conditioning Corporation Private Ltd. will only be recovered to the extent of approximately 48.5 per cent. The amount advanced at the 31st March 1956, was Rs. 48,52,951 and while the purchase price is not yet finally known it is estimated to be not less than Rs. 26,00,000 which would result in a loss of Rs. 22,52,951. As a sum of Rs. 2,50,000 is payable as brokerage on sale of the loan the total loss in this respect is expected to be in the region of Rs. 25,00,000. In addition, the Company's shareholding in the Air Conditioning Corporation Private Ltd. has been disposed of to the purchaser of the advance and this has also resulted in a loss of Rs. 1,17,300. It is the intention of the directors to write off these losses in full in the current year, but, in the meantime, it is considered prudent to allocate a further amount to contingencies reserve, as proposed later, in order to bring the amount standing to the credit of that reserve account up to a figure of Rs. 26,17,300, which is equal to the total amount of the loss likely to be incurred.

With the relinquishment of the abovementioned managing agencies and the restrictions imposed on managing agents by the Companies Act 1956, the Company's income from such sources will inevitably be adversely affected in future.

The profit and loss account records a credit balance of Rs. 30,03,640, as compared with Rs. 29,71,809 for the previous year. After providing for taxation including a sum of Rs. 1,30,000 for the additional tax payable on the proposed dividend on ordinary shares in respect of the year under review, and deducting from the total provision the sum of Rs. 3,52,862 being an excess reserve in respect of taxation for prior years, the balance available for disposal is Rs. 18,71,841 as against Rs. 18,86,360 in the previous year, arrived. The profit and loss account shows a balance of profit of Rs. 30,03,640 (Rs. 29,71,809) to which has to be added the balance brought forward from the previous year of Rs. 1,51,360 (Rs. 1,58,072) making a total of Rs. 31,55,000 (Rs. 31,29,881). The provision required for taxation is Rs. 12,83,159 (Rs. 12,43,521) leaving a balance for disposal of Rs. 18,71,841 (Rs. 18,86,360). Out of this balance the directors propose the following appropriations:

To dividend on preference share capital Rs. 1,25,000 and to dividend on the 6,50,000 ordinary shares of Rs. 10 each at the rate of 16 (14) per cent. without any deduction in respect of income-tax payable by the Company Rs. 10,40,000 (Rs. 9,10,000) and to transfer to contingencies reserve Rs. 6,17,300 (Rs. 4,00,000) leaving to be carried forward to next year Rs. 89,541 (Rs. 1,51,360 after transferring Rs. 3,00,000 to superannuation fund).

The Gillanders Arbuthnot & Company (Pakistan) Ltd., a subsidiary of the Company, has recorded a profit after taxation of Rs. 2,03,241 in the year under review, as compared with that of Rs. 4,06,063 in the previous year. This result is considered satisfactory, in view of the difficult trading conditions and severely restricted import policy which continues to hamper business in Pakistan. As these conditions have continued, the balance at credit of profit and loss account of Rs. 3,72,817 has been retained in that country.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,00,000	Block ...	10,54,049

Upper Ganges Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit and loss account after providing Rs. 10,54,000 (Rs. 6,50,000) for depreciation shows a profit on the year's working of Rs. 12,95,211 (Rs. 10,24,525) to which is added the balance brought forward from the previous year of Rs. 82,931 (Rs. 48,719) making a total of Rs. 13,78,142 (Rs. 10,73,244). From this there has been provided for taxation Rs. 7,90,000 (Rs. 5,75,000) and for general reserve Rs. 2,00,000 (Rs. 1,00,000) leaving a balance available for disposal of Rs. 3,88,142 (Rs. 3,98,244). From this the directors recommend payment of dividend on 12,000 cumulative redeemable preference shares of Rs. 100 each at 5 per cent. per annum free of income-tax Rs. 60,000 (Rs. 60,000), on 15,000 cumulative redeemable preference shares of Rs. 100 each at 5 per cent. per annum less tax Rs. 55,313 (Rs. 55,313) and on 80,000 ordinary shares of Rs. 10 each at Rs. 3 (Rs. 2-8) per share (free of income-tax) Rs. 2,40,000 (Rs. 2,00,000), leaving to be carried forward Rs. 32,829 (Rs. 82,931).

The working efficiency of the Company's sugar mills during the year under review was satisfactory and the mills had the longest season in its history which continued upto the 17th July 1956. There was a record production and the total cane crushed upto the 30th June 1956 was 1,17,47,919 maunds and 1,21,54,737 maunds upto the 17th July 1956 when the season was over as against a crushing of 95,52,676 maunds of cane only in the previous season. The average recovery for the season was 9.72 per cent. as against 9.69 per cent. in the previous season.

Since the close of the accounts of the Uttar Pradesh Trading Co., Ltd., on 31st March 1956 no change has taken place in the holding company's interest in the said subsidiary company nor has any material change taken place in the subsidiary company in regard to any of the matters specified in section 212(5)(b) of the Companies Act, 1956.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Bharat Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit and loss account after providing Rs. 70,000 (Rs. 40,000) for depreciation shows a profit on the year's working of Rs. 1,94,561 (Rs. 4,04,260) to which is added the balance brought forward from the previous year of Rs. 13,206 (Rs. 26,084) and transfer from dividend equalisation reserve of Rs. 50,000 (*nil*) making a total of Rs. 2,57,767 (Rs. 4,30,344). From this there has been provided for taxation Rs. 12,000 (Rs. 1,73,700) leaving a balance available for disposal of Rs. 2,45,767 (Rs. 2,56,644). From this the directors recommend payment of dividend on 5,000 cumulative redeemable preference shares of Rs. 100 each at 5 per cent. per annum less tax Rs. 18,438 (Rs. 18,438) and on 1,50,000 ordinary shares of Rs. 10 each at Re. 1-8 (Re. 1-8) per share free of income-tax Rs. 2.25,000 (Rs. 2,25,000) leaving to be carried forward Rs. 2,330 (Rs. 13,206).

The directors report that the Mills crushed 24,98,153 maunds of cane during the year under review as against 18,79,202 maunds only during the previous season. The average recovery was, however, lower at 9.48 per cent. against 10.01 per cent. during the previous season. This is attributable to the abnormally low sucrose content of cane on account of the scanty winter rains this year. Early start of the Mills and crushing over a much longer period as compared to the previous season, in as much as the Mills worked for 180 days during this year as against 138 days only in the previous year, was also another factor which affected the recovery. Although the losses were somewhat compensated by a rebate which was granted in the price of cane crushed on or after the 9th May 1956, it is regretted that on account of the low recovery as also decline in sugar prices during the year, the working results of the Company were affected adversely.

As regards the Usha Development Co., Ltd., which is a subsidiary of the C. & E. Morton (India) Ltd., wholly subsidiary of the company, 93.02 per cent. of the ordinary share capital was held by the C. & E. Morton (India) Ltd. on 31st March 1956 and proportionate part accordingly of Rs. 403 being loss for the last financial year and Rs. 22,367 being net aggregate loss for the previous financial years, which have not been dealt with in or for the purposes of the accounts of the company, concern the members of the company.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	5,64,327
Reserves ...	13,51,513	Stock-in-trade ...	39,26,992

Liabilities ...	43,07,720	Standing crops ...	14,951
Profit and loss account ...	2,330	Debts, deposits and advances ...	12,79,514
		Investments	17,90,500
		Cash ...	23,844
Rs.	78,74,034	Rs.	78,74,034

New India Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

The profit and loss account after providing Rs. 2,95,000 (Rs. 1,75,000) for depreciation shows a profit on the year's working of Rs. 5,00,578 (Rs. 2,58,688) to which is added the balance brought forward from the previous year of Rs 1,364 (Rs. 64,888), making a total of Rs. 5,01,942 (Rs. 3,23,576). From this there has been provided for taxation a sum Rs. 2,56,000 (Rs. 80,000) leaving a balance available for disposal of Rs. 2,45,942 (Rs. 2,43,576). The directors recommend payment of dividend on 486 cumulative preference shares of Rs. 100 each at 9 per cent. per annum free of income-tax Rs. 4,374 (Rs. 4,374), on 10,000 cumulative redeemable preference shares of Rs. 100 each at 5½ per cent. per annum less tax Rs. 40,563 (Rs. 40,563) and on 76,910 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2-8) per share free of income-tax Rs. 1,97,275 (Rs. 1,97,275) leaving to be carried forward Rs. 3,730 (Rs. 1,364).

The working efficiency of the mills was satisfactory and there was a record cane crushing during the year under review. The total cane crushed amounted to 45,74,333 maunds of cane, the average recovery being 9.47 per cent. as against a crushing of 33,24,501 maunds and an average recovery of 10.07 per cent. during the previous season. Damage to cane crop by heavy floods and crushing over a much longer period affected the recovery during the year. The loss on account of lower recovery was partially compensated by grant of a rebate in the price of cane purchased by the mills on and from 9th May 1956.

As required under Section 212(3) of the Companies Act, 1956, the directors have to state that as the entire issued capital as on 31st March 1956 of the Darbhanga Marketing Co., Ltd., was held by the company, the profits of the subsidiary company for the last as well as the previous financial years which have not been dealt with in or for the purposes of the accounts of the company, concern wholly the members of the company. As regards The Behar Journals Ltd., 61.45 per cent. of the issued capital of the said company as on 31st March 1956 was held by the company. The proportionate part accordingly of Rs. 4,525, being loss of the last financial year and of Rs. 1,35,048 being net aggregate loss for the previous financial years of the said The Behar Journals Ltd. which have not been dealt with in or for the purposes of the accounts of the company, concern the members of the company.

Accounts in brief are as under:—

Notices

THE KELVIN JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 98th Annual General Meeting of the Members of The Kelvin Jute Company Limited will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 15th day of April, 1957, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Mr. Gobindlall Bangur and Mr. H. J. Silverston, the retiring Directors.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. H. J. Silverston be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special notice dated 9th March, 1957, of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. H. J. Silverston is an "associate" of the Managing Agents within the meaning of the Act by reason of his being a partner with Mr. A. D. Vickers in the firm of Messrs. Orr, Dignam & Co., Mr. A. D. Vickers being a Director of the Managing Agents' Company, and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:—

   (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

   82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

   (b) Article 87 shall be deleted and the following new Article substituted therefor:

   87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

   (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

   (d) Article 176 shall be deleted and the following new Article substituted therefor:

   176. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

   (e) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

   (f) In Article 181, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.
7. That this meeting approves of lending to the Company of money by McLeod and Company Limited, the Managing Agents of the Company, and the guaranteeing by McLeod and Company Limited of loans made to the Company by any other person, the material terms being as follows:—

   (i) McLeod and Company Ltd. shall, from time to time, when requested by the Company, notify the Company of the rate of interest at which it will lend money to the Company or the rate of guarantee commission in consideration for which it will guarantee a loan made to the Company by any other person specified by the Company, as the case may be, of any limit on the amount which it will so lend or guarantee and of any special terms and conditions as to security or otherwise upon which it will so lend or guarantee and will specify the date up to which it will lend or guarantee on the terms so notified;

   (ii) McLeod and Company Ltd. will then lend to the Company or guarantee the loan to the Company by such other person specified as above, as the case may be, on the terms so notified at any time up to the date so specified, such sum or sums as the Company shall specify within the limit, if any, notified as above;

   (iii) with immediate effect and without prejudice to the foregoing the payment to McLeod and Company Ltd. of a commission of one-half-of-one per centum per annum on the maximum amount guaranteed in any year by McLeod and Company Ltd. at the request of the Company be and is hereby approved;

   (iv) these arrangements shall not prejudice the right of the Company to borrow money from any person other than McLeod and Company Ltd. and to secure the guaranteeing of a loan made to it by any other person willing to guarantee the same; and

   (v) it is hereby expressly declared that any interest or guarantee commission received by McLeod and Company Ltd. from the Company on or in respect of a loan or guarantee made pursuant to such contract shall not be treated as remuneration paid by the Company to McLeod and Company Ltd. as Managing Agents of the Company.

The Share Transfer Books of the Company will be closed from 1st to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co. LTD.
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *18th March*, 1957.

Note:—Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December, 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to the 31st December 1956, of which Members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 162.

In the course and for the purpose of the Company's business moneys have to be borrowed and it is often necessary as well as expedient to borrow from McLeod and Company Ltd., the Managing Agents of the Company or from banks or other persons, such loans being guaranteed by the Managing Agents. That the Managing Agents should be entitled to interest on money lent by them and remuneration by way of a commission on the loans guaranteed by them is only right and proper. The Companies Act, 1956, provides that a Managing Agent is entitled to receive additional remuneration for services rendered otherwise than as such Managing Agent provided certain formalities are complied with. The services proposed to be rendered by McLeod & Co. Ltd., the Managing Agents, to the Company may be deemed to be a "service" as contemplated in Section 360 of the Act. This section requires that the arrangements have the approval of the Company in general meeting accorded by special resolution. Special Resolution 7 in the convening notice sets out particulars of the proposed arrangement and your Directors recommend its adoption in the interest of the Company.

CHITAVALSAH JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE 60th Annual General Meeting of the Members of Chitavalsah Jute Mills Company Limited will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 15th day of April, 1957, at 3-30 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. H. J. Silverston, the Director retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

   "That Mr. H. J. Silverston be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice dated 9th March, 1957 of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. H. J. Silverston is an "associate" of the Managing Agents within the meaning of the Act by reason of his being a partner with Mr. A. D. Vickers in the firm of Messrs. Orr, Dignam & Co., Mr. A. D. Vickers being a Director of the Managing Agents' Company, and that, therefore, he can only be appointed by special resolution as a Director of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

5. That the requirements of Articles 82, 83, 87, 121, 174, 178 and 179 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:—

   (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

   82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956, and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

   (b) Article 87 shall be deleted and the following new Article substituted therefor:

   87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

   (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

   (d) Article 174 shall be deleted and the following new Article substituted therefor:

   174. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

   (e) In Article 178, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

   (f) In Article 179, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 1st April to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *18th March* 1957.

Note.—Payment of the proposed dividends, if declared, will be made on or after 30th April 1957, only to those members whose names are registered in the Books of the Company on 15th April 1957, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended the 31st December 1956, it is proposed that the Accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing the 1st July 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the accounts of the Company will be closed on a date subsequent to 31st December 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 160.

THE EMPIRE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 88th Annual General Meeting of the Members of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3 Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 15th day of April, 1957, at 4 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. M. R. C. Thomas, the Director retiring by rotation at the Meeting who, being eligible, offers himself for re-appointment.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:

5. That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended 31st December, 1956.
6. That the Articles of Association of the Company be altered in manner following:

   (a) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:

   82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1953 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

   (b) Article 87 shall be deleted and the following new Article substituted therefor:

   87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

   (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

   (d) Article 176 shall be deleted and the following new Article substituted therefor:

176. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

(*e*) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(*f*) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual **General" substituted** therefor.

The Share Transfer Books of the Company will be closed from 1st April to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

McLEOD & Co., LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *18th March*, 1957.

Note.—Payment of the proposed dividends, if declared, will be made on or after 30th April, 1957, only to those members whose names are registered in the Books of the Company on 15th April, 1957, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

In order to comply with the Articles of Association of the Company, the Company's Accounts have been closed and audited half-yearly and a Profit and Loss Account in respect of each half-yearly period ending on the 30th June and the 31st December, in each year and the Balance Sheet as at each date, have been laid before the Company in General Meetings held twice in every calendar year.

Under the provisions of the Companies Act, 1956, each such half-yearly period has to be regarded as a "financial year" and as a result, the usual half-yearly General Meetings will each be deemed to be an "Annual General Meeting" within the meaning of the Act, thus resulting in two "Annual General Meetings" in each calendar year. Having regard to the obligations imposed on a Company by the Act in respect of every Annual General Meeting, viz., retirement of Directors by rotation, appointment of Auditors, and filing of an Annual Return, etc., and the work and expense attending the preparation of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 6 of the convening notice. In respect of the half-year ended 31st December, 1956, it is proposed that the accounts be not separately prepared and laid before members but that they be embodied in consolidated accounts for the period commencing on the 1st July, 1956. Special Resolution 5 in the convening notice suffices to effect this proposal. If Special Resolutions 5 and 6 are passed, the Accounts of the Company will be closed on a date subsequent to 31st December, 1956, of which members will be advised later, which hereafter will be the closing date of each financial year of the Company.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 162.

THE ALEXANDRA JUTE MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE 102nd Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 15th day of April, 1957, at 4-15 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the half-year ended 30th June, 1956, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint Directors in place of Messrs. R. G. Edwards and A. B. Kingsley, the Directors retiring by rotation at the Meeting.

   And in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956.

   (i) "That Mr. R. G. Edwards be and is hereby appointed a Director of the Company liable to retirement by rotation."

   (ii) "That Mr. A. B. Kingsley be and is hereby appointed a Director of the Company liable to retirement by rotation."

   Special Notice dated 9th March, 1957, of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Messrs. R. G. Edwards and A. B. Kingsley are "associates" of the Managing Agents within the meaning of the Act by reason of their being Directors of the Company which is a subsidiary of the Managing Agents' Company, and that, therefore, they can only be appointed by special resolutions as Directors of the Company liable to retirement by rotation.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a Special Resolution.

5. That the Articles of Association of the Company be altered in manner following:—

   (*a*) Articles 82 and 83 shall be deleted and the following new Article substituted therefor:—

   82. *When Annual General Meetings to be held.*—In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors. Such General Meetings shall be called "Annual General Meetings" and shall be specified as such in the notice convening the meeting. All other meetings of the Company shall be called "Extraordinary General Meetings."

   (*b*) Article 87 shall be deleted and the following new Article substituted therefor:

   87. *Business of Meetings.*—The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

   (*c*) In Article 121, line 1, the words "Ordinary Meeting in every subsequent year" shall be deleted and the words "Annual General Meeting to be held in every year" substituted therefor.

   (*d*) Article 175 shall be deleted and the following new Article substituted therefor:

   175. *Profit and Loss Account and Balance Sheet.*—At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the said Act, so far as they are applicable to the Company, but, save as aforesaid, the Directors shall not be bound to disclose greater details of the results or extent of the trading and transactions of the Company than they may deem expedient.

   (*e*) In Article 179, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

   (*f*) In Article 180, lines 1 and 2, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing, shall be deleted and the words "Annual General" substituted therefor.

The Share Transfer Books of the Company will be closed from 1st to 15th April, 1957, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

SCHEDULED BANKS' ADVANCES CROSS Rs. 700-CRORE MARK

(*From Our Own Correspondent*)

BOMBAY, 20*th March*

The short-term money market experienced another week of stringent conditions. Besides the growing demand for bank credit to meet the needs of trade and industry, funds were also required for the customary financial year-end tax payments. The supply of funds in the market, however, fell short of banks' requirements to meet the above demand, with the result that banks had to seek accommodation from the Reserve Bank and money rates were held at the previous week's levels.

Inter-bank call money continued to be bid at 3½ per cent., though small transactions were reported done earlier in the week at 3¼ per cent. after clearing hours. House money was placed at 4 to 4½ per cent., as also short-term deposits for one to six months.

The latest statement of affairs of the Reserve Bank of India for the week ended 15th March 1957 discloses no notable variations in the Issue Department. Notes in circulation have gone down by only Rs. 1.20 crores, in contrast to the sharp expansion of Rs. 14.95 crores in the previous week. Thus, notes in circulation, after just crossing the 1956 peak of Rs. 1,525.88 crores to Rs. 1,525.91 crores, stand lower at Rs. 1,524.71 crores. Notes held in the Banking Department, which had shrunk by Rs. 6.03 crores a week ago, have risen by Rs. 1.85 crores, with the result that there has been only a negligible rise in total notes issued. Rupee securities are unchanged, after the rise of Rs. 9.94 crores noted in the previous week. Though foreign securities are again unchanged, total foreign assets have gone up by Rs. 31.34 crores, consequent on the increase in balances held abroad (in the Banking Department) by a similar extent. Deposits of Central Government have risen by Rs. 2.99 crores, deposits of other Governments by Rs. 20.03 crores and other deposits by Rs. 32.54 crores. Loans and advances to Governments are lower by Rs. 1.76 crores, while other loans and advances have risen by Rs. 2.29 crores, following the increase of Rs. 4.26 crores in outstanding advances to Scheduled banks against usance bills. Fresh advances to banks against these bills during the week were of the order of Rs. 16.08 crores, as compared with Rs. 13.68 crores in the previous week. Repayments amount to Rs. 11.82 crores; the corresponding figure of the previous week was Rs. 14.60 crores. Investments show a sharp rise of Rs. 24.60 crores.

A further rise of Rs. 5.51 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 8th March 1957. Demand deposits, which had shrunk by Rs. 4.26 crores in the previous week, have also risen by Rs. 1.40 crores. Notwithstanding such a sharp increase in deposits, borrowings from the Reserve Bank stand reduced by only Rs. 2.23 crores. On the assets side, the most notable feature is that advances have, for the first time in the history of Scheduled banks, crossed the Rs. 700-crore mark to stand at Rs. 701.12 crores, a rise of Rs 2.47 crores over the week. This level compares with the peak of Rs. 617.07 crores touched during this part of the busy season in 1956. Bills purchased and discounted are also up by Rs. 1.29 crores. Investments show a fall of only Rs 85 lakhs. Cash balances are lower by Rs. 78 lakhs, while balances with other banks have risen by Rs. 97 lakhs and money at call by Rs. 2.10 crores.

The Gilt-edged market remained dull with the volume of business remaining restricted. Interest was confined to a few counters and the undertone remained steady. 3 per cent 1986 Conversion Loan was placed at Rs. 74-5 *ex-voucher*, as against Rs. 74-9 *cum-voucher* a week ago. 3 per cent. 1976-75 had sellers at Rs 87-6 and 3 per cent. 1966-68 at Rs. 92-4. 3 per cent. 1964 gained an anna to Rs 94-7, but attracted sellers at that level. 3 per cent. 1963-65 was on offer at Rs. 94-3. 3 per cent. 1959-61 changed hands at the self-same rate of Rs. 97-12, while 3 per cent. 1958 was bid up an anna higher at Rs. 99-10. 3½ per cent 1962 was on offer at Rs. 97-13, while 3½ per cent. 1961 had buyers at Rs. 99-7. 3½ per cent. 1964 was wanted at Rs. 98-6½, but sellers quoted Rs. 98-7. 3½ per cent. 1967 and 3½ per cent 1974 were unchanged at Rs. 98-8. State Loans was devoid of any interest.

There was a considerable weakening of the rupee during the week in terms of U.S. and Canadian dollars. Bank's selling rate of ready U.S dollar rose from Rs. 478½ to Rs. 479½ per $100 and their buying rate from Rs. 475½ to Rs. 476½ per $100. The selling rate of the Canadian dollar moved up from Rs. 502½ to Rs. 503½ and buying rate from Rs. 495½ to Rs. 496½ per $100. This is only in consonance with the weakening of sterling abroad. Thus, in New York, spot sterling reacted from $2.79⅜-2.79⅝ to $2.78.15/16-2.79.1/16 and three months' forward from $2.78.13/16-2.78 15/16 to $2.77.¼-2.78. Transferable sterling was marked down from 276.10-276.20 cents to 275 75-275.85 cents.

GOOD DEMAND FOR HIDES

(*From Our Own Correspondent*)

KANPUR, 17*th March*

During the week under review, the hides and skins market ruled steady. Owing to *Holi* celebrations, the country dealers were few in the market. New arrivals of cow or buff were not as considerable as those in the past week, but offtake was prompt. Demand for goat or sheep was strong. The Madras dealers were keen buyers of high grade goat and light quality cow. In regard to quality buff, the main purchasers were the local tanners.

The latest available quotations are: Wet salted cow 1st grade Rs. 340, 2nd grade Rs. 280 and 3rd grade Rs. 145 per score; wet salted buff 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per rupee; buff calf 2 lbs. 5 ozs. per rupee; goat 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 225 to Rs. 240 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

BULLION IRREGULAR

(*From Our Own Correspondent*)

BOMBAY, 20*th* March

An irregularly lower trend was noted in the bullion market during the week under review. After an early setback due to the weakness of gold on bear selling following the slackness in offtake, bullion prices appeared to gain ground, thanks to the strength of the white metal which was in good demand on account of *Holi* festival. This recovery proved short-lived and prices once again languished due to reports that Tibetan silver coins equivalent to about 700 bars had arrived in India during the week. Despite the improvement in demand for gold during the last two days, the yellow metal ruled quietly steady in sympathy with silver.

Forward silver (March settlement) softened from Rs 178-13 to Rs. 178-3, but soon shot up to Rs. 179-11 before the settlement ran out at Rs. 179-10. The next settlement receded from Rs. 179-1 to Rs. 178-10 before recovering to Rs. 180-8 Towards the close, however, it once again relapsed to Rs. 178-13.

Ready silver closed As. 8 lower at Rs. 178-1, the highest and lowest levels touched being Rs. 179-14 and Rs. 177-12, respectively. The floating stocks of silver are estimated at 900 bars. The daily average offtake was 20 bars.

Gold for forward delivery (March settlement) gave way from Rs. 106-6 to Rs. 105-1 and the settlement ran out at Rs. 105-2 The April settlement was marked down from Rs. 106-7 to Rs. 105-9. After a recovery to Rs. 106, the yellow metal languished to Rs. 105-5 and closed at Rs. 105-10.

Ready gold suffered a drop of Re. 1 to Rs. 105-7. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was lower at 2,500 tolas on an average.

In New York, silver was maintained at 91⅜c. London silver prices also were unchanged at 79⅜d. for spot and 79½d. for forward. There was a further hardening of gold in London from 249s. 9½d. to 250s. 3½d.

The following comparative table shows the trend of market during the week under review:

	20-3-1957	Highest	Lowest	12-3-57
	Rs. a	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	105 7	106 10	105 2	106 7

TEA PRICES RECEDE

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, 14*th March*

A little over 450,000 lbs. were on offer in dust sale 'F' which was held on Tuesday, 12th March. Although there was a good general demand, prices were irregularly an anna to As. 2 lower for all types with the exception of medium descriptions which can be quoted steady. Highgrown dusts were the weakest feature and were occasionally difficult of sale.

The average price realised in dust sale 'F' was Re. 1-14-5 per lb., as against Re. 1-12-4 per lb. for the corresponding sale of 1956.

London Market:—*Sale of 11th March* 1957:—Better demand and, except for light liquoring brokens, market firm and sometimes dearer, particularly Dooars.

Sale of 12th March 1957:—Prices unchanged, but improved demand.

Colombo Market:—*Sale of 11th March* 1957:—Good demand. Grainy dusts lower, poorer sorts firm. Black leaf fannings and broken mixed steady. Other kinds about 20c. lower.

Sale of 12th March 1957:—Active demand for limited selection best flavoury Dimbula types following quality. Other sorts better general demand about 10c. lower.

Calcutta Market:—*Export*:—Except for whole leaf stylish and tippy teas, market generally As. 2 to As. 3 easier.

Internal:—17,500 dust. Good general demand. Market opened half to one anna easier and closed firm to half anna easier. Best C.T.C. Assams strongest feature. Middle east types and powdery kinds well supported at around last rates. 4,900 leaf. Good general demand at irregular rates.

Export Quota:—During the week, a much quieter tone has been evident and at the time of writing, business has been done at 36 pies.

Forthcoming Auctions:—Dust sale 'G' will be held on Tuesday, 26th March.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 6:—1,600,000 lbs. Poor demand. Exporters very quiet. Fannings neglected, low medium and medium brokens As. 4 to As. 8 lower, better sorts up to Re. 1 decline. Strongest feature whole leaf, which are irregularly As. 2 easier. Withdrawals heavy."

COTTON FUTURES FIRM

(*From Our Own Correspondent*)

BOMBAY, 20*th March*

The firm trend noted in the cotton futures market last week continues unabated, thanks to small volume of tenders against the expiring Jarilla contract, lower crop ideas and general apprehensions of scarce supplies of quality cotton. Private estimates of cotton crop put the aggregate yield at only 4.95 million bales, as against 5.1 million bales expected earlier. Lower crop estimate and limited imports from abroad in the wake of continued upward trend in mill consumption induced a strong buying spree, while offerings were limited. Cotton values, as a consequence, made a strident advance, with Jarilla March touching a high of Rs. 785 on the 18th inst. and Vijay April firmed up to Rs. 880 yesterday. Even the operation of the rigorous margin system failed to have any effect. The buying spree, however, received a check in the closing sessions of the week on fears of Government intervention. Vijay April and June succumbed to selling pressure which erased a large part of the earlier gains, while Jarilla March and May remained firm.

Jarilla March opened the week at Rs. 760 and improved, on brisk short covering, to Rs. 785 on Monday. Opening at Rs. 783 today, the contract advanced to Rs. 785 and closed at the same rate. Jarilla May opened at Rs 680. It met with heavy speculative buying which took the contract higher to Rs. 696 on Monday. Trading in that contract was slow today. Commencing the session at Rs. 687-8, it improved to Rs. 689-8 before winding up at Rs. 687-8.

Fluctuations in the Vijay contracts were more marked. Commencing the week at Rs. 866, April delivery improved, on sustained bull support, to Rs. 880 yesterday. It, however, succumbed to heavy selling pressure and came down to Rs. 862 today before closing fractionally higher at Rs. 862-8.

Switching over of operations from nearby contract to distant one and apprehension of scarce supplies of Vijay styles were mainly responsible for the advance in the prices of Vijay June settlement. Opening the week at Rs. 814, the contract improved steadily to Rs. 840 on the 18th inst. Trading in the contract in subsequent sessions was characterised by a considerable volume of selling which pushed the contract down to Rs. 822 today. But the closing rate was higher at Rs. 826.

The following is the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.

	20-3-57	*High*	*Low*	12-3-57
Jarilla (March) ...	785	785	755	766
Jarilla (May) ...	687½	696	678½	685¾
Vijay (April) ...	862½	880	862	868½
Vijay (June) ...	826	840	807	816

The firm trend of the futures market was reflected in the spot section where prices ruled very near the official ceilings. The high rates, of course, prevented any sizable volume of business. Only stray purchases for meeting the immediate requirements of mills were reported. Towards the close of the week, however, a revival of demand was in evidence and mill inquiries broadened, interest being mainly centred round Vijay, Surti, 0394, Khamgaon, Berar, etc. The prevailing high prices restricted export business and shipment purchases were confined to Bengals. Overseas buyers considered Indian cotton as too dear *vis-a-vis* other growths.

In the foreign section, spot lots of Egyptians and American Good Middlings evoked interest and some business was reported to have been put through in these qualities. The latest available spot rates—in rupees per candy of 784 lbs.—for some popular varieties are given below:

Bengal *Deshi* 730; Berar Jarilla 820; Khandesh 840; Vijay 945; Oomra *Deshi* 790; Moglai 765.

It is understood that textile interests at Ahmedabad and Kanpur have drawn the attention of the authorities to the difficulties of mills which find it difficult to get good quality cotton, especially Vijay, even at the ceiling prices. They have urged the Government to take appropriate measures designed to make available such cotton at reasonable prices. Presumably as a sequel to this representation, the Textile Commissioner has notified that purchase or sale of any variety of Indian cotton above the prescribed basic ceiling price requires prior certification of the East India Cotton Association, Bombay. According to him, without such certificate, any transactions over the ceiling price will amount to contravention of the Cotton Control Order and will be punishable according to law.

In contrast to the easy trend noted in the past few weeks, the Karachi cotton futures market ruled distinctly steady during the week under review. The steadiness was due to speculative buying induced by reports of good business done with Russia and China. N.T.R.G. March spurted by As 7 to Rs. 78-7. May position advanced by As. 11 to Rs. 80-11. In the spot section, *deshi* styles were much sought after and rates hardened as a consequence. Punjab *Deshi*, for instance, rallied Rs 2 to Rs. 78-8. Sind *Deshi* rose by a rupee to Rs. 87. The latest available spot rates—in rupees per 82 lbs.—for some other popular varieties of Pakistan cotton are as under:

4 F Punjab Roller 84-3; S.G. 87-11; L.S.S. Punjab Roller 86-3; S.G. 89-11; N.T. Roller 84-11; S.G. 93-3; 289 F Punjab Roller 89-3; S.G. 100-11.

The Alexandria cotton futures market continued to rule easy, thanks to slackness of overseas demand and absence of local spinner interest. Both the long-staple Karnak and the medium-staple *Ashmouni* contracts suffered a further fall in prices although the spot premiums for top

grades Karnak, Menoufi and *Ashmouni* were maintained firm due to scarcity of offerings. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 114.25; May 115.10; July 114.90. *Ashmouni*: April 81.60; June 82.05; August 82.00.

The Sudan Gezira Board has announced its reserve prices for cotton. They are (in pence per lb. c.i.f. Bombay): GS 73.92; XG2S 72.92; G-2-S 71.41. Trade circles consider these prices high. It was not surprising, therefore, that, at the auctions held on the 14th inst., the Gezira Board could not sell more than 600 bales of GS at the reserve price and the balance of 2,700 bales offered, consisting of G.S., XG2S and G-2-S had to be withdrawn. On the following day also, only 300 bales out of the total offer of 2,700 bales were lifted at the reserve prices.

Easy conditions prevailed in the Liverpool cotton futures market, with slow trading and narrow fluctuations in prices. Near deliveries of both American and American type contracts staged a retreat, although towards the close, there was some recovery on mill fixation. Inter-month switchings contributed to the easy trend. Distant deliveries, however, met with trade support and improved slightly. Egyptian Karnak was neglected, as also Sudans. In the spot section, there were renewed enquiries for medium and lower U.S. styles. Some of the higher grades also evoked some interest. Small turnover was reported in East African, Turkish and Peruvian growths, as well as in Indian Oomras. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: March-April 26.08; May-June 26.23; July-August 26.02; October-November 25.82. *American Mixed Growth Contract*: March-April 26.08; May-June 26 32; July-August 26.14; October-November 25.94. *Egyptian Karnak*: March-April 60. *Sudan Lambert*: May-June 42.75; July-August 41.75.

A fully steady trend was in evidence in the New York cotton futures market this week. There was good buying, induced by expectation of an upward revision in final Soil Bank acreage. Consequently, prices tended to move up. The improvement would have been quite marked but for the reports of a further increase in certified stocks. The U.S. Agricultural Department's New Orleans Office opened yesterday the first competitive bids on a new offering of three million bales of U.S. Government-owned cotton. Details of the offerings and the price accepted are, however, not known. The Secretary of Agriculture, Mr. Benson, is reported to have observed that Public Law 480 under which U.S. surplus commodities are sold for foreign currencies had been an effective tool in disposing of surplus products. According to him, sales under the Law is only a temporary emergency programme and the Department of Agriculture will ask Congress to extend it by a year after 30th June next when it is due to expire.

Meanwhile, the C.C.C. sold a further quantity of 15,107 bales under the Export Sales Programme, bringing the total sales so far to 6,399,696 bales. The average price at average location for Middling 15/16" was 26.20 cents and that for Middling 1" 27.20 cents per lb., same as at the previous sale.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 20*th March*

The yarn market depicted a bearish trend this week too. Buying enquiries continued to be slack, while operators were generally inclined to reduce their holdings. Values, as a consequence, moved further downwards. Staple fibre yarns came in for heavy selling on reports of heavy stocks and, even at reduced rates, no support was forthcoming. Rayon yarns lacked demand. Cotton yarns were neglected, owing to lack of encouraging advices from consuming centres.

Rayon yarns 150 bright cones for April delivery slumped by Rs. 11 to Rs. 629. Dull cones Snia yarn (120) for April delivery fell by Rs. 8 to Rs. 803. In the spot section, 150 Japan lost six pies to Rs. 4-1. 120 Japan was neglected at Rs. 4-4. 150 Italy was neglected at Rs. 3-11-6. 120 Italy, however, had some enquiries and gathered half an anna to Rs. 4-1-6. Among indigenous yarns, National Rayons 120 bright cones 1st grade shed three pies to Rs. 3-11-6. 150 bright cones first grade were dull at Rs. 3-5-6.

In the staple fibre yarn section, 40 x 2 April delivery was hammered down by Rs. 14 to Rs. 629. Spot New Greats (40 x 2) dropped an anna to Rs. 3-4. Citys declined by nine pies to Rs. 3-4-9. Kohinoors and Centurys eased by six pies each to Rs. 3-6 and Rs. 3-5-6, respectively. Among foreign yarns (80 x 2), Paramounts shed six pies to Rs. 5-4-6. Fujis changed hands at Rs. 5-6, same as last week.

In the cotton yarn section, 10 counts Moderns receded by As. 4 to Rs. 15. Podars lost an anna to Rs. 14-12. Twenty counts Moderns dropped As. 6 to Rs. 19-2. Maduras receded by an anna to Rs. 19-7. Gokaks were quiet at Rs. 18-11. Among thirtys, Edwards were quoted at Rs. 21-12, same as last week. Indus, however, elicited some attention and improved by As. 4 to Rs. 21-12. Forty counts Minaxis declined by As. 4 to Rs. 26-12. Gokaks decreased by As. 2 to Rs. 27-2. Moderns were on offer at Rs. 28. Sixty counts Moderns fell by a rupee to Rs. 61-8, Raghuvamshis eased by As. 4 to Rs. 57-4. Finlays were neglected at Rs. 61. Among 80s, Moderns shed As. 4 to Rs. 76-12. Mahendras and Finlays were dull at Rs. 74-8 and Rs. 81-8, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	20-3-1957	12-3-1957
	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)—**		
120 Dull Cones Snia April	803 0	811 0
150 Bk. Cones April	629 0	640 0

80s Modern	76 12	77 0

OILSEEDS ACTIVE

(From Our Own Correspondent)

BOMBAY, 20*th March*

The oilseeds market ruled buoyant during the week under review. In particular, the groundnut section was firm, thanks to brisk demand from spot houses, *vanaspati* producers and crushers. The castor section recorded an advance in prices, following influential buying on export enquiries. But the latter's advance was somewhat checked by the inability of spot prices to forge ahead. Linseed and cottonseed were fully steady. The market, however, reacted slightly today on profit-taking.

The Bombay Oils and Oilseeds Association is expected to permit trading in delivery contracts in oils also. At its meeting held on Monday, the Association approved the by-laws governing trading in delivery contracts. The by-laws provide for a standardised contract and facilities for survey and arbitration in case of dispute. The Association is expected to request the Forward Markets Commission for the approval of these by-laws. Among the oils that would be traded are castor oil, groundnut oil, linseed oil, cocoanut oil, mustard oil, nigerseed oil, kardiseed oil and cottonseed oil.

In the groundnut section, May contract opened the week firm at Rs. 170-10 and swiftly moved up to Rs. 174-10 on the 19th before closing lower at Rs. 173-8. The net rise over the week was no less than Rs. 5-6. In the spot section, Bold F.A.Q. improved by As. 8 to Rs. 35. Coromandel, too, rose by As. 12 to Rs. 35-12. Groundnut oil ex-mill was done As. 8 higher at Rs. 19-8.

Linseed May contract commenced the week at Rs. 29-7. The same day, it declined by As. 5. Subsequently, it improved to Rs. 30 on the 18th. But today it closed lower at Rs. 29-10, having thus put on As. 12 over the week. Spot Bold was quoted at Rs. 29-6, as against Rs. 29-2 on the 12th. Linseed oil ready was a shade better at Rs. 16-12.

The advance in the castor section was, however, somewhat less marked than that in groundnut. Opening the week at Rs. 161-12, the May contract moved up, with minor fluctuations, to Rs. 162-12 on the 15th inst., and further to Rs. 164-12 yesterday. After receding to Rs. 161 today it finished at Rs. 162. The net gain over the week was Rs. 4-4. Spot Madras which was As. 2 higher yesterday than last week reacted today to Rs. 33-8, being As. 2 lower than last week. Oil B.S.S. was fully maintained at Rs. 20-4, same as last week.

Cottonseed May contract opened steady at Rs. 101-12 and declined by As. 8 the same day. It touched the peak level, Rs. 104, on the 18th and 19th inst. Today, along with other sections, it received a slight setback, and closed at Rs. 102-4. Over the week, it was better by Rs. 2-4.

Among others, kardiseed Bold ready was done As. 8 higher at Rs. 22-4. Nigerseed Madras was, however, nominally lower at Rs. 29.

The all-India final estimate of groundnut for the year 1956-57 puts the current year's area and production at 1,31,01,000 acres and 40,86,000 tons of nuts in shell, respectively, as against the partially revised estimate of 1,26,92,000 acres and 28,62,000 tons of nuts in shell for 1955-56. This shows an increase of 4,09,000 acres or 3.2 per cent. in area and 2,24,000 tons or 5.8 per cent. in production during the current year as compared with last year.

The increase in acreage during the current year has been reported by almost all the groundnut-growing States. But this increase is more marked in the case of Bombay, U.P. and Rajasthan and has been attributed to sufficient and timely rainfall at the time of sowing.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	20-3-1957	12-3-1957	6-3-1957
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—

SUGAR DULL

(From Our Own Correspondent)

BOMBAY, 20*th March*

Easy conditions prevailed in the sugar market during the week under review. Traders expected that the usual monthly release of sugar would be announced shortly. Arrivals of sugar into the market also continued to be large; they aggregated 21,300 bags which were, of course, lower than the arrivals of 29,000 bags last week. Some selling was, therefore, in evidence and sugar prices tended to look down.

Spot bold grain sugar fell from Rs. 93-98 to Rs. 92-96 per bag, including sales tax. Small grain was quiet at Rs. 88 and medium grain at Rs. 89-Rs. 91.

Fagan delivery contract for 'C' grade sugar was squared up at Rs. 91, as against Rs. 91-2 last week-end. Delivery orders for about 3,000 bags issued at this price were soon adjusted. *Vaisakh* delivery, after improving by As. 6 to Rs. 92-8 on rumours of an upward revision in excise duty on sugar, declined to Rs. 92-2 after the announcement of the budget which did not contain any tax proposals.

BLACK PEPPER QUIETLY STEADY

(Messrs. Parekh and Co.)

BOMBAY, 19*th March*

Malabar black pepper ruled quietly steady during the week with narrow fluctuations in prices. Some 1,300 tons of pepper were shipped to Russia from Cochin on the 11th inst. The future will, therefore, solely depend upon the buying attitude of New York and selling by Singapore. Singapore is reported to be easy under pressure of increased arrivals. Following the news of unsettled political situation in Indonesia, the local bulls are trying to exploit the market. But they have failed to raise the prices there, due to lack of any support either from the U.S.A. or from Europe.

The recent election result in Kerala showed a majority of Communists. Consequently, they are likely to form the Ministry in that State. If so, they may nationalise rubber and tea industry as promised in their election manifesto. They will also demand from the Centre a major share in the income accruing from the export of pepper. Some of the analysts are interpreting this as a bear factor for pepper.

Despite the poor demand both from inland and from overseas, local bulls are trying to maintain the prices artificially. It remains to be seen how far they will succeed in their attempt, if, in the meantime, Sarawak begins underselling.

Alleppey remained barely steady at Rs. 525, while there are sellers for garbled at Cochin at Rs. 91 for ready and at Rs. 92 for March delivery.

ALLAHABAD BANK

LIMITED

Established 1865

Affiliated to the Chartered Bank

Head Office:

6 & 7, India Exchange Place CALCUTTA.

Bombay Offices:

39, Apollo Street and 232/34, Kalbadevi Road.

Ahmedabad Office:

Pankore Naka.

FOREIGN EXCHANGE BUSINESS TRANSACTED

ALEX. IZAT,
General Manager.

A.B. 18.

In the A.S.T.A. section, there are sellers for March to June at $0.24 but without buyers. In the delivery section, local bulls are trying to push up the prices with the view to forcing the shorts to cover and exciting foreign buyers to action. But so far, they have been unsuccessful.

Today's nominal quotations are: Ready delivery Rs. 77 per Bengal maund; April Rs. 531-Rs. 736 and May Rs. 543-Rs. 548 per candy of 5¼ cwts.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 16*th March*

The kip market continued to rule steady during the week. Arrivals kept pace with demand. There were more inquiries for buff calf and prices were steadier. Demand for cow calf and buff hides was poor. In the tanned skins section, trading was quiet, as is usual with the proximity of London tanned skins public auctions which commence on the 18th inst.

The U.K. importers have introduced, from the 1st inst., new terms of purchase under No. 5 contract, which call for specific guarantee of leather substance in the kips sold. Most of the tanners have agreed to the new terms, as they do not lose anything by agreeing to the terms. The smaller tanners who use adulterants to secure false weight will not be able to continue the trade, once shippers refuse to buy their productions which will yield a lower percentage of leather substance. It is believed that adulteration will decline steadily from now onwards, and better qualities will be available from May, as shippers will be wary in their purchases in the open market.

FOODGRAINS DECLINE

(From Our Own Correspondent)

HAPUR, 18*th March*

With hardly a few days left for the harvesting of *rabi* crops here in West U.P., wheat prices have started showing signs of losing high-price levels. The Government of India is reported to be formulating a new policy to grapple with the problem of food prices in the country and imposition of some kind of controls is not being ruled out. The State of Punjab is experiencing an acute shortage of wheat for some time past and 10,000 tons of wheat are being rushed to meet that shortage. Wheat prices here have recorded a modest fall during the week, as, harvesting season drawing near, stockists want to part with their stocks. The prevailing prices are: wheat *dara* Rs. 16-4, farm quality Rs. 17-4 and wholesale *khati* Rs. 16 per maund. Local stocks are lower at 3 *khaties*, the corresponding figure last year being 13 *khaties*.

Rice showed no significant price changes. The latest prevailing prices are: *Basmati* Rs. 23 to Rs. 27; *Manipuri* Rs. 20-14 and coarse quality Rs. 17 per maund.

Gram ruled quiet, despite good consumer demand, as reports of good crop prospects were being received from the Punjab. Prices were expected to record a downward trend with the beginning of the new crop in the markets. Barley and *bejhar* ruled quietly steady, as local stocks were very poor. Maize and *bajra* ruled quiet, as consumer demand had subsided with the change of season. The latest prices are: Gram local Rs. 13-12; Punjab produce Rs. 14-4; barley Rs. 14-4; *bejhar* Rs. 13-8; maize Rs. 13-12; *bajra* Rs. 14; *jowar* Rs. 12-12 to Rs. 13-10; *guwar* Rs. 11.

Arrival of new peas have begun in small quantity here, but, in East U.P., arrivals have been on a fairly large scale. Owing to slack outside demand, prices recorded a fall of Re. 1 per maund during the week. *Arhar* also eased for want of trade enquiry. Other pulses, too, were easy in sympathy with peas. The prevailing prices are: Peas new *dara* green Rs. 12 and white Rs. 14; *arhar* Rs. 12; *urd* Rs. 18 to Rs. 20; *moong* Rs. 14 to Rs. 15-4; *masoor* Rs. 15.

Pulses futures eased during the week on bear pressure, influenced by a fall in ready prices. The latest quotations were slightly better than the lowest for the week, due to profit-taking. The latest available quotation are: Peas *jeth* Rs. 10-3-4½; peas farm *jeth* Rs. 10-7-6; *arhar jeth* Rs. 10-12-6; *urd baisakh* Rs. 18-5.

SUGAR EASY

(From Our Own Correspondent)

HAPUR, 18*th March*

Sugar prices ruled quiet during the week in the absence of new driving forces. Production was expected to be better than last year as *gur* prices had gone down further; cultivators, it was reported, were trying to pass their cane produce to factories. Demand from consuming centres was small and the undertone was depressed. The prevailing mill delivery prices of sugar were: Jaswant Rs. 28-12; Simbhauli Rs. 28-14; Mawana Rs. 28 to Rs. 29; Daurala Rs. 29 to Rs. 30; Amroha Rs. 28-4; Bijnore Rs. 28-4; Mansoorpur Rs. 29 to Rs. 30; Rampur Rs. 31-8; retail Rs. 30-10 per maund.

The *khandsari* market ruled dull and prices were mostly stationary. Inferior grades were quoted between Rs. 19 and Rs. 21 per maund and superior between Rs. 22 and Rs. 26 per maund.

Ready *gur* eased for want of outside buying enquiry. Small offtake during the week was to Punjab and Rajasthan. Daily arrivals were at an average of 2,000 maunds daily and local stock was put at about 95,000 maunds. Arrivals since the beginning of the season were put at 435,000 maunds, as against 425,000 maunds a year before. The prevailing prices were Rs. 9-8 to Rs. 9-14 per maund. *Gur* futures also declined in line with prices in ready section. *Baisakh* opened at Rs. 10-9-3 and declined in successive sessions to the lowest at Rs. 10-2 and was quoted today at Rs. 10-2-3.

Notice

THE MODERN MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Wednesday the 24th day of April 1957, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October, 1956.
2. To declare a dividend and bonus.
3. To appoint Directors in place of those who retire but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 27th March 1957 to the 16th April 1957, both days inclusive.

Any member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting is being published in the Press and will be posted to the Shareholders individually.

By Order of the Board,

N. SIRUR & Co. PRIVATE LTD.,
Managing Agents,

V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 11*th March*, 1957.

N.B.—The dividend and bonus, when declared, will be made payable at the State Bank of India, Bombay, on and after Monday the 29th April 1957, to those shareholders whose names stand on the Register of Members on the 27th March, 1957. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

FINANCES OF INDIAN RAILWAYS

(*Concluded from page 559*)

sarai and Asansol Raj Kharswan and Barajamada is now under active consideration. Three new lines, aggregating 87 miles on the South-Eastern, Western and Southern Railways have been completed and opened for traffic in the current year, while eight new lines are under construction.

The goods traffic actually carried during 1955-56 amounted to 114 million tons, while, according to the statistics available up to the end of January 1957, it is expected that the total traffic during 1956-57 will amount to 126 million tons, about 10 per cent. more than in the previous year. While traffic is increasing as envisaged in the Plan, serious difficulties are being encountered in the physical execution of the planned works, due to acute shortage of vital stores like steel, cement and permanent way materials. In order to avail of a larger field for the purchase of steel, it has been decided that the Thomas quality steel of selected specifications will now be accepted by the railways for many of their track and structural requirements. The question of using Thomas quality steel for workshop manufacture operations is still under consideration. Certain changes in the organisation and procedure calculated to expedite procurement of steel are also under consideration. The problem of foreign exchange has also been a source of considerable anxiety in recent months. In order to ease the position, negotiations are in progress with the World Bank for a loan.

There has been a general improvement in the operating position, the increase in the originating tonnage handled during the year being 10 per cent. Wagon loadings increased by 6.38 per cent. on broad-gauge and by 10.8 per cent. on metre-gauge, including transhipment loads. Movements via transhipment points also showed considerable improvement. Gratifying results were obtained from the special measures taken by the railways to increase the efficiency of operation. Targets for further improvements ranging from 10 per cent. to 20 per cent. have been set for the coming year and measures to achieve these targets are well in hand.

The final report of the team of consultants, which is now in India under the Technical Co-operation agreement between India and the U.S.A., is expected in October next. The team has already submitted a preliminary report, and the Railway Board has asked the consultants to undertake detailed studies on the subject of heavier and more powerful steam locomotives, the designing of wagons with larger capacity, the introduction of centralised traffic control on certain busy single-line sections on broad and metre gauges, and ways and means of improving movement capacity in the coalfield area to cater to the large increase in coal production expected in the second Plan.

BANKING

(*Concluded from page 563*)

Rs. 18.56 crores, loans, cash credits and overdrafts recording an increase of Rs. 13.27 crores to Rs. 73.04 crores and bills purchased and discounted a rise of Rs. 5.28 crores to Rs. 17.72 crores. Nevertheless, the credit ratio is at a lower level than the average for all Scheduled banks. Investments show a drop of Rs. 3.74 crores, and cash balances an increase of Rs. 1.21 crores. The cash ratio, it may be noted, is well above the general average. There has been a notable expansion in the Bank's bills business during the year, as witness the rise in bills for collection from Rs. 6.37 crores to Rs. 8.72 crores and acceptances and endorsements from Rs. 5.21 crores to Rs. 9.37 crores.

WELL-ESTABLISHED Company has vacancy for suitably qualified Chartered Accountant, preferably with overseas experience. Good salary and prospects for the right man. Apply Box No. 961, C/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

SUGAR

(*Concluded from page 566*)

country can earn foreign exchange of about Rs. 800.

The importance of sugar exports was stressed by Mr. S. S. Kanoria, President of the Indian Sugar Mills Association (I.S.M.A.) and Chairman of the Sugar Exports Division, in the course of a statement issued to the Press recently. Mr. Kanoria pointed out that, in spite of the initial difficulties due to fears and suspicions of foreign buyers regarding quality, packing, etc., and keen competition from other countries, the I.S.M.A. has been able to make sales of appreciable quantities of sugar to Malaya, West Asian countries, East Africa, Ceylon and Burma. These, according to him, are the natural markets for Indian sugar. The representatives of the I.S.M.A. have already visited most of these countries and it is hoped that, as these countries receive supplies of Indian sugar, they will develop a liking for it. Since India is very favourably situated and friendly with these countries and its quality of sugar second to none, it can look forward to them as its regular markets. The I.S.M.A. is very keen to establish a good reputation for Indian sugar and lay solid foundations for a flourishing export business in future. As such, the highest business standards are being followed and meticulous care taken to ensure that the quality of sugar exported is upto specifications. For this purpose, at considerable expense, internationally reputed surveyors have been employed who exercise a strict control on the packing and quality of all sugar meant for export both at the mills and at the ports of shipment.

Mr. Kanoria alluded to the tussle in various markets for sales of Indian sugar and was confident that India would be in a position to compete successfully with the other exporting countries. Incidentally, he revealed that the entire profits realised by the I.S.M.A. from the sugar export business was being pooled in a separate fund to be utilised for exports at a loss as and when the necessity arose.

Prizes in the competitions for the highest production of *gur* per acre in two different zones of the pre-reorganisation Bombay State for the year 1955-56 have been announced by the Government of Bombay. The competitions were held for the Deccan Canal area and the Kolhapur-Karnatak area. The Government has also decided to issue certificates to those competitors who produce more yield than the minimum but who are not entitled to the prizes, their yield not being maximum.

BANK OF MAHARASHTRA LIMITED

(*Concluded from page 584*)

composed of the Marathi-speaking and Gujarati-speaking areas. As a result of the inclusion of Vidarbha and Marathawada, Maharashtra has been unified. Your Bank was started mainly with the idea of serving the economic development of Maharashtra which is starved of banking facilities. It is a matter of gratification to all of us that along with its steady growth, this Bank has been instrumental in establishing, promoting and developing new enterprises. In future, the Bank has a more dynamic role to play. Its sound financial position, the reputation which it has acquired in the banking world and the part it has been playing in the economic development of Maharashtra should enable the Bank of Maharashtra to fulfil the expectations of the people about it. In the task that awaits the Bank, I am confident that the Board will have your continued support.

"What has been achieved by the Bank during its career of a little over two decades is the fruit of the co-operative effort of you, gentlemen, and the staff. During a period of stress and strain to which the banking system was subjected, your Board was fortunate in having the unstinted loyalty of the staff, and the happy relations between the Board and the Bank employees were primarily responsible for considerably easing the pressure on the Board. I am sure you will join me in paying my humble tribute to Mr. Joag, Manager of the Bank, and his colleagues of all ranks at the head office and the branches who contributed their best to the prosperity of this institution in a difficult period. During the year, Mr. S. G. Marathe resigned from the Board owing to ill health. He was connected with the Bank since its inception and has rendered meritorious services to the institution. The Board regrets that his advice will no longer be available. While acknowledging with grateful thanks all that has been done by Mr. Marathe to nurse this Bank, let us hope that he will regain his health from the well-earned rest which he richly deserves.

"I thank the members of the Local Advisory Committees at the branches for the help and guidance given by them to our agents. I also thank the shareholders, depositors and well-wishers for their support and request them to continue the same in future."

Notice

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT payment of the Half-yearly Interest on the 5 per cent. Debenture Stock 1966-71 of the Company will be made on 1st April 1957 to those Stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary.

2, FAIRLIE PLACE,
CALCUTTA-1, *12th March*, 1957.

(*Concluded from page 600*)

of the Accounts to be laid before members in conformity with the provisions of the Act, your Directors recommend that the Articles of Association of the Company be amended to provide that the Company's Accounts be closed and audited annually and laid before the Company at an Annual General Meeting in each calendar year. The proposed amendments are set out in Resolution 5 of the convening notice. If this resolution is passed as a Special Resolution, your Directors propose closing the Company's Accounts annually on 31st December in each year, which hereafter will be the closing date of each financial year of the Company. The next Annual General Meeting will, therefore, be held to consider the Accounts for the half-year ended the 31st December, 1956, and thereafter the Accounts for a full financial year ending on 31st December will be placed before every subsequent Annual General Meeting.

The foregoing changes will not result in any financial benefit either to the Directors or to the Managing Agents of the Company, and interim dividends may, subject to trading results in a current financial year, be declared by the Directors under Article 161.

FREE ENTERPRISE AND MENTAL OBSOLESCENCE

THE Prime Minister, Mr. Nehru, has done a signal service to free enterprise by reminding those engaged in it to be constantly on their guard against mental obsolescence. In his address to the annual meeting of the Federation of Indian Chambers of Commerce and Industry, held at New Delhi last week, Mr. Nehru, after quoting the words of the Chairman of the Federation, Mr. Lakshmipat Singhania—"it is not only machinery that becomes obsolete; one has to guard against obsolescence of the mind"—said that "no truer words could have been stated." He added: "These words should be inscribed in a prominent place wherever your organisations work." Obviously, Mr. Nehru, who looks upon national progress as a mighty adventure, a triumph of human spirit and enterprise over obstacles, has been struck by the Chairman's reference to the dangers from any antediluvian outlook among business men and industrialists.

It is not, however, clear whether Mr. Nehru meant this advice only for those who are engaged in free enterprise. This can hardly be correct, considering that no one can ever be too heavily on one's guard against mental obsolescence. In any case, the private sector has in recent years given a great deal of evidence of its ability to adjust itself to changing circumstances. Apart from this consideration, which is at best only a negative tribute to it, it must be recognised that this sector has always conjured up before the country great visions of a modern and progressive economy. Indeed, the men who, in the face of very heavy odds, have worked unceasingly for progress in such diverse spheres of economic activity as steel, shipping, aircraft and automobiles, cannot certainly be accused of mental obsolescence. Rather they have always been very much in advance of their times. It is not that Mr. Nehru's advice is wrong. Only, it is necessary to bear this advice in mind at all times so that people may be perpetually on their guard against mental inertia.

There is, however, a certain peculiar appropriateness in this advice for certain sections of opinion in this country. Two such sections will readily occur to one's mind. There is, for instance, a certain class of persons who are constantly crying back to what they consider to be the happy days of a bygone age. For them no productive activity is good enough unless it is carried out with the most primitive of instruments. Modern means of production are anathema to this section. The second class of persons to whom this advice could be addressed with profit are those who still hug on to certain antiquated theories of the eternal validity of the virtues of State ownership. They are ignorant of the more recent trends in socialistic opinion which frankly questions the inevitable connection between nationalisation and socialism. To many of them, it may come as a surprise that socialist leaders elsewhere are having some sound re-thinking on socialistic dogmas. Thus, Mr. Hugh Gaitskell, leader of the British Labour Party, said recently: "Simple, direct and unique relationship between wholesale nationalisation and the ultimate ideals of socialism which early theorists took for granted cannot be assumed in the new circumstances of today." There is much wisdom in Mr. Gaitskell's words. In any case, there is much food for thought in them for many political parties in this country. It will thus be seen that Mr. Nehru's advice is applicable to all sections of Indian opinion. Indeed, it is always true for all countries in all ages.

One might ask just what is the antithesis of mental obsolescence. This antithesis lies in mental honesty, in a certain willingness to change one's attitudes and opinions in the light of observed facts. It also means a certain fluidity. From this point of view, Mr. Nehru did well to emphasise that the Government is not rigid or dogmatic. He said: "If we have given up dogma in religion—at least some of us—surely, you won't expect us to become dogmatic in other matters." Referring to the Five-year Plans, he said: "These Plans are not rigid. We may vary them, we may change them, we may add to them, we may subtract from them according to circumstances." This certainly is the antithesis of mental obsolescence. He, however, missed the essence of his advice when he said that there was some truth in the concept of free enterprise, but a vast quantity of error. In his view, "it might have fitted in in the thinking of the nineteenth century, but not in the atomic age—in any case, not in India." He also said that it passed his comprehension that anyone should set up institutions to propagate free enterprise. He wondered whether the propagators of this idea could carry the millions of people of this country with them.

Being a genuine democrat himself, Mr. Nehru cannot obviously be averse to advocacy of any cause merely on the ground that it is not likely to be very popular. He may, however, be right in his scepticism about the popularity of free enterprise. But then, that is no reflection on the system. For some historical reasons, its virtues have never been placed adequately before the people to enable them to judge its merits. But that cannot be held as an argument against free enterprise or against propagation of its essential virtues. Mr. Nehru was, however, on firm ground when he averred that a "nation which loses its roots does not prosper, will not prosper—it gradually fades." Perhaps, free enterprise answers this test very well, for it is certainly more in tune with India's individualistic outlook and traditions.

Considering that the scope for economic advancement is almost limitless in this country, there is no need—at least, there ought not to be any need—for any acrimonious discussion about the relative importance of free and State enterprise. "Committed as we are to broad-base economic development," Mr. Singhania rightly observed, "Governmental policies should encourage and not hinder a wide diffusion of *entrepreneurship*." It is true that such leadership is now confined only to a small section of the population. This factor is sometimes erroneously described as undue concentration. But, as Mr. Singhania pointed out, it is "an evidence not so much of concentration of economic power as of economic backwardness in general." Through its hasty and unhelpful legislation, the Government has prevented the growth of competitive economy and deterred many potential entrants into the ranks of traders and industrialists. In this connection, Mr. Singhania said: "I dare say that every one of us present here will be able to cite more than one instance where individuals anxious to enter or expand business have refrained from doing so, apprehending that the hand of law may descend too heavily on them for unwitting omissions or commissions." Whatever its faults, free enterprise in this country cannot certainly be accused of any "closed shop" mentality. In certain countries, the governments deliberately facilitate the growth of competitive conditions and actively check monopolistic and semi-monopolistic practices. In India, on the other hand, those who are engaged in free enterprise themselves invite the Government to permit more entrants into their ranks.

Mr. Singhania availed himself of the opportunity provided by the annual meeting of the Federation to make a special appeal to the Government and labour to permit industry to adopt measures which will help increase production, reduce costs and improve quality. He stressed, in particular, the importance of improving agricultural production. "Unless agricultural productivity is increased," he said, "the market for industrial products would continue to remain narrow and, at the same time, the income and the standard of living of the farmers will remain at the present low level." A specific issue which he raised was the stringency of credit conditions. After emphasising that the growth of savings depends on the pursuit of appropriate fiscal and monetary policies by Government, he averred that the "experience of the last two years indicates that credit stringency and restrictive Government policies have attempted more to arrest a rise in prices rather than look to the effects on the expansion of industries and the consequent growth in production." He added: "The present heavy burden of taxation also acts as a deterrent to new investment. It can singly, more so in conjunction with the restrictive monetary policy, check the healthy growth of capital market." It is to be hoped that these considerations will induce the Government to soften the rigour of its credit restrictionist policies, if not also its fiscal deterrents.

Some of the broad issues which the Chairman raised in his speech found amplified expression in the specific resolutions adopted by the Federation. The resolution on economic policy expressed its "grave concern" over the stress and strains which had developed in the economy of the country and urged the Government to give increased weightage to the improvement of agricultural production. The Federation, in another resolution, called for a modification of the Government's import and export policies with a view to augmenting foreign exchange resources. Without mincing words, the resolution emphasised that, "considering the magnitude of deficiency

in foreign exchange resources, we must be prepared for austerity in consumption of at least non-essential goods." Another resolution warned the Government that, if monetary stringency were not corrected in time, it would cause a setback not only in preserving the existing levels of trade and economic activity but also in the matter of smooth progress of the programme of development under the Plan. Appropriately enough, the Federation adopted two important resolutions on taxation. One urged the Government to introduce a certain uniformity in the sales tax policies of State Governments. It reiterated its recommendation that sales tax on inter-State transportations of essential articles should be merged, wherever possible, with some Central levy. Another resolution urged the Government to evolve what it called a "scientific tax structure." The present structure and rates of levy, as the Federation itself pointed out in that resolution, affect adversely not only individual but also corporate enterprise.

RAILWAY BUDGET

THE White Paper on the Railway Budget presented to the Lok Sabha last week is of interest mainly for the reason that it serves to spotlight the achievements under the first Five-year Plan and throws some light on the task ahead of the railways under the second Plan. A notable, and obviously very welcome, trend in recent official and non-official opinion is the realisation of the importance of transport for the success of the second Plan. And transport, it cannot be too often reiterated, includes not only rail but road, sea and air transport. It is no longer a question of rail *versus* any other form of transport, but rail *cum* all forms of transport. Obviously, rail transport has to expand. But, with the best will in the world, it cannot lift all the traffic that may develop in the next few years. Realising this basic weakness in transport plans, the Union Government has been realistic enough to modify its policy towards road transport. The recent amendments to the Motor Vehicles Act are clearly designed to facilitate the development of road transport. Nevertheless, it is obvious that more remains to be done in this direction. In particular, the policy of licensing for motor vehicles has to be liberalised, the incidence of taxation on these vehicles reduced and the State Governments have to be prevented from carrying out their nationalisation programmes in respect of road transport. Above all, the roads should be improved and extended, for bad roads not only hinder smooth transport but constitute an intolerable, though invisible, levy on motor vehicles.

The finances of an important segment of the national transport system, namely, the railways, continue to make good showing, thanks to the increase in passenger and goods earnings. Gross traffic receipts in 1956-57 are now estimated at Rs. 350.0 crores, as against Rs. 316.3 crores in 1955-56, while the estimate for 1957-58 places the receipts higher at Rs. 368.50 crores. Included in these earnings are goods earnings which in 1955-56 amounted to Rs. 180.28 crores and for 1956-57 and 1957-58 are placed at Rs. 206.50 crores and Rs. 218.0 crores, respectively. The impressive increase in railway earnings will become clear when it is seen that traffic receipts rose from about Rs. 247 crores for the year 1950-51 to Rs. 316 crores in the last year of the first Five-year Plan—an increase of nearly Rs. 69 crores, made up of an increase of about Rs. 10 crores in passenger earnings, Rs. 4 crores under other coaching traffic, Rs. 53 crores under goods and Rs. 2 crores under sundry earnings. Ordinary working expenses during this period rose from Rs. 165 crores to Rs. 212.95 crores. In 1955-56, the net railway revenues, after meeting ordinary and miscellaneous working expenses and providing for Rs. 45 crores for depreciation reserve fund, aggregated Rs. 50.34 crores, the corresponding figures for 1956-57 and 1957-58 being Rs. 64.64 crores and Rs. 65.22 crores, respectively. The payment of dividend to general revenues amounted to Rs. 36.12 crores in 1955-56 and is expected to absorb Rs. 37.69 crores in 1956-57 and Rs. 43.79 crores in 1957-58. The net surplus is thus placed at Rs. 14.22 crores for 1955-56, Rs. 26.95 crores for 1956-57 and Rs. 21.43 crores for 1957-58. The capital-at-charge at the end of 1955-56 was Rs. 968.99 crores, as against Rs. 901.58 crores at the end of 1954-55, the ratio of net revenue to capital-at-charge being 5.2 per cent. and 4.9 per cent., respectively. At the end of 1956-57, capital-at-charge was Rs. 1,067.03 crores and it is expected to move up to Rs. 1,191.20 crores at the end of 1957-58.

The figures for 1957-58 are based on current rates of traffic. The high level committee which was appointed in July 1955 to review the price structure is expected to submit its report shortly. The Government intends, the Union Minister for Railways, Mr. Jagjivan Ram, pointed out in his speech when he presented the Railway Budget in the Lok Sabha, to implement the Committee's recommendations as far as practicable within the next financial year. Clearly, to the extent the recommendations are implemented, the estimates for earnings in 1957-58 will have to be modified. The Committee's report and the Government's decision thereon will, naturally enough, be awaited with interest. Nevertheless, even at this stage, two observations may well be made. In the first place, if it is finally decided to raise the freights, the rise should be so designed as to keep the consequent increase in costs of production and transportation to a minimum. Secondly, the Government should recognise that, if it is right for the railways to raise freights on the ground of the urgency of their need for development finance, it cannot possibly deny a similar right to industries in the private sector such as electricity and coal.

There is, however, no denying the fact that the railways must be freely allowed the resources they need in order to augment their carrying capacity. Otherwise, they cannot possibly fulfil efficiently the role assigned to them under the second Plan. It must be remembered that even now transport bottlenecks retard the progress of trade and industry. During the first Five-year Plan, a total expenditure of Rs. 423.73 crores, inclusive of Rs. 140 crores from the general revenues, was incurred in respect of railway development. During the Plan period, the railways acquired 1,586 locomotives, 61,254 wagons and 4,758 coaches, raising their total holdings to 9,172 locomotives, 235,198 wagons and 23,158 coaches at the end of the Plan. In spite of these large-scale procurements, the proportion of over-aged broad-gauge locomotives and wagons at the end of the Plan period was higher than at its commencement; superannuated locomotives formed 32.5 per cent. of the total and wagons of the same category 16.5 per cent. of the total, as compared with 23 per cent. and 13.3 per cent., respectively. The position on the metre-gauge showed some improvement, only 26 per cent. of the locomotives and 17.2 per cent. of the wagons being over-aged at the end of the Plan, as compared with 31.1 per cent. and 29.4 per cent., respectively at the beginning. There was an improvement in the position of coaches, inasmuch as the percentages of overaged coaches at the end of the Plan was reduced to 24 for broad-gauge and 26.4 for metre-gauge, as against 29.5 and 45, respectively, at the commencement of the Plan.

A great deal of new and concerted effort will be needed in the next few years, if the railways are to carry at least a reasonable proportion of the increase in traffic that will become available. The Rs. 1,125-crore plan for the railways envisages additional capacity of 47 million tons over the five-year period; last year, the railways carried 114 million tons and in 1956-57 they carried about 126 million tons. The second Plan contemplates the acquisition of 2,258 locomotives, 11,364 carriages and 107,247 wagons. Against these, 557 locomotives, 1,931 carriages and 27,184 wagons had been ordered in 1956-57 and orders for another 411 locomotives, 2,346 carriages and 17,729 wagons are to be placed in 1957-58. The importation of rolling stock and the implementation of other aspects of the railway plan imply both availability of such stock and of foreign exchange. Negotiations with the World Bank are, therefore, of particular interest to the development of railway transport. It would appear that there is acute shortage of vital stores such as steel and cement and permanent way materials like rails, sleepers and points and crosses. The successful implementation of the railway programme for 1956-57 alone will need about 1.06 million tons of steel; the availability for the whole year is expected to be only 550,000 tons. The supply position of other track materials also continues to be difficult.

While every effort should be made to acquire the foreign exchange which the railways need for development and the physical equipment which is needed for augmenting their carrying capacity, it cannot be too strongly stressed that the authorities should continue to improve their operational efficiency. To make every wagon and locomotive go a little farther than it does, or make them carry a little more than they do, should be the aim of the high and the low in the railway administration. Here is a task in which the railway administration, on the one hand, and those whose goods are carried by the railways, on the other, should co-operate to their mutual advantage. It is to be hoped that such co-operation will be forthcoming and, in particular, the railway labour will evince a keener appreciation of its role in national progress and put forth its best efforts in the interests of more efficient railway transport.

A subject which has lately attracted considerable criticism relates to accidents. The authorities are no doubt aware of the nature of the public agitation over this issue. They are already taking steps to ensure better maintenance of the permanent way. Nevertheless, it is somewhat disturbing to be told that track renewal was in arrears to the extent of 7,000 miles for rails and 7,000 miles for sleepers even at the end of the first Plan period. Further, there is the important question of the efficient maintenance of bridges. It is gratifying to note that the Government has appointed a high-level committee of engineers headed by Dr. A. N. Khosla, ex-Chairman of the Central Water and Power Commission, to prescribe appropriate designs and formulæ and recommend other measures for the efficient maintenance of bridge structures and protective works. The authorities will, however, be well advised not to relax their efforts designed to improve safety of rail transport on the ground that a high-level committee is about to examine the efficient maintenance of bridge structures. The Committee's work should form the basis for supplementing, not an excuse for postponing, the railway administration's measures for improving the safety factor in rail travel.

EXCISE DUTY ON CLOTH

AMONG the Government's fiscal blind spots, the excise duty on cloth is the blindest. When the issue was raised in the course of the general debate on the Budget in the Rajya Sabha on Tuesday last, the Union Minister for Revenue and Civil Expenditure, Mr. M. C. Shah, opposed any reduction in the duty, imposed last September. Defending the Government's inflexible attitude towards the levy, he said that the last few months' experience had shown that the incidence of the duty did not fall on consumers; it only mopped up higher profits of the industrialists. All this might or might not have been true at the time the levy was imposed. But the more immediate issue is the impact of the levy on the offtake of cloth. There is now clear evidence to show that the market is unable to absorb, as fast as it should, the output of the mills. Sir John Burns, Chairman of the Millowners' Association, Bombay, in his speech at the annual meeting of the Association, held on 27th inst., declared that, since the increase in excise duty on cloth in September last, the "position has steadily deteriorated and today can only be regarded as serious." It would appear that stocks with mills now exceed 500,000 bales. This is a repetition of the situation in 1953 when stocks were just as heavy and the Government was compelled to adopt specific corrective measures.

Sir John Burns rightly attributed this deplorable stock position to loss of confidence among traders and to consumers' resistance induced by increase in excise duty. He quoted some telling figures to show how heavy was the burden of the duty. He calculated that the duty formed 11.5 per cent. to 31.9 per cent. of the mill prices of representative qualities of cloth; on some superfine varieties, it is as high as 38 to 39 per cent. On an average, it works out to 24.8 per cent. in respect of representative qualities, or an average increase of 11.2 per cent. over August 1956. He added: "When I mention that the total expected collection of excise on cloth in a year is Rs. 75 crores, you will appreciate just how heavy the incidence of excise is. According to the White Paper on the Budget for 1957-58, the index for cotton manufactures in 1956 increased by 4.3 per cent. only. This would hardly seem to justify an increase in excise by an average of 11.2 per cent. over August 1956 and 14.8 per cent. over December 1955." These facts must convince any impartial observer of the textile scene that the Government should devote some second thoughts to the impact of the excise duty on the industry and the consumers. Such a study will no doubt indicate that the situation demands some corrective action in the shape of such appropriate reduction in the duty as will give a healthy fillip to offtake of cloth.

INVESTORS LACK CONFIDENCE

SPURT IN COTTON—NEED FOR ENCOURAGING CORPORATE SAVINGS

THURSDAY, 5 P.M.

MARKET GOSSIP

A FRESH wave of selling has been sweeping over the share market since last week and nervous bulls have been unloading their earlier purchases made on the eve of the Budget. Confidence seems to have been severely shaken and even small offerings have brought down values sizably. Many a leading counter has sunk to the lowest levels seen in the last four weeks. The successful efforts of the bulls to pull up the market during these four weeks have been practically undone in the last six days and the earlier gains have been nearly wiped out.

Thus, Tata Steels, which had crept up from Rs. 166 on 1st March to Rs. 181 in the Budget session on the 19th inst., has retreated to Rs. 168. Indian Irons have come down from Rs. 21-7 on the eve of the Budget to Rs. 19-3, as against Rs. 19-6 just before the recent upward movement started early this month. The recession in textiles is more pronounced and has, in fact, provided a lead to the week's depression. Bombay Dyeings have lost over Rs. 42 during the last seven days to touch Rs. 548-2, the lowest since 1st March. Centurys have come down from Rs. 491-8 touched in the pre-Budget session to Rs. 443 and Kohinoors from Rs. 336-8 to Rs. 321. The loss in Finlays is no less than Rs. 18, at Rs. 302. Leading counters in other groups have fared no better. Bombay Burmahs, which were once hot favourites at as high as about Rs. 740 (which, of course, included the final dividend of Rs. 28-12) early in February on expectations of favourable outcome of capital reconstruction and prospects of bonus issue, go abegging now at Rs. 586-4, even after they have become cheaper by over Rs. 123 in less than two months.

The most surprising feature is provided by Scindias, which dropped today nearly a rupee Rs. 19-7, after creeping up from Rs. 19-11 on Monday to Rs. 20-3/4. The earlier steadiness was due to expectations of an announcement regarding bonus issue which the shareholders asked for only two weeks ago at the last annual general meeting. The Directors have promptly obliged them with a gift, subject to the blessings of the Controller of Capital issues, of one share for every five shares held by them now. This is proposed to be done by capitalising a sum of Rs. 1.88 crore from out of the amount (Rs. 1.98 crore) standing to the credit of share premium account. This sum which was collected from the shareholders earlier is to be returned to them in the form of bonus shares; such a bonus issue does not attract bonus tax. The proposal, if carried out, will raise the paid-up capital of the Company to Rs. 11.28 crores.

Notwithstanding the announcement of the gift and the encouraging trend in earnings during the current year disclosed by the Chairman at the annual general meeting, the shares have been hammered down today by heavy selling pressure. This is attributed to fears that the Company's modernisation and expansion plans would be affected not only by the higher cost of borrowing but by the difficulty of securing the necessary funds. The Government of India is reported to have informed the Company that the rate of interest on credit for buying ships abroad will be 4½ per cent., as against 2½ per cent., and that it is not in a position to sanction further loans to the Company in view of the acute shortage of finances. Another factor which seems to have worried the operators is whether the Company would be able to maintain the present dividend of Re. 1 per share on the increased capital. If it is to do so, it will require an additional sum of Rs. 9.40 lakhs. It remains to be seen whether the earnings will be so high as to permit such an additional drawing from the profits.

The market's nervousness is understandable in the context of the widespread concern expressed by one and all over the serious situation created by the strain on the economy which experience during the first year of the second Five-year Plan has brought to light. The Government is no less concerned about it than the business men who were gathered at New Delhi last week-end and strove hard to bring home to the Government the difficulty of raising the necessary resources under the present heavy burden of taxes. No broad-minded industrialist is denying his co-operation to the Government in the implementation of the Plan. The difference of opinion between them and the Finance Minister, however, centres round the point whether the Plan can be implemented within the stipulated period with the existing available resources. The business men demand that the Plan period should be extended, but Mr. Krishnamachari is dogmatic about sticking to the Plan. His grim determination to hang on to the Plan is what is worrying the country.

In his reply to the debate on the Budget, Mr. Krishnamachari said: "We shall grimly hang on to the Plan. If we sink, we sink together, but we hope to swim to the shore of safety. We shall use every effort that we have, every ingenuity that we can command and every resource that we can lay hands on to make the Plan a success." Surely, nobody will like to sink and every one is anxious to lend a helping hand to the Finance Minister. What the country expects of him is a more realistic approach to the Plan. His dogmatism and his tirade against some sections of the private sector, which, according to him, want the Plan to be cut or altered not in the interest of the country but to enable them to make profits, are not going to help him in his efforts. May be, a few of them will stand to gain by the suggested measures, but what is to be considered is whether it is not in the general interest of the country to make the Plan more flexible.

If the Five-year Plans are not rigid, as the Prime Minister pointed out in his address to the F.I.C.C.I., and can lend themselves to suitable modifications, surely this is the time when a re-appraisal of the situation should be made before it is too late. The Planning Commission also must have realised the seriousness of the situation; otherwise, Mr. E. P. Moon, Adviser to the Commission, would not have suggested a cut of 20 per cent. If Mr. Krishnamachari has rejected Mr. Tulsidas Kilachand's demand to prune the Plan as suggested by Mr. Moon and is furious with Mr. Kilachand for quoting Mr. Moon, it is presumably because the Finance Minister does not want to admit it frankly till the next Budget. It will also give the Finance Minister some time to reassess the situation and shape his Budget accordingly.

Another important factor which has stifled market confidence is the rejection by the Union Minister for Revenue and Civil Expenditure of the demand for a reduction in additional excise duty on cloth levied in September last, despite the "serious crisis" which is facing the textile industry, to which Sir John Burns, the outgoing Chairman of the Millowners' Association, Bombay, made a reference in his address at the annual general meeting of the Association held this week. According to Sir John, the incidence of excise duty on cloth averages 24.8 per cent., an increase of 11.2 per cent. over that in August 1956. This has resulted in an accumulation of cloth with mills to the tune of 500,000 bales. In the circumstances, it is not surprising that investors in textile shares are worried about mill profits during the current year.

* * * *

The cotton market is thick with rumours of official intervention in trading. Some expect a steep upward revision in margins on cotton futures, while a few others fear that the Government may requisition the available supplies and allot them direct to mills. A section of traders is even apprehensive of suspension of trading in cotton. It is difficult to say how the mind of the authorities is working. It is, of course, true that the prices of cotton—futures and spot—have gone up considerably of late. Jarilla (Fine 25/32") March forged ahead from Rs. 618-8 on 28th December 1956, to touch Rs. 820 on Monday when it went off the board. The net rise over the three-month period is thus as much as Rs. 201-8. The quotation is the highest ever seen since business in this contract commenced at Rs. 681-4 on 18th June 1956. Over the same period, Vijay (Fine 27/32") April has spurted by Rs. 171 to Rs. 899. The new settlements, Vijay June and Jarilla May, have advanced in the past four weeks by Rs. 51 and Rs. 40 to Rs. 850 and Rs. 719, respectively. In sympathy, the spot values of cotton have also registered a substantial rise, as will be seen from the figures given below:

(In rupees per candy of 784 lbs.)

	Latest available	A week ago	A month ago	A year ago
Bengal *Deshi*..	750	730	725	730
Berar Jarilla..	830	820	805	790
Khandesh ..	840	840	835	770
Vijay ..	945	945	930	930
Oomra *Deshi*..	800	790	795	730
Moglai ..	775	765	750	685

Even the introduction of the margins recently has not had any effect on the market and prices have continued to march upwards. But it would seem incorrect to contend that this trend is something artificial, inasmuch as it has not been influenced by heavy speculative and option dealings. It is only the result of the natural forces of supply and demand on the cotton front. Any charge of unbridled speculation would be somewhat wide of the mark. Such a charge would have been true had the prices of spot cotton been lower than those of futures. Actually, spot cotton, particularly tenderable cotton, is at a premium over futures, owing to sustained demand from mills. The factors responsible for the price advance in the forward market are lower crop estimates and the persistently high level of mill demand. The traders' ideas of cotton production in the current (1956-57) season are now around 4.85 million bales, as against nearly 5.20 million bales anticipated earlier. The current annual rate of cotton consumption by mills is, however, very much higher than the estimated yield, being about 5.26 million bales. There is, therefore, a clear deficit of 410,000 bales, without taking into account either the exports from or the imports into India. Moreover, the tendency among several mills has been to consume more of domestic cotton rather than foreign cotton. This must be attributed principally to the reduction in supplies of long-staple cotton, following lower imports from Egypt and East Africa, and to the fact that the production of superior counts of cloth (out of foreign cotton) has tended to be uneconomic, thanks to the heavy incidence of taxation. The excise duty alone forms as much as 38 to 39 per cent. of the mill prices of some superfine varieties of cloth.

* * * *

The foregoing account will clearly reveal that the rise in prices, however deplorable it may be in itself, cannot be attributed to mere speculative activity in the cotton market. If, however, the authorities still feel that the rise in cotton prices must be checked, they will do well to take measures to augment supplies of cotton through imports of those varieties of foreign cotton which compare with Indian growths such as cotton of staple lengths ranging from 13/16" to 1". But the chief obstacle to such a policy is the very difficult foreign exchange position. It must, however, be conceded that, by allowing imports of cotton, the Government will be enabling the mills to maintain a high level of output which is vitally needed from the point of view of both employment and export of cotton manufactures, one of the staple earners of foreign exchange. This, indeed, is the real solution to the present so-called crisis in cotton and not mere official interference. Needless to say that such interference is likely to create uncertainties in the trade and impair the confidence of the public in the working of any forward market in the country.

* * * *

It remains to be seen whether the Government will in the near future amend the Plan. From Mr. Krishnamachari's statement, quoted above, it is obvious that the Government is still determined not to amend it. Nevertheless, the logic of events may eventually compel the Government to revise its policy. Perhaps, the Government is adopting the well-worn maxim that it is not necessary to cross bridges before they are reached. The question, however, is whether the country should go along with the Plan and amend it only at a later stage or whether it should anticipate the difficulties from now only and take suitable corrective action. An interesting answer to this question was provided by Mr. H. P. Mody, Chairman of the Central Bank of India Ltd., in the course of his speech at the annual meeting of the Bank, held today. Mr. Mody referred to the fact that the Plan had been criticised from the start by some people for its unrealistic targets of investment. He then referred to the fact that spokesmen of the Government had said that there would be a process of adjustment from time to time which would take care of any material changes in the situation that might take place. He added:

"I would like to urge that that is not enough and that what is needed is a reappraisal, here and now, of programmes and policies as a whole. I contend that enough is known, even at this stage, of the resources which could be mobilised for planned economic development in India, and the serious difficulties which have already arisen in the first year of the Plan must be taken as an indication that the projected scheme of development goes beyond the country's capacity to carry it out within the stipulated period. No year-to-year targets of investment were published when the second Five-year Plan was originally prepared, but the provision of Rs. 915 crores made for 1957-58 as outlay for the Central and State Governments is such as to suggest that the Government is still largely pursuing the schedule of investment under the original assumption, even though the working of the first year has proved them to be wide off the mark."

Mr. Mody felt that the urgency of a reappraisal of the whole position could not be questioned. The extent to which inflationary finance could be resorted to, taxation could be stepped up, and foreign exchange could be secured were pretty well known. He, therefore, thought that it would be very unfortunate if fiscal and other measures were taken at this stage in order to live up to an unrealistic programme of investment. In this connection, he averred that he could not but voice his disappointment at the latest pronouncements of the Union Finance Minister in Parliament. He hoped that the Minister would realise that the criticisms advanced on certain aspects of the Plan were neither selfish nor obstructive. The business community, he said, had repeatedly and unequivocally recognised the necessity of a planned development of the country and had offered its fullest co-operation. But he rightly felt that all this did not mean that the community should not have views of its own regarding priorities and methods or that its experience and knowledge in such matters should be impatiently set aside.

A reference to the issue of the adequacy of the country's resources for purposes of implementing the Plan was also made by Mr. G. P. Kapadia, Vice-President, Indian Merchants' Chamber, in the course of his speech in support of the resolution on taxation policy adopted by the Federation of Indian Chambers of Commerce and Industry at its annual meeting in New Delhi. Mr. Kapadia said that an underdeveloped economy embarking upon ambitious plans could not create all the foreign exchange it needed through exports alone or through the curtailment of imports. Capital goods requirements of the country which would give the benefit to the country for decades to come entailed a huge cost for a planning period. It would be impossible to provide for all such capital costs to be incurred during the planning period covering a small compass of five years. Obviously, therefore, the capital goods to be obtained from abroad must be on a credit basis and the country would have to arrange for such goods from countries that are willing to give such credit. He added:

"The creditworthiness of the country depends not merely on the balance of trade being maintained on an even basis or on the creation of foreign exchange resources by a favourable balance of trade each year. But it has another fundamental bearing in the shape of the new industrial investment taking place in the country and the capital resources of the country increasing correspondingly as a result of rapid industrialisation."

Clearly, if the external resources are not available on the scale on which they are needed for the implementation of the Plan, the country would have to make up the deficiency through increased domestic resources. In this connection, Mr. Kapadia said that it was worthwhile considering whether the country's economy could bear further extraordinary burdens and whether such burdens

EQUITIES DEPRESSED

TEXTILES MARKED DOWN HEAVILY

(From Our Own Correspondents)

BOMBAY, *28th March*

EQUITIES tumbled down on the Stock Exchange during the week under review. The nervous selling pressure which developed last week after the presentation of the interim Budget gathered momentum during the week under review and values touched the lowest levels since the beginning of March. At one time equities appeared to be steady at lower levels, but fresh nervous offerings broke the bottom. The grim determination of the Finance Minister to hold on to the Plan and implement it at all costs "in the interests of the country" and his rejection of the suggestions to alter the basic assumptions of the Plan imparted fresh weakness in the belief that the Finance Minister was all-out to levy fresh taxes to find the finances to implement the Plan. Mr. M. C. Shah's rejection of the demand in the Rajya Sabha for a reduction of the additional excise duty imposed in September last further unnerved operators in the textile section. The growing stringency in the money market, weaker advices from Calcutta, threat of Government intervention in the cotton market were all factors which sapped the enthusiasm to hold on despite the attractive levels.

In the steel section, Tata Ordinaries gave way from Rs. 175-8 to Rs. 167-8 on Monday. After a short-lived mild recovery to Rs. 171, the shares retreated again today to Rs. 167-8 before closing at Rs. 168. The new shares were done Rs. 4-8 lower at Rs. 120. Indian Irons slipped back from Rs. 20-7 to Rs. 19-8 and, after steadying up to Rs. 20, fell away to Rs. 19-3. The Rights were placed Re. 1-4 lower at Rs. 4-7.

Textile shares were the worst affected, despite the encouraging corporate news. The main disturbing factor in this section was the fear that mill profits for the current year would be considerably less if the present level of excise duties was maintained. Bombay Dyeings remained steady early in the week with a recovery from Rs. 571-4 to Rs. 576-4, but fell back to Rs. 553-2 on Monday. The results of the Company for the year ended 31st December 1956, which disclosed a rise in gross profit from Rs. 1.18 crores to Rs. 1.26 crores, caused a temporary improvement to Rs. 568-2, but in the face of the general weakness, this level could not be sustained. Consequently, the shares slumped to Rs. 548-2 at the close. Centurys were the worst affected with a drop of Rs. 30 to Rs. 443. Kohinoors were marked down from Rs. 329 to Rs. 321. Central Indias dropped Rs. 3 to Rs. 112, Finlays Rs. 12 to Rs. 302 and Gokaks Rs. 6-14 to Rs. 210. India United Ordinaries shed As. 5 to Rs. 10-6. Indore Malwas suffered a fall of only Re. 1-4 to Rs. 137-8. Khataus declined by Rs. 7-8 to Rs. 191-4 and Model Mills Rs. 8-12 to Rs. 170. New Greats were done at Rs. 218 *ex-div.*, as against Rs. 230 *cum-div.* a week ago. Podars declined by Rs. 2-8 to Rs. 165 and Phœnix by Rs. 2-8 to Rs. 147-8. Shree Niwas Cottons disclosed a loss of Rs. 6-14 at Rs. 178-2. The decline in Simplex was less pronounced, with a drop of only Re. 1-8 to Rs. 175. Standards suffered a fall of Rs. 21-4 to Rs. 440 and Svadeshis Rs. 7 to Rs. 214-8. Tata Mills were done Rs. 2-8 lower at Rs. 46-8.

Bank shares ruled quiet with a marking down in values all round. Barodas were As. 8 lower at Rs. 103-8. Central Banks retreated from Rs. 53-4 to Rs. 51-4 and their new shares from Rs. 56-8 to Rs. 55. Bank of Indias also receded from Rs. 136 to Rs. 134. Union Banks lost As. 8 to Rs. 7-1½ and United Commercials Re. 1 to Rs. 56-8.

Business in insurance shares were very much restricted. New Indias had business at the unchanged rate of Rs. 40. Indian Mercantiles changed hands As. 8 better at Rs. 40-8, while Neptunes were put through at Rs. 3-4, as against the previous nominal quotation of Rs. 5.

Electricity shares were on offer and the undertone was quiet. Ahmedabad Electrics were done at Rs. 94-11 *ex-div.* (final Rs. 4 per share), as against Rs. 100-10 *cum-div.* a week ago. Bombay Suburbans were unchanged on balance at Rs. 110, while Surat Electrics were put through Re. 1-4 lower at Rs. 112-8. Poona Electrics had business Re. 1-4 lower at Rs. 128-12. Tata Hydros declined by Re. 1-8 to Rs. 120 and their new shares were dull at Rs. 116. Tata Powers were marked down by Rs. 11-4 to Rs. 1,200 and their new shares by Rs. 17-8 to Rs. 1,170. Andhra Valleys shed Rs. 16-4 to Rs. 1,192-8.

The miscellaneous section was depressed in consonance with the general trend. The sugar group showed and all-round recession, Belapurs falling from Rs. 230-4 to Rs. 227. Phaltans lost Re. 1-4 to Rs. 134-12. Walchandnagar Industries moved down by As. 10 to Rs. 268-12. Cement shares ruled weak. Heavy selling in Associated Cements dragged the shares down from Rs. 166-8 to Rs. 158, before they closed at Rs. 159-8. Digvijay Cements drifted lower by Rs. 3-8 to Rs. 143-8. Jaipur Udyogs were done As. 3 lower at Rs. 11-15. In the engineering and mining group, Alcocks retreated from Rs. 273-12 to Rs. 260. Tata Locomotives suffered a precipitous fall to Rs. 138-12, after an initial gain from Rs. 144-12 to Rs. 148. Premier Constructions dropped Rs. 9-12 to Rs. 165. Larsen and Toubros were As. 8 lower at Rs. 15-6. Shivrajpurs shed Rs. 2-8 to Rs. 90. Indian Coppers fell by As. 2½ to Rs. 3-4 and B.B. Petrols by an anna to Rs. 2-9.

In the shipping and automobile group, a drop of Re. 1-4 to Rs. 19-7 was noted in Scindias, despite the announcement that the Directors have decided to capitalise a part of the share premium amount and issue bonus shares in the ratio of 1 for 5. Great Eastern Shippings weakened from Rs. 19 to Rs. 18-2. Premier Automobiles retreated from Rs. 97 to Rs. 89-8. Hindustan Motors shed only As. 4 to Rs. 7-6½.

Among the miscellaneous industrials, Bombay Burmahs (old), after an initial gain from Rs. 621-4 to Rs. 627-8, slumped to a low of Rs. 581-4. Just at the close, they recovered slightly to Rs. 586-4. The Partly-paids lost Rs. 16-4 to Rs. 215. British India Corporations reacted from Rs. 8-1 to Rs. 7-6. National Rayons were steady for some time, due to proximity of dividend announcement, but soon receded to Rs. 233, a loss of Rs. 5-4 over the week. Tata Chemicals were done As. 12½ lower at Rs. 15-13½ and Tata Oils Rs. 3-4 down at Rs. 42-4. Wimcos were a quiet feature at Rs. 171-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, *27th March*

The Calcutta Stock Exchange ruled distinctly easy during the week under review. Fears of additional taxation and upward revision in railway freight rates adversely affected the sentiment of operators. The continued stringency in the money market also acted as a damper. Selling ensued as a consequence and equity values staged a retreat. In particular, the speculative counters lost much ground.

Jute shares were subjected to heavy selling. Unions were hammered down by Rs. 20 to Rs. 100. Dalhousies fell by Rs. 9 to Rs. 85. Barnagores dropped Rs. 3 to Rs. 92. New Centrals declined by As. 9 to Rs. 12-4. Nuddeas were neglected at Rs. 30-8. Budge Budges were dull at Rs. 90, as also Cheviots at Rs. 126, Gourepores at Rs. 226, Orients at Rs. 99 and Presidencies at Rs. 4.

Coal shares received little attention. South Karanpuras receded by As. 5 to Rs. 9. Burrakurs shed As. 4 to Rs. 21-2. Kuardis were quiet at Rs. 2-7, Bengals at Rs. 446 and Karanpura Collieries at Rs. 98.

Tea shares lacked support. Hantaparas climbed down by Rs. 3 to Rs. 191. Rajabhats decreased by As. 6 to Rs. 21-6. Sungmas were unaltered at Rs. 10-6. Brooke Bonds were sold today at Rs. 19-8. Carrons at Rs. 166, Jayshrees at Rs. 11 and Ranicherras at Rs. 16-8.

Engineering shares were on offer at reduced rates. Jessops fell by Rs. 2-1 to Rs. 24-11. Indian Irons slipped down by As. 11 to Rs. 19-12. Textile Machinery declined by As. 7 to Rs. 19-7. Guest, Keen Williams eased by As. 6 to Rs. 24-8. Marshalls lost As. 4 to Rs. 4-11. National Irons were transacted at Rs. 7-1.

Among miscellaneous industrials, Martin Burns moved down by As. 14 to Rs. 22-8. British India Corporations dropped As. 12 to Rs. 7-9. National Carbons decreased by As. 8 to Rs. 26-6. Burma Mines slipped by As. 4 to Rs. 2-9. Shaw Wallaces receded by a like amount to Rs. 11-6. Indian Coppers, Sone Valleys and Calcutta Electrics shed As. 2 each to Rs. 3-3, Rs. 7 and Rs. 12-12, respectively. B.B. Petrols eased by an anna to Rs. 2-11. Angelo Brothers were dull at Rs. 19-10.

* * * *

The Alkali and Chemical Corporation of India, Ltd. announces that the Committee of the Stock Exchange will allow dealings in the renunciation letters of the new "A" Ordinary Shares to be issued to existing shareholders next month. This means that members' rights to these shares will be saleable.

* * * *

Madras Stock Exchange

MADRAS, *26th March*

Distinctly bearish conditions prevailed on the Madras Stock Exchange during the week under review. The absence of any additional tax proposals in the Central Budget did not help to infuse confidence among operators. On the contrary, there were fears that new heavy taxation was in store. They were based on the Finance Minister's statement that "the objective must be to reduce it (that is, the deficit) to the extent possible by increasing the resources accruing to the public exchequer." These fears, coupled with weak advices from Bombay and Calcutta, induced heavy selling which brought about a sharp break in values.

In the planting section, tea shares staged a retreat. Nonsuch Teas fell by As. 12 to Rs. 23. Coonoor Teas dropped As. 10 to Rs. 24. Blue Mountains declined by As. 4 to Rs. 5-15. Devasholas and Talayar Teas lost a same amount to Rs. 21-8 and Rs. 11-12 *cum-div.*, respectively. Kil Kotagiris receded by As. 4 to Rs. 6-8. Waterfalls shed a like sum to Rs. 6-8. Haileyburias were done at Rs. 24, as against Rs. 24-4. Nilgiri Teas were neglected at Rs. 10-10, as also Parksides at Rs. 17-8 *cum-div.* and Ouchterlonys at Rs. 5. Kalpetta, however, had some enquiries and moved up by As. 4 to Rs. 26. Neelamalais gathered an anna to Rs. 6-3.

Coffee shares ruled easy. Consolidated Coffees moved down by As. 10 to Rs. 23-2 and Coffee Lands by As. 6 to Rs. 26-10. Periakaramalais lost As. 3 to Rs. 8-4-6. Mysore Coffees were a shade lower at Rs. 3-1-6. Amalgamated Coffees were dull at Rs. 12-6, Balmadies at Rs. 3-8, Kumargodes at Rs. 6-11-6 and Rajendras at Rs. 11-6.

Among rubber shares, Travancore Rubbers and T.R. & T's lost As. 8 each to Rs. 21-8 and Rs. 9-9, respectively. Cochin Malabars were lower by As. 7 at Rs. 8-14. Kailas dropped As. 5 to Rs. 5-9 and Anandams As. 4 to Rs. 21-4. Malankaras were done at Rs. 30-4, as against Rs. 30-8. Nenmenys and Pullangodes shed As. 2 each to Rs. 22-12 and Rs. 2-10, respectively. Nilamburs were quiet at Rs. 16-4.

In the textile section, Metturs were hammered down by Rs. 10 to Rs. 430. Cannanores fell by Rs. 7 to Rs. 170. Coimbatore Pioneers and Lakshmis decreased by Rs. 6 each to Rs. 160 and Rs. 272 respectively. Bangalore Woollens were quoted lower by Rs. 5 at Rs. 580 *cum-div.* and Buckinghams by Rs. 4 at Rs. 177 *cum-div.* K. Rajendras declined by Rs. 4 to Rs. 106, Coimbatore Spinnings by Rs. 2 to Rs. 88 and Saradas by Rs. 5 to Rs. 100. Janardanas receded by a rupee to Rs. 109 *cum-div.* Travancore Rayons shed As. 6 to Rs. 13-10. Rajapalayams were neglected at Rs. 150, Ranga Vilas at Rs. 88, Pankajas at Rs. 77-8 and Premiers at Rs. 190. Vasantas changed hands at Rs. 310, same as last week. Venkatesas were on offer at Rs. 164.

In the sugar group, Mysores were marked down by Re. 1-8 to Rs. 39-8. E.I.Ds were quoted As. 4 lower at Rs. 27-13 *cum-div.* Deccans and Travancores lost As. 2 each to Rs. 10-6 and Rs. 11-4, respectively. Indias shed As. 2 to Rs. 16-2. K.C.P. Ordinaries, however, had good buying enquiries and spurted by Rs. 5 to Rs. 135. Kirlampudis were unchanged at Rs. 33.

In the miscellaneous section, Textools slumped by Rs. 10 to Rs. 250. India Cements were marked down by Rs. 2-4 to Rs. 25. F.A.C.Ts and Mettur Chemicals shed As. 5 each to Rs. 5-14 and Rs. 9-3, respectively. Travancore Cements were As. 5 lower at Rs. 9-7. Sen-Raleighs eased by As. 2 to Rs. 12-10. Spencers lost a like amount to Rs. 16-2. Singarenis were unaltered at Rs. 10-8.

MARKET GOSSIP

(Concluded from previous page)

would give the required benefit or whether they would result in an adverse effect on national economy. He said:

"If by measures of taxation bigger and bigger slices are taken out either out of individual enterprise and/or out of corporate enterprise, in course of time the resources would stand depleted and although the State as such would considerably swell temporarily, the people would shrink and the country as a whole would be the poorer in the long run. It is one of the compulsions of a backward economy that the flow of private savings cannot be greatly augmented by mere equal distribution of wealth and income. Egalitarian measures may within limits be justified on the basis of social justice but if these are pursued in a doctrinaire manner, they may defeat the very objective."

After recalling that the recent pronouncements of the Union Finance Minister indicated that the Government wanted more and more of corporate enterprise to come into being, Mr. Kapadia said: "Logically, therefore, Government ought to see that this objective was achieved and it was but to be expected that with the great increase in personal income taxation, the taxation of corporate enterprise would be much less burdensome." He, however, regretted that steps taken by the Government had resulted in more and more burdens on corporate enterprise as well. He subjected three specific measures adopted by the Government in the recent past to a critical scrutiny. The measures which he considered were: (1) withdrawal of rebate on undistributed profit; (2) a levy of supertax on a graduated scale on distribution in excess of 6 per cent. on paid-up capital, and (3) levy of a tax on bonus shares. He rightly said that these measures definitely showed a reverse of the policy the avowed object of which had been the ploughing back of profits within industry. He also referred to the fundamental changes made in the provisions of section 23A of the Indian Income-tax Act. He felt that if the object of the Government was to encourage corporate enterprise in the interests of the success of the Plan, then it was imperative that the new provisions should be deleted and section 23A should be kept completely in abeyance for the period of the second Plan.

Urging a dispassionate consideration of the question of retention of profits, he said, that the extra super-tax on excess dividends might in many cases result in lower rates of dividend which in turn would have an impact on the prices of the scrips; they might go much below their intrinsic worth. Summing up his observations on the Government's taxation policy, he said:

"If Government thinks in terms of gearing corporate enterprise and corporate savings, it is but imperative that conditions should be created for the fullest development of corporate enterprise and corporate savings. And to achieve this objective the minimum possible burden should be put on corporate enterprise and logically, therefore, rebate in respect of undistributed profits ought to be there, the extra tax in respect of excess dividend distribution should be dropped, the tax in respect of bonus issues must be eliminated and the deposit scheme so administered as to bring within its compass only those companies which deliberately fritter away their resources by distribution of surpluses available as a result of capital allowances and by the utilisation of such resources in extraneous activities. On the other hand, if Government thinks in terms of the savings being generated through individuals and Government thinks in terms of the equity holder who is the backbone of the corporate enterprise, with the extra burdens on companies, the burden of individual taxation must be considerably lowered if the objective of generating savings for the success of the second Plan is to be achieved."

In view of the very legitimate fears entertained by the business community over the next budget and of the imperative need to stimulate savings, individual and/or corporate, it is greatly to be hoped that Mr. Kapadia's closely reasoned analysis of the Government's fiscal measures will receive the attention it deserves.

NEWS IN BRIEF

THE Government of India has sanctioned a scheme in the private sector for the production of 15,000 tons of pig iron annually at Coimbatore (Madras State) from the iron ores found near Salem.

Ganz, a Government-owned electrical equipment manufacturing firm in Hungary, will build two hydro-electric power stations in Kashmir at a cost of over Rs. 30 lakhs. The order was placed on 25th January.

Under the Indian aid programme to Nepal, a team of Indian experts will visit Nepal to assess the requirements of a cement plant, and then visit China to select a cement plant to be given to Nepal under the Sino-Nepalese economic agreement.

For the supply of washed metallurgical coal from the Jharia fields to Bhilai and Rourkela, a washery would be set up in Gugda on the Jharia fields. Tender specifications for this washery have been prepared. The location of two more washeries to wash coals for other steel plants in the private sector has been settled. A broad allocation of coal to the various steel plants has been agreed to between the Ministries of Production, Railways, and Iron and Steel.

The 24th Annual General Meeting of the Indian Sugar Mills Association, Calcutta, will be held at New Delhi on Friday, 5th April, 1957, Mr. S. S. Kanoria, President of the Association, presiding. The meeting will be inaugurated by Mr. Ajit Prasad Jain, Minister for Food and Agriculture, Government of India. Apart from reviewing various important developments in the sugar industry during the outgoing year, it is understood that certain important resolutions having a vital bearing on the sugar industry will also be taken up for discussion.

An aggregate of 610 million pieces of new coins of denominations of one *naya paisa* and two, five and ten *naye paise* will be produced by 1st April—the day on which the decimal coinage comes into force. All the Government mints at Alipore, Bombay and Hyderabad are working at full speed to produce the new coins. It is expected that, by the end of June next, the mints will have produced an additional 230 million pieces. The new 25 and 50 *naye paise* (quarter and half rupee new coins) are to be introduced some time later in 1957.

The Punjab Government is examining proposals for setting up an electric appliances factory and an electric generator factory at Chandigarh. The capital investment on each of the two projects is estimated at Rs. 30 lakhs. The proposed factories will be set up by private industrialists with Government collaboration. The Government's contribution will be in the form of land and building. This form of mixed investment will probably be an innovation in the country.

The Medicinal and Toilet Preparations (Excise Duties) Act, 1955 (16 of 1955), will come into force on 1st April 1957. The Act provides for the levy and collection of duties on medicinal and toilet preparations containing alcohol, opium, Indian hemp or any other narcotic. The Act and the rules made under it introduce uniform rates of excise duties on these preparations and prescribe a uniform set of rules to regulate the collection of duty on such preparations and trade in them.

The Aluminium Committee set up by the Government of India sometime ago has recommended the establishment of two units with a capacity of 10,000 tons each per annum during the second Plan period in order to increase the output of aluminium. According to the Committee, the current demand for aluminium in all forms is estimated at about 20,000 tons and it is expected to increase to 30,000 to 40,000 tons by 1960-61. One of the units, the Committee has suggested, should be established in Mettur to take advantage of the bauxite resources at Shevaroy. The two units should have an additional capacity for rolling about 5,000 to 6,000 tons aluminium sheets and strips.

From Abroad

Egypt will get half a million tons of oil from Russia in exchange for Egyptian goods under an agreement signed recently between the two countries.

The British Overseas Airways Corporation is the world's second busiest inter-Continental airline among the companies affiliated with the International Air Transport Association. The busiest is Pan-American Airways, flying 27 per cent. of the inter-Continental air traffic, as compared with B.O.A.C.'s 11 per cent.

Freight rates for rubber shipments from the Far East to Europe are to be increased by 15 per cent. with effect from 1st June next, and the freight rates for tin cargoes will be raised by 10 per cent. from 1st May. These increases are the result of the decision of the three main liner conferences operating between Europe and the Far East to raise their basic rates of freight.

The Union of Burma and the United States have signed an economic co-operation agreement for development purposes. Under a concurrent loan agreement, the U.S.—through the Export-Import Bank—is granting Burma $25 million worth of credits to finance purchases of commodities and services Burma needs for its development. Another $17.3 million worth of kyats is being extended to Burma to purchase U.S. reserve agricultural commodities. Both are long-term 40-year loans.

The Japanese Government has invited applications for constructing 398,000 gross tons of ships—the largest programme since Government sponsorship was introduced in shipbuilding in 1947. The record figure, according to the Ministry of Transport, is based on the assumption that the Japanese Development Bank, a Government financial institution, will supply 20,000 million yen for the programme. The Bank may, however, reduce the fund by 10 per cent. and in that case, the total tonnage will be reduced to 340,000 tons.

Burma and the U.S. have signed an economic co-operation agreement, providing for loan assistance to the former for economic development. Under the agreement, Burma will get two loans aggregating $42.3 million. The two loan agreements will be concluded with the U.S. Export-Import Bank. The first loan of $25 million will be made from the dollar funds of the International Co-operation Administration and other loan of the order of $17.3 million will be given from the amount paid by Burma to the U.S. for the purchase of surplus agricultural commodities.

The Economic Council of Finland, a body of experts which advises the Government on matters of national financial, economic and commercial policy, has published a programme designed to stabilise the country's economy. Under the programme, wages are to be increased only when production increases. Prices of fruit, coffee, liquid fuel, imported grain, cattle fodder and other commodities are to be freed from current State regulation. The tax on companies' profits is to be increased from 32 to 38 per cent. Imports of fuel are to be cut by 20 per cent. Exports of timber and wood products are to be subjected to a levy, the proceeds of which will go towards financing the purchase of raw materials for Finnish industries.

The Burmese Government is ready to disburse in the current financial year Rs. 82 lakhs as compensation for nationalised agricultural lands. According to Mr. Thakin San Myiut, Minister for Land Nationalisation, there are 6.2 million acres of land to be nationalised in Burma, of which 2.3 million acres belong to the South Indian *Chettiar* community. If all these lands are resumed by the Government, total compensation payable will amount to Rs. 13.7 crores, of which the Chettiars will receive Rs. 4.6 crores or 33.5 per cent. of the total compensation amount. But about 1.4 million acres only have been nationalised so far since the Act came into force. In 1953-54 and 1954-55 about 674,560 acres were nationalised, for which compensation payable amounted to Rs. 155 lakhs.

PERSONAL

MR. John A. Thivy, India's Ambassador to Italy, left for Rome on Saturday last week.

Mr. Babubhai M. Chinai of Bombay has been elected President of the Federation of Indian Chambers of Commerce and Industry for the coming year.

Mr. Gopala Menon, Indian Consul-General in New York, has been elected Chairman of the *Ad-hoc* Committee of the Special United Nations Fund for Economic Development.

Mr. G. A. Kulkarni and Mr. S. M. Mistry have been elected President and Vice-President, respectively, of the Association of Merchants and Manufacturers of Textile Stores and Machinery, India, for 1957.

Mr. N. S. V. Aiyer, Secretary, Millowners' Association, Bombay, has proceeded on long leave preparatory to retirement after 34 years of service to the Association. Mr. B. G. Kakatkar, formerly Deputy Secretary, has taken over charge as Acting Secretary.

Dr. S. T. Merani, Labour Attache, Consulate-General of India, Geneva, will represent the Government of India at the fourth session of the Advisory Committee on Salaried Employees and Professional Workers of the I.L.O. to be held at Geneva from 1st to 13th April next. The employees will be represented by Messrs. L. C. Joshi and A. K. Bhatacharya and the workers by Messrs. Keshab Banerjee and N. M. Barot.

Mr. C. H. Bhabha (Central Bank of India), Mr. D. R. Thom (Bank of India) and Mr. S. L. Kothari (Bank of Jaipur) have been re-elected Chairman, Deputy Chairman and Honorary Secretary, respectively, of the Indian Banks Association for the year 1957. The other members of the Committee are: Messrs. N. M. Chokshi (Bank of Baroda), Mr. M. R. Ruia (United Commercial Bank), Kamalnayan Bajaj (Punjab National Bank), S. Krishnaswamy Iyengar (Indian Bank) P. V. Gandhi (Devkaran Nanjee Banking Co.), F. K. F. Nariman (Union Bank of India), N. K. Karanjia (Central Bank of India) and C. Eknath Kamath (Canara Bank).

BOMBAY BUDGET

THE Government of Bombay's budget for 1957-58, which Dr. Jivraj N. Mehta, the Finance Minister, presented to the State Legislative Assembly on Saturday last week, is only of academic importance. For it takes the nature of a vote-on-account budget, pending the presentation of a full-fledged budget after the new Legislature meets. The estimates of receipts have been framed on the basis of existing taxation and those of expenditure provide only for obligatory and standing charges so as to enable the continuance of existing services. The budget does not thus propose to anticipate in any manner the decisions of the new Government by initiating new policies or making changes in existing policies. Nevertheless, the budget is of some interest for two reasons. First, it gives a picture of the financial position of the enlarged bilingual State of Bombay. Secondly, it indicates, through the disclosure of a sizable revenue surplus of Rs. 2.37 crores and the huge contemplated capital expenditure of Rs. 40.68 crores, that higher taxation will not be long delayed.

An idea of the budgetary position of the enlarged bilingual Bombay State, as compared with that of the State prior to reorganisation, can be had from the following statement:

(In crores of rupees)

	1957-58 (*Bilingual Bombay*)	1956-57 (*Before Re-organisation*)
Revenue Receipts	106.32	78.10
Revenue Expenditure ...	108.69	77.87
Deficit(−) or surplus(+) ...	−2.37	+0.23

The revenue deficit of Rs. 2.37 crores and the capital expenditure of Rs. 40.68 crores—the two together amount to Rs. 43.05 crores—represent the sum which the Bombay Government will have to raise in the next financial year. As against this amount, the Finance Minister has taken credit for Rs. 5.58 crores met from funds and for Rs. 12.34 crores representing betterment under debt heads, inclusive of loans from the Central Government, but without taking into account open market borrowings. The overall deficit expected for 1957-58 thus comes to Rs. 25.13 crores. The deficit is proposed to be fully covered by withdrawals from the opening balance of Rs. 32.31 crores. The coming year (1957-58) is, therefore, expected to close with a balance of Rs. 7.18 crores, including amounts invested in Treasury Bills. This balance, according to the Finance Minister, will go up to the extent of the Government's open market borrowing which will be partly counterbalanced on account of new schemes that will be taken up by means of supplementary demands.

The estimated receipts of Rs. 106.32 crores include Rs. 35.06 crores under "other taxes and duties," Rs. 14.57 crores on account of the State's share in Central taxes (income-tax Rs. 11.52 crores, Union excise duties Rs. 2.61 crores and Estate Duty Rs. 44 lakhs), and Rs. 13.19 crores under land revenue. The provision of Rs. 35.06 crores under "other taxes and duties" includes an amount of Rs. 24.50 crores for general sales tax which takes into account a credit of Rs. 1 crore for sales tax on inter-State trade. The estimate on the expenditure side includes Rs. 19.57 crores for education, Rs. 11.43 crores for police, Rs. 8.66 crores for medical and public health, Rs. 6.90 crores for general administration and Rs. 5.78 crores for Community Development Projects, National Extension Service and local development work. The estimate of Rs. 8.03 crores under "miscellaneous" includes an amount of Rs. 2.67 crores for the integration of pay scales and dearness allowance rates of the employees of the new State and for granting increased rates of dearness allowance to low-paid employees in accordance with the recent Government of India scheme.

The net year's budget, as already stated, provides for a capital expenditure of Rs. 40.68 crores for schemes other than those of State trading; the figure is inclusive of Rs. 2.96 crores for roads which is debited to the State Road Fund. The bulk of the capital expenditure is accounted for by irrigation, the capital outlay on which is estimated at Rs. 16.98 crores. Roads and buildings account for Rs. 9.21 crores. The outlay on the Koyna project is put at Rs. 6.86 crores and on Port development at Rs. 86 lakhs.

The aforesaid items of capital expenditure are proposed to be met principally from loans (Rs. 13.07 crores) and grants (Rs. 1.33 crores) from the Centre, share in small savings (Rs. 6.68 crores), withdrawal from Fund for Development Schemes (Rs. 2.00 crores), and balances in State Road Fund, Milk Fund, Sugarcane Cess Fund, Port Development Fund, etc. (Rs. 4.21 crores). The balance will be met from open market borrowing and other sources. The budget contains provisions for loans and advances. They include Rs. 5.30 crores to the new Bombay Electricity Board, Rs. 1.95 crore under industrial housing schemes and Rs. 1.05 crore under low-income group housing scheme.

DRILLING FOR MINERAL OIL

Arrangements in respect of exploratory drilling for mineral oil in the Jawalamukhi hills of the Punjab are being fast completed. Working against heavy odds in the difficult mountainous terrain of the Sivalik ranges, 16 Rumanian engineers and technicians are busy completing the derrick which will penetrate the foot rocks of the Himalayas in search of mineral oil. Drilling operations in this area are the first major step in the implementation of India's Rs. 30-crore scheme for mineral oil exploration during the second Plan period. The importance of exploring and tapping the country's mineral oil resources cannot be overemphasised in view of the fact that the country now spends more than Rs. 75 crores worth of foreign exchange on imports of mineral oil. The demand is estimated to double by the end of the second Plan and foreign exchange to the tune of Rs. 150 crores will have to be found for the purpose.

Indian and foreign oil experts who surveyed the region during the last two years were hopeful of subathus—oil-bearing rocks—being found at a depth of 8,000 to 9,000 feet. The seepage of gas in the form of burning flames in a nearby temple for centuries has only confirmed the belief that oil or gas or both may be present in the area. Work on the derrick site started in January last and is nearing completion. The transportation of the drilling equipment to the site was a difficult job and a special road had to be cut through solid rock to carry the 1,300-ton heavy equipment to the drilling point. About seven thousand workers were employed to construct the 4½-mile long road which had to be strong enough to withstand transport of the heavy equipment.

The drilling equipment, which had been purchased from Rumania at a cost of Rs. 40 lakhs, is being installed by Rumanian technical personnel. They are also training Indian engineers in the science and technology of oil drilling. The 45-ton heavy derrick, which will be propelled by five engines of 300 h.p. each, has a load capacity of 300 tons. It can drill up to about 10,000 feet.

The derrick will thrust four casings of varying diameters into the rock to reach a depth of 11,500 feet. The first one of 18⅜ feet diameter will pierce up to a depth of 300 feet and the second and third of 14¾ and 10¾ feet in diameter will reach a depth of 2,100 and 6,600 feet respectively. The last casing, which will probe upto a depth of 11,500 feet, will be of 6⅝ feet in diameter. The outer surface of each successive casing will be cemented with a special quality cement to avoid puncturing of the side or the onrush of gas or any extraneous matter. A special kind of mud will circulate through the casing which in the process will bring out the crushed rocks for analysis in a laboratory at the work site. The road to another drilling site, where a second drill obtained from Russia is to begin operation, is under construction. A modern miniature town is already springing up in the area.

SCIENTIFIC RESEARCH

Some important decisions in respect of the development and co-ordination of scientific research in the country were taken by the Board and the Governing Body of the Council of Scientific and Industrial Research at its recent meeting held in Bangalore. Among the major proposals approved by the Board were those relating to the setting up of a National Aeronautical Research Laboratory and establishment of four research centres for essential oil, one each at Dehra Dun, Kanpur, Poona and Bangalore. The National Aeronautical Research Laboratory, with facilities for undertaking research on all aspects of aeronautical engineering, will be established within a reasonable time and a phased programme for this purpose will be drawn up for implementation during the second and third Five-year Plans. The Laboratory will undertake scientific investigations into the problem of flight in relation to design, construction and operation of aircraft. A transonic supersonic wind tunnel will also be set up as soon as possible to serve as the nucleus of the proposed laboratory. A project team is to be appointed to work out the details. It has also been decided to set up a Wind Power Division in the premises of the Central Salt Research Institute, Bhavnagar. The Ionosphere Field Station at Haringhata, in Calcutta, will be placed on a permanent footing. An Advisory Committee has also been constituted to assist the Council in the administration of the station. The establishment of training-*cum*-research centres on gas turbines at the Indian Institute of Technology, Kharagpur, Bengal Engineering College, Calcutta, and Indian Institute of Science, Bangalore, was approved.

The programme of work drawn up by the Essential Oils Research Committee for the research centres at Dehra Dun, Kanpur, Bangalore and Poona was also approved. The problem of indigenous production of sulphur also figured in the discussions of the Board and various concrete proposals for developing sulphur production were made. The Governing Body also sanctioned 50 new research schemes covering various branches of science and engineering.

It may be observed that greater co-ordination between the Development Wing of the Ministry of Heavy Industries and the Council of Scientific and Industrial Research for utilisation of the results of research at the national laboratories has been made possible by the creation of a Joint Standing Committee with the Minister for Heavy Industries as Chairman and the Director-General of, Scientific and Industrial Research, the Chief Industrial Adviser to the Government of India, and prominent industrialists as members. The creation of a centre for design and fabrication of pilot plant and training of design personnel is one of the important decisions taken in this respect.

PROGRESS IN HOUSING

Among the basic necessities of life, housing comes next only to food and clothing. Appropriately enough, considerable importance has been given to the development of housing in the second Plan. This is evidenced by the fact that no less than Rs. 120 crores have been provided for under this head, as against Rs. 38.5 crores in the first Plan. This amount is distributed among various schemes thus: Subsidised industrial housing Rs. 45 crores; low income group housing Rs. 40 crores; rural housing Rs. 10 crores; slum clearance and sweepers housing Rs. 20 crores; middle income group housing Rs. 3 crores and plantation housing Rs. 2 crores.

Some commendable progress has been made in 1956-57 in the implementation of these programmes, which come under the Ministry of Works, Housing and Supply. Obviously, the pace of progress will have to be quickened in the coming years, if the targets fixed for the Plan are to be reached according to schedule. A noteworthy feature of the progress during 1956-57 was that two new schemes, namely, the Plantation Housing Scheme and the Slum Clearance Scheme were introduced. The former envisages grant of interest-bearing loans, not exceeding 80 per cent. of the estimated cost of construction, to planters through their State Governments to enable them to provide accommodation for resident labour in accordance with the requirements of the Plantation Labour Act, 1951. The second scheme contemplates grant of Central aid to the extent of 50 per cent. of the cost of approved projects by way of interest-bearing loan and 25 per cent. by way of subsidy, provided the State Governments give the balance from their own resources. Response from the States is reported to be satisfactory in respect of both the schemes. Yet another notable development was the revival of the scheme for the grant of housing advances to Central Government servants in April 1956. The scheme is said to be gaining popularity.

One of the more important schemes which have already been in operation is the Subsidised Industrial Housing Scheme. According to this Scheme, the Centre grants loans and subsidies to State Governments, private employers and

BUSINESS MEN OFFER CO-OPERATION TO GOVERNMENT

PROCEEDINGS OF COMMERCE FEDERATION

From Our Own Correspondent

NEW DELHI, 26*th March*

THE last week-end in the Capital was highlighted by the annual session of the Federation of Indian Chambers of Commerce and Industry, inaugurated by Prime Minister Nehru. The Federation's deliberations, more or less synchronising with the presentation of the Central Budget and the debate thereon in the Lok Sabha, confirmed the full extent to which the business community was willing to go in its co-operation with the Government in the building up of the Welfare State. Prime Minister Nehru, in criticising the nineteenth century concept of free enterprise, unfortunately missed the point that the business community in India was only pleading for the utmost possible freedom of enterprise within the limitations of a mixed economy. He, however, made the significant admission that the tax burdens on industry were heavy and that it had cause to grumble. And the Prime Minister also spoke enough to indicate that his Government would never be dogmatic in its approach to economic problems and there was enough scope for the development of the private sector in the pattern of the first Five-year Plan.

DELHI LETTER

The outgoing President of the Federation, Mr. Lakshmipat Singhania, in a balanced and lucid speech, offered the co-operation of business men and industrialists to the Government in its development efforts. He made a number of constructive suggestions that merit particular attention. In view of the foreign exchange crisis which has compelled the Government to impose restrictions even on imports of capital goods and machine tools, he suggested the constitution of a small committee composed of officials and non-officials which could go into the whole question of import requirements for both the public and the private sectors. This suggestion was at once timely, because the development schemes of the public sector do not seem to feel the pinch so much as those in the private sector. In view, again, of the need for augmenting the country's scarce resources in foreign exchange, Mr. Lakshmipat Singhania also advanced a powerful plea for the setting up of new export industries and for strengthening the existing ones.

One of the resolutions passed by the Federation rightly, therefore, focussed attention on this question and called for a modification of the import and export policies. The relevant resolution suggested that imports of consumer goods should be restricted further and steps taken to augment internal production to meet internal requirements. To this end, a liberal licensing policy should be followed for the establishment of new units and expansion of existing ones. On the export side, the resolution urged, steps should be taken by industry and trade with the co-operation of the Government, to diversify export trade in regard to both commodities and export markets and exporters should pay greater attention to the quality of finished products and arrange for appropriate inspection of goods before shipment.

Capital Formation

Mr. Singhania devoted a good portion of his speech to capital formation, emphasising that the growth of savings would depend on the pursuit of appropriate fiscal and monetary policies by the Government. In urging that unduly high levels of taxation and drastic measures of restriction of credit should be avoided, he remarked, *inter alia*: "It is true that inflationary pressures, as and when they occur, have to be curbed. But price increase is a symptom and the cure lies in assisting production. At the same time, it should be recognised that some increase in the level of prices will inevitably accompany the rise in national income and expenditure. The experience of the last two years indicates that credit stringency and restrictive Governmental policies have attempted more to arrest a rise in prices than to look to the effects on the expansion of industries and the consequent growth in production."

While Mr. Singhania brought out the contradictions in the Government's fiscal and monetary policies in a general way, it was given to Mr. G. P. Kapadia to particularise such contradictions in the present approach to corporate savings and capital formation. One paragraph in the latter's brilliant speech would bear full quotation:

"There is a new trend of thought about the gearing of savings by individuals and savings by corporations. An impression is now gathering strength to the effect that, since the State is indulging more and more in taxing corporate enterprise, after having reached the saturation point in individual taxation, a time has come to develop a new outlook whereby the distribution of (retained profits) by companies may be considered to be advisable and penal measures may be introduced for non-distribution. This theory takes full cognisance of the fact that, in the hands of the recipient individuals, the incomes should not bear tax at heavy rates and there should be a very substantial reduction in the rates of personal income taxation. If Government think in terms of gearing corporate enterprise and corporate savings, it is but imperative that conditions should be created for the fullest development of corporate enterprise and corporate savings."

The final session of the present Lok Sabha has just discussed the "lame-duck" Budget in a "lame-duck" way. The otherwise dull session was enlivened by Mr. Tulsidas Kilachand who questioned the accuracy of Budget estimates and by Mr. Ashok Mehta who spoke on the gravity of the present economic situation. The session, incidentally, was notable for its rejection of a Communist resolution demanding the nationalisation of the British tea interests in the country.

Elections in Kerala

The certainty of Communists being entrusted with the responsibility of forming a Government in Kerala State, where they have won an absolute majority, has been anxiously discussed in political circles here. It is suggested, in this connection, that the Union Government would have to classify the confidential papers which cannot be shared with the States and also to exercise stricter control over the State's finances in the spheres specified in the Constitution. The only redeeming circumstance is that Kerala is a deficit State which will have to rely greatly on the Centre for financial assistance.

In such circumstances, it is considered unlikely that a possible Communist Government in Kerala will bring forward any scheme for nationalisation of foreign-owned tea and rubber plantations (particularly after the rejection of the Communist demand in the Lok Sabha for such nationalisation), for the simple reason that the State will not have sufficient financial resources for paying compensation in accordance with the provisions of the Constitution. That Communists will measure their steps in Kerala in the hope that they have a world to win could be inferred from the statement of a leading member of that State's Communist Party executive at a Press conference here. He emphasised that his party did not intend to introduce radical reforms which might run counter to the Constitution. Such reforms as the party might contemplate, could be introduced only with the concurrence of the Centre. Radical land reforms, on the other hand, would present no difficulty inasmuch as the second Plan itself was already committed to them. A ceiling on landholdings on the basis of an annual income of Rs. 3,000 per family would definitely be imposed.

(*Concluded from next column*)

duction is only about 40 per cent. above pre-war and mutton and lamb production remains at the pre-war level. These two categories are being given a stimulus, but since we are dealing here with farm products which are the slowest of all to mature, dramatic results cannot be expected.

Thus, the Government has indicated its determination to continue giving encouragement to agriculture and the value of the industry's output will probably go on rising another 1 per cent. or 2 per cent. each year. Already, it is nearly 60 per cent. higher than pre-war and in the past ten years has increased by some 30 per cent. The cost in subsidies is high, but relative to both the national income and the country's financial budget seen in the round, it is hardly an excessive price to pay to maintain a strong and progressive agricultural industry.—*All Rights Reserved.*

FARMERS TRIUMPHANT

From Our Own Correspondent

LONDON, 23*rd March*

IN spite of the attacks which are always made upon the farming industry when the cost of subsidies is mentioned—and this year the attacks in the course of the annual review of prices and subsidies have been driven particularly hard—the farmers have managed not only to hold their own but even slightly to improve their position. All of the principal agriculture products of the United Kingdom come under the umbrella of the Government's guarantee and the value of this protected section of the industry is some £1,200 million. Of this, the market worth is about £950 million leaving £250 million, or rather more in the coming year, to be met out of the public purse.

LONDON LETTER

The agriculture subsidies have, because of cost increases, tended steadily to rise and in the year before last they only amounted to £205 million. The Government, however, has two problems to face, the first that it has undertaken to give long-term assurances to the country's farmers that the value of their guaranteed products will not be allowed to fall by more than 2½ per cent. per annum. On the other hand, the Government is also anxious to maintain a high level of agricultural output to save import costs; so that while this year the Government could have reduced the value of its guarantees by some £30 million, in practice, it increased them by some £6 million, that is after taking account of the increases in costs which the Government has decided to bear.

Balance of Production

Thus, farmers as a whole are going to be slightly better off than last year, but inside the general category of farmers the actual arrangements in the negotiations between the Government and the National Farmers Union give different results to different classes of producers. The Government, by increasing subsidies on particular products and reducing them on others, can have a material effect on the balance of production, though it is limited in wielding this power by the fact that the guarantee on each individual product must not be moved more than 4 per cent. in any one year, or more than 9 per cent. over any period of three years. The Government is naturally criticised when, having given financial encouragement to the production of some commodities, it then switches its policy and tries to cut down the guarantee on that commodity; but that after all is exactly how the free market works. If price encourages the production of a particular commodity then the consequent increase in supplies brings about in time a reduction in the attractiveness of the price and producers switch to something else.

So this year the Government, which had been steadily encouraging milk production, has noted that supplies are out-running demand and has refused to give further support to the expansion of production this year. Milk production is indeed 50 per cent. higher than pre-war. The same dramatic increase has been seen in egg production and in this market imports have been virtually squeezed out. So the guaranteed price of eggs has been reduced by the full 4 per cent. which the arrangements with the farmers permit, and indeed other disincentives are being applied to their production. The production of wheat has also far outrun the economic level for this country; the acreage for the current season is nearly 25 per cent. higher than before the war, but production is substantially more than 50 per cent. higher. With large wheat surpluses in the world and especially in the Commonwealth, the Government wants to reduce the volume of wheat in the cereals acreage and wheat has also been cut back the maximum permitted. Lastly, pig production has had any further incentives withheld. A few years ago, the Government was at its wit's end to try to increase the production of pig-meat but for some reason no stimulus appeared effective, and then suddenly the financial bribes rose to such a level that pig production soared upwards. Today, it is not quite as high as the peak of two years ago, but it is still a good 50 per cent. higher than pre-war (ten years ago, it was less than half of pre-war, so that production has trebled itself in ten years).

The farmers who are doing well this year are the producers of sheep and cattle. Beef pro-

AMERICAN LETTER

FAST RISE IN GOVERNMENT SPENDING

EMPHATIC DEMAND FOR BUDGET CUT

From Our Special Correspondent

NEW YORK, 20*th March*

THE two chief events on which American public opinion is focussed at this time are the meetings of British Prime Minister, Mr. Harold Macmillan, with President Eisenhower at Bermuda, as well as the renewed crisis between Israel and Egypt over the Gaza strip and the Aqab Gulf area. So far as the former is concerned, it seems to aim at two major objectives—the revival of close Anglo-American ties and friendship which was sorely tried by the Anglo-French invasion of Egypt which was condemned by the United States and the United Nations, and a reappraisal of Britain's position as a world power.

The United Kingdom's position *vis-a-vis* the U.S. is that the British as a nation are carrying economic and military commitments beyond their capacity and these must be trimmed to fit what can be borne, pocketbook-wise. There seems to be determination on both sides that, in the future, the Anglo-American alliance must be based on hard and clear understandings of the issues involved and not just on sentiment, as exemplified by such organisations as the Union of the English-speaking peoples. Somehow or other, the implication is that Britain no longer is the world power it used to be. The process of decline has been so gradual and yet so rapid that it has escaped attention here and abroad.

No doubt, behind closed doors, Whitehall will seek agreement from Washington to reduce her military forces in Germany. British proposals include increased supplies of American nuclear weapons for its forces.

There is much speculation here what demands for U.S. economic help will be made for a long-range programme to reduce West European dependence on the Suez Canal for petroleum supplies. This suggests that the U.S. will be asked to assume a substantial share of the present British subsidy to Libya and American support for a new cost-sharing programme for the North Atlantic Treaty Organisation.

How all such proposals will fare at the hands of Congress is an unknown factor at this point. Senators and Congressmen have been deluged with mail from constituents demanding that the Federal Budget is too high and must be reduced. At least 90 per cent. of Congressional mail demanding reductions suggest that foreign aid is the area to attack first in this respect, according to a special survey by *Newsweek* magazine. Other fields where the axe may fall is defence, public works and the farm price support programme. The latter covers such crops as wheat, maize, cotton, tobacco, rice and groundnuts.

The reason for the emphatic demand for Budget-cutting is that Government spending has risen faster than anticipated. According to figures not yet published, expenditures by Federal, State and local Governments have jumped at the annual rate of $2,500 million in the first quarter of the year above the October-December 1956 rate. The Federal share of this boost is about $1,000 million and it was spent mostly on the armed forces. Price increases were responsible for the major portion of it, if not all. Higher spending was generally anticipated but not to such an extent.

There is still general optimism about the business picture in this country, although soft spots can no longer be laughed off. Factory jobs, which usually turn up in February, fell slightly, although employment that month was up 600,000 to 63,200,000.

Actual spending by business and industry in the past six months has been lower than forecast by both the Securities and Exchange Commission and by the U.S. Department of Commerce. This is difficult to pin down in accurate figures, since industries love to announce huge expansion plans, but they are usually quiet when the cut back takes place in this area and postpone projects.

Also, for the first time since December 1951, housing starts have dipped below the 1 million a year rate and all indications are that they will go down still more this spring. Bankers speak of such development as "desirable" until the lull in some lines should be intensified. In this connection, it should be remembered that the Federal Reserve, which has done everything in its power to stem inflation, admits it is much more difficult to call the turn on an actual recession and do something about it effectively by loosening monetary stringency.

A downturn usually snowballs much faster than an upturn. It is human nature, during a cycle of declining prices, to wait with the purchase of goods until still lower prices obtain and to buy promptly when prices go up for fear that prices will be still higher later. It is at the moment a very confusing situation. Neither business nor Government knows which way the wind is going to blow in the ensuing months, particularly since the normal summer lull may be superimposed upon an abnormal cyclical lull—abnormal at least in the perspective of the last ten years.

The automobile industry is not doing too well, either. New car stocks on the sales floors of retailers have increased further and some dealers are voicing concern over the accumulation. The first cries of "enough" are being heard.

The action of the stock market fully confirms the uncertainty which hands over the U.S. business world. Lassitude in trading has reigned for many days in recent weeks. Transactions on 19th March, for example, fell to the smallest figure since 23rd October 1956, namely, only 1,450,000 shares. Stock prices have been soft, while bond quotations were on the steady to firm side.

World trade is still doing all right. International exports rose by 11 per cent. in value in 1956, according to a compilation of the United Nations. About 40 per cent. of this boost is being attributed to greater volume of shipments from the United States, but only 14 per cent., was absorbed by increased imports to the U.S. The closing of the Suez Canal came too late in the last quarter to influence the last quarter showing.

There was a marked increase in capital goods exports from America and Western Europe to the rest of the world. This reflects the progress which has been made in the industrialisation programmes of the less developed countries. The share of the U.S. in this movement was 29 per cent. of world volume and Western Europe's share was 13 per cent. In the field of agriculture, the Government reported that farmers' planting intentions for 1957 indicated the smallest crop acreage under cultivation in 40 years, but the surpluses are so large that the commodity markets hardly reacted to it.—*All Rights Reserved.*

GROWTH OF BANKING IN KERALA—III

OVER-CAPITALISATION—FOREMOST DEFECT

THE growth and structure of banking in Kerala, as has been noticed in the first two articles in this series in our issues of 9th and 16th inst., are largely shaped by the peculiar conditions obtaining in the State. An examination of the financial position of the banks in the State, on the other hand, reveals that many of the banks incorporated in the State suffer from certain serious weaknesses, one of the more important of them being overcapitalisation. An important feature of these weaknesses is that they are not confined to any particular class of banks; they afflict all types of banks irrespective of their size. Their financial position further discloses that despite the rise in paid-up capital, reserves and deposits of these banks over the last five years, their gross profits as well as net profits have tended to fall sharply.

Eight prominent features, or weaknesses, generally exhibited by the banks, according to the Travancore-Cochin Banking Enquiry Commission, are: overcapitalised position, high rates of interest on sizable portion of deposits, over-extended advances, high percentage of advances against real estate, high percentage of clear advances, high percentage of advances having undesirable features, working at a loss, and low real value of paid-up capital and reserves. Data obtained by the Commission in this regard discloses that 113 of the 133 banks, or 84 per cent. display an overcapitalised position. It is noteworthy, however, that as against 98 per cent. in the group of small-sized banks, 38 per cent. of the large-sized banks are found to suffer from this defect. The concentration of these weaknesses among the small-sized banks indicates, according to the Commission, that they are not able to attract sufficient business, and that there is some redundancy of units in this group. Further, 62 per cent. of the total number of banks are also found to pay high rates of interest on their deposits. Moreover, over-extended position of advances is seen in respect of 56 per cent. of the banks. The medium and large-sized banks are found to display this tendency in a more pronounced manner than the small-sized banks. Almost an equal number of banks, again, as in the case of over-extended advances, display the two features, namely, high percentage of advances against real estate and high percentage of clear advances. Furthermore, about one-third of the total number of banks show undesirable features in respect of their advances. The medium-sized group of banks has relatively the largest proportion of units exhibiting this weakness. It is also significant that 22 out of 133 banks are incurring losses and 31 of them suffer from the erosion of their capital by 50 per cent. or more. On the basis of this position, the Commission has found that the extent of deviation from all-India standards is quite pronounced in relation to the first five characteristics given above. The greatest deviation, however, is found in respect of overcapitalisation of banks. The broad conclusion drawn from these facts by the Commission is that many of the difficulties confronting the banks in the State are more due to their managerial policies than to their structure.

Operational Efficiency

The Commission concedes, however, that it is difficult to hazard definite conclusions regarding operational efficiency from the foregoing study of the financial position. Nevertheless, it makes an attempt to examine the performance of the Award banks and Non-Award banks, separately, during the period 1951-55 from the standpoint of certain important factors such as paid-up capital, reserves and gross profits. This study reveals that the whole group of Award banks and Non-Award banks showed, during the period, increases in paid-up capital, reserves and deposit resources, though certain individual cases proved an exception. Further, the aggregate gross earnings of Award banks also reflected an uninterrupted rise. Their net profits, however, fell off during the period, partly as a result of certain banks working at a loss and partly due to rise in establishment charges. There was thus an increase in the number of the banks which could not ensure any return to the shareholders. A distinguishing feature observed in the case of both the types of banks, however, was that, by and large, the rise in deposits accrued to larger units. This seemed to indicate, the Commission says, that the reason for the small banks not being able to attract deposits was their small size. Moreover, while the gross profits of the Award banks registered a decline after 1953, those of Non-Award banks, though they showed a fall in 1953, were at their highest in 1955. The net profits of the latter, however, showed a small decline. A particularly significant feature of the working of the Award banks was that a large number of banks work on an unremunerative basis, or with slender profits, with the result that only 50 per cent. of the banks could pay dividends to the shareholders consistently.

The Commission has also considered at some length some alleged difficulties experienced by the banks following the application of certain provisions of the Banking Companies Act, 1949, to the Travancore-Cochin State, and the advice tendered by the Reserve Bank of India on matters of policy and methods of operation. In this connection, the Commission has made some important recommendations. They are, briefly, (1) the existence of certain companies which are not entitled to transact business in terms of section 11(ii) of the Banking Companies Act, 1949, should not be allowed to continue. (2) Banks which have secured exemption from the above section, and the financial position of which is satisfactory, may be allowed to enjoy exemption for the last time up to 31st March 1960 to enable them to satisfy the requirements. (3) The question of prescribing different ratios for demand and time liabilities under section 24 of the above Act may be further examined by the Government. Meanwhile, the present concession granted to the banks incorporated in and confining their activities to the State, namely, maintenance of 15 per cent. of their total demand and time liabilities in eligible assets, which is valid up to 31st March 1957, may be extended for three years. (4) The balances maintained with banks other than the Reserve Bank and its agents should not be taken into account for purposes of section 24. (5) Banks should take concerted action to bring down the level of interest rates on deposits. (6) Banks should not grant advances on real estate on a large scale. (7) The State Government should make a thorough enquiry into law's delays in respect of suits filed by banks in the States and take such steps as are necessary to speed up their disposal. (8) Banks in the State should adopt sound banking practices and bring them into conformity with the banking law.

Conditions of Service of Employees

An important section of the recommendations and suggestions of the Commission relates to the terms and conditions of service of the bank employees, which it has examined thoroughly. Among other things, the Commission recommended that, in the case of 'D' class Award Banks incorporated in the State, the exemption in respect of area IV in the State

INDIAN OVERSEAS BANK EARNS RECORD PROFIT

DIVIDEND RAISED AGAIN

FOR the second year in succession the Directors of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras) have raised the dividend level, the latest year for which this has been done being the one ended 31st December 1956. Thus, the distribution, which had been stepped up from 6 per cent. to 7½ per cent. for 1955, has been raised further to a record level of 10 per cent. for the year under review. This is, however, in consonance with the further substantial progress in the Bank's business and the rise in earnings.

The profit for the year under review has jumped up from Rs. 16.56 lakhs to Rs. 28.65 lakhs and this sharp rise has enabled the Bank not only to maintain the upward trend in earnings noted for some years past but to raise the profit more than fourfold in six years, that is, from Rs. 7.03 lakhs in 1950 to Rs. 28.65 lakhs in 1956. Nearly 50 per cent. of the profit has been set aside for taxation, which is provided with Rs. 14 lakhs, as against Rs. 7.50 lakhs a year ago. An increase of Rs. 2 lakhs to Rs. 6 lakhs has been made in the transfer to the reserve fund and of Rs. 2.25 lakhs to Rs. 3.50 lakhs in the allocation to bonus to staff.

The sharp rise in profit is accounted for by the substantial increase in gross income from Rs. 84.86 lakhs to Rs. 114.67 lakhs. Interest and discount earned show an improvement of Rs. 20.39 lakhs, accompanied by a rise of Rs. 9.36 lakhs in commission and exchange. Though interest paid and expenses also have gone up by Rs. 8.81 lakhs and Rs. 8.71 lakhs, respectively, the cumulative rise in outgo is much less than the increase in income, with the result that the profit is higher by no less than Rs. 12.09 lakhs.

An idea of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	66.30	45.91	38.64	37.31

Investments	5,16.18	4,84.07	4,08.99	3,09.24
Cash	2,60.61	2,78.17	2,89.22	2,69.45
Balance-sheet total ..	28,73.04	25,72.80	18,47.59	16,18.58
Ratio to deposits of—	%	%	%	%
Advances	65.5	62.8	48.5	53.5
Investments	28.6†	27.8†	36.2	31.0
Cash	15.8	19.3	25.4‡	26.7‡

* After providing for depreciation on investments.
† After taking into account the investments earmarked against borrowings from other banks.
‡ After taking into account foreign balances earmarked against borrowings from other banks.

It will be noted from the above table that the Bank has substantially strengthened its reserves during the past three years. The upward trend in deposits has been well maintained, though the increase of Rs. 2.07 crores in 1956 is less than that (Rs. 3.13 crores) noted in the previous year. Fixed deposits have gone up by Rs. 1.13 crores, as against Rs. 1.28 crores in the previous year, savings bank deposits by Rs. 46 lakhs (as against Rs. 0.38 lakh) and current and other accounts by Rs. 48 lakhs (Rs. 1.47 crores).

A noteworthy feature on the assets side of the balance-sheet is the relatively smaller rise of Rs. 1.76 crores in advances, as against Rs. 3.57 crores in the previous year. The bulk of this rise is accounted for by loans, cash credits and overdrafts which have gone up by Rs. 1.15 crores (as against Rs. 52 lakhs in 1955), while bills purchased and discounted are up by only Rs. 61 lakhs (Rs. 3.05 crores). In view of this, the Bank's liquidity ratio has not been seriously affected. The cash ratio, which has come down substantially in the last three years, is nevertheless at a much higher level than the average for all Scheduled banks.

U.C. BANK'S EXCELLENT PROGRESS

SHARP RISE IN PROFIT

A MARKED expansion in business and a sizable improvement in earnings are the notable features of the working of the United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, Calcutta) during the year ended 31st December 1956. Thus, the balance-sheet total, which had grown from Rs. 45.20 crores at the end of 1952 to Rs. 81.69 crores at the close of 1955, shows a further rise to Rs. 91.51 crores at the end of the year under review. The profit also has swelled to as much as Rs. 56.52 lakhs from Rs. 36.69 lakhs for 1955, to which level it had gone up from Rs. 23.01 lakhs earned in 1953. It is, however, to be noted that the expansion in turnover during 1956, as indicated by the balance-sheet total, is less marked than that in the previous year, but the pace of increase in profit is sharper than that noted a year ago.

The expansion in business and the increase in interest rates on advances have resulted in a rise in gross income from Rs. 2.44 crores to Rs. 3.03 crores, the bulk of the rise being accounted for by commission and exchange which have gone up by Rs. 41.61 lakhs. It will be interesting to note that the earnings from commission and exchange have more than doubled themselves in the course of the past three years. This is not surprising in view of the sizable expansion in the Bank's bills business during this short period. Interest and discount earned have also gone up by Rs. 18.08 lakhs, as against Rs. 21.48 lakhs in the previous year. Interest paid, on the other hand, has also risen by no less than Rs. 31.52 lakhs, as against an increase of only Rs. 9.81 lakhs in 1955, due to the increase in deposits, particularly fixed deposits and larger borrowings, as well as to the higher interest rates on deposits which prevailed during the year. This is accompanied by an increase of Rs. 8.62 lakhs in expenses, of which salaries, allowances and provident fund alone account for Rs. 6.92 lakhs. Nevertheless, the profit has risen by Rs. 19.83 lakhs, which compares well with the aggregate increase of Rs. 13.68 lakhs in the previous two years.

The bulk of the rise in profit has been utilised to strengthen the reserve fund, which gets Rs. 20 lakhs, as against Rs. 8.50 lakhs a year ago. The dividend also has been stepped up from 5½ per cent. to 7 per cent. This is the third year in succession for which the dividend is being raised. Thus, in the course of three years the distribution to the shareholders has been raised from 4 per cent. to 7 per cent.

The impressive progress made by the Bank during the past three years is well illustrated by the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned ..	1,81.98	1,53.90	1,42.42	1,27.42

* Ratio arrived at after taking into account the securities earmarked against borrowing from other banks.

With the rise of Rs. 4.46 crores during the year under review, the Bank's deposits have established a fresh record. But the pace of increase is slower than that in the previous year. This is to be attributed to the stringent monetary conditions throughout the year. Of this rise, fixed deposits alone account for Rs. 3.04 crores; the rise in savings bank deposits and current and other accounts being of the order of only Rs. 71 lakhs and Rs. 70 lakhs, respectively. In view of the difficulty in raising the deposit resources to meet the substantially larger demand for advances, the Bank, in consonance with others, has had to increase its borrowings from other banks.

The total rise of Rs. 10.86 crores in advances is made up of an increase of Rs. 4.68 crores in loans, cash credits and overdrafts and of Rs. 6.18 crores in bills purchased and discounted. Such a large increase in advances has necessitated a reduction in investments to the extent of Rs. 2.74 crores to supplement the increase in deposits and borrowings noted above. Cash balances are higher by Rs. 1.30 crores, lifting the cash ratio to 14.4 per cent., which is very much higher than the general average.

CENTRAL GOVERNMENT'S CAPITAL BUDGET

TOTAL DISBURSEMENTS NEXT YEAR PUT AT RS. 883.86 CRORES

THE capital budget of the Central Government for the coming year (1957-58) provides for an aggregate disbursement of Rs. 883.86 crores, which represents a substantial rise as compared with Rs. 697.31 crores in 1956-57 (revised) and Rs. 481.22 crores in 1955-56 (actual). This sum, together with the surplus of Rs. 26.84 crores on revenue account, is matched against capital receipts which are estimated at Rs. 910.70 crores, a rise of Rs. 196.95 crores over the revised estimate for 1956-57. The bulk of the aforesaid rise —amounting to Rs. 95.00 crores—is accounted for by Treasury Bills, the net receipts from which are placed at Rs. 365.00 crores, as against Rs. 270.00 crores. The receipts under other deposits and advances (net) are also placed higher by Rs. 74.47 crores at Rs. 179.44 crores. Receipts from new loans are placed higher by Rs. 5.70 crores at Rs. 194.93 crores. The budget assumes a new market loan of Rs. 100 crores, Rs. 90 lakhs from the World Bank for the second D.V.C. loan, Rs. 36 crores from the U.S.S.R. for the Bhilai steel project, and Rs. 58.03 crores from the U.S. The other important sources which are expected to yield larger receipts, the figures being in crores of rupees, are: Net deposits under Income-Tax Act 14.58 (—0.95 in 1956-57); repayment of loans by States 44.12 (35.38); national savings certificates 23.70 (19.75); national plan certificates 11.00 (9.50); other unfunded debt 19.12 (18.16); and Treasury savings deposits certificates 4.30 (3.20).

The capital disbursements during 1957-58 as compared with the previous year are expected to be more by Rs. 186.55 crores, the estimate being placed, as already noted, at Rs. 883.86 crores. The major portion of this anticipated increase is accounted for by industrial development, the total capital outlay on which is put higher by Rs. 105.51 crores. The outlay on railways and schemes of State trading is also put higher by Rs. 20.36 crores and Rs. 19.40 crores at Rs. 103.81 crores and Rs. 49.35 crores, respectively. Provision for advances to State Governments, too, has been stepped up by Rs. 15.61 crores to Rs. 248.37 crores. There is, however, a marked fall of Rs. 45.07 crores to Rs. 38.74 crores in the provision for discharge of permanent debt.

Disbursements Analysed

The following table gives the details of capital disbursements proposed to be made in 1957-58, as against the revised and budget estimates for 1956-57 and the accounts for 1955-56:

(In lakhs of rupees)

	1957-58 Budget	1956-57 Revised	1956-57 Budget	1955-56 Account
Capital outlay:				
Railways	1,24,17	1,03,81	1,13,43	67,52
Irrigation	17	20	18	12
Posts and Telegraphs ..	9,85	9,85	9,75	9,03
Schemes of agricultural improvement and research ..	2,42	3,22	3,26	32
Industrial development ..	1,85,42	79,91	79,60	11,07
Aviation	2,88	3,18	3,37	1,95
Broadcasting	1,65	1,40	1,55	1,17
Ports	5,29	5,41	5,76	3,96
Currency and coinage ..	3	1,00	79	8,47
Mint	72	31	38	28
Delhi capital outlay ..	7,38	7,94	10,07	5,33
Multi-purpose river schemes..	3,72	2,37	2,37	2,86
Electricity schemes	87	55	77	18
Civil works	11,37	18,03	18,24	10,22
Commutation of pensions ..	—31	—31	—19	—42
Sterling pensions	—8,85	—9,01	—8,82	—8,59
Defence capital outlay ..	23,54	21,36	26,30	17,59
Schemes of Government trading	49,35	29,95	9,51	—29,59
Development grants ..	10,15	12,78	12,39	13,09
Compensation to displaced persons	19,01	21,19	26,24	3,68
Shipping and tankers, etc. ..	1,64	20	1,35	..
Transfer of sale proceeds of American loan commodities	80,30	..	..	..
Other works	3,52	..	..	..
Other civil heads	38	26	45	12
Discharge of permanent debt ..	38,74	83,81	4,56	72,30
Inter-State debt settlement ..	1,45	3,07	6	68
Advances to State Governments.	2,48,37	2,32,76	2,74,26	2,48,87
Other loans and advances ..	60,23	63,98	96,00	32,01
Total ..	6,83,86	6,97,31	6,91,63	4,81,22

The above table shows that the capital outlay on industrial development is the largest single item of its kind, the total sum earmarked being as much as Rs. 185 42 crores. This includes provisions for a variety of undertakings—Government and quasi-Government. The major portion of the outlay—Rs. 156.83 crores, to be precise—is accounted for by the three steel plants—Bhilai, Rourkela and Durgapur; the revised estimate of outlay in 1956-57 is only Rs. 35.00 crores. The share of the Bhilai project is Rs. 63.30 crores (Rs. 14.00 crores in 1956 57), of Rourkela Rs. 60.00 crores (Rs. 9.00 crores), and of Durgapur Rs. 33.50 crores (Rs. 12.00 crores). The details of allocations—in lakhs of rupees—for other schemes of industrial development (the figures in brackets are revised estimates for 1956-57) are given below:

Indian Airlines Corporation 510 (236); Air-India International 155 (327); Neyveli Lignite Corporation 400 (530); oil exploration scheme 291 (100); Department of Atomic Energy 275 (294); Western Shipping Corporation 200 (350); Eastern Shipping Corporation 120 (74); Nangal Fertilisers and Chemicals Ltd. 200 (179); Heavy Electricals Ltd. 100 (24); establishment of two coal washeries 100 (*nil*); Institute of Small scale Industries 85 (25); coal production programme 76 (79); Hindustan Antibiotics 50 (50); grant to Council of Scientific and Industrial Research 50 (150); development of salt works 40 (20); overseas communication service 36 (30); Hindustan Shipyard Ltd. 30 (76); Hindusthan Insecticides Ltd. 28 (24); Orissa Mining Corporation 23 (3); National Instruments Factory 20 (28); Punjab and Delhi State Financial Corporations 16 (*nil*); civil explosives factory 10 (20); National Construction Corporation 10 (5); Geological Survey of India 10 (*nil*); Indian School of Mines and Applied Geology 9 (*nil*); Central Board of Geophysics 9 (*nil*); establishment of second shipyard 3 (*nil*); Dry Freeze Vaccine Laboratory, Guindy 2 (1); Hindusthan Housing Factory Ltd. 1 (*nil*); diesel engine factory 0.38 (*nil*).

Defence capital outlay is now estimated at Rs. 24.06 crores in the current year and Rs. 25 crores next year. Credit has been taken under this head for Rs. 2.49 crores this year and Rs. 1.45 crores next year on account of the realisation of sale proceeds of surplus stores and Rs. 21 lakhs this year for donations for the National Defence Academy.

State Trading

Among the various schemes of Government trading, the most important is purchase of foodgrains. As against the net expenditure of Rs. 9.44 crores included in the Budget, the revised estimate shows a net expenditure of Rs. 25.57 crores. The increase is due to an increase of Rs. 79.26 crores in the gross expenditure on the purchase of foodgrains both at home and abroad, but this would be partly set off by increased recoveries of Rs. 63.13 crores. Budget provides for a gross expenditure of Rs. 146.25 crores and recoveries of Rs. 90.81 crores on account of purchase of foodgrains. No import of sugar is expected in this or the next year, but revised and budget estimates provide for Rs. 122 lakhs and Rs. 7 lakhs, respectively, on account of certain outstanding charges relating to past imports. Import of iron and steel under the Technical Co-operation Agreement will involve a net expenditure of Rs. 159.85 lakhs this year and a net recovery of Rs. 341.94 lakhs next year. Purchase of foodgrains by the Administration in the Union Territories will cost Rs. 133.78 lakhs this year, as against a net recovery of Rs. 29.01 lakhs in the original budget. The increase is due to the provision for former Part C States of Himachal Pradesh and Delhi. In the next year, provision for the purchases of foodgrains for these Territories has been included in the amount of Rs. 146.25 crores provided for "purchase of foodgrains." The estimates also include provision of Rs. 45.01 lakhs this year and a net recovery of Rs. 28.75 lakhs next year on account of the Land Reclamation Scheme. Next year's Budget also includes net recovery of Rs. 220.99 lakhs for the scheme of production and supply of coal.

A provision of Rs. 80.3 crores has been included in the next year's Budget for accommodating transactions relating to the assistance received from the U.S.A. Of this sum, Rs. 40.3 crores are in respect of the Development Assistance Programme and the balance under Public Law 480.

A sum of Rs. 11.37 crores has been earmarked for civil works during 1957-58, the figure for 1956-57 being Rs. 18.03 crores. Of this, national

MARKETING OF WOOL IN INDIA

PRIVATE TREATY SALES CONSTITUTE THE USUAL MEANS OF DISPOSAL

SYSTEMS of wool marketing may be divided into two main groups: auction and private treaty. Under the private treaty method, each grower sells his wool directly to a wool merchant at a price agreed between them. If the price offered by a merchant is unacceptable to the grower, he may refuse to sell and retain his wool in the hope of receiving a better offer from another merchant, but he will not usually have an opportunity to compare the offers of several merchants simultaneously. Under the auction method, on the other hand, large numbers of farmers send all their wool to one auction centre where many buyers are assembled. Each lot of wool is offered for sale in turn and, for each lot, bids are made by several potential buyers, the wool being sold to the one who makes the highest bid. Not every system of marketing can be placed exactly in one or the other of these groups; for instance, private treaty sales are often made at small local markets which provide competition between several merchants, though these markets are not quite so competitive as auction sales.

Most of the wool grown in Australia, New Zealand and South Africa is sold at auctions in those countries, and nearly all of the remainder is sent to London to be auctioned there. Wool from the Falkland Islands and some of that grown in Chile are also sold by auction in London and Germany has its own wool auctions. In Argentina and Uruguay, on the other hand, wool is sold through the private treaty system, though this operates in conjunction with large central markets. A few marketing schemes include Government price supports; in the United States, these are applied to private treaty trading, in the United Kingdom a statutory board buys wool at fixed prices and then re-sells it at auction, and, in the Soviet Union, most of the wool is compulsorily purchased for State-owned mills.

Private Treaty Marketing

In most other wool-growing countries, private treaty marketing is employed, and this is the system which prevails in India. Earlier this year, the Development Council for the Indian Wool Industry recommended the establishment of an auction centre in India, but later divergences of opinion caused this to be postponed. Private treaty sales thus remain as the usual means by which Indian farmers dispose of their wool, though these often take place in small local wool markets. Some Indian wool is subsequently auctioned at Liverpool, but it is sent there by export traders and not by the growers. There are many of these local wool markets in India, the main ones being:

Rajasthan: Bikaner, Jaipur, Jodhpur, Pali-Marwar, Jhunjhunu, Sikar, Nokha Bhadra, Baff, Osiam, Puggal, Mohwa-Madawar, Bharatpur, Alwar, Sadulpur, Ratangarh, Ganga Nagar, Hanuman Garh, Beawar, Kekri, Bhilwara, Rani, Aranpura.

Punjab: Fazilka, Abohar, Amritsar, Panipat, Fathaibad, Samana, Patiala, Kapurthala, Bhatinda and Mansa.

Uttar Pradesh: Mirzapur, Gorakhpur, Agra, Kanpur, Aligarh, Haldani-Mandi, Ramnagar and Jhansi.

Bombay: Jamnagar, Rajkot, Mahuva, Morvi, Dharangadhra, Ahmedabad, Anjar, Dwarka, Palanpur, Deesa, Kadi and Bombay.

Delhi: Delhi.

Kashmir: Srinagar.

Bihar: Gaya.

Bengal: Kalimpong (for Tibetan wool) and Calcutta.

Madras-Mysore: Bangalore, Tiptur and Madras.

Wool is sold by weight in these markets, and is usually roughly washed before being offered for sale, either by back-washing prior to shearing or by river-washing of the shorn fleeces. A uniform weighing system is used in most of the markets, local authorities having framed laws for regulating weights and measures, though there are some minor differences in systems.

Marketing in Upcountry Areas

The means by which wool reaches these markets varies with the locality and with the type of farming practised. In the north, especially in the Punjab, wool is nowadays marketed by the producers themselves, for, after Partition, the nomadic shepherds—mainly Muslims—left for Pakistan. Consequently, most of the sheep are now kept in small flocks by settled farmers who are well acquainted with the local markets where they also deal in foodgrains and cotton.

In the country's biggest wool-producing areas of Rajasthan and Joria (Saurashtra-Gujerat Section), sheep are reared both by nomadic shepherds and by more settled farmers, and their methods of marketing differ. The established agriculturists may either sell their produce to village merchants or market their produce themselves. The nomadic shepherds usually dispose of their wool to *beoparis*, or travelling buyers, who then take it to the markets, and sometimes exporters make direct contact with the shepherds and collect their wool at convenient centres. Occasionally, these nomadic shepherds, who roam from place to place in search of grass and water, reach a market where they can sell such wool as their sheep may be carrying at the time, but this type of sale does not occur very frequently.

Collection of wool from the more remote villages is generally undertaken by the *beoparis*, who may be buying on their own account or merely as agents for either the market merchants or the exporters. In these remote districts, wool is sold on a fleece as well as on a weight basis. When unshorn wool is sold on a fleece basis, the shearing cost is usually borne by the buyer. When the shearing season commences (March to May and August to October), the *beoparis* concerned start visiting the villages to inspect the flocks and negotiate with the shepherds for the purchase of their wool. If a price is agreed, the flock owners are paid some advance money, which is forfeited by the buyer if he does not appear in time to shear the wool or refuses to take delivery. Payment is generally made in cash, but, in some hilly tracts of the country, the barter system still prevails. In Kulu, or example, *Laholi* dealers exchange Tibetan wool for locally-made woollen cloth, blankets, lohis, provisions, and the like.

Wool sheared in the villages or jungle is rolled in complete fleeces, containing wool from all parts of the sheep; that is to say, it is not graded according to its quality and colour, as is the case in many other countries. Methods of packing and carriage are varied; in the plains, the packing used for local traffic is a *bora*, or gunny bag; in the Himalayan region, wool is packed in rolls or bundles of various sizes and weights. Wool is brought from the producers to the nearest markets by road as head-loads on ponies, donkeys, horses, in bullock carts, trucks, and sometimes on sheep's back. The mode of transport for conveying wool from these collecting centres depends on the available facilities and on the distance between the points. Buses and lorries are generally preferred to rail transport. Wool destined for export to foreign ccuntries is packed in bales of various sizes which are sent from the assembly markets to the ports by rail.

Export Regulations

From the Indian markets, wool goes both to Indian manufacturers and to exporters. The greater part of Indian wool production goes into overseas mills, though the proportion has been reduced by the export regulations imposed by the Indian Government to protect the supplies of the home industry. During the years prior to 1950 when the free export of wool was permitted, the quantity exported totalled about 37 million lbs. per year. Free export was stopped in 1950, and today, after various quantitative changes, the Government of India allows only 32 million lbs. to be exported.

There are two methods by which Indian exporters send wool overseas—one is by consignment for sale at Liverpool and the other is by contracts concluded directly between the exporter and foreign buyers. Liverpool is the auction centre for what are known as "East India Wools," that is, the carpet-type wools grown in India, Pakistan and neighbouring countries and, until 1910, it was practically the only overseas outlet for Indian wool. Auctions at Liverpool are conducted by the Liverpool Wool Brokers Association, which holds eight sales each year. Liverpool brokers do not as a rule, deal directly with any of the local exporters in India. A few exporting houses with London or Liverpool offices deal with Indian exporters and arrange financing, forwarding and disposal of the wool in auctions. Not all of the wool consigned to Liverpool is actually sold by auction, however, since many lots fail to reach the reserve prices set by the exporters and are subsequently disposed of by private arrangements between the sales.

Export merchants who consign their wool to Liverpool may have to wait for three months before their goods are actually sold, and this introduces an element of uncertainty, for wool prices are liable to fluctuate during the intervening period. To reduce this uncertainty, Indian exporters usually set reserve prices below which they will not sell, and these are closely related to the prices they expect to receive. It is, of course, a common practice for sellers in auction markets to fix reserve prices, but, in most wool auctions, the sellers are usually prepared to accept the market basis, and the reserves are set well below the expected prices merely as a precaution against a severe fall in market values. The high limits set by Indian exporters result in a much smaller proportion of the wool offered at Liverpool being sold than is usual at other auction centres.

Direct Contract System

Indian exporters' desire for closer control of their selling prices encouraged the development of direct sales to foreign buyers. This method of trading was introduced in 1910, when concerns in the United States and Canada were the first buyers. Very few people were interested in or able to adopt this system during its early stages, but, as Indian exporters created increasing confidence among foreign buyers in regard to both the quality of their wool and the regularity and promptness of supplies, the direct contract system became accepted to an increasing extent. The flow of wool towards the Liverpool auctions thus came to be correspondingly reduced, and today some 60 to 70 per cent. of Indian wool is disposed of on the contract basis—either spot contract or forward contract—not only in the U.S. but also in the U.K., Russia, Australia, and on the Continent. As Indian wool activity at Liverpool tended to decrease, Liverpool brokers began working as agents for merchants engaged in direct contract business, in addition to handling wool consigned to the auctions.

Direct contract sales are conducted on the basis of standard samples of wool which are sent by the exporters to foreign buyers (consumers or their agents). Offers are then exchanged between buyers and sellers on the basis of these samples and guarantees of clean yield. The prices quoted may include cost and freight, or cost, insurance and freight, contracts drawn up on these terms being known in the trade as c. & f. and c.i.f., respectively. After acceptance of the offers, the buyer opens a letter of credit with an Indian bank in favour of the seller, against which the seller, after handing over shipping documents, can draw 80 per cent. to 100 per cent., according to the terms agreed in the contract. After the buyer has received and given his approval of the goods, the accounts are finalised on the basis of the test of clean yield made at the destination.

The established shippers engaged in direct contract business now have a very good reputation abroad for their business dealings and are, accordingly, getting bulk orders from foreign buyers for supplies of Indian wool. The Government of India has also assisted our exporters by the introduction of a grading scheme under which exportable wool is inspected by official experts and graded according to quality and yields results. This gives an additional check on the quality of wool exported, thereby guaranteeing various grades for foreign importers.

Wool Marketing in Southern Dominions

It may be instructive to conclude with a brief comparison between the marketing procedure in India and that followed in the Southern Dominions where the auction system prevails. In these countries, the locks and stained wool are removed from the fleeces before they are packed, and many growers undertake the classing of their clips, putting different qualities of fleeces into different bales. From the farms the bales of wool are usually consigned by road or rail to wool brokers, who are important inter-

CHAIRMAN OF COTTON BOARD RESIGNS

MORE YARN, LESS CLOTH

From Our Special Correspondent

MANCHESTER, 19*th March*

RUMOURS which have persisted for some considerable time in Lancashire that Sir Raymond Streat would relinquish his position as Chairman of the Cotton Board on attaining the age of 60 years have been justified by events. Sir Raymond, who has held the post since 1940, has now asked to be released when his present term ends on 31st March. He was 60 last month. In an exchange of letters with Sir David Eccles, President of the Board of Trade, he stated: "Experience has convinced me that any position as leader or spokesman of an industry organisation should not be held too long by the same man." Sir Raymond said that his colleagues on the Board feel it would be desirable to allow about six months for discussions and negotiations in arranging for a successor. In his reply, Sir David Eccles referred to Sir Raymond's 17 years devoted service to the cotton industry and said that his departure would present difficult problems requiring discussion between the Board of Trade and the industry. It was hoped to arrange for a senior Board of Trade official to visit Manchester shortly for a conference with leaders of the industry.

MANCHESTER LETTER

Sir Raymond, who was once the youngest secretary in the history of the Manchester Chamber of Commerce at the age of 22, has been at the head of a pioneer Development Council during a period of difficulty and rapid change in the industry's affairs, including the transition from war-time contraction to peace-time expansion. His qualities of diplomacy have been seen in many complicated negotiations with Governments and in international textile conferences. A measure of his success is the degree of unity achieved among the various constituents of the Board, including the trade unions, in their attitude to problems facing the industry.

No Undue Haste

There is, perhaps, significance in the fact that, among those suitably qualified, there is no undue haste to step into Sir Raymond's shoes. The trade itself faces an important decision upon which future developments hang. Sir Raymond is ready to continue in office for several months, pending the appointment of a successor, and it can be assumed that there will be considerable discussion as to the course which should be adopted.

Last year, there was a keen demand in some quarters for a complete revision of the structure of the Cotton Board with the introduction of a part-time chairman and the enlargement of the Board itself. Such a fundamental change in the organisation would require Parliamentary sanction and it is understood that the Government is not prepared to introduce legislation at this time.

When the different sections of the trade were asked last year for their views on the future of the Board, there was no sign of any objection to the continuance of some form of central body to represent the industry. Divergent opinions were expressed on the details of the existing arrangement, but support for the general idea was unanimous.

Hardly had the news of Sir Raymond's decision been published than a fresh resignation from the Board was announced. Dr. R. Robson, a world-recognised expert on mill problems and head of the Board's Statistics Department, made it known that he was leaving the organisation to take up a similar post with the Iron and Steel Board. Although Dr. Robson had generally kept in the background, his formidable knowledge of statistics had been a valuable asset to the industry as a whole, particularly in the post-war years when his department has released innumerable documents and statements relating to production and developments in the trade. He too had attended many conferences in the capacity of an observer and had been at Sir Raymond's right hand with the appropriate figures at the right moment. His parting gift to the trade has been the completion of a volume setting out the history of Lancashire textiles over the past half-century, which was published only this month.

Cotton production in the Commonwealth plus the Sudan, but excluding India and Pakistan, continues to flourish. Output during the past year established yet another record, exceeding the previous peak by more than 50,000 bales. According to the annual report of the British Cotton Growing Association, output in these areas in the past season amounted to 1,279,000 bales, as compared with 1,222,400 bales in the previous year. Variations naturally occurred in the quantity of the raw material grown in the different countries, but new records were achieved in the Sudan, Aden and Tanganyika. In both the latter territories, the post-war expansion in cotton growing has been remarkable. Aden's crop in 1949 was only 100 bales, but, last year, the total had risen to 30,700 bales. In Tanganyika, output has advanced from below 50,000 bales in 1950-51 to 130,000 bales by 1956.

Government's "Indifference"

Why should the British cotton industry be singled out for lack of consideration by the Government, is the question posed by Sir John Grey, veteran Lancashire trade leader and Chairman of John Grey Ltd., the Burnley weaving group, in his annual statement. Commenting on the drift of labour from the cotton textile industry which has resulted in a loss of 23,000 workers from the weaving side in the past two years, Sir John said: "This is due largely to the supine indifference of the Government in tolerating without hindrance, tariff or quota the importation of enormous quantities of cheap Oriental cotton goods, in marked contrast to the Governmental agitation displayed towards unemployment in any other British industry. In no other country in Europe or America would this decimation of an important industry have been tolerated by its Government."

Overshadowing the future are the possible consequences of the projected European free trade union, Sir John added. In the initial stage, he predicted, the United Kingdom was likely to be at a continuing disadvantage in the scramble for extended markets, owing to the partisan attitude of some Continental Governments towards export incentives for their own industries. "We shall be competing with European countries where wage rates are lower, where textile machinery is worked for longer hours and for whose military defence, as well as our own, we are adding to a taxation burden that would still probably be the heaviest in Europe, even if it were only the welfare state it had to finance."

Trend of Output

Some expansion in productive activity in Lancashire during the month of January can very often be anticipated when seasonal influences do not interfere with the even flow of output. Some contrasting features, however, arise on this occasion in the returns now published by the Board of Trade. It is, for example, notable that single yarn production in January was substantially higher than the average throughout 1956 and exceeded in all sections the comparable figures for January of last year. Average weekly yarn production was 17,540,000 lbs., against 17,190,000 lbs. in January 1956. On the other hand, the quantity of cloth produced on a weekly average basis was 2,000,000 yards lower than a year ago, the volume being 45,500,000 linear yards, as against 47,400,000 yards. Although output of cotton material showed a reduction, the chief decline came in the amount of goods woven from man-made fibres and mixtures which was slightly below the average weekly output for the whole of 1956 at 13,400,000 linear yards.

That the weaving section is failing to keep pace with the improvement in spinning was also obvious from the employment statistics, which showed that, in January, the number of workers on the books in spinning and doubling increased by 1,500 to 127,700, the highest manpower figure since April last year. Those available for weaving employers remained at the low point of 117,400, showing no improvement on the December total.

The number of looms running in January was 234,000, as compared with 247,000 a year previously and the weekly average of 229,000 throughout 1956. Spindles at work represented 75 per cent. of those in running mills, numbering 21,400,000 mule equivalent spindles. This compared with 22,100,000 operating in January last year, so that the higher output was presumably obtained by better productivity and the more intelligent use of machinery.—*All Rights Reserved.*

A CEILING TODAY COULD BE A SHOWER TOMORROW:

Look to your roof now—don't suffer from the monsoon.

Don't let a situation like this develop. Act now and you will ensure leakproof roofs by specifying Shalimar Tarfelt.

COTTON UNDER THE SECOND PLAN

ADOPTION OF BETTER METHODS OF CULTIVATION URGED

THE need for intensive methods of cotton cultivation and proper measures for plant protection for attaining the Second Plan target of 6.5 million bales was stressed by Dr. M. S. Randhawa, President of the Indian Central Cotton Committee and Additional Secretary to the Ministry of Agriculture, Government of India, in his address to the 75th meeting of the Committee held on 20th March at Bombay. Dr. Randhawa observed that the revised production target of 6.5 million bales was fixed after taking into consideration the increased target for textile production, higher exports and extra-factory consumption. The revised target has been accepted by the Government of India. The State-wise distribution of the target is as follows:

Plan Targets

(In thousand bales of 392 lbs. each)

States (Reorganised)	*Production*
Punjab	1,250
Rajasthan	290
Uttar Pradesh	110
Madhya Pradesh	567
Bombay	2,934
Mysore	670
Madras	450
Andhra	165
Orissa	30
Other States	34
Total ..	6,500

The target of production under the second Plan for the current year (1956-57) has been put at 4,546,000 bales, which represents an increase of 13 per cent. over last year's crop. An additional area of 482,000 acres was brought under cotton cultivation during the current season. Targets fixed for manuring have been achieved in the States of Punjab, Rajasthan, Mysore and Saurashtra region of Bombay and those for improved seeds have been achieved in practically all the States. In order to achieve the goal of 6.5 million bales, greater effort is necessary. There is also need to improve the quality of cotton. Full advantage of the improvements effected in particular strains of cotton, as Dr. Randhawa pointed out, cannot be derived unless it is grown under optimum conditions, integrating all the latest scientific methods. He pointed out that the striking improvement in the yield of paddy, resulting from the adoption of the Japanese method of cultivation which is nothing but a combination of all known scientific techniques in respect of paddy, clearly illustrated this point. He therefore, suggested, that it would be desirable if schedules of such improved cultivation practices to be adopted in the different tracts are laid down for cotton also.

Plant Protection

Plant protection measures, Dr. Randhawa observed, have an important place in the development of cotton under the second Plan. Experiments conducted in regard to the use of aircraft for spraying proved to be successful in the Punjab. In Fazilka, in the Punjab, for instance, where aerial spraying was conducted, there was 100 per cent. control of cotton jassids. In addition, no white-fly adults were visible in the area. The total cost of spraying aggregated to about Rs. 14-8 per acre. He expressed the hope that more use would be made of aircraft in controlling cotton pests in other States as well where conditions are favourable for such spraying.

Dr. Randhawa also referred to the recommendations of the Conference on Cotton Growing Problems held at Chandigarh in November last. The Conference had stressed the need for research on long-staple Gaorani cotton. Two schemes in this respect are now in operation and a number of very promising long-staple strains have been isolated. Seeds of more than 200 varieties of cotton have already been procured from the U.S.A. and the Soviet Union. These seeds will be distributed to different cotton research stations which will transfer them to the Regional Research Stations when the latter are established. The Conference recommended that germplasm banks should be maintained at all the Regional Research Stations. It had also directed that the work on Andrews variety of Sea Island cotton and trials on hybrid cotton being conducted in Kerala should be vigorously pursued. Accordingly, the appointment of a special officer for development of Andrews variety of Sea Island cotton in Kerala, Mysore and Assam has been proposed for expediting the work. Cotton has further been included in the model agronomy scheme of the Indian Council of Agricultural Research and experiments on spacing have also been taken up.

The scheme for co-ordinated regional research stations for cotton and its rotation crops, namely, oilseeds and millets, Dr. Randhawa observed, is an important development in the organisation of agricultural research in the country. The necessity of organising agricultural research on a cross-commodity basis was felt for a long time and it is for the first time that a step in this direction has been taken. It is also for the first time that an organisation of a permanent nature has been created for tackling agricultural problems on a regional basis which will ensure maximum efficiency and economy in expenditure. At these research stations, research on inter-related agricultural problems of these commodities would be carried out by a band of scientists working as a team. The establishment of these composite regional stations would provide coverage for fundamental research applicable to a wide range of agro-climatic conditions. Co-ordination would also be provided between the work of the proposed composite stations and the State research stations dealing with these commodities through a committee presided over by the Agricultural Commissioner with the Government of India with the Directors of Agriculture of the States constituting the region, the chiefs of the Regional Research Stations concerned, the Director, Indian Agricultural Research Institute, the botanists dealing with cotton, oilseeds and millets of the States constituting the region and Secretaries of the Cotton and Oilseeds Committees as members. This Committee would meet annually at a suitable place in the region and consider the programme of research drawn up by the chief of the regional stations. The chief of the Regional Station will also provide guidance to the State research organisations located in the region and thus act as a project leader. This scheme has been approved by the research organisations concerned, namely, the Indian Council of Agricultural Research, the Indian Central Cotton Committee and the Indian Central Oilseeds Committee. An officer on special duty has been appointed to give effect to the scheme. Most of the States concerned have agreed to provide land while the cost of the buildings will be met out of the central fund to which all the three research organisations will subscribe.

Dr. Randhawa surveyed the trend in mill consumption of cotton, exports and imports. The continuous increase in consumption, which has been in evidence from 1950-51 onwards, continued in the last season also, consumption aggregating 4.97 million bales, as against 4.77 million bales in the previous year. Despite the increase in cotton production, the country has still to depend upon imports to the extent of about 600,000 bales of cotton of the long-staple variety. It is therefore encouraging to note that the Committee's efforts in producing Indo-American strains of staple length 1.1/16" to 1⅛" and the acclimatisation of Andrews Sea-Island cotton have been successful.

Crop Estimating Surveys

The Committee also considered the recommendations of the special Sub-Committee which had been appointed to review the operation of the crop estimating surveys on cotton and assess the position of cotton statistics and suggest ways and means of improving them. A scheme for estimating the cost of production of cotton and other rotation crops in the major cotton-growing tracts is to be introduced in four major cotton-growing regions of India. It is estimated to cost Rs. 13 lakhs which will be shared by the Indian Central Cotton Committee, the Indian Central Oilseeds Committee and the Indian Council of Agricultural Research on an agreed basis.

Dr. Randhawa pointed out that the Technological Laboratory at Matunga had been functioning as an important tool of the cotton breeder. 1,580 samples were received from the State Agriculture Departments for fibre measurements and spinning tests. There is need for effective co-ordination between the research institutes set up by the Ahmedabad Textile Industry's Research Association, the Textile Research Association, Bombay, and the Southern India Millowners' Association at Coimbatore which are intended to serve the textile industry. It is desirable that duplication of work and waste of effort and resources should be avoided so that all the research institutes combine together to serve the interests of the industry and the cotton growers in a rationalised manner. A sub-committee has been proposed to be constituted to give the necessary guidance in this regard. It will include the Directors of all the four research institutes, two cotton breeders and two industrialists.

The Committee also resolved to bring out an Atlas on cotton which will show, in a graphic manner, the spread of various important varieties of cotton in different States with production and other relevant data. It has also been decided to issue the Committee's Journal, *Indian Cotton Growing Review*, bimonthly, instead of quarterly as at present.

ZAGREB

VISIT THE **SPRING FAIR** APRIL 13th TO APRIL 23rd, 1957

TAKE PART IN THE **AUTUMN FAIR** SEPTEMBER 7th TO SEPTEMBER 22nd, 1957

This year, the Spring Fair (which includes the Sample Fair) promises to be even bigger and better than the Spring Fair of 1956. A wide range of products will be exhibited, including handicrafts, and a special section of the Fair will be devoted to Yugoslav Craftsmanship. It is the International Fair of printing machines and equipment and consumer goods.

Yugoslavia will again exhibit to the world non-ferrous metals, timber, glassware, textiles, agricultural engineering equipment, leather, foodstuffs, etc., at this, the INTERNATIONAL FAIR. There will be also wide participation by other countries, and you, too, are invited to exhibit. Applications for floor space will be accepted until May 15.

Special reduced rates for fares, transport of merchandise, and visas for holders of Fair certificates.

Further information and Fair certificates can be obtained from:

Yugoslav commercial and diplomatic representatives or direct from ZAGREBACEI VELESAJAM, Sevska Costa 25, Zagreb, Yugoslavia.

OUTSTANDING PROGRESS

31st December, 1956

Deposits Exceed .. Rs. 106 Crores

Working Funds Exceed .. Rs. 140 Crores

The P. N. B. secured 20% of the additional deposits of all scheduled banks in the country during 1956.

Chairman
Shri S. P. Jain

SUGAR EXPORTS UPTO 100,000 TONS CONTEMPLATED

FEARS OF RISE IN DOMESTIC PRICES UNFOUNDED

IT was only last week that we emphasised in these columns the need for the Government of India permitting an additional quantity of sugar for export, in view of the plentiful stocks available, the currently ruling high prices in overseas markets and the necessity for earning foreign exchange. It is gratifying to be told that the Government contemplates allowing exports of sugar up to 100,000 tons, including the quantity that has already been allowed for export. This was disclosed by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his reply to a question in the Lok Sabha the other day. Mr. Jain stated that, so far, the Government had allowed exports up to 46,000 tons, making a profit of about Rs. 17 lakhs. The export at the moment, he added, was handled by the Indian Sugar Mills Association and the profits now made were being kept separately, so that they could be utilised later on, that is, when sugar could not be exported economically. Asked by one of the members as to whether there was any proposal to expand production of sugar in the country, in view of the demand for this commodity in foreign markets, the Minister said:

"The Government has a programme for expanding sugar production. For the present, the Government proposes to implement this programme and may later on think of augmenting it further. But the difficulty in further expansion is shortage of foreign exchange. However, in two years, India hopes to produce a major portion of the machinery required by sugar mills."

There is, however, a section of opinion which fears that any further exports of sugar from India will lead to an upward trend in sugar prices in the domestic market. These fears are clearly exaggerated. The supply position of sugar, as was reviewed last week, is very comfortable, the quantity actually available for consumption in the current season (1956-57) being as much as 2.6 million tons (inclusive of previous season's carryover) which is nearly 500,000 tons more than what is actually required to meet the domestic needs in full. The aggregate closing stocks of sugar with the mills at the end of last month amounted to 1,065,000 tons, as against 880,000 tons a year before. With nearly half the crushing season still remaining, several factories are faced with the problem of huge accumulations of stocks lying unsold. Some idea of this problem can be had from the following latest figures relating to stocks, production and despatches of sugar with mills in the different States:

(In tons)

	Closing stocks as on 22nd February, 1957	1st November, 1956 to 22nd February, 1957	
		Production	Despatches
Uttar Pradesh	532,663	567,019	319,750
Bihar	193,202	187,311	99,883
Bombay	117,334	133,107	64,637
West Bengal	5,131	4,042	2,398
Punjab	25,698	26,343	10,877
Rajasthan	8,188	9,545	5,178
Madhya Pradesh	21,300	24,123	12,669
Orissa	1,253	1,245	791
Madras	21,421	24,725	16,073
Kerala	7,997	11,843	3,860
Mysore	21,533	26,938	14,378
Andhra	69,114	75,706	45,738
Total ..	1,024,239	1,002,847	596,232

The aforesaid aspect would be appreciated better if one were to take note of the fact that, despite the exports of nearly 50,000 tons allowed, the prices of sugar have not recorded any tendency to rise; they have remained practically stationary and, in fact, have tended to look down in some cases. Indigenous bold grain sugar is currently being quoted in the Bombay market at Rs. 92-Rs. 96 per bag, as against Rs. 95-Rs. 103 before the Government announced its decision to permit sugar exports. Similarly, the retail price of sugar quoted in the Hapur market which stood at Rs. 31 per maund on 2nd February declined to Rs. 30-10 on the 2nd inst., since when it has maintained this level. Mill delivery prices of sugar produced in North India have not shown any marked variation. The latest available prices—in rupees per maund—with figures in brackets giving rates prevailing before exports were allowed are: Jaswant 28-12 (28-6); Simbhauli 28-14 (28-10); Mawana 28-8 (28-4); Damala 29-8 (29-8); Amroha 28-4 (27-14); Bijnore 28-4 (27-14); Rampur 31-8 (31-10).

The recent decision of the Government of India to allow exports of sugar up to 100,000 tons must be welcomed, inasmuch as it will help the sugar factories to tide over, to some extent at least, the difficult problem of finding godown space and finance for stocking large quantities of sugar. Sugar traders, however, seem to be somewhat critical of the Government's policy of permitting exports only through the Indian Sugar Mills Association. For instance, addressing the third annual meeting of the *Shakkar Vyapari Mandal* Ltd., at Bombay last week-end, Mr. Shantilal K. Somaiya, the retiring President, pointed out that the trade with its mature experience of export business should, in fairness, receive priority in the export drive, without whose active co-operation it would be difficult for any centralised agency rapidly to develop exports. He urged the Government of India to permit the trade to export and to do away with the present monopoly. He revealed that representation had been made in the matter to the Government. Presumably as a sequel to this representation, the Government has asked the Indian Sugar Mills Association to permit traders also to tender sugar for export. It is, however, not known what arrangements the Association has made in this connection, more especially with regard to the system of pooling the entire profits realised by it from the sugar export business in a separate fund to be utilised for exports at a loss as and when the necessity arises. One would want to know whether this system will be made applicable to the traders also and, if so, how it will work.

SUGARCANE PRICES

The Lok Sabha rejected on Friday last week a private resolution urging the Government of India to set up a statutory body for fixing the prices of sugarcane payable by factories to growers. The resolution was moved by Mr. B. Ramachandra Reddy who said that such a board would have gone a long way towards promoting better relations between cane growers and millers, thereby helping increase in sugar production. He cited the example of Australia where such a body was functioning very effectively and pointed to the Indian sugar delegation to Australia having highly commended the introduction of a similar body in India.

Speaking on the resolution, Mr. M. V. Krishnappa, Deputy Minister for Food, declared that the Government could not accept the resolution. For he stated that the Governments of Uttar Pradesh and Bombay, two principal cane-growing States, had opposed the setting up of a statutory body and wished the present arrangements to continue.

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of February 1957 was 352,629 tons, bringing the total production during the first four months of the season 1956-57 to 1,169,028 tons. The corresponding figures for the last season were 355,000 tons and 1,067,000 tons, respectively.

The offtake of sugar from factories during the month of February 1957 was 177,000 tons, as against 233,000 tons in the corresponding period last season. The total offtake of indigenous sugar during the first four months of the current season amounted to 635,000 tons, as against 598,000 tons a year before.

The closing stock of indigenous sugar on the 28th February 1957 was 1,065,000 tons, as against 880,000 tons on the same date last season.

ENLARGING RESOURCES OF COKING COAL

C.F.R. INSTITUTE'S TASK

THE symposium on coal carbonisation held last week at the Central Fuel Research Institute, Jeolgora, served a useful purpose in focussing immediate attention to the problem on conserving and enlarging the country's resources of good quality coking coal. The problem is a formidable challenge to the Institute and the Coal Blending and Coking Research Organisation—a challenge which must be met, if the iron and steel industry, or for that matter industry in general, is to develop commensurate with the expectations of the planners and with the needs of the country.

Fuel power and minerals constitute the foundation of industrial development. Strangely enough, India has abundant reserves of high grade iron ore, but the reserves of coking coal which can be carbonised directly to yield metallurgical coke is extremely limited. Estimates place the availability of good quality coking coal at about 750 million tons out of a total of 2,500 to 3,000 million tons of all qualities. On the basis of production of 45 million tons of iron and steel per annum, the reserves are not expected to last for more than 30 years, unless special steps are taken to conserve these coals in mining and in utilisation.

It is through carbonisation of coal at high and low temperatures that coke, so vital for the steel and other industries, is produced, besides giving other valuable products like coke oven gas, coal tar, benzol and a large number of chemicals, but the reserves of metallurgical coal suitable for conversion into coke for metallurgical use is rather limited. It is, therefore, of utmost importance that such coals are to be conserved and their use limited to operations where inferior coals would be inappropriate. It is also necessary that the inferior grade coals should be upgraded and rendered suitable for coking purposes by blending, washing and other methods. Recognising the seriousness of the problem, the Tata Iron and Steel Company, Ltd., has already set up washeries at West Bokaro and Jamadoba, which are the first of their kind in the country. The railways, which use about 4.7 million tons of coking coal, have also decided to change the design of locomotive boilers, so that the latter will progressively operate on non-coking coals instead of on coking coals as hitherto. The resources of metallurgical coking coal can thus be enlarged substantially, but the washing of inferior coals presents very special problems, due to the intimate mixture of mineral matter in the coal. Besides, the washing process will also result in production of large quantities of high ash coals and middlings for which proper uses must be found, by planning other industries, such as generation of power, production of fertilisers, production of synthetic oil, etc., which can consume high ash refuse and thus make the beneficiation of the inferior quality coals more economic for production of metallurgical coke.

While, on the one hand, the supply of good quality coking coals is not plentiful, on the other, these coals are really poor in quality as compared with those in other countries. They require beneficiation and preparation before they are fit for metallurgical use. It is, therefore, necessary to minimise the use of better quality coking coals. There are various means of doing so, all of which will cost money and effort. Britain, West Germany, and the Eastern United States are great centres of coal carbonisation and as these areas contain large resources of good quality coking coals, they have not so far faced these problems. The resources being exhaustible, even these areas are alert to the problem. There are, however, other countries in the world, such as Japan, the Saar District, France, Western United States, Yugoslavia and East Germany, which, like India, have faced such problems. They have been able to solve them to a considerable extent by reducing their dependence on good quality coking coal and rendering themselves self-sufficient in terms of resources in various degrees, thanks to the bold experiments and technological developments. While it will pay India to study these experiments and developments, it has to evolve its own solutions, because Indian coals are different in nature from those of the above countries and even in this country, each type of coal in the same region requires individual development and study. The results of experiments carried out so far in India and the study of achievements in other countries have shown that India's resources of coking coal or production capacity in terms of resources can be enlarged considerably, if the results of research were implemented in practice with vigour and foresight.

DEBT POSITION OF CENTRAL GOVERNMENT

TOTAL AT THE END OF NEXT YEAR WILL AMOUNT TO RS. 3,362 CRORES

THE outstanding public debt of the Government of India is expected to go up, during the next financial year, by Rs. 521.99 crores, that is, from Rs. 2,839.68 crores as on 31st March 1957 to Rs. 3,361.67 crores at the end of March 1958. The bulk of the rise, amounting to Rs. 365.00 crores, will be short-term, in the form of Treasury Bills and ways and means advances, which, incidentally, indicates the extent to which the Finance Minister proposes to resort to deficit financing, with a view to covering the deficit on revenue and capital accounts. Current rupee loans, dollar loans, loans from the U.S.S.R. and expired loans are also expected to be higher by Rs. 65.93 crores, Rs. 56.23 crores, Rs. 32.43 crores and Rs. 3.02 crores, respectively. Sterling loans, however, are placed lower by Rs. 62 lakhs at Rs. 21.65 crores, due largely to the reduction in the capital portion of railway annuities.

The following table gives a broad analysis of the Central Government's debt position as on 31st March 1958 as compared with that at the end of 1956-57 and 1938-39:

(In crores of rupees)

	As on 31st March		
	1939	1957	1958
Rupee Loans:			
Current loans	437.87	1,588.45	1,654.38
Treasury bills and ways and means advances	46.30	865.25	1,230.25
Special floating loan	..	212.60	212.60
Expired loans	.65	11.33	14.35
Total ..	484.82	2,677.63	3,111.58
Sterling Loans:			
Current loans	396.50	0.56	0.53
War contribution	20.62	20.62	20.62
Capital portion of railway annuities	47.82	1.07	0.48
Expired loans	0.01	0.02	0.02
Total ..	464.95	22.27	21.65
Dollar Loans	..	132.95	189.18
Loan from U.S.S.R.	..	6.83	39.26
Grand Total ..	949.77	2,839.68	3,361.67

The liability for the British war loan remains suspended, while the outstanding railway annuities are covered by an equivalent deposit with the United Kingdom Government, which provides the necessary sterling as the payments fall due. Omitting these items, the total outstanding debt will be Rs. 2,818 crores at the end of the current year and Rs. 3,341 crores at the end of 1957-58. At the end of the Budget year, the outstanding debt would, as compared with the figure at the end of 1938-39, have risen by Rs. 2,459 crores.

In addition, the Government of India is liable to repay the balances in the various Provident Funds, the Post Office Savings Banks, the Post Office Cash, National Savings and National Plan Certificates, the Depreciation and Reserve Funds of the Railways, Posts and Telegraphs, etc., and certain other deposits mainly relating to excess profits tax and income-tax. These balances are estimated to amount to Rs. 1,060 crores at the end of the current year and Rs. 1,163 crores at the end of 1967-58, after making a very rough allowance for Pakistan's probable share in them. Taking the regular debt and these liabilities together, the debt position of the Government of India will stand as follows:

(In crores of rupees)

	As on 31st March	
	1957	1958
Regular loans	2,839.68	3,361.67
Other liabilities	1,060.40	1,163.35
British war loan and railway annuities ..	(—) 21.69	(—) 21.10
Total ..	3,878.39	4,503.92

This outstanding debt may be analysed with reference to the purpose on which the money has been utilised or the assets by which it is covered. An analysis is given below:

(In round crores of rupees)

	As on 31st March	
	1957	1958
Railways	1,073	1,107
Posts and Telegraphs and other Commercial Departments	150	172
Investment in commercial concerns	136	321
Loans and advances	1,187	1,440
Purchase of annuities for sterling pensions ..	60	54
Subscriptions to the International Monetary Fund and World Bank	213	213
Debt due from Pakistan	300	300
Cash and other investments	50	50
Total ..	3,169	3,747

Allowing for these, the uncovered debt will amount to Rs. 757 crores at the end of the Budget year, as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive debt, for the large grants to States for development in recent years, which increase the productive capacity of the country as a whole, are not entirely unremunerative and, similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the Delhi capital outlay and Defence capital outlay), is not without value.

Out of the total debt noted above, the interest-bearing obligations of the Government of India are expected to stand at Rs. 4,298.05 crores by the end of 1957-58, as against Rs. 3,676.13 crores at the end of the current year and Rs. 1,201.58 crores (excluding Rs. 4.18 crores on account of Service Funds—England) at the end of 1938-39. The major portion of this liability is covered by interest-yielding assets, the actual amount of such as on 31st March 1958 being Rs. 3,484.33 crores, a rise of Rs. 577.44 crores as compared with the figure at the end of this year. The assets as on 31st March 1939 aggregated only Rs. 896.65 crores. The details of some of the important items of assets are shown in the following table:

(In crores of rupees)

	At the end of		
	1938-39 Pre-war	1956-57 Revised	1957-58 Budget
Capital advanced to railways ..	725.24	1,072.79	1,196.96
Capital advanced to other commercial departments	27.42	150.19	172.28
Investment in commercial concerns	..	136.04	321.06
Capital advanced to States ..	123.28	1,030.24	1,234.49
Other interest bearing loans ..	20.71	157.06	205.49
Deposits with the U.K. Government for redemption of railway annuities	..	1.07	0.48
Purchase of annuities for sterling pensions	..	59.50	53.57
Debt due from Pakistan	..	300.00	300.00
Total ..	896.65	2,906.89	3,484.33

Besides the aforesaid interest-yielding assets, the Government of India has cash and securities on Treasury account. The estimate of these as the end of next year is placed at Rs. 50.38 crores, as against Rs. 50.41 crores at present and Rs. 30.30 crores on 31st March 1939. The interest-bearing obligations not covered by assets are expected to rise from Rs. 718.83 crores to Rs. 763.34 crores. The figure at the end of 1938-39 was Rs. 274.63 crores.

NATIONALISATION OF TEA INDUSTRY RULED OUT

MR. MORARJI DESAI'S ENUNCIATION OF POLICY

THE rejection, by the Lok Sabha, of Mr. A. K. Gopalan's resolution proposing nationalisation of the tea industry has served to spotlight not only the absurdity of "theoretical notions of nationalisation," as Mr. Morarji Desai put it, but also the grave danger to India's economy inherent in this and other similar proposals. Mr. Gopalan's resolution moved in the House towards the close of the last winter session stated that the predominant position of British capital in the tea industry had proved detrimental to national interests and that the industry, should be nationalised forthwith. It will be recalled that, in the course of his short speech introducing the resolution, Mr. Gopalan did not put forward any convincing reasons in support of his proposition. His principal contention was that there was a high degree of concentration of foreign capital in the tea industry and that this must be put an end to. It is gratifying to note that the Minister for Commerce and Industry, in his reply to the debate, made some very pertinent remarks on the futility of the suggested step. Pointing out that the general question of nationalisation of industries was one to which some were wedded without any consideration, Mr. Desai averred that his Government was neither against nationalisation nor in favour of it merely as a principle. The question of nationalisation of the tea industry ought to be examined, he said, from the point of view of whether it would be in the interests of the country.

No Causes

This, in fact, has always been the main consideration in deciding the pros and cons of nationalisation of industries. In the case of the tea industry, as Mr. Desai endeavoured to show in his speech, it is impossible to discover anything that will even remotely point to the need for nationalisation. Taking the most important aspect of production, there is no guarantee that nationalisation would result in greater production. On the other hand, as Mr. Desai pointed out, there are grave doubts about production continuing for some time on the same scale as at present after nationalisation has been achieved. That would indeed be a big risk for this country to take. Incidentally, Mr. Desai pointed out that production in the British-owned estates was in no way inferior to the production in Indian-owned estates.

It is admitted that non-Indian interests (primarily British) hold a predominant position in the Indian tea industry. The Plantation Inquiry Commission drew particular attention to this fact and referred to the "excessive concentration of economic power in a few hands." But the Commission did not say that such concentration was the result of a deliberate move on the part of non-Indian interests. On the contrary, it stated that there had been a progressive reduction of non-Indian interests within the industry during the past many years. Apart from this, the important point to consider is whether, and if so to what extent, the alleged concentration is affecting the Indian tea industry or the country as a whole. Surely, it has not stood in the way of the progress of the industry, viewed from any angle. It has not placed our export trade or local trade in any position of disadvantage, nor has it placed any particular burden on the consumer in India or abroad. On the other hand, the fact that Britain is still by far the largest single consumer of Indian tea shows that no harm has come out of the alleged concentration. Mr. Desai rightly pointed out that, if foreign tea interests in India were treated in the manner suggested by the resolution, the export position of tea would be harmed.

Profits

The sponsors of the resolution argued that huge profits were being earned and taken out of India by the foreign owners of tea estates. This may have a big value as a means of propaganda, but it is not warranted by facts. Mr. Desai countered the argument by giving the information that, in 1953-54, out of the net profit of Rs. 11.07 crores, only Rs. 3.05 crores were paid as dividend. In 1954-55, the net profit of the tea industry amounted to Rs. 11.79 crores, out of which only Rs. 3 crores were distributed as dividend. A large percentage of net profit had been ploughed back in the industry for its improvement. Here again, it is noted from the Plantation Inquiry Commission's Report, that the non-Indian interests' share of the amounts ploughed back was no less than that of the Indian interests; in fact, it was more.

The feeling that the tea industry is uniformly prosperous and pays large dividends to shareholders is by no means casual, for some people even swear by it. The facts may be gleaned by a reference to a recent number of the *Economic Review* published by the All India Congress Committee which gives an index of industrial profits for the four years 1950 to 1953 set against a basic figure of 100 in 1939. This shows that, while the average for all industries, including tea, jute, cotton and sugar, was 246.6 in 1950, it was 271.2 for tea only. In 1951, the index for tea was 103.9, as against 310.5 which was the average for all industries. In 1952, it was 88.8 for tea, as against 190.6 for all others. In 1953, the index for tea was 391.4, while the average for the others was 261.2. This is sufficient to show not only the widely fluctuating nature of the profits earned by the tea industry from year to year but also the fact that the average profit earned is by no means colossal or incomparable with other industries.

Financial Commitment

The sponsors of nationalisation did not seem to be concerned very much with the financial implications. The Commerce Minister estimated that the cost of nationalisation would be Rs. 181 crores, not to speak of the large working capital required. Apart from the difficulty of finding this huge sum of money, what is the object in employing it towards acquiring an existing industry which, even on the Minister's own admission, is working efficiently? It would be far more sensible and desirable to employ such a large amount on new enterprises and new investment for which there is a real need. The Minister pertinently asked in this connection: "While the position today is that we are inviting foreign capital to invest in this country for raising industrial production, how can we think in terms of liquidating foreign capital already invested in this country?" He emphasised that no benefit would accrue by following such contradictory policies.

The argument that labour was being exploited was also rejected by Mr. Desai. In fact, he said, the conditions of labour were becoming better and better every day. In support of this point he drew attention to the fact that their wage bill had risen from Rs. 11 crores a few years ago to Rs. 60 crores at present. Amenities provided to labour were increasing. The regulations framed by the Government were also bringing about more and more improvement of the living and working conditions of estate workers. About a million people were employed in this industry. He challenged the argument of the supporters of the resolution that labour was not getting a fair deal from foreign owners and said: "We have to admit that the labour is looked after better in the foreign estates than in the Indian estates."

Indianisation

It must be assumed that in proposing nationalisation of the tea industry the sponsors were not thinking merely of foreign-owned estates. In any scheme of nationalisation Indian-owned estates also must necessarily be included; otherwise it will not be nationalisation in the true sense. The sponsors of the resolution appeared to be talking of nationalisation of foreign-owned plantations only. It is possible that the real purpose of the resolution was merely that British-owned plantations should be bought up by Indian owners. That would be a process of Indianisation and not nationalisation. But Indianisation on these lines has, in fact, been going on for some years past, and must continue in the future.

For every plane – more than a hundred men!

THIS large team of very important people is behind every Indian Airlines aircraft, looking after *your* comfort, *your* safety — ensuring speedy journeys and happy landings. There's the man who pilots the plane, the man who navigates its course, the men who service the engines, the electrician — to name but a few. Every year Indian Airlines Corporation covers 20 million miles over 132 daily flights and the hundred men who keep each aircraft flying are an indispensable part of this service. They serve the wings that serve India.

PROBLEMS OF ELECTRICAL INDUSTRY

CO-ORDINATION OF IMPORTS AND PRODUCTION WANTED

SOME of the major problems facing the electrical industry figured prominently in the address delivered by Mr. N. R. Banerjee, President of the Indian Electrical Manufacturers Association, at the annual meeting of the Association held recently at Calcutta. Although the industry has made significant progress in recent years, a large gap in supply still remains to be filled. The major obstacles in the way of rapid development of the industry, apart from taxation and labour policies, have been the lack of co-ordination between imports and indigenous manufacture, the delay in the licensing of the installation of additional capacity, absence of proper co-ordination between indentors and manufacturers and shortage of raw materials.

Despite these handicaps, the electrical industry, as pointed out earlier, made rapid strides during recent years. Production during 1955 and the target proposed for attainment by 1961 are given in the table below:

PRESENT PRODUCTION AND PROPOSED TARGETS

	Units	Production in 1955	Target for 1961	Capacity to be established
Transformer	K.V.A.	564,700	1.5*	2*
Motor	H.P.	252,000	800,000/1*	1.25*
Cables and wires—				
Bare copper conductors	Tons	8,434	10,000	..
ACSR and all aluminium conductors ..	,,	8,045	20,000	30,000
VIR and PVC cables..	Mil. Yds.	86	250	500/600†
Paper insulated power cables	Miles	..	1,600	1,600
Switch gear and control gear—				
11 KV-switchgear ..	Nos.	..	1,600	1,600
Low voltage circuit breakers	,,	254	3,000	3,500
Motor control gear ..	,,	7,710	120,000	120,000
Iron-clad switch and switch fuses ..	,,	580,000	600,000	800,000

* Millions. † Million core yards.

There has been, for instance, a marked increase in demand for transformers during the last few years, thanks to the increase in rural electrification and manufacturers of transformers have made a concerted effort to augment production. The output of transformers increased from 194,000 KVA in 1951 to 920,000 KVA in 1956. However, the Government, on the ground that the indigenous industry is unable to meet the entire demand, has liberalised import policy in respect of transformers. The Association, it is stated, has pointed out many a time that the indigenous industry could meet the entire demand and if it had not been able to do so in the past it was not so much because of its inability to manufacture transformers in sufficient quantity, as to the lack of planning, on the part of indentors, in placing orders. Huge orders released all of a sudden from different quarters could embarrass any industry. The Tariff Commission itself had pointed out, in its report on "Continuance of Protection to the Power and Distribution Transformer Industry," that the planning of orders in the case of a few States was not even and sudden spurts in demand were created at particular times. It had also observed that the manufacturers were severely handicapped if there was delay in the final payment of bills by Central and State Governments on quantities actually delivered.

Liberalisation of Imports

Mr. Banerjee pointed out that the adverse effects of liberalisation of imports, are already being felt. The indigenous transformer industry is now short of orders in the smaller ratings and yet some of the State Governments have been only recently granted licences for importing them. Production of transformers could be considerably increased if the various State and Central Government indentors and the manufacturers co-ordinate their standardised requirements under the guidance of the Indian Standards Institution. He also stressed the need for placing indents at least 12 months in advance as a significant proportion of the raw material for transformers has to be imported on forward delivery basis. For instance, transformer sheets, one of the most essential raw materials of the industry, are now imported to the extent of 95 per cent. of total requirements.

Production of electric motors has also made considerable headway during the last five years. During the quinquennium 1950-51 to 1955-56, output of electric motors increased more than three times the 1950-51 figure, aggregating 295,000 h.p. in 1955-56. But demand also steadily increased and has outstripped supply so that there is still a gap left to be covered. Mr. Banerjee pointed out that though the Government's import policy takes cognisance of production trends within the country, there is need for greater co-ordination between Government and manufacturers in respect of the formulation of import policy. He suggested that the Government should consult the Association in framing the policy and assured wholehearted co-operation of the Association.

Ball bearings, a component part of electric motors, are also produced in the country, but it is not sufficient to meet the entire demand. Hence manufacturers of electric motors have been allowed to import ball bearings to the extent of their three months' requirements. The Association feels that this facility needs to be extended still further until such time as the indigenous supply of ball bearings is able to meet the increasing demand from the motor industry. There is also shortage of indigenous pig iron, another raw material for the manufacture of electric motors, which has to be met by imports. The wide disparity between the price of imported and indigenous pig iron affects the price structure of those manufacturers who have to depend more on the imported material.

Vast Field to Cover

But in the manufacture of switch and control gears, Mr. Banerjee said, a vast field is still left uncovered. The industry is, however, planning to extend the range of manufacture. The progress in other fields has also been encouraging. The production of bare copper conductors has been doubled, that of winding wires nearly doubled and that of rubber and plastic insulated cables stands at three times the 1952 figure. Similarly, production of storage batteries, dry cells, conduit pipes and radio receivers, electrical steel sheets, etc., has shown remarkable progress.

Inaugurating the meeting, Mr. Manubhai Shah, Minister for Heavy Industries, surveyed the rapid progress made by the electrical manufacturing industry. He pointed out that the Government's policy had always been carefully formulated, taking due account of indigenous capacity and production and demand. But he added that any suggestions that manufacturers may have to offer will be carefully considered by the Government while formulating the import policy. He also drew particular attention of manufacturers to some important aspects of the industry. Regarding transformers, he said that there have been complaints that the prices quoted by the producers are high. The industry, he suggested, would, therefore, do well to make an inquiry into its cost structure to see if any reduction in cost is possible. While a large capacity has been built up for the manufacture of distribution transformers, the country is still very much short of medium and large size power transformers. The Minister therefore requested the firms who are already manufacturing power transformers and others who have had considerable experience in the manufacture of distribution transformers to organise production of these transformers. Manufacturers of electrical equipment, the Minister held, had not shown sufficient initiative in undertaking the production of switchgears in the past. It would appear that some schemes with a phased programme have recently been sanctioned. There is still, however, a large gap and manufacturers will, therefore, do well to give some attention to this important field of electrical industry.

(Concluded from next column)

The Tariff Commission, in its last Report, had noted that it was convinced that the producers had made every effort to improve quality of the screws manufactured by the installation of better type of machinery and by the introduction of quality control. As the quality of the wire has not been satisfactory, the quality of the wood screw has also suffered. For instance, the railways, who are large-scale users of wood screws, have not been satisfied with the quality of the indigenous product.

Despite the difficulties faced by the industry in respect of obtaining raw materials of good quality, it has, during the 10 years of tariff protection, developed considerably. As the demand for wood screws is steadily increasing, the industry has a bright future provided proper care is taken to maintain high quality and economic cost.

PROTECTION TO WOOD SCREW INDUSTRY

TARIFF COMMISSION OPENS INQUIRY

THE Tariff Commission has commenced the inquiry into the question of continuance of protection to the wood screw industry beyond 31st December 1957. The inquiry is undertaken under section 11(*e*) and 13 of the Tariff Commission Act, 1951, which empowers the Commission to inquire into and report on any further action required in respect of protection granted to an industry. It may be recalled that, on the recommendation of the Tariff Board, the industry was first granted protection in 1946 for a period of three years by converting the revenue duty of 30 per cent. *ad valorem* into a protective duty at the same rate. In 1950, after a fresh inquiry, the Board recommended the continuance of protection to the industry at the same rate of duty for a further period of two years. The rate of duty was later raised to 31½ per cent. *ad valorem* by the Finance Act of 1951. The last inquiry into the claim for the continuance of protection to this industry was held in 1953 and the Commission recommended the continuance of protection for a further period of four years at the same rate of duty. The Government, however, in consultation with the Commission, decided that the rate of duty should be 31½ per cent. *ad valorem* or As. 5 per gross, whichever is higher.

In his speech made at the time of the opening of the public inquiry, the Chairman of the Tariff Commission, Mr. K. R. Damle, reviewed the present position of and prospects for the industry. The current demand for wood screws is estimated at about 3,500 tons or 7 million gross. Total availability in 1956, that is, the domestic production and imports was 4,369 tons or 8 million gross. Although it is difficult to project the future demand for general consumer items like wood screws, taking into consideration the programmes of house-building and other constructional projects contemplated in the second Plan, the Development Wing of the Ministry of Heavy Industries envisages the demand for wood screws to increase to 7,500 tons or 15 million gross a year by 1960-61. The Screw Manufacturers' Association, Calcutta, estimates annual demand to increase only to 5,000 tons or 10 million gross.

Installed Capacity

As regards production capacity, in 1953 there was 37 units manufacturing wood screws in the country. Of these, only 17 with a capacity of 4.5 million gross were registered with the Development Wing. There are at present 18 units registered with the Development Wing and their total capacity is 5.8 million gross. Some of the registered units have been permitted to expand their capacity and when the expansion is completed, the total capacity is estimated to increase to 7 million gross. The actual production of units in the Development Wing's list aggregated 7.5 million gross in 1956, as compared with 2.5 million gross in 1953.

The wood screw industry has been experiencing some difficulties in respect of supply of raw material of the requisite standard of quality. The Indian Steel and Wire Products Ltd., Indranagar, has been supplying H.B. steel wire, the principal raw material required for the manufacture of wood screws. Although this unit has sufficient capacity to meet the entire requirements of the wood screw industry for steel wire, it has not been able to do so. This has been attributed to the difficulty of procuring sufficient supplies of steel billets of the required specification. The firm has therefore been recently permitted to import billets.

There has also been complaints that the quality of the wire supplied by the Indian Steel and Wire Products Ltd., has not been satisfactory. The latter has, however, informed the Tariff Commission that it is prepared to supply wire of any chemical composition provided the Screw Manufacturers' Association undertakes to place orders with the firm for the entire requirements of the industry so that it can ask the Tata Iron and Steel Company to supply billets of the required chemical composition. A section of the industry had suggested that due to the unsatisfactory supply position and the quality of the domestic steel wire, the manufacturers of wood screws should be permitted to import wire from any source at the same rate of duty as is applicable to that of British manufacture. It has also been suggested that those units which have got capacity to draw their own wire should be permitted to import rods.

(Continued in previous column)

NEW PRODUCTS AND PROCESSES

New Screwdrivers for Jet Engine Adjustment

AMERICAN aircraft industry engineers have devised a new method by which mechanics sitting in the cabin of a big jet plane can make precision adjustments on its engines even though the engines may be 100 feet away out on the plane's wing. According to *Planes*, the publication of the Aircraft Industries Association of America the device is a simple one. The engineers built a screwdriver with a 100-foot handle. With the new "screwdriver," a mechanic is now able to sit in the pilot's seat watching the plane's instruments and make precision adjustments of the fuel controls of a jet engine in its pod far out on the wing. But the contrivance is not a conventional screwdriver. Two screwdriver heads with electric drives are contained in a small box which is connected by a 100-foot cord to a control box. The screwdriver heads are fitted into the recesses of the fuel-control screws, which turn to make changes in the fuel supply. These screws, of course, are part of the engine. The control box, which is attached by a cord to the box containing the screwdrivers, is placed in the plane's cabin. There the mechanic watches the instruments that record the operations of the engines and can adjust their operation to hairline accuracy while they are running at full power.

New Jet Trainer Aircraft

A remarkable new aircraft, the first to be designed in Britain exclusively for jet training, is expected to make its maiden flight early in March Costing only about £13,000, the Student, as it is known, has been developed over the last two years by F. G. Miles Ltd., a name famous in British aviation. Already, it is claimed, its many advanced design features have aroused the interest of Commonwealth and other Air Forces. According to Mr. Frederick Miles, Chairman and Managing Director of the firm, the Student will be the cheapest jet trainer in the world, and could be built abroad by countries not possessing a highly developed aircraft industry because of its simple design and construction.

Liquid Micromanometer

An instrument factory at Delft, the Netherlands, manufactures a simple, accurate micromanometer. This instrument is suitable for gauging both low pressures and differential pressures; in conjunction with an orifice plate or an impact tube it is used for instance for measuring gas and air velocities. This micromanometer has a fixed, slanting glass precision tube, which is clamped to a sturdy, machine-finished beam. The scale is 300 mm. (11.8 ins.) long and graduated in 1/1 mm. It can be supplied in a gradient of 1:10 or 1:4, the measuring range with an alcohol filling being about 25 or 60 mm. (0.98 in. or 2.4 ins.) respectively of water-column. The zero point control cock mounted on the cistern greatly facilitates the use of the instrument.

All-aluminium Electrolytic Capacitators

The plessey company of the U.K. has introduced a range of all-aluminium, sub-miniature electrolytic capacitators, including one claimed to be the smallest yet produced. Made possible by the application of a new type of etched foil construction the capacitators have wire terminations secured by a new method to the anode riser, preventing the possibility of dissimilar metals making contact inside the case, and thus eliminating the corrosive effect of the potential existing between such metals, particularly in the presence of the electrolyte. Sub-miniature capacitators are available in a range of capacitances from 9 to 50uF, and for operation at peak working voltages from 1.5 to 70.

Pressure Sprayer Nozzle

A tangential pressure sprayer nozzle, claimed to be a new development in spray gun nozzle design, has been developed by Alfred Bullows and Sons of the U.K. By using a novel arrangement of the nozzle horns, the kinetic energy of the discharged air is used to the full, as the two air streams pass tangentially across the face of the nozzle. When used with the firm's L/500 and L/600 spray guns, the nozzle provides a wide spray, maximum coverage for every pass of the gun and breaks up the paint with a minimum consumption of air at minimum pressure. It is stated that the atomising air pressure can frequently be reduced from 50 lbs./sq. in. to as little as 5 lbs./sq. in.

New Aid for Oil Study

A 20-year research effort on the part of the Gulf Oil Company scientists has resulted in the development of a new seismographic "camera" to be used in future oil explorations. The "camera" translates sound waves produced by small underground dynamite charges into light patterns which are recorded on rolls of moving films. The filmed light patterns provide company geologists a picture of underground conditions. The "camera" is expected to be of great use in the exploration for new oil fields as well as for determining if additional oil reserves are present in fields now considered no longer workable.

Faster Film for Photography

A new exceptionally fast photographic film has been developed in the laboratories of the Eastman Kodak Company. The film is said to be four times as fast as the fastest sheet film previously made by the company. Although the new film which is called S.O. 1177 is at present only available in limited quantities on special order, it will be made available commercially later on. It is claimed that with the new film clear photographs can be taken by the light of a cigarette lighter using a 1/25 second exposure at f./5.6.

FOR RAIL PASSENGERS

DOES YOUR LUGGAGE CONTAIN JEWELLERY, PRECIOUS STONES, WATCHES, SILKS, SHAWLS, CAMERAS, MUSICAL INSTRUMENTS OR OTHER "EXCEPTED ARTICLES?"

If so, you are advised that when you entrust such articles to the care of the Railways for carriage and the value of such articles in any one package exceeds Rs. 300/-, you should

(1) declare their value in writing at the time of booking, and

(2) pay a percentage on the value so declared over and above the normal freight charges,

failing which the Railways will not accept liability for the loss, destruction, deterioration or damage of such articles. The articles named above and many others you will find listed as "Excepted Articles" in the Railways Time-Tables and Guide.

The Station Master of the nearest station will give you detailed information if you contact him.

CENTRAL AND WESTERN RAILWAYS

THE SUPERANNUATION SCHEME—I

LIFE INSURANCE CORPORATION TO INTRODUCE SHORTLY

ALTHOUGH in India at present the Provident Fund is the most popular form of making provision for retired employees, it has at least one disadvantage which considerably limits its usefulness as a cover against the financial exigencies which a person may have to face some time or other during the period after the termination of his active life. The lump sum received as provident fund is likely to be frittered away and may not in most cases provide a steady income during retirement. Oftentimes, the employer will again be approached for financial assistance. There is, therefore, an increasing measure of awareness on the part of employers as well as employees of the advantages and desirability of making provision for payment of pensions to employees. In Western countries, enlightened employers have realised that such a scheme is of inestimable value to themselves and to the community as a whole.

In view of these obvious advantages, the Life Insurance Corporation of India has drawn up a Superannuation Scheme with the object of helping employers and employees to make provision for the payment of pension to the latter on their retirement from service. Special reduced rates are offered for these schemes with a view to giving its benefits to industry at the lowest cost possible. Although the main object of the Superannuation Scheme is provision of pensions to employees on their retirement, some life cover may also be provided to them during the period of service.

Many Advantages

A Superannuation Scheme has admittedly many advantages. From the point of view of the employer, the provision of long-term benefits through pension ensures a devoted staff free from the anxieties of providing for old age. Any contributions made by an employer under an approved Superannuation Scheme are permitted to be deducted in computing his income, profits or gains for the purpose of assessment of income-tax. The Scheme enables old employees to be superannuated at a reasonable age, thereby improving efficiency by making possible promotion of younger employees at an earlier age. The employees also stand to benefit by the Scheme. The ordinary contributions made by the employee to an approved Superannuation Fund will be eligible for tax relief under section 15 of the Indian Income-tax Act, 1922, in the same way as life insurance premiums and contributions to Provident funds are provided relief. A further advantage is that unlike what is the case in respect of provident fund, the contributions of the employer are not added to the employee's income either for tax liability or even for the purpose of determining the rate of tax. Nor is the employer's contribution included for computing the limit of one-fifth of the income or Rs. 8,000, whichever is less, for the purpose of relief under section 15. This is an advantage to employees in the higher income groups. All benefits received by employees will, of course, be liable to tax in accordance with the tax regulations in force from time to time. Further, freedom from anxieties about the future ensures a better frame of mind, promoting the employee's efficiency and developing his loyalty to the institution which he serves, thereby providing the necessary conditions for advancement in his career.

A Superannuation Fund may be introduced either in lieu or in replacement of an existing Provident Fund or in addition to a provident fund, but in lieu of a gratuity scheme. The entire lump sum payable under a gratuity scheme is taxable in the year of receipt thereof, whereas, under a pension scheme, only the annual pensions will be taxed each year. The incidence of taxation is, therefore, much less in the latter case.

The Corporation is normally prepared to entertain enquiries in connection with approved superannuation funds only. A fund should be established under an irrevocable trust into which shall be paid the amounts set apart for providing pensions to employees or their widows' children or dependents. Insurance benefits may also be provided as subsidiary to the pension benefits. A trust deed and set of rules should be drawn up. The latter would deal with eligibility, benefits and contributions, adjustments, early and late retirements, resignations and withdrawals according to the needs of the employer and the employee. It is recommended that a legal adviser be consulted for drawing up the trust deed and rules.

Predetermined Plan

The class of employees who are eligible for membership of the Scheme must be clearly defined. At the inception of the Scheme at least 50 per cent. of the eligible members are required to join. All future recruits who are eligible for membership must join the Scheme. Both the pension and the amount of life cover should be based upon some predetermined plan which precludes individual selection. One of the following methods is suggested:

(1) *Money Purchase Schemes.*—Each employer's individual salary scale may be accepted, and the contribution may be fixed at a percentage of the employee's salary. The annual contribution of the employer should not in any case exceed 25 per cent. of the employee's salary.

(2) *Proportion of Salary Scheme.*—Alternatively, the pensions payable to the employees may be fixed as a proportion of their respective salaries. The pension may, for example, be equal to 1/60th of the total salary drawn by the employee during the period of service. If such a Scheme is contributory, the cost to the employer would be different from that to the employee, as the latter would normally contribute a fixed percentage of his salary. The term "salary" should be clearly defined, e.g., it may be the basic salary only exclusive of any allowances or bonus that may be paid to the employee.

The employees who are members of the Scheme will participate in increased pension and life insurance benefits in respect of the increases in salary which they receive from time to time. Participation in this Scheme for new entrants and for existing members in respect of the increased benefits will be with effect from the Scheme anniversary following the date of joining or the date of increment and not from the actual date of joining or increment.

There should be a provision in the Trust Deed and Rules for temporary lay-off, i.e., cessation of contributions in respect of employees who are on leave without pay. No contributions shall be paid during such absence of the employees. The benefits available in respect of contributions made up to the date of absence shall be proportionately reduced. When the employee resumes service, his benefits and contributions will be determined afresh as in the case of a new entrant.

The main object of Superannuation Schemes as explained earlier, is provision of pensions to employees on their retirement from service but some life cover may be provided to them during the period of service. The following insurance and/or annuity plans are offered by the Corporation in connection with Superannuation Scheme business. The selection of the particular plan will depend upon the amount of life cover which it is intended to provide whilst the employees are in the service of the employer. In the first place, there is a plan for deferred annuity with return of premiums in the event of death during the deferment period. This plan is most suitable where it is desired to provide the maximum pension at the minimum cost, and life cover is not desired. Under this plan, uniform annual premiums are payable from the date of entry into the scheme up to the date of retirement or earlier death or exit, with premiums adjusted consequent upon increments in salary. If the employee survives to the retirement age, he will receive a pension in accordance with the trust deed and rules. If, however, he dies during service, all the premiums paid to the Corporation will be refunded to the trustees. Any payments made by the trustees to the employee's dependents shall be in the form of a pension under an approved superannuation fund.

Secondly, there is a plan which is a combination of a deferred annuity without return of premiums in the event of death during the deferment period and a temporary insurance policy. Instead of the deferred annuity with return of premiums, some employers may prefer to combine a deferred annuity without return of premiums with a temporary insurance policy. The sum insured under the temporary insurance policy may be equal to, say, 12 to 18 months' salary of the employee. This plan is most suitable for employers who wish to provide for some life cover during the service of the employee but do not wish to incur the heavy cost under the endowment insurance plan. Under this plan, there are two benefits. The first is that a pension is secured commencing at the retirement age of the employee. Uniform annual premiums are payable under this policy throughout the duration of the contract and no portion of the premiums paid will be refunded by the Corporation if the employee dies during service. The second benefit is intended to give life insurance protection to the employee whilst he is in the service of the employer. The sum assured will be paid in a lump sum to the trustees if the employee dies before the retirement age. Under an approved scheme, the trustees will have to utilise the sum assured for an annuity for the employee's widow or other dependents. Nothing is payable under the temporary insurance policy if the employee survives to the retirement age.

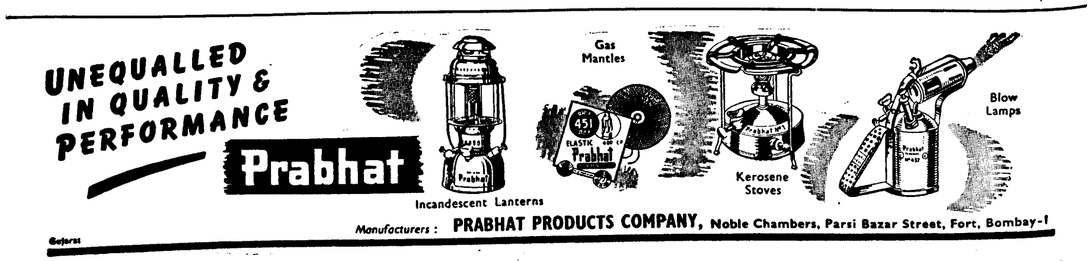
Finally, there is a non-profit endowment assurance plan, the sum insured under which would be the commuted value of the pensions in the case of proportion of salary plans. This plan provides the maximum amount of life cover so that the cost per unit of pension is naturally the highest. If the employee dies before the retirement age, the sum assured under the policy will be paid in a lump sum to the trustees, who will have to pay the benefit in the form of an annuity to the heirs of the employee under an approved scheme. If the employee survives to the retirement age, he will receive through the Trustees a pension in accordance with the rules of the scheme in lieu of the sum assured under the policy.

INSURANCE IN CANADA

The volume of net premiums written for fire insurance in Canada in 1956 is expected to be almost exactly the same as in 1955 when it amounted to $146,000,000, states Mr. K. R. MacGregor, Superintendent of Insurance, Ottawa, in a year-end review of insurance operations.

"Fire insurance coverage has naturally continued to increase with continued economic expansion," "but by reasons of substantial reductions in premium rates the annual volume of net premiums written has remained almost static since 1953.

"Some reductions in premium rates have been justified by the experience in a few classes but competition has tended to extend reductions to other classes as well. This tendency along with many serious fires and windstorms in recent years has resulted in a steadily increasing ratio of claims incurred to premiums earned, from 44 per cent. in 1951 to 55 per cent. in 1955."



CAN ROAD TRANSPORT PROVIDE RELIEF TO RAILWAYS?—I

SOME RECENT VIEWS EXAMINED

By B. V. Vagh, B.E. (Civil), M.I.E. (Ind.)

AN article by the writer under the caption "Can Road Transport Provide Relief to Railways?" appeared in the issue of *Commerce*, dated 28th July 1956. It was in reply to an article under the same caption by a member of the Railway Board, appearing in the first issue of the *Indian Railways*, dated 16th April 1956. Briefly, the railway case was that on economic grounds road transport can cater only for short-distance traffic within a range of 40 to 50 miles and that too, for the high-rated traffic and, therefore, on the whole, it was incapable of providing any relief to the railways. By quoting facts and figures, the writer established that on economic grounds road transport was fully capable of providing relief to the railways if it was allowed to develop as in other countries by removing restrictions on it imposed at the instance of the railways.

Independent Opinion

Since then to date a number of people in the country and also outside, representing neither the railways nor road interests, have either spoken or written on this subject of relief, and in order to understand the general trend of opinion it may be useful to see what they think about it. Their views are summarised briefly below:

(i) World Bank Mission on 30th June, 1956:

"We urge that the Government review its whole transport policy and programme with a view to maximising transport by all available means—by rail, roads, coastal shipping and inland waterways." In regard to roads, the Commission suggested "more energetic measures to remove State and inter-State restrictions on road transport and to reduce tax rates bearing on road transport."

(ii) *Capital* in an editorial in its issue dated 2nd August, 1956:

"On the balance the case for expanding road transport seems to be the stronger. Since it is obvious that the railways cannot lift all the goods that will have to be carried during the next five years an alternative means of transport is clearly necessary and among the inland transport services the roads are the only alternative."

(iii) Mr. C. P. Matthen, M.P., member of the Lok Sabha, speaking in the House on 11th August, 1956:

"Today the greatest problem is the transport problem. And as my honourable friend Mr. S. C. Samanta, as a member of the Committee on the second Five-year Plan said, 'it is impossible for the railways to lift the goods or to transport the passengers completely. They want something else to supplement their efforts.' One thing that can supplement their efforts is the surface transport industry."

(iv) Mr. F. C. Bhadwar, former Chairman of the Railway Board, in an article in the *Financial Times*, London, dated 13th August, 1956:

"Road transport requires the quickest possible development on its own merits and doubly so to provide some relief to railways. There appears to be no reason why 10 to 15 per cent. of the goods traffic being forced on to the railways should not be carried by road trucks with trailers."

(v) Mr. A. D. Shroff, well-known Bombay industrialist, in an article in the *Times of India*, dated 25th September, 1956:

"Now, assuming that, out of the shortage in rail transport 6 million tons can be made up by water transport leaving 30 million tons to be made good by motor vehicles some 60,000 trucks, part of them heavy ones or with trailers, can fill up this gap *in toto*.

"Thus, in a nutshell, the main solution to the transport bottleneck is for Government to remove the handicaps on motor transport."

(vi) *Commerce* in an editorial in its issue, dated 20th October, 1956:

"As regards road transport, it is well known that it accounts for a much smaller proportion of the total goods carried than in many Western countries.

"In Italy motor transport carries more than twice the quantum of goods carried by rail, in Australia it carries 8 per cent. more. In the U.S.A. the proportion of road to railway goods traffic was about one-third in 1953 and in the U.K. motor transport lifts 46 per cent. of all surface freight. In India, on the other hand, it has been computed, that motor vehicles carry no more than 14 per cent. of the rail traffic."

(vii) Mr. Shah Nawaz Khan, M.P., Deputy Minister of Railways and Transport, in a speech at Delhi on 8th November, 1956:

"According to the production targets set by the Planning Commission, the railways were originally expected to carry an additional 61 million tons. The 40 per cent. increase in their capacity will add up 47 million tons to the present capacity of about 115 million tons. There will thus be a gap of about 14 million tons. This gap may increase further if the revised production targets which have increased the tonnage of cement by 3 million tons and that of foodgrains and general goods by about 10 million tons materialise. A part of this total gap of 27 million tons may be offset against the increased capacity of coastal shipping and inland waterways which today is nearly 5 million tons and is likely to be doubled by the end of the Plan period. The balance will, however, have to be carried by road transport."

(viii) Dr. Rama Rao, M.P., in the Lok Sabha on 28th November, 1956:

"This problem of road transport is very important for many reasons. It is closely associated with our railways in the business of transporting goods as well as passengers, especially when we have very severe handicaps and delays in the transport of goods now being done by the railways. Therefore, we must see that our road transport is strengthened and improved so that it can take over, at least, some part of the transport business."

(ix) Pandit Thakur Das Bhargawa, M.P., in the Lok Sabha on 28th November, 1956:

"I cannot think of any trend in the country that the railways will be able to cater to the needs of the country in its entirety or that the railways will meet the full needs of the country. I think that our salvation lies, in so far as this aspect is concerned, in developing road transport."

(x) Pandit K. C. Sharma, M.P., in the Lok Sabha on 28th November, 1956:

"I think under no circumstances will railways be able to carry all the goods that would be required of them in the second Five-year Plan period. So transport of goods by road is necessary and should be encouraged."

(xi) Mr. Viswanatha Reddy, M.P., in the Lok Sabha on 28th November, 1956:

"I will content myself by observing that at no future date can we expect that our railway system will be able to meet the transport needs of our country to the extent and on the same scale as we would desire. Therefore, the necessity of developing motor transport is very obvious."

(xii) Mr. T. B. Vittal Rao, M.P., in the Lok Sabha on 28th November, 1956:

"The crux of the whole problem is how road transport could and should be developed in order to move the goods offered, in view of the fact that railways cannot move all the goods."

(xiii) Mr. O. V. Alagesan, M.P., Deputy Minister of Railways and Transport in the Lok Sabha on 29th November, 1956:

"The traffic that will have to be carried (during the second Plan) goes up by at least 15 million tons and the resultant gap (in railway capacity) comes to about 25 million tons. Even to carry the traffic that has been proposed to be carried by the railways the expenditure may have to go up because costs have already gone up. . . When this traffic of about 25 million tons offers itself there should be no conflict between the modes of transport. Road transport has naturally to come in and play its role."

(xiv) Mr. R. P. Sinha, M.P., in the Rajya Sabha on 12th December, 1956:

"You may be aware that it is estimated that there would be a gap of 30 million tons between the capacity offered for transport and demands on the railway transport by the year 1960-61. In spite of the fact that we are probably spending about Rs. 1,125 crores—may be some more money—on our railway development, there will be this gap of 30 million tons and I am very doubtful whether the community will be in a position to spare more money and if so, to what extent in order that this gap may be filled by the railways.

"The second important consideration that weighs with us today is this, that by the end of 1960-61 we shall have spent over Rs. 700 crores on our roads alone... If you see the density of traffic in other countries on their roads and in this country you will see that the return that we are getting from our roads is very meagre. Therefore, it is quite clear that there is very big room for the development of our road transport because there is enough capacity on our roads to carry it."

(xv) Mr. J. S. Bisht, M.P., in the Rajya Sabha on 12th December, 1956:

"In a country like the U.S.A. which has a highly developed transport system... more than 25 per cent. of goods load are lifted by road transport ... Is there any reason why a country like India with an area of nearly 12 lakh sq. miles and with only 34,000 route miles of railways it should not allow road transport to develop as early as possible?"

(xvi) The *Eastern Economist* 1956 Annual, page 1058:

"The major part which the railways have to play in relative terms in the country's transport system cannot conceal their inadequacy to cope with the mounting pressure of traffic. All the traffic offering must be carried for this is a condition precedent by the growth of the Indian economy envisaged for the coming years. Roads will need to be assigned a far more vigorous and onerous role than at any time before."

Exposition

These extracts from the writings and speeches of 16 independent observers, which include one outside observer, three economic journals, two Deputy Ministers of Railways and Transport of the Union Government, one retired Chairman of the Railway Board, and nine members of the two Houses of our Parliament, representing different political parties in the country, bring out the following points, clearly and unequivocally:

(i) During the second Five-year Plan there will be a sizable gap in the railway's transport capacity.

(ii) It will be impossible to provide additional funds from the public sector to meet this gap since even for the capacity planned for the railways an additional allotment may be required on account of rising costs.

(iii) The extent to which water transport can meet this gap will be limited even if its present capacity is doubled.

(iv) Therefore, the only way to meet this gap is the development of road transport to the extent required.

This clear exposition of the present transport position in the country has since been reflected in the new Motor Vehicles legislation which has now been passed by Parliament and which is awaiting the President's assent. It makes two important provisions in this matter. They are:

(i) There will, in future, be no distance limit on motor transport anywhere in the country.

(ii) The Government will now set up an All-India Inter-State Road Transport Commission to "develop, co-ordinate and regulate" inter-State long-distance road traffic.

Therefore, the unfortunate controversy as to whether road transport can provide relief to the railways must be taken to have come to an end and it is hoped will never be started again. The country's verdict as reflected in the new legislation by Parliament has replied to the question unequivocally and has to be accepted.

Mr. Kalyanaraman's Queries

In the October 1956 issue of the *Indian Railways* there is an article on this subject by Mr. S. R. Kalyanaraman, Additional Member, Railway Board. The article is in reply to the writer's article in *Commerce* referred to at the outset. In it, Mr. Kalyanaraman makes the following main points:

(i) The figure of Rs. 11¼ crores arrived at by the writer for the movement of one million tons of traffic is an "over-simplified" method of calculation since "it overlooks the fact that when line capacity works are provided they cannot be put in so as to be just proportional to the anticipated additional traffic."

(ii) "Whereas Mr. Vagh's figure of Rs. 11¼ crores as the cost of transporting a million tons by rail includes not only the cost of rolling stock but also that of track, workshop facilities, etc., the comparative figure of Rs. 4½ crores assumed by him in relation to road transport covers only the bare cost of the trucks."

(iii) Whether the mileage and the rate per mile figures for trucks given by the Study Group are right or those given by Mr. Vagh are right.

(iv) In his reference to truck-trailer combinations Mr. Vagh has used the words "said to be." Should figures be based on what is "said to be" or on experience?

(v) Whether the country's capacity of truck production is sufficient to meet the demand after meeting replacements?

(vi) "Even if truck-trailers and tractor-trailers of the capacity and cost mentioned by Mr. Vagh are in fact available, are our roads and road bridges generally capable of taking such heavy vehicles? Will their use make no difference to the wear and tear of our roads? If road repair costs have to go up, what will be the extent of the increase?"

Writer's Replies

The writer's replies to them are as follows:

(i) This applies both to railways and to roads. Therefore, you have either to work out a formula for both for arriving at the cost incidence per unit of traffic moved after taking into consideration the future capacity of the track or base your figures on the actual cost incurred during a period. The former requires a number of assumptions, since taking, for instance, the case of bridges which have an estimated life of about 100 years you will have to estimate the traffic over that period to arrive at a figure applicable to the present traffic. Such an estimate is bound to be hypothetical. It is significant that Mr. Kalyanaraman does not query Mr. Vagh's figure of Rs. 11¼ crores.

(ii) The writer's figures were on the basis of the original article by Mr. Mathur, to which his article was a reply, and were confined to the same items as in that article. Moreover, he has given in his reply separately the comparative costs of railway track and roads, based, in the case of the former, on provision in the budget, and, in the case of the

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY 1943)

FOURTEENTH REPORT OF THE BOARD OF DIRECTORS.

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1956.

	Rs.	a.	p.
The net profit for the year, after providing for all known and anticipated charges and including Rs. 27,761-2-0 brought forward from the previous account, amounts to ..	56,79,419	10	9
The Directors have made the following appropriations out of the net profit:			
Transfer to Reserve Fund	20,00,000	0	0
Provision for Taxes	16,00,000	0	0
Provision for Bonus to Staff	6,50,000	0	0
Balance	14,29,419	10	9
Rs.	56,79,419	10	9

Out of the balance of Rs. 14,29,419-10-9 the Directors recommend to the shareholders the payment of a Dividend at Rs. 8-8-0 per share, free of income-tax, which will absorb Rs. 14,00,000, leaving Rs. 29,419-10-9 to be carried forward to the next year's account.

The Bank's business continued to expand during the year and the profit showed a substantial increase as compared to the preceding year.

Demand for money continued unabated throughout the year.

The Bank Rate remained unchanged at 3½ per cent. but the rate of interest on both deposits and advances rose steadily throughout the period. After the turn of the year the Reserve Bank of India raised the rate of interest to scheduled banks on advances against Government Securities from 3½ per cent. to 4 per cent.

The Bank's investments appear in the balance sheet at below market value.

During the year branches of the Bank were opened at Kuala Lumpur in the Federation of Malaya and Rourkela.

The Directors are thankful to the shareholders and the clients of the bank for their continued support. They also express their gratitude to the Bank's advisers and advisory committees for their able help and guidance.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors—

SHRI G. D. BIRLA — SHRI G. D. KOTHARI
SHRI M. R. RUIA — SHRI YOGINDRA N. MAFATLAL

retire by rotation, and being eligible, offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
G. D. BIRLA,
Chairman.

CALCUTTA, *12th March*, 1957.

BALANCE SHEET AS AT 31st DECEMBER 1956.

31-12-1955 Rs.	31-12-1955 Rs.	CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The United Commercial Bank, Limited, as at 31st December, 1956, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

INDIA'S BALANCE OF PAYMENTS

EARNINGS FROM EXPORTS MUST BE AUGMENTED

THE White Paper on the Budget presented by the Finance Minister the other day in Parliament makes it crystal clear that the nature of the balance of payments position of the country is serious. The basic assumptions on which the Planning Commission based its final estimates of balance of payments deficit on current account for the period of the second Plan have undergone considerable changes since the Plan was finalised. The assumptions are, firstly, that the terms of trade in the next five years will remain, on an average, the same as they were in 1955-56 (first nine months) and, secondly, that the inflationary pressures will be held firmly under control. While there was no significant change in the first 11 months of 1956 in the terms of trade, the inflationary prices, which made their appearance in the latter half of 1955, on the other hand, gathered momentum during 1956. Over 1956 as a whole, the general index of wholesale prices increased by 13 per cent. from 373.4 to 421.9. On 16th February 1957, the index stood at 424.4. It is noteworthy that the most perceptible increase has occurred in respect of agricultural commodities which registered a decline in production from 66.5 million tons in 1954-55 to 63.4 million tons in 1955-56. Cereal prices increased, for instance, by no less than 27.6 per cent. and groundnut and groundnut oil prices, to take two other examples, went up by 26.5 per cent. and 31.8 per cent., respectively, in 1956. Thus, in addition to the expected impact of the planned developmental activity on the balance of payments position, the inflationary forces, too, exerted their influence on this position. In consequence, while the second Plan placed the deficit on current account (excluding official donations) in 1956-57 at Rs. 148 crores, actually, a deficit of this order was achieved in the first half of 1956-57.

Developmental Activity

The most conspicuous impact on the balance of payments position came from rising developmental activity in 1956. The monthly value of imports increased sharply from Rs. 51.81 crores in 1955 to Rs. 65.39 crores in 1956. As against this, the monthly value of exports declined slightly from Rs. 49.65 crores in 1955 to Rs. 48.64 crores in 1956. The major explanation for the sharp increase in imports lies in the increasing demands for development. For the monthly value of imports of food, drink and tobacco actually declined from Rs. 6.37 crores in 1955 to Rs. 3.56 crores in 1956. During April-November 1956, the value of imports stood at Rs. 535 crores, as against Rs. 418 crores in the corresponding period of 1955. Of this increase of Rs. 117 crores, Rs. 96 crores was accounted for by the increase in the imports of machinery, iron and steel and other metals. Imports of machinery rose from Rs. 73.5 crores in April-November 1955 to Rs. 105.8 crores in the corresponding period of 1956. At the same time, those of iron and steel increased from Rs. 34.3 crores to Rs. 88 crores, and those of metals from Rs. 16.4 crores to Rs. 26.2 crores. Besides, there has been a large increase in the imports of vehicles, electrical goods and hardware.

In sharp contrast to this, the effect of the growing pressure of demand on economy combined with the fall in production of certain items have led to a fall in exports. The fall in exports, from Rs. 388.4 crores in the period April-November 1955 to Rs. 378 crores in the corresponding period of 1956, is mostly accounted for by the decline in exports of oil from Rs. 26.2 crores to Rs. 13.4 crores, and of cotton from Rs. 24.6 crores to Rs. 10.9 crores, which is largely explained by the poor crop of oilseeds and cotton in 1955-56. Significant declines in exports are also recorded in manganese, cotton textiles, and jute manufactures. It is noteworthy, however, that the decline in the total value of exports witnessed in 1956 would have been larger but for the large increase registered in the exports of black tea, which rose to 331 million lbs. in April-November 1956, as against 227 million lbs. in the corresponding period of 1955.

Import Prices

The White Paper also takes note of the not insignificant strain on the balance of payments of the factors, such as the increase in prices of imported materials and machinery and in the freight bill following the closure of the Suez Canal. Moreover, there are also indications that imports for development in the private sector have been larger than estimated. Again, while the expansionary impact of the increase in investment in 1956-57 has been largely neutralised by the increase in imports of investment goods, a part of the strain on the payments position is said to be due to the secondary effect of the developmental activity, namely, the failure of the domestic savings to match the investment undertaken.

The following table provides the balance of payments (current account) position in the four quarters of 1956 as compared with the corresponding quarters of 1955:

(In crores of rupees)

	1955				1956			
	1st qtr.	2nd qtr.	3rd qtr.	4th qtr.	1st qtr.	2nd qtr.	3rd qtr.	4th qtr.
Merchandise	— 3.2	—22.2	—30.1	—20.7	—36.5	—76.7	—111.8	N.A.
Invisibles :								
Investment ..	— 1.3	— 3.3	— 1.5	+ 2.0	+ 3.4	+ 3.3	+ 2.3	N.A.
Other ..	+15.7	+ 9.8	+ 9.3	+16.2	+13.1	+ 9.2	+ 9.7	N.A.
Donations :								
Official ..	+ 3.8	+ 8.4	+12.1	+10.4	+14.1	+ 9.6	+ 8.3	N.A.
Other ..	+ 9.9	+ 7.8	+ 8.9	+ 8.3	+10.4	+10.1	+10.1	N.A.
Current account ..	+24.9	+ 0.5	— 1.3	+16.2	+ 4.6	—44.5	—81.4	—68.7
Errors and omissions ..	— 4.7	+ 5.3	+13.6	— 9.0	—15.2	— 7.1	+17.7	N.A.

Net credit + Net debit — N.A.—Not available.

As can be seen from the table, for the whole of 1956, there was a balance of payments deficit of Rs. 190.1 crores—figures for each quarter being +Rs. 4.5 crores, —Rs. 44.5 crores, —Rs. 81.4 crores and —Rs. 68.7 crores—as against a surplus of Rs. 40.3 crores in 1955. The deficit in the second and third quarters (details for the fourth are not available) are said to be due to enhanced deficit on trade account. Import payments increased from Rs. 335.3 crores in April-September 1955 to Rs. 476.8 crores in the corresponding period of 1956, while export earnings declined from Rs. 303 crores to Rs. 288.3 crores, so that the trade deficit widened from Rs. 52.3 crores in April-September 1955 to Rs. 188.5 crores in the corresponding period of 1956, or a net deterioration of Rs. 136.2 crores on trade account. It is noteworthy, however, that the increase in trade deficit was to a certain extent neutralised, thanks to the receipts from invisibles, official donations and other capital transactions. Further, according to the White Paper, preliminary estimates for the quarter ended December 1956 indicate that the same trends continued till the end of the year. The deficit for the year as a whole is, therefore, placed at Rs. 195 to Rs. 205 crores. The net result is that the foreign assets held by the Reserve Bank of India declined from Rs. 735 crores at the end of 1955 to Rs. 530 crores at the end of 1956. During the 10 months ended January 1957, during which the fall was most marked, they declined by no less than Rs. 236 crores, as against a rise of Rs. 5 crores during the previous corresponding period.

Drain on Reserves Serious

Obviously, a drain on reserves of this order, as the White Paper puts it, cannot but be regarded as serious. This situation has also vitiated the validity of the original estimates of foreign exchange requirements for the second Plan—of Rs. 1,100 crores—arrived at by the Planning Commission. The foreign exchange component of the steel plants is expected to be larger than was estimated. Besides, the prices of capital goods and steel to be imported during the Plan period have gone up.

This, obviously, calls for strenuous efforts in various directions if the Plan programmes are to be put through according to the schedule. Despite the fact that certain of the steps taken by the Government, such as the recent purchase of $127.5 million from the I.M.F., and the standby arrangements for a further purchase of $72.5 million provide some breathing time, it has become a matter of urgency, as the White Paper points out, to explore every possible avenue of promoting exports, of economising on imports and of getting additional assistance. The measures to be taken are set out by the White Paper as under:

"It is also imperative to promote exports and to weed out inessential imports, even if this results in a certain measure of restraint on consumption at home. This, it must be emphasised, is not a mere long-term desideratum; it is a vital urgent necessity. The need for external assistance in order to implement the Plan is, in any case, large and, while foreign resources have to be mobilised on a much larger scale than hitherto, it is equally important to augment the earnings from exports and to economise on import payments. At the same time, the implementation of the development programme has to be phased in a manner which contributes to an orderly transition to higher levels of investment in subsequent periods. Any phasing of Plan expenditure which leads to excessive strains on the economy in the initial years would only impair the chances of continued progress from year to year."

In short, the measures to be taken have to be directed towards promoting exports, cutting down inessential imports, imposing restraint on consumption, mobilising foreign assistance, and appropriately phasing the programmes under the Plan. Though much has been done in all these directions, much more remains to be done. Foreign assistance received till the end of March 1956 amounted to Rs. 297 crores of which Rs. 99 crores remains to be spent in the second Plan. Further, the U.S. Government has authorised $55 million for development assistance to India during 1956-57. During the same period Canada has authorised $13 million and New Zealand £1 million as aid under the Colombo Plan. A particularly noteworthy scheme, among others, of foreign assistance is the agreement concluded with the U.S. last August according to which India can acquire in the U.S. surplus agricultural produce worth $360 million consisting mainly of wheat, rice and cotton over a period of three years. The proceeds of this deed will be in rupees, of which the U.S. will make to India a long-term developmental loan of $234.1 million and a grant of $54 million. The agreement, thus, makes available additional financial resources to the Plan while, at the same time, it enables the country to import, without incurring immediate foreign exchange liabilities, essential consumer goods. Whatever foreign assistance is given, however, the bulk of effort must come from the people themselves. This should be in the form of putting off consumption, increasing savings, and stepping up exports.

SULPHURIC ACID INDUSTRY

Along with other basic chemicals, such as caustic soda, soda ash and liquid chlorine, the production of sulphuric acid is also expected to be stepped up during the second Plan period with a view to achieving self-sufficiency. The contemplated increase in sulphuric acid is from 165,000 tons in 1955 to 500,000-600,000 tons in 1960-61 or an increase of over three times. The present capacity of the industry, comprising 37 units, is 245,000 tons per annum. Licences have also been issued for 14 additional units and for expansion of the existing units. This means an additional capacity of 240,000 tons per year.

As the price of sulphuric acid has been very high, which, it is feared, would act as a deterrent to its increased use and development, a ceiling price has been adopted after discussions between the Development Council for Heavy Chemicals, Government, and the industry. This ceiling price is linked with the price of imported sulphur.

One of the handicaps of the industry has been the small size of sulphuric acid manufacturing units generally developed so far. The cost of production of sulphuric acid is related to the size of the manufacturing plant, apart from the price of sulphur. With a view to realising reasonable economies in the cost of production, the minimum size of the units has been raised to 50 tons per day. This, it is expected, would bring down the production cost of sulphuric acid.

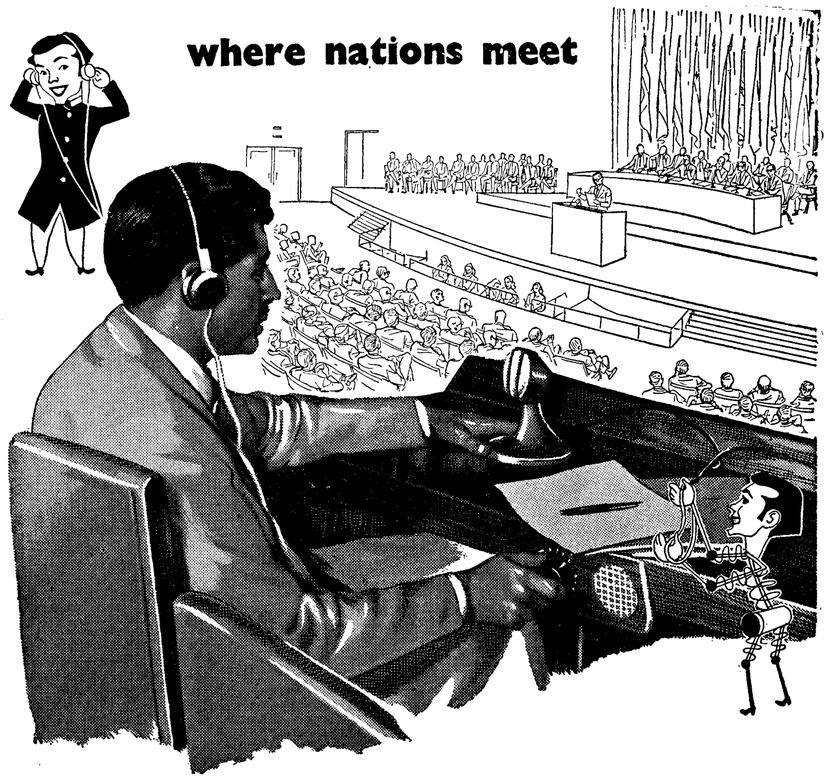
As the country is now dependent on imports of sulphur, Government has under consideration the setting up of an industry to manufacture sulphur from indigenous raw materials such as pyrites and gypsum. Investigations have been taken up to assess resources of pyrites at Amjor in Bihar. Also the possibility of economic utilisation of gypsum is being examined. It may be possible to set up one or two units with an aggregate annual capacity of at least 30,000 tons of sulphur during the second Plan period. A successful start has recently been made with regard to the fabrication of sulphuric acid plant in the country.

STANDARD FOR FUEL PUMP DIAPHRAGM FABRIC

The Indian Standards Institution has published an Indian standard specification for fuel pump diaphragm fabric. This standard prescribes the requirements and the methods of test for fuel pump diaphragm fabric, (a) synthetic rubber proofed and (b) varnish proofed, used in the construction of fuel pump diaphragms for motor vehicles.

Three classes of fabrics are included in this standard. They are synthetic rubber proofed, varnish proofed, type 1 and varnish proofed, type 2. Of these classes, synthetic rubber proofed and varnish proofed, type 1, are intended for use with either motor petrol (80 octane) or a mixture of motor petrol (80 octane) and power alcohol (4 : 1 by volume), while varnish proofed, type 2, is intended for use only with motor petrol (80 octane). The diaphragms prepared from two or more plies of synthetic rubber proofed fabric and five or more plies of varnish proofed fabric of the material are required to work satisfactorily for the period normally corresponding to a run of 16,000 kilometres (10,000 miles).

Besides terminology, classes and types, and sampling, the standard prescribes, under part A—qualification tests, bench rig test and other requirements of the basic and proofed fabric; and under part B—methods of test for product identification, such as acetone extract, chloroform extract, alcoholic potash extract, rubber combined sulphur, carbon black, ash and total synthetic oil-resistant type rubber.



Ours is an age of conferences, an age of international communication and co-operation. People of widely varying cultures, of different languages, come into closer contact all the time.

Philips Simultaneous Interpretation System—installed at the UNESCO, New Delhi, and a dozen other important places in various parts of the world—is in its own way contributing to the cause of peace and greater harmony among the various nations of the world.

PREFERENCE DIVIDENDS WITHHELD

THE difficult conditions under which the jute industry is working at present do not require much enumeration. Difficulty of getting raw jute at economic price levels, which threatens to become almost a permanent feature, thanks to the uncertain crop position and dependence on Pakistan for the supply of raw jute to a large extent, the inability of the prices of manufactured goods to keep pace with the higher prices of raw jute, decline in demand from overseas markets and competition from Pakistan, all these have contributed to the poor working results of jute mills.

The working results of the Kanknarrah Company Ltd. and the Kamarhatty Company Ltd. (Managing Agents: Messrs. Jardine Henderson, Ltd., Calcutta) for the half-year ended 30th June 1956, provide an example to illustrate the above observations. Both the Companies have suffered losses during the half-year under review. This is the second half-year in succession for which they have incurred losses, and what is more disquieting is that, the losses are more pronounced than those for the previous six months. Thus, Kanknarrah has incurred a gross loss of Rs. 7.26 lakhs, as against only Rs. 2.68 lakhs for the six months ended 31st December 1955, and Kamarhatty's loss has gone up from Rs. 2.42 lakhs to Rs. 4.02 lakhs. In fact, the working of the Companies during the past three half-years discloses a steady downward trend in their earnings. Thus, the gross profit of Rs. 9.69 lakhs earned by Kanknarrah in the half-year ended 31st December 1954 has turned into a gross loss of Rs. 7.26 lakhs for the half-year under review. Likewise, the gross loss of Kamarhatty for the six months ended 30th June 1956, is in distinct contrast to the gross profit of Rs. 12.80 lakhs for the six months ended 31st December 1954.

After providing for Managing Agents' remuneration and depreciation, the net loss of the Kanknarrah Company stands at Rs. 9.06 lakhs, as against a net loss of Rs. 3.80 lakhs six months ago. The net loss of the Kamarhatty Company has gone up from Rs. 2.42 lakhs in the previous half-year to Rs. 4.02 lakhs. In view of the adverse working conditions, the Managing Agents have wisely, and in the larger interests of the Companies, waived the commission that is due to them. The losses, otherwise, should have been far greater. The Kanknarrah Company has made a provision of Rs. 1 lakh against anticipated loss on raw jute stock and work in progress. Its provisions in the previous half-year were Rs. 8,423 for doubtful debts, Rs. 4,928 for possible loss at agency and Rs. 67,490 for sales tax contingencies. No allocation to the reserves has been made by the Kamarhatty during the period under discussion but, in the preceding half-year, it transferred a sum of Rs. 9,525 for doubtful debts and Rs. 1.02 lakhs for sales tax contingencies.

In view of the unfavourable trading results, no dividend to the ordinary shareholders has been declared by the Companies for the second half-year in succession. In fact, the results have been so unfavourable that the Directors have had to withhold dividends, perhaps for the first time in many years. Even in the previous half-year, to wipe out the loss and to pay the preferential dividend, the Directors had to withdraw fairly sizable amounts from their reserves. It may be of interest to note that Kanknarrah had paid a dividend of 8 per cent. per annum for the six months ended 31st December 1954, but this had to be drastically cut to 2 per cent. per annum for the succeeding half-year, consequent on the sharp setback in earnings. Likewise, Kamarhatty's dividend also was curtailed to 5 per cent. from 10 per cent. per annum, during the same period.

The table at the bottom of the page will enable a comparative study of the working of these two Companies during the past three half-years.

Commenting on the trading conditions during the half-year under review, the Directors observe:

"In compliance with the Working Time Agreement of the Indian Jute Mills Association, the mills continued working 48 hours per week throughout the half-year, with 12½ per cent. of the total complement of looms sealed until 7th January 1956, with 10 per cent. of the total looms sealed from 9th January to 18th February 1956 and with 5 per cent. of the total looms sealed from 20th February to the end of the half-year. The reasons for the decision to unseal 7½ per cent. of the total looms were referred to in our last report. The expected improved demand from overseas markets, unfortunately, did not materialise, with the result that stocks of finished goods increased so rapidly that, half-way through the year, they stood at almost double the figure recorded at the end of December 1955, when the decision to unseal looms was first taken. To correct this situation, remedial steps were taken and 2½ per cent. of the looms were resealed from 16th July and a further 5 per cent. from 17th September, thus resuming the *status quo ante* 7th January. Stocks have since decreased and prices of finished goods rose, although there has been a subsequent fall. The international situation in the Middle East was a contributory factor to the rise, in that nearly all consuming markets apparently thought it wise to improve their stock position.

"Your Company has, however, found it increasingly difficult to dispose of its manufactures to advantage, in view of the rise in the raw jute market more than keeping pace with finished goods. The position has been aggravated by the non-delivery of raw jute by contract due dates and mills being thereby forced to purchase their immediate requirements on a hand-to-mouth basis from the Cossipore market."

The following synopses of the Companies' latest balance-sheets give an idea of their financial position:

	As on 30th June, 1956	
	Kanknarrah	Kamarhatty
LIABILITIES	Rs.	Rs.
Capital	68,22,700	59,20,000
Reserves	11,38,962	21,90,232
5½ per cent debentures	12,99,000	13,04,000
Provision for taxation	4,02,197	1,08,141
Liabilities	33,04,838	91,27,061
ASSETS		
Gross block	1,21,21,526	1,28,23,291
Less—Depreciation	87,61,781	1,15,01,308
Net block	33,59,745	13,21,983
Fixed assets in course of installation	22,92,776	57,15,481
Stocks	42,14,237	57,07,365
Stores	15,14,416	22,72,536
Debts, deposits and advances	22,15,212	29,20,419
Investments	1,80,465	1,95,275
Cash	2,36,630	2,00,389
Profit and loss account	9,24,216	3,14,036
	Rs. 1,79,87,697	1,86,49,484

While the results for the half-year under review are most disappointing and those for the second half of 1956 are expected to be more unsatisfactory, the situation is not without a ray of hope. For the Directors are satisfied that by the completion of the modernisation scheme in the Kanknarrah Company's 'A' mill during December 1956 and with the coming into operation within the next two months of the modern high speed spinning machinery in the Kamarhatty Company's 'B' mill, substantial cost savings will be effected which would place the Companies in a competitive position in the industry, even during the present difficult market conditions. The Directors of the Kamarhatty Company have further decided to concentrate production in the 'B' mill by closing down all the machinery in the 'A' mill.

RECORD PROFIT OF INDIAN STEEL AND WIRE PRODUCTS

An expansion in overall production, adoption of new techniques in manufacture and a few other factors of not a permanent nature have contributed to the sharp rise in earnings of the Indian Steel and Wire Products, Ltd. (Managing Agents: Messrs. Indra Singh and Sons Private Limited, Calcutta) for the year ended 31st March 1956. The audited accounts show that the Company's gross profit has made a strident advance of Rs. 25.09 lakhs to Rs. 106.33 lakhs. With this increase, the Company has not only maintained the upward trend in its profit for the third year in succession, but made good the shrinkage in

1952-53, when the profit declined from Rs. 85.75 lakhs to Rs. 77.52 lakhs. What is more, the profit for the year under review is a record in the history of the Company. The net profit, too, after making higher provisions for Managing Agents' remuneration, depreciation and taxation, stands at the distinctly higher level of Rs. 37.31 lakhs as against Rs. 26.51 lakhs a year ago and Rs. 21.84 lakhs in 1953-54.

Despite the better results, the Directors have not recommended a higher dividend which is being maintained at the usual level of 30 per cent. by paying Rs. 3 per share on the 320,000 fully paid-up shares of Rs. 10 each, As. 4-9.6 per share on 26,580 partly paid-up shares (Re. 1 paid-up per share).

While the dividend has thus only been maintained, the Directors have very wisely raised the allocation to the reserves to Rs. 20.49 lakhs from Rs. 15.90 lakhs provided in the previous year. Thus, the reserve fund gets Rs. 10 lakhs as against Rs. 2.50 lakhs, the development rebate Rs. 3.54 lakhs as against Rs. 8.40 lakhs and provision for bad and doubtful debts Rs. 1.96 lakhs as against *nil*. The provision for gratuities has been maintained at Rs. 5 lakhs.

The Company's overall production increased during the year under review. This is reflected in the rise in sale proceeds from Rs. 355.92 lakhs for 1954-55 to Rs. 415.12 lakhs for 1955-56 and the rise in expenses from Rs. 255.47 lakhs to Rs. 311.99 lakhs. The better results for the year under review were due to some extent to factors which are not likely to continue in the coming years. The chief contributory causes for the better results were: (1) the Supreme Court decision on sales tax in regard to inter-State sales which effected a considerable saving on the Company's purchases, as all inter-State sales were exempt from the payment of sales tax, (2) modernisation in the method of manufacture of the Company's products by commissioning devices which reduce manual handling to the minimum, and (3) speedy clearance of manufactured products. There was also an upward revision in the selling prices of the Company's finished products but this was due to a rise in raw material prices. Another helpful factor was that the Company was able to get its raw materials at "port" prices in the latter months of the year under review, as Tatanagar was considered a "port" for purpose of steel prices from November 1955.

The financial position of the Company is quite encouraging. Its paid-up capital at Rs. 32.26 lakhs (made up of 320,000 ordinary shares of Rs. 10 each fully paid-up and 26,580 shares of Rs. 10 each, Re. 1 paid-up) is supplemented by reserves and surplus aggregating Rs. 207.25 lakhs. These reserves include a general reserve of Rs. 86.45 lakhs, contingency reserve of Rs. 26.50 lakhs, reserve for revaluation of stocks and stores of Rs. 33.40 lakhs, reserve for repairs and renewals of Rs. 33.30 lakhs and development reserve of Rs. 11.94 lakhs. The provision for taxation stands at Rs. 88.21 lakhs and the current liabilities amount to Rs. 68.14 lakhs. The gross block of the value of Rs. 191.91 lakhs has been depreciated to Rs. 41.52 lakhs. The current assets amount to Rs. 354.36 lakhs. These are inclusive of stores Rs. 32.12 lakhs, stock-in-trade (at cost) Rs. 10.05 lakhs, debts, deposits and advances Rs. 97.67 lakhs, investments in Government securities and shares of companies Rs. 38.94 lakhs and cash and bank balances Rs. 175.46 lakhs. The cash balances alone more than adequately cover the current liabilities and provision for taxation.

The Directors have thought it expedient that a portion of the reserves should be capitalised and consequently arrangements have been made for obtaining governmental sanction and to comply with the formalities in this behalf. They anticipate that this step will take concrete shape in the near future.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 65 *ex-div.* On the basis of the dividend of 30 per cent., the shares provide a yield of 4.61 per cent. per annum.

I.C.I.C.'S MAIDEN DIVIDEND

The audited accounts of the Industrial Credit and Investment Corporation of India Ltd. (General Manager: Mr. P. S. Beale, Bombay) for the year ended 31st December 1956 show that the Corporation has earned a net profit of Rs. 21.64 lakhs as against Rs. 14.69 lakhs a year ago, after meeting all expenses and making provisions for depreciation and taxation. The increase in profit by about Rs. 7 lakhs is due to the higher income received by the Corporation by way of interest and dividends which has gone up from Rs. 32.16 lakhs in the previous year to Rs. 41.75 lakhs.

From the profits made, the Directors have recommended a maiden dividend of 3½ per cent. free of income-tax, absorbing Rs. 17.50 lakhs. After transferring Rs. 5 lakhs to general reserve, same as for the previous year, there remains a balance of Rs. 6.31 lakhs to be carried forward, as against Rs. 7.16 lakhs brought in.

The Directors state that, during the year under review, there was a heavy flow of enquiries for financial accommodation, these covering a wide range of industrial activities all over the country. In view of the necessity to comply with the provisions of the new Companies Act, there was some unavoidable delay in disposing of applications and progress, therefore, was naturally slow. The Directors had agreed, by the end of the year, to give financial assistance for a total amount of Rs. 601 lakhs in one form or another in respect of 24 applications, as against 11 in the previous year, and a further 15 applications involving a total of Rs. 6 crores were under examination. Of the amount of Rs. 601 lakhs sanctioned, loans account for Rs. 295 lakhs, underwriting of ordinary and preference shares for Rs. 238 lakhs and direct subscriptions to ordinary and preference shares for Rs. 68 lakhs.

The outstanding loans and advances as at the end of the year amount to Rs. 53.56 lakhs, as against Rs. 10.25 lakhs at the close of 1955. All these loans were given to industrial companies against mortgages. The investments aggregate Rs. 6.53 crores, as compared with Rs. 5.63 crores a year ago. Of these, Government and Government-guaranteed securities account for Rs. 4.47 crores, debentures for Rs. 90.26 lakhs, preference shares of industrial companies for Rs. 38.06 lakhs and ordinary shares for Rs. 77.32 lakhs. The bulk of the investments in industrial concerns are in new projects which have not yet reached profit-making stage.

It is often found that there is a time lag between the sanctioning of a loan and the actual disbursement of funds by the Corporation. The Corporation has made arrangements to disburse the loans according to the needs of the particular projects. While in some cases instalments will be spread over two years, in others such as underwriting of any subscription to ordinary and preference shares, particularly in the case of new projects for which deliveries of machinery are spread over a period of time, the amounts are invested only as and when calls are made. In the case of underwriting, out of Rs. 177 lakhs completed, the Company's eventual subscription to shares will amount to only Rs. 75 lakhs, the balance having been taken by other investors.

It will be recalled that the Corporation had been granted a loan of $10 million (or its equivalent in other currencies) by the World Bank for the purpose of meeting the external costs of projects which the Corporation assisted. But up to the end of 1956, no opportunities occurred for making use of this loan. This was because the promoters of new projects were in a position to obtain foreign exchange needs in the normal course and it was unnecessary for them to borrow foreign currency from the Corporation. The position is, however, expected to change on account of the shortage of foreign exchange and the revision of the Government's import policy. The Corporation is, therefore, ready now to assist in suitable cases where loans in foreign currency are sought, by utilising the aforesaid World Bank loan.

BANKING

(*Concluded from page 614*)

should be withdrawn and the banks should implement the Government's modified decision as formulated under the Industrial Disputes (Banking Companies) Decision Act, 1955, with effect from 1st January 1956. In the case of the five 'C' class Award banks the exemption in respect of area IV in the State should be withdrawn. In the case of two banks, namely, South Indian Bank Ltd. and the Catholic Syrian Bank, Ltd. however, the Labour Appellate Tribunal decision should be restored with retrospective effect from 1st April 1954 in the same manner and subject to the same conditions as laid down in the Industrial Disputes (Banking Companies) Decision Act, 1955; and in the case of the remaining two, that is, Palai Central Bank Ltd. and Travancore Forward Bank Ltd., the above named Act should be made applicable to their offices in that area with effect from 1st January 1956. The minimum emoluments of the clerks serving in the Non-Award banks should be Rs. 65 per month, consisting of a basic wage of Rs. 45 and dearness allowance of Rs. 20. The minimum emoluments of the subordinate staff serving in these banks should Rs. 35 per month, consisting of Rs. 25 basic wage and dearness allowance of Rs. 10. The Commission has also recognised the fact that there is a *prima facie* case for regulating the scales of pay, allowances, leave rules, working hours and all other terms and conditions of service of the workmen of the Non-Award banks in the State.

As regards the question of strengthening the banking structure in the State, the Commission has felt that no drastic measures are needed. It has expressed the view that the system can be considerably strengthened through weeding out of the extremely unsound banks and through rectifying the defects of others. It has also suggested that the Reserve Bank should take measures to strengthen the large-sized banks which are weak and that the banks should explore the possibilities of amalgamation, or alternatively, merger.

The Government has examined these recommendations and come to the conclusion that they should be accepted with the modification that in the case of the South Indian Bank Ltd. and the Catholic Syrian Bank Ltd., retrospective effect to the Appellate Tribunal decision should be given as from 1st January 1955, instead of 1st April 1954, as recommended by the Commission.

(*Concluded*)

Points From The Chair

Monetary Policy

"THE impact of the monetary policy and the fiscal policy on the national economy has been far more serious than what is officially acknowledged. The industrial production rose during the year by 25 per cent. but the agricultural production received a serious setback owing to unfavourable monsoon. The shortage of essential goods, accompanied by heavy deficit financing, released new inflationary forces which raised the living costs, intensified the labour unrest and squeezed the profit between costs and prices. Even granting that we are all living in an inflationary world in which a decline in the purchasing power of the rupee is inevitable and the prospect for those who have to live on fixed incomes and savings is dismal, I wonder whether it is a sound policy to acquire assets even in the name of development by resorting to methods which, if adopted by an individual, would be termed as dubious. I concede that in these days, stabilisation of prices and costs is probably the best that we can look to because any drastic reduction would swing the balance to the other extreme, i.e., deflation, which would be equally disastrous; but what is desirable is a middle course which would avoid the two extremes. Unfortunately, it is not easy for politicians in a democracy to resist the temptation of trying to do too much too soon."

V. P. VARDE,
Bank of Maharashtra Ltd.

Private Enterprise

"Additional taxation is being imposed to help finance the second Five-year Plan, but it would be well to recognise that more and more penal taxation may defeat its own ends for so many limitations surround the private investor today in India that it is, unfortunately, no longer clear how the skill and enterprise which is so necessary can be rewarded. Without fair rewards private enterprise cannot be expected to function or to provide the very large sums of money that the Plan expects from the private sector. Heavy taxation too in itself is going to do little to halt the steady inflationary tendency; for, although the money supply rose less in 1956 than in the previous year, the wholesale price index went up 13 per cent. on the year. Continued and increasing inflation could endanger the whole Plan. That the authorities are aware of this is encouraging for, commenting in the draft Plan on the difficulties of financing in part such an ambitious programme by deficit financing, the sponsors admitted that the stepping up of investment might have an inflationary impact, particularly if a relatively high proportion of the expenditure were found by an increase in the creation and supply of money."

VINCENT ALPE GRANTHAM,
Chartered Bank

Cost of Rubber Production

"The controlled price of rubber was unchanged at Rs. 155-12 per 100 lbs. for smoked sheet during the year, and our average price of Rs. 148-2 per 100 lbs. reflects the high standard of production. In the 12-month period our cost of production rose from 79.13 to 88.36 cents per lb. The increased rubber cess accounted for 5.75 cents of this increase; other items of increase are normal and in present conditions suggest close attention by our managers to their costs. In the year 1956-57, both the cost of production and average sale price figures will rise as a result of our change to Centrifuge Latex production, but the difference between the two, representing our gross working profit, is also expected to increase. This year's crop is estimated at 715,000 lbs. for the two estates, but an undercurrent of unsettlement among the labour as a result of the Special Tribunal Award and a disappointing crop in December, usually our best month, make it probable that our harvest will only be about 675,000 lbs. However, favourable weather is capable of eliminating this deficiency."

W. W. KILGOUR,
Thirumbadi Rubber Co., Ltd.

Plantation Award

"The Special Tribunal for Plantations published its Award after the end of our financial year. As you have been already advised in a letter from the Managing Agents, the increase in costs, if this Award were to be implemented in full and at once, would be prodigious. Fortunately, plantation employers were able to get a stay of execution from the Supreme Court who also granted them special leave to appeal. More recently, negotiations for an out-of-court settlement have been in train and I am pleased to see from yesterday's newspapers that agreement has been reached resulting in wage increases to labour of approximately 20 per cent. I estimate that this will increase our annual wage bill by Rs. 1 lakh. Compared with the enormity of the Award from which we have now been delivered, this is a small price and within the capacity of the Company to pay. By any other standard, it is a stern impost, but it is to be hoped that it will be compensated for to some extent by increased productivity resulting from the four-year period of industrial peace which I was given to understand would be one of the terms of settlement."

W. W. KILGOUR,
Kil Kotagiri Tea & Coffee Estates Co., Ltd.

PROFIT OF CALCUTTA CHEMICAL SHRINKS

RYAM SUGAR RESUMES DIVIDEND

Calcutta Chemical Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Sen Das Maitra & Co., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

After meeting all expenses, allowing depreciation and charging taxes, the account for this year shows a net profit of Rs. 4,10,535 (Rs. 5,70,522) which the directors recommend for distribution as follows:—

By transferring to the reserve fund Rs. 41,000 (Rs. 56,000), by paying a dividend of 6 per cent. per annum, free if income-tax on the preference shares of the 1st Issue Rs. 12,000 (Rs. 12,000), by paying a dividend of 4½ per cent. per annum, free of income-tax on the preference shares of 2nd issue Rs. 12,040 (Rs. 10,416), by paying a dividend of 12 (12) per cent. free of income-tax on ordinary shares Rs. 94,626 (Rs. 88,908), by paying of contingent contribution to the provident fund (in addition to the interim contribution of Rs. 24,028 (Rs. 21,820) Rs. 27,421 (Rs. 22,821) and by placing at the disposal of the managing agents for being spent at their discretion:—

(*a*) for paying bonus to employees for their services Rs. 1,14,000 (Rs. 95,000),

(*b*) for welfare and amenities including entertainments of the employees Rs. 15,000 (Rs. 11,000) and

(*c*) for paying gratuity on retirement, death or disablement of the employees Rs. 41,000 (Rs. 34,000). The above distribution will leave a balance of Rs. 53,448 (Rs. 2,40,377) from the profit in the year under review to be carried forward to the next year's account.

The cost of raw materials, bonus charges and other expenses have increased during the year under review. The company has to pay the central excise duty on soap. In spite of these, the management has not increased the selling prices for the benefit of the public.

Sri J. C. Das Gupta, the Works Manager was deputed to visit factories in U.K. and the Continent to get first-hand knowledge of improvements made there. Sri D. N. Maitra, an Assistant Superintendent, and Sri N. N. Maitra, a chemist also returned after about two years' training in different chemical and pharmaceutical factories in U.K. and the Continent. From their reports the directors feel convinced that there are great possibilities for expansion of business of this company by not only increasing the output of the present items by improved methods but also by taking up new lines. For such expansion, money will be necessary and the directors are considering whether it can be raised by increase of share capital, issuing debentures or taking loans from Government or other institutions.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	14,72,788	Block ...	14,18,120
Reserves ...	10,82,771	Stock of finished goods	7,00,276

Liabilities ...	31,41,885	Work-in-progress ...	2,04,724
Profit and loss account ...	1,24,043	Debts, deposits and advances ...	14,27,008
		Provident fund investments	7,37,215
		Investments	6,24,004
		Cash ...	2,61,293
Rs.	63,01,487	Rs.	63,01,487

Ryam Sugar Co., Ltd.

The directors of the above Company (Secretary: Mr. M. D. Khaitan, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1956.

The Company has earned during the year under review a profit of Rs. 5,17,758 (Rs. 2,37,924). After providing Rs. 96,266 (Rs. 75,000) for depreciation and Rs. 2,07,000 (*nil*) for estimated tax liability, there is a balance of Rs. 2,14,492. Out of this, Rs. 14,704 (*nil*) has been provided for doubtful debts and transfers of Rs. 1,25,000 (*nil*) to general reserve and Rs. 50,000 (*nil*) to rehabilitation reserve have been made, leaving a balance of Rs. 24,788 (loss of Rs. 96,076 after paying Rs. 9,000 as managing agents remuneration and Rs. 2,50,000 as compensation to managing agents).

From the previous account the directors have re-transferred to the profit and loss account Rs. 80,000 from cane price adjustment account and Rs. 80,000 from provision for gratuity and Rs. 11,152 from provision of sales tax as it is considered that these provisions will no longer be required. After making all the above adjustments the net balance is Rs. 1,95,940 and adding to this the carry forward of Rs. 5,264 (Rs. 24,340) from the previous year's account there is Rs. 2,01,204 (Rs. 53,264 after transferring Rs. 1,25,000 from general reserve) for disposal and the directors recommend that this be disposed as under:—

In payment of dividend on the preference shares at 6 per cent. free of income-tax for the year ended 30th June 1956 Rs. 48,000 (Rs. 48,000), and dividend on the ordinary shares of 17½ (*nil*) per cent. free of income-tax for the year ended 30th June 1956 Rs. 1,40,000 (*nil*) leaving to be carried forward to the next account Rs. 13,204 (Rs. 5,264).

The factory commenced crushing operations on the 1st December 1955 and closed on 5th May 1956. The cane crushed amounted to 2,577,960 maunds (1,429,046 maunds) which was the highest crush recorded in the past 15 years. The average recovery was slightly lower this year at 10.44 per cent. as against 10.74 per cent. in the previous year. Cane price continued steady at Re. 1-7 per maund at the factory gate and Re. 1-5 per maund at out-stations. This was encouraging to the growers and gave them incentive to produce more sugar cane. The increased production of sugar cane contributed directly to a higher national production of sugar which reached its highest peak of 18.56 lakh tons. Due to transport difficulties, particularly on the North Eastern Railway, large stocks of sugar had to be carried over. This, along with the large carryover of the previous year and the higher production this year, affected our selling price, though not very adversely.

T. Stanes and Co., Ltd.

The directors of the above Company (Managing Director & Chairman: Mr. E. H. Stanes, Coimbatore) submitted the audited accounts of the Company for the year ended 30th September 1956.

The main features of the past year for this Company have been the overwhelming acceptance of the reorganisation proposals submitted to shareholders in September, 1955, and consequent on these, this Company was converted to a Public Company on 27th March 1956.

The number of Shareholders has increased from 46 at that date to 298 at the present time. Permission to issue the balance of 4,511 shares to non-resident shareholders has been received recently, and allotments were made on 5th February 1957.

The United Coffee Supply Co., Ltd., and Stanes Motors (South India) Ltd. are now wholly owned subsidiaries of this Company.

This Company and its subsidiaries have had a satisfactory year. The profit of T. Stanes and Co., Ltd., amounts to Rs. 5,09,633 for the year from which has to be deducted Rs. 1,95,000 for income-tax and super-tax. The balance available for distribution includes Rs. 35,554 brought forward as per revised allocations agreed at the annual general meeting held on 27th March 1956 plus Rs. 10,677 commission on profits waived by the managing director on the profits to 30th September 1955 plus Rs. 12,000 transferred from development and stock reserve as per resolution dated 24th December 1956 at the Extraordinary General Meeting held on that date making a total of Rs. 3,72,864 available. The directors recommend the following distribution:—

Dividend of 7 per cent on preference shares less income-tax Rs. 7,744, interim dividend 8¾ per cent. already paid Rs. 1,01,176, final dividend 7¼ per cent. free of income-tax Rs. 86,723, 1¼ per cent. dividend for the year ended 30th September 1954 paid as approved at the Extraordinary General Meeting held on 24th December 1956 Rs. 14,454, charitable donations Rs. 5,000, bonus to staff Rs. 28,500, ordinary annual contribution to officers' superannuation fund at 16¼ per cent. Rs. 54,012, transfer to development and stock reserve Rs. 35,000 and carry forward Rs. 40,256.

The interim budget proposals of the Government, in which dividend taxes were raised steeply on dividends of over 6 per cent. of the issued capital (taking no note of the actual capital employed in the business) make a punitive levy on dividends of over 18 per cent. The rate including Income-tax, corporation tax and dividend tax, amounts to Re. 0-12-11.4 per rupee. This tax makes any higher rate of dividend than that now proposed impracticable.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	13,43,913	Block ...	4,19,749

Dhanalakshmi Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. M. Nanjappa Chettiar & Sons, Tirupur) submitted the audited accounts of the Company for the year ended 31st December 1956.

After deducting all working expenses and interest and providing Rs. 7,96,809 (Rs. 4,62,337) for depreciation, the year's working resulted in a net profit of Rs. 12,12,131 (Rs. 20,93,357). From this sum Rs. 800 (Rs. 3,060) has been expended in the year of account as donations. With Rs. 6,864 (Rs. 9,248), the balance of profit carried forward from last year, there is a sum of Rs. 12,18,195 (Rs. 20,99,545) to the credit of the profit and loss account. The directors set aside as provision for taxes Rs. 6,09,495 (Rs. 9,60,000) and a tax-free dividend of 25 (30) per cent. to shareholders absorbing Rs. 6,08,700 (Rs. 7,30,440), leaving to be carried forward *nil* (Rs. 6,864, after transferring Rs. 1,02,242 to the general reserve and providing Rs. 3,00,000 for bonus).

The decrease in the profits of the year is mainly due to the want of co-operation of labour and to the excise policy of the Central Government. It is hoped that the profits of the year 1957 may not be less than those of 1956.

In the year of account 3,344 spindles were added, bringing the total spindleage 39,620.

The expansion programme of the Company requires finance on a considerable scale. It will be noted notice from the profit and loss account that interest to the extent of Rs. 78,426 has been paid in the year 1956 and from the balance-sheet, that loans to the extent of Rs. 20,19,406 have been obtained. It is proposed to minimise, to a certain extent, such borrowing by the issue for cash of one new shares for every two shares now held. The present authorised capital of the Company is, Rs. 25,00,000 divided into 25,000 shares of Rs. 100 each. As 24,348 shares have already been subscribed for and fully called up, it is proposed to increase the authorised capital to Rs. 50,00,000 by the creation of 25,000 new shares of Rs. 100 each. Steps are being taken to get the approval of the Controller of Capital Issues for such issue of shares.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,34,800	Block ...	20.59,280
Reserves ...	22,25,000	Stock-in-trade	46,47,832
Provision for taxation ...	9,52,265	Stores ...	3,99,427
Liabilities ...	33,65,021	Debts, deposits and advances ...	14,53,873
		Investments	3,96,115
		Cash ...	20,559
Rs.	89,77,086	Rs.	89,77,086

Anaparai Estates, Ltd.

The directors of the above Company (Managing Agents: The Associated Planters Private Ltd., Mysore) submit the audited accounts of the Company for the year ended 30th June 1956.

The result of the Company's working for the period under review is a profit of Rs. 3,82,526 (Rs. 2,42,987). Depreciation written off on buildings and machinery, etc., amounted to Rs. 23,378 (Rs. 18,808). The Company's contribution to provident fund was Rs. 2,273 (Rs. 2,071) and debenture interest and income-tax payable thereon absorbed Rs. 29,088 (Rs. 29,088) leaving a net profit of Rs. 3,27,787 (Rs. 1,93,020). After adding the amount brought forward from last year of Rs. 4,848 (Rs. 9,033) and managing agency allowance provided last year, not required, now adjusted Rs. 13,000 (*nil*) there is a total of Rs. 3,45,635 (Rs. 2,02,053). Deducting the amount transferred to reserve for agricultural income-tax of Rs. 90,000 (Rs. 50,000) there is a balance of Rs. 2,55,635 (Rs. 1,52,053). From this the directors recommend a dividend at 25 (16¼) per cent. on ordinary shares absorbing Rs. 2,26,470 (Rs. 1,47,205) leaving a balance of Rs. 29,165 (Rs. 4,848) to be carried forward to next year.

The directors feel that the working results of the Company for the year ended 30th June 1956 have been very satisfactory. The coffee crop of the year was more than the estimate by 25 per cent. The pepper crop was triple the estimate.

		Realised for 1955-56	*Estimate for 1956-57*
Arabica	.. .. tons	78 (75¾)	126
Robusta	.. ..	230¾ (145¼)	331
Pepper	.. candies	34 (6¾)	12
Orange	.. lorry loads	.....	80 to 85

The average cost of coffee per cwt. stood at Rs. 89-2-3 as against Rs. 96-9-3 during the previous year. The lower costs are mainly due to the higher crop realised during the year.

The estates of the Company have been maintained well and the labour position is quite satisfactory. The crop has shown a substantial increase and the estimated crop for the coming year is the highest on record.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,05,878	Block ...	14,60,759
Debentures	3,84,000	Stock of coffee	9,13,447
Reserves ...	5,30,000	Stock of pepper ...	27,411
Provision for agricultural income-tax	1,19,772	Stores, spares, tools, etc.	52,808
Liabilities ...	11,40,783	Other assets	62,152
Profit and loss account ...	29,165	Loans and advances ...	3,07,552
		Investments ...	2,58,856
		Cash ...	26,613
Rs.	31,09,598	Rs.	31,09,598

SWAN MILLS, LIMITED

NOTICE

THE FORTY-NINTH ANNUAL GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay, on Wednesday, the 24th April, 1957, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1956.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring:—

(a) Sir Chunilal V. Mehta, K.C.S.I. retires by rotation under Article 114 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company that it is proposed to move a Resolution to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Sir Chunilal V. Mehta has signified his willingness to stand for re-election. The following Resolution will, therefore, be proposed as an Ordinary Resolution:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who was born on the 12th day of January, 1881 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

(b) Mr. P. G. Kendall retires by rotation under Article 114 of the Company's Articles of Association. As he is an employee of James Finlay & Co., Limited, the Managing Agents, he can, by reason of Section 261 of the Companies Act, 1956, only be appointed a Director by a Special Resolution of which Special Notice has been received by the Company. Mr. Kendall offers himself for re-election and Special Notice has been received by the Company that the following Resolution will be proposed as a Special Resolution:—

"RESOLVED that Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can, therefore, under the provisions of Section 261 of the Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(c) Mr. Gautam Sarabhai who was appointed a Director under Article 111 of the Company's Articles of Association holds office only until this General Meeting of the Company, but is eligible for re-election and offers himself for re-election.

(d) Mr. A. A. S. Rae who was appointed a Director under Article 111 of the Company's Articles of Association holds office only until this General meeting of the Company but is eligible for re-election and offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To consider and, if thought fit, to pass the following Resolutions, which will be proposed as Special Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, be and they are hereby appointed buying agents for the Company in the United Kingdom for a period of three years from the date of this Meeting to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a Capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(a) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the United Kingdom for the Company.

(b) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(ii) "RESOLVED that in Article 110 of the Company's Articles of Association the third sentence consisting of the words 'One of such Directors Ex-officio to be nominated by the Managing Agents, shall be the Chairman of the Board of Directors of the Company,' be deleted."

(6) To consider and, if thought fit, to pass the following Resolutions which will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that the execution by the Company of the Agreement dated the 28th day of December, 1956, between the Company and James Finlay & Co., Limited, whereby James Finlay & Co., Limited, were re-appointed the Managing Agents of the Company in terms of the draft Agreement referred to in the Ordinary Resolution passed at the Extraordinary General Meeting of the Shareholders held on the 12th December, 1956, but modified, as required by the Central Government, by the deletion of the provision in Clause 9 of the said draft Agreement whereby one of the Directors Ex-officio to be nominated by the Managing Agents be the Chairman of the Board of Directors, be and is hereby approved ratified and confirmed."

(ii) "RESOLVED that the Company hereby consents to the Board of Directors of the Company borrowing moneys from time to time for and on behalf of the Company and for its purposes, notwithstanding that the amount for the time being remaining undischarged of the moneys to be borrowed, together with the moneys already borrowed by the Company, shall exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, but so that the total amount so remaining undischarged at any particular time shall not exceed the sum of Rs. 1,00,00,000.

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England, a Branch of and as Agents of the English Card Clothing Co., Limited, Card Clothing House, Lindley, Huddersfield, England, may earn from them on any Sales to the Company by John Whiteley & Sons, of Card Clothing, Comber Needles and Lickerin Wire, and any other products sold by John Whiteley & Sons, and required to be purchased by the Company in the normal course of business from John Whiteley & Sons, providing the rates at which such goods are sold by John Whiteley & Sons, to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Ltd., of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Ltd., and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Ltd., providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by Igranic Electric Co., Ltd. of Starters and Switchgear and any other products sold by Igranic Electric Co., Ltd., and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Ltd., providing the rates at which such goods are sold by Igranic Electric Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear Ltd., Northgate Works, Chester, may earn from them on any sales to the Company by Brookhirst Switchgear Ltd., of Starters and Switchgear and any other products sold by Brookhirst Switchgear Ltd., and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear Ltd., providing the rates at which such goods are sold by Brookhirst Switchgear Ltd., to the Company are not less favourable to the Company than the market rates."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Ltd., of Starters and Switchgear and any other products sold by Cantie Switches Ltd., and required to be purchased by the Company in the normal course of business from Cantie Switches Ltd., providing the rates at which such goods are sold by Cantie Switches Ltd., to the Company are not less favourable to the Company than the market rates."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company, to be held in the year 1960, as the Principal Agents of the National Insurance Co. of Great Britain, Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into, between the Company and the said National Insurance Co. of Great Britain, Ltd."

(ix) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company, to be held in the year 1960, as the Principal Agents of the South India Insurance Co., Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots, and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Ltd."

(x) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960, as the Principal Agents of the London & Provincial Marine & General Insurance Co., Ltd., in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Ltd."

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,

By its Constituted Attorney,
J. C. BURNS.

BOMBAY, 13*th March*, 1957.

Notes.—(*a*) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(*b*) The transfer books of the Company will be closed from 30th March to 24th April, 1957, both days inclusive.

(c) The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 25th April, 1957, to those shareholders whose names stand on the Register on 30th March, 1957, to whom Dividend Warrants will be posted.

Explanatory Statement under Section 173 of the Companies Act, 1956

Note.—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore necessary, having regard to the provisions of Section 358 of the Companies Act, 1956, to pass the Resolution set out under item No. 5(i) in order that James Finlay & Co., Limited, may be remunerated for this work.

Note.—It will be recalled that at the Extraordinary General Meeting held on 12th December, 1956, Article 110 of the Company's Articles of Association was deleted and substituted by a new Article 110. The Central Government objected to the provision therein whereby one of the Ex-Officio Directors nominated by the Managing Agents be the Chairman of the Board. It has, therefore, become necessary to alter the Articles by deleting that provision and to pass the Resolution set out under Item No. 5(ii).

Note.—At the same meeting a Resolution was passed for the re-appointment of James Finlay & Co., Limited, as the Managing Agents of the Company for a period of ten years as from the 1st day of January, 1957, on terms and conditions contained in the draft of an Agreement referred to in the said Resolution between the Company and James Finlay & Co., Limited. An Application was also made to the Central Government for its sanction to the re-appointment of James Finlay & Co., Limited, as the Managing Agents of your Company. Government of India in their letter dated 20th December, 1956, granted the necessary approval to the re-appointment of Messrs. James Finlay & Co., Limited, as the Managing Agents of your Company for a period of ten years, with effect from the 1st January, 1957, subject, however to the condition that the penultimate sentence in clause 9 of the draft Managing Agency Agreement, providing for one of the Ex-Officio Directors nominated by the Managing Agents to be the Chairman of the Board, be deleted. The amended Agreement was executed at the Meeting of the Board held on 28th December, 1956. It is thought desirable that the execution of the Agreement should be approved, ratified and confirmed and for this purpose the Resolution set out under Item No. 6(i) is proposed.

The Agreement is open for inspection at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay, during usual business hours on any working day.

Mr. J. C. Burns, Mr. C. H. Campbell and Mr. P. G. Kendall, Directors of the Company, are also employees of James Finlay & Co., Limited and Mr. J. C. Burns and Mr. C. H. Campbell are the Directors nominated by James Finlay & Co., Limited. These gentlemen are, therefore, interested in the Resolutions Nos. 5(i), 5(ii) and 6(i).

Note.—The Resolution No. 6(ii) for authorising the Directors to borrow in excess of the Paid-up Capital and free Reserves of the Company is required to be passed in view of Section 293 of the Act. It is necessary, as in the past, for borrowings to be made for the purposes of the Company's business and as opinions differ as to what constitute 'free reserves' and also as to what exactly are to be regarded as 'temporary loans,' in order to remove doubts and for greater precaution, it is considered necessary and desirable that the Company should pass the proposed Resolution.

Note.—James Finlay & Co., Limited, the Managing Agents, are representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England; Tullis Woodroffe & Co., Limited, 1/21, North Beach Road, Madras; Igranic Electric Co., Limited, Victoria Station House, Victoria Street, London, S.W. 1; Brookhirst Switchgear Limited, Northgate Works, Chester and Cantie Switches, Limited, Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is, therefore, necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under Items Nos. 6(iii), 6(iv), 6(v), 6(vi) and 6(vii), in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note.—James Finlay & Co., Limited, the Managing Agents, are the Principal Agents of the National Insurance Co. of Great Britain, Limited, the South India Insurance Co., Limited and the London & Provincial Marine & General Insurance Co., Limited, with which Companies the Company places its insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under Items Nos. 6(viii), 6(ix) and 6(x), in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,

By its Constituted Attorney,
J. C. BURNS.

BOMBAY, 13*th March*, 1957.

THE GOLD MOHUR MILLS, LIMITED

NOTICE

THE THIRTY-FIRST ANNUAL GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay, on Thursday the 25th April, 1957, at 4.00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December 1956.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring:—

(a) Mr. Ramniwas Ramnarain retires by rotation under Article 114 of the Company's Articles of Association, but is eligible for re-election under the same Article and offers himself for re-election.

(b) Mr. P. G. Kendall retires by rotation under Article 114 of the Company's Articles of Association. As he is an employee of James Finlay & Co., Limited, the Managing Agents, he can, by reason of Section 261 of the Companies Act, 1956, only be appointed a Director by a Special Resolution of which Special Notice has been received by the Company. Mr. Kendall offers himself for re-election and Special Notice has been received by the Company that the following Resolution will be proposed as a Special Resolution:—

"RESOLVED that Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can, therefore, under the provisions of Section 261 of the Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(c) Mr. Gautam Sarabhai who was appointed a Director under Article 111 of the Company's Articles of Association holds office only until this General Meeting of the Company, but is eligible for re-election and offers himself for re-election.

(d) Mr. Bhagvandas C. Mehta who was appointed a Director under Article 111 of the Company's Articles of Association holds office only until this General Meeting of the Company, but is eligible for re-election and offers himself for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To consider and, if thought fit, to pass the following Resolutions, which will be proposed as Special Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, be and they are hereby appointed buying agents for the Company in the United Kingdom for a period of three years from the date of this Meeting to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a Capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(a) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the

United Kingdom for the Company.

(b) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(ii) "RESOLVED that in Article 110 of the Company's Articles of Association the third sentence consisting of the words 'One of such Directors Ex-officio to be nominated by the Managing Agents, shall be the Chairman of the Board of Directors of the Company,' be deleted."

(6) To consider and, if thought fit, to pass the following Resolutions which will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that the execution by the Company of the Agreement dated the 28th day of December, 1956, between the Company and James Finlay & Co., Limited, whereby James Finlay & Co., Limited, were re-appointed the Managing Agents of the Company in terms of the draft Agreement referred to in the Ordinary Resolution passed at the Extraordinary General Meeting of the Shareholders held on the 14th December, 1956, but modified, as required by the Central Government, by the deletion of the provision in Clause 9 of the said draft Agreement whereby one of the Directors Ex-officio to be nominated by the Managing Agents be the Chairman of the Board of Directors, be and is hereby approved, ratified and confirmed."

(ii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England, a Branch of and as Agents of the English Card Clothing Co., Limited, Card Clothing House, Lindley, Huddersfield, England, may earn from them on any Sales to the Company by John Whiteley & Sons, of Card Clothing, Comber Needles and Lickerin Wire, and any other products sold by John Whiteley & Sons, and required to be purchased by the Company in the normal course of business from John Whiteley & Sons, providing the rates at which such goods are sold by John Whiteley & Sons, to the Company are not less favourable to the Company than the market rates."

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Ltd., of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Ltd., and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Ltd., providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by Igranic Electric Co., Ltd., of Starters and Switchgear and any other products sold by Igranic Electric Co., Ltd., and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Ltd., providing the rates at which such goods are sold by Igranic Electric Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear Ltd., Northgate Works, Chester, may earn from them on any sales to the Company by Brookhirst Switchgear Ltd., of Starters and Switchgear and any other products sold by Brookhirst Switchgear Ltd., and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear Ltd., providing the rates at which such goods are sold by Brookhirst Switchgear Ltd., to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Ltd., of Starters and Switchgear and any other products sold by Cantie Switches Ltd., and required to be purchased by the Company in the normal course of business from Cantie Switches Ltd., providing the rates at which such goods are sold by Cantie Switches Ltd., to the Company are not less favourable to the Company than the market rates."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960, as the Principal Agents of the National Insurance Co. of Great Britain, Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said National Insurance Co. of Great Britain, Ltd."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960, as the Principal Agents of the South India Insurance Co., Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Ltd."

(ix) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960, as the Principal Agents of the London & Provincial Marine & General Insurance Co., Ltd., in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Ltd."

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,
By its Constituted Attorney,
J. C. BURNS.

BOMBAY, 13*th March*, 1957.

Notes:—(*a*) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company. A form of proxy which may be used by members is attached hereto.

(*b*) The Transfer Books of the Company will be closed from 30th March to 25th April, 1957, both days inclusive.

(*c*) The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 26th April, 1957, to those Shareholders whose names stand on the Register on 30th March, 1957, to whom Dividend Warrants will be posted.

Explanatory Statement under Section 173 of the Companies Act, 1956

Note:—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore necessary, having regard to the provisions of Section 358 of the Companies Act, 1956, to pass the Resolution set out under item No. 5(i) in order that James Finlay & Co., Limited, may be remunerated for this work.

Note:—It will be recalled that at the Extraordinary General Meeting held on 14th December, 1956, Article 110 of the Company's Articles of Association was deleted and substituted by a new Article 110. The Central Government objected to the provision therein whereby one of the Ex-officio Directors nominated by the Managing Agents be the Chairman of the Board. It has, therefore, become necessary to alter the Articles by deleting that provision and to pass the Resolution set out under item No. 5(ii).

Note:—At the same meeting a Resolution was passed for the re-appointment of James Finlay & Co., Limited, as the Managing Agents of the Company for a period of ten years as from the 1st day of January, 1957, on terms and conditions contained in the draft of an Agreement referred to in the said Resolution between the Company and James Finlay & Co., Limited. An application was also made to the Central Government for its sanction to the re-appointment of James Finlay & Co., Limited, as the Managing Agents of your Company. Government of India in their letter dated 20th December, 1956, granted the necessary approval to the re-appointment of Messrs. James Finlay & Co., Limited, as the Managing Agents of your Company for a period of ten years, with effect from the 1st January, 1957, subject, however, to the condition that the penultimate sentence in clause 9 of the draft Managing Agency Agreement, providing for one of the Ex-officio Directors nominated by the Managing Agents to be the Chairman of the Board, be deleted. The amended Agreement was executed at the Meeting of the Board held on 28th December, 1956. If is thought desirable that the execution of the Agreement should be approved, ratified and confirmed and for this purpose the Resolution set out under item No. 6(i) is proposed.

The Agreement is open for inspection at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay, during usual business hours on any working day.

Mr. J. C. Burns, Mr. C. H. Campbell and Mr. P. G. Kendall, Directors of the Company, are also employees of James Finlay & Co., Limited, and Mr. J. C. Burns and Mr. C. H. Campbell are the Directors nominated by James Finlay & Co., Limited. These gentlemen are, therefore, interested in the Resolutions Nos. 5(i), 5(ii) and 6(i).

Note:—James Finlay & Co., Limited, the Managing Agents, are representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England; Tullis, Woodroffe & Co., Limited, 1/21, North Beach Road, Madras; Igranic Electric Co., Limited, Victoria Station House, Victoria Street, London, S.W. 1; Brookhirst Switchgear, Limited, Northgate Works, Chester and Cantie Switches, Limited, Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is, therefore, necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under items Nos. 6(ii), 6(iii), 6(iv), 6(v) and 6(vi), in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note:—James Finlay & Co., Limited, the Managing Agents, are the Principal Agents of the National Insurance Co. of Great Britain, Limited, the South India Insurance Co., Limited and the London & Provincial Marine & General Insurance Co., Limited, with which Companies the Company places its insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under items Nos. 6(vii), 6(viii) and 6(ix), in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,
By its Constituted Attorney,
J. C. BURNS.

BOMBAY, 13*th March*, 1957.

THE FINLAY MILLS, LIMITED

NOTICE

THE FIFTY-SECOND ANNUAL GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay, on Friday, the 26th April, 1957, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December, 1956.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring:—

(*a*) Mr. Ramniwas Ramnarain retires by rotation under Article 114 of the Company's Articles of Association, but is eligible for re-election under the same Article and offers himself for re-election.

(*b*) Mr. C. H. Campbell retires by rotation under Article 114 of the Company's Articles of Association. As he is an employee of James Finlay & Co., Limited, the Managing Agents, he can, by reason of Section 261 of the Companies Act, 1956, only be appointed a Director by a Special Resolution of which Special Notice has been received by the Company. Mr. Campbell offers himself for re-election and Special Notice has been received by the Company that the following Resolution will be proposed as a Special Resolution:—

"RESOLVED that Mr. C. H. Campbell, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can, therefore, under the provisions of Section 261 of the Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To consider and, if thought fit, to pass the following Resolutions, which will be proposed as Special Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, be and they are hereby appointed buying agents for the Company in the United Kingdom for a period of three years from the date of this Meeting to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a Capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(*a*) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the United Kingdom for the Company.

(*b*) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(ii) "RESOLVED that in Article 110 of the Company's Articles of Association the third sentence consisting of the words 'One of such Directors Ex-officio to be nominated by the Managing Agents, shall be the Chairman of the Board of Directors of the Company,' be deleted."

(6) To consider and, if thought fit, to pass the following Resolutions which will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that the execution by the Company of the Agreement dated the 28th day of December, 1956, between the Company and James Finlay & Co., Limited, whereby James Finlay & Co., Limited, were re-appointed the Managing Agents of the Company in terms of the draft Agreement referred to in the Ordinary Resolution passed at the Extraordinary General Meeting of the Shareholders held on the 13th December, 1956, but modified, as required by the Central Government, by the deletion of the provision in Clause 9 of the said draft Agreement whereby one of the Directors Ex-officio to be nominated by the Managing Agents be the Chairman of the Board of Directors be and is hereby approved ratified and confirmed."

(ii) "RESOLVED that James Finlay & Co., Limited Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England, a Branch of and as Agents of the English Card Clothing Co., Limited, Card Clothing House, Lindley, Huddersfield, England, may earn from them on any Sales to the Company by John Whiteley & Sons of Card Clothing, Comber Needles and Lickerin Wire, and any other products sold by John Whiteley & Sons, and required to be purchased by the Company in the normal course of business from John Whiteley & Sons, providing the rates at which such goods are sold by John Whiteley & Sons, to the Company are not less favourable to the Company than the market rates."

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Ltd., of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Ltd., and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Ltd., providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by Igranic Electric Co., Ltd., of Starters and Switchgear and any other products sold by Igranic Electric Co., Ltd., and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Ltd., providing the rates at which such goods are sold by Igranic Electric Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear Ltd., Northgate Works, Chester, may earn from them on any sales to the Company by Brookhirst Switchgear Ltd., of Starters and Switchgear and any other products sold by Brookhirst Switchgear Ltd., and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear Ltd., providing the rates at which such goods are sold by Brookhirst Switchgear Ltd., to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the Annual General Meeting of the Company to be held in the year 1960 to retain all commission or other remuneration which they as representatives of Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Ltd., of Starters and Switchgear and any other products sold by Cantie Switches Ltd., and required to be purchased by the Company in the normal course of business from Cantie Switches Ltd., providing the rates at which such goods are sold by Cantie Switches Ltd., to the Company are not less favourable to the Company than the market rates."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960 as the Principal Agents

of the National Insurance Co., of Great Britain, Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said National Insurance Co. of Great Britain, Ltd."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company, to be held in the year 1960 as the Principal Agents of the South India Insurance Co., Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots, and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Ltd."

(ix) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the Annual General Meeting of the Company to be held in the year 1960 as the Principal Agents of the London & Provincial Marine & General Insurance Co., Ltd., in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Ltd."

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,

By its Constituted Attorney,

J. C. BURNS.

BOMBAY, 13*th March* 1957.

Notes:—(a) Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

(b) The transfer books of the Company will be closed from 30th March to 26th April 1957, both days inclusive.

(c) The Dividend when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 27th April 1957, to those shareholders whose names stand on the Register on 30th March 1957, to whom Dividend Warrants will be posted.

Explanatory Statement under Section 173 of the Companies Act, 1956

Note:—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore necessary, having regard to the provisions of Section 358 of the Companies Act, 1956, to pass the Resolution set out under item No. 5(i) in order that James Finlay & Co., Limited, may be remunerated for this work.

Note:—It will be recalled that at the Extraordinary General Meeting held on 13th December 1956, Article 110 of the Company's Articles of Association was deleted and substituted by a new Article 110. The Central Government objected to the provision therein whereby one of the Ex-officio Directors nominated by the Managing Agents be the Chairman of the Board. It has, therefore, become necessary to alter the Articles by deleting that provision and to pass the Resolution set out under Item No. 5(ii).

Note:—At the same Meeting a Resolution was passed for the reappointment of James Finlay & Co., Limited as the Managing Agents of the Company for a period of ten years as from the 1st day of January 1957 on terms and conditions contained in the draft of an Agreement referred to in the said Resolution between the Company and James Finlay & Co., Limited. An Application was also made to the Central Government for its sanction to the re-appointment of James Finlay & Co., Limited, as the Managing Agents of your Company. Government of India in their letter dated 20th December 1956, granted the necessary approval to the reappointment of Messrs. James Finlay & Co., Limited, as the Managing Agents of your Company for a period of ten years, with effect from the 1st January 1957, subject, however, to the condition that the penultimate sentence in clause 9 of the draft Managing Agency Agreement, providing for one of the Ex-officio Directors nominated by the Managing Agents to be the Chairman of the Board, be deleted. The amended Agreement was executed at the Meeting of the Board held on 28th December 1956. It is thought desirable that the execution of the Agreement should be approved, ratified and confirmed and for this purpose the Resolution set out under item No. 6(i) is proposed.

The Agreement is open for inspection at the Registered Office of the Company, Chartered Bank Building, Fort, Bombay during usual business hours on any working day.

Mr. J. C. Burns, Mr. C. H. Campbell and Mr. P. G. Kendall, Directors of the Company, are also employees of James Finlay & Co., Limited, and Mr. J. C. Burns is a Director nominated by James Finlay & Co., Limited. These gentlemen are, therefore, interested in the Resolutions Nos. 5(i), 5(ii) and 6(i).

Note:—James Finlay & Co., Limited, the Managing Agents, are representatives of John Whiteley & Sons, Brunswick Mills, Halifax, Yorks, England; Tullis, Woodroffe & Co., Limited, 1/21, North Beach Road, Madras, Igranic Electric Co., Limited, Victoria Station House, Victoria Street, London, S.W. 1, Brookhirst Switchgear Limited, Northgate Works, Chester and Cantie Switches, Limited, Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is, therefore, necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under items Nos. 6(ii), 6(iii), 6(iv), 6(v) and 6(vi) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note:—James Finlay & Co., Limited, the Managing Agents, are the Principal Agents of the National Insurance Co. of Great Britain, Limited, the South India Insurance Co., Limited and the London & Provincial Marine & General Insurance Co., Limited, with which Companies the Company places its insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Companies Act, 1956, to pass the Resolutions set out under items Nos. 6(vii), 6(viii) and 6(ix) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

By Order of the Board of Directors,

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Tuesday, 16th April 1957, at 4.30 p.m., for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1956.

(2) To sanction the declaration of a Dividend.

(3) To confirm the appointment of Mr. E. S. Vernon-Jones and Mr. A. A. S. Rae as Directors.

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) To elect a Director in place of Mr. A. A. S. Rae, who retires by rotation but being eligible offers himself for re-election.

(6) To elect a Director in place of Sir Chunilal V. Mehta, K.C.S.I., who also retires by rotation. Sir Chunilal V. Mehta, although otherwise eligible for re-election, having attained the age of 76 years, is not eligible for reappointment, unless his appointment is made or approved by the Shareholders in general meeting in terms of Section 281 of the Companies Act, 1956.

Special Notice is hereby given that it will be proposed as an Ordinary Resolution that Sir Chunilal V. Mehta, K.C.S.I., be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him.

By Order of the Board of Directors,

E. S. VERNON-JONES,
Chairman.

BOMBAY, 15*th March* 1957.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956.

The Resolution in connection with the re-election of Sir Chunilal V. Mehta, K.C.S.I., which will be proposed as an Ordinary Resolution, under item (6) is as under:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation, be and is hereby appointed a Director of the Company, and it is hereby specifically declared that the age limit of 65 shall not apply to him."

Sir Chunilal V. Mehta has been a Director of the Company since January 1941, and his long and distinguished connection with the textile mill industry is well known. As a businessman of wide experience, he has rendered valuable services to the Company during his long association with it, and it is in the interest of the Company that it should continue to receive the benefit of his services.

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE EIGHTY-FIFTH ANNUAL GENERAL Meeting of The Bombay Dyeing and Manufacturing Company, Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, 18th April 1957, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1956.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. Maneklal Premchand who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement is annexed hereto as required by Section 173 of the said Act:—

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 67 years and who retires by rotation, be and he is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
4. To elect a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation and is eligible for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, to pass with or without amendment as may be permissible the following Resolutions as Ordnary Resolutions and/or Special Resolutions as specified below:—

ORDINARY RESOLUTIONS

I. RESOLVED that each of the existing 1,00,392 Ordinary Shares of the face value of Rs. 250 each in the Capital of the Company which have been issued and subscribed and each of the 2,008 Shares of the face value of Rs. 250 each in the Capital of the Company not issued so far be sub-divided into ten shares of the face value of Rs. 25 each, such sub-division to take effect as from the first day of October 1957, and that Clause 5 of the Memorandum of Association of the Company be altered accordingly.

II. RESOLVED that the Directors be and they are hereby authorised wherever deemed necessary by them to exchange fresh certificates for such Shares of Rs. 25 each in place of the existing Share Certificates in the names of those Shareholders whose names stand on the Register of the Company as on 1st October 1957 and that such fresh Certificates be ready for delivery within six months from 1st October 1957.

III. RESOLVED that the Registers, Books and Documents of the Company required to be maintained and kept open for inspection under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 and Schedule VIII to the Act, be kept open for such inspection by the persons entitled thereto under the aforesaid provisions to the extent in the manner and on payment of fees, if any, specified in the aforesaid provisions at the Registered Office of the Company between the hours of 10-30 a.m. to 1 p.m. on all working days, except when the Registers and Books are closed under the provisions of the Companies Act, 1956, or the Articles of Association of the Company. Provided, however, that the Register required to be maintained under Section 307 of the Act, shall be open for inspection of the Members or holders of Debentures of the Company, if any, as aforesaid between the times abovementioned during the period prescribed by Sub-section 5(a) of Section 307.

IV. RESOLVED that the Resolutions passed at the 82nd Annual General Meeting of the Shareholders of the Company numbered 1, 2 and 3 regarding exchange of areas, surrender by the Company of land held under leases of which the Lessors were the Executors of the late Sir Ness Wadia and sale by the Company of land to National Peroxide Ltd., subject to alterations in areas and prices resulting from joint surveys and the demands of the Municipal Corporation be and they are hereby confirmed and the proposed transactions approved.

V. RESOLVED that the Directors be and they are hereby authorised to exercise the powers of exchange, sale, conveyance, lease, assignment and other powers specified in Subclause IX of Clause 3 of the Memorandum of Association and Article 118(VI) of the Articles of Association of the Company as the Directors may from time to time deem necessary or desirable in the interests of the Company on such terms and conditions as the Directors may fix.

SPECIAL RESOLUTIONS

VI. RESOLVED that in place and stead of the existing Clause 3 of the Articles of Association of the Company, the following Clause be and the same is hereby substituted as from the first day of October 1957 as Clause 3 thereof:—

3. The Capital of the Company is Rs. 2,56,00,000 (Rupees two hundred and fifty-six Lacs) divided into 10,24,000 (Ten Lacs twenty-four thousand) Shares of the face value of Rs. 25 each, with power to divide the Shares in the Capital for the time being into Equity Share Capital and Preference Share Capital and to attach there to respectively any preferential, qualified or special rights, privileges or conditions.

VII. RESOLVED that in place and stead of the existing Clause 102 of the Articles of Association of the Company, the following Clause be and it is hereby substituted as Clause 102 thereof:—

102. Unless otherwise determined by a General Meeting the qualification of a Director shall be the holding of Shares in the Company of the total face value of Rs. 750.

VIII. RESOLVED that in place and stead of the existing Clause 133 of the Articles of Association of the Company, the following Clause be and the same is hereby substituted as Clause 133 thereof:—

133. Every Deed or other instrument to which the Seal is required to be affixed shall (except in the case of Certificates of title to Shares) be signed by two Directors, who shall sign their names at the foot of or elsewhere on the said Deed, instrument or document. Certificates of title to Shares may be so signed by one Director or by a person or persons duly authorised by the Directors in that behalf. The signature on such Certificates of the Director may be reproduced and affixed by mechanical means.

IX. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and its Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., in terms of the draft placed before the meeting, and for the sake of identification, initialled by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the date of the Annual General Meeting of the Company in the year 1960, in respect of purchases, sales or supplies of goods in which the Managing Agents regularly trade or do business in such as Rings, Ring Travellers, Lublicating Oils, Hair and Leather Beltings, and other Leather Goods such as Pickers, Picking Bands and Buffers, Shuttles, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Delintering Machinery, Floor Polishing Machines, Homogenizers, Machinery and Machinery spare parts and Mechanical Handling Equipment or in respect of which they may trade or do business in as well as in respect of sales to the Managing Agents by the Company of sundry stores, petrol, tubular banding, soap, cloth and such other ancillary items and in respect of the supply or rendering of any service by either to the other, other than that of Managing Agents, including receiving loans or deposits at interest not exceeding the State Bank of India's rate of interest from the Managing Agents, subject to the conditions that all payments to be made to the Company by the Managing Agents shall be made within one month from the date of such transactions, and that the prices charged to the Company shall be as approved or confirmed by the Board, and shall be such as are not less favourable to the Company than the market rates, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

X. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of a Contract being entered into between the Company and Spin-Weave Textiles, an Associate of the Managing Agents, in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman of the Company, to be operative as from the date of this Meeting till one month after the Annual General Meeting of the Company in the year 1960, in respect of purchases or supplies of Bobbins, Pirns, Skewers, Wood, Wooden Cases, Wooden Articles such as Sleys, Hand Tops, Rollers, Picking Sticks, Leather Goods such as Beltings, Picking Bands, Pickers, Buffers, Loom Straps, Ram Rings, Castings and Machinery spare parts and other sundry mill stores, on the terms that the rates charged to the Company shall be approved or confirmed by the Board, and shall be such as are not less favourable than the rates charged for similar items generally agreed to by other reputed firms in Bombay, or which are otherwise reasonable, and the terms and conditions of the said supplies shall be sanctioned by the Board of Directors.

XI. RESOLVED that the proposal to make available by way of Lease, License or otherwise in accordance with the law, for a period of ten years, Block "Q" at the Company's Dye Works to a private limited company proposed to be floated and registered under the name of or similar to Bombay Ring Travellers Company (Private) Ltd., in which Company the Managing Agents, Messrs. Nowrosjee Wadia & Sons (Private) Ltd., may hold more than one-third of the shares in the Capital of that Company, thus giving them not less than one-third of the total voting power in that Company and thereby making that Company Associates of Messrs. Nowrosjee Wadia & Sons (Private) Ltd., be and the same is hereby approved and the Directors be and they are hereby authorised to carry through such transaction on terms and conditions to be finally agreed upon between them and the proposed company when formed and to execute such documents and do all such acts as may be required for the purpose.

The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of items I to XI set out above is annexed to the Notice of the Annual General Meeting posted to all the Shareholders individually.

The drafts of the Contracts referred to in Special Resolutions Nos. IX and X are open for inspection by any Member at the Registered Office of the Company on working days except on Saturdays from 11 a.m. to 4 p.m.

By Order of the Board,

NOWROSJEE WADIA & SONS (PRIVATE) LTD.,

NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 5*th March*, 1957.

(b) The Share Transfer Books of the Company will remain closed from Friday, the 22nd March, 1957, to Thursday, the 11th April, 1957, both days inclusive.

(c) The Dividend when declared will be made payable at the National Bank of India Ltd., Bombay, on or after the 29th April 1957, to those Shareholders whose names stand on the Register of the Company on 11th April 1957, and the Dividend Warrants will be duly posted to them.

(d) The Shareholders are requested to immediately notify any change of address to the Company.

To

THE MEMBERS OF
THE BOMBAY DYEING & MFG. CO., LTD.

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of The Belapur Company, Limited, will be held at the Registered Office of the Company at Brady House, 12-14, Veer Nariman Road, Fort, Bombay, on Wednesday the 24th April 1957 at 3 p.m. (S.T.).

For the purpose of considering and if thought fit passing the following Resolutions as Special Resolutions:—

I. *Resolved* that all contracts entered into between this Company and Messrs. G. Claridge & Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents and the said Associate of the Managing Agents be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

II. *Resolved* that all contracts entered into between this Company and Messrs. Empire Dyeing and Manufacturing Company, Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents and the said Associate of the Managing Agents be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

III. *Resolved* that all contracts entered into between this Company and Messrs. Brady Engineering Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents and the said Associate of the Managing Agents be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

IV *Resolved* that all contracts entered into between this Company and "Commerce" (1935) Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

V. *Resolved* that all contracts entered into between this Company and The New City of Bombay Manufacturing Co., Ltd., an Associate of Messrs. W. H. Brady & Co., Ltd., the Managing Agents of the Company, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

VI. *Resolved* that all contracts entered into between this Company and its Managing Agents, Messrs. W. H. Brady & Co., Ltd., in respect of goods in which the Managing Agents regularly trade or do business or in respect of rendering of service in a technical capacity, and entered in the Register of Contracts maintained by the Company under Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents be and they are hereby authorised to retain all profit or other remuneration earned or to be earned by them from such business.

VII. *Resolved* that all contracts entered into by this Company for the sale, purchase, supply or rendering of any goods, power, freight, repairs or other services with other companies which either fall within the management of the Managing Agents, Messrs. W. H. Brady & Co., Ltd., or in whose net profit Messrs. W. H. Brady & Co, Ltd., participate as Managing Agents or of which Messrs. W. H. Brady & Co., Ltd. are Selling Agents, Representatives or Principal Agents or which are Associates of the Managing Agents, and entered in the Registers of Contracts maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents and such other companies be and they are hereby authorised to retain all commission, profit and other remuneration earned or to be earned by them respectively from such business as principals or agents.

VIII. *Resolved* that all contracts of insurance entered into by this Company with the Employers' Liability Assurance Corporation Ltd., Law Union and Rock Insurance Company Ltd., Concord of India Insurance Company Ltd., and the Insurance Office of Australia Ltd., of which the Managing Agents, Messrs. W. H. Brady & Co., Ltd., are the Principal Agents, and entered in the Register of Contracts maintained by the Company under Section 359 of the Companies Act, 1956, upto 19th March, 1957, be and they are hereby approved of and confirmed and that the Managing Agents be and they are hereby authorised to retain all commission and other remuneration earned or to be earned by them from such business as Principal Agents.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 20*th March*, 1957.

A member entitled to attend and vote is entitled to appoint a proxy, or, where that is allowed, one or more proxies to attend and vote instead of himself. A proxy need not be a member.

EXPLANATORY STATEMENT

Items I to VIII: Various contracts have been entered into by this Company with the Managing Agents, Messrs. W. H. Brady & Co., Ltd., and with Associates of the Managing Agents and with other companies in which the Managing Agents are interested as Managing Agents, Selling Agents or otherwise. Such contracts have been entered in the registers maintained by the Company under Section 359 and/or Section 360 of the Companies Act, 1956. It is thought advisable to apprise the shareholders of the contracts so entered into and to have the same approved and confirmed by them and to take the authority of the members to the Managing Agents and such other parties retaining the commissions or other remuneration earned or to be earned by them from such business as principals or agents. The shareholders are advised to avail themselves of the right of inspection of the said registers given by the Companies Act and in the accompanying Notice.

The nature and extent of the interests of the Directors of your Company and the Managing Agents in such contracts are as follows:—

Mr. Bhagwandas C. Mehta	III	Director and Shareholder.
Sir Jamsetjee Jejeebhoy, Bart.	V	Director and Shareholder.
Do. do.	VI	Shareholder.
Mr. Krishnaraj M. D. Thackersey	Nil	Nil
Mr. Maneklal Premchand	I, II, IV & V	Shareholder.
Mr. J. Symon	III	Director and Shareholder.
Do.	II & VI	Shareholder.
Mr. F. Edwards	I	Director.
Do.	II	Director and Shareholder.
Do.	VI	Shareholder.

The Managing Agents are interested in all the above Resolutions as follows:—

As Managing Agents: G. Claridge & Co., Ltd.

Empire Dyeing and Manufacturing Company, Ltd.

Brady Engineering Company, Ltd.

New City of Bombay Manufacturing Company, Ltd.

New Great Eastern Spinning and Weaving Company, Ltd.

As large Shareholders in "Commerce" (1935) Ltd.

As contracting parties in respect of equipment and stores sold to or purchased by this Company (Resolution VI)

and

As Principal Agents of the Insurance Companies mentioned in Special Resolution VIII.

By Order of the Board,
W. H. BRADY & CO., LTD.,
Managing Agents.

BOMBAY, 20*th March*, 1957.

To the shareholders of The Belapur Company, Ltd., and in particular to Mr. William Abel and Rajaballi Hasom Paroo & Sons, Ltd.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 27*th March*

There was no change in the conditions of the short-term money market during the week under review. If anything, the stringency was a little more pronounced. With the approach of the financial year-end there was a diversion of funds to Government coffers due to tax payments. While the supply was very limited, the seasonal demand for financing movement of crops had a pronounced effect on the market conditions and banks had to resort to substantially large borrowings from the Reserve Bank. There was, however, no change in money rates which were firmly held at the previous week's levels.

Inter-bank call money was keenly bid at 3½ per cent. among the Exchange and large Indian banks. The corresponding rate among the smaller Indian banks was also 3½ per cent. but stray transactions were reported at 3¾ per cent. House money and short-term deposits for one to six months continued to be done at 4 to 4½ per cent.

The Reserve Bank statement for the week ended 22nd March 1957 discloses a further contraction of Rs. 6.91 crores in notes in circulation and an increase of Rs. 8 crores in notes held in the Banking Department. Total notes issued are consequently higher by Rs. 1.09 crores, and this rise is covered by a similar increase in rupee coin. Rupee and foreign securities are again unchanged, but balances held abroad, in the Issue Department, have dropped by Rs. 5.01 crores. There has been a decline of Rs. 1.24 crores in Central Government deposits and a rise of Rs. 12.37 crores in deposits of other Governments. Loans and advances to Government are lower by Rs. 3.83 crores, while other loans and advances have gone up by no less than Rs. 15.86 crores, thanks to advances to Scheduled banks against usance bills to the tune of Rs. 15.14 crores. Repayments of maturing bills during the week amount to Rs. 2.12 crores, so that the outstanding advances against these bills show a rise of Rs. 13.02 crores.

The Scheduled banks' statement for the week ended 15th March 1957 shows a negligible fall in demand deposits of banks, while time deposits have gone up by Rs. 2.57 crores. Borrowings from the Reserve Bank are up by Rs. 2.52 crores, following the increase of Rs. 4.26 crores in borrowings against usance bills. As against a rise of Rs. 2.35 crores in total deposits, the increase in advances is of the order of Rs. 9.39 crores and in bills purchased and discounted Rs. 1.30 crores. Investments are lower by Rs. 44 lakhs. Cash balances do not show any marked variation, but money at call and short notice has improved by Rs. 1.44 crores.

The Gilt-edged market was extremely dull during the week under review, with no worthwhile business and hardly any variations in prices. The undertone was subdued with sellers over in almost all counters. 3 per cent. 1986 Conversion Loan was featureless at Rs. 74-5, while 3 per cent. 1970-75 was placed an anna lower at Rs. 87-5. 3 per cent. 1966-68 stood at Rs. 92-4, 3 per cent. 1964 at Rs. 94-7 and 3 per cent. 1963-65 at Rs. 94-3. 3 per cent. 1959-61 was stagnant at Rs. 97-12, 3 per cent. 1958 at Rs. 99-10 and 3 per cent. 1957 at Rs. 99-12. 3½ per cent. 1962 was unchanged at Rs. 97-13, 3¼ per cent. 1961 at Rs. 99-7, and 3½ per cent. 1964 at Rs. 98-7. 3½ per cent. 1965 was friendless at Rs. 98-4, as also 3½ per cent. 1967 at Rs. 98-8.

There was a slight improvement in rupee in terms of the U.S. dollar during the week. Banks' selling rate of ready dollars was marked down from Rs. 479¾ to Rs. 479¼, before closing at Rs. 479½ per $100. Similarly, the buying rate declined from Rs. 476½ to Rs. 476 before being placed at Rs. 476½ per $100. This is in tune with the trend in sterling abroad. Thus, in New York, spot sterling improved from $2.78.15/16-2.79.1/16 to $2.79.3/16-2.79.5/16, but closed lower at $2.79.1/16-2.79.3/16. Three months' forward gained on balance from $2.77⅛ 2.78 to $2.78 3/16-2.78.5/16 and transferable sterling from 275.75-275.85 cents to 276.15-276.25 cents.

TEA PRICES WEAKEN

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 21*st March*

Almost 1,600,000 lbs. were on offer in Sale No. 6 which was held on Tuesday, 19th March. Quality remained quite useful, but occasional invoices showed signs of a seasonal decline. The sale opened to a poor demand and exporters were very quiet. Internal buyers gave some support to the market, but prices declined for all types. Low medium and medium brokens were irregularly As. 4 to As. 8 easier, whilst better sorts occasionally showed a fall of as much as Re. 1. A few flavoury invoices met with some competition, but rates were below last. All fannings grades were again neglected but whole leaf teas met with useful demand at prices which were irregularly As. 2 easier. Withdrawals were heavy. The following are the quotations:—

	1957	1956
	Rs. a. p.	Rs. a. p.
Plain B.P.	1 12 0*	1 7 0
Low medium B.O.P.	1 14 0*	1 13 0
Medium B.O.P. ...	2 0 0*	2 2 0
Good B.O.P. ...	2 3 6*	3 6 0 to 3 8 0
Well made black leaf O.P.	2 6 6	2 7 0

*Nominal.

The average price realised in Sale No. 6 was Rs. 2-2-2 per lb., as compared with Rs. 2-5-11 per lb. in the corresponding sale of 1956.

London Market—Sale of 18th March 1957.—Coloury and well made teas firm to occasionally dearer. Others irregular and generally one penny lower.

Sale of 19th March 1957.—Coloury medium and well made teas firm to dearer. Others irregular and generally penny lower.

Colombo Market—Sale of 18th March 1957.—Off grades generally lower, particularly stalky kinds.

Sale of 19th March 1957.—Dimbula dickoya type brokens considerably lower, following inferior quality. Other sorts good demand irregular. Plain and light liquoring kinds slightly lower. Useful coloury kinds slightly dearer. Poorer liquoring fannings weakest feature gulf types dearer.

Calcutta Market—Export.—52,380 packages. Selective buying with fannings grades weakest feature. Price brokens best feature.

Internal.—17,230 dust. Good general demand. Powdery types half other descriptions one anna easier. Best C.T.C. strongest feature. 6,210 leaf. Fair demand one anna to As. 2 easier. Fannings weakest feature.

Export Quota.—The market improved to 42 pies early in the week, but has since declined to 40 pies at which figure business has been done.

Forthcoming Auctions.—Sale No. 7 will be held on Tuesday, 2nd April.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale G.*—350.000 lbs. Good demand. Commonest firm to dearer, mediums irregularly one anna easier, best liquoring lower."

SILVER ERRATIC

(From Our Own Correspondent)

BOMBAY, 27*th March*

Trading in the bullion market during the week under review was dominated by silver which moved widely on divergent news about import of Tibetan coins. On balance, the white metal showed a fractional gain. Gold, on the other hand, moved within a narrow range and the undertone was steady on encouraging offtake in the spot section.

Earlier in the week, silver displayed a reactionary tendency, thus maintaining the downward trend noted in the latter half of the previous week. There was nervous selling on reports of fresh inflow of Tibetan coins and apprehensions of further arrivals in the weeks to come. From Saturday onwards, there was a notable change in sentiment on reports that traders associated with import of silver coins from Tibet had turned buyers. This gave rise to conjectures that imports would slow down and prices recovered quickly. Just at the close there was again a slight setback.

Forward silver (13th April settlement) retreated from Rs. 178-13 to Rs. 175-4, but soon crept up to a high of Rs. 179-15 today. The closing was, however, lower at Rs. 179-2.

Ready silver gave way from Rs. 178-1 to Rs. 174-10 before recouping to Rs. 179-5 and closing at Rs. 178-8. The floating stocks of silver are reported to be 900 bars. The daily average offtake was about 20 bars.

Gold was featureless, but steady. Forward gold (11th April settlement) moved between Rs. 104-10 and Rs. 106-2, but finished a shade better over the week at Rs. 105-12.

Ready gold gained from Rs. 105-7 to Rs. 106-3, but closed at Rs. 105-12. The ready metal, which was at a discount of As. 3 under forward last week, came to command a premium of one anna yesterday, reflecting the encouraging offtake, particularly from upcountry centres. Today, however, it was quoted on par with forward. The floating stocks of gold are estimated at 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 3,500 tolas on an average.

New York silver price was maintained at 91⅛c. London spot silver was marked down from 79⅝d. to 79⅜d. and forward, after declining from 79½d. to 79⅜d. improved to 79½d. Wide movements were noted in gold. After a setback from 250s. 3½d. to 250s. 1½d. the yellow metal recovered to 250s. 3½d.

The following comparative table shows the trend of market during the week under review:

	27-3-1957	Highest	Lowest	20-3-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

LINSEED RISES SLIGHTLY

(Messrs. A. Bradley & Co.)

CALCUTTA, 25*th March*

There was a slight rise in linseed prices during the week, thanks to keener enquiries from crushers. A somewhat easier undertone, however, was displayed towards the close, owing to a fall in demand. With ready goods still very scarce, activity was rather limited. In the oil section, shippers were fairly active, chiefly for near positions, and prices advanced appreciably.

The latest available quotations are: March Rs. 21-12 and April-May Rs. 21 per maund.

COTTON FUTURES FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 27*th March*

Hectic purchases by bulls at markedly higher prices characterised the trading in the cotton futures market during the week under review. The buying spree was let loose principally by small volume of tenders against the Jarilla March contract which went off the board on Monday, lower crop ideas and fears of scarce quality cotton supplies in the wake of the continuously upward trend in mill consumption. The bullish fervour was fanned further by expectations of very small tenders against the maturing Vijay April contract. The tendering differences in respect of this contract fixed yesterday were considered by traders to be on the high side.

The Jarilla March contract, as already stated, went off the board on Monday, the last rate at which transactions were put through being Rs. 820, that is, the official ceiling price. Total tenders against the contract aggregated 2,150 bales, this quantity being the lowest on record in recent years. The total tenders against I.C.C. Jarilla February 1955, it will be recalled, amounted to 5,950 bales. Trading in the contract commenced on 18th June 1956 at Rs. 681-4. The lowest level touched was Rs. 618-8 on 28th December and the highest Rs. 820 on the day of expiry.

Jarilla March opened the week at Rs. 783, as against the previous close of Rs. 785, and steadily advanced, on sustained buying support, to Rs. 820 on the 25th inst., before going off the board at the same rate. Influenced by the firmness in the March contract, Jarilla May opened at Rs. 686 and on speculative support improved to Rs. 694 yesterday. Opening higher at Rs. 699-8 today, it spurted to Rs. 719 before closing at Rs. 712. M.G. Vijay forged ahead from Rs. 862 to Rs. 877 on the 23rd inst. Uncertainty regarding fixation of tendering differences in respect of the contract led to a fall in values, the contract receding to Rs. 861 on Monday. Tendering differences fixed yesterday were bullishly interpreted and this induced a sharp buying support which lifted the quotation to Rs. 899 today. The closing rate was, however, lower at Rs. 887-8. Vijay June followed more or less the same trend. The contract opened at Rs. 822 and gradually rose to Rs. 828-8 yesterday. Opening today at Rs. 836, it spurted, on strong bull manipulation, to Rs. 850 before winding up the day at Rs. 843-8.

The following is the trend of prices of the contract during the week:

(In rupees per candy of 784 lbs.)

		27-3-57	*High*	*Low*	20-3-57
Jarilla (March)	...	820 (25-3-57)	820	783	785
Jarilla (May)	...	712	719	684	687½
Vijay (April)	...	887½	899	861	862½
Vijay (June)	...	843½	850	818	826

The spot market continued to rule firm. Although spinner demand was fairly active with interest confined to good quality lots of 0394, 197/3, Vijay, Jarilla 216F, 320F, etc., the high rates prevailing continued to limit turnover. Some prominent mills were reported to have shifted their buying to upcountry centres where prices were considered to be comparatively lower. Export inquiry was noted for Bengal *Deshi* and Dholleras. There was moderate demand for spot lots of U.S. and East African and some business was reported in Californians for August shipment and beyond, subject, however, to availability of import licences.

It is reported that an agreement has been signed between the Government of India and the Egyptian Trade Delegation under which 20,000 bales of Egyptian cotton will be shortly imported by India. Import of an additional 20,000 bales will be considered, if the present agreement is carried out satisfactorily. No official announcement in this respect has, however, been made up to the time of writing.

The following are the latest available spot rates —in rupees per candy of 784 lbs.—for some varieties of cotton:

Bengal *Deshi* 750; Berar Jarilla 830; Khandesh 840; Vijay 945; Oomra *Deshi* 800; Moglai 775.

In contrast to the steady trend noted last week, the Karachi cotton futures market ruled easy during the week under review. The easiness was due to speculative selling induced by larger March notices. N.T.R.G. March contract expired at Rs. 76-4 on the 26th inst. N.T.R.G. May which had closed at Rs. 80-11 last week eased to Rs. 79-13. Spot values, however, remained steady. The following are the latest available spot rates—in rupees per 82 lbs.—for a few popular varieties of Karachi cotton prevailing at Karachi:

Sind *Deshi* 87; Punjab *Deshi* 78-8; 4F Punjab Roller 83-5; S.G. 86-13; L.S.S. Punjab Roller 85-5; S.G. 88-13; N.T.R.G. 83-13; S.G. 91-5; 289F Punjab Roller 88-5; S.G. 98-13.

The Alexandria cotton futures market continued to rule easy during the week, thanks to lack of overseas interest and small local demand. Sentiment was also adversely affected by limited daily turnover in the spot market. Karnak March went off the Board on the 25th inst. Export sales from the commencement of the season till the end of February aggregated 453,751 bales (of 730 lbs.), as compared with 720,655 bales in the corresponding period of the previous season. Actual shipments during the period were 292,844 bales, as against 504,459 bales a year before. The latest available rates—in tallaris per lb.—from Alexandria are as under, the figures in brackets being last week's closing quotations:

Karnak: May 114.35 (115.10); July 114.50 (114.90). *Ashmouni*: April 80.10 (81.60); June 80.90 (82.05); August 81.20 (82.00).

Cotton futures values at Liverpool registered appreciable gains. Although there was scattered hedge selling, it was absorbed by short covering. Commission house buying found offerings limited.

Sentiment was also helped by rumours of higher Commodity Credit Corporation prices for forward deliveries. Egyptian Karnak was neglected and Sudan ruled easy. Turnover in ready and shipment cotton continued to be small. Interest was confined to lower grade American, Turkish, Russian, East African and Sudan varieties. Indian styles evoked little interest. The Liverpool Cotton Association has decided to suspend trading in the local Egyptian futures contract when the current position runs out, as trading under present monetary conditions has virtually ceased. The latest available rates—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: March-April 26.27; May-June 26.38; July-August 26.18; October-November 25.98. *American Cotton Mixed Growth Contract*: March-April 26.27; May-June 26.45; July-August 26.25; October-November 26.01. *Egyptian Karnak*: March-April 60. *Sudan Lambert*: May-June 42.75; July-August 41.75.

The New York cotton futures market put on a cheerful appearance during the week. The main influencing factor was the belief that entries into the Soil Bank programme would be larger than expected. The trade buying and short covering induced by this found offerings limited. The spot values also improved.

It is reported that, as on 7th inst., the catalogued stocks of Upland cotton of the Commodity Credit Corporation were 3,152,000 bales. It was made up of 2,757,000 bales of the 1955 crop and 395,000 bales of the 1954 and earlier crops. Of the total catalogued cotton, raingrown stocks were 2,894,000 bales and irrigated stocks 258,000 bales. Only 455,000 bales or 14 per cent. of the total catalogued stocks were Middling and higher grades of stapling 1.1/32" and longer. The Commodity Credit Corporation has yet to catalogue 3,250,000 bales of 1955 crop. Exports continued to make good progress. During the week ended the 14th inst., 155,496 bales were exported which made the aggregate figure for the season thus far 5,186,930 bales. During the corresponding period last season, total exports were only 1,000,372 bales.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	26-3-57	19-3-57	11-3-57
Spot	35.45	35.40	35.00
March	—	—	34.70

October	33.36	33.14	—

SUGAR DULL

(From Our Own Correspondent)

BOMBAY, *27th March*

Dull conditions, similar to those noted last week prevail in the sugar market. Prices would have registered a distinct fall but for the unexpected delay in the issue of monthly release. The release has been delayed by about a week and trade circles anticipate that it may be issued before the month is out. Meanwhile, some traders have started guessing again on the probability of levy of additional excise duty on sugar. The deals in sugar put through, however, have tangibly failed to carry the market with them for the present. Arrivals of indigenous sugar during the week under review amounted to about 22,900 bags.

Bold grain sugar spurted by a rupee to Rs. 93-Rs. 97 per bag, inclusive of sales tax. Small and medium grains were fully maintained at Rs. 88 and Rs. 89-Rs. 91, respectively.

In the forward section, *vaisakh* delivery contract receded from Rs. 92-2 to Rs. 91-12 and is quoted today at this price. The principal contributory factor for the fall was the very recent sale of 'C' 29 grade sugar by a newly established co-operative sugar factory in Bombay-Deccan at Rs. 82-4 per bag ex-mill.

YARNS DEPRESSED

(From Our Own Correspondent)

BOMBAY, *27th March*

Depressed conditions prevailed in the yarn market during the week under review. Forced by the continued stringency in money market, stockists were busy liquidating their holdings, while buyers were scarce, thanks to persistent slackness in enquiries from consuming centres. Turnover, therefore, was greatly restricted, the actual offtake being at a rate of not more than 600 cases per day, and prices marched further downward. The undertone of the market was distinctly bearish.

Rayon yarns encountered selling and suffered a break in values. Dull cones 120 Snia for April delivery receded by Rs. 4 to Rs. 799. 150 bright April delivery were hammered down by Rs. 17 to Rs. 612. In the spot section, 150 Italy dropped nine pies to Rs. 3-10-9. 120 Italy fell by half an anna to Rs. 4-1. 120 Japan was quiet at Rs. 4-4, and 150 Japan at Rs. 4-1-3. Among indigenous yarns, National Rayons 120 bright cones 1st grade declined by 6 pies to Rs. 3-11. 150 bright cones 1st grade lost 3 pies to Rs. 3-5-3.

Staple fibre yarns lacked support. 40 x 2 April delivery fell by Rs. 9 to Rs. 620. June delivery was nominally quoted at Rs. 622. Although business in this contract commenced many days ago, no transactions have so far been put through. Spot 40 x 2 Kohinoors decreased by 15 pies to Rs. 3-4-9. Centurys shed 11 pies to Rs. 3-4-7. Citys and New Greats eased by 9 pies each to Rs. 3-4 and Rs. 3-3, respectively. Among foreign yarns (80 x 2) Paramounts declined by 18 pies to Rs. 5-3. Fujis lost a similar amount to Rs. 5-4-6.

Despite expectation of reduced supplies of yarn, consequent on reports of a 25 per cent. cut in electric supply in the Salem area, the cotton yarn section ruled weak. 40 counts were particularly depressed, Moderns receding by As. 8 to Rs. 27-8 and Gokaks by As 2 to Rs. 27. Among 30s, Edwards and Indus both declined by As. 4 to Rs. 21-8. Ten counts Moderns were neglected at Rs. 15 as also Podars at Rs. 14-12. Twenty counts Maduras lost an anna to Rs. 19-6. Moderns were done As. 2 lower at Rs. 19. Among 60s, Moderns were quiet at Rs. 61-8 and Finlays at Rs. 61. Raghuvamshis, however, evoked some support and put on As. 4 to Rs. 57-8. Among 80s, Mahindras were subjected to selling and declined by As. 8 to Rs. 74. Moderns receded by As. 4 to Rs. 76-8. Finlays were dull at Rs. 81-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	27-3-1957	20-3-1957
	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)—**		
120 Dull Cones Snia April	799 0	803 0
150 Bt. Cones April	612 0	629 0
120 Japan (per lb.)	4 4	4 4
150 Japan (per lb.)	4 1½	4 1
120 Italy (per lb.)	4 1	4 1½
150 Italy (per lb.)	3 10½	3 11½
Staple fibre yarn **(per case of 200 lbs.)—**		
40 x 2 April	620 0	629 0
40 x 2 June	622 0	—
40 x 2 New Greats (per lb.)	3 3	3 4

60s Raghuvamshi	57 8	57 4
80s Modern	76 8	76 12

CASTORSEED FIRM AT CLOSE

(From Our Own Correspondent)

BOMBAY, *27th March*

The oilseeds market moved irregularly during the week under review. The groundnut and linseed sections ruled distinctly bearish, while the castorseed and cottonseed sections exhibited a firm trend. Groundnut encountered long liquidation in the face of limited support from crushers, although there was a slight recovery towards the close in sympathy with castorseeds. Linseed met with persistent offerings. Castorseeds, however, forged ahead to higher levels on bear covering and support from traders who had applied put options. Cottonseed was well maintained, owing to spurt in cotton prices.

Groundnut May contract opened the week steady at Rs. 172-4 and improved the same day to Rs. 173-10. After declining to Rs. 170-8 on the 25th inst. it rose again on bear covering to Rs. 173 yesterday, before closing today at Rs. 172-8. Over the week, it thus lost a rupee. Spot Bold F.A.Q. receded by As. 10 to Rs. 34-6. Groundnut oil ex-mill was quoted As. 8 lower at Rs. 19.

Linseed May contract commenced the week at Rs. 29-8. It declined to Rs. 28-12 on the 25th inst. but recovered to Rs. 29-5 before finishing As. 3 lower. Spot Bold ready was done As. 10 lower at Rs. 28-12. Linseed oil ready was done at Rs. 16-4, as against Rs. 16-2 last week-end.

Castorseeds May contract opened the week at Rs. 160-12 and reached a high of Rs. 163-8 on the same day. It, however, sagged subsequently to touch the lowest level of the week on the 25th inst., that is, Rs. 158-4. During the last two sessions of the week, it spurted and touched today the high of Rs. 167, before closing at Rs. 164-8. During the week, the contract put on Rs. 2-8. Spot Madras quality slided down by As. 2 to Rs. 33-6. Oil B.S.S. was done at Rs. 20-8 as against Rs. 20-4 last week.

Cottonseed May (futures) shot up from Rs. 101-12 on the opening day to Rs. 104 on the following day. After receding to Rs. 101-12 on the 25th inst. it recovered to Rs. 103-8 on the 26th. Today, the contract moved up further to Rs. 105-12, but finished lower at Rs. 104-12. The net gain over the week was thus Rs. 2-8.

Kardi seed Bold was done at Rs. 22-4 or As. 4 higher than last week. *Niger* seed Madras was quoted at Rs. 28-14, as against Rs. 29 a week ago.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	27-3-1957	20-3-1957	12-3-1957
	Rs. a.	Rs. a.	Rs. a.

BLACK PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, *26th March*

Malabar black pepper during the week fluctuated narrowly in slow dealings both at primary centres and at Bombay. Scattered trade selling, following easier advices from Singapore, was absorbed by the bull who was reported trying to maintain the market despite poor overseas inquiries. The bull who is long both in delivery and in A.S.T.A. is said to be waiting for an opportunity to unload. He is trying to manipulate, but, without support from New York, his efforts are so far unsuccessful. He has so far not been able to excite New York buyers nor the local shorts to action. The shippers for April contract with the U.S.S.R. are also reported to have been mostly covered.

Alleppey and Cochin are barely steady at Rs. 531-4 and Rs. 92-4, respectively, with business poor.

Singapore is down to Str.$70 with pressure of arrivals from Sarawak. London is also reported to have reduced its price from 19d. to 18d. for Sarawak Black. Spot in New York is nominally quoted at $0.24½. The general sentiment in New York is to wait and watch for new incentives. Dealers and grinders there are buying sparingly, pending Sarawak new arrivals.

With the proximity of the monsoon, further price erosion in Malabar black is generally expected, if no sizable buying comes forth from New York. Refusal of licences by the Reserve Bank of India to about 28 banks with the prospect of more notices to many more in the former Travancore-Cochin State is likely to affect pepper economy in that State.

In A.S.T.A., March and April were done at $0.23½ and $0.23⅝, respectively, while April-May-June were offered at $0.24.

In the delivery section, business turnover is rather poor and whatever was offered by bears was taken up by the bull, as the bull feared that any weakness in Bombay was likely to be reflected at Cochin, Alleppey and New York.

Today's nominal quotations are: Ready delivery Rs. 76 per Bengal maund; April Rs. 528-Rs. 533 and May Rs. 535-Rs. 540 per candy of 5½ cwts.

KIPS MOVE UP

(From Our Own Correspondent)

MADRAS, *25th March*

Trading in kips with the U.K. continued to be restricted, due to resistance to price increases demanded at origin. Shippers were active buyers in the local market and arrivals met with brisk clearance at prices slightly higher than those in the preceding week. U.K. dressers paid advances in price on selective purchases. A few top class E.I. tanners sold for three to four months' shipment at full prices. This fact, coupled with poorer arrivals from the tanneries led a section of the trade to think that prices would hold, despite large arrivals of stocks in the U.K. in a bunch during March.

Demand for cow calf and buff calf was patchy and that for buff hides poor.

In the March London tanned skins public sales, good descriptions of goat skins met with brisk demand at advanced prices, while poorer sorts declined by 6*d.* per lb. Sheep skins sales are in progress.

In the local market, prices ruled steady and are likely to weaken, if the proposed duty of 15 per cent. on E.I. tanned skins imported into France is imposed.

HIDES FULLY STEADY

(From Our Own Correspondent)

KANPUR, *23rd March*

During the week under review, the hides and skins market ruled fully steady. New arrivals of wet cow and buff were considerable, while those of sheep were not as plentiful as in the previous week. Demand for upper grade of cow, buff and sheep was quite strong. The main purchasers were the local tanners. The country tanners made heavy purchases of lower grade cow, whereas Madras dealers evinced keen interest in upper grade goat.

The latest available quotations are: Wet salted cow 1st grade Rs. 340, 2nd grade Rs. 280 and 3rd grade Rs. 145 per score; wet salted buff 1st grade 2 lb. 2 ozs., 2nd grade 2 lb. 4 ozs. per rupee; Goat, 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 225 per 100 pieces; sheep skins 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

FOODGRAINS TEND TO DECLINE

(From Our Own Correspondent)

HAPUR, *25th March*

Quiet conditions prevailed in the foodgrain markets during the week, due to expectations of new crop coming in the market shortly. Harvesting of crops have begun in all parts of Uttar Pradesh and new grain arrivals are being received in east U.P. Untimely rains, accompanied by hailstorms during the week in west U.P., Delhi and some parts of Punjab, have damaged the standing wheat and barley crops to some extent. The Union Food Ministry, however, expects a slightly higher production this year than last year. The all-India first estimate of *kharif* cereals for 1956-57 indicates an increase of 6.3 million acres and prospects for *rabi* crop are encouraging.

Wheat prices declined fractionally to be quoted at Rs. 16-2 per maund for *dara* quality and Rs. 17 for farm produce. Wholesale *khati* was transacted at Rs. 15-12. Local stock was 2 *khaties* only on Friday, the corresponding figure last year being 10 *khaties*. New crop arrivals of wheat will still take about a month to reach the market. Rice prices ruled quietly steady during the week. On Monday *basmati* was quoted at Rs. 23 to Rs. 27, *Mainpuri* at Rs. 20-14 and coarse at Rs. 16-8 per maund.

With the beginning of arrivals of new gram from Madhya Bharat and on good crop prospects here as well as in the Punjab, gram prices ruled quietly easy during the week, although local stock was very poor. Harvesting of barley and *bejhar* is being done on a large scale and new crop arrivals will begin after a week. Maize and *bajra* are losing their seasonal demands and prices too are recording a downward trend. *Jowar* prices, however, ruled steady, due to poor stocks and the prevailing prices on Monday were:—gram Punjabi Rs. 13-10; new Madhya Bharati Rs. 13-4; barley Rs. 13; *bejhar* Rs. 13; maize Rs. 13-12; *bajra* Rs. 14; *jowar* Rs. 12-10 to Rs. 13-8; *guwar* Rs. 11.

Peas prices recorded a fall during the week, as arrivals of new crop in the market all over the State of U.P. had increased, but the quality offered was still poor and damp. *Arhar* prices also sagged slightly, as were those of other pulses. Peas *dara* new was done at Rs. 12-6 to Rs. 12-8, *arhar* at Rs. 12-6, *urd* at Rs. 18 to Rs. 20, *moong* at Rs. 14 to Rs. 15 and *masoor* at Rs. 15 per maund.

While *arhar* futures improved, other pulses ruled quietly both ways during the week in heavy speculative bouts of buying and selling. The latest quotations on Monday were: Peas *jeth* Rs. 10-4-3; peas farm *jeth* Rs. 10-8-9; *arhar jeth* Rs. 11-0-9; *urd baisakh* Rs. 18-7.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *25th March*

Sugar prices ruled quietly steady during the week on prospects of good exports. The Union Food Minister has informed the Lok Sabha that the Government at present contemplates allowing export of sugar upto 100,000 tons, out of which the Government has allowed 46,000 tons so far. Inquiries for purchase of Indian sugar has been received from a number of countries in Europe and West and East Asia. Crushing in factories is in full swing, as, due to depressed conditions in ready *gur* prices, factories are attracting enough cane as yet. Sowings of cane for the next season has begun. Demand for crystal sugar was reported from Bombay and Madras side, but on a small scale.

The latest prevailing mill delivery prices are: Jaswant Rs. 28-10; Simbhauli Rs. 28-12; Mawana Rs. 28-8 to Rs. 29; Daurala Rs. 29-4; Amroha Rs. 28-4; Bijnore Rs. 28-4; Mansoorpur Rs. 28-10 to Rs. 30; Rampur Rs. 31; retail Rs. 30-10 per maund.

The *khandsari* market continued to rule dull and depressed with negligible demand and increasing stock positions. Inferior grade was quoted between Rs. 18 and Rs. 20 and superior quality upto Rs. 25 per maund.

Ready *gur* prices were mostly depressed during the week, although local arrivals were small at an average of 1,000 maunds daily, but outside buying inquiry being slack, price trend continued to be weak. Despatches to consuming centres of Bihar and Gujerat were mostly of *gur* brought here from nearby centres in Bulandshahr district where prices were quoted below Rs. 9 per maund for best quality, as against Rs. 9-8 to Rs. 9-12 per maund quoted at Hapur.

Notice

THE STANDARD-VACUUM REFINING COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent. Debentures 1964-68 will be closed for transfers from 16th April 1957 to 30th April 1957, both days inclusive.

Secretary and Treasurer,
State Bank of India.
Agents for the Standard-Vacuum Refining Co. of India Ltd., for the management of the Debentures.

STATE BANK OF INDIA,
MUNICIPAL LOANS SECTION,
APOLLO STREET, FORT,
BOMBAY, *30th March* 1957.

THE CENTRAL WAREHOUSING CORPORATION

(This is an advertisement. No prospectus is required since this is a statutory Corporation.)

The Central Warehousing Corporation has been established with effect from 2nd day of March, 1957, in pursuance of section 17(1) of the Agricultural Produce (Development and Warehousing) Corporations Act, 1956. Its head office is at New Delhi.

AUTHORISED CAPITAL

2,00,000 Shares of Rs. 1,000 each .. .. Rs. 20,00,00,000

PRESENT ISSUE

1,00,000 Shares of Rs. 1,000 each .. .. Rs. 10,00,00,000

The subscription list will open on the 29th March, 1957, and will close on 31st May, 1957. All applications should be made to the Vice-Chairman, Central Warehousing Corporation, c/o Ministry of Agriculture, New Delhi, on application forms which can be obtained from him.

Ten per cent. of the value is to be paid on application and 10 per cent. on allotment and the balance as and when called for. The allotment is expected to be completed by the 30th June, 1957.

Of the capital issued in the first instance :—

(i) The National Cooperative Development and Warehousing Board will subscribe for 40,000 shares .. .. Rs. 4.00 Crores
(ii) The State Bank of India may subscribe 10,000 shares .. .. Rs. 1.00 Crores
(iii) Scheduled Banks may subscribe 12,500 shares .. .. .. Rs. 1.25 Crores
(iv) Cooperative Societies may subscribe 2,500 shares .. .. Rs. 0.25 Crore
(v) Insurance Companies, investment trusts and other classes of financial institutions may subscribe 30,000 shares .. .. Rs. 3.00 Crores
(vi) Recognised associations (Recognised by the Central Government under Section 6 of the Forward Contracts (Regulation) Act, 1952) and Joint Stock Companies dealing in agricultural produce may subscribe 5,000 shares Rs. 0.50 Crore

If any of the shares referred to in clauses (ii) to (vi) above remain unallotted, they may be subscribed by the National Cooperative Development and Warehousing Board and the State Bank of India in such proportion as may be agreed upon between them. No single institution belonging to any class referred to in clauses (ii) to (vi) above shall be entitled to subscribe for more than twenty-five per cent. of the share capital reserved for that class. The shares of the Corporation can be subscribed to only by the institutions mentioned above and *not by individuals.*

The shares of the Corporation are *not transferable* except to the National Cooperative Development and Warehousing Board, the State Bank of India, any Scheduled Bank, the Life Insurance Corporation of India, any investment trust or other financial institution or any Cooperative Society or any recognised association or Joint Stock Company dealing in agricultural produce.

GOVERNMENT GUARANTEE

The shares of the Corporation are guaranteed by the Government of India as to the repayment of the principal and the payment of annual dividend at such minimum rates as fixed by the Central Government by notification in due course. The payment of annual dividend at a minimum rate of 3 per cent. has also been guaranteed by the Central Government.

RAISING OF FUNDS

The Corporation can with the prior approval of the Government of India issue and sell bonds and debentures carrying interest, for the purpose of raising funds to the extent of ten times the amount of the paid-up share capital and reserve fund of the Corporation.

OBJECTS

The Central Warehousing Corporation may:

(a) acquire and build godowns and warehouses at such suitable places in India as it thinks fit;
(b) run warehouses for the storage of agricultural produce, seeds, manures, fertilisers and agricultural implements offered by individuals, Cooperative Societies and other institutions;
(c) arrange facilities for the transport of agricultural produce to and from warehouses;
(d) subscribe to the share capital of a State Warehousing Corporation (to be set up in each State except in Jammu and Kashmir in due course);
(e) act as agent of the National Cooperative Development and Warehousing Board or of the Government for the purpose of the purchase, sale, storage and distribution of agricultural produce, seeds, manures, fertilisers and agricultural implements; and
(f) carry out such other functions as may be prescribed.

It is proposed to set up about 100 warehouses during the period 1957-58 to 1960-61 of capacity ranging between 10,000 and 20,000 tons thus affording storage facility for nearly 1.5 million tons of produce.

The receipt issued by the warehouseman will be negotiable instrument.

MANAGEMENT

The general superintendence and management of the affairs and business of the Central Warehousing Corporation will rest in a Board of Directors, who with the assistance of an Executive Committee and a Managing Director will exercise all the powers and discharge all the functions which may be exercised by the Central Warehousing Corporation.

The Board of Directors of the Central Warehousing Corporation will include, among others: one Director to be elected in the prescribed manner by each of the following classes of shareholders, viz:—

(i) Scheduled Banks, (ii) Cooperative Societies, (iii) Insurance companies, investment trusts and other financial institutions, and (iv) Recognised associations and Joint Stock Companies dealing in agricultural produce.

The four Directors to be elected referred to above will be nominated by the Central Government for the first constitution of the Board of Management in consultation with the National Cooperative Development and Warehousing Board. The Central Government have accordingly notified that the following Directors shall constitute the initial Board of Management of the Central Warehousing Corporation:—

1. Secretary, Ministry of Agriculture, Government of India, New Delhi (*Chairman*).
2. Joint Secretary in charge of Cooperation, Ministry of Agriculture, Government of India, New Delhi (*Vice-Chairman*).
3. Financial Adviser to the Ministry of Agriculture, Government of India, New Delhi.
4. Secretary, Ministry of Production, Government of India, New Delhi.
5. Shri B. VENKATAPPIAH, Deputy Governor, Reserve Bank of India, Bombay.
6. Shri P. S. RAJAGOPAL NAIDU, M.P., President, North Arcot District Cooperative Marketing and Supply Society, Vellore, South India.
7. Prof. D. G. KARVE, c/o Reserve Bank of India, Bombay.
8. Additional Member (Commercial) Railway Board, Government of India, New Delhi.
9. Consulting Engineer (Road Development) Ministry of Transport, Government of India, New Delhi.
10. Shri B. P. PATEL, Managing Director, The State Bank of India, Bombay.
11. Shri A. M. WALKER, General Manager, Punjab National Bank Limited, Delhi.
12. Shri RAGHURAJ SWARUP, Director, Life Insurance Corporation of India, Muzaffarnagar, U.P.
13. Shri KESHAV PRASAD GOENKA, Goenka Niwas, 31, Netaji Subhas Road, Calcutta.

AUDIT

The accounts of the Corporation shall be audited by not less than two auditors duly qualified to act as auditors of companies under sub-section (i) of section 144 of the Indian Companies Act, 1913. These two auditors will be appointed by the Government of India; one of these will be appointed in consultation with the Comptroller and Auditor General of India.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.= Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations. x.d.=Ex. Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

TRENDS IN SOVIET INDUSTRY

CONCENTRATION OF PRODUCTION

By Prof. N. Nekrasov

WHAT we mean by concentration of production is its concentration in larger and larger plants all the time. Such plants are equipped with the latest improved machines, automatic machine tools and automatic transfer machines, which sharply increase labour productivity. The main feature of concentration of production is not so much the number of workers employed in the large plants as the volume of output. In the past 20 years, the number of enterprises in the U.S.S.R. employing 500 workers or more went up from 6.9 per cent. to 10.6 per cent., while the share of these plants in total output increased much more. Productivity of blast furnaces, for instance, increased almost 25 times in the last 30 years. That, of course, has changed the very conception of a large iron and steel works.

The output of pig iron provides a graphic picture of the concentration of production. Between 1940 and 1955, the number of iron and steel plants with an annual output of under 100,000 tons of pig iron each declined by half, and the number of plants with an annual output from 300,000 to 500,000 tons was doubled. In 1940, there were but four plants with an annual capacity of more than one million tons of pig iron and, in 1955, there were twelve.

In the current sixth five-year period, productivity of blast furnaces will rise still more; in particular, blast furnaces of 1,513 and 2,000 cubic metre capacity will be put into operation. The same holds true for the steel-making industry. Whereas in 1928, there were only five mills which produced from 200,000 to 500,000 tons of steel, in 1955, there were 26 and 9 with an output ranging from 500,000 to a million tons. Today open-hearth furnaces of 70 to 100-ton capacity are to be replaced by furnaces holding a charge of 250 and 500 tons. The capacity of electric furnaces in operation in 1950-55 did not exceed 40 tons, but today production is being mastered of furnaces of 180-ton capacity.

The process of concentration of production is also going on in the engineering industry, and helping the process along is the development of large and highly productive machines, machine tools, presses and other equipment. To illustrate, in the first Five-year Plan period, the Soviet electric-power machinery industry put out steam turbines of no more than 2,500 to 4,000-kw. capacity, whereas in the fifth five-year period, turbines of 150,000-kw. capacity were manufactured, and today production is being mastered of steam turbines of 200,000 and 300,000-kw. capacity and water turbines of 200,000 and 250,000-kw. capacity.

Electric Stations

The development of the power machinery industry makes it possible to increase the concentration of power production and raise the productivity of electric stations. The Kuibyshev and Stalingrad hydro-electric stations with an aggregate capacity of 4,400,000 kw. will supply the country ten times as much electricity as all electric stations in pre-revolutionary Russia produced together. Thermal electric stations under construction will have a capacity as high as 1,200,000 kw. A characteristic feature in the construction of atomic electric stations is that they are being built as very large enterprises. Under the sixth Five-year Plan, five atomic electric stations are to be built, ranging in capacity from 400,000 kw. to 600,000 kw.

Concentration of industrial production can also be observed in the cement-making industry. In the fifth five-year period, the productive capacity of most cement factories was 200,000 tons, with only nine having a capacity of over 600,000 tons a year. Cement factories under construction at the present time are large industrial enterprises with an annual capacity of up to 2 million tons.

The growing concentration of industrial production is reflected in the country's much higher technical and economic indices. Capital investments per unit of output are becoming considerably lower, labour productivity is going up steeply, and cost of production, expenditure of raw and other materials, electricity, fuel, and so on are dropping.

The cost of production of the electricity to be put out by the large stations being built on the Angara and the Yenisei rivers will on the average come to a quarter of the cost of electricity produced by thermal electric stations. Another advantage of large-scale production is that it provides the best conditions for introducing new techniques and modernising equipment and also for line production.

Concentration of industry in the U.S.S.R. does not lead to unemployment, nor does it cut down employment. Planned development of the Soviet economy, which is based on public ownership of the means of production, far from reducing the number of workers as automation is regularly increasing, on the contrary, shows a rise in the number of employed from year to year. In 1932, workers employed in U.S.S.R. industry numbered a little over 6 million, in 1937, the number was close to 8 million; in 1950, it was 11,308,000, and in 1955, 14,275,000.

SURVEY

(*Concluded from page 610*)

co-operatives of industrial workers for construction of tenements for industrial workers governed by the Factories Act, 1945, and certain categories of mine workers. Up to the end of December 1956, a total amount of Rs. 24.75 crores had been sanctioned, of which as much as Rs. 14 crores had been disbursed under this Scheme. For the year under review, the corresponding figures were Rs. 2.44 crores and Rs. 76 lakhs. While 88,000 tenements have been authorised for construction so far, 47,000 are reported to have been completed. Under the Low Income Group Housing Scheme, on the other hand, those whose income does not exceed Rs. 6,000 per annum are expected to be benefited. The total disbursements under this Scheme work out to Rs. 13.44 crores, of which Rs. 2.3 crores were disbursed in 1956-57.

A different approach is, however, adopted in the case of rural housing, in view of the magnitude of the problem in relation to the available resources. It has been decided to undertake, in the first instance, certain pilot projects in selected areas, with a view to determining the lines of more intensive development under the Scheme. A composite scheme for the establishment of pilot projects is being drawn up.

Yet another noteworthy development was the expansion of activities of the National Buildings Organisation which promotes national approach to the problems of housing and helps to economise building costs through research in techniques and materials. Two notable achievements of this Organisation were the starting of a quarterly journal devoted to housing and building technology and the taking up of some 30 problems of urgency for investigation.

TEXTILES

(*Concluded from page 616*)

mediaries in the auction system. Unlike the Indian merchants who actually buy the wool from the farmers, these brokers merely act as agents for the growers, who retain ownership of the wool until it is auctioned. These brokers maintain large warehouses at the auction centres, where the wool is stored and made available for inspection before the sales. In addition, brokers are willing, for a small fee, to unpack and re-class wool for growers who are not very skilled in classing or who have not enough wool of each separate quality to fill up their bales. Most of these brokers are commercial companies, though brokerage functions are also performed by farmers' co-operatives, these being particularly important in South Africa. In Australia and New Zealand, the brokers actually conduct the auctions on behalf of their clients, and the sales programmes are arranged by the brokers, while, in South Africa, the auctions are conducted by the municipal authorities.

Sales are held at short intervals throughout the selling season (September-June for Australia, September-May for South Africa, and October-May for New Zealand). In the mornings of the actual sale days, buyers representing principals in many nations move up and down the rows of bales in the wool warehouses, inspecting and valuing. Later, buyers go to the Wool Exchange, where the actual sales by auction take place. After the sale, invoices are sent to buyers, bales are sampled, wools re-packed and the bales are sewn up, pressed and bound, to await shipment or local delivery. Most of the wool sold in the Southern Dominions actually goes to manufacturers overseas, the majority of whom will have bought it on their own account, acting either through their own buyers or through buying brokers operating on a commission basis. Some wool is bought at the auctions by export merchants for re-sale in the consuming countries, but, unlike the Indian export merchants, these handle only a small proportion of the total trade. A number of Dominion wool growers consign their wool to the London auctions, where they sometimes obtain slightly higher prices than those prevailing at sales in their own countries, but the additional work and costs involved in shipping their own wool are sufficient to deter all but the largest producers from this course.—*Exclusive to* Commerce. *By courtesy of the International Wool Secretariat.*

Notice

THE LAKHSHMI COTTON MANUFACTURING COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-second Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Monday, 15th April 1957, at 4.30 p.m., for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1956.

(2) To sanction the declaration of a Dividend.

(3) To appoint Auditors for the current year and to fix their remuneration.

(4) To confirm the appointment of Mr. E. S. Vernon-Jones as Director.

(5) To elect a Director in place of Mr. D. M. Khatau, who retires by rotation but being eligible offers himself for re-election.

(6) To elect a Director in place of Sir Chunilal V. Mehta, K.C.S.I., who also retires by rotation. Sir Chunilal V. Mehta, although otherwise eligible for re-election, having attained the age of 76 years, is not eligible for reappointment, unless his appointment is made or approved by the Shareholders in general meeting in terms of Section 281 of the Companies Act, 1956.

Special Notice is hereby given that it will be proposed as an Ordinary Resolution that Sir Chunilal V. Mehta, K.C.S.I., be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him.

By Order of the Board of Directors,

E. S. VERNON-JONES,
Chairman.

BOMBAY, 15*th March* 1957.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956:—

The Resolution in connection with the re-election of Sir Chunilal V. Mehta, K.C.S.I., which will be proposed as an Ordinary Resolution, under item (6) is as under:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation, be and is hereby appointed a Director of the Company, and it is hereby specifically declared that the age limit of 65 shall not apply to him."

Sir Chunilal V. Mehta has been a Director of the Company since January 1941, and his long and distinguished connection with the textile mill industry is well known. As a businessman of wide experience, he has rendered valuable services to the Company during his long association with it, and it is in the interests of the Company that it should continue to receive the benefit of his services.

Note: A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."

ASIA TREADS PLANNED PATH

ASIA is on the march. Nearly all countries of this Continent are now beginning to lift themselves out of their low living standards and the relatively underdeveloped state of their economies. It is now more than 15 years since the Atlantic Charter inspired all underdeveloped countries with visions of a happier era. For the Charter gave the assurance of peace which "will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want." Since the signing of the Charter, and more particularly, the establishment of the specialised agencies of the United Nations, there has been a world-wide interest in the problems of the underdeveloped regions of the world. In these regions themselves, there has been a great awareness of the need for economic development; in fact, they agitate for very rapid economic development.

The shortage of capital and of technical know-how has, as is well known, created difficult problems for these countries. The fact that capital goods have to be imported on a large scale has meant a severe strain on their balance of payments position. They have also had to go through a certain inflationary phase which is perhaps inevitable in all earlier stages of economic development. Clearly, to compress in a few years or in a few five-year plans, several stages of economic progress which industrially advanced nations of the West took several decades to cover calls for great imagination on the part of the administration and willingness to undertake severe sacrifices on the part of the people. Foreign aid could, of course, mitigate, though it cannot obviously eliminate altogether, the hardships involved in the process of economic improvement.

How have these countries met their great economic problems? How did they fare in 1956, a year of grave political developments with their impact on the economies of many nations? An answer to these questions is to be found in the comprehensive report of the Economic Commission for Asia and Far East (E.C.A.F.E.) on Asian economy, entitled "Economic Survey for Asia and Far East." The report presents studies of 17 countries—Afghanistan, Burma, Cambodia, Ceylon, China (Taiwan and mainland), Hong Kong, India, Indonesia, Japan, Korea, Laos, Malaya and British Borneo, Nepal, Pakistan, the Philippines, Thailand and Viet-Nam. The broad picture which emerges from the report is that favourable economic conditions continued to prevail in most countries of the region in 1956. Production gains were widespread. It is, however, disturbing to note that inflationary tendencies manifested themselves in many countries. But the authorities were determined to see that the plans which they had chalked out were implemented. Indeed, "planning" has become a watchword in Asia. The Survey examines the salient features of the economic development of the 13 Asian countries which have taken the "planned path to better living." Although the emphasis in many of these plans is on agriculture, the fact remains that these countries, except Japan, continue to be predominantly agricultural, industrial production accounting for only a small proportion of the total national income.

Appropriately enough, many countries of this region have not overlooked the importance of agricultural development. Agricultural production in 17 Asian countries (excluding mainland China) was at a record level in 1955-56, though it was still below the *per capita* production in the years before the war. At a total of 121 million tons, the production of cereals even exceeded the post-war record of 1953-54. Although the total production of cereals was at a record, the increases were mainly confined to a few countries. This meant that, in countries where food production fell below the necessary levels, there was great need for imports of foodgrains. The financial strain involved in such imports was relieved to a certain extent through the assistance rendered by the U.S. The U.S. programme for the disposal of agricultural surpluses was of considerable assistance to the countries which faced critical shortages in food supplies.

The export earnings of most Asian countries are largely determined by the level of exports of a few staple agricultural commodities. Such commodities include rubber, tea, and jute. Production of natural rubber in Asia, which accounts for nearly 95 per cent. of the world total, was over 1.6 million tons in 1956. The world consumption of natural rubber in this period continued to expand, but at a reduced rate. Over half a million tons of tea, the same production as a year ago, was grown in Ceylon, India, Indonesia and Pakistan in the first 10 months of 1956. The combined exports of the four countries rose by 20 per cent. during this period over the quantity exported in the corresponding period of 1955. The production of raw jute in the 1956-57 season continued its upward trend in both India and Pakistan, together they produced around two million tons, as compared with 1.8 million tons in the previous season. Exports of most agricultural commodities were higher than a year before and it is noteworthy that export prices showed a slight decline to start with, but rose subsequently, due mainly to developments in West Asia.

It is significant that industrial production in Asian countries rose at a substantially higher rate in 1956 than the year before. Crude petroleum production increased to an estimated 20 million tons, with Indonesia producing 12½ million tons and Brunei over 5½ million tons. Power generation increased by almost one-third between 1952 and 1955 and expanded again by an estimated 12 per cent. during 1956 to a total of 102,420 million kw.h. *Per capita* power generation on the basis of 1955 estimates stands at 732 kw.h. for Japan, 156 kw.h. for Malaya, 22 kw.h. for India, and 21 kw.h. for mainland China and Ceylon. The output of steel continued to increase in China (Thaiwan and mainland), India and Ceylon. Productive capacities for cement were expanded to meet the rise in demand as a result of efforts at economic development. In 1956, the output of cement rose by 4 million tons to 26 million tons. The output of cotton yarn increased by about a quarter million tons to 2.3 million tons and of cotton cloth by 1,900 million metres to over 13,500 million metres. Production of paper, it is stated, has been expanded in order to meet the cultural and educational needs of the region; it now stands at about 3½ million tons.

According to a newly developed index which is presented for the first time in the present Survey, the growth of industrial production in the region was 8 per cent. in 1955, as compared with the previous year, and there was a further gain of nearly 15 per cent. in the first half of 1956. The Survey draws attention to the fact that transport facilities were extended in Asia during 1956 and about a quarter of all the money earmarked for economic development in the various economic plans of the region was to be spent on transport and communications. The authors of the Survey are, however, constrained to remark that transport facilities, although they are being steadily expanded, are "almost everywhere visibly inadequate for the quickened tempo of activity foreseen in the near future."

The data on foreign trade of the E.C.A.F.E. region are somewhat incomplete, inasmuch as they do not cover Afghanistan, mainland China,

Korea and Nepal. Basing its estimate on the data so far available, the Survey points out that the foreign trade of Asian countries grew in both volume and value during 1956. Imports, however, rose faster than exports which actually declined in value for most countries. The aggregate exports of the region as a whole, however, showed an increase of 6 per cent. over the same period in 1955. The value of imports into all the countries, except China (Thaiwan), Pakistan and Southern Viet-Nam, rose by nearly 20 per cent., partly as a result of high prices and partly due to heavy purchases of capital goods for economic development. It is noteworthy that the share of consumer goods imported into Asia has been declining steadily from about 71 per cent. in 1954 to about 64 per cent. in 1956. In other words, during the same period, the share of capital goods has increased from about 29 per cent. to 36 per cent. The improvement in capital goods imports reflects the increase in the pace of economic expansion in the region.

The geographical pattern of the foreign trade of the Asian countries, however, remained generally unchanged. The trade of Asian countries with each other amounted to about a third of their total trade. Western Europe's share remained at about a quarter of the total and the U.S. share was nearly a fifth of the total. A notable feature of the trade pattern was that there was a marked rise in imports from the centrally planned countries, including imports from mainland China; exports to such countries, however, were at a lower level. The countries which signed trade agreements with the centrally planned countries were Afghanistan, Burma, Cambodia, Ceylon, India, Hong Kong, Indonesia, Japan, Malaya, Nepal and Pakistan. Soviet trade with Asian countries, according to one estimate, increased in 1956 by 15 per cent. to 8,000 million roubles.

Many Asian countries suffered—and continue, in fact, to suffer—from balance of payments difficulties, thanks to heavy imports of food articles and capital goods and to unsatisfactory increase in their exports. The Survey rightly points out that the region's increasing trade deficit might have brought wider dislocations had it not been for the inflow of foreign aid, including the loans and other forms of aid from the U.N.'s specialised agencies. The U.S. aid is worthy of special mention. Such aid amounted to $950 million in 1956. Of the total grants and aids given by the U.S. in the fiscal year 1954, only 28 per cent. came to Asia. This figure increased to about 45 per cent. during the fiscal year 1955, for the U.S. policy placed greater emphasis on Asian and African countries. A new factor in the Asian situation is the interest evinced by the U.S.S.R. In 1955 and 1956, Russia made several offers of assistance to countries of the region and entered into large and long-term credit agreements for specific undertakings in Afghanistan, India and Indonesia; these loans were offered at as low a rate of interest as 2½ per cent.

In the absence of foreign aid and inflow of foreign capital on a scale which is necessary for purposes of rapid economic development, it is hardly surprising that the economy of the region was subjected to severe strain. Living costs rose in many countries. Prices of several commodities, in particular those of food articles, moved up in 1956. Every government in Asia, with the exception of Brunei, it is stated, returned a budget deficit during 1956. In most cases, the direct cause of the budget deficit was heavy expenditure by the Government for the purpose of economic development. The Survey draws attention to the role of deficit financing when it says: "In some cases, the technique of deficit financing is being avowedly used; in other cases, the evidence of deficit financing is present, but governments have stated that they do not intend to use this most delicate of economic weapons. But in practically all countries of the region except Ceylon, Japan and one or two others, deficit financing has apparently assumed an important role."

Such, in broad outline, are the recent trends in Asian economy. It is against this background that one must view the proceedings of the tenth anniversary session of the E.C.A.F.E., held last month in Bangkok, which was attended by some 200 representatives from 31 countries. Mr. C. V. Narasimhan, E.C.A.F.E.'s Executive Secretary, struck a new note when he suggested that the work of the organisation might now be concentrated on certain key sectors of Asian economy. This, he said, should be done without contracting E.C.A.F.E.'s work, but by making a closer study "in penetration and depth" of major problems, such as Asia's increasing population and need to find resources for economic development. Broadly speaking, the delegates agreed that Asian countries had reached the beginning of the road to economic advance, though there was a long way still ahead and that energetic efforts should be made at stabilising international commodity markets.

While the importance of industrial progress was recognised, concern was expressed over Asian agriculture. The delegates drew attention to the fact that food production per head of population continued to be below pre-war level because of rapid rise in population. It is gratifying to note that Asian countries now show a greater awareness of the retarding effect on economy of large increases in population. Obviously, in the absence of control over population, no sustained improvement can be effected. The other points covered by the delegates included: (1) Governments of ship-owning countries were asked to use their good offices with the shipping lines in keeping ocean freight rates at an equitable level and (2) early creation of the Special U.N. Fund for Economic Development was urged by several delegates. In view of the continuing difficulties on the foreign exchange front in many Asian countries and of the increasingly important role played by government expenditure in the overall plans for economic development, it was only to be expected that the session would discuss the issues relating to the part to be played by private enterprise and by the inflow of private foreign capital. While it was agreed that Governments would have to continue to take an active hand in carrying out development programmes, it was stated that private enterprise, as one of the resources of economic development, should be encouraged. This is a welcome trend in the Commission's discussions.

The essential role of external aid in Asian rehabilitation was stressed and there were many pleas for acceleration and intensification of this aid. The Commission noted the measures taken by several countries to create a more favourable climate for private investment from abroad. The fact, however, remains that private foreign capital has not been attracted to this region on any large scale. Indeed, the Survey itself records that there was no marked increase in the amount of private foreign capital in Asian countries; Camboda, China (Taiwan), Laos, and the Philippines, however, adopted regulations to encourage foreign investment. Since the Asian countries, as stated at the outset, are trying to compress several decades of economic progress into brief five-year plans, it is of the utmost importance that they should adopt realistic measures which would facilitate the flow of foreign private capital. Such capital could help relieve very considerably the stresses and the strains in the economies of the Asian countries to which the Survey has rightly drawn international attention.

MAJOR PORTS

IN the event of the early resumption of traffic through the Suez Canal, it is to be expected that Indian ports will be called upon to handle a much larger volume of cargo than they are doing at present. In any case, the implementation of the Five-year Plan presupposes a sizable increase in both imports and exports. The major as well as the minor ports have, therefore, to equip themselves to meet the heavier responsibility in the matter of handling larger cargo. The major ports, namely, Calcutta, Bombay, Madras, Cochin, Kandla and Visakhapatnam, should be developed without any more delay. Under the first Five-year Plan, a sum of Rs. 25 crores, including Rs. 8.5 crores on Kandla, was spent on the development of major ports. During the period covered by the Plan, the handling capacity of the major ports increased from 21 million tons to 26 million tons. The programme for development of major ports in the second Plan envisages the creation of additional capacity to the tune of 6.75 million tons—Calcutta 1.5 million tons, Madras 0.5 million tons, Cochin 1.25 million tons, Visakhapatnam 1.75 million tons and Kandla 1.75 million tons. When this programme is implemented, the handling capacity of the major ports will rise to about 33.5 million tons.

Two issues are involved in the matter of development of major ports. In the first place, it is not clear whether the programme of development now envisaged, even if completed, would enable the major ports to handle all the traffic which might develop in the course of the next five years. The Estimates Committee, in its report on major ports, has expressed the view that it is "not quite so sure that the anticipated increased facilities at Indian ports will be adequate to meet fully the requirements of increased import and export traffic during the period of the second Plan." Accordingly, it has recommended that measures should be adopted to rationalise the traffic and utilise the facilities of all the intermediate ports to the maximum extent. It has also made a number of suggestions for improving the facilities in the major ports. These suggestions include increase in the number of dredgers, more vigorous dredging operations and mechanisation of coal berth in Calcutta, increase in the supply of cranes, locos, wagons and other equipment in Bombay, and creation of more berthing facilities in Madras. It is to be hoped that these suggestions will receive the attention they deserve.

The other aspect of major port development is finance. Such development, it is now estimated, will cost about Rs. 81 crores. Actual allotment under the second Plan is Rs. 40 crores. The Port Trusts are expected to be able to find Rs. 20 crores from their internal resources. There is thus a shortfall to the extent of Rs. 21 crores. It is not clear how this gap will be bridged. Obviously, port charges may have to be raised. The authorities will be well advised to see that any increase in port charges they may be compelled to effect is kept at a minimum so that the prices of commodities may not be affected. There is also the question of efficiency of dock and port labour. If the workers did their work honestly and efficiently, it should be possible to increase the volume of cargo handled by the ports. It is necessary to extend the piece-rate system for payment of wages to all ports. This will enable workers to earn their just reward. At the same time, it will reduce shipping delays and help improve turnround of ships.

PRINTING AND PRINTERS

RECOGNISED universally as an essentially educational enterprise, the printing industry has always had valid claims for governmental support. In India, however, the industry's progress has been achieved without any special assistance from the Government. It is not to official munificence but to the self-sacrificing zeal of early Christian missionaries that the industry owes its beginnings. Their motive was, of course, religious—"Go ye therefore and teach all nations"—but the impetus they gave to printing was massive. But the industry's development has been hampered by the slow progress of literacy. Surely, no printer can thrive well in a country where four out of five are illiterate. The result is that, for a country of India's continental size and population, its printing industry makes a poor showing. The number of presses is smaller than one would expect. And, as a rule, they turn out shoddy work; the few notable exceptions, among which the press which prints this journal is one, serve only to prove the rule.

The industry, however, can now confidently look forward to a glorious future, what with the Central and State Governments' plans for instituting a system of universal compulsory primary education for the young and for eradicating illiteracy among adults. It must be remembered that no democratic government can afford to neglect the education of its masters, the public. All this implies that the printing industry should be expanded and improved. The press should be enabled to turn out the best possible work. Given that the content is good, a well printed book, like a thing of beauty, is a joy for ever. Perhaps it is not as widely realised, as it should be, that the first attraction for a youngster is the form, rather than the content, of a book. And it is a pity that most educational material in this country is printed so badly that children are more repelled than attracted by it.

In printing, as in most arts and industries, the man and his tools are equally important. It is true that a bad workman will quarrel with his tools. But even the best workman can do little with bad tools. Good machinery and equipment are vitally needed for successful working. At the all-India conference of printers, held this week at New Delhi, the President, Mr. G. Kapoor, pointed out that machines in many presses were worn-out and needed to be replaced. It is to be hoped that the Government will enable owners of printing presses—there are about 21,000 to 23,000 of them—to find the resources they need for re-equipment. Imports of machinery should be permitted, and, at the same time, efforts should be made to manufacture printing equipment in India. Further, printing is a great craft. No man became a great printer who had no genuine pride in his calling. Such pride comes of knowledge and experience. It is, therefore, of the utmost importance that facilities for training in printing and for instruction in printing technology should be speedily augmented. This will help raise standards of performance in printing.

WEAKNESS IN SHARE MARKETS PERSISTS

COTTON IMPORTS—OUTLOOK FOR HINDUSTAN LEVER

THURSDAY, 5 P.M.

SHARE markets have developed fresh weakness this week, with no signs of any support whatsoever. Investors are chary of approaching the markets and picking up the blue chips which are being quoted at attractively low levels. Though the fall in prices this week was less marked than in the previous week, it does not provide any indication that the rot has been stemmed. In fact, after remaining somewhat steady earlier in the week, equities have experienced fresh pressure today and the closing prices are well below the week's best levels. Tata Steels have come down by Rs. 4.25 from the week's high of Rs. 169.75. They even touched a low of Rs. 165, the lowest for the year so far, and Indian Irons knocked at Rs. 18.95. The other conspicuous declines noted are in A.C.Cs. which have come down by no less than Rs. 3 to Rs. 156.50 and in National Rayons which have shed Rs. 6.75 to Rs. 226.25.

MARKET GOSSIP

The extent to which the confidence of investors has been hit can be easily judged, if one recalls that it was only a year ago the markets started on their upward trend, having been inspired by the prospects of large-scale deficit financing and hopes of large corporate earnings during the second Five-year Plan. A very rosy picture of the outlook for many industries, particularly steel, cement, chemicals and rayon, was drawn. Bright expectations of sizable capital profit, without any considerations of yield, attracted many investors at higher and higher levels. It does not mean that these industries have fared badly or their progress has been retarded. In fact, latest reports from New Delhi indicate that the authorities are investigating the possibility of setting up a fourth steel plant during the third Five-year Plan. If this materialises, and with the availability of more cement, industrial activity can be expected to move up to higher levels.

It is not that investors are not aware of this prospect. Nevertheless, they are not willing to come forward to pick up the industrial scrips which were once well fancied. The reasons for this state of affairs are too well known to bear repetition. The two additional factors which have been responsible for this week's recession are the call made by the Tata Iron and Steel Company for the payment of the second and final instalment (Rs. 35 per share) of the issue price on the Company's new shares and the decision of the National Rayon Corporation to issue fresh capital to the tune of Rs. 1 crore, by offering the existing shareholders new ordinary shares at Rs. 125 (that is, at a premium of Rs. 25) per share, in the proportion of one share for every two shares. National Rayon's new issue is to provide finance for the Company's proposed new project, namely the setting up of a tyre cord plant with an annual capacity of 4 million lbs. The cost of the project is estimated at Rs. 3 crores. Usually, whenever a right issue is announced by a company, the old shares move up on expectations that the additional investment would bring an adequate return, as a result of the implementation of the company's expansion programme. This has not happened in the present case. This is because of the acute stringency in the money market. Borrowing from banks to finance the new issue is out of the question, as banks are finding it difficult to lend money even for seasonal trade and crop movements. In the circumstances, it is not surprising that the market is worried over finding as much as Rs. 4 crores to pay Tatas' call when they have not paid the first call in full and they have been paying a penal interest at the rate of 9 per cent. on the outstanding amount. What is more, this call has come at a time when the shareholders have to find about Rs. 7 crores for purchasing the right shares of the Indian Iron and Steel Company. It may be argued that Tatas' call could have been postponed, but it should not be forgotten that the Company has to find money for its expansion programme and it is in no better position than the shareholders themselves in so far as borrowing from banks is concerned. National Rayon's issue is, no doubt, subject to the sanction of the Controller of Capital Issues, so that it may be some months before the issue is actually made. But Tatas' call was not unexpected and the shareholders were well aware that they would be called upon to pay the final instalment six months after the first call was made.

* * * *

Planting shares have provided the highlight of the week's recession on the Madras Stock Exchange, with a further sharp setback in values, on a heavy bout of selling pressure. The earlier expectations of better performance by several plantating companies during the current year, thanks to better crop reports and higher price realisations, have been completely overshadowed by the concern over the future of the plantations in Kerala. The assurance of the Union Minister for Commerce and Industry that there would be no nationalisation does not seem to have brought any cheer to the market. It is, on the other hand, watching with anxiety the policy which the Communist Government in Kerala would adopt as regards nationalisation, which is on the party programme. This anxiety, along with a few other uncertain factors, has caused considerable nervousness, with the result that many of the shares have pierced even the floor prices fixed by the Madras Stock Exchange authorities early in November last, following the publication of the Plantation Labour Award, as will be seen from the following list of representative scrips:

	Latest	A week ago	Floor prices fixed in November 1956
	Rs. nP	Rs. nP	Rs. nP
Cochin Malabar ..	8.31	8.84	8.94
Haileyburia	22.75	24.00	24.75
Highland Produce ..	15.00	15.25	15.75
Nelliampathy	3.25	3.19	3.31
Pullangode	2.62	2.62	3.12
Periakaramalai ..	8.00	8.22	7.06
O. V. Estates	4.84	5.00	4.62
Thirumbadi	1.81	1.91	2.19
T. R. T.	9.31	9.56	11.25
Teekoy Rubber ..	9.19	9.19	12.00

The prospect of higher wage bill in estates is another factor which is worrying investors. Although the recent amicable settlement between the planters and workers over wages has considerably reduced the burden on plantations, the terms of the settlement have cast a burden which is still heavier than that before the Award. An idea of the extent of the burden which estates will be called upon to bear under the terms of the out-of-court settlement can be had from the following observations of Mr. W. W. Kilgour in his speech at the annual general meeting of the Ouchterlony Valley Estates held recently:

"Under the terms of the settlement, two of our estates with preponderant tea acreage will pay wage increases representing an increase of 20 per cent. upon the pre-Award wage and the remaining three estates with preponderant coffee acreage will pay wage increases representing an increase of nearly 9 per cent. over the pre-Award wage. In addition to this, provident fund benefits at 8.1/3 per cent. of wages will be payable. Compared with the enormity of the Award, this is, of course, a merciful deliverance. By any other standard, it is a stern impost which, according to my estimate, will add Rs. 3¼ lakhs to our wage bill."

Mr. Kilgour is, however, hopeful that a part of this additional cost can be made good through higher productivity, with the return of more normal working conditions, which have been disrupted by the decline of discipline and morale, as a result of the prolonged labour proceedings.

* * * *

Last week, we referred in these columns to the rumours of official intervention in the cotton trade, following the steep rise in cotton prices. Soon after we went to press, the Government of India announced the imposition of a ban on further exports of cotton against licences issued in terms of the notifications of 6th and 7th February, permitting for export a total quantity of 200,000 bales of cotton (all varieties) up to 30th June next. Simultaneously with this announcement came the statement by an official spokesman that the first step under the Government notification authorising the Textile Commissioner to requisition cotton holdings would be the freezing of stocks with any trader who refuses to sell at ceiling rates. Thanks to these measures, as also to the persistent fears of heavier margins on transactions in futures, the firmness of the cotton market has somewhat abated and values have staged a retreat. Over the week, Vijay (Fine 27/32") April has gone down by Rs. 51.50 per candy of 784 lbs., June position by Rs. 32.50 and Jarilla (Fine 25/32") May by Rs. 22.50. The spot prices have also suffered a break, Oomra *Deshi* and Moglai declining by Rs. 25, Khandesh by Rs. 20 and Berar Jarilla by Rs. 15, and Bengal *Deshi* by Rs. 10. The setback, it must, however, be stressed, is to be attributed not so much to any aggressive sales by bears as to the profit-taking operations of some traders. The drop in prices is only a temporary phenomenon and, considering the present tight statistical position of cotton, prices are bound to move up in the coming weeks. The Government may, of course, requisition cotton stocks and make them available to mills at or near ceiling rates. But such will not solve the problem of shortage of supplies. The consumption of cotton by mills is running at such a high annual rate that, if supplies are not augmented, the carryover at the end of the season will dwindle considerably.

Viewed thus, it is, indeed, gratifying to note that the Government is reported to be actively considering the proposal to allow liberal imports of cotton from the sterling and dollar areas, the difficult foreign exchange position notwithstanding. An official circular is understood to have already been sent to all the mills asking the latter to indicate their requirements of Egyptian cotton and the price they would be prepared to pay. The tentative scheme drawn up by the Government following the recent discussions with the Egyptian Trade Mission, it is said, envisages a sort of bulk purchase of a certain quantity of Karnak 154 type cotton. The Indian mills are believed to be prepared to pay on the basis of Rs. 2,805 per candy of 784 lbs. c.i.f., while the currently ruling price for this type in the market is higher. If, therefore, any large-scale purchases of Egyptian cotton are to materialise, Egypt will have to come forward with a more liberal price discount than what is now offered.

* * * *

Like all conscientious chairmen, Mr. A. J. C. Hoskyns-Abrahall, Chairman of Hindustan Lever Ltd., has refused to paint a brighter picture of the Company's future than what is warranted. Shareholders are the same the world over; they would prefer an agreeable surprise to a painful disappointment. Addressing the annual meeting of the Company, held today in Bombay, Mr. Hoskyns-Abrahall referred at the outset to the fact that the Company's final figures had shown that the earlier forecast of results had been somewhat conservative. This had enabled the management to recommend a higher final dividend of 75 *naye paise*, as against 37 nP anticipated earlier. Lest this agreeable change should lead shareholders to speculate on the Company's future distribution policy, the Chairman sounded a note of caution. He said: "We are, therefore, recommending to you a higher final dividend of 75 nP, at the same time coupling with that recommendation the caution that our outlook and policy have not thereby undergone any essential change." He said that they would not like shareholders to build up "any great expectations" that future dividends would be higher than what had been forecast a few months ago. He, however, revealed that the Company's sales in 1956 exceeded 121,000 tons (exclusive of sales of toilet preparations). If the profits were not quite of the order of those earned in the previous year, it was because of increases in freight and in costs of raw materials and processing.

Proceeding, the Chairman observed that they were vitally interested in the target of 7½ million tons for oilseeds, set under the second Plan. He added: "That oilseeds, and particularly groundnuts, should be freely available at moderate prices is of prime importance to our business, to say nothing of its significances for export and foreign exchange purposes, but we cannot yet detect any great progress being made towards hitting the target." He also drew the attention of shareholders to the increase in freight rates and to the inadequacy of transport facilities which constantly gave rise to costly delays. Referring to the Company's purchase policy, he disclosed that they bought 80 to 90 per cent. of their raw material requirements from indigenous sources. However, a few items, such as perfume ingredients and certain chemicals, were being imported; without these imports, it would be difficult for them to maintain the quality of their products. It is to be hoped that the management would be able to continue the import of these materials. Perhaps the Company has some claim for special consideration of its import needs, in view of the fact that its products are sold abroad—it exported goods worth Rs. 76 lakhs in 1956—and the Company is thus an earner of foreign exchange itself.

* * * *

India is vitally interested in the early resumption of traffic through the Suez Canal through which passes most of its export and import trade. It is, therefore, gratifying to note that, in about a week's time, the Canal will be rendered physically safe for traffic. Clearing of the Canal has now been nearly completed. It may be recalled that, when clearing operations commenced in December last, nearly 32 ships, tugs and dredgers had been submerged in the Canal. A large part of this impediment has now been removed, so that ships up to 11,000 tons are able to use the Canal. Very soon the Canal will be safe for all traffic. All this is encouraging news. But not so encouraging is the report that the British and American ships might not use the Canal. British shipowners, it is stated, have decided to boycott the Canal until the Egyptian authorities agree to the U.N. six principles on freedom of navigation, payment of transit fees, upkeep and development of the Canal. As long as this decision is not revoked, Indo-British trade is likely to suffer a relative setback. This would have an unfortunate effect on the future of Indo-British trade.

It is also a pity that, at a time when Britain could expect to regain the ground lost through the closure of the Suez Canal and the prolonged engineering and shipyard strikes which ended this week, it should have been forced into a decision to boycott the Canal. It is to be hoped that it will be possible to arrive at a settlement which will be satisfactory to all parties concerned. Meanwhile, concern has been expressed in Britain over the inadequate increase in the U.K.'s share in world exports. Over 1951-55, world exports of manufactured goods, according to a report issued by the U.K. Board of Trade, rose by 22 per cent., whereas U.K.'s exports rose by only 9 per cent. Again, while the U.K. exports of manufactures increased by 11 per cent. in value, in the first nine months of 1956, world trade increased by 15 per cent. It is noteworthy that, over the period of 1951-55, Germany increased its share of world exports from 9.7 per cent. to 14.9 per cent., U.S.'s share fell from 25.6 per cent. to 23.6 per cent. and Japan's share rose from 4.1 per cent. to 5.0 per cent. These figures clearly reveal that the U.K. must put forth strenuous efforts, if it is to recapture its former share in world exports.

* * * *

The Standard-Vacuum Refining Company of India has agreed to surrender the duty protection of two annas per gallon on motor spirit produced by it with effect from 1st October 1956 and to refund the money already realised on account of this concession after that date. The surrender of this concession by the Company is expected to result in an additional revenue of about Rs. 1.2 crore annually to the Government for approximately eight years. The Standard-Vacuum Refining Company has also undertaken to increase its output and manufacture certain new products which will also result in a saving of foreign exchange to the extent of about Rs. 1.2 crore per year from 1958. The increase in output will open further possibilities of earning foreign exchange.

EQUITIES DECLINE FURTHER

TATA STEELS AT NEW LOW

(From Our Own Correspondents)

BOMBAY, *4th April*

THE Stock Exchange had only three sessions during the week under review. Besides the usual fortnightly closing on Saturday last, being the day following the settlement, the market remained closed on Monday, 1st April, being a Bank holiday, and on 2nd, as a mark of respect to Mr. Harkisondass Lukhmidass, a leading broker, who died on Monday. During this short period of working, the market suffered a further setback, particularly today, on renewed selling pressure. The absence of any fresh incentives, the growing stringency in the money market, the announcement by the Tata Iron and Steel Company making the second and final call of Rs. 35 per share, including the premium of Rs. 10 per share, on the ordinary shares, the decision of the National Rayon Corporation to issue fresh capital to the tune of Rs. 1 crore and the issue of capital by a few other concerns also induced offerings, as the existing shareholders would be hard put for financing these issues. The undertone at the close was weak.

In the steel section, Tata Ordinaries ruled steady early in the week, with a rise from Rs. 168.00 to Rs. 169.50. But the new account, which opened yesterday, witnessed a sagging trend, and this became pronounced today, the shares slumping to Rs. 165.00, the lowest level for the year so far. The closing was a shade better at Rs. 165.50. The new shares were done Rs. 4 lower at Rs. 120. Indian Irons, after gaining from Rs. 19.19 to Rs. 19.60, slipped back to Rs. 19.05 at the close. Indian Irons Rights changed hands at Rs. 4.37, as against Rs. 4.44 a week ago.

The setback in the textile section was less pronounced than in the previous week; in fact, a few counters managed to score modest gains over the week. Bombay Dyeings showed a tendency to steady up early in the week, the quotation moving up from Rs. 548.12 to Rs. 553.75. This, however, proved short-lived and the shares gave way to Rs. 543 at the close today. Centurys hardened from Rs. 443.00 to Rs. 454.50, but much of this gain was wiped out today when the shares dropped to Rs. 449. Kohinoors moved between Rs. 324.50 and Rs. 321 before closing at Rs. 321.50. Central Indias showed no change over the week at Rs. 112. Edward Textiles were done at the self-same rate of Rs. 250. Finlays shed a rupee to Rs. 301 and Gokaks Rs. 3 to Rs. 207. Indu Ordinaries shaded off from Rs. 10.37 to Rs. 10.35. Indore Malwas had business Re. 1 higher at Rs. 138.50. Khataus were maintained at Rs. 191.25. New Greats were marked up by Rs. 5 to Rs. 225, while New Citys were stagnant at Rs. 149.37. Model Mills looked up by Rs. 10 to Rs. 180. Shree Niwas lost Rs. 3.12 to Rs. 175 and Simplex Rs. 3 to Rs. 172, while Standards gathered Rs. 3 to Rs. 443. Svadeshis were dull at Rs. 214. Tata Mills were brought down by Rs. 2 to Rs. 44.50.

Bank shares continued to rule easy, with a further marking down in prices. Barodas were done at Rs. 98.25 *ex-div.* (final div. Rs. 4.00) as against Rs. 103.50 *cum-div.* Central Banks had business at Rs. 48 *ex-div.* (div. Rs. 2) as against Rs. 51.25 *cum-div.* and their new shares at Rs. 52 *ex-div.*, as against Rs. 55 *cum-div.* Bank of Indias were unchanged on balance at Rs. 134. Union Banks were a shade quiet at Rs. 7.05, while United Commercials were steady at Rs. 57.

Insurance shares were dull, with business confined to a small scale. New Indias moved between Rs. 40.25 and Rs. 39.75 before closing at Rs. 40.

Electricity shares were featureless. Ahmedabad Electrics moved down from Rs. 94.69 to Rs. 93.25 and Amalgamated Electrics from Rs. 10.69 to Rs. 10.50. Surats were done at Rs. 110.00 *ex-div.*, as against Rs. 112.50 *cum-div.* Bombay Suburbans were unchanged at Rs. 110.00. Tata Hydros picked up a rupee to Rs. 121, while Tata Powers shaded off from Rs. 1,200 to Rs. 1,195. Andhra Valleys were held at Rs. 1,192.50.

The miscellaneous section ruled quiet in the face of general sluggishness. Sugar shares were marked down, Belapur slipping from Rs. 227.00 to Rs. 225.25. Bhopals were done at Rs. 17.50 *ex-div.*, as against Rs. 19 *cum-div.* quoted a week ago. Phaltans shed Rs. 1.75 to Rs. 133.00 and Walchandnagars Rs. 1.25 to Rs. 267.50. Among the cement shares, A.C.Cs. continued to display weakness, the shares dropping Rs. 3 over the week to Rs. 156.50. Digvijays ruled steady at Rs. 143.50. Ashok Cements declined from Rs. 10.25 to Rs. 9.60, Jaipur Udyogs from Rs. 11.94 to Rs. 11.75 and Orissa Cements from Rs. 13.37 to Rs. 13.20.

In the engineering and mining group, Alcocks reacted from Rs. 259.50 to Rs. 256.25. After an initial rise from Rs. 138.75 to Rs. 140.00, Tata Locomotives gave way to Rs. 137.50. Premier Constructions moved down by Rs. 2.50 to Rs. 162.50. Larsen and Toubros shaded off from Rs. 15.37 to Rs. 15.00. Shivrajpurs were just steady at Rs. 90.50. Indian Coppers were dull at Rs. 3.22 and B.B. Petrols at Rs. 2.56.

In the shipping group, Scindias were marked down from Rs. 19.44 to Rs. 18.65 and Great Easterns from Rs. 18.12 to Rs. 17.55. Automobile shares found no support. Premier Automobiles retreated from Rs. 89.50 to Rs. 86.75 and Hindustan Motors from Rs. 7.41 to Rs. 7.25.

In the miscellaneous group, Bombay Burmahs showed a hardening tendency early in the week with a rise from Rs. 586.25 to Rs. 600.00, but they soon developed fresh weakness and retreated to Rs. 581.50. The Partly Paid-ups, however, gained over the week Rs. 2.50 to Rs. 217.50. The announcement of a higher distribution of Rs. 14 per share for the year 1956 (as against Rs. 12 per share for the previous year) by declaring a cash bonus of Rs. 2 did not have any effect on National Rayons, which, on the other hand, were affected by the offer to issue new shares, and they retreated from Rs. 233.00 to Rs. 226.25. Gwalior Rayons shed Rs. 1.37 to Rs. 13.00. Tata Chemicals improved from Rs. 15.84 to Rs. 15.95 and Tata Oils from Rs. 42.25 to Rs. 42.50. Hindustan Levers were placed at Rs. 18.60 *ex-div.*, as against Rs. 19.50 *cum-div.* a week ago. Killick Industries were lower by Re. 1 at Rs. 159. Wimcos were unchanged at Rs. 171.25.

* * * *

Calcutta Stock Exchange

CALCUTTA, *3rd April*

The huge uncovered deficit of Rs. 365 crores in the 1957-58 Budget and the Finance Minister's open thinking about the need to enlarge public revenues led to fears that the May Budget would reveal unpleasant surprises to the commercial community and industry circles. Both investors and operators underlined Mr. Krishnamachari's assertion that both the Centre and the States would have to exert their utmost towards finding more funds. Under such a context, it was not surprising that, during the week under review, the Calcutta Stock Exchange was devoid of interesting support. The volume of transactions declined and the lower levels touched by equities were the only attraction for the business that was put through. Speculators revealed a nervous tendency and, in an effort to lessen commitments, sold heavily, causing rates to fall further. Mr. Krishnamachari's reply to the Budget debate, wherein he declared that the Government would grimly hang on to the Plan, was taken to mean that ways would be found to get over the difficulty for funds. This again provided market circles with cause to think that corporate taxation which, it was noted, was stated as already high by the visiting American trade mission, would be revised further.

The Finance Minister had been unusually unkind to private enterprise in his reply to the Budget debate, and his condemnation of the profit-making idea "when the country is in distress and the Government is in trouble" was interpreted as provocative. For market circles strongly felt that private enterprise could not be expected to fulfil a philanthropic role and that it invested funds and took risks, motivated by the profit-making idea in the first instance. The motive of making profits is a good quality, since it is the one force which makes an industry efficient, economic, and to be of maximum service to the community and the country. So the condemnation of the profit-making motive by such a responsible personality as Mr. Krishnamachari took the market by complete surprise. He was thought capable of making further surprises, and trading is expected to continue to be listless until some definite idea of the new imposts is available.

Coals were driven to lower levels, as the many problems facing the collieries appeared insoluble, at any rate for the time being. Burrakurs, after changing hands at Rs. 21-6, sagged to close at Rs. 21-2. At Rs. 440, Bengals lost Rs. 5. South Karanpuras tended to be quiet at Rs. 8-15.

There was little support for jute shares. From Rs. 20, Nationals fell to Rs. 19-10 and, at Rs. 122, Indias were driven down by Rs. 3-8. Business in Alliances could be put through only at the lower rate of Rs. 74, while Budge Budges were quiet at Rs. 90. Gourepores were pushed back to Rs. 226 from Rs. 222. New Centrals realised Rs. 11-15, as against Rs. 12-4 previously.

Engineering shares recorded a downward tendency. The renunciation rights of the new Indian Irons were at one time as low as Rs. 4-5, as against Rs. 4-15 earlier. The scrip itself was lower at Rs. 19-7. Braithwaites at Rs. 25-2 recorded a fractional recession, while Kumardhubis at Rs. 9-13 were better by As. 2. Texmacos drew in support at Rs. 18-14, as against Rs. 19-7 earlier. Hooghly Dockings were earlier steady at Rs. 132, as were Guest Keens at Rs. 25.

In line with the general trend, fewer transactions were recorded in teas, and the weakness in export auctions was duly reflected. Hantaparas gave way from Rs. 187 to Rs. 184. Tezpores realised only Rs. 20, as against Rs. 21-12 previously. Ranicherras lost As. 6 to Rs. 16-6. However, at Rs. 23-2, Jayabirparas were better by As. 2, and at Rs. 21-4, Dhelakhats were firm.

Miscellaneous industrials were lethargic. Indian Coppers were as low as Rs. 3-2, Sone Valley Cements being quiet at Rs. 6-15. Trading was done in Titaghur Papers at the fractionally lower rate of Rs. 35-4. India Steamships dipped to Rs. 10-3 from Rs. 10-7. A feature in yesterday's trading was the spurt in Metal Boxes to Rs. 27-6 from Rs. 26-7. National Carbons in transactions improved to Rs. 27 from Rs. 26-4, but Rohtas Industries sagged to Rs. 16-14 from Rs. 17-6. Indian Cables were lower at Rs. 24-8, but picked up to Rs. 25 yesterday.

Madras Stock Exchange

MADRAS, *3rd April*

The distinctly bearish conditions noted on the Madras Stock Exchange last week continued unabated during the week under review. Renewed fears of heavy taxation in the May Budget adversely affected the sentiment of operators. Bearish advices from Calcutta and Bombay also acted as a damper. These factors, together with the stringent credit conditions, let loose a fresh wave of selling and equities marched further downwards. The planting section was particularly weak, notwithstanding the categorical declaration by the Union Commerce and Industry Minister that nationalisation of foreign-owned plantation companies in Kerala was not in the interest of the country. For operators were greatly worried about the threat of labour unrest in Kerala estates which gave rise to apprehensions of a possible wage rise. Heavy selling ensued as a consequence and shares of practically all plantation companies suffered a sharp setback. In fact, several counters were taken below the floor prices fixed by the Stock Exchange authorities on 8th November last, following the debacle created by the Plantation Labour Award. Despite the reported revival of demand in piecegoods markets, textile shares suffered a break in values, thanks to keen disappointment over the Government's rejection of the plea for reducing the heavy burden of excise duty on cloth. Sugar, electric and miscellaneous counts failed to evoke attention of operators.

Among tea shares in the planting section, Blue Mountains fell by Re. 1.69 to Rs. 4.25. Talayar Teas dropped 38 nP to Rs. 11.37 and Nilgiri Teas by 37 nP to Rs. 10.25. Neelamalais receded by 19 nP to Rs. 6 and Ouchterlonys by 15 nP to Rs. 4.85. Chembras shed 6 nP to Rs. 3.81 Devasholas were neglected at Rs. 21.50. Among coffee shares, Balamadies were quiet at Rs. 3.50. In the rubber group, Travancore Rubbers slumped by Re. 1.50 to Rs. 20. Rajagiris were marked down by 87 nP to Rs. 20.50 and Cochin Malabars by 62 nP to Rs. 8.25. T.R. & T's were quoted 25 nP lower at Rs. 9.31. Midlands decreased by 29 nP to Rs. 17.65. Thirumbadis shed 10 nP to Rs. 1.81. Pullangodes eased by 3 nP to Rs. 2.59. Vaikundams remained unchanged at Rs. 30.50. Nelliampathys, however, were a shade better at Rs. 3.20, as against Rs. 3.19 last week.

In the textile section, Janardhanas were hammered down by Rs. 14 to Rs. 95. Rajalakshmis slumped by Rs. 10 to Rs. 150. Pankajas fell by Rs. 7.50 to Rs. 70, Ranga Vilas by Rs. 5.50 to Rs. 82.50. Bangalore Woollens and Premiers receded by Rs. 5 each to Rs. 575 and Rs. 185, respectively. Coimbatore Spinnings dropped Rs. 4 to Rs. 84. Buckinghams declined by Rs. 3 to Rs. 174, Maduras by Rs. 2.25 to Rs. 43 and Lakshmis receded by Rs. 2 to Rs. 130. Saradas and Rajapalayams lost a rupee each to Rs. 99 and Rs. 149, respectively. Kotharis shed 12 nP to Rs. 15.50.

In the sugar group, Mysores dropped Rs. 2 to Rs. 37.50. E.I.Ds receded by Re. 1.39 to Rs. 26.42. Indias lost 12 nP to Rs. 16. Travancores were stagnant at Rs. 11.25.

The miscellaneous section followed the general trend of the market. Rallis climbed down by Rs. 3 to Rs. 34. India Cements declined by 50 nP to Rs. 24.50. Andhra Cements receded by 37 nP to Rs. 12.75. F.A.C.Ts were 27 nP lower at Rs. 5.60. Mettur Chemicals shed 19 nP to Rs. 9. India Steel Rollings lost 6 nP to Rs. 11.25. Spencers were unchanged at Rs. 16.12 as also Mysore Chemicals and Fertilisers at Rs. 7.91.

COMPANY INTELLIGENCE

Indian Factory for Consolidated Pneumatic Products

A programme of expansion in overseas markets was evident in the announcements which had been issued over the past few months by the Consolidated Pneumatic Tool Company, Ltd., of London and Fraserburgh. This has now been confirmed by the statement just released advising the formation of a new company under the title of the Consolidated Pneumatic Tool Co. (India) Private Ltd. The new company which came into being on 28th February 1957, has a Directorate comprising Mr. G. J. Codley, Mr. Norman Readman and Mr. V. Nimbkar (Managing). It will operate in Bombay where new factory premises will be constructed.

The primary purpose behind this development is the manufacture of C.P. products within the country, and it is expected that operations will be in full swing by the end of this year. Consolidated Pneumatic products scheduled to be made in India are pneumatic tools, rock drills and demolition tools, pumps, and air compressors. The new company will be complementary to the Consolidated Pneumatic branches in Bombay and other Indian cities, as the entire sales and service organisation will continue without change, and will handle C.P. products of the British, Indian and U.S.A. factories.

Simpsons to Raise Fresh Capital

One of the latest public enterprises to enter the capital market is Simpson & Co., Ltd., Madras. This company proposes to raise Rs. 1 crore in 7½ per cent. taxable cumulative redeemable preference shares of Rs. 100 each. The offer for subscribing to the new issue will be made first to the existing shareholders in proportion to their holdings and the balance not availed of by them will be placed before the public shortly. The necessary consent has been obtained from the Controller of Capital Issues.

NEWS IN BRIEF

THE packing charges for cement for the quarter ending June 1957 have been fixed at Rs. 13.44 per ton. The charges are applicable to cement packed in new bags only.

The Government of India has fixed the price of tea for the purpose of determining the export duty at Rs. 2.74 per lb., as against Rs. 3.38 per lb. in force from 1st March. There is no change in the existing rate of duty of 37.50 *naye paise* per lb.

While information is not readily available about the total amount of royalty paid in 1956 by the Government of India through departmental channels to foreign firms for technical know-how, the amount paid by Indian firms, both Government-controlled and others, in 1956 was Rs. 105.99 lakhs, according to the accounts maintained by the Reserve Bank of India.

Consequent on the increase in the Central Government pool price of ammonium sulphate fertiliser with effect from 26th March, the Government of Bombay has refixed the rates of supply to traders at Rs. 365 per ton and to co-operative societies at Rs. 360 per ton. The revised rates apply to railway receipts bearing 26th March or subsequent dates and delivered thereafter.

The Government of India has decided to construct the second shipbuilding yard, and preparatory work in this connection has already commenced. Cochin, Karwar, Bhatkal, Tuticorin and Kandla are among the seven alternative sites under consideration of the Government for the location of the yard. The final site of the yard will be decided after obtaining the views of the consultants for the yard who have not yet been selected.

The iron deposits in Sandur (Mysore State) are the richest in the world, according to Mr. Lorov, a Russian industrial expert. The iron-content is as high as 70 per cent., whereas the best mines in the world can boast of only 60 per cent. No great mining operations, it is said, are required to collect the mineral deposits. An industrially self-sufficient pig iron manufacturing plant can be operated in the vicinity of Sandur on a very small capital of Rs. 10 lakhs.

The Government of India will place an order with Messrs. Oronzio de Nora of Milan, Italy, for the supply of electrolysers for the Nangal Fertilisers and Heavy Water Project at a cost of Rs. 3.12 crores. Credit facilities have been arranged. The first instalment of 10 per cent. of the cost will be payable immediately and subsequent instalments in 1960 and the following years. The delivery of the equipment will start in March 1958 and the entire equipment will be delivered at the project site by April 1959.

The Ministry of Iron and Steel has transferred the management of the Bhilai and Durgapur steel projects, which have so far been functioning directly under it, to Hindustan (Private) Ltd. The Company which is wholly owned by the Government of India was formed two years ago to build and run the Rourkela plant. The transfer has been effected with a view to providing for the management of all the three steel projects by one company. By this arrangement, the Ministry hopes to be able to devote greater attention to the problems of further development of the steel industry.

Section 15 of the Central Sales Tax Act—that relating to sales tax on inter-State transactions in declared goods—together with other sections of the Act, will come into force on 1st July instead of on 1st May. Section 15 declares certain goods to be of special importance in inter-State trade or commerce and lays down that no State is authorised to levy sales tax on inter-State sale or purchase of goods at a rate exceeding 2 per cent. at more than one point in the series of successive sales. The goods so declared are coal, including coke and all its forms, cotton, hides and skins, iron and steel, jute and oilseeds.

A meeting of the representatives of the automobile industry, convened by the Ministry of Heavy Industries at New Delhi on the 1st inst., decided to set up a standing organisation of representatives of the industry to ensure frequent consultation between the latter and the Government of India in regard to the various problems confronting the industry, including the measures to be adopted for its planned development, in the light of the comprehensive report of the Tariff Commission on the industry submitted recently. A six-man steering committee was also set up to consider the organisational and other aspects of the organisation.

A Committee has been set up by the Government of India to examine the question of economy in the use of cement in all its aspects, as the domestic demand for cement is far in excess of indigenous production. The Committee will investigate and report on the availability of raw materials of pozzolanic nature (surkhi, sand, etc.). It will also study the question as to whether it is feasible to mix such materials with cement without adversely affecting the properties of the ultimate mixture *vis-a-vis* portland cement for specific jobs. The Committee is expected to submit its report in about three months' time.

The Estimates Committee of the Lok Sabha has called upon the Government to transfer the management of ordnance factories from the Defence Ministry to a company system of management or under a statutory corporation. In its report on the Ministry of Defence, the Committee has observed that all industries in the public sector, whether defence or civil, should be run in the manner in which all industries are intended to be run anywhere in the world and not by a departmental system of management. It is an accepted principle that the best form of management of industries is the company system of management which facilitates their running as far as possible on sound business principles. The Committee has favoured a change in the composition of the Defence Production Board which at present is dealing with policy and important matters concerning production in ordnance factories.

The Union Ministry of Commerce and Consumer Industries has announced that applications for licences to import capital goods would be considered under one of the two alternative sets of terms. First, the total payment prior to shipment should not exceed 20 per cent. of the f.o.b. value of the plant and equipment, the remaining 80 per cent. being paid in seven more or less equal annual instalments. Secondly, the initial payment is to be limited to 10 per cent., the balance being paid after production has started and in instalments which should not exceed the net saving in, or earning of, foreign exchange which the project will achieve thereafter. For purposes of consideration under the second alternative, the item to be produced must be one which has sufficient importance to the country's economy to justify its continued importation, in spite of light foreign exchange position or it must be readily capable of earning foreign exchange by being exported.

The Government of India has announced the establishment of a Central Wage Board for the cotton textile industry, with Mr. F. Jeejeebhoy as Chairman. The other members of the Board are Mr. Asoka Mehta and Prof. M. V. Mathur (independent members), Mr. Arvind N. Mafatlal and Mr. Bharatram (representing employers), and Mr. S. R. Vasavada and Mr. G. Ramanujam (workers' representatives). The terms of reference of the Board, the headquarters of which will be in Bombay, include the determining of categories of employees—manual, clerical, supervisory and others—who should be brought within the scope of the proposed wage fixation. The Board has also been asked to work out a wage structure based on the principles of fair wages as set forth in the report of the Committee for Fair Wages. In evolving a wage structure, the Board should, in addition to the considerations relating to fair wages, also take into account the needs of the industry in developing economy, the requirements of social justice, and the need for adjusting wage differentials in such a manner as to provide incentives to workers for advancing their scale. It has also been asked to bear in mind, too, the desirability of extending the system of payment by results and, in applying the system, the Board shall keep in view the need for fixing the minimum (fall-back) wage and also to safeguard against overwork and undue speed.

From Abroad

The Soviet Government will set up National Economic Councils in its various constituent republics, regions and national territories to manage industry and construction projects.

Weekly take-home pay for American factory workers in February this year was about three dollars higher than a year ago. February pay for workers with families averaged $74.99 weekly, while that for single workers averaged $69.58.

A new company, *Compagnie Francaise due Sahara*, has been formed in Paris for the study and development of all economic possibilities in the Sahara area. The African Industrial Development Corporation, a Government agency, is to give full co-operation to the new company.

In order to raise agricultural production, the U.S. Government will help Pakistan to establish fertiliser factories. The U.S. is also prepared to finance several projects of regional nature which are already under the consideration of the Economic Committee of the Baghdad Pact.

The British House of Commons passed the Government's Controversial Rent Bill. It now goes to the House of Lords. The Bill abolishes the rent ceiling on about 800,000 flats and houses in Britain and will eventually raise rents for more than four million others. Ultimately, the Government intends to abolish statutory rent control altogether.

Operations of the Export-Import Bank of Washington to facilitate trade between the U.S. and other countries were at a record peak during the six months ended December 1956. In that period, the Bank authorised 106 credits to 28 countries aggregating $938 million. The largest credit was $500 million and the smallest $940.

Work on a new oil pipeline from the Persian Gulf to the Turkish Coast is to start shortly. It is expected to be completed in about three to four years at an estimated cost of $800 million. The 33-inch pipeline with a capacity of one million barrels a day will be a joint venture of eight American, British, French and Dutch oil companies.

Industrial users of castor oil in the U.S. forecast a major boom in the country's consumption of castor oil, according to the *McGraw-Hill American Letter*. Jet planes are expected to use more castor oil as lubricant, because it maintains its viscosity over extreme ranges of temperature. Manufacturers of lipsticks, plastics, paint and soap will also use large quantities of castor oil.

The value of U.S. capital machinery exports in 1956 aggregated $3,800 million, or 22 per cent. above the figure of 1955. The major portion of the increase resulted from increased economic activity in Canada and Far Eastern countries. The greatest increase was recorded in exports of construction and mining machinery—47 per cent. above 1955. Increases were also made in electrical machinery, industrial machinery and tractors and accessories.

Approximately 20.3 million acres of American farmland have so far been placed under the Soil Bank Programme. The Programme is designed to conserve America's soil resources and to reduce current production of wheat, corn, upland cotton, rice and tobacco. Under the Programme, Government payments are made to American farmers who plant less than their full acreage allotments for these basic crops.

Representatives of the U.K. manufacturers of petroleum equipment will go to Canada in May next to visit all important oil installations and companies throughout the country. The main object is to explore all means of promoting sales of British manufactured engineering products to the Canadian oil industry. The visit is arranged by the Council of British Manufacturers of Petroleum Equipment, which represents more than 400 engineering firms supplying the oil industry both in the U.K. and abroad.

In the Southern Austrian town of Magdalensburg, at about 3,000 feet above sea level and just off the new Mohenstrasse Road, archæologists, who, for some time have been excavating the capital of ancient Noricum, have now unearthed a city which sheds as much light on Roman times as the discovery of Pompeii. According to Pan American, the scientists expect to reach lower levels which may change historical ideas now current about the early life of the Celts. So far, they have uncovered Roman offices which show the "modern" banking system of the early Romans. Last year, 21,000 visitors viewed the excavation.

PERSONAL

MR. Mustafa Kamal Kidwai, at present Minister of India to Saudi Arabia, has been appointed India's First Ambassador to that country.

Mr. N. M. Ayyar, Secretary, Union Ministry of Transport, has proceeded on leave preparatory to retirement. Mr. Nagendra Singh has assumed charge as Secretary, in addition to being the Director-General of Shipping.

Mr. A. S. Bam, I.C.S., a Deputy Secretary in the Ministry of Rehabilitation, Government of India, has been appointed Iron and Steel Controller. The present Iron and Steel Controller, Mr. C. R. Natesan, has proceeded on leave.

Mr. B. N. Adarkar, who relinquished the post of Member, Tariff Commission, on 30th March 1957, has been appointed Executive Director for India on the International Monetary Fund. He is expected to proceed to Washington to take charge of his new appointment early in June. Mr. Adarkar will replace Mr. Narayan Prasad who will thereafter return to India.

COAL INDUSTRY

THE view that it is both unnecessary and harmful in the country's interest to force the coal industry into the straight-jacket of inflexible planning was neatly expounded by Mr. Narendra Singh Singhi, Chairman of the Indian Mining Federation, at the annual meeting of the Federation, held in Calcutta last week. The coal industry, as is now well known, has to reach a target of 60 million tons—an increase of nearly 22 million tons over the production for 1955, to be made up of an increase in production by the public sector of 12 million tons and of 10 million tons in the private sector. It would appear that even after nearly nine months had elapsed since the Plan was outlined, little progress had been made towards increased production of coal. This is partly attributed to the fact that the Government took an unduly long time in approving the plans of the collieries in the private sector. Mr. Singhi said: "Perhaps in its three-dimensional thinking, the Government did not realise that the fourth dimension, time, is an indispensable factor for the success of planning."

Mr. Singhi rightly opposed what he termed the "doctrinaire obsession" regarding the roles of the public and private sectors in economic development. After all, the private sector, as Mr. Singhi pointed out, is not so private as many might imagine. For it is as much under the control of the Government as the public sector, at least in so far as the essential features of its working are concerned. And, in the coal industry, in particular, the two sectors have a complementary, rather than a competitive, function to perform. Unless the authorities accept in letter as well as in spirit this fundamental proposition in the development of the coal industry, it is certainly to be feared that the overall Plan for the industry might go awry. From this point of view, it is to be deplored that the Government has created the impression that the private sector is not getting a square deal, whether in the matter of allocation of wagons or supplies of essential materials or of prices for coal. Mr. Singhi complained that the public sector often gets an unduly large share of necessary facilities like supplies of iron and cement and, most important of all, transport. It is true that the Government spokesmen have denied this allegation. Nevertheless, they will do well to realise that in the interests of the overall development of the coal industry it is particularly important that the private sector should have free access to all available raw materials that it needs and also to transport equipment.

The private and public sectors have necessarily to be regarded as segments of the larger national sector. It is clearly the responsibility of the Government to ensure that the target for coal production under the second Five-year Plan is reached, if necessary through suitable adjustments in the targets for the two sectors. After referring to this consideration, Mr. Singhi observed: "I am putting forward no revolutionary idea but just drawing your attention to what the planning authorities have themselves said. But the fact needs emphasising because once things are taken for granted, it becomes difficult to modify one's programme of action even if circumstances make such modification imperative." He strongly urged that all the existing units in the coal industry should be allowed as free a scope as possible so that they may not only maintain a charted course of production but be in a position to meet a sudden and unexpected rise in demand brought about by unforeseen circumstances. He rightly emphasised the unwisdom of static targets and declared that the coal industry faces a colossal task which can only be achieved by the joint efforts of the two sectors.

Finally, Mr. Singhi referred to the problem of coal prices. As readers are no doubt aware, this question was dealt with extensively by Mr. R. Maulik in his speech at the recent annual meeting of the Indian Mining Association (*vide Commerce*, dated 9th March 1957). Mr. Singhi endorsed every word of what Mr. Maulik had to say on this question. He too emphasised that in the present circumstances of the country, there must be a fair margin in coal price over the cost of production. The margin should also contain an element that will pay for the development of the industry. He stressed that the authorities should bear in mind two further considerations, namely, (1) coal is a wasting asset and (2) there is a considerable time-lag between production and actual despatches. A correct pricing policy for coal, as Mr. Singhi said, should be based on these compelling considerations. It is to be hoped that the Government will not deny the coal industry its inherent right to a fair and reasonable price which will enable it to play its part effectively under the second Five-year Plan.

TEXTILE RESEARCH

The suburb of Ghatkopar in Greater Bombay hummed with activity on Monday this week, following the laying of the foundation-stone of the Bombay Textile Research Institute by the State's Chief Minister, in the absence of Mr. Morarji R. Desai, Union Minister for Commerce and Industry. The ceremony marks another concrete step in the implementation of a decision which was taken more than eight years ago. It was on 20th August 1948, it will be recalled, that the decision to set up two textile research institutes—one at Bombay and the other in South India—was taken at an all-India conference of millowners associations held in Delhi.

The establishment of the Bombay Textile Research Institute marks the beginning of a great project, the credit for which must go to the Millowners' Association, Bombay. The complete scheme envisages a huge capital outlay of Rs. 1 crore and a maximum recurring expenditure of Rs. 11.5 lakhs. The share of the Association in these amounts is half, the other half being met by the Cotton Textiles Fund Committee. Thirty-three mill companies—25 in the island of Bombay and eight upcountry, together accounting for 1,855,166 spindles, 40,041 looms and finishing equipment worth Rs. 2.84 crores—have so far joined the scheme. They have paid by way of entrance fee over Rs. 25.35 lakhs. A further sum of Rs. 3.12 lakhs is due from six member-mills which have been given the facility to pay the entrance fees in suitable instalments.

The Institute, according to Mr. Vithal N. Chandavarkar, Chairman, Governing Council, Bombay Textile Research Association, will have a wide range of up-to-date equipment and be staffed by a team of highly qualified and experienced scientists and technologists to undertake work in practically all phases of textile research —from fibre to fabric, including industrial engineering (time and motion studies, standardisation of workloads, wages, etc.), training-within-industry, statistical quality control, and problems of human relations. The Institute will establish close and continuous contact with its member-mills and place its expert knowledge and the fruits of its labour at their disposal. It will, in addition, deal with problems peculiar to each mill. In order to enable mill technicians to become *au fait* with the latest developments in their line, the Institute will publish from time to time informative literature on technical subjects pertaining to textiles. It will also provide facilities for the training of engineers to design textile machinery so that, with their aid, the industry may, in years to come, have access to the best type of productive equipment in the country itself.

The task that will be assigned to the Bombay Textile Research Institute is thus a stupendous one. Apart from the new challenges offered by rapid technological developments and the advent of man-made fibres, the Indian textile industry has to accept the challenge of the growing competition in the world textile trade. If this competition is to be weathered successfully, it is of the utmost importance that the industry should concentrate all attention on the need for maximising production of quality textiles at an economic cost. This, indeed, is the acid test by which the progress of the industry in the coming years will be judged. Such a heavy responsibility can, however, be expected to be shouldered by the industry only if it is assisted by research carried out at a well equipped institute as the one now being set up in Bombay. This aspect can be better appreciated if it is considered that colossal sums of money are being spent on research in the industrially advanced countries like the U.K., the U.S. and Japan. These efforts, as Mr. V. Nanjappa, Textile Commissioner, has pointed out, have yielded rich dividends in the form of a well established and progressive textile industry in these countries. To quote him: "The field of activity is by no means circumscribed and all aspects from the cotton fibre till the finished stage of the manufactured fabric have all been investigated. The result is the textile industry today is no longer completely dependent on "rule-of-thumb" methods. In the forefront of such activity are research institutes like the Shirley Institute, the laboratories of the Fine Cotton Spinners Association of the United Kingdom, the Textile Foundation, the Textile Research Institute and the Institute of Textile Technology of the United States of America. These research institutes carry out a systematic study on all facets connected with textile production."

While conducting research, the Bombay Institute will do well to bear in mind the triple objectives to which Mr. Morarji Desai drew special attention in the course of his message sent on the occasion of the foundation-stone-laying ceremony. First, the control of processes at all stages must be accurate and scientific, with a view to avoiding wastage through production of defective materials. Secondly, more efficient and shorter processes should be developed, so that cost of production can be brought down, labour saved and working conditions improved. Finally, new textile products must be evolved.

How far and to what extent will the aforesaid objectives be fulfilled by the Research Institute remains to be seen. Much, of course, depends on the type of technical and scientific personnel that will man the Institute. The Governing Council of the Research Association has been fortunate in securing the services, as Joint Director, of Dr. C. Nanjundayya, one of India's leading textile experts and until recently Director of the Indian Central Cotton Committee's Technological Laboratory. There will, we are told, be a band of zealous and brilliant textile research workers "who will be capable of designing new machines and inventing mechanical processes, chemical treatments, electronic devices and all the necessary adjuncts to assist the textile industry." In view of this assurance and also the assurance of Mr. Morarji Desai that the Government is prepared to consider liberal grants from the Textiles Fund, in addition to the exemption of the amount paid towards research from the levy of income-tax and super-taxes, one may be confident that the Institute will attain a high status among the world's textile research organisations.

RATIONALISATION

Rationalisation is a subject on which strong and conflicting views have been expressed by leaders of industry and labour unions. Attempts at introduction of labour-saving machines are being met with stiff opposition on the part of labour and have, in some cases, led to prolonged strikes and lockouts, with adverse effect on industrial relations in general. It is in the fitness of things, therefore, that the question of introducing rationalisation schemes in industry was chosen for discussion at the seventh All-India Conference of the Indian Institute of Personnel Management, held recently at Dalmianagar. The Conference held two sessions, one on rationalisation and its effect on industrial relations and the other on industrial relations in India and abroad. The Conference discussed the problem of rationalisation in all its bearing on productivity and employer-employee relations and suggested a series of measures to cushion the adverse effect, if any, of rationalisation.

The opposition of labour to rationalisation, it is common knowledge, stems from apprehensions of displacement of labour and unemployment. But the opposition does not, as Mr. S. C. Joshi, Director of Personnel, Tata Iron and Steel Company, Jamshedpur pointed out, extend to any and every scheme. It is generally confined to schemes which are thought to have the effect of large-scale displacement of workers without new employment opportunities being created. There is no justification for opposing schemes which have no such implications. Fair workload, effective utilisation of existing machinery and equipment, better management techniques and deterioration in industrial relations are some of the problems which have to be tackled along with rationalisation. Mr. Joshi suggested that proper investigation and study of rationalisation schemes, proper planning and phasing of schemes, prior consultation and agreements with employees and their organisation were essential. Surely, personnel officers have an important part to play in this respect. Much, of course, depends,

(*Continued on page* 701)

INTRODUCTION OF DECIMAL COINAGE

REFORM OF FAR-REACHING SIGNIFICANCE

A HUMAN tendency is to postpone difficult tasks. In so doing, the fact is often forgotten that the task has to be faced some day and that postponement does not make the task simpler. The introduction of the much-delayed reform, the decimal coinage, which is to be followed by the ushering in of the metric system of weights and measures a year later, has come none too soon. Indeed, if the decimal coinage system, which has come into effect from 1st April 1957, had been introduced much earlier, the task would not have been so difficult as it is today.

In fact, the desirability of reforming the existing system of coinage was recognised as far back as 1867, and the then Government's conclusion that the new system should be introduced in gradual stages never materialised. More recently, in 1946, the Indian Science Congress passed a unanimous resolution in favour of a comprehensive policy of decimalisation of currency, weights and measures in India. Far-reaching political changes, however, came in the way of pursuing to the end legislation to that effect, introduced in the Central Legislature in the same year. Three years later, the Report of the Special Committee on Weights and Measures, which was endorsed by the General Council of the Indian Standards Institution, expressed the view that it would be an advantage if the adoption of decimalised currency preceded that of the metric system of weights and measures, and that the weights and dimensions of new coins should be related to the metric system of weights and measures so as to facilitate propagation of general knowledge of the magnitude of the new units among the public. Further, in 1955, the Government found that the volume of opinion in favour of the change had increased, and introduced a Bill in Parliament, which became the Indian Coinage (Amendment) Act, 1955.

With the introduction of decimal coinage on 1st April, a new phase, which Mr. Nehru termed in his broadcast the other day as the beginning of "a silent but far-reaching revolution," has been ushered in in the evolution of Indian currency. India has thus fallen in line with 105 of the 140 countries in the world that issue their own coins. The U.S. led the way (1786 and 1792) in decimal coinage with the dollar as the unit. Important among others that adopted this system subsequently were France (1799 and 1803), countries of the Latin Union (1865), Germany (1873), the Scandinavian States (1875), Russia (1839 and 1897) and Latin American countries and Japan (1871).

U.K.'s Experience

It is noteworthy, however, that the U.K. has not introduced this system so far though its advantages are fully recognised. The reason is that scientific and technological development and commerce and trade have gone so far that it is impossible to bring about the change-over without widespread dislocation to commerce and trade. Indeed, it is aptly stated that the experience of the U.K. is a timely warning that the time is now opportune in India for the introduction of this reform. For the rapid industrial expansion taken on hand in the country will, in the next decade or so, complicate the economy and involve the use of hundreds of thousands of calculating machines. Besides, the fact that various industries dealing with the scientific instruments of measurement are still in their infant stage and, therefore, can be geared to the new metric system of measures, weights and coinage easily, lent further support to the present measure.

Besides being in itself so essential, decimal coinage is the precursor to the bigger reform of standardising weights and measures, a year hence, of which there is at present enormous multiplicity and variety all over the country, leading to a great deal of confusion. Moreover, in order to be fully effective, the decimal coinage must be linked with the metric system of weights and measures. For example, the new rupee weighs 10 grams just as the old one weighs a tola. New coins of 50 *naye paise*, and 25 *naye paise* weigh 5 grams and 2.5 grams, respectively, and so on. The new coins thus help in acquainting the people with the metric system.

Under the new system, the rupee will retain its original value and name. It will be divided, however, into 100 units, namely, *paisa*, instead of 64 pice or 192 pies as hitherto. During the transitional period of three to four years, when both the old and new coins will be current, the new *paisa* will be called *naya paisa*, and after the interim period the prefix will be dropped. The *naya paisa*, accordingly, will be the primary unit of Indian currency, and coins of denominations of 1, 2, 5 and 10 *naye paise* have been put into circulation. Coins of higher denominations, namely, 25 and 50 *naye paise* and the new rupee will be introduced at a subsequent date. Till then, the present half-rupee and quarter-rupee coins will continue in circulation with the value, respectively, of 50 *naye paise* and 25 *naye paise*.

Ready Reckoner

The following conversion table prepared by the authorities provides the equivalents of *naye paise* to amounts ranging from three pies to As. 15-9.

As. Ps.	Naye Paise	As. Ps.	Naye Paise	As. Ps.	Naye Paise	As. Ps.	Naye Paise
0 3	2	4 3	27	8 3	52	12 3	77
0 6	3	4 6	28	8 6	53	12 6	78
0 9	5	4 9	30	8 9	55	12 9	80
1 A.	6	5 As.	31	9 As.	56	13 As.	81
1 3	8	5 3	33	9 3	58	13 3	83
1 6	9	5 6	34	9 6	59	13 6	84
1 9	11	5 9	36	9 9	61	13 9	86
2 As.	12	6 As.	37	10 As.	62	14 As.	87
2 3	14	6 3	39	10 3	64	14 3	89
2 6	16	6 6	41	10 6	66	14 6	91
2 9	17	6 9	42	10 9	67	14 9	92
3 As.	19	7 As.	44	11 As.	69	15 As.	94
3 3	20	7 3	45	11 3	70	15 3	95
3 6	22	7 6	47	11 6	72	15 6	97
3 9	23	7 9	48	11 9	73	15 9	98
4 As.	25	8 As.	50	12 As.	75	16 As.	100

The rounded equivalents to the existing coins are arrived at on the basis of the method of "rounding off" prescribed in the Indian Coinage Act as amended in 1955, only for the purpose of making use of them when coins are actually tendered in the course of a transaction. For other purposes where conversion is necessary, such as the computation of total value at a given rate, the exact equivalent of the rate should be worked out, even though it involves fractions, and when the question of payment arises, the fractions of a rupee in the total sum should be converted into *naye paise* in accordance with the conversion table.

The positive advantages of the decimal system for modern banking, commerce and industry, which demand a quick and easy method of computation, are now quite well known. At the same time, it has been recognised that the stresses and strains in the initial stages of transition may well create, in the absence of adequate preparation and planning, numerous difficulties. In order to mitigate these handicaps and facilitate a smooth change-over, the Government has made elaborate preparations in various departments. Worthy of special mention in this regard is the Posts and Telegraph Department which has over 60,000 offices in the country and in which monetary transactions involving exchange of subsidiary coinage constitute a considerable proportion of its daily business. The first preparatory step taken in this direction was amending, in September 1956, the Indian Post Office Act, 1898, and replacing the First Schedule to it by a new Schedule showing the tariff in decimal coinage. Consequently, inland and foreign rates of postage, fees and sums charged for different classes of articles, telegrams, etc., have been determined in terms of decimal coinage. The new tariff, which has come into force simultaneously with the system, bears an approximate equivalence to the existing tariff and the existing structure has generally remained unchanged, though slight variations have been made in certain cases with the object of simplifying calculations and rationalising the rates. In the case of telephone rates, however, existing rates will continue unchanged for some time, owing to the time needed for changing the machines which prepare the telephone bills.

Postal Orders

Certain changes have also been brought about in postal orders. They have been printed in multiples of 50 *naye paise* rising upto Rs. 10. The rate of commission has been changed from 1 anna for each Postal Order in the old system to 5 *naye paise* for postal orders of value ranging from 50 *naye paise* to Rs. 5, and to 10 *naye paise* for the higher denominations. A new series of National Savings and National Plan Certificates will also be issued. With a view to circumventing the practical difficulties in the course of transactions at the counters, efforts have been made to build up stocks of new coins in almost all the post offices and telegraph offices. Adequate steps have also been taken to familiarise the public with the new coins.

In adopting the metric system, as Prime Minister Mr. Nehru has stated in the course of his broadcast, India has not adopted something alien to it. He has rightly pointed out that we are going back to something which was originally the product of Indian genius, namely, the zero and numerals. Commending the change, the Prime Minister pertinently observed:

"Everything old is not necessarily bad, just as everything new is not necessarily good. But in a changing world something that was good in the past may not fit in in present conditions. We have therefore to adapt ourselves to this changing world. The world today is one of science, technology and industry in their innumerable aspects. A cumbrous system of coinage and weights and measures is wasteful of time and energy and delays work. As our social life becomes more advanced and complex, these petty delays and waste mount up and add to a great deal. Therefore, it has become necessary to make this change now rather than at a later stage."

The introduction of the system has not come a day too soon. India has certainly taken one of the boldest steps in recent currency history by introducing the decimal system. It is to be hoped that the transitional stage will be negotiated with minimum of disturbance to national economy.

PANDYAN BANK'S GOOD PROGRESS

The audited accounts of the Pandyan Bank Ltd. (Managing Director: Mr. S. N. K. Sundaram, Madurai) for the year ended 31st December 1956 make encouraging reading, inasmuch as the progress made in recent years has been well kept up. The profit, which had steadily grown from Rs. 1.86 lakhs in 1952 (after a setback from the high of Rs. 2.55 lakhs in 1949) to Rs. 3.22 lakhs in 1955, has further improved to Rs. 3.47 lakhs in the year under review, thus establishing a record in the history of the Bank. The dividend is, however, unchanged at 7½ per cent., after having been successively stepped up to that level last year from 3½ per cent. paid for 1952. In declaring a dividend of 7½ per cent. the Directors have fully carried out their intention expressed last year to have the annual distribution to the shareholders stabilised at this level for some years to come, during which time the resources of the Bank would be enlarged and the financial position strengthened.

The Bank's gross income for the year amounts to Rs. 17.07 lakhs, having risen from Rs. 12.61 lakhs in 1955. Interest and discount earned account for Rs. 12.85 lakhs, as against Rs. 9.27 lakhs, and commission and exchange for Rs. 2.97 lakhs (Rs. 2.47 lakhs). The outgo by way of interest paid has gone up from Rs. 4.14 lakhs to Rs. 6.29 lakhs and expenses from Rs. 5.07 lakhs to Rs. 7.05 lakhs.

Out of the profit of Rs. 3.47 lakhs, the Directors have set aside Rs. 1.35 lakhs as provision for taxation, as against Rs. 1.15 lakhs in the previous year. They have added Rs. 75,000 to the general reserve, which had received Rs. 1.30 lakhs a year ago. They have, however, transferred, for the first time, a sum of Rs. 50,000 to the contingency fund, as they feel that the Bank is now in a position to follow the established practice of leading banks of creating internal reserves for the purpose of meeting any unforeseen contingency.

The following comparative table gives an idea of the Bank's progress during the last three years:

	1953	1954	1955	1956
	Rs.	Rs.	Rs.	Rs.
Capital	8,00,000	8,00,000	9,99,175	10,00,000
Reserves	7,20,000	8,20,000	9,50,000	10,25,000
Deposits	1,06,95,312	1,48,18,704	1,95,22,312	2,44,22,818
Loans and advances .	62,31,718	73,80,883	1,01,38,708	1,34,98,014
Investments	21,85,814	61,30,525	73,12,005	72,39,939
Cash and banks ..	40,78,811	42,35,782	42,62,472	54,78,443
Total resources ..	1,33,51,072	1,81,50,714	2,36,78,119	2,94,40,773
Profit	2,45,165	2,53,257	3,21,644	3,46,616
Dividend (per cent.) ..	5	6¼	7½	7½

The Bank was established in 1946. Its deposits have grown from Rs. 38.81 lakhs at the end of 1947 to Rs. 244.23 lakhs at the close of 1956. The number of branches has been enlarged from 7 to 35.

The World Bank has formed a new Far East Department to tackle increased banking operations in Burma, China, Ceylon, Indonesia, Japan, Korea, Philippines, Thailand and Vietnam. The existing Asia and Middle East Department will be left with responsibility for Afghanistan, Egypt, Ethiopia, India, Persia, Iraq, Israel, Jordan, Lebanon, Pakistan and Syria.

The director of the new department will be Mr. Martin Rosen, a 38-year-old American economist, who was the Bank's former assistant director of operations for Europe, Africa and Australia.

He will have as assistant director Mr. Ian P. Cargill, a Scotsman who formerly worked for the British Treasury and as an adviser on trade and finance in the Colonial Office.

CURB ON MILL CLOTH OUTPUT UNJUSTIFIED

MORE SPINDLES AND LOOMS MUST BE INSTALLED

A WELL-WORN but pertinent point which Mr. Ramnath A. Podar, the newly elected Chairman of the Millowners' Association, Bombay, made in his address at the recent annual meeting of the Association, was that the concept of social justice should not be made to provide a doctrinal cover for forced marches towards economically unsound objectives. Although Mr. Podar emphasised this point while touching on the new three-tier machinery for the settlement of disputes, it can as well be applied to the whole of the cotton mill industry. For the industry has already suffered, and is still suffering, a great deal on account of irrational official policies based on purely ideological considerations. How else can one explain the crushing burden of taxation and the restrictions on mill output of cloth? Since the former has been discussed with special reference to excise duty in the course of an editorial last week, we propose to examine at some length the output restriction policy.

Under the second Five-year Plan, it will be recalled, the Government of India has allowed an expansion of just 350 million yards in the production of mill cloth. This quantity is only about 20 per cent. of 1,700 million yards of additional production necessary to give a *per capita* consumption of 18.5 yards in the Plan period, after allowing 1,000 million yards for export. Out of the remaining 1,350 million yards, 1,000 million yards are allocated for the handloom sector and 200 million yards for powerlooms. The balance will be allotted later. Even the 300 million yards allocated to the mills have to be produced only for export through the installation of automatic looms.

Reliance on Handlooms

It will be seen from the foregoing account that considerable reliance is placed on the handlooms. It must no doubt be admitted that the development of handlooms is quite desirable from the point of view of employment consideration, but this must be matched against the no less vital consideration, namely, the price the consumer has to pay for his requirements of cloth. It is scarcely necessary to point out that the production of cloth on handlooms has all along been uneconomic. Not only is the production capacity very low but the cost of manufacture also is unduly high. The handloom sector cannot be expected to fulfil the large target set for it in the Plan. The demand for cloth is rising and the handloom and powerloom sectors, as Sir John Burns, the erstwhile Chairman of the Association, rightly stated, have not been able to give the extra production needed to meet it and, in September last, evidence of a growing shortage of cloth became apparent to all. He drew attention to the statement in the tentative framework of the second Plan which had said that "the emphasis on capital-saving methods may well land us between two stools—the large-scale capital-using methods may get discouraged without other methods filling the gap; we may thus have the worst of both worlds." Explaining the position in the sphere of textile industry, Sir John said:

"This is not quite what has happened in the case of textiles. The textile industry has not become discouraged, but it has been prohibited from expanding. The result, however, is the same. I might mention that, in spite of the restrictions on expansion, the mill industry produced 212 million yards more in 1956 than in 1955, whereas handloom production increased by 29 million yards only. To correct the situation which developed, the method chosen was to add so much to the cost to the consumer by way of excise that the people cannot afford to buy as much cloth and to attempt thus to equate the demand to the supply. Surely, this can only be a makeshift answer to the problem and a more permanent solution will have to be found. The Five-year Plans came into being only to raise the standard of living of the people. The first essential in raising the standard of living is to see that everybody has enough to eat and when this has been accomplished, the second thing that people are likely to look for as their purchasing power increases is more clothing and more decorative clothing. The present policy is not going to give the people an opportunity of buying more cloth and that would seem to be the first essential. The people are not likely to accept the success of planning, if more clothing is not available to them at prices they can afford. Next to food, cloth could readily become the yardstick by which the Plans will be judged."

There is considerable force in these observations. Unless the supplies of such an essential item of consumption as cloth are augmented, the task of maintaining a reasonable degree of price stability will be rendered very difficult. If, therefore, the country is not to run the risk of an acute scarcity of cloth supplies and soaring prices in the coming years, it is of the utmost importance that the capacity of the mill sector must be stepped up. As Sir John rightly observed, "there would seem to be only one satisfactory answer and that is to permit mills to install additional spindles and looms and, by increasing their production, satisfy the demand. This must be done as soon as possible, as new spindles and looms cannot be installed overnight and it will take time."

Compulsory Deposits

Another important aspect to which Sir John made special reference relates to compulsory deposits. Companies are required to deposit with the Government certain percentages of free reserves and current profits, in order to qualify for development rebate and/or depreciation allowances being treated as tax-free. The Act gives Government the power to siphon off such sums as it may determine as being free reserves. If this were actually done, it would, as Sir John averred, lead to great difficulty so far as the textile industry is concerned. For the industry is one in which the requirements of working capital are extremely high. In fact, there are said to be few mill companies, if any, which have enough working capital for their heads at all times and several companies borrow from banks or elsewhere to meet their working capital requirements. Further, the mills need finance not only for buying cotton seasonally when it is available to them and selling cloth but also for financing stocks of cloth and cotton. Drawing attention to these factors, Sir John observed:

"The balance-sheet of a company can give a false impression in so far as it relates to reserves. The reserve funds shown in a balance-sheet do not mean that the company has equivalent amounts in cash in hand. To my mind, the criterion should be the cash position and not the balance-sheet position. There would seem to be little point in compelling a company to make a deposit with Government when that company has already borrowed money for its normal business. This would only result in increasing the borrowings of the company. In the present condition of the money market, this, in fact, may not always be possible and a company may not be able to carry on its normal business for lack of finance. As I have said, the solution to my mind would seem to be, if there is no possibility of Government dropping the proposal altogether, to judge the position of a company by its cash position and not by the balance-sheet."

To revert to Mr. Podar's speech. The Chairman stressed that, without an adequate supply of cloth and other necessities of life in a period of rising living standards, there was every likelihood of the economy being exposed to inflationary pressures. There was, therefore, every need that the textile industry should fulfil the tasks assigned to it by the planners. It could do so, provided there was industrial peace and higher productivity. Emphasising, in particular, the productivity aspect, Mr. Podar rightly said: "It is in the interests of the workers themselves that they should fulfil these expectations (the need for attaining a higher level of productivity in all the sectors of the economy). As the second Plan document has so explicitly put it, "improvement in wages can result mainly from increased productivity.' In the present state of our country's development, no fair-minded person can possibly countenance an outright increase in wages without a corresponding improvement in the effort of labour to give higher production."

In this connection, Mr. Podar alluded to some of the important decisions taken during the past year in order to promote the social and economic welfare of textile workers. There is, for instance, the payment of gratuity to workers awarded by the Industrial Court in November 1956; this has created the need for fixing the superannuation age in the textile industry and steps are being taken towards this end. Two other measures relate to the upward revision in the employers' contribution to the workers' health scheme from 1¼ to 3½ per cent. and contemplated increase in the rate of contribution to provident fund from 6¼ to 8⅓ per cent. These two increases are expected to impose an additional burden of Rs. 1.4 crores per annum on the Bombay cotton mills. Since the incidence of all these measures is already being felt acutely by the mills, further steps to ameliorate the condition of labour should be taken, having due regard to the capacity of the industry to bear fresh burdens and only after consultation with the interests concerned. Surely, it would, as Mr. Podar very aptly opined, be prudent to consolidate the gains already secured before advancing further.

CORRESPONDENTS ALL OVER THE WORLD

WORLD WOOL CONSUMPTION HIGHEST SINCE THE WAR

World wool consumption during 1956 is estimated by the Commonwealth Economic Committee to have reached 2,830 million lbs. (clean), an increase of 8 per cent. on the 2,614 million lbs. recorded for 1955, and the highest total since the war. In 11 of the largest manufacturing countries which absorbs about two-thirds of the world total, consumption aggregated 1,880 million lbs., as compared with 1,730 million lbs. in the previous year, an increase of 9 per cent. In the United Kingdom, which uses more wool than any other country, consumption last year was virtually unchanged as compared with 1955, but there were striking increases among the other countries. In Japan, for example, the increase was no less than 41 per cent., though its total of 171 million lbs. (clean) for 1956 is little more than a third of last year's consumption in Britain. The U.S.A., the second largest among wool users of the world, recorded an increase of 6 per cent. The other principal increases were France 12 per cent., West Germany 5 per cent., Italy 10 per cent., Belgium 22 per cent., Australia 18 per cent., the Netherlands 8 per cent. and Canada 9 per cent. Sweden, alone among the principal users, showed a decrease of 17 per cent.

For France, Germany and Japan, the 1956 totals, states the Committee, were all the highest of any post-war year. Consumption outside these 11 chief manufacturing countries—of which a little over half takes place in the Soviet Union, Eastern Europe and China—is provisionally estimated by the Committee to have risen by about 8 per cent. as compared with 1955. Consumption in the Soviet group itself—based on available supplies of wool—is estimated to have shown a rather greater increase through a rise in the domestic clip and imports which were apparently substantially larger.

COLOUR FASTNESS OF TEXTILES

The Indian Standards Institution has issued five standards covering methods of test for determination of colour fastness of textile materials to acid spotting, cross-dyeing (wool), degumming, perspiration, and alkali spotting. Colour fastness of textile materials is of considerable importance to the consumer. The fastness depends not only upon the nature and depth of shade of the dyestuff used but also upon the nature of the fibre and the method of dyeing or printing employed. The same colouring matter, when used in dyeing or printing different fibres, or when applied by different methods upon the same fibre, may give vastly different results. Formulation of standard methods of test for determining colour fastness of textile materials to different agencies and processes likely to effect change in colour is, therefore, necessary.

Since it is equally important to evaluate colour fastness of textile materials to the action of other agencies and processes which effect colour such as washing, dry cleaning, hot pressing, rubbing, sea water, etc., separate Indian standards dealing with methods of test for evaluating colour fastness in respect of these agencies and processes are being issued. A complete list of such standards may be obtained from the Indian Standards Institution.

A copy of this Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration, together with the necessary documents which are required by Section 60 of the Companies Act, 1956.

"CONSENT of the Central Government has been obtained for this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any statements made or opinions expressed with regard to them."

The Subscription List will open on 10th April 1957 and will close on 22nd April 1957 or earlier or later at the discretion of the Directors.

SHREE GOPAL PAPER MILLS LIMITED

(INCORPORATED ON 5TH OF NOVEMBER 1936 UNDER THE INDIAN COMPANIES ACT, 1913.)

SHARE CAPITAL

Authorised Capital :

	Rs.
7,500—6 per cent. (Income-tax free) Cumulative Participating First Preference Shares of Rs. 100 each .	7,50,000
75,000—7 per cent. (Income-tax free) Cumulative Redeemable 2nd Preference Shares of Rs. 100 each ...	75,00,000
12,55,625—Ordinary Shares of Rs. 10 each	1,25,56,250
	Rs. 2,08,06,250

Issued, Subscribed and Paid-up Capital :

	Rs.
7,500—6 per cent. (Income-tax free) Cumulative Participating First Preference Shares of Rs. 100 each	7,50,000
*12,54,907—Ordinary Shares of Rs. 10 each	1,25,49,070
	Rs. 1,32,99,070

Note :—These include

(a) 29,938 Ordinary Shares of Rs. 10 each issued for consideration other than cash in part payment of the purchase price of the mill in 1936;

(b) 5,00,629 Ordinary Shares of Rs. 10 each issued as fully paid up to the existing shareholders, as on 1st January 1955, in proportion of one Ordinary Share for each Ordinary Share held by them on 1st January, 1955, by capitalisation of Reserves.

The rest are for cash.

Debenture Loan Capital .. .. Rs. 40,00,000

(a) 5½ per cent. Registered Mortgage Debentures of Rs. Ten Lacs divided into 1,000 Debentures of Rs. 1,000 each secured by Trust Deed dated 14th July 1937 and supplemental Trust Deeds dated 14th August 1944 and 1st September 1954 10,00,000

The principal amount is repayable on 16th July 1966 with option to the Company to pay off on or after 15th July 1962 by giving six months' notice of its intention so to do.

The interest is payable half-yearly on the 15th January and 15th July each year.

(b) 3,000 6 per cent. Registered Mortgage Debentures of Rs. 1,000 each secured by Debenture Trust Deed dated 27th June 1955 ... 30,00,000

Rs. 40,00,000

The interest is payable half-yearly on 16th February and 16th August each year. 600 Debentures of this series will be redeemed by the Company at par on 16th February 1961 and on each 16th day of February of the years following till the whole of the said Debentures shall have been redeemed or paid off. The particulars of Debentures to be redeemed will be determined by draw.

Both the above series of Debentures are secured by fixed mortgage charge of the Company's lands, buildings, plant and machinery, both present and future and a floating charge on other assets (excepting raw materials, stores and stock-in-trade), such floating charge not hindering or preventing the Company from leasing, charging or otherwise disposing of or dealing with the other assets, and the Company may charge such other assets and such charge may be made specific or floating and may be made to rank in priority or *pari passu* with or after the floating charge in favour of the holders of these Debentures.

The mortgage charge with respect to both these series of Debentures rank *pari passu*.

Note : (The Company has a Cash Credit limit, etc., for Rs. 53 lacs with Allahabad Bank Ltd., secured by floating charge on movable assets of the Company, such charge ranking in priority to floating charge in favour of holders of above Debentures.)

PRESENT ISSUE

75,000—7 per cent. (Income-tax free) Cumulative Redeemable Preference Shares of Rs. 100 each at par .. .. Rs. 75,00,000

These shares carry 7 per cent. (income-tax free) cumulative preference dividend and subject to the provisions of the Companies Act, 1956, shall be redeemed at par on 1st of July 1972 with option to the Company to redeem them at par earlier at any time after the 30th June 1969 on giving six months' previous notice of its intention so to do. A redemption fund is proposed to be created by setting apart Rs. Ten Lacs every year out of the annual profits from the year 1963 onwards till full Rs. 75 Lacs is made up.

The shares will rank for dividend next after paying or providing for payment of cumulative preferential dividend at 6 per cent. per annum (income-tax free) on the capital for the time being paid up on the existing Preference Shares of the nominal value of Rs. 7½ lacs of the Company but in priority to the Ordinary Shares of the Company. For return of capital, these shares will rank next after the existing Preference Shares but in priority to the Ordinary Shares, but shall not be entitled to any further participation in profits or surplus assets.

This issue of 75,000 Second Cumulative Redeemable Preference Shares of Rs. 100 each is offered for public subscription.

The amount payable in respect of these shares is as follows :—

Rs. 50 per share with application, and Rs. 50 per share on allotment.

Applications must be made for a minimum of five Preference Shares or multiples thereof.

The Company is advised that the Preference Shares now being issued are "Approved Investments" within the meaning of Section 27A of the Indian Insurance Act, 1938.

PROSPECTUS

OBJECTS

The Company was incorporated on 5th November, 1936. Objects for which the Company was formed are as set out in the Memorandum of Association and in particular to acquire the Paper Mills belonging to Punjab Pulp and Paper Mills Limited (in Liquidation) with 51 acres of freehold land, situate in Jagadhri, and to carry on business of manufacture of pulp and papers of all kinds, and articles of all kinds for manufacture of which pulp and paper is used.

The Company has since then progressively expanded, both in its volume of production and its range of products. The Company's Factory at Yamna Nagar (Jagadhri Railway Station) now stands in an area of nearly over 350 acres of land with a fully equipped Research Laboratory and an extensive staff and labour colony. The original annual rated capacity of the Mills was 7,500 tons of finished paper inclusive of wrapper. With the additions and alterations so far made, its present annual rated capacity stands at 13,500 tons of paper including wrapper. In addition to the Paper Mills, the Company has got a Hydrogenation Factory, a Tin Can Manufacturing and Printing Plant and a mechanised Stationery Department for manufacture of stationery. The cost value of the block in 1936 when the Factory was purchased was Rs. 25,58,618-2. On 30th June, 1956, it stands at over Rs. one crore fifty lacs, showing additions of about Rs. one crore twenty-five lacs during this period. The present market value of block, i.e., Plant and Machinery, Equipments, Buildings, Land, etc., of the Company should be about Rs. 3 crores.

DEVELOPMENT

The Company is at present engaged in Expansion, Renovation and Modernization Programme of about Rs. 3 crores to be completed by the end of the year 1958. It is a two-phased programme. The first phase consists of the modernisation and renovation of the existing three paper machines. The major portion of the equipment has already reached the site and has been erected or is in course of erection. This first phase is expected to be completed by April 1957 when the production of the existing three machines would go up from 40 tons to 53/54 tons of paper per day, i.e., the annual rated capacity would go up from 13,500 tons to 17,500 tons.

The second phase of the Programme is Expansion programme which consists of putting up a new Pulp and Paper Mill. Orders for both the new Pulp and Paper Mill Soda Recovery unit and other items of the machinery and equipment required for this programme have already been placed and advance payments of over Rs. fifty-one lacs have already been made. The shipments of the new Paper Machine and the new Pulp Mill consisting of 2 streets—one for the manufacture of pulp from wood and bamboo and another for the manufacture of pulp from bagasse, grass, etc., are expected to be completed during the current year. The first consignment of equipment relating to the new Paper Machine has already arrived in India.

The scheme has been drawn up in consultation with Messrs. Escher Wyss GmbH, Ravensburg and Messrs. Krauss-Maffei Imperial GmbH, Muenchen 13, of West Germany, both of whom are reputed manufacturers of paper and pulp machinery. The scheme envisages, in addition to the installation of pulp and paper mill—

(a) Setting up of a new modern soda house consisting of soda recovery boiler, recausticising unit and modern evaporator and an electrostatic precipitator, under technical supervision of Elof Hanson of Sweden.

Note:—The suppliers guarantee caustic recovery of 95 per cent. as against present recovery of about 65 per cent. This should result in considerable saving to the Company in cost of chemicals used in manufacture.

(b) Addition of another turbine of 6,250 kw. and two boilers to our existing electrical unit to provide additional load of electricity and additional process steam.

With the completion of this Expansion and Modernization programme, the Mills rated capacity would increase to 90/100 tons per day (i.e., about 32,000 tons per annum against the present rated capacity of 13,500 tons per annum) of finished paper, consisting of all kinds of writing and printing papers including Banks, Bonds, Ledgers, Air-mails and Manifold, etc.

OBJECT OF THIS ISSUE

The total cost of this Renovation Expansion and Modernization programme is estimated at approximately Rs. three crores, of which over Rs. 86 lacs has already been spent on renovation and modernization of existing paper machines and as advance payments against orders placed for machines and equipments for the second phase of the programme, Rs. 70 lacs would become available from the Company's liquid resources in hand, including conversion of part of the investments of the Company. Rs. 65 lacs would become available from prospective resources of the Company, i.e., provisions for depreciation, development rebate and undistributed profits between now and end of 1958, by which time the second and final phase of the scheme would have been completed and the new plant put into commission. This leaves an uncovered balance of about Rs. 75 lacs, which is proposed to be made up by the present issue of Second Preference Share capital.

RAW MATERIALS

Raw materials so far used are sabai grass and rags. The Company obtains its requirements of sabai grass from Nepal, Punjab and Himachal Pradesh forests for which they are holding leases for various terms. Bamboo, spruce and other coniferous woods and bagasse will be the additional raw materials for the new Mills. Arrangements have been settled for 15-year lease of the bamboo forests of the new Punjab State. The Government have also plans in hand to augment further the yield of grass and bamboo of their forests. Himachal Pradesh has also agreed to grant lease of their bamboo forests to the Company. For spruce and other coniferous woods, the Company is negotiating with the Punjab, Himachal Pradesh and U.P. Governments for leases. So far as bagasse is concerned, there are a large number of sugar factories in and around the Mills, and as such no difficulty is anticipated in obtaining sufficient quantities of bagasse as may be required.

PROSPECTS AND PROFITS

Per capita consumption of paper in India is amongst the lowest in the world, being 2 lbs. per annum as compared to 400 lbs. in U.S.A. and 100/200 lbs. in European countries and 50 lbs. in Japan. With the progressive industrialisation of the country and spread of literacy under the Second Five-Year Plan, the consumption of paper, paper boards and newsprint is estimated by the Planning Commission to go upto 5,00,000 tons per annum by the year 1960-61. During the First Five-Year Plan period, i.e., from the year 1951 to 1955-56, the indigenous production has gone up from 1,14,000 tons to 2,02,000 tons. The consumption of paper in the meantime has also gone up to 3,17,000 tons due to increase in the demand in the country. In order to fill up this gap between production and consumption, the country has been importing considerable quantities of foreign paper every year.

The Company's Modernization and Extension Programme coupled with the continued growing demand for paper in the country leads your Directors to believe that (in the absence of some unforeseen circumstances beyond their control) the Modernization and Expansion Programmes coming into fruitrition according to schedule (the former by the end of April 1957 and the latter by the end of 1958), the profits of the Company should show considerable increase commensurate with the extended capacity of the mills. Computing on the present price levels, it may well be hoped that the trading profits of the Company should be twice as much in the year 1959 compared to the present profits.

Dividend Cover:—On the basis of the present annual net profits as disclosed by the Auditors' Report hereunder appended, the dividend payable on the First and Second Preference Shares is covered by present earnings nearly four times over.

FINANCIAL INFORMATION

Auditors' Report

The following is a copy of the report of the Company's Auditors, Messrs. Price, Waterhouse, Peat & Co., Chartered Accountants:

MESSRS. KARAM CHAND THAPAR & BROTHERS PRIVATE LTD. CALCUTTA, 28*th March*, 1957.
Managing Agents,
SHREE GOPAL PAPER MILLS LTD.,
5, India Exchange Place,
Calcutta.

Dear Sirs,

We have examined the books and accounts of Shree Gopal Paper Mills Ltd. as kept in the Managing Agents' Office at Calcutta and at the Mills, in which are incorporated the certified Returns from the Oil Mills, Ginning Factory and Forests, for the four years ended 31st December, 1955, and the half-year ended 30th June, 1956, and report that the Profits of the Company are as set out below. The accounts for the half-year ended 31st December, 1956, have not yet been made up. These profits have been arrived at after charging all expenses of working and management including provision for Normal Depreciation on the basis allowable for taxation and after making such adjustments as are, in our opinion, appropriate.

Income	Year ended 31st December, 1952	Year ended 31st December, 1953	Year ended 31st December, 1954	Year ended 31st December, 1955	Half-year ended 30th June, 1956

PRICE, WATERHOUSE, PEAT & CO.

STATUTORY AND GENERAL INFORMATION

1. Directors:

The Articles of the Company provide that

(i) Unless otherwise determined by a General Meeting, the number of Directors shall not be less than five nor more than eleven inclusive of ex-officio Directors and Managing Agents' nominee Directors.

(ii) Unless otherwise determined by a General Meeting, the qualification of a Director shall be the holding of Ordinary Shares of the Company of the nominal value of Rs. 5,000 in his own name, but this shall not apply to Central or State Government Director, or Technical Director, or Managing Agents' nominee Directors.

(iii) Each Director shall be paid out of the funds of the Company by way of remuneration a sum of Rs. 200 for each meeting of the Board which he attends. In addition to the remuneration payable to him as above, a Director if he is not a resident of the place where the meeting is held, will further be entitled to actual travelling charges not exceeding air-conditioned class railway fare from his usual place of residence in India, and back; in addition to third class fare for a servant if taken, and also Rs. 40 per diem for the days necessary for attending and returning from the Meeting of the Board of Directors or any Committee thereof or General Meeting of the Company or otherwise in connection with the business of the Company. Where the journey is undertaken by air, actual air passage shall be paid.

The Directors shall, subject to the provisions of Sections 198 and 309 of the Act, be further entitled to receive by way of additional remuneration a commission equivalent to 1 per cent. of the net annual profits of the Company, computed in the manner laid down in Sections 349, 350 and 351 of the Companies Act, 1956. Such commission shall be divided equally amongst the Directors on the Board on the last day of the financial year of the Company to which the commission relates, unless they decide otherwise.

(iv) If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company, the Company may, subject to the provisions of Sections 314, 198 and 309 of the Act, remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration as above provided for the Directors.

(v) The general control of the business of the Company is vested in the Board of Directors who, in addition to the powers and authorities by the Articles of Association of the Company or otherwise expressly conferred upon them, may exercise all such powers and do all such acts and things as may be exercised or done by the Company and are not by the Articles or by the Companies Act or any other statute expressly directed or required to be exercised or done by the Company in General Meeting, subject nevertheless to the provisions of the Companies Act and statutes and of the Articles and to any regulations from time to time made by the Company in General Meeting; but no regulations so made shall invalidate any prior act of the Directors which would have been valid if such regulation had not been made. The Directors shall be at liberty subject to the aforesaid provisions to delegate any of their powers to the Managing Agents or a Committee of Directors or a Director, or any other person.

2. Managing Agents:

Messrs. Karam Chand Thapar & Bros. Private Ltd. are the Managing Agents of the Company. They have been reappointed as Managing Agents of the Company for a period of ten years from 1st January 1957. Sanction of the Central Government to their reappointment has been obtained. The Managing Agents are a private limited company with a subscribed and paid-up capital of Rs. 25,00,000.

The Managing Agents are entitled to the management of the whole affairs and business of the Company, subject to the control and supervision of the Board of Directors.

The remuneration of the Managing Agents is a commission of 10 per cent. on the net annual profits of the Company computed in the manner as laid down in Sections 349, 350 and 351 of the Companies Act, 1956, subject to a minimum of Rs. 50,000 in case of no profits or inadequacy of profits in any financial year of the Company. The said sum of Rs. 50,000 is payable by the Company to the Managing Agents in equal monthly instalments, each payable on the last day of each month. Any remuneration due to the Managing Agents over and above the minimum of Rs. 50,000 on the basis of 10 per cent. of net annual profits as above, shall be paid by the Company immediately after the accounts of the Company for each financial year have been audited and laid before the Company in General Meeting.

The Managing Agents are also entitled to charge and be paid all expenses on account of rent, postage, telegrams, printing, stationery, telephones, electricity, taxes and all salaries or wages or emoluments, bonuses, allowances, provident fund contributions, commissions, etc., which shall be payable to the managers, accountants, legal advisers, engineers, experts, agents, clerks, servants, workers, brokers, bankers, solicitors, auditors, technicians, commission agents, dealers or other officers, employees and workmen retained by the Managing Agents for and on behalf of the Company at the office of the Company at Calcutta or at the Company's Works or at the office of the Managing Agents or elsewhere, and all expenses of manufacture and all other out-of-pocket expenses incurred on behalf of the Company, for carrying out and conducting the business of the Company, including travelling and conveyance expenses, etc., likewise incurred.

The Company shall also bear and pay such proportion of expenses on account of salaries, wages, allowances, provident fund contributions, commissions, etc., of the officers, staff and workers, etc., employed partly in connection with the business of the Company and partly for the business of other companies or firms at Calcutta and/or elsewhere as also the office incidentals such as rent, stationery, telephone, electricity, travelling and conveyance expenses likewise incurred relating to such officers, staff and workers.

The Articles of Association provide that the Managing Agents shall conduct and manage the whole affairs of the Company subject to the control and supervision of the Board of Directors.

The Managing Agents are entitled to nominate not more than two Directors where the number exceeds five and one Director where the number does not exceed five.

3. Borrowing Powers:

The Articles of Association of the Company provide that subject to the the provisions of subclause (d) of clause (1) of Section 293 of the Companies Act, 1956, the Directors may from time to time at their discretion, raise or borrow or secure the payment of any sums of money for purposes of the Company from any persons, firms or companies including a Director and Managing Agents. The shareholders by Special Resolution dated 19th January, 1957 have authorised the Directors to borrow for the purposes of the business of the Company amounts in excess of the aggregate of the paid-up capital and free reserves of the Company.

4. Restrictions of Right to Transfer:

Articles of Association contain no restrictions on the transfer of fully paid-up shares. The Directors may, however, decline to register any transfer of shares which are not fully paid up, and may also decline to register any transfer of shares on which the Company has a lien. The Company has a first and paramount lien upon all shares (not being fully paid-up shares) held by any member of the Company (whether alone or jointly with other persons) and upon all dividends which may be declared in respect of such shares for all moneys (whether presently payable or not, called or payable in respect of these shares, and for all debts,

obligations, liabilities and engagements of such members solely or jointly with any other persons.

5. Voting Power :

The Articles of the Company provide that

(1) On a show of hands every member entitled to vote and present in person shall have one vote. Upon a poll the voting rights of members shall be as laid down in Section 87 of the Companies Act, 1956. Provided that save as provided in clause 2(b) of Section 87 of the said Act, a member of a company holding any preference share capital therein, shall in respect of such capital have a right to vote only on the resolutions placed before the Company which directly affect the rights attached to his preference shares.

No member not personally present shall be entitled to vote on a show of hands unless such member is a corporation or a company present by a proxy or by a representative duly authorised in which case such proxy or representative may vote on show of hands as if he were a member of the Company.

(2) No member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as a proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member, or in regard to which the Company has, and has exercised, any right of lien.

6. Interest of Directors :

Lala Karam Chand Thapar and Mr. Lalit Mohan Thapar are Directors of Messrs. Karam Chand Thapar & Bros. Private Ltd., Managing Agents of the Company, and as such are interested accordingly. Both of them are Managing Agents' nominee Directors on the Board of the Company.

None of the Directors have any interest in any property acquired by the Company within the two years preceding the date hereof or to the machinery and plant and equipment that may be purchased out of the proceeds of this issue.

Lala Karam Chand Thapar is a Director of Orient Engineering and Commercial Co., Ltd., through whom order being item No. 6 for machine drive, has been placed on A.E.G. of Germany.

7. Miscellaneous :

(i) Redeemable Preference Shares.

The Company has not within two years preceding the date hereof issued any Redeemable Preference Shares. The present issue of capital is of Redeemable Preference Shares.

(ii) The Company has not within the two years preceding the date hereof issued nor does it at present propose to issue any shares at premium.

(iii) The Company has not entered into nor does it propose at present to enter into any contract or arrangement whereby any option or preferential right has been given or is proposed to be given to any persons to subscribe for any shares or debentures of the Company.

(iv) No amount or any benefit has been paid to any promoter or any officer within the two years preceding the date hereof, nor is any amount intended to be paid.

(v) The Company issued:

(a) 5,00,750 Ordinary Shares of Rs. 10 each as fully paid up to the existing shareholders as on 1st of January 1955 in proportion of one Ordinary Share for each Ordinary Share held by them on that date, by capitalisation of reserves;

(b) 2,52,875 Ordinary Shares of Rs. 10 each as further capital for cash at par in January 1955;

and (c) Rs. 30 lacs Debenture loan capital in 3,000, 6 per cent. Registered Mortgage Debentures of Rs. 1,000 each at par.

(vi) The Company has not issued, nor agreed to issue within the two years preceding the date hereof any shares or debentures either for cash or as fully or partly paid up otherwise in cash.

(vii) The Company paid an underwriting commission of Rs. 75,000 to Messrs. Dhanuka & Co. for procuring subscription of the aforesaid debentures of Rs. 30 lacs. Beyond this, the Company has paid no other sum within the two years preceding the date hereof, nor is any such payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares in debentures of the Company or as discount in respect thereof, nor is it intended that any should be paid in respect of the present issue.

Purchase of Properties :

(viii) Save as respects property purchased or acquired or to be purchased or acquired being item No. (b) referred to under the heading 'Contracts,' or the additional Turbine for which order is still to be placed, any property which the Company has purchased or acquired or proposes to be purchased or acquired which is to be paid out of the proceeds of this present issue or the purchase or the acquisition of which has not been completed on the date of the issue of the prospectus is property—

(a) Contract for purchase or acquisition whereof has been entered into in the ordinary course of business of the Company the contract not being made in contemplation of this issue, or this issue in consequence of the contract; or

(b) As respects which contract the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under contracts as aforesaid is vested or will vest absolutely in the Company. There had been no other transaction relating to such property within two years preceding this prospectus.

(ix) The Company does not propose to acquire any business nor does it propose to apply the proceeds or any part of the proceeds of the present issue in the purchase of any business or in the purchase of any interest in any business or in connection therewith nor the proceeds of this issue or any part thereof are intended to be applied directly or indirectly in any manner resulting in the acquisition by the Company of shares in any other body corporate.

8. Underwriting Arrangement :

No underwriting arrangements have so far been made for this issue. The Articles of Association of the Company permit payment of underwriting commission upto 2½ per cent. (in addition to brokerage) on the value of the shares to person or persons subscribing or agreeing to subscribe or procuring or agreeing to procure subscription for any shares of the Company. Brokerage will be paid by the Company as hereunder mentioned.

9. Subscription :

The object of this issue is as hereinabove stated. The minimum subscription, which in the opinion of the Directors is required to be provided in respect of each of the items mentioned in clause 5 of Part 1, Schedule 2 of the Companies Act 1956, is Rs. 36.25 lacs.

(a) Price of property proposed to be purchased	Rs. 35 lacs
(b) Expenses on this issue	„ 1.25 „
(c) Repayment of any moneys borrowed in respect of foregoing matters	Nil
(d) Any other expenditure	Nil

Shortfall, if any, and any additional working capital required will be provided out of such facilities including advance from Banks and/or Managing Agents as may be available to the Company from time to time, and/or long-term deferred payment arrangements in respect of supplies of Machinery still to be ordered.

10. Modification of Rights :

The Articles of Association of the Company provide that—

Whenever the capital is divided into different classes of shares all or any of the rights and privileges attached to each class may subject to the provisions of Sections 106 and 107 of the Companies Act, be modified, commuted, affected, abrogated or dealt with by agreement between the Company and any person purporting to contract on behalf of that class, provided such agreement is (a) ratified in writing by the holders of at least three-fourths in nominal value of the issued shares of the class or is (b) confirmed by a Resolution passed at a separate General Meeting of the holders of shares of that class and supported by the votes of the holders of not less than three-fourths of those shares, and all the provisions of the Articles of Association of the Company as to General Meetings shall, *mutatis mutandis*, apply to every such meeting, but so that the quorum thereof shall be the members holding or representing by proxy or attorney one-fifth of the nominal amount of the issued shares of that class. This Article is not to derogate from any power the Company would have had if this Article were omitted.

11. Expenses of this Issue :

Preliminary expenses, including brokerage, are estimated at under Rs. one lac 25 thousand.

12. Contracts :

The following Contracts, not being contracts in the ordinary course of business which are or may be material, have been entered into by the Company during the two years preceding the date hereof:—

(a) Agreement dated 11th February 1957 between the Company and Messrs. Karam Chand Thapar and Bros. Private Ltd. reappointing the latter as Managing Agents of the Company for a period of ten years as from the 1st January 1957, on the terms as to remuneration as hereinabove stated.

(b) Orders for supply of Machinery and equipment as under:—

(1) Order No. SGM/D-E/M/4 (55)/246A, dated 18/22-8-55 placed on M/s. Escher Wyss GmbH., Ravensburg, W. Germany for New No. IV Paper Machine, F.O.B. Value DM. 34,55,200. (2) Order No. SGM/D-E/M/4 (55)/247A, dated 18/22-8-55 placed on M/s. Krauss Maffei-Imperial GmbH. & Co., Muenchen, West Germany, for New Pulp Mill, F.O.B. Value DM. 41,61,240. (3) Order No. SGM/D-JMW/3956 (Order Sr. No. 68), dated 14-8-56 placed on M/s. Elof Hansson, Sweden, for JMW Recovery Boiler, F.O.B. Value SW. Kr. 15,10,000. (4) Order No. SGM/D-Emb/C (A)/4055 (Order Sr. No. 69), dated 21-8-56 placed on M/s. Jagenberg-Werke Akt. Cos., Dusseldorf, Germany, for Duplex Sheet Cutter F.O.B. Value £21,406. (5) Order No. SGM/D Dorr/6689 (Order Sr. No. 70), dated 26-12-56 placed on Messrs. Elof Hansson, Goteborg, Sweden, for Dorr Re-causticizing Plant, F.O.B. Value Sw. Kr. 8,16,000. (6) Order No. SGM/B-M/D (4)/4437 (Order Sr. No. 71), dated 11-9-56, placed on The Orient Engineering & Commercial Co., Ltd., Calcutta, for AEG Drive for No. IV Machine, F.O.B. Value £45,000. (7) Order No. SGM/D-Crane/5173 (Order Sr. No. 76), dated 17-10-56, placed on M/s. Haushahn, West Germany, for Crane for New Paper Machine Buildings, F.O.B. Value £5,525. (8) Order No. SGM/D-E/V/881 (Order Sr. No. 99), dated 1-1-57, placed on Messrs. Elof Hansson, Goteborg, Sweden, for Rosenblad's Evaporation Plant, F.O.B. Value Sw. Kr., 8,87,900. (9) Order No. SGM/D-E/P/880 (Order Sr. No. 100), dated 1-1-1957, placed on Messrs. Elof Hansson, Goteborg, Sweden, for Flaktfabriken's Electric Precipitator, F.O.B. Value Sw. Kr. 2,90,250.

13. Documents :

Copies of the Memorandum and Articles of Association of the Company, the original Consent Order of the Controller of Capital Issues, the original sanction of the Government of India approving the reappointment of Messrs. Karam Chand Thapar & Bros. Private Ltd. as Managing Agents of the Company for ten years from 1st of January 1957, and the Managing Agency agreement dated 11th February 1957 made between the Company and Messrs. Karam Chand Thapar and Bros. Private Ltd., Managing Agents, on their reappointment, and copies of the orders for purchase of machinery, plant and equipment and other contracts referred to above, the abovementioned Auditors' report and the copies of the Balance Sheet and Profit and Loss Account upon which the report is based can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the subscription list closes whichever is earlier.

14. Auditors' Consent :

Messrs. Price Waterhouse Peat & Company have given, and have not, before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their report, set out above, in the form and context in which it is included.

The consent in writing of the Bankers and Solicitor of the Company to act in their respective capacities have been obtained.

15. Brokerage :

Brokerage at the rate of Re. 1/- per Redeemable Preference Share will be paid by the Company on allotments made in respect of applications bearing the stamp of a recognised stock broker or a banker.

16. Application and Allotment :

Application for shares which must be for five shares or multiples of five shares should be made on the accompanying form and will be refused if not so made. The application form, together with the remittance for the full amount payable on application, may be sent to any of the branches of the Company's Bankers, Messrs. Allahabad Bank Ltd. and Messrs. Oriental Bank of Commerce Ltd. The remittance if not made in cash should be made by cheque or draft drawn upon a branch of the Bank, to which the application and the draft or cheque are being sent, or upon the bank in the town in which there is a branch of any of the aforesaid Company's Bankers. If drawn on a bank elsewhere, bank charges at Rs. 0-4-0 per cent. must be included in the remittance.

Cheques or Drafts should be made payable to Messrs. SHREE GOPAL PAPER MILLS LIMITED and should, for applicants' protection, be crossed "Account Payee only." A separate cheque or draft must accompany each application form.

Allotment will be notified by despatch of an Allotment Letter but the Directors reserve the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, whole or any balance to the application money, as the case may be, will be refunded to the applicant by a cheque on the Calcutta Branch of the Company's Bankers.

Share Certificates will be available for issue in exchange for the Letters of Allotment on or after forty-five days from the date of Allotment Letter and each successful applicant for more than 25 shares will receive Share Certificates in lots of 25 shares and such smaller denominations as is required to complete the total number of shares allotted, except when the applicants request Share Certificates in larger denominations. Such Allotment Letters and Share Certificates will be despatched by Registered Post.

Copies of the Prospectus and the Form of Application may be obtained from the Company's Bankers named above, at any of their Branches in India.

IMPACT OF LABOUR STRIKE ON TEXTILE CONSUMPTION

NEW PAY CAMPAIGN TO BE LAUNCHED

From Our Special Correspondent

MANCHESTER, *26th March*

MANCHESTER LETTER

BRITISH industry at the moment faces a crisis of considerable magnitude. Widespread stoppages of work in key trades, beginning in shipbuilding and now spreading to engineering factories, have created a situation fraught with danger, both to the economic future of the nation and to the current conditions where inflation is such a predominant factor.

To the textile industry, where labour relations have, generally speaking, been consistently good for a generation past, the present conflict between employers and unions in other spheres has an old-fashioned ring about it. The cotton unions are, in fact, in the throes of formulating a new wage claim, but it would be a break with precedent, if any real strike threat was to emerge from the negotiations. The appeal to arbitration which has invariably followed recent pay disputes has proved an adequate, if not an ideal, solution to such problems.

Dependent as the Lancashire cotton trade now is on Britain's home market and the ever-widening use of textiles in other industries, it is impossible for traders to ignore the developments of the past week. In the event of lengthy stoppages affecting large numbers of workers, the impact on the consumption of textile must be considerable, from the viewpoint of both the individual buyer and the big industrial customer.

Moves towards a peaceful settlement of the current unrest have curbed the widespread talk of the possibility of a general strike. Such gloomy forecasts, which were being freely discussed, merely emphasised the inherent seriousness of the situation. It is small wonder, therefore, that many buyers have been anxiously scanning their commitments and endeavouring to avoid adding to them, except when necessity has arisen. Such an attitude, however understandable, is the more unfortunate at a time when the textile outlook seemed more promising.

Rayon Pay Cut

Lord Terrington, Chairman of the Cotton Conciliation Committee, persuaded employers and trade union leaders in the rayon weaving industry at a meeting in Manchester to reopen discussions with the object of establishing a fresh wage structure in this section of the textile trade. The Cotton Spinners and Manufacturers' Association had proposed that the bonus of 40 per cent. for weaving rayon cloth should be reduced to 12½ per cent., a move which had been decisively rejected by the Amalgamated Weavers' Association. The employers contended that the premium payment introduced when rayon was a novelty fibre was now out of date and that synthetic fibres were just as easy to weave as cotton.

Lord Terrington did not make a definite award, but recommended that both sides should get together, recognising that the rayon situation presented difficulties which would be helped by encouraging the extension, as quickly and widely as possible, of the Cotton Manufacturing Commission's system of weaving on rayon cloths. The Commission's report, issued in 1949, set up a new alternative wage structure for the weaving industry based on the use of redeployment and widespread mill modernisation. Mr. J. D. Greenwood, Chairman of the Cotton Manufacturers' Association, said that both sides had agreed to reopen talks in an effort to find a formula for settling the dispute.

"Plan for Cotton"

The launching of a new pay campaign for Lancashire's 250,000 cotton spinning and weaving workers will be decided at a special joint meeting of union leaders from the spinning and weaving sections in Manchester on 29th March. Meanwhile, the Legislative Council of the United Textile Factory Workers' Association has decided to call a special meeting on 3rd April to consider the unions' new policy manifesto "Plan for Cotton." The 30,000-word document, on which work first started four years ago, has recently been revised by its author, Mr. Harold Wilson, M.P. for Huyton, to take account of changed conditions in the industry.

Among the recommendations understood to be contained in the manifesto is a return to the bulk buying of raw cotton for Lancashire mills on similar lines to the former Liverpool-based Raw Cotton Commission. Another recommendation is aimed at protecting Lancashire against "unfair" imports of cheap Asiatic cloth by setting up a trading commission to purchase and control such imports.

Slow Export Offtake

Two months have gone by so far as the overseas trade returns of 1957 are concerned, but the position of textile imports and exports shows no real change for the better. Shipments of cotton and rayon piecegoods to markets abroad have declined slightly, although trade in yarns has made a little progress.

For the first two months of the year, exports of cotton piecegoods amounted to 78,147,000 square yards, as against 80,111,000 square yards in 1956. The quantity of rayon and synthetic fibre piecegoods shipped overseas was 19,552,000 square yards, as against 20,508,000 yards. Cotton yarn shipments were 200,000 lbs. higher than a year ago at 6,353,260 lbs., while there was a more sustained improvement in the offtake of man-made fibre yarns to 7,731,600 lbs., as against 4,942,390 lbs.

In every case except rayon and synthetic cloth exports, Australia remains the biggest outlet for Lancashire-made goods. Other Commonwealth markets, including South Africa, Rhodesia and Nyasaland and various territories in West Africa, continue to give steady if unspectacular support. India's purchases of rayon and synthetic fibre yarns have increased sharply from 631,000 lbs. in the first two months last year to 1,567,000 lbs.

While some sort of stability appears to have been reached in the declining fortunes of exporters, the arrivals of foreign cloth have continued to increase, partly as a result of the hold-up in the flow of supplies by sea routes towards the end of last year. Imports of cotton grey cloth to the end of February were 58,452,000 square yards, as against 40,190,000 square yards in the same period of 1956.

All the leading suppliers have increased their consignments to this country, the quantity of Indian cloth being more than 5,000,000 yards higher at 26,651,000 square yards; arrivals from Hong Kong have increased by 2,000,000 yards to 9,881,000 square yards. Shipments from Japan have risen from 5,697,000 square yards to 8,932,000 square yards, while a notable expansion has occurred in receipts from undesignated countries, which exceeded 11,000,000 square yards in the two months, against barely 3,000,000 yards a year ago.

Imports of finished cotton cloth during the period under review were 1,000,000 yards higher at nearly 8,000,000 square yards, but supplies of rayon fabric reaching this country were reduced by 4,000,000 yards to 11,124,000 square yards.

Anglo-Soviet Deal

A contract worth more than £100,000 for pea canning machinery for Russia—the first of its kind to be placed in Europe—has been secured by Mather and Platt Ltd., the £10,000,000 Manchester engineering group. Making the announcement at the annual meeting, Mr. Loris E. Mather, Chairman, said: "Some people may think it undesirable to trade with a country with which we have such strained political relations, but this is not the view of our Government, nor is it our view. The more we can show the Russian people what we can make for their benefits and, as in this case, to improve their standard of peaceful living, the more hopeful should be our future relations."

The Company, said Mr. Mather, had traded with Russia on and off for nearly 100 years, but this was their first deal since the end of World War II. "Strained relations were not unknown in Tzarist times," he commented, "and it is only just over a century ago that we were fighting the Crimean War."

No Common View

Due consideration, which is now obviously being given to the European free trade plan in many quarters of the textile industry, no less than in other British trades, has disclosed a sharp cleavage of opinion between those who feel that the system will undermine local competitive power still further and those who welcome yet another challenge to our prowess. In Lancashire at least, it is fair to say that those who fear the plan are in a majority or are more vocal in their opposition to the scheme.

In one branch of the trade, the condenser spinning and weaving section, employers have been canvassed as to their views and have emphatically rejected the scheme as being likely to injure the industry. This opinion seems to be widely held among the smaller units who foresee a further tightening of the grip already held by the combines.—*All Rights Reserved.*

E.C.A.F.E. COMPLETES TEN USEFUL YEARS

ITS WIDE AND VARIED CONTRIBUTION TO ASIAN ECONOMIC DEVELOPMENT

WHEN two officials of the Economic Commission for Asia and the Far East recently visited Burma's new iron and steel plant, they were met at the gate by the factory manager with the words: "Well, you people from the E.C.A.F.E. can take some credit for this." Burma has today one of the most modern iron and steel plants in Asia and in the world. For centuries, Burma produced rice, teak and, later, rubber in abundance. But for this raw-material-producing country, the manufacture of iron and steel was a new venture. Much research had to be done and many important decisions taken before the way was clear for the construction of the first iron and steel plant in Burma. During the planning stage, some of the Burmese officials to whom authority for the construction of the new plant had been entrusted joined a group of iron and steel experts from several Asian and non-Asian countries on a study tour to Japan. The trip was organised by two United Nations agencies—E.C.A.F.E., which had given the impulse, and the Technical Assistance Administration, which had provided the finances. What the Burmese engineers saw in Japan, and the technical discussion which they had during that study trip among themselves, with their colleagues from other countries, and with E.C.A.F.E.'s iron and steel experts, resulted in radical changes in the plans for Burma's iron and steel plant—changes that proved their value to the Burmese Government and to Burmese economy.

In neighbouring Thailand, a new large irrigation and navigation dam was ceremoniously opened only a short time ago by the King and the Prime Minister. The water that will flow into Thailand's central plain through a well-controlled and vast network of canals will produce another 500,000 tons of rice for export. The project of the dam is half a century old. The suggestion was first put forward in the reign of King Chulalongkorn, but it was only since the last war that the Thai Government succeeded in securing, from the World Bank, that bit of financial support that had always been lacking in the past. And when the dedication ceremony of the new dam took place, credit was given to international assistance: To the World Bank that had advanced $18 million towards the total cost of $58 million, to the F.A.O., for having sent an economic agricultural mission to Thailand when the project was being planned, and to the E.C.A.F.E. which, through assisting with hydraulic tests in a scale laboratory, had saved Thailand about a million dollars.

In the Philippines

In the Philippines, until a few years ago, the handlooms used in farmsteads did not differ in design from the looms used during the last century. They would produce cloth of two to ten yards in length, but the trouble about this cloth was that it did not sell well, despite its attractive design, because modern commercial demand was for a cloth length of forty yards and more. Many things had to be changed about Philippine small-scale industries, and one of the changes put into effect in the Philippines a little earlier than in other countries was the widening of the antiquated loom. The change in the Philippine loom was assisted by a group of experts from various countries who met in the Philippines just at the right time, when the question had become a topic of importance for the weavers and the Government. By now, a new broader loom is used, incorporating many of the suggestions made by the expert loom designers that had met under E.C.A.F.E.'s auspices. The new loom was also improved by the introduction of a kind of automatic shuttle which the worker can pull effortlessly, whereas, before, he had strenuously to extend his hand to shift the shuttle sidewards. These vastly improved looms have meanwhile found their way to Thailand, Malaya, India and other Asian countries.

Ten years ago, when the E.C.A.F.E. came into being as a temporary organisation to give effective aid to war-devastated countries, it would have required a good deal of imagination to visualise the organisation as it exists today and the various E.C.A.F.E. experts engaged as they are in such activities as sketched above. But for that matter, it would have been difficult to anticipate the revolutionary changes that had transformed Asia during the last decade. E.C.A.F.E., which started as a small research body, has adapted itself to these changes and the Commission has branched out into a multitude of activities affecting almost all aspects of Asian economic life. For the economic research student, Asia was, to a large extent, an uncharted land ten years ago. The handful of E.C.A.F.E. secretariat staff people who assembled at Shanghai, E.C.A.F.E.'s first headquarters, under the leadership of E.C.A.F.E.'s first Executive Secretary, Dr. Lokanathan, were doing a pioneering job in collecting reliable data and statistics and ascertaining the most pressing needs of the various Asian countries.

Effects of War

The effects of war were still being felt everywhere in Asia, politically and economically. Politically, the independence movement in Asia had not reached its climax, and not all the new countries of Asia had yet become members of the United Nations. In fact, Asian countries were heavily outnumbered in E.C.A.F.E.'s original membership and continued to be a minority for some years. In E.C.A.F.E.'s original membership, Asia was represented by China, India, the Philippine Republic and Thailand. The non-regional countries in the E.C.A.F.E. were Australia, France, the Netherlands, the Union of Soviet Socialist Republics, the United Kingdom and the United States of America.

Ten countries thus set the E.C.A.F.E. off on its course, under the wider supervision of the Economic and Social Council of the United Nations. But E.C.A.F.E.'s membership, and to some extent also its so-called geographical scope, grew rapidly in the course of time. Today the Commission has twenty-four members, of whom seventeen are in the region and seven outside. The Commission's geographical scope, that is, the immediate area of its activities, now embraces a region stretching from Afghanistan to Japan, and from Korea down to Indonesia. To tackle the constitutional problem of getting admitted into E.C.A.F.E. the Asian countries that were not self-governing or whose constitutional position was in a state of uncertainty or dispute, the device of associate membership was evolved. This proved useful, but by now all associate members have become full members of the Commission, with the exception of Hong Kong, and Malaya and British Borneo. The E.C.A.F.E. thus grew into the largest and most important regional agency of the United Nations in Asia.

Unique Position

The E.C.A.F.E.'s position in many ways is unique. It is universal in concept and character, as an integral part of the United Nations and by reason of its membership, in which Asian and non-Asian countries, among them all the big powers, have joined hands. At the same time, the E.C.A.F.E., as one of the regional branches of the United Nations, is firmly entrenched, as it should be, in the vast and important region it serves. For centuries, Asian countries were oriented outside Asia and there was little intercourse among them. When this situation changed after the war, the E.C.A.F.E. became the first independent regional rallying ground for Asia in the economic field. For ten years now, the E.C.A.F.E. has been a crystallising point for Asian economic co-operation and efforts. It is one of the most fascinating episodes in the history of nations to witness how in Asia energetic reconstruction, rehabilitation, and development efforts are made by national Governments under the spur of newly won independence, while, at the same time, this Asian nationalism is blended with the international idea of co-operation and assistance through such agencies as the E.C.A.F.E. As the quest for independence has by and large been brought to a victorious conclusion, it is realised that political freedom must rest on a sound economic foundation, and that national, regional, and global co-operation is required to ensure a brighter future.

How, it may be asked, has the E.C.A.F.E. furthered economic development? After tentatively probing a multitude of economic problems, the Commission gradually evolved a systematic method of operation which centres around the meetings of the Commission. These meetings, held usually in a different country every year, are the E.C.A.F.E.'s highest forum at which senior delegates, many of cabinet rank, meet to discuss their countries' economic situation and problems, review the Commission's activities and map out a plan of work for the Secretariat for the years to come. To provide such a meeting place is one of the most important functions and it was, therefore, a gratifying indication of the value attached to these meetings when they became known as an "Economic Parliament of Asia." In the first two years of its existence, the Commission met twice a year in full session. The increase in membership and scope of activities soon led to a growth in the structure and status of the Commission. A committee on industry and trade was established and, in subsequent years, there followed the Inland Transport Committee and a large number of sub-committees. These committees and sub-committees meet annually or, in some cases, every other year and, like the Commission, though on a lower but more technical level, they bring together delegates for expert discussions. In addition, the E.C.A.F.E. has during the years arranged many working parties on special topics of importance. Moreover, regional conferences have been held, of which the largest were on trade promotion, flood control and water resources development, mineral resources, statistics, etc. In all these activities, as an organ of inquiry and recommendation, the E.C.A.F.E. has been directed and guided by requests and needs of the Governments of its member-States. The Secretariat, which services the Commission, acts as research and statistical bureau, and as a consulting agency for short-term services. During the past ten years, the E.C.A.F.E. has prepared some 1,000 studies and reports. The Secretariat's *Economic Survey*, published annually since 1948, contains a mine of facts, industriously assembled, carefully analysed and commented upon.

Regional Co-operation

One of the most important and distinct contributions the E.C.A.F.E. has made to Asian economic life relates to regional co-operation and development of regional projects. These projects have assumed an increasing role in the Commission's activities. In this field, as in others, the Commission has closely co-operated with other United Nations agencies, especially with the Technical Assistance Administration of the United Nations which has financed several of its regional projects. Various types of projects have been developed: training courses and centres, seminars, study groups and group visits. The Commission has initiated and is closely associated with the United Nations regional railway training centre at Lahore (Pakistan) and it participates with the I.L.O. in the establishment of the regional training centre for diesel marine mechanics at Rangoon (Burma). In other instances, though not a sponsor, it has assisted in various ways. Another type of regional project is study tours, several of which have been organised by the E.C.A.F.E. (and paid for by the T.A.A.). Thus, Asian iron and steel experts went to Japan on one of those study tours, railway experts to Europe, lignite experts to Australia, inland waterway experts to Europe and the United States, cottage industry experts to Japan, geologists and mining experts to the U.S.S.R. and Europe, and electric power engineers to the U.S.S.R., Europe and the United States. There are other regional projects of very considerable significance.

One of the most ambitious, a kind of Tennessee Valley project, is the plan for the utilisation of the Mekong. The Mekong is one of the largest rivers in Asia, it flows through several countries, and there is tremendous scope for regional co-operation in the field of power, irrigation and navigation. The E.C.A.F.E. experts first surveyed the potentialities of the Mekong in 1952 and, a few months ago, a reconnaissance team of senior experts visited the Mekong again to make concrete recommendations. Another instance of its work and initiative is the signing of a special convention, drawn up under its auspices, for the measurement and registration of inland waterway vessels.

When, at an E.C.A.F.E. meeting in Tokyo, somebody suggested that "invisible" exports be also included in trade statistics, another delegate quickly rose to inquire how "invisible" exports could be made visible. Similarly, many of the results of the Commission's activities are not always tangible enough to become "visible," though their value to the countries concerned and the region as a whole may not be doubted. The E.C.A.F.E. has no executive power; it can only recommend. It is not a banking or financial institution, and it cannot build factories or dams. However, it has become, as a delegate of an Asian country put it, a "favoured and effective instrument of economic co-operation in Asia and the Far East." and as such it has made its contribution to Asian economic life.

New Coins... From 1st APRIL '57

Exact value in existing coins

10 Naye Paise—(1/10th of a rupee)—1 anna 7.2 pies
5 Naye Paise—(1/20th of a rupee)—9.6 pies
2 Naye Paise—(1/50th of a rupee)—3.84 pies
1 Naya Paisa—(1/100th of a rupee)—1.92 pies

The old coins, namely, 1 pice or 1/4 anna, 2 pice or 1/2 anna, 1 anna, 2 annas, 4 annas, and 8 annas, will be in circulation side by side with the new coins shown above. Four anna coins and eight anna coins are exactly equivalent to 25 Naye Paise and 50 Naye Paise respectively and may be used as such for all purposes. Both the old coins and the new coins will be legal tender in payment or on account.

CONVERSION FACILITIES

CONVERSION FACILITIES WILL BE PROVIDED AT THE RESERVE BANK OFFICES, BRANCHES OF THE STATE BANK OF INDIA, OTHER AGENCY BANKS AND TREASURIES AND SUB-TREASURIES.

NEW COINS WILL BE GIVEN ONLY IN EXCHANGE FOR EXISTING COINS OF A TOTAL VALUE OF 4 ANNAS, AND MULTIPLES THEREOF e.g. 4 ANNAS, 8 ANNAS, 12 ANNAS, ONE RUPEE ETC.

It is not necessary to convert rates or unit costs expressed in annas/pies into Naye Paise before working out the total amount payable.

EXAMPLES:

If 50 articles are purchased at 3 annas each, first work out the total amount in rupees/annas; You have to pay nine rupees and six annas.

If you have only Naye Paise with you, you find that six annas is equivalent to 37 Naye Paise. You accordingly pay 9 Rupees and 37 Naye Paise.

The result will be the same if you took the exact equivalent of 3 annas (18¾ Naye Paise) and multiplied it by 50 but it would be incorrect if you had taken the rounded off equivalent of 3 annas from the conversion table (19 Naye Paise) and then multiplied it by 50.

Similarly, if you buy from anyone a number of articles at the same time at different rates expressed in annas or pice coins, first calculate the total amount due in rupees, annas and pies. Apply the conversion table to the annas and pies in the total amount, if you want to pay in new coins.

You may simplify conversions by remembering that

4 annas .. .. 25 Naye Paise
8 annas .. .. 50 Naye Paise
12 annas .. .. 75 Naye Paise
1 Rupee .. .. 100 Naye Paise

EXAMPLES:

(1) To make payment of 10¼ annas, you may first give 8 annas or 50 Naye Paise; the balance of 2¼ annas is equal to 16 Naye Paise;

(2) To make payment of 36 Naye Paise, you first pay four annas or 25 Naye Paise, and then the balance of 11 Naye Paise by tendering 1 anna and nine pies.

DA 56/250

CONVERSION TABLE

The conversion table gives the exchange value in Naye Paise (rounded off in the manner prescribed in section 14 (2) of the Indian Coinage Act 1906 as recently amended) for amount tendered in annas/pies coins. The exact Naya Paisa equivalent of the total amount to be converted is rounded off by ignoring fractions of ½ Naya Paisa and below, and treating more than ½ Naya Paisa as 1 Naya Paisa.

CONVERSION TABLE

EQUIVALENTS IN NAYE PAISE FOR VALUE TENDERED IN ANNAS/PIES IN ANY SINGLE PAYMENT.

Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise	Old Coins Annas Pies	New Coins Naye Paise
0 3	2	4 3	27	8 3	52	12 3	77
0 6	3	4 6	28	8 6	53	12 6	78
0 9	5	4 9	30	8 9	55	12 9	80
1 Anna	6	5 Annas	31	9 Annas	56	13 Annas	81
1 3	8	5 3	33	9 3	58	13 3	83
1 6	9	5 6	34	9 6	59	13 6	84
1 9	11	5 9	36	9 9	61	13 9	86
2 Annas	12	6 Annas	37	10 Annas	62	14 Annas	87
2 3	14	6 3	39	10 3	64	14 3	89
2 6	16	6 6	41	10 6	66	14 6	91
2 9	17	6 9	42	10 9	67	14 9	92
3 Annas	19	7 Annas	44	11 Annas	69	15 Annas	94
3 3	20	7 3	45	11 3	70	15 3	95
3 6	22	7 6	47	11 6	72	15 6	97
3 9	23	7 9	48	11 9	73	15 9	98
4 Annas	25	8 Annas	50	12 Annas	75	16 Annas	100

Rounding off as has been done in the conversion table is necessary only at the end of a transaction when any amount due in annas and pies is to be converted into Naye Paise.

You can make payment either in new coins or in old coins or by a combination of both according to the coins available with you.

The conversion table is, therefore, to be used only at the end of a transaction when payment has to be made or change has to be given as illustrated in the examples below.

EXAMPLES: (Where the amount due is expressed in annas/pies).

For 12 articles, costing 1¼ annas each, the total amount due is 1 Rupee and 2 annas, the purchaser may give the entire amount in old coins.

or

pay 1 Rupee and 12 Naye Paise (the equivalent of 2 annas according to the table is 12 Naye Paise).

In the above example, the purchaser may tender 2 Rupees, all in old coins, and ask for the balance. The amount to be given as change is 14 annas. This may be given wholly in anna coins or in new coins, or partly in old and partly in new coins. Let us assume that eight annas is paid in old coins and 6 annas is to be returned in new coins. Use the Conversion table to find the equivalent of 6 annas in new coins which is 37 Naye Paise.

EXAMPLES: (Where the amount due is expressed in Naye Paise).

An article costs 11 Naye Paise. One may pay this amount in new coins or in the form of 1 anna and 9 pies in old coins (the equivalent of 1 anna 9 pies according to the table is 11 Naye Paise).

If a person tenders 20 Naye Paise against 11 Naye Paise due, the change to be returned will be 9 Naye Paise or in old coins, the equivalent thereto namely 1 anna 6 pies.

For a payment of 11 Naye Paise, one may tender a 4 anna coin and ask for change. 4 annas are equivalent to 25 Naye Paise; the balance to be returned is 14 Naye Paise; this can be returned wholly in new coins, or in old coins, 2 annas and 3 pies according to the table are equal to 14 Naye Paise; one may give an anna coin (6 Naye Paise) and 8 Naye Paise in new coins.

TRENDS IN WHITE SUGAR DURING 1955-56

ALL-TIME RECORD OUTPUT—LARGER NUMBER OF WORKING DAYS

ALTHOUGH the trends in Indian sugar economy during the last season (that is, 1955-56) have been reviewed in these columns on more than one occasion, as well as in the *Annual Number*, the reviews are not only incomplete but also lack full authenticity; because they were prepared on the basis of tentative and scattered estimates. Viewed thus, the special final note on the production of sugar directly from cane in vacuum pan factories during 1955-56, contained in the latest issue of the *Agricultural Situation in India*, published by the Economic and Statistical Adviser, Ministry of Agriculture, assumes importance. The note is very comprehensive in its scope, inasmuch as it covers all the aspects of developments in the white sugar sector in the different States—number of factories working, duration of crushing, quantity of cane crushed and of sugar produced, recovery of sugar and other factors.

The production of sugar during the 1955-56 season, according to the note, touched the all-time record of 1,862,100 tons, which exceeded the first Five-year Plan target of 1.8 million tons by 62,100 tons and the previous season's output of 1,590,000 by 272,000 tons. The substantial rise in output is attributed partly to a bumper sugarcane crop and partly to an increase in the number of working factories. Expressed in terms of *gur*, the production of cane in 1955-56 was higher than in the previous year by 99,000 tons; the improvement was specially marked in Bihar, thanks to high *gur* prices at the time of sowing, favourable weather conditions and better irrigation facilities. The number of working factories was higher at 143, as against 136, the total number of factories registered under the Industries (Development and Regulation) Act, 1951, being 147. Another important factor which accounted for the higher level of sugar production was the diversion of larger quantities of sugarcane to the factories; the quantity of cane actually crushed aggregated 18,939,100 tons, as against 16,011,600 tons. Following such large supplies of cane, the duration of the crushing season was lengthened, the number of working days being 144, as against 129.

The salient features of the development of sugar industry in the different States (before Reorganisation) during the last two seasons are given in the statement at the foot of the page. The statement reveals that the rise in production during 1955-56 was shared by all the States, except Madras and Mysore which showed a slight decline. The rise was particularly appreciable in Uttar Pradesh and Bihar—the largest sugar-producing States—the actual increase being of the order of 94,000 tons and 86,000 tons, respectively. Sugar output was higher by 28,000 tons in Bombay, 17,000 tons in Hyderabad and 11,000 tons in Andhra. The U.P. accounted for over 50 per cent. of the country's total output, followed by Bihar and Bombay; the percentage share of the former was 17 and of the latter 11.

The duration of the crushing season, as already stated, was unusually long during the year. It started from the end of September 1955 and continued till the end of July 1956. Unlike in the last season, a large number of factories started crushing early during the 1955-56 season. In Bihar, particularly, 23 out of 28 factories started crushing by the end of the first week of December 1955, as compared with only eight factories in the corresponding period in 1954. More factories carried on their crushing operations after 31st May in 1955-56 than in 1954-55, the number, respectively, being 41 and 17. The late closure of factories was more marked in the case of U.P., Bihar and Bombay. In U.P., 32 factories were in operation even after 31st May, as against the corresponding figure of 11 only in the 1954-55 season.

The actual duration of the season in U.P. was 147 days in 1955-56, as against 139 days in the preceding season. In Bihar, the season was specially longer, actual duration being 134 days in 1955-56, as against 94 days only in the previous season. A slight fall was, however, registered in the case of Madras, Mysore and P.E.P.S.U. In all other States, the duration of the season was longer in the current than in the previous season. The frequency distribution of factories according to the number of days of actual crushing shows that, in 1955-56, the duration of season ranged from 150 to 220 days and over in the case of 63 factories, as against 36 factories in 1954-55. Again, the number of factories which worked for less than 100 days was only 26 in 1955-56, as against 36 in the previous season.

The maximum quantity of sugarcane crushed by any factory during the 1955-56 season was 640,000 tons, as compared with 370,000 tons in the previous season. The average quantity of cane crushed per factory in different States except Madras in 1955-56 was also higher than in 1954-55. The maximum capacity of sugar factories (measured in terms of cane actually crushed per day) registered an advance from 2,227 tons in 1954-55 to 2,369 tons in the season under review. The all-India average capacity also increased from 909 tons to 1,003 tons.

The remarkable expansion in sugar production noted above was achieved despite some setback in the quality of cane supplied to mills. The all-India average percentage recovery of sugar from cane during 1955-56 was 9.83, which compares unfavourably with 9.93 in the previous season. The recovery of sugar fell in all the States, barring Uttar Pradesh, Mysore, Rajasthan, Travancore-Cochin and Bhopal where some improvement was registered. In P.E.P.S.U., it was the same as in the last season. The maximum recovery for the season was 12.80 per cent., as against 12.68 per cent. in 1954-55.

In view of the increased sugar production, imports of sugar were stopped. On the other hand, the Government of India asked for an export quota of 200,000 tons of sugar during 1958-59 under the International Sugar Agreement, provided that could be secured without accepting the restrictive clauses of the Agreement. This request of the Government of India received the support of a number of countries at the International Sugar Conference held at New York in June 1956 and the prospect in that connection appeared to be hopeful when the Conference postponed to meet again in Geneva in October next. India had remained outside this Agreement since 1942, because it was considered that association with this Agreement would in-

PROBLEMS OF COAL INDUSTRY

UNION MINISTER'S STATEMENT

IT is a somewhat tragic irony that the coal industry, which is a source of sustenance to many other essential industries on which depend the success of the second Five-year Plan, should face such difficult conditions as it is facing now. It is not that the industry is not able to produce enough coal required within the country, but it is not being allowed, by force of circumstances and by the Government's indifferent attitude, to do all it can. In fact, the industry's production has been steadily going up; nevertheless, many a unit is operating on an uneconomic basis, thanks to the sharp rise in operational cost, with no corresponding increase in selling price which is controlled by the Government. Added to these, coalfields are experiencing a shortage of wagon supply to move their output. Attention to the predicament in which the coal industry is thus placed was drawn by Dr. Radha Kumud Mookerji during question-hour in the Rajya Sabha last week.

In reply to Dr. Mookerji's question, Mr. K. C. Reddy, Minister for Production, laid on the table a statement explaining the position in detail. The statement said that representations had been made by the coal industry, from time to time, pointing out certain difficulties experienced by it, especially in regard to inadequacy of the prices fixed for coal. The last such representation was made in June 1956, following the award of the All-India Industrial Tribunal (Colliery Disputes). The main points raised in this representation were: (1) the need for increase in coal prices because of the increased cost of production, due to the implementation of the award; (2) other factors which contributed materially to reduction in profit margin in the industry were (*a*) steep rise in replacement costs of items of plant, machinery and colliery stores and (*b*) extra expenditure imposed on the industry by the introduction of the Coal Mines (Temporary) Regulations; and (3) revision of the rules governing stowing subsidies.

Explaining the basis on which coal prices are fixed and the revisions made in recent years, the statement said that coal prices were fixed, as a general rule, on the basis of cost of production as ascertained by examination of the costs of production of a number of representative units. The Government had been keeping a constant watch over coal prices and had reviewed them from time to time, as and when required. Thus, in 1947, following the award of the Conciliation Board, the coal prices in Bengal-Bihar fields were increased by Rs. 3-8 per ton uniformly for all grades. The prices of coal in fields other than Bengal-Bihar were also increased on various dates, following the Fact-finding Committee Report of 1947 for Madhya Pradesh, Korba Award of 1947, Talcher Award of 1948, Rewa Award of 1948 and the Fact-finding Committee Report of 1948 for Assam. Certain adjustments in coal prices in the Bengal-Bihar fields were made from 1949 to 1955, for particular grades, taking into account various factors, such as increased production and despatches, the higher profit margin earned by the lower grade collieries, as an anti-inflationary measure, the increased cost of contribution payable by the employers to the provident fund of the workers, and to compensate the coking coal collieries for the restrictions entailed by the pegging of coking coal production, etc.

The prices were last revised upward in July 1956, after taking into account various factors affecting the cost of production, including the increase in operational cost and the effect of the award of the All-India Industrial Tribunal (Colliery Disputes), published in May 1956. This upward revision in coal prices was sanctioned on the basis of the recommendations of a Price Revision Committee, constituted in 1955 with the Coal Controller as Chairman, the Chief Cost Accounts Officer of the Government of India and a Joint Secretary in the Ministry of Production, as members. This Committee made an investigation into the cost of production as it was before the Tribunal gave its award and also further went into the question of extra cost of raising coal as a result of implementing the Award of the Tribunal. The Minister assured, in his statement, that coal prices would be kept under constant review and that the Government was giving consideration to a proposal to examine the entire question on a comprehensive basis.

Referring to the wagon supply position, the statement pointed out that it showed a marked improvement during 1956, as compared to previous years. Thus, the average daily loading in all the fields during the last three years was as follows: 1954—3,948 wagons; 1955—4,045 wagons; and 1956—4,246 wagons. While the wagon supply position had thus shown improvement, the Minister admitted that it was still short of actual requirements, with the result that the collieries were unable to obtain all the wagons they required for movement of their production and the coal-consuming industries were also not able to obtain coal supplies according to their needs. Restricted line capacity and junction limitations on certain sections also restricted the movement of coal from the collieries. The Railway Ministry had, however, embarked on a carefully considered plan for improving the transport position during the second Plan period.

The next important problem facing the industry is in respect of sand stowing. Alluding to this, the Production Minister's statement observed that the rate of subsidy granted to collieries for stowing had been increased and the rate of depreciation allowed on stowing machinery had also been liberalised. The various measures taken by the Coal Board to assist the collieries to undertake sand stowing, according to the Minister, are: (*a*) liberal financial subsidies are granted to collieries which undertake stowing and loans, at a concessional rate of interest, are allowed for the purchase and installation of stowing plants; (*b*) the Coal Board is planning central schemes for the supply of sand for the collieries and for encouraging stowing with materials other than sand. A committee to draw up a central scheme for the Jharia coalfield has already been set up. The question of setting up a similar committee for the Raniganj coalfield is under consideration of the Coal Board; and (*c*) the question of the Government acquiring sand rights in rivers is under consideration. The Minister added that a committee appointed by the Government to enquire into the question of sand reserves and sand replacements consequent on the construction of dams had reported that there was no apprehension regarding the availability of sand supplies for stowing purposes.

The most important problem which needs attention is the revision of coal prices. It is to be noted that the recent report that the Government proposed to give an interim increase of Re. 1-8 per ton in coal prices has not been confirmed by the Minister in his statement. Frustrated by the Government's delay in revising the prices, the collieries have been forced to appeal to the Supreme Court against the award of the Labour Appellate Tribunal, which modified substantially the award of the lower Tribunal. This does not, however, stand in the way of the Government announcing a suitable increase in prices and thus save the industry from a crisis.

RISE IN COAL PRODUCTION IN 1956

An increase of 1.21 million tons was recorded in the production of coal in India during 1956, as compared to the output in 1955. The total quantity raised in 1956 was 39.43 million tons, as against 38.22 million tons for 1955. The increase would have been more but for the strike in a number of Raniganj fields lasting for nearly a month. Despatches of coal were also higher, having amounted to 34.96 million tons, as against 32.94 million tons in 1955.

The following table shows the trend of production and despatches of coal since 1950:

(In million tons)

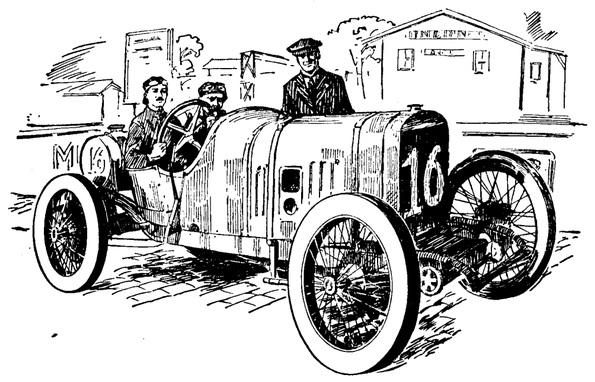
	Production	*Despatches*
1950	32.31	27.11
1951	34.43	29.22
1952	36.30	31.18
1953	35.98	30.76
1954	36.88	31.91
1955	38.22	32.94
1956	39.43	34.96

On an average, 3,406 wagons were loaded daily in Bengal and Bihar coalfields, as against 3,262 wagons in 1955. In other fields, the daily loading was 841 wagons, as against 783 wagons in the previous year, which means an increase of 210 wagons in the overall daily loadings.

Production of soft coke, by-product hard coke and beehive hard coke also registered slight increase during the year. The production of soft coke was 1.652 million tons in 1956, as against 1.649 million tons in 1955.

At the end of December 1956, there was a stock of 2.77 million tons of coal at the pitheads of collieries and 1.71 million tons with the consumers. The approximate quantity of coal consumed by some of the principal consumers in India during the year was: railways, 13.37 million tons; iron and steel plants, 3.31 million tons; electric supply companies 3.17 million tons; cement factories 1.76 million tons; cotton mills, 1.81 million tons; paper mills 0.59 million tons; jute mills 0.47 million tons; engineering works 0.35 million tons; domestic coke 1.65 million tons and brick burning works, 2.25 million tons.

Export of coal outside India during 1956 amounted to 1.727 million tons and about 1.078 million tons were moved by coastal steamers from Calcutta Port to other ports of the country.



1913-when 75 miles an hour was sensational!

Way back in 1913, Jules Goux, the racing motorist, won the famous Indianapolis 500-mile race on Firestone Tyres at the then sensational speed of 75 miles per hour. This result helped Firestone to produce better tyres and each successive year, the developments incorporated in Firestone tyres have been tested and proved on the race track for use on the highway.

Now, from Firestone comes a great contribution to safe motoring—the New DeLuxe Champion Tubeless Tyre. It gives you and your family protection never before provided in any tyre at any price. It's the first and only tyre with *built-in peace of mind!*

PROSPECTS FOR INDIAN TEA

IMPORTANCE OF EXPORT PROMOTION AND INTERNAL PROPAGANDA

INVESTORS in tea shares have reason to feel gratified at the recent assurance of the Union Minister for Commerce and Industry in the Lok Sabha that the tea industry in the country would not be nationalised. The confidence of shareholders in South Indian tea and other plantations has, however, been shaken by the threat of nationalisation of foreign plantations in Kerala, where the Communist Party is assuming powers of office. Though the party spokesmen have given the assurance that they will work within the Union Constitution, they have indicated that they would be able to persuade the Union Government to agree to nationalisation of foreign-owned estates in the State. Fears of increase in wage bill of estates in the near future have also affected sentiment. The result is that prices of plantation shares in Madras have tumbled down, piercing even the floor prices fixed by the Stock Exchange authorities in October last, following the debacle created by the publication of the Plantation Labour Award. In view of the above assurance of the Union Minister for Commerce and Industry, there is reason to believe that the Government of India would not go back on its word and permit the Communist Government in Kerala to take over the plantations in the State.

Outlook Obscure

Be that as it may, the outlook for the tea industry as a whole seems to be somewhat obscure. The fortunes of the industry have been fluctuating and, within the last six years, it has experienced an unprecedented slump (during 1952) and an unparalleled prosperity (in 1954). The year 1955 also was an unfortunate one, but it was not as bad as 1952. The following year, that is 1956, would have turned out to be a bad year, but the voluntary restriction on crop resorted to by North Indian tea producers and the international situation created by the Suez crisis saved the industry from a slump. The crop restriction helped the final North-east Indian production for 1956 to stand at only 2.5 million lbs. above the previous year's output and world production at no more than 3.7 million lbs. above the 1955 figure. The 1956 production, it may be noted, is still 40.1 million lbs. above the average for 1953-55.

The final output figures of the main tea-producing countries for the last three years are as follows:

(In million lbs.)	1956	1955	1954
North-east India ...	536.7	534.2	513.6
South India	127.0	129.0	128.5
Pakistan	54.4	52.5	54.6
Ceylon	375.6	380.0	366.7
Indonesia	93.7	95.4	103.1
Total ...	1,187.4	1,191.1	1,166.5

Besides the above two factors which helped the industry avert what would have proved to be a crisis, the Government's withdrawal of the restriction on the quantity of tea shipped for sale at the London auctions, also provided strength to the market. In the final analysis, tea maintained, during the year, its position as the biggest foreign exchange earner for the country. In fact, both the quantity and the value of tea exported from India touched, in 1956, a record of 516 million lbs. (out of a total output of 663.7 million lbs.) and Rs. 140.6 crores, respectively, exceeding the previous high of 456 million lbs. valued at Rs. 131 crores reached in 1954. As regards the future, it is not too much to hope that the Government will help the industry maintain this position, if it is to find additional foreign exchange resources to finance the second Five-year Plan.

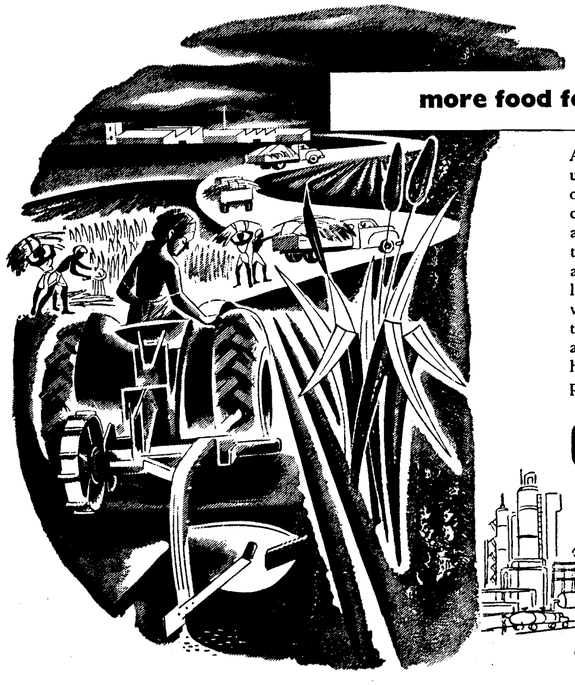
There are, however, some external factors which cannot be foreseen or overcome. For instance, there is a persistent tendency for world output of tea to outstrip the demand, with the existing producing countries enlarging their production and more and more new countries taking to tea production. There is a keen desire among other countries to restrict their purchases from outside and to attain a position which is as near self-sufficiency as possible. This means that India has to face greater and greater competition in the international markets in the years to come. India can be expected to maintain its lead as the leading supplier of tea to the world, provided it can face successfully this competition. But India has a certain difficulty in meeting such competition. The bulk of its output is common teas which will be hit very hard in times of recession. It is difficult to sell these teas and, except in times of prosperity, they are generally sold below cost.

A solution to India's tea export problems could be found through an international agreement among the principal producing countries. The prospects of such an agreement are, however, remote with the opposition of Ceylon, the second largest producer, in view of its limited internal market. India could, of course, depend to a large extent on its domestic consumption, which offers vast scope for expansion; but it is only a long-term solution.

All this suggests that India will do well to concentrate on enlarging its markets abroad through wider propaganda. During the past year, Russia was a new customer for Indian tea and it took 17.08 million lbs. Exports to Egypt, U.S., Canada and a few other countries were also enlarged. The following table shows the trend of exports of North Indian teas to the principal markets of the world during the last three seasons:

(In million lbs.)	1st April to 16th March		
	1956-57	1955-56	1954-55
U.K.	289.97	215.12	261.09
Irish Republic ...	15.71	19.08	22.44
U.S.S.R.	17.08	—	—
U.S.	19.05	18.04	22.48
Canada	14.13	10.63	13.99
Egypt	14.59	10.40	8.24
Red Sea ports ...	8.42	3.94	5.32
Hamburg and Bremen	6.19	4.42	4.20
Amsterdam and Rotterdam ...	2.99	3.13	4.88
Istanbul	4.10	5.15	2.00
Australia	1.70	2.06	6.94
Iran and Persian Gulf	9.67	8.86	10.80
Other countries ...	4.42	3.32	4.52
Total ...	406.73	304.15	366.90

It is encouraging to note that shipments as a whole show a considerable improvement, thus more than making good the decline in 1955-56. However, there have been instances of India having lost its markets to other countries, particularly Indonesia. The decline in shipments of Indian tea to Australia is significant and deserves to be watched with care by the Government of India. It is to be hoped that the presence of the Australian trade delegation in India would be availed of by the authorities to explore the possibility of recovering the lost market in that country and in any trade agreement between the two countries tea should figure prominently. Likewise, the Government should take the opportunity provided by the visit of the West German trade delegation to increase its exports of tea to that country. In fact, the leader of the delegation has indicated the possibility of West Germany importing more and more tea every year. Thus, on the whole, the outlook for Indian tea depends to a large extent on export promotional efforts, provided attention is paid to production of quality tea and on more intensive internal propaganda.



more food for more people

As mechanized farming brings more land under crops . . . as powerful bulldozers and other equipment labour day and night to build dams to water the thirsting earth . . . as roads and rails reach farther to bring food to the market place . . . so the need for oil—fuels and lubricants—grows. Caltex is irrevocably linked with the plans contributing to the well-being of India's millions. At Visakhapatnam the new Caltex Refinery is nearing completion—a tribute to free enterprise. Soon, from here, will flow Caltex quality petroleum products to accelerate India's progress.

OIL is the Lifestream of Progress

CAT

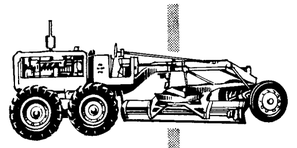
MOTOR GRADERS

All over India on the big construction projects with municipalities ; state farms ; and with the leading contractors, you can see Caterpillar Motor Graders hard at work.

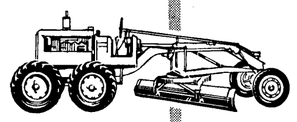
Building or maintaining existing roads, ditches, shaping banks, there is no tool like the profit making Caterpillar Motor Grader.

All over India, and throughout the world successful contractors and project engineers give Caterpillar their first choice. The main reasons for this preference are the proved low cost, high production and long-lived performance of these famous machines.

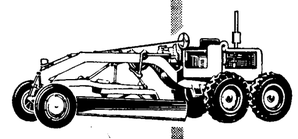
Ensure the job gets done to time by using a Caterpillar Motor Grader. There are three models the No. 12, 112 and 212. One of these, or more, is the answer to your problem.



No. 12—115 HP



No. 112—75 HP



No. 212—50 HP

MANUFACTURE OF ELECTRICAL GOODS

STANDARDISATION NECESSARY

THE need for producing electrical goods of standard quality was underlined by Mr. Morarji Desai, Union Minister for Commerce and Industries, while inaugurating the Electrotechnical Division Council of the Indian Standards Institution (I.S.I.) at New Delhi. If the use of electricity in the house is to become popular, Mr. Desai pointed out, safety in electrical appliances and other items of domestic use would have to be given special attention. In some foreign countries, notably the Scandinavian countries, Canada and Australia, it is practically impossible to manufacture and sell electrical appliances which have not been certified as inherently safe. India too, the Minister added, will have in future statutory regulations designed to safeguard against defective manufacture.

The constitution of the I.S.I. originally provided for the setting up of five Division Councils, one each for Engineering, Buildings, Chemicals, Textiles and Agriculture. The General Council at its last meeting decided to reorganise the existing Engineering Division Council and approved the creation of two more Division Councils, namely, the Structural and Metals Division Council and the Electrotechnical Division Council. The Structural and Metals Division Council was inaugurated towards the end of last year. With the establishment of the Electrotechnical Division Council there are at present seven Division Councils functioning under the Institution.

The I.S.I., it may be noted, was set up in 1947 with the following objectives:

(1) To prepare and promote the general adoption of standards, on national and international basis, relating to structures, commodities, materials, practices, operations, matters and things.
(2) To promote standardisation, quality control and simplification in industry and commerce.
(3) To co-ordinate the efforts of producers and users for the improvement of materials, products, appliances, processes and methods.
(4) To provide for the registration of standardisation marks applicable to the products, commodities, etc., for which it issues standards, to be branded on or applied to those products, commodities, etc., which conform to the standards that had been set.

Role of Standards

It is well known that standards have an important part to play in regulating industry. They ensure minimum levels of quality by laying down, where necessary, materials of construction, dimensions, performance requirements and methods of tests to check those performance requirements. They enable the buyer and the seller to speak the same language. By simplifying and unifying requirements, standards enable bulk production which naturally helps in economising cost. The problem of stock-keeping gets simplified as fewer spare parts have to be carried in stock. Fair competition is made possible between suppliers. Last but not least, the problem of the designer is simplified, thus making progress easier, as the designer would be able to select from a number of types and sizes of the most commonly used construction materials.

Reviewing the progress of standardisation, the Minister observed that it kept pace with the development of the industry. The Institution has already laid down standards for the more common types of electrical machinery, apparatus, and appliances, electrical conductors and cables, electrical accessories such as lamps, switches, plugs, sockets, etc. Several Indian standards for radio receivers, including those used in rural areas for community listening and radio components, have been issued. With the creation of the new Division Council, it is to be expected that the activities of the I.S.I. would be considerably augmented. In view of the greatly accelerated development of the generation and utilisation of electricity envisaged under the second Plan, the work of the Council in laying down standards is indeed large.

One of the common yardsticks for the assessment of industrial advancement of a country is the *per capita* energy consumption. In India it is estimated at about 30 units per year while countries like Canada have a *per capita* consumption of 3,500 units. Installed capacity in India in 1955-56 is estimated to have been of the order of 3½ million kw. which, at the end of the second Plan, is expected to be more than doubled to 8 to 9 million kw. A corresponding increase in *per capita* consumption of energy can be naturally expected. This serves to indicate the vast nature of the field open to the manufacturers of electrical machinery appliances and materials. The I.S.I., being associated with the Development Councils for Heavy and Light Electrical Industries set up by the Government of India, is contributing its share towards the proper development of these industries. In this connection, mention may be made of the proposed Government factory at Bhopal designed for the manufacture of heavy electrical equipment, such as hydraulic and steam turbine generators, generators for diesel engines, large-sized industrial motors and electric traction equipment.

Not an Easy Problem

The problem of standardisation of electrical goods is by no means an easy one. It is complicated especially on account of the hazards to life which may arise from the use of unsuitable materials, or faulty construction. Further, the weather in tropical countries is another handicap. Deterioration due to corrosive atmosphere, particularly in the coastal areas, and fungus and other microbiological attacks are common experiences in this country. A breakdown occurring from any of these causes will not only mean inconvenience but at times may even involve damage to human life. It is, therefore, necessary, Mr. Desai added, to ensure that manufacturers take into account all such adverse conditions of service and usage.

Under the Indian Standards Institution (Certification Marks) Act, 1952, the I.S.I. is authorised to specify certification marks and to grant licences to manufacturers for affixing the marks on the goods produced to conform to Indian standards. The scheme is voluntary but a number of licences have already been issued by the I.S.I., many of which relate to electrical materials. Indian standards are prepared after full consultation with all interests concerned and they are, therefore, suited for adoption by the industry and trade. Though their adoption is voluntary, it is only right that the manufacturers should have some desire to claim compliance with Indian standards, thus giving a guarantee of quality. In most cases, it is neither convenient nor practicable for the ordinary consumer to assure himself that the article he buys is of an accepted standard quality. Certification marks will, therefore, be a convenient device to assure the consumer that he is on safe ground when he buys an appliance or electrical material bearing the mark. Mr. Desai, therefore, specially appealed to the electrical manufacturing industry to adopt the I.S.I. mark, particularly in the manufacture of consumer goods. The Minister also emphasised that it is important that suppliers abroad were also made aware of the peculiar climatic and other conditions in India. For the country would necessarily continue to import substantial quantities of electrical machinery and equipment despite the expansion of existing manufacture and plans for the future envisaged under the Plan.

The I.S.I. has been taking an active part in focussing international attention on special problems of tropical countries. However, before such problems could be solved and proper designs evolved, considerable investigation and research would no doubt be necessary. This is being organised, to the extent possible, through I.S.I. Committee effort and co-operation of laboratories concerned. In the interest of international trade, as a large importer of machinery and a possible exporter in future, standardisation at the international level is of overall interest to India. Standardisation activity at the international level is carried on by the International Organisation for Standardisation (I.O.S.). The International Electrotechnical Commission (I.E.C.), which came into existence in 1906, is now affiliated to the I.O.S. as its Electrotechnical Division. The object of these two organisations is to facilitate co-ordination and unification of national standards. The Indian Standards Institution represents the country on both these international bodies. It is also an elected member of the Committee of Action of the I.E.C., which is its executive body, and has thus a hard and important responsibility in formulating policies. It is reassuring to know that India is benefiting from and contributing its share to the work of the I.E.C. As a result of the initiative taken by India, a unified world standard for dimensions of electric motors is well on its way to finalisation. The importance of this development can be gauged when it is realised that until recently world opinion had been divided into two groups and the task of making motors made in various countries interchangeable with one another appeared hopeless. To make an effective contribution to international standardisation and to benefit fully therefrom, the need for greater participation in the work of the I.E.C. is imperative. New types of materials are being fast developed in more advanced countries and considerable improvements are taking place in manufacturing techniques. The Indian electrical industry, if it has to keep pace with such developments, would have to pay greater and greater attention to what is being done elsewhere. The Minister observed that close collaboration with the activities of the I.E.C. is a convenient means for such purpose.

TRACTOR EQUIPMENT

The view that the institutional changes contemplated during the second Plan period and aimed at promoting land use and land management on more efficient lines did not accord with the requirements of agricultural efficiency was expressed by Mr. L. R. Patel, Chairman of the Tractor and Allied Equipment Manufacturers' Association, at its meeting held recently in Bombay. Referring to the imposition of ceilings on land, he said that the use of tractors would be economical only when the holdings were sufficiently large. Before fixing a ceiling on some arbitrary and ideological basis, it must first be decided what standard of living the rural population were expected to maintain. He added: "Ceilings have already been fixed in the Punjab, West Bengal, Hyderabad, Himachal Pradesh, Jammu and Kashmir, etc. The census of land holdings brought about by the National Development Council reveals that there are in India about 453 lakh holdings below ten acres, 12 lakhs between 10 and 50 acres and less than seven lakhs of holdings of the size of about 50 acres. While one can only speculate whether by the limitation of holdings above 50 acres there would be anything more than a subjective satisfaction for the small holders, there can be no doubt about its ill effect on agricultural efficiency in the long run, unless measures like co-operative farming are adopted.

Another disturbing factor, according to Mr. Patel, had been the imperfect policy adopted with regard to the import of spare parts. In an attempt to protect indigenous manufacture of component parts of a general nature as, for example, pistons, ball bearing, V-belts, etc., little regard was paid to the degree of specialised design of parts covered by these wide definitions but used on specific proprietary machines. More often than not, the resultant restrictions interfered seriously with the operation of many imported machines.

CRAWLER TRACTOR

A gigantic crawler tractor has been brought into India by Blackwood Hodge (India) Private Ltd. This machine (Euclid TC-12) is claimed to be an entirely new concept in design, operation and performance of crawler tractors. It is designed for heavy construction work, and has been fitted with two General Motors diesel engines capable of developing 218 h.p. each, giving a total of 436 h.p., more than twice the rated horsepower of most crawler tractors yet offered. The machine consists of two halves, each containing an engine which drives one of the tracks through separate torque convertors and semi-automatic transmissions. This permits changing from one forward speed range to another or reverse, under full power. Since these two halves are connected by a single steel kingpin, the machine can be easily divided and transported in two pieces. Another unique feature is that one track can be driven in a forward direction, and the other in reverse at the same time. This enables the TC-12 to turn completely around within its own length. The total weight of this mammoth machine complete with bulldozer blade approximates 40 tons.

NEW PRODUCTS AND PROCESSES

High-speed Computer

A NEW large high-speed electronic computer which will, it is claimed, be 100 to 200 times faster than any comparable electronic computer at present available, is to be developed by International Business Machines under a contract for the U.S. Atomic Energy Commission. The machine will, according to specifications released by International Business Machines, be capable of performing multiplications of 12 to 15 digit numbers at a rate of more than 500,000 multiplications a second and will be able to carry out about two million additions a second. The computer which is to be called *Stretch*, will have a large capacity magnetic core memory and will also incorporate several types of ultra high speed memory, all of which will, it is claimed, be able to be brought to bear simultaneously on separate problems, or on different phases of the same problems. The machine will be able to accept information from several different input sources simultaneously and will use a specially developed high speed information output system.

Preventing Wheel Slip on Railtracks

Research which has been carried out recently in the U.S. has led to the development of a new and more efficient kind of nozzle for sanding slippery railway lines which is said to reduce the amount of sand used and therefore the ill-effects of such anti-slip sanding. The research which was carried out by the Stanford Research Institute for the Southern Pacific Railway, showed that the use of a specially shaped "nipped" nozzle and the attachment of a sheath to shield the falling sand from the wind gave an improved spread of sand and that this substantially increased the braking and accelerating performance of the locomotive. Running experiments have shown, it is claimed, that the use of the improved sanding unit reduces the consumption of sand to ½ lb. per minute for each wheel. This compares with the previously used rates of between 3 lbs. and 5 lbs. per wheel. At the same time the use of smaller quantities of sand markedly reduces the obstruction to the passage of drainage water away from the rails.

Light Waves as Yardsticks

Differences of 1/10,000,000th of an inch, or about one-thousandth the thickness of a human hair, can now be accurately measured by using an instrument developed by the United States National Bureau of Standards. The device uses light waves as measuring sticks to determine the difference in length of the precision measuring instrument known as a gauge block. Usually made of steel, a gauge block is rectangular in shape, with opposite faces separated by an accurately known distance. Ordinary master gauge blocks now are certified to an accuracy of the nearest 1/1,000,000th of an inch for inch-long blocks. Practical equipment for comparing lengths to the nearest 1/10,000,000th of an inch, as is possible with the new instrument, has been greatly needed because of the extremely small tolerance required for parts used in jet aircraft, machine tools and many other precision instruments used by present-day industry.

Electric "Elephant"

An electric-powered "elephant," a powerful machine capable of lifting a whole truckload of heavy logs as high as a three-storey house, is the latest innovation toward increasing production of a large United States Pacific Northwest timber concern. Designed for handling tons of logs at a time at the Weyerhouser Timber Company's Grays Harbour mill, the "elephant" plucks a complete load of logs from a truck trailer, rolls to a heap of logs already stacked and drops them on top. The 30-foot machine then rolls back, lifts the truck trailer and deposits it behind the cab-power plant for return to the woods for another load of logs. The whole operation is complete in five minutes. The operator controls work of the machine from the buttons of a control panel, which start, stop and regulate the speed of electric motors. Pulp mills of the U.S. Pacific Northwest are seeking similar machines to speed building their own pulpwood stockpiles.

Distilled Water from Solar Furnace

An experimental solar furnace system has recently been operated in Australia where it was used in experiments into the practicability of using solar power to produce demineralised distilled water. The system consisted of a glass mirror collector mounted over a black plastic trough, in which the water was contained and where the evaporation of the water took place. The purified water vapour was then automatically collected on a special condensation surface attached to the solar furnace and was drained off into a series of adjacent collecting tanks. The system, which was operated by the Beaurepaire Tyre Service, Mildura, Victoria, is said to have yielded eight gallons of distilled water a day. This water was used to fill car batteries.

Leak-proof Hose Clips

Manufactured by F. R. Swimburne Products Proprietary Ltd., of Hawthorn, Victoria (Australia), Python worm-drive hose clips provide a perfect connection grip for hose and piping in the factory, on farms, in the home, and in the automotive industry. The clip is strip-proofed to aircraft standards, and is guaranteed to withstand a minimum torque of 60 inch-pounds. It is available in several sizes to suit hoses of an outside diameter ranging from ½ in. to 4½ in. The powerful and durable Pythor hose clip will grip hoses securely and make effective connections even over irregular surfaces. They are zinc-plated and rustproof. Truck and tractor plants have found that Python clips save valuable time on the assembly line. They can be used with the same efficiency with water, steam, air, gas and oil.

THE SUPERANNUATION SCHEME—II

DIFFERENT TYPES OF PLANS OFFERED

IN order to maintain equity between the younger employees and the older employees who have served during a period when there was no superannuation arrangements, the employer can make additional contributions to purchase pensions for such members in respect of their past service. These past service contributions may be paid in a lump sum or may be spread over a period of years and are eligible for the same tax concessions as are applicable to the ordinary annual contributions made by the employer. Past service benefits may be provided under either a single premium endowment policy with an annuity option or a single premium deferred annuity policy, depending upon the plans of insurance selected for the main benefits under the Scheme. A distinction may also be made between the rate for past service pensions and future service pensions.

Under any of the abovementioned three plans, the scheme may be contributory or non-contributory. Under all the above plans, the age at which pensions are entered upon should normally be the retirement age according to the service rules of the employer. The endowment policies should also mature at the retirement age and the expiry age for the temporary insurance policies should be the same.

The pension would normally be payable monthly in arrear for a guaranteed period of five or ten years and thereafter throughout the lifetime of the pensioner, but there will be no proportionate payment till the date of death. The Corporation would, however, be prepared to make the pensions payable otherwise than monthly and with any guaranteed period that the employer and employee may desire. The Superannuation Schemes offered by the Corporation are flexible enough to provide for reduced or increased pensions in the event of early or late retirement. If desired, a provision will also be incorporated in the policy to permit payment of a reduced pension as long as the employee or his wife is alive, in lieu of the pension payable during his lifetime alone. These alternative benefits will be endorsed on the policy if, and only if, the trust deed and rules permit such benefits.

If an employee dies before the normal retirement age, the sum insured under the endowment and temporary insurance plan and the return of premiums, if any, under the other pension plans will become payable to the trustees on the date of death. The latter may then pay to the widow or other dependents of the employee an annuity for a certain term or throughout the lifetime of such beneficiary.

Temporary Insurance Plans

The Corporation will issue two types of temporary insurance policies: (i) A policy covering the risk of death in service, with uniform annual premium. Under this plan, the full sum assured is payable if the employee dies before the retirement age, but nothing is payable if he survives to that age. Uniform annual premiums will be payable throughout the period of the contract, apart, of course, from increases in premiums due to increments in salary received by the employee. (ii) A temporary insurance policy for one year, which may be renewed for a year if so desired. The policy may be renewed each year in this way until the employee attains the retirement age. Under these one-year policies, the sum assured will be paid only if the employee dies during that year. Under this plan, the annual premium increases each year as the age of the employee advances even apart from increases in sum assured consequent on increments in salary.

No medical examination is necessary under the deferred annuity plans. Medical examination will not ordinarily be required even under the endowment and temporary insurance plans if the sum assured does not exceed Rs. 10,000 except where temporary insurance policies are issued with deferred annuity with return where the non-medical limit will be Rs. 5,000. For subsequent increases in the sums assured on the life of an employee, medical examination will be necessary only if the total increase in the sum insured since the date of last medical examination exceeds Rs. 10,000.

Reduced premium rates will apply to Superannuation Schemes, where the number of members at the inception of the Scheme is not less than 10. But should the number increase to 10 or more at a later date, the reduced rates will apply in respect of increments and new entrants effective from that date. On the other hand, the reduced rates once applied will continue to apply even if the number of members covered by the Scheme falls below 10 later, due to exits. The Corporation will not issue separate notices for the premiums payable in respect of each employee. A consolidated statement showing the premiums in respect of the individual members and the total sum payable by the trustees will be sent to the trustees. In the case of contributory schemes, the premium due from the employees may be deducted from the salary of the employees subject to the provisions of law.

The Policy

The Corporation will issue a Single Master Policy to the trustees, where the number of members under a scheme is not less than ten. The policy will set forth the rates for determining the sum insured and/or the pension benefits in respect of each employee and also the manner in which the appropriate premium rates shall be determined and applied in each case. A schedule showing the names of the employees who are initially admitted to the Scheme, their ages, particulars of insurances and/or pensions including the dates on which such insurances become effective and the amount of premium will also be incorporated in the policy. The policy will contain the conditions on which the sums assured and/or the pensions shall be varied from time to time during the currency of the policy and the dates on which variations become effective, the manner of calculating the premium therefor and the manner of payment of the premiums and the sums insured or the pensions. In the case of Superannuation Schemes where the number of members is less than ten, individual policies will be issued to the trustees in respect of each member. A Master Policy will not be issued for such a scheme.

The rules framed for each Superannuation Scheme should provide for the conditions determining cessation of insurance and/or pension benefits either on the whole or in respect of any employee or class of insurance. The rules may provide for automatic cessation of insurance benefits on the date of termination of the employment.

Subject to the provisions of the trust deed and rules and the concurrence of the trustees, any employee covered by a Master Policy issued by the Corporation in connection with the Superannuation Scheme, upon written application made to the Corporation within 30 days after the date of termination of his employment shall be entitled to one of the following benefits:

(i) A cash surrender value which shall not be less than 50 per cent. of the total of the premiums paid in respect of the particular employee, except for premiums paid under temporary insurance policies which carry no surrender value, will be paid to the trustees. Under an approved pension scheme, the benefit must be paid to the employee in the form of an annuity and not in a lump sum.

(ii) An individual paid-up assurance or pension payable in the same manner and subject to the same conditions as the original assurance or pension for that portion of the sum assured or pension which the amount of premiums paid bears to the total amount payable, subject to the paid-up pension being for an amount not less than Rs. 5 per month and the assurance for not less than Rs. 100. This benefit shall not be allowed under temporary insurance policies.

The above two benefits are, however, available only after two complete years' premiums are paid. No surrender value or paid-up value will be available if the employee leaves the service of the employer before two complete years' premiums are paid. If the entire scheme is wound up within three years of the date of commencement of the scheme, a deduction of 1 per cent. of the total sum assured or cash option will be made from the surrender value.

(Concluded)

INSOLVENT INSURANCE COMPANIES

The Government of India has decided to pay full insurance benefits to the policyholders of 29 insolvent insurance companies, by taking over their liabilities. It is proposed to meet this liability over a period of years out of the Government's share of the surplus ensuing at the biennial valuation of the Life Insurance Corporation. The decision, which is only fair and equitable, was taken on the recommendation of the Life Insurance Corporation which, after having investigated the question, held that it would be unfair to make the burden fall on the policyholders of the solvent companies, which would, in effect, be the case if the consequences of the decision to pay in full the policyholders of the deficit companies, are to be borne by the Corporation. It, therefore, recommended that the Government should agree to its paying the policyholders of the insolvent companies their policy benefit in full and that the Government should itself bear the liability.

It may be recalled that when the Life Insurance Corporation Bill was before Parliament, it was noticed that a certain number of insurers, whose business would be vested in the Corporation, were not solvent. Their liabilities, including the actuarial reserves under policies in force, were in excess of their assets. The financial position of some of these companies was so difficult that, owing to want of funds, they had not been paying the claims of their policyholders. Accordingly, power was reserved to the Life Insurance Corporation by section 14 of the Life Insurance Corporation Act, 1956, to reduce the amounts of insurance under contracts of life insurance entered into before January 1956 by such insurers to the extent justified by their respective financial position. The Corporation has been examining the position of such insurers. Though all investigations are not yet complete, a sufficiently clear picture has emerged.

The following companies, namely, Crescent, Hind Benefit, East and West, Presidency Life and Provident, Warden, Bombay Capital, Indian Economic, Inter-Provincial Provident, East End Provident, Mahaluxmi Provident, New Bengal Provident, Bengal Industrial, Chota Nagpur Provident and Prabartak, Rajasthan, Dominion Ideal Mutual, Kranti Provident and India Oriel, were all found to be in deficit, the total extent of net liability amounting to Rs. 59 lakhs, approximately. If policy benefits are reduced to the extent of deficit for each company, such reductions, it is estimated, will vary from 3 per cent. to as much as 60 per cent. in one case.

In the case of a further group of ten companies, namely, Continental Mutual, Free India General, Home Security, Modern-Mutual, Peerless, Policemen Provident, Tropical, United Karnataka, Reliance and Commercial Insurance, while the investigations are not yet complete, there is a *prima facie* uncovered deficit, which, together with possible deficiency in respect of a few other companies, is estimated to amount to about another Rs. 10 lakhs. The total uncovered deficit of all the above insurers, therefore, is estimated to be of the order of Rs. 70 lakhs. On the appointed day, the business in force of these insurers was about 116,000 policies assuring Rs. 16.5 crores approximately.

The Government's decision will, of course, serve to remove the anxiety of the policyholders whose hard-earned savings were thought to be in danger of being lost.

ECONOMICS OF EXPENDITURE TAX

ITS INTRODUCTION IS UNSUITABLE FOR INDIA

By P. C. Jain

OUT of all the recommendations contained in the Kaldor report, the most fundamental and basic recommendation, from the point of view of tax reform in this country, is that about the imposition of an expenditure tax. It is reported that the Government of India is considering the problem of imposing this tax in India. This gives Dr. Kaldor's recommendation a new importance. An expenditure tax for India has some theoretical arguments in favour of it. But, when we take an overall view of the matter, such a tax is likely to do more harm than good in the special conditions in our country. It cannot, therefore, be called a suitable tax and its imposition would not make the Indian tax system more equitable but would instead create new difficulties which we do not have to face under the existing system of taxation.

The main thesis of Dr. Kaldor in support of the expenditure tax is that it is more equitable than the super-tax, which it aims to replace in the first instance, because it takes into account inequality of consumption which is a better criterion for judging equity in taxation than inequality of income or wealth on which the present income-tax and super-tax in India, as in other countries, are based. In other words, an expenditure tax considers what a person takes away from the nation's stream of goods and services and taxes him accordingly while an income-tax considers what a person puts into this stream and taxes him on that basis. It is argued that consumption is a better criterion for judging the capacity of a person to bear taxation than his income, and taxation levied on this basis would be more equitable than the present system of income taxation in India.

Equity

But equity in taxation alone is not the only criterion which the Government should take into consideration in its taxation policy. It should also consider the effect of any particular tax on (*a*) peoples' savings and the incentive of *entrepreneurs* or, in short, on the process of economic growth, (*b*) concentration of economic power, (*c*) tax evasion, and (*d*) administrative feasibility. From all these points of view, as we shall presently argue, an expenditure tax is utterly unsuitable for an economically backward country like India.

Dr. Kaldor has suggested that the expenditure tax in India should be levied on the basis of expenditure per head per family on what is known as the quotient system, "which is already applied in France for income-tax purposes, according to which the income (or expenditure) of all members of the family is first aggregated and then divided into a number of parts, depending on the number of persons in each family, and the tax is charged separately on each part." He has suggested an exemption limit of Rs. 10,000 per adult and expenditure in excess of this amount would be charged according "to the slab system of graduation, starting from 25 per cent. on the lowest slab (i.e., on expenditure between Rs. 10,000 and Rs. 12,500) and rising gradually up to a maximum of 300 per cent. on expenditures in excess of Rs. 50,000 per head." If it is considered necessary to net in a larger population by the expenditure tax Dr. Kaldor has suggested the possibility of reducing the exemption limit to Rs. 6,000 per head per family, in which case the maximum rate of 300 per cent. would be imposed on expenditures exceeding Rs. 30,000 per head per family.

The main contention of Dr. Kaldor in favour of the expenditure tax is that it would encourage savings which are so vital for India's economic development. He is quite clear in his assertion that it would not only increase the amount but also the rate of capital formation. Since the expenditure tax is levied on the amount of income actually spent on consumption, people would be able to reduce their tax liability by reducing their consumption and by increasing their savings. Under ordinary circumstances this argument might, to some extent, be tenable but it is invalid in the case of India. The expenditure tax would be paid by a small section of the population which is at present subject to income-tax assessment. Since the Government of India would not find it possible to reduce the maximum rate of income and super-tax to 7 annas in the rupee (as against the present rate of over 14 annas 8 pies per rupee) and since it would not be possible for it to reduce the indirect taxes in the shape of excise duties, import duties, sales taxes, etc., which are also paid by people in the higher income groups, the burden on this limited class of people would undoubtedly become excessive. Their taxable capacity would thereby be exceeded and, in spite of their 'enormous' income, they would not be able to increase the rate of savings. If the burden on them becomes too great they may be obliged to reduce the rate of savings. In order to prove effective in increasing the rate of savings the expenditure tax should be imposed in lieu of super-tax and the indirect taxes like excises, import duties, sales taxes, etc., but in view of the Government's need for additional revenues it would not be possible for it to forgo the revenue from these taxes. In these circumstances, if the expenditure tax is levied in India it would surely reduce the rate of savings.

But even if the maximum rate of income-tax is reduced to the level of 7 annas in the rupee as envisaged by Dr. Kaldor, the expenditure tax might not increase the rate of savings. In order to keep the balance, while levying the expenditure tax, it would be necessary to impose a tax on gifts and a tax on total wealth as was clearly realised by Dr. Kaldor. If these other taxes are levied the encouragement which the expenditure tax gives to savings would be more or less counter-balanced by increased tax which people will have to pay on account of their increased wealth resulting from increased savings. But if it is granted that, taking all the factors together, the rate of savings would increase, the question arises as to whose rate of savings would increase. It surely cannot be the rate of savings of people in the lower income groups but only that of people in the higher income groups. As Dr. Kaldor recognised, the expenditure tax would "augment the rate of accumulation of large fortunes." This will intensify the concentration of economic power in India and would thus be inconsistent with the objective of a "socialistic pattern of society" which the Government of India is trying to follow. We, therefore, come to the conclusion that the expenditure tax is not suitable to our country so far as people's savings, initiative and enterprise of *entrepreneurs* and the concentration of economic power are concerned.

Income-tax

It is quite correct to argue that an income-tax, if it becomes heavy, discourages savings and discourages risk-taking by the *entrepreneurs*. But, in India, we have become accustomed to the income-tax and whatever its theoretical disadvantages as regards savings and enterprise, the condition under this tax has become stabilised and there is no sound reason for disturbing it. Moreover, if income-tax is discouraging savings there is a case for reducing the maximum combined rate of income- and super-tax to 12½ annas in the rupee, if not less, but not for replacing part of it by an expenditure tax. Similarly, if the present rate of income-tax in India is discouraging enterprise there is a case for making the necessary adjustments in it rather than levying the expenditure tax. It has been conclusively demonstrated that "a true income-tax which allows full loss offsets does not discourage risk-taking, since the rate of return per pound risked remains constant as the tax rate rises or falls."

Another ground on which Dr. Kaldor supports the expenditure tax is that it would prevent tax evasion. In the Report on Indian Tax Reform, he argues:

" . . . the incorporation of an expenditure tax in a system of personal taxation which includes both taxes on income (including capital gains) and on property would ease considerably the prevention of evasion—partly because it would introduce an opposition of interests between the different parties as regards concealment of particular transactions (whereas under the present system both parties to a transaction may have an identical interest in concealing altogether or in understating the value of a particular transaction), and partly also because the necessity to account for the amounts spent on personal purposes over a particular period together with the obligation to produce a balance-

AUDITOR'S REPORT.

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited, as at 31st December, 1956, and also the Profit and Loss Account of the Bank for the year ended on that date with the Books of Accounts and certified returns from Branches and visited some of the major Branches of the Bank during the year and examined the books of accounts and cash and securities as at the time of my visit and report that:

(a) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit;
(b) Such information and explanations have been found to be satisfactory;
(c) The returns received from the branches have been found adequate for the purpose of my audit;
(d) The transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank;
(e) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required;
(f) In my opinion,
  (i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1956;
  (ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
  (iii) proper books of accounts as required by law have been kept by the Bank so far as appears from my examination of there books; and
(g) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

INDIAN OVERSEAS BANK LIMITED

MR. M. CT. MUTHIAH'S SPEECH AT ANNUAL GENERAL MEETING

FULFILMENT OF PLAN TASK CAN BE CONVENIENTLY STAGGERED

ADDRESSING the shareholders of The Indian Overseas Bank Ltd., at their Annual General Meeting held in Madras on 29th March 1957, Mr. M. Ct. Muthiah, Chairman, expressed the view that the fulfilment of the task undertaken in the Second Plan could be conveniently staggered with neither too much reliance on deficit financing nor too drastic a resort to direct taxation.

The following are extracts from Mr. Muthiah's speech:

"GENTLEMEN,

"The Directors' report on the working of the Bank during the year 1956 has been with you for some time now and with your permission I shall take it as read.

"The comparative statement of condition gives a synopsis of the Bank's progress during the last five years. Deposits at Rs. 16,49 lakhs show an increase of Rs. 2,07 lakhs over the previous year. Advances and investments in Government securities have correspondingly increased by Rs. 1,76 lakhs and Rs. 32 lakhs, respectively.

"We continue to maintain a high degree of liquidity in the employment of funds as shown below:

	Lakhs of Rupees	Percentage to total deposits
A. Cash and Balance with banks	260	15.8
B. Bills	644	39.0
	904	54.8
C. Investments (against which no borrowings have been made) ...	471	28.8
Total of A to C	1,375	83.6
D. Advances	437	26.7

"The year 1956 was one of further growth in the earnings of our Bank. Gross earnings at Rs. 114 lakhs are the highest in the Bank's history, representing an increase of 34 per cent. over the previous year. Expenses also rose by Rs. 17 lakhs, chiefly as a result of increased salaries and higher interest paid on deposits. The net profit of Rs. 28.65 lakhs for the year is a record for the Bank exceeding the previous high of Rs. 16.55 lakhs earned last year. This handsome improvement in the Bank's working has enabled us to grant an increased bonus to the staff and your Directors consider that the shareholders are entitled to a higher dividend of 10 per cent., as against 7½ per cent. declared last year.

"As already indicated in my last year's report, two more branches were opened during the year, one in New Delhi, the Capital of the Indian Union and the other in Hyderabad (Deccan).

"Our overseas branches continue to have the support and patronage of a large clientele abroad, thanks to the high level of efficiency maintained by our staff.

Banking, Monetary and Economic Trends

"As a result of the growing industrial activity, the large increase in the volume of imports and the issue of Central Government and State loans during the year, total advances of Scheduled banks rose from Rs. 615 crores in December 1955 to about Rs. 780 crores in December 1956. Deposits, however, rose by Rs. 77 crores only to Rs. 1,097 crores reflecting the inadequacy of conditions favourable for the flow of funds into the banking system. The percentage of advances to deposits shot up from 60.34 per cent. to 71.11 per cent. The expansion of credit was attained by reduction in cash balances, liquidation of investments in Government securities and increased borrowing from the Reserve Bank. Advances availed of by the Scheduled banks under the Bill Market Scheme during the busy season in 1955-56 aggregated to Rs. 227 crores, as against Rs. 147 crores in the corresponding period of the previous year. Money supply expanded by about Rs. 131 crores to Rs. 2,178 crores and notes in circulation rose to an all-time record of Rs. 1,516 crores in May.

"The official Bank rate of the Reserve Bank of India remained unchanged at 3½ per cent. since November 1951, but the effective Bank rate, i.e., the rate at which the Reserve Bank rediscounted approved trade bills was raised from 3 per cent. to 3¼ per cent. on 1st March 1956 and thence to 3½ per cent. on 21st November 1956, ostensibly to counteract the inflationary tendencies in the country. With the increased stamp duty, the effective rate would be virtually 4 per cent. As from 1st February 1957, the Reserve Bank rate of interest on advances to Scheduled banks against Government and other eligible securities has also been raised to 4 per cent., possibly to render bank borrowings dearer in the wake of rise in prices of essential commodities including foodgrains. In the context of rising money rates, the Bank rate at 3½ per cent. appears rather untenable and it should necessarily follow the change in interest rate structure, if it is at all to be directed as a variable weapon of credit control in modern planned economies.

"Agricultural production during the year disclosed a slight fall, whereas the rise in industrial production was over 15 per cent.

"Over the year, the general index number of wholesale prices (base-year ended August 1939=100) moved up by 18.4 per cent. to 431.7 whereas the index number of prices of food articles advanced by 31.2 per cent. to 422.6. This was chiefly due to the fact that there was an altogether unwholesome tendency to hoard food grains for speculative purposes. A mild credit squeeze was, therefore, resorted to by the Reserve Bank to arrest the creation of artificial scarcity of foodgrains through an overdose of bank credit.

"A more serious threat to the country's economy than the mild inflationary pressure at home was the dwindling of foreign assets. The total of the foreign securities and balances held abroad with the Reserve Bank declined from Rs. 735 crores to Rs. 533 crores between January and December of the year. Our Finance Minister sensed the danger ahead and lost no time in initiating remedial measures to keep under reasonable check the inflationary pressure and to correct to some extent the imbalance in the balance of payment position.

Emergency Budget

"An emergency budget was introduced, the main features of which were increased rates of taxation on company dividends, compulsory depositing of part of company's reserves and profits with the Reserve Bank of India and the reintroduction of the Capital Gains Tax. The Finance Minister had already taken initial moves to conserve foreign exchange. Several cuts affecting over five hundred items of consumer goods have been made in import quotas for the licensing period January to June 1957, thereby providing for a reduced expenditure of about Rs. 30 crores overseas. The basic foreign travel allowance of £750 has also been withdrawn from the beginning of 1957, with a view to regulating its grant on the merits of each application. Rigorous scrutiny of all schemes and projects is proposed to be made from now on and undertakings involving foreign exchange expenditure of any kind have to receive the special sanction of the Finance Ministry. The need for such drastic measures could be better appreciated in the context of the present trend of trade. The value of the country's total exports for the first nine months of the year receded from Rs. 452.25 crores a year ago to Rs. 424.62 crores. Imports, on the other hand, showed a substantial increase from Rs. 454.99 to Rs. 577.60 crores in the year.

"It is, therefore, not unlikely that the phasing of the Plan outlay and ultimately the total Plan outlay itself would be largely governed by foreign exchange considerations. This realistic approach towards the implementation of the second Five-year Plan should necessarily slow down the tempo of socialistic drive in economic developments and encourage in its wake free flow of foreign capital into the country to meet the gap in foreign exchange resources. It is realised that not only through aid but also through trade should India mobilise funds to finance her present Plan. Export Promotion Councils, constituted a year ago, commenced their work by sending representatives abroad. Government also continued the policy of entering into bilateral trade agreements and a State Trading Corporation was established to trade mainly with bilateral trade countries on a Government-to-Government basis.

"The Plan under way is, as you are aware, just a continuation of the developmental efforts commenced in the First Plan with, of course, a larger accent on industrialisation, especially the development of heavy industries and the requisite ancillaries like transport, for which World Bank aid is presently sought. The fulfilment of the task envisaged can be conveniently staggered with neither too much reliance on deficit financing nor too drastic a resort to direct taxation, with a view to ensuring the co-ordinated and closely integrated efforts in both public and private sectors.

"I referred in my last address to the freeing of certain foreign currencies other than U.S. Dollars, Canadian Dollars, Sterling and Pakistan Rupee. With effect from 3rd September 1956, authorised dealers have been permitted to deal in U.S. and Canadian Dollars at rates to be decided by market conditions, subject to spot transactions being at or between the official buying and selling rates of the Bank of England.

Enactments of Interest

"The year was particularly momentous for certain legislative enactments relating to insurance and banking. The life insurance business taken over by the Government under an emergent ordinance early in the year was legalised in September last by the passing of the Life Insurance Corporation Act, but claims thereunder of the old companies remain yet unsettled. The new Companies Act that came into force in April last is a cumbersome piece of legislation which extends to every possible aspect of company administration and, as you are aware, its application has already revealed several incongruities, particularly in regard to banks. Other measures of importance are the amendments made to the Reserve Bank Act and the Banking Companies Act. The latter gave the Reserve Bank powers of control over the terms of appointment of whole-time directors, managing directors and chief executive officers of banks as also to issue directives to banks in matters of policy and administration. It also empowers the Reserve Bank to appoint officers for the purpose of watching and reporting on the conduct of affairs of any banking company. These amendments were, of course, received with mixed receptions, but, given the goodwill all round, it will not be impossible to achieve the objects in view in the best interest of the country.

Tour Abroad

"Last year, I went on a tour of the United Kingdom and the Continent accompanied by the General Manager and I am happy to pay personal testimony to the fund of goodwill we enjoy abroad. The tour also helped personal assessment of world problems of general interest to the Bank and incidentally to make arrangements for the special training of our selected staff in the United Kingdom. Such tours at frequent intervals are indeed essential to strengthen the ties and improve the reciprocal business relationship with our overseas correspondents in the context of growing competition for foreign exchange business.

"The need for giving specialised training for the junior staff in India has been engaging our attention and your Directors have decided to establish in Madras a training school with necessary facilities for the trainees. Apart from the theoretical courses, the trainees will be given intensive practical training at our Madras Branch.

"In conclusion, I wish to express on behalf of the Board and on my own, our sincere appreciation of the very good work done by the entire staff. I am sure, with their continued loyalty and unstinted co-operation, our Bank will grow from strength to strength."

Note: *This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.*

The British Bank of the Middle East

(INCORPORATED IN ENGLAND BY ROYAL CHARTER, 1889 WITH LIMITED LIABILITY)

BALANCE SHEET OF INDIAN BRANCHES AS AT 31st DECEMBER, 1956.

CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.
1. Capital—		
Deposit with Reserve Bank of India under Section II (2) of the Banking Companies Act, 1949	20,80,541 10 0	
2. Reserve Fund and Other Reserves		Nil
3. Deposits and Other Accounts—		
Fixed Deposits	52,14,288 10 0

5. Net Profit on revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
6. Income from Non-Banking Assets, and Profit from Sale or Dealing with such Assets	Nil
7. Other Receipts	Nil
Total .. Rs.	29,24,001 13 7

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at the 31st day of December, 1956, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date, in which are incorporated the unaudited returns of Calcutta Branch not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-Section (1) and (2) of Section 211 and Sub-Section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branch of the Bank not visited by us;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1956, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

P. L. SANDEMAN,
Manager.

BOMBAY, 28th March, 1957.

Chartered Accountants.

CALCUTTA JUTE FABRICS SHIPPERS ASSOCIATION

MR. N. K. JALAN'S SPEECH AT ANNUAL GENERAL MEETING

STEADY SUPPLIES AND STABLE PRICES NEEDED

DESPITE the removal of export duties on jute in 1955 and the increase in mills' production at the beginning of last year, the jute manufacturing industry did not fare well in 1956. This was mainly due to the lack of sufficient response from the overseas market. The abnormal influence exercised on price structure by the unusually firm jute market was another contributory factor. In his address to the Annual General Meeting of the Calcutta Jute Fabrics Shippers Association held at Calcutta on Tuesday 2nd April 1957, Mr. N. K. Jalan, Chairman of the Association, stressed the need for steady supplies and stability in prices. He suggested that a properly regulated futures market could do much to stabilise jute prices.

The following is the full text of Mr. Jalan's speech at the meeting:

"GENTLEMEN,

"If you have no objection, I will take the notice convening this meeting as read.

"When I was elected Chairman of the Association at the beginning of the year under review, I might with some justification have looked forward from that point of time to the present occasion and pictured myself, after a lapse of 12 months, as the happy reviewer of a successful year for the Indian jute industry and trade. The outlook a year ago was certainly bright enough to warrant the modest hope that the progress made in 1955 would be maintained during 1956, and if today, contrary to expectations, I am not cast in the role of the aforesaid happy reviewer, I can at least try to analyse the reasons why our earlier hopes were not fulfilled.

Export Trade

"It is, of course, arguable that, solely from the point of view of the export trade, which is our bread and butter, the year was a moderately good one, even if the bread was rendered somewhat dry by the scarcity of the butter. In my 'Note on the Market' which appears in your Committee's Report, I did in fact use the words 'reasonably satisfactory' in alluding to the year's results. I was, of course, speaking as a shipper, and it must be acknowledged that, for the manufacturing industry itself, the 12 months under review were most disappointing and literally unrewarding; and we, as shippers, cannot indulge in complacency in circumstances where the manufacturing industry itself is not thriving. I think that most observers of the scene will agree that the two main contributory factors to the disappointments of the year were, firstly, the lack of a solid response from the overseas markets which we might reasonably have looked for as a result of the removal of the export duties in 1955 and the increase in the mills' production at the beginning of 1956—both of which developments must surely have been welcome features to consumer interests—and, secondly, the abnormal influence exercised on the price structure by the unusually firm jute market witnessed during the year. Given the first factor, bad enough in itself, the addition of the second factor was sufficient to turn the scales heavily against the industry, so much so that at one stage, towards the middle of the year, a minimum export price scheme was canvassed in official circles as a means of counteracting the uneconomic margin between jute and finished goods prices. The proposal was ultimately abandoned, and I am sure we were all glad that it did not materialise for we know how repugnant the idea of controls is to our overseas customers.

The Real Answer

"Considering the long-term interests of the industry, the real answer to the problem seems to lie in lower prices for raw jute, with finished goods prices stabilised at their present low levels, thus preserving our competitive advantage and assisting the growth of the national economy through higher earnings from increased exports. Mention of our competitive position leads me on naturally to a reference to our most formidable competitor, namely, Pakistan. We have seen the Pakistan jute industry mushroom to a very respectable size and we are obviously entering a period in which our combative strength is to be severely tested. Last year, Pakistan's exports of jute manufactures totalled 80,000 tons, an increase of about 50 per cent. on the previous year and roughly one-tenth of India's total exports of gunnies.

Overseas Demand

"Naturally we ourselves are immediately and primarily concerned about the state of overseas demand, and we were fortunate that it was fairly well sustained during the past year, even if it did not come up to our expectations. One keen disappointment which we all felt was the paucity of the eventual offtake by Russia, when we had been led to believe that substantial orders would be forthcoming from that quarter. Indeed, it was largely on the understanding that a sizable business was to be done with Russia that the industry agreed, at the instance of the Government of India, to increase its output in the early part of 1956. In the event, the total business put through amounted to only about 10,000 tons, and with no compensatory revival of demand from other sources, the mills were finally compelled to curtail their production once again, while shippers were left with a feeling of frustration. That Russia should have been at all interested in obtaining jute goods from India betokens a potentially large source of demand, especially when viewed against the background of that country's gigantic and rapidly expanding economy, and I am sure that, by sustained negotiation on the part of our Government, a rewarding business connection can still be established on behalf of the Indian jute industry.

"The total gunny export business during the calendar year 1956, at the provisional figure of 868,500 tons, was some 25,000 tons less than in 1955, although there is some satisfaction in being able to record that the rise in the domestic offtake was almost sufficient to restore the balance. Actually, India itself was the industry's second best customer during the year. Shipments to the U.S.A., still our largest single market, showed a welcome increase from 180,000 tons in 1955 to 195,800 tons in 1956, and if the increase in domestic consumption in that country did not quite match the higher offtake from Calcutta, we can at any rate take some encouragement from the general upward trend, which we hope will be maintained in the coming year. The U.S.A. is essentially a hessian consumer, and so also is the Argentine, but there was a disappointing drop in that country's purchases of jute goods in 1956, compared with the previous year. Nevertheless, this is possibly attributable to the fact that large stocks had been built up previously by the Argentine and were in course of liquidation during the year under review. Moreover, there is some prospect of a better offtake in the coming year with the return of the trade there to private hands. This latter measure may well assure for us a more even and better sustained demand from the Argentine. The total exports of jute goods to the U.K., another important customer, increased slightly to 60,800 tons, a figure at which we cannot cavil.

Shipments to Australia

"A telling factor in an assessment of the trade during the year was the marked decline in shipments of heavy goods to Australia, our biggest customer for this commodity. However, there is no reason to suppose that this decrease in offtake was occasioned by other than temporary considerations, and in the normal course of events there should be a substantial improvement this year in Australian purchases. Considering, also, the very heartening internal consumption of sacking goods during the past year and the prospect of an expansion of this demand in pace with the unfolding of India's second Five-year Plan, we can look forward with some confidence—barring unforeseen contingencies—to an increase in the consumption of heavy goods. It is unfortunate that, for political and other reasons, the Far Eastern market which was once so important to us has now virtually been lost and that, owing to the growth of indigenous jute manufacture in the areas concerned there is little likelihood of a resumption of this trade.

"One lesson that must by now have been well learnt, if we profit at all from our experience, is the fundamental importance to our export trade of assured supplies of goods and stability of prices. The rapid progress made towards the attainment of self-sufficiency in raw material supplies has been instrumental in bringing us nearer to that major goal, but speculation is still with us and will not be entirely eliminated even when it has lost the advantage of a fluctuating raw jute supply position. The recent severe depression of gunny prices, otherwise unaccountable, has shown how influential these ungoverned speculative activities can still be. The hopes of those who have the genuine interests of the industry and trade at heart now reside in the successful implementation of Government's scheme for the establishment of a properly regulated futures market which, given the chance to do so, could exercise more influence than any other single factor in stabilising prices. At the same time, we are glad to note that Government are pursuing this matter cautiously, for desirable as a sound hedge market is, it would be disastrous if the normal forward business for specific delivery were disrupted by the imposition of a control for control's sake. A misapplication of the rules governing futures trading could well throw out of employment all those gunny dealers and brokers who at present constitute what is known as the 'bazaar,' and their dependants and employees would suffer with them. I consider, therefore, that in all fairness the I.J.M.A.'s standard gunny contract form should be excluded from the application of the Forward Contracts (Regulation) Act, and in support of this contention I would point out that the regulations governing futures trading in the East India Cotton Association do not affect forward contracts for specific delivery, and these arrangements have worked very satisfactorily.

Delays in Loading

"Your Committee's report, which was issued to you shortly before this meeting, deals fairly comprehensively with the various matters which engaged the Association's attention during the year under review and I do not propose to weary you with a recital of the Committee's activities as already described in the report. I would, however, like to touch briefly on one or two matters which are of rather more importance and closer concern to us than others. First of all, there is the question of delays in the loading of gunny cargo, regarding which there has been so much controversy and negotiation over a period of many years.

"As you will have seen from the report, we seem at last to be making some headway towards an improvement in the boating position, and it will be particularly interesting to see what effect the new arrangements for Australian sailings have when they are introduced in July next. Apart from this, there is the diversion fee scheme recently introduced by the lighterage companies. No doubt this is well intentioned, but the scheme in its present form bears much too heavily on the shippers. Your Committee are aware of the considerable trouble to which some members have been put as a result of the peremptory demands made on them by some of the lighterage companies, and I should like to inform you that we are pressing the Calcutta River Transport Association to dissuade its members from enforcing the new scheme pending further discussions which are to take place between the interests concerned under the auspices of the Bengal Chamber.

F.O.B. Contract

"Your Committee have also been actively engaged in considering contract matters during the year, particularly the long outstanding f.o.b. contract for sales to America and also, as a result of prolonged correspondence with Australia during the year, the standard contract form for sales to that country. With regard to the f.o.b. contract, we are indebted to Mr. N. L. Kanoria for having taken this matter up in the course of a visit which he paid to the U.S.A. last year, and I am glad to be able to say that the I.J.M.A. has now agreed to reopen negotiations with us, although it has not committed itself in any way. Recently, your Committee had a useful discussion with a leading representative of one of the major jute goods importing and distributing committees in Australia and it is hoped that, before long, we will be able to arrive at some mutually satisfactory arrangement in regard to the controversial aspects of the present contract conditions applicable to Australian business.

"One perturbing feature during recent years has been the decline in our roll of members. There were eight resignations last year against only two new admissions, and at the present time, our membership list comprises 65 firms. Yet, only five years ago we had a total membership of 90. It is realised that part of this loss is attributable to normal factors, but it may well be that some firms which would otherwise have been interested in maintaining their connection with the Association have been unduly influenced in their decision to resign by the progressive increases in the rate of membership subscription which it has been found necessary to make in order to balance the annual budgets. The subscription last year was Rs. 100 per quarter per member, and while this is admittedly rather high, it scarcely seems to provide sufficient justification for leaving the Association, which after all is still the only body truly representative of the gunny exporting interests in Calcutta. I sincerely trust that the recent trend towards a smaller membership will be arrested, and if the main consideration in this has been the financial obligations of membership, members will at least have been reassured by the prospect of a lower subscription rate in the coming year, as mentioned in the Annual Report. We will have a smaller budget in 1957, due to the reduction in the Association's contribution to the Bengal Chamber, and I take this opportunity of placing on record our sincere appreciation of the Chamber Committee's generous action.

"In conclusion, gentlemen, I wish to place on record my very great appreciation of the valuable help and unfailing support which I have received from the members of the Committee in the discharge of my duties. Mr. Duncan Smith, your Deputy Chairman, is unfortunately unable to be present today, as he has just proceeded on leave to the U.K., but I take this opportunity of expressing my warm thanks to him for his most able assistance during the year.

"I should also like to express my sincere appreciation of the help I have received throughout from our Secretaries, Mr. Robertson and Mr. Mairs, and from the other members of the Chamber staff concerned with our Association."

The

QUALITY

that Endures

Three hundred years of history have helped to shape the character of Lloyds Bank. An unwritten charter of confidence has been fashioned from the experience of generations of customers whom it has faithfully served

In its character is the quality that endures.

INDIAN MINING FEDERATION

MR. NARENDRA SINGH SINGHI'S PLEA FOR CO-ORDINATED COAL POLICY

ADDRESSING the Forty-fourth Annual General Meeting of the Indian Mining Federation, held on 27th March 1957, at Calcutta, Mr. Narendra Singh Singhi, the Chairman of the Federation, emphasised that the public and private sectors in the coal industry were not two different worlds, but were complementary to each other. The following are excerpts from his speech:

"GENTLEMEN,

"Our last annual general meeting was held on the eve of a new era. The draft Plan-frame, which served as the basis of the second Five-year Plan, had been considered in detail and allocations for various items in both the public and private sectors had received the final touches. It was, therefore, a heavy responsibility that I took over from my predecessor and it was natural that I should feel a little nervous, but at the same time I was elated with the hope of seeing the coal industry make the first big step towards the ambitious goal of 60 million tons of coal at the end of five years. Perhaps, it is not too ambitious if we view the Government's planning programme in perspective: an annual output of 15 million tons of steel and 150 million tons of coal to be achieved by the year 1965.

"We now have figures of the industry's performance during the year 1956. The two sectors between them produced just over 39 million tons of coal during the year, marking an increase of a little over a million tons over the output of the year 1955. Even after making due allowance for the fact that the calendar year 1956 covered only the first nine months of the Plan period, the coal industry, it will be admitted, has not made anything like a flying start towards the winning post of 60 million tons in 1960-61."

After referring to the fact that it was not till the end of June that the Production Ministry was able to make up its mind about the quantitative assignments of the two sectors, Mr. Singhi said: "Perhaps in its three-dimensional thinking the Government did not realise that the fourth dimension, time, is an indispensable factor for the success of planning." He added:

Wagon Supplies

"It is not my intention to sound a pessimistic note; but if we are to make a success of the Plan, in spite of its initial setback, we must first of all squarely face facts. Production is going up in the collieries at an increasing pace which can be speeded up still further. The supply of wagons has also increased of late but hardly to the extent necessary. Huge stocks are to be found at the pitheads. What will happen when the Plan gets going and there is a substantial increase in the tempo of coal production? The railways are the lifeline of industries; in particular, of the coal industry. If the meagre improvement that has taken place of late in the rail transport of coal is an earnest, the prospect of the Plan seems bleak indeed. The inadequacy of funds allotted for the improvement of railways is advanced by the railway authorities as the main reason for the failure of the railways so far to cope with the increased traffic. If that is so, the whole question should be thoroughly investigated at the highest Governmental level. But, with a little more efficiency, the railways could have utilised the funds made available to them to much better effect than they have so far done. At this rate there is little chance of the supply of wagons being able to catch up with production with the result that the sinister role of transport as the limiting factor of coal production threatens to become even more pronounced than ever before. Let us consider one immediate effect of this. Wholesale mechanisation is an important item in the plans for increased production of most collieries. But, once mechanisation is adopted, everything must go on schedule. It is essential, therefore, that wagons must be ready to receive the coal when it arrives there.

"But there are other factors to consider and I propose now to deal with one of the most important of them, namely, our doctrinaire obsession regarding the roles of the public and the private sectors in laying the foundation of a sound national economy.

"It might be argued that, so far as the coal industry is concerned, since the two sectors have been given their due assignments, we have only to carry on without trying to reopen an issue already settled. Well, carry on we must, but while most of us think of the assignment in static terms, our Prime Minister has always exhorted us to think dynamically. It we are to do so in the concrete terms of coal production, it just means that the 12 and 10 million tons of additional production, entrusted to the two sectors, are to be considered as flexible rather than fixed targets within the overall figure of 60 million tons. I am putting forward no revolutionary idea, but just drawing your attention to what the planning authorities have themselves said.

Public Sector

"The public sector in this industry has been in existence for quite a long time, but its output has always been a modest fraction of that of the private sector. In 1956, collieries in the public sector produced only 3 million tons, as against 35 million tons mined by the collieries in the private sector. Even with the very considerable expansion envisaged for it under the current Plan, its target at the end of the Plan period is 15 million tons, as against 45 million tons assigned to the private sector. But that, of course, is to be considered only as a beginning. In subsequent Plans, the public sector will have a progressively increasing role assigned to it. That seems to be the firm policy of the Government and it is not for me to criticise the policy.

"The fact remains, however, that the coal industry in both sectors has undertaken the vast commitment of providing the country with 60 million tons of coal at the end of five years of which one year has already gone without an appreciable increase in production owing, as I have already pointed out, to the Government's shilly-shallying methods. Can we reach the target in the four remaining years? I can speak only for the private sector. It has received the green signal rather late. But that is a minor matter compared with the other handicaps under which it has to operate. For example, new mines have been declared out of bounds for the private sector. While collieries are expected to go all out for production, it seems hardly a logical decision to ask them to confine their operations within a restricted area. The idea seems to be gradually to narrow the scope of the private sector and widen that of the public in pursuit of the policy of establishment of a socialistic pattern of society.

"After all, the private sector in the coal industry is not nearly so private as many might imagine, being subject to a whole series of control measures exercised by the Mines Department and the Coal Board in regard to the methods of mining, the depth of mines and safety measures, on the one hand, and the Coal Controller, on the other, who is responsible for the entire business of distribution of coal. The public sector too is not entirely manned by public servants, it has to lean fairly heavily on contractors who work for a profit. My point is that the two sectors are not two different worlds. They are complementary rather than contrary. An integrated coal policy, covering all aspects of production as well as distribution, can, therefore, be fully implemented throughout the industry irrespective of the two sectors. But, unfortunately, it is not. Modest enough as the public sector's role appears to be in the present scheme of things, the principle of 'weightage' still functions, as a heritage from the bad old days, in determining its 'minority rights.' This is borne out by the fact that it often gets an unduly large share of necessary facilities like supplies of iron and cement and, most important of all, transport. As you are aware, strong representations have been made by the industry, both in Calcutta and Delhi, against the favoured treatment in respect of wagons received by the Government collieries. What is most unfortunate in this connection is that details of indents and allotments to the Government collieries asked for by the representatives of the industry on the Wagon Allotment Committee in Calcutta were never furnished."

HINDUSTAN LEVER LIMITED

SPEECH OF THE CHAIRMAN AT ANNUAL GENERAL MEETING

THE Annual General Meeting of Hindustan Lever Limited was held in Bombay on 4th April 1957. The following is the text of the speech made at the meeting by the Chairman, Mr. A. J. C. Hoskyns-Abrahall:

"It gives me great pleasure to welcome our new shareholders to this annual general meeting of our Company in its new form and under its new name. The report and accounts have been in your hands for some days and, by your leave, I will take them as read.

"Less than five months have passed since we announced Unilever Ltd.'s intention to offer a part of our shares for sale to the public. At that time, we made certain forecasts about our business and expressed certain intentions about the distribution of our profits. In the short time that has elapsed since then, there has been no sudden boom in our business or any sort of windfall, but our final figures, as you will have seen, have shown our earlier forecast to have been somewhat conservative. We are, therefore, recommending to you a higher final dividend of 75 naye paise, at the same time coupling with that recommendation the caution that our outlook and policy have not thereby undergone any essential change. In the light of recent events, we would not like you to build up any great expectations that future dividends will be higher than we forecast those few months ago.

Taxation

"In this connection, I would remind you that the ink on our Offer for Sale documents was barely dry and the lists had not even been opened, when the Finance Minister sprang his surprise interim Budget on the country, with its capital gains tax, its lengthened scale of super-tax on dividends and its compulsory depositing of a large part of companies' reserves. Moreover, the Minister has also thought it right to tell us that, in seeking finance for the second Five-year Plan, he has by no means yet exploited corporate taxation to the full. In this sort of context, I feel bound to say that, however much we may be able to increase our sales turnover in the future, it does not necessarily follow that there will be a commensurate, if indeed any, benefit to our shareholders. The development of this country costs money, a lot of money, and the private investor will continue to be called upon to pay his share by way of taxes. How much that share will eventually be we cannot know; it is not likely to be small.

"We did, in fact, increase our sales in 1956, achieving a tonnage exceeding 121,000 without including the sale of toilet preparations, in which section mere tonnage is not a very suitable measure. That our profits were not quite of the order of those we earned in 1955 was mainly due to increases in costs of our raw materials, of processing and of freight.

"We are far from complacent about this upward trend in costs, which seems to be fairly general among household necessities, or near-necessities, into which class our products fall. In a community embracing so many people with very low incomes, our products run the risk of being too highly priced, whether for the consumers' good or our own, and we should greatly like to make reductions, with all the stimulus they would give to increases in consumption. Unfortunately, the prerequisites are lacking. We are vitally interested, for instance, in Government's second Plan target of more than 7½ million tons of oilseeds, representing a 30 per cent. increase in production. That oilseeds, and particularly groundnuts, should be freely available at moderate prices is of prime importance to our business, to say nothing of its significance for export and foreign exchange purposes, but we cannot yet detect any great progress being made towards hitting the target. Transport is another vital sphere where unrestricted availability at moderate prices is essential, but, at present, its inadequacy is constantly giving rise to costly delays and, on the top of that, freight rates are tending to increase. These are but two indications of what I have said is a general trend.

"While the rising national income will generally be absorbing some of the shock of higher prices, we do, of course, provide what counterblast we can in our own operations. Through nearly all the media we use, we are adding to our normal advertising efforts a steadily mounting educational service, by which habit-forming instruction in better washing and cooking methods is imparted to the public. In the countryside, particularly, our large and still growing fleet of demonstration, cinema and other vans is carrying this service farther afield every year.

Import Restrictions

"Another matter affecting us is the recent tightening of import restrictions and some of you may well be asking to what extent we rely on imported materials for the pursuit of our business. You will already know that we find between 80 and 90 per cent. of our raw materials from within this country, since that fact was stated in our Offer for Sale. That does not mean, however, that there are not certain key items, some perfume ingredients, for instance, and certain chemicals imported by us, without which—although they may be small in volume—we should be unable to maintain the quality, or what you might call the personality, of our products. We hope to be allowed to continue to import such items as being actual users of them, but of that we cannot yet be sure. It is hardly necessary to say that such changes as we are powerless to avoid we shall seek all means to mitigate, and we do not expect to have to ask our consumers to accustom themselves to any serious departure from our normal products. You should know, moreover, that, as exporters, we are already useful earners of that scarce and greatly sought after commodity, foreign exchange. In 1956, our exports of glycerine, *vanaspati* and soap were worth rather more than Rs. 76 lakhs, and they went to places as far apart as New York and Fiji with many destinations in between. When we seek to make imports, our record as exporters should be allowed to stand to our credit.

"It is, however, and has long been, our policy to buy Indian materials so far as we possibly can. In the past few years, we have been encouraging, with some success, the local manufacture of items which previously were imported. Bleaching earth, paper and board are recent instances where we have been able increasingly to switch our buying from foreign to local sources. We are also increasingly relying on Indian sources for the management of the business. It may interest you to know that, from a peak of 59 in 1952, the number of Europeans we employ has already fallen to 32, the places of the 27 who have gone having been taken by Indians. This trend extends throughout our business, whether it be in the marketing, commercial or technical sections.

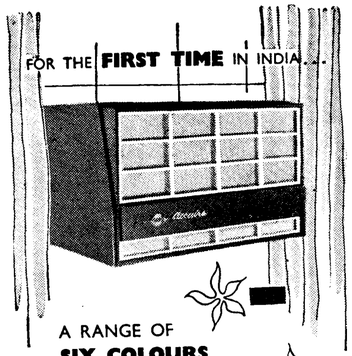
"Our staff have worked well throughout the year. We are glad to say that we have signed a comprehensive agreement with our Bombay factory employees covering the whole period of the second Five-year Plan. It embraces wages, bonus and retirement provisions for about half our employees, as well as production incentives. A similar agreement with the rest of our employees all over India is now on the point of being signed and we, therefore, have good reason to look forward to a period of steady consolidation of the goodwill already existing on both sides.

Welfare of Employees

"While on this subject, I might add that we try to look after the welfare of our employees, not only by giving them congenial working conditions, but, more particularly, by providing them with good medical services and good factory canteens. We have canteens in all our factories except the one at Shamnagar near Calcutta and there a newly built canteen is due to be opened ten days from now. Moreover, we are not satisfied with our Bombay Soap Factory in this respect and propose to build there a new canteen at a cost of about Rs. 6 lakhs, as soon as we can finalise our plans and secure the necessary cement and steel. Providing this facility for our office staffs is by no means an easy matter, but we propose to include a modern canteen with recreational facilities in the new Bombay Office building, on which we hope to start work this year. So far as medical services are concerned, we have full-time doctors and nursing sisters on the staff in our Bombay and Calcutta factories, while in our smaller factories we have part-time doctors who attend daily and full-time dispenser-dressers. All factories have consulting rooms and properly equipped dispensaries. Arrangements to deal with medical emergencies occurring outside general duty hours vary from place to place; in the Bombay factory, we have dispenser-dressers on duty in all shifts; in our other factories, we have staff specially trained in first-aid. In our offices, we have arrangements for doctors to be on part-time duty or we pay them retainers, so that facilities for free consultation and treatment are available to the employees concerned. In the past few years, these medical services have generally, and particularly in Bombay, reduced the time lost through illness and accident.

"I would like to end this review by giving you one good reason why this business should continue to expand, lest you should think that I have listed difficulties but little else and hear little but the rattle of chains. We are, in fact, conducting our operations in a rapidly developing country, inhabited by something approaching 400 million people, who by modern standards consume per head so little of the sort of products we manufacture, that an immeasurably greater consumption is bound to come. Moreover, it is entirely for the good of the country that it should come. On this satisfactory base, we expect to go on building. As for the difficulties, they are, or are likely to be, largely of a type common to most consumer industries at the present time, and it is probably fair to say that our business is as well equipped as most others to meet their challenge."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.



THE FIRST NATIONAL CITY BANK OF NEW YORK

(INCORPORATED WITH LIMITED LIABILITY IN THE U.S.A.)

Member Federal Deposit Insurance Corporation.

CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, MR. HOMI MODY'S SPEECH AT ANNUAL MEETING

REAPPRAISAL OF PLAN PROGRAMME AND POLICIES AS A WHOLE URGED

SPEAKING at the Forty-sixth ordinary general meeting of the Central Bank of India, Ltd., held in Bombay, on 28th March 1957, Mr. Homi Mody, Chairman of the Bank, made a brief reference to the second Five-year Plan. He said that the adjustment of the Plan from time to time according to the exigencies of the situation was not enough. What was needed, he urged, was a reappraisal, here and now, of programmes and policies as a whole, as the Government knew enough at this stage of the resources which could be mobilised for planned development of the country.

The following is the full text of Mr. Mody's speech:

"LADIES AND GENTLEMEN,

"I have pleasure in presenting the Directors' report and statement of accounts for the year 1956, but before I deal with them I would like to make a few observations on matters of general interest affecting finance and industry.

"The year marked the end of the first Five-year Plan and the inauguration of the second. Economic conditions in India continued to show the buoyant tone in evidence in the last few years under the impact of progressively increasing development outlay. Industrial production, foreign and domestic trade, money supply and prices recorded sizable increases.

"The total money supply with the public, comprising currency and bank deposits, amounted to Rs. 2,178 crores at the end of December 1956, showing an increase of Rs. 131 crores over the corresponding date of the previous year. Due to the money supply outpacing the rise in production levels and economic activity, the index number of wholesale prices recorded an increase of 61 points and consumer prices also rose substantially.

"A feature of our economy which is causing serious concern is the rapid deterioration that has taken place in our foreign exchange resources. During the 11 months ended February this year, the fall in our reserves has reached the alarming figure of Rs. 227 crores. This development was largely unforeseen and, for the moment, it has thrown the second Five-year Plan out of gear. Against a figure of Rs. 783 crores of imports allowed for in the first year of the Plan, imports have been at the annual rate of Rs. 953 crores. As the Reserve Bank *Bulletin* for December 1956 says: 'Whereas the Plan expected the phasing of imports to be such as to lead to a hump in the second and third years of the Plan, it seems that the actual course of events has been such as to give rise to a hump even in the first year of the Plan.'

Unrealistic Targets

"That brings me to a consideration of the second Five-year Plan. Some of us have from the start criticised the unrealistic targets of investment laid down in the Plan and have pleaded for scaling them down. We have also commented on the inadequacy of the provision for agricultural development and production of consumer goods. In the survey of Asia and the Far East published on 18th March by the Economic Commission for Asia and the Far East, three questions have been posed: (1) Whether the Plan is not too ambitious in terms of resources; (2) whether it assigns too great a share of responsibility to the public sector and too little to the private; and (3) whether it does not emphasise industries (particularly heavy industries) too much at the cost of agriculture. The Commission have also spoken of the risks in attempting too much too quickly.

"In mitigation of the hardships which a Plan of this magnitude might impose on the community, spokesmen of the Government have been saying that there would be a process of adjustment from time to time which would take care of any material changes in the situation that might take place. I would like to urge that that is not enough and that what is needed is a reappraisal, here and now, of programmes and policies as a whole. I contend that enough is known, even at this stage, of the resources which could be mobilised for planned economic development in India, and the serious difficulties which have already arisen in the first year of the Plan must be taken as an indication that the projected scheme of development goes beyond the country's capacity to carry it out within the stipulated period. No year-to-year targets of investment were published when the second Five-year Plan was originally prepared, but the provision of Rs. 915 crores made for 1957-58 as outlay for the Central and State Governments is such as to suggest that the Government is still largely pursuing the schedule of investment under the original assumptions, even though the working of the first year has proved them to be wide of the mark.

Reappraisal Needed

"In the light of this trend, the urgency of a reappraisal of the whole position cannot be questioned. The extent to which inflationary finance can be resorted to, taxation can be stepped up, and foreign exchange can be secured, is pretty well known, and it would be very unfortunate if fiscal and other measures were taken at this stage in order to live up to an unrealistic programme of investment. In this connection, I cannot but voice my disappointment at the latest pronouncement of the Finance Minister in Parliament. I hope he will realise that the criticisms advanced on certain aspects of the Plan are neither selfish nor obstructive. The business community has repeatedly and unequivocally recognised the necessity of a planned development of the country and has offered its fullest co-operation. That does not mean, however, that it should not have views of its own regarding priorities and methods, nor that its experience and knowledge in such matters should be impatiently set aside.

"1956 was a year of stringency and dearness of finance and the resources of banks had to be strained to the utmost to meet the rapidly expanding demand for funds. The loan portfolio of banks had to be unduly stretched and they had to depend more and more on the Reserve Bank for assistance.

"The outstanding portfolio of advances and inland and foreign bills of the Scheduled banks amounted to Rs. 788 crores, showing an abnormal increase of Rs. 157 crores since the end of the previous year. The resources of the banking system did not, however, show a corresponding improvement, inasmuch as, over the same period, demand and time liabilities increased by only Rs. 81 crores to Rs. 1,114 crores. The banks, therefore, found it necessary to finance the additional credit requirements both by allowing their cash ratio to come down and by disposing of a portion of their security holding. The most remarkable sign of the pressure on the banks was, however, the increase in the Scheduled banks' indebtedness to the Reserve Bank from Rs. 30 crores at the end of 1955 to Rs. 79 crores at the end of 1956. In fact, the volume of debt was not much short of the banks' total cash resources, comprising both till-money and balances with the Reserve Bank. In this context, I may refer to a point mentioned in the White Paper on the Budget that the Reserve Bank had lent limited support to Government securities in order to relieve the extreme stringency in the money market. This is a move forced by the logic of the situation in which bankers have been placed. It is to be hoped that inflationary pressures would be lessened by a reasonable scaling down of the development outlay which has caused them, but given the situation as it is, official policy must obviously be directed towards providing banks with the funds they need for fulfilling their function as suppliers of credit.

"Before leaving the subject of the general banking position in the country, I would refer to an improvement in the published statistics which seems to be called for. Although detailed forms have to be sent in every week by all Scheduled banks, up-to-date figures of demand and time *deposits*, as distinguished from other kinds of demand and time liabilities, are not available. Similarly, loans to trade cannot be distinguished in the statistics from loans from one bank to another. A recent issue of the *Tata Quarterly* discusses some of these questions, and in view of the importance of these data for assessing monetary trends, I hope that steps will be taken to compile them on a regular basis.

Deposits of State Governments

"There is one other matter to which I would like to refer before closing this review. The statement recently made at the annual general meeting of the State Bank of India that, although the statute authorises its operating as a commercial bank, due regard is to be had to the public interest—and this is interpreted by the Bank to include its obligations to the banking structure as a whole—is indeed refreshing. But this pronouncement cannot quite be reconciled with the reported directives to some of the Government and quasi-public institutions, which had hitherto been depositing a part of their funds with commercial banks, to deposit hereafter all their funds exclusively with the State Bank. I would also like to point out that the measures being taken by the State Bank to increase its working funds and the opening by it of branches in areas adequately served by other institutions cannot but affect the interests of commercial banks.

"I shall now turn to matters of more personal interest to the shareholders—the Directors' report and statement of accounts.

"The past year was one of further growth in the resources and earnings of the Bank and in an appreciable expansion in its turnover of business in general. Our gross earnings, which had received a setback in 1953, have since been progressively increasing, and there was a particularly marked improvement during the past year, which recorded a rise of as much as Rs. 86 lakhs. While interest and discount accounted for a major portion of the increase, there was a substantial increase of Rs. 20 lakhs under commission, exchange, etc. Of this, a no small part was due to the ground gained by us in foreign exchange since the establishment of our own office in London which, for the first time, was able to contribute its quota to the general profits.

Expense Ratio Declines

"The rates of interest on time and call deposits had to be further stepped up during the year, and working funds, including borrowings from other banks, cost comparatively more, resulting in an increase of Rs. 57 lakhs under interest paid. With regard to establishment charges which apparently show a slight recession, the position is not what a comparison of the figures would indicate. The figures for the previous year included a sum of nearly Rs. 13 lakhs on account of arrears paid on adjustment of staff emoluments, as laid down by the Bank Award Commission. If that is taken into consideration, the establishment charges can be said to have been up by nearly Rs. 12 lakhs. The ratio of total expenses to gross profits stood at 75.24 per cent. as against 80.28 per cent. in the previous year. The ratio of establishment charges to gross profits similarly came down from 66.06 per cent. to 61.55 per cent.

"As stated in the earlier part of my speech, increase in the resources of banks lagged far behind the increased demand for credit. Scramble for deposits, therefore, continued to be acute and progressively higher rates had to be paid. In view of these conditions, our total deposits which stood at Rs. 138 crores, showing an improvement of Rs. 10 crores over the previous year, may be considered to be satisfactory.

"The increase in the Reserve Bank's lending rate against Government securities from 3½ per cent. to 4 per cent. and the rise in the cost of borrowings by banks against usance bills from 3½ per cent. to 4 per cent., consequent upon an abnormal raising of the stamp duty from the 1st of February, has given further momentum to the upward trend in deposit rates, which has carried the rate for call and time deposits to as high as 4½ per cent. This cannot but have its repercussions on the rates at which banks can afford to lend.

"Advances at Rs. 90.76 crores recorded a substantial increase of Rs. 18.56 crores over the previous year, and constituted the highest level touched by the Bank since its inception. Even so, our ratio of advances to deposits was 66 per cent. only, as against the general average of 71 per cent. of all Scheduled banks.

Investments Reduced

"The continuing credit squeeze compelled us more vigorously to pursue our policy of reducing our investment portfolio. The reduction would have been more substantial, but for the fact that we had to subscribe to the new Central and State Governmental loans floated during the year. The net reduction amounted to Rs. 3.74 crores, bringing down our ratio of investment to deposits from 44 per cent. in 1955 to 38 per cent. as at the close of 1956.

"The sudden decline in market values just towards the end of the year unfortunately widened the gap between the market value and the book value of our securities, but since the opening of the current year, there has been a revival in values and the position has improved. In this connection, it is worthy of note that nearly 75 per cent. of our investments in Government securities mature within the next ten years, and a further 22 per cent. in the following five years. As pointed out in the past, if we can hold on to our securities up to maturity, not only would the difference appearing at present be wiped out, but there would accrue a substantial surplus.

"Shareholders will have noted with satisfaction that, after a lapse of three years, the net profit figure has again crossed the rupee one-crore mark. The ratio of net profit to gross income rose to 15.87 per cent., as against 13.53 per cent. for the previous year. With the reorganisation that has taken place and the further measures we have in view, we hope to keep up the improvement.

"Our profit figures would have been better but for some unfortunate experiences we have had in the last two or three years, and which have emphasised the need for doing everything possible to strengthen our position. In the interests of the Bank, it is obviously undesirable to enter into a discussion of the transactions in question. It will suffice to say, every possible step has been taken by the Board to secure the accounts which were not in order and adequate provision has been made where necessary.

Cut in Dividend Restored

"It gives me particular pleasure to record that it has been found possible, as a result of the year's working, to implement the assurances I have been giving in the past. I have stated on more than one occasion that as soon as our earnings warranted it, the cut in the distribution, both to the shareholders and to the staff, would be restored to the extent the profits permitted. Nothing has, therefore, given greater satisfaction to the Board than to be in a position to restore, after a lapse of four years, the cut in dividend and to double the bonus paid to the staff. Prevailing trends do not at the moment indicate conditions as favourable for banks as during the past year, but it is to be hoped that, with the improvement that has taken place in our relations with our staff and with the management wholeheartedly devoting itself to the interests of the Bank, the institution will be able to maintain, if not improve upon, the progress shown over the past year. In this connection, I must particularly mention the services of our Vice-Chairman, Mr. C. H. Bhabha. His ability and resourcefulness and the keen interest he has been taking in the day-to-day working of the Bank are beyond all praise, and I would like to extend to him, on behalf of the Board and the shareholders, our grateful thanks for all he has been doing.

"I would conclude by making our acknowledgements to all who are in the service of the Bank. The General Manager, Mr. N. K. Karanjia, has been carrying a heavy burden, which he has been discharging with ability and single-minded devotion to duty. He has done a great deal for the Bank since he has been placed at the head of the administration and he enjoys the fullest confidence of the Board. To him, to Mr. F. C. Cooper, the Deputy Manager, and to all members of the staff at the head office and at the branches, as also to the Local Advisory Committees at the various centres, I would like on behalf of the shareholders and the Board to convey our warmest appreciation."

Note.—This does not purport to be a record of the proceedings of the annual general meeting.

CAN ROAD TRANSPORT PROVIDE RELIEF TO RAILWAYS?—II

NEED FOR CO-OPERATION AMONG DIFFERENT GOODS CARRIERS STRESSED

By B. V. Vagh, B. E. (Civil), M.I.E. (Ind.)

IN the November 1956 issue of the *Indian Railways*, Mr. K. B. Mathur, the author of the first article which started this controversy, has written another article under the caption "Towards Greater Co-ordination of Transport." This article is more conciliatory than the first one and its caption also suggests a co-operative mood. The main points made by Mr. Mathur are:

(i) (a) Based on the performance of B.G. wagons and their outturn, the cost on account of wagons and engines per million tons of traffic works to Rs. 3.59 crores and that on brake-vans and minor facilities about Rs. 0.43 crore, making in all approximately Rs. 4 crores. (b) The road estimate of Rs. 11 crores was based on "the operating cost as worked out by the Study Group" and "the cost of an equipped 6-ton diesel truck as confirmed by Tatas has been assumed as Rs. 35,000."

(ii) The estimated extra traffic by the end of the second Plan is now 75 to 80 million tons instead of 60.8 million tons mentioned by him before.

(iii) Therefore, the railway gap will be of the order of 30 million tons.

(iv) The annual target of automobile production is 45,000 of which 20,000 to 25,000 are likely to be required for rehabilitation. The balance of the additional capacity must condition the quantum of increased traffic which road transport can cater to.

(v) More road vehicles will be required for feeder and passenger traffic and to supplement bullock-cart capacity.

(vi) There are many "ifs" and "buts" and "vague assumptions" in the road case and "there is obviously no time now to make new plans on hypothetical assumptions."

(vii) (a) "If development of goods transport by road were quite as simple as some would like to suggest, the private sector would ere long have cashed on the situation. The fact that they have held their hand should point to the moral."

(b) "In actual experience, well-established business houses including the oil companies find road haulage beyond certain limits unattractive and look to railways for carrying their goods."

(c) "The railways should not be deprived of a fair share of high-rated traffic for otherwise the rail freight for industrial raw products may have to be enhanced substantially."

(d) "If, like the railways, in areas where the railways are underdeveloped, the road services were to carry low-rated traffic with high-rated traffic mixing the lucrative with the less lucrative, they can certainly serve an important national purpose."

Writer's Replies

To these the writer's replies are:

(i) (a) It would have been more appropriate had Mr. Mathur based his figures on the total rolling stock and total traffic estimated to be handled by it instead of basing it on the performance of an average wagon. However, the point at issue is not whether the estimate is Rs. 4 crores, Rs. 4¼ crores or Rs. 4¾ crores. It is that the wording in Mr. Mathur's original article, by employing the words "except in cases where extensive improvement in line capacity works is required," gave the impression that his figure of roughly Rs. 4 crores was inclusive of line capacity. That was the reason why the writer had to work out the break-down of figures. (b) This has been replied to in the writer's reply to Mr. Kalyanaraman's queries.

Mr. Mathur says that he has based his truck costs on one make. There are several makes in the country with various prices. All of them have to be used and, therefore, for working out costs on a scheme like this the figure has to be based on all makes and not only on one make. Moreover, on long-distance traffic truck-trailer combinations have to be employed. These reduce the unit cost of vehicles by about 28 per cent. These are important points.

(ii) and (iii) This tallies with the writer's estimate on page 6, para 12, of his pamphlet "Goods Transport in the second Five-year Plan" in which he mentions that the railway gap is about 35 per cent. of their 1950-51 capacity of 92 million tons. This works out to 32 million tons, as against Mr. Mathur's figure of 30 million tons. However, since this pamphlet was written in June 1956 certain imports have been decided upon and certain targets have been revised. As a result, the gap may be about 35 to 36 million tons at least. The writer has suggested that inland water transport may provide about 5 million tons and road transport about 30 million tons. This broad indication seems now to have been accepted by the Government as per the statements of the two Deputy Ministers of Railways and Transport as quoted in para 2, (vii) and (xiii) above.

(iv) and (v) The truck requirements of the first and second Five-year Plans work out to: (a) Normal feeder traffic carried by motor transport, 1,00,000; (b) to supplement bullock-cart capacity for feeder traffic, 30,000; (c) to meet the railway gap of about 30 million tons, 50,000; (d) passenger vehicles 60,000; and (e) replacements 60,000—Total 3,00,000. Against this figure, the estimated truck production in the country based on production targets during the two Plans including "disposal" vehicles likely to be available work out to about 2 lakhs. This leaves a gap of about 1 lakh vehicles for which there is room for expansion as in the case of the railways. At the beginning of the first Plan, the railways' own production capacity was limited but it has now been stepped up to the point of near self-sufficiency. Similarly, a persistent effort is being made to secure the requisite tonnage for shipping. The same has to be done in the case of road transport also.

(vi) This has been replied to in the writer's reply to Mr. Kalyanaraman and there is absolutely no hypothetication in the suggestion to employ truck-trailer combinations, which alone will solve our transport problem. It has been mentioned that the railway's original estimate for carrying 47 million tons is now likely to go up on account of rising costs. Moreover, by the end of the second Plan the country would have invested over Rs. 700 crores on roads and all they carry at present, including the truck-equivalent of bullock carts, is about two vehicles per mile against four in South Africa and 23 in the U.K. Obviously, it is in the interest of the country to see first that this investment is fully utilised before it can think of sparing more funds for the railways. Therefore, as mentioned in Parliament by several members and also by the two Deputy Ministers of Transport, road transport has to be stepped up to assist the railways and here truck-trailer combinations will have to be employed, however, hypothetical they may look to some people.

(vii) (a) and (b) The reason why road transport has not developed during the past 15 years to the extent to which it should have is not because of its inability to develop as suggested by Mr. Mathur but because of the restrictions deliberately placed on it at the instance of the railways. That it was necessary to put these restrictions is in itself proof of its capacity to expand. The sole reason why the private sector held its hand was these restrictions and its moral is that in developing a country's economy the partisanship shown so far in favour of the railways was harmful. Fortunately, Parliament has now undone the harm by liberalising the Motor Vehicles Act. Similarly, why well-established business houses did not take to road transport to the extent business houses in other countries do is the fact that private carriers were subjected to a number of restrictions and not because they found railway transport more suitable in all cases. This particular argument from the railways with the record of their past role in this sorry spectacle is not fair.

(vii) (c) and (d) There are no two opinions on this point and road interests have never suggested that they should be allowed all high-rated traffic and that the railways should carry only low-rated traffic. Both roads and railways belong to the same country, both are indigenous and both must be allowed to play their legitimate roles. What is necesary is first to allocate to each the amount of long-distance traffic which it should carry to meet the overall transport requirements of the country, taking into consideration not only the relative investments and the capacity of the sources from which they can come but the extent to which investments already made are being utilised, the need to develop a balanced transport industry, requirements of foreign exchange and the employment potential of each service. When this allocation is made then it should not be difficult to apportion the ratio of low-rated and high-rated traffic for each service in such a way that the average yield is consistent with the cost of vehicle-operation.

Underdeveloped Areas

Mr. Mathur's suggestion that this should be done "in areas where the railways are underdeveloped" is correct in principle but its practical implications require to be examined. If our objective is first to meet the transport requirements of the second Plan then obviously all means of transport have to be concentrated in the areas where there is need for transport. Therefore, from the country's point of view there can be no question of picking and choosing. Secondly, by opening all these areas to all forms of transport there can be no overlapping or duplication since everybody is agreed that the railway capacity is insufficient and requires to be supplemented. What is necessary is that the extra trucks to be put on the road on long-distance traffic should not be in excess of the railway's gap. This is exactly what road interests have suggested. Thirdly, if certain areas are underdeveloped as regards railways, the obvious reason for that is that there has not been enough traffic there so far and even if some traffic may now develop in these regions it is bound to be limited. There is obviously no great point in putting additional transport where it is either not likely to be required or, if required, will be employed to a limited extent. Finally, the opening up of underdeveloped areas will certainly meet the requirements of local traffic but the development of inter-State road traffic for which the Government has now to set up an Inter-State Commission as per the new motor vehicles legislation, will need the use of inter-State roads. That this is what Government has in mind seems to be clear from the following statement by Mr. Shah Nawaz Khan, M.P., Deputy Minister of Railways and Transport, in a speech in Delhi on 8th November 1956:

"For road transport to act as a supplementary carrier there was need to develop long-distance road traffic even on routes parallel to the railways."

(Continued on page 711)

Wagons readily available on . . . .

CENTRAL RAILWAY

The Central Railway Administration has great pleasure in bringing to the notice of the trade the easy availability of wagons for booking of goods traffic, especially to destinations the movement to which is not restricted or subject to operational quotas.

The total outstanding indents for wagons to free destinations number some 3,370 against a daily average loading of 2,700. The outstanding demand is therefore just a bit over one day's loading—the time it takes to register an indent, to transmit it to the controlling point and to order and move an empty wagon to the station where it is wanted.

To enable the trade to take full advantage of the present easy wagon position, the Central Railway Administration will now accept freely all indents to unrestricted destinations and routes. Intending consignors are therefore requested to extend their co-operation to the Railway Administration in registering their demands for wagons as early as possible and thus take full advantage of the present easy wagon position on the Central Railway.

ISSUED BY THE **CENTRAL RAILWAY**

RAMTIRTH BRAHMI OIL

Ayurvedic Medicine (Regd.)

(Special  No. 1)

Appreciated by Famous:

PROFESSORS · HOMOEOPATHS · APOTHECARIES and HAKIMS

CAN ROAD TRANSPORT PROVIDE RELIEF TO RAILWAYS?—II

NEED FOR CO-OPERATION AMONG DIFFERENT GOODS CARRIERS STRESSED

By B. V. Vagh, B. E. (Civil), M.I.E. (Ind.)

IN the November 1956 issue of the *Indian Railways*, Mr. K. B. Mathur, the author of the first article which started this controversy, has written another article under the caption "Towards Greater Co-ordination of Transport." This article is more conciliatory than the first one and its caption also suggests a co-operative mood. The main points made by Mr. Mathur are:

(i) (*a*) Based on the performance of B.G. wagons and their outturn, the cost on account of wagons and engines per million tons of traffic works to Rs. 3.59 crores and that on brake-vans and minor facilities about Rs. 0.43 crore, making in all approximately Rs. 4 crores. (*b*) The road estimate of Rs. 11 crores was based on "the operating cost as worked out by the Study Group" and "the cost of an equipped 6-ton diesel truck as confirmed by Tatas has been assumed as Rs. 35,000."

(ii) The estimated extra traffic by the end of the second Plan is now 75 to 80 million tons instead of 60.8 million tons mentioned by him before.

(iii) Therefore, the railway gap will be of the order of 30 million tons.

(iv) The annual target of automobile production is 45,000 of which 20,000 to 25,000 are likely to be required for rehabilitation. The balance of the additional capacity must condition the quantum of increased traffic which road transport can cater to.

(v) More road vehicles will be required for feeder and passenger traffic and to supplement bullock-cart capacity.

(vi) There are many "ifs" and "buts" and "vague assumptions" in the road case and "there is obviously no time now to make new plans on hypothetical assumptions."

(vii) (*a*) "If development of goods transport by road were quite as simple as some would like to suggest, the private sector would ere long have cashed on the situation. The fact that they have held their hand should point to the moral."

(*b*) "In actual experience, well-established business houses including the oil companies find road haulage beyond certain limits unattractive and look to railways for carrying their goods."

(*c*) "The railways should not be deprived of a fair share of high-rated traffic for otherwise the rail freight for industrial raw products may have to be enhanced substantially."

(*d*) "If, like the railways, in areas where the railways are underdeveloped, the road services were to carry low-rated traffic with high-rated traffic mixing tne lucrative with the less lucrative, they can certainly serve an importanf national purpose."

Writer's Replies

To these the writer's replies are:

(i) (*a*) It would have been more appropriate had Mr. Mathur based his figures on the total rolling stock and total traffic estimated to be handled by it instead of basing it on the performance of an average wagon. However, the point at issue is not whether the estimate is Rs. 4 crores, Rs. 4¼ crores or Rs. 4½ crores. It is that the wording in Mr. Mathur's original article, by employing the words "except in cases where extensive improvement in line capacity works is required," gave the impression that his figure of roughly Rs. 4 crores was inclusive of line capacity. That was the reason why the writer had to work out the break-down of figures. (*b*) This has been replied to in the writer's reply to Mr. Kalyanaraman's queries.

Mr. Mathur says that he has based his truck costs on one make. There are several makes in the country with various prices. All of them have to be used and, therefore, for working out costs on a scheme like this the figure has to be based on all makes and not only on one make. Moreover, on long-distance traffic truck-trailer combinations have to be employed. These reduce the unit cost of vehicles by about 28 per cent. These are important points.

(ii) and (iii) This tallies with the writer's estimate on page 6, para 12, of his pamphlet "Goods Transport in the second Five-year Plan" in which he mentions that the railway gap is about 35 per cent. of their 1950-51 capacity of 92 million tons. This works out to 32 million tons, as against Mr. Mathur's figure of 30 million tons. However, since this pamphlet was written in June 1956 certain imports have been decided upon and certain targets have been revised. As a result, the gap may be about 35 to 36 million tons at least. The writer has suggested that inland water transport may provide about 5 million tons and road transport about 30 million tons. This broad indication seems now to have been accepted by the Government as per the statements of the two Deputy Ministers of Railways and Transport as quoted in para 2, (vii) and (xiii) above.

(iv) and (v) The truck requirements of the first and second Five-year Plans work out to: (*a*) Normal feeder traffic carried by motor transport, 1,00,000; (*b*) to supplement bullock-cart capacity for feeder traffic, 30,000; (*c*) to meet the railway gap of about 30 million tons, 50,000; (*d*) passenger vehicles 60,000; and (*e*) replacements 60,000—Total 3,00,000. Against this figure, the estimated truck production in the country based on production targets during the two Plans including "disposal" vehicles likely to be available work out to about 2 lakhs. This leaves a gap of about 1 lakh vehicles for which there is room for expansion as in the case of the railways. At the beginning of the first Plan, the railways' own production capacity was limited but it has now been stepped up to the point of near self-sufficiency. Similarly, a persistent effort is being made to secure the requisite tonnage for shipping. The same has to be done in the case of road transport also.

(vi) This has been replied to in the writer's reply to Mr. Kalyanaraman and there is absolutely no hypothetication in the suggestion to employ truck-trailer combinations, which alone will solve our transport problem. It has been mentioned that the railway's original estimate for carrying 47 million tons is now likely to go up on account of rising costs. Moreover, by the end of the second Plan the country would have invested over Rs. 700 crores on roads and all they carry at present, including the truck-equivalent of bullock carts, is about two vehicles per mile against four in South Africa and 23 in the U.K. Obviously, it is in the interest of the country to see first that this investment is fully utilised before it can think of sparing more funds for the railways. Therefore, as mentioned in Parliament by several members and also by the two Deputy Ministers of Transport, road transport has to be stepped up to assist the railways and here truck-trailer combinations will have to be employed, however, hypothetical they may look to some people.

(vii) (*a*) and (*b*) The reason why road transport has not developed during the past 15 years to the extent to which it should have is not because of its inability to develop as suggested by Mr. Mathur but because of the restrictions deliberately placed on it at the instance of the railways. That it was necessary to put these restrictions is in itself proof of its capacity to expand. The sole reason why the private sector held its hand was these restrictions and its moral is that in developing a country's economy the partisanship shown so far in favour of the railways was harmful. Fortunately, Parliament has now undone the harm by liberalising the Motor Vehicles Act. Similarly, why well-established business houses did not take to road transport to the extent business houses in other countries do is the fact that private carriers were subjected to a number of restrictions and not because they found railway transport more suitable in all cases. This particular argument from the railways with the record of their past role in this sorry spectacle is not fair.

(vii) (*c*) and (*d*) There are no two opinions on this point and road interests have never suggested that they should be allowed all high-rated traffic and that the railways should carry only low-rated traffic. Both roads and railways belong to the same country, both are indigenous and both must be allowed to play their legitimate roles. What is necesary is first to allocate to each the amount of long-distance traffic which it should carry to meet the overall transport requirements of the country, taking into consideration not only the relative investments and the capacity of the sources from which they can come but the extent to which investments already made are being utilised, the need to develop a balanced transport industry, requirements of foreign exchange and the employment potential of each service. When this allocation is made then it should not be difficult to apportion the ratio of low-rated and high-rated traffic for each service in such a way that the average yield is consistent with the cost of vehicle-operation.

Underdeveloped Areas

Mr. Mathur's suggestion that this should be done "in areas where the railways are underdeveloped" is correct in principle but its practical implications require to be examined. If our objective is first to meet the transport requirements of the second Plan then obviously all means of transport have to be concentrated in the areas where there is need for transport. Therefore, from the country's point of view there can be no question of picking and choosing. Secondly, by opening all these areas to all forms of transport there can be no overlapping or duplication since everybody is agreed that the railway capacity is insufficient and requires to be supplemented. What is necessary is that the extra trucks to be put on the road on long-distance traffic should not be in excess of the railway's gap. This is exactly what road interests have suggested. Thirdly, if certain areas are underdeveloped as regards railways, the obvious reason for that is that there has not been enough traffic there so far and even if some traffic may now develop in these regions it is bound to be limited. There is obviously no great point in putting additional transport where it is either not likely to be required or, if required, will be employed to a limited extent. Finally, the opening up of underdeveloped areas will certainly meet the requirements of local traffic but the development of inter-State road traffic for which the Government has now to set up an Inter-State Commission as per the new motor vehicles legislation, will need the use of inter-State roads. That this is what Government has in mind seems to be clear from the following statement by Mr. Shah Nawaz Khan, M.P., Deputy Minister of Railways and Transport, in a speech in Delhi on 8th November 1956:

"For road transport to act as a supplementary carrier there was need to develop long-distance road traffic even on routes parallel to the railways."

(*Continued on page 711*)

Wagons readily available on . . . .

CENTRAL RAILWAY

The Central Railway Administration has great pleasure in bringing to the notice of the trade the easy availability of wagons for booking of goods traffic, especially to destinations the movement to which is not restricted or subject to operational quotas.

The total outstanding indents for wagons to free destinations number some 3,370 against a daily average loading of 2,700. The outstanding demand is therefore just a bit over one day's loading—the time it takes to register an indent, to transmit it to the controlling point and to order and move an empty wagon to the station where it is wanted.

To enable the trade to take full advantage of the present easy wagon position, the Central Railway Administration will now accept freely all indents to unrestricted destinations and routes. Intending consignors are therefore requested to extend their co-operation to the Railway Administration in registering their demands for wagons as early as possible and thus take full advantage of the present easy wagon position on the Central Railway.

UTILISATION OF IDLE CAPACITY IN GLASS INDUSTRY

KEYNOTE OF DEVELOPMENT PROGRAMME

IT has been the considered view of the glass manufacturers that, in view of the large installed capacity for meeting the requirements of glass and glassware in the country, no additional capacity should be installed, except where necessary to manufacture new and special varieties of products, during the second Plan period. An indication of the fact that their earnest plea has not fallen on deaf ears came when Mr. Manubhai Shah, the Union Minister for Heavy Industries, declared, in the course of his address to the annual meeting of the All-India Glass Manufacturers' Federation, held at New Delhi on 20th inst., that efforts were being directed towards utilisation of idle capacity and bringing into commission the factories that might have either closed for want of demand or had been partially working. He, however, stated that for manufacturing new products and special items it might be necessary to set up additional capacity in case it was not possible to divert the existing surplus capacity to manufacture them. It is noteworthy that, in fact, 21 new schemes, including six projects of substantial expansion involving an additional capacity of 44,000 tons per annum, have already been sanctioned, and are being established.

Present Capacity

At present, there are 134 glass factories engaged in the main lines of manufacture in the country with an annual capacity of 339,084 tons per annum. This, of course, is exclusive of the additional capacity that is being installed. Of these, only 92 factories are working with a capacity of 278,016 tons, while the rest, nearly 42 factories, have a capacity of 61,000 tons. As against this, the total production of various items in 1956 amounted to only 143,587 tons. This, it should be noted, represents an increase of no less than 65 per cent. from the level of production in 1950, when it stood at 87,270 tons. Thus, as at the end of 1956, the production did not constitute even 50 per cent. of the total capacity. The following table provides a clear picture of the main lines of production, existing capacity, production, estimated demand in 1956 and 1960-61, and the targets of production fixed under the Plan:

Item	Unit	Present installed capacity*	Production in 1956	Estimated demand for 1956	Estimated demand for 1960-61	Production targets for 1960-61
Sheet glass ..	Tons	50,400	24,848 (47 62 m.sq. ft.)	233,000 (40 00 m. sq. ft.)	35,000 (60 00 m. sq. ft.)	35,000
Glass shells ..	,,	2,964	1,522 (35 93 m. pcs.)	1,100 (25 00 m. pcs.)	2,200 (50.00 m. pcs.)	2,200
Laboratory glassware ..	,,	7,824	3,357	4,000	6,000	6,000
Vacuum flasks.	,,	2,064	330 (48,336 dozens)	560 (70,000 dozens)	800 (100,000 dozens)	750
Bottleware ..	,,	180,630	62,413	90,000†	90,000†	90,000
Table and pressedware.	,,	68,000	28,219	25,000	35,000	35,000
Lampware ..	,,	40,000	19,967	15,000	20,000	18,000
Miscellaneous glassware ..	,,	31,202	3,031	6,000	10,000	12,000
Total ..	,,	383,084	143,587	132,000	200,000	196,950

* Includes the existing capacity plus the additional capacity of 44,000 tons per annum sanctioned for new and special items of manufacture.
† Includes phials.

As can be seen from the table above, the estimated demand for 1956 was only 132,000 tons. Obviously, the chief reason for the slow rise in production was lack of adequate effective demand. The demand during the period of the second Plan, however, is expected to rise substantially—by no less than 15,600 tons, or 10 to 12 per cent.—to over 200,000 tons. Consequently, the targets for 1960-61 have been so fixed as to ensure the attainment of self-sufficiency in most of the items, without any further addition to their existing capacity. In the case of certain special items, however, additional capacity as already pointed out has been sanctioned. These items include laboratory glassware (1,800 tons), vacuum flasks (1,200 tons), bottles (17,000 tons), table and pressedware (20,000 tons) and miscellaneous items (20,000 tons).

Problems Facing Industry

In the course of his address, the Union Minister dwelt at some length on some of the problems facing the industry and reviewed the steps taken by the Government to overcome them. The quality of the products and output per man, the Minister pointed out, were low as compared with the standards in the industrially advanced countries. He conceded that this was due, to a certain extent, to too many factories producing the same item or items. In this connection he expressed the hope that the recommendations of the *Ad Hoc* Committee, set up with a view to promoting the development of the industry on healthy lines, would prove useful in raising the efficiency of production and the standard of the goods. He also drew the attention of the members to the Technical Survey of the industry conducted by the four foreign experts and the Development Officer for Mineral Industries. It is noteworthy that the team has visited more than 60 glass factories and is expected to submit its report soon. An important feature of their survey is that the experts have been assigned to 21 different glass factories individually for periods ranging between one week and three months. Mr. Shah strongly felt that the efforts of these experts would help improve the working of the industry.

In addition to the handicap arising from the practice of manufacturing a number of articles in each factory regardless of the facilities available there, is another obstacle to the efficient functioning of the industry, namely, the disparity between the capacity of the units, the capacity of the largest unit being 1,800 tons per month as against 12 tons of the smallest one. He rightly suggested that the first handicap could be overcome through rationalisation; and the example set by certain glass factories in the South of confining their production to certain few items on the basis of available facilities was worthy of emulation. To circumvent the latter, he rightly called for a common production programme. Under this programme, both the small- and large-scale factories could work together, supplementing each other's production to meet the requirements of both large and small consumers.

Developments

Reviewing the recent developments in the field, he noted with satisfaction the fact that certain varieties of sheet glass and safety glass had been produced for the first time in the country. He also welcomed the reduction, by 40 to 45 per cent., effected in the price of penicillin vials. Other notable developments are the setting up of factories, which are expected to go into production before the end of the year, for the production of glass building blocks, insulators, glasswood, synthetic stone, and optical glass.

Alluding to the difficulty faced by the industry in obtaining coal supplies, Mr. Shah pointed out that the Government had already recognised the claim of the industry for a fair and regular allotment of coal, and that its priority was recently upgraded from 'H' to 'F'. Consequently, the glass industry enjoys priority over chemical, engineering, paper, soap, and other industries in the matter of allocation of coal supplies. He felt that the supplies of 300,000 tons of coal the industry was already receiving should be enough to meet its requirements. The Government, he said, was trying to work out methods of effecting economy in the consumption of fuel. As regards transport difficulties he assured the manufacturers that facilities were being expanded.

The industry is also experiencing serious shortage of refractories. Mr. Shah felt that the shortage would be of a temporary nature and before long the refractory industry would be able to satisfy the demand. The question, he said, was being examined by the Panel appointed for the purpose. He could not endorse the view, however, that every glass manufacturer should make his own refractories, for the glass industry had neither the material nor the means to produce good refractories. Only good specialised units of refractories, he rightly stressed, could relieve the shortages.

The question of exports also figured in the speech. The value of exports of glass and glassware was only Rs. 48 lakhs in 1956, even though there is a large surplus capacity. It is to be hoped that the Export Promotion Council, which is proposed to be set up in due course, will suggest suitable measures for stimulating exports.

CORRIGENDUM

In our issue of 23rd February, page 381, column 1, it was stated by us that the "glass industry has been enjoying tariff protection since 1950". Only the sheet glass industry has received tariff protection since 1950.

PENICILLIN OUTPUT MORE THAN DOUBLED

PRODUCTION MINISTRY'S RECORD

THE various industries under the Production Ministry witnessed substantial progress in 1956. The more notable among them are the penicillin industry at Pimpri, whose output went up from 6.6 million mega units in 1955 to 14.12 million mega units in 1956, and the fertiliser factory at Sindri, where the production of ammonium sulphate increased to 331,000 tons in 1956, as compared with 321,000 tons in the previous year. It has also been decided to expand the production of the penicillin factory by 60 per cent. by the end of 1958. Besides, the D.D.T. factory at Delhi which went into production in 1955 turned out no less than 500 tons of D.D.T. during the year under review. The Government has also decided to double the capacity of the plant by the end of 1957.

Apart from ammonium sulphate, the new coke oven battery at Sindri continued to maintain its production at the rated capacity of 600 tons per day. The coke oven gas will be used for the production of two more fertilisers, namely, urea and double salt, thereby raising the production of Sindri by about 60 per cent. This expansion programme is expected to be completed by 1958. In addition, preliminary work is said to be proceeding apace on two large new factories of the size of Sindri. The Hindustan Cables at Chittaranjan manufactured 610 miles of cables in 1956, as against 386 miles in 1955. In view of the anticipated requirements of the Posts and Telegraph Department to the tune of 800 miles of cables a year, the armouring shop is being expanded. It is also proposed to work double shifts to raise the output to 1,000 miles a year.

An important development in the case of Hindustan Machine Tools is that the old agreement with Messrs. Oerlikons of Zurich, Switzerland, has been replaced by a set of new agreements. These, it is expected, will make for the improvement in the working of the project. As a result of the change, the Swiss firm will continue as technical consultants, but without participation in the company. Till the end of February 1957, 132 lathes had been manufactured. The Hindustan Shipyard at Visakhapatnam has turned out two ships during the year. It is also noteworthy that the Government proposes to start a second shipyard. A technical school is being started at the Visakhapatnam shipyard to train as many as 500 persons during the next five years. A significant development in this connection was the offer made by the U.K. Government to send an expert mission, which was accepted by the Government.

Electrical Equipment

Following the acceptance by the Government of the project report submitted by the consultants, Messrs. Associated Electrical Industries Ltd., of the U.K., preliminary work on the Heavy Electrical Equipment Factory at Bhopal has got under way during the year under review. Further, estimates and designs for the construction of training school, trainees' hostels, factory building, etc., have been drawn up and are under consideration. In the case of salt, production increased from 81 million maunds in 1955 to 88 million maunds in 1956. Of this, as much as 8 million maunds was exported, the highest since 1951. It is noteworthy that the standard purity prescribed has been raised from 94 per cent. to 95 per cent.

While the two oil refineries namely, Standard-Vacuum and Burmah-Shell, maintained full production during the year, Caltex has completed the erection of a refinery at Visakhapatnam. A interesting development in this field is the voluntary surrender, as from October 1956, by Burmah-Shell of the benefit of the duty protection of two annas per gallon on motor spirit to which they were entitled under the agreement. The gain to the national exchequer is Rs. 2 crores per annum.

The *Khadi* and Village Industries Board also is reported to have made substantial progress during the year. The total outlay on grants and loans by the Government for the development of *khadi* industries, including Ambar Charka, is about Rs. 10.5 crores during 1956-57. In accordance with the recommendations of the Ambar Charka Enquiry Committee, an experimental programme of 75,000 Ambar Charkas was sanctioned by the Government. Large development programmes had been approved for village industries. Special attention had been paid to the marketing of handicrafts also through mobile vans, exhibitions, etc.

BOMBAY DYEING'S PROFIT HIGHER

EXPORTS OF CLOTH AND YARN SALES REACH RECORD LEVELS

SHAREHOLDERS of the Bombay Dyeing and Manufacturing Company, Ltd. (Managing Agents: Messrs. Nowrosjee Wadia and Sons Private Ltd., Bombay) will be gratified to learn that the suggestion made by some of them at the last annual general meeting of the Company, to merge the cash bonus of Rs. 5 per share declared for that year with the dividend of Rs. 20, has been accepted, if not in that year, at least in the year following, that is, for the one ended 31st December 1956. It will be recalled that the Chairman, Mr. Neville Wadia, had then said that if the cash bonus was merged with the dividend, the Company would be expected to maintain the same. The decision to merge the bonus with the dividend for 1956, therefore, indicates that the Company has, for once, decided to make a departure from its conservative policy. It also implies that the Company is confident of maintaining the present rate of dividend which, for the year ended 31st December 1956, has been recommended at 10 per cent. as against a dividend of 8 per cent. and a cash bonus of 2 per cent. paid for the previous year.

The accounts of the Company for the year under review show that the results are satisfactory in the context of the market conditions which prevailed in the latter months of the year. The gross profit has gone up from Rs. 118.20 lakhs to Rs. 125.80 lakhs, the highest since 1945. The net profit has gone up from Rs. 49.52 lakhs to Rs. 54.16 lakhs. Out of the net profit, the Directors have transferred a sum of Rs. 12.87 lakhs to provision for gratuities as against Rs. 1.50 lakhs. The substantially larger provision is due to the award of the Industrial Court granting payment of gratuity to mill operatives with retrospective effect from November 1954 on a prescribed scale. The immediate liability of the Company on this account amounts to Rs. 36 lakhs, besides a recurring liability every year. While a provision of Rs. 12 lakhs has been made from the profit of the year under review, the balance will be provided gradually in due course. The allocation to bonus for purpose of "set on" in subsequent years, as per agreement, is Rs. 1.37 lakhs, as against Rs. 7.83 lakhs a year ago, and the addition to rehabilitation and development account reserve amounts to Rs. 13.14 lakhs, as against Rs. 14.88 lakhs.

The progress of the Company's working during the past three years can be clearly judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	7,47.15	7,23.34	7,26.42	6,64.61

* Not actual but only approximate.

It will be noted that sale proceeds have gone up sizably, thanks to the buoyant conditions which prevailed in the earlier part of the year, and the encouraging exports of cloth, as well as larger sales of yarn. Although the total quantity of cloth exported from India during 1956 declined, the Company was able to speedily increase its exports, and, for the first time, over 50 million yards valued at approximately Rs. 3.95 crores were exported during the year. Free yarn sales by the Company reached a record figure of 4.81 million lbs. Out of this, the quantity exported was according to the quota allotted by the Government. Out of the 1,206 automatic looms which had been ordered for the Spring Mills of the Company, 320 looms have been received at the mills up to date and 128 are working at present. Shipments of the new automatic looms will continue to come in throughout the year, and as soon as the electrical equipment is received and installed at the mills, they will start working in the main automatic loom shed. The Spring Mills is being gradually put on to night shift as from 25th February 1957. The construction of the new bleach works at the Textile Mills is proceeding, and it is expected that the erection of the machinery will commence in May 1957. The work was delayed by about two months due to a strike in the workshops of the suppliers and fabricators of steel. Some of the new machinery ordered for the new bleach works has already been received at the mills. It is hoped that the plant will go into operation towards the end of 1957. During the year under report, additions to machinery amounted to Rs. 71.84 lakhs and additions to buildings Rs. 22.59 lakhs.

The Company's financial position as disclosed by its balance-sheet is impressive. The paid-up capital of the Company, all in ordinary shares of Rs. 250 each, remains unchanged at Rs. 2.51 crores. The reserves and surplus which supplement this aggregate Rs. 3.15 crores, of which general reserve accounts for Rs. 50 lakhs, and rehabilitation and development reserve accounts for Rs. 1.76 crores. The provision for taxation amounts to Rs. 14.41 lakhs. The current liabilities aggregate Rs 1.67 crores. The gross block of Rs. 5.98 crores has been written down to Rs. 2.47 crores. Additions during the year were of the order of Rs. 1.11 crores. The current assets aggregate Rs. 5 crores and include, among other items, investments in Government securities and shares of companies Rs. 73.41 lakhs, stores and spare parts at cost Rs. 14.89 lakhs, stock-in-trade Rs. 1.93 crores, debts, deposits and advances Rs. 90.53 lakhs and cash and bank balances Rs. 1.29 crores. There is, in fact, a drop in the cash balances from Rs. 2.68 crores as at the end of 1955, and this is evidently due to the additions to fixed assets noted above.

The Rs. 250 fully paid-up shares of the Company are being currently quoted at Rs. 353-12 *cum-div* (final: Rs. 17-8). On an *ex-div.* basis, and on the basis of the distribution for the past year, the yield works out to 4.77 per cent. per annum, free of income-tax.

The Directors have decided to sub-divide the present ordinary shares of the face value of Rs. 250 each into ten shares of the face value of Rs. 25 each. The splitting of the shares will be effective from 1st October 1957.

CONTROL OF CAPITAL ISSUES

The working of the Capital Issues Control during the year ended 31st March 1957 shows that the amount of capital issue for which sanction was accorded during the year was substantially greater than that in the previous year, the bulk of which was accounted for by industrial concerns. The number of applications received for consent to the issue of capital under the Capital Issues (Control) Act, 1947, and the Foreign Exchange Regulation Act, 1947, was 695, which included applications for extension of time of consents granted in earlier years. The total number of applications received in 1955 was 575. Three hundred and sixty-two applications made during the year under the Capital Issues (Control) Act 1947, for the issue of capital amounting to about Rs. 222.35 crores were disposed of, as against 374 applications for Rs. 151.42 crores in the previous year. An analysis of the consents granted and rejections on an industry-wise basis during the last two years shows the following trend:

(Amount of capital in crores of rupees)

	1956-57		1955-56	
	No. of applications	Amount of capital	No. of applications	Amount of capital
Agriculture and allied activities	26	1.76	46	3.18
	(12)	(0.47)	(9)	(0.71)
Industrial companies	205	160.44	176	97.51
	(25)	(17.72)	(50)	(20.75)
Non-industrial companies	66	35.81	67	24.70
	(28)	(2.31)	(26)	(1.74)

(The figures in brackets represent the issues for which permission was refused.)

The refusals mainly related to one application for initial issue amounting to Rs. 2 crores in the cement industry, another application for a further issue amounting to Rs. 11.05 crores in paper and paperboard industry and some applications for issue of bonus shares amounting to Rs. 3.17 crores (Rs. 4.91 crores). The difference of about Rs. 3.84 crores (Rs. 2.83 crores) between the figures of total disposals and the total of both consents and refusals combined is explained by the fact that consents in some cases were given to less amounts than those applied for.

One hundred and fourteen applications (113 in the previous year) out of the total number of disposals shown above involved issues of capital to persons resident abroad. Besides, 76 applications (40) made under the Foreign Exchange Regulation Act, 1947, were also disposed of upto the 31st December 1956. In all, 190 applications (153) were disposed of, which involved investment of foreign capital in companies registered in India to the extent of Rs. 23.29 crores (Rs. 23.41 crores); 160 of these (123), involving foreign investment of the value of Rs. 16.86 crores (Rs. 22.48 crores), were approved and 30 (30) applications involving foreign capital of about Rs. 6.43 crores (Rs. 0.93 crore) were refused.

ELGIN MILL ENHANCES DIVIDEND

Despite the uncertainty prevailing in the cotton textile industry and the difficult trading conditions, the working of the Elgin Mills Company, Ltd. (Managing Agents: Messrs. Begg Sutherland & Co., Private Ltd., Kanpur), for the year ended 30th September 1956, show a substantial improvement in earnings. Thus, the gross profit of the Company has advanced by Rs. 11.87 lakhs, that is, from Rs. 44.59 lakhs in the previous year to Rs. 56.46 lakhs during the year under review. This is the fourth year in succession for which the profit has shown an upward trend, having steadily moved up and more than doubled itself from Rs. 27.20 lakhs in 1951-52. What is more, the increase in profit for the year under review is larger than that noted in either of the previous three years.

The net profit, after providing for depreciation and taxation, stands higher at Rs. 23.32 lakhs, as against Rs. 16.80 lakhs. The rise in profits has enabled the Directors to declare a higher dividend at 12½ per cent. as against a dividend of 10 per cent. paid for the past three years.

Allocations to the reserves also have been proportionately increased from year to year in conformity with the rising trend in earnings. For the year under review, the Directors have provided a sum of Rs. 15 lakhs to rehabilitation reserve, as against Rs. 13 lakhs a year ago. This is in conformity with the Company's policy of conserving its financial resources to meet the cost of an extensive capital replacement programme. In addition to this transfer from the year's profit, a sum of Rs. 10 lakhs has also been transferred to this reserve from the provision for taxation no longer required, bringing the total allocation to the rehabilitation reserve to Rs. 25 lakhs. This also brings the total amount thus conserved for this purpose during the last six years to Rs. 64 lakhs. The Directors have also strengthened the general reserve with Rs. 2 lakhs.

The following table will bring out clearly the state of working of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1956	1955	1954	1953
Sales	3,19.42	2,83.39	3,09.02	2,96.79
Stocks	36.56	11.60	15.82	18.04
Expenses	2,92.02	2,36.19	2,70.38	2,73.51
Gross profit	56.46	44.59	38.63	30.09
Managing Agents' remuneration	4.64	3.79	3.33	2.70
Depreciation	6.00	8.00	8.50	7.50
Taxation	22.50	16.00	12.00	10.00
Net profit	23.32	16.80	14.80	9.89
Adjustments due to changes in stock valuation	2.50	...	..	..
E.P.T.E. refund (net)	..	3.90	..	..
To reserves	17.00	13.00	7.00	3.00
To write off investments	..	..	0.92	..
Dividends—				
Preference	1.09	1.09	1.09	1.09
Ordinary	7.87 (12½%)	6.30 (10%)	6.30 (10%)	6.30 (10%)
Carry forward	0.79	0.93	0.62	0.73

The table shows that the Company's sale proceeds have improved by about Rs. 36 lakhs to Rs. 319.42 lakhs. The improvement in sales would have been more but for the accumulation in stocks, as reflected in the rise in value of closing stocks from Rs. 11.60 lakhs to Rs. 36.56 lakhs, consequent on the imposition of additional excise duty on cloth with effect from 1st September 1956. There has also been a sharp rise of Rs. 55.83 lakhs in expenses.

The Company continues its policy of reducing manufacturing expenses by replacing obsolete machinery with new. The replacement programme was, however, handicapped during the year under review by late delivery of new machinery, with the result that machinery valued at about Rs. 8.46 lakhs, due for installation in the year ended 30th September 1956, will be paid for in the current year and installed. Further orders for new machinery, valued at approximately Rs. 13 lakhs, have been placed for delivery during the financial year ending 30th September 1957. The Company has acquired the entire share capital of Shree Madhav Mills Ltd. and Calico Processors Ltd., Bombay, which have become its subsidiaries.

The Company has a paid-up capital of Rs. 78.20 lakhs, of which 8 per cent. cumulative preference shares of Rs. 100 each account for Rs. 11 lakhs, 5 per cent. 'B' cumulative preference shares of Rs. 10 each for Rs. 4.20 lakhs and ordinary shares of Rs. 10 each for the balance. This is strengthened by reserves and surplus aggregating Rs. 84.26 lakhs. The provision for taxation stands at Rs. 18.45 lakhs. The gross block of Rs. 154.24 lakhs, including additions during the year of Rs. 2.40 lakhs, has been written down to Rs. 19 lakhs. Investments in Government securities and shares of subsidiary companies amount to Rs. 69 lakhs. The other current assets aggregate Rs. 168.54 lakhs and cover the current liabilities and provision for taxation, amounting to Rs. 84.09 lakhs, by a wide margin.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted on the Calcutta Stock Exchange at Rs. 22-12 *ex-div.*, for which the dividend for the year provides a yield of 5.5 per cent. per annum.

COIMBATORE COTTON'S PROFIT HIGHER

EXPANSION PLAN ON HAND

THE audited accounts of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Coimbatore) for the year ended 31st December 1956 disclose that the working of the Company during the year has been satisfactory, resulting in a further improvement in earnings. The gross profit, which had gone up from Rs. 12.84 lakhs to Rs. 14.88 lakhs in 1955, has improved further to Rs. 16.09 lakhs in 1956. This is the second year in succession for which the profit has maintained the upward trend and such an expansion has lifted the profit to the highest level since 1951.

The net profit also shows a welcome improvement from Rs. 3.78 lakhs to Rs. 5.57 lakhs, in refreshing contrast to the slight fall noted in the previous year. Notwithstanding the rise in earnings, the dividend is unchanged at 25 per cent., a rate which the Company had paid for the previous two years, after having raised it from 20 per cent. paid for 1953. This is because the rise in net profit has been more than offset by the allocation of Rs. 1.80 lakhs for payment of bonus to staff in respect of the year 1955 and the setting aside of Rs. 50,000 for gratuity fund, while no allocations had been made for either of these a year ago.

The following comparative table, giving the salient features of the Company's results for the past four years, provides an idea of its progress since 1953:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Sale proceeds	83.67	73.21	N.A.	N.A.
Closing stocks	3.31	2.75	N.A.	N.A.
Raw materials and stores consumed	55.08	46.89	N.A.	N.A.

Carry forward	0.11	0.34	0.05	...

N.A. = Not available.

The rises in sale proceeds, raw materials and stores consumed and expenses, all indicate that the production of the Company during the year must have been higher, though a part of the increases in the former two can be due to the rise in prices. Of the rise in expenses to the tune of Rs. 2.43 lakhs, salaries, wages and bonus account for Rs. 1.58 lakhs.

The Company's financial position is quite satisfactory. Its reserves and surplus as at the end of the year under review aggregate Rs. 19.12 lakhs, as against a paid-up capital of Rs. 12 lakhs. The provision for taxation stands at Rs. 6.96 lakhs. The current liabilities amount to Rs. 13.75 lakhs. On the assets side, the gross block of the value of Rs. 41.98 lakhs has been written down to Rs. 11.32 lakhs. The current assets amounting to Rs. 40.50 lakhs exceed the current liabilities and provision for taxes by as much as Rs. 19.79 lakhs. Of these current assets, cash balances account for Rs. 8.01 lakhs, having declined from Rs. 18.42 lakhs at the end of 1955.

The additions to fixed assets indicate the progress made in the construction of the Jubilee Mills, which is being started as a separate unit, in commemoration of the Company's Silver Jubilee. The buildings are almost completed and the whole of the machinery is expected to be received by about June this year. It is hoped that this unit will go into production by September 1957.

The Company has also a big expansion programme on hand. It has received permission from the Government to install 12,800 spindles and 240 looms. A sum of about Rs. 60 lakhs will be required to install and work the same. The Directors have thought it not prudent to have recourse to borrowing for this purpose. They have, therefore, obtained permission to issue fresh capital to the extent of Rs. 24 lakhs. For this purpose, it is proposed to raise the authorised capital from the present level of Rs. 25 lakhs to Rs. 75 lakhs.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 355 *ex-div.*, at which rate and on the basis of the dividend for 1956, the yield works out to 7.04 per cent. per annum free of income-tax.

Points From The Chair

Relieving Money Stringency

"THE stringency in the organised money market sounds rather paradoxical in the context of heavy doses of deficit financing. This is, obviously, the result of the present financial policy of the Government to lay a heavy burden on the organised sector of the economy through direct taxes such as income-tax, dividend tax, tax on bonus issues of share capital, capital gains tax, death duty, and the newly instituted compulsory deposit scheme, as well as indirect taxes on industrial manufactures, on the one hand; and the expending of Government revenues in a manner which benefits most the lower income groups who either do not have a substantial saving margin, or are not accustomed to canalise their savings through the organised money market. The failure of the nationalised Life Insurance Corporation to maintain the high rate of writing new business attained by the companies during previous years will also cause, some diminution in individual savings mobilised by the organised section of the money market. As against this, demand is rising due to the generation of new income ahead of the productive capacity of the country. This explains the paradox of the tendency of commodity prices to rise at a time when stringent conditions prevail in the money market. The key to the problem lies, therefore, in increased production in agriculture as well as industry."

TULSIDAS KILACHAND,
Bank of Baroda Ltd.

New Enactments

"The year was particularly momentous for certain legislative enactments relating to insurance and banking. The life insurance business taken over by the Government under an emergent ordinance early in the year was legalised in September last by the passing of the Life Insurance Corporation Act, but claims thereunder of the old companies remain yet unsettled. The new Companies Act that came into force in April last is a cumbersome piece of legislation which extends to every possible aspect of company administration and, as you are aware, its application has already revealed several incongruities particularly in regard to banks. Other measures of importance are the amendments made to the Reserve Bank Act and the Banking Companies Act. The latter gave the Reserve Bank powers of control over the terms of appointment of whole-time directors, managing directors and chief executive officers of banks as also to issue directives to banks in matters of policy and administration. It also empowers the Reserve Bank to appoint officers for the purpose of watching and reporting on the conduct of affairs of any banking company. These amendments were, of course, received with mixed receptions but given the goodwill all round, it will not be impossible to achieve the objects in view in the best interest of the country."

M. CT. MUTHIAH,
Indian Overseas Bank Ltd.

Second Five-year Plan

"Some of us have from the start criticized the unrealistic targets of investment laid down in the Plan and have pleaded for scaling them down. We have also commented on the inadequacy of the provision for agricultural development and production of consumer goods. In the Survey of Asia and the Far East published on the 18th March by the Economic Commission for Asia and the Far East, three questions have been posed: (1) Whether the Plan is not too ambitious in terms of resources; (2) whether it assigns too great a share of responsibility to the public sector and too little to the private; and (3) whether it does not emphasise industries (particularly heavy industries) too much at the cost of agriculture. The Commission have also spoken of the risks in attempting too much too quickly. In mitigation of the hardships which a Plan of this magnitude might impose on the community, spokesmen of Government have been saying that there would be a process of adjustment from time to time which would take care of any material changes in the situation that might take place. I would like to urge that that is not enough and that what is needed is a reappraisal, here and now, of programmes and policies as a whole. I contend that enough is known, even at this stage, of the resources, which could be mobilised for planned economic development in India, and the serious difficulties which have already arisen in the first year of the Plan must be taken as an indication that the projected scheme of development goes beyond the country's capacity to carry it out within the stipulated period."

SIR HOMI MODY,
Central Bank of India Ltd.

Price of Copper

"The future course of copper prices is not a matter about which I should care to express any firm opinion. It is related to various considerations about which there is already a lot of publicised information available to us all, such as the technical position of the metal, the relation between its current production and consumption, and the point at which producers may be moved to take active steps to create conditions favourable to maintaining or even improving the current price level. There appears to be some grounds for hoping that the price of electrolytic copper will not fall materially below its present level for any long period in the immediate future and, consequently, that it is reasonable to hope that the profit after taxes for the current year will not fall below the estimate of £4¼ million, which I have already given you but it is obvious to me, and I hope that I have made it clear to you, that there can be no certainty on that point."

C. HELY-HUTCHINSON,
The British South Africa Company, London.

COMPANY MEETINGS AND DIVIDENDS

GOKAK MILLS LTD. Annual General Meeting, Bombay, 10th April 1957. Dividend: Rs. 13 per share, payable on and after 15th April 1957. Transfer books closed from 8th to 28th March 1957, both days inclusive.

RELIANCE FIREBRICK AND POTTERY CO., LTD. Annual General Meeting, Calcutta, 12th April 1957.

LAKHSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th April 1957. Dividend: Rs. 30 per share (final), payable on or after 22nd April 1957. Transfer books remain closed from 2nd to 16th April 1957, both days inclusive.

VISHNU COTTON MILL, LTD. Annual General Meeting, Bombay, 16th April 1957. Dividend: Rs. 5-8 per share (final), payable on and after 23rd April 1957. Transfer books remain closed from 3rd to 17th April 1957, both days inclusive.

AUTOMOBILE PRODUCTS OF INDIA LTD. Annual General Meeting, Bombay, 17th April 1957. Transfer books will remain closed from 11th to 17th April 1957, both days inclusive.

BOMBAY DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 18th April 1957. Dividend: Rs. 17-8 per share (final), free of income-tax, payable on or after 29th April 1957. Transfer books remain closed from 22nd March to 11th April 1957, both days inclusive.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. Annual General Meeting, Bombay, 22nd April 1957. Dividend: Rs. 3-8 per share, payable on and after 23rd April 1957. Transfer books will remain closed from 5th to 22nd April 1957, both days inclusive.

MODERN MILLS, LTD. Annual General Meeting, Bombay, 24th April 1957. Transfer books remain closed from 27th March to 16th April 1957, both days inclusive.

SWAN MILLS, LTD. Annual General Meeting, Bombay, 24th April 1957. Dividend: Rs. 25 per share, payable on or after 25th April 1957. Transfer books will remain closed from 30th March to 24th April 1957, both days inclusive.

GOLD MOHUR MILLS, LTD. Annual General meeting, Bombay, 25th April 1957. Dividend: Rs. 15 per share, payable on or after 26th April 1957. Transfer books will remain closed from 30th March to 25th April 1957, both days inclusive.

POONA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 25th April 1957. Dividend: Rs. 5 per share (final) payable on 27th April, 1957. Transfer books remain closed from 2nd to 25th April 1957, both days inclusive.

BROACH ELECTRIC SUPPLY AND DEVELOPMENT CORPORATION LTD. Annual General Meeting, Bombay, 25th April 1957. Dividend: As. 10 per share, payable on 27th April, 1957. Transfer books remain closed from 2nd to 25th April 1957, both days inclusive.

NASIK-DEOLALI ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 25th April 1957. Transfer books remain closed from 2nd to 25th April 1957, both days inclusive.

FINLAY MILLS, LTD. Annual General Meeting, Bombay, 26th April 1957. Dividend: Rs. 20 per share, payable on or after 27th April 1957. Transfer books will remain closed from 30th March to 26th April 1957, both days inclusive.

INDIAN ALUMINIUM CO., LTD. Annual General Meeting, Calcutta, 27th April 1957. Dividend: As. 8 per share (final). Transfer books will remain closed from 6th to 27th April 1957, both days inclusive.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD. Annual General Meeting, Bangalore, 27th April 1957. Dividend: Rs. 20 per share (final), payable on or after 28th April 1957.

BUCKINGHAM AND CARNATIC CO., LTD. Annual General Meeting, Madras, 27th April, 1957. Dividend: Rs. 6 per share (final) payable on 27th April 1957. Transfer books will remain closed from 5th to 26th April 1957, both days inclusive.

HUKUMCHAND JUTE MILLS, LTD. Interim dividend: Rs. 3-8 per share, free of income-tax on the preference shares, payable after 24th April 1957. Transfer books will remain closed from 15th to 24th April 1957, both days inclusive.

KHATAU MAKANJI SPINNING AND WEAVING CO., LTD. Additional dividend: Rs. 4.25 per share for the year ended 30th June 1954, payable on and after 27th April 1957. Transfer books will remain closed from 15th to 24th April 1957, both days inclusive.

MIDLAND RUBBER AND PRODUCE CO., LTD. (AND REDUCED). Interim dividend of Re. 1 per ordinary share, for the year ended 31st March, 1957. Transfer books will remain closed from 16th to 22nd April 1957, both days inclusive.

COORG TEA CO., LTD. Interim dividend of As. 8 per ordinary share, for the year ended 31st March, 1957. Transfer books remain closed from 5th to 15th April 1957, both days inclusive.

NELLIAMPATHY TEA AND PRODUCE CO., LTD. Interim dividend of As. 2 per ordinary share, for the year ending 30th June 1957. Transfer books will remain closed from 9th to 15th April 1957, both days inclusive.

RAJAGIRI RUBBER AND PRODUCE CO., LTD. Interim dividend of Re. 1 (10 per cent.) per share, for the year ending 30th June, 1957. Transfer books will remain closed from 9th to 15th April, 1957, both days inclusive.

TALAYAR TEA CO., LTD. Interim dividend of As. 8 per ordinary share, for the year ended 31st March 1957.

JAWAHAR MILLS LTD. Dividend of Re. 1-4 per share for the year ended 31st December 1956. Transfer books will remain closed from 13th to 26th April 1957, both days inclusive.

Notices

THE NEW MONKHOOSHI TEA COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta 1, on Tuesday the Twenty-third day of April, 1957, at 11-00 a.m., to consider and if thought fit to pass, with or without modification, the following resolutions, namely:—

1. (a) That it is desirable to capitalise a sum of Rs. 3,00,000 being part of the undivided profits of the Company standing to the credit of the Reserve Fund and accordingly that the said sum of Rs. 3,00,000 be capitalised and that this amount be used as a capital bonus which shall be applied on behalf of the persons who are, on the 23rd day of April, 1957, holders of the 80,000 issued Ordinary Shares of the Company of Rs. 7-8 each, in payment in full for 40,000 new Ordinary Shares of Rs. 7-8 each and that such 40,000 new Ordinary Shares, credited as fully paid, shall be accordingly allotted to such persons respectively in the proportion of one new Ordinary Share for every two issued Ordinary Shares held on the 23rd day of April, 1957, by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares and will participate in any dividend declared in respect of the year ended 31st December, 1956, and shall also be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such Ordinary Shareholder and not as income.

   (b) That pursuant to the above resolution and in satisfaction of the said special capital bonus the Directors be and they are hereby directed to allot and distribute 40,000 new Ordinary Shares credited as fully paid up amongst the persons who are on the 23rd day of April, 1957, holders of the 80,000 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them.

   (c) That the draft of the Agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and that the Directors be authorised to affix the Seal of the Company to duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 23rd day of April, 1957, by some person to be appointed by the Directors in that behalf under Article 168 of the Articles of Association of the Company.

The Share Transfer Books of the Company will be closed from 8th to 23rd April, 1957, both days inclusive.

By Order of the Board,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

THE NEW MONKHOOSHI TEA COMPANY LIMITED

Circular Letter to Shareholders

EXPLANATORY STATEMENT

DEAR SIR/MADAM,

Your Directors consider that the present issued capital of the Company does not reflect the actual Capital position of the Company and that the Issued Capital should be increased. They recommend that a sum of Rs. 3,00,000, being a part of the amount standing to the credit of General Reserve, be capitalised and that this amount be utilised as Capital Bonus to be satisfied by an issue of 40,000 Ordinary Shares of Rs. 7-8 each, credited as fully paid up, to the existing holders of Ordinary Shares on the 23rd day of April, 1957, in the proportion of one new Ordinary Share for every two issued Ordinary Shares held by them on the said 23rd day of April, 1957, the said new Ordinary Shares ranking in all respects *pari passu* with the existing Ordinary Shares, and participating in any dividend declared in respect of the year ended 31st December, 1956.

Your Directors recommend for your approval the resolutions which will be proposed in this connection and which are detailed in the Notice calling a General Meeting of Shareholders on the 23rd April, 1957.

The Directors and Managing Agents of the Company will be entitled to an allotment of New Shares in regard of their respective Shareholdings and to this extent they may be deemed to be interested in the above proposal.

The draft Agreement referred to in Resolution 1(c) of the annexed Notice convening the General Meeting may be inspected at the Registered Office of the Company on any working day during usual business hours, upto the date of the meeting.

Yours faithfully,
MACNEILL & BARRY LTD.,
J. H. G. WHITFIELD,
Acting Secretary,
Managing Agents.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

GOVERNMENT OF INDIA
Ministry of Railways (Railway Board)

ESTABLISHMENT OF STEEL FOUNDRY AT CHITTARANJAN

THE MINISTRY OF RAILWAYS (RAILWAY Board) are inviting proposals for setting up a steel foundry at Chittaranjan, West Bengal, with the technical collaboration of a reputed foreign steel foundry. The proposed steel foundry will form a complement to the existing Locomotive Works at Chittaranjan and should have a planned output of 6,000 tons of finished casting with a possibility of expansion upto 9,000 tons per annum. The firm selected for collaboration will be fully responsible for

(i) the design and layout including the buildings and production equipment,

(ii) procurement, inspection and transport of the plant and equipment to the site,

(iii) supervision of erection and installation of important production equipment and

(iv) successful operation.

The selected firm will also be responsible for training Indian personnel in technical and managerial functions and should also provide competent key personnel in the initial stages.

The offer should give complete details of cost, men and material required, earliest date of commissioning the foundry and payment terms. Water, electric power and other raw materials required will be arranged by the General Manager, Chittaranjan Locomotive Works.

Further particulars are available in the tender hand-out which will be supplied on application to the undersigned. The offers are to be addressed to the Secretary (M), Railway Board, New Delhi, India, and should reach him on or before 15th June 1957.

J. F. MUNCHERJEE,
Director, Mechanical Engineering,
Railway Board.

NEW DELHI, *30th March* 1957.

BENARES ELECTRIC LIGHT AND POWER COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-seventh Ordinary General Meeting (not being an Annual General Meeting) of the abovenamed Company will be held at its Registered Office No. 12, Mission Row, Calcutta, on Monday the 29th April, 1957, at 11-0 a.m., for the following purposes:—

1. To receive and adopt the Audited Accounts for the half-year ended 30th June, 1956, and the Directors' and the Auditors' Reports thereon.
2. To declare a Dividend.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd April, 1957, to the 29th April, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA 1, *3rd April*, 1957.

EXPLANATORY STATEMENT

N.B.—This meeting is being convened to consider the accounts for the half-year ended 30th June, 1956, in accordance with the provisions of the Company's Articles of Association.

THE SOUTH KARANPURA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above named Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Wednesday the 1st May 1957, at 11 a.m., for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st August 1956, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 17th April to the 1st May 1957, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

CALCUTTA, *28th March*, 1957.

Note.—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after the 9th May 1957, to those shareholders so entitled whose names appear in the Company's books on the 1st May, 1957, or to their mandatees. No application for Dividend Warrants will be necessary.

THE SOUTH KARANPURA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on 28th March, 1957, a Dividend of 3½ per cent. per annum was recommended to be paid for the year ended 31st August, 1956, without any deduction for Income-tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA.

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

THE REGISTERS OF MEMBERS AND Transfer Books of the Company will be closed from 12th to 19th April, 1957, both days inclusive, in connection with Interim Dividend for the half-year ended 30th September, 1956, payable on or after 20th April, 1957.

By Order of the Board,
THE AMALGAMATED ELECTRICITY CO., LTD.,
N. C. JAVERI,
Director.

BOMBAY, *30th March*, 1957.

ECONOMICS OF EXPENDITURE TAX

(*Concluded from page* 681)

sheet of personal net wealth at the beginning and at the end of the period forces the taxpayer into a full disclosure of receipts; just as the need to make a full return of current receipts and expenditure forces the taxpayer into a full disclosure of capital assets."

The mistake in this argument is Dr. Kaldor's assumption that the transactions of people subject to the expenditure tax are only with persons who are also subject to this tax. But in India this is far from being the case. It would be perfectly possible to evade the expenditure tax by showing in the returns either a gift or a loan to someone who is not subject to income tax or showing it as repayment of a past loan to such a person to which there can be no limit. In India, fictitious *benami* transactions are not unknown and an expenditure tax can safely be evaded by showing an outlay on buying a house or some other property which in fact actually belongs to someone else. If both the parties were subject to the expenditure tax such transactions could easily be discovered but it would be almost impossible to do so if one of the parties is not paying the income-tax or the expenditure tax. Moreover, in the case of smaller businesses in India, personal accounts are mixed up with business accounts and it would be quite easy to evade an expenditure tax by either inflating the receipts of the business house and reducing one's own income or by passing some items of the expenditure to the business house. In the case of big business the allowances made available to business executives in connection with business, in spite of all the suggestions which Dr. Kaldor has made in this connection, would give scope for tax evasion.

Practical Difficulties

The most severe criticism against the expenditure tax is that it creates insurmountable administrative and practical difficulties. It is theoretically correct that expenditure "is more strictly definable than 'income' as the basis of taxation" but in actual practice the only way of finding out expenditure is, especially in the case of an economically backward country like India, to first find out the income and then to find out the net addition to savings. The difference of the two would be taken to constitute expenditure. It is difficult to calculate income and the task would become still more difficult if, in addition, we have to find out the net addition to a person's savings before we can find out his expenditure. Moreover, if an expenditure tax is levied the position of the income-tax officer would become still more difficult.

Dr. Kaldor has argued that in the case of an expenditure tax "concealments could not be carried to the point at which the taxpayer's own returned figure for his expenditure becomes apparently inconsistent with his mode of living." This means that the income-tax officer will not only have to determine a person's income but his 'true' expenditure with reference to the taxpayer's 'mode of living.' This is not calculated either to make the income-tax officer's task easier or to improve his relations with the public. Apart from every other consideration, the expenditure tax would enormously increase the work of the department and a large number of trained officers would be required to cope with the work.

It might be emphasised here that although, in theory, an expenditure tax is more equitable than an income-tax, in the peculiar conditions in India this does not happen to be the case. We have the joint family system and although Dr. Kaldor has provided for this by suggesting a tax on a *per capita* basis (i.e., per head per family), the difficulty is that, in a large number of cases, people have to incur expenditure on persons who do not actually live with them and who cannot by any definition be called members of their family. If they are taxed on the basis of this 'inflated' expenditure the expenditure tax ceases to be equitable in their case. Moreover, such a tax would be altogether equitable only in the case of a more or less stable price level. If prices are rising or falling, as is bound to be the case in India with an enormous developmental outlay under the Plan, the expenditure tax ceases to be equitable because in the case of rising prices the people suffer a double sacrifice by having to pay higher prices for maintaining their standard of living and by paying a higher expenditure tax as well while in the case of falling prices they get off more lightly than they should if equity were to be the criterion.

It appears that an expenditure tax would either suit a country, if such a country exists anywhere in the world, consisting "of a small group of people squandering their hereditary wealth on luxurious consumption" or a country in which every one has a fairly high income and most of the people, if not all, pay the income-tax (or the expenditure tax). India is not such a country and the expenditure tax is, therefore, completely unsuitable for us. The Finance Ministry must be tempted to make a new experiment and see what happens to the people under this financial B.C.G. injection. But we are already passing through enormous strains on account of the second Plan and this is not a suitable time for fancy experiments.

LAKHSHMI AND VISHNU COTTON MILLS REPEAT DIVIDENDS

ENCOURAGING RESULTS OF GODAVARI SUGAR

Lakhshmi Cotton Manufacturing Co., Ltd.

THE directors of the above Company (Chairman: Mr. E. S. Vernon-Jones, Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit for the year of Rs. 21,76,350 (Rs. 21,79,447) to which must be added the balance brought forward from last year of Rs. 14,744 (Rs. 19,080) giving a total of Rs. 21,91,094 (Rs. 21,98,527). Out of this the interim dividend paid in November 1956 of Rs. 12-8 (Rs. 12-8) per ordinary share absorbed Rs. 1,60,000 (Rs. 1,60,000) leaving a balance of Rs. 20,31,094 (Rs. 20,38,527) to which the directors have added Rs. 5,58,935 (*nil*) transferred from engine and machinery fund, making available for appropriation a sum of Rs. 25,90,029 (Rs. 20,38,527). The directors have transferred to depreciation Rs. 13,37,539 (Rs. 7,81,640), gratuity Rs. 33,000 (Rs. 33,000), reserve for taxation Rs. 4,82,000 (Rs. 7,05,000) and engine and machinery fund Rs. 2,74,114 (Rs. 61,143).

Out of the balance of Rs. 4,63,376 (Rs. 4,57,744), the directors recommend a dividend of Rs. 12-8 (Rs. 12-8) per share less income-tax on 6,400 preference shares, and a final dividend of Rs. 30 (Rs. 30) per share on 12,800 ordinary shares (making Rs. 42-8 (Rs. 42-8) per share for the year) free of income-tax absorbing Rs. 4,43,000 (Rs. 4,43,000) and to carry forward the balance of Rs. 20,376 (Rs. 14,744).

The sum of Rs. 5,58,935, transferred from engine and machinery fund represents initial depreciation previously set aside on plant and machinery which has now for income-tax purposes been totally written off and included in depreciation. The sum of Rs. 2,74,114 transferred to engine and machinery fund represents the amount of income-tax saved from the initial depreciation and development rebate on building and machinery for 1956, plus Rs. 67,000 surplus available from the profits.

Trading Conditions:—Market conditions in India were very favourable during the first two-thirds of the year, sufficient to offset the rising cost of cotton and the rapid increase in dearness allowance, which arose from a scarcity of the coarser foodgrains in the Deccan. The heavy increase in excise duties on 1st September, however, completely altered the picture. It is hardly too much to say that the wholesale cloth trade, under pressure also from the credit squeeze, has had to abandon its traditional position as a buffer between the industry and retail, with the result that large stocks of cloth have been thrown back on to the mills. As a result, closing stocks are more than 60 per cent. larger than the opening balance (which was of reasonable dimensions) and stocks of superfine cloth, in particular, continue to present a serious problem. Stocks of cloth would have been even larger, had not production been to a large extent switched to export before the end of the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	48,00,000	Block (net) ...	43,42,120
Reserves ...	67,91,510	Machinery under erection ...	1,43,756

Profit and loss account ...	20,376	Debts, deposits and advances ...	61,16,262
		Investments ...	7,73,175
		Cash ...	34,114
Rs.	2,28,05,511	Rs.	2,28,05,511

Vishnu Cotton Mill Ltd.

The directors of the above Company (Chairman: Mr. E. S. Vernon-Jones, Bombay) submit the audited accounts of the Company for the year ended 31st December 1956.

The accounts show a profit for the year of Rs. 12,90,479 (Rs. 15,35,692) to which must be added the balance brought forward from last year of Rs. 23,124 (Rs. 22,250) giving a total of Rs. 13,13,603 (Rs. 15,57,941). Out of this the interim dividend paid in November 1956 of Rs. 2-8 (Rs. 2-8) per ordinary share absorbed Rs. 80,000 (Rs. 80,000) leaving a balance of Rs. 12,33,603 (Rs. 14,77,941). To this the Directors have added Rs. 6,64,718 (Rs. 3,37,000) representing the amount transferred from depreciation renewal and extension fund Rs. 4,45,718 (*nil*) and dividend fund Rs. 2,19,000 (Rs. 3,37,000) making available for appropriation Rs. 18,98,321 (Rs. 18,14,941), from which they have transferred to depreciation Rs. 14,45,782 (Rs. 7,58,199), debenture redemption fund Rs. 1,33,747 (Rs. 1,33,747) and gratuity fund Rs. 45,000 (Rs. 32,000).

Out of the balance of Rs. 2,73,792 (Rs. 2,79,995 after transferring Rs. 2,86,000 to general reserve, Rs. 3,00,000 to depreciation and renewal fund and Rs. 25,000 to debenture issue expense) the directors recommend a dividend of Rs. 35 (Rs. 35) per share less income-tax on 3,133 preference shares, and a final dividend of Rs. 5-8 (Rs. 5-8) per share on 32,000 ordinary shares (making Rs. 8 (Rs. 8) per share for the year) absorbing Rs. 2,56,870 (Rs. 2,56,870) and to carry forward the balance of Rs. 16,922 (Rs. 23,124).

The sum transferred from depreciation, renewal and extension fund of Rs. 4,45,718 represents initial depreciation previously set aside on plant and machinery now totally written off for income-tax purposes and included in depreciation. The total amount of depreciation to be provided for the year is Rs. 16,67,782, but the directors have decided to provide Rs. 14,45,782 only, in view of the profit being insufficient to cover full depreciation and other provisions. The sum of Rs. 4,823 being refund of customs duty charged in excess on imported machinery has been reduced from the block.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	47,66,500	Block (net) ...	56,32,160
Reserves ...	31,89,009	Machinery in erection ...	7,48,560

Godavari Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. K. J. Somaiya and Sons (Private) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st May 1956.

The profit and loss account for the year under review shows a profit of Rs. 7,55,634 (Rs. 8,00,981) after providing Rs. 9,39,595 (Rs. 15,45,003) for depreciation and Rs. 22,50,000 (Rs. 7,00,000) for taxation. This, together with the balance of Rs. 19,309 (Rs. 20,130) brought forward from the last year, amounts to Rs. 7,74,943 (Rs. 8,21,111), which the directors recommend to appropriate as follows:—

Interim dividend at Rs. 15 (Rs. 10) per share on ordinary shares, free of income-tax, Rs. 6,00,000 (Rs. 4,00,000), final dividend on ordinary shares at Re. 1 (Rs. 2-8) per share, free of income-tax, Rs. 40,000 (Rs. 1,00,000) dividend on preference shares at 5½ (5½) per cent., free of income-tax, Rs. 1,01,802 (Rs. 1,01,802) and carried forward Rs. 33,141 (Rs. 19,309 after setting aside Rs. 2,00,000 for reserve fund).

The quantity of cane crushed during the year under review by the Company's two factories has broken all the records of the previous years. The crushing would have been even greater, but for the rat trouble that had developed in the farms. The directors had taken timely action in putting an end to the serious menace to the crop by the rats. The releases of sugar continued to be controlled by the Central Government and the Company carried highest sugar stock in the year under review, as compared to past years.

The directors inform that they have secured the licence to run the distillery. They were in a position to start the same on 27th February 1957.

The crop for the year under review is satisfactory. Cane crop available for the crushing season 1956-57 is about 2,874 acres. The working of the two factories has been satisfactory. The season for the year under review at both the factories has been comparatively longer. The Company had to purchase large quantity of sugar cane from outsiders.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	58,50,950	Block (net)	69,21,031
Reserves ...	45,34,298	Stock-in-trade ...	1,62,04,188
Provision for taxation ...	23,30,709	Stores and spares ...	31,64,039
Liabilities ...	1,99,98,037	Crop in progress ...	40,14,159
Profit and loss account ...	33,141	Debts, deposits and advances ...	8,74,802
		Investments	14,46,078
		Cash ...	1,22,838
Rs.	3,27,47,135	Rs.	3,27,47,135

Upper Ganges Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

Satisfactory progress has been maintained during the period under review, as will be seen from the following table:

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st December 1953 ...	3,539,501	6,03,387
30th June 1954	3,555,244	5,87,679
31st December 1954 ...	3,861,862	6,14,170
30th June 1955 ...	3,923,868	6,28,668
31st December 1955 ...	4,214,945	7,05,546
30th June 1956 ...	4,365,805	7,50,265

After providing for all charges and placing Rs. 4,221 (Rs. 3,426) to statutory contingencies reserve and Rs. 30,000 (*nil*) to general reserve, there remains a balance of Rs. 36,947 (Rs. 34,513) including Rs. 8,097 (Rs. 9,049) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of in payment of a dividend at the rate of 10 (8¾) per cent. per annum, free of income-tax for the half-year Rs. 29,925 (Rs. 26,184) and in carrying forward to next half-year Rs. 7,022 (Rs. 8,329).

Accounts in brief were as under:—

Rs.	26,85,840	Rs.	26,85,840

Bareilly Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

As will be seen from the undermentioned schedule, satisfactory progress has been made during the six months under review:

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st December, 1953 ...	3,682,856	7,36,411
30th June, 1954 ...	4,252,655	7,75,596
31st December, 1954 ...	4,119,991	7,79,404
30th June, 1955	4,885,872	8,92,718
31st December, 1955 ...	4,617,914	8,82,280
30th June, 1956 ...	5,368,304	9,56,125

Since there is an excess of clear profit over the reasonable return, and as this position is likely to continue, the discount for prompt payment of bills is to be increased from one anna to one and a half anna in the rupee.

After providing for all charges, and placing Rs. 10,744 (Rs. 10,245) to statutory contingencies reserve, Rs. 17,166 (Rs. 17,166) to reserve for redemption of debentures and Rs. 25,000 (*nil*) general reserve, there remains a balance of Rs. 56,088 (Rs. 60,090 after providing Rs. 15,000 for development and extensions account) including Rs. 19,748 (Rs. 18,718) brought forward from the previous half-year, available for distribution, and this the Directors recommend be disposed of in payment of a dividend at the rate of 10 (10) per cent. per annum, free of income-tax, for the half-year Rs. 40,000 (Rs. 40,000) and in carrying forward to next half-year Rs. 16,088 (Rs. 20,090).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	28,42,185
Reserves ...	11,06,514	Stores and spares ...	5,00,325
Provision for taxation ...	85,000	Debts, deposits and advances ...	99,877
Liabilities ...	27,53,878	Investments	1,51,863
Profit and loss account ...	16,088	Cash ...	11,47,551
		Fictitious assets ...	19,679
Rs.	47,61,480	Rs.	47,61,480

Saugor Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th June 1956.

Certain works in connection with the erection of the new thermal station have been delayed, owing to the exceptionally heavy rains that occurred in Saugor in the year 1956. Work is however, now proceeding satisfactorily, and it is expected to commission the new power station in June 1957.

As will be seen from the following schedule, satisfactory progress has been made during the six months under review.

Half-year Ended	*Units Sold*	*Revenue* Rs.
31st December, 1953 ...	591,616	1,96,763
30th June, 1954 ...	645,244	2,10,358
31st December, 1954 ...	635,557	2,10,705
30th June, 1955 ...	676,261	2,16,306
31st December, 1955 ...	682,701	2,25,792
30th June, 1956 ...	741,004	2,37,436

After providing for all charges and placing Rs. 1,939 (Rs. 1,769) to statutory contingencies reserve and Rs. 8,000 (*nil*) to general reserve, there remains a balance of Rs. 10,970 (Rs. 10,142 after adding Rs. 4,000 to development and extension account) including Rs. 2,247 (Rs. 2,680) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of in payment of a dividend at the rate of 5 (5) per cent. per annum, free of income tax, for the half-year Rs. 7,500 (Rs. 7,500) and in carrying forward to next half-year Rs. 3,470 (Rs. 2,643).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	4,48,327
Reserves ...	1,42,519	Stores and spares ...	1,87,289
Provision for taxation ...	34,656	Debts, deposits and advances ...	29,579
Liabilities ...	3,28,868	Investments	16,392
Profit and loss account ...	3,471	Cash	1,27,927
Rs.	8,09,514	Rs.	8,09,514

N.B.—Figures within brackets relate to the corresponding period of the previous year.

KEEN DEMAND FOR FUNDS

(From Our Own Correspondent)

BOMBAY, *3rd April*

Activity in the short-term money market during the week under review was marked by a keen demand for funds, in the face of acute shortage of supplies. In the absence of any big lenders, banks had to seek accommodation from the Reserve Bank in a large measure. There was a tendency for interest rate on house money at call to harden, but there was no widespread business at the higher rate, so that the general rate was still kept at 4 to 4¼ per cent. Short-term deposits for one to six months were also bid at 4 to 4¼ per cent. Business in the inter-bank section was at a low ebb, due to paucity of lenders. There was, however, no change in inter-bank call rate, which was quoted at 3½ per cent.

An expansion of Rs. 8.30 crores in notes in circulation is disclosed by the Reserve Bank of India statement for the week ended 29th March 1957. Notes held in the Banking Department are lower by Rs. 7.64 crores and the increase of Rs. 66 lakhs in total notes is covered by a similar rise in rupee coin. Foreign securities have declined by Rs. 9 crores and this is accompanied by a fall of Rs. 10.90 crores in balances held abroad, so that the aggregate decline in foreign assets is of the order of Rs. 19.90 crores. There has been a rise of Rs. 10.94 crores in deposits of the Central Government, reflecting the year-end tax payments. Deposits of other Governments are lower by Rs. 3.21 crores, while those of banks have risen by Rs. 6.67 crores. Loans and advances to Governments show an increase of Rs. 1.85 crores and other loans and advances Rs. 3.14 crores, despite the reduction of Rs. 1.67 crores in outstanding advances to Scheduled banks against usance bills. Fresh advances to banks against these bills during the week aggregate Rs. 17.21 crores and the fall in outstanding borrowings shown above indicates that repayments of maturing bills are of the order of Rs. 18.88 crores. A sharp rise of Rs. 40.41 crores is noted in investments.

The Scheduled banks' statement for the week ended 22nd March 1957, discloses a fall of Rs. 4.71 crores in demand deposits and of Rs. 42 lakhs in time deposits. Borrowings from banks are also lower by Rs. 1.03 crores, while borrowings from the Reserve Bank and the State Bank have enlarged by Rs. 15.99 crores and Rs. 2.32 crores, respectively. Advances show a rise of only Rs. 73 lakhs, but the increase in bills purchased and discounted is more marked, being of the order of Rs. 5.13 crores. Cash balances are up by Rs. 1.99 crores, while money at call and short notice has dropped by Rs. 3.42 crores.

Dull conditions were witnessed in the Gilt-edged market during the week under review. The acute stringency in the money market kept interest at a low ebb and the turnover of business was poor. 3 per cent. 1986 Conversion Loan shaded off from Rs. 74.35 to Rs. 74.25. All the other counters were unchanged. 3 per cent. 1970-75 was on offer at Rs. 87.30 and 3 per cent. 1966-68 at Rs. 92.25. 3 per cent. 1964 was devoid of any interest at Rs. 94.45. 3 per cent. 1963-65 was dull at Rs. 94.20, and 3 per cent. 1959-61 at Rs. 97.75. 3½ per cent. 1962 was unchanged at Rs. 97.80. 3½ per cent. 1961 at Rs. 99.45 and 3½ per cent. 1964 at Rs. 98.45. 3½ per cent. 1965 was stagnant at Rs. 98.25 and 3¾ per cent. 1967 at Rs. 98.50. State loans were neglected and sellers were in evidence in some of the issues.

The weakness of sterling abroad during the week under review affected the rupee also in terms of the U.S. dollar. Thus, banks' selling rate for ready dollars rose from Rs. 479.50 to Rs. 480.00 per $100 and their buying rate from Rs. 476.25 to Rs. 476.50 per $100. In New York, spot sterling weakened from $2.79 1/6-2.79 3/16 to $2.78⅞-2.78¾. Three months' forward was marked down by 3/16c. to $2 78-2.78¼ and transferable sterling by 5s. to 276.10-276.20 cents.

COMMON TEAS DEARER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *28th March*

Some 350,000 lbs. were on offer in Dust Sale 'G' which was held on Tuesday, 26th March. The sale opened to a good general demand with commonest kinds fully firm and often dearer. Medium dusts sold fairly well, but prices were half to one anna easier. Best liquoring descriptions were irregular and often declined. There was some demand for Middle East types.

The average price realised in Dust Sale 'G' was Re. 1-14-6 per lb., as against Re. 1-14-5 per lb. in Sale 'F' and Re. 1-14-6 per lb. in the corresponding sale of 1956.

London Market—Sale of 25th March 1957.—Best liquoring Assams firm; others 1*d.* to 3*d.* lower.

Sale of 26th March 1957.—Best steady; others 2*d.* easier.

Colombo Market—Sale of 25th March 1957.—Grainy dusts lower, others good demand firm rates.

Sale of 26th March 1957.—Quality inferior. Demand quieter. Highgrowns considerably lower, especially fannings. Medium brokens declined 15c. to 20c., but corresponding fannings slightly dearer. Small leaf lowgrown brokens declined 5c. Persian Gulf types firm.

Calcutta Market—Export.—59,700 packages. Whole leaf tippy teas, Gulf and Red Sea port types well supported. Others irregularly easier.

Internal.—19,300 dust. Good general demand. Middle East types dearer, others steady. C.T.Cs. up to As. 2 easier. Fibrous sorts neglected. 3,950 leaf. Good general demand at irregular rates.

Export Quota.—The market is very quiet pending the opening of special licence transactions on 1st April. The nominal quotation is 28 pies sellers, 24 pies buyers.

SILVER WEAKENS AT CLOSE

(From Our Own Correspondent)

BOMBAY, *3rd April*

An erratic trend in silver prices was again the feature of this week's trading in the bullion market. Gold, however, ruled steady with the movements confined to a narrow range. Towards the close, the yellow metal softened a little in sympathy with silver.

Uncertainty about the future of the Indo-Tibetan trade, the agreement in respect of which expired on 31st March, was the main dominating influence in silver. The trend during the earlier part of the week was slightly upward on expectations that the Government of India would restrict, if not ban, the import of silver coins from Tibet. Towards the close, rumours that the trade arrangement with Tibet had been extended for a period of three months and the actual arrival of about 200,000 coins today affected sentiment. Just at the close, there was again a mild revival, on profit-covering.

The bullion market remained closed on 1st April, being a Bank holiday, and on 2nd April, as a mark of respect to a leading broker who died yesterday.

Forward silver (13th April settlement) hardened from Rs. 179-2 to Rs. 180-14, thus maintaining the upward trend noted in the latter half of the previous week. There was, however, a sudden drop today to Rs. 178-5 for reasons stated above, before finishing at Rs. 179.

Ready silver moved up from Rs. 178-8 to Rs. 180-4, but retreated to Rs. 177-13 and closed at Rs. 178-10. The narrowing of the discount at which the ready metal was quoted below forward from As. 10 to As. 6, despite the increase in floating stocks and the slackness in demand, reflects the weakness of the forward. The floating stocks of silver are placed at 1,100 bars. The daily average offtake was 10 bars.

Forward gold (11th April settlement) improved from Rs. 105-12 to Rs. 106-1, before reacting to Rs. 105-5.

Ready gold was done on par with the forward. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals and offtake were of the order of 4,000 tolas.

There was no change in New York silver price at 91⅛c. Spot silver in London, however, hardened from 79¾d. to 80d. and forward from 79½d. to 79¾d. Gold staged a sharp rise from 250s. 3½*d.* to 250s. 9½*d.*

The following comparative table shows the trend of market during the week under review:

	3-4-1957	Highest	Lowest	27-3-1957
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relate to the previous day.

TIN ADVANCES

(From Our Own Correspondent)

CALCUTTA, *2nd April*

A notable improvement in sentiment was in evidence in the metal market during the week under review, and the star feature was the rise in tin from Rs. 509 to Rs. 519 following a higher trend on the London Metal Exchange. This, in turn, was due to the decision of the International Tin Council to make an upward revision in the price of buffer stock tin. This decision followed the recognition by the Council of the need to increase output. Cost of production had been rising, and it was felt that, without an increase in price, producers would not get sufficient incentive. Locally, stocks continued to be plentiful and, naturally, consumers were content to carry little stocks. From Rs. 173, electrolytic copper improved to Rs. 176. Demand was moderate, and, as in tin, bazar stocks were fair in copper also. Government inquiries for moderate tonnages were a feature. Electrolytic zinc was fully steady at Rs. 78. For a time, there was some difficulty in locating ready stocks, but soon there were fresh arrivals. Virgin lead was firm at Rs. 79. The supply position was comfortable.

Forthcoming Auctions.—Dust Sale 'H' will be held on Tuesday, 9th April.

Tea shipments from Cochin:—

	From 1st Jan. to 9th March 1957.	*From 1st Jan. to 9th March* 1956.
To United Kingdom ...	7,428,303	7,941,616
To U.S.A.	1,985,417	1,704,965
To Canada	1,738,732	1,420,550
To Australia	773,809	926,995
To Indian Ports ...	1,230,707	1,066,030
To other countries ...	760,790	961,308
Total Lbs. ...	13,915,758	14,021,464

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale* 7.—1,500,000 lbs. Fair general demand at much lower rates. Low mediums and mediums irregularly 20 nP. to 30 nP. lower. Best considerably easier. Fannings grades more enquiry at the drop; whole leaf quieter."

COTTON FUTURES BEARISH

(From Our Own Correspondent)

BOMBAY, *3rd April*

The Government's move to requisition cotton stocks to ensure an equitable supply to mills at reasonable prices and the decision to ban all export sales of Indian cotton with immediate effect would appear to have had their full effect on the cotton futures market. The market ruled distinctly bearish during the week under review. Some traders were somewhat inclined to believe that, with heavier arrivals of new crop cotton and fair quality being made tenderable against the May and June settlements, prices would come down further. There were apprehensions that heavier margins might be imposed by the authorities. The market was also thick with rumours that the Government might soon rationalise the available supplies among the mills and certify the purchase and sales of cotton on the basis of samples drawn by the Controllers. Under the impact of these factors, cotton futures staged a sharp decline in prices.

Certain sections of the trade believe that, in the context of rising mill consumption and lower crop idea, the recent rise in prices is not something unnatural. In their opinion, any hasty and warranted Government intervention in the market would only harm the interest of genuine traders. Measures like requisitioning of cotton stocks and making them available to mills at reasonable prices give rise to serious practical problems which it will be difficult to tackle except through adoption of arbitrary and unfair methods.

Details as to how the requisitioning of stocks will be put into effect are not known but it is felt that the traders and mills will be called upon to declare their stocks and to obtain the prior approval of the Textile Commissioner, so that the latter will have full control over the purchase and sale of cotton by any section of the trade. Traders are still in the dark as to whether the requisitioning is going to be confined to Bombay only or whether it is applicable only to traders or to growers also. The Millowners' Association, Bombay, is reported to have put forward some suggestions to meet the current situation. These include certification of purchases and sales on the basis of samples drawn by the Controllers, non-extension of the validity of export licences expiring at the end of June 1957 and import of American cotton comparable to Indian growths. It has also suggested that the mills should be prohibited from buying *kapas* direct unless they have their own ginneries or have them on lease.

Meanwhile, the operators strongly protested against the irregularities in the fixation of room rates for the Vijay April contract; as a mark of protest, the traders refrained from doing any business on 28th March. Room rates for Vijay were fixed on 26th March, while those for Jayadhar, Laxmi and some other varieties were not fixed. However, on an application filed by a member, the basis for these varieties were fixed the next day. The room rates were generally considered to be close to the ceiling.

M. G. Jarilla (May delivery) opened the week at Rs. 707, as against the previous close of Rs. 712, and on firm bull buying improved to Rs. 724. The selling pressure induced by the Government requisitioning move and other related measures took the contract down to Rs. 699½ yesterday, although, towards the close, slight recovery was in evidence and the contract closed at Rs. 708-8. Opening at Rs. 707-8, the contract firmed up, on bear covering, to Rs. 712 before closing at Rs. 705.

Fluctuations in Vijay contracts were very marked. Vijay April commenced the week at Rs. 873, as against Rs. 887-8. Apprehensions that the Government might intervene at any moment induced heavy selling which resulted in a virtual landslide in values and the contract touched a low of Rs. 846 yesterday before finishing today higher at Rs. 853. The net loss over the week was Rs. 34-8.

After improving from Rs. 833 to Rs. 844, Vijay June encountered a selling spree which depressed the contract to Rs. 823 yesterday. Commencing today's session at Rs. 828, it improved to Rs. 831-8 before closing at Rs. 829-8. The net loss over the week was Rs. 14.

The following is the trend of prices of the contracts during the week:

(In rupees per candy of 784 lbs.)

	3-4-57	*High*	*Low*	27-3-57
Jarilla (May) ...	705	725	699½	712
Vijay (April) ...	853	877	846	887½
Vijay (June) ...	829½	844	823	843½

In the spot section, values declined considerably. Despite the fall, mill demand continued to be slack, as the ruling prices were still considered to be high.

The Joint Chief Controller of Imports and Exports has announced that, with immediate effect, no further sales of Indian raw cotton against the licences issued in terms of earlier notices would be permitted. Exporters who have already entered into firm commitments against the licences issued in terms of earlier notices on or before 30th March 1957 were required to produce the following documentary evidence: (i) firm Contract executed, (ii) letter of credit opened, (iii) cable offer and acceptance.

The notification further stated that no further licences on any ground will be issued in terms of the earlier notices.

The latest available spot rates—in rupees per candy of 784 lbs.—are given below, the figures in brackets being last week's closing quotations:

Bengal *Deshi* 740 (750); Berar Jarilla 820 (830); Khandesh 825 (840); Vijay 945 (945); Oomra *Deshi* 780 (800); Mogla 760 (775).

It is reported that the proposal for the establishment of a forward market in cotton at Ahmeda-

bad has been approved by the Government of India. The market is expected to be set up before *Divali* this year. Governments approval is subject to ratification by the Forward Markets Commission. Textile circles, organised mercantile bodies and tradesmen have welcomed the resumption of forward marketing in cotton after a lapse of 14 years. The establishment of forward markets is expected to provide incentive to the growth of cotton and its location in Ahmedabad which is linked with cotton fields is greatly welcomed.

The Karachi cotton futures market ruled firm during the week, thanks to brisk speculative buying induced by reports that a business of about 5,000 bales had been done with China. Bullish advices from Bombay also aided the sentiment favourably. Traders were inclined to believe that the decision of the Government of India not to permit any fresh export of Indian cotton would result in renewed interest in Pakistan cotton. Buying support ensued as a consequence and prices registered a handsome improvement. N.T.R.G. May rallied Rs. 2-1 to Rs. 81-14. July delivery advanced by Rs. 2-9 to Rs. 83-15. Spot values also recorded considerable gains, except *Deshi* styles, the rates of which remained unchanged. The following are the latest available spot quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 87: Punjab *Deshi* 78-8: 4 F Punjab Roller 85-7; S.G. 88-7; L.S.S. Punjab Roller 86-15; S.G. 90-7; N.T.R.G. 85-15; S.G. 93-15; 289 F Punjab Roller 90-7; S.G. 100-5.

Continued lack of overseas inquiries, coupled with slack domestic spinner demand, was responsible for the downward trend in the Alexandria cotton futures market in the week under review. The prices would have suffered a sharp break but for the expectation that the reported agreement between the Government of India and the Egyptian delegation providing for the purchase by India of 20,000 bales of Egyptian cotton would lift up values in the coming weeks. In the spot section, activity was subdued and turnover limited. The latest available rates—in tallaris per lb.—from Alexandria are as under:

Karnak: May 173.35; July 113.65. *Ashmouni*: April 78.15; June 79.25; August 79.50.

The Liverpool cotton futures market put on a cheerful appearance during the week. Values of both the American and American type contracts firmed up moderately on commission house buying and trade calling which found offerings limited. Strong advises from New York following the announcement of higher average price accepted by the C.C.C. for bids under the new export sales programme helped to improve sentiment further. The large volume of tenders against the March-April contract, however, acted as a damper. Sudan contract eased, due to absence of buying interest. Demand for ready and shipment cotton continued to be slack, as spinners were well supplied with stocks, sufficient to cover at least two months' requirements. Interest was mainly confined to lower grades U.S. growths. A small volume of business was put through in ready lots of Sudan, East African, Turkish and Russian. Spot lots of Indian Oomras evoked some attention, while there was practically no demand for shipment cotton.

The latest available rates—in pence per lb.—from Liverpool are given below:

American One Inch Staple Contract: May-June 26.46; July-August 26.34; October-November 26.17; December-January 26.12. *American Cotton Mixed Growth Contract*: May-June 26.57; July-August 26.43; October-November 26.22; December-January 26.17. *Sudan*: May-June 42.50; July-August 41.50.

Cotton values at New York were fully maintained during the week. The gradual reduction in Government stocks resulting from the recent large C.C.C. export sales and Soil Bank considerations affected the sentiment and activity was fairly brisk. Another helpful factor was the reported purchase by Formosa of about 20,000 bales of U.S. cotton for May-June shipment. But a marked rise in price was prevented by hedging and profit-taking sales.

The C.C.C. has sold under the current export programme a further 582,160 bales, making the aggregate sold thus far to 6,981,856 bales. The average price accepted for basis Middling 1" at average location was 27.42 cents per lb., as against 27.20 cents per lb. at the previous sale. Under the new export programme, the C.C.C. has sold 237,355 bales. This is the first sale under that programme and shipments can be made only after 15th August. The average price accepted for basis Middling 1" at average location was 27.47 cents per pound. Exports for the week ended the 21st March were 261,211 bales. Total shipments till that date this season were 5,448,141 bales, as compared with 1,062,117 bales in the same period last season.

The following are the latest available quotations from New York, as compared with those of a week and a fortnight before:

(In cents per lb.)

	3-4-57	26-3-57	19-3-57
Spot	35.45	35.45	35.40
May	35.20	35.17	35.07
July	34.67	34.70	34.61
October	33.56	33.36	33.14

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 3rd *April*

Easy conditions prevailed in the yarn market during the week under review. Thanks to the continued stringency in the money market, comfortable supply position, and poor enquiries from consuming centres, business put through was considerably restricted, with values moving narrowly. Cotton yarns, in particular, ruled dull, following bearish advices from the cotton market, downward trend in exports, and reduced offtake by handlooms and powerlooms. Even reports of revival of demand in piecegoods markets failed to have any significant effect.

Rayon yarns 120 Dull Cones Snia for April delivery remained unchanged at Rs. 799. Although business in June delivery was commenced many days ago, no transactions were put through; the delivery was nominally quoted at Rs. 812. 150 Bright Cones April delivery, however, advanced by Rs. 11 to Rs. 623 on special buying support. In the spot section, 120 Italy fell by an anna to Rs. 4. 150 Italy receded by three pies to Rs. 3-10-6. 150 Japan declined by half an anna to Rs. 4-0-9. 120 Japan was quiet at Rs. 4-4. Among indigenous yarns, both National Rayons 120 Bright Cones 1st grade and 150 Bright Cones 1st grade were neglected at Rs. 3-11 and Rs. 3-5-3, respectively.

Staple fibre yarns evoked scattered inquiries, particularly from the Punjab side, and tended to rise. 40 x 2 June delivery advanced by Rs. 5 to Rs. 627. April delivery improved by Re. 1 to Rs. 627. Spot 40 x 2 Kohinoors moved up by three pies to Rs. 3-5. Citys gained a like amount to Rs. 3-4-3. New Greats were better by three pies at Rs. 3-3-3. Among foreign yarns (80x2), Paramounts advanced by an anna to Rs. 5-4. Fujis were quoted at Rs. 5-5 against Rs. 5-4-6 last week-end.

In the cotton yarn section, forty counts Gokaks and Moderns were quiet at Rs. 27 and Rs. 27-8, respectively. Minaxis, on the other hand, hardened by As. 7 to Rs. 27-5 on special support.

Eighty counts encountered selling. Mahendras fell by As. 12 to Rs. 73-4. Moderns dropped As. 4 to Rs. 76-4. Finlays were on offer at Rs. 81-8, same as last week. Among ten counts, Podars and Moderns were neglected at Rs. 14-12 and Rs. 15, respectively. Sixty counts Finlays and Moderns were stagnant, the former at Rs. 61 and the latter at Rs. 61-8. Thirty counts proved an exception and met with good buying support. Indus increased by As. 8 to Rs. 22 and Edwards by As. 4 to Rs. 21-12. Twenty counts Maduras were an anna better at Rs. 19-7. Moderns were firm at Rs. 19. Gokaks were quoted at Rs. 18-10.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today, as compared with those six days before:

	3-4-1957	27-3-1957
	Rs. a.	Rs. a.
Art silk yarn **(per case of 200 lbs.)—**		
150 Dull Cones Snia April	799 0	799 0
150 Bt. Cones April	623 0	612 0
120 Japan (per lb.)	4 4	4 4
150 Japan (per lb.)	4 12	4 11½

60s Raghuvamshi	58 0	57 8
80s Modern	76 4	76 8

CASTORSEED FIRM

(From Our Own Correspondent)

BOMBAY, 3rd *April*

The previous week's firmness in castorseed prices continued unabated during the week under review though profit-taking offerings trimmed the extreme gains to some extent. The firmness was aided by speculative buying, thanks to demand from spot houses and shippers. As prices in the futures section exceeded the Rs. 165-mark, margins became operative. The groundnut sections ruled strong early in the week but developed easiness following upcountry offerings and limited interest evinced by crushers. As a result, the section closed somewhat lower on balance, after fluctuating narrowly. The trend in cottonseed futures was firm in sympathy with the cotton market. Linseed remained quietly steady.

A spectacular rise in prices was registered in the castorseed futures section. May contract which had slided down from Rs. 167-8 to Rs. 166-8 on the opening day, displayed a steady upward trend, notwithstanding profit-taking, to touch the high of Rs. 173-12 today. The contract closed the session at Rs. 172-4, having thus gained no less than Rs. 7-12, over the week. Spot Madras moved up by As. 14 to Rs. 34-4. Oil B.S.S. was higher by As. 11 at Rs. 21-3.

Groundnut May (futures) opened the week steady at Rs. 173-2 and, following upcountry offerings, declined to Rs. 170-10 on 30th March. Subsequently, however, it recovered to touch a low of Rs. 171-2 today before finishing at Rs. 171-6. Over the week, the contract shed Re. 1-2. Spot Bold F.A.Q. lost As. 2 to Rs. 34-4. Khandesh quality was unchanged at Rs. 35-4. Groundnut oil ex-mill declined by As. 3 to Rs. 18-13.

Linseed May contract commenced the week at Rs. 29-4, and moved between Rs. 29-1 and Rs. 29-8. It, however, finished lower at Rs. 29-5, having thus put on As. 3 over the week. In the spot section, Bold ready improved from Rs. 28-12 to Rs. 29. But linseed oil ready was quoted As. 4 lower at Rs. 16.

Cottonseed May (futures) section, continued to reflect last week's steady tone. Opening at Rs. 106, it touched the low of Rs. 105 on the following day. Subsequently, it resumed the former trend, having touched the peak of Rs. 107-8 today before finishing As. 8 lower. On balance, the contract was higher by Rs. 2-4.

Among other seeds, *kardi* seed Bold ready shed As. 8 to Rs. 21-12. *Niger* seed Madras was quoted at Rs. 29-4, as against Rs. 28-14 last week-end.

The third and official forecast report on groundnut crop for 1956-57 in Andhra Pradesh estimates the area sown upto 25th January last at 3,109,000 acres. Compared with the final area of 3,071,000 acres for the previous year, the present estimate is an increase of about 1-2 per cent. The yield of the crop is reported to be reduced to some extent in the districts of Visakhapatnam, Krishna, Nellore and Cuddappah due to excessive rains received during the growth of the crop. The yield is estimated at 10,95,000 tons of unshelled nuts. Compared with the revised estimated yield of 11,52,000 tons for the previous year, the present estimate shows a decrease of 3 per cent.

The following table shows the prices of oilseeds and oils at close as compared with those at the close of the previous two weeks:

	3-4-1957	27-3-1957	20-3-1957
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
May 1957	171 6	172 8	173 8

SUGAR FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 3rd *April*

After displaying a somewhat easier trend early in the week following the usual monthly release announced on 28th March, the sugar market steadied up in the subsequent sessions. The chief helpful factor was the steadiness of the ex-mill quotations, thanks to good export business. Reduced arrivals of sugar into the market—being 12,000 bags, as against 22,900 bags in the previous week—also imparted strength. Consequently, the earlier losses were completely recovered, and today's rates were maintained at levels prevailing last week-end.

Spot small grain sugar was fully steady at Rs. 88 per bag, inclusive of sales tax, as also medium grain at Rs. 89-Rs. 91, and large grain at Rs. 93-97.

In the forward section, *Vaisakh* delivery contract for 'C' grade sugar which had receded earlier from Rs. 91-12 to Rs. 91-8 recovered subsequently to Rs. 92 under frantic bear-covering. It was, of course, a shade lower at Rs. 91-14 today.

KEEN DEMAND FOR BLACK TEAS

(From Our Own Correspondent)

CALCUTTA, 2nd *April*

An improvement in sentiment was recorded during the internal tea sales held last week. Dusts on offer amounted to 19,298 chests. There was keen demand for black teas suitable for Middle East consumption. The price for these teas also improved. Commons and orthodox Dooars possessing a clean black leaf appearance were steady. Good support was accorded to orthodox Assams, with black leafy teas receiving more attention. On the other hand, C.T.Cs lost 12 nP, and the dull fibrous teas were hardly noticed by buyers. The quotations were: Best Assams C.T.Cs Rs. 2.75, medium Assam C.T.C. Re. 2 to Rs. 2.12, medium Assam grainy dust Re. 1.69 to Re. 1.75, and medium Dooars Re. 1.12 to Re. 1.69.

Prices of leaf grades on offer, aggregating 4,009 chests, registered an upward trend.

JUTE GOODS FIRM

(From Our Own Correspondent)

CALCUTTA, 2nd *April*

Firm conditions prevailed in the jute markets during the week under review. Prices of jute goods recorded fractional gains, while lack of interest by mills led to a fractional recession in the prices of raw jute. Fair business was done for shipment, and the month of March was expected to record an improvement. From 1st to 20th March, sacking shipped had gone up to 27,000 tons, as against 14,200 tons only in the corresponding period in the previous month. Hessian was not as satisfactory as sacking, but all the same shipments at 20,100 tons were higher by 1,280 tons. It should be noted that shipments of hessian had declined to 28,170 tons in February from 37,445 tons in January, and those of sacking to 28,664 tons from 29,307 tons. There was the realisation in market circles that a part of the shipments done in the last month related to orders placed, while the Suez Canal crisis had reached its climax. The report that burlap consumption in the United States during February was as low as 62 million yards, as against 75 million yards in the previous month, did not cause any alarm, in view of the satisfactory figures relating to shipments as detailed above.

On Wednesday last, ready hessian 40" 10 oz. was steady at Rs. 40.50 and B. twills at Rs. 110. There were small inquiries and routine export business was done. Speculators showed keen

interest at this stage and, as a result, on Thursday B. twills rose to Rs. 110.37 and hessian 40" 10 oz. to Rs. 40.69. More business was done with shippers, and this resulted in the stabilisation of the earlier improvement in prices, following increased activity by speculators. In both hessian and sacking, further genuine business followed, and, on Friday, prices improved by another degree. Ready 40" 10 oz. hessian realised Rs. 40.75 and ready B. twills Rs. 110.75. These rates were the highest levels for the week under review. More business was done for forward positions. July-September B. twills at Rs. 111.87 added 87 nP and for the same delivery position hessian 40" 10 oz. at Rs. 41.25 added 25 nP. The market was closed on Saturday last and yesterday, being bank holidays for conversion of accounts to the decimal coinage system.

Mills showed little interest in raw jute, and prices were marked down. Indian northern bottoms at Rs. 28 gave way by 50 nP, and a similar recession was recorded in local daisee bottoms at Rs. 31.00.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 2nd *April*

There was no change in the kip market. Demand kept pace with arrivals at unchanged prices, though U.K. importers were trying in vain to buy at lower levels.

In the March London tanned skins public auctions, price of sheep skins recorded a decline of 3d. to 6d. on average parcels and 150,000 skins remained unsold. The next sale takes place on 6th May 1957.

In the local market, prices of tanned goat and sheep skins remained steady. Arrivals of market quality skins were small, and were expected to dwindle, due to tanners producing better class tannages which showed better results.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 1st *April*

Easy tendencies were discernible in the foodgrain markets during the past week and sharp losses were recorded in the prices of coarse grains in the wake of pressure of new crop arrivals. In sympathy, wheat and pulses also recorded a slight fall. The latest Government of India's policy envisages enough imports to meet the demand of the country and also to build up reserves against unforeseen demands due to droughts and floods.

Wheat lost As. 4 per maund during the week to Rs. 15-14 for average quality and to Rs. 17 for farm produce. Local stocks is now very poor, but, as stockists in producing centres want to sell their stocks, arrivals from villages have increased to an average of 50 maunds daily. Sales at the rate of 2 *seers* 12 *chattaks* per rupee continue at fair-price shops, the number of which has increased further. Prices would have gone up further if the fair-price shops, which now number over 19,000 all over the country, had not been opened. The demands of poor and middle classes is being meet at these shops. Harvesting of wheat has now begun in west U.P., while in east U.P., it is in full swing. Prices are expected to register a fall as soon as new crop arrivals begins in the markets.

Rice continues to rule quiet, due to comfortable supply position. On Monday, they were quoted at: *Basmati* Rs. 23 to Rs. 26-4, *Manipuri* Rs. 21 and coarse Rs. 16-4 per maund. With the increased arrivals of new crop gram from Madhya Bharat and lower Punjab advices influenced by good crop prospects there, gram prices registered a fall of Re. 1 per maund during the week. Fall in barley and *bejhar* prices was more pronounced, owing to increased new crop arrivals into the market. *Jowar*, however, ruled steady, due to poor stocks in the face of better demand for seed purposes, while maize and *bajra* ruled quiet owing to poor demand from the consumers. The prices as on Monday were (in rupees per maund)—gram from Punjab 12-14; from Madhya Bharat 12-10; barley 10; *bejhar* 9-8; maize 13-12; *bajra* 14; *jowar* white 13-10; brown 12-10; *guwar* 10-8.

Pressure of arrivals of new peas into the market accounted for a further fall in peas *dara* prices, as grinders for *dal* were the only purchasers and outside demand was dormant. Daily arrivals mounted to 1,000 maunds. Other pulses also recorded a subdued trend in sympathy with peas. The prevailing prices were: Peas *dara* Rs. 10-4; farm quality Rs. 10-14; *arhar* Rs. 12-4, *urd* Rs. 18 to Rs. 20; *moong* Rs. 13-8; *masoor* Rs. 15 per maund.

While *urd baisakh* delivery recorded slight gains during the week on scattered bull support, other Pulses futures eased. On Monday they were quoted at: Peas *jeth* Rs. 9-14-3; peas farm jeth Rs. 10-5-9; *arhar jeth* Rs. 10-14-6; *urd baisakh* Rs. 18-9.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, 1st *April*

Thanks to poor outside buying enquiry from consuming centres, and the further release of 167,000 tons of sugar for free sale, mill delivery prices of sugar were slightly depressed during the week under review. The production of sugar in the country is expected to touch a new high this season. Up to 15th March, production was put at 1,359,000 tons, as against 1,242,000 tons during the corresponding period last year. Stocks with factories on this date stood at 1,148,000 tons as compared with 1,028,000 tons last year.

The prevailing mill delivery prices as on Monday were:—Jaswant Rs. 28-10; Simbhauli Rs. 28-12; Mawana Rs. 28 to Rs. 29; Daurala Rs. 29-6, Amroha Rs. 28-4; Bijnore Rs. 28-3; Mansoorpur Rs. 28-10 to Rs. 30; Rampur Rs. 31; retail Rs. 30-10 per maund.

Khandsari prices declined further during the week on slack outside buying enquiry in the face of increased stocks. Prices were Rs. 19 to Rs. 23 per maund.

Ready *gur* ruled quiet. Arrivals were modest, the average being 600 maunds daily and local stock was put at 97,000 maunds, as against 69,000 maunds a year before. Harvesting of *rabi* crops being in full swing, arrivals are likely to go down further. Sowings of cane for the next season is in full swing and an increased acreage is expected. Prevailing prices are Rs. 9-12 to Rs. 10 per maund. Arrivals of *gur* and *shakker* into other markets are still heavy at an average of 10,000 maunds daily in Muzaffarnagur and 5,000 maunds in Meerut.

Future *gur* prices ruled quiet. The latest quotations for *baisakh* delivery were near the opening level of the week at Rs. 9-13-3. Business in *Asar* and *Fagun* delivery was started today. They were quoted at Rs. 10-8-3 and Rs. 9-13, respectively.

SURVEY

(Concluded from page 662)

as Dr. Maitreyee Bose, President of the West Bengal I.N.T.U.C. pointed out, on whether there is a clear understanding of the real implications of rationalisation. In fact, much of labour's opposition can be traced to the fact that the very word conjures up a picture of large-scale displacement of labour, unemployment and dislocations in the labour ranks. If, therefore, the ill-informed criticism and the adamant opposition of labour are to be made to disappear, it is imperative that modernisation of machinery and reorganisation of industry must be associated with diversification of production, finding of new markets, search for betterment and development of industries. The employees must also be educated in the scope for larger employment opportunities. At the same time, it is necessary to see that rationalisation is introduced gradually and without upsetting the present system of working in factories or the social structure. This aspect was particularly stressed by Dr. J. D. N. Yershluys, Deputy Director of the U.N.E.S.C.O. Research Centre in Social Implications of Industrialisation in South-East Asia. He suggested that it would be better if rationalisation schemes consisted of a range of relatively small changes. Training of workers to handle new and often complicated machines, breaking off of existing working groups and adjustment of workers to take higher responsibilities in manning intricate machines are some of the problems to be tackled while introducing rationalisation.

The general consensus of opinion at the Conference was that increased productivity and decreased labour cost could be secured by improved management technique on the part of employers and that this device should be fully explored. It felt that, in effecting rationalisation through the introduction of modern machinery and other labour-saving devices, some preliminary planning and thorough investigation of the conditions in the particular industry were essential. Further, it was considered desirable to have proper phasing of schemes and prior consultation with the employees and their organisations, so as to secure their co-operation and assistance in the successful implementation of the scheme. It would be advantageous, the Conference pointed out, if an agreement on details of the scheme were arrived at and a clause providing for voluntary arbitration to remove doubts and to interpret the agreement were included in it. Wherever necessary, suitable arrangements should also be made for training workers to fit into changes inherent in rationalisation. The Conference also felt that due consideration should be given to the question of sharing of gains of rationalisation among capital, labour and consumers. It maintained that rationalisation should, as far as possible, be planned in such a way as to eliminate retrenchment and, where retrenchment was inevitable, efforts should be made to secure alternative employment for such persons in active co-operation with other employers and the State.

Steps taken to expand national shipping tonnage during the second Five-year Plan were detailed in a statement laid on the table of the Lok Sabha by the Union Deputy Minister for Transport and Railways last week. According to the statement, the policy of giving loan assistance to Indian shipping companies for acquisition of tonnage has been continued. A second shipping corporation, the Western Shipping Corporation, has been set up entirely in the public sector for acquisition of tonnage and entering into certain overseas trades. Firm commitments by way of loans to the private sector companies and the investments in the public sector companies have been made to the full extent of Rs. 37 crores provided for the development of shipping under the second Plan. Efforts are now being made to secure additional funds for the same purpose. Government assistance to Indian shipping companies by way of allotment of Government-owned controlled cargo is being continued.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.= Deferred shares. P.O.= Preferred Ordinary shares. Y= Accounts published yearly. H.= Accounts published half-yearly. P.= Company has Preference shares. T.= Company has Debentures. N.= Nominal quotations. x.d.= Ex. Dividend. c.d.= Cum. Dividend. i.= Interim Dividend. f.= Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

M—Managed by the Board of Directors. † Less income-tax. z) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year 1955. * Including bonus. (k. Investment
(l) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 3,40,000 shares of which 1,20,000 shares are bonus shares. (c) For seven months ended 31st March.
‡ New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.
The William Jute Co. has sub-divided ordinary shares in Rs. 10/- to shares of Rs. 10 each.

FIRST NATIONAL CITY BANK OF NEW YORK

PROFIT OF INDIAN BRANCHES A SHADE LOWER

THE year 1956 represents the first full year of working of the First National City Bank of New York, after the merger of the National City Bank of New York and the First National Bank of the City of New York on 30th March 1955. The results of the integrated unit during the first nine months of its working disclosed that the expectation held at the time of the merger, that the activities of the two banks would broaden and complement each other and that the growth potential of the merged institution would be greater than that of the two banks separately, has been fully realised. The Bank's performance in 1956 confirms that the merger has been amply justified, with a further expansion in business and a strengthening of its financial position.

The total resources of the Bank at the end of the year amounted to $7,426.98 million, as against $7,001.30 million a year before and $6,323.10 million (of the National City Bank of New York) at the close of 1954. Deposits, which had grown from $5,639.19 million to $6,308.78 million at the end of 1955, expanded further to $6,672.39 million. Loans and discounts rose to $3,708.10 million from $3,184.56 million, to which level they had gone up from $2,337.06 million at the close of 1954. It will thus be noted that, while deposits were up by only $363.61 million, loans and discounts rose by no less than $523.54 million and this rise in advances was duly reflected in the fall of $373.32 million in investments in Government and other securities. Cash balances, gold and dues from banks, were, however, higher by $244.96 million at $1,861.53 million. The undistributed surplus profit shows a further rise from $60.01 million to $69.38 million.

The audited accounts of the Bank's Indian branches show that its turnover improved substantially during the year under review, as witness the rise in the balance-sheet total from Rs. 8.94 crores at the end of 1955 to Rs. 10.20 crores. The year's profit, however, shrunk slightly from Rs. 15.76 lakhs to Rs. 15.41 lakhs. This decline, albeit small, is in distinct contrast to the general trend of profits of Indian Scheduled banks and the marked increase noted in the Bank's own profit in 1955. Nevertheless, the year's profit is well above that of Rs. 9.89 lakhs for 1954.

The following comparative table brings out clearly the progress of the Bank's working during the past two years:

(In lakhs of rupees)

	For the year ended 23rd December 1956	1955	1954
Interest and discount	37.78	30.15	22.48
Commission and exchange ..	25.14	24.78	19.80

Advances	88.2	79.8	78.9
Investments	14.2	12.5	12.1
Cash	8.8	10.4	12.0

*Government securities lodged with the Reserve Bank.

The Bank's deposits in India have grown by only Rs. 13 lakhs, and even this is mainly due to the rise of Rs. 97 lakhs (to Rs. 4.43 crores) in fixed deposits and of over Rs. 11 lakhs (to Rs. 11.42 lakhs) in savings bank deposits. Current and other accounts have, on the other hand, dwindled by Rs. 95 lakhs to Rs. 3.19 crores. As against this, advances have risen by Rs. 75 lakhs, following the increase of Rs. 52 lakhs noted in 1955. This relatively larger increase in advances has been responsible for the larger borrowings from other banks, which, over the year, are higher by Rs. 65 lakhs and the fall of Rs. 17 lakhs in cash balances. The shrinkage in cash balances has

LONDON LETTER

PRE-BUDGET COMMENTARY

From Our Own Correspondent

LONDON, 31st *March*

THE country approaches the budget divided but buoyant. Unions, employers and Government have yet to agree on the strike settlements, but one thing is certain, that there will be bigger wage packets at the end of it. It is hard to seek how a further dose of mild inflation can be avoided. Not only this, but it is generally supposed that the Prime Minister and Chancellor of the Exchequer together are going to try to give the country a Tory fillip to see how far they can stimulate enterprise by reducing taxation on the *entrepreneur* class.

The year that has just closed has shown revenue and expenditure both up on the previous year. Revenue is £265 million higher, expenditure is £372 million higher and, against the budget surplus in 1955-56 of £397 million this year, there are £290 million on the credit side. This is not quite as high as originally estimated, principally because of various supplementary expenditures, but rising revenue as ever in recent years has proved capable of taking care of the greater part of the increased expenditures. Income-tax and surtax between them have produced more than anticipated and nearly 10 per cent. more than the year before. Customs and excise duties have been equally buoyant.

But, of course, the revenue and expenditure budget is not the only way to look at the nation's finances, and it is not the only way in which the Chancellor will look. We must also take into account the very large bill for what is known as "below the line" expenditure; that is capital payments by the Government which, some way or other, ought to be met by increased savings, if they are not to be inflationary in effect.

A year ago, the Government estimated that they would invest something like £800 million. In the event the local authorities responsible for roads and housing and the nationalised industries invested less than expected and the total of Government advances turned out in the end at little more than £600 million.

If one offsets the Government's capital expenditure against its current revenue surplus, there is a deficit of £330 million. This is a few million less than was budgeted for a year ago, so that, broadly, the Chancellor can say that the overall national finances has worked out according to plan.

How far do the national financial results give a guide to the forthcoming budget? Unfortunately, not far. Chancellors in recent years have always budgeted for big surpluses as an anti-inflationary measure. If the Chancellor were guided by the usual considerations he would no doubt say that there was no room for tax remissions and he must work for another big budgetary surplus. The Chancellor *could* even say that he wants to balance the whole of his "below the line" capital expenditure against a revenue surplus and thus go for a strict deflationary budget; but he is unlikely to take either of these courses. If he is determined to provide incentives, then he can look at the whole of his budgetary surplus on current account and give tax remissions where they will do most good from the point of view of productivity and exports, to the full extent that the estimated revenue and expenditure permit—leaving himself with only a small accounting surplus. In this case, the whole of the Government's forthcomiag "below the line" capital expenditure would have to be financed out of current savings and his budget could contain provisions to stimulate this.—*All Rights Reserved.*

INDO-FINLAND TRADE AGREEMENT

On 21st March letters were exchanged in New Delhi between the representatives of the Government of India and the Government of Finland extending the trade agreement between the two countries until 31st December 1957.

The relations between the two countries will continue to be governed by the letters exchanged between them in January 1951 and again in September 1952. Appropriately, the present agreement has been concluded at a time when an official goodwill delegation from Finland is touring India to reciprocate a visit by a similar Indian delegation to Finland in 1956.

The important items in the list of exports from India to Finland are tobacco, hides and skins, cashewnuts, spices, jute goods, tea, coffee, shellac, coir yarn and manufactures, fibre for brushes and brooms, myrobalans and extracts, vegetable oils, handicrafts and cottage industry products, cotton textiles, coal and iron ore. Among the items available for export from Finland to India are mechanical and chemical wood-pulp, newsprint, various kinds of papers and paper products, boards, stationery, household and sanitary porcelain, steel files, machinery for farming, woodworking, plywood, road-making, etc., and electrical and telecommunication cables.

The impressions gained by the five-member delegation sponsored by the Engineering Export Promotion Council to explore the possibilities of finding markets for Indian goods in African countries confirm the belief that there is good prospects for the export of engineering goods like diesel engines, pumps, agricultural implements, tools, electric fans, sewing machines, abrasives, bolts and nuts, buckets, builder's hardware, etc., to countries like East Africa, Ethiopia and the Sudan. The delegation attempted to focus the attention of the countries which it visited on industrial development in India and sought to create an interest in Indian goods.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

TASK AHEAD OF KERALA

ALL eyes are now set on Kerala where the Communist party, having emerged as the single largest party in the recent elections, has assumed office for the first time in India's brief constitutional history. Of the total electorate of 7.5 million, 5.2 million exercised their franchise. The Communist party polled 1.99 million votes and captured 60 seats, as against 2 million votes polled and 43 seats captured by the Congress. Thus, the party has captured a disproportionately large number of seats as compared with the number of votes polled. This is one of those strange puzzles, commonly met with in electoral arithmetic. Be that as it may, the party is now in a position to form a government, thanks to the help of a few independents. Commenting on the election results in Kerala, Mr. Nehru recently said that they reflected discontent with local matters—local issues and irritations—and not so much positive support to communism. May be this is true, but the fact remains that the party is the only political body which is in a position to deliver the goods.

The fear has often been expressed that the party's political and economic policies may tend to be dictated by certain foreign countries. This fear has now been dispelled by the party spokesmen, who have averred that they will have no association with foreign powers, It is to be hoped that the party will observe this assurance in practice. Since in communist dialectic and practice ends are more important than the means, the question which would naturally be asked is whether the party will use the democratic ladder to reach its destination and thereafter kick the ladder by which it moved up. Again, the party spokesmen have made it clear that the Government of Kerala will function within the four corners of the Constitution. One, however, feels that this assurance has been given with a certain mental reservation. The party's leaders have declared that it is for the Union Government to show that it would respect the Constitution and help build up healthy conventions. Here is a suggestion that it is the Union Government, and not the Communist party, which might not respect the Constitution. This is, to say the least, a strange suggestion. A spokesman of the party has affirmed that, though the Ministry would function within the ambit of the Constitution, it did not mean that it would deviate from the cherished principles of Marxism, Leninism and Stalinism. Now the question arises as to what will be the party's attitude when the Constitution comes in the way of carrying out its Marxist, Leninist and Stalinist policies. Only time will show whether such conflicts will arise and how they will be resolved.

There is, however, no denying the fact that Kerala's economic problems are somewhat intractable. The pressure on land is acute, opportunities for employment are strictly limited, the level of industrialisation is relatively low, the percentage of literacy is comparatively very high. The ground is thus somewhat fertile for the growth of extremist political ideologies. Unless living standards are raised and the region's economy is improved and diversified, discontentment is bound to grow. The Central Government, on its part, has given the assurance that it will not deny to the State any assistance on the ground that it is run by a political party which is different from the Congress. This shows how the democratic Centre is prepared to work. But the Communist party seems to speak with two voices. At one time, it gives the assurance that it will work within the four corners of the Constitution and, at another time, it accuses the Central Government of being averse to certain changes in the Constitution. It remains to be seen whether it will be able to persuade the Central Government to change the Constitution in the way it wants. Clearly, the party wants to change the Constitution in order to introduce certain economic measures which it thinks are essential in the interests of the State. It is this factor which is bound to cause serious misgivings. It is up to the Central Government to remain firm on this issue and to see that Constitutional changes are not brought about merely for the sake of serving party expediency, rather than national interests.

The Chief Minister of the State, Mr. E. M. S. Namboodiripad, has declared that the party is under no illusions that its programme can be easily implemented through "orders issued by the Government one fine morning." If this suggests that the Ministry realises the value of hastening slowly in its economic reforms, it is all to the good. But some of the more recent utterances of the Chief Minister, especially those concerned with the nationalisation of foreign-owned plantations, point to the fact that the Ministry is inclined to regard economic tasks with much unnecessary political fervour. Particularly disturbing is the reported statement of the Chief Minister that in matters of nationalisation the model to follow is President Nasser of Egypt. Apart from the wisdom or otherwise of choosing Mr. Nasser as a model, it is clearly absurd for a federating unit, which is an integral part of a wider political entity, to think in terms of imitating a foreign independent power.

Be that as it may, the State Government's reasons for nationalisation of foreign-owned plantations are not convincing, to say the least. Accusing the Centre for not being able to see eye to eye with the State in the matter of nationalisation of these plantations, the Chief Minister said that the "Centre is not prepared to discuss the question of ending foreign domination in such a vital sector of economy as plantations on the sole consideration as to whether such a step will benefit Kerala from the financial and economic point of view." He added: "The Central Government takes its stand that plantations could not be nationalised even if by this single step Kerala can get several crores of rupees to be used for its development." This is a total misreading of the situation, besides being a total misrepresentation of the Central Government's attitude. The policy relating to plantations is best left to the Centre for decision. It is unwise on the part of a State Government to follow a unilateral policy in regard to plantations which are dotted all over the country. Further, there can be only two valid grounds for nationalisation of an industry. An industry is fit for nationalisation if it is proved that it is incapable of undertaking modernisation and expansion on its own. The other ground on which nationalisation can be justified is that the industry singled out for nationalisation has been so grossly mismanaged that matters cannot be set right through the normal process of legislation.

The nationalisation of foreign-owned plantations cannot be justified on either of these grounds. For it cannot be contended that foreign-owned plantations are not well maintained or they are hopelessly incapable of expansion and modernisation. It is true that they, like all industrial units in India (Indian or foreign-owned), need large resources for further expansion, but, given the necessary incentives, they will be able to go ahead much faster than they have been doing. In any case, expansion of these plantations will require money. The State Government cannot argue that it wants finance for nation-building purposes and at the same time spend money and make a call on India's limited foreign exchange resources in paying compensation and take over plantations which would require additional fin-

ance for further development. The only way out of the dilemma is to enable the plantation industry to acquire the resources it needs for further development so that it is able to expedite its expansion programmes and thereby create additional opportunities for fresh employment and also make a larger contribution to the State Exchequer. Nor can nationalisation of foreign-owned plantations be justified on the ground that they are ill-managed. In fact, it has been recognised by many impartial observers that many of these plantations represent models of good and efficient management.

Further, the State Government will be well advised to examine the impact of any decision to nationalise foreign-owned plantations on foreign and domestic capital. It requires no great far-sightedness to realise that such a decision will be interpreted not merely as a socialist measure but as a vexatious form of racial discrimination. It is bound to have far-reaching repercussions on national economy by stifling the flow of foreign capital at a time when the country can ill afford to do without external assistance. Besides, in the event of the decision being implemented, even domestic capital is bound to treat Kerala as "out-of-bounds" territory. For it will certainly read the writing on the wall and will not venture into Kerala for fear that it will not be long before it gets similar treatment to that which is meted out to foreign capital. In fact, it is easy to foresee a flight of capital from Kerala, which would only make things more difficult for the Government.

After all, Kerala, as even several communists have themselves realised, needs private capital. It would appear that the party would invite individual industrialists inside and outside Kerala to start new industries and the State Government would extend "all help" to them. In the course of a recent debate in the Rajya Sabha, a communist member revealed that the State Government would continue the negotiations already initiated for purposes of starting a cycle factory in Kerala. He also made a strong plea for large-scale exploitation of Kerala's forest wealth. He even announced that communists were prepared to come to an "industrial truce" in Kerala. All these soft words, carrying assurances to the private sector, will mean nothing, if the authorities show scant regard for capital already invested in the State.

The Chief Minister will, therefore, do well to learn the importance of the inevitability of gradualness in carrying out his economic reforms. He will in fact be creating more problems than he solves by pursuing the policy of hasty and ill-conceived nationalisation measures. It is, of course, right that he should claim from the Centre such assistance as he thinks is due to the State. Perhaps, he is on firm ground when he suggests that some States are getting a part of the Centre's income from industries concentrated or localised in the States concerned and that similar treatment should be meted out to Kerala in respect of coconut, pepper, rubber and other produce. The Chief Minister will also do well to institute such land reforms as will ensure larger production and higher levels of income for the farmers. But, by and large, Kerala's problems can be solved only through a rapid process of industrialisation. It is only large and efficient industries that would provide opportunities of employment for Kerala's youth. Such industrial progress cannot be brought about by the State taking upon itself all responsibility for further economic progress. All this means that the State, in the interests of its people, should learn to temper its political ideology by a sober consideration of the hard realities of the State's economy. To attempt to do too much with too little resources and in too short a time is to court economic disaster.

FISCAL REFORM

BY asserting that the disincentive effect of higher taxation on the will to work of higher-income groups was generally exaggerated, the Taxation Enquiry Commission has probably hardened the Government's attitude towards fiscal reliefs more than it intended. It is frequently forgotten, if not deliberately ignored, that the Commission was inclined to disbelieve only exaggerated accounts of the disincentive effect of higher taxation, though, in all probability, it would not have gone so far as to deny altogether the existence of such effect. However, ever since the Commission's remark gained currency, it has become somewhat difficult to convince the Government of the need for, and the importance of, liberal tax reforms. Because the assessees tend generally to emphasise the points where the tax system affects them most adversely, without making any corresponding effort to draw the attention of the Government to how the tax revenues could be augmented without seriously impairing incentive for effort, the authorities have been prone to ignore all pleas for fiscal relief on the ground that they represent nothing more than ordinary human failing expressing itself in the shape of demands for additional benefits from the taxing authorities. The memorandum on taxation policy, submitted to the Government by the Associated Chambers of Commerce of India, falls happily into a different category, in that, while it both indicates and justifies the possible lines of tax relief, in respect of direct and indirect taxation, it also suggests the measures which the Government could take in order to improve its revenue. The memorandum, therefore, deserves the serious consideration of the fiscal authorities in the country.

The two unexceptionable contentions on which the Chambers base their memorandum are:

(1) All classes of the population which benefit from the increase in the national income resulting from the Plan should contribute a fair proportion of the increase in the form of taxes to the State.

(2) The burden of tax on particular sections of the community should not stifle the growth and development of productive enterprise on their part, but should rather be adjusted so as to encourage the saving and investment of resources in advantageous ways.

In the Chambers' opinion, the present system of taxation is defective, in that not only is a very small part of the increase of income in the country being taxed, but what is being taxed is excessively taxed. It is the Chambers' view that it is of vital importance that there should be such changes in the form and incidence of taxation as will remedy these defects. The Chambers' general proposals are designed to broaden the tax structure, to reduce the present level of tax on incomes, particularly personal incomes, and to improve the efficiency and coverage of the tax system.

Emphasising that the classes assessed to income-tax carry too large a share of the national tax burden, the memorandum points out that, in 1952-53—the last year for which returns are available—the total number of assessees was 900,406, of whom 444,773 were salaried employees and, of the rest (excluding the comparatively small number of companies), the majority were engaged in business and professions. The incidence of tax on personal income, it rightly holds, is now so heavy that it is arguable that a stage of diminishing returns has been reached. In fact, the Government has tacitly admitted that the magnitude of this burden is large, that it has provided incentives in the shape of tax-free arrangements to foreign technicians working in this country. Since the encouragement to work, save and invest must be a primary consideration of tax policies during the next decade in this country, the memorandum has stressed the need for incentives for individuals who will be of vital importance during that period, namely, the administrative, managerial and professional classes.

Accordingly, it has suggested that there should be a general reduction in the burden of personal taxation, in the first instance, at least to the levels in force up to 1953-54. The differentiation between the treatment of earned and unearned income in the higher-income groups should be restored. The amount of earned income relief should be increased and such relief should be allowed for super-tax as well as income-tax purposes. Again, the employers' contribution to provident funds and interest on provident funds balances should be wholly excluded from employees' total incomes and relief in respect of employees' contributions and life insurance premiums should be allowed for super-tax as well as income-tax. Contributions by an employer out of taxed profits to provide for employees' pensions should be exempted from assessment as income in the hands of the employee. There is no doubt that these suggestions broadly represent the considered and moderate views of all those administrators, technical experts and executives who have now been subjected to a disproportionately large tax burden.

The chief contention of joint-stock companies in this country has been that, while the Government expects them to make an increasingly important contribution to national activity, its tax imposts leave little finance out of their profits which could be used for purposes of expansion. And the fact that high dividends and bonus shares attract penal tax provisions means that joint-stock companies cannot create a climate in which they could attract the savings of private investors to themselves. The Chambers' memorandum affirms that the present corporate tax policy, although it provides relief in the form of development rebate in respect of new machinery, would appear to contemplate that, to a large extent, increased working capital must come from banks or other loans. Since the extent to which such loans will materialise is problematic, the solution, in the Chambers' opinion, lies in the accumulation of profits by companies. It argues that the portion of a dividend tax based on the percentage of the paid-up share capital which is distributed as dividends is a denial of a justification for, and even of the rightful existence of, the joint-stock company system and is bound in time to impede the functioning of markets.

Its suggestions for reform of the tax system are all designed to provide the necessary incentive for better performance by joint-stock companies. Again, the memorandum, after discussing the vexed position of companies governed by section 23A, has suggested that the section should be replaced by a new section which would be restricted in its operation to companies where it is clear that one of their main purposes is to accumulate incomes by avoiding distribution to individuals who are liable to super-tax. Further, the new section should not apply to a company which is not a private company within the meaning of the Companies Act and the shares of which carrying no less than 33⅓ per cent. of the voting power have been allotted to the public. The need for amending section 23A arises from the fact that there are several companies which are caught by this section at present, although their shares, valued in the aggregate at several crores of rupees, are owned by thousands of small shareholders. The section, in its present form, prevents the accumulation of profits by these companies for purposes of development.

As regards indirect taxation, the memorandum recognises the justification for an increase in such taxation. It supports the Government's policy of making increasing resort to excise duties which it regards as a fruitful source of revenue. It suggests that the Government should give further serious consideration to the rationalisation of sales tax through the introduction of a uniform centrally administered tax which would replace existing single and double point taxes, reduce the harassment of the taxpayer, and ease the burden on the State administration. It urges consideration of the need for re-imposition of the salt tax. This levy, as is well known, has been the subject of great political controversy. But it is certainly time the Government revised its attitude. If it so chooses, the Government may set apart the revenue from this duty for such purposes as Harijan uplift or rural education or community projects. Among other suggestions are a tax on non-local rail passenger traffic, stamp duty on cheques (As. 2 per cheque), tax on share transfers (2 per cent. *ad valorem*), increase in postal charges and increase in land revenue and development levy.

A suggestion to which we would particularly draw the Government's attention is the institution of prize bonds and State lotteries. The memorandum says:

> "The Chambers think that there is every justification for the resort to unconventional methods of securing revenue and, bearing in mind the importance which State lotteries assume in many countries, they would suggest that consideration should be given to similar organised lotteries in India. The recent adoption in the United Kingdom of a system of prize bonds to stimulate the savings movement might equally be followed here."

It is well known that the belief in "good luck," "fortune" and "destiny" is both widespread and ingrained in the Indian public. And there is no reason why the Government should not turn this belief to good account. So far as we know, no inquiry has been instituted into the extent of public indulgence in lotteries of foreign origin, crossword puzzles and races. Following the judgment of the Supreme Court this week, which expressed the view that prize competitions were of a gambling nature and could not be regarded as trade or commerce within the meaning of Article 19(1) (*g*) of the Constitution, it may be expected that prize competitions will decline in importance. Before the public is led to more reprehensible forms of gambling, the Government will perhaps do well to examine how best it may utilise as well as control the "gambling instinct" through a well organised system of State lotteries or prize bonds.

SHARE MARKET RECOVERS SLIGHTLY

FISCAL RELIEF IN U.K.—CORPORATE TAX—SHREE GOPAL'S NEW ISSUE

THURSDAY, 5 P.M.

THERE has been a slight improvement in the share market during the last few days. Since Friday last, values have gained some ground. There is, however, no indication to suggest that the worst is over and the recovery can gain momentum in the coming weeks. For the extent of recovery is only small compared to the loss sustained since the last interim Budget and there is much ground to be covered before shares are restored to the levels touched on the Budget day. This is because confidence has not revived to any notable extent. The improvement has been brought about by technical factors rather than by any fresh bullish news. The bears seem to have realised that it is more prudent to book their profits before they pursue their game. But the bulls are hesitant to follow the rise, in view of the Budget uncertainties, the growing stringency in the money market and the absence of any brisk offtake of cloth from mills and traders. There has, therefore, been sizable profit-taking at the bulge, with the result that the closing levels are well below the week's high.

MARKET GOSSIP

The recovery in Tata Steel ordinaries from Rs. 163.25 touched on Friday last to Rs. 170.25 today, before closing at Rs. 168.00, is indeed noteworthy in the context of the call made by the Company for the payment of the second and final instalments on the new issue, for which the shareholders will have to find nearly Rs. 4 crores before 1st June. The rise in the new shares during the last two days from Rs. 113.25 to Rs. 119.00 is even more encouraging. This is said to be based on expectations that the management might consider the postponement of the date of payment of the second call money, in view of the extreme stringency in the money market and the difficulty of shareholders to find the necessary funds. It is stated that, before doing so, the management might find out the ways and means position and also consult the World Bank authorities under the terms of the agreement. If the Company does so, it will be a welcome relief to the shareholders, inasmuch as they will have some time for making their final payment. The question is how long the Company can postpone the payment date, considering that the money market does not show any sign of relaxation. Another factor which the Company has to take into consideration is whether it will be assured of the payment in full even after the postponement, in view of the fact that the Central and State Governments will be in the market in the next few months. If, however, the Company's ways and means position shows that it requires funds immediately, it may be compelled to insist on payment before the due date and allot the new shares not taken up by the holders of the existing ordinary shares.

Indian Irons have been remarkably steady during the last two days, notwithstanding the large issue of the Company which is hanging on the market and which has been a heavy drag on it all these days. This steadiness, almost on the eve of the last day for payment of the issue, that is, 15th April, has given rise to hopes that there might be a slight upward revision of the dividend on the old shares, in view of the fact that the Company's earnings for 1956-57 would be far more encouraging than in the previous year and that the new shares will not qualify for dividend in respect of 1956-57 and have to wait for another year before earning the dividend. This, however, requires the Government's permission and it remains to be seen whether the Government which turned down the request las year will agree to such a revision.

The presence of the Finance Minister in the City and his discussions with the Reserve Bank officials have given rise to various conjectures. It is believed that he might announce some measures by which the present monetary stringency can be eased and more money can be made available to industry and trade. Whether this presumption is correct or not, there is no doubt that the question must be uppermost in his mind and, even if the object of his visit is something else, he may take the opportunity to study the market climate for his borrowing programme. Indeed, the Finance Minister has rendered his task more difficult this year by having shaken completely the investors' confidence by his fiscal measures. If the present trend in the money and gilt-edged markets persists for the next few months, the chances of the Government's success in its borrowing programme will be bleak. It may be that the Government will try to force the loans on institutions. It is doubtful whether the Government will meet with much success in this way, because institutions will surely resist lending to the Government at 3½ per cent. when they themselves are borrowing from the Reserve Bank at 4 per cent. There are, therefore, only two alternatives open to the Government if its borrowing programme is to be successful. One is to agree to lend to banks at 3½ per cent., as against the present rate of 4 per cent., and this is most unlikely. The second is to raise its own borrowing rate from 3½ per cent. to 4 per cent. It may be that this will affect the existing securities and put the holders to some capital loss, but this cannot be helped, if the Government relies on borrowing to provide a substantial part of the finances for its development programmes.

Mr. Peter Thorneycroft, Britain's Chancellor of the Exchequer, presenting his first budget to the British Parliament, this week, has found it possible to announce a series of welcome tax reliefs. Although these reliefs perhaps fall short of what the Chancellor and his party would have themselves liked, it is easy enough to see that in the context of domestic inflationary pressure and the international situation no Chancellor could have made more liberal concessions. The Conservative Government has a record of massive achievements to its credit in that it has worked successfully and unceasingly for freeing the economy from the stranglehold of physical controls and rationing. The modest incentives, now offered, to taxpayers and certain classes of companies are designed at least partially to ensure the provision of the necessary incentives for the maintenance as well as expansion of productive effort.

Having assured himself that some concessions are both necessary and possible, the Chancellor has used great discrimination in the choice of the sectors in British economy which should benefit from the liberalisation measures. Britain's superannuated men will thank the Chancellor for setting special income-tax exemption limits for the aged which will be £250 per year for single persons of 65 and £400 for married couples where either husband or wife has reached that age. The taxation allowance for children will remain at £100 for a child under 12 but will be increased to £125 for older children and to £150 from the year the child becomes 17. The starting point for surtax for married couples will be £2,100 as against £2,000 at present. A further concession will involve the extension of the two-ninths of earned income allowance from the present limit of £2,000 a year to £4,000 a year; after the latter limit, the allowance will be one-ninth until the £10,000-a-year mark is reached. The Chancellor has abolished the tax on living theatres and sporting events and reduced that on cinema seats. Purchase tax on kitchenware has been reduced from 30 to 15 per cent. In order to help shipbuilding, which has been affected recently by strikes over wage demands, he has increased the investment allowance for expenditure on new ships from 20 per cent. to 40 per cent. Further, to discourage the flight of companies abroad, he proposes that trading corporations managed in Britain but operating abroad—other than shipping and financial institutions such as banks and insurance companies—will be exempted from income and profits tax on their overseas trading profits. Despite these concessions, the revenue for 1957-58 is placed higher at £5,387 million, as against £5,158 million in 1956-57; the expenditure estimates are £4,827 million and £4,868 million respectively.

The twin problems of British economy are the holding of the price line and promotion of exports. The chief obstacle in the way of maintenance of prices is the growing demand for higher wages. Mr. Thorneycroft has warned that Britain had been "trying to get more out of her economy than she had been putting into it." He says that, between 1955 and 1956, the nation's output had increased by £1,200 million in money value but only by £240 million in real terms. So far as the current balance is concerned, the position no doubt improved considerably last year. Thus, the year 1956 witnessed a surplus of £233 million, as compared with a deficit of £79 million in 1955. On the other hand, the accounts relating to long-term investment transactions showed a net outflow of £191 million in 1956 as compared with £163 million in the previous year. The point to be noted is that the 1956 current surplus, sizable as it was, was still inadequate to enable the country to meet all its overseas commitments and to start to build up sufficiently strong reserves. The country, as the Economic Survey warns, will have to earn more in order to pay for the increased imports which will be needed when the expansion of industrial production is resumed.

It must further be remembered that the drawing of $561 million from the International Monetary Fund will have to be repaid by 1959. In this connection, the Survey observes: "Our prospects, therefore, depend mainly on our success in the expansion of exports. The very heavy investment of the last two or three years has improved our industrial efficiency and expanded our capacity. Investment by private industry is likely to remain this year at about its present high level, and investment in the basic services of fuel, power and transport (including new road building) is expected to increase. Thus, our equipment for a further export drive has been considerably strengthened. With good prospects for world trade, and with a record of rising exports, the external conditions for a successful year are already present. Internally, high savings and all possible restraint in Government expenditure should create a situation favourable to the export effort and help us to avoid any undue increase in the level of imports when expansion is resumed." Exports must, therefore, necessarily be increased more rapidly than in recent years. It is true that the market for many of the goods the U.K. produces is vast. But it is also true that the country will have to reckon with competition from other main manufacturing countries which, as recent experience has shown, is bound to remain keen.

• • • •

Elsewhere in this issue (*vide* leader page) we have drawn the attention of our readers to some of the salient features of the memorandum on taxation policy submitted by the Associated Chambers of Commerce of India to the Government. It will be seen therefrom that the memorandum contains a large number of constructive suggestions which are designed to improve the system of taxation with a view to giving the necessary fillip to industrial and trading activity in this country. There is one aspect of the memorandum which deserves special notice in these columns. This refers to corporate taxation. The memorandum rightly holds that there is no field of enterprise in which the encouragement of saving and the expansion of real capital and productive capacity are in general so closely linked as in joint-stock organisation and none in which less consideration appears to have been given to the logical applications of principles to attain these ends. Among the different fiscal burdens on corporate enterprise, to which the memorandum has drawn attention, mention must be made of dividend tax. The fact that any dividend is expressed as a percentage of a nominal figure of capital is irrelevant to a shareholder who has purchased his shares on the market (and that is, the very large majority of shareholders), for what is important to him is the percentage return which the amount of the dividend represents on the price which he has paid for the shares on the market. The worst effects of the present sysem of taxation of dividends will only emerge after a year or two.

But meanwhile, it is, as the memorandum points out, obvious that this system imposes a penalty on the shareholders of those companies which, having conducted their affairs successfully in the past, have followed a conservative dividend policy and have built up substantial reserves; it is indeed paradoxical that a Government which desires to encourage just such a policy for the future should aim to enforce it by levying proportionately higher taxes against those who have followed that very policy in the past. The company which is over-capitalised and/or which is badly managed or is not employing its capital to the best effect will be unaffected by those penal rates of super tax. The memorandum submits that such a policy must be contrary to the national interest in the long run.

In the light of what is stated above, the Chambers make the following suggestions for changing the system of taxation of dividends:

(*a*) The base on which the percentage dividend is calculated for taxation purposes should be the total capital invested in the company, i.e., paid-up share capital plus premiums on shares issued plus all reserves, except those arising out of revaluation of assets.

(*b*) No additional tax on dividends should be payable if the dividend paid does not exceed a standard rate of dividend; such standard rate to be either: (i) six per cent. per annum of the total capital invested in the business, computed as above; or (ii) the actual average rate (on paid-up share capital) at which dividends were declared during the three accounting years ended on or before 31st March 1956—whichever may be the higher.

(*c*) With a view to encouraging new companies (which for this purpose may be taken to be companies formed on or after 1st January 1950), any deficiency in dividends below the standard rate of six per cent. per annum should be allowed to be carried forward so that any higher dividend declared in later years should, up to the extent of that deficiency, not attract any additional tax on dividends.

The memorandum has earnestly urged the Government to re-examine the system of taxation of corporate earnings with a view to reducing the charge on undistributed profits, redistributing the whole burden of corporate taxation and simplifying the whole structure. With this end in view, it has made the following notable suggestions:

(*a*) Income-tax should be charged at a standard rate on all company profits as at present. (*b*) Super-tax (corporation tax) should be charged at a standard rate on all company profits with substantial relief for undistributed profits. (*c*) Multiple corporation tax should be eliminated; the tax should be a single-point tax so that dividends paid by a company would not again be charged to super-tax if the recipient was another company, whether distributed by such other company or not. (*d*) The difference in the effective rates of super-tax on Indian and non-Indian companies should be eliminated. (*e*) Income-tax at the present company rate should be deducted from all dividends paid to shareholders; tax deducted from dividends will be retained by the company until the profits out of which they are paid are assessed and the company would then pay to Government any excess of the tax deducted from the dividend over the tax payable on its profits. (*f*) As a corollary to the procedure outlined in (*e*), shareholders should obtain credit for tax deducted from dividends at the standard rate, irrespective of whether or not the paying company has any assessable profits. (*g*) The present system of taxing companies in respect of dividends paid by the withholding of super-tax rebates should be discontinued and be substituted by an additional corporation tax or dividend tax over and above the standard rate calculated on the lines already indicated. (*h*) The present system of taxing companies in respect of bonus share issues should be discontinued.

An irksome provision in the Income-tax Act, as all corporate assessees know only too well, is section 18A which deals with advance payment of tax. This section which was inserted in 1944 as a war-time measure in order to mop up surplus profits has continued to remain on the Statute book though the original emergency which gave it birth has perhaps altogether ceased to exist. A suggestion for modest reform of this section has been made by the memorandum. It points out that, when tax rates are stable, the business community can plan its level of activity and working capital requirements on the understanding that section 18A will extract a certain amount of tax from profits as they arise. However, increased taxation with

EQUITIES IMPROVE

HESITANCY AT HIGHER LEVELS

(From Our Own Correspondents)

BOMBAY, 11*th April*

EQUITIES moved erratically during the week under review, but the trend was upward and modest gains were recorded in many counters. The recovery was mainly due to short-covering and some buying attracted by the low levels. Expectations that there might be an easing of the monetary stringency through increased money supply—this hope was based on last week's expansion of Rs. 37 crores in note circulation—and baseless rumours that the Budget might be postponed also improved sentiment. The closing prices were, however, below the week's best levels, as extreme gains were pruned by heavy profit-taking.

In the steel section, Tata Ordinaries dipped early in the week from Rs. 165.50 to Rs. 163.25, but moved up haltingly to touch today Rs. 170.25. At the close, they dropped to Rs. 168.00. The new shares declined from Rs. 116.00 to Rs. 113.25 before regaining to Rs. 119.00. After softening from Rs. 19.65 to Rs. 18.65, Indian Irons improved to Rs. 19.65 and closed at Rs. 19.45.

Textiles also fared better, though the improvement was not very marked. Bombay Dyeings declined from Rs. 543.00 to Rs. 535.00 before staging a rise to Rs. 555.50. The closing was, however, lower at Rs. 548.00. Centurys also came down from Rs. 449.00 to Rs. 441.00 earlier in the week. After recovering to Rs. 455.00, they finished at Rs. 448.50. Kohinoors were done at the close at Rs. 314 *ex-div.*, after advancing from Rs. 321.50 *cum-div.* to Rs. 317.00 *ex-div.* (final div. Rs. 12). Central Indias were marked up over the week by Rs. 1.50 to Rs. 113.50. Finlays gathered Rs. 4 to Rs. 305, while Gokaks shed Rs. 2 to Rs. 205. Indu Ordinaries were a fraction better at Rs. 10.40. Indore Malwas were dull at Rs. 138, while Khataus suffered a fall of Rs. 11.25 to Rs. 180. Morarji Mills gained Rs. 2.50 to Rs. 210.00, while New Greats were unchanged at Rs. 225.

Bank shares ruled quiet with a slight marking down in values. Barodas lost 75 nP. to Rs. 97.50 and Centrals new Re. 1 to Rs. 51, while the old shares were higher by 50 nP. at Rs. 48.50. Bank of Indias were taken down by Rs. 2 to Rs. 132 and United Commercials by 50 nP. to Rs. 56.50. Union Banks were steady at Rs. 7.10.

Electricity shares were featureless and the undertone was quietly steady. Ahmedabad Electrics came down from Rs. 93.25 to Rs. 92.50 before recovering to Rs. 93.25. Bombay Suburbans reacted from Rs. 110.00 to Rs. 107.81. Surat Electrics were done at Rs. 106.50 *ex-div.*, as against Rs. 112.50 *cum-div.* a week ago. Tata Hydros were a shade lower at Rs. 120.50 and Tata Powers at Rs. 1,193.75. Andhra Valleys lost Rs. 5 to Rs. 1,187.50.

Narrow movements were noted in the miscellaneous section. In the sugar group, Belapurs moved between Rs. 226.50 and Rs. 223.00 before closing at Rs. 225.50. Phaltans gathered Re. 1 to Rs. 134, while Walchandnagars maintained on balance Rs. 267.50. Among cement shares, Associated Cements were erratic. After slowly gaining ground from Rs. 156.50 to Rs. 160.50, the shares dipped to Rs. 158.25. Digvijays were marked down from Rs. 143.50 to Rs. 141.00. Orissa Cements were done 20 nP. lower at Rs. 13, while Ashoka Cements looked up to Rs. 9.85. In the engineering and mining group, Alcocks were unchanged on balance at Rs. 256.25, though they touched a low of Rs. 251.25 during the week. Tata Locomotives, after going down from Rs. 137.50 to Rs. 135.00, were bid up to Rs. 141.50. The closing was again lower at Rs. 138.25 Premier Constructions were maintained on balance at Rs. 162.50. Shivrajpur Syndicates were steady at Rs. 91, Indian Coppers at Rs. 3.28 and B.B. Petrols at Rs. 2.54.

Shipping shares ruled steady. Scindias dipped early in the week from Rs. 18.65 to Rs. 18.30, but on keen demand advanced to Rs. 19.40 before finishing at Rs. 19.00. Great Easterns gained on balance 45 nP. at Rs. 18. Premier Automobiles improved slightly from Rs. 86.75 to Rs. 87.50, while Hindustan Motors were quiet at Rs. 7.15.

In the miscellaneous group, Bombay Burmahs were erratic. After dropping from Rs. 581.50 to Rs. 563.00, they gained to Rs. 585.00 before reacting to Rs. 572.00. British India Corporations recovered smartly to Rs. 7.45 after drifting lower from Rs. 7.15 to Rs. 6.65. The closing was, however, done at Rs. 7.10. National Rayons came up to Rs. 230.75 from Rs. 221.00 touched early in the week, but finished at Rs. 225.00, with a loss of Rs. 1.25 over the week. Tata Chemicals were steady at Rs. 16.10 and Tata Oils at Rs. 42.75. Wimcos were marked down from Rs. 171.25 to Rs. 168.75.

Calcutta Stock Exchange

CALCUTTA, 10*th April*

Lack of buying support continued to depress trading on the Calcutta Stock Exchange during the week under review. Fears of new imposts on trade and industry in the forthcoming budget made operators and investors lessen commitments. In the selling pressure thus caused, values came down further. Reports that the Communist Government in Kerala would ardently pursue the question of nationalisation of the plantation industry in that State were a psychological factor which chilled sentiment. The stringency in the money market, coupled with the approach of due date for an instalment on rights shares of the Indian Iron and Steel Company, Ltd., and for the final instalment of the call money on the Tata Iron and Steel Company Ltd.'s rights issues were the other factors which restricted buying interest. For these due instalments resulted in earmarking of a portion of funds available for the market. To that extent, daily trading was further affected.

Among coals, Burrakurs were unchanged at Rs. 21.25, while New Beerbhooms fell from Rs. 15.12 to Rs. 14.75. Equitables at Rs. 20.37 suffered a decline of Rs. 2.53. Central Indias sagged from Rs. 6.19 to Rs. 5.94. At Rs. 95.00, Karanpuras were down by several points.

Sellers predominated the jute section, and a gradual fall in prices was the consequence, despite the slightly improved trend in the jute goods export market. Nationals were driven from Rs. 19.75 to Rs. 19.25 and Chitavalsahs from Rs. 12.00 to Rs. 10.94. Naihattis were as low as Rs. 52.00, as against Rs. 78.00 previously, with Nuddeas being crossed at Rs. 29.25, as against Rs. 30.25. Howrahs invited attention at the lower rate of Rs. 16.00. New Centrals realised only Rs. 11.50, at which rate the decline was by Re. 0.37. Aucklands were extremely quiet at Rs. 85.

A further decline in quotations of engineering scrips was not surprising, in view of the general apathy. Indian Irons opened at Rs. 19.56 and declined to close at Rs. 18.88. In the absence of clarification on the Company's dividend policy, operators were in no mood to increase commitments in this speculative counter. Among other shares in the engineering section, Jessop & Cos. fell from Rs. 24.06 to Rs. 22.56 and Texmacos from Rs. 18.50 to Rs. 18.05. Guest Keens gave way from Rs. 25.75 to Rs. 25.44.

• • •

Madras Stock Exchange

MADRAS, 10*th April*

Distinctly bearish conditions continued to prevail on the Madras Stock Exchange during the week under review also. Sellers predominated in many counters, particularly in plantation shares of Kerala. Absence of buyers, acute stringency in the money market, the disquieting statements of Kerala Communist Party leaders regarding nationalisation of plantations and reports of fresh difficulties in the way of a settlement between plantation labour and management, the proposal to set up a wage board for the textile industry and bearish advices from Bombay and Calcutta demoralised sentiment and business was considerably restricted.

Among tea shares in the planting section, Peermades and Twyfords lost a rupee each to Rs. 26.50 and Rs. 17.50, respectively. Periakaramalais marked down from Rs. 7.87 to Rs. 7.80 *cum-div.* (interim dividend: 10 per cent.). Highlands declined by 50 nP to Rs. 14.25 and Kalasas by a like amount to Rs. 13.75. Blue Mountains and Haileyburias were 25 nP lower at Rs. 4 and Rs. 22.50, respectively. Devasholas fell by 25 nP to Rs. 21.25. Kil Kotagiris receded by 24 nP to Rs. 5.95. Malabar Agriculturals were marked down by 37 nP to Rs. 11. Among coffee shares, Balmadies slumped by 25 nP to Rs. 3.25. Coffee Lands fell by 50 nP to Rs. 25.50. Kumargodes shed 7 nP to Rs. 6.65. Shevroys lost 5 nP to Rs. 1.95. Rajendras were neglected at Rs. 11.37. Consolidated Coffees, however, witnessed some support and the shares advanced by 30 nP to Rs. 22.10. In the rubber group, Malankaras dropped 50 nP to Rs. 29.75. Kailas fell by 44 nP to Rs. 5.00. Pullangodes receded by 15 nP to Rs. 2.44 and Midlands by 15 nP to Rs. 17.50 *cum-div.* Cochin Malabars were quoted 19 nP lower at Rs. 3.06.

In the textile section, Metturs were hammered down by Rs. 17.50 to Rs. 410. Rajalakshmi's were down by Rs. 17 at Rs. 133. Bangalore Woollens slumped by Rs. 12.75 to Rs. 562.25. Coimbatore Cottons declined by Rs. 5 to Rs. 350. Janardanas dipped by Rs. 2 to Rs. 93. Vasantas were Rs. 2 lower at Rs. 308 *cum-div.* Cambodias receded by a rupee to Rs. 13.

In the miscellaneous section, Rallis fell by Rs. 4 to Rs. 30. Orissa Cements dropped 38 nP to Rs. 12.87. Aluminium Industries declined by 25 nP to Rs. 13.62. Spencers receded by 12 nP to Rs. 16. F.A.C.Ts decreased by 10 nP to Rs. 5.50. Parrys Confectionery eased by 7 nP to Rs. 2.87. India Cements were unchanged at Rs. 24.50.

CALCUTTA CHEMICAL CO., LTD.

In our issue dated 30th March 1957, under "Company Reports," it had been stated that there was a shrinkage in the profit of the Calcutta Chemical Company, Ltd., for the year ended 30th June 1956. The net profit for the year, after providing for depreciation and taxes, was shown as Rs. 4,10,535, as compared with Rs. 5,70,522. This is not correct. For the profit for 1955-56 is arrived at after providing Rs. 2,75,000 for taxation, while that for 1954-55 was subject to taxation. The actual profit for 1955-56, subject to taxation, is, therefore, Rs. 6,85,535, an increase of Rs. 1,15,014 over that for the previous year. Even after providing for taxation (which in respect of 1954-55 is Rs. 2,05,000), the net profit for 1955-56 is higher at Rs. 4,10,535, as against Rs. 3,65,522 for the previous year.

All 6,500 of us in Hindustan Lever, a small army of men and women, have something very important in common. For us, it is not enough to make soaps, toiletries and cooking fats—with each of our products we aim to give you what you need in unvarying quality, so that you—the families of India—may know and trust and use them.

For almost eighty years, we have grown with your growing needs. And, like a flowering plant, we have put forth new and exciting blooms—dynamic pioneering activities behind the actual manufacturing scenes. Our Market Research department—unique in this country—carefully studies your preferences, your habits and opinions, and guides production with its findings. Our Quality Control department carries out strict tests on each product from the raw material stage to the finished article. The Dalda Advisory Service and the Washing Information Service are there to help you make the best use of our products.

And what are these products? You know them well—Sunlight Soap, for instance . . . Lifebuoy . . . Lux . . . Rexona . . . Gibbs S.R. Toothpaste . . . Dalda Vanaspati . . . and others that have become household friends. We are proud that so many of you have chosen to use them every day in your homes. At the same time we realise that your patronage lays upon us a duty, that of keeping steady our common aim, to offer the very best quality and value to our customers . . . to you!

HINDUSTAN LEVER SERVES THE HOME

HLL 9-XB

NEWS IN BRIEF

A FACTORY for the manufacture of micanite used for insulation purposes in electrical machinery is to be set up in the Nellore District of Andhra.

Deposits of talc, iron ore and kaolin have been located by the Geological Survey of India in the Keonjhargarh District of Orissa State.

The Railway Board has placed abroad orders worth about Rs. 10.7 crores for 100 diesel electric broad-gauge locomotives of 2,000 h.p. each, in order to cater to the increasing goods traffic demand during the second Plan period.

The Madras Government has sanctioned the establishment of one 'A' class and one 'B' class soap-making units in the State at an initial cost of Rs. 50,000. Provision has been made for a recurring expenditure of Rs. 35,120 per annum.

An agreement has been signed between India and Burma which provides for the purchase by the former of 500,000 tons of Burmese rice valued at Rs. 16 crores. Burma will supply 320,000 tons of *Naasein*, a special variety of rice at the rate of £33 per ton f.o.b. The balance of 180,000 tons will be made up of *Nagasein* parboiled at £33 11s. 4d. per ton f.o.b.

The Government of India has authorised the Tea Board to make an interim release of tea export quota for 1957-58 to the extent of 50 per cent. of the crop basis of tea estates, pending final notification of the Indian export allotment of tea for the year. The total releases for the season 1956-57 aggregated 63.4 per cent. of the estates' crop basis, or 453.3 million lbs.

The three-day conference of Railway Statistical Officers which concluded in New Delhi on the 5th inst. discussed measures to improve the accuracy of railway statistics and expedite the consolidation of data. Among the specific subjects dealt with were passenger and goods earning statistics, standard of statistical inspection on railways, uniformity in the form and contents of domestic statistics, and compilation of tonnage and ton-miles.

The Government of Andhra is at present conducting investigations about the occurrence of iron ore in Khammam and Warrangal districts. Preliminary estimates of iron-bearing deposits in this zone have shown that the deposits are spread over a very extensive area and the quality is good. Prospecting work for coal in the Godavari basin is also under progress and boring tests are being conducted.

The Mysore Government will take over the management of the Hatti Gold Mines shortly. An agreement to this effect has been reached between the Mysore and Andhra Governments. Situated in Raichur District, the gold mines are being managed by a private joint-stock company. The Mysore Government intends to improve the mines by providing hydro-electric power from the Tungabhadra Project and technical assistance from the Kolar Gold Fields.

The Soviet Union has offered coal-mining machinery to India on a deferred payment basis. Nearly Rs. 20 crores worth of coal-mining equipment is needed to exploit coal mines in the public sector, including the railway collieries taken over by the Coal Development Corporation. The biggest unit of coal-mining equipment will probably be needed in the Korba coalfields which are expected to yield about 4 million tons by the end of the second Plan period. Meanwhile, tenders have been invited for coal-mining machinery worth over Rs. 4 crores.

Equipment and aid worth Rs. 50 to Rs. 60 lakhs may be obtained from West Germany for the prototype workshop. The offer has been made by the West German Foreign Minister, Mr. Von Brentano, to the Government of India. The workshop will evolve simple machines for use in small-scale industries and make the prototypes available to Indian *entrepreneurs* for manufacture and sale. Services of nearly a dozen German experts will be available under the scheme. They will have a number of Indian assistants who will be trained in the technique of inventing new machines. The location of the workshop has yet to be decided.

The Government has decided not to entertain any more applications for licences for the installation of spindles in the worsted woollen sector. Announcing this decision, the Union Commerce and Consumer Industries Ministry points out that there is no scope for installation of additional worsted spindles in the woollen industry and any further expansion will only result in the dislocation of the production programme of existing units. The installed capacity and the capacity already licensed under the Industries (Development and Regulation) Act, 1951 amounts to 27 million lbs. of all varieties of worsted yarn. The target for the second Plan period is only 15 million lbs.

Salt exports from India during 1956 were substantially higher at 7,370,000 maunds, as against 5,560,000 maunds in the previous year. Japan was the principal buyer of Indian salt. Some quantities were also purchased by Indonesia, Malaya and Maldwip. The increase in exports was due to the record production of 88,900,000 maunds in 1956, as compared with 81,100,000 maunds in the previous year and 73,900,000 maunds in 1954. It is proposed to raise the production to 100 million maunds by 1960-61. A provision of Rs. 1.89 crores has been made for this purpose under the second Plan.

A scheme for the manufacture of nickel sulphate from the catalyst waste of hydrogenation factories has been prepared by the Small-scale Industries Organisation for the guidance of small-scale manufacturers of nickel sulphate. Nickel in the form of nickel formate is used as a catalyst for the hydrogenation of vegetable oils. The activity of the catalyst decreases after being used twice. As nickel-plating is being carried out on an extensive scale in India, there is a ready market for the nickel sulphate. The manufacturing process is explained elaborately in a booklet issued by the organisation Catalyst. The booklet also gives the basic data regarding the requirements of plant and machinery, raw materials, capital investment, manufacturing cost, profit, etc. Copies of the scheme can be obtained free of cost from the Office of the Development Commissioner, Small-scale Industries, and the Regional Directors of Small Industries Service Institutes at New Delhi, Calcutta, Bombay and Madras.

From Abroad

Yugoslovia will get U.S. wheat and cotton shipments worth $13.5 million under an agreement recently concluded between the two countries.

A financial agreement has been signed by the Sudan and Egypt which provides for the withdrawal of over 20 million Egyptian pound notes circulating in the Sudan.

The Government of Pakistan has appointed a Taxation Enquiry Committee to carry out a comprehensive enquiry into the system of taxation in the country. The six-member committee is headed by Mr. Zahid Hussain, former Chairman of the Pakistan Planning Commission.

The U.S. Special Ambassador, James P. Richards, has announced that the United States is prepared in principle to provide $12.5 million towards regional economic development projects among the four Middle East members of the Baghdad Pact—Iraq, Turkey, Iran and Pakistan.

A newly formed consortium of five British firms will supply rubber manufacturing machinery and electrical equipment worth many million pounds to Russia for equipping a tyre factory now being built by the latter. When completed, the factory will be the largest in the world outside the United States.

The Court of Inquiry appointed by the U.K. Government to probe into the wage dispute in Britain's shipbuilding and engineering industries has commenced work. The Confederation of Shipbuilding and Engineering Unions has agreed to order its members to return to work, pending the recommendations of the Court.

During the financial year ended 31st March 1957, B.O.A.C. achieved a surplus, but the full and final assessment will not be complete until some weeks hence. Provisional figures, however, show that there was an increase in capacity of 8 per cent., but an increase in gross revenue of 13½ per cent. The passenger-miles flown aggregated 1,200 million, representing an increase of 11.5 per cent. over the figure for the financial year 1955-56.

PERSONAL

MR. Shaikh Yusuf Alfozan, presently Minister of Saudi Arabia to India, has been appointed the first Saudi Arabian Ambassador to India.

Mr. Sanjiban Banerji of the United Bank of India has been elected a member of the Committee of the Indian Banks Association for the current year.

Mr. V. M. Madhavan Nair, at present Deputy High Commissioner for India in Ceylon, has been appointed Commissioner for the Government of India in Malaya and Singapore in succession to Mr. P. K. Tandon.

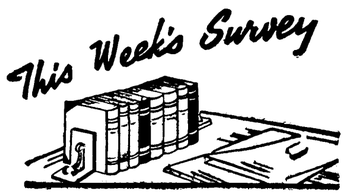
Sir John Burns, Chairman of the James Finlay group of cotton mills, left India for the United Kingdom on Saturday last to join the Board of Directors of Messrs. James Finlay & Co., Ltd., at their head office in Glasgow.

Lala Indermohon Thapar, Mr. Mulchand C. Parekh and Mr. S. B. Goenka have been elected Chairman, Vice-Chairman and Junior Vice-Chairman, respectively, of the Indian Mining Federation for the current year.

Rail Transport is an important factor in the economy of the country, which keeps a constant flow of raw materials to producing centres and manufactured goods to consuming centres. With the Second Five Year Plan well on the way the Railways are once again in the forefront to meet the ever-increasing transport demands of the country. This Railway Week we have made the occasion for renewal of our pledge to fulfil the task placed before us.

The Central & Western Railways are in the midst of several new projects in various stages of progress, some nearing completion. Many more are scheduled for early commencement. All this is aimed at providing greater transport capacity, more conveniences and better amenities to the travelling public, so that at the end of the Second Five Year Plan a 15% increase in passenger carrying capacity and 40% increase in goods carrying capacity would have been achieved as compared to what it was at the beginning of the plan.

CENTRAL & WESTERN RAILWAYS



SPECIAL U.S. AID FUND

NO other country has contributed so much to the material advancement of the undeveloped and underdeveloped regions of the world as the U.S. Indeed, but for the enormous foreign aid—financial and technical—given by this country, not only would the tempo of economic activity in the aforesaid regions have been considerably slower than what it is but the very basis of the democratic set-up would have been greatly shaken by communist infiltration. There is no exaggeration whatever in the remark of Mr. John Foster Dulles, U.S. Secretary of State, made while testifying in support of President Eisenhower's $4,400-million Mutual Security Programme before a special Senate Committee to study the Foreign Aid Programme, that the American people "have never tried to make their nation into an oasis of prosperity in a world desert of human misery." An eloquent testimony to this is provided by his proposal for the establishment of an "Economic Development Fund" to provide assistance through loans on terms more favourable than are possible through existing institutions. Suggesting tentatively that development loans made from this Fund might reach $750 million yearly, Mr. Dulles gave the following details:

The Fund can extend aid for specific programmes or projects submitted by applicant countries. Each request for a loan from the fund should meet certain criteria, including a showing (1) that financing cannot be obtained from other sources; (2) that the project is technically feasible; (3) that it gives reasonable promise of direct or indirect contribution to a nation's increased productivity. The Fund can usefully join with such institutions as the World Bank or the Export-Import Bank in financing particular projects. Its aid may thus enable these Banks to expand their operations by assisting projects which cannot qualify in their entirety for loans which these institutions are authorised to make. In order not to displace other sources of credit, loans from the Fund should be repayable on a basis subordinate to the claims of the World Bank, the Export-Import Bank, and private lending agencies.

The creation of an Economic Development Fund, as suggested by Mr. Dulles, will be widely welcomed, especially in the present context of acute shortage of capital resources experienced by a majority of countries in the underdeveloped region, including India. The present system of making U.S. appropriations on an annual basis is defective, inasmuch as the appropriations have resulted in procedures which do not allow either the U.S. or the receiving countries to make the most efficient use of the resources which the U.S. is providing. Drawing attention to this aspect, Mr. Dulles rightly emphasised that, since economic development was a continuous process, not an annual event, the Fund would need continuing authority and a capital authorisation sufficient for several years, to be renewed when needed.

The loans that will be made available out of the proposed Fund cannot, of course, be more than a marginal addition to any country's development efforts. Nevertheless, the addition can, as Mr. Dulles pointed out, be significant and even determining; "it can break foreign exchange bottlenecks and it can be a key factor in stimulating a country to a more effective development programme of its own." Reassuring is his statement that the establishment of the Fund will not entirely eliminate grant aid which may be needed to meet contingencies and imperative needs that cannot realistically be met by loans. Also reassuring is the statement that the technical assistance programmes—now running at about $150 million per annum—will be continued in the coming years also.

INDO-AUSTRALIAN TRADE

The possibilities of expanding Indo-Australian Trade are, indeed, very wide. The rapid industrialisation that is afoot in India calls for expanding imports of various kinds of plant, machinery and transportation equipment. There are other things, such as wheat and wool which India needs in order to meet the increasing consumption demand. At the same time, Australia can very profitably enhance its purchases from India of goods such as manganese and mica, cotton, cotton textiles, jute goods, vegetable oils, tea, coir products and a host of others. So far, however, a combination of forces in both the countries has served to affect adversely the quantum of trade that is passing between the two countries. For some time past, Australian economy has been subject to great inflationary pressures which, as a consequence, led to the imposition of severe import restrictions by the Government. In India, too, import restrictions have been in force for balance of payments reasons. The net result is that between 1951-52 and 1955-56 the trade between the two countries dwindled considerably, from £A64.7 million to £A35.7 million.

In this context, the observations of Mr. John G. Hurley, leader of the Australian Trade Mission, now in India, in the course of his address to the Bombay Rotary Club on 9th instant, are particularly significant. He pertinently pointed out that the two major obstacles that lay in the way of expanding trade between the two countries were shipping difficulties and import restrictions. It is noteworthy that the Mission has addressed itself to this task of mitigating shipping difficulties in right earnest and has held discussions with shipping companies and urged the authorities to solve this problem without delay. A matter of special satisfaction in this regard is the announcement by shipping companies now operating services that additional and more suitable vessels are on order and will commence operating progressively as from next year. It has been recognised that steps have necessarily to be taken to alleviate the shipping and port difficulties in India. At the same time, it is gratifying to note that the Trade Mission is alive to the fact that the problem is not one-sided.

The recent relaxation of import restrictions in Australia is a welcome measure and augurs well for the expansion of trade between the two countries. As a result of this relaxation, Australia, it is estimated, can now import Rs. 75 crores more worth of goods per annum, bringing the value of its total imports to as much as Rs. 800 crores. The possibilities of deriving benefit from these measures, however, depend, to a certain extent, on a reciprocal relaxation of import restrictions in India; and Mr. Hurley has expressed the hope that the Government of India, too, would show concessions. He appreciated, however, the problems arising from the balance of payments situation. Nevertheless, he felt that in a rapidly expanding economy, the persistence of import controls were highly inflationary in their effect. This is largely true. But, what determines, in the ultimate analysis, the quantum of imports from Australia is the types of goods offered to India and the terms under which they are offered. Thus, granting of long-term credit by Australia for the purchase of machinery and capital goods will go a long way in increasing India's imports of machinery. It is heartening to note that Australian business men are willing to consider this solution, and that the Government is already exploring the possibility of asking Australian manufacturers to meet these terms. It is to be hoped that some concrete results would emerge from the Trade Mission's tour in this country.

LEATHER INDUSTRY

Covering within its fold both hides and skins—raw as well as manufactured—the leather industry plays a vital role in India's economy. The number of workers employed in the organised tanning sector alone is about 10,000 and that engaged in the small-scale sector is as much as 763,000 which is about 6.6 per cent. of the total labour force employed in all the small enterprises (1950-51). Further, it produces goods which are used for a variety of purposes; these goods include sole, harness and saddlery, belting, upholstery and other heavy leathers, upper leather, sheep and goat skins (vegetable and chrome tanned), and reptile skins. It is, however, as one of the staple earners of foreign exchange that the leather industry has carved for itself a conspicuous place in the economic set-up of the country. On an average, India exports every year hides and skins—raw and manufactured—worth nearly Rs. 30 crores, which represent about 5 per cent. of the total foreign exchange earned.

In view of the vital role played by the leather industry thus and considering the present difficult foreign exchange position, the need for removing some of the handicaps facing it cannot be too strongly stressed. It is unfortunate that the quality of raw hides and skins is reported to be deteriorating gradually, and the tanner and the tanning technologist are confronted with the challenge to produce good quality leather from bad hide. The methods adopted for curing and preservation of hides and skins are also very primitive in several cases. It is not surprising, therefore, that as much as 50 per cent. of the installed capacity of the organised tanneries had been lying unutilised for a long time. An idea of the latest position in this respect can be had from the following figures:

	Unit	Installed capacity	Production in 1956
Tanned hides—			
Chrome	000 hides	1,680	743
Vegetable	,,	3,420	1,681
Leather cloth	000 yards	7,800	2,619
*Footwear**—			
Western type	000 pairs	5,775	3,630
Indigenous type	,,	N.A.	2,911

* Long-scale factories only. N.A.—Not available.

The foregoing table indicates the none too happy position of the leather and footwear industries. Surely, an expanding market for leather and the increasing hide deterioration, as Prof. M. S. Thacker, Director-General, Scientific and Industrial Research, Government of India, aptly remarked in his speech read (in his absence) at the symposium on "Raw Hides and Skins—Curing and Preservation" held at the Central Leather Research Institute in Madras the other day, militate against each other. This is the basic fact which calls, to quote Prof. Thacker, "for a searching of minds, pooling of thoughts, sharing of ideas and chalking out of a clear-cut co-ordinated programme." Given all these, the leather industry will, there is no doubt, be established on a more solid and secure footing. Needless to say that India, with the enormous livestock wealth which the country possesses, is well endowed for the rapid development of its leather industry.

The installed capacity of the leather industry, as already noted, is quite large. If only the handicaps facing it are removed, the industry will earn a considerably larger foreign exchange which is now precious to a degree; according to one estimate, the export trade in hides and skins —raw and manufactured—can be augmented by 100 per cent. It is gratifying to note that, in his address at the symposium, Mr. C. Subramaniam, Finance Minister of Madras, assured that the Government would always be prepared to help the leather industry, if proper schemes were formulated and presented by the representatives of the industry. This assurance and the move of the Central Leather Research Institute to undertake job work to convert the raw or half-tanned materials into finished products, as also to study the problem of effective utilisation of by-products, augur well for the future development of the Indian leather industry.

ENGINEERING INDUSTRY

Since engineering industry is basic to the entire industrial structure of the country, its rapid development on a sound and secure basis is a question of national importance. In his address at the annual meeting of the Indian Engineering Association, held recently at Calcutta, Mr. Cleetus, the Chairman, has therefore done well in highlighting some of the problems faced by the industry and pointing out the difficulties in the way of its rapid expansion. Although the engineering industry fared better than most other industries last year, it continued to be plagued by many inhibiting factors. Despite these disadvantages the industry recorded rapid advances in production, and output more than doubled during the period 1951 to 1956.

The supply position of steel, Mr. Cleetus pointed out, has been a matter of constant worry to the industry. Since steel is a basic raw material of the industry and its indigenous production inadequate to meet the demand, resort is taken to imports to fill the gap. But in the absence of a clear import policy for steel, importers and fabricators using steel have been put to much difficulty. There has been a drastic cut in the foreign exchange allocation for this purpose and it is not known now how much of steel will be permitted to be imported in the second quarter of the current year. This, Mr. Cleetus added, will eventually lead to disturbance in the production programmes of steel-using industries.

Proceeding, Mr. Cleetus referred to the recent award of the Appellate Tribunal on colliery disputes, which, he said, was a step of far-reaching consequences. Following the award, there has been a total increase in the price of coal to the tune of Rs. 4.5 per ton. This will put up the cost of the engineering industry, a

Plan for Progress

Power and Plenty

Giant walls taming  the rushing waters, irrigation channels bringing new life to barren soil, and heavy cables carrying a mighty surge of power throughout  the country are today laying the  foundations of India's economic self-sufficiency During the Second Five Year Plan  electrification will be extended  to 10,600 additional towns and villages and irrigation to an extra 21 million acres. Textile Machinery Corporation Limited is proud to play its part in this nation-wide endeavour to bring power to industry,  light to village homes, food  to the hungry and prosperity and happiness to the people. A pioneer in many fields of engineering, it supplies industry, railways and river valley projects with a wide range of equipment.

DEFERRED PAYMENT SCHEME FOR IMPORT OF CAPITAL GOODS

RESULTS OF TALKS WITH FOREIGN TRADE MISSIONS ANALYSED

From Our Own Correspondent

NEW DELHI, *9th April*

DELHI LETTER

POSTAL delays can often be as exasperating as "the law's delays," and this correspondent is obviously irritated by the knowledge that his letter of 2nd April did not reach *Commerce* in time last week. His only consolation is that a part of his unpublished despatch is still topical enough to be included in this letter. And so what follows introduces the subject of this despatch in much the same way as it did last time.

The recent decision of the Government to grant import licences for certain types of capital goods only if suitable terms of deferred payments are arranged by importers, so that remittances of foreign exchange can be suitably phased, has just been fully explained in a *Gazette* announcement. The alternative sets of terms under which applications would be considered are indicated. One of the alternatives is that total payment prior to shipment is not to exceed 20 per cent. of the f.o.b. value of the plant and equipment, and the remaining 80 per cent. to be paid in seven more or less equal annual instalments thereafter. The other alternative is that the initial payment is to be limited to 10 per cent., and the balance to be paid after production has started and in instalments not exceeding the net saving in, or earning of, foreign exchange which the project will achieve thereafter. Import licences issued under either alternative will specify the value to be remitted, the currency in which it is to be remitted and the dates on which such remittances are to be permitted.

The types of cases in which it will not be necessary for importers to secure deferred payments are also described in the announcement. These are: (1) Where the total value of imported plant and equipment to complete a project is less than Rs. 5 lakhs; (2) where the equipment is 10 per cent. or less in value on the machinery already installed or covered by an import licence or available from indigenous sources and is essential for the completion of such plant; (3) where the total value of the equipment to be imported is less than the amount of fresh foreign capital coming in for the project; and (4) where the equipment is needed for constructional purposes, like earthmoving equipment and excavators. In these cases, however, applications will be considered only on merits in accordance with the import policy in force as well as the priority to be attached to the project.

Doubts Continue

Doubts continue whether the deferred payment scheme for importing capital goods will have the intended results. In this connection, Sir Norman Kipping, Director-General of the Federation of British Industries, who has been here recently, remarked that there was no likelihood of India succeeding in getting credits spread over a period of seven years, as asked by it for the import of capital goods. He, however, gave the hope that India could look forward to getting British credit for executing several projects which would be able to pay for themselves and save and earn foreign exchange in the course of the next few years.

The doubts, however, are not wholly allayed by the trend of discussions in the Capital between the West German and U.S. trade missions and the Government of India. The leader of the West German mission has no doubt fully appreciated the need for West Germany stepping up its offtake of Indian goods. Although, according to him, the West German Government as such could not undertake to provide loan assistance in the matter of export credits for capital goods, German banks could extend certain facilities which might be helpful from India's point of view. Another significant remark made by the leader is to the effect that West Germany would not lose interest in developing the Indian market for its manufactures, because of the attractions of the European common market. The common market will take 15 years or so to be organised and there need not be any clash, according to him, between Germany's willingness and capacity to trade with India and its desire to avail itself of the opportunities of the common market system.

For its part, the Ministry of Heavy Industries has done its best to allay the West German fears about a possible decline in exports to India on account of our restrictions on the import of capital goods. For one thing, the new regulations about the import of capital goods on a deferred payment basis are not as stringent as they appear to foreign suppliers, for the payment would actually be made in a large number of cases in three or four years, instead of seven years, although the initial payment would be low. These are the projects in which the payment for capital goods would be linked to their going into production and starting to save or earn foreign exchange. Payment would also be allowed to be made on the dates specified in the relevant import licence, irrespective of the time when the project goes into operation. However, if the supplies are not delivered according to schedule, the payment would be deferred for a corresponding period. The Ministry has also made it clear to the West German mission that the condition regarding seven-year export credits would not be applicable to a large number of projects. There would be insistence on this condition only in respect of projects whose potential to earn or save foreign exchange is not appreciable. The leader of the West German mission has, however, declined to commit himself and his delegation on a subject on which his country's industry alone could take a decision.

Helpful Stand

The West German mission, on the other hand, has taken a positively helpful stand on other matters under discussion with the Government of India. In the first instance, it has offered to receive an exporters' mission from India to enable this country to assess the possibilities of stepping up exports to West Germany. Secondly, it has taken up for further discussion the West German Foreign Minister's offer to set up in India a prototype workshop for small industries. The West German outlay on this project will be about Rs. 50 lakhs, while the rupee expenditure to be borne by India will be mainly on buildings. The mission has presented, in this connection, the project report for setting up the said prototype workshop. The mission's talks with the appropriate Ministries of the Government here are continuing, and their outcome is being watched with considerable hope.

Whatever be the outcome of the talks with the German mission, there is currently some ground for optimism in the arrival here of the Vice-President of the Export-Import Bank of Japan. He is to discuss with the Government of India the possible supply of Japanese capital goods on deferred payment basis. It is learnt that the Bank is thinking in terms of possibly financing Japanese exports of heavy machinery to India. There may not be much difficulty in the matter of evolving some suitable arrangement, in view of the fact that the Japanese Government's regulations already permit deferred payments for a period of five years. What is more, Japan has waived its restrictions on investment of Japanese capital in foreign countries. It is also recalled that the Japanese Federation of Heavy Machinery Manufacturers has already taken some preliminary steps to promote Japanese industrial investments in India.

The U.S. trade mission which returned to the Capital last week-end after its tour of industrial centres in India, has, however, held out no definite hope in the matter of export credits. The leader of the mission has not indicated any possibility of immediate large-scale accommodation to Indian importers by private firms in the United States, nor has he foreseen any official initiative in this matter. Some U.S. firms, according to him, have already accommodated Indian importers and others would emulate their example. And his country's Import-Export Bank might also be prepared to take up the matter.

PRECARIOUS BALANCE

From Our Own Correspondent

LONDON, *6th April*

LONDON LETTER

ON the face of it, 1956 ended up as a good year on balance of payments account. The overall surplus was £233 million, as compared with a deficit of £79 million in 1955 and yet, the gold reserves were only saved from falling away to a fantastically low level by the drawing of £200 million from international sources. The Economic Survey for 1957 takes as its main theme (one must remember this is a Treasury paper) the need to build up an even greater balance of payments surplus. Even investment, which might mean additional imports or a diversion from exporting of the capacity of the heavy industries, is frowned upon. The short-term view is taken that we must export more and more to build up a greater surplus on current account. Undoubtedly, before this theory comes to be put into practice in the months ahead, the question will be asked why exports are expanding with such difficulty and may be the answer will be suggested—because we are not putting aside enough to investment to improve our exporting power. It may be the battle of the long view against the short.

In 1956, imports (f.o.b.) aggregated £3,462 million and exports £3,403 million leaving a negligible overall deficit of £59 million. Against this, invisibles brought in no less than £462 million to which defence aid added £23 million.

Comparison

The following table shows how the second half of the year went compared with the similar period in 1955.

(In million £'s)

	July-December	
	1955	1956
Imports—		
Dollars	379	412
Other	1,355	1,316
	1,734	1,728
Exports—		
Dollars	258	311
Other	1,282	1,391
	1,540	1,702
Balance on visible trade	—196	— 26
Invisibles including defence aid	+188	+206
Government expenses	— 96	—101
Net balances	—102	+ 79

Thus, while imports were more or less held, exports improved something like 10 per cent. and largely accounted for the overall improvement over the period. What then caused the deterioration in the gold and dollar reserves? In the first place, investment principally in the sterling area at the rate of £243 million more than absorbed the whole of the surplus on current account. In the second place, heavy drawings on the sterling balances to the tune of £185 million would have drawn down the gold and dollar holdings by a combined total of £195 million. In the event, this was offset by borrowings of £200 million, so that, by 31st December, the gold and dollar reserves were more or less at the same level as the year before.

The following table shows over the last five years how the surplus (in most years) on current account has been drawn away by investment overseas, and the consequent effect on the overall international balance.

(In million £'s)

	1952	1953	1954	1955	1956
Current account surplus	+247	+188	+228	— 79	+233
Overseas investment	— 92	—175	—235	— 17	—243
Net surplus (+) or deficit (—)	+155	+ 13	— 7	— 96	— 10
Change in overseas sterling holdings	—330	+227	+ 94	—133	+15*
	—175	+240	+ 87	—229	+ 5

* This is made up of a drawing down of sterling balances of £185 million and on the other hand drawings by the U.K. on international reserves of £200 million.

It will be apparent from the above table that relatively small movements in the sterling balances can create havoc with the slender balances on overall trade account. Yet, if one is seeking to indite the holders of sterling balances for having embarrassed the U.K. by their drawings, one must also appreciate that, at the end of 1952, the sterling holdings of all the countries stood at £3,219 million and, at the end of 1956 at £3,425 million showing over the five years an *increase* of £200 million.—*All Rights Reserved.*

AMERICAN LETTER

WRATH OVER "HIGH" BUDGET CONTINUES

CONGRESS MAY APPLY THE CUTTING AXE

From Our Special Correspondent

NEW YORK, *3rd April*

PUBLIC opinion in the United States was pleased about the Eisenhower-Macmillan talks at Bermuda, but final judgment is reserved until future events prove the success which has been suggested in the official *communiques*. The inside story is that closer and more continuous liaison is to be established among responsible officials of the British Foreign Office and the American State Department. It is obvious that, while the conference dealt with the general goals of both nations in the Middle East, no common policy details have been spelled out. At any rate, hereafter, British and American officials are expected to keep in constant touch on all unresolved issues and will seek to chart a common course as various world problems arise.

It seemed to most observers on the spot that mists of suspicion between Washington and Whitehall which had arisen from the Suez attack were largely blown away—at least for the time being. The second point on the agenda concerned guided missiles, as indicated in my previous despatch. The talks brought forth an American promise to provide the United Kingdom with such missiles. This was played down purposely, wishing to avoid exciting anybody.

The prospect is that U.S. short-range missiles of 100-mile range will be ready in some quantities in 1958. They are primarily for tactical use by ground forces and against aircraft. Beyond that, Britain is to get long-range missiles capable of travelling about 1,500 miles which could strike deep into and behind the Iron Curtain. Weapons in this category, however, will not be ready for another five years, according to the experts.

The U.S. armed forces have not yet settled on the prototype of the future long-range missile. The Army has developed its "Jupiter" and the Air Force its "Thor." Both sides insist theirs is superior, but both need perfecting and the final weapon may be a combination of the two. Then there will be a long wait before orders are placed and production is begun.

Self-restraint

Over the protests of India and Japan, Britain and the United States will continue with their atomic and hydrogen bomb tests. Both leaders agreed that a treaty with Moscow placing limitations on atomic tests "today could not be enforced effectively, nor could breaches of it be detected surely." There will, however, be self-restraint in tests. They will be announced well in advance, it was said.

Moscow reaction was as expected. The Kremlin reiterated its proposal to stop nuclear tests altogether. As in the past, the Russians gave no indication of their willingness to accept inspection or guaranties, but Denmark and Norway were warned not to permit establishment of N.A.T.O. bases in their territories.

Meanwhile, much interest was shown here in two other overseas events. One was the entry into the canal of the first Suez convoy, since that waterway was blocked last November. The other was the signing at Rome of the six nations' pact to create a common European market and of a second agreement, Euratom, which provides for the joint development of atomic power for peaceful purposes. Both treaties will have to be ratified by the respective legislatures in the countries concerned. There is much curiosity here what ultimate effect both instruments might have on world trade. It is likely to take another decade to find out.

A mild bombshell was exploded here the other day by President Eisenhower's suggestion that a constitutional amendment be passed providing that a majority of the Cabinet members may be empowered to authorise the Vice-President of the United States to take over the power of the President in the event the latter should become incapacitated. The suggestions was outlined by the White House to Congressional leaders. There was much opposition. Those who opposed the idea said that the proposed change was unnecessary, since the Constitution provided for such a contingency—without formal action by the Cabinet.

The Eisenhower Middle East doctrine which was finally adopted, also was held to be superfluous on the same grounds. The President's insistence naturally led to a lot of speculation and bewilderment. Why bring up such an issue, if it is not imminent was the popular question, or is it imminent? Is there more behind it that meets the naked eye? In the perspective of the heart attack which the President suffered and of his serious operation later, many do believe that there may be doubts in the Chief Executive's own mind about his state of health, even though physicians have pronounced him hale and hearty for his age.

Future events will tell a clearer story. The Eisenhower suggestion, indeed, may be based on the honest conviction of the President that, since this is his last term anyway, provision should be made in the Constitution for a transfer of power in the event not only of death but also of disability of the President.

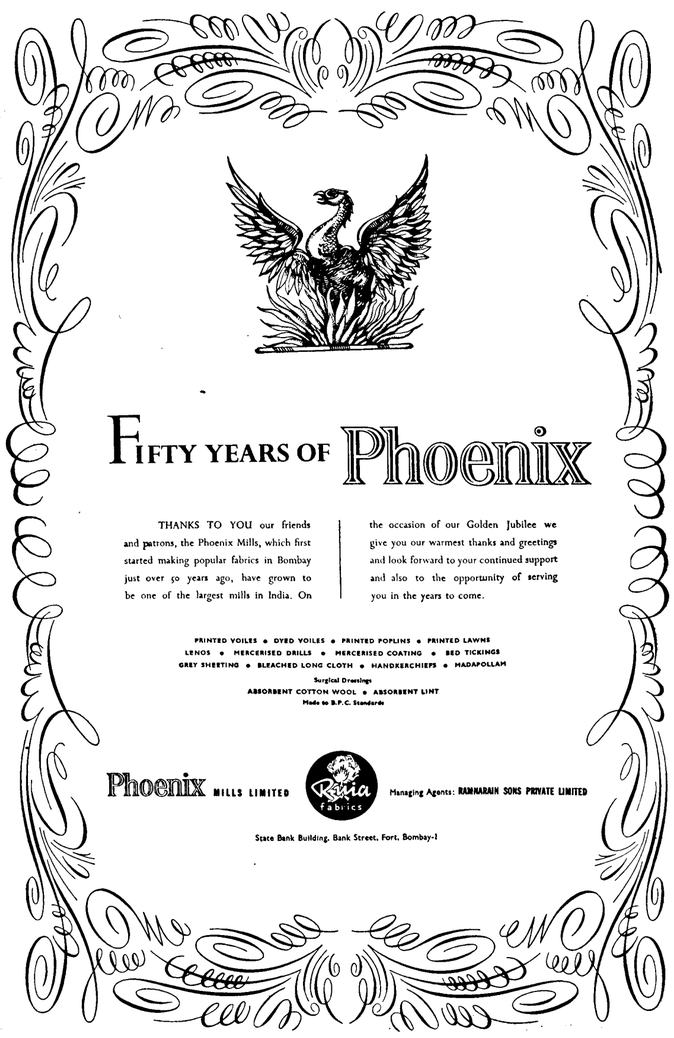
The Vice-President

Part of the opposition to the plan is based, undoubtedly, on the dislike of Mr. Nixon, the Vice-President. He is quite young, compared with others in government. His progress has been rapid and an element of envy cannot be denied. In the event of Mr. Eisenhower's disability, Mr. Nixon would be "acting President" under the plan. It cannot be disputed that the Vice-President has done an admirable job in representing the United States overseas and there is no reason to assume that he could not do an adequate job as acting President, even though he does not have the experience and world-wide esteem which Mr. Eisenhower enjoys personally. At any rate, this is some of the background of the current controversy.

Economically, the picture in the United States remains unchanged. The soft spots, fractional as they are, in the picture as a whole also remain unchanged. Automobile sales are slower than expected and the textile situation has not improved.

The last season in New York's centre of the garment industry was poor, and orders and reorders are not too encouraging. Retail business which is now largely pre-Easter buying, has been relatively good and slightly above last year. Some allowance must be made, however, for higher prices.

Upturn in terms of dollars does not necessarily mean a higher unit volume so that, in the final analysis, the retail picture is a little better than unchanged. The wrath over the extraordinarily high Federal Budget continues and it is almost certain that Congress will apply the cutting axe in various areas where it is politically feasible. The constituents will have to be appeased. There has been some easing of money rates which may turn still easier unless the business situation improves materially.—*All Rights Reserved.*



INSTITUTIONAL FINANCE IN JAPAN

CENTRAL BANK WIELDS OVERWHELMING INFLUENCE

JAPAN, as the most industrialised country of Asia, provides a storehouse of valuable knowledge and experience in the sphere of industrialisation upon which the rest of Asia can draw profitably. Though, in its insularity, relative deficiency in foodstuffs and raw materials and dependence on foreign trade, it is akin to the U.K., nevertheless, it shares with the rest of Asia some of its peculiar features and problems, such as large population and a high annual rate of increase of as much as 2 per cent. (as against 1.25 per cent. in India) and dependence of a large proportion of the total population on agriculture, forestry, fishery and small industries. Japan's emergence, in the context of these problems, as the most industrialised country of Asia is no small measure due to the effective role played by its financial institutions. These include, at present, the Bank of Japan, which is the Central Bank of the country, ordinary commercial banks, institutions for long-term credit, institutions for financing small enterprises, besides those for financing agriculture and forestry, and Government financial institutions. An important point to be noted here is that the pivotal role played and influence wielded by the Bank of Japan increased enormously, owing to the absence of a well-developed capital market, with the progress of industrialisation in the country.

In this connection, the article entitled "Financial Institutions of Japan" in the March issue of the *Reserve Bank of India Bulletin*, in which has been discussed at considerable length the growth of the various types of financial institutions in Japan, will be read with much interest. The reorganisation of the currency system on sound lines in Japan started with the establishment of the Bank of Japan in 1882, when the function of note issue was transferred to it from the national banks established under National Banks Ordinance promulgated in 1872. The process of bringing about uniformity in the functions and legal status of national banks and other private banks was completed by 1899, and all of them were made subject to General Banking Laws. For about 20 years, till the end of the First World War, the chief functions of the commercial banks were to provide long-term finance and short-term commercial loans to enterprises, and agricultural finance. A special feature of these activities was that the banks were able to give long-term loans because of the preponderance of fixed deposits in the resources raised by them. This, however, led to frequent crises of banks to prevent which the Government established special banks like the Yokahama Specie Bank, Industrial Bank of Japan, etc., which obtained their resources largely by the issue of debentures.

Enforcement of Banking Law

The year 1927 was another landmark in the history of banking in Japan. Occasioned by a severe financial crisis, the year saw the enforcement of the new Banking Law designed to strengthen the capital structure of banks and to establish sound banking traditions in the management of banks. The law provided for minimum capital requirements and licensing and supervision of banks, and for promotion of mergers and amalgamations of banks. The effect of these measures was seen in the sharp decline in the number of commercial banks from 1,867 in 1901 to 377 at the end of 1937 and to 61 at the end of the Second World War. The period since the end of the war witnessed three distinct phases. In 1945, the Allied Occupation Authorities adopted measures to split up the huge banking trusts of "Zaibatsu" families which had grown under the support of the Government. The process of breaking up was completed in 1949 after 1,200 firms had been removed from the control of the large banks. This was followed by a revision in the policy, based on the consideration that a strong financial organisation was necessary for achieving economic self-support in Japan. Consequently, most of the Zaibatsu banks were allowed to function, and other trust companies were permitted to reorganise and engage in banking. The third phase started with the enforcement of the nine-point principle under the "Dodge Plan" in 1949, according to which the operations of the Bank of Japan were enlarged with a view to checking inflation and bringing about economic stability. This was followed in 1953 by a new policy aimed at economic stabilisation and normalisation.

The Bank of Japan is the Central bank of the country. In terms of the Bank of Japan Law of 1942, the capital of the Bank amounts to 100 million yen of which 55 million yen have been subscribed by the Government, and the rest by private shareholders. Since 1949, the management of the Bank was taken over by the Policy Board, on which are represented the Ministry of Finance, Economic Counsel Board, agricultural, industrial, commercial and banking interests. The Board formulates all policies of the Bank. The Bank, being the sole note-issuing authority, was following the elastic fiduciary system till 1942, when it was changed to what is called the "maximum issue system," the maximum limit of note issue being decided at present by the Ministry of Finance with the approval of the Cabinet.

Credit Control

The Bank controls credit through three instruments, namely, open market operations, the official interest rate and the qualitative control measures. An interesting feature of the open market operations in Japan is that they cover not only institutions having transactions with the Bank, but also other financial institutions like insurance companies, urban credit co-operatives, and mutual loan companies. These quantitative control measures formed part of the nine-point principle of the Dodge Plan. A feature of the Bank's operations, till August 1955, in the matter of interest rates was the "higher interest rate application system." Under this system, the Bank, in order to provide funds at low rates to important basic industries and to curb inflation, fixes a standard amount or a loan quota for each of the city banks on the basis of several factors such as banking deposits, cash, advances, etc., and any loan amount in excess of this quota is charged higher interest rates. Up to 15 per cent. of the amount of the quota loans are made at the basic bank rates, while those beyond 15 per cent. but not exceeding 100 per cent. of the quota are charged slightly higher rates, known as "primary higher rates." Loans that exceed the second limit are charged "secondary higher rates."

Besides this, there is also qualitative credit control, according to which specially low rates are charged for nationally important purposes. Since August 1955, however, credit control has been operated chiefly through bank rates. The higher interest rate application system was modified in such a way that it might be resorted to in exceptional cases. Another significant feature is that the banks are not required legally to keep a certain percentage of their cash reserves with the Central Bank.

Ordinary Banks

The "ordinary" banks of Japan, which more or less correspond to the commercial banks and savings banks in Europe and the U.S.A., numbered 86, while their offices were 5,672 as at the end of 1955. This means an average of 63 offices per million people. Of these, two are long-term credit banks, 13 large city banks, 65 local banks and 6 trust banks. Besides, there are 13 foreign banks with 33 branches engaged mainly in foreign exchange business in the country. One of the noteworthy features in the sphere of commercial banks is that only joint-stock banks with a capital of one million yen or more are given licence by the Government to engage in commercial banking business. Yet another is that the deposits, advances, and investments of the 13 city banks respectively accounted for 66, 60 and 56 per cent. of the total of all ordinary banks in December 1956. Another notable feature of the banking system is that most of the investment demand for funds is directed towards commercial banks, which, in view of limited resources at their command, passed on the burden to the Bank of Japan by resorting to borrowing. As a result, a large measure of control over industrial policy has come to rest with the banking system, the Central Bank being the ultimate deciding authority.

Over-loaning is yet another peculiar and persistent feature of the system in Japan. The ratio of loan and discounts to deposits of commercial banks moved between 130 per cent. and 101 per cent. between 1897 and 1922. There were wide variations since 1922. In 1955 when there was slackening in economic activity, the ratio stood at 85.8. During 1956, however, there was, once again, an increase in the ratio. The conclusion drawn from this is that, during the last decade, the Bank of Japan's lendings have been more or less turned to the credit requirements of the private sector, and, in the absence of a well developed capital market, or investing public, Japanese industry and trade had to be developed through a process of forced savings bank loans originating from the Central Bank.

Peculiar Characteristics

There are certain characteristics peculiar to the Japanese commercial banks. They are: (i) A small number of city banks having many branches throughout Japan is co-existent with many local banks which mainly meet the local demand for funds; (ii) The proportion of long-term deposits has generally been high in the composition of deposits and the supply of long-term industrial funds is an important part of bank credit; (iii) Since the demand for funds is so great in relation to their resources, the banks largely depend on the Bank of Japan; (iv) as a consequence of the scarcity of loanable funds, interest rates on both loans and deposits are high.

In the absence of capital accumulation and a developed securities market, the demand for long-term credit has been usually met by special banks. An outstanding feature of these banks is that they can issue debentures which the ordinary banks are not allowed to do. Japan's advance in the sphere of small enterprises is once again largely due to the institutions which are especially intended to meet their needs. Thus, the Central Bank for Commercial and Industrial Co-operatives, which was established in 1936, and the Mutual Loans and Savings Banks, created by law in 1951 by converting *Mujin Kaisha* (mutual loan companies), accept deposits from their members and other bodies and extend loans. The former organisation extends long-term credit without security, and discounts bills for associate co-operatives and their members. As at the end of December 1955, its total outstanding deposits amounted to 13,896 million yen, while total of outstanding loans and discounts stood at 66,041 million yen. As on the same date, moreover, 9,371 commercial and industrial co-operatives were operating in the country. Besides, there are credit associations, governed by the Credit Associations Law, 1951, which supply small business finance. These are non-profit-making organisations and membership in them is confined to small enterprises and wage earners. In order to expand credit facilities to the small enterprises, the Government has recently initiated a Credit Insurance Scheme, whereby banks providing long-term loans and advances to medium and small-scale industries are enabled to insure the loan against non-payment to a specified extent.

To provide agricultural finance, there is the Central Co-operative for Agriculture and Forestry, established in 1923. Its main function is the adjustment of regional and seasonal excess or shortage of funds among its members. While the unit co-operatives in agriculture and fisheries at the village level extend loans by accepting deposits, the Central Co-operative Bank has direct access to the money market and is also in a position to raise funds from outside the co-operative circle by issuing debentures, and to obtain Government funds or loans from the Bank of Japan under the Agricultural Bill System. It is interesting to note that under this system farmers are able to get loans for production purposes. An agricultural bill is a promissory note drawn by a unit co-operative for a loan given to a farmer. This bill is discounted by the credit federations, which, in turn, get it rediscounted at the Central Co-operative Bank. This bill is also accepted by the Bank of Japan as a collateral for loans which it extends to the Central Bank at an interest rate lower than the normal rate.

The Government of Japan has also created institutions for specific types of business of national importance. Of these, mention must be made of the Export-Import Bank of Japan and Japan Development Bank, originally established, respectively, in 1950 and 1951. Their objects are restricted to the provision of such long-term funds, for export and import business in the case of the former, and for economic development and industrial reconstruction in the case of the latter, as the private financial institutions find it difficult to supply. The former is also prohibited from competing with other financial institutions. Besides these, Japan has other types of institutions, such as Labour Banks, Life Insurance Companies and the Securities Finance Corporations, which cater to the needs of various sectors of the economy.

PROFIT OF HONGKONG BANK A SHADE HIGHER

FURTHER FALL IN LIQUID ASSETS

THE year 1956 turned out, on the whole, to be one of steady economic progress, with an improvement in industrial activity and trade, for almost all Asian countries. As one of the leading international banks serving these areas, the Hongkong and Shanghai Banking Corporation (Chief Manager: Mr. Michael W. Turner, Hong Kong) has had its own share in financing such widespread and increasing activities. This is duly reflected in the rise of H.K.$143.84 million in the Bank's advances to customers and of H.K.$39.27 million in trade bills discounted as at the close of the year. Though such an expansion has helped the Bank's advances nearly to double themselves in three years, and trade bills to rise by 50 per cent., the pace of expansion in these two main items of credit has slowed down during 1956.

The Bank's profit for the year amounts to H.K.$20.63 million, an increase of only H.K.$55,100 over the year which is not commensurate with the expansion in the Bank's activity. This is partly due to the fact that banking business as a whole has been less remunerative than in the previous year, on account of the higher interest rates on deposits and bank borrowings, and partly due to the series of unfortunate losses suffered by the Bank in Calcutta. Nevertheless, with this small rise, the Bank has established a fresh record in its profit since 1930.

With the undistributed surplus of H.K.$10.61 million brought forward from 1955, the distributable sum, at H.K.$31.24 million, is higher by no more than H.K.$0.44 million. As in the previous year, a sum of H.K.$4 million has been utilised to write off Bank premises and H.K.$16.20 million for distribution to shareholders at £5 per share (made up of an interim payment of £2 per share and a final one of £3 per share), same as that paid a year ago on the increased capital of H.K.$25 million raised by the capitalisation of H.K.$5 million from the reserves in March 1955. These appropriations leave H.K.$11.04 million to be carried forward to 1957.

The following comparative table, giving the synopsis of the Bank's balance-sheets as at the close of the last four years, provides an idea of the Bank's progress:

(In thousands of H.K. $)

	As on 31st December			
	1956	1955	1954	1953
Capital	25,000	25,000	20,000	20,000
Reserve fund	128,000	128,000	128,000	96,000
Undistributed surplus	11,040	10,607	10,215	9,859
Note issue	675,742	675,742	675,742	755,742
Current, deposit and other accounts	2,564,288	2,557,376	2,672,641	2,636,471
Acceptances	16,130	20,356	56,521	10,557
Cash	200,907	260,260	330,986	439,317
Money at call and short notice	149,086	189,788	576,659	680,530
Securities against excess note issue	645,883	645,883	645,883	725,883
Investments—				
In Government and other securities	349,084	415,347	406,760	388,213
In subsidiary companies and associated company	10,867	9,264	2,136	2,136
Advances	1,213,502	1,069,860	929,455	645,653
Trade bills discounted	600,013	560,740	404,555	326,653
British and other Government treasury bills	220,746	227,066	208,216	295,928
Balance-sheet total	3,430,300	3,427,200	3,571,195	3,536,687

The current, deposit and other accounts show a small increase of H.K.$6.91 million, in contrast to the fall of H.K.$115.27 million noted in 1955, with the result that they are well below those at the close of 1954. They could have been more but for the transfer of some of the funds by depositors to the U.K. to take advantage of the high rates obtainable there.

This active demand for bank credit is reflected in the rise, as already pointed out, of H.K.$143.84 million in the Bank's advances and of H.K.$39.27 million in trade bills, thanks to a large extent to the growing industrial and commercial expansion in South-East Asia and to the credit squeeze in the U.K. which made itself felt in the Eastern territories, where the Bank largely operates, in a greater measure during the year under review. In the case of the Hongkong Bank, this was further aggravated by the fact that some concerns which had previously obtained a large part of their finance in London turned to the Bank for their credit requirements, while at the same time transferring their deposits to the U.K., as stated above.

As a result of the larger facilities granted to its constituents, the Bank's cash balances have shrunk by H.K.$59.29 million, money at call and short notice by H.K.$39.80 million and Government Treasury Bills by H.K.$6.32 million. Investments in Government securities also have declined by H.K.$66.26 million, but this is due partly to the fall in market value of British, Colonial and other Government securities quoted in Britain and partly to the sale of investments mainly in connection with the transfer of the funds of the staff retirement scheme to a separate trust. Despite the shrinkage in these liquid assets, the Bank has been prudent in maintaining a suitable degree of liquidity. The ratio of the Bank's readily realisable assets to its total liabilities as on 31st December 1956 is a little under 45 per cent., which, though the Directors consider as a safe margin, shows a fall over the last few years and serves as a reminder that the Bank's ability to finance the capital and current requirements of its clients must of necessity have some limitation.

BRITISH BANK OF THE MIDDLE EAST

SHARP FALL IN PROFIT

A SIZABLE setback in business turnover, accompanied by a further rise in expenses, has been responsible for the sharp drop in profit of the Indian branches of the British Bank of the Middle East (Manager: Mr. P. L. Sandeman, Bombay) for the year ended 31st December 1956, the third year of the Bank's operations in India after it took over the branches of the National Handelsbank N.V. on 1st January 1954. The balance-sheet total, which had gone up from Rs. 8.48 crores to Rs. 9.99 crores at the close of 1955, has declined to Rs. 8.74 crores. Similarly, after recording a rise from Rs. 2.12 lakhs to Rs. 9.63 lakhs, the Bank's profit has fallen to Rs. 1.59 lakhs for the year under review.

The Bank's gross income has dropped by Rs. 4.23 lakhs to Rs. 29.24 lakhs, in distinct contrast to the rise of Rs. 10.62 lakhs to Rs. 33.47 lakhs noted in the previous year. This is mainly accounted for by interest and discount earned which have fallen by Rs. 5.32 lakhs. Commission and exchange have, on the other hand, gone up by Rs. 1.01 lakh, but this is more than offset by the rise of Rs. 0.78 lakh in interest paid and of Rs. 2.92 lakhs in expenses, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December		
	1956	1955	1954
Interest and discount earned	15.04	20.36	15.01
Commission and exchange	14.12	13.11	7.76
Interest paid	6.62	5.84	4.44
Expenses	29.92	18.00	16.29
Depreciation	0.11	..	..
Profit	1.59	9.63	2.12
Remitted to Head Office	3.33	8.59	1.24
Carry forward	0.18	1.92	0.88
	As on 31st December		
	1956	1955	1954
Capital	20.80	20.81	20.66
Deposits	2,40.99	2,44.45	1,75.04
Borrowings from other banks	15.00	10.00	25.00
Bills for collection (*contra* item)	1,31.07	1,31.10	89.31
Acceptances (*contra* item)	2,38.85	2,03.52	2,13.69
Advances	4,10.26	5,37.45	4,53.03
Investments	38.53	30.92	20.50
Cash	51.68	74.04	64.83
Balance-sheet total	8,73.61	9,99.44	8,47.80

The Bank's deposits as at the close of the year show a slight fall of Rs. 3.46 lakhs, as against a rise of Rs. 69.41 lakhs noted at the end of 1955. Current and other accounts show a sharp recession from Rs. 214.43 lakhs to Rs. 188.22 lakhs and savings bank deposits are somewhat lower at Rs. 63,000. It is, however, gratifying to note that the decline in these two classes of deposits has been made good to a considerable extent by the expansion in fixed deposits from Rs. 29.37 lakhs to Rs. 52.14 lakhs. There has also been a rise of Rs. 5 lakhs in borrowings from other banks. Advances have dwindled from Rs. 5.57 crores to Rs. 4.10 crores and their recession has more than offset the rise of Rs. 1.04 crores noted in 1955. Of the decline in advances, loans, cash credits and overdrafts (at Rs. 2.27 crores) account for Rs. 76 lakhs and bills purchased and discounted (at Rs. 1.83 crores) for Rs. 71 lakhs. Notwithstanding the sharp fall in advances, the Bank's cash balances at the close of the year show a shrinkage of Rs. 22.36 lakhs and investments are higher by only Rs. 7.61 lakhs. There has been a welcome expansion in the Bank's foreign bills business, as witness the rise of Rs. 35.33 lakhs in acceptances, endorsements, etc.

HIND BANK'S PROFIT AT RECORD HIGH

DIVIDEND MAINTAINED

THE audited accounts of the Hind Bank Ltd. (General Manager: Mr. S. D. Pardiwalla, Calcutta) for the year ended 31st December 1956 make encouraging reading, inasmuch as the Bank's profit has been further marked up by Rs. 1.25 lakhs to a new high of Rs. 12.11 lakhs. It must, however, be noted that the rise in profit for 1956 is less pronounced than in the previous year, but this is not a peculiar feature of this Bank alone. For the general rise in costs and higher rate of interest paid on deposits and borrowings by banks have considerably reduced their profit margins.

With the rise in profit, the provision for taxation has also been stepped up from Rs. 4 lakhs to Rs. 4.50 lakhs and the allocation to the reserve fund from Rs. 2.50 lakhs to Rs. 3.75 lakhs. The dividend is, however, unchanged at 6 per cent., to which level it had been raised last year from 3 per cent. paid for 1953 and 1954.

An idea of the Bank's progress during the last three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1956	1955	1954	1953
Interest and discount earned	24.21	19.81	15.54	14.51
Commission and exchange	11.35	11.48	8.26	7.89
Interest paid	12.01	9.86	7.73	5.75
Expenses	12.04	10.34	9.38	8.53
Depreciation and repairs	0.38	0.24	0.19	0.24
Profit	12.11	10.86	6.56	7.91
Provision for taxation	4.50	4.00	2.50	3.86
To reserves	3.75	2.50	1.50	2.00
„ bonus to staff	0.90	0.83	0.39	0.40
„ gratuity fund	..	..	0.25	..
Dividend	3.00 (6%)	3.00 (6%)	1.50 (3%)	1.50 (3%)
Carry forward	1.02	1.66	1.13	1.01
	As on 31st December			
	1956	1955	1954	1953
Capital	50.00	50.00	50.00	50.00
Reserves	29.75	26.00	23.50	22.00
Deposits	5,11.77	5,12.48	4,07.01	3,80.30
Borrowings from other banks	..	0.02	..	..
Acceptances	1,80.28	2,51.28	1,59.23	2,20.96
Advances	3,49.37	3,80.17	2,62.67	2,36.59
Investments	1,28.45	1,26.60	1,12.33	1,10.25
Cash (including money at call and short notice)	1,14.48	90.06	1,07.65	1,14.89
Balance-sheet total	7,92.74	8,66.42	6,79.87	7,01.79
Ratio to deposits of—	%	%	%	%
Advances	68.2	74.1	64.5	62.2
Investments	25.1	24.7	27.6	29.0
Cash	22.4	17.6	26.4	30.2

It will be noted that the Bank's earnings by way of interest and discount have gone up by Rs. 4.40 lakhs, thus maintaining the upward trend for the fourth year in succession. During these four years the income from interest and discount has more than doubled itself from Rs. 10.67 lakhs in 1952 to Rs. 24.21 lakhs in 1956. The upward trend in earnings from commission and exchange noted in previous years has, on the other hand, been slightly reversed, though, at Rs. 11.35 lakhs, it is higher than that in any of the years preceding 1955. Interest paid on deposits and borrowings has also risen by Rs. 2.15 lakhs and expenses by Rs. 1.70 lakhs.

The Bank's balance-sheet shows a slight fall in deposits from the previous year's record level and a decline in advances. The recession in deposits is mainly accounted for by the decline in fixed deposits from Rs. 1.92 crores to Rs. 1.76 crores, in contrast to the general trend of banks in respect of this class of deposits. Savings bank deposits have, on the other hand, gone up from Rs. 18.62 lakhs to Rs. 22.51 lakhs and current and other accounts from Rs. 3.01 crores to Rs. 3.13 crores. Advances, which had consistently maintained an upward trend since 1950, with a rise from Rs. 1.23 crores to a record high of Rs. 3.80 crores in 1955, have suffered a reversal in 1956 with a decline of Rs. 31 lakhs to Rs. 3.49 crores, at which level they constitute the second highest in the history of the Bank. The bulk of this decline is accounted for by bills purchased and discounted which have dropped from Rs. 1.44 crores to Rs. 1.20 crores. Loans, overdrafts and cash credits have gone down by only Rs. 7 lakhs to Rs. 2.29 crores. The fall in advances has enabled the Bank to strengthen its liquidity, as witness the rise of Rs. 1.85 lakhs in investments and of Rs. 24.42 lakhs in cash balances. About 86 per cent. of the Bank's investments are held in Central and State Government securities, of which 92 per cent. mature within the next eight years.
